APPLIED POSITIVE PSYCHOLOGY (APOP)

APOP 100 Introduction to Positive Psychology
In the 20th century, the field of psychology made enormous and important strides in addressing mental health challenges. Today research in the field has expanded, inspired, in part, by Martin E.P. Seligman’s 1998 APA presidential address, to include the scientific study of optimal functioning and what helps people live full lives. This course focuses on the science of of thriving—what does it mean to be "happy," and how can one cultivate well-being at the individual and community level? Students explore the foundations of this science, understand a conceptual framework for well-being, and actively engage in activities that help to cultivate well-being. Drawing upon theory, empirical research, ancient and collective wisdom, we examine these topics critically and experientially and together build an engaged learning community. For those pursuing a Certificate in Applied Positive Psychology, this course is strongly recommended as a prerequisite for the other three courses.

APOP 120 Human Flourishing: Strengths and Resilience
What does it mean to flourish? What are we like when we are at our best? What helps us bounce back from challenges and adversity? Continuing the exploration of the science of positive psychology, students delve deeply into the study of character strengths as a framework for building positive character and well-being, and explore the concept of resilience, or the ability to overcome challenging situations. In this course, we explore how we can leverage our strengths to more effectively contribute to the greater world and enhance our own well-being. We also study the physical and psychological protective factors that constitute resilience, and how they are cultivated. Students learn about these topics from a scientific and experiential perspective, both as individuals and within our learning community. This course will have required synchronous sessions and the instructor will offer a choice of times. Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.
Also Offered As: LEAD 350

APOP 220 Flourishing with Others: Building Thriving Relationships
Interpersonal relationships are key for happiness and well-being. Christopher Peterson, one of the pioneers of positive psychology used to say that the field could be summarized in three words: "Other people matter." In this course, we will take a deep dive into the research on relationships that work well and foster well-being. We will study positive relationships at different levels, from the closest ones, like families and romantic partnerships, to friendships, relationships between colleagues and in teams at work, to broader communities, and our relationship with nature and our planet. For each of these domains, we will learn practical ways to nurture and improve relationships and to help people flourish through them. This class will combine academic rigor with experiential learning, and it will provide many opportunities for self-reflection, conversation in small teams and applied "experiments" in students’ lives.

APOP 290 Understanding the Science of Positive Psychology
Information about positive psychology research has proliferated in the popular press. How can we become better critical consumers of that information, and ensure we are capable of discerning the nuances of scientific studies? In this course, students will be introduced to some of the methods and approaches used to conduct well-being research and how to interpret the results of that research responsibly. Students will explore how positive psychology concepts are operationalized and measured, learn the strengths and shortcomings of study design, and differentiate between drawing conclusions from a single study vs. a broader body of research within a field. Students will also practice reading and dissecting primary research articles, extracting important information, and distilling this information through accessible scientific communication. This is not a statistics nor a methods course—the goal is to equip students to be critical and informed consumers of research in positive psychology and of the popular articles that describe that research. This course also involves weekly synchronous recitation sessions (scheduling varies). Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.

APOP 320 Morality and the Good Life
Morality pervades everyday life. Far from being confined to the ivory tower, we make moral decisions and engage in moral behavior every day, ranging from the ordinary (e.g., whether to volunteer or return a lost wallet) to the extreme (e.g., whether to donate one’s kidney to a stranger or fight and die for a cause). Morality is central to our evaluations of ourselves and others, and to the wellbeing of ourselves and the societies in which we live. In this course, you will learn about psychological research on morality. We will cover topics such as (1) How people make moral judgments, (2) How and why people have differing judgments of everything from tax rates to dietary preferences, (3) Psychological factors contributing to moral (e.g., altruistic) behavior, and (4) Intersections between moral psychology and our ideals, aspirations and well-being at the individual and societal level. This course aims to introduce you to the psychology of morality, to enable you to be more aware of and effective in navigating moral challenges in daily life.
