DENTAL - ORTHODONTICS
(DORT)

DORT 753 Orthodontics II
Activity: Lecture
1.25 Credit Hour

DORT 788 P and I Clinic
Through clinical rotation, the student is exposed to patients with malocclusions that arise in a normally developing craniofacial complex. Management of these problems aims at providing an unimpeded eruption and alignment of dentition.
Activity: Clinic
1.25 Credit Hour

DORT 794 Preventive and Interceptive Orthodontics II Clinic
The Preventive and Interceptive Clinic rotation consists of seven sessions in the Orthodontic clinic. During each rotation, students are assigned a minimum of two hours in a clinical setting and an additional hour or more in seminar to review the day's cases and any additional treatment planning information (i.e., cephalometrics, space analysis). Through these rotations, students are exposed to patients with malocclusions that arise in a normally developing craniofacial complex.
Activity: Clinic
1.25 Credit Hour

DORT 803 Adjunctive Orthodontics
Adjunctive orthodontic intervention involves the management of orthodontic problems prior to restorative treatment. Each student is required to complete the treatment of a clinical case which may involve the following: 1. repositioning teeth that have drifted after extraction or bone loss caused by periodontal disease. 2. forced eruption of broken teeth to expose sound root structure of which to place permanent restorations. 3. correction of crossbites which do not involve a skeletal discrepancy. 4. alignment of anterior teeth for more esthetic restorations.
Activity: Clinic
0.25 Credit Hours

DORT 804 Adjunctive Orthodontics II Clinic
Adjunctive orthodontic intervention involves the management of orthodontic problems prior to restorative treatment. Each student is required to complete the treatment of a clinical case which may involve the following: 1. repositioning teeth that have drifted after extraction or bone loss caused by periodontal disease. 2. forced eruption of broken teeth to expose sound root structure of which to place permanent restorations. 3. correction of crossbites which do not involve a skeletal discrepancy. 4. alignment of anterior teeth for more esthetic restorations.
Course usually offered in spring term
Activity: Clinic
0.25 Credit Hours
