DRST 739 Pass Preparatory Course
Activity: Laboratory
4.25 Credit Hours

DRST 740 Restorative Dentistry L
Activity: Lecture
2.0 Credit Hours

DRST 741 Comprehensive Care C Fall
Activity: Clinic
5.0 Credit Hours

DRST 742 Restorative Dentistry SP
Activity: Clinic
6.25 Credit Hours

DRST 743 Comprehensive Care Spring
Comprehensive care is defined as the overall patient care delivery system that includes all dental services, including emergency care, treatment planning, general dentistry, specialty care, and maintenance programs. The delivery of such care revolves around the Primary Care Unit (PCU) Program, in which the Departments of Restorative Dentistry and Periodontics participate. Pre-doctoral students practice within one of six clinical groups within the Penn School of Dental Medicine. Within each unit, the students perform examination and diagnostic procedures, comprehensive treatment planning, all restorative dental procedures, fixed and removable prosthodontic procedures, including implant supported restorations, non-surgical periodontal procedures, and maintenance therapy. Faculty from the Department of Periodontics are also assigned to the units. Patient care is supervised and managed by the faculty in the PCU Program. The PCU leader is the final determinant in all Tx Plans, Procedures and referrals within the PCU group. The PCU Program is committed to graduating an excellent practitioner who is educated and trained to deliver comprehensive, preventive, therapeutic, and oral health maintenance services. The program strives to eliminate the fragmentation of treatment, integrate dental disciplines, and create faculty accountability and responsibility to both patients and students. The program goal is to produce a practitioner who can integrate basic science knowledge with clinical proficiency in all phases of general dentistry, based on the concept of recognition and treatment of oral disease, based on the best scientific evidence.
Activity: Clinic
3.0 Credit Hours

DRST 789 Clinical Seminar
The seminar is an open forum discussion in which students make case presentations after which the diagnosis, treatment plan, and therapy are analyzed and evaluated. Initially, the PCU leader may present cases in order to establish the proper method of case presentation; thereafter, it is the student’s responsibility to present thoroughly documented cases which include photographic slides of pretreatment, a complete dental and medical evaluation, study models, radiographs, and other pertinent data.
Activity: Seminar
0.5 Credit Hours

DRST 792 Clinical Seminars II
The seminar is an open forum discussion in which students make case presentations after which the diagnosis, treatment plan, and therapy are analyzed and evaluated. Initially, the PCU leader may present cases in order to establish the proper method of case presentation; thereafter, it is the student’s responsibility to present thoroughly documented cases which include photographic slides of pretreatment, a complete dental and medical evaluation, study models, radiographs, and other pertinent data.
Activity: Seminar
0.5 Credit Hours

DRST 841 Comprehensive Care C
Fourth-year students, within their PCU groups, continue to perform examination and diagnostic procedures, comprehensive treatment planning, all restorative dental procedures, fixed and removable prosthodontic procedures, including implant supported restorations, non-surgical periodontal procedures, and maintenance therapy. The PCU program goal is to produce a practitioner who can integrate basic scientific knowledge with clinical proficiency in all phases of general dentistry, based on the concept of recognition and treatment of oral disease.
Activity: Clinic
10.0 Credit Hours

DRST 842 Comprehensive Care II Clinical
Fourth-year students, within their PCU groups, continue to perform examination and diagnostic procedures, comprehensive treatment planning, all restorative dental procedures, fixed and removable prosthodontic procedures, including implant supported restorations, non-surgical periodontal procedures, and maintenance therapy. The PCU program goal is to produce a practitioner who can integrate basic scientific knowledge with clinical proficiency in all phases of general dentistry, based on the concept of recognition and treatment of oral disease.
Activity: Clinic
8.5 Credit Hours

DRST 889 Clinical Seminar
The seminar is an open forum discussion in which students make case presentations, after which the diagnosis, treatment plan, and therapy are analyzed and evaluated. Initially, the PCU leader may present cases in order to establish the proper method of case presentation; thereafter, it is the student’s responsibility to present thoroughly documented cases which include photographic slides of pretreatment, a complete dental and medical evaluation, study models, radiographs, and other pertinent data.
Activity: Seminar
0.5 Credit Hours

DRST 890 Clinical Seminar II Spring
The seminar is an open forum discussion in which students make case presentations, after which the diagnosis, treatment plan, and therapy are analyzed and evaluated. Initially, the PCU leader may present cases in order to establish the proper method of case presentation; thereafter, it is the student’s responsibility to present thoroughly documented cases which include photographic slides of pretreatment, a complete dental and medical evaluation, study models, radiographs, and other pertinent data.
Course usually offered in spring term
