### LALS 227 Educating for Democracy in Latin America and the U.S.

What does it mean to educate for a democracy, and for what type of democracy should we educate for? This course will examine these central questions and others pertaining to citizenship, democracy, and education as it relates to Latin America and Latino/as in the U.S. The course will first examine theories of education for democracy comparing and contrasting the works of persons including U.S. progressive-era writer John Dewey, Brazilian scholar Paulo Freire, and Penn President and political scientist Amy Gutmann. The course will delve into a civic and political education curriculum and pedagogies that have been carried out in institutions, inequality, and culture in the region. The latterpart of the course will examine civic education practices of Latino/as here in the U.S. from primary schools to higher education. This course offers a service-learning component where students will be encouraged to volunteer with educational organizations in the Philadelphia community.

Taught by: Bartch

1 Course Unit

### LALS 231 Perspectives in Brazilizan Culture

Topics vary. For current course description, please see department's webpage: http://ccat.sas.upenn.edu/roml/portuguese/undergraduate/courses.html

Taught by: Flannery Marcia
Course not offered every year
Prerequisite: Taught in Portuguese
Activity: Seminar
1 Course Unit

### LALS 233 World History: Latin America Topics vary.

Topics vary
Course usually offered in fall term
Activity: Seminar
1 Course Unit
LALS 395 Latins in United States
This course presents a broad overview of the Latino population in the United States that focuses on the economic and sociological aspects of Latino immigration and assimilation. Topics to be covered include: construction of Latino identity, the history of U.S. Latino immigration, Latino family patterns and household structure, Latino educational attainment. Latino incorporation into the U.S. labor force, earnings and economic well-being among Latino-origin groups, assimilation and the second generation. The course will stress the importance of understanding Latinos within the overall system of race and ethnic relations in the U.S., as well as in comparison with previous immigration flows, particularly from Europe. We will pay particular attention to the economic impact of Latino immigration on both the U.S. receiving and Latin American sending communities, and the efficacy and future possibilities of U.S. immigration policy. Within all of these diverse topics, we will stress the heterogeneity of the Latino population according to national origin groups (i.e. Mexican, Puerto Rican, Cuban, and other Latinos), as well as generational differences between immigrants and the native born.

LALS 250 C.I.A. Assasinations and Coups in Latin America
Why has the United States government participated in political assassinations and coups d’etat in Latin America? How have these interventions affected Latin American political and economic outcomes? How have they helped or hurt U.S. interests in the region? This lecture course provides an introduction to the history and politics of U.S.-led assassinations and coups in Latin America since 1949. For each event, the course will help students understand (1) the goals of the U.S. government; (2) the historical and political context of the intervention; and (3) the outcomes and consequences, both in Latin America and for the United States. Knowledge of the history of U.S. involvement in regime change is critical for understanding contemporary foreign policy.
Taught by: Kronick
Course offered spring; odd-numbered years
Activity: Lecture
1 Course Unit

LALS 254 Archaeology of the Inca
The Inca created a vast and powerful South American empire in the high Andes Mountains that was finally conquered by Spain. Using Penn's impressive Museum collections and other archaeological, linguistic, and historical sources, this course will examine Inca religion and worldview, architecture, sacred temples, the capital of Cuzco, ritual calendar, ceque system, textiles, metalworking, economic policies and expansionist politics from the dual perspectives of Inca rulers and their subjects. Our task is to explain the rise, dominance, and fall of the Incas as a major South American civilization.
For BA Students: History and Tradition Sector
Taught by: Erickson
Course not offered every year
Activity: Seminar
1 Course Unit

LALS 258 Caribbean Music & Diaspora
This survey course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts <concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course <- diaspora. Throughout the course, we will listen to many different styles and repertoires of music, ranging from calypso to junkanoo, from rumba to merengue, and from dancehall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relations to our own North-American contexts of music consumption and production.
Taught by: Rommen

Activity: Lecture
1 Course Unit

LALS 273 The Immigrant City
Immigration is among the most important phenomena shaping neighborhoods, cities, and regions. Understanding migration is fundamental to understanding urbanization, community development, and urban society today. This course examines the development of immigrant communities in United States cities and suburbs. Class readings, discussions, and visits to a variety of Philadelphia immigrant neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, and the public sphere. We study the diverse dynamics and impacts of immigration through foundational readings and close observation of various newcomer and receiving communities. The first part of the course surveys migration and community formation among a broad range of ethnic groups in different sorts of city and suburban neighborhoods, mainly through history, sociology, and geography. The second part focuses on public policy and community and economic development practices related to migration at the local, regional, national, and trans-national scales.
Taught by: Vitiello, Domenic
Course usually offered in spring term
Activity: Seminar
1 Course Unit

LALS 274 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

Taught by: Falleti
One-term course offered either term
Activity: Seminar
1 Course Unit

**LALS 317 The Politics of Matter and the Matter of Politics**
What is nature? What is culture? What kinds of practices and actors constitute what we call science? Who and what constitute the sphere we refer to as politics? A number of theoretical developments in cultural anthropology, political theory, critical geography, and feminist science studies have problematized the modernist ontological divide between Nature and Culture and a whole series of binary oppositions (such as objects/subjects, matter/form, bio/geo) that follow from it. Taking inspiration from this literature and placing it in conversation with Native and Indigenous scholarship and a series of contemporary socio-environmental struggles occurring in Latin America and beyond, this course will discuss the conceptual-methodological tools that a concern with politics of matter has generated. The epistemic and political implications of these tools go beyond their analytical usefulness as innovative devices to explore novel phenomena. They complicate well-established fields of inquiry, such as political ecology and economy, environmental studies, ethics, social justice, and modern politics; and, indeed, the singular ontology that these fields may inadvertently and explicitly sustain. We will explore how it is that things, stuff, matter, ‘nature’ came to fall outside modern politics as such, and the kinds of ethico-political repercussions that problematizing this division may produce.

**LALS 328 Democracy in Trouble: OAS to the Rescue?**
Democracy in the Americas is in trouble. Entrenched political, economic, and social inequality, combined with environmental degradation, weak institutions, pervasive health epidemics, weapon proliferation, and other pressing issues pose formidable challenges for strengthening democratic ideals and institutions. The Organization of American States (OAS), is uniquely poised to confront and purposively focused to strengthen peace, security, democracy, and human rights. In this community-based course, students will study the role and history of the OAS while working directly with area public high school students in preparation for the OAS annual high model OAS simulation in Washington, DC.
Taught by: Bartch

**LALS 389 Topics in Modern and Contemporary Art**
Topics vary. Spring 2019: The end of the last century saw a shift in the way contemporary artistic practice was conceived. This class will consider the work and writings of key artists and thinkers of the last 50 years who have tackled issues of race, class, consumption, marginality, nationality, and modernism.
Taught by: Shaw
Course not offered every year
Activity: Seminar
1 Course Unit

**LALS 387 Topics in Africana Studies**
Topics vary: Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women’s lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected.

LALS 399 Independent Study
Individual research to be taken under the direction of a faculty member. Students wishing to do an independent study should contact the Latin American and Latino Studies program.
One-term course offered either term
Activity: Independent Study
1 Course Unit

LALS 402 Why Latin America Matters: Examining Us-Latin American Foreign Relations
Activity: Lecture
1 Course Unit

LALS 417 Comparative Racial Politics
This course combines scholarship on race and racism in plural societies with qualitative approaches to the study of political institutions, phenomena and actors. Germany, Brazil, France and Cuba will be examined as individual country cases and in comparative perspective. Conceptual and theoretical readings on race, racism and politics provide students with the analytic tools to draw more abstract lessons and generalizable conclusions about how racial and ethno-national hierarchy involves the role of the state and political economy, culture, norms and institutions. Students will also examine the impact of civil rights movements for political equality in response to legacies of racial and ethno-national hierarchy and inequality. Finally, students will become familiar with scholarship on nationalism and social movements as they relate to racial politics.
Taught by: Hanchard

1 Course Unit
LALS 527 Spring 2015: Race, Gender & Auto/Biography
SPRING 2017: Market Women, Madames, Mistresses & Mother Superior studies gender, labor, sexuality, and race in the Caribbean. In our historical examination of primary source documents alongside literature, and popular media, we will question some of the iconic representations of Caribbean and Latin American women in order to understand the meaning, purpose and usages of these women's bodies as objects of praise, possession, obsession and/or ridicule by communities, governments and religions within and outside of the region. Beginning in the late-18th century and ending with contemporary migration narratives, this course considers the relationship between slave society and colonial pasts on gender performance in the modern Caribbean, Latin America, and their diasporas.

LALS 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends.
Taught by: Erickson, C.
Course not offered every year
Prerequisites: ANTH 241 or ANTH 600 and one archaeology area course or permission from instructor
Activity: Seminar
1 Course Unit

LALS 590 Introduction to Francophone Literature
An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.
Course not offered every year
Activity: Seminar
1 Course Unit

LALS 655 Democratization
This graduate class focuses on issues of democratization (and de-democratization), as studied in the comparative politics literature. The course is structured in four parts. In the first part, we scrutinize conceptualizations and measurements of democracy. In the second part, we study competing political theories about the origins of democracy. The third part of the seminar is devoted to the study of democratic transition and consolidation processes. To finish, we tackle specific issues in democratization such as social capital and civic participation, as well as the resilience of (subnational) authoritarianism.

LEAD 101 Leadership Theory and Practice
Using an innovative combination of academic theory, empirical research, and self-reflection, this course is an intensive introduction to multiple and competing concepts of leadership. Students will critically analyze texts and research related to effective leadership and leaders and, at the same time, develop their own, individualized leadership traits and skills profile. A culminating biographical analysis paper requires students to compare and contrast their own distinctive leadership traits and skills to those of an admired leader. The course concludes with each student crafting a 5-year leadership and communication career plan.
Activity: Online Course
1 Course Unit

LEAD 102 Leadership Theory and Practice
Using an innovative combination of academic theory, empirical research, and self-reflection, this course is an intensive introduction to multiple and competing concepts of leadership. Students will critically analyze texts and related to effective leadership and leaders and, at the same time, develop their own, individualized leadership traits and skills profile. A culminating biographical analysis paper requires students to compare and contrast their own distinctive leadership traits and skills to those of an admired leader. The course concludes with each student crafting a 5-year leadership and communication career plan.
Activity: Online Course
1 Course Unit

LEAD 304 Communication
This writing-intensive course is designed to enhance each student’s ability to communicate effectively in the workplace and other professional settings. Students will learn how to edit their own writing, give persuasive oral presentations to different audiences, communicate effectively during conflicts or crises, and apply evidence-based lessons from positive psychology to personal development and professional success. Students who have taken LEAD 101 will complete the first draft of a plan.
Activity: Online Course
1 Course Unit

LEAD 340 Professional Communication and Self-Development
This writing-intensive course is designed to enhance each student’s ability to communicate effectively in the workplace and other professional settings. Students will learn how to edit their own writing, give persuasive oral presentations to different audiences, communicate effectively during conflicts or crises, and apply evidence-based lessons from positive psychology to personal development and professional success. Students who have taken LEAD 101 will complete the first draft of a plan.
Activity: Online Course
1 Course Unit
LGST 100 Ethics and Social Responsibility
This course explores business responsibility from rival theoretical and managerial perspectives. Its focus includes theories of ethics and their application to case studies in business. Topics include moral issues in advertising and sales; hiring and promotion; financial management; corporate pollution; product safety; and decision-making across borders and cultures.
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 101 Law and Social Values
This course presents law as an evolving social institution, with special emphasis on the legal regulation of business in the context of social values. It considers basic concepts of law and legal process, in the U.S. and other legal systems, and introduces the fundamentals of rigorous legal analysis. An in-depth examination of contract law is included.
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 202 Law of Corporate Management and Finance
This course provides an introduction to the law of corporate management and finance, focusing on large publicly held corporations. It is presented from the perspective that before too long virtually all students will serve on one or more corporate boards of directors and that each should, therefore, know about the duties owed by directors and officers to those toward whom they bear a fiduciary duty. The course covers the basic obligations of corporate directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stake holders in the governance of public corporations, including shareholders, creditors/bondholders, employees (including corporate executives), investment bankers, corporate lawyers, and accountants. Particular attention is given to the law of mergers and acquisitions. Important issues of social policy concerning large business corporations are also discussed.
Taught by: Buccola, Orts
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 204 Real Estate Law
See Real Estate, REAL 204
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 205 Law of Marketing and Antitrust
The course explores the legal aspects of competition. The aim is to understand what legal obligations a business organization owes to its competitors and consumers. In particular, the course focuses on permissible and impermissible marketing tactics, pricing strategies, use of intellectual property (including patents, copyrights, and trademarks), and exertion of market dominance. The focus is primarily on U.S. law, but the challenges posed by diverse domestic, foreign, and international regimes will also be discussed. The course is useful to students interested in marketing strategy or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competitive business interaction.
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 206 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 207 The Sports Industry: Business and Legal Aspects
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues.
Taught by: DiGisi
One-term course offered either term
Activity: Lecture
1 Course Unit
LGST 208 The Law at Work: Employment Law for Managers
This course is based on the principle that knowledge and understanding of employment law facilitate (1) promotion of a workforce with a high degree of commitment to reaching business goals, (2) the development of practical business solutions to problems arising in the workplace, (3) effective human resources policy and procedures that comply with applicable laws. It provides students with an introduction to the law of the workforce and examines the balance between business goals and employment law compliance. The course examines the various employment laws with which businesses must comply and the legal rights and responsibilities of employees and employers. The emphasis is on laws concerning equal employment opportunity with respect to discrimination and harassment because of sex, race, national origin, religion, sexual orientation, age, disability and other characteristics protected by workforce laws; work-related privacy including investigations, electronic communication and social media; employee misclassification; diversity and affirmative action; and the legal and regulatory environment regarding immigration, wage and hour, leaves of absence, hiring, termination and afterwards, the non-employee workforce, whistle blower concerns, labor-management relations and collective bargaining.
Taught by: Weinstein
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 212 Economic Analysis of Law
The course is designed to teach students how to think as an economist about legal rules; to evaluate alternative legal rules against standards of economic efficiency and distributive justice; and to understand the nature of the legal process and several specific areas of the law. With the use of alternative texts, both deductive and inductive reasoning will be employed to study the formation and interpretation of legal rules.
Taught by: Buccola
One-term course offered either term
Prerequisite: Econ 001
Activity: Lecture
1 Course Unit

LGST 213 Legal Aspect of Entrepreneurship
This practically oriented course examines the critical legal issues confronting start-ups with a focus on innovation and disruption. Cutting edge topics include the new drone law, which permits companies to benefit from the efficiency of aerial view techniques. Students will learn to use the law to manage risk, deploy resources and maximize value by analyzing cases, statutes, pleadings and contracts. The course covers the entire lifecycle of a business and deals with confidentiality, non-competition and invention assignment clauses, tax advantages of limited liability companies (LLC) v. corporations or partnerships, securities law strategy for raising venture capital, independent contractor v. employee concerns, discrimination laws, merger and acquisition exit plans, intellectual property (IP) including patent, trade secrets, copyrights and trademarks, as well as restructuring and bankruptcy. Students will emerge from the course with the skills and tools to draft term sheets tailored to their business models, as well as mitigate liability via risk-protective policies, insurance and management of litigation. The course fulfills elective requirements for 6 Concentrations, Majors, or Minors: * Wharton Legal Studies and Business Ethics; * Wharton Entrepreneurship and Innovation/Management; * Wharton Social Impact and Responsibility; * SAS Legal Studies Minor; * SAS STSC Major (Science, Technology and Society)--with permission; * Engineering Entrepreneurship Minor--with permission.
Taught by: Hochstadter
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 215 Environmental Management: Law & Policy
This course provides an introduction to environmental management by focusing on foundational concepts of environmental law and policy and how they affect business decisions. The primary aim of the course is to give students a deeper practical sense of the important relationship between business and the natural environment, the existing legal and policy framework of environmental protection, and how business managers can think about managing their relationship with both the environment and the law.
Taught by: Light, Orts
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 216 Emerging Economies
This course explores important issues in conducting business internationally in and with emerging economies. Much of the course attempts to define emerging economies and to understand the changes occurring in these countries. The course also examines the position of emerging economies in the global context, and how broad social issues affect the development of emerging economies and the ability to establish relationships or conduct business in emerging economies.
Taught by: Nichols
One-term course offered either term
Activity: Lecture
1 Course Unit
LGST 218 Diversity and the Law
The goal of this course is to study the role the law has played, and continues to play, in addressing the problems of racial discrimination in the United States. Contemporary issues such as racial profiling, affirmative action, and diversity will all be covered in their social and legal context. The basis for discussion will be assigned texts, articles, editorials and cases. In addition, interactive videos will also be used to aid class discussion. Course requirements will include a term paper and class case presentations. 
Taught by: Anderson
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 219 Law and Policy in International Business
This course introduces students to the legal frameworks for regulating international business - national, regional, and international. Topics include mechanisms for dispute resolution, different standards on assigning nationality, jurisdictional and choice of law problems, controversies regarding the treatment of incoming foreign direct investment and expropriation of foreign-owned businesses, patterns in extraterritoriality, problems of clashing legal standards affecting areas like labor and the environment, and projects for creating more uniform rules governing the conduct of international business. Throughout students will be encouraged to evaluate the policy dimensions of laws and to develop their own critical perspectives regarding these. 
Taught by: Zaring
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 220 International Business Ethics
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business. 
Taught by: Berkey, Laufer
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 221 Constitutional Law and Free Enterprise
The course explores the fundamentals of U.S. constitutional doctrine and adjudication, with an emphasis on commercial and business issues and implications of constitutional law. The course starts by considering the Constitution and the structure and relationship of the governmental entities it establishes and upon which it depends. Special attention is given to the role of the federal courts, especially the Supreme Court, in interpreting and applying constitutional principles. From this foundation, the course moves on to examine in detail the major economic and business implications of constitutional law in different eras of the nation’s history. A core theme is how historical events and changing notions of public policy have affected and been affected by the evolution of constitutional doctrine. 
Taught by: Sepinwall
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 222 Internet Law & Policy
The Internet has become central to business and daily life. This course looks at how courts, legislatures, and regulators confront the major legal issues that the Internet poses. The fundamental challenge is that law comes from governments and other institutions in specific places, but the Internet is global and virtual. Conflicts such as the shutdown of the Napster peer-to-peer file-sharing service and the debate over “network neutrality” regulations for broadband access illustrate the challenge. How does the legal system think about Google, Skype, Twitter, and Facebook? How should it? The material in the course ranges from the foundations of cyberlaw, developed during the e-commerce boom of the 1990s, to current leading-edge questions around social networks, user-generated content, location-based services, cloud computing, and broadband platforms. Major topics include: how legally-enforceable contracts are made online; how courts determine jurisdiction over online transactions; intellectual property rules around digital assets such as music, video, and online texts; control over Internet domain names; liability of intermediaries such as Internet Service Providers and search engines; and online privacy protections. No pre-existing legal or technical knowledge is required. 
Taught by: Werbach
One-term course offered either term
Activity: Lecture
1 Course Unit
LGST 223 Securities Regulation
The course examines the federal securities laws and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management, and real estate.

LGST 224 Human Rights and Globalization
The 2000 UN Global Compact has confirmed the role of TNCs as central actors in the UN system of international human rights law, but whether their role should be voluntary or legally mandated remains in dispute. This course introduces students to how globalization has led to projects for expanding international human rights law to capture the operations of TNCs and why this development is opposed in many quarters. Competing perspectives on the pros and cons of imposing human rights responsibilities on TNCs and on the respective roles that businesses and governments should play will be examined. The Positions of various governments, businesses, international institutions, academics, and NGOs will be considered, and a number of illustrative case studies will be analyzed.

LGST 226 Markets, Morality & the Future of Capitalism
Markets play a central role in the life of a capitalist democracy. But is this a good thing? Should we let markets decide who is rich and who is poor? Who makes decisions and who follows them? Whose ideas get heard and whose ideas do not? The goal of this class will be to examine the market from the perspective of various social values to see whether we should want a market system and, if so, what kind of market system we should want. Among the issues we will examine are the following. Does the market contribute to the common good? If so, how? Does the market conflict with the idea that all human beings are of equal value? What is the relation between the market and freedom? Does the market liberate us or oppress us? Can we reconcile the market with our democratic ideals? What role should corporations play in a healthy democracy? What role should markets play in an increasingly globalized world? We will read several important philosophers, economists and political theorists writing on these issues, including Adam Smith, John Rawls, Amartya Sen, Friedrich Hayek, Karl Marx, Robert Nozick, Jurgen Habermas, and others. Grades will be based on three papers and class participation.

LGST 227 Literature of Success
This course explores the history, literature, and philosophy of two age-old questions: what does it mean to be successful and how does one achieve this elusive goal? It surveys some of the classics of the "success" genre - from Benjamin Franklin's Autobiography in the 18th century to Dale Carnegie's How to Win Friends and Influence People and Marcus Buckingham's Now, Discover Your Strengths in the 20th and 21st centuries. Case studies of remarkable achievements in business and society and Arthur Miller's play Death of a Salesman provide additional contexts within which to reflect on the questions at the center of the course. Students will keep a personal journal and use web-based tools to examine their own character strengths, talents, and achievement orientations. Grading is based on class attendance and participation, reading response papers, personal journals on assigned topics involving self reflection, a mid-term paper on an assigned research subject related to success, and a final, longer paper exploring, based on course readings and original research, each students personal philosophy of success. No final exam.

LGST 228 Sports Law
This course focuses on the areas of association, contract, constitutional, labor, antitrust, and agency law as they apply to the sports industry. This course exposes the student to many of the legal issues facing stakeholders in sport organizations. Special attention is given to the regulation of professional sports leagues promoting competitive balance, as well as antitrust law and labor-management relations dealing with the organization structure of sports leagues. The course also takes an inside look at previous and newly formed collective bargaining agreements and the use of Salary Cap or lack thereof in professional sports leagues. The development of effective communication skills will be emphasized through class presentations, written assignments, and quizzes; leadership and interpersonal communications will be cultivated through small group projects and meetings, and critical thinking and problem solving skills will be fostered through the careful study of case law impacting the sports industry in a variety of facets.

LGST 230 Social Impact and Responsibility: Foundations
What role can business play in helping to meet global societal needs, whether it involves the environment, improving health, expanding education or eradicating poverty? Is there any responsibility on the part of business to help meet those needs? What are models of successful business engagement in this area? How should success be measured? Are there limits to what businesses can and should do, and what institutional changes will enable businesses and entrepreneurs to better succeed? This survey course provides students the opportunity to engage in the critical analysis of these and other questions that lie at the foundation of social impact and responsibility as an area of study. The course involves case studies, conceptual issues, and talks by practitioners. The course is designed to help students develop a framework to address the question: How should business enterprises and business thinking be engaged to improve society in areas not always associated with business? The course is required for the secondary concentration in Social Impact and Responsibility
Taught by: Gordon, Nichols
Activity: Lecture

LGST 241 Theories of the Business Enterprise
What is a business firm? How did various forms of business, including the corporation, arise historically? How do contemporary economic and financial theories explain how business firms evolve, grow, and die? What are the legal underpinnings of the forms of business enterprise, ranging from sole proprietorships to partnerships to family-owned enterprises to multinational corporate groups? How do business firms relate to politics and government, as well as religion? What about the environment? This interdisciplinary course offers an introduction to pursuing answers to these questions. Students will gain perspective on the nature of business enterprises from different points of view that will be useful in further research, as well as having practical application. Ubiquitous economic concepts such as agency costs, principal-agent relationships, transaction costs, and influence costs will be studied. Different legal structures of firms will also be introduced, including new hybrid organizations such as benefit corporations, which seek to meld non-profit and profit objectives. In the course, we will read high-profile U.S. Supreme Court cases such as Citizens United and Hobby Lobby and debate appropriate boundaries (or not) between business and politics, as well as business and religion. Business ethics and the nature of any social responsibilities owed by business and business people will be topics too.

LGST 242 Big Data, Big Responsibilities: The Law and Ethics of Business Analytics
Significant technologies always have unintended consequences, and their effects are never neutral. A World of ubiquitous data, subject to ever more sophisticated collection, aggregation, and analysis, creates massive opportunities for both financial gain and social good. It also creates dangers in areas such as privacy, security, discrimination, exploitation, and inequality, as well as simple hubris about the effectiveness of management by algorithm. Firms that anticipate the risks of these new practices will be best positioned to avoid missteps. This course introduces students to the legal, policy, and ethical dimensions of big data, predictive analytics, and related techniques. It then examines responses-both private and governmental-that may be employed to address these concerns.

LGST 243 Other People's Money: The Law, Politics, and History of Financial Institutions
We learn in introductory economics courses that money is fungible: that is, one dollar is as good as the next. Indeed, using money as a "medium of exchange" is one of its defining characteristics. But what happens when we take a big pile of money and put it in different buckets. On one bucket we might write "hedge fund"; on another, "central bank"; on still another, "payday lender." Then money starts to change in ways defined by law, history, ethics, and politics. This course will take you on a tour of these different buckets—different kinds of financial institutions, broadly defined—throughout the modern financial system. We will look at hedge funds, insurance companies, investment banks, sovereign wealth funds, central banks, consumer banks, payday lenders, state-sponsored enterprises (like the Export-Import Bank in the United States and much of the financial system in China), and the cutting edge of fintech, including crowd-funded lending, digital currencies, and more. In each case, students will be exposed to a series of specialized questions: Where did this institution come from? What problem is it trying to solve that other alternatives could not resolve? What is the basic business (or, where relevant, regulatory) model for each institution? How is each institution regulated, and by whom? What are the ethical considerations in each context? What are the political considerations that each market participant faces?

LGST 611 Responsibility in Global Management
This course uses the global business context to introduce students to important legal, ethical, and cultural challenges they will face as business leaders. Cases and materials will address how business leaders, constrained by law and motivated to act responsibly in a global context, should analyze relevant variables to make wise decisions. Topics will include an introduction to the basic theoretical frameworks used in the analysis of ethical issues, such as right-based, consequentialist-based, and virtue-based reasoning, and conflicting interpretations of corporate responsibility. The course will include materials that introduce students to basic legal (common law vs. civil law) and normative (human rights) regimes at work in the global economy as well as sensitize them to the role of local cultural traditions in global business activity. Topics may also include such issues as comparative forms of corporate governance, bribery and corruption in global markets, human rights issues, diverse legal compliance systems, corporate responses to global poverty, global environmental responsibilities, and challenges arising when companies face conflicting ethical demands between home and local, host country mores. The pedagogy emphasizes globalized cases, exercises, and theoretical materials from the fields of legal studies, business ethics and social responsibility.
One-term course offered either term
Activity: Lecture
0.5 Course Units

LGST 612 Responsibility in Business
This course introduces students to important ethical and legal challenges they will face as leaders in business. The course materials will be useful to students preparing for managerial positions that are likely to place them in advisory and/or agency roles owing duties to employers, clients, suppliers, and customers. Although coverage will vary depending on instructor, the focus of the course will be on developing skills in ethical and legal analyses that can assist managers as they make both individual-level and firm-level decisions about the responsible courses of action when duties, loyalties, rules, norms, and interests are in conflict. For example, the rules of insider trading may form the basis for lessons in some sections. Group assignments, role-plays, and case studies may, at the instructor’s discretion, be used to help illustrate the basic theoretical frameworks. Course materials will highlight industry codes and professional norms, as well as the importance of personal and/or religious values.

LGST 785 Business Strategy and Corporate Law
This course explores strategic, business and legal decision making in a fluid real world corporate context. Classes will cover a series of timely financial and legal subjects as well as case studies that deal with topical problems in corporate governance, investment strategy, executive compensation, and potential corporate and criminal behavior. Press, public market reaction, and governmental/political considerations will be integrated into the classroom.
Activity: Lecture
1 Course Unit

LGST 799 Seminar in Law & Society
A study of the nature, functions, and limits of law as an agency of societal policy. Each semester an area of substantive law is studied for the purpose of examining the relationship between legal norms developed and developing in the area and societal problems and needs.
One-term course offered either term
Activity: Seminar
1 Course Unit

LGST 802 Corporate Law and Management in Global Perspective
This course provides an introduction to the law of corporate management and finance, focusing on large publicly held corporations. It is presented from the perspective that before too long virtually all students will serve on one or more corporate boards of directors and that each should, therefore, know about the duties owed by directors and officers to those toward whom they bear a fiduciary duty. The course covers the basic obligations of corporate directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stake holders in the governance of public corporations, including shareholders, creditors/bondholders, employees (including corporate executives), investment bankers, corporate lawyers, and accountants. Particular attention is given to the law of mergers and acquisitions. Important issues of social policy concerning large business corporations are also discussed.
Materials: To be determined.
Format: Lecture and legal case discussion.

LGST 805 Law of Marketing and Antitrust
The course explores the legal aspects of competition. The aim is to understand what legal obligations a business organization owes to its competitors and consumers. In particular, the course focuses on permissible and impermissible marketing tactics, pricing strategies, use of intellectual property (including patents, copyrights, and trademarks), and exertion of market dominance. The focus is primarily on U.S. law, but the challenges posed by diverse domestic, foreign, and international regimes will also be discussed. The course is useful to students interested in marketing strategy or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competitive business interaction.
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 806 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.
Cross-listed with MGMT 691/OPIM 691.
Format: Lecture, class discussion, simulation/role play, and video demonstrations.
Materials: Textbook and course pack.
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 807 Securities Regulations
The course examines the federal securities law and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management and real estate.
Requirements: Midterm and final exam.
Materials: Text, pamphlet of statutes and rules, and study guide.

Activity: Lecture
1 Course Unit
LGST 809 Sports Business Management
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues. This course is crosslisted with MGMT815.
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 813 Legal and Transactional Aspects of Entrepreneurship
Legal and Transactional Aspects of Entrepreneurship is a practical and intensive course that examines the critical legal and transactional issues confronting start-up and emerging growth companies. Although the context of the course is early stage companies, many of the concepts studied are equally applicable to more mature, established companies. The course provides perspective on how to use the law strategically to manage risk, deploy resources and maximize shareholder value.
Topics include the enforceability of confidentiality, non-competition and other restrictive covenants in employment agreements; choice of business form including the legal, financial and tax advantages and disadvantages of general partnerships, limited partnerships, corporations and limited liability companies; tax and securities law; legal aspects of raising capital including structuring venture capital and private equity financing; entrepreneurial acquisition structures, employment law, and intellectual property law including trade secrets, copyrights, patents, and trademarks. Format: Lecture and discussion with coverage of legal cases and materials. Requirements: Class participation, midterm and final exam. Materials: Course pack.
Taught by: Borghese
One-term course offered either term
Prerequisites: None but generally recommended for second year students. Students who have taken certain legal studies courses may find limited overlap with this course.
Activity: Lecture
1 Course Unit

LGST 815 Environmental Management: Law and Policy
This course provides an introduction to environmental management with a focus on law and policy as a basic framework. The primary aim of the course is to give students a deeper practical sense of the important relationship between business and the natural environment and to think critically about how best to manage this relationship.
Taught by: Light, Orts
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 820 International Business Ethics
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.

LGST 920 Ethics in Business and Economics
The seminar explores the growing academic literature in business ethics. It also provides participants an opportunity to investigate an ethical issue of their choosing in some depth, using their field of specialty as context. The seminar assumes no previous exposure to business ethics. Different business ethics theories and frameworks for investigating issues will be discussed, including corporate social responsibility, corporate moral agency, theories of values, and corporate governance. In turn, these theories will be applied to a range of issues, both domestic and international. Such issues include: corruption in host countries, the management of values in modern corporations, the ethical status of the corporation, ethics in sophisticated financial transactions (such as leveraged derivative transactions), and gender discrimination in the context of cultural differences. Literature not only from business ethics, but from professional and applied ethics, law, and organizational behavior will be discussed. Often, guest speakers will address the seminar. At the discretion of the class, special topics of interest to the class will be examined. Students will be expected to write and present a major paper dealing with a current issue within their major field. The course is open to students across fields, and provides integration of ideas across multiple business disciplines.

LING 051 Proto-Indo European Language and Society
Most of the languages now spoken in Europe, along with some languages of Iran, India and central Asia, are thought to be descended from a single language known as Proto-Indo-European, spoken at least six thousand years ago, probably in a region extending from north of the Black Sea in modern Ukraine east through southern Russia. Speakers of Proto-Indo-European eventually populated Europe in the Bronze Age, and their societies formed the basis of the classical civilizations of Greece and Rome, as well as of the Celtic, Germanic and Slavic speaking peoples. What were the Proto-Indo-Europeans like? What did they believe about the world and their gods? How do we know? Reconstruction of the Proto-Indo-European language, one of the triumphs of comparative and historical linguistics in the 19th and 20th centuries, allows us a glimpse into the society of this prehistoric people. In this seminar students will, through comparison of modern and ancient languages, learn the basis of this reconstruction — the comparative method of historical linguistics — as well as explore the culture and society of the Proto-Indo-Europeans and their immediate descendants. In addition, we will examine the pseudo-scientific basis of the myth of Aryan supremacy, and study the contributions of archaeological findings in determining the "homeland" of the Indo-Europeans. No prior knowledge of any particular language is necessary. This seminar should be of interest to students considering a major in linguistics, anthropology, and archaeology, ancient history or comparative religion. (Also fulfills Cross-Cultural Analysis.)

Notes: Freshman Seminar

LING 054 Bilingualism in History
This course introduces the foundations of linguistics - the scientific study of language - through exploration of multilingualism in the USA and in different societies around the world. Contacts between groups of people speaking different languages are documented from earliest records, and around the world it remains the norm to find more than one language in regular use in a single community. In this course we will see that multilingualism is a catalyst for linguistic change: sometimes languages are lost; sometimes new languages are created; sometimes the structure of a language is radically altered. We will consider: Which parts of linguistic structure are most susceptible to change under conditions of bilingualism? Does language contact - whether a result of trade, education, migration, conquest, or intermarriage - influence language structure in predictable ways? How do individual speakers handle multiple languages? How have attitudes to speakers of multiple languages changed through history? How have socio-historical events shaped the linguistic situation in the USA?

LING 071 American Sign Language I
Introduction to American Sign Language (ASL). Introduces ASL in a contextualized and conversational manner. Course includes receptive and expressive readiness activities, sign vocabulary and grammar, and an introduction to important topics and people within Deaf communities and Deaf culture.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 072 American Sign Language II
Increased communication skill in American Sign Language (ASL). Expressive and receptive abilities are expanded upon via a contextualized and conversational manner. Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion.
For BA Students: Language Course
One-term course offered either term
Prerequisite: LING 071 or Permission of the Instructor
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 073 American Sign Language III
American Sign Language (ASL) at the Intermediate I level. Expressive and receptive abilities are expanded upon via a contextualized and conversational manner, including, but not limited to, narrative production. Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion.
For BA Students: Language Course
One-term course offered either term
Prerequisite: LING 072 or permission of instructor
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center
LING 074 American Sign Language IV
American Sign Language (ASL) at the Intermediate II level. Expressive and receptive abilities are expanded upon via a contextualized and conversational manner, including, but not limited to, narrative production. Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion.
For BA Students: Last Language Course
One-term course offered either term
Prerequisite: LING 073 or permission of instructor
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 075 American Sign Language V
This is an advanced ASL course in which students expand their conversational and narrative range. While receptive readiness activities continue to be an important part of the class, the emphasis moves toward honing expressive sign skills through narrative presentation and ASL-only class discussions. Various aspects of Deaf culture and cultural behavior rules will be incorporated into the course. A large component of the course is a unit on Deaf history in which students read and discuss major events and famous deaf people via readings, film, class lectures and discussions, and other outside resources.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisite: LING 074 or permission of instructor
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 076 Deaf Literature, Performance, Art, and Film
This course is an advanced/conversational ASL course that explores several key topics related to Deaf culture and the Deaf experience s influence on literature (both written and signed), theatre, fine and visual arts, and film -both Deaf and hearing directed and acted. Using only ASL in class, students learn about various perspectives and approaches to each of the themes and topics of the course. Some questions to explore and answer in this course will be: What is Deaf Literature? The Deaf Lens: What is it? How is it different from a hearing perspective on film? How is Deafness expressed differently in each of the arts discussed in this course? Analysis and discussion will come from readings as well as viewings of various types of Deaf arts.
For BA Students: Advanced Language Course
Taught by: Draganac-Hawk
Course usually offered in spring term
Prerequisites: Ling 074 and prior language experience or permission from instructor.
Activity: Seminar
1 Course Unit

LING 077 ASL/Deaf Studies - ABCS
For this course, students will attend Pennsylvania School for the Deaf on a weekly basis where they will participate in and contribute to the school community via tutoring or other mutually agreeable activities. Students will also have formal class on a weekly basis with discussions and activities centering on reflection of community experiences through linguistic as well as cultural lenses. Additionally, drawing from the required Linguistics and other ASL/Deaf Studies coursework, students will develop an inquiry question and conduct preliminary community-based research to analyze sociolinguistic variations of ASL and Deaf cultural attitudes, behaviors, and norms. Ongoing reflections and discussions-formal and informal-on Deaf cultural/theoretical topics drawing from readings as well as community experiences will be integral to the course experience. LING 078, Topics in Deaf Culture and permission from the instructor, are required for this course.
For BA Students: Advanced Language Course
Tought by: Fisher
Prerequisites: LING 078 and permission from instructor, Anyone considering taking this course should contact the ASL Program Coordinator early in the semester prior to enrollment (Spring) to ensure adequate time to obtain clearances and appropriate placement.
Activity: Lecture
1 Course Unit

LING 078 Deaf Culture
This course is an advanced/conversational ASL course that explores several key topics related to Deaf Culture. Using only ASL in class, students will read and discuss books, articles, and films related to the following topics: Deaf History, Deaf Identity, Deafness as Asset, Communication Issues and Pathological Perspectives on Deafness, Deafness and Education, Deaf/Hearing Family Dynamics. Language growth will stem from direct instruction as well as through the course of class conversation. Students will collaborate with the instructor and our Deaf community liaison to develop and host an event that is accessible to both Deaf and hearing people alike.
For BA Students: Advanced Language Course
Taught by: Fisher
One-term course offered either term
Prerequisite: LING 074 or permission from coordinator
Activity: Seminar
1 Course Unit
Notes: Offered through Penn Language Center
LING 079 Disability Rights and Oppression: Experiences within Global Deaf Communities
This course explores the linguistic and social statuses of global Deaf communities with respect to language rights and efforts toward parity with spoken language communities. We will begin by providing some background and context for understanding Deaf communities and people as both linguistic and cultural minorities as well as members of a disability group. We then explore various examples of oppression borne by Deaf people throughout history and today, with an emphasis on the Milan Conference of 1880, from which several decrees mandated that sign languages be banned in all instruction of Deaf students worldwide. The impacts of said decrees were catastrophic for the linguistic and social rights of Deaf people; effects of these experiences are pernicious and long lasting. Since then, global Deaf communities have fought to gain the legal rights and social recognition that are typically afforded hearing members of their respective communities. There are some Deaf communities that have attained said rights, where others are still left far behind. We explore the lasting effects of the Milan Congress in global terms, using the United States and North American Deaf communities as a standard for comparative measurement. Do note that this course will include a module on Italian Sign Language (LIS) and will give opportunities to learn and use LIS in and amongst Italian Deaf community members while in Italy.
Taught by: Fisher
Course usually offered in spring term
Prerequisites: Application and Permission from Penn Global
Activity: Lecture
1 Course Unit

LING 081 Beginning Irish Gaelic I
Irish Gaelic, spoken primarily on the west coast of Ireland, is rich in oral traditions, song, poetry and literature. Knowledge of this language provides a foundation to understanding Celtic folklore and linguistics and also enhances the study of Anglo-Irish literature and history. The first-year course will include reading, conversation, listening and speaking.
Taught by: Blyn-LaDrew
Two terms. student may enter either term.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 082 Beginning Irish Gaelic II
Taught by: Blyn-LaDrew
One-term course offered either term
Prerequisite: LING 081 or permission from instructor
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center

LING 083 Intermediate Irish Gaelic I
Taught by: Blyn-LaDrew
One-term course offered either term
Prerequisite: LING 082 or equivalent
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 085 Advanced Irish Gaelic I
Taught by: Blyn-LaDrew
One-term course offered either term
Prerequisite: LING 084 or equivalent
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center

LING 086 Advanced Irish Gaelic II
This course will emphasize reading of literary texts, and advanced aspects of grammar, composition, and conversation.
Taught by: Blyn-LaDrew
One-term course offered either term
Prerequisite: LING 085 or equivalent
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 091 American Sign Language III/IV
Expanded instruction of American Sign Language (ASL) on the Intermediate I and II levels. Includes receptive and expressive readiness activities, sign vocabulary and grammar growth, fingerspelling practice and narrative skills. Topics on Deaf cultural are also included in the course readings and discussions. Increases the emphasis on more abstract and challenging conversational and narrative range.
For BA Students: Last Language Course
Course not offered every year
Prerequisite: LING 072 or by permission of instructor
Corequisites: Expanded instruction of ASL.
Activity: Lecture
2 Course Units
Notes: Offered by Penn Language Center; permit from Penn Language Center required for admission.

LING 102 Introduction to Sociolinguistics
Human language viewed from a social and historical perspective. Students will acquire the tools of linguistic analysis through interactive computer programs, covering phonetics, phonology and morphology, in English and other languages. These techniques will then be used to trace social differences in the use of language, and changing patterns of social stratification. The course will focus on linguistic changes in progress in American society, in both mainstream and minority communities, and the social problems associated with them. Students will engage in field projects to search for the social correlates of linguistic behavior, and use quantitative methods to analyze the results.
For BA Students: Society Sector
Taught by: Tamminga
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Satisfies Quantitative Data Analysis

LING 103 Introduction to Language: Language Structure and Verbal Art
The purpose of this course is to explore the relationship between linguistic structure and the use of language for artistic purposes. The syllabus is organized as a sequence of units, each built around a particular theme. These include the sound structure of poetry (meter, rhyme, and other linguistic patterns in Jabberwocky, the Odyssey, Shakespeare, the Troubadours, and others); how precise linguistic data can be used to solve an outstanding literary problem (determining the approximate date when Beowulf was composed); and the structure of folktales of various cultures and of narratives of everyday experience.
For BA Students: Arts and Letters Sector
Taught by: Ringe
Course usually offered in fall term
Activity: Lecture
1 Course Unit
LING 105 Introduction to Cognitive Science
Cognitive Science is founded on the realization that many problems in the analysis of human and artificial intelligence require an interdisciplinary approach. The course is intended to introduce students to the problems and characteristic concepts of Cognitive Science, drawing on formal and empirical approaches from the parent disciplines of computer science, linguistics, neuroscience, philosophy and psychology. The topics covered include Perception, Action, Learning, Language, Knowledge Representation, and Inference, and the relations and interactions between such modules. The course shows how the different views from the parent disciplines interact, and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories, and provides an introduction to some of the main directions of current research in the field.
Taught by: Brainard/Ungar
Course usually offered in fall term
Also Offered As: CIS 140
Activity: Lecture
1 Course Unit
Notes: This is a Formal Reasoning course.

LING 106 Introduction to Formal Linguistics
In this course, we study formal mathematical tools for the analysis of language that help us understand and classify the complex structures and rules that constitute language and grammar. These tools include set theory, formal language and automata theory, as well as aspects of logic, and will be applied to the syntax and semantics of natural language. In addition to learning something about formal tools for analyzing language, this will also enhance your general skills in analytical reasoning.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: This is a Formal Reasoning course.

LING 115 Writing Systems
The historical origin of writing in Sumeria, Egypt, China, and Mesoamerica; the transmission of writing across languages and cultures, including the route from Phoenician to Greek to Etruscan to Latin to English; the development of individual writing systems over time; the traditional classification of written symbols (ideographic, logographic, syllabic, alphabetic); methods of decipherment; differences between spoken and written language; how linguistic structure influences writing, and is reflected by it; social and political aspects of writing; literacy and the acquisition of writing.
For BA Students: History and Tradition Sector
Taught by: Buckley
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LING 120 Introduction to Speech Analysis
This course focuses on experimental investigations of speech sounds. General contents include: the fundamentals of speech production and perception; speech analysis tools and techniques; and topics in phonetic studies. The course consists of integrated lectures and laboratory sessions in which students learn computer techniques for analyzing digital recordings.
Taught by: Kuang
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Satisfies Quantitative Data Analysis

LING 151 Language and Thought
This course describes current theorizing on how the human mind achieves high-level cognitive processes such as using language, thinking, and reasoning. The course discusses issues such as whether the language ability is unique to humans, whether there is a critical period to the acquisition of a language, the nature of conceptual knowledge, how people perform deductive reasoning and induction, and how linguistic and conceptual knowledge interact.
Taught by: Trueswell
One-term course offered either term
Prerequisites: PSYC 001, COGS 001, LING 105, or PSYC 207
Activity: Lecture
1 Course Unit

LING 170 Experimental Methods for Linguists
Controlled experiments are a key element of empirical research, and they play an increasingly important role in the study of language and communication. This course will be divided into two halves. In the first half, students will be introduced to the fundamentals of how to conduct an experiment, along with a basic introduction to statistical methods. The emphasis will be on understanding the basic logic of experimental design, but special lectures will focus on the application of particular methods to the study of language. In the second half, classes will become more like lab meetings as students develop their own experimental projects from the ground up. At the end of the semester they will write up these projects as papers.
Taught by: Roberts
Course not offered every year
Activity: Seminar
1 Course Unit

LING 210 Introduction to Language Change
This course covers the principles of language change and the methods of historical linguistics on an elementary level. The systematic regularity of change, the reasons for that regularity, and the exploitation of regularity in linguistic reconstruction are especially emphasized. Examples are drawn from a wide variety of languages, both familiar and unfamiliar. The prerequisite for the course is any course in phonetics or phonology, or Ling 001, or permission of the instructor. Note that this course does NOT satisfy any sector requirement.
Taught by: Ringe
Course not offered every year
Prerequisites: One phonetics or phonology course, or Ling 001. Note that this course does NOT count towards sector II, History and Tradition.
Activity: Lecture
1 Course Unit

LING 230 Sound Structure of Language
An introduction to phonetics and phonology. Topics include articulatory phonetics (the anatomy of the vocal tract; how speech sounds are produced); transcription (conventions for representing the sounds of the world’s languages); classification (how speech sounds are classified and represented cognitively through distinctive features); phonology (the grammar of speech sounds in various languages: their patterning and interaction) and syllable structure and its role in phonology.
Taught by: Noyer
Course usually offered in spring term
Prerequisites: Prerequisite: A prior course in linguistics or permission of instructor.
Activity: Lecture
1 Course Unit
LING 235 Psychology of Language
This course describes the nature of human language, how it is used to speak and comprehend, and how it is learned. The course raises and discusses issues such as whether language ability is innate and unique to humans, whether there is a critical period for the acquisition of a language, and how linguistic and conceptual knowledge interact.
Taught by: Dahan
One-term course offered either term
Prerequisite: PSYC 151 or LING 001
Activity: Lecture
1 Course Unit

LING 240 Structure of a Language
Designed to apply linguistic principles to the grammatical analysis of a particular language, this course focuses on a different language each time it is given, according to the decision of the instructor. It may be taken by students with prior knowledge of the language in question who have not taken previous courses in linguistics, and by students of linguistics who wish to explore a new language. The selected language will be announced prior to pre-registration for any semester in which it is given.
Course not offered every year
Activity: Seminar
1 Course Unit

LING 241 Language in Native America
This course is an introduction to linguistic perspectives on the languages native to the Americas (their nature and distribution, typological similarities and differences), with an emphasis on North America. The diverse languages of this region will be examined from the point of view of particular linguistic phenomena, such as phonology, morphology, and syntax; and in addition we will study their historical development and their place in culture, society, and thought.
Taught by: Buckley
Course not offered every year
Activity: Lecture
1 Course Unit

LING 242 Construct a Language
In this course, students construct their own language, one that is compatible with what is known about possible human languages. To this end, the course investigates language typology through lectures and examination of grammars of unfamiliar languages. Topics include language universals, points of choice in a fixed decision space, and dependencies among choices.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Students who have taken Ling 140: Construct a Language are not eligible to enroll in Ling 242.

LING 247 Structure of American Sign Language
This course covers the linguistic structure of American Sign Language (ASL), including its phonology (articulatory features, phonological constraints, nonmanuals), morphology (morphological constraints, compounds, incorporation, borrowing), and syntax (syntactic categories, basic phrase structure, common sentence types). Also discussed are the topics of classifiers and deixis. In keeping with the comparative perspective of linguistic theory, parallels and differences between ASL and other (primarily spoken) languages are pointed out where appropriate. Historical and sociolinguistic issues are addressed where they are relevant to elucidating linguistic structure. Though the course focuses on ASL, it necessarily touches on issues concerning sign languages more generally, notably the possible effects of modality (sign vs. speech) on linguistic structure and the implications of the signed modality for general linguistics.
Taught by: Fisher/Santorini
Course not offered every year
Prerequisite: Ling 001 or permission of instructor(s)
Activity: Lecture
1 Course Unit

LING 250 Introduction to Syntax
This course is an introduction to current syntactic theory, covering the principles that govern phrase structure (the composition of phrases and sentences), movement (dependencies between syntactic constituents), and binding (the interpretation of different types of noun phrases). Although much of the evidence discussed in the class will come from English, evidence from other languages will also play an important role, in keeping with the comparative and universalist perspective of modern syntactic theory.
Taught by: Santorini
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LING 270 Language Acquisition
An introduction to language acquisition in children and the development of related cognitive and perceptual systems. Topics include the nature of speech perception and the specialization to the native language; the structure and acquisition of words; children's phonology; the development of grammar; bilingualism and second language acquisition; language learning impairments; the biological basis of language acquisition; the role in language learning in language change. Intended for any undergraduate interested in the psychology and development of language.
Taught by: Santorini
Course not offered every year
Activity: Lecture
1 Course Unit

LING 300 Tutorial in Linguistics
This tutorial allows students to deal in a concentrated manner with selected major topics in linguistics by means of extensive readings and research. Two topics are studied during the semester, exposing students to a range of sophisticated linguistic questions.
Taught by: Legate
Course usually offered in fall term
Prerequisites: Senior status or permission of the instructor. Majors only.
Activity: Seminar
1 Course Unit
LING 301 Conference
An independent study for majors in linguistics.
One-term course offered either term
Activity: Independent Study
1 Course Unit

LING 302 Linguistic Field Methods
Instruction and practice in primary linguistic research, producing a
grammatical sketch and a lexicon through work with a native-speaker
consultant and some reference materials. Consultant work is shared with
LING 502.
Taught by: Buckley/Legate
Course not offered every year
Prerequisites: Ling 230 and Ling 250
Activity: Seminar
1 Course Unit

LING 310 History of the English Language
This course traces the linguistic history of English from its earliest
reconstructable ancestor, Proto-Indo-European, to the present. We focus
especially on significant large-scale changes, such as the restructuring
of the verb system in Proto-Germanic, the intricate interaction of sound
changes in the immediate prehistory of Old English, syntactic change in
Middle English, and the diversification of English dialects since 1750.
Taught by: Ringe/Kroch
Course not offered every year
Activity: Lecture
1 Course Unit

LING 335 Psycholinguistics
Taught by: Dahan
Prerequisites: PSYC 151, or PSYC 235, or LING 001, or permission of
instructor.
Activity: Lecture
1 Course Unit

LING 354 Language and Game Theory
This course is an introduction to game-theoretic pragmatics. It focuses
on aspects of meaning that follow from rational, strategic decision
making. The course covers an introduction to the theory of games with
an emphasis on coordination games and cooperation. We develop a
game theoretic account of truth conditional semantics using zero-sum
games. We then cover Gricean implicature; focal points and coordination;
polysemy vs homophony; and a game account of reference tracking and
pronoun interpretation.
Taught by: Clark
Course not offered every year
Activity: Lecture
1 Course Unit

LING 380 Introduction to Semantics
This course provides an introduction to formal semantics for natural
language. The main aim is to develop a semantic system that provides a
compositional interpretation of natural language sentences. We discuss
various of the aspects central to meaning composition, including function
application, modification, quantification, and binding, as well as issues
in the syntax-semantics interface. The basic formal tools relevant for
semantic analysis, including set theory, propositional logic, and predicate
logic are also introduced.
Taught by: Schwarz
Course usually offered in fall term
Prerequisite: Ling 250
Activity: Lecture
1 Course Unit

LING 398 Senior Thesis
One-term course offered either term
Activity: Independent Study
1 Course Unit

LING 404 Morphological Theory
This course will explore some issues concerning the internal structure
of words. After a brief introduction to some basic terms and concepts,
we will discuss the interaction of morphology with phonology. We will
look both at how morphology conditions phonological rules and how
phonology conditions morphology. Then we will turn to the interaction
of syntax and morphology. We will look at some problems raised by
infection morphology, clitics and compounds. The main requirement
for the class will be a series of homework exercises in morphological
analysis and a short paper at the end of the semester.
Taught by: Embick
Course not offered every year
Activity: Lecture
1 Course Unit

LING 405 Morphology Theory II
This course takes a detailed look at a number of central topics in
morphological theory. The material examined in the course consists of
primary readings and reviews, covering a number of central topics in
the field. These topics include (but are not restricted to) allomorphy,
blocking, the interface of phonology and morphology, syncretism,
affixation, the syntax-morphology interface, and compounding. The
primary requirements for the class involve short assignments that are
based on the readings, in the form of both problem sets and critical
appraisals of core theoretical positions. In addition to this, students will
write a short paper at the end of the semester.
Taught by: Embick
Course not offered every year
Prerequisites: Morphology Theory I or permission of the instructor.
Activity: Lecture
1 Course Unit

LING 411 Old English
The main purpose of this course is to teach students to read Old English
("Anglo-Saxon"), chiefly but not exclusively for research in linguistics.
Grammar will be heavily emphasized; there will also be lectures on the
immediate prehistory of the language, since the morphology of Old
English was made unusually complex by interacting sound changes. In
the first eight weeks we will work through Moore and Knott's "Elements
of Grammar" and learn the grammar; the remainder of the term will be
devoted to reading texts.
Taught by: Kroch
Course not offered every year
Activity: Seminar
1 Course Unit

LING 440 Pidgins and Creoles
The origins and development of pidgins (languages of
intercommunication that have evolved for practical reasons in situations
of trade, conquest, or colonization, and spoken as second or auxiliary
languages) and creoles (languages with native speakers that have
developed from previous pidgins); relations between creoles and other
languages; implications of creole studies for general theories of language
and language change.
Course offered fall; even-numbered years
Activity: Lecture
1 Course Unit

2018-19 Catalog | Generated 08/30/18
LING 449 Language and Computation
The computational study of natural language and its implications for linguistic theories. Topics include finite state tools, computational morphology and phonology, grammar and parsing, computational models of language learning in children and machines.
Taught by: Yang
Course not offered every year
Activity: Seminar
1 Course Unit

LING 455 Experiments in the Study of Meaning
This course provides an introduction to the experimental study of meaning in natural language. We begin by introducing some basic notions of formal semantics and pragmatics and review relevant technical background. Next we discuss recent developments in studying meaning-related phenomena experimentally, which, in addition to theoretical questions, involve issues in the acquisition and processing of semantic information. In the course of this, we will also introduce the basics of experimental design and relevant psycholinguistic methodology. In addition to readings and homework assignments, students will embark on a small research project (individually or jointly), which will be presented in class at the end of the semester and written up as a term paper.
Taught by: Schwarz
Course not offered every year
Prerequisites: Ling 106, 170, 250, 380/580, 550 or permission by instructor
Activity: Seminar
1 Course Unit

LING 470 Narrative Analysis
The course will develop our understanding of narrative structure on the basis of oral narratives of personal experience, told by speakers from a wide range of geographic backgrounds and social classes. It will link the principles governing oral narratives to the narratological examination of myth, literature and film by Propp, Greimas, Prince, Chatman, and others. The principles that emerge from the study of oral narrative will be re-examined in literary narrative, including Scandinavian, Greek and Hebrew epics, medieval romances, film, and modern novels, with attention to the differences between vernacular, literary and academic style. The class will then consider the work of psychologists on how narratives are remembered and understood, based on the causal network theory of Trabasso, and apply these principles to narratives written to teach children to read, particularly those designed to reflect the cultural and linguistic framework of African American children.
Course not offered every year
Activity: Seminar
1 Course Unit

LING 495 Games and Signals
Game Theory has provided a new way of looking at linguistic meaning, particularly pragmatics (the use of language). This course will survey the use of Game Theory in linguistics as well as develop the techniques for studying signaling behavior. We will look at the formal foundations of signaling with particular attention paid to games of incomplete information (games where even which game is being played is uncertain). This will allow us to extend pragmatics beyond Gricean conversational maxims to areas like deception and polite signaling.
Taught by: Robin Clark
Course not offered every year
Activity: Lecture
1 Course Unit

LING 496 Agents and Evolution
The course surveys Evolutionary Game Theory and Agent-Based Models with special reference to language. We will develop systems for modeling various types of language change as well as the dynamics of linguistic micro-variation. Topics include semantic/pragmatic cycles in signaling, the maintenance of conventional meaning, and testing for selection in language change.
Taught by: Clark
Course not offered every year
Activity: Lecture
1 Course Unit

LING 500 Research Workshop
This course is intended for advanced graduate students who are interested in developing a research paper. Each student will present his or her topic several times during the semester as the analysis develops, with feedback from the instructor and other students to improve the organization and content of the analysis. The goal is an end product appropriate for delivery at a national conference or submission to a journal.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

LING 502 Linguistic Field Methods
Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 302. Each student will write a final paper on some aspect of the language.
Taught by: Buckley/Legate
Course not offered every year
Prerequisites: LING 530 and Ling 550
Activity: Seminar
1 Course Unit

LING 503 Sound Structure of Language
An introduction to articulatory and acoustic phonetics; phonetic transcription; basic concepts and methods of phonological analysis.
Taught by: Noyer
Course usually offered in spring term
Activity: Lecture
1 Course Unit

LING 510 Historical and Comparative Linguistics
Taught by: Ringe
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LING 511 Language Variation & Change
Speech communities as a focus for the understanding of language evolution and change: language variation in time and space. The relationship between language structure and language use; between language change and social change. Populations as differentiated by age, sex, social class, race, and ethnicity, and the relationship of these factors to linguistic differentiation.
Taught by: Tamminga
Course usually offered in spring term
Activity: Lecture
1 Course Unit
LING 515 Dynamics of Language
This course introduces the tools, techniques, as well as current research on the approach to language as a dynamical system, which seeks to fruitfully integrate linguistic theory, psycholinguistics, corpus linguistics, and historical linguistics through the means of mathematical modeling. Topics include: string processing, dynamical systems and stability, stochastic processes, mathematical models of population dynamics, and dynamical models of language learning, processing, and change. Taught by: Yang
One-term course offered either term
Prerequisite: LING 510
Activity: Seminar
1 Course Unit

LING 520 Phonetics I
Speech: its linguistic transcription, its quantitative physical description, and its relationship to the categories and dimensions of language structure and use. The physical basis of speech: acoustics, vocal tract anatomy and physiology, hearing and speech perception, articulation and motor control. Phonetic variation and change. Prosody: stress, intonation, phrasing speech rate. Phonetic instrumentation, the design and interpretation of phonetic experiments, and the use of phonetic evidence in linguistic research, with emphasis on computer techniques. Introduction to speech signal processing. Speech technology: introduction to speech recognition, text-to-speech synthesis, speech coding. This course will emphasize the phonetics of natural speech, and its connections to issues in other areas of linguistics and cognitive science. Taught by: Liberman/Kuang
Course usually offered in fall term
Prerequisites: An introductory course in linguistics, or consent of instructor
Activity: Lecture
1 Course Unit

LING 521 Phonetics II
This is a methodology course, which focuses on how to conduct phonetics research using very large speech corpora. Topics include scripting and statistical techniques, automatic phonetic analysis, integration of speech technology in phonetics studies, variation and invariability in large speech corpora, and revisiting classic phonetic and phonological problems from the perspective of corpus phonetics. Taught by: Kuang/Liberman
Course usually offered in spring term
Prerequisite: LING 520
Activity: Lecture
1 Course Unit

LING 525 Computer Analysis and Modeling of Biological Signals and Systems
A hands-on signal and image processing course for non-EE graduate students needing these skills. We will go through all the fundamentals of signal and image processing using computer exercises developed in MATLAB. Examples will be drawn from speech analysis and synthesis, computer vision, and biological modeling. Taught by: Liberman
Course usually offered in fall term
Also Offered As: CIS 558
Activity: Lecture
1 Course Unit

LING 530 Phonology I
First half of a year-long introduction to the formal study of phonology. Basic concepts in articulatory phonetics; the distribution of sounds (phonemes and allophones); underlying and surface forms, and how to relate them using both ordered-rule and surface-constraint approaches. The survey of theoretical topics in this term includes distinctive features (context, organization, underspecification); the autosegmental representation of tone; and the theory of phonological domains and their interaction with morphological and syntactic constituency. Emphasizes hands-on analysis of a wide range of data. Taught by: Noyer
Course usually offered in fall term
Prerequisite: LING 503 or equivalent
Activity: Lecture
1 Course Unit

LING 531 Phonology II
Second half of a year-long introduction; continues LING 530. Topics to be surveyed include syllable structure and moraic theory; the prosodic hierarchy; the properties and representation of geminates; templatic and prosodic morphology; reduplication and emergence of the unmarked; and metrical phonology (properties of stress, foot typology, and issues of constituency). Emphasizes hands-on analysis of a wide range of data. Taught by: Buckley
Course usually offered in spring term
Prerequisite: LING 530
Activity: Lecture
1 Course Unit

LING 530 Phonology I
First half of a year-long introduction to the formal study of phonology. Basic concepts in articulatory phonetics; the distribution of sounds (phonemes and allophones); underlying and surface forms, and how to relate them using both ordered-rule and surface-constraint approaches. The survey of theoretical topics in this term includes distinctive features (context, organization, underspecification); the autosegmental representation of tone; and the theory of phonological domains and their interaction with morphological and syntactic constituency. Emphasizes hands-on analysis of a wide range of data. Taught by: Noyer
Course usually offered in fall term
Prerequisite: LING 503 or equivalent
Activity: Lecture
1 Course Unit

LING 531 Phonology II
Second half of a year-long introduction; continues LING 530. Topics to be surveyed include syllable structure and moraic theory; the prosodic hierarchy; the properties and representation of geminates; templatic and prosodic morphology; reduplication and emergence of the unmarked; and metrical phonology (properties of stress, foot typology, and issues of constituency). Emphasizes hands-on analysis of a wide range of data. Taught by: Buckley
Course usually offered in spring term
Prerequisite: LING 530
Activity: Lecture
1 Course Unit

LING 550 Syntax I
A general introduction at the graduate level to the analysis of sentence structure. The approach taken is that of contemporary generative-transformational grammar. Taught by: Kroch
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LING 551 Syntax II
The second half of a year-long introduction to the formal study of natural language syntax. Topics to be covered include grammatical architecture; derivational versus representational statement of syntactic principles; movement and locality; the interface of syntax and semantics; argument structure; and other topics. The emphasis is on reading primary literature and discussing theoretical approaches, along with detailed case-studies of specific syntactic phenomena in different languages. Taught by: Legate
Course usually offered in spring term
Prerequisite: LING 550 or permission of instructor
Activity: Lecture
1 Course Unit

LING 556 Historical Syntax
Introduction to the study of the syntax of languages attested only in historical corpora. The course will cover methods and results in the grammatical description of such languages and in the diachronic study of syntactic change. Taught by: Kroch
Course not offered every year
Prerequisite: LING 551 or the equivalent
Activity: Seminar
1 Course Unit
LING 568 Dialect Geography
This course traces the origins and characteristics of regional dialects. Beginning with a survey of the traditional dialectology literature beginning in the 19th century, we will discuss the influences of social, political, and physical geography on language change. We will then move on to examine the foundations of North American English dialect regions and the large-scale language changes that underlie their development. Students enrolled in 368 will complete a final project on American English accents; students enrolled in 568 will write an original research paper on a non-English dialect topic of their choosing.
Taught by: Tammenga
Course not offered every year
Activity: Lecture
1 Course Unit

LING 570 Developmental Psycholinguistics
The generative literature on language acquisition has produced many accurate and insightful descriptions of child language, but relatively few explicit accounts of learning that incorporate the role of individual experience into the knowledge of specific languages. Likewise, the experimental approach to language development has identified processes that could provide the bridge between the data and the grammar, but questions remain whether laboratory findings can sufficiently generalize to the full range of linguistic complexity. This course is an overview of research in language acquisition with particular focus on the important connection between what children know and how they come to know it.
Taught by: Yang
Course usually offered in spring term
Activity: Seminar
1 Course Unit

LING 575 Mental Lexicon
An investigation of the psychological representations and processing of words. Topics include: the extraction of words from speech; lexical access and production; the induction of morphological and phonological regularities in word learning; decomposition of morphologically complex words; frequency effects in morphological processing; storage vs. computation in the lexicon; the past tense debate; morphological change. This course makes extensive use of linguistic corpora. Students will also be familiarized with experimental design issues in the psycholinguistic study of the lexicon.
Taught by: Yang
Course not offered every year
Activity: Lecture
1 Course Unit

LING 580 Semantics I
This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.
Taught by: Schwarz
Course usually offered in fall term
Prerequisite: Ling 550
Corequisite: Ling 550
Activity: Lecture
1 Course Unit

LING 581 Semantics II
The first part of the course expands the system from LING 580 to include intensional contexts. In particular, we discuss analyses of modals, attitude verbs, and conditionals, as well as the scope of noun phrases in modal environments. The second part of the course discusses a selection of topics from current work in semantics, such as the semantics of questions, tense and aspect, donkey anaphora, indefinites, genericity, degree constructions, events and situations, domain restriction, plurality and focus.
Taught by: Schwarz
Course usually offered in spring term
Prerequisite: Ling 551
Corequisite: Ling 551
Activity: Lecture
1 Course Unit

LING 595 Game Theoretic Pragmatics
A great deal of linguistic meaning can be explained if we conceive of language as being a signaling system used by rational agents. Game theory provides an explicit mathematical account of rational, strategic interaction. This course will lay out the fundamentals of game theory, evolutionary game theory and multi-agent systems necessary to develop a theory of “radical pragmatics.” We will discuss game theoretic models of implicature; presupposition and accomodation; reference tracking; scalar implicature as well as a number of other phenomena.
Taught by: Clark
Course not offered every year
Activity: Lecture
1 Course Unit

LING 596 Pragmatics Workshop
Pragmatics Workshop
Taught by: Clark
Course not offered every year
Activity: Seminar
1 Course Unit

LING 603 Topics in Phonology
Topics are chosen from such areas as featural representations; syllable theory; metrical structure; tonal phonology; prosodic morphology; interaction of phonology with syntax and morphology.
Taught by: Buckley/Noyer
Course not offered every year
Prerequisite: LING 530-531
Activity: Seminar
1 Course Unit

LING 607 Topics in Psycholinguistics
Topics in Psycholinguistics
Taught by: Schuler
Activity: Seminar
1 Course Unit

LING 608 Topics in Semantics and Pragmatics
Topics in Semantics & Pragmatics
Taught by: Clark/Schwarz
Course not offered every year
Activity: Seminar
1 Course Unit
LING 610 Seminar in Historical and Comparative Linguistics
Selected topics either in Indo-European comparative linguistics or in historical and comparative method.
Taught by: Ringe
One-term course offered either term
Activity: Seminar
1 Course Unit

LING 615 Comparative Indo-European Grammar
A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.
Taught by: Ringe
Two terms; student must enter first term.
Activity: Seminar
1 Course Unit

LING 616 Comparative Indo-European Grammar II
A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.
Taught by: Ringe
One-term course offered either term
Activity: Seminar
1 Course Unit

LING 620 Topics in Phonetics
Topics in Phonetics
Taught by: Liberman/Kuang
Course not offered every year
Activity: Seminar
1 Course Unit

LING 630 Seminar in Morphology
Readings in modern morphological theory and evaluation of hypotheses in the light of synchronic and diachronic evidence from various languages.
Taught by: Noyer/Embick
Course not offered every year
Prerequisite: LING 530
Activity: Seminar
1 Course Unit

LING 650 Topics in Natural-Language Syntax
Detailed study of topics in syntax and semantics, e.g., pronominalization, negation, complementation. Topics vary from term to term.
Taught by: Kroch/Legate
One-term course offered either term
Prerequisite: LING 551 or permission of instructor
Activity: Seminar
1 Course Unit

LING 653 Topics in the Syntax-Semantics Interface
Topics in the Syntax-Semantics Interface
Taught by: Kroch
Course usually offered in fall term
Activity: Seminar
1 Course Unit

LING 660 Research Seminar in Sociolinguistics
Students approaching the dissertation level will explore with faculty frontier areas of research on linguistic change and variation. Topics addressed in recent years include: experimental investigation of the reliability of syntactic judgments; the development of TMA systems in creoles; transmission of linguistic change across generations. The course may be audited by those who have finished their course work or taken for credit in more than one year.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: This course will have different topics each term.

LING 662 Topics in Experimental Sociolinguistics
Topics in Experimental Sociolinguistics
Course not offered every year
Activity: Seminar
1 Course Unit

LING 670 Topics in the Cultural Evolution of Language
Readings in the cultural evolution of language. This encompasses research on the contribution of processes of cultural change to the emergence of language in the human species, the emergence of new languages, and language change viewed as a cultural-evolutionary process. There will be an emphasis on research employing empirical methods, particularly experimentation. Otherwise focus varies from term to term.
Course not offered every year
Activity: Seminar
1 Course Unit

LING 675 Language and Cognition
Activity: Seminar
1 Course Unit

LING 999 Independent Study and Research
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Student must submit brief proposal for approval. May be repeated for credit.
LOGIC, INFORMATION AND COMPUTATION (LGIC)

LGIC 010 Ideas in Logic and Computation
This course provides an introduction to some of the fundamental ideas of logic and computation. Topics will include truth functional logic, quantificational logic, and logical decision problems.
Taught by: Weinstein
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: This is a Formal Reasoning course.

LGIC 210 Applied Mathematics of Information and Computation I
The first semester of a two-semester course designed to introduce students to a range of mathematical subjects useful in the analysis of information and computation. This course will treat topics chosen from set theory, combinatorics, graph theory, and number theory.
Taught by: Scedrov, Towsner
Course usually offered in fall term
Prerequisite: MATH 114 or MATH 115 or permission of the instructor
Activity: Lecture
1 Course Unit

LGIC 220 Applied Mathematics of Information and Computation II
The second semester of a two-semester course devoted to mathematical subjects useful in the analysis of information and computation. Topics will be drawn from automata theory, formal languages, computability and complexity, and information theory.
Taught by: Scedrov, Towsner
Course not offered every year
Prerequisite: LGIC 210 or permission of the instructor
Activity: Lecture
1 Course Unit

LGIC 310 Logic I
Taught by: Scedrov, Towsner, Weinstein
One-term course offered either term
Prerequisite: MATH 371 or MATH 503
Activity: Lecture
1 Course Unit

LGIC 320 Logic II
The second semester of a two-semester course on the fundamental results and techniques of mathematical logic. Topics will be drawn from model theory, proof theory, recursion theory, and set theory. Connections between logic and algebra, analysis, combinatorics, computer science, and the foundations of mathematics will be emphasized.
Taught by: Scedrov, Towsner, Weinstein
One-term course offered either term
Prerequisite: LGIC 310 or permission of the instructor
Activity: Seminar
1 Course Unit

LGIC 499 Topics in Logic
This course will focus on the fundamental results and techniques of mathematical logic. Topics will be drawn from model theory, proof theory, recursion theory, and set theory. Connections between logic and algebra, analysis, combinatorics, computer science, and the foundations of mathematics will be emphasized.
Taught by: Weinstein
Course not offered every year
Activity: Seminar
1 Course Unit
MALAYALAM (MLYM)

MLYM 408 Beginning Malayalam Part I
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.
For BA Students: Language Course
Taught by: Kurichi
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MLYM 409 Beginning Malayalam Part II
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.
For BA Students: Language Course
Taught by: Kurichi
Course usually offered in spring term
Prerequisites: Beginning Malayalam Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit

MLYM 428 Intermediate Malayalam Part I
This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.
For BA Students: Language Course
Taught by: Kurichi
Two terms. student must enter first term.
Activity: Lecture
1 Course Unit

MLYM 429 Intermediate Malayalam Part II
This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.
For BA Students: Last Language Course
Taught by: Kurichi
Course usually offered in spring term
Prerequisites: Intermediate Malayalam Part I or equivalent ascertained through placement exam or permission of instructor.
Activity: Seminar
1 Course Unit
MANAGEMENT (MGMT)

MGMT 100 Leadership and Communication in Groups
Through the process of action, reflection, and experimentation, and application, MGMT 100 aims to develop your leadership, teamwork, and communication skills. The course provides many occasions to strengthen your ability to exercise leadership through service, to speak and write persuasively, and to work collaboratively with a diverse group of individuals. Through the course of the term, you will have a heightened sense of your individual strengths and opportunities for growth. Eleven sections of approximately 60 students are scheduled each year (nine in the fall; two in the spring). Attached to each section are six recitations. Your recitation determines your project team. Whether you are in lecture participating in role plays or simulations, in recitation doing impromptu speeches, or out in the field working on your project, Management 100 is highly interactive and participative. The hallmark of the course is experiential learning.

Activity: Lecture
1 Course Unit
Notes: This course is exclusively reserved for Wharton undergraduate students.

MGMT 101 Introduction To Management
We all spend much of our lives in organizations. Most of us are born in organizations, educated in organizations, and work in organizations. Organizations emerge because individuals can’t (or don’t want to) accomplish their goals alone. Management is the art and science of helping individuals achieve their goals together. Managers in an organization determine where their organization is going and how it gets there. More formally, managers formulate strategies and implement those strategies. This course provides a framework for understanding the opportunities and challenges involved in formulating and implementing strategies by taking a "system" view of organizations, which means that we examine multiple aspects of how managers address their environments, strategy, structure, culture, tasks, people, and outputs, and how managerial decisions made in these various domains interrelate. The course will help you to understand and analyze how managers can formulate and implement strategies effectively. It will be particularly valuable if you are interested in management consulting, investment analysis, or entrepreneurship - but it will help you to better understand and be a more effective contributor to any organizations you join, whether they are large, established firms or startups.

One-term course offered either term
Prerequisite: NONE
Activity: Recitation
1 Course Unit

MGMT 104 Industrial Relations and Human Resource Management
This undergraduate core course introduces students to a combination of basic concepts and timely topics around work and employment. As such, it is divided into two main sections and two quarters within each of those. The first main section deals with micro-level work issues, while the second main section deals with macro-level work issues. Within each of those sections, the first quarter focuses on basic concepts, while the quarter section deals with more applied topics.

One-term course offered either term
Prerequisites: MGMT 100 and MGMT 101
Activity: Lecture
1 Course Unit

MGMT 105 Multinational Corporate Strategies
This course focuses on the creation of competitive advantage in the multinational firm. It examines the nature of global competition by exploring the characteristics of global versus non-global industries and firms. We also explore different types of international strategy and structure and examine the specific challenges of managing in multiple countries and markets. Finally, we consider the strategic allocation of resources along the value chain and the role of strategic alliances as a crucial element of an effective global strategy.

Course usually offered in spring term
Prerequisites: MGMT 100, MGMT 101, and MGMT 111
Activity: Lecture
1 Course Unit

MGMT 111 Multinational Management
Multinational management is the study of the international corporation and the global political and economic environment. This course provides an introduction to the more advanced offerings. It covers the historical origins of the multinational corporation, the economics of trade, money and investment in the world economy, and the policies and behavior of governments and international organizations. We place considerable emphasis in understanding the national and historic origins of the international firm, as well as on current issues regarding emerging economies and shifts in the political economy of global markets.

Prerequisites: MGMT 100 and MGMT 101
Activity: Lecture
1 Course Unit

MGMT 205 Multinational Corporate Strategies
This course focuses on the creation of competitive advantage in the multinational firm. It examines the nature of global competition by exploring the characteristics of global versus non-global industries and firms. We also explore different types of international strategy and structure and examine the specific challenges of managing in multiple countries and markets. Finally, we consider the strategic allocation of resources along the value chain and the role of strategic alliances as a crucial element of an effective global strategy.

Course usually offered in spring term
Prerequisites: MGMT 100, MGMT 101, and MGMT 111
Activity: Lecture
1 Course Unit

MGMT 208 Globalization and International Political Economy
Globalization and International Political Economy is an upper level undergraduate course designed to provide the background necessary to understand globalization and the changes taking place in the international political-economy. The course objective is to help students develop a conceptual framework that will provide an understanding of the current international political-economic environment, provide a basis for thinking about the fundamental changes which are now taking place, and to build a solid foundation to which new material can be added throughout the students’ careers. Format: Class discussions will be interactive and structured to encourage maximum student participation.

Course usually offered in spring term
Activity: Lecture
1 Course Unit
MGMT 209 The Political Environment of the Multinational Firm
Are you well prepared to manage or analyze business challenges and competitive threats in a variety of political and social environments? For example, what should you do to dissuade or counter an individual critic armed with a camera phone or a YouTube account? Or a government official who because of a tight reelection campaign or an internal challenge from a populist general turns on you? Lone individuals, small activist groups and unexpected political shifts have done extensive damage to the reputations - and value - of multinationals in recent years. And yet most companies don’t plan for, or even think about, investing in building the kinds of solid relationships with community leaders, governments, NGOs, and other key players that can help them avoid such crises and, when necessary, draw upon their reservoir of stakeholder capital to respond quickly and decisively when a challenge or threat emerges. This semester-long class provides an integrative perspective towards the management of these risks and opportunities. It highlights that better assessment of stakeholder opinion, understanding of how stakeholders impact firm value and of how to infuse stakeholder relationships with trust to unlock that value are increasingly critical elements of a firm’s long-term success, particularly in emerging markets. Firms must also focus on continual improvement in their stakeholder engagement, reinforcing their actions with strategic communications and via organizational culture. The course will give students a combination of practical tools and the latest academic thinking in the emerging field of corporate diplomacy.

Activity: Lecture
1 Course Unit

MGMT 211 Competitive Strategy
This is an advanced course in competitive strategy. The course will apply the tools of industrial organization economics and game theory to examine the strategic decisions that managers make. We will examine those decisions concerning pricing, capacity investment, advertising, new product introductions, and research and development. Emphasis will be placed on the strategic interaction among rival sellers. In particular we will look at the various methods of entry deterrence and strategic commitment. The course will attempt to integrate traditional economic models with case study materials.

Course usually offered in fall term
Prerequisites: MGMT 100 and MGMT 101 and some knowledge of microeconomics is suggested. The course will be discussion oriented and based largely on case materials and mini-lectures.

Activity: Lecture
1 Course Unit

MGMT 212 Social Entrepreneurship
This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to generate more profits and in so doing, the more the profits made, the more the problem is alleviated. Even if it is not possible to eventually create a profit-making enterprise, the process of striving to do so can lead to a resource-lean not-for-profit entity. Creating a profitable social entrepreneurship venture is by no means a simple challenge. It involves deeply understanding how to prioritize a multi-mission entity, how to analyze and engage traditional agencies, how to formulate political strategies to develop influence and social assets in target beneficiary markets, how to forge negotiating strategies for securing resources, how to capture publicity for the enterprise, and generally how to minimize resource requirements. Students in teams will develop a PowerPoint deck proposing a social enterprise start up using the tools and principles of the course.

Prerequisite: MGMT 230 recomended
Activity: Lecture
0.5 Course Units

MGMT 214 Market Dynamics and Technical Change
The course is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. There is definitely an overlap in content with other courses in intermediate microeconomics, or managerial economics. Nevertheless, the treatment is sufficiently distinctive to make it complementary to those other treatments for a student who is particularly interested in economic change, or is otherwise interested in acquiring a broader view of economics.

Prerequisites: Students need to have taken a first college course in economics. Multivariate calculus is generally useful in economic theory at this level, but does not carry significant weight in this course. Similarly, an understanding of basic linear algebra enhances the value of the linear programming analysis of the firm, but is not a prerequisite. The course is reserved for Wharton juniors and seniors.

Activity: Lecture
1 Course Unit
MGMT 223 Business Strategy
This course encourages students to analyze the problems of managing the total enterprise in the domestic and international setting. The focus is on the competitive strategy of the firm, examining issues central to its long- and short-term competitive position. Students act in the roles of key decision-makers or their advisors and solve problems related to the development or maintenance of the competitive advantage of the firm in a given market. The first module of the course develops an understanding of key strategic frameworks using theoretical readings and case-based discussions. Students will learn concepts and tools for analyzing the competitive environment, strategic position and firm-specific capabilities in order to understand the sources of a firm’s competitive advantage. In addition, students will address corporate strategy issues such as the economic logic and administrative challenges associated with diversification choices about horizontal and vertical integration. The second module will be conducted as a multi-session, computer-based simulation in which students will have the opportunity to apply the concepts and tools from module 1 to make strategic decisions. The goal of the course is for students to develop an analytical tool kit for understanding strategic issues and to enrich their appreciation for the thought processes essential to incisive strategic analysis. This course offers students the opportunity to develop a general management perspective by combining their knowledge of specific functional areas with an appreciation for the requirements posed by the need to integrate all functions into a coherent whole. Students will develop skills in structuring and solving complex business problems.
Prerequisites: MGMT 100 and MGMT 101; seniors and juniors that have completed introductory courses in finance, marketing, and accounting.
Activity: Lecture
1 Course Unit

MGMT 224 Leading Diversity in Org
People in the workplace are constantly interacting with peers, managers, and customers with very different backgrounds and experiences. When harnessed effectively, these differences can be the catalyst for creative breakthroughs and the pathway to team and organizational learning and effectiveness; but when misunderstood, these differences can challenge employees’ values, performance, workplace relationships, and team effectiveness. This course is designed to help students navigate diverse organizational settings more effectively and improve their ability to work within and lead diverse teams and organizations. It also offers students the opportunity to develop their critical thinking on topics such as identity, relationships across difference, discrimination and bias, equality, and equity in organizations and society and how they relate to organizational issues of power, privilege, opportunity, inclusion, creativity and innovation and organizational effectiveness. Class sessions will be experiential and discussion-based. Readings, self-reflection, guest speakers from organizations, case studies and a final project will also be emphasized. By the end of this course, you should be able to: 1) Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations 2) Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations 3) Propose ways to make relationships across difference in organizations more effective 4) Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in organizations 5) Analyze a company’s current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company.
One-term course offered either term
Activity: Lecture
0.5 Course Units

MGMT 225 Value Creation and Value Capture in American Business History
This course concerns the history of capitalism in America viewed from the perspective of the people who operated (and in some cases owned) the firms. Its focus is on the activities of value creation and value capture and on how evolving opportunities and selection pressures have conditioned the historic development of competition, strategic analysis and initiatives, organizational structures, merger-and-acquisition activity, entrepreneurship, and the like. Accounting and control are also part of the story: the course in fact considers issues arising in a variety of different management disciplines and shows off their interrelationships. The maintenance (or otherwise) of value capture over the cycle and over time is a running theme. The course has a narrative element (running from Franklin’s days through the early twenty-first century) but its deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. It proceeds through a consideration of actual business decisions and performance in a series of challenging and otherwise interesting moments in the evolution of the American business environment. The materials are unusual for the Wharton School--they are often case-like and when possible draw on documents contemporary to the decisions such as correspondence, memoranda, minutes of meetings, old newspaper and magazine stories, and eyewitness accounts. They require thoughtful preparation. This course is much more focused on the students than many and a successful experience of its demands that the students both engage with the materials and take an active role in the class discussion. The largest single element in the grading is a substantial term paper on a topic agreeable to both the student and the instructor. For more information, please contact the instructor: raff@wharton.upenn.edu.
Activity: Lecture
1 Course Unit

MGMT 229 Intel Property Strategy
Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: “And boy, have we patented it!” How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategist and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.
Activity: Lecture
0.5 Course Units
Notes: See the description for MGMT 729. This is a cross-listed course.
MGMT 230 Entrepreneurship
MGMT 230 integrates the material introduced in business fundamental courses and applies it to the design and evaluation of new ventures. The purpose of this course is to explore the many dimensions of new venture creation and growth and to foster innovation and new business formations in independent and corporate settings. The course addresses both a theoretical perspective on venture initiation and the application of writing an actual business plan. In this course you are asked to get out of the habit of being a receiver of ideas, facts, concepts and techniques, and get into the habit of generating ideas, identifying problems, analyzing and evaluating alternatives, and formulating workable action plans, thus putting textbook knowledge into practice. Students will get these hands-on experiences in the following ways: Through the formation and ongoing work of venture teams that will design a comprehensive business development plan for a particular start-up company. Teams are expected to utilize the tools and analytical approaches discussed in class to their venture, through simulations, labs, lectures and class discussions that are designed to familiarize students with the many dimensions of entrepreneurship and new venture initiation. Class format varies throughout the course. In some class sessions, there will be a lecture on specific topics. Other sessions will consist of live simulations, labs, in-class exercises, and discussions of a particular topic or venture ideas that students are developing. Guest speakers will also lead and participate in some class sessions.
Activity: Lecture
1 Course Unit

MGMT 231 Entrepreneurial Venture Initiation
This advanced course on entrepreneurship focuses on developing a validated opportunity into a venture that is ready for seed financing and/or launching the product or service. Participants in the workshop must previously have developed a validated opportunity, either in a previous course or through independent efforts. Students may participate as a team of up to three people. Ideally, participants are committed to pursuing their opportunity commercially, or at least to seriously explore that possibility. The workshop provides a practical guidance for developing the product or service, forming the entity, raising capital, building the team, establishing partnerships, and sourcing professional services. After completing the course, you will be "pitch ready" - whether submitting to campus venture competitions or to outside investors. Most coursework is focused on applying concepts and frameworks to project tasks in developing the venture. Format: Readings, discussion, and developing an implementation plan for a real venture. Course usually offered in spring term
Prerequisites: MGMT 230 recommended.
Activity: Lecture
1 Course Unit

MGMT 233 Strategies and Practices of Family-Controlled Companies
This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making; financial and resource driven options for long-run competitiveness, organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, family dynamics and communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm. Format: The class is structured around topical lectures with frequent utilization of case studies. There will be in-class discussion, as well as on-site and off-site project work time.
Course usually offered in spring term
Prerequisite: NONE
Activity: Lecture
1 Course Unit

MGMT 237 Management of Technology
The course is designed to meet the needs of the future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems.
Course usually offered in spring term
Prerequisites: MGMT 100 and MGMT 101; this course is exclusively reserved for Management and Technology students.
Activity: Lecture
1 Course Unit

MGMT 238 Organizational Behavior
Management 238 is an organizational behavior course, examining individual, interpersonal, and group effectiveness at work. Topics range from decision-making, motivation, and personality to networks, influence, helping, leadership, teamwork, and organizational culture. The learning method is heavily experiential, with a focus on applying key principles to the human side of management in role-play exercises, simulations, a mini-TED talk, and group projects in local organizations. This course requires the instructor’s permission. Registration is by application only; Penn InTouch requests will not be processed. The link to the application form will be available on the Management Department’s website: https://mgmt.wharton.upenn.edu/programs/undergraduate, beginning March 12, 2018. The deadline for applications is March 16, 2018 at 5 PM. Students will be notified after March 30, 2018 regarding the status of their application.
Prerequisites: MGMT 100 and MGMT 101
Activity: Lecture
1 Course Unit
Notes: This course is open to juniors and seniors across Penn.
MGMT 240 Group Dynamics
Open to all sophomores, juniors, and seniors. This course develops your knowledge and skills for designing, leading, and consulting with teams in organizations. The goals are to provide both the conceptual understanding and the behavioral skills required to improve team effectiveness. This course makes use of analytic and reflective writing, peer feedback and coaching, simulations, and an intensive field project with a real team in the Philadelphia area. There are four kinds of teams that are the focus of your study: teams of which you’ve been a member in the past; your 240 Team, with three or four other classmates; a team outside of 240 that your 240 Team will observe, analyze, and report on – your Host Team; and a team you expect to be on in the future. The primary case material for applying course concepts (learned from readings and lectures) will be these teams you know from direct observation and experience. Expect to leave this course with new knowledge of how to diagnose and intervene — as leader, member, or consultant — to improve the performance sustainability, and impact on the members of any team. Prerequisite: Sophomore standing or above.
Activity: Lecture
1 Course Unit

MGMT 241 Knowledge for Social Impact: Analyzing Current Issues & Approaches
Recent technological changes have raised awareness of the magnitude and devastating long-term effects of poverty, food insecurity, limited and unequal access to education, and other social issues. Coupled with growing awareness of these issues is the emerging sense that traditional government programs and charities may be unable to solve these problems - at least, not alone. What may be needed are new strategies - strategies borne of (a) a deep understanding of the issues; (b) interdisciplinary collaboration; and (c) access to business knowledge, frameworks, and resources. This course is designed to provide the information, strategies, examples, and analytical mindset to make students more rigorous, insightful, and effective in analyzing social ills and crafting potential solutions. Together, a cross-disciplinary group of undergraduate students, including students in Wharton, the College, and other Penn Schools, will examine the nature and extent of two pressing social problems - food insecurity and barriers to post-secondary education - and current approaches to solving these problems.
Taught by: Klein, Katherine
Activity: Lecture
1 Course Unit

MGMT 242 Corporate Governance, Executive Compensation and the Board
This course examines the relationships between corporate managers, the boards of directors charged with overseeing them, and investors. We'll review the responsibilities of the board, including financial statement approval, CEO performance assessment, executive compensation, and succession planning. While boards are legally bound to represent the interests of equity investors, in the course of carrying out this role they are often called on to respond to the needs of numerous other stakeholders, including customers, employees, government and society at large. With global brands at risk and mistakes instantly transmitted via Internet and social media, the reputational stakes are very high. The course is a combination of lecture, guest lecture, discussion, case analysis, and in-class research workshops. We will review some of the theory underlying modern governance practice, drawing from theories and evidence provided by research across diverse fields, including finance, sociology, and organization and management theory. We'll study specific situations where boards and management teams faced governance challenges, and assess the strategies used to deal with them. Finally, we'll examine the ways in which governance arrangements and external stakeholder involvement in governance affects corporate social behavior and global citizenship.
Prerequisites: MGMT 100 and MGMT 101
Activity: Lecture
1 Course Unit
Notes: Classes will comprise of a combination of mini-lectures and case discussions. Students will be expected to participate fully in class discussions. Effective participation will require sufficient and informed preparation of cases and assigned readings in advance of each class. Requirements: Students will be expected to participate fully in class discussions. Effective participation will require sufficient and informed preparation of cases and assigned readings in advance of each class. In addition, there will be two course papers. See instructor regarding course materials.

MGMT 243 Work and Technology: Choices and Outcomes
This half-semester course is organized in two modules. The first module "Technology, Operations, and Strategy" takes an organizational-level look at the different ways human and social capital are deployed by firms under varying strategies and different production paradigms. In addition, we look at past and current approaches to automation and the diverse rationales, transactional modes, and consequences of outsourcing, particularly of technical labor. The second module "Technology and Managing People" examines how traditional practices of managing human and social capital are being transformed by new technologies that give managers new ways to enact control and new means to induce commitment, while also giving individuals with high levels of human capital ("talent") new sources of leverage in negotiating the employment contract (in both economic and psychological terms) and new opportunities for inter-firm mobility and skill acquisition.
Course not offered every year
Prerequisites: We anticipate that students will have taken the first-year required Wharton 101 (or its replacement course before taking this elective. Taking the core MGMT101 class, either before or together with this elective, will also be helpful in understanding how organizations either function in their environment and the context within which firms make strategic decisions.
Activity: Lecture
0.5 Course Units
Notes: Students will be evaluated on class participation, written work and group assignment.
MGMT 247 Employment Law
See LGST 208. This is a cross-listed course.
Activity: Lecture
1 Course Unit

MGMT 249 Mergers and Acquisitions
This course explores the role of mergers and acquisitions and alternative methods of corporate development in advancing the strategies of operating business. Emphasis is on the way companies use acquisitions to alter business mixes; seize opportunities in new products, technologies and markets; enhance competitive positioning; adjust to changing economics, and promote value-creating growth. Although the course will emphasize strategic acquisitions, it will also explore leveraged buy-outs and hostile financial acquisitions as well as their influence on corporate buyers. Please note that you must fulfill the prerequisites in order to enroll in this class.
Prerequisites: MGMT 100 and MGMT 101
Activity: Lecture
1 Course Unit

MGMT 251 Consulting to Growth Companies
This course offers students a unique opportunity to develop consulting skills and entrepreneurial expertise by working as consultants to thriving entrepreneurial ventures in the Philadelphia area. This capstone course combines both fieldwork and class work and allows students to apply knowledge and skills acquired through other course work to real world issues that must be addressed by operating companies. An understanding of characteristics producing rapid entrepreneurial growth and skills related to effective communications and management of a business relationship are emphasized. Team term consulting assignment, lectures, case analysis, and small group discussions.
Course usually offered in fall term
Prerequisites: Junior or Senior Standing Recommended.
Activity: Lecture
1 Course Unit

MGMT 264 Venture Capital and Entrepreneurial Management
This course focuses on venture capital management issues in the context of a high-growth potential start-up company. The course is motivated by rapid increases in both the supply of and demand for private equity over the past two decades. The topic is addressed from two distinct perspectives: issues that relate to the demand for private equity and venture capital (the entrepreneur’s perspective) on the one hand, and issues that relate to the supply of capital (the investor’s perspective) on the other. As well, we will address management issues that relate to how the VC and the entrepreneur work together once an investment has been made, compensation issues, and governance issues in the privately held venture capital backed company. Format: Case/discussion format, supplemented by lectures and guest speakers.
Course usually offered in fall term
Prerequisite: Junior or Senior Standing Recommended
Activity: Lecture
1 Course Unit

MGMT 267 Entrepreneurship and Technological Innovation
This course will give you an overview of entrepreneurial development, especially within the realm of technical innovation. We will be concerned with content and process questions as well as with formulation and implementation issues that related to conceptualizing, developing and managing successful new ventures. The class serves as both a stand-alone one and as a preparatory course to a more in-depth venture implementation class (MGMT 231) as well as other classes in the domain of management and entrepreneurship. Management 267 will appeal to individuals who have a desire to become entrepreneurs at some stage of their career. Similarly, students who intend to work in the entrepreneurial ecosystem (such as in the venture capital industry) will benefit from the course.
Activity: Lecture
0.5 Course Units

MGMT 272 Power and Politics in Organizations
The purpose of this course is to introduce you to the power dynamics in organizations. The course is designed so that you will learn concepts that are useful for understanding, analyzing, and developing political skill. But beyond discovering ways to extend your own power in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of scholarly articles, cases, exercises, assessments and simulations, we will extract a variety of lessons about power and politics in organizations. Topics include voice, issue selling, building coalitions and networks, coping with intolerable bosses and incivility, and downsizing. Students will be expected to engage in field research for their coursework and final paper, and the course requires that students submit assignments for almost every class session. Thematically, this course highlights how your relationships with organizational stakeholders and an understanding of the organizational context are crucial to successfully navigating the political terrain of organizations. Organizations are inherently political arenas that require social astuteness, and an understanding of the “rules of the game.”
This course is designed for students aiming to develop their leadership, general management, and career skills through a better understanding of power and politics, and relates to other courses on these topics in the Management department.
Activity: Lecture
0.5 Course Units

MGMT 276 Cultivating Judgment Skills: Forecasting in Business Politics
This course will explore the diverse ways in which scholars and practitioners have defined “good judgment.” And it will introduce students to practical tools for assessing and improving judgment, with special emphasis on probabilistic reasoning. Students will have the opportunity both to fine-tune their personal judgment skills as well as to master and then weave together insights from several bodies of scientific knowledge, including frequentist and Bayesian statistics, psychological work on judgment and choice, group dynamics, organizational behavior and political science (key concepts discussed in Tetlock’s (2015) book “Superforecasting”). We will focus on bottom-line accuracy in sizing up real world problems. Class work will be primarily exercises, including working as an individual and in teams. You will have opportunities to forecast on a wide range of political, business, and macro-economic questions, which we will use as feedback tools to help you calibrate your judgment. Assessments include a weekly concept test and a final group presentation aimed to help you improve your judgment. The goal is to launch you on the lifelong process of learning how much trust you should place in your judgments of trustworthiness.
Activity: Lecture
1 Course Unit
MGMT 288 Managing and Competing in China
This course provides an examination of some of the largest businesses in the People's Republic of China, acquainting students with the governance and management (both management structure and management teams) of some of the largest and best-known Chinese firms. Students will also become acquainted with the capabilities and liabilities of Chinese firms and their strategic options. Tools needed to assess the investment potential of Chinese firms will be provided, and students will have an opportunity to do original research on issues of governance and management of Chinese firms.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MGMT 291 Negotiations
This course includes not only conflict resolution but techniques which help manage and even encourage the valuable aspects of conflict. The central issues of this course deal with understanding the behavior of individuals, groups, and organizations in conflict management situations. The purpose of this course is to understand the theory and processes of negotiations as it is practiced in a variety of settings. The course is designed to be relevant to the broad spectrum of problems that are faced by the manager and professional including management of multinationals, ethical issues, and alternative dispute resolutions. Cross listed with LGST 206 and OIDD 291.
Prerequisites: MGMT 100 and MGMT 101

MGMT 610 Foundations of Teamwork and Leadership
MGMT 610 is the first core course in the MBA Program and it cannot be waived. The first week of the fall term (in August) is dedicated to this formative and foundational experience. This course focuses on developing students' knowledge and skill set for teamwork and leadership. It is meant to be an intense immersion experience that draws strongly on the pedagogy of the Wharton Teamwork and Leadership Simulation, a team-based, highly interactive simulation that was custom-designed specifically to allow students to experience the core concepts they learn in this class. The three goals of this course are for students to learn: 1. Leadership behaviors: how to enact the skills that contribute to a team's effective performance. 2. Team dynamics: how to be an effective team member, as well as how to best design work teams. 3. Organizational awareness: understanding organizational culture. Format: A custom-designed Wharton-only simulation is paired with course sessions to deliver a unique learning experience. Classes will include experiential learning combined with debriefings, lectures, readings, class discussion and personal and group performance feedback. This course reflects the realities that informal leadership occurs in teams on an ongoing basis, that being a good team player is a part of leadership, and that many of one's early experiences with leadership will occur while working on teams. Because of the team-based nature of this course, and time-intensive nature of this experience, attendance is mandatory for ALL five sessions of this class.
Activity: Lecture
0.5 Course Units

MGMT 611 Managing Established Enterprises
The management of large, established enterprises creates a range of multi-faceted challenges for the general manager. A general manager needs to understand the internal workings of a firm, how to assess and create a strategy, and how to take into account increasing globalization. While these issues are distinct, they are very much intertwined. As a result, this course will provide you with an integrated view of these challenges and show you that effective of an established enterprise requires a combination of insights drawn from economics, sociology, psychology and political economy.
Activity: Lecture
1 Course Unit
MGMT 612 Management of Emerging Enterprises
Emerging enterprises, the focus in this course, are small, new, fast-growing organizations. Their founders and managers face multifaceted challenges: how to assess the competitive position of their business model and develop a strategy; how to develop the internal organizational structure, culture, and policies for selecting and managing employees; and how to pursue global opportunities. We cover these challenges in separate modules on strategy, human and social capital, and global issues. The human and social capital module covers classic management challenges of aligning interests of the individual and the organization; managing individual psychological needs and social influences; and developing employee capabilities that provide competitive advantage. Also covered are unique challenges that yound organizations face, i.e. building an effective culture; recruiting, selecting, and retaining talent; building systematic approaches to motivating employees; coping with the stresses of rapid growth; and leveraging the benefits (and avoiding the liabilities) of the founder's powerful imprint. The strategy module covers fundamental issues central to the competitiveness of the enterprise. Because the strategy field is broad, MGMT 612 emphasizes topics and frameworks that are most relevant for younger firms, such as innovation, disruption, managing resource constraints, and building capabilities. However, a key insight of the module is the importance of seeing the playing field from the perspective of the competition. Thus, by the end of this section, students will have a robust grounding in strategy that will allow them to succeed, whether their career path leads to a Fortune 100 firm or a garage start up.
Activity: Lecture
1 Course Unit

MGMT 624 Leading Diversity in Org
People in the workplace are constantly interacting with peers, managers, and customers with very different backgrounds and experiences. When harnessed effectively, these differences can be the catalyst for creative breakthroughs and the pathway to team and organizational learning and effectiveness; but when misunderstood, these differences can challenge employees' values, performance, workplace relationships, and team effectiveness. This course is designed to help students navigate diverse organizational settings more effectively and improve their ability to work within and lead diverse teams and organizations. It also offers students the opportunity to develop their critical thinking on topics such as identity, relationships across difference, discrimination and bias, equality, and equity in organizations and society and how they relate to organizational issues of power, privilege, opportunity, inclusion, creativity, and innovation and organizational effectiveness. Class sessions will be experiential and discussion-based. Readings, self-reflection, guest speakers from organizations, case studies and a final project will also be emphasized. By the end of this course, you should be able to: 1) Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations 2) Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations 3) Propose ways to make relationships across difference in organizations more effective 4) Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in organizations 5) Analyze a company's current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company.

MGMT 671 Executive Leadership
Leaders mobilize resources toward valued goals. In this course, the focus is on growing the student's capacity as a leader in all parts of life. The purpose is to learn practical and customized lessons about how to improve performance and results at work, at home, in the community, and in the private self (mind, body, spirit) by finding mutual value among these four domains. The core idea is that leadership is about making a difference in all aspects of one's life. This course offers students the opportunity to practice the skills needed to do so, now and in the future. Students learn and apply key leadership principles and actively explore what it means for them to be real (to act with authenticity by clarifying what's important), to be whole (to act with integrity by respecting the whole person), and to be innovative (to act with creativity by experimenting with how things get done). Please visit www.totalleadership.org to learn more. Special registration for MGMT 671: This course is only available to Wharton MBA students. The first step in the registration process for it is to apply for admission by writing a response to the email Professor Friedman send in the Fall term to all Wharton MBA students. This course is not included in MBA Course Match.
Course usually offered in spring term

MGMT 690 Mang Decsn Making
See OIDD 690. This is a cross-listed course with OIDD 690.
Activity: Lecture
1 Course Unit
MGMT 691 Negotiations
This course examines the art and science of negotiation. This course develops managerial skills by combining lectures with practice, using exercises where students negotiate with each other. Over the course of the semester, students will engage in a number of simulated negotiations ranging from simple one issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills. Cross-listed with LGST 806 and OIDD 691.
Activity: Lecture
1 Course Unit

MGMT 701 Strategy and Competitive Advantage
This course is concerned with strategy issues at the business unit level. Its focus is on the question of how firms can create and sustain a competitive advantage. A central part of the course deals with concepts that have been developed around the notions of complementarities and fit. Other topics covered in the course include the creation of competitive advantage through commitment, competitor analysis, different organizational responses to environmental changes, modularity, and increasing returns. An important feature of the course is a term-length project in which groups of students work on firm analyses that require the application of the course concepts.
Prerequisite: MGMT 611 or MGMT 612
Activity: Lecture
1 Course Unit

MGMT 711 Competitive Strategy and Industrial Structure
This is a course in analyzing competitive interactions. The course emphasizes a vision of strategy in which each competitor simultaneously chooses its strategy, taking into account the strategies of its opponents. Crucial to this vision is the anticipation of the moves of your opponent and, in particular, the expectation that your opponent is (almost) as smart as you are. Equal attention will be given to the development of techniques for analyzing competitive interactions and to the application of those techniques. Game theory and the economics of industrial organization provide the basis for the theoretical constructs developed in the course. Topics that will be explored include: market failures and profitability, competitive bidding, signaling, entry deterrence, agenda setting, regulations, and price wars.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MGMT 712 Managing strategic partnerships
This course explores the management of strategic partnerships between firms, which have surged in recent years in response to globalization, technological evolution, deregulation, shortened product life cycles, and intensified competition. Today’s alliances drive corporate growth and change, and vary greatly in terms of partner type, commitment, equity investment, degree of control, between scale, and scope. They range from bilateral arrangements to ecosystems to outsourcing, often blurring traditional organizational boundaries and leading to the creation of globally distributed enterprises. In view of these contemporary developments, the objectives of the course are two-fold: (1) to arm you with a set of tools to facilitate the selection of an appropriate alliance strategy in a given situation; and, (2) to provide you with frameworks to help the initiate and implement different kinds of partnerships. The emphasis lies on strategic and organizational aspects in the formation and management of these transactions, rather than financial considerations. Alternative growth strategies to strategic alliances (e.g., acquisitions), the impact of these partnerships on competition within an industry, and regulatory constraints will also be discussed. In terms of its pedagogical approach, this is designed to be an interactive, applied, case-based course with accompanying conceptual readings to help structure your thinking. Given the nature of the course, we will also apply the lessons from the cases to understand the challenges and implications of relevant recent and on-going deals. In addition, guest speakers with experience in investment banking, consulting, and industry will be invited to share their perspectives. A group project is intended to give you the opportunity to apply your learning from the course to a context that is most interesting and relevant to you.
Course not offered every year
Prerequisite: MGMT 611 or MGMT 612
Activity: Lecture
0.5 Course Units

MGMT 714 Value Creation and Value Capture in American Business History
This course examines how the kind of firms in which most Wharton students will spend the next stage of their careers came to be as they are today. At a superficial level, the course’s objectives are descriptive and narrative. Its deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. The course will discuss the historical development of the business enterprise as an institution. It will also cover the evolution of competition and strategy and of corporate finance. The focus will be on American developments, since many of the innovations took place here, but there is scope for comparison with institutions in Japan and the leading European economies if there is student interest. The course considers issues arising in anumber of different management disciplines and shows off their interrelationships. In terms of the Wharton curriculum and of recent research, strategy issues, and in particular the set of issues concerning how value can be created and captured at the enterprise level, are a running theme. Format: There will be occasional lecturing but this is principally a discussion course. The readings are predominantly primary source documents, supplanted when helpful by background notes from the instructor; with occasional readings from secondary sources. Evaluation is based on class participation, weekly brief written responses to the readings, and a term paper, with the great bulk of the grade weight on the last of these.
Taught by: Raff.
Prerequisite: MGMT 611 or MGMT 612
Activity: Lecture
1 Course Unit
**MGMT 715 Political Environment of the Multinational Firm**

All successful firms go global. This course provides a broad introduction to international business. You will learn about who loses and who gains from trade, what are the effects of tariffs and non-tariff barriers, the World Trade Organization (WTO), regional trading blocs, and NAFTA. The course then turns to the international financial architecture, focusing on exchange rate risk. We then move to multinational firm strategies, including a discussion of the reasons for why firms choose to do business globally through trade or FDI, international tax strategy, joint ventures, technology transfer, different ways to be a multinational firm, and ethical dilemmas. The class is a mix of lectures and cases that allow students to synthesize the extensive materials on multinational management, international institutions, economic policies, and politics with a goal towards formulating multinational firm strategy.

*Activity: Lecture*

---

**MGMT 720 Corporate Diplomacy**

Are you well prepared to manage or analyze business challenges and competitive threats in a variety of political and social environments? For example, what should you do to dissuade or counter an individual critic armed with a camera phone a YouTube account? Or a decentralized grassroots organization that seemingly pops up overnight, appears to have no single leader or headquarters, and yet is quite successful in capturing media attention? Or a government official who because of a tight reelection campaign or an internal challenge from a populist general turns on you? Lone individuals, small activist groups and unexpected political shifts have done extensive damage to the reputations - and value - of multinationals in recent years. And yet most companies don’t plan for, or even think about, investing in building the kinds of solid relationships with community leaders, governments, NGOs, and other key players that can help them avoid such crises and, when necessary, draw upon their reservoir of stakeholder capital to respond quickly and decisively when a challenge or threat emerges. This semester-long class provides an integrative perspective towards the management of these risks and opportunities. It highlights that better assessment of stakeholder opinion, understanding of how stakeholders impact firm value and of how to infuse stakeholder relationships with trust to unlock that value are increasingly critical elements of a firm’s long-term success, particularly in emerging markets. Firms must also focus on continual improvement in their stakeholder engagement, reinforcing their actions with strategic communications and via organizational culture. The course will give students a combination of practical tools and the latest academic thinking in the emerging field of corporate diplomacy.

Taught by: Witold Henisz

Prerequisites: There are no formal prerequisites but participants should be able to contribute some individual expertise from previous coursework, training, and work experience and will, at other times, rely heavily on their peers to summarize and introduce key concepts and perspectives from other disciplines, industries or countries with which they may be less familiar.

*Activity: Lecture*

---

**MGMT 729 Intel Property Strategy**

Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: "And boy, have we patented it!"] How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategist and investors. This course is cross-listed with LGST 729/MGMT229. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.

---

**MGMT 731 Technology Strategy**

The course is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. The course uses a combination of cases, simulation and readings. The cases are drawn primarily from technology-based industries. Note, however, that the case discussions are mainly based on strategic (not technical) issues. Hence, a technical background is not required for fruitful participation.

MGMT 740 Leading Effective Teams
This course develops your knowledge and skills for designing, leading, and consulting with teams in organizations. The goals are to provide both the conceptual understanding and the behavioral skills required to improve effectiveness. This course emphasizes class participation, readings, analytic and reflective writing, assessments, peer feedback and coaching, lectures simulations and an intensive field project. with a real team in the Philadelphia area. Four kinds of teams are the focus of study: teams of which you've been a member in the past; your 740 team, with three or four classmates; a team outside of 740 that your 740 Team will observe, analyze, and report on - your Host Team; and a team that you expect to be on in the future. The case material for learning and applying course concepts will be these teams that you know from direct observation and experience. Expect to leave this course with new knowledge of how to diagnose and intervene - as leader, member, or consultant - to improve the performance, sustainability, and impact on the members of any team in any setting. The text is by J. Richard Hackman, Leading Teams (Harvard Business).
Prerequisite: MGMT 610
Activity: Lecture
1 Course Unit

MGMT 765 Venture Capital and Entrepreneurial Management: Practices and Institutions of Silicon Valley
This elective half-semester course will highlight venture capital and entrepreneurship in general and will explore selected aspects of this industry, including: industry trends and dynamics in Silicon Valley and the South of Market area (SOMA) of San Francisco; the recent emergence of alternative sources of startup financing, including incubators/ accelerators and crowdfunding platforms; angel groups and stage-agnostic institutional investors; business and operational aspects of early stage companies in transition to mezzanine-level stages of growth; and company “exits,” including both initial public offerings and merger/sale transactions. MGMT765 and MGMT804 cover separate issues within the same general industry and are not redundant. This course addresses issues faced by later stage VC backed firms, while MGMT804 centers on early stage, pre-revenue startups. The format of this course relies heavily on site visits and recognized leaders within the Bay Area to bring forth on-the-ground perspectives of a changing and important industry. While MGMT804 is not a prerequisite, the two courses are complementary.
Prerequisite: MGMT 801 recommended
Activity: Lecture
0.5 Course Units
Notes: Requirements: Individual participation in lectures, discussions, and company visits, student presentations, and final paper.

MGMT 772 Power and Politics in Organizations
The purpose of this course is to introduce you to the power dynamics in organizations. The course is designed so that you will learn concepts that are useful for understanding, analyzing, and harnessing power. But beyond discovering ways to extend your own power, influence and political skill in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of theoretical and business articles, cases, exercises, assessments, and simulations, we will extract a variety of lessons about power and politics in organizations. Topics include political skill, influence, issue selling, change management, networks, hierarchy, political conflict, corruption, coping with intolerable bosses, speaking up, redemption, and downsizing. Thematically, this course highlights how your relationships with organizational stakeholders and an understanding of the organizational context are crucial to successfully navigating the political terrain of organizations. Organizations are inherently political arenas that require social astuteness, and an understanding of the "rules of the game." This course is designed for students aiming to develop their leadership, general management and career skills through a better understanding of power and politics, and relates to other courses on these topics in the Management department.

MGMT 776 Cultivating Judgment Skills
A world-class poker player defined the difference between serious players and amateurs this way: serious players know the difference between 40/60 and 60/40 propositions. In other words, serious players are well calibrated (skilled at distinguishing what they know from what they don't). This course gives you chances to explore how well calibrated you are in a low-risk setting. The course should appeal to students with interests in strategy, international business, political-risk analysis, and the managerial challenges of maximizing the judgmental accuracy of key personnel. The class will pit its wits against competitors in a global-forecasting tournament sponsored by the Intelligence Advanced Research Projects Agency (IARPA) - as well as design forecasting exercises around your individual career and business plans. Key challenges include: (a) learning to translate “interesting questions” into “testable propositions,” (b) getting into the habit of translating vague hunches into probability metrics and making good use of feedback on how well calibrated you are, (c) applying tools for enhancing accuracy, (d) making solo forecasts - and exploring methods of making team forecast more than the sum of their individual-contributor parts.
Prerequisites: None (but an interest in links between business and politics is helpful).
Activity: Lecture
0.5 Course Units
MGMT 782 Strategic Implementation
This course is directed toward the attainment of five interdependent objectives: 1) to develop an understanding of strategic implementation in complex organizations; 2) to understand how organizational planning, design, control and human resource decisions are interdependent and critical to successful implementation; 3) to develop a sensitivity to the "realities" of strategy implementation in "real world" organizations; 4) to obtain a deeper understanding of your personal management style and how it may help or hinder strategy implementation; and 5) to become a better communicator and implementer of strategy. To meet these course objectives, the emphasis will be on learning powerful ideas about how to be systematic in strategy implementation efforts, making use of research about case problems, class discussions, in class exercises, and student presentations. Much of the learning will take place in group discussions outside the classroom in preparation for the time we meet in the classroom.
Activity: Lecture
1 Course Unit

MGMT 784 Managerial Economics and Game Theory
The purpose of this course is to develop students' abilities to apply game theory to decision making. Development of the tools of game theory and the application of those tools is emphasized. Game theory has become an important tool for managers and consultants in analyzing and implementing tactical as well as strategic actions. This course will primarily focus on examples useful for developing competitive strategy in the private sector (pricing and product strategy, capacity choices, contracting and negotiating, signaling and bluffing, takeover strategy, etc.). Game theory can also be used to address problems relevant to a firm's organizational strategy (e.g., internal incentives and information flow within a firm) and to a firm's non-market environment (e.g., strategic trade policies, litigation and regulation strategy).
Prerequisites: (Intermediate microeconomics) or equivalent. It is expected that the student has been introduced to some basic game theory. There will be a quick review of the basics and some recommended supplemental readings for those who have little or no background in game theory.
Activity: Lecture
0.5 Course Units

MGMT 794 Understanding Careers and Executive Labor Markets
This course examines the structure of executive careers in order to help understand how those careers can be managed most effectively. By drawing on extensive economic, sociological and psychological research on careers, we will examine such questions as when executives should move on to the next job or even change fields altogether, and what are effective means of finding jobs, achieving promotions, managing networks, and achieving work-life balance. The first few sessions of the course explore the basic building blocks of the career, outlining our knowledge on the different orientations that individuals take to their careers, how approaches to the career change as people get older, and how different kinds of job moves within and across firms advance careers. The second part of the course explores in more detail the social resources that affect careers, notably social networks and relationships with mentors. The third section of the course then examines a number of the most important and difficult issues affecting modern careers, including making successful transitions, the effects of gender on careers, work life balance, and international careers.
Prerequisites: There are no prerequisites for this course.
Activity: Lecture
0.5 Course Units

MGMT 801 Entrepreneurship
MGMT 801 is the foundation course in the Entrepreneurial Management program. The purpose of this course is to explore the many dimensions of new venture creation and growth. While most of the examples in class will be drawn from new venture formation, the principles also apply to entrepreneurship in corporate settings and to non-profit entrepreneurship. We will be concerned with content and process questions as well as with formulation and implementation issues that relate to conceptualizing, developing, and managing successful new ventures. The emphasis in this course is on applying and synthesizing concepts and techniques from functional areas of strategic management, finance, accounting, managerial economics, marketing, operations management, and organizational behavior in the context of new venture development. The class serves as both a stand alone class and as a preparatory course to those interested in writing and venture implementation (the subject of the semester-long course, MGMT 806). Format: Lectures and case discussions
Prerequisites: Wharton MBA students only.
Activity: Lecture
0.5 Course Units

MGMT 802 Change, Innovation & Entrepreneurship
Designed for students with a serious interest in entrepreneurship, this course will provide you with an advanced theoretical foundation and a set of practical tools for the management of startups and entrepreneurial teams in fast-changing and innovative environments. Building on the skills of MGMT 801, every class session is built around an experience where you have to put learning into practice, including the award-winning Looking Glass entrepreneurial simulation, role-playing exercises, and a variety of other games and simulations. The goal is to constantly challenge you to deal with entrepreneurial or innovative experiences, as you learn to navigate complex and changing environments on the fly, applying what you learned to a variety of scenarios. MGMT 802 is built to be challenging and will require a desire to deal with ambiguous and shifting circumstances. Format: Lectures, discussion, interim reports, class participation, readings report, and presentations, and an innovation assessment in PowerPoint format.
Prerequisites: MGMT 801 strongly recommended.
Activity: Lecture
0.5 Course Units
MGM804 Venture Capital and Entrepreneurial Management
This elective half-semester course focuses on venture capital management issues in the context of the typical high-growth potential early stage start-up company. The course is fundamentally pragmatic in its outlook. It will cover seven principal areas relevant to the privately held high-growth start-up which include: commentary on the venture capital industry generally, as well as a discussion of the typical venture fund structure and related venture capital objectives and investment strategies; common organizational issues encountered in the formation of a venture backed start-up, including issues relating to initial capitalization, intellectual property and early stage equity arrangements; valuation methodologies that form the basis of the negotiation between the entrepreneur and the venture capitalist in anticipation of a venture investment; the challenges of fundraising, financing strategies and the importance of the business plan and the typical dynamics that play out between VC and entrepreneur; typical investment terms found in the term sheet and the dynamics of negotiation between the entrepreneur and the venture capitalist; compensation practices in a venture capital backed company, and corporate governance in the context of a privately-held, venture capital-backed start-up company and the typical dynamics that play out between VC and entrepreneur in an insider-led, "down round" financing.

Prerequisite: MGM801 recommended
Activity: Lecture
0.5 Course Units

MGM806 Formation and Implementation of Entrepreneurial Ventures
This advanced course on entrepreneurship focuses on developing a validated opportunity or concept into a venture that is ready for seed financing and/or launching the product or service. Participants in this course must previously have developed a validated opportunity, either in a previous course or through independent efforts. Students may participate as a team of up to three people. Ideally, participants are committed to pursuing their opportunity commercially, or at least to seriously explore that possibility. The course provides a practical guidance for developing the product or service, forming the entity, raising capital building the team, establishing partnerships, and sourcing professional services. After completing the course, you will be "pitch ready" - whether submitting to campus venture competitions or to outside investors. Most coursework is focused on applying concepts and frameworks to project tasks in developing the venture. Students must have successfully completed MGM801 before enrolling in this course. Students must have successfully completed MGM801 before enrolling in this course.
Format: Highly interactive
Prerequisites: MGM801 REQUIRED.
Activity: Lecture
1 Course Unit

MGM809 Private Equity in Emerging Markets
The course investigates the private equity industry in emerging markets. The goal of the course is to give students a realistic understanding of the roles, responsibilities and analytical skills required of market practitioners, as well as the tensions that arise between various stakeholders, including government officials, investors, entrepreneurs, and the press. The underlying premise is that private equity in those countries has evolved as a distinctly different asset class from private equity in industrialized countries in areas such as valuations, governance, structure, contract enforcement and regulatory transparency. The course will require high level of preparation and class participation. Classes will be a mix of guest speakers from the industry and business cases, to provide students with a practical grasp of the private equity industry and the particular issues involved with how the business works in emerging markets. Cases will highlight the challenges and tasks at each stage of the investment cycle, such as structuring a new fund, originating new deals, conducting due diligence, creating value and monitoring performance of portfolio companies, and exiting.
Prerequisites: Completion or waiver of FNCE 601.
Activity: Lecture
0.5 Course Units

MGM811 Entrepreneurship Through Acquisition
MGM811 focuses on the theoretical, strategic, analytics, and practical issues of acquiring a business. Topics include: locating a business, due diligence, reviewing and analyzing data, valuation, raising capital/financing the deal, structuring the acquisition, letters of intent, contracts/asset purchase agreements, and integrating the target. Format: The class consists of lectures, in-class discussions of caselets, assigned readings, homework problems, and a group or individual project.
Prerequisites: MGM801 recommended.
Activity: Lecture
0.5 Course Units

MGM812 Social Entrepreneurship
This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to launch a venture that generates profits by alleviating that social problem. Even if it is not possible to eventually create a profit-making enterprise, the process of striving to do so can lead to a resource-lean not-for-profit entity. Creating a profitable social entrepreneurship venture is by no means a simple challenge. Cross-listed with MGM212.
Activity: Lecture

MGMT 816 Building Human Assets in Entrepreneurial Ventures
The success of entrepreneurial endeavors depends, even more so than in larger more bureaucratic organizations, on the ability to locate and manage talent effectively. Specifically, on the need to find the right people and keep them engaged in working on the organization’s goals. We focus in this course on leading, building, and maintaining human assets in start-up and small, growing operations. The course is designed with several key components, these are: conceptual and practical readings relevant to the topic; case studies illustrating key concepts and issues; lecture on practical application and examples; and lastly every class will also feature a presentation by and conversation with an outside expert whose work is relevant to guiding or advising start-ups and fast-growing small firms. We will focus on the following objectives: identifying the talent needed to initiate and sustain an entrepreneurial endeavor; structuring human resource policies and corporate culture to prepare for and facilitate firm growth; assessing the human aspects of valuing entrepreneurial companies; and responding to conflict and organizational threats within nascent firms. This course will apply recent research from strategic human resource management, personnel economics and organizational behavior to the practical issues of building and managing human assets in new ventures.
Prerequisites: MBA students only.
Activity: Lecture
0.5 Course Units

MGMT 833 Strategies and Practices of Family-controlled Companies
This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making; financial and resource driven options for long-run competitiveness, organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, family dynamics, communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm. The class is structured around topical lectures with frequent utilization of case studies requiring active class participation, as well as on-site and off-site project work time. Submission of several written case studies, and a term project are required.
Prerequisites: Open to Wharton MBA and Penn graduate students
Activity: Lecture
1 Course Unit

MGMT 896 Decision Making in the Leadership Chair
Contact the Management Department for additional information at: Courseinfo@wharton.upenn.edu. Decision making in the leadership chair is a complex task and one that is difficult to teach in a business school setting. To bridge this gap, Mr. William P. Lauder and invited executives will bring their experiences into the classroom, primarily addressing key decision they made, how they weighed their options, and what they learned from the outcomes. The framework for the class centers around two crucial aspects of decision making in the leadership chair: the need to manage many groups of stakeholders, and the need to play many roles when doing this. This course is by application only to second-year Wharton MBAs and a maximum of 48 students will be selected. A communication will be sent regarding the application details.
Activity: Independent Study

MGMT 897 Global Modular Course A: Lesson From Israeli Innovation
Activity: Lecture
0.5 Course Units

MGMT 900 Economic Foundations of Management
This course examines some of the central questions in management with economic approaches as a starting point, but with an eye to links to behavioral perspectives on these same questions. It is not a substitute for a traditional microeconomics course. Economics concerns itself with goal directed behavior of individuals interacting in a competitive context. We adopt that general orientation but recognize that goal directed action need not take the form of maximizing behavior and that competitive processes do not typically equilibrate instantaneously. The substantive focus is on the firm as a productive entity. Among the sorts of questions we explore are the following: What underlies a firms capabilities? How does individual knowledge aggregate to form collective capabilities? What do these perspectives on firms say about the scope of a firms activities, both horizontally (diversification) and vertically (buy-supply relationships)? We also explore what our understanding of firms says about market dynamics and industry evolution, particularly in the context of technological change. A central property of firms, as with any organization, is the interdependent nature of activity within them. Thus, understanding firms as "systems" is quite important Among the issues we explore in this regard are the following. Organizational "systems" have internal structure, in particular elements of hierarchy and modularity. Even putting aside the question of individual goals and objectives and how they may aggregate, the question of organizational goal is non-trivial. To say that a firms objective is to maximize profits is not terribly operational. How does such an overarching objective get decomposed to link to the actual operating activities of individual subunits, including individuals themselves. This issue of goals has links to some interesting recent work that links the valuation process of financial markets to firm behavior. Financial markets are not only a reflection of firm value, but may guide firms initiatives in systematic ways.

1 Course Unit

MGMT 918 Personnel Economics A
This is a half-semester PhD course in the Management Department that is also open to any current PhD students at Wharton. The canonical model in economics views an agent as a fully rational, atomistic individual making optimal choices under scarcity. This approach has been very powerful theoretically and empirically to explain and to predict behavior in the workplace. This model has also been enriched to accommodate other phenomena arguably affecting behavior in the workplace like the social context (e.g. peer effects, altruism, or social comparison), non-standard time preferences, loss aversion, and cognitive costs. Incorporating these ideas into the standard model can be accomplished in various ways but the real stress test for these theories is whether they predict behavior more generally (i.e. we don't just use theory to explain one choice but choices more generally) and to generate empirical predictions that can be tested using experiments. In this mini-course we start-off with a tour de force of the fundamental principal-agent model and the various behavioral extensions. The core of the course is, however, not theoretical but a practical course on how to design field experiments to test these ideas.
Activity: Seminar
0.5 Course Units
MGMT 919 Personnel Economics B
This is a half-semester PhD course in the Management Department that is also open to any current PhD students at Wharton. It is a continuation and builds on MGMT 918 - please see the course description for MGMT 918. As in MGMT 918 we expand on the canonical model in economics and introduce views from behavioral economics and introduce views from behavioral economics to derive novel theories with empirically testable implications on workplace behavior and individual performance in labor markets and health. In this mini-course the focus is on continuing our review of the literature but the primary aim is to work towards a project description and paper that can be developed into a PhD chapter or journal article.
Activity: Seminar
0.5 Course Units

MGMT 920 Seminar in Human Resources Research
This class is designed to give students an overview of the fundamental topics and arguments in the area of employment, how different social science paradigms consider employment topics, and some the new and emerging approaches to this topic.
Activity: Seminar
0.5 Course Units

MGMT 925 Seminar in Corporate Strategy
This course explores current research on corporate strategy. Over the past two decades, research in the area of corporate strategy has evolved considerably. The fundamental focus of the field has been on sources of competitive advantage at the of the firm, and the process of building and maintaining competitive advantage. In this class, we explore current research articles that best represent the development of rent-generating resources at the level of the firm. Topics addressed include the concept of strategy, research on the evolution of firm capabilities, competitive interaction, top management teams and strategy formation, and changes in firm scope through acquisitions, divestitures and alliances.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

MGMT 926 Corporate Transactions & Strategy
This course explores current research on firm boundaries and scope. Issues of firm boundaries and scope have received much attention in the strategic management field over the past twenty years. Theoretical frameworks explaining firm boundaries have been proposed, and empirical research on key success factors within particular boundary choices has flourished. Firm scope is one of the long-standing domains of research in strategic management that is still drawing substantial attention. While certain core perspectives have academic and empirical support, there is much debate and many new research questions to examine, particularly in a global context. In this class, we explore current research articles that best represent the research. Topics addressed include corporate diversification, choices between modes of market entry, key success factors in acquisitions and alliances, and impact of diversification on innovation.
Activity: Seminar
0.5 Course Units

MGMT 932 Proseminar in Management
Innovation is currently a hot topic. The popular stereotype holds that firms that are not innovating, or that are not at least saying that they are innovating, are backward at best and at risk of extinction at worst. Behind the hype is more than half a century of theory and research on organizational and managerial innovation, and the seminar will focus on this domain. A useful overview of the domain is available in Fariborz Damanpour “Organizational Innovation” in Oxford Research Encyclopedia on Business and Management Oxford University Press 2018. We will examine a number of theoretical and empirical approaches to understanding the phenomenon that have emerged during this period and identify key questions explored, principal contributions to the literature, and remaining questions and areas for future research. At the same time, we will embark on a journey in the sociology of knowledge, to encourage you to understand how the evolution of these approaches is linked to changes in the larger world.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Topics for pro-seminars vary. Please contact the instructor as course content may vary.

MGMT 933 Psychological and Sociological Foundations of Research in Management
This course, is required of all first-year doctoral students in Management and open to other Penn students with permission, provides an introduction to the psychological and sociological roots of management theory and research. The course is predicated on the belief that to be effective as a contemporary management scholar one needs a background in “the classics.” Therefore, we will be reading classics from the fields of psychology and sociology in their original form during this semester.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

MGMT 935 Network Theory and Applications
This course explores network models and their applications to organizational phenomena. By examining the structure of relations among actors, network approaches seek to explain variations in beliefs, behaviors, and outcomes. The beauty of network analysis is its underlying mathematical nature - network ideas and measures, in some cases, apply equally well at micro and macro levels of analysis. Therefore, we read and discuss articles both at the micro level (where the network actors are individuals within organizations) and at the macro level (where the network actors are organizations within larger communities) that utilize antecedents or consequences of network constructs such as small worlds, cohesion, structural equivalence, centrality, and autonomy. We begin by examining the classic problem of contagion of information and behaviors across networks, and follow by considering the various underlying models of network structure that might underlie contagion and other processes. The next two sessions address a variety of mechanisms by which an actor’s position in a network affects its behavior or performance. Then, the following two sessions address antecedents of network ties via the topics of network evolution and network activation. We close with a “grab bag” session of articles chosen to match class interests.
Activity: Seminar
0.5 Course Units
MGMT 937 Entrepreneurship Research Seminar
The seminar seeks to expose students to theoretical and empirical perspectives on entrepreneurship research. We will focus on the main questions that define the field and attempt to critically examine how, using a range of methodologies, researchers have addressed these questions. As we review the literature, we will seek to identify promising research areas, which may be of interest to you in the context of your dissertation research. In addition to addressing the content of the received literature, we will examine the process of crafting research papers and getting them published in top-tier journals. Towards that end, we will characterize the key elements of high-impact papers and review the development process of such studies. Students are expected to come fully prepared to discuss and critique the readings that are assigned to each class meeting (see details below). Each student will serve as the discussion leader for one or more of the class sessions. Discussion leaders are expected to critically review several articles, identify new insights in the research that is being reviewed, and evaluate its contribution to the literature. Position the articles within the literature on the subject matter, raise discussion questions, and act as the discussion moderator for the class session. Each discussion leader is asked to prepare a one or two-page summary of the assigned papers which includes a statement of the main research question(s), the methodology, data set if any, summary of findings, a commentary with your thoughts on the reading, and proposed discussion questions. Prior to each class, the discussion leader will meet the instructor to help plan the class meeting. Towards the end of each class meeting, each student will be asked to articulate a research question that emerged from the session and describe the research design used to investigate the issue.
Activity: Seminar
0.5 Course Units

MGMT 938 Family Business Research Seminar
Family firms differ in a number of ways from non-family firms. These differences may result in differential behavior by and performance of family firms versus non-family firms. Although family-controlled firms make up the vast majority of businesses around the world, academic research in this space is sparse. This seminar seeks to expose students to theoretical and empirical perspectives on family businesses. Throughout the course, we will focus on the ownership, control, and management issues that set family firms apart. We will focus on the main issues faced by family firms, and attempt to critically examine how, using a range of methodologies, researchers have addressed these issues. As we review the literature, we will seek to identify promising research areas, which may be of interest to you in the context of your dissertation research. In addition to addressing the content of the received literature, we will examine the process of crafting research papers and getting them published in top-tier journals. Towards that end, we will characterize the key elements of high-impact papers and review the development process of such studies. Students are expected to come fully prepared to discuss and critique the readings that are assigned to each class (see details below). Each class will center on discussing in-depth 4-5 papers from the reading list assigned to that class. Before each class, I will let you know which papers to prepare. Each student will serve as the discussion leader for one or more of the class sessions. Discussion leaders are expected to critically review several articles, identify new insights in the research that is being reviewed, and evaluate its contribution to the literature. Position the articles within the literature on the subject matter, raise discussion questions, and act as the discussion moderator for the class session. Each discussion leader is asked to prepare a one or two-page summary of the assigned papers which includes a statement of the main research question(s), the methodology, data set if any, summary of findings, a commentary with your thoughts on the reading, and proposed discussion questions. Prior to each class, the discussion leader will meet the instructor to help plan the class meeting. Towards the end of each class, each student will be asked to articulate a research question that emerged from the session and describe the research design used to investigate the issue.

0.5 Course Units

MGMT 951 Seminar in Micro-Organizational Behavior
The purpose of this course is to examine and understand theory and empirical research in the field of micro-organizational behavior. We will study a blend of classic and contemporary literature and examine theoretical propositions of individual and group behavior in organizations as well as discussing and critically evaluating empirical studies based on these theories. Sample topics include the what is micro-OB?, the person versus situation debate, motivation, job design, group dynamics, leadership and organizational culture and socialization. MGMT 951 is a companion class to MGMT 961, and you can take it in either order.
Activity: Lecture
0.5 Course Units
MGMT 952 Seminar in Macro-Organizational Behavior
Organizations are ubiquitous, and so is organization. This half-semester course explores organization theory (OT) from the 1960s through the end of the 20th century. We will examine the proliferation of organizational theories during this time period (such as contingency theory, resource dependence theory, ecological theory, and institutional theory) and understand how each theory attempts to relate structure and action over varying levels of analysis. We will determine one or two additional schools to add once we discuss your exposure in other management classes to other potential topics such as behavioral decision theory, sense-making and cognition, organizational economics, corporate governance, social networks, and the like.

Activity: Seminar
0.5 Course Units

MGMT 953 Seminar on Research Methods
This is an introductory doctoral seminar on research methods in management. We examine basic issues involved in conducting empirical research for publication in scholarly management journals. We start by discussing the framing of research questions, theory development, the initial choices involved in research design, and basic concerns in empirical testing. We then consider these issues in the context of different modes of empirical research (including experimental, survey, qualitative, archival, and simulation). We discuss readings that address the underlying fundamentals of these modes as well studies that illustrate how management scholars have used them in their work, separately and in combination.

Activity: Seminar
1 Course Unit

MGMT 955 Seminar in International Management
The goal of the course is to provide you with a foundation in some of the major research areas that underpin the study of Multinational Management. International Business (and the study of MNCs) is an interdisciplinary field. As such, our survey of the seminal articles in the field will span a number of different theoretical and empirical approaches (i.e., economic, managerial, organizational and institutional). Much of our seminar discussions will focus on identifying and developing interesting research questions raised by this interdisciplinary literature, which offers many opportunities for systematic empirical study.

MGMT 956 Seminar on Emotions in Organizations
This one quarter class where we examine and understand basics in emotions theory and its application in organizational behavior. To do so, we will cover a blend of basic psychological theories and organizational behavior literature so that we can appreciate the prevailing theories and findings in various areas of emotions and organizations, and gain a deep understanding of the psychological basis necessary to fully understand organizational behavior research. Specifically, we will examine how affect (consisting of emotions, moods, and affective traits) influences perceptions, cognitions and behavior within organizations. We will critically examine the existing knowledge of emotions in organizational life and identify possible future venues of research. We will begin by examining the nature of emotions in general and then focus on the organizational context, examining specific types of emotions and content areas that have been investigated within organizational behavior research.

Activity: Lecture
0.5 Course Units

MGMT 957 Emotions in Organizations
This is a one quarter class where we examine and understand basics in emotions theory and its application in organizational behavior. To do so, we will cover a blend of basic psychological theories and organizational behavior literature so that we can appreciate the prevailing theories and findings in various areas of emotions and organizations, and gain a deep understanding of the psychological basis necessary to fully understand organizational behavior research. Specifically, we will examine how affect (consisting of emotions, moods, and affective traits) influences perceptions, cognitions and behavior within organizations. We will critically examine the existing knowledge of emotions in organizational life and identify possible future venues of research. We will begin by examining the nature of emotions in general and then focus on the organizational context, examining specific types of emotions and content areas that have been investigated within organizational behavior research.

MGMT 958 Institutions and Multinational Management
This course builds on the foundational material presented in MGMT 955 with a deeper focus on current research examining institutional influences on multinational management. These include regulative supports (e.g., laws, regulations, contracts and their enforcement through litigation, arbitration of incentive compatible self-regulation) but also normative (e.g., socially shared expectations of appropriate behavior, and social exchange processes) and cognitive (e.g., creating shared identity to bridge differences in values, beliefs and framing) elements of the institutional environment. We will examine not only strategic responses in the market environment but also influence strategies of multinational and domestic firms that seek to alter the institutional environment in which they operate. We will draw not only upon the international business literature but also related literatures including political economy, law, finance, communications, institutional theory, strategic corporate social responsibility, tourist management, construction management, management of extractive industries, negotiations, social movements and network theory (really!).

Activity: Seminar
0.5 Course Units

MGMT 959 Institutions and Multinational Management
The purpose of this quarter course is to continue to explore key concepts and research programs in the field of micro-organizational behavior that we began to study in MGMT 951. To do so, we will cover a blend of classic and contemporary literature so that we can appreciate the prevailing theories and findings in various areas of micro-organizational behavior. In addition, for each topic we will then try to go beyond the existing literature. We will work to increase our understanding by re-framing the research variables, altering the perspective, bringing in new theory, and comparing levels of analysis. Building on the topics we examined in MGMT 951, we will explore further organizational behavior topics including identity, fit, extra role behaviors, job design, creativity, status, power and influence.

Activity: Seminar
0.5 Course Units

MGMT 960 Institutions and Multinational Management
This is a graduate course focusing on the empirical aspects of multinational firms and international trade. We will focus on a variety of issues that are related to the multinational firm, beginning with trends in multinational activity, then moving to both horizontal and vertical theories of the multinational firm. In the first half of the course (MGMT 962), the topics will include patterns in the expansion of multinational firms, horizontal and vertical multinationals; the linkages between openness to trade and investment and growth; trade orientation and firm performance, and labor markets and multinational firms. We complete the first half of the course reviewing the evidence on offshoring and multinationals and the implications for the US labor market, as well as new evidence on corporate social responsibility and the multinational firm.

Activity: Seminar
0.5 Course Units

MGMT 961 Advanced Topics in Micro-organizational Behavior
The purpose of this quarter course is to continue to explore key concepts and research programs in the field of micro-organizational behavior that we began to study in MGMT 951. To do so, we will cover a blend of classic and contemporary literature so that we can appreciate the prevailing theories and findings in various areas of micro-organizational behavior. In addition, for each topic we will then try to go beyond the existing literature. We will work to increase our understanding by re-framing the research variables, altering the perspective, bringing in new theory, and comparing levels of analysis. Building on the topics we examined in MGMT 951, we will explore further organizational behavior topics including identity, fit, extra role behaviors, job design, creativity, status, power and influence.

**MGMT 970 Applied Methods for Management Research**
Students taking the course will be introduced to the seminal readings on a given method, have a hands-on discussion regarding their application often using a paper and dataset of the faculty member leading the discussion. The goal of the course is to make participants more informed users and reviewers of a wide variety of methodological approaches to Management research including Ordinary Least Squares, Discrete Choice, Count Models, Panel Data, Dealing with Endogeneity, Survival/failure/event history and event studies, experiments, factor analysis and structural equation modeling, hierarchical linear modeling, networks, comparative qualitative methods, coding of non-quantitative data, unstructured text and big data simulations.

Course usually offered in fall term
Activity: Seminar
1 Course Unit
MANAGEMENT OF ECONOMICS (MGEC)

MGEC 611 Microeconomics for Managers: Foundations
This course establishes the micro-economic foundations for understanding business decision-making. The course will cover consumer theory and market demand under full information, market equilibrium and government intervention, production theory and cost optimization, producing in perfectly competitive and monopoly markets, vertical relations, and game theory, including simultaneous, sequential, and infinitely repeated games. Finally, we will wrap up game theory with an application to auctions. Students are expected to have mastered these materials before enrolling in the second quarter course: Microeconomics for Managers: Advanced Applications.
One-term course offered either term
Activity: Lecture
0.5 Course Units

MGEC 612 Microeconomics for Managers: Advanced Applications
This course will cover the economic foundations of business strategy and decision-making in market environments with other strategic actors and less than full information, as well as advanced pricing strategies. Topics include oligopoly models of market competition, creation, and protection, sophisticated pricing strategies for consumers with different valuations or consumers who buy multiple units (e.g. price discrimination, bundling, two-part tariffs), strategies for managing risk and making decisions under uncertainty, asymmetric information and its consequences for markets, and finally moral hazard and principle-agent theory with application to incentive contacts.
Taught by: Staff.
One-term course offered either term
Activity: Lecture
0.5 Course Units
MKTG 101 Introduction to Marketing
The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in assessing and solving marketing problems. The course is also a foundation for advanced electives in Marketing as well as other business/social disciplines. Topics include marketing strategy, customer behavior, segmentation, market research, product management, pricing, promotion, sales force management and competitive analysis.
Taught by: Niedermeier
One-term course offered either term
Activity: Recitation
1 Course Unit
Notes: For fall and spring semesters, you must be registered for one of the 20 recitation sections (MKTG101201 through MKTG101220) AND a lecture section (MKTG101001 or MKTG101002). Failure to sign up for both a recitation and a lecture will result in you being dropped from the course. PLEASE NOTE: Recitation Section MKTG101220 is reserved only for Joseph Wharton Scholars.

MKTG 211 Consumer Behavior
This course is concerned with how and why people behave as consumers. Its goals are to: (1) provide conceptual understanding of consumer behavior, (2) provide experience in the application of buyer behavior concepts to marketing management decisions and social policy decision-making; and (3) to develop analytical capability in using behavioral research.
Taught by: Melamud, Sharif, Riis
One-term course offered either term
Prerequisite: MKTG 101
Activity: Lecture
1 Course Unit

MKTG 212 Data and Analysis for Marketing Decisions
Firms have access to detailed data of customers and past marketing actions. Such data may include in-store and online customer transactions, customer surveys as well as prices and advertising. Using real-world applications from various industries, the goal of the course is to familiarize students with several types of managerial problems as well as data sources and techniques, commonly employed in making effective marketing decisions. The course would involve formulating critical managerial problems, developing relevant hypotheses, analyzing data and, most importantly, drawing inferences and telling convincing narratives, with a view of yielding actionable results.
Taught by: Eliashberg, Nave
One-term course offered either term
Prerequisites: MKTG 101, and STAT 101 or equivalent. CNPS minors may take STAT 111 or STAT 430 instead of STAT 101.
Activity: Lecture
1 Course Unit
Notes: (Former course title Marketing Research.)

MKTG 221 New Product Management
Examination of the marketing aspects of products or services exclusive of their promotion, pricing or distribution. Focuses on decisions regarding product introduction, positioning, improvements, and deletion, and the tools available for making these decisions.
One-term course offered either term
Prerequisites: MKTG 101; NOTE: Students may not take this course and MKTG 262 for credit.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for Fall, January for Spring) for sections offered in the SECOND half of the term.

MKTG 224 Advertising Management
Immersion in the advertising development process and examination of the practice of advertising. Focuses on decisions regarding advertising objectives, copy selection, budget setting and media selection.
One-term course offered either term
Prerequisites: MKTG 101 or permission of instructor; NOTE: Students may not take this course and MKTG 265 (formerly MKTG 235) for credit.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for Fall, January for Spring) for sections offered in the SECOND half of the term.

MKTG 225 Principles of Retailing
This course explores the domain of retailing: marketing to the final consumer. Emphasis is placed on marketing aspects of retailing not covered in other courses: retail strategy, merchandising, vendor relations and location.
Course usually offered in spring term
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for Fall, January for Spring) for sections offered in the SECOND half of the term.
MKTG 227 Digital Marketing and Electronic Commerce
The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing is critical to the success of firms that will shape the consumption-led economies that are fueled by these technologies. MKTG 227 provides a research-based and framework-driven approach to succeeding in this environment, through a rigorous approach to understanding digital marketing and electronic commerce. The course is organized into two sections and utilizes relevant theory, empirical analysis, and practical examples, to develop the key learning points. Guest speakers will participate as well, as appropriate.
Taught by: Bell, Goldstein
One-term course offered either term
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students should register for this course before the end of the Course Selection period (September for Fall, January for Spring) for sections offered in the SECOND half of the term. Students may not take both MKTG 227 and the full semester version of this course, MKTG 270 (formerly MKTG 230x) for credit.

MKTG 234 Idea Generation & the Systematic Approach for Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students’ (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people.
The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges. 4. Integration - Both via individual assignments and a project group in which interdisciplinary teams of students generate a creative product/service/customer.
Taught by: Rom Schrift
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: Students may not take both MKTG 292 and MKTG 234 for credit. Students should check the course start date as this mini course may be held during the first or second half of the semester.

MKTG 237 Introduction to Brain Science for Business
Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing, build team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social value, and optimize digital interaction. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and the human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law, and policy will be discussed throughout.
Taught by: Platt
Course usually offered in spring term
Prerequisite: None
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Students may not take both MKTG 351 (Special Topics version) and MKTG 237x for credit. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half and or SECOND half of the semester.

MKTG 241 Entrepreneurial Marketing
This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will be to provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to small and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.
Taught by: Lodish, Lautman
Course usually offered in fall term
Prerequisites: MKTG 101; MKTG 212 (can take concurrently); students are discouraged from taking this course and MKTG 221 without the permission of the marketing undergraduate faculty advisor.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for Fall, January for Spring) for sections offered in the SECOND half of the term.
MKTG 242 Multinational Marketing
Global marketing is an extremely demanding discipline but, from a career standpoint, one which is both challenging and rewarding. Inherent to the success of any global marketing professional, yet many times overlooked and/or underappreciated, is the critical nature of human understanding and relationships in business planning and execution. This is especially relevant in today’s business environment when you consider the dual multinational company imperative of continued revenue and profit growth in mature markets and successfully expanding into new growth and emerging markets. This course assumes an understanding of marketing principles and some exposure to and appreciation of the global environment. The objective of the course is to provide an understanding of how the global environment (particularly cultural diversity) affects the application of marketing principles and business practice on a global basis and the competencies necessary to be a successful global manager.

One-term course offered either term
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term (Former MKTG 282)

MKTG 254 Pricing Policy
The pricing decision process including economic, marketing, and behavioral phenomena which constitute the environment for pricing decisions and the information and analytic tools useful to the decision maker.

One-term course offered either term
Prerequisites: MKTG 101 and sophomore standing.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Students can not take both MKTG 254 and the full semester version of this course, MKTG 288, for credit. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring) for sections offered in the SECOND half of the term.

MKTG 262 New Product Development
In this hands-on experiential course, students will partner with a local start-up to apply design thinking steps taught throughout the course. Students will learn how to uncover deep consumer needs, effectively ideate, and create rapid prototypes to test their ideas with real customers. This class is well suited for those interested in careers in innovation or management consulting, marketing, product management, technology, or entrepreneurship. No prior experience or requirements are needed for this course.

Course not offered every year
Prerequisite: MKTG 101 recommended but not required
Activity: Lecture
1 Course Unit
Notes: NOTE: Students may not take both MKTG 262 and MKTG 221 for credit

MKTG 265 Principles of Advertising
This course focuses on advertising via all media - print, digital, video, TV, Internet, etc. Emphasis is placed on understanding the communication development process and consumer behavior (psychology), the measurement and evaluation of advertising effects, and developing appropriate media plans.

One-term course offered either term
Prerequisites: MKTG 101
Activity: Lecture
1 Course Unit
Notes: Students should not take both MKTG 265 (full semester version) and MKTG 224 (mini course version), since credit will not be given for both courses.

MKTG 266 Marketing for Social Impact
Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fundraising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.

Taught by: Deborah Small
Course usually offered in fall term
Prerequisite: MKTG 101 or instructor permission
Activity: Lecture
1 Course Unit
Notes: Students may not take both MKTG 266 and MKTG 233 for credit.

MKTG 270 Digital Marketing, Social Media and E-Commerce
MKTG 270 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 227, Digital Marketing and Electronic Commerce, a half cu course offered by the department.

Taught by: Bell
One-term course offered either term
Prerequisite: MKTG 101
Activity: Lecture
1 Course Unit
Notes: Students may not take both MKTG 270 and the half semester version of this course, MKTG 227 for credit. This course replaces experimental course MKTG 230x.
MKTG 271 Models for Marketing Strategy
In today's business environment, marketing executives are involved in complex decision-making and they become responsible for return on their marketing investments. The first objective of this course is to help participants become better executives. By exposing students to various analytical and computer-based tools, developed for solving marketing problems, it will help to prepare them for careers in industries such as consumer packaged goods, hi-tech, financial services, media and entertainment, pharmaceutical, consulting, and venture capital.

The course's main focus is on various existing models, such as models that predict the consumer's dynamic adoption of an innovative product. However, at some point in their career, students may find themselves facing business problems for which a model can assist in making decisions, but no existing model is available. Hence, the second objective of the course is to provide participants with critical skills necessary to evaluate new models to which they may be exposed by attending presentations or reading the literature. The models to be discussed in the class have been implemented and proven useful in a wide range of industries (e.g., business-to-consumers and business-to-business).

Taught by: Eliashberg
Course usually offered in fall term
Prerequisites: MKTG 101, STAT 101 and some tolerance for expressing critical ideas in simple math
Activity: Lecture
1 Course Unit

MKTG 277 Marketing Strategy
This course views marketing as both a general management responsibility and an orientation of an organization that helps one to create, capture and sustain customer value. The focus is on the business unit and its network of channels, customer relationships, and alliances. Specifically, the course attempts to help develop knowledge and skills in the application of advanced marketing frameworks, concepts, and methods for making strategic choices at the business level.

Taught by: Robertson, Yildirim
Course usually offered in fall term
Prerequisites: MKTG 101 or permission from instructor.
Activity: Lecture
1 Course Unit
Notes: Lectures, discussions, cases

MKTG 278 Strategic Brand Management
Which brands make you happy? Apple? Amazon? Starbucks? Everlane? Soulcycle? Sweetgreen? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand. The course is created for students interested in building a brand and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, and a final project. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students' ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.

Taught by: Williams
Course usually offered in spring term
Prerequisite: MKTG 101
Activity: Lecture
1 Course Unit

MKTG 288 Pricing Strategies
This course is designed to equip students with the concepts, techniques, and latest thinking on pricing issues, with an emphasis on ways in which to help a firm improve its pricing. The orientation of the course is about practice of pricing, not theory. We will focus on how firms can improve profitability through pricing, look at how firms set their prices and how to improve current practices to increase profitability. The first part of the course focuses on how to analyze costs, customers, and competitors in order to formulate proactive pricing strategies. The second part focuses on price promotions, price bundling, price discrimination, versioning, nonlinear pricing, pricing through a distribution channel, dynamic pricing, etc.

Taught by: Zhang
Course usually offered in spring term
Prerequisite: MKTG 101
Activity: Lecture
1 Course Unit
Notes: Students may not take both MKTG 288 and MKTG 254 for credit.

MKTG 292 Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the student's (a) creativity (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people.

The course includes: interaction with guest lecturers; a review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation; hands on learning of approaches for generating creative ideas; applications of creativity to selected management domains; and integration via individual assignments and a group project in which interdisciplinary teams of students generate a creative product, service, customer experience, business or strategy.

Taught by: Schrift
Course usually offered in fall term
Prerequisite: MKTG101
Activity: Lecture101
1 Course Unit
Notes: Format: Lecture, class discussion, guest speakers.
MKTG 306 Special Topics: Retail Merchandising

RETAIL MERCHANDISING: This course introduces the role of merchandising at various retailers with an emphasis on apparel and soft-line businesses. Selected topics will include product development, line planning, sourcing, product lifecycle, forecasting, buying, planning and vendor relations. Special emphasis will be placed on current trends in retail merchandising through current articles and industry guest speakers. The objective of this course is to familiarize students with merchandising theory and strategies considered to be current best practices in retailing.

Course usually offered in fall term
Prerequisite: MKTG 101 or MKTG 225
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u., One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for Fall, January for Spring) for sections offered in the SECOND half of the term.

MKTG 309 Special Topics: Experiments for Business Decision Making

EXPERIMENTS FOR BUSINESS DECISION MAKING: In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a "test and learn" philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the "test and learn" philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments. Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.

Course offered fall; even-numbered years
Prerequisites: MKTG 101 or faculty permission is required; STAT 101, STAT 431, or equivalent is recommended.
Activity: Lecture
1 Course Unit
Notes: (Former MKTG 269)

MKTG 350 Special Topics - Consumer Neuroscience

CONSUMER NEUROSCIENCE: How can studying the brain improve our understanding of consumer behavior? While neuroscience made tremendous strides throughout the 20th century, rarely were meaningful applications developed outside of medicine. Recently, however, breakthroughs in measurement and computation have accelerated brain science and created a dizzying array of opportunities in business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini-course provides an overview of the neuroscience behind and the potential for these developments. Topics will range from well-known and widely used applications, such as eye-tracking measures in the lab and field, to emerging methods and measures, such as mobile technologies, face-reading algorithms, and neural predictors of marketing response. The course will also discuss applications in branding and product development, including wearable physiological devices and apps, sensory branding for foods and fragrances, pharmaceuticals and medical devices, and neuroscience-based products designed to enhance cognitive functions. These applications stem from many subfields of cognitive neuroscience, including attention, emotion, memory, and decision making. This course is self-contained and has no prerequisites. However, students with some background in business, economics, psychology, and/or neuroscience are likely to find the material covered in this course complementary to their existing knowledge.

Taught by: John Clithero
Course usually offered in spring term
Prerequisites: None.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring) for sections offered in the SECOND half of the term.

MKTG 351 Special Topics: Introduction to Brain Science for Business

INTRODUCTION TO BRAIN SCIENCE FOR BUSINESS: Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social value, and optimize digital interactions. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law and policy will be discussed throughout.

Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. This course has been replaced by MKTG 237x.
MKTG 352 Special Topics - Marketing Analytics
MARKETING ANALYTICS: Companies are currently spending millions of dollars on data-gathering initiatives - but few are successfully capitalizing on all this data to generate revenue and increase profit. Moving from collecting data to analysis to profitable results requires the ability to forecast and develop a business rationale based on identified data patterns. Marketing Analytics will cover the three pillars of analytics - descriptive, predictive and prescriptive. Descriptive Analytics examines different types of data and how they can be visualized, ultimately helping you leverage your findings and strengthen your decision making. Predictive Analytics explores the potential uses of data once collected and interpreted. You will learn to utilize different tools, such as regression analysis, and estimate relationships among variables to predict future behavior. Prescriptive Analytics takes you through the final step - formulating concrete recommendations. These recommendations can be directed toward a variety of efforts including pricing and social-platform outreach.
Taught by: Iyengar
Course usually offered in fall term
Prerequisites: MKTG 101, and STAT 101 or equivalent
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu credit course. Check course start date. You must register for sections that meet in the second half of the semester by the course selection deadline in September.

MKTG 353 Special Topics
Course usually offered in spring term
Prerequisite: MKTG101
Activity: Lecture
0.5 Course Units

MKTG 354 Special Topics: Visual Marketing
VISUAL MARKETING: As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing, and will provide an overview of visual perception and visual cognition, eye movements, and attention, and their role and influence on consumer memory, persuasion, choice, and other behaviors.
Taught by: Johnson
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. In-class exercises, team-based learning, discussions, and lectures. Check meeting dates.

MKTG 399 Independent Study
One-term course offered either term
Prerequisites: MKTG 212 and written permission of instructor and the department undergraduate advisor
Activity: Independent Study
1 Course Unit
Notes: Content arranged by project supervisor, 1.0 c.u

MKTG 401 Marketing Analytics Capstone: Learning by Doing
In this class students will (1) Apply knowledge to practice for an actual client, with a focus on the synthesis of knowledge acquired across curriculum (2) Practice analytical thinking skills (analyzing and framing business problems and problem-solving techniques), including consideration of ethical issues. (3) Practice written and oral communication skills, as well as working in an (assigned) team environment, by leveraging the experience developed in earlier years of the leadership Journey. (4) Reflect on their own social and intellectual development over their time at Wharton and Penn.
Taught by: Iyengar
Course usually offered in spring term
Prerequisites: Permission from the Instructor is required. Senior Standing is required.
Activity: Lecture
0.5 Course Units
Notes: MKTG401x fulfills the Wharton Senior capstone requirement. Students should have proficient knowledge of R/Python and SQL. Online courses are available through WCAI (Wharton Customer Analytics Initiative) if needed.

MKTG 476 Applied Probability Models for Marketing
This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.
Taught by: Fader
Course usually offered in spring term
Prerequisites: A high comfort level with basic integral calculus and recent exposure to a formal course in probability and statistics such as STAT 430 is strongly recommended.
Activity: Lecture
1 Course Unit

MKTG 611 Marketing Management
This course addresses how to design and implement the best combination of marketing efforts to carry out a firm's strategy in its target markets. Specifically, this course seeks to develop the student's (1) understanding of how the firm can benefit by creating and delivering value to its customers, and stakeholders, and (2) skills in applying the analytical concepts and tools of marketing to such decisions as segmentation and targeting, branding, pricing, distribution, and promotion. The course uses lectures and case discussions, case write-ups, student presentations, and a comprehensive final examination to achieve these objectives.
Taught by: Kahn, Berger, Meyer, Riis
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu
MKTG 612 Dynamic Marketing Strategy
Building upon Marketing 611, the goal of this course is to develop skills in formulating and implementing marketing strategies for brands and businesses. The course will focus on issues such as the selection of which businesses and segments to compete in, how to allocate resources across businesses, segments, and elements of the marketing mix, as well as other significant strategic issues facing today's managers in a dynamic competitive environment. A central theme of the course is that the answer to these strategic problems varies over time depending on the stage of the product life cycle at which marketing decisions are being made. As such, the PLC serves as the central organizing vehicle of the course. We will explore such issues as how to design optimal strategies for the launch of new products and services that arise during the introductory phase, how to maximize the acceleration of revenue during the growth phase, how to sustain and extend profitability during the mature phase, and how to manage a business during the inevitable decline phase.
Taught by: Van den Bulte, Bradlow
One-term course offered either term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu

MKTG 613 Strategic Marketing Simulation
Building upon Marketing 611, Marketing 613 is an intensive immersion course designed to develop skills in formulating and implementing marketing strategies for brands and businesses. The central activity will be participation in a realistic integrative product management simulation named SABRE. In SABRE, students will form management teams that oversee all critical aspects of modern product management: the design and marketing of new products, advertising budgeting and design, sales force sizing and allocation, and production planning. As in the real world, teams will compete for profitability, and the success that each team has in achieving this goal will be a major driver of the class assessment. The SABRE simulation is used to convey the two foci of learning in the course: the changing nature of strategic problems and their optimal solutions as industries progress through the product life cycle, and exposure to the latest analytic tools for solving these problems. Specifically, SABRE management teams will receive training in both how to make optimal use of marketing research information to reduce uncertainty in product design and positioning, as well as decision support models to guide resource allocation.
Taught by: Reibstein
Course usually offered in spring term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu

MKTG 711 Consumer Behavior
Marketing begins and ends with the customer, from determining customers' needs and wants to providing customer satisfaction and maintaining customer relationships. This course examines the basic concepts and principles in consumer behavior with the goal of understanding how these ideas can be used in marketing decision making. The class will consist of a mix of lectures, discussions, cases, assignments, project work and exams. Topics covered include customer psychological processes (e.g., motivation, perception, attitudes, decision-making) and their impact on marketing (e.g., segmentation, branding, and customer satisfaction). The goal is to provide you with a set of approaches and concepts to consider when faced with a decision involving understanding customer responses to marketing actions.
Taught by: Reed
One-term course offered either term
Prerequisite: Completion of MKTG 611
Activity: Lecture
1 Course Unit
Notes: Format: Lectures and discussion, case analyses, presentations.

MKTG 712 Data and Analysis for Marketing Decisions
Firms have access to detailed data of customers and past marketing actions. Such data may include in-store and online customer transactions, customer surveys as well as prices and advertising. Using real-world applications from various industries, the goal of the course is to familiarize students with several types of managerial problems as well as data sources and techniques, commonly employed in making effective marketing decisions. The course would involve formulating critical managerial problems, developing relevant hypotheses, analyzing data and, most importantly, drawing inferences and telling convincing narratives, with a view of yielding actionable results.
Taught by: Iyengar, Eliashberg, Nave
One-term course offered either term
Prerequisite: MKTG 611; STAT 613
Activity: Lecture
1 Course Unit
Notes: Format: Lecture, discussion, and cases.

MKTG 721 New Product Management
This course provides a total immersion in the new product development process - from sourcing ideas and innovation, through new product sales forecasting. The focus is on collective learning, what works, what doesn't, and why. While the primary focus is the new product development process within a corporate structure, some coverage is given to start-ups.
One-term course offered either term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: Format: Lectures, cases, simulations, class discussions, and guest speakers.
**MKTG 724 Advertising Management**
The purpose of this course is to provide students with an opportunity to learn and apply the major frameworks, theories, current research findings, principles and practices of effective advertising management as part of an Integrated Marketing Communications (IMC) program. By the end of this course, students should not only be familiar with a large body of advertising knowledge, but should also be able to apply this information to create and evaluate effective advertising strategies and tactics. The emphasis will be on: 1) understanding the psychology of customer motivation and persuasion; 2) crafting effective and creative messages; 3) making efficient selections and use of media; and 4) understanding metrics, all within the broader Integrated Marketing Communications perspective.

One-term course offered either term
Prerequisites: Completion of MKTG 611, and MKTG 612 or MKTG 613.
(May be taken concurrently with MKTG 612 or 613)
Activity: Lecture
0.5 Course Units
Notes: Format: Case discussions, in-class exercises, lectures, group projects, guest lectures by marketing professionals.

**MKTG 725 Principles of Retailing**
This course provides an interdisciplinary overview of the retailing industry. Primary focus will be on the customer facing activities of retailers, including assortment planning, private-label development and the management of in-store operations, and the back-door activities (forecasting and supply chain management) that support customer interaction. In addition, current issues facing retailers, such as customer relationship management, industry consolidation and supplier relations, will be explored. The course will also survey topics in finance, operations, information technology and real estate as they relate to retail.

Course usually offered in spring term
Prerequisites: MKTG 611; and MKTG 612 or MKTG 613; or permission of instructor
Activity: Lecture
0.5 Course Units
Notes: Format: Lecture and discussion, case analyses, and guest speakers.

**MKTG 727 Digital Marketing and Electronic Commerce**
The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing plays a key role in shaping the modern consumption-led economies fueled by these technologies. MKTG 727 provides a research-based and framework-driven approach to understanding digital marketing and electronic commerce. The course is organized into two sections and utilizes relevant theory, empirical analysis, and practical examples, to develop the key learning points. Guest speakers will participate as well, as appropriate.

Taught by: Bell, Goldstein
One-term course offered either term
Prerequisites: Completion of MKTG 611, and MKTG 612 or MKTG 613.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Students may not take both MKTG 727 and the full semester version of this course, MKTG 730x or MKTG 770 for credit.

**MKTG 733 Marketing for Social Impact**
Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fund-raising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.

Taught by: Deborah Small
Course usually offered in fall term
Prerequisite: MKTG 611 or permission of instructor
Activity: Lecture
0.5 Course Units
Notes: Format: Lecture, class discussion, simulations, cases and guest lecturers.

**MKTG 734 Idea Generation and the Systematic Approach for Creativity**
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students' (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people. The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges.

4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer

Taught by: Rom Schrift
Course usually offered in fall term
Prerequisite: None
Activity: Lecture
0.5 Course Units
Notes: Students may not take both MKTG 792 and MKTG 734 for credit. Students should check the course start date as this mini course may be held during the first or second half of the semester.
MKTG 737 Introduction to Brain Science for Business
Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing, build team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social value, and optimize digital interaction. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and the human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law, and policy will be discussed throughout.
Taught by: Platt
Course usually offered in spring term
Prerequisite: None
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. (Half semester course) Check meeting dates. Students may not take both MKTG 851 (Special Topics version) and MKTG 737x for credit.

MKTG 741 Entrepreneurial Marketing
This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to mid-size and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.
Taught by: Lodish, Lautman
Course usually offered in fall term
Prerequisites: Completion of MKTG 611; and MKTG 612 or MKTG 613; and MKTG 712; (May take MKTG 612 or 613, and MKTG 712 concurrently); Students are discouraged from taking this course and MKTG 721 except with permission of an MBA adviser.
Activity: Lecture
0.5 Course Units
Notes: Format: Guest speakers, lecture, class discussions, team project

MKTG 742 Multinational Marketing
Global marketing is an extremely demanding discipline but, from a career standpoint, one which is both challenging and rewarding. Inherent to the success of any global marketing professional, yet many times overlooked and/or underappreciated, is the critical nature of human understanding and relationships in business planning and execution. This is especially relevant in today’s business environment when you consider the dual multinational company imperative of continued revenue and profit growth in mature markets and successfully expanding into new growth and emerging markets. This course assumes an understanding of marketing principles and some exposure to and appreciation of the global environment. The objective of the course is to provide an understanding of how the global environment (particularly cultural diversity) affects the application of marketing principles and business practice on a global basis and the competencies necessary to be a successful global manager.
One-term course offered either term
Prerequisites: Completion of MKTG 611; and MKTG 612 or MKTG 613. MKTG 612 or 613 may be taken concurrently with MKTG 742.
Activity: Lecture
0.5 Course Units
Notes: Format: Cases, lectures, discussions. (Former MKTG 782)

MKTG 754 Pricing Policy
The course provides a systematic presentation of the factors to be considered when setting price, and shows how pricing alternatives are developed. Analytical methods are developed and new approaches are explored for solving pricing decisions.
Taught by: Raju, Zhang
One-term course offered either term
Prerequisites: Completion of MKTG 611; and MKTG 612 or MKTG 613. (May be taken concurrently with MKTG 612 or 613.) OIDD 612 and STAT 613 are recommended.
Activity: Lecture
0.5 Course Units
Notes: Format: Lecture and discussion

MKTG 760 Law of Marketing and Antitrust
See Legal Studies, LGST 205/805.
Course not offered every year
Activity: Lecture
1 Course Unit
MKTG 768 Contagious: How Products, Ideas and Behaviors Catch On
Why do some products catch on and achieve huge popularity while others fail? Why do some behaviors spread like wildfire while others languish? How do certain ideas seem to stick in memory while others disappear the minute you hear them? More broadly, what factors lead to trends, social contagion, and social epidemics? Interactive media, word of mouth, and viral marketing are important issues for companies, brands, and organizations. This course looks at these and other topics as it examines how products, ideas, and behaviors catch on and become popular. Marketers want their product to be popular, organizations want their social change initiative to catch on and entrepreneurs want their ideas to stick. This course will touch on four main aspects: (1) Characteristics of products, ideas, and behaviors that lead them to be successful. (2) Aspects of individual psychology that influence what things are successful. (3) Interpersonal processes, or how interactions between individuals drive success. (4) Social networks, or how patterns of social ties influence success. Taught by: Berger
One-term course offered either term
Prerequisites: MKTG 711 and MKTG 712 are recommended but not required.
Activity: Lecture
1 Course Unit
Notes: Lecture, class discussion, cases. (Former MKTG 728)

MKTG 770 Digital Marketing, Social Media and E-Commerce
MKTG 770 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 727, Digital Marketing and Electronic Commerce, a half cu course offered by the department.
Taught by: Berman, Bell
One-term course offered either term
Prerequisites: MKTG 611, and one of the following: MKTG 612 or MKTG 613
Activity: Lecture
1 Course Unit
Notes: Students may not take both MKTG 770 and the half semester version of this course, MKTG 727 for credit. This course replaces experimental course MKTG 730x.

MKTG 771 Models for Marketing Strategy
In today's business environment, marketing executives are involved in complex decision-making and they become responsible for return on their marketing investments. The first objective of this course is to help participants become better executives. By exposing students to various analytical and computer-based tools, developed for solving marketing problems, it will help to prepare them for careers in industries such as consumer packaged goods, hi-tech, financial services, media and entertainment, pharmaceutical, consulting, and venture capital. The course's main focus is on various existing models, such as models that predict the consumer's dynamic adoption of an innovative product. However, at some point in their career, students may find themselves facing business problems for which a model can assist in making decisions, but no existing model is available. Hence, the second objective of the course is to provide participants with critical skills necessary to evaluate new models to which they may be exposed by attending presentations or reading the literature. The models to be discussed in the class have been implemented and proven useful in a wide range of industries (e.g., business-to-consumers and business-to-business). The course is not only about models, however. It also covers modeling needs. Some industries such as the media and entertainment or the pharmaceutical industries present unique problems and modeling needs. The third objective of the course is to expose participants to the nature and essence of such idiosyncratic problems as well as modeling needs in such industries. Overall, the course will make participants understand better critical marketing problems by analyzing them rigorously and will enhance their skills in either designing or evaluating models-based strategies. Taught by: Eliashberg
Course usually offered in fall term
Prerequisites: Completion of: MKTG 611; and MKTG 612 or MKTG 613; basic calculus; exposure to basic statistical analysis, and some tolerance for expressing critical ideas in simple math.
Activity: Lecture
1 Course Unit
Notes: Format: Evaluating marketing models; practicing with computer-based models and software; discussing case studies that describe modeling applications; group presentations of model-based marketing analysis and strategy.
MKTG 775 Managing Customer Value
As the concept of CRM becomes common parlance for every marketing executive, it is useful to take a step back to better understand the various different behaviors that underlie the development of successful CRM systems. These “behaviors” include customer-level decisions, firm actions, and the delicate but complex interplay between the two. Accordingly this course is comprised of four main modules. We start with the discussion of customer profitability - focusing on the concepts of “customer lifetime value” and “customer equity”. We will examine how to measure long-run customer profitability in both business-to-customer and business-to-business environments, and the uses of these measures as major components assessing overall firm valuation. Second, we move to the value that the firm provides to its customers - better understanding the true nature of customer satisfaction and its non-trivial relationship with firm profitability. Third, we examine each of the three main components of the firm’s management of its customer base: customer acquisition, development, and retention - and the complex resource allocation task that must be balanced across them. Finally, we conclude with a discussion of various tactical and organizational aspects of customer relationship management.
Taught by: Fader
Course usually offered in spring term
Prerequisites: None.
Activity: Lecture
1 Course Unit
Notes: Format: Lecture and discussion

MKTG 776 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical "building blocks" that will allow them to develop and implement powerful models of customer behavior. Over the years, researchers and practitioners have used these methods for a wide variety of applications, such as new product sales forecasting, analyses of media usage, customer valuation, and targeted marketing programs. These same techniques are also very useful for other types of business (and non-business) problems. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.
Taught by: Fader
Course usually offered in spring term
Prerequisites: Students must have a high comfort level with basic integral calculus, and recent exposure to a formal course in probability and statistics is strongly recommended.
Activity: Lecture
1 Course Unit
Notes: Format: Lecture, real-time problem solving

MKTG 777 Marketing Strategy
This course views marketing as both a general management responsibility and an orientation of an organization that helps one to create, capture and sustain customer value. The focus is on the business unit and its network of channels, customer relationships, and alliances. Specifically, the course attempts to help develop knowledge and skills in the application of advanced marketing frameworks, concepts, and methods for making strategic choices at the business level.
Taught by: Robertson, Yildirim
Course usually offered in fall term
Prerequisites: Completion of MKTG 611, and MKTG 612 or MKTG 613.
Activity: Lecture
1 Course Unit
Notes: Format varies by instructor. Typically: case, lecture, group projects and class discussion. See syllabus.

MKTG 778 Strategic Brand Management
Which brands make you happy? Apple? Amazon? Starbucks? Everlane? Soulcycle? Sweetgreen? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand. The course is created for students interested in building a brand and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, and a final project. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students’ ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.
Taught by: Williams
Course usually offered in spring term
Prerequisites: MKTG 611; and MKTG 612 or MKTG 613.
Activity: Lecture
1 Course Unit
Notes: Format: Lectures, cases, discussions, exercises, and a group project.

MKTG 806 Special Topics: Retail Merchandising
RETAIL MERCHANDISING; This course introduces the role of merchandising at various retailers with an emphasis on apparel and soft-line businesses. Selected topics will include product development, line planning, sourcing, product lifecycle, forecasting, buying, planning and vendor relations. Special emphasis will be placed on current trends in retail merchandising through current articles and industry guest speakers. The objective of this course is to familiarize students with merchandising theory and strategies considered to be current best practices in retailing.
Course usually offered in fall term
Prerequisite: MKTG 611 or MKTG 725
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu half credit course. Format: Lecture, discussion.
MKTG 809 Special Topics: Experiments for Business Decision Making

EXPERIMENTS FOR BUSINESS DECISION MAKING: In the last decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a "test and learn" philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the "test and learn" philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments. Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.

One-term course offered either term
Prerequisites: MKTG 611 required; STAT 431 or equivalent required; MKTG 712 recommended but not required.
Activity: Lecture
1 Course Unit

MKTG 850 Special Topics - Consumer Neuroscience

CONSUMER NEUROSCIENCE: How can studying the brain improve our understanding of consumer behavior? While neuroscience made tremendous strides throughout the 20th century, rarely were meaningful applications developed outside of medicine. Recently, however, breakthroughs in measurement and computation have accelerated brain science and created a dizzying array of opportunities in business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini-course provides an overview of the neuroscience behind and the potential for these developments. Topics will range from well-known and widely used applications, such as eye-tracking measures in the lab and field, to emerging methods and measures, such as mobile technologies, face-reading algorithms, and neural predictors of marketing response. The course will also discuss applications in brand and product development, including wearable physiological devices and apps, sensory branding for foods and fragrances, pharmaceuticals and medical devices, and neuroscience-based products designed to enhance cognitive functions. These applications stem from many subfields of cognitive neuroscience, including attention, emotion, memory, and decision making. This course is self-contained and has no prerequisites. However, students with some background in business, economics, psychology, and/or neuroscience are likely to find the material covered in this course complementary to their existing knowledge.

Taught by: John Clithero
Course usually offered in spring term
Prerequisite: None
Activity: Lecture
0.5 Course Units
Notes: 0.5 CU half credit course

MKTG 851 Special Topics: Introduction to Brain Science for Business

INTRODUCTION TO BRAIN SCIENCE FOR BUSINESS: Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social value, and optimize digital interactions. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law and policy will be discussed throughout.

Taught by: Michael Platt
Course usually offered in spring term
Prerequisite: None
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu. One-half term. This course is now offered as MKTG737x.

MKTG 852 Special Topics - Marketing Analytics

MARKETING ANALYTICS: Companies are currently spending millions of dollars on data-gathering initiatives - but few are successfully capitalizing on all this data to generate revenue and increase profit. Moving from collecting data to analysis to profitable results requires the ability to forecast and develop a business rationale based on identified data patterns. Marketing Analytics will cover the three pillars of analytics - descriptive, predictive and prescriptive. Descriptive Analytics examines different types of data and how they can be visualized, ultimately helping you leverage your findings and strengthen your decision making. Predictive Analytics explores the potential uses of data once collected and interpreted. You will learn to utilize different tools, such as regression analysis, and estimate relationships among variables to predict future behavior. Prescriptive Analytics takes you through the final step - formulating concrete recommendations. These recommendations can be directed toward a variety of efforts including pricing and social-platform outreach.

Taught by: Iyengar
Course usually offered in fall term
Prerequisites: MKTG 611 and STAT 613
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu half credit course. Check course meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring) for sections offered in the SECOND half of the term.
MKTG 853 Special Topics: Design Thinking - A Human-Centered Approach to Innovation
DESIGN THINKING - A HUMAN-CENTERED APPROACH TO INNOVATION: In this hands-on experiential course, students will partner with a local start-up to apply design thinking steps taught throughout the course. Students will learn how to uncover deep consumer needs, effectively ideate, and create rapid prototypes to test their ideas with real customers. This class is well suited for those interested in careers in innovation or management consulting, marketing, product management, technology, or entrepreneurship. No prior experience or requirements are needed for this course.
Taught by: Caputo
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MKTG 854 Special Topics: Visual Marketing
VISUAL MARKETING: As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing, and will provide an overview of visual perception and visual cognition, eye movements, and attention, and their role and influence on consumer memory, persuasion, choice, and other behaviors.
Taught by: Johnson
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. In-class exercises, team-based learning, discussions, and lectures.
MKTG 893 Advanced Study: Marketing in Emerging Economies: Understanding & Marketing to the Chinese and Indian Consumer
This course is a two part series. The first part concentrates on the Indian Consumer and the second part concentrates on the Chinese Consumer. India and China add up to half of the world’s population. Each presents its own challenges and opportunities. US and European MNCs have been in both countries for many years, but emerging market MNC’s are becoming stronger and in many cases overtaking US and European companies despite their strong brands and know-how. Marketing to the Indian Consumer will provide a careful understanding of: 1) The opportunity and challenges in the Indian consumer market 2) Various segments within the Indian consumer market. 3) Consumer psychology and decision making processes in each segment 4) Distribution channels in Indi Media in India: Mass, Local and non-traditional. 5) Bottom of the pyramid consumers and rural markets. 6) Product design and development decisions. The course will focus on the following industries: consumer packaged goods, mobile phones, financial services (insurance and banking), healthcare, sports and entertainment, and transportation. The course will involve case studies from local and international companies, guest lecturers, and visits to consumer homes to observe their tastes, habits, and preferences.
Taught by: Raju and Zhang
Course not offered every year
Activity: Lecture
0.5 Course Units
Notes: Indian Consumer Section of the Course offered in Mubai, India The Chinese Consumer Section of the Course will be taught in Beijing, China.

MKTG 895 Global Business Week
GLOBAL BUSINESS WEEK: MKTG 895 is one in an array of Global Business Week (GBW) study tour courses offered by various departments across Wharton. Each of the GBW courses offered in a term, will entail travel to a different part of the world and address a different element of economic driver for a country or industry. A faculty member will drive the topic and curriculum associated with a study tour to a region of the world where the study of a topic will provide insights and clarity available only by being in country. In country lectures from the lead faculty and area experts in industry, academia and government will form much of the basis of class time. In addition, students will experience relevant company and cultural settings where they will again hear from industry experts. Each course will require an individual student paper, a participation component, and a pre-travel or in-country set of assignments. See course syllabus for details.

CUSTOMER CENTRICITY AT THE LEADING EDGE OF ANALYTICS AND TECHNOLOGY: LEARNING FROM SCANDINAVIA. Instructor: Peter Fader. The concept of "customer centricity," i.e., that not all customers are created equal, is gaining credibility and traction. More and more firms are coming to the realization that understanding and leveraging the behavioral differences across customers can potentially be more sustainably profitable than more conventional product-centric thinking that continues to dominate today's business landscape. At the heart of this transformation are three critical ingredients data, analytics, and technology. Using customer data at a granular level allows firms greater visibility into customer interactions, their use of social media, biometrics, and geolocation as tools to enhance business models and even create new ones. It allows a firm to be deliberate about which customers to go after and what kinds of services to provide them. For many, the key to profitable growth lies in successfully harnessing and developing the tools, organizational structures, and corporate cultures that create and enhance these capabilities.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

MKTG 897 Advanced Study: Luxury Branding and Retailing in Italy and Beyond
New retail brands and opportunities for growth are emerging at an unprecedented rate, for online retailers and offline retailers alike. In this course we will: (1) articulate key principles for successful branding and for understanding consumer shopping behavior in retail environments, (2) demonstrate unique challenges and opportunities that luxury brands face, and (3) discuss concepts and empirical methods for analyzing consumer shopping behavior.
Taught by: David Bell, Barbara Kahn
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
**MKTG 899 Independent Study**
A student contemplating an independent study project must first find a faculty member who agrees to supervise and approve the student’s written proposal as an independent study (MKTG 899). If a student wishes the proposed work to be used to meet the ASP requirement, he/she should then submit the approved proposal to the MBA adviser who will determine if it is an appropriate substitute. Such substitutions will only be approved prior to the beginning of the semester.

One-term course offered either term
Prerequisites: MKTG 611; and MKTG 612 or MKTG 613; and the written permission of instructor and the department MBA faculty advisor
Activity: Independent Study
1 Course Unit

**MKTG 940 Measurement and Data Analysis in Marketing - Part A**
This course provides an introduction to the fundamental methodological issues that arise in experimental and quasi-experimental research. Illustrative examples are drawn from the behavioral sciences with a focus on the behavior of consumers and managers. Topics that are covered include: the development of research ideas; data collection and reliable measurement procedures; threats to validity; control procedures and experimental designs; and data analysis. Emphasis is placed on attaining a working knowledge of the use of regression methods for non-experimental and quasi-experimental data and analysis of variance methods for experimental data. The primary deliverable for this course is a meta-analysis of a research problem of the students choosing that investigates the effects of research methods on empirical results.

Course usually offered in fall term
Activity: Seminar
0.5 Course Units

Notes: PhD Course. (Formerly part of MKTG 967) 0.5 cu

**MKTG 943 Research Methods in Marketing - Part B**
This course provides an introduction to the fundamental methodological issues that arise in experimental and quasi-experimental research. Illustrative examples are drawn from the behavioral sciences with a focus on the behavior of consumers and managers. Topics that are covered include: the development of research ideas; data collection and reliable measurement procedures; threats to validity; control procedures and experimental designs; and data analysis. Emphasis is placed on attaining a working knowledge of the use of regression methods for non-experimental and quasi-experimental data and analysis of variance methods for experimental data. **MKTG 941 Measurement and Data Analysis in Marketing - Part B**
In this course we consider models for binary, count, and continuous data including contingency table models, logistic and probit regression, ANOVA, ANCOVA, conjoint analysis, and OLS. In addition we cover multidimensional techniques such as MDS, cluster analysis, principal components analysis, factor analysis, and discriminant analysis. We utilize the statistics package SPlus 2000, and also BUGS for implementing many of the techniques described in a Bayesian manner.

**MKTG 950 Judgment and Decision Making Perspectives on Consumer Behavior - Part A**
The purpose of this course is to provide a solid foundation for critical thinking and research on the judgment, decision-making and choice aspects of consumer behavior. There is a focus on how people process information when making judgments and choices and how the processes of judgment and choice might be improved. Topics of discussion include rationality, judgment under uncertainty, judgment heuristics and biases, risk taking, dealing with conflicting values, framing effects, prospect theory, inter-temporal choice, preference formation, and the psychology of utility. The focus will be on the individual decision-maker, although the topics will also have some applicability to group and organizational decision-making and behavioral research methodologies.

MKTG 952 Information Processing Perspectives on Consumer Behavior - Part A
The purpose of this seminar is to provide graduate students with a solid foundation for critical thinking and research in psychology and marketing on information processing related topics. Topics of discussion include consumer knowledge (learning, memory and categorization), attitude theory, persuasion, affect and social influence. The course draws from the literature in marketing, psychology and economics. The course will enable students to conceptualize, operationalize, and develop research ideas. Therefore, the focus is on understanding theoretical and methodological approaches to various aspects of consumer behavior, as well as advancing this knowledge by developing testable hypotheses and theoretical perspectives that build on the current knowledge base.
Course usually offered in spring term
Activity: Seminar

MKTG 954 Economic/OR Models of Marketing - Part A
This doctoral seminar reviews analytical models relevant to improving various aspects of marketing decisions such as new product launch, product line design, pricing strategy, advertising decisions, sales force organization and compensation, distribution channel design and promotion decisions. The primary focus will be on analytical models. The seminar will introduce the students to various types of analytical models used in research in marketing, including game theory models for competitive analysis, agency theory models for improving organization design and incentives within organizations, and optimization methods to improve decision making and resource allocation. The course will enable students to become familiar with applications of these techniques in the marketing literature and prepare the students to apply these and other analytical approaches to research problems that are of interest to the students.

MKTG 956 Empirical Models in Marketing - Part A
This course is designed to generate awareness and appreciation of the way several substantive topics in marketing have been studied empirically using quantitative models. This seminar reviews empirical models of marketing phenomena including consumer choice, adoption of new products, sales response to marketing mix elements, and competitive interaction. Applies methods and concepts developed in econometrics and statistics but focuses on substantive issues of model structure and interpretation, rather than on estimation techniques. Ultimately, the goals are a) to prepare students to read and understand the literature and b) to stimulate new research interests. By the end of the course, students should be familiar with the key issues and approaches in empirical marketing modeling.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

MASTER OF CHEMICAL SCIENCES (MCS)

MCS 541 Proseminar II: Capstone Proposal Preparation
Highly recommended course during the semester prior to starting a capstone project. Students will review the scientific communication, research design, and prepare and submit an original proposal for the capstone project. Current opinions in the study of chemistry and presentations by guest lecturers will add content to areas of concentration.
Activity: Hybrid Course
0.5 Course Units

MCS 542 Proseminar III: Capstone Report Preparation
Highly recommended while taking MCS 699. Students will prepare and submit the report and poster for the capstone project.
Activity: Hybrid Course
0.5 Course Units

MCS 598 Independent Studies: Literature Review
Advanced study of literature and current research in various branches of chemistry with the goal of learning a new topic or research trend supervised by a faculty member. Students will be evaluated based on the work plan designed with the faculty mentor and director of the program. To obtain a grade, students will submit a report at the end of the semester.
Activity: Independent Study
1 Course Unit

MCS 599 MCS Independent Studies
May be taken for multiple course unit credit for (1) advanced study and research in various branches of chemistry, (2) seminar in current chemical research, (3) individual tutorial in advanced selected topics.
Taught by: Mayol-Cabassa, Ana-Rita
One-term course offered either term
Activity: Independent Study
1 Course Unit
**MSSP 601 The Power of Partnerships between Government, Non-profits, and the Private Sector**

Everything from the Affordable Care Act to the Mayor’s Rebuild Initiative here in Philadelphia could not be implemented by government without strong and vital partnerships with non-profits and the private sector. These collaborations provide an opportunity to help people, impact and change policy, improve outcomes, and multiply the impact that nonprofit and private sector organizations can have. The course will help graduate (and advanced undergraduate) students not only understand the theory, policy, and practice of these collaborations but also learn how they actually happen. Students will also learn the characteristics of these three sectors, their roles and contributions, and competitive forces that are often at work in the collaborative process. Topics for discussion will include attitudes and expectations in the public sector, the ingredients of effective partnerships, and effective communication strategies with elected and appointed officials. The course will be conducted on a seminar basis. Graduate students are expected to take an active part in shaping the discussion. Students will be expected to rotate leadership for the class discussions and to supplement course materials with independent study of relevant magazine and newspaper articles. Course grades are assigned as follows: 20 percent for class participation, 15 percent for an in-class written exam, 30 percent for a group presentation and write-up of a case study, and 35 percent for a final project. High quality written work and accurate citations is an expectation in all assignments.

**Activity: Seminar**
1 Course Unit

**MSSP 606 Data for Equitable Justice Lab**

Data for Equitable Justice Lab is a non-credit research group that gives SP2 Masters students an opportunity to analyze some of today’s most important social issues through data and, with faculty support, create a product for audiences well beyond our classrooms and campus. With guidance from the lab faculty, students develop a project - either individually or as part of a team - to examine a contemporary social policy or political issue through or on data or digital technology. Through these projects students will produce an op-ed, bolg post, podcast, academic article, short film, or other product of their choosing that creates or contributes to contemporary discourse.

**Activity: Laboratory**
0 Course Units

**MSSP 628 Policy: Analysis of Issues, Strategy and Process**

Policy analysis requires an understanding of social problems/social issues and the processes by which policy is developed and implemented. Critical skills in many policy frameworks include: problem definition and analysis, review of relevant research, identification of possible actions, implementation and evaluation, and fiscal analysis. Competency in written and oral communication is also essential. To develop these related skills, this course utilizes as a base a dynamic social problem analysis framework that addresses issues of equity, equality and adequacy. It also examines multiple theoretical and analytical perspectives. Through the review of contemporary and historical social policy debates and provisions, selected case examples and policy briefs, this course provides students with an understanding of the policy roles of the legislative and executive branches of government, including goal setting, policy rulemaking and enactment, allocation of resources, financing, regulation, and implementation. The policy process at state and local levels of government will also be addressed. The primary focus is on U.S. policy although global policies will be discussed when relevant.

Course usually offered in fall term

Prerequisite: Enrolled in MSSP program or permission of instructor

**Activity: Lecture**
1 Course Unit

**MSSP 629 Research and Evaluation Design**

Research and Evaluation Design introduces social research methods in the context of social policy and program evaluation. The course provides a conceptual and practical understanding in the design of experimental, quasi-experimental, and non-experimental research and in the application of quantitative and qualitative methods. Students learn about the application of the research process and skills in all phases of assessing a social policy and developing a social program, including needs assessment, implementation analysis, and evaluation of policy or program effectiveness. Students learn to be critical and informed consumers of research and to apply guidelines of research ethics in social policy settings.

Taught by: Summerville

One-term course offered either term

Prerequisite: Enrolled in MSSP program or permission of instructor

**Activity: Lecture**
1 Course Unit

**MSSP 630 Quantitative Reasoning/Social Statistics**

The primary goals of this course are (1) to provide students with a solid understanding of the logic of social science research as well as (2) to provide students with an introduction to a broad range of statistical methods commonly used in social science research. The first portion of the semester concentrates on defining research problems, research design (including sampling, measurement, and causal inference), and assessing research quality. The latter portion of the semester focuses upon data analysis including descriptive statistics, measures of association for categorical and continuous variables, introduction to t-tests, ANOVA and regression, and the language of data analysis. Students will learn how to choose and apply statistical tools to data sources, how to interpret quantitative studies, and will gain experience using SPSS - a statistical software package.

Course usually offered in fall term

Prerequisite: Enrolled in MSSP program or permission of instructor

**Activity: Lecture**
1 Course Unit

---

2018-19 Catalog | Generated 08/30/18
MSSP 631 Law and Social Policy
This course introduces students to the basics of the American legal system, focusing on the interplay between litigation and social policy. Students will learn how law, and particularly case law, is made, how to read case law and evaluate precedent, legal reasoning and argument. This course will utilize various teaching methods including introduction to the "Socratic" lecturing method which is frequently utilized in the study of law. Students will also study the structure of court systems at both state and federal levels as well as the litigation process and the role of law and courts in shaping and addressing social policy issues. Students will also learn the basics of several areas of substantive law, with an eye toward consideration of how that law has been, and can be, used to effect social change.
Course usually offered in spring term
Prerequisite: Enrolled in MSSP program or permission of instructor
Activity: Lecture
1 Course Unit

MSSP 632 Capstone Seminar I: Policy Communications
The focus of the Capstone Seminar is three-fold: 1) to enhance student integration of the theory and practice of social policy analysis; 2) to enhance the student’s competencies in the written and oral communication processes and procedures necessary for the policy world; and 3) to ensure basic knowledge about federal budget processes, stakeholder roles, and inter-organizational collaboration.
Course usually offered in spring term
Prerequisites: Enrolled in MSSP program.
Activity: Lecture
0.5 Course Units

MSSP 633 Capstone Seminar II: Policy Internship
Capstone II consists of an intensive, multi-week policy internship that is selected through a consultative process involving the student, MSSP advisors, internship coordinator/advisor, and mentors/supervisors at potential sites. The internship provides an opportunity for the student to expand horizons beyond the academic. It serves as a medium to integrate classroom learning with experiences in policy making activity.
Course usually offered in fall term
Prerequisite: Enrolled in MSSP program
Activity: Seminar
1 Course Unit

MSSP 634 MSSP/DA Capstone I: Telling Stories with Data
The volume and complexity of data continues to increase in the world around us, including science, business, medicine, social media and everyday human activity. This course aims to expose students to visual representation methods and techniques that increase the understanding of complex data. Good visualizations not only present a visual interpretation of data, but do so by improving comprehension, communication, and decision making. In this course, students will learn about the fundamentals of perception, the theory of visualization, and good design practices for visualization. The course will also provide hands-on experience on the process of data communication, from initial data analysis, to identifying appropriate visualization techniques, to crafting informative visualizations.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

MSSP 635 MSSP/DA Capstone II: Internship
Capstone II consists of an intensive, multi-week internship that is selected through a consultative process involving the student, MSSP advisors, internship coordinator/advisor, and mentors/supervisors at potential sites. The internship provides an opportunity for the student to expand horizons beyond the academic. It serves as a medium to integrate classroom learning with experiences in policy making activity.
Prerequisite: Enrolled in Social Policy/Data Analytics program
Activity: Seminar
0.5 Course Units

MSSP 668 Economics for Social Policy
This course provides students with theory and tools from the field of economics that are useful for the field of social policy, such as: 1) critical macroeconomic and microeconomic concepts for social policy formation and analysis; 2) information about the Congressional budget process and federal budget, U.S. and global monetary policy, economic measurement indices, and tax policy in relation to social policy values of equity, equality and adequacy, 3) how to apply cost-benefit analysis and/or cost-effectiveness analysis to policy proposals; and 4) the role of nonprofit organizations in the provision of social services and programs that are mandated by federal legislation.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MSSP 710 Democratizing Data: Analytics for Social Change
With the advent of digital technologies nad the increasing power of computational analytics, the proliferation and ubiquity of data production has increased at exponential rates enabling new possibilites for social analysis. This course will examine the emergence of democratizing data -- the movement to make government and other data more widely or publicly available and its potential enabling for democratic possibilities. The types of data being made available, through various analytic systems, and the ways in which their accessibility and inaccessibility is contributing to reconfigured power relations, will be described. The paradigmatic tensions and shifts that have emerged in the debates on "Big Data," such as deductive versus inductive reasoning and the challenges posed to statistical sampling theory, will be interrogated. The appropriation of machine learning and predictive analytic algorithms for social analysis will be critically explored. Issues related to the ethical and legal use of administrative data, particularly data related to patient, client, student, and taxpayer information will be considered, as well as from internet-based sources including social media. Potential solutions to data security challenges will be additionally considered. Methods for web-scraping of data, analysis of web traffic data, and the use of social networking data in the modeling of social phenomena and public opinion will be examined. Students will learn how to make results accessible to non-technical audiences via data visualization tools, such as web-based data dashboards and web-based maps. These topics will be discussed for the analysis of health, education, and social policy as well as their implications for questions pertaining to race, gender, class, sexuality, dis/abilities, age and youth culture. This course will develop students' knowledge of computational and data analytics and its applications for social policy analysis.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
MSSP 741 Gender & Social Policy
Gender and Social Policy develops an advanced understanding of social policies through a focus on social issues and conditions through the lens of gender, economic and critical theory. The specialized focus on gender and social policy provides students with the opportunity to develop more specialized knowledge about how market dynamics and government policies respond to the needs and risks faced by women. Specific emphasis is placed on utilizing theoretical frameworks to evaluate the intersection between social policy, history and social science in relationship to gender issues. Students are also expected to conduct a policy analysis that includes an evaluation of how current and former social movements surrounding gender issues shaped their policy of interest.
Taught by: Baker
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MSSP 780 Policy and "Difference" in Postmodernity
Social constructions of "difference" permeate the institutions, spaces, and assumptions of our society. These social constructions include but are not limited to the racialized, gendered, sexed, classed, and dis/abled constructions of the body. By leaning on postmodern thinkers such as Iris Marion Young, Pierre Bourdieu, Jacques Derrida, Ernesto Laclau, and Michel Foucault, this seminar course will begin by engaging the questions of what is "difference" and how is "difference" discursively constructed and reproduced in society. Using a postmodern lens, the remainder of the course will engage various social science texts that deal with the varieties of "difference" (i.e. race, gender, class, sexuality) and the explicit and/or implicit policy implications of these works. Thus, we will critically engage policies such as welfare, affirmative action, economic policies of taxation, and same-gender marriage, among others. The underlying questions throughout the course will be to what extend does social policy enable the possibilities of freedom, justice, and democracy for the "Other", the deviant, the abject, the marginalized, those of assumed "difference"? And, to what extent does policy constrain those possibilities at the same time? This course does assume familiarity with social theory and is an introduction to postmodern thought on the law, the political, and policy.
Taught by: Dixon-Roman
Course usually offered in spring term
Activity: Seminar
1 Course Unit

MSSP 797 Social Policy in Revolutionary Cuba (1959-2017)
Cuba represents one of the world's long-standing institutionalized revolutions whose narrative and policies have changed from a strong nationalism yearning for independence, to an alignment with communism's ideology and modus operandi, to a nostalgic, post-Soviet Union "socialism" ruled by a binary, state-controlled capitalism. In addition to the myriad of social and political changes affecting the island, the transition of leadership from Fidel Castro to his brother, Raul, and the death of the former in 2016, has put into question the theoretical pillars of the Revolution, thus undermining its initial legitimacy. This course is designed to provide students with the critical and analytical tools to dissect Cuban revolutionary politics, policies, and identity mutations within the island's historical trajectory. We will begin by critically reviewing key points of diplomatic and historical relationships between the U.S and Cuba, followed by an analysis of the notion of independence - upon which Castro relied to gather massive support - in the context of the 60's debates on decolonization and underdevelopment. In addition, we will delve into the theoretical foundations of the Revolution focusing, among other texts, on the literature by Cuba's "founding father" Jose Marti, who deeply influenced the Spanish-American war (1898)'s outcomes as well as Fidel Castro's vision for Cuba. Throughout the course, students will also have the opportunity to critically read and discuss main Cuban social policies such as its famous Literacy Campaign, and other Education, Housing, Cultural, Health, and Immigration policies, as well as the island's complex relationship with technological development and communications. Finally, we will study identity and race dynamis, which are inextricably embedded in Cuba's political landscape.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Application deadline: 11/20/17 at 5pm; Class dates in Havana: May 17-May 31; Pre-departure sessions at Penn: April (TBA); Application available at: www.sp2.upenn.edu/global/courses

MSSP 799 Independent Study
Independent studies provide a flexible opportunity for standing faculty and students to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising standing faculty member. Part-time faculty members are not eligible to offer independent studies. Independent studies require the academic advisor's approval.
Activity: Independent Study
1 Course Unit
MSSP 897 Applied Linear Modeling
This course deals with the underlying assumptions and applications of the general linear model with social science, education, and social policy related questions/data. The first half of the course begins by covering simple linear regression and the assumptions of the general linear model, assumption diagnostics, consequences of violation, and how to correct for violated assumptions. This will also include methods of incomplete case analysis (i.e. missing data analysis). Then various aspects of regression analysis with multiple independent variables will be covered including categorical explanatory variables (e.g. to estimate group differences), interaction effects, mediating effects (e.g. to estimate the indirect effect of social processes), and non-linear effects. The course will then cover some of the applications of the general(ized) linear model including logistic regression, some elements of path modeling (structural equation modeling), multilevel analysis (hierarchical linear modeling), and longitudinal modeling (growth modeling). The course will be taught using SAS, but students are welcome to use any statistical package of comfort. Pre-requisite: Introductory Graduate Statistics.
Taught by: Dixon-Roman
Course usually offered in spring term
Prerequisite: Introductory Graduate Statistics
Activity: Lecture
1 Course Unit
MASTER OF SCIENCE IN TRANSLATIONAL RESEARCH (MTR)

MTR 510 Introduction to Clinical and Translational Research
This introductory course lays the foundation for understanding practical aspects of conducting clinical research in an academic environment. The course is divided into two modules: Module 1: Research Methods & Protocol Development and Module 2: Regulatory Environment for Clinical Trials. The first module introduces clinical research, clinical protocols, study designs and biostatistics that underlie such studies. The second module covers ethical considerations in clinical research, study execution and oversight, and the regulatory environment for clinical research. Upon completion, students should have a strong foundation in the fundamentals of clinical research and should be able to apply contemporary research tools to clinically relevant areas of investigation.
Taught by: Emma Meagher, MD
Course usually offered in fall term
Also Offered As: REG 510
Activity: Lecture
1 Course Unit

MTR 620 Translational Therapeutics
To provide an in-depth view of the process by which scientific discoveries are commercialized. This course covers discovery in the laboratory, technology transfer, regulatory, financial, and managerial issues involved in moving a technology from the lab into the market place. The course contents fall into three broad categories: (1) examples of scientific discoveries that are candidates for commercialization, (2) fundamental elements of technology transfer, such as intellectual property protection and licensing, and (3) aspects of commercialization, such as regulatory approval, financing, and startup formation. In using this structure, the course provides parallel coverage of both the science and the commercialization process, in such a way that the elements of one contribute to the student's experience in learning the other.
Taught by: Nalaka Gooneratne, MD
Also Offered As: BE 608
Prerequisites: Undergraduates and graduate students in other departments are welcome. Please contact mmaxwell@upenn.edu to request permission to register.
Activity: Lecture

MTR 623 Writing An NIH Grant
This course will provide a comprehensive overview of the grant writing process. Audience: Faculty who have not written an NIH grant before or need guidance with
Activity: Lecture
1 Course Unit
MASTER OF URBAN SPATIAL ANALYTICS (MUSA)

MUSA 500 Spatial Statistics and Data Analysis
This hands-on course will provide an introduction to statistical methods and will serve as a prequel to ESE502. Topics covered will include exploratory univariate analysis, correlation and Chi-square analysis, t-tests and ANOVA. Non-parametric alternatives to the standard tests will be discussed. OLS regression, including assumptions and diagnostics, will be covered in detail. Heavy emphasis will be placed on the application of each method covered. The course will conclude with an introduction to spatial statistical methods and a brief overview of linear algebra and matrix notation for OLS and spatial regression. Students will learn to use JMP-IN, ArcGIS and GeoDa for data analysis.
Taught by: Eugene Brusilovsky
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MUSA 501 Introduction to Applied Statistics
This hands-on course will provide an introduction to statistical methods and will serve as a prequel to ESE502. Topics covered will include exploratory univariate analysis, correlation and Chi-square analysis, t-tests and ANOVA. Non-parametric alternatives to the standard tests will be discussed. OLS regression, including assumptions and diagnostics, will be covered in detail. Heavy emphasis will be placed on the application of each method covered. The course will conclude with an introduction to spatial statistical methods and a brief overview of linear algebra and matrix notation for OLS and spatial regression. Students will learn to use JMP-IN, ArcGIS and GeoDa for data analysis.
Taught by: Eugene Brusilovsky
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MUSA 503 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with vector-oriented (i.e., drawing based) geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Previous experience in GIS is not required.
Taught by: Tomlin or Hillier
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MUSA 504 Business and Crime Geographics
In this hands-on course, students will learn how to use ESRI Business Analyst software and data to undertake real estate and social service market studies, business location studies, and consumer expenditure profiles. New this year, the course will also explore techniques and software for tracking and forecasting crime; and deploying police resources.
Taught by: Amos
Course usually offered in spring term
Prerequisites: Prior experience with ArcGIS.
Activity: Seminar
1 Course Unit

MUSA 505 Web-based Mapping
This hands-on course will teach students how to develop and implement web-and internet-based mapping tools and applications using ESRI’s ArcGIS Server and ArcGIS Online products as well as the Google Maps Applications Programming Interface (API). Students will learn how to use web-based tools to build spatial databases, analyze and display spatial data at multiple scales, mix web-based vector and raster data with image data, conduct spatial analysis and develop urban and environmental planning applications.
Taught by: Landis and Dailey
Course usually offered in spring term
Prerequisite: CPLN 670 / LARP 743
Activity: Laboratory
1 Course Unit

MUSA 507 Spatial Analysis for Urban and Environmental Planning
This course builds on prior knowledge of GIS and basic statistics to help students to develop GIS and spatial analysis applications for use in urban and environmental planning and management. Each weekly session will focus on a particular analytical approach (e.g., buffering, geo-processing, map algebra, network analysis) as applied to a particular urban or environmental planning tasks (e.g., identification of development opportunities, prioritizing conservation lands, urban growth modeling, housing price modeling). The format of the class includes weekly lectures/in-class demos; and weekly homework assignments. The course will make extensive use of ArcGIS and associate Extensions, especially Spatial Analyst, Network Analyst, and Business Analyst. One-year student versions of ArcGIS and ArcGIS extensions will be available free of charge at the City Planning Office. ArcGIS runs best on Windows machines; those with Macs will need to install a Windows emulator.
Taught by: Steif
Course usually offered in fall term
Prerequisite: MUSA 501 or CPLN 503 or equivalent
Activity: Lecture
1 Course Unit

MUSA 610 Javascript Programming for Planning Applications
This hands-on course will introduce city planning, MUSA and design graduate students to Java and Javascript. Students will learn the logic and syntax of the Java programming language for use in simple web applications (Weeks 1 to 7); as well as how to program database and map-oriented web desktop applications using Javascript (Weeks 8 to 14). The "hands-on" uses of Java and Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.
Taught by: Faculty
Course usually offered in spring term
Activity: Laboratory
1 Course Unit
MUSA 611 Java Script Programming for Planners and Designers
This course will introduce City Planning, MUSA and design graduate students to Javascript. Students will learn the logic and syntax of the Java programming language for use in a simple web application (weeks 1 to 7); as well as how to program database and map-oriented web and desktop applications using Javascript (weeks 8 to 14). The "hands-on" uses of Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.
Taught by: Faculty
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MUSA 620 Data Wrangling and Visualization
The purpose of this course is to familiarize students with the "pipeline" approach to data science. This involves the process of gathering data; sorting the data; analyzing the data and visualizing the data such that non-technical managers can make use of it for decision making. The first part of the course teaches students how to gather data by way of scraping, APIs, Google Big Query, Twitter and other unstructured sources. The second part of this course, teaches students how to store and retrieve these data in a database. The third part of the class teaches some more esoteric machine driven analytics. The fourth and final component of the class is data visualization both in state and dynamic (web-based) form. The students will be expected to replicate this pipelines on a data set of their own choosing for their final project.
Course usually offered in spring term
Prerequisites: Prerequisites include a working knowledge of R and ArcGIS.
Activity: Seminar
1 Course Unit

MUSA 800 MUSA Capstone Project
One-term course offered either term
Activity: Seminar
1 Course Unit

MUSA 801 MUSA Seminar
Course Description: the purpose of this course is to have students to work with city and non-profit clients on analytical projects that convert client data into actionable intelligence. Groups of 3-4 students will work with the client to understand the business process, wrangle data, develop spatial and spatial analytics and serve these outputs to non-technical decision makers through the medium of data visualization. Students will be mentored by MUSA Faculty and advised by someone from the partnering agency. Prerequisites: students must have a working knowledge of R and experience building both spatial and statistical models including machine-learning models. In order to be eligible for this course, students must have taken the following courses - 1) MUSA-507/ CPLN-590 and either CPLN-505 or MUSA-500. Students must have taken or be enrolled concurrently in MUSA-601 or MUSA-800. Students without these specific prerequisites are asked to contact the instructor.
Admission into the course: for spring 2018, there are initially 16 open seats with the possibility of another 4 opening up. To be admitted into the course, students are asked to pick one of the practicum projects and write no more than 300 words about why the use case is of interest, how they might go about solving the problem, and its usefulness to city Please also discuss which data-drive skills are your sharpest. The essay should be turned into the City Planning Office in Meyerson Hall.
Projects (subject to change): Louisville, Kentucky-Traffic Flows and Smart Signal Modeling: students will work have access to high-resolution traffic data from Waze and historical traffic signal information from the City. The goal is understand the traffic pattern that might result from a given traffic signal configuration. Can discover a configuration that is amenable to mode choice like walking or biking? Minneapolis, Minnesota-Code Enforcement: Minneapolis has a problem where too many construction projects are happening illegally. Unpermitted construction work may result in unsafe living conditions and worse. This project is to help the city predict where illegal work may be happening and how inspectors can better enforce existing permit regulations. Philadelphia, PA-Equitable Bike Share Planning: one of the policy goals of Philadelphia’s bike share system is to expand into neighborhoods where bike share demand may not be profitable but where the subsidies might induce more sustainable mode choice in the future. Working with the Bicycle Coalition of Greater Philadelphia, the goal of this project is for students to build and algorithm, which can predict bike share demand for any location Citywide,
Taught by: Ken Steif
Course usually offered in spring term
Prerequisites: MUSA-507/CPLN-590 and either CPLN-505 or MUSA-500
Activity: Seminar
1 Course Unit
MATERIALS SCIENCE AND ENGINEERING (MSE)

MSE 099 Undergraduate Research and/or Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term. Note: a maximum of 2 c.u. of MSE 099 may be applied toward the B.A.S. or B.S.E. degree requirements.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Open to all students

MSE 215 Introduction to Functional Materials: From Macro to Nanoscale
The purpose of this course is: 1) to introduce key concepts underlying the design, properties and processing of functional materials and their applications, and 2) to apply these concepts in the rapidly growing field of nanomaterials and nanotechnology. Fundamental chemical and physical principles underlying electronic, dielectric, optical and magnetic properties will be developed in the context of metals, semiconductors, insulators, crystals, glasses, polymers and ceramics. Miniaturization and the nanotechnology revolution confronts materials science with challenges and opportunities. Examples in which nanoscale materials exhibit qualitatively different properties compared to bulk will be emphasized.
Course usually offered in spring term
Prerequisite: MSE 221
Activity: Lecture
1 Course Unit

MSE 220 Introduction to Materials Science and Engineering
The course is an introduction to the most important concepts in materials science and engineering with a goal of building the foundations for all other courses related to materials and how to think about materials in other areas of engineering and the physical sciences. It covers atomic bonding, crystal structure and symmetry, glasses, defects, diffusion, elasticity, plasticity, fracture, phase diagrams, phase transformations, and an introduction into thermal, electrical, magnetic and optical properties and materials processing. Material classes will include metals, ceramics, polymers, semiconductors, and composites.
Course usually offered in fall term
Prerequisite: PHYS 140 or MEAM 110
Corequisites: PHYS 141 and MATH 240
Activity: Lecture
1 Course Unit

MSE 221 Quantum Physics of Materials
This course develops the background in basic physics required to understand the behavior of electrons in atoms, molecules and solids. Beginning with experiments and ideas that led to the foundation and postulates of Quantum Mechanics, the behavior of an electron in simple potential wells is treated. The electron in a harmonic oscillator well and the Coulomb potential of a hydrogen atom are treated next. Pauli's exclusion principle and generalization to multi-particle systems are introduced. The Fermi energy, density of states and free electron band structure will be introduced. Many state-of-the-art materials analysis techniques will also be demonstrated throughout the course.
One-term course offered either term
Prerequisites: PHYS 140, 141 concurrent and MATH 240
Activity: Lecture
1 Course Unit
Notes: Meets Natural Science Requirement

MSE 250 Nano-scale Materials Lab
In this class you will learn laboratory methods used to synthesize materials, to examine the structure of materials, to measure electrical, mechanical and thermal properties, and to investigate the relationships between processing, structure and properties. Emphasis is placed on laboratory skills, technical understanding, and technical communications (figures, writing). The laboratory exercises involve: 1) learning how to use state of the art equipment for studying the properties and internal structure of materials, 2) qualitative and quantitative interpretation of data and observations, and 3) the development of analytical skills necessary to form general and fundamental conclusions from observations and data. This course focuses on how materials' structure and chemistry can be controlled to tailor properties and how properties of nanoscale materials can differ significantly from their bulk counterparts.
Course usually offered in spring term
Prerequisite: MSE 220
Activity: Lecture
1 Course Unit

MSE 260 Energetics of Macro and Nano-scale Materials
Basic principles of chemical thermodynamics as applied to macro and nano-sized materials. This course will cover the fundamentals of classical thermodynamics as applied to the calculation and prediction of phase stability, chemical reactivity and synthesis of materials systems. The size-dependent properties of nano-sized systems will be explored through the incorporation of the thermodynamic properties of surfaces. The prediction of the phase stability of two and three component systems will be illustrated through the calculation and interpretation of phase diagrams for metallic, semiconductor, inorganic systems.
Course usually offered in spring term
Prerequisite: CHEM 102
Activity: Lecture
1 Course Unit

MSE 296 Introduction To Negotiation
Activity: Lecture
1 Course Unit
MSE 330 Self-Assembly of Soft Materials
Soft matter is found in diverse applications including sports (helmets & clothes); food (chocolate, egg); consumer products (e.g., lotions and shampoo); and devices (displays, electronics). Whereas solids and liquids are typically hard and crystalline or soft and fluid, respectively, soft matter can exhibit both solid and liquid like behavior. In this class, we investigate the thermodynamic and dynamic principles common to soft matter as well as soft (weak) forces, self-assembly and phase behavior. Classes of matter include colloidal particles, polymers, liquid crystalline molecules, amphiphilic molecules, biomacromolecules/membranes, and food. Active learning activities will be included.
Course usually offered in fall term
Also Offered As: BE 330
Prerequisites: CHEM 102 or equivalent; MSE 220 or BE 220 or introductory physical chemistry course.
Activity: Lecture
1 Course Unit

MSE 360 Structure at the Nanoscale
To understand the atomic arrangements of crystalline matter, this class focuses on crystallography, symmetry, and diffraction techniques. The first half focuses on learning how to describe the structure of crystalline matter through the basics of crystallography and symmetry by introducing two-dimensional symmetry operations, point, and plane groups; this knowledge is then extended into three-dimensions to arrive at an understanding of space lattices and space groups. The second half is concerned with applying this information to understand structures through various diffraction and microscopy techniques.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MSE 393 Materials Selection
Throughout mankind's history, materials have played a critical role in civilization and technology. The selection of materials has been based on availability and functionality. The rapid advances of materials technologies in the last 150 years, however, have made nearly all classes and forms of materials available, at a cost. These costs include the dollars and cents costs that typically accompany the use of stronger, lighter materials, but environmental costs are also important and significant. Therefore, in theory at least, materials selection can now proceed on a rational basis as an optimization process involving performance and costs - both financial and environmental. In this course, we will focus on structural applications where mechanical design is central. By the end of the course, the students can expect to acquire a level of engineering familiarity with a broad range of materials, and be prepared to undertake responsible material design projects in the future.
Course usually offered in spring term
Prerequisites: MSE 220, Junior standing or approval of the instructor
Activity: Lecture
1 Course Unit

MSE 405 Mechanical Behavior of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in spring term
Also Offered As: MSE 505
Prerequisites: MSE 220 and/or MEAM 210 or the equivalent background, MATH 240 or equivalent
Activity: Lecture
1 Course Unit

MSE 430 Polymers and Biomaterials
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship.
Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in fall term
Also Offered As: CBE 430, CBE 510, MSE 580
Prerequisites: MSE 260 or equivalent course in Thermodynamics or Physical Chemistry (such as CBE 231, CHEM 221, MEAM 203)
Activity: Lecture
1 Course Unit

MSE 440 Phase Transformations
The state of matter is dependent upon temperature, thermal history, and other variables. In this course the science of structural transitions is treated, with the purpose in mind of utilizing them for producing materials with superior properties. The subjects covered include the methods of structural analysis, solidification, solid state transformation, and order-disorder transition.
Course usually offered in spring term
Prerequisites: MSE 220, MSE 260, or equivalent or permission of the instructor
Activity: Lecture
1 Course Unit
MSE 455 Electrochemical Engineering of Materials
After introducing electrochemical concepts (redox reactions, electrolytic versus galvanic cells, standard oxidation potentials), this course will cover the broad impact of electrochemical phenomena on materials. Topics that will be discussed include: (1) Materials extraction from their ores to finished products by electrowinning, (2) Chemical refining (Mond process) and electrorefining of materials, (3) Materials degradation by destructive electrochemical corrosion, (4) Three-dimensional nanostructured materials by selective electrochemical corrosion, (5) Enhancing the electrochemical performance of materials via nanostructuring - e.g. lithium-ion battery electrodes; (6) Enhancing the electrochemical performance of materials via surface chemistry - e.g. oxygen evolution electrocatalysts; (7) Light-enhanced electrochemical performance of materials - e.g. solar water splitting photoelectrocatalysts. Students will be engaged in interactive classroom activities.
Course usually offered in fall term
Also Offered As: MSE 555
Activity: Lecture
1 Course Unit

MSE 460 Computational Materials Science
This course provides an introduction to modeling and simulation in materials science, covering continuum methods (e.g. finite element methods) and atomistic and molecular simulation (e.g. molecular dynamics). These tools play an increasingly important role in modern engineering. You will get hands-on training in both the fundamentals and applications of these methods to key engineering problems. The lectures will provide an exposure to areas of application, based on the scientific exploitation of the power of computation. We will use software packages (Comsol and LAMMPS) and thus extensive programming skills are not required. Matlab background needed for the course will be covered in a self-contained module.
One-term course offered either term
Prerequisites: Junior or Senior Standing. Ability to write simple computer codes would be an advantage.
Activity: Lecture
1 Course Unit

MSE 465 Fabrication and Characterization of Micro and Nanostructured Devices
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and biological applications. Basic principles of materials chemistry, physics, thermodynamics and surface/interfacial science are applied to solid state, liquid, and colloidal approaches to making materials. A wide range of nano- and microfabrication techniques, including photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 30% of class time and 50% of the homework devoted to hands on experiences and lab report writing. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3 lab reports, 4 problem sets with journal paper reading assignment, and a final project design.
Course usually offered in spring term
Also Offered As: MSE 565
Activity: Lecture
1 Course Unit

MSE 495 Senior Design
The senior design course is a two-semester capstone program that gives students the opportunity to design and execute an original experimental or theoretical project in materials science, engineering, or product/device development that is solving a real world problem. Students will work closely with a scientific advisor in their lab and meet once a week in the classroom to learn from an innovative curriculum that will build real-world skills in the context of their research and design project. These skills include project management, networking, teamwork, impactful written and verbal communications, upward management, self-reflection and feedback. Students will also learn how to design research in the context of having an impact on the world. This will be through weekly vignettes of innovative materials science solutions that solve problems in industries ranging from construction to healthcare to consumer products.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MSE 496 Senior Design
The senior design course is a two-semester capstone program that gives students the opportunity to design and execute an original experimental or theoretical project in materials science, engineering, or product/device development that is solving a real world problem. Students will work closely with a scientific advisor in their lab and meet once a week in the classroom to learn from an innovative curriculum that will build real-world skills in the context of their research and design project. These skills include project management, networking, teamwork, impactful written and verbal communications, upward management, self-reflection and feedback. Students will also learn how to design research in the context of having an impact on the world. This will be through weekly vignettes of innovative materials science solutions that solve problems in industries ranging from construction to healthcare to consumer products.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MSE 500 Experimental Methods in Materials Science
This laboratory course introduces students to a variety of experimental methods used in materials science and engineering. Hands-on training will be provided for atomic force microscopy, X-ray diffraction and scattering, mechanical testing with image capture, and dynamic light scattering. Students will use numerous software packages for data collection and analysis, as well as being introduced to LabVIEW as a method for customizing experiments. In addition, students will see demonstrations of scanning electron microscopy, transmission electron microscopy, and electron diffraction and analyze data from these methods. The format for the course will include a weekly lecture (1.5 hours), a weekly lab session (4 hours) and six assignments.
Course usually offered in fall term
Prerequisites: Permission of the Undergraduate Curriculum Chair and Instructor
Activity: Lecture
1 Course Unit
MSE 505 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in fall term
Also Offered As: MSE 405
Activity: Lecture
1 Course Unit

MSE 507 Fundamentals of Materials
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them.
One-term course offered either term
Activity: Lecture
1 Course Unit

MSE 515 Mathematics for Materials Science
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MSE 520 Structure of Materials
Course usually offered in spring term
Prerequisites: Permission of the Undergraduate Curriculum Chair and Instructor
Activity: Lecture
1 Course Unit

MSE 525 Nanoscale Science and Engineering
Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustension of current approaches, and for the development of revolutionary designs and applications.
Course usually offered in fall term
Also Offered As: ESE 525
Prerequisites: ESE 218 or PHYS 240 or MSE 220 or equivalent, or by permission
Activity: Lecture
1 Course Unit

MSE 530 Thermodynamics and Phase Equilibria
Fundamental elements of engineering thermodynamics, statistical thermodynamics, chemical thermodynamics and defect thermodynamics. Thermodynamic functions, stability, phase transitions, mixtures (gases, condensed matter, polymer solution), defects and interfaces. Phase diagrams and predominance diagrams. Applications to energy problems (engines, efficiency, power, electrochemical cells) and properties (Curie's law, rubber elasticity, specific heat, phonon/photon spectra, constitutive equations, equation of states).
Course usually offered in fall term
Prerequisites: Permission of the Undergraduate Curriculum Chair and Instructor
Activity: Lecture
1 Course Unit

MSE 536 Electronic Properties of Materials
This course will introduce the physical principles underlying broad spectrum of electronic properties in the solid state. Starting with the band structure of solids, the course will give an overview of electronic, dielectric, magnetic, thermal and optical properties of materials. The treatment will use quantum mechanical and statistical mechanical concepts familiar to students at the undergraduate level. Commonly used theories and models will be introduced and their predictions will be compared with observations. Students who have taken MSE 221/ MSE 260 and/or MSE 570/MSE 575 will benefit from this advanced introduction to material properties.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MSE 537 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course.
Taught by: Faculty
One-term course offered either term
Prerequisites: Freshman physics; MEAM 354 or equivalent, or consent of instructor.
Activity: Lecture
1 Course Unit
MSE 540 Phase Transformations
The phase of a material determines macroscopic properties such as strength, diffusion, and permeability. Whereas thermodynamics provides an idealistic understanding of phase behavior, the real phase (composition) and morphology of a solid material depends on the rate of transformation from one state to another. Namely, kinetics is the study of the rates at which systems approach the ideal state predicted by thermodynamics. Thus, transport/diffusion underlies our understanding of phase transformations. Technology applications will include, polymer nanocomposites as kinetically arrested materials, rapid solidification to create new materials, purification methods for integrated circuits, and drug delivery.
Course usually offered in spring term
Prerequisites: Permission of the Undergraduate Curriculum Chair and Instructor
Activity: Lecture
1 Course Unit

MSE 545 Materials for Energy and Environmental Sustainability
This course will cover the fundamental materials science issues central to the design of sustainable energy technology. The goal of this course is to expose students to the emerging advances in materials science and materials chemistry that underpin technologies for energy conversion (fuel cells, thermoelectrics, photovoltaics, wind energy etc.), storage (biofuels, artificial photosynthesis, batteries etc) and distribution (smart grids and hydrogen and methane economy concepts etc.) and to place these in a real world context. This class will emphasize concepts in "green materials and green engineering practices" that are emerging with a global focus on "Sustainable Technology." "Sustainability is defined as meeting the needs of the present without compromising the ability of future generations to meet their needs." Engineering materials and processes at all scales; molecular/nanometer, micro, and the macro-scale are critical to developing the tools society required to meet the growing needs for energy and sustainable materials for the built environment. This course is appropriate for graduate students and advanced undergraduates in Penn's Material Science Programs. Core MSE curriculum components in thermodynamics, structure, electronic & ionic transport, mechanics, polymers and optical materials will be expected, and exposure to the preparation in basic Chemistry and Physics will be advantageous in this highly interdisciplinary course.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MSE 550 Elasticity and Micromechanics of Materials
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eshelby's problem, etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed.
Taught by: Vitek
Course usually offered in fall term
Prerequisites: Permission of the Undergraduate Curriculum Chair and Instructor
Activity: Lecture
1 Course Unit

MSE 555 Electrochemical Engineering of Materials
After introducing electrochemical concepts (redox reactions, electrolytic versus galvanic cells, standard oxidation potentials), this course will cover the broad impact of electrochemical phenomena on materials. Topics that will be discussed include: (1) Materials extraction from their ores to finished products by electrowinning, (2) Chemical refining (Mond process) and electrorefining of materials, (3) Materials degradation by destructive electrochemical corrosion, (4) Three-dimensional nanostructured materials by selective electrochemical corrosion, (5) Enhancing the electrochemical performance of materials via nanostructuring - e.g. lithium-ion battery electrodes; (6) Enhancing the electrochemical performance of materials via surface chemistry - e.g. oxygen evolution electrocatalysts; (7) Light-enhanced electrochemical performance of materials - e.g. solar water splitting photoelectrocatalysts. Students will be engaged in interactive classroom activities.
Course usually offered in fall term
Also Offered As: MSE 455
Activity: Lecture
1 Course Unit

MSE 561 Atomic Modeling in Materials Science
This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis of the results such as radial distribution function, thermodynamics deduced from the molecular dynamics, fluctuations, correlations and autocorrelations. 2. Semi-empirical descriptions of atomic interactions: pair potentials, embedded atom method, covalent bonding, ionic bonding. Basics of the density functional theory. Mechanics, condensed matter physics, thermodynamics and statistical mechanics needed in interpretations are briefly explained.
Course usually offered in spring term
Prerequisites: Ability to write a basic code in a computer language such as fortran, C, C++
Activity: Lecture
1 Course Unit

MSE 565 Fabrication and Characterization of Nanostructured Devices
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and biological applications. Basic principles of materials chemistry, physics, thermodynamics and surface/interfacial science are applied to solid state, liquid, and colloidal approaches to making materials. A wide range of nano- and microfabrication techniques, including photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 30% of class time and 50% of the homework devoted to hands on experiences and lab report writing. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3 lab reports, 4 problem sets with journal paper reading assignment, and a final project design.
Course usually offered in spring term
Also Offered As: MSE 465
Prerequisite: MSE 360 or permission of the instructor
Activity: Lecture
1 Course Unit
MSE 570 Physics of Materials I
Failures of classical physics and the historical basis for quantum theory. Postulates of wave mechanics; uncertainty principle, wave packets and wave-particle duality. Schroedinger equation and operators; eigenvalue problems in 1 and 3 dimensions (barriers, wells, hydrogen, atom). Perturbation theory; scattering of particles and light. Use of computer-aided self-study will be made.
Course usually offered in fall term
Prerequisites: Undergraduate physics and math through modern physics and differential equations
Activity: Lecture
1 Course Unit

MSE 575 Statistical Mechanics
Statistical Mechanics is a unique branch of physics that permeates our understanding of matter at all length scales, from nanometers to stellar dimensions, and ranging in temperatures from pico-Kelvin (or lower) to billions of degrees Kelvin. This course will provide an overview of select topics in equilibrium and non-equilibrium statistical mechanics. The course will introduce the basic postulates of classical and quantum equilibrium statistical mechanics, explain the methodology of calculating observable properties, and discuss several applications in diverse fields. The second part of the course will introduce the methodology of non-equilibrium processes and discussing important theorems and results in the linear response regime. Finally, a brief discussion of systems far from equilibrium will be presented. Select applications from condensed matter physics, chemistry, materials science, biology, astrophysics, economics and meteorology will be used to illustrate the fundamental principles.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MSE 580 Polymers and Biomaterials
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in fall term
Also Offered As: MSE 430
Prerequisites: MSE 260 or equivalent course in thermodynamics or physical chemistry (such as CBE 231, MEAM 203)
Activity: Lecture
1 Course Unit

MSE 597 Master's Thesis Research
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

MSE 599 Master's Indep Study
One-term course offered either term
Activity: Independent Study
1 Course Unit

MSE 610 Transmission Electron Microscopy and Crystalline Imperfections
Theory and application of transmission electron microscopy methods to problems in materials science and engineering, condensed matter physics, soft matter, polymeric materials, inorganic chemistry and chemical engineering. The principles of microscope operation, electron scattering, image formation and spectroscopy will be described, with an emphasis on both theory and experiment. With laboratory.
Course not offered every year
Activity: Lecture
1 Course Unit

MSE 640 Optical Materials
This course discusses the optical properties of modern materials engineered for specific functionality and cover exciting new developments being made in this rapidly evolving field. Emphasis is placed on how modern nanotechnology reshapes the light-matter interaction and delivers novel optical properties that are not available in nature.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MSE 650 Mechanics of Soft and Biomaterials
This course is aimed to expose the students to a variety of topics in mechanic materials via discussion of "classic" problems that have had the widest impact long period of time and have been applied to analyze the mechanical behavior a variety of biological and engineering materials.
Course not offered every year
Activity: Lecture
1 Course Unit

MSE 790 Selected Topics in Materials Science and Engineering
Students should check department office for special topics.
One-term course offered either term
Notes: Both terms
Activity: Lecture
1 Course Unit

MSE 895 Teaching Practicum.
One-term course offered either term
Activity: Lecture
1 Course Unit
MATH 104 Calculus, Part I
Brief review of High School calculus, applications of integrals, transcendental functions, methods of integration, infinite series, Taylor's theorem, and first order ordinary differential equations. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Prerequisites: None. Engineering students are encouraged to register for the 006 lecture and group 6 recitations.
Activity: Recitation
1 Course Unit
Notes: This is a Formal Reasoning course.

MATH 110 Calculus for Wharton Students
Differential calculus, integral calculus, series, differential equations and elements of multivariable calculus, with an emphasis on applications.
One-term course offered either term
Activity: Lecture
1 Course Unit

MATH 114 Calculus, Part II
Functions of several variables, vector-valued functions, partial derivatives and applications, double and triple integrals, conic sections, polar coordinates, vectors and vector calculus, first order ordinary differential equations. Applications to physical sciences. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Prerequisite: Math 104
Activity: Recitation
1 Course Unit
Notes: This is a Formal Reasoning course.

MATH 115 Calculus, Part II with Probability and Matrices
Functions of several variables, partial derivatives, multiple integrals, differential equations; introduction to linear algebra and matrices with applications to linear programming and Markov processes. Elements of probability and statistics. Applications to social and biological sciences. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Prerequisite: Math 104
Activity: Recitation
1 Course Unit
Notes: This is a Formal Reasoning course.

MATH 116 Honors Calculus
Students who are interested in math or science might also want to consider a more challenging Honors version of Calculus II and III, Math 116 and Math 260 (the analogues of Math 114 and Math 240, respectively). These courses will cover essentially the same material as 114 and 240, but more in depth and involve discussion of the underlying theory as well as computations.
One-term course offered either term
Activity: Recitation
1 Course Unit
Notes: This is a Formal Reasoning course.

MATH 122 Community Algebra Initia
Community Algebra Initiative
One-term course offered either term
Activity: Lecture
1 Course Unit

MATH 123 Community Math Teaching Project
This course allows Penn students to teach a series of hands-on activities to students in math classes at University City High School. The semester starts with an introduction to successful approaches for teaching math in urban high schools. The rest of the semester will be devoted to a series of weekly hands-on activities designed to teach fundamental aspects of geometry. The first class meeting of each week, Penn faculty teach Penn students the relevant mathematical background and techniques for a hands-on activity. During the second session of each week, Penn students will teach the hands-on activity to a small group of UCHS students. The Penn students will also have an opportunity to develop their own activity and to implement it with the UCHS students.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 170 Ideas in Mathematics
Topics from among the following: logic, sets, calculus, probability, history and philosophy of mathematics, game theory, geometry, and their relevance to contemporary science and society.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: May also be counted toward the General Requirement in Natural Science Mathematics

MATH 180 Analytical Methods in Economics, Law, and Medicine
Elementary applications of decision analysis, game theory, probability and statistics to issues in accounting, contracting, finance, law, and medicine, amongst others.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 202 Proving Things: Analysis
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying real and complex numbers, sequences, series, continuity, differentiability and integrability. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
One-term course offered either term
Corequisites: Math 104, 114 or 240
Activity: Seminar
1 Course Unit

MATH 203 Proving things: Algebra
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying arithmetic, algebra, linear algebra, groups, rings and fields. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
One-term course offered either term
Corequisites: Math 104, 114 or 240
Activity: Lecture
1 Course Unit
MATH 210 Mathematics in the Age of Information
This course counts as a regular elective for both the Mathematics Major and Minor. This is a course about mathematical reasoning and the media. Embedded in many stories one finds in the media are mathematical questions as well as implicit mathematical models for how the world behaves. We will discuss ways to recognize such questions and models, and how to think about them from a mathematical perspective. A key part of the course will be about what constitutes a mathematical proof, and what passes for proof in various media contexts. The course will cover a variety of topics in logic, probability and statistics as well as how these subjects can be used and abused.
One-term course offered either term
Prerequisites: Math 114, Math 115 or equivalent
Activity: Lecture
1 Course Unit

MATH 240 Calculus, Part III
Linear algebra: vectors, matrices, systems of linear equations, vector spaces, subspaces, spans, bases, and dimension, eigenvectors, and eigenspaces. Matrix exponentials. Ordinary differential equations: higher-order homogeneous and inhomogeneous ODEs and linear systems of ODEs, phase plane analysis, non-linear systems.
One-term course offered either term
Prerequisite: Math 240
Activity: Recitation
1 Course Unit

MATH 241 Calculus, Part IV
Partial differential equations and their solutions, including solutions of the wave, heat and Laplace equations, and Sturm-Liouville problems. Introduction to Fourier series and Fourier transforms. Computation of solutions, modeling using PDE's, geometric intuition, and qualitative understanding of the evolution of systems according to the type of partial differential operator.
One-term course offered either term
Prerequisite: MATH 240
Activity: Recitation
1 Course Unit

MATH 260 Honors Calculus, Part II
This is an honors version of Math 240 which explores the same topics but with greater mathematical rigor.
Course not offered every year
Prerequisite: Math 114
Activity: Recitation
1 Course Unit

MATH 290 Undergraduate Mathematics Research Course
This is a project oriented mathematics research class that teaches students to solve real world problems by constructing and analyzing a mathematical model. Typically the problems that the projects solve can come from mathematics, chemistry, biology, and material science but sometimes we also have problems from economics, finance, and social sciences. The research problems in the course can vary from year to year.
Activity: Lecture
1 Course Unit

MATH 299 Undergraduate Research in Mathematics
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MATH 312 Linear Algebra
Linear transformations, Gauss Jordan elimination, eigenvectors, theory and applications. Mathematics majors are advised that MATH 312 cannot be taken to satisfy the major requirements.
Course not offered every year
Prerequisite: MATH 240
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312.

MATH 313 Computational Linear Algebra
Many important problems in a wide range of disciplines within computer science and throughout science are solved using techniques from linear algebra. This course will introduce students to some of the most widely used algorithms and illustrate how they are actually used. Some specific topics: the solution of systems of linear equations by Gaussian elimination, dimension of a linear space, inner product, cross product, change of basis, affine and rigid motions, eigenvectors and eigenvalues.
One-term course offered either term
Prerequisite: Math 240, and some programming experience
Activity: Lecture
1 Course Unit

MATH 314 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants; Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products: Euclidean, unitary and symmetric spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Taught by: Staff
Prerequisites: Math 114 or 115.
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312.

MATH 320 Computer Methods in Mathematical Science I
Students will use symbolic manipulation software and write programs to solve problems in numerical quadrature, equation-solving, linear algebra and differential equations. Theoretical and computational aspects of the methods will be discussed along with error analysis and a critical comparison of methods.
Course usually offered in fall term
Prerequisites: MATH 240 or concurrent and ability to program a computer, or permission of instructor
Activity: Lecture
1 Course Unit
MATH 340 Discrete Mathematics I
Topics will be drawn from some subjects in combinatorial analysis with applications to many other branches of math and science: graphs and networks, generating functions, permutations, posets, asymptotics. Course not offered every year
Prerequisites: MATH 114 or Math 115 or permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 341 Discrete Mathematics II
Topics will be drawn from some subjects useful in the analysis of information and computation: logic, set theory, theory of computation, number theory, probability, and basic cryptography.
Prerequisites: Math 340/Logic 210 or permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 350 Number Theory
Congruences, Diophantine equations, continued fractions, nonlinear congruences, and quadratic residues.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 360 Advanced Calculus
Syllabus for MATH 360-361: a study of the foundations of the differential and integral calculus, including the real numbers and elementary topology, continuous and differentiable functions, uniform convergence of series of functions, and inverse and implicit function theorems.
MATH 508-509 is a masters level version of this course.
One-term course offered either term
Prerequisite: MATH 240
Activity: Lecture
1 Course Unit

MATH 361 Advanced Calculus
Continuation of MATH 360.
One-term course offered either term
Prerequisite: MATH 240
Activity: Lecture
1 Course Unit

MATH 370 Algebra
Syllabus for MATH 370-371: an introduction to the basic concepts of modern algebra. Linear algebra, eigenvalues and eigenvectors of matrices, groups, rings and fields. MATH 502-503 is a masters level version of this course.
One-term course offered either term
Prerequisites: MATH 240 and Math 314, or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

MATH 371 Algebra
Continuation of MATH 370.
One-term course offered either term
Prerequisites: MATH 240, Math 314 and Math 370, or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

MATH 420 Ordinary Differential Equations
After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.
One-term course offered either term
Prerequisite: MATH 240 or permission of instructor
Activity: Lecture
1 Course Unit

MATH 425 Partial Differential Equations
Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.
Course usually offered in fall term
Prerequisites: MATH 240 or permission of instructor. Knowledge of PHYS 150-151 will be helpful.
Activity: Lecture
1 Course Unit

MATH 432 Game Theory.
A mathematical approach to game theory, with an emphasis on examples of actual games. Topics will include mathematical models of games, combinatorial games, two person (zero sum and general sum) games, non-cooperating games and equilibria.
One-term course offered either term
Prerequisites: Math 240.
Activity: Lecture
1 Course Unit

MATH 460 Topology
Point set topology: metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.
Course not offered every year
Prerequisites: MATH 240 and permission of instructor
Activity: Lecture
1 Course Unit
MATH 465 Differential Geometry
Differential geometry of curves in the plane and in 3-space; n gauge theories. Surfaces in 3-space; The geometry of the Gauss map; ons. The language of Intrinsic geometry of surfaces; Geodesics; Moving frames; of vector bundles, The Gauss-Bonnet Theorem; Assorted additional topics.
Course not offered every year
Prerequisites: MATH 361 or Permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 840 Topics in Modern Math
Mathematics 480 will open with a review of the basics of real analysis (brief or extended background requires). The review will include: introduction of the real numbers through Dedekind cuts, continuity of real-valued functions on the real line; Cantor nested-interval principle, basic results for continuous functions, Maximum and Intermediate Value theorems, Heine-Borel Theorem, Uniform Continuity on closed intervals; metric spaces, convergence of sequences, Cauchy sequences, completeness, more general uniform continuity and intermediate value theorems; general topology, separation, compactness, product spaces, Tychonoff’s Theorem. Special topics in analysis: Weierstrass Polynomial Approximation Theorem, Bernstein polynomials and simultaneous approximations and derivatives, topics from divergent series, summation methods; r measure theory, the Lebesgue integral, Lp spaces, Holder, Minkowski, and Cauchy-Schwarz inequalities; basics of Functional Analysis, normed spaces, Banach spaces and Hilbert space, with examples (Lp spaces, continuous-functions spaces), Banach spaces and spectral theory, groups and Fourier transforms, Tauberian theorems; approximation theory, again, through the prism of functional analysis; extension of the polynomial approximation theorem (Stone-Weierstrass theorem), Muntz approximation theorem (by polynomials with preassigned powers), compact operators, the Spectral theorem, Stone’s theorem (representations of the additive group of real numbers); Peter-Weyl theory (representations of compact groups). A selection from these topics as time and class preparation allow.
Course not offered every year
Prerequisites: A year of analysis at the 300 level or above (for example, Mathematics 360-361, 508-509); a semester of linear algebra at the 300 level or above (for example, Mathematics 370).
Activity: Lecture
1 Course Unit

MATH 499 Supervised Study
Study under the direction of a faculty member. Intended for a limited number of mathematics majors.
One-term course offered either term
Prerequisite: Permission of major adviser
Activity: Independent Study
1 Course Unit
Notes: Hours and credit to be arranged

MATH 500 Geometry-Topology, Differential Geometry
Point set topology; metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.
Course not offered every year
Prerequisites: Math 240 and 241.
Activity: Lecture
1 Course Unit

MATH 501 Geometry-Topology, Differential Geometry
The course moves from a study of extrinsic geometry (curves and surfaces in n-space) to the intrinsic geometry of manifolds. After a review of vector calculus and a section on tensor algebra, we study manifolds and their intrinsic geometry, including metrics, connections, geodesics, and the Riemann curvature tensor. Topics include Eulerian curvature and Euler’s theorems, the Gauss map and first/second fundamental forms, the Theorema Egregium, minimal surfaces in n-space; other topics as time permits.
Course not offered every year
Prerequisites: Math 240, Math 312 (or 370), and Math 361 (or 508); or Math 500; or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 502 Abstract Algebra
An introduction to groups, rings, fields and other abstract algebraic systems, elementary Galois Theory, and linear algebra – a more theoretical course than Math 370.
Course usually offered in fall term
Prerequisites: Math 240 or Math 260; and Math 314/514 or permission of the instructor
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

MATH 503 Abstract Algebra
Continuation of Math 502.
Course usually offered in spring term
Prerequisites: Math 502 or with the permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

MATH 504 Graduate Proseminar in Mathematics
This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MATH 505 Graduate Proseminar in Mathematics
This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
MATH 508 Advanced Analysis
Construction of real numbers, the topology of the real line and the foundations of single variable calculus. Notions of convergence for sequences of functions. Basic approximation theorems for continuous functions and rigorous treatment of elementary transcendental functions. The course is intended to teach students how to read and construct rigorous formal proofs. A more theoretical course than Math 360.
Course usually offered in fall term
Prerequisites: Math 240 and 241. Math 200 and 201 also recommended.
Activity: Lecture
1 Course Unit

MATH 509 Advanced Analysis
Course usually offered in spring term
Prerequisites: Math 508 or with the permission of the instructor. Linear algebra is also helpful.
Activity: Lecture
1 Course Unit

MATH 512 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products; Euclidean, unitary and symplectic spaces; Orthogonal and unitary operators; Tensor products and polynlinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Prerequisites: Math 114 or 115.
Activity: Lecture
1 Course Unit
Notes: Math 512 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of Math 312 and Math 512.

MATH 513 Computational Linear Algebra
A number of important and interesting problems in a wide range of disciplines within computer science are solved by recourse to techniques from linear algebra. The goal of this course will be to introduce students to some of the most important and widely used algorithms in matrix computation and to illustrate how they are actually used in various settings. Motivating applications will include: the solution of systems of linear equations, applications matrix computations to modeling geometric transformations in graphics, applications of the Discrete Fourier Transform and related techniques in digital signal processing, the solution of linear least squares optimization problems and the analysis of systems of linear differential equations. The course will cover the theoretical underpinnings of these problems and the numerical algorithms that are used to perform important matrix computations such as Gaussian Elimination, LU Decomposition and Singular Value Decomposition.
Activity: Lecture
1 Course Unit

MATH 514 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products; Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polynlinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Prerequisite: Math 114 or Math 115
Activity: Lecture
1 Course Unit

MATH 520 Selections from Algebra
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Course not offered every year
Corequisite: Math 502 or permission of the instructor
Activity: Lecture
1 Course Unit

MATH 530 Mathematics of Finance
This course presents the basic mathematical tools to model financial markets and to make calculations about financial products, especially financial derivatives. Mathematical topics covered: stochastic processes, partial differential equations and their relationship. No background in finance is assumed.
Course not offered every year
Prerequisites: Math 240, Stat 430
Activity: Lecture
1 Course Unit

MATH 546 Advanced Probability
The required background is (1) enough math background to understand proof techniques in real analysis (closed sets, uniform coverage, fourier series, etc.) and (2) some exposure to probability theory at an intuitive level (a course at the level of Ross’s probability text or some exposure to probability in a statistics class). After a summary of the necessary results from measure theory, we will learn the probabist’s lexicon (random variables, independence, etc.). We will then develop the necessary techniques (Borel Cantelli lemmas, estimates on sums of independent random variables and truncation techniques) to prove the classical laws of large numbers. Next come Fourier techniques and the Central Limit Theorem, followed by combinatorial techniques and the study of random walks.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MATH 547 Stochastic Processes
Course not offered every year
Prerequisites: Math 546/Stat 930 the equivalent.
Activity: Lecture
1 Course Unit

MATH 560 Selections from Geometry and Topology
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Course not offered every year
Corequisite: Math 500 or permission of the instructor
Activity: Lecture
1 Course Unit
MATH 561 Selections from Geometry and Topology
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Course not offered every year
Corequisite: Math 500 or permission of the instructor
Activity: Lecture
1 Course Unit

MATH 570 Introduction to Logic and Computability
Course not offered every year
Prerequisite: Math 371 or Math 503
Activity: Lecture
1 Course Unit

MATH 571 Introduction to Logic and Computability
Continuation of Math 570.
Course not offered every year
Also Offered As: CIS 518
Prerequisites: Math 570 or with the permission of the instructor.
Activity: Seminar
1 Course Unit

MATH 580 Combinatorial Analysis and Graph Theory
Generating functions, enumeration methods, Polya's theorem, combinatorial designs, discrete probability, extremal graphs, graph algorithms and spectral graph theory, combinatorial and computational geometry.
Course not offered every year
Prerequisite: Permission of the instructor
Activity: Lecture
1 Course Unit

MATH 581 Combinatorial Analysis and Graph Theory
Continuation of Math 580.
Course not offered every year
Prerequisites: Math 580 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 584 The Mathematics of Medical Imaging and Measurement
The last several decades have seen major revolutions in both medical and non-medical and imaging technologies. Underlying all of these advances are sophisticated mathematical tools to model the measurement process and reconstruct images. This course begins with an introduction of the mathematical models and then proceeds to discuss the integral transforms that underlie these models: the Fourier transform, the Radon transform and the Laplace transform. We discuss how each of these transforms is inverted, both in theory and in practice. Along the way we study interpolation, sampling, approximation theory, filtering and noise analysis. This course assumes a thorough knowledge of linear algebra and a knowledge of analysis at the undergraduate level (Math 314 and Math 360 and Math 361, or Math 508 and Math 509).
Taught by: Staff.
Course not offered every year
Also Offered As: BE 584
Prerequisites: Math 314 and Math 360 and 361, or Math 508 and 509 or with permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 586 Topics in Mathematical Biology.
This course will cover various mathematical models and tools that are used to study modern biological problems. The specific emphasis will vary from year to year, but typically will include an introduction to stochastic processes and computational methods that arise in evolutionary biology and population genetics. No prior knowledge of biology is needed to take this course, but a strong background in probability and familiarity with algorithms and combinatorics will be assumed.
Prerequisites: Math 430 or equivalent is required. Math 241 and 340 are recommended.
Activity: Lecture
1 Course Unit

MATH 594 Mathematical Methods of Physics
Introduction to mathematics used in physics and engineering, with the goal of developing facility in classical techniques. Vector spaces, linear algebra, computation of eigenvalues and eigenvectors, boundary value problems, spectral theory of second order equations, asymptotic expansions, partial differential equations, differential operators and Green's functions, orthogonal functions, generating functions, contour integration, Fourier and Laplace transforms and an introduction to representation theory of SU(2) and SO(3). The course will draw on examples in continuum mechanics, electrostatics and transport problems.
Course not offered every year
Prerequisites: Math 241 or Permission of Instructor. Physics 151 would be helpful for undergraduates.
Activity: Lecture
1 Course Unit

MATH 599 Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit
MATH 600 Topology and Geometric Analysis
Differentiable functions, inverse and implicit function theorems. Theory of manifolds: differentiable manifolds, charts, tangent bundles, transversality, Sard’s theorem, vector and tensor fields and differential forms: Frobenius’ theorem, integration on manifolds, Stokes’ theorem in n dimensions, de Rham cohomology. Introduction to Lie groups and Lie group actions. Course usually offered in fall term
Prerequisites: Math 500 and 501 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 601 Topology and Geometric Analysis
Covering spaces and fundamental groups, van Kampen’s theorem and classification of surfaces. Basics of homology and cohomology, singular and cellular; isomorphism with de Rham cohomology. Brouwer fixed point theorem, CW complexes, cup and cap products, Poincare duality, Kunneth and universal coefficient theorems, Alexander duality, Lefschetz fixed point theorem. Course usually offered in spring term
Prerequisites: Math 600 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 602 Algebra
Group theory: permutation groups, symmetry groups, linear algebraic groups, Jordan-Hölder and Sylow theorems, finite abelian groups, solvable and nilpotent groups, p-groups, group extensions. Ring theory: Prime and maximal ideals, localization, Hilbert basis theorem, integral extensions, Dedekind domains, primary decomposition, rings associated to affine varieties, semisimple rings, Wedderburn’s theorem, elementary representation theory. Linear algebra: Diagonalization and canonical form of matrices, elementary representation theory, bilinear forms, quotient spaces, dual spaces, tensor products, exact sequences, exterior and symmetric algebras. Module theory: Tensor products, flat and projective modules, introduction to homological algebra, Nakayama’s Lemma. Field theory: separable and normal extensions, cyclic extensions, fundamental theorem of Galois theory, solvability of equations. Course usually offered in fall term
Prerequisites: Math 370 and 371 or Math 502 and 503
Activity: Lecture
1 Course Unit

MATH 603 Algebra
Continuation of Math 602. Course usually offered in spring term
Prerequisites: Math 602 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 604 First Year Seminar in Mathematics
This is a seminar for first year Mathematics graduate student, supervised by faculty. Students give talks on topics from all areas of mathematics at a level appropriate for first year graduate students. Attendance and preparation will be expected by all participants, and learning how to present mathematics effectively is an important part of the seminar. Course usually offered in fall term
Prerequisites: Open to first year Mathematics graduate students. Others need permission of the instructor.
Activity: Seminar
1 Course Unit

MATH 608 Analysis
Complex analysis: analyticity, Cauchy theory, meromorphic functions, isolated singularities, analytic continuation, Runge’s theorem, d-bar equation, Mittag-Leffler theorem, harmonic and sub-harmonic functions, Riemann mapping theorem, Fourier transform from the analytic perspective. Introduction to real analysis: Weierstrass approximation, Lebesgue measure in Euclidean spaces, Borel measures and convergence theorems, C0 and the Riesz-Markov theorem, Lp-spaces, Fubini Theorem. One-term course offered either term
Prerequisites: Math 508 and 509
Activity: Lecture
1 Course Unit

MATH 609 Analysis
Real analysis: general measure theory, outer measures and Caratheodory construction, Hausdorff measures, Radon-Nikodym theorem, Fubini’s theorem, Hilbert space and L2-theory of the Fourier transform. Functional analysis: normed linear spaces, convexity, the Hahn-Banach theorem, duality for Banach spaces, weak convergence, bounded linear operators, Baire category theorem, uniform boundedness principle, open mapping theorem, closed graph theorem, compact operators, Fredholm theory, interpolation theorems, Lp-theory for the Fourier transform. One-term course offered either term
Prerequisites: Math 608 or permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 610 Functional Analysis
Convexity and the Hahn-Banach Theorem. Hilbert Spaces, Banach Spaces, and examples: Sobolev spaces, Holder spaces. The uniform bounded principle, Baire category theorem, bounded operators, open mapping theorem, closed graph theorem, compact operators, Fredholm theory. Functional calculus and elementary Spectral Theory. Interpolation theorems. Applications to partial differential equations and approximation theory. Prerequisites: Math 608 or 609, some elementary complex analysis is essential.
Activity: Lecture
1 Course Unit

MATH 611 Functional Analysis
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Course not offered every year
Corequisites: MATH 600 and 602
Activity: Lecture
1 Course Unit

MATH 612 Selections from Algebra
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Course not offered every year
Corequisites: MATH 600 and 602
Activity: Lecture
1 Course Unit

MATH 618 Algebraic Topology, Part I
Homotopy groups, Hurewicz theorem, Whitehead theorem, spectral sequences. Classification of vector bundles and fiber bundles. Characteristic classes and obstruction theory. Course usually offered in fall term
Prerequisite: Math 600/601 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 619 Algebraic Topology, Part I
Rational homotopy theory, cobordism, K-theory, Morse theory and the h-cobordism theorem. Surgery theory. Course usually offered in spring term
Prerequisites: Math 618 or with the permission of the instructor.
Activity: Lecture
1 Course Unit
MATH 620 Algebraic Number Theory
Dedekind domains, local fields, basic ramification number, product formula, Dirichlet unit theorem, finiteness of class numbers, Hensel’s Lemma, quadratic and cyclotomic fields, quadratic reciprocity, abelian extensions, zeta and L-functions, functional equations, introduction to local and global class field theory. Other topics may include: Diophantine equations, continued fractions, approximation of irrational numbers by rationals, Poisson summation, Hasse principle for binary quadratic forms, modular functions and forms, theta functions.
Course not offered every year
Prerequisites: Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 621 Algebraic Number Theory
Continuation of Math 620.
Course not offered every year
Prerequisites: Math 620 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 622 Complex Algebraic Geometry
Algebraic geometry over the complex numbers, using ideas from topology, complex variable theory, and differential geometry. Topics include: Complex algebraic varieties, cohomology theories, line bundles, vanishing theorems, Riemann surfaces, Abel’s theorem, linear systems, complex tori and abelian varieties, Jacobian varieties, currents, algebraic surfaces, adjunction formula, rational surfaces, residues.
Course not offered every year
Prerequisites: Math 602 and 603 and Math 609
Activity: Lecture
1 Course Unit

MATH 623 Complex Algebraic Geometry
Continuation of Math 622.
Course not offered every year
Prerequisites: Math 622 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 624 Algebraic Geometry
Algebraic geometry over algebraically closed fields, using ideas from commutative algebra. Topics include: Affine and projective algebraic varieties, morphisms and rational maps, singularities and blowing up, rings of functions, algebraic curves, Riemann Roch theorem, elliptic curves, Jacobian varieties, sheaves, schemes, divisors, line bundles, cohomology of varieties, classification of surfaces.
Course not offered every year
Prerequisites: Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 625 Algebraic Geometry
Continuation of Math 624.
Course not offered every year
Prerequisites: Math 624 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 626 Commutative Algebra
Topics in commutative algebra taken from the literature. Material will vary from year to year depending upon the instructor’s interests.
Course not offered every year
Prerequisites: Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 628 Homological Algebra
Complexes and exact sequences, homology, categories, derived functors (especially Ext and Tor). Homology and cohomology arising from complexes in algebra and geometry, e.g. simplicial and singular theories, Cech cohomology, de Rham cohomology, group cohomology, Hochschild cohomology. Projective resolutions, cohomological dimension, derived categories, spectral sequences. Other topics may include: Lie algebra cohomology, Galois and etale cohomology, cyclic cohomology, l-adic cohomology. Algebraic deformation theory, quantum groups, Brauer groups, descent theory.
Course not offered every year
Prerequisites: Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 634 Arithmetic Geometry
Arithmetic Geometry
Activity: Lecture
1 Course Unit

MATH 642 Topics in Partial Differential Equations
Problems in differential geometry, as well as those in physics and engineering, inevitable involve partial derivatives. This course will be an introduction to these problems and techniques. We will use P.D.E. as a tool. Some of the applications will be small, some large. The proof of the Hodge Theorem will be a small application. Discussion of the Yamabe problem and ricci flow (used to prove the Poincare Conjecture) will be larger.
Prerequisites: Math 608, 609. This course will not presume courses in Partial Differential Equations or Differential Geometry. Background will be covered in the course.
Activity: Lecture
1 Course Unit

MATH 644 Partial Differential Equations
Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and non-linear problems. Sobolev spaces and the theory of distributions will be developed as needed.
Course not offered every year
Prerequisites: Math 600 and 601, Math 608 and 609
Activity: Lecture
1 Course Unit
MATH 645 Partial Differential Equations
Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudodifferential operators, and nonlinear problems. Sobolev spaces and the theory of distributions will be developed as needed.
Course not offered every year
Prerequisites: Math 600 and 601, Math 608 and 609
Activity: Lecture
1 Course Unit

MATH 649 Stochastic Processes
Conditional expectations, martingales, Markov chains, Brownian motion, diffusions.
Prerequisite: Math 648
Activity: Lecture
1 Course Unit

MATH 652 Operator Theory
Subject matter may include spectral theory of operators in Hilbert space, C*-algebras, von Neumann algebras.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 654 Lie Groups
Connection of Lie groups with Lie algebras, Lie subgroups, exponential map. Algebraic Lie groups, compact and complex Lie groups, solvable and nilpotent groups. Other topics may include relations with symplectic geometry, the orbit method, moment map, symplectic reduction, geometric quantization, Poisson-Lie and quantum groups.
Course not offered every year
Prerequisites: Math 600 and 601, Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 655 Lie Groups
Continuation of Math 654.
Course not offered every year
Prerequisites: Math 654 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 656 Representation of Continuous Groups
Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 657 Representation of Continuous Groups
Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 660 Differential Geometry
Riemannian metrics and connections, geodesics, completeness, Hopf-Rinow theorem, sectional curvature, Ricci curvature, scalar curvature, Jacobi fields, second fundamental form and Gauss equations, manifolds of constant curvature, first and second variation formulas, Bonnet-Myers theorem, comparison theorems, Morse index theorem, Hadamard theorem, Preissmann theorem, and further topics such as sphere theorems, critical points of distance functions, the soul theorem, Gromov-Hausdorff convergence.
Course not offered every year
Prerequisites: Math 600 and 601, Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 661 Differential Geometry
Continuation of Math 660.
Course not offered every year
Prerequisites: Math 660 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 671 Topics in Logic
Discusses advanced topics in logic.
Course not offered every year
Also Offered As: CIS 518
Prerequisites: Math 570 and 571
Activity: Seminar
1 Course Unit

MATH 694 Mathematical Foundations of Theoretical Physics
Selected topics in mathematical physics, such as mathematical methods of classical mechanics, electrodynamics, relativity, quantum mechanics and quantum field theory.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 695 Mathematical Foundations of Theoretical Physics
Selected topics in mathematical physics, such as mathematical methods of classical mechanics, electrodynamics, relativity, quantum mechanics and quantum field theory.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 702 Topics in Algebra
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Activity: Lecture
1 Course Unit
**MATH 720 Advanced Number Theory**
Ramification theory, adeles and ideles, Tate's thesis, group cohomology and Galois cohomology, class field theory in terms of ideles and cohomology, Lubin-Tate formal groups, Artin and Swan conductors, central simple algebras over local and global fields, general Hasse principles. Other topics may include the following: zero-dimensional Arakelov theory, Tate duality, introduction to arithmetic of elliptic curves, local and global epsilon factors in functional equations, p-adic L-functions and Iwasawa theory, modular forms and functions and modular curves.
Course not offered every year
Prerequisites: Math 620 and 621
Activity: Lecture
1 Course Unit

**MATH 721 Advanced Number Theory**
Continuation of Math 720.
Course not offered every year
Prerequisites: Math 720 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

**MATH 724 Topics in Algebraic Geometry**
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Either Math 622 and 623 or Math 624 and 625
Activity: Lecture
1 Course Unit

**MATH 730 Topics in Algebraic and Differential Topology**
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Math 618 and 619
Activity: Lecture
1 Course Unit

**MATH 731 Topics in Algebraic and Differential Topology**
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Math 618 and 619
Activity: Lecture
1 Course Unit

**MATH 748 Topics in Classical Analysis**
Harmonic analysis in Euclidean space, Riemann surfaces, Discontinuous groups and harmonic analysis in hyperbolic space, Pseudodifferential operators and index theorems, Variational methods in non-linear PDE, Hyperbolic equations and conservation laws, Probability and stochastic processes, Geometric measure theory, Applications of analysis to problems in differential geometry. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Math 608 and Math 609 and permission from the instructor
Activity: Lecture
1 Course Unit

**MATH 752 Topics in Operator theory**
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Activity: Lecture
1 Course Unit

**MATH 753 Topics in Operator Theory**
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Activity: Lecture
1 Course Unit

**MATH 760 Topics in Differential Geometry**
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Math 660 and 661
Activity: Lecture
1 Course Unit

**MATH 761 Topics in Differential Geometry**
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Math 660 and 661
Activity: Lecture
1 Course Unit

**MATH 820 Algebra Seminar**
Seminar on current and recent literature in algebra.
Course not offered every year
Activity: Seminar
1 Course Unit

**MATH 830 Geometry-Topology Seminar**
Seminar on current and recent literature in geometry-topology
Course not offered every year
Activity: Seminar
1 Course Unit

**MATH 831 Geometry-Topology Seminar**
Seminar on current and recent literature in geometry-topology
Course not offered every year
Activity: Seminar
1 Course Unit

**MATH 871 Logic Seminar**
Seminar on current and recent literature in logic.
Course not offered every year
Activity: Seminar
1 Course Unit

**MATH 878 Probability and Algorithm Seminar**
Seminar on current and recent literature in probability and algorithm.
Taught by: Staff.
Activity: Seminar
1 Course Unit

**MATH 881 Combinatorics Seminar**
Seminar on current and recent literature in combinatorics.
Course not offered every year
Activity: Seminar
1 Course Unit
MECHANICAL ENGINEERING AND APPLIED MECHANICS (MEAM)

MEAM 091 Shop Tr: Manual Milling
Fundamental principles of manual milling of metals, including hands-on training in the machine shop.
One-term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 092 Shop Tr: Manual Turning
Fundamental principles of manual turning of metals using a lathe, including hands-on training in the machine shop.
One-term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 093 Shop Tr: Hybrid Milling
Building upon the basics covered in MEAM 091, this intermediate-level course includes detailed operation sequencing, fixture design, and hands-on conversational CNC programming for the ProtoTrak Hybrid Mill.
Activity: Lecture
0.25 Course Units

MEAM 094 Tr: CNC Milling/solidcam
Building upon proficiency in MEAM 091 and 093, this hands-on course covers the details of full computer-controlled machining using SolidCAM and the Haas MiniMill.
One-term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 095 Shop Tr: CNC Turning
Building upon the basics of MEAM 092, this course explores advanced computer-controlled turning using SolidCAM and the Haas TL-1.
One-term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 099 Independent Study
An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal. Subject to the approval of the MEAM Undergraduate Curriculum Chair.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Open to all students. A maximum of 2 c.u. of MEAM 099 may be applied toward the B.A.S. or B.S.E. degree requirements

MEAM 101 Introduction to Mechanical Design
This hands-on, project-based course covers the fundamentals of the modern mechanical design process, from needfinding and brainstorming to the basics of computerized manufacturing and rapid prototyping. Topics include: product definition (needfinding, observation, sketching, and brainstorming); computer-aided design (part creation, assemblies, and animation using SolidWorks); fundamental engineering design practices (material selection, dimensioning, tolerances, etc.); basic computer simulation and analysis; and rapid prototyping (laser cutter, 3-D fused-deposition modeling, and an introduction to computer-controlled machining).
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: This course is available to all Engineering majors.

MEAM 110 Introduction to Mechanics
This lecture course and a companion laboratory course (MEAM 147) build upon the concepts of Newtonian (classical) mechanics and their application to engineered systems. This course introduces students to mechanical principles that are the foundation of upper-level engineering courses including MEAM 210 and 211. The three major parts of this course are: I. Vector Mechanics; II. Statics and Structures; and III. Kinematics and Dynamics. Topics include: vector analysis, statics of rigid bodies, introduction to deformable bodies, friction, kinematics of motion, work and energy, and dynamics of particles. Case studies will be introduced, and the role of Newtonian mechanics in emerging applications including bio- and nano-technologies will be discussed.
Course usually offered in fall term
Corequisites: MATH 104 (The Engineering section of this class is strongly recommended) and MEAM 147.
Activity: Lecture
1 Course Unit

MEAM 147 Introduction to Mechanics Lab
This half-credit laboratory class is a companion to the Introduction to Mechanics lecture course (MEAM 110). It investigates the concepts of Newtonian (classical) mechanics through weekly hands-on experiments, emphasizing connections between theoretical principles and practical applications in engineering. In addition to furthering their understanding about the workings of the physical world, students will improve their skills at conducting experiments, obtaining reliable data, presenting numerical results, and extracting meaningful information from such numbers.
Course usually offered in fall term
Corequisite: MEAM 110
Activity: Laboratory
0.5 Course Units

MEAM 201 Machine Design and Manufacturing
Building upon the fundamentals of mechanical design taught in MEAM 101, this hands-on, project-based course provides students with the knowledge and skills necessary to design, analyze, manufacture, and test fully-functional mechanical systems. Topics covered include an introduction to machine elements, analysis of the mechanics of machining, manufacturing technology, precision fabrication (milling, turning, and computer-controlled machining), metrology, tolerances, cutting-tool fundamentals and engineering materials. Enrollment is limited.
Course usually offered in spring term
Prerequisite: MEAM 101; MEAM 210 or equivalent as co/pre-requisite (or permission of the instructor)
Activity: Lecture
1 Course Unit
MEAM 203 Thermodynamics I
Thermodynamics studies the fundamental concepts related to energy conversion in such mechanical systems as internal and external combustion engines (including automobile and aircraft engines), compressors, pumps, refrigerators, and turbines. This course is intended for students in mechanical engineering, chemical engineering, materials science, physics and other fields. The topics include properties of pure substances, first-law analysis of closed systems and control volumes, reversibility and irreversibility, entropy, second-law analysis, exergy, power and refrigeration cycles, and their engineering applications.
Course usually offered in spring term
Prerequisites: MATH 104 and MATH 114
Activity: Lecture
1 Course Unit

MEAM 210 Statics and Strength of Materials
This course is primarily intended for students in mechanical engineering, but may also be of interest to students in materials science and other fields. It continues the treatment of statics of rigid bodies begun in MEAM 110/PHYS 150 and progresses to the treatment of deformable bodies and their response to loads. The concepts of stress, strain, and linearly elastic response are introduced and applied to the behavior of rods, shafts, beams and other mechanical components. The failure and design of mechanical components are discussed.
Course usually offered in fall term
Prerequisite: MEAM 110/MEAM 147 or PHYS 150
Corequisites: MATH 240 and MEAM 247 are strongly recommended
Activity: Lecture
1 Course Unit

MEAM 211 Engineering Mechanics: Dynamics
This course introduces the basic concepts in kinematics and dynamics that are necessary to understand, analyze and design mechanisms and machines. These concepts are also fundamental to the modeling and analysis of human movement, biomechanics, animation of synthetic human models and robotics. The topics covered include: Particle dynamics using energy and momentum methods of analysis; Dynamics of systems of particles; Impact; Systems of variable mass; Kinematics and dynamics of rigid bodies in plane motion; Computer-aided dynamic simulation and animation.
Course usually offered in spring term
Prerequisite: MEAM 210
Corequisites: MATH 240 or ENM 251 and ENGR 105 or equivalent
Activity: Lecture
1 Course Unit

MEAM 220 Introduction to Materials Science and Engineering
The course is an introduction to the most important concepts in materials science and engineering with a goal of building the foundations for all other courses related to materials and how to think about materials in other areas of engineering and the physical sciences. It covers atomic bonding, crystal structure and symmetry, glasses, defects, diffusion, elasticity, plasticity, fracture, phase diagrams, phase transformations, and an introduction into thermal, electrical, magnetic and optical properties and materials processing. Material classes will include metals, ceramics, polymers, semiconductors, and composites.
Course usually offered in fall term
Also Offered As: MSE 220
Prerequisites: Knowledge of basic calculus and chemistry
Activity: Lecture
1 Course Unit

MEAM 247 Mechanical Engineering Laboratory I
This is the first of a two semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. This fall semester course follows closely with MEAM 210, involving experiments to explore the principles of statics and strength of materials.
Course usually offered in fall term
Prerequisite: Sophomore standing in engineering
Corequisite: MEAM 210 strongly recommended
Activity: Laboratory
0.5 Course Units

MEAM 248 Mechanical Engineering Lab I
This is the second of a two-semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. The spring semester course follows closely with MEAM 203 and MEAM 211, expanding upon the principles of experimentation, measurement, analysis, and design of systems through hands-on laboratories and projects in thermodynamics and dynamics.
Course usually offered in spring term
Prerequisite: Sophomore standing in engineering
Corequisites: MEAM 203 and MEAM 211 are strongly recommended
Activity: Lecture
0.5 Course Units

MEAM 302 Fluid Mechanics
Physical properties; fluid statics; Bernoulli equation; fluid kinematics; conservation laws and finite control-volume analysis; conservation laws and differential analysis; inviscid flow; The Navier-Stokes equation and some exact solutions; similitude, dimensional analysis, and modeling; flow in pipes and channels; boundary layer theory; lift and drag.
Course usually offered in fall term
Prerequisites: MATH 241 or ENM 251 and PHYS 150 or MEAM 110/MEAM 147
Activity: Lecture
1 Course Unit

MEAM 321 Vibrations of Mechanical Systems
This course teaches the fundamental concepts underlying the dynamics of vibrations for single-degree of freedom, multi-degree and infinite-degree of freedom mechanical systems. The course will focus on Newton's Force Methods, Virtual-Work Methods, and Lagrange's Variation Methods for analyzing problems in vibrations. Students will learn how to analyze transient, steady state and forced motion of single and multi-degree of freedom linear and non-linear systems. The course teaches analytical solution techniques for linear systems and practical numerical and simulation methods for analysis and design of nonlinear systems.
Course usually offered in spring term
Prerequisites: MATH 241 or ENM 251 and MEAM 211
Activity: Lecture
1 Course Unit
MEAM 333 Heat and Mass Transfer
This course covers fundamentals of heat and mass transfer and applications to practical problems in energy conversion and conservation. Emphasis will be on developing a physical and analytical understanding of conductive, convective, and radiative heat transfer, as well as design of heat exchangers and heat transfer with phase change. Topics covered will include: types of heat transfer processes, their relative importance, and the interactions between them, solutions of steady state and transient state conduction, emission and absorption of radiation by real surfaces and radiative transfer between surfaces, heat transfer by forced and natural convection owing to flow around bodies and through ducts, analytical solutions for some sample cases and applications of correlations for engineering problems. Students will develop an ability to apply governing principles and physical intuition to solve problems.
Course usually offered in spring term
Prerequisites: MEAM 203 and MEAM 302
Activity: Lecture
1 Course Unit

MEAM 347 Mechanical Engineering Design Laboratory
This is the first of a two-semester junior level laboratory sequence that students complete over the fall and spring semesters. The course is project-based, with problems whose solution requires experimental data and quantitative analysis, as well as creative mechanical design. The technical content is connected to MEAM 302 and MEAM 354, including aerodynamics, applied fluid systems and structural analysis. The course also includes electromechanical systems and application s of finite element analysis.
Course usually offered in fall term
Prerequisite: Junior standing in engineering
Activity: Laboratory
1 Course Unit

MEAM 348 Mechanical Engineering Design Laboratory
This is the second of a two-semester junior level laboratory sequence that students complete over the fall and spring semesters. The course is project-based, with open-ended design problems that challenge students to develop original experiments and choose appropriate analyses, with an increasing emphasis on teamwork and project planning. The technical content is connected to MEAM 321 and MEAM 333, including multimodal transient heat transfer and dynamic systems modeling.
Course usually offered in spring term
Prerequisite: Junior standing in engineering
Activity: Laboratory
1 Course Unit

MEAM 354 Mechanics of Solids
This course builds on the fundamentals of solid mechanics taught in MEAM 210 and addresses more advanced problems in strength of materials. The students will be exposed to a wide array of applications from traditional engineering disciplines as well as emerging areas such as biotechnology and nanotechnology. The methods of analysis developed in this course will form the cornerstone of machine design and also more advanced topics in the mechanics of materials.
Course usually offered in fall term
Prerequisites: MEAM 210 or equivalent, BE 200 or permission of instructor.
Activity: Lecture
1 Course Unit

MEAM 405 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the ranges of material properties.
Course usually offered in fall term
Also Offered As: MSE 405, MSE 505
Activity: Lecture
1 Course Unit

MEAM 415 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student.
One-term course offered either term
Also Offered As: IPD 515
Activity: Lecture
1 Course Unit

MEAM 421 Control for Autonomous Robots
This course introduces the hardware, software and control technology used in autonomous ground vehicles, commonly called "self-driving cars." The weekly laboratory sessions focus on development of a small scale autonomous car, incrementally enhancing the sensors, software, and control algorithms to culminate in a demonstration in a realistic outdoor operating environment. Students will learn basic physics and modeling: controls design and analysis in Matlab and Simulink; software implementation in C and Python; sensor systems and filtering methods for IMUs, GPS, and computer vision systems; and path planning from fixed map data.
One-term course offered either term
Also Offered As: ESE 421
Prerequisite: CIS 110 or CIS 120 or ENGR 105; ESE 210 or ESE 215 or MEAM 211 or permission of the instructor
Activity: Lecture
1.5 Course Unit

MEAM 445 Mechanical Engineering Design Projects
This capstone design project course is required of all mechanical engineering students. Student teams will design and test complex mechanical systems that address a societal or consumer need. Projects are devised by the team, sponsored by industry, or formulated by Penn professors. Each project is approved by the instructor and a faculty advisor. Topics treated in the course include project planning, prototyping, patent and library searches, intellectual property, ethics, and technical writing and presentations. The work is spread over MEAM 445 and MEAM 446.
Course usually offered in fall term
Prerequisite: Junior standing
Activity: Lecture
1 Course Unit
MEAM 446 Mechanical Engineering Design Projects
This is the second course in the two course sequence involving the capstone design project. See MEAM 445 for course description.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MEAM 455 Continuum Biomechanics
Continuum mechanics with applications to biological systems.
Fundamental engineering conservation laws are introduced and illustrated using biological and non-biological examples. Kinematics of deformation, stress, and conservation of mass, momentum, and energy. Constitutive equations for fluids, solids, and intermediate types of media are described and applied to selected biological examples. Class work is complemented by computational laboratory experiences.
Course usually offered in fall term
Also Offered As: BE 455
Activity: Lecture
1 Course Unit

MEAM 502 Energy Engineering in Power Plants and Transportation Systems
Most energy consumed in the U.S. and in the world is produced using thermal-to-mechanical energy conversion. In this course, students will learn the engineering principles that govern how heat is converted to mechanical power in electric power plants, jet aircraft, and internal combustion engines. Topics covered include a review of thermodynamics and basic power cycles, supercritical, combined, and hybrid cycles, cogeneration, jet propulsion, and reciprocating internal combustion engines. A brief introduction to desalination and combustion is also included. The material in this course will provide students a foundation important for industrial and research employment in energy engineering.
Course usually offered in fall term
Prerequisites: Undergraduate engineering thermodynamics (MEAM 203 or equivalent), and heat transfer (MEAM 333 or equivalent)
Activity: Lecture
1 Course Unit

MEAM 503 Direct Energy Conversion: from Macro to Nano
The course focuses on devices that convert thermal, solar, or chemical energy directly to electricity, i.e., without intermediate mechanical machinery such as a turbine or a reciprocating piston engine. A variety of converters with sizes ranging from macro to nano scale will be discussed, with the advantages offered by nanoscale components specifically highlighted. Topics will include thermoelectric energy converters and radioisotope thermoelectric generators (RTGs), thermionic energy converters (TEC), photovoltaic (PV) and thermophotovoltaic (TPV) cells, as well as piezoelectric harvesters. Additional topics may include magnetohydrodynamic (MHD) generators, alkali metal thermal-to-electric converters (AMTEC), and fuel cells.
One-term course offered either term
Prerequisites: Basics of thermodynamics (MEAM 203 or equivalent), Basics of heat transfer (MEAM 333 or equivalent)
Activity: Lecture
1 Course Unit

MEAM 504 Tribology
The course will comprehensively cover both theoretical and practical tribology, the science and technology of interacting surfaces in relative motion. The various modes of lubrication, hydrodynamic, elastohydrodynamic, hydrostatic, mixed, solid and dry, will be studied in detail. The contact between solid surfaces will be covered, leading to an understanding of friction and various modes of wear. At each stage, it will be shown how the tribological principles learned can be applied in practice to improve the efficiency and durability of mechanical equipment and thereby enhance sustainability through energy and materials conservation.
One-term course offered either term
Prerequisites: Senior standing in Mechanical Engineering or Materials Science or by permission of the instructor.
Activity: Lecture
1 Course Unit

MEAM 505 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the ranges of material properties.
Course usually offered in fall term
Also Offered As: MSE 405
Activity: Lecture
1 Course Unit

MEAM 507 Fundamentals of Materials
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them. The course assumes an undergraduate background in any area of physical/chemical science and undergraduate mathematics appropriate to this. The course will also be accessible to students of applied mathematics.
One-term course offered either term
Also Offered As: MSE 507
Activity: Lecture
1 Course Unit

MEAM 508 Materials and Manufacturing for Mechanical Design
The selection of materials and manufacturing processes are critical in the design of mechanical systems. Material properties and manufacturing processes are often tightly linked, thus this course covers both topics in an integrated manner. The properties and manufacturing processes for a wide range of materials (i.e., metals, ceramics, polymers, composites) are examined from both a fundamental and practical perspective. From a materials standpoint, the course focuses on mechanical properties, including modulus, strength, fracture, fatigue, wear, and creep. Established and emerging manufacturing processes will be discussed. Design-based case studies are used to illustrate the selection of materials and processes.
One-term course offered either term
Activity: Lecture
1 Course Unit
MEAM 510 Design of Mechatronic Systems
In many modern systems, mechanical elements are tightly coupled with electronic components and embedded computers. Mechatronics is the study of how these domains are interconnected, and this hands-on, project-based course provides an integrated introduction to the fundamental components within each of the three domains, including: mechanical elements (prototyping, materials, actuators and sensors, transmissions, and fundamental kinematics), electronics (basic circuits, filters, op amps, discrete logic, and interfacing with mechanical elements), and computing (interfacing with the analog world, microprocessor technology, basic control theory, and programming). Course usually offered in fall term
Prerequisite: Graduate standing in engineering or permission of the instructor
Activity: Lecture
1 Course Unit

MEAM 513 Feedback Control Design and Analysis
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach. Course usually offered in spring term
Also Offered As: ESE 505
Prerequisites: MEAM 321 or ESE 210, Juniors and Seniors encouraged to enroll
Activity: Lecture
1 Course Unit

MEAM 514 Design for Manufacturability
This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems. Course usually offered in spring term
Also Offered As: IPD 514
Prerequisites: MEAM 101 or equivalent, MEAM 210 or equivalent, senior or graduate standing in the School of Design, Engineering, or Business with completed product development and/or design engineering core coursework or related experience.
Activity: Lecture
1 Course Unit

MEAM 516 Advanced Mechatronic Reactive Spaces.
This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera.
Course usually offered in spring term
Also Offered As: IPD 516
Prerequisite: MEAM 510 (Mechatronics) or equivalent
Activity: Lecture
1 Course Unit

MEAM 517 Control and Optimization with Applications in Robotics
This course covers a variety of advanced topics in model-based nonlinear control, primarily focused on computational techniques and dynamic robotic applications. Students will learn both the theoretical basics of nonlinear and optimal control along with computational algorithms. Topics include dynamic programming, trajectory optimization, canonical underactuated systems, control of limit cycles, stability analysis, nonsmooth mechanics, and model predictive control. Applications include walking and running robots, manipulation, and flying machines. As the course will cover state of the art techniques, we will review relevant research papers. At the end of the semester, students will prepare and present a final project on a related topic of their choosing. Prerequisites: MATH 312 or equivalent, MEAM 513/ESE 505, ESE 500, MEAM 520 or equivalent, MEAM 211 or equivalent, programming experience highly recommend, or permission of the instructor.
Activity: Lecture
1 Course Unit

MEAM 519 Elasticity and Micromechanics of Materials
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eshelby's problem etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed.
One-term course offered either term
Also Offered As: MSE 550
Activity: Lecture
1 Course Unit
MEAM 520 Introduction to Robotics
The rapidly evolving field of robotics includes systems designed to replace, assist, or even entertain humans in a wide variety of tasks. Recent examples include human-friendly robot arms for manufacturing, interactive robotic pets, medical and surgical assistive robots, and semi-autonomous search-and-rescue vehicles. This course presents the fundamental kinematic, dynamic, and computational principles underlying most modern robotic systems. The main topics of the course include: rotation matrices, homogeneous transformations, manipulator forward kinematics, manipulator inverse kinematics, jacobians, path and trajectory planning, sensing and actuation, feedback control, haptic interfaces, and teleoperation. The material is reinforced with hands-on lab exercises involving a robotic arm and a haptic interface.
Course usually offered in fall term
Prerequisites: MEAM 211 and MATH 240 or equivalent
Activity: Lecture
1 Course Unit

MEAM 527 Finite Element Analysis
The objective of this course is to equip students with the background needed to carry out finite elements-based simulations of various engineering problems. The first part of the course will outline the theory of finite elements. The second part of the course will address the solution of classical equations of mathematical physics such as Laplace, Poisson, Helmholtz, the wave and the Heat equations. The third part of the course will consist of case studies taken from various areas of engineering and the sciences on topics that require or can benefit from finite element modeling. The students will gain hands-on experience with the multi-physics, finite element package FemLab.
Course usually offered in fall term
Also Offered As: ENM 427
Prerequisites: MATH 241 or ENM 251 and PHYS 151
Activity: Lecture
1 Course Unit

MEAM 529 Introduction to MEMS and NEMS
Introduction to RM MEMS technologies; need for RF MEMS components in wireless communications. Review of micromachining techniques and MEMS fabrication approaches. Actuation methods in MEMS, TRF MEMS design and modeling. Examples of RF MEMS components from industry and academia. Case studies: micro-switches, tunable capacitors, inductors, resonators, filters, oscillators and micromachined antennas. Overview of RF NEMS.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MEAM 530 Continuum Mechanics
This course serves as a basic introduction to the Mechanics of continuous media, and it will prepare the student for more advanced courses in solid and fluid mechanics. The topics to be covered include: Tensor algebra and calculus, Lagrangian and Eulerian kinematics, Cauchy and Piola-Kirchhoff stresses, General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics; constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure.
Course usually offered in spring term
Prerequisites: Multivariable Calculus, Linear Algebra, Partial Differential Equations
Activity: Lecture
1 Course Unit

MEAM 535 Advanced Dynamics
Course usually offered in fall term
Prerequisites: MEAM 211 and some Linear Algebra. Senior or Master's Standing in Engineering or permission of the instructor.
Activity: Lecture
1 Course Unit

MEAM 536 Viscous Fluid Flow and Modern Applications
This is an intermediate course that builds on the basic principles of Fluid Mechanics. The course provides a more in depth and unified framework to understand fluid flow at different time and length scales, in particular viscous flows. Topics include review of basic concepts, conservation laws (momentum, mass, and heat), fluid kinematics, tensor analysis, Stokes' approximations, non-Newtonian fluid mechanics, and turbulence. The course will explore important modern topics such as microfluidics, swimming of micro-organisms, wind turbines, rheology, biofluid mechanics, and boundary layers.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This course is intended for juniors, seniors and graduate students from the Schools of Engineering and/or Arts and Sciences that have a general interest in fluid dynamics and its modern applications. Students should have an understanding of basic concepts in fluid mechanics and a good grasp on differential equations.
MEAM 537 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course.
Course usually offered in spring term
Also Offered As: MSE 537
Prerequisites: Freshman physics; MEAM 354 or equivalent, or consent of instructor.
Activity: Lecture
1 Course Unit

MEAM 538 Turbulence
This course is an introductory course on turbulent flows. The course provides physical and mathematical framework for quantitative and qualitative descriptions of fundamental processes involved in turbulent flows. Topics include the Navier-Stokes equations, the statistical description of turbulence, equations for mean and fluctuations, energy cascade, turbulence spectra, Kolmogorov hypotheses, behavior of shear flows, and isotropic turbulence. The course will also explore modern topics such as computational modeling of turbulence.
Taught by: MEAM 302 or equivalent
One-term course offered either term
Prerequisite: MEAM 302 or equivalent
Activity: Lecture
1 Course Unit
Notes: Instructor Permission required for undergraduates

MEAM 543 Performance, Stability and Control of UAVs
This course covers the application of classical aircraft performance and design concepts to fixed-wing and rotary-wing Unmanned Aerial Vehicles (UAVs). A survey of the latest developments in UAV technology will be used to motivate the development of quantitative mission requirements, such as payload, range, endurance, field length, and detectability. The implications of these requirements on vehicle configuration and sizing will be revealed through application of the fundamentals of aerodynamics and propulsion systems. The course will also cover basic flight dynamics and control, including typical inner-loop feedback applications.
One-term course offered either term
Prerequisites: MEAM 210, 211, MATH 240 or equivalents
Activity: Lecture
1 Course Unit

MEAM 545 Aerodynamics
Review of fluid kinematics and conservation laws; vorticity theorems; two-dimensional potential flow; airfoil theory; finite wings; oblique shocks; supersonic wing theory; laminar and turbulent boundary layers.
Course usually offered in spring term
Prerequisite: MEAM 302
Activity: Lecture
1 Course Unit

MEAM 550 Design of Microelectromechanical Systems
A course that covers the design and fabrication of micro- and nano-electromechanical systems. Topics in the course include micro- and nano-fabrication techniques, mechanics of flexures, thin film mechanics, sensing and actuation approaches (e.g., electrostatic, piezoelectric, and piezoresistive), as well as materials and reliability issues. The fundamentals of these topics will be augmented with device-based case studies.
Course not offered every year
Prerequisites: MEAM 354 or equivalent is recommended.
Activity: Lecture
1 Course Unit

MEAM 553 Atomic Modeling in Materials Science
This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis of the results such as radial distribution function, thermodynamics deduced from the molecular dynamics, fluctuations, correlations and autocorrelations. 2. Semi-empirical descriptions of atomic interactions: pair potentials, embedded atom method, covalent bonding, ionic bonding. Basics of the density functional theory. Mechanics, condensed matter physics, thermodynamics and statistical mechanics needed in interpretations are briefly explained.
Course usually offered in spring term
Also Offered As: MSE 561
Prerequisites: Ability to write a basic code in a computer language such as fortran, C, C++
Activity: Lecture
1 Course Unit

MEAM 555 Nanoscale Systems Biology
Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano- thru micro- scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (eg. fluorescence down to nano-scale, AFM), physical methods (eg. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology.
One-term course offered either term
Also Offered As: BE 555, CBE 555
Prerequisites: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor.
Activity: Lecture
1 Course Unit
MEAM 561 Thermodynamics: Foundations, Energy, Materials
To introduce students to advanced classical equilibrium thermodynamics based on Callen’s postulatory approach, to exergy (Second-Law) analysis, and to fundamentals of nonequilibrium thermodynamics. Applications to be treated include the thermodynamic foundations of energy processes and systems including advanced power generation and aerospace propulsion cycles, batteries and fuel cells, combustion, diffusion, transport in membranes, materials properties and elasticity, superconductivity, biological processes.
Course not offered every year
Prerequisites: Undergraduate thermodynamics.
Activity: Lecture
1 Course Unit

MEAM 564 The Principles and Practice of Microfabrication Technology
A laboratory course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures, microelectronic and microstructural materials, photolithography, diffusion, oxidation, materials deposition, etching and plasma processes. Basic laboratory processes are covered in the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).
Course usually offered in fall term
Also Offered As: ESE 460, ESE 574
Prerequisites: Any of the following courses: ESE 218, MEAM 333, CBE 351, PHYS 250 or permission of the instructor
Activity: Lecture
1 Course Unit

MEAM 570 Transport Processes I
The course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and the constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows featuring a few examples from mechanical, chemical, and biological systems. Reactive flows will also be considered.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MEAM 571 Advanced Topics in Transport Phenomena
The course deals with advanced topics in transport phenomena and is suitable for graduate students in mechanical, chemical and bioengineering who plan to pursue research in areas related to transport phenomena or work in an industrial setting that deals with transport issues. Topics include: Transport processes with drops, Bubbles and particles; Phase change Phenomena: condensation, evaporation, and combustion; Radiation heat transfer: non-participating media, participating media, equation of radiative transfer, optically thin and thick limits; Introduction to Hydrodynamic and Thermal Instability; Microscale energy transport; Nano-particle motion in fluids and transport.
Course not offered every year
Prerequisites: Either MEAM 570, MEAM 642, CBE 640 or equivalent, or Written permission of the Instructor.
Activity: Lecture
1 Course Unit

MEAM 575 Micro and Nano Fluidics
The course focuses on topics relevant for micro-fluidics, lab on chip technology, point of care diagnostics, nano-technology, biosensing, and interfacial phenomena. Although we will discuss briefly the fabrication of micro and nano fluidic devices, the course will mostly focus on physical phenomena from the continuum point of view. The mathematical complexity will be kept to a minimum. The course will be reasonably self-contained, and any necessary background material will be provided, consistent with the students’ background and level of preparation. Specifically, we will examine fluid and nanoparticle transport under the action of pressure, electric, magnetic, and capillary forces; the structure and role of superhydrophobic surfaces; how the solid/liquid interface acquires electric charge; ion transport in electrolytes (Poisson-Nernst-Planck equations); colloid stability; electroosmosis, electrophoresis, and particle polarization; electrowetting and digital microfluidics; particle and cell sorting; immunoassays; and enzymatic amplification of nucleic acids.
Course not offered every year
Activity: Lecture
1 Course Unit

MEAM 580 Electrochemistry for Energy, Nanofabrication and Sensing
Principles and mathematical models of electrochemical processes in energy conversion and storage, water desalination, nanofabrication, electroplating, and sensing for engineering and science graduate students and advanced undergraduates, lacking prior background in electrochemistry. The course covers equivalent circuits, electrode kinetics, electrokinetic and transport phenomena, and electrostatics. The course will introduce and use the finite element program COMSOLTM.
We will discuss, among other things, applications to stationary and flow batteries, supercapacitors, integrated electric circuit fabrication, electrokinetics, and biosensing. In contrast to CBE 545 Electrochemical Energy Conversion that focuses on solid state electrochemistry, this course emphasizes liquid-based electrochemistry.
One-term course offered either term
Prerequisites: Undergraduate course in Fluid Mechanics (MEAM 302), and in Heat and Mass Transfer (MEAM 333)
Activity: Lecture
1 Course Unit

MEAM 597 Master's Thesis Research
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

MEAM 599 Master's Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit
MEAM 613 Nonlinear Control Theory
The course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility, and observability, for nonlinear systems; Forbenius' theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations. Course not offered every year
Also Offered As: CBE 617, CIS 613, ESE 617
Prerequisites: A sufficient background to linear algebra (ENM 510 or ENM 511 or equivalent) and a course in linear control theory (MEAM 513 or equivalent), or written permission of the instructor.
Activity: Lecture
1 Course Unit

MEAM 620 Advanced Robotics
This course covers advanced topics in robotics and includes such topics as multi-body dynamics, nonlinear control theory and planning algorithms with application to robots and systems of multiple robots. Course usually offered in spring term
Prerequisites: Graduate standing in engineering and MEAM 535 or ESE 500 or CIS 580 or MEAM 520.
Activity: Lecture
1 Course Unit

MEAM 630 Advanced Continuum Mechanics
This course is a more advanced version of MEAM 530. The topics to be covered include: tensor algebra and calculus, Lagrangian and Eulerian kinematics; Cauchy and Piola-Kirchhoff stresses. General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics. Constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure. Course not offered every year
Prerequisites: One graduate level course in applied mathematics and one in either fluid or Solid Mechanics.
Activity: Lecture
1 Course Unit

MEAM 632 Plasticity
This course develops the mathematical theory of plastic deformation for both crystalline and disordered materials. Phenomenological models for strain-hardening, creep and size-dependent plastic flow as well as physically-based theories for single crystals are discussed. Applications are drawn from problems in structural mechanics, deformation processing, friction and contact, and fracture. Large strain deformations and problems involving strain localization are considered. Course not offered every year
Prerequisites: MEAM 519 or permission of instructor.
Activity: Lecture
1 Course Unit

MEAM 633 Mechanics of Adhesion and Fracture
This course focuses on mechanics aspects of adhesion and fracture of solids. The topics are intimately related, as fracture involves decohesion. Topics include forces of interaction between surfaces of solids, perfect versus imperfect adhesion, aspects of contact mechanics, linear analysis of cracks in elastic materials, non-linear analysis of cracks in elastic-plastic materials, J-integral methods, phenomenological theories, crack growth and heeling, and stability. Micro-mechanical models of fracture are analyzed using non-linear elasticity and energy methods. Applications to various material systems and processes, including structural materials, layered materials, friction and wear. Course not offered every year
Prerequisites: Background equivalent to MEAM 519 and ENM 510
Activity: Lecture
1 Course Unit

MEAM 634 Rods and Shells
This course is intended for 2nd year graduate students and introduces continuum mechanics theory of rods and shells with applications to structures and to biological systems as well as stability and buckling. The course begins with topics from differential geometry of curves and surfaces and the associated tensor analysis on Riemannian spaces. A brief introduction to variational calculus is included since variational methods are a powerful tool for formulating approximate structural mechanics theories and for numerical analysis. The structural mechanics theories of rods, plates and shells are introduced including both linear and nonlinear theories.
Course not offered every year
Prerequisites: First-year graduate-level applied mathematics for engineers (ENM 510 and 511) and a first course in continuum mechanics or elasticity or permission of instructor.
Activity: Lecture
1 Course Unit

MEAM 635 Composite Materials
This course deals with the prediction of the average, or effective properties of composite materials. The emphasis will be on methods for determining effective behavior. The course will be concerned mostly with linear mechanical and physical properties, with particular emphasis on the effective conductivity and elastic moduli of multi-phase composites and polycrystals. However, time-dependent and non-linear properties will also be discussed.
Course not offered every year
Prerequisite: ENM 510
Corequisite: ENM 511
Activity: Lecture
1 Course Unit

MEAM 642 Advanced Fluid Mechanics
Fluid mechanics as a vector field theory; basic conservation laws, constitutive relations, boundary conditions, Bernoulli theorems, vorticity theorems, potential flow. Viscous flow; large Reynolds number limit; boundary layers. One-term course offered either term
Activity: Lecture
1 Course Unit
MEAM 646 Computational Mechanics
The course is divided into two parts. The course first introduces general numerical techniques for elliptical partial differential equations - finite difference method, finite element method and spectral method. The second part of the course introduces finite volume method. SIMPLER formulation for the Navier-Stokes equations will be fully described in the class. Students will be given chances to modify a program specially written for this course to solve some practical problems in heat transfer and fluid flows.
Course not offered every year
Prerequisites: ENM 510, ENM 511, and one graduate level introductory course in mechanics. FORTRAN or C programming experience is necessary.
Activity: Lecture
1 Course Unit

MEAM 650 Mechanics of Soft and Biomaterials
This course is aimed to expose the students to a variety of topics in mechanic materials via discussion of "classic" problems that have had the widest impact long period of time and have been applied to analyze the mechanical behavior a variety of biological and engineering materials. One-term course offered either term
Also Offered As: MSE 650
Activity: Lecture
1 Course Unit

MEAM 662 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory. Course usually offered in fall term
Also Offered As: BE 662, CBE 618
Activity: Lecture
1 Course Unit

MEAM 663 Entropic Forces in Biomechanics
This course is targeted for engineering/physics students working in the areas of nano/bio technology. The course will start with a quick review of statistical mechanics and proceed to topics such as Langevin dynamics, solution biochemistry (Poisson-Boltzmann and Debye-Huckel theory), entropic elasticity of bio-polymers and networks, reaction rate kinetics, solid state physics and other areas of current technological relevance. Students will be expected to have knowledge of undergraduate mechanics, physics and thermodynamics. One-term course offered either term
Activity: Lecture
1 Course Unit

MEAM 690 Advanced Topics in Thermal Fluid Science or Energy
This course will be offered when demand permits. The topics will change due to the interest and specialties of the instructor(s). Some topics could include: Computational Fluid Mechanics, Visualization of Computational Results, Free Surface Flows, Fluid Mechanics of the Respiratory System, and transport in Reacting Systems.
Course not offered every year
Activity: Lecture
1 Course Unit

MEAM 691 Special Topics in Mechanics of Materials
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Compliant Mechanisms, Optimal Control, and Fluid-Structure interaction.
Course not offered every year
Activity: Lecture
1 Course Unit

MEAM 692 Topics in Mechanical Systems
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Electromagnetics, Control Theory, and Micro-Electro-Mechanical Systems.
Course not offered every year
Activity: Lecture
1 Course Unit

MEAM 699 MEAM Seminar
The seminar course has been established so that students get recognition for their seminar attendance as well as to encourage students to attend. Students registered for this course are required to attend weekly departmental seminars given by distinguished speakers from around the world. There will be no quizzes, tests, or homeworks. The course will be graded S/U. In order to obtain a satisfactory (S) grade, the student will need to attend more than 70% of the departmental seminars. Participation in the seminar course will be documented and recorded on the students transcript. In order to obtain their degree, doctoral students will be required to accumulate six seminar courses and MS candidates (beginning in the Fall 2001) two courses. Under special circumstances, i.e. in case of conflict with a course, the student may waive the seminar requirement for a particular semester by petition to the Graduate Group Chair.
One-term course offered either term
Activity: Seminar
1 Course Unit

MEAM 895 Teaching Practicum
This course provides training in the practical aspects of teaching. The students will work with a faculty member to learn and develop teaching and communication skills. As part of the course, students will participate in a range of activities that may include: giving demonstration lectures, leading recitations, supervising laboratory experiments, developing instructional laboratories, developing instructional material, preparing homework assignments, and preparing examinations. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty responsible for the course. At the completion of the 0.5 c.u. of teaching practicum, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation from the faculty member responsible for the course. The evaluation will be based on comments of the students taking the course and the impressions of the faculty.
One-term course offered either term
Activity: Lecture
0.5 Course Units
MEAM 899 Independent Study
For students who are studying specific advanced subject areas in mechanical engineering and applied mechanics. Before the beginning of the term, the student must submit a proposal outlining and detailing the study area, along with the faculty supervisor’s consent, to the graduate group chair for approval. At the conclusion of the independent study, the student should prepare a brief report.
One-term course offered either term
Activity: Independent Study
1 Course Unit

MEAM 990 Masters Thesis
Master’s Thesis
Activity: Masters Thesis
1 Course Unit

MEAM 995 Dissertation
Activity: Dissertation
1 Course Unit

MEAM 999 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master’s thesis or Ph.D. dissertation requirements.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Both terms.
MILITARY SCIENCE (MSCI)

MSCI 101 Basic Leadership I Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.
Course usually offered in fall term
Corequisites: Enrollment in MSCI 110 Basic Leadership I Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 1 h. No credit, or as awarded by cross-enrolled schools

MSCI 102 Basic Leadership I Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.
Course usually offered in spring term
Corequisites: Enrollment in MSCI 120 Basic Leadership I Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 1 h. No credit, or as awarded by cross-enrolled schools

MSCI 110 Leadership and Personal Development
Introduces students/cadets to the personal challenges and competencies that are critical for effective leadership. Focus is placed on developing basic knowledge and comprehension of the U.S. Army’s Leadership Dimensions while gaining a “big picture” understanding of the Army ROTC program, its purpose in the U.S. Army and our nation, and its advantages for the student. Classes are conducted for one hour once each week.
Course usually offered in fall term
Corequisites: Enrollment in MSCI 101 Basic Leadership I Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 120 Foundations In Leadership
Reviews leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback and using effective writing skills. Students/cadets are also exposed to key fundamentals of skills required to be successful as an MS II cadet; namely military map reading and land navigation, and small unit operations/leadership drills.
Course usually offered in spring term
Corequisites: Enrollment in MSCI 102 Basic Leadership I Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 201 Basic Leadership 2 Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.
Course usually offered in fall term
Corequisites: Enrollment in MSCI 210 Basic Leadership 2 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 2 h. No credit, or as awarded by cross-enrolled schools.

MSCI 202 Basic Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Basic Course Leadership Laboratory. 2h. Open only to (and required of) students in the associated Military Science course. Series, with different roles for students at different levels in the program. Learn and practice basic skills. Gain insight into Advanced Course in order to make an informed decision whether to apply for it. Build self-confidence and team-building leadership skills that can be applied through life.
Course usually offered in spring term
Corequisites: Enrollment in MSCI 202 Leadership I Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 2 h. No credit, or as awarded by cross-enrolled schools

MSCI 210 Innovative Tactical Leadership
Explores the dimensions of creative and innovative tactical leadership strategies and styles by studying historical case studies and engaging in interactive student exercises. Focus is on continued development of the knowledge of leadership values and attributes through an understanding of rank, uniform, customs and courtesies.
Course usually offered in fall term
Corequisites: Enrollment in MSCI 202 Leadership I Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 220 Leadership In Changing Environments
Examines the challenges of leading in complex contemporary operational environments. Students/cadets are exposed to more complex land navigation/map reading tasks, as well as more advanced small unit operations/leadership drills. Cadets develop greater self awareness as they practice communication and team building skills.
Corequisites: Enrollment in MSCI 202 Leadership I Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 301 Leadership Laboratory/Practicum 3
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Course usually offered in fall term
Prerequisites: Completion of MSCI 100 and 200 level courses.
Corequisites: Enrollment in MSCI 310 Basic Leadership 3 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 2.5 hours. No credit, or as awarded by cross-enrolled schools.
MSCI 302 Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. ROTC Advanced Camp. A six-week camp conducted at an Army post. Only open to (and required of) students who have completed MS 301 and 302. The student receives pay. Travel, lodging and most meal cost are defrayed by the US Army. The Advanced Camp environment is highly structured and demanding, stressing leadership at small unit levels under varying, challenging conditions. Individual leadership and basic skills performance are evaluated throughout the camp. The leaders and skills evaluations at the camp weigh heavily in the subsequent selection process that determines the type commission and job opportunities given to the student upon graduation from ROTC and the university. 
Course usually offered in spring term
Prerequisites: Completion of MSCI 100 and 200 level courses.
Corequisites: Enrollment in MSCI 320 Basic Leadership 3 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 2.5 hours. No credit, or awarded by cross-enrolled schools.

MSCI 310 Leadership in Contact
Uses increasingly intense situational leadership challenges to build cadet awareness and skills in leading small units. Skills in decision-making, persuading, and motivating team members when “in combat” are explored, evaluated, and developed.
Prerequisites: Completion of MSCI 100 and 200 level courses.
Corequisites: Enrollment in MSCI 301 Leadership 3 Lab required.
Activity: Lecture
2 Course Units
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 320 Complex Team Leadership Issues
Challenges cadets with more complex leadership issues to further develop, practice, and evaluate adaptive leadership. Cadets continue to analyze and evaluate their own leadership values, attributes, skills and actions in preparation for the Leadership Development and Assessment Course (LDAC). Primary attention is given to preparation for LDAC and the development of both tactical skills and leadership qualities.
Course usually offered in spring term
Corequisites: Enrollment in MSCI 302 Leadership I Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 401 Leadership Laboratory/Practicum 4
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.
Course usually offered in fall term
Prerequisites: Completion of MSCI 100, 200 and 300 level courses.
Corequisites: Enrollment in MSCI 410 Leadership 4 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 1.00 CU - credit excluded from full-time calculation.

MSCI 402 Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Advance Course Leadership Laboratories. 2h. Open only to students in the associated Military Science course. Series, with different roles for students at different levels in the program. Involves leadership responsibilities for the planning, coordination, execution and evaluation of various training and activities with Basic Course students and for the ROTC program as a whole. Students develop, practice and refine leadership skills by serving and being evaluated in a variety of responsible positions.
Course usually offered in spring term
Prerequisites: Completion of MSCI 100, 200 and 300 level courses.
Corequisites: Enrollment in MSCI 420 Basic Leadership 4 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 2.5 hours. No credit, or as awarded by cross-enrolled schools.

MSCI 410 Developing Adaptive Leaders
Develops cadet proficiency in planning, executing, and assessing complex operations, functioning as a member of a staff, and providing leadership performance feedback to subordinates. Cadets are given situational opportunities to assess risk, make ethical decisions, and provide coaching to fellow ROTC cadets.
Course usually offered in fall term
Prerequisites: Completion of MSCI 100, 200 and 300 level courses.
Corequisites: Enrollment in MSCI 401 Leadership 4 Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - credit excluded from full-time calculation.

MSCI 420 Leadership in the Contemporary Operating Environment of the 21st Century
Explores the dynamics of leading in the complex situations of current military operations. Cadets examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. Aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support are examined and evaluated.
Prerequisites: Completion of MSCI 100, 200 and 300 level courses.
Corequisites: Enrollment in MSCI 402 Leadership I Lab required.
Activity: Lecture
2 Course Units
Notes: 1.00 CU - Credit excluded from full-time calculation.
MUSIC (MUSC)

MUSC 005 College Music Program
Private study in voice, keyboard, strings, woodwind, brass, percussion, and non-western instruments. Such study is designed to meet the artistic, technical, and/or professional needs of the student. Note: This is not a syllabus. Course requirements and assessment will be determined by the private instructor. Private lessons in the College House Music cannot be taken Pass/Fail. Please visit http://www.sas.upenn.edu/music/performance. Students cannot register through Penn In Touch. Registration will be maintained by the music department upon receipt of application and instructor permission.

Activity: Studio
0.5 Course Units
Notes: Permits will be entered after student completes College Music House form. Forms available in Music department.

MUSC 007 Ensemble Performance
Successful participation in a music department sponsored group. Ensemble groups: University Orchestra, University Wind Ensemble, Choral Society, University Choir, Ancient Voices, Baroque and Recorder Ensemble, Chamber Music Society, Arab Music Ensemble, Samba and Jazz Combo. This course must be taken for a letter grade (Pass/Fail registration option may not be utilized for this course).

Activity: Studio
0.5 Course Units
Notes: Please contact Ensemble Director if you are interested in taking Music 007 for credit.

MUSC 010 Marian Anderson Performance Program
Special instruction in vocal and instrumental performance for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate level of musical performance. They also must participate in a Music Department ensemble throughout the academic year, perform in public as a soloist at least once during the year (recital), perform a jury at the end of the spring semester, and attend and participate in masterclasses.

Two terms, student must enter first term.
Prerequisite: Must be a music major or minor
Activity: Lecture
0.5 Course Units

MUSC 016 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics will be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings http://www.college.upenn.edu/courses/seminars/freshman.php.

Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 018 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics will be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings http://www.college.upenn.edu/courses/seminars/freshman.php.

Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 030 1000 Years of Musical Listening
We know that we like music and that it moves us, yet it is often difficult to pinpoint exactly why, and harder still to explain what it is we are hearing. This course takes on those issues. It aims to introduce you to a variety of music, and a range of ways of thinking, talking and writing about music. The majority of music dealt with will be drawn from the so-called “Classical” repertory, from the medieval period to the present day, including some of the 'greats’ such as Handel, Beethoven, Mozart, Berlioz, and Verdi, but will also introduce you to music you will most likely never have encountered before. This course will explore the technical workings of music and the vocabularies for analyzing music and articulating a response to it; it also examines music as a cultural phenomenon, considering what music has meant for different people, from different societies across the ages and across geographical boundaries. As well as learning to listen ourselves, we will also engage with a history of listening. No prior musical knowledge is required. (Formerly Music 021).

Fulfills College Cross Cultural Foundational Requirement.
For BA Students: Arts and Letters Sector

Taught by: Calcagno, Caldwell, Goodman
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Open to all students

MUSC 031 Symphony
This course will focus on a specific repertoire of representative symphonies by such composers as Haydn, Mozart, Beethoven, Schubert, Berlioz, Schumann, Brahms, Tchaikowsky, and Mahler. Historical developments will be considered, along with the effects upon symphonic literature of such major sociological changes as the emergence of the public concert hall. But the emphasis will be on the music itself--particularly on the ways we can sharpen our abilities to engage and comprehend the composers' musical rhetoric. Topics will alternate term to term. Fulfills College Cross Cultural Foundational Requirement.

Taught by: Bernstein
One-term course offered either term
Activity: Lecture
1 Course Unit
MUSC 032 Composers
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills College Cross Cultural Foundational Requirement.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Caldwell, Goodman, Kallberg
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 033 History of Opera
An investigation, through a series of representative works, of the central problem of opera: how does the combination of music, text, and visual spectacle create an art form in which the whole is more powerful than its parts. Today this issue can be examined not only in live performances but also through media such as film, DVD, streaming video – media to which this four-centuries-old multimedia form has adapted, evolving in still compelling ways. The works chosen for the course provide a chronological survey but also represent the variety of sources on which opera has drawn for its subject matter: myth and legend, the epic, the novel, and the play.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Goodman
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 034 Music Makers
Courses under this number will treat composer performers and performance. Courses will include a class on Haydn and Mozart (formerly 027); Beethoven (Formerly 028; and Mahler (formerly 025).
Taught by: Caldwell, Goodman, Kallberg
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 035 Jazz Style and History
This course is an exploration of the family of musical idioms called jazz. Attention will be given to issues of style development, selective musicians, and to the social and cultural conditions and the scholarly discourses that have informed the creation, dissemination and reception of this dynamic set of styles from the beginning of the 20th century to the present. Fulfills Cultural Diversity in the U.S.
Taught by: Ramsey
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This course is an exploration of the family of musical idioms called jazz. Attention will be given to issues of style development, selective musicians, and to the social and cultural conditions and the scholarly discourses that have informed the creation, dissemination and reception of this dynamic set of styles from the beginning of the 20th century to the present. Fulfills Cultural Diversity in the U.S.

MUSC 044 Popular Music
This course traces the history of popular music in America from the nineteenth century to the present. We will start with parlor songs and social class and the racialized rise of minstrelsy in the antebellum period, track the separation of highbrow and lowbrow culture in the 19th century, explore the explosion of new styles in the early twentieth century, and witness the birth of hugely influential genres such as rock n roll in the 1950s and hip hop in the 1970s and 1980s. Throughout the semester we will consider how popular music intersects with and reflects individual and social identity, particularly in terms of race, class, gender, and sexuality. Students will engage intensively with popular songs and pieces while also gaining a firm grounding in the historical and social forces of which music was a part.
Taught by: Goodman
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 049 Listening to Nostalgia from the Phonograph to YouTube
In revising the past, nostalgia invites us to also rethink the present, its ideals and its utopias. This CWiC course covers a century of nostalgia’s aural technological mediation, from the invention of the phonograph to today’s digital media such as YouTube. We will explore how conflicting forms of aural nostalgia (the longing for the sounds of other times or other places) are seen either as a suspicious refuge or an empowering cultural resource, and how they affect personal and collective identities, such as enhancing self-esteem or providing interpersonal bonds. The objective is to develop the students public speaking skills by voicing their own experiences of nostalgia while trying to understand the broader social, cultural, and communal issues at stake in nostalgic sounds.
Through the examination of readings, analyses of recent and archival recordings, exhibits, and discussions, we will examine the intricate roles nostalgia has played at the intersections of aesthetics, technology, politics, marketing, the environment, and various audiovisual media, and how they affect us as individuals and communities. In order to develop their oral communication skills, students will be required to give presentations on two nostalgic topics of their choice in formats that employ different research, organization, and presentation competencies. Every week a small group of students will report on an example of sonic nostalgia found in Philadelphia in the style of a nostalgic radio program (or podcast). Each student will give a more formal oral critique of a nostalgic artifact of their choice, engaging with the plurality of oral and aural forms of nostalgia.
Taught by: Pare-Morin
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Communication within the Curriculum.
MUSC 050 World Musics and Cultures
This course examines how we as consumers in the "Western" world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways—particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of "World Music" by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process. Fulfills College Cross Cultural Foundational Requirement.
For BA Students: Arts and Letters Sector
Taught by: Muller,Rommen,Sykes
One-term course offered either term
Activity: Lecture
1 Course Unit

MUSC 051 Music of Africa
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwaito to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African Fuji, and North African rai and hophop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post colonial era. (Formerly Music 053). Fulfills College Cross Cultural Foundational Requirement.
Taught by: Muller
Course not offered every year
Activity: Lecture
0 Course Units

MUSC 056 Seeing/Hearing South Africa: Politics and History through Contemporary Performance
This course begins in the regular semester—students are provided a general introduction to South African history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the two week intensive travel to South Africa (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites. For fall/winter travel: focus is on Cape Town's New Year's Festival performed by those historically called "Cape Coloured" a Festival that makes complicated understandings of race, slavery, and transatlantic translation of borrowed culture. For the Spring/late spring travel, the destination is music festivals in mid-May. Both classes include visits to Robben island, Kirstenbosch gardens; 'Cape Malay' heritage sites; travel to KwaZulu Natal, and to Johannesburg's apartheid museum, Soweto's anti apartheid destinations, the Cradle of Humankind works heritage site, a game park, and the Union Buildings in Pretoria. En route we will stop over to view Khoisan rock art. For BA Students: Arts and Letters Sector
Taught by: Muller

Prerequisites: APPLICATION THROUGH PENN GLOBAL REQUIRED. http://global.upenn.edu/pennabroad/
Activity: Seminar
1 Course Unit
Notes: Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs

MUSC 060 Beginning Tabla I
An introduction to the tabla, the premier drum of north Indian and Pakistani classical music traditions.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MUSC 061 Indian Musical Performance A: Elementary
Introduction to the fundamentals of Indian music; instruction in performance on the sitar.
Taught by: Nalbandian
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 062 Beginning Tabla II
Continued study in Tabla
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MUSC 063 Beginning Sitar II
Taught by: Nalbandian
Activity: Lecture
1 Course Unit
Notes: Continuation of MUSC 061
This course will cover basic skills and vocabulary for reading, hearing, performing, analyzing, and writing music. Students will gain command of musical rudiments, including notation, reading and writing in treble and bass clefs, intervals, keys, scales, triads and seventh chords, and competence in basic melodic and formal analysis. The course will include an overview of basic diatonic harmony, introduction to harmonic function and tonicization. Musicianship skills will include interval and chord recognition, rhythmic and melodic dictation and familiarity with the keyboard. There will be in-depth study of selected compositions from the "common practice" Western tradition, including classical, jazz, blues and other popular examples. Listening skills—both with scores (including lead sheets, figured bass and standard notation), and without—will be emphasized. There is no prerequisite. Students with some background in music may place out of this course and into Music 170, Theory and Musicianship I. (Formerly Music 70, 71). Fulfills College Formal Reasoning and Analysis Foundational Requirement.
Taught by: Waltham-Smith, Weesner
One-term course offered either term
Prerequisites: There is no prerequisite. Students with some background in music may place out of this course and into Music 170, Theory and Musicianship I.
Activity: Lecture
1 Course Unit

MUSC 080 Literatures of Jazz
That modernism is steeped as much in the rituals of race as of innovation is most evident in the emergence of the music we have come to know as jazz, which results from collaborations and confrontations taking place both across and within the color line. In this course we will look at jazz and the literary representations it engendered in order to understand modern American culture. We will explore a dizzying variety of forms, including autobiography and album liner notes, biography, poetry, fiction, and cinema. We'll examine how race, gender, and class influenced the development of jazz music, and then will use jazz music to develop critical approaches to literary form. Students are not required to have a critical understanding of music. Class will involve visits from musicians and critics, as well as field trips to some of Philadelphia's most vibrant jazz venues.
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 081 Film Music in Post 1950 Italy: Nino Rota and Ennio Morricone
An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorve, Pasolini, and Coppola. Highlights include several excerpts from the Fellini/Rota collaboration, including The White Sheik, i vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clowns, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota's music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone's work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick's Days of Heaven and Tarantino's The hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.
Taught by: Samuel
Activity: Seminar
1 Course Unit

MUSC 082 African-American Literature
An introduction to African-American literature, typically ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some versions of the course will concentrate only on the modern period. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 130 Introduction to European Art Music
This course aims to introduce students to what it means to study the European musical tradition. Students will approach the diverse music that constitute the classical tradition from a variety of scholarly perspectives. The goal of this class is to listen deeply and think broadly. Students will consider questions such as: what sort of object is music? Where is it located? What does it mean to say a work is "canonic"? What is left out of the story? This class will be in dialog with other tier-one classes, and will consider what the historian can bring to the study and understanding of music.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Caldwell, Goodman, and Kallberg
Course not offered every year
Prerequisite: Music 070
Activity: Lecture
1 Course Unit
Notes: Fulfills the requirements of the Music Major. Music 070 prerequisite.
MUSC 135 Introduction to the Music Life in America
This course surveys American musical life from the colonial period to the present. Beginning with the music of Native Americans, the European legacy, and the African Diaspora, the course treats the singular social and political milieu that forged the profile of America's musical landscape. Attention will be given to the establishment of the culture industry and to various activities such as sacred music, parlor music, concert and theater music, the cultivation of oral traditions, the appearance of jazz, the trajectory of western art music in the United States, and the eventual global dominance of American popular music. Music 070 prerequisite. Preference given to music Majors and Minors. Fulfills the Cultural Diversity in the U.S. College Requirement.
Taught by: Ramsey, Goodman
Course not offered every year
Prerequisite: Music 070
Activity: Lecture
1 Course Unit

MUSC 150 Introduction to Ethnomusicology
This course introduces students to the field of ethnomusicology through a series of case studies that explore a range of traditional, popular, and art musics from around the world. The course takes as a point of departure several works of musical ethnography, musical fiction, and musical autobiography and, through in-depth reading of these texts, close listening to assigned sound recordings, and in-class case studies, generates a context within which to think and write about music.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Fulfills the requirements of the Music Major.

MUSC 161 Intermediate Sitar I
North Indian classical music is performed in a format shared by stringed, bowed and wind instruments. Intermediate North Indeian Instrumental performance is open to students who play a Western or Indian instrument with at least an intermediate degree of proficiency and to those who have completed Beginning Sitar. The course will cover North Indian methods of composition, rhythm and improvisation and focus on two or three performance pieces. A group performance will be given at the end of the semester.
Taught by: Miner
One-term course offered either term
Activity: Lecture
1 Course Unit

MUSC 170 Theory and Musicianship I
Introduction to and development of principles of tonal voice-leading, harmonic function, counterpoint, and form through written analysis, composition, improvisation, and written work. Course covers diatonic harmony and introduction to chromaticism. Repertoires will focus on Western classical music. Musicianship component will include sight-singing, dictation keyboard harmony. Fulfills College Formal Reasoning and Analysis Foundational Requirement.
Taught by: Moreno, Primosch, Reise, Waltham-Smith, Weesner
Course usually offered in fall term
Prerequisite: Music 070 or successful completion of diagnostic test
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 171 Theory and Musicianship II
Continuation of techniques established in Theory and Musicianship I. Explores chromatic harmony. Concepts will be developed through analysis and model composition. Musicianship component will include sight singing, clef reading, harmonic dictation and keyboard harmony.
Taught by: Moreno, Reise, Waltham-Smith, Weesner
Course usually offered in spring term
Prerequisite: Music 170
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 230 Historical Eras and Topics: Earlier Periods
This course offers an in-depth look at topics and repertoires of the "earlier" periods, namely one (or more) of three historical epochs: Medieval, Renaissance, or Baroque. The purpose of this course is to give students the opportunity to engage deeply with musical works historically, analytically, and contextually, in addition to introducing a range of methodologies within the historical study of Music. ( Formerly Music 120, 121,122).
Taught by: Calcagno, Caldwell, Goodman
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 231 Historical Eras and Topics: Later Periods
This course offers an in-depth look at topics and repertoires of the eighteenth century to today. Classes focus on one (or more) of four historical epochs: Enlightenment, Romantic, Modern, and Postmodern. The purpose of this course is to give students the opportunity to engage deeply with musical works historically, analytically and contextually, in addition to introducing a range of methodologies within the historical study of music. (Formerly 123, 124).
Taught by: Goodman, Kallberg, Ramsey
Activity: Lecture
1 Course Unit

MUSC 232 Themes in Music History
In this course, students will have the opportunity to explore music history from a thematic or conceptual perspective, frequently through several eras. Past themes organizing the course include the Voice, the Sacred, Uncanny, Technology, Instruments, Orality and Literacy, and Machines. 
Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 234 Music Makers
Courses under this number will treat composer, performers, and performance. This class may also on occasion have a performance component, including collaborations with local performance venues, artists in residence. Courses will include a class on Haydn and Mozart (formerly 027); Beethoven (formerly 28); Mahler (formerly 25); Monks and Nuns; String Quartets.
Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Activity: Lecture
1 Course Unit
MUSC 235 Studies in African-American Music
This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways that black music produces "meaning" and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments. The course will also engage other expressive art forms from visual and literary sources in order to better position music making into the larger framework of African American aesthetics. (Formerly Music 146).
Taught by: Ramsey
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 236 Performance, Analysis, History
Participation in the course is contingent upon a successful audition. This course must be taken for a letter grade (pass/fail option may not be utilized for this course). This weekly seminar will explore music from the past and present through class discussions of performance, historical context, and analytical aspects of the music led by a professor and/or performer. One example of a class in this number will be an indepth study of chamber music repertoire led by the Daedalus Quartet. Students will prepare for a final performance at the end of the semester as well as a paper/presentation. Students interested in this applied approach to music may also wish to take 256 and/or 276.
Taught by: Weesner
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 239 Guided Reading in Musicology
Individual research under the supervision of a member of the faculty. Students who take Music 239 may not take Music 259 or 279.
Prerequisite: 130 and one other class from tier 1 or 2. Student must complete one guided Reading Course in order to be eligible for departmental honors.
One-term course offered either term
Prerequisites: Musc 130 or 135; and 170
Activity: Independent Study
1 Course Unit

MUSC 246 Sound Studies
This course provides an introduction to the burgeoning field of sound studies. With clear roots in Music studies, sound studies is at the same time a trans-disciplinary endeavor that spans literature, media theory, sensory history, and anthropology, and is engaged with substantive issues of race, gender, and global politics. Students will engage with texts drawn from a variety of fields, as well as sound and performance art, fiction, podcasts, and film, and they will be encouraged to experiment with creative, multimedia elements in their final projects.
Taught by: Waltham-Smith
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 252 Music, Religion, Ritual in South and Southeast Asia.
What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today's public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.
Taught by: Sykes
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 255 Accordions of the New World
This course focuses on the musical genres and styles (both traditional and popular) that have grown up around the accordion in the New World. We will begin our explorations in Nova Scotia and move toward the Midwest, travelling through the polka belt. From there, our investigation turns toward Louisiana and Texas—toward zydeco, Cajun, and Tex-Mex music. We will then work our way through Central and South America, considering norteno, cumbia, vallenato, tango, chamame, and forro. Our journey will conclude in the Caribbean, where we will spend some time thinking about merengue and rake-n-scare music. Throughout the semester, the musical case studies will be matched by readings and film that afford ample opportunity to think about the ways that music is bound up in ethnicity, identity, and class. We will also have occasion to think about the accordion as a multiply meaningful instrument that continues to be incorporated into debates over cultural politics and mobilized as part of strategies of representation through the New World. (Formerly Music 157).
Taught by: Rommen
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 256 Music and Performance of Africa
This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required. (Formerly Music 253).
Taught by: Muller
Course not offered every year
Activity: Lecture
1 Course Unit
MUSC 257 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertoires of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North-American contexts of music consumption and production. (Formerly Music 258).
Taught by: Rommen
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 258 Latin American Music
This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts—concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertoires of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North American contexts of music consumption and production. (Formerly Music 158).
Taught by: Rommen

MUSC 259 Guided Research Ethnomusicology
Individual research under the supervision of a member of the faculty. Students who take Music 259 may not take 239 or 279.
One-term course offered either term
Prerequisites: Music 150 and 170.
Activity: Independent Study
1 Course Unit

MUSC 265 Performing Arts in South Asia
This course is a survey of selected traditions of theater, music, and dance in India and surrounding regions. Topics include ritual practices, theater, classical dance, classical music, devotional music, regional genres, and contemporary popular musics. Readings and lectures are supplemented by audio and visual materials and live performances. The aim of the course is to expose students to a variety of performance practices from this part of the world and to situate the performing arts in their social and cultural contexts. The course has no prerequisites.
For BA Students: Arts and Letters Sector
One-term course offered either term
Activity: Lecture
1 Course Unit

MUSC 266 Music Cult in India & Pak
One-term course offered either term
Activity: Lecture
1 Course Unit

MUSC 270 Theory and Musicianship III
Continuation of techniques established in Theory and Musicianship I and II. Concepts will be developed through analysis and model composition. Musicianship component will include advanced sight singing, clef reading, harmonic dictation and keyboard harmony.
Taught by: Moreno, Primosch, Reise, Waltham-Smith, Weesner
Course usually offered in fall term
Prerequisites: Music 170 and 171
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 271 Composition I: Historical Practices
Studies in selected 16th through 19th century compositional practices. Possible topics may include 16th century modal counterpoint; sonata forms in Viennese classicism; advanced chromatic harmony. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.
Taught by: Primosch, Reise, Waltham-Smith
Course not offered every year
Prerequisites: Music 170, 171, 270
Activity: Lecture
1 Course Unit

MUSC 272 Composition II: Contemporary Practices
Studies in selected 20th and 21st century compositional practices. Possible topics may include 20th century post-tonal harmony; composing for piano; the sonata in the 20th century. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.
Taught by: Reise
Course not offered every year
Prerequisites: Music 170, 171, 270
Activity: Lecture
1 Course Unit

MUSC 273 Orchestration
An introduction to writing for the instruments of the orchestra. Course will include study of individual instruments and various instrumental combinations, including full orchestra. Representative scores from the 18th century to the present day will be analyzed. Students will be responsible for several scoring projects and will have opportunities to hear readings of their projects. Prerequisite: at least two semesters of music theory or permission of instructor. (Formerly 285).
Taught by: Primosch
Course not offered every year
Prerequisites: Music 70 or 170
Activity: Lecture
1 Course Unit
MUSC 275 Electronic Music
MUSC 275 offers an introduction to electronic music/sound production with a focus on analogue systems and performance. Guest artists will join us for in-class visits and performances during the semester. Meetings will take place in the classroom, in concert spaces and in the studio. Preference given to Music majors and minors for registration.
Taught by: Lew
Course not offered every year
Prerequisite: Music 070 or 170
Activity: Lecture
1 Course Unit

MUSC 277 Recording Music.
An introduction to music and sound recording with a focus on concerts and live performances. The entire process will be examined from start to finish, including the roles played by composers, musicians, listeners, performance spaces, and recording technology. Meetings will take place in the classroom, in concert spaces and in the studio. Music majors and minors will be given preference for registration.
Taught by: Lew
Course usually offered in fall term
Prerequisites: Music 170.
Activity: Seminar
1 Course Unit
Notes: This course is for Music Majors and minors.

MUSC 278 Composition for Musicians
Music 278 is a Composition Seminar that treats composing as both an end in itself and a means for thinking broadly and speculatively about music. We will work on various compositional techniques through exercises as well as ‘free’ composition, giving attention to skills as well as to personal voice. We will survey the current musical landscape through listening, analysis and discussion. The question of musical style itself will be pursued, and while we will be oriented to western art music, we will consider a wide range of styles, including popular music. It is assumed that students will have fluency with musical notation. Prerequisite: Music 171, or permission of the instructor.
Taught by: Weesner
Prerequisite: Music 171
Activity: Seminar
1 Course Unit
Notes: Music 171 prerequisite

MUSC 279 Guided Research in Theory and Composition
Individual research under the supervision of a member of the faculty. Students who take Music 279 may not take Music 239 or Music 259. A research paper (15-20 pages in length with a bibliography) is expected at end of term summarizing research.
Prerequisites: Music 170, 171 and one other tier 2 class
Activity: Independent Study
1 Course Unit

This global cities seminar will discuss the cultural politics of memory as they develop through the spatial and sonic atmosphere of post-war Berlin. A city rich in history and focused on the future, Berlin is a laboratory for how exploration of the recent past is re-scripting the near future. The city becomes a palimpsest sonically, visually, and spatially that is available for investigation and interpretation as a means to understand historical patterns and their relationship to novel practices and methods in the present. Media, and in particular sonic cultures, as well as real estate economics and ecological design will form interrelated prisms through which to understand cities, urban practices, urban memory and the transformation of the environment. Methodologically, the course will be an experiment in the use of media to understand cities and engage with urban practices. The course also involves a mandatory, funded field trip to Berlin during spring break when students will participate in the ongoing Anthropocene Curriculum at the Haus der Kultur der Welt and will visit sound art galleries and sound design studios, as well as meeting with practitioners and researchers. Entrance to the course is via application.
Music320(naomiwal@sas.upenn.edu)&ARCH320(barberda@design.upenn.edu)
Taught by: Daniel Barber and Naomi Waltham Smith
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 330 Seminar in Music History
Advanced seminar in topics in musicology.
Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 350 Seminar in Ethnomusicology
Advanced study in a selected topic in Ethnomusicology.
Taught by: Muller, Rommen, Sykes
One-term course offered either term
Activity: Seminar
1 Course Unit

MUSC 370 Seminar in Theory and Composition
Advanced seminar in topics of music theory and compositions.
Taught by: Waltham-Smith, Weesner, Moreno
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 508 Advanced Musicianship
Advanced techniques of score reading and general musicianship at the keyboard. Goals of the course include increasing proficiency in sight singing (including C clefs). Taking harmonic, melodic, and rhythmic dictations. Accurate performance of rhythms.
Two terms. student must enter first term.
Prerequisites: Reasonable keyboard and sight-reading facility
Activity: Lecture
1 Course Unit

MUSC 515 Analysis of Twentieth-Century Music
Analytical studies of twentieth-century music.
Taught by: Primosch
Course not offered every year
Activity: Seminar
1 Course Unit
MUSC 516 Analysis of 20th Century Music II
Analytical Studies of 20th century music focusing on post World War II music.
Taught by: Primosch, Reise
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 520 Orchestration
A study of the instruments of the orchestra and their combination.
Frequent written projects.
Taught by: Reise
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 525 Composition in Selected Forms
Study of the style and form of one genre, composer, or historical period, with emphasis on written projects.
Taught by: Reise
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 530 Composition and Electronic Media.
This course is intended for advanced composers who have substantial experience and training in composition. Students in MUSC530 will complete short etudes utilizing the student's choice of media. Examples from the literature will be discussed.
Taught by: Primosch
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 601 Texts and Material Culture
Topics may include hermeneutics, methods of formulating value judgements, the relationship of evaluation to interpretation, and the role of aesthetics in history.
Taught by: Kallberg
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 603 Aesthetics and Criticism
Topics may include hermeneutics, methods of formulating value judgements, the relationship of evaluation to interpretation, and the role of aesthetics in history.
Taught by: Kallberg
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 604 Historiography and Methodologies.
Theories and models of historical investigation. Analysis of historiographic writings and musicological works exemplifying particular approaches, such as transnational, environmental/landscape, gender/silence, critical race studies, performance studies, archives, and the digital humanities.
Taught by: Calcagno, Caldwell, Goodman
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 605 Anthropology of Music
Topics may include the intellectual history of ethnomusicology, current readings in ethnomusicology, a consideration of theoretical principles based upon the reading and interpretation of selected monographs, and area studies. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Open to graduate students from all departments

MUSC 606 The Interpretation of Oral Traditions
Topics may draw on methodologies derived from jazz studies, chant studies, and ethnomusicology. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Ramsey
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 620 Analytical Methods: Tonal Music
Current methods in the analysis of tonal music. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Moreno, Waltham-Smith
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 621 Analytical Methods: Twentieth-Century Music
Current methods in the analysis of tonal music. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Moreno, Waltham-Smith
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 630 Perspectives on the String Quartet
Course not offered every year
Activity: Seminar
1 Course Unit
MUSC 650 Field Methods in Ethnomusicology
The goal of the seminar is to give students a compressed dissertation research experience—taking them from the beginnings of "researching" a community and its music, through the documentation and representation stages. Students do background and methods reading, though the focus of the class is the development of basic ethnographic and documentation skills. This is a community partnership seminar, which means that all forms of representation are produced in collaboration with community partners in West Philadelphia. These include photographic essays, an NPR style audio documentary, but most significantly, twenty-thirty minute documentary films on a particular subject. See sample syllabus and projects on http://ccat.sas.upenn.edu/music/westphillymusic Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 700 Seminar in Composition
Seminar in selected compositional problems, with emphasis on written projects. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Primosch, Reise, Weesner
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 705 Seminar in Ethnomusicology
Topics in Ethnomusicology. Please see department website https://www.sas.upenn.edu/music/node/53425 for current term course descriptions.
Taught by: Muller, Rommen, Sykes
Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: Open to graduate students from all departments

MUSC 710 Studies in Medieval Music
PLEASE see department website for current term course description. http://www.sas.upenn.edu/music/courses/music/courses .
Taught by: Caldwell

NAVAL SCIENCE (NSCI)

NSCI 100 Naval Science Drill
A professional laboratory covering various aspects of naval leadership and professional development. While emphasis is given to military marching, formation, and parade, the course also includes lectures from sources in and out of the Navy. Guest speakers cover topics such as leadership, Navy career paths, equal opportunity, rights and responsibilities, AIDS awareness, terrorism/counterterrorism, naval warfare doctrine, employment of naval forces, ethics and values, operations security, and safety.
One-term course offered either term
Prerequisites: Prerequisite (Sophomores, Juniors, Seniors) Fall NSCI 101/Spring NSCI 102
Corequisite: Corequisite (Freshmen) Fall NSCI 101/Spring NSCI 102
Activity: Lecture
1 Course Unit

NSCI 101 Naval Orientation
A course designed to familiarize the student with the history, characteristics and present employment of sea power. Particular emphasis is placed upon our naval forces and their capability in achieving and maintaining our national objectives. Naval organization and operational functions are discussed in conjunction with sea power concepts. Additionally, the student is given an insight into the Naval Service, shipboard organization and safety, time management skills and study techniques.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NSCI 102 Seapower and Maritime Affairs
A broad survey of naval history designed to add historical perspective to current defense problems. Topics covered include: naval power as an aspect of national defense policy, navies as an instrument of foreign policy, strategy selection, resource control, technology, and manning.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Engineering and Nursing students receive credit

NSCI 201 Leadership & Management
This course emphasizes principles of leadership, personnel and material management, and subordinate development in the context of the naval organization. Practical applications are explored through experiential exercises and case studies.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Only Engineering, Nursing, and Wharton students receive credit.

NSCI 202 Navigation I
A comprehensive study of the theory and practice of terrestrial, and electronic navigation and the laws of vessel operations. Topics include fundamentals of coastal and harbor piloting, electronic navigation and mean of navigating without reference to land. An in-depth study of the international and inland nautical Rules of the Road is also included. Case studies and practical exercises are used to reinforce the fundamentals of marine navigation.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Only Engineering students receive credit.

NSCI 301 Engineering
This course provides an overview of how propulsion and electricity are provided to our Navy's fighting ships. The basic engineering principles relating to thermodynamics, steam propulsion (conventional and nuclear), gas turbine propulsion, internal combustion engines, electricity generation and distribution, and various support systems will be taught. Ship design, stability, damage control, and some engineering-related ethical issues will also be discussed.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Only Engineering students receive credit.

NSCI 302 Weapons
This course provides an overview of the theory and concepts underlying modern weapons systems. The principles behind sensors and detection systems, tracking systems, computational systems, weapon delivery systems, and the fire control problem will be examined, with a consistent emphasis on the integration of these components into a "weapons system". Case studies will be used to illustrate and reinforce concepts introduced in the course.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Only Engineering students receive credit.

NSCI 310 Evolution of Warfare
This course is designed to add broad historical perspective to understanding military power. Treating war and the military as an integral part of society, the course deals with such topics as: war as an instrument of foreign policy, military influences on foreign policy, the military as a reflection of society, manning and strategy selection.
Course offered fall; even-numbered years
Activity: Lecture
1 Course Unit

NSCI 401 Navigation II
Insight into modern naval operations is gained through analysis of relative motion pertaining to ships at sea, underway replenishment, shiphandling, and tactical communications. The process of command and control and leadership is examined through case studies of actual incidents at sea.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NSCI 402 Leadership and Ethics
The capstone course of the NROTC curriculum, this course is intended to provide the midshipman with the ethical foundation and basic leadership tools to be effective junior officers. Topics such as responsibility, accountability, ethics, the law of armed conflict, military law, division organization and training, and discipline are introduced through practical exercises, group discussion, and case studies.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Only Wharton students receive credit.
NSCI 410 Fundamentals of Maneuver Warfare
This course prepares future military officers and other leaders for service by studying modern tactical principles, current military developments, and other aspects of warfare and their interactions with the influences on maneuver warfare doctrine. There is a specific focus on the United States Marine Corps as the premier maneuver warfighting organization. Study also includes historical influences on tactical, operational, and strategic levels of maneuver warfare practices in the current and future operating environments.
Course offered fall; odd-numbered years
Activity: Lecture
1 Course Unit
NEAR EASTERN LANGUAGES & CIVILIZATION (NELC)

NELC 010 Archaeology & Technology
Spring 2018: This seminar explores how humans apply and modify technologies in contexts as diverse as everyday life, major politico-economic undertakings, or scholarly research. We investigate this through a comparison of technologies of the past with technologies of the present used to study the past. We will dig into the details of topics like building pyramids and tombs, the function of ancient astronomical devices, pre-telegraph long-distance communication, tools for cutting and carving stone, and kilns for firing pottery. Archaeologists study these issues by examining the material remains of past societies: the cut-marks on stone blocks, extant tomb structures, the debris of manufacturing activities, and much more. Today’s technologies enable the detailed scientific examination of the evidence, improving our understanding of the past. Thus, in parallel with our investigation of past technologies, we will also study the history of the application of present technologies to research on the archaeological record. We will dig into topics like the first uses of computers and databases, the development of statistical methods, early digital 3D modeling of objects and architecture, the adoption of geophysical prospection and geographic information systems, and the emerging uses of machine learning. In some cases, we can even compare old and new technologies directly, such as with land measurement and surveying techniques. Throughout the class we will engage in readings and discussions on the theory of humans and technology, to gain a better understanding of how processes such as innovation function in all time periods.

Taught by: Cobb, Peter
Activity: Seminar
1 Course Unit

NELC 031 History of the Middle East Since 1800
A survey of the modern Middle East with special emphasis on the experiences of ordinary men and women as articulated in biographies, novels, and regional case studies. Issues covered include the collapse of empires and the rise of a new state system following WWI, and the roots and consequences of the Palestinian-Israeli conflict, the Iranian revolution and the U.S.-Iraq War. Themes include: the colonial encounter with Europe and the emergence of nationalist movements, the relationship between state and society, economic development and international relations, and religion and cultural identity. Requirements: one paper and two take-home exams.

For BA Students: History and Tradition Sector

Taught by: Kashani-Sabet
One-term course offered either term
Activity: Recitation
1 Course Unit

NELC 032 Topics in 20th C. Middle East
If “the clash of civilizations” is the first image that jumps to mind when thinking about the modern Middle East, then this is the course for you. From the familiar narratives about the creation of modern nation-states to the oft-neglected accounts of cultural life, this course surveys the multi-faceted societies of the twentieth-century Middle East. Although inclusive of the military battles and conflicts that have affected the region, this course will move beyond the clichés of war and conflict in the Middle East to show the range of issues and ideas with which intellectuals and governments grappled throughout the century. The cultural politics and economic value of oil as well as the formation of a vibrant literary life will be among the topics covered in the course. Ty considering illustrative cultural moments that shed light on the political history of the period, this course will adopt a nuanced framework to approach the Arab/Israeli conflict, the history of the Gulf States, the Iran-Iraq War, and U.S. involvement in the region.

Taught by: Kashani-Sabet
One-term course offered either term
Activity: Lecture
1 Course Unit

NELC 034 Israel in the Middle East
This introductory level course will offer an in-depth look at Israeli history and society, and how it relates to the Middle East through varying lenses. We will consider such topics as the rise of Jewish, Palestinian, and Arab nationalisms in the context of changing imperial control over Palestine/Israel (from Ottoman to British), and the emergence of the Middle East in its current borders; Conflict and conflict-resolution in Israel, Palestine, and the Middle East; Israel’s Palestinian minority. Jewish immigrants to Israel from the Middle East, food and music culture in Israel, and their connection to the Middle East; or the place of the Middle East in Israeli literature and film. We will use cutting edge research from several disciplines, as well as literature, film, audio, and photographic evidence. Students will leave the class with a firm grasp of Israeli history and society, and will be widely familiar with the different narratives, viewpoints, and complexities concerning Israel and its position in the Middle East. Prior knowledge of Israeli or Middle Eastern history is not required.

Taught by: Tam
Activity: Seminar
1 Course Unit

NELC 036 The Middle East through Many Lenses
This freshman seminar introduces the contemporary Middle East by drawing upon cutting-edge studies written from a variety of disciplinary perspectives. These include history, political science, and anthropology, as well as studies of mass media, sexuality, religion, urban life, and the environment. We will spend the first few weeks of the semester surveying major trends in modern Middle Eastern history. We will spend subsequent weeks intensively discussing assigned readings along with documentary films that we will watch in class. The semester will leave students with both a foundation in Middle Eastern studies and a sense of current directions in the field.

Taught by: Sharkey H
Course usually offered in fall term
Activity: Seminar
1 Course Unit
NELC 046 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hittites, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.
For BA Students: History and Tradition Sector
Taught by: Frame
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NELC 051 Jews and Judaism in Antiquity
A broad introduction to the history of Jewish civilization from its Biblical beginnings to the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.
Taught by: Dohrmann
Course usually offered in fall term
Activity: Lecture

NELC 052 Medieval and Early Modern Jewry
Exploration of intellectual, social, and cultural developments in Jewish civilization from the dawn of rabbinic culture in the Near East through the assault on established conceptions of faith and religious authority in 17th century Europe. Particular attention will be paid to the impact of Christian and Muslim "host societies" on expressions of Jewish culture.

NELC 053 The History of Jewish Civilization from the Late Seventeenth Century to the Present
This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected.

NELC 061 Literary Legacy of Ancient Egypt
This course surveys the literature of Ancient Egypt from the Old Kingdom through the Greco-Roman period, focusing upon theme, structure, and style, as well as historical and social context. A wide range of literary genres are treated, including epics; tales, such as the "world's oldest fairy tale;" poetry, including love poems, songs, and hymns; religious texts, including the "Cannibal Hymn"; magical spells; biographies; didactic literature; drama; royal and other monumental inscriptions; and letters, including personal letters, model letters, and letters to the dead. Issues such as literacy, oral tradition, and the question poetry vs. prose are also discussed. No prior knowledge of Egyptian is required.

NELC 064 The World of Cleopatra
The figure of Cleopatra is familiar from modern stories, legends, and film. Was this famous woman a brazen seductress or a brilliant political mind? How many of these presentations are historically accurate? This class will examine the Ptolemaic period in Egypt (305-30 BCE), the time period during which Cleopatra lived, in an attempt to separate myth from reality. The Ptolemaic period is filled with political and personal intrigue. It was also a time of dynamic multiculturalism. Arguably one of the most violent and fascinating eras in ancient Egyptian history, the Ptolemaic period is largely unknown and often misunderstood. This course will examine the history, art, religion and literature of Egypt's Ptolemaic period which culminated in the reign of Cleopatra VII.

NELC 101 Introduction to the Ancient Near East
The great pyramids and mysterious mummies of Egypt, the fabled Tower of Babel, and the laws of the Babylonian king Hammurabi are some of the things that might come to mind when you think of the ancient Near East. Yet these are only a very few of the many fascinating — and at time perplexing — aspects of the civilizations that flourished there c. 3300-300 BCE. This is where writing first developed, where people thought that the gods wrote down what would happen in the future on the lungs and livers of sacrificed sheep, and where people knew how to determine the length of the hypotenuse a thousand years before the Greek Pythagoras was born. During this course, we will learn more about these other matters and discover their place in the cultures and civilizations of that area. This is an interdisciplinary survey of the history, society and culture of the ancient Near East, in particular Egypt and Mesopotamia, utilizing extensive readings from ancient texts in translation (including the Epic of Gilgamesh, "one of the great masterpieces of world literature"), but also making use of archaeological and art historical materials. The goal of the course is to gain an appreciation of the various societies of the time, to understand some of their great achievements, to become acquainted with some of the fascinating individuals of the time (such as Hatshepsut, "the women pharaoh," and Akhenaten, "the heretic king"), and to appreciate the rich heritage that they have left us.

NELC 102 Introduction to the Middle East
This is the second half of the Near East sequence. This course surveys Islamic civilization from circa 600 (the rise of Islam) to the start of the modern era and concentrates on political, social, and cultural trends. Although the emphasis will be on Middle Eastern societies, we will occasionally consider developments in other parts of the world, such as sub-Saharan Africa, Central Asia, and Spain, where Islamic civilization was or has been influential. Our goal is to understand the shared features that have distinguished Islamic civilization as well as the varieties of experience that have endowed it with so much diversity.

NELC 103 Origin and Culture of Cities
The UN estimates that 2.9 of the world's 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the "origin" of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.

NELC 106 Pastoral Nomadism in the Past and Present
Pastoral nomadism is a "third way" of human subsistence separate from farming and foraging. It is a sustainable human adaptation to grassland and arid environments practiced through particular technologies and domesticated animals. This course begins by examining the human ecology and social organization that emerge from mobile ways of life, drawing on modern, ethnographic, and archaeological examples of pastoral nomadic groups in the Middle East and Central Asia. Academic readings and ethnographic films will form the basis of discussions about several larger themes, including: the origins of pastoral nomadism and horse riding; the development of dairy-based foods and human adaptations allowing the digestion of lactose; the historical relationship between mobile groups of pastoralists and territorial states; popular perceptions of nomads in various forms of historical and modern media; and the influence of ideas about nomads on modern senses of heritage and nationalism in the Middle East and Central Asia.

NELC 111 Water in the Middle East Throughout History
The role of water in the Middle East cannot be overstated. The Middle East is an arid region, but human and natural systems have interacted to determine relative water scarcity and abundance at different times and places. The location, accessibility, yield, and quality of natural and managed water resources significantly influenced the location and longevity of ancient and modern settlements. Control of water has always affected the economic, political, social life of the communities inhabiting these settlements. This course examines the distribution of water resources throughout the Middle East and the archaeology and anthropology of water exploitation and management over the last 9000 years. It will consider water in river valleys, deserts, highland zones, steppes, and coastal areas of Mesopotamia, Egypt, the Levant, and Arabia from environmental, political, social, cultural, and technical perspectives. We will engage with a variety of media, including academic readings, popular journalism, films, satellite imagery, and digital maps. We will examine irrigation, water supply, sanitation, and water-driven power systems known from ethnographic studies and archaeological excavations. These data will allow us to engage with debates in Middle Eastern anthropology, including those concerning the relationship between water and political power, the environment in which the earliest cities arose, and present and potential future water crises and "water wars." In our final weeks, we will discuss archaeology and historical anthropology's contribution to conceptions of water "sustainability" and examine attempts to revive traditional and ancient technologies in an effort to better manage modern water resources.

NELC 118 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Ghobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.

NELC 130 Introduction to the Qur'an
The goal of this course is to provide students with a general introduction to the holy scripture of the religion of Islam, the Qur'an. In particular, students will become familiar with various aspects of Qur'anic content and style, the significance of the Qur'an in Islamic tradition and religious practice, scholarly debates about the history of its text, and contemporary interpretations of it. Through close readings of a wide range of passages and short research assignments, students will gain first-hand knowledge of the Qur'an’s treatment of prophecy, law, the Biblical tradition, and many other topics. No previous background in Islamic studies or Arabic language is required for this course.

NELC 133 Penn/Philadelphia/and the Middle East
This seminar explores the historic engagement of the University of Pennsylvania and its faculty, students, and graduates in the Near and Middle East. It does so while drawing on archives, rare books and manuscripts, and artifacts that are now preserved in the University Archives, the Penn Museum, and the Penn Libraries. Together we will consider how, beginning in the late nineteenth century, Penn scholars engaged in archaeological expeditions to celebrated sites like Ur (in what is now Iraq) and Memphis (in Egypt) and how some of these efforts influenced the late Ottoman Empire’s policies towards antiquities and museums. We will examine how Penn’s curriculum changed over time to accommodate Semitics, including the study of languages and biblical traditions, in light of or in spite of historic tensions at the university between secular and religious learning. We will assess how Penn responded to changing American popular attitudes and U.S. foreign policy concerns relative to the Middle East, including during the Cold War and post-2001 (post-9/11) eras. Finally, we will trace the stories or biographies of some individual objects in Penn collections in order to appreciate the university’s roles in collecting, preserving, analyzing, and disseminating knowledge about the region’s deep cultural heritage. Ultimately, by investigating and writing.

NELC 136 Introduction to Islam
This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

NELC 150 Introduction to the Bible (The "Old Testament")
An introduction to the major themes and ideas of the Hebrew Bible (the Old Testament), with attention to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity. All readings are in English.
For BA Students: Humanities and Social Science S
Course usually offered in fall term
Activity: Lecture
1 Course Unit
NELC 154 Women in Jewish Literature
This course introduces students of literature, women's studies, and Jewish studies to the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres—devotional literature, memoir, fiction, and poetry—we will study women's roles and selves, the relation of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction & poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glueck of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction and a memoir written by women in Yiddish, Hebrew, and English. "Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890)

NELC 155 ARCHAOLOGY & THE BIBLE
Archaeology and the Bible is a chronological survey of the long span of human occupation in the Land of the Bible, known by the names of the modern nation-states and political entities that occupy the area, as well as various short hands such as Levant and Syria-Palestine, from ca. 10,000 BCE, when humans first began to farm and herd animals through the time of the Divided Monarchy of Israel and Judah. While archaeology has moved beyond a primary concern with illuminating the Bible, NELC 155 will investigate the broader import of archaeological discoveries for our understanding of ancient Israel and its neighbors.

NELC 156 Great Books of Judaism (Fall 2018: Lifecycle in the Talmud)
The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision; bar/bat mitzva and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will also be provided.

NELC 166 The Religion of Ancient Egypt
Weekly lectures (some of which will be illustrated) and a field trip to the University Museum's Egyptian Section. The multifaceted approach to the subject matter covers such topics as funerary literature and religion, cults, magic religious art and architecture, and the religion of daily life.
Taught by: Silverman/Wegner
Course not offered every year
Activity: Lecture
1 Course Unit

NELC 168 Women in Ancient Egypt
This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.

NELC 180 Narrative Across Cultures
An introduction to literary study through a genre, either the short story or poetry. Versions of this course will vary widely in the selection of texts assigned. Some versions will begin with traditional stories or poems, including a sampling of works in translation. Others will focus exclusively on modern and contemporary American short fiction or poetry. This course is designed for the General Requirement, and is ideal for the students wishing to take an English course but not necessarily intending to major.
For BA Students: Arts and Letters Sector
One-term course offered either term
Activity: Lecture
1 Course Unit

NELC 182 Ancient Civilizations of the World
This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist of a guided tour of a relevant gallery, as well as a hands-on object-based lab with archaeological materials selected by the instructor. This course meets the General Education Curriculums Cross Cultural Analysis foundational approach, whose aim is to help students understand and interpret the cultures of peoples (even long-dead peoples) with histories different from their own; it also fulfills the History and Tradition Sector breadth requirement.

NELC 201 Modern Middle Eastern Literature in Translation
The Middle East boasts a rich tapestry of cultures that have developed a vibrant body of modern literature that is often overlooked in media coverage of the region. While each of the modern literary traditions that will be surveyed in this introductory course-Arabic, Hebrew, Persian and Turkish-will be analyzed with an appreciation of the cultural context unique to each body of literature, this course will also attempt to bridge these diverse traditions by analyzing common themes such as modernity, social values, the individual and national identity as reflected in the genres of poetry, the novel and the short story. This course is in seminar format to encourage lively discussion and is team-taught by four professors whose expertise in modern Middle Eastern literature serves to create a deeper understanding and aesthetic appreciation of each literary tradition. In addition to honing students’ literary analysis skills, the course will enable students to become more adept at discussing the social and political forces that are reflected in Middle Eastern literature, explore important themes and actively engage in reading new Middle Eastern works on their own in translation. All readings are in English.

NELC 231 Modern Arabic Literature
This course is a study of modern Arabic literary forms such as the free verse poem, the prose-poem, drama, the novel, and the short story. The class examines issues related to Arabic culture and identity in the modern and post-modern era through the study of Arabic literature. The aim of the course is to introduce students to key samples of modern Arabic literature which trace major social and political developments in Arab society. All readings will be in English translations. The class will also address the role of translation in shaping modern Arabic literary forms and creating the image of Arabic literature in other languages. Recent topics have included: Arab Women and War, Modernism and Arabic Poetry, The Arabic Free Verse movement.
Taught by: Fakhreddine
Course not offered every year
Activity: Lecture
1 Course Unit

NELC 235 Food in the Islamic Middle East: History, Memory, Identity
In the tenth century, a scholar named Ibn Sayyar al-Warraq produced an Arabic manuscript called Kitab al-Tabikh (The Book of Cooking). This volume, which compiled and discussed the recipes of eighth- and ninth-century Islamic rulers (caliphs) and their courts in Iraq, represents the oldest known surviving cookbook of the Arab-Islamic world. Many more such cookbooks followed; in their day they represented an important literary genre among cultured elites. As one food historian recently noted, there are more cookbooks in Arabic from before 1400 than in the rest of the worlds languages put together. Ibn Sayyars cookbook can help us to think about the historical and cultural dynamics of food. In this class, we will focus on the Middle East across the sweep of the Islamic era, into the modern period, and until the present day, although many of the readings will consider the study of food in other places (including the contemporary United States) for comparative insights. The class will use the historical study of food and foodways as a lens for examining subjects that relate to a wide array of fields and interests. These subjects include economics, agricultural and environmental studies, anthropology, literature, religion, and public health. With regard to the modern era, the course will pay close attention to the consequences of food for shaping memories and identities including religious, ethnic, national, and gender-based identities particularly among people who have dispersed or otherwise migrated. It will also focus considerably on the politics of food, that is, on the place of food in public relations. Among the questions we will debate are these: How does food reflect, shape, or inform history? By approaching the study of Middle Eastern cultures through food, what new or different things can we see? What is the field of food studies, and what can it offer to scholars? What is food writing as a literary form, and what methodological and conceptual challenges face those who undertake it?

NELC 238 Introduction to Islamic Law
This course will introduce students to classical Islamic law, the all-embracing sacred law of Islam. Among the world’s various legal systems, Islamic law may be the most widely misunderstood and even misrepresented; certainly, misconceptions about it abound. Islamic law is, however, the amazing product of a rich, fascinating and diverse cultural and intellectual tradition. Most of the readings in this course will be taken from primary sources in translation. Areas covered will include criminal law, family law, law in the Quran, gender and sexuality, the modern application of Islamic law, Islamic government and other selected topics.

Course offered fall; even-numbered years
Activity: Lecture
1 Course Unit

NELC 239 Migration and the Middle East
This reading-and discussion-intensive seminar examines the phenomenon of migration into, out of, within, and across the Middle East and North Africa. We will focus on the period from the late nineteenth century to the present, and will emphasize the cultural (rather than economic) consequences of migration. Along the way we will trace connections between the Middle East and other regions— notably the Americas, sub-Saharan Africa, South Asia, the Caucasus, and Western Europe. Readings are interdisciplinary and include works of history, anthropology, sociology, medical research, literature, political science, geography, and human rights advocacy. As students develop final projects on topics of their choice, we will spend time throughout the semester discussing tactics for research and writing.

NELC 244 Reading Ancient Mesopotamia
An introduction to the literature of Ancient Mesopotamia. The literature of ancient Mesopotamia flourished thousands of years ago in a culture all of its own, yet the survival of hundreds of thousands of written records challenges us to read it and make sense of it without simply approximating it to the realm of our own understanding. How can we learn to do this? Situating our understanding of how we read and how we understand culture within an interdisciplinary range of literary-critical and analytic approaches, we will approach this question by immersing ourselves in the myths, tales and mentalities that made Mesopotamian literature meaningful. To give us a measure of our progress we will bracket the semester by reading Gilgamesh which is never less than a great story, but which will take on new layers of meaning as the semester develops and we learn to read the text in more and more Mesopotamian ways. As we journey through these mysterious realms we will reflect not only Mesopotamia and its immortal literature but on what it means to read and understand any cultures other than our own. NELC 254 Jewish Humor
In modern American popular culture Jewish humor is considered by Jews and non-Jews as a recognizable and distinct form of humor. Focusing upon folk-humor, in this course we will examine the history of this perception, and study different manifestation of Jewish humor as a particular case study of ethnic in general. Specific topics for analysis will be: humor in the Hebrew Bible, Jewish humor in Europe and in America, JAP and JAM jokes, Jewish tricksters and pranksters, Jewish humor in the Holocaust and Jewish humor in Israel. The term paper will be collecting project of Jewish jokes. For BA Students: Arts and Letters Sector Taught by: Ben-Amos
Course not offered every year
Activity: Lecture
1 Course Unit

NELC 258 Jewish Folklore
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish Folklore in a variety of oral literary forms. Taught by: Ben-Amos
Course usually offered in fall term
Activity: Lecture
1 Course Unit
NELC 259 Introduction to Modern Hebrew Literature
The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story reinvented, literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold
Course usually offered in fall term
Prerequisites: Hebrew 054 or the equivalent, per instructor's evaluation
Activity: Seminar
1 Course Unit

NELC 266 History of Ancient Egypt
Review and discussion of the principal aspects of ancient Egyptian history, 3000-500 BC.
Taught by: Wegner
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NELC 281 Topics In Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.
Taught by: Spooner
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NELC 285 Jews Under Medieval Islam
This seminar will examine what Jews living in Muslim lands wrote during medieval times, focusing on a range of primary sources including poetry, Bible commentary, historiography and polemics. Through these sources we will develop an understanding of the place of this community in Jewish history as well as within the medieval empire of Islam.
For BA Students: Humanities and Social Science Sector
Taught by: Goldstein
Course not offered every year
Activity: Lecture
1 Course Unit

NELC 320 Digital Exploration of the Past: Archives, Databases, Maps, and Museums
This course exposes students to digital methods for investigating past environments and societies, including digitization of analog records, the construction and querying of databases, and the creation of digital maps. The ultimate goal of the course will be to carry out a final project that benefits the Penn Museum and the public. In fall 2018, our exploration of digital methods will center around the archaeological site of Ur (Tell el-Muqayyar), located in southern Iraq. Ur was one of the earliest cities in the world, and, thanks to campaigns partly funded by Penn in the 1920s and 1930s, is one of the best-excavated sites in southern Mesopotamia. Here at Penn, we have unparalleled access to archival documentation and artifacts from the site. We will draw upon this access to contribute to an on-going digital humanities project in the Penn Museum (the public "Ur Online" database). In the process, students will re-assess data that has the potential to change anthropological ideas about issues such as the environmental setting of the earliest cities and archaeological ideas about demographic and urban structure within the city of Ur itself. There are no prerequisites, but students must bring an interest in Mesopotamian archaeology and/or the origins of urbanism and be motivated to carry out individual and group research guided by the instructor & classmates.
Taught by: Hammer
Activity: Seminar
1 Course Unit

NELC 323 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.
Taught by: Pittman
Course not offered every year
Activity: Seminar
1 Course Unit

NELC 332 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.
Taught by: Sharkey
Course not offered every year
Prerequisites: A university-level survey course in Middle Eastern, African, or Mediterranean history.
Activity: Seminar
1 Course Unit
NELC 334 Africa and the Middle East
Taught by: Troutt Powell
One-term course offered either term
Activity: Seminar
1 Course Unit

NELC 335 Muslims, Christians, and Jews in the Middle East: Historical Perspectives
A reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and Middle Eastern history is required. Middle Eastern history is required. This class is intended for juniors, seniors, and graduate students.
Taught by: Gold
One-term course offered either term
Activity: Seminar
1 Course Unit

NELC 336 Nationalism and Communal Identity in the Middle East
This seminar views the phenomenon of nationalism as it affected the modern Middle East in the nineteenth and twentieth centuries. Together we will consider the diverse components of nationalism, including religion, language, territorial loyalty, and ethnicity, and test the thesis that nations are "imagined communities" built on "invented traditions." At the same time, we will examine other forms of communal identity that transcend national borders or flourish on more localized scales. This class approaches nationalism and communal identity as complex products of cultural, political, and social forces, and places Middle Eastern experiences within a global context. Students must take a survey of modern Middle Eastern history or politics before enrolling in this class. This class is intended for juniors, seniors, and graduate students.
Taught by: Sharkey
Course usually offered in fall term
Prerequisites: NELC 102 or other relevant introductory courses on the Middle East.
Activity: Seminar
1 Course Unit

NELC 337 Descent to the Underworld in Ancient Near-Eastern and Western Literature
From antiquity to the present the hero's journey to the underworld, or the land of the dead, has offered poets and philosophers a metaphor to express our search for life's meaning. In antiquity that meaning was to be found by an extraordinary individual in a heroic quest beyond the grave. In this course we will consider various interpretations what of this "katabasis" means within the context of our everyday struggle to find meaning.
Taught by: Foley
Activity: Seminar
1 Course Unit

NELC 338 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI's ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.
Taught by: Hammer
Activity: Lecture
1 Course Unit

NELC 339 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern "descendents," autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.
Taught by: Gold
Course usually offered in spring term
Prerequisites: Hebrew 059 or the equivalent, per instructor's evaluation
Activity: Seminar
1 Course Unit
NELC 362 Intro to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracies on larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity in working with the main types of digital archaeological data: structured data (relational databases), 3d models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets. The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.
Taught by: Peter Cobb
Prerequisite: Prior archaeological classwork and/or experience preferred
Activity: Lecture
1 Course Unit

NELC 383 The Religious Other
Course explores attitudes toward monotheists of other faiths, and claims made about these "religious Others" in real and imagined encounters between Jews, Christians and Muslims from antiquity to the present. Strategies of "othering" will be analyzed through an exploration of claims about the Other’s body, habits and beliefs, as found in works of scripture, law, theology, polemics, art, literature and reportage. Attention will be paid to myths about the other, inter-group violence, converts, cases of cross-cultural influence, notions of toleration, and perceptions of Others in contemporary life. Primary sources will be provided in English.

NELC 422 Intermediate Urdu Part II
This continuing second-year course allows students to continue improving their Urdu proficiency while also gaining a broad foundational understanding of Urdu society and culture throughout South Asia. The course provides students the tools needed to handle a variety of authentic written and spoken Urdu sources including film, music, media reports, folk tales, and simple literature. Students will also continue to increase their speaking and writing proficiency to be able to discuss a broad range of concrete, real-world topics. The course is designed for students with one year of previous Urdu or Hindi study or the equivalent proficiency.
For BA Students: Last Language Course
Taught by: Pien
Activity: Seminar
1 Course Unit

NELC 434 Arabic Literature and Literary Theory
This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory. This course in taught in translation.
Taught by: Fakhreddine
One-term course offered either term
Activity: Lecture
1 Course Unit

NELC 437 Islamic Intellectual Tradition
This comprehensive survey of the traditions of rational thought in classical Islamic culture is distinguished by its attempt to contextualize and localize the history of what is best described as philosophy in Islam, including not only the Islamic products of the Hellenistic mode of thought but also religious and linguistic sciences whose methodology is philosophical. The course examines the influence of these different disciplines upon each other, and the process of the Islamic “aspecting” of the Greek intellectual legacy. The readings thus include not only the works of Hellenized philosophers (falasifa) of Islam, but also those of theologians (mutakallimun), legists (fiqh scholars), and grammarians (nahw/lugha scholars). No prerequisites. Additional advanced-level assignments can be given for graduate credit.

Course not offered every year
Activity: Seminar
1 Course Unit

NELC 450 Introduction to the Bible (The "Old Testament")
An introduction to the major themes and ideas of the Hebrew Bible (the Old Testament), with attention to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity. All readings are in English.
For BA Students: Humanities and Social Science S
Course usually offered in fall term
Activity: Lecture
1 Course Unit
NELC 451 Jews and Judaism in Antiquity
A broad introduction to the history of Jewish civilization from its Biblical beginnings to the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.
Taught by: Dohrmann
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NELC 454 Spirit and Law
While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.
Taught by: Fishman
Course not offered every year
Activity: Seminar
1 Course Unit

NELC 456 Great Books of Judaism (Fall 2018: Lifecycle in the Talmud)
The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision; bar/bat mitzva and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will also be provided.
For BA Students: Arts and Letters Sector
Course usually offered in fall term
Activity: Seminar
1 Course Unit

NELC 458 Jewish Literature in the Middle Ages in Translation
Course explores the cultural history of Jews in the lands of Islam from the time of Mohammed through the late 17th century (end of Ottoman expansion into Europe) --in Iraq, the Middle East, al-Andalus and the Ottoman Empire. Primary source documents (in English translation) illuminate minority-majority relations, internal Jewish tensions (e.g., Qaraism), and developments in scriptural exegesis, rabbinic law, philosophy, poetry, polemics, mysticism and liturgy. Graduate students have additional readings and meetings. Spring 2015

NELC 544 Reading Ancient Mesopotamia
An introduction to the literature of Ancient Mesopotamia.
Taught by: Tinney
One-term course offered either term
Activity: Seminar
1 Course Unit
NELC 550 The Bible in Translation
This course introduces undergraduates and graduate students to one specific Book of the Hebrew Bible. "The Bible in Translation" involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. Although no prerequisites are required, NELC 250 is a perfect follow-up course for NELC 150 "Intro to the Bible."
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit.

NELC 552 Themes Jewish Tradition
Course topics will vary; they have included: Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Jewish Political Thought & Action (Fishman) When did the Bible become the Bible? What was the nature of canon and authority in early Israel and Judaism, and how did biblical communities think about their sacred texts? How and what did the Bible mean to ancient readers? The answers to these questions are varied and surprising. This course looks at early biblical and Jewish texts that both write and re-write the tradition's own central texts. We will think widely and creatively about ancient textuality, orality, interpretation, composition, and authority. Drawing on literary theory, the course will examine the ways that biblical and post-biblical literature from the Second Temple to the rabbinic period (with some forays into contemporary literature) manifest complex ideas about power, meaning, and religiously in early Judaism.
Taught by: Ben-Amos/Dohrmann/Fishman
One-term course offered either term
Activity: Seminar
1 Course Unit

NELC 557 Seminar in Rabbinic Literature
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor.
Course usually offered in spring term
Prerequisites: Proficiency in Hebrew and/or Greek recommended. Undergraduates need permission to enroll.
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit

NELC 559 Introduction to Modern Hebrew Literature
The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story reinvented, literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold

Activity: Seminar
1 Course Unit

NELC 562 Intro to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracies on larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity with working with the main types of digital archaeological data: structured data (relational databases), 3D models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets. The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.
Taught by: Peter Cobb
Prerequisite: Prior archaeological classwork and/or experience preferred
Activity: Lecture
1 Course Unit

NELC 567 Seminar on Egyptian Archaeology and History
Specific topics will vary from year to year.
Taught by: Wegner
Course not offered every year
Activity: Seminar
1 Course Unit
NELC 568 Women in Ancient Egypt
This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NELC 582 Prose Narrative
Historical, literary, comparative, and ethnographic methods contribute to study of prose narratives which were told in oral societies in antiquity and in modern times and were documented in literary societies for different purposes. Oral storytellers, both professional and amateurs, performed them in private and public spaces. Their recording from antiquity to modern times became an integral element of modern life in general and in education and arts in particular. The storytellers, their performances in oral and literary cultures, their genres, and their symbolic meanings are the subjects of the course, together with the analytical methods that help mapping their distribution worldwide.
Activity: Seminar
1 Course Unit

NELC 606 Pastoral Nomadism in the Past and Present
Pastoral nomadism is a "third way" of human subsistence separate from farming and foraging. It is a sustainable human adaptation to grassland and arid environments practiced through particular technologies and domesticated animals. This course begins by examining the human ecology and social organization that emerge from mobile ways of life, drawing on modern, ethnographic, and archaeological examples of pastoral nomadic groups in the Middle East and Central Asia. Academic readings and ethnographic films will form the basis of discussions about several larger themes, including: the origins of pastoral nomadism and horse riding; the development of dairy-based foods and human adaptations allowing the digestion of lactose; the historical relationship between mobile groups of pastoralists and territorial states; popular perceptions of nomads in various forms of historical and modern media; and the influence of ideas about nomads on modern senses of heritage and nationalism in the Middle East and Central Asia.
Taught by: Pastoral Nomadism in the Past and Present
Activity: Seminar
1 Course Unit

NELC 617 Topics in the Art of Iran
Topic varies. Spring 2018: The pro-seminar will examine aspects of continuity and rupture in the visual culture(s) of the Iranian world. This is an opportunity for students whose preparations may be centered on other contiguous periods or regions to consider the manner in which Middle Asia and its rich visual cultures contributed to the forging of Late Antique and medieval/ Islamic visual expressions of kingship, territory and religion. The seminar will consider a range of materials from archaeological sites, rock reliefs and wall paintings to textiles, silver vessels, coins and ceramics, with special attention to materials excavated or otherwise held by the Penn Museum.

Course not offered every year
Activity: Seminar
1 Course Unit

NELC 618 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, art, history and politics through film in the contemporary era. We will examine a variety of works that represent the social, political, economic and cultural circumstances of post-revolutionary Iran. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the function of cinema in present day Iranian society. Films to be discussed will be by internationally acclaimed filmmakers, such as Abbas Kiarostami, Mohsen Makhmalbaf, Rakhshan Bani-Etemad, Tahmineh Milani, Jafar Panahi, Bahman Gohbadi, among others.
One-term course offered either term
Activity: Seminar
1 Course Unit

NELC 620 Digital Exploration of the Past: Archives, Databases, Maps, and Museums
This course exposes students to digital methods for investigating past environments and societies, including digitization of analog records, the construction and querying of databases, and the creation of digital maps. The ultimate goal of the course will be to carry out a final project that benefits the Penn Museum and the public. In fall 2018, our exploration of digital methods will center around the archaeological site of Ur (Tell el-Muqayyar), located in southern Iraq. Ur was one of the earliest cities in the world, and, thanks to campaigns partly funded by Penn in the 1920s and 1930s, is one of the best-excavated sites in southern Mesopotamia. Here at Penn, we have unparalleled access to archival documentation and artifacts from the site. We will draw upon this access to contribute to an on-going digital humanities project in the Penn Museum (the public "Ur Online" database). In the process, students will re-assess data that has the potential to change anthropological ideas about issues such as the environmental setting of the earliest cities and archaeological ideas about demographic and urban structure within the city of Ur itself. There are no prerequisites, but students must bring an interest in Mesopotamian archaeology and/or the origins of urbanism and be motivated to carry out individual and group research guided by the instructor & classmates.
Taught by: Hammer
Activity: Seminar
1 Course Unit
NELC 632 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.
Taught by: Sharkey
Course not offered every year
Prerequisites: A university-level survey course in Middle Eastern, African, or Mediterranean history.
Activity: Seminar
1 Course Unit

NELC 633 Seminar in Selected Topics in Arabic Literature
This is the graduate seminar course in which a variety of aspects of Arabic literature studies are covered at the advanced graduate level. Students in this course are expected to be able to read large amounts of literature in Arabic on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent topics have included: 1001 NIGHTS; the short story; the novel; MAQAMAT; classical ADAB prose; the drama; the novella; modern Arabic poetry.
Taught by: Allen
Course usually offered in spring term
Activity: Seminar
1 Course Unit

NELC 638 Approaches to Islamic Law
This course aims to introduce students to the study of Islamic law, the all-embracing sacred law of Islam. In this course we will attempt to consider many different facets of the historical, doctrinal, institutional and social complexity of Islamic law. In addition, the various approaches that have been taken to the study of these aspects of Islamic law will be analyzed. The focus will be mostly, though not exclusively, on classical Islamic law. Specific topics covered include the beginnings of legal thought in Islam, various areas of Islamic positive law (substantive law), public and private legal institutions, Islamic legal theory, and issues in the contemporary development and application of Islamic law.
Taught by: Lowry
Course not offered every year
Prerequisites: Some background knowledge about Islam is an asset.
Activity: Seminar
1 Course Unit

NELC 641 Iraq: Ancient Cities and Empires
This course consists of an analytical survey of civilization in the ancient Mesopotamia from prehistoric periods to the middle centuries of the first millennia B.C. A strong focus is placed on Mesopotamia (Iraq, eastern Syria) proper, but it occasionally covers its adjacent regions, including Anatolia (Turkey), north-central Syria, and the Levantine coast. As we chronologically examine the origin and development of civilization in the region, various social, political, economic, and ideological topics will be explored, including subsistence, cosmology, writing, trade, technology, war, private life, burial custom, and empire. Based on both archaeological and historical evidence, these topics will be examined from archaeological, anthropological, historical and art historical perspectives. Students will be exposed to a variety of theoretical approaches and types of relevant evidence, including settlement survey data, excavated architectural remains and artifacts, and written documents. The course aims to provide students with a strong foundation for further study in Near Eastern civilization.
Taught by: Zettler
Course not offered every year
Activity: Lecture
1 Course Unit

NELC 646 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI’s ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.
Taught by: Hammer
Activity: Lecture
1 Course Unit

NELC 659 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern “descendents,” autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.
Taught by: Gold
Course not offered every year
Prerequisites: Hebrew 059 or the equivalent, per instructor’s evaluation
Activity: Seminar
1 Course Unit
NELC 664 The World of Cleopatra
The figure of Cleopatra is familiar from modern stories, legends, and film. Was this famous woman a brazen seductress or a brilliant political mind? How many of these presentations are historically accurate? This class will examine the Ptolemaic period in Egypt (305-30 BCE), the time period during which Cleopatra lived, in an attempt to separate myth from reality. The Ptolemaic period is filled with political and personal intrigue. It was also a time of dynamic multiculturalism. Arguably one of the most violent and fascinating eras in ancient Egyptian history, the Ptolemaic period is largely unknown and often misunderstood. This course will examine the history, art, religion and literature of Egypt’s Ptolemaic period which culminated in the reign of Cleopatra VII.
Taught by: Houser Wegner
Course not offered every year
Activity: Lecture
1 Course Unit

NELC 666 History of Ancient Egypt
Review and discussion of the principal aspects of ancient Egyptian history, 3000-500 BC.
Taught by: Wegner
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NELC 668 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
Taught by: Silverman
Course not offered every year
Activity: Lecture
1 Course Unit

NELC 681 Topics In Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.
Taught by: Spooner
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NELC 686 Topics in Mid East History
Reading and discussion course on selected topics in Middle Eastern history.
Activity: Seminar
1 Course Unit

NELC 731 Topics in Islamic Archaeology
Course not offered every year
Activity: Seminar
1 Course Unit

NELC 999 Independent Study
Directed research or candidacy exam and proposal preparation.
One-term course offered either term
Activity: Independent Study
1 Course Unit
NETWORK AND SOCIAL SYSTEMS ENGINEERING (NETS)

NETS 112 Networked Life
What kind of science is appropriate for understanding the Facebook? How does Google find what you're looking for... and exactly how do they make money doing so? What properties might we expect any social network to reliably have, and are there simple explanations for them? How does your position in an economic network (dis)advantage you? How are individual and collective behavior related in complex networks? What might we mean by the economics of spam? What do game theory and the Paris subway have to do with Internet routing? Networked Life looks at how our world is connected -- socially, economically, strategically and technologically -- and why it matters.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NETS 150 Market and Social Systems on the Internet
Want to understand the sociological and algorithmic aspects of friend recommendation? Want to know how Google decides what 10 answers to return, out of the 10 million matching results? Want to understand how search engines have revolutionized advertising? Then this is the course for you! NETS 150 provides an overview of the issues, theoretical foundations, and existing techniques in networks (social, information, communication) and markets on the Internet. Subsequent NETS courses are available for students wishing to explore any of these topics in greater detail.
Activity: Lecture
1 Course Unit

NETS 212 Scalable and Cloud Computing
What is the "cloud"? How do we build software systems and components that scale to millions of users and petabytes of data, and are "always available"? In the modern Internet, virtually all large Web services run atop multiple geographically distributed data centers: Google, Yahoo, Facebook, iTunes, Amazon, EBAY, Bing, etc. Services must scale across thousands of machines, tolerate failures, and support thousands of concurrent requests. Increasingly, the major providers (including Amazon, Google, Microsoft, HP, and IBM) are looking at "hosting" third-party applications in their data centers - forming so-called "cloud computing" services. This course, aimed at a sophomore with exposure to basic programming within the context of a single machine, focuses on the issues and programming models related to such cloud and distributed data processing technologies: how to think about dividing both data and work across large clusters of machines, both within and across data centers, how to design algorithms that do this parallel computation, and how to implement the algorithms in new frameworks such as MapReduce.
Course usually offered in fall term
Prerequisites: CIS 120, CIS 160
Corequisite: CIS 121
Activity: Lecture
1 Course Unit

NETS 213 Crowdsourcing and Human Computation
Crowdsourcing and human computation are emerging fields that sit squarely at the intersection of economics and computer science. They examine how people can be used to solve complex tasks that are currently beyond the capabilities of artificial intelligence algorithms. Online marketplaces like Mechanical Turk and CrowdFlower provide an infrastructure that allows micropayments to be given to people in return for completing human intelligence tasks. This opens up previously unthinkable possibilities like people being used as function calls in software. We will investigate how crowdsourcing can be used for computer science applications like machine learning, next-generation interfaces, and data mining. Beyond these computer science aspects, we will also delve into topics like prediction markets, how businesses can capitalize on collective intelligence, and the fundamental principles that underlie democracy and other group decision-making processes.
One-term course offered either term
Prerequisite: CIS 120 or prior programming experience
Activity: Lecture
1 Course Unit

NETS 312 Theory of Networks
Want to understand how memes spread across the Internet? How organisms exhibit flocking behavior? How the structure of a network can help predict behavior among the nodes? This course is a rigorous study of the structure and function of complex networks. From World Wide Web to networks of banks and lenders that form the financial sector, to friendship networks that influence our opinion and everyday decision-making, networks have become an integral part of our daily lives.
One-term course offered either term
Activity: Lecture
1 Course Unit

NETS 412 Algorithmic Game Theory
How should an auction for scarce goods be structured if the sellers wish to maximize their revenue? How badly will traffic be snarled if drivers each selfishly try to minimize their commute time, compared to if a benevolent dictator directed traffic? How can couples be paired so that no two couples wish to swap partners in hindsight? How can you be as successful as the best horse-racing expert at betting on horse races, without knowing anything about horse racing? In this course, we will take an algorithmic perspective on problems in game theory, to solve problems such as the ones listed above. Game theory has applications in a wide variety of settings in which multiple participants with different incentives are placed in the same environment, must interact, and each "player"s actions affect the others.
One-term course offered either term
Activity: Lecture
1 Course Unit
NEUROSCIENCE (NGG)

NGG 510 Neurotransmitter Signaling & Neuropsychopharmacology
The goals of this course are three-fold: 1. Provide an overview of major psychiatric disorders 2. Provide in-depth information on neurotransmitters, emphasizing the wealth of new molecular information on how neurons function and communicate, as well as the basis for psychotherapeutics (one class per week). 3. Develop skills to appreciate, present, and critically evaluate the current literature in neurotransmitter signaling and neuropsychopharmacology (one class per week).
Taught by: Steve Thomas, Chris Pierce, Wade Berrettini, Liz Heller-Mesznik
Course offered spring; even-numbered years
Activity: Lecture
1 Course Unit

NGG 521 Brain Computer Interface
This course is geared to advanced undergraduate and graduate students interested in understanding the basics of implantable neuro-devices, their design, practical implementation, approval, and use. Reading will cover the basics of neuro signals, recording, analysis, classification, modulation, and fundamental principles of Brain-Machine Interfaces. The course will be based upon twice weekly lectures and "hands on" weekly assignments that teach basic signal recording, feature extraction, classification and practical implementation in clinical systems. Assignments will build incrementally toward constructing a complete, functional BMI system. Fundamental concepts in neurosignals, hardware and software will be reinforced by practical examples and in-depth study. Guest lecturers and demonstrations will supplement regular lectures.
Also Offered As: BE 521
Prerequisites: BE 301 (Signals and Systems) or equivalent, computer programming experience, preferably MATLAB (e.g., as used in BE labs, BE 209/210/310). Some basic neuroscience background (e.g. BIOL 215, BE 305, BE 520, NGG core course), or independent study in neuroscience, is required. This requirement may be waived based upon practical experience on a case by case basis by the instructor.
Activity: Lecture
1 Course Unit

NGG 534 Seminar in Current Genetics Research
In this course we will focus on examples of human disease gene models and examine how these genetic model systems can be used to learn more about how and why a disease occurs and how it might be better diagnosed or treated. The course will meet once a week for 1.5 - 2.0 hours. Prior to each class, the student discussion leader for the week is expected to meet at least once with the assigned faculty preceptor to discuss their presentation.
Taught by: Thomas Jongens
Course usually offered in spring term
Activity: Seminar
1 Course Unit

NGG 572 Electrical Language of Cells
This course introduces students to high-speed electro-chemical signaling mechanisms that occur in nerve and other excitable cells during normal activity. Topics considered in substantial detail include: a) a basic description of the passive and active membrane electrical properties; b) the molecular architecture and functional role of ion channels in cell signaling; c) the role of the calcium ion as an ubiquitous chemical messenger, with applications to neuro-secretion; d) excitatory and inhibitory transmission in the central nervous system; e) sensory transduction, as illustrated by the visual, olfactory, and auditory pathways. The course assumes a standard background in cell biology, as well as basic concepts from college physics and college calculus.
Taught by: Toshinori Hoshi, Doug Coulter
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NGG 573 Systems Neuroscience
This course provides an introduction to what is known about how neuronal circuits solve problems for the organism and to current research approaches to this question. Topics include: vision, audition, olfaction, motor systems, plasticity, and oscillations. In addition, the course aims to provide an overview of the structure of the central nervous system. A number of fundamental concepts are also discussed across topics, such as: lateral inhibition, integration, filtering, frames of reference, error signals, adaptation. The course format consists of lectures, discussions, readings of primary literature, supplemented by textbook chapters and review articles.
Taught by: Yale Cohen, Christopher Pierce
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NGG 575 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurological basis of learning and memory. A combination of lectures and discussions will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective. This course is intended for upper level undergraduate and graduate students.
Taught by: Hilary Gerstein
Course offered fall; odd-numbered years
Activity: Seminar
1 Course Unit
NGG 578 Advanced Topics in Behavioral Genetics
The first half of this course focuses on the use of genetic techniques to study the molecular and cellular bases of behavior. Reverse genetic approaches utilizing gene knockout and transgenic technology and forward genetic approaches using mutagenesis and quantitative genetic techniques will be discussed, as well as application of these studies to different model organisms. Genetic approaches to behavior and complex disease in humans will be illustrated with a lecture on neurodegenerative disorders. The second half of this survey course will provide an introduction to autism and other neurodevelopmental disorders. The class will include clinical descriptions of autism as well as closely related disorders such as Fragile X syndrome for which there are now well developed model systems. It will be team taught by experts in each of the content areas covered including psychology, neurology, genetics, animal modeling, cognitive neuroscience. The scope will be from genes to brain to behavior to treatment.
Taught by: Maja Bucan, Robert Schultz
Course offered spring; even-numbered years
Activity: Lecture
1 Course Unit

NGG 584 Neurobiology of Sleep and Arousal
The objectives of this course are to discuss mechanisms controlling sleep and arousal; to survey novel approaches to investigations in these areas; indicate the clinical relevance of these ideas where possible. The course is run in the style of a journal club where in each weekly session, students review and discuss influential papers in the field.
Taught by: David Raizen, Max Kelz
Course offered fall; even-numbered years
Activity: Lecture
1 Course Unit

NGG 588 Topics in Translational Neuroscience
This course will introduce graduate students in neuroscience and related disciplines to basic mechanisms and clinical features of major categories of nervous system disease. Each two-hour class will consist of two-parts; a formal lecture followed by a seminar on the same topic. The formal basic science lectures will discuss genetic, molecular, and cellular mechanisms relevant to the disease examined while the seminar will illustrate how that information can be used in the clinical setting to promote further discovery and inform treatment. Some of the seminar will be associated with the Clinical Neuroscience Training Program (CNST) to provide the opportunity to interact with medical students and clinicians. The course will rely on assigned readings of primary research papers and discussions during class.
Taught by: Mariella De Biasi
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NGG 594 Theoretical and Computational Neuroscience
This course surveys recent theoretical models of neural function. Students will be introduced to the basic techniques of modelling and computer simulation. Topics include models of synaptic plasticity, neuronal processing and oscillations, and models of various brain regions including cortex, thalamus, cerebellum, and hippocampus. Particular emphasis will be placed on models of the visual system from development to perceptual phenomena such as structure-from-motion, shap-from-shading, and stereopsis. Higher level processes including cortical integration will be considered. Applied neural network models of Hopfield, Sejnowski, and parallel distributed processing will also be presented.
Taught by: Vijay Balasubramanian
Course usually offered in spring term
Prerequisites: Previous coursework in physiology and in differential equations and some familiarity with computers, or instructor’s permission.
Activity: Lecture
1 Course Unit

NGG 597 Neural Development, Regeneration and Repair
The goals of this course are to examine the principles underlying nervous system development and to learn how understanding developmental mechanisms can inform strategies to promote regeneration and repair. This is not a survey course. Rather, the course will focus on selected topics, for which we will discuss the genetic, molecular and cellular strategies employed to study these problems in different model organisms. Emphasis is on how to interpret and critically evaluate experimental data. Each class is 1.5 hours in length. During the first hour, and assigned paper will be discussed in detail. During the last 20-30 minutes, faculty will introduce methods, concepts and background information pertinent to the paper that will be discussed at the following meeting.
Taught by: Greg Bashaw, Wenqin Luo
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NGG 598 Advanced Systems Neuroscience
This course takes an integrative approach to the study of nervous system function. We will explore neural strategies for transforming sensory information into motor commands that specify specific behavior. We will use example systems of different modalities to explore concepts such as neural coding, action selection and learning etc., at levels ranging from synaptic input analysis at single sensory neurons and their effect on local network processing to larger scale population analyses. The course will consist of an introductory section to provide a conceptual framework for studying neural circuits at the systems level. This will be followed by additional sections that each explores specific nervous systems within the context of this conceptual framework. Prerequisite: CORE III (NGG 573, Systems Neuroscience) or Permission of the Course Director.
Taught by: Marc Schmidt, Long Ding
Course offered fall; odd-numbered years
Prerequisite: Core III or Permission of course director
Activity: Lecture
1 Course Unit

NGG 600 Topics in Neurobiology of Disease 001: Neurodegenerative Diseases
Activity: Seminar
0.5 Course Units
NGG 615 Protein Conformational Diseases
Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer’s disease, Parkinson’s disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidoses. This course will include lectures, directed readings and student presentations, to cover seminal and current papers on the cell biology of conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation.
Taught by: Yair Argon, Harry Ischiropoulos
Course offered fall; odd-numbered years
Also Offered As: BMB 518
Activity: Lecture
1 Course Unit

NGG 618 Recovery After Neural Injury
The human nervous system is subject to several types of injury, (traumatic, ischemic, epileptic, demyelinating and/or inflammatory) that cause serious functional deficits. The mechanisms used by the central and peripheral nervous systems for functional recovery from these injuries will be described in this course. The molecular and cellular pathobiology of CNS injury will be reviewed and methods to enhance functional recovery will be discussed in detail. These include the limitation of secondary neuronal damage by pharmacological manipulations (neuroprotection), the promotion of regeneration and plasticity, the application of bioengineering strategies, and the use of behavioral rehabilitative approaches. Course Format: a combination of lecture, journal club type student presentations and classroom discussion.
Taught by: Akiva Cohen, D Kacy Cullen
Course offered spring; odd-numbered years
Activity: Lecture
1 Course Unit

NGG 695 Scientific Writing
This 7-class course is designed to introduce students to basic scientific writing skills and is timed for second year graduate students preparing for qualifying examinations. Participants will review the general principles of clear, persuasive writing, and will apply these principles to writing for a scientific audience. Particular emphasis will be placed on conveying the significance of your research, outlining the aims, and discussing the results for scientific papers and grant proposals. The course will also provide an overview of the structure and style of research grant proposals and scientific manuscripts. Classes are highly interactive, and the majority of class time will be spent discussing student scientific writing. The goal of the course is to encourage active and open interaction among students. Ideal endpoints include improved self-editing, and development of effective strategies for offering and receiving editorial recommendations among peers.
Taught by: Harry Ischiropoulis, Joshua Ian Gold
Course usually offered in spring term
Prerequisites: NGG Pre-candidacy exam students only.
Activity: Seminar
0.5 Course Units

NGG 699 Lab Rotation
Activity: Laboratory
3 Course Units

NGG 706 Neuroeconomics
This seminar will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. This course will focus on our current state of knowledge regarding the neuroscience of decision-making, and how evidence concerning the neural processes associated with choices might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, decisions that involve learning from experience, decisions in strategic interactions and games, and social preferences.
Taught by: Joseph Kable

**NONPROFIT LEADERSHIP (NPLD)**

**NPLD 510 Social Innovation**
This is a class focused on understanding how innovation plays a central role in public problem solving. We will explore how social entrepreneurs develop their ideas, define intended impact, market their solutions, understand competition, and collaborate with other actors. At the end of the course, students will have mastered a set of conceptual tools that will allow them to be effective problem solvers in diverse settings throughout their careers. The course has five core objectives: 1) To introduce students to the concepts and practices of social entrepreneurship; 2) To introduce students to the components of a successful social enterprise; 3) To equip students with the tools to be able to accurately identify and assess innovation and impact in social enterprises; 4) To train students to view the world from a perspective of social innovation; and 5) To empower students to develop their own innovative solutions to difficult social problems around the world.

Taught by: Frumkin
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Open to graduate and undergraduate students

**NPLD 561 Nonprofit Branding**
This course will provide the tools and framework for helping students to understand the role that marketing and brand building can play in the non-profit sector. As such, we will create a shared understanding of the key concepts that help define branding and the classic elements of marketing that will serve as a foundation for discussion and analysis throughout the semester. We will identify the fundamental differences that non-profit organizations face in building their brands and how those challenges differ from tradition/for profit brand building. We will identify tools and frameworks that brands/organizations can use to help design and implement marketing strategy. We will utilize current and relevant case studies that help demonstrate the core concepts of this course.

Taught by: Rhode
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: half credit course

**NPLD 562 (Almost) Everything You Need to Know About Nonprofit Law**
This half credit course will provide a basic understanding of the law that applies to nonprofit organizations, with an emphasis on the law affecting 501(c)(3) public charities. It will focus on ways to obtain and maintain federal tax exempt status, including issues of private inurement and private benefit, limits on advocacy, lobbying and electioneering, unrelated business income tax, and excess benefits taxes. It will show how legal structure and governance procedures affect the answer to the questions "Whose Organization Is It?" Students will review bylaws of multiple organizations to see how differences in structure reflect the great diversity of nonprofits and why "one size does not fit all" within the sector. They will learn how to avoid bad legal drafting that can create problems for dysfunctional organizations. The course will explain the fiduciary duty of officers and directors, explore the extent of potential personal liability, and review necessary insurance and indemnification. It will review Form 990 publicly available tax returns of multiple nonprofits to see why a tax return may be a nonprofit's most important public relations document. It will also review the basics of charitable giving through a mock meeting of university development officers, outline the concepts of planned giving, and discuss the requirements for charitable solicitation registration at the state level. It will explain the legal requirements for maintaining endowments and discuss a series of ethical issues that can face nonprofit executives and their lawyers.

Course usually offered in spring term
Activity: Lecture
0.5 Course Units

**NPLD 563 Raising Philanthropic Capital**
Americans gave more than $350 billion to nonprofit organizations last year, the highest total ever recorded. Now, more than ever, it is crucial that nonprofit leaders master the art and science of raising philanthropic capital. Participants in this innovative class will: 1) acquire an understanding of the nonprofit funding landscape; 2) learn proven and creative strategies to secure investments; 3) gain the experience of giving and motivating charitable commitments; and 4) receive peer evaluation and professional consulting feedback. This experiential and interactive learning course will provide students an opportunity to evaluate a nonprofit organization endeavoring to attract voluntary support, and coach students to think through and develop the ideas, skills, and tools required to participate personally in today's philanthropic market.

Taught by: Hagin
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

**NPLD 564 Social Entrepreneurship at the Bottom of the Pyramid**
This half credit course will offer a broad and pragmatic perspective on social impact at the Bottom of the Pyramid. The early part of the course will focus on geneal characteristics, challenges, and opportunities of resource-poor settings and high-uncertainty environments. The bulk of the course will focus on tools and frameworks designed to operationalize such Social Impact initiatives. The course is aimed at students with no to moderate experience in entrepreneurship/international development. Students with extensive work experience in for-profits, nonprofits, NGOs, or development work are most welcome.

Taught by: Thompson
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
NPLD 565 Financial Management of Nonprofits
The half credit class will provide students with the ability to use the financial tools of cash flow, budgeting and forecasting models to assist in strategic thinking as it relates to a nonprofit organization. In addition, the class will provide tools that can be used to follow implementation of such strategies including: personal cash flow; basic financial statements; supplemental schedules; and cash flow, budgeting, and forecasting.
Taught by: Boylston
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

NPLD 566 Social Media Strategies
This course is intended as an introduction to strategic use of social media for social ventures. Many of you already use social media platforms in your personal lives, and have developed an intuitive understanding of how they work, and use them reflexively. If you’re unfamiliar with various social media venues, that’s ok! Many social media platforms will be described briefly in the lectures, but the course is not intended as a how-to for using them. We suggest that if you’re new to the various social media platforms mentioned, that you jump in and try them out! These platforms are designed for individuals with all levels of technical proficiency, and they’re designed to be inviting. You might find that with only a bit of effort that you become comfortable with them quickly. We expect that, regardless of your skill level, comfort, and current personal use of social media, you will gain real value from this course. Much of this value relates to conveying an understanding of how to use these tools strategically, and on behalf of a social venture or a social cause you care about. This sort of use of social media is significantly different than the way you would use it in your personal life. We hope, as you move through this course, you will wonder: 1) What does it mean to craft the voice of an institution? 2) What is it like to speak in the voice of an institution instead of my own? 3) How could one possibly develop a strategic plan to organically and authentically engage a community? 4) How do you define, find, and build community? 5) More than retweets and likes, what is engagement, how do you measure it, and how do you create engagement to spark social change?
Course usually offered in fall term
Activity: Online Course
0.5 Course Units
Notes: Open only to students in the hybrid NPLD program

NPLD 580 Effective Governance Practices for Nonprofits
Effective governance relies upon consistent and ethical board leadership, yet nonprofit organizations that exemplify truly model governance are few and far between. This course introduces students to broad frameworks of governance, but will focus most deeply on the human dimensions of board leadership. In particular, we will examine real examples and cases of moral and ethical dilemmas faced by nonprofit boards and executive leaders, and the nuanced practices required to achieve effective board governance. This will involve a careful look at several real cases, as well as guest lectures from 3-4 different nonprofit board and CEO leaders. The invited leaders will use their own experiences to guide students through some of the most challenging ethical and managerial situations that can be encountered, with the goal of providing a practical grounding for students who expect to contribute to nonprofit leadership in their careers - either as executive staff or as board members.
Taught by: Shmavonian
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: .5 cu course

NPLD 582 NGOs and International Development
The course will offer a broad perspective on international development, aid, and the roles of NGOs and social enterprises. The latter half of the course will focus on issues in NGO management: fundraising, staff (expatriate and local), monitoring, and evaluation (including randomized controlled trials). The course is aimed at students with no to moderate experience in international development, but students with extensive work experience with NGOs or development work are also welcome.
Taught by: Thompson
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NPLD 585 Social Impact Lab: Grand Canyon
This is a 5-day, off-site, intensive service-learning course in social innovation. Students will learn how innovation and entrepreneurship play a central role in public problem solving. We will explore how social entrepreneurs co-develop new ideas with key stakeholders, articulate problems and solutions, define intended impact, understand competition, and collaborate with other actors. At the end of the course, students will have mastered a set of conceptual tools and strategies that will allow them to be effective problem solvers in diverse settings throughout their careers. Bring your purpose, passions, and pet societal challenges to share. The course has five objectives: 1) To introduce students to the concepts and practices of social entrepreneurship; 2) To introduce students to the components of a successful social enterprise; 3) To train students to view the world from a perspective of social innovation; 4) To encourage and empower students to develop their own innovative solutions to different social problems around the world. 5) To introduce students to real social issues and social innovations in a real-world setting.
Activity: Lecture
1 Course Unit
Notes: Application required; course meets in Grand Canyon with some pre-trip course sessions; program fee applies
NPLD 587 Interpersonal Dynamics In Nonprofits That Thrive
This course is designed for interdisciplinary students with an enthusiastic interest in cultivating flourishing organizations, engaged stakeholders, and inspiring leaders across sectors and especially within nonprofits. Over the past several years, the field of Positive Organizational Scholarship (POS) has proliferated, yielding a compelling body of knowledge on how and when people thrive at work. This course focuses on both the theoretical and practical insights that can be gained from cutting-edge POS research and applied to help practitioners enrich people's experiences at work. Special attention is placed on how this wisdom applies not only across sectors but also specifically to the nonprofit organizational context. The course is built upon a foundation of experiential learning, such that students can expect to experiment and apply course concepts in their own lives throughout the semester. In other words, students will start with themselves as the first site of learning and development. The experiential community is enhanced further with team projects where students assess and consult with local nonprofit organizations. These team projects culminate in students presenting to their actual nonprofit organizations their recommendations for enhanced strategy and practices. In particular, the learning objectives of the course provide students with: 1) Techniques and real-world experience in using positive leadership concepts to enrich one's own career, relationships, and life; 2) Ability to identify opportunities to use positive leadership practices in the workplace to enhance stakeholder engagement, individual and organizational performance, and collective impact; 3) Tools for applying positive leadership concepts in nonprofits, as well as all other organizational domains (e.g. business, government, coaching, the family etc.); 4) Research and consulting experience with a local non-profit organization.
Taught by: Myers
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NPLD 589 Ethics and the Pursuit of Social Impact
Leaders of organizations must often make difficult decisions that pit the rights of one set of stakeholders against another. Having multiple stakeholders or bottom-lines brings with it challenges when conflicts arise, with the perennial question of whose rights/benefits prevail? What trade-offs need to be made between multiple bottom lines? Does the mission of the organization prevail over the privileges of employees/clients? To what extent can large donors influence the mission of the organization? What is an appropriate social return on investment? This course will introduce the factors that influence moral conduct, the ethical issues that arise when pursuing social goals, and discuss the best ways to promote ethical conduct within such organizations. The course will use specific case studies, real and hypothetical, to analyze a variety of ethical issues that arise (including finance, governance, accountability, fundraising, labor (paid and unpaid), client groups, and service provision) among the multiple stakeholders. This course is offered in the fall semester and will conclude by discussing ways that organizations can prevent and correct misconduct, develop a spirit of ethical behavior and institutionalize ethical values in the organization's culture.
Taught by: Handy
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Section 002 open only to students in the hybrid NPLD program

NPLD 590 Social Finance
Economic analysis and financial accounting are like languages: fluency comes with practice. In-class review of case studies (including in-person discussions with the representatives of diverse agencies and organizations featured in the case studies) will enable students to test and develop their capacity for applying conceptual tools and analytical methods to sometimes messy and always complicated, real-life situations. The course objective is to develop theoretical understanding, critical judgment, and practical skills for sensitive and effective engagement with financial and economic matters of significance. Students will learn: (a) different ways of thinking about the economic foundations of social policy, (b) the basic terminology, tools, and methods for analyzing the financial statements of a wide range of organizations, and (c) accounting procedures for evaluating business, government, and organizational operations, policies, and practices.
Taught by: Lamas
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: The course is open to students across the University. All graduate students who take this course must register under NPLD790. All undergraduate students must register under NPLD590.

NPLD 591 Change Making: Personal Traits and Professional Skills
Over the past decade, researchers have identified some of the key skills that people need to succeed in their work and in their lives. These are skills that anyone can develop with practice. In this class, we will teach three of the key skills: resilience (the ability to thrive in difficult times); creativity (the ability to come up with innovative solutions to problems); and productivity (the ability to make the best use of your time and find life balance). This summer session will take place through dynamic, interactive workshops. During the first session we will learn the key skills. Over the course of the next three weeks, we will practice these skills to see significant improvement in important areas of our daily lives. By the final day of class, we will talk about how to sustain these gains in our personal and professional lives long after the course has ended. This course is not a traditional lecture course. While we will review the best scientific research on the skills for effective change makers, the main part of the course is devoted to practicing these skills. In other words, this is a highly experiential, interactive, and dynamic course!
Taught by: Sherman
Course usually offered summer term only
Activity: Lecture
1 Course Unit

NPLD 593 Design Thinking for Social Impact
Thinking like a designer can transform the way people and organizations develop products, services, processes, and strategy. This approach, called design thinking, brings together what is desirable from a human point of view with what is technologically feasible and economically viable. It also allows people who aren't trained as designers to use creative tools to address a vast range of challenges. Design thinking is a deeply human process that taps into abilities we all have but get overlooked by more conventional problem-solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols.
Course usually offered summer term only
Activity: Lecture
1 Course Unit
Notes: fall section open only to students in the hybrid NPLD program
NPLD 595 Effective Communication and Storytelling
Great leaders are storytellers. They are able to engage and entertain their communities, and tell a compelling narrative about how the world works. They use language powerfully and communicate in ways that uplift and inspire others. In this class, we will explore the power of telling great stories, and learn how to do it most effectively when promoting your campaigns to make the world a better place. We will also look at the skills of framing language in ways that will win over an audience. Finally, we will look at other key skills of effective communication, including the best strategies for persuasion, negotiation, and conflict resolution.
Taught by: Sherman
Course usually offered summer term only
Activity: Lecture
1 Course Unit

NPLD 596 Design and Incorporation of High Impact Nonprofits
Design and Incorporation of High Impact Not-For-Profits is designed for those who have a practitioner’s interest in the design, governance, leadership, and management of high impact not-for-profit organizations. This course is taught through learning best practice theory, applying this theory to a simulation experience, and providing students the opportunity to apply their new knowledge and experience in an interview with a current not-for-profit leader. Students, through the combination of theory and practice, are provided with the essential competencies and tools to design and incorporate a not-for-profit, conduct in-depth analysis of a not-for-profit’s effectiveness including, but not limited to, governance, leadership, social impact, financial sustainability, and systems and policy influence. Through the mock simulation process of designing, incorporating, and governing, students will leave with a “best practice” for not-for-profit manual that includes articles of incorporation, bylaws, governance deliverables, strategic business plan, organizational scorecard, 3-5 year budget, development plan and public policy strategy.
Activity: Lecture
1 Course Unit

NPLD 720 Data Analysis for Social Impact
Practitioners, leaders, and researchers need to engage with the latest cutting-edge research findings in their field. In this class you will develop an understanding of the quantitative methods that underpin social impact research, in an applied lab-based context. Theoretically, we will focus on developing your working statistical knowledge, and practically we will develop your data analysis skills by introducing you to a range of approaches for analyzing and handling large-scale secondary quantitative data that capture social impact. The substantive focus of the course will be on individual-level participation in the Non-Profit Sector in activities such as volunteering and charitable giving. This applied course covers the fundamental elements and approaches to handling and analyzing quantitative survey data. The emphasis is on developing an adequate understanding of basic theoretical statistical principles, descriptive and exploratory methods of analysis, graphical representation, operational procedures and interpretation of statistical results using STATA. The course will cover a wide range of statistical techniques from basic descriptive statistics to more advanced multivariate statistical techniques, such as OLS regression and logistic regression. You will also be introduced to a number of important topics, including theory testing and development; philosophy of science and research judgement; and replication in social impact research.
Taught by: Bennett
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: fall section open only to students in the hybrid NPLD program

NPLD 730 Difficult Art of Listening
The art of listening ethnographically has many benefits. Using a generally anthropological framework to organize sessions, this course attempts to make a case for the productive force (for scholars, policy makers, non-profit leaders and others) of hearing in proactive and nuanced ways. Highlighting the value of acoustemological ways of understanding the world (knowing through hearing), the course asks students to listen in newfangled ways to many of the things they’ve heard before - while also listening out for things that they’ve never previously taken note of. Thinking about how listening carefully greases the wheels for successful interpersonal communication and overall cultural understanding, students will be asked to observe themselves listening in ways that might allow for innovative translations of observable/empirical data into knowledge that can be deployed in service to personal, institutional, and structural change.
Course usually offered in fall term
Activity: Online Course
0.5 Course Units
Notes: Open only to students in the hybrid NPLD program

NPLD 750 Corporate Social Responsibility (CSR): Partnerships and Practices
Businesses performing philanthropic activity often use their platform of CSR activities to engage with society, directly, via a corporate foundation, or through partnerships with nonprofit organizations. Although such philanthropic activities are not directly related to profit-making ventures, they may boost their reputation, be used in marketing their products, talent recruitment, increase employee engagement and commitment, and thus contribute to the profit indirectly. Many businesses undertake their CSR related philanthropic activities using strategic partnerships with nonprofits or public sector organizations to meet their goals. This provides opportunities to nonprofit and public sector leaders in achieving social and sustainable change.
Taught by: Handy
Activity: Lecture
1 Course Unit
Notes: Course takes place in the Netherlands Pre-travel meeting dates TBA; Application required: www.sp2.upenn.edu/global/courses
NPLD 751 Widening the Aperture: Assessing Global Social Impact Interventions
Part of being a working professional in social impact is assessing the effectiveness of intervention models. This is true whether you work in service delivery, consulting, evaluation or philanthropy. This course offers students a unique, experience-based opportunity to assess an organization's work from afar, then on the ground in Malawi. The expectation is that several assumptions established in the beginning of the course will hold through to the end. Importantly, others will not. Students will understand how we build a knowledge base about an organization's work, what assertions we come to, and then how we test those assumptions. This process represents a vital skill set including research, perspective-taking, and direct engagement with the communities served and the people doing the work. The course will provide students with a practical framework for analyzing social impact interventions through three important and complementary lenses: sector practice, environmental factors and organizational implementation. Students will use the immersive, travel experience in Malawi to engage directly with one of three service organizations to apply the framework. They will also use data collected about these organizations through the Lipman Family Prize selection process, a University of Pennsylvania-based social impact prize, combined with their own research, both primary and secondary, to better understand the organizations, staff, and forces influencing the intervention. Students will present their findings to the organizational leadership while still in the country. The course will include significant team-based project work.
Course usually offered summer term only
Activity: Lecture
1 Course Unit

NPLD 782 Small Group Processes
Studying the behavior of groups and the actions/inactions of people within groups provides a doorway to deeper understanding of our selves, our families, our friends, our colleagues, our organizations, and our communities. This half credit course is designed for Penn Graduate students eager to generate constructive group processes when chairing a committee, managing a work group, teaching in a classroom, serving on a jury, conducting a support/therapy group or facilitating strategy formulation. It is easy to see what is going well or poorly when observing what others are doing. But tuning into and gaining a comprehensive grasp of these processes when they are happening in the groups we belong to and learning how to take constructive actions in the here and now when it can have a meaningful impact requires a high level of cognitive capability combined with a special form of relational artistry. This course is an amalgam of experiential activities and energizing ways to internalize the rich concepts developed during many decades of applied-academic research. Participants are required to be fully present and fully engaged for the whole weekend, read the major book and a number of articles, put write a paper. This course occupies a full weekend and runs from 6pm Fri. to 6pm Sun. This is a 48-hour intensive weekend; you go home to sleep. Participants applying for this course are required to take a Primer, which provides potential participants with a common conceptual base for engaging in the essential learning and lays out the intellectual foundations of the course. Permits will be issued soon after participants have taken the Primer. Contact the NPLD program for more information on primer and course dates.
One-term course offered either term
Prerequisite: Attendance at course Primer (see course description)
Activity: Seminar
0.5 Course Units
Notes: Fall 2018 Class Schedule: Option 1: Friday 9/14 6-11pm; Saturday 9/15 9am-11pm; Sunday 9/16 9am-6pm. Option 2: Friday 9/21 6-11pm; Saturday 9/22 9am-11pm; Sunday 9/23 9am-6pm.

NPLD 783 Field Exercise in Social Impact Measurement
The twofold purpose of social impact measurement is to assess and improve the impact of nonprofit programs, and to inform grantmaking practice and effectiveness. In addition to accounting for funds spent and reporting on the actual work carried out, social impact measurement is an essential learning opportunity for grantmaker and grantee. However, choosing an appropriate methodology of measurement is critical. This course will offer an overview of leading social impact measurement methodologies and tools, and an impact measurement field exercise. During the field exercise, student teams will develop an evaluation plan and associated instruments for a local nonprofit using one or more of the methodologies. Teams will present their evaluation plans and offer recommendations for implementation. Lectures will be complemented by class time devoted to field exercise team meetings and off-site field work.

NPLD 784 The Nonprofit Sector: Concepts and Theories
Can you imagine a world without the vitality and diversity of the nonprofit sector? What would it be like? Everything from health care to education, from serving the disadvantaged to protecting and restoring the environment, nonprofit organizations seem to have become an inseparable part of every aspect of our lives. So often they are taken for granted that we seldom pause and reflect on the roles and functions of these vital organizations in our community. This course will introduce you to the various roles that voluntary, philanthropic and nonprofit organizations play in American society. It will cover the theory, size, scope and functions of the sector from multiple disciplinary perspectives including historical, political, economic, and social views. The course also has a “hidden agenda.” Take this class to see and discover what this agenda is!

Taught by: Guo
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NPLD 785 Group Dynamics and Organizational Politics
This is one of the courses referred to as “The Power Lab at Penn.” This intensely experiential course is designed for those providing group and institutional leadership at any level of a human enterprise, managing work groups, chairing committees, serving on special task forces, conducting support groups, offering legal services, teaching in classrooms, facilitating groups in clinical settings, etc. Participants will focus on two topics: (1) an in-depth understanding of group dynamics while they are in action, and (2) the organizational relationships between groups that are in a powerful position, groups locked in a powerless state and those caught in the middle between the powerful and the powerless.

Course Structure: This course has six components: (1) A pre-course discerning process, which consists of a one evening plus one full day Primer workshop; (2) Module 1 which is focused on group dynamics; (3) reading an assigned book and writing a paper based on Module 1 experiences; (4) Module 2 which addresses power relationships among groups with differential resources; (5) reading two assigned books and writing a paper based on Module 2 experiences; and (6) a post-course debriefing. The Primer provides all potential participants with a common conceptual base for engaging in the essential learning and lays out the intellectual foundations of the course.

Taught by: Smith
Course usually offered in fall term
Prerequisites: Permit required; all potential participants are required to attend a Primer class which consists of one evening session AND an all day session. Permits are granted only after students have completed the primer classes.
Activity: Lecture
1 Course Unit
Notes: Students from all graduate programs at Penn are welcome to apply. Contact the NPLD program for more information.

NPLD 786 Strategic Management and Leadership of Nonprofits
This course is about doing good and doing well. It is designed to introduce you to the fundamental issues in accountability and governance and the administration and management in nonprofit organizations. Through research and analysis, you will understand multiple structures of accountability and the various stakeholders in nonprofits, understand the duties and dynamics of boards of directors in conjunction with other mechanisms of governance (e.g. chief executive officers, advisory boards, etc.), and develop an understanding of management techniques and leadership skills for enhancing the effectiveness of nonprofit organizations. You will be asked to think about the challenges of running nonprofit organizations in a comparative context, with cases drawn from both the U.S. and abroad. The emphasis of this course is on acquiring operational skills. The course is designed for those who may have had years of experience managing other people and programs in the nonprofit sector but who want to develop a more systematic mastery of this challenge, as well as students from other sectors who aspire to a nonprofit leadership role.

Taught by: Guo
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NPLD 790 Social Finance
Economic analysis and financial accounting are like languages: fluency comes with practice. In-class review of case studies (including, on occasion, in-person discussions with the representatives of diverse agencies and organizations featured in the case studies) will enable students to test and develop their capacity for applying conceptual tools and analytical methods to sometimes messy and always complicated, real-life situations. The course objective is to develop theoretical understanding, critical judgment, and practical skills for sensitive and effective engagement with financial and economic matters of significance. Students will learn: (a) different ways of thinking about the economic foundations of social policy, (b) the basic terminology, tools, and methods for analyzing the financial statements of a wide range of organizations, and (c) accounting procedures for evaluating business, government, and organizational operations, policies, and practices.

Taught by: Lamas
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: The course is open to students across the University. All graduate students who take this course must register under NPLD790. All undergraduate students must register under NPLD590. SECTION 002 is open only to students in the hybrid NPLD program.
NPLD 791 Leadership: Designing the Future
This is one of the two courses referred to as The Power Lab at Penn. The other is NPLD 785/SWRK 766. This experiential, highly interactive seminar is for those eager to serve in managerial/leadership positions of human systems that create/maintain the organizational and fiscal viability of public, non-profit or private enterprises, including their partnerships. Candidates in all Penn graduate programs are welcome, whether one’s ambition is to generate sustainable livelihoods, renewable energy, wealth, clean water, viable environments, robotics, or quality services in fields such as education, health care, AI, communication, the arts, or criminal justice, or security. Course participants are members of decision-making groups that run a computer-based, data-driven, future-creating, socio-economic simulation while synchronously studying the intra and inter-group dynamics inherent in all leadership actions. The educational methodology of this course is based on discovery-learning processes about the critical inter-dependencies among several phenomena, such as: strategy formulation-execution and organizational practices that unleash latent possibilities; wealth creation and the dynamics of competition/collaboration within and among groups; robust economic metrics and intra/inter-group decision-making and sophistication; leadership of market-financial-political ecosystems and quality group-based followership; the efficacy of work-based activities and system conflict management capabilities; building new forms of private, public, non-profit ventures and developing human capital. This course combines intellectual and experiential learning about the business of organizing and an organization’s businesses. It is based on cutting-edge sociological, economic, psychological, managerial and anthropological thinking about wealth-creation/circulation, the power of combining left-brain and right-brain reasoning, the harnessing of energies trapped by classic organizational conflicts and accessing the abundance located in contexts of seeming scarcity.
Taught by: Smith
One-term course offered either term
Prerequisites: Permit required; all potential participants are required to attend a Primer class which consists of one evening session AND an all day session. Permits are granted only after students have completed the primer classes.
Activity: Lecture
1 Course Unit
Notes: Undergraduates need permission

NPLD 792 Social Entrepreneurship
Social entrepreneurs are individuals with innovative vision seeking to accomplish important public purposes through the creative and aggressive mobilization of people and resources. Using academic theory and research on social entrepreneurship as a framework, student innovators learn to design, develop, and lead social change organizations of their own invention. Students turn their passion for changing the world into concrete plans for launching a venture. Over the course of the semester, we will cover a broad array of topics associated with social innovation and entrepreneurship, including defining the problem/opportunity, refining the mission/vision, developing market research and industry analysis, defining a financial and operating structure, assessing results and progress, and scaling an enterprise. This course is neutral on sector. Graduate students in any of Penn’s graduate and professional schools who want to create social value through either nonprofit or for-profit ventures are invited to take the class and develop their ideas. The class will expose students to the process of getting an organization - regardless of sector - off the ground and running. While this is a class on innovation and entrepreneurship, students do not need to be committed to starting a venture upon graduation. The skills and tools contained in the course have wide applicability in the workplace. Being able to develop a coherent venture plan is great training for anyone who wants to work in government, philanthropy, or the business sector funding or managing existing organizations. The course attempts to convey a picture of what a well-considered and well-executed venture plan looks like with the goal of developing in students an appreciation for clear thinking in the pursuit of the creation of public value.
Taught by: Frumkin
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Fall class open only to student in the hybrid NPLD program

NPLD 796 Philanthropy and Fundraising Tools for Managers
This course will review the everyday tools that nonprofit managers and development officers need to raise funds from individuals and other sources of private philanthropy. Last year, Americans gave approximately $300 million and 83% of it was from individuals. The fundraising profession has created a body of knowledge in the past twenty years that can guide effective fundraising programs so that charitable organizations can support their mission. The sessions will review the theory and practical techniques that development professionals use every day in large and small organizations including annual giving, major gifts, planned giving, cultivation of donors, making your case for support, the Seven Faces of Philanthropy, special events, and prospect research. There will also be discussions of philanthropic trends and current giving patterns. For those who are interested in nonprofit administration, these will be critical tools to understand.
Taught by: Heisman
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Undergraduates need permission
NPLD 797 Philanthropy and the City
This course will focus on how urban communities are shaped by the nonprofit sector and the billions of philanthropic dollars that fuel their work. By bridging theory and practice, the class explores what dynamics are at play to deliver vital services or programs in healthcare, education, the arts, community development, and other issues. The course will also focus on these important questions: (1) Whose responsibility is the public good? How is that responsibility shared by the public, private, and nonprofit sectors? and (2) Given that responsibility for the public good, which individuals and groups make the decisions about how to serve the public good? How are these decisions made, and who benefits from these decisions? Students will consider these questions in an interdisciplinary context that will bring a historical and philosophical perspective to the examination of the values and institutions that characterize the contemporary philanthropy and the nonprofit sector.
Taught by: Bauer/Goldman
Course usually offered in spring term
Activity: Seminar
1 Course Unit

NPLD 799 Independent Study
Independent studies provide a flexible opportunity for students and NPL faculty or part-time instructors to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising professor. Independent studies require the academic advisor's approval.
Activity: Independent Study
1 Course Unit
NURSING (NURS)

NURS 061 Biologically-Based Chemistry
A contextual approach will be used in studying the concepts in General, Organic and Biological Chemistry that are foundational to an understanding of normal cellular processes. Topics that will be covered include measurements, atomic structure, bonding, chemical reactions, properties of gases and liquids, solutions, equilibrium, acids and bases, pH, buffers, nuclear chemistry, nomenclature and properties of the main organic functional groups, and the structures and function of carbohydrates, proteins and lipids.
Taught by: Lafferty-Della Valle
Course usually offered in fall term
Prerequisite: One year of high school general chemistry or its equivalent
Activity: Lecture
0.5 Course Units
Notes: 0.5 course units

NURS 065 Fundamentals of Nutrition
Essentials of normal nutrition and their relationships to the health of individuals and families. These concepts serve as a basis for the development of an understanding of the therapeutic application of dietary principles and the nurse's role and responsibility in this facet of patient care.
Taught by: Compher; Dolan; Caspar-Clark
Course usually offered in spring term
Prerequisite: NURS 061; NURS 062 (or equivalent Science Sequence Courses)
Activity: Lecture
1 Course Unit

NURS 068 Integrated Cell Biology and Microbiology
This course will include the major topics of cell biology and microbiology that are foundational for an understanding of normal and pathological cellular processes. Topics will include the brief study of prokaryotic and eukaryotic cell structures and functions; the main biological molecules; membrane transport; cellular communications; the flow of genetic information; cell division; and cellular metabolism. The course will also examine the role of cells and microbes in human health and infectious diseases. It will include a description of the main types of microbes, how they are identified, their growth requirements, and the role of the immune system in controlling infections, the control of microbes, host-microbe interactions. The context for this course will be the application of cell biology and microbiology for understanding the cellular basis of cancer and infectious human infection disease processes. This course will include special sessions from a clinical perspective in the various fields of medicine, microbiology, and immunology.
Taught by: Johnson, Ross
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 101 The Nature of Nursing Practice
This course facilitates students' ability to conceptualize the experiences of individuals, families, communities, and populations living with health and illness. It emphasizes the integration of knowledge from other disciplines and of nursing science as the basis for practice. The course introduces the four core themes of the undergraduate nursing program: engagement, inquiry, judgment, and voice and examines how the themes are used to characterize the nature of nursing practice.
Taught by: Kutney-Lee; Brooks-Carthon; Wiltse Nicely
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: 0.5 course units

NURS 102 Situating the Practice of Nursing
This course emphasizes not only how nursing is practiced, but also where it is practiced. The course further explores the four core themes of engagement, inquiry, judgment, and voice as it provides guided observational experiences in a wide variety of settings. These experiences help the student to discover what is not known and what is subsequently necessary to know. These experiences also explore the place of the natural and social sciences and the arts and humanities in nursing practice. This course also will highlight the relationships between and among members of the interprofessional team and families and patients. NURS 102 fosters development of the professional role and sets the stage for life-long learning.
Taught by: Kutney-Lee; Brooks-Carthon; Kaufman; Brewer
Course usually offered in spring term
Prerequisite: NURS 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 course units

NURS 103 Psychological and Social Diversity in Health and Wellness
This course explores and integrates the intersection of psychological, cognitive, and social development with the lived experiences of individuals, families, and communities across the lifespan in order to conduct socially contextualized health assessments and health teaching. Extant theories will be critically analyzed and examined with respect to issues of health care access, health history, health promotion, and issues of equity and diversity from a life-course perspective. This knowledge will be synthesized and integrated with the development of the student's communication skills and interviewing processes necessary to develop socially attuned health history and teaching that promote psychological well being and healthy lifestyles. Simulated and observational experiences provide students with opportunities to acquire and apply knowledge necessary for conducting a comprehensive health history of an individual situated within a diverse community. They also provide opportunities to develop prioritized health teaching plans in partnership with that individual.
Taught by: Connolly; Lewis, L,
Course usually offered in fall term
Prerequisite: NURS 101
Activity: Lecture
1 Course Unit
Notes: Offered in Summer for Accelerated BSN Program
**NURS 112 Nutrition: Science & Applications**

An overview of the scientific foundations of nutrition. The focus is on the functions, food sources and metabolism of carbohydrate, fat, protein, vitamins and minerals. Effects of deficiency and excess are discussed and dietary recommendations for disease prevention are emphasized. Current issues and controversies are highlighted. Students will analyze their own dietary intakes and develop plans for future actions.

Taught by: DeJonghe; Hayes

One-term course offered either term

Activity: Lecture

1 Course Unit

Notes: For Non-Nursing Majors

**NURS 131 Human Anatomy and Physiology - Part A**

The structural and functional organization of the human organism is presented, along with the fundamentals of developmental anatomy and embryology. Histologic and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms which enable the human body to maintain homeostasis in an ever-changing environment.

Taught by: Scanga

Course usually offered in spring term

Prerequisites: NURS 61 and NURS 62 (or equivalent College Level Chemistry and Biology)

Activity: Lecture

1.5 Course Unit

Notes: 4 h. lec. 2 h. lab. $100 lab fee

**NURS 132 Human Anatomy and Physiology - Part B**

The structural and functional organization of the human organism is presented, along with the fundamentals of developmental anatomy and embryology. Histologic and gross anatomical features of each organ system are related to the physiologic and biochemical mechanisms which enable the human body to maintain homeostasis in an ever-changing environment. Basic concepts of pathophysiology are introduced and applied to certain clinical disorders.

Taught by: Scanga

Course usually offered in fall term

Prerequisite: NURS 131

Activity: Lecture

1.5 Course Unit

Notes: 4 h. lec. 2 h. lab. $100 lab fee.

**NURS 159 Pathways To Practice**

Activity: Lecture

1 Course Unit

**NURS 160 Physical Assessment**

This is a laboratory course designed to help beginning nursing students to develop competence in the process of physical assessment. Students engage in actual practice of physical assessment with fellow students as their ‘patient’ subject. A blending of instructor demonstration and supervision of physical examination practice sessions is used in the learning laboratory setting. Students prepare via self-learning activities with a variety of supplied resources (readings, videotapes, computer programs) and have the opportunity to refine their skill through faculty-supervised practice sessions. Procedural skills that correlate with the presentations of physiologic system assessment are included.

Course usually offered summer term only

Prerequisite: Matriculation in the Accelerated BSN Nursing Program

Activity: Lecture

1 Course Unit

Notes: For Students in Accelerated BSN Nursing Program Only

**NURS 163 Integrated Anatomy, Physiology, and Physical Assessment I**

This is the first part of a two-semester course designed to provide a comprehensive study of the structure and function of the human body along with essential embryology and maturational physiology. Histological and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms that enable the human body to maintain homeostasis. Within each system, deviations from normal are considered to situate the student’s understanding of health problems and to foster an appreciation for the complexity of the human organism. Integrated into each topic are the correlated physical assessment parameters and related procedural skills. Laboratories exercises and case study analysis provide a contextual base to acquire and use domain-specific knowledge of concern to the practice of nursing.

Taught by: Scanga; Quigley

Course usually offered in spring term

Prerequisite: NURS 061; NURS 062; NURS 063; (or equivalent Science Sequence Courses)

Activity: Lecture

2 Course Units

Notes: 2.0 course units

**NURS 164 Integrated Human Anatomy, Physiology & Physical Assessment II**

This is the second part of a two semester course designed to provide a comprehensive study of the structure and function of the human body along with essential embryology and maturational physiology. Histological and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms that enable the human body to maintain homeostasis. Within each system, deviations from normal are considered to situate the student’s understanding of health problems and to foster an appreciation for the complexity of the human organism. Integrated laboratories and case studies provide a contextual base to acquire and use domain-specific knowledge that includes physical assessment, and procedural.

Taught by: Scanga; Quigley

Course usually offered in fall term

Prerequisite: NURS 163

Activity: Lecture

2 Course Units

Notes: 2.0 course units

**NURS 165 Integrated Pathophysiology, Pharmacology, and Therapeutics**

Pathophysiologic concepts and processes are introduced with major emphasis on commonly occurring acute and chronic illnesses and their therapeutic interventions. Major classes of drugs that are used to support organ function are explored. The physiological and pathophysiologic rationale for each drug indication, mechanisms of drug action, individualized dosing implications, and adverse drug events will be explored for prototypical agents used in the selected cases. The course will enhance the student’s comprehension of the scientific complexity of therapeutic interventions in various conditions and will build upon the foundational sciences. Additionally the course will provide the student with sufficient scientific knowledge and skills to prepare administer and monitor drugs and therapies in a safe and effective manner.

Taught by: Boullata

Course usually offered in spring term

Prerequisite: NURS 164 (or Equivalent)

Activity: Lecture

2 Course Units

Notes: 2.0 course units
NURS 215 Nursing of Women and Infants
This course emphasizes the child-bearing cycle, and the related issues of maternal and infant mortality and morbidity. It also explores women and infant's health care and health promotion needs across the lifespan. It provides a global perspective, and uses the United Nations' Pillars of Safe Motherhood and World Health Organization’s Millennium Development Goals as the vehicles to enable students to understand the interrelationships among issues of health and health promotion; social, economic, political and environmental contexts; and the care of women across the lifespan. Clinical experiences provide opportunities for students to understand the connections between the local and the global; to use their developing knowledge base to affect the health of women and their infants. Students will have opportunities for hospital-based care of child-bearing women and their infants. In addition, community-based experiences with individual women and with groups of women across the life cycle will be provided in order to enhance teaching, interviewing and assessment skills.
Taught by: Guidera; O'Hare; Hill-O'Neill
Course usually offered in spring term
Prerequisite: NURS 101; NURS 102; NURS 103; NURS 164 (Traditional) or NURS 106 (Accelerated)
Activity: Lecture
1.5 Course Unit

NURS 225 Pediatric Nursing
This course considers how nursing influences the health and healing capacities of infants, children, adolescents and their families. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses pediatric nursing phenomena of concern and major final common pathways of pediatric illness from infancy through adolescence using a using a developmental and systems approach. Emphasis is placed on family-centered care through transitions in the illness and recovery phases. The course emphasizes clinical reasoning; family centered strategies for optimizing health and maintaining individuality; promoting optimal developmental, physiological, and psychological functioning; and enhancing strengths within the context of family. Clinical experiences at various children's hospitals and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care and knowledge integration.
Taught by: Hickerson
One-term course offered either term
Prerequisite: NURS 215
Corequisite: NURS 235
Activity: Lecture
1.5 Course Unit
Notes: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly

NURS 230 Statistics for Research and Measurement
This course examines statistical methods used by scientists in the analysis of research data. The fundamental theorem for this course is the "square root law" (central limit theorem). Students become literate in statistical terminology and symbols and knowledgeable of assumptions for statistical tests. Fundamental statistics include basic theorems and principles, sample, population and data distributions, measures of central tendency, correlational techniques, and commonly used parametric and nonparametric statistical tests. Parameters for inferential and descriptive statistics are examined as the basis for explaining the results from research studies. Students apply chance models in estimating confidence intervals of percentages and means, and in hypothesis testing. This content is taught in the context of nursing research and measurement of nursing phenomena. Examination of research publications enable students to apply their knowledge to reading and understanding data analyses used in studies. Students evaluate tables and graphs as ways to summarize research findings. Course content prepares students to examine statistical and clinical significance of research findings.
Taught by: Kim
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 235 Psychiatric Nursing
This course examines how nursing influences the health and healing capacities of individuals and families experiencing severe psychiatric distress. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. The course addresses nursing phenomena of concern related the meanings of an illness experience, the development of healing relationships with or within individuals, families, and groups, and on the advanced communication strategies needed to engage individual and families in mental health promotion strategies. It also provides the tools to enable students to construct effective treatment groups with patients; work groups with disciplinary and inter-professional colleagues; and to understand the healing dimensions of environments. Clinical and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care and clinically situated knowledge integration.
One-term course offered either term
Prerequisite: NURS 215
Corequisite: NURS 225
Activity: Lecture
1.5 Course Unit
Notes: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly
NURS 245 Nursing of Young and Middle Aged Adults
This course considers how nursing influences the health and healing capacities of young and middle aged adults who experience functional status impairments as a result of serious illness or injury. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses nursing phenomena of concern, including risk factors for illness or injury, strategies to overcome barriers and support personal health resources, alleviate suffering and reduce the impact of illness or injury on the functioning of the person. Content and clinical experiences integrate developmental and role issues; policy, cultural and ethical considerations. Clinical experiences in acute care hospital units and simulation experiences provide opportunities for clinical reasoning, clinical care, and knowledge integration.
Taught by: Walsh-Brennan
One-term course offered either term
Prerequisite: NURS 215
Corequisite: NURS 255
Activity: Lecture
1.5 Course Unit
Notes: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly

NURS 255 Nursing of Older Adults
This course considers how nursing influences the health and healing capacities of older adults. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses nursing phenomena of concern including the unique set of principles and body of knowledge and skills necessary to the practice of nursing with older adults. Students are provided with the theoretical background necessary to understand health system issues affecting older adults. Students will attain the knowledge necessary to complete a comprehensive assessment of the older adult’s physical, functional, psychosocial, and cognitive capacities. Common problems associated with cardiovascular, respiratory, neurological, musculoskeletal, sensory, and genitourinary systems that affect older adults will be discussed. In addition, principles of continuity of care, rehabilitation, nutritional and pharmacodynamic changes, cultural diversity and ethics will be integrated throughout the course. Clinical experiences in acute care hospitals and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care, and knowledge integration. Special emphasis is placed on transitional care for older adults across the health care continuum.
Taught by: Matura
One-term course offered either term
Prerequisite: NURS 215
Corequisite: NURS 245
Activity: Lecture
1.5 Course Unit
Notes: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly

NURS 299 Independent Study in Nursing
An opportunity to develop and implement an individual plan of study under faculty guidance.
One-term course offered either term
Prerequisite: Permission of instructor and NURS 106
Activity: Independent Study
1 Course Unit

NURS 303 Contemporary Issues in Human Sexuality and Health
Course content emphasizes theories of sexual development and factors influencing sexual behavior within the continuum of health and illness. Common sexual practices of people are studied within the context of lifestyle and situational life crises. Concepts of normal sexual function and dysfunction are examined. Contemporary sexual issues are explored.
Taught by: Stevens
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 304 Contemporary Issues in Global Women’s Health
This undergraduate elective course will provide an introduction to contemporary issues in global women’s health and multiple theoretical perspectives related to global women’s health. This course will examine and analyze various women’s health issues across the globe within historical, social, cultural, economic, political and environmental contexts. This course will have particular emphasis on intensive analyses of gender equity and cultural sensitivity issues in providing appropriate and adequate care for women across the globe.
Taught by: Im
Course usually offered in spring term
Prerequisite: Nursing Students must have completed NURS 215
Activity: Lecture
1 Course Unit
Notes: Freshmen and Sophomores need Instructor Permission

NURS 305 Narrative Matters in Health and Illness Experiences
This course emphasizes the uses of narrative and memoir to consider major themes and events related to the experience of health and illness in the United States as well as the curative role, as either family member or health professional and crafting policy.
Taught by: Connolly, C
Activity: Seminar
1 Course Unit
Notes: Foundational Course for History, Health, and Humanities Minor

NURS 306 Opioids: From Receptors to Epidemics
Taught by: Compton; Schmidt
Prerequisites: Biology 101 or Biology 121 or with permission of instructors. For BSNs: N165 Integrated Pathophysiology, Pharmacology and Therapeutics
Activity: Lecture
1 Course Unit
Notes: This survey course reviews the neuropharmacology of opioids including central and peripheral sites of opioid actions. Opioid receptor pharmacology as well as cellular and molecular neuroadaptations to opioids are discussed in relation to addiction, physical dependence, tolerance, hyperalgesia and withdrawal. Genetic and pharmacogenonomic effects on variation of opioid response are also presented. Opioid addiction and the actions of opioids on pain systems are reviewed with an emphasis on their pre-clinical and clinical expression. The effects of regulatory, pharmaceutical and criminal justice justice forces on opioid prescription in the US are considered vis-à-vis pain management and opioid addiction. Finally, the causes and consequences of the of the current “opioid epidemic” are reviewed, as well as federal, healthcare and community efforts to address it.
NURS 312 Nutritional Aspects of Disease
This course provides an advanced understanding of the role of nutrition in integrated biological systems. Students will develop a rigorous comprehension of major clinical disorders, including the underlying pathophysiology and conditions that are affected by nutrition and how optimization of nutritional variables may modulate these processes. A critical overview of the role of nutrition in disease prevention, management and treatment, and in health maintenance will be emphasized throughout the course.
Taught by: Hayes, M
Course usually offered in spring term
Prerequisite: NURS 112
Activity: Lecture
1 Course Unit

NURS 313 Obesity and Society
This course will examine obesity from scientific, cultural, psychological, and economic perspectives. The complex matrix of factors that contribute to obesity and established treatment options will be explored. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Compher
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 315 Sociocultural Influences on Health
This course is intended for students interested in U.S./Global Healthcare. It includes lectures, discussions, readings, and written assignments focused on various social, cultural, and economic factors that impact the health and illness perceptions and behaviors of various ethnic and minority groups. In particular, it focuses on how culture affects health and disease, and how health and disease affect culture. This course takes a critical approach to knowledge development by scrutinizing values, theories, assumptions, and practices cross culturally. It relies upon a range of interdisciplinary approaches to analyze how disease is diagnosed, treated, and experienced differently in various cultural contexts. At the same time, students will have the opportunity to examine and critique cultural assumptions and theories, the shifting nature of cultures, the situational use of cultural traditions, and the ethnocentrism of contemporary Western health care. Special attention is given to the influence of race, class, gender, religious, and spiritual ideas about health and illness.
Taught by: Wall
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Foundational Course for Minor in Multicultural/Global Health Care

NURS 316 International Nutrition: Political Economy of World Hunger
A detailed consideration of the nature, consequences, and causes of hunger and undernutrition internationally. Approaches are explored to bringing about change, and to formulating and implementing policies and programs at international, national, and local levels, designed to alleviate hunger and undernutrition.
Taught by: Chrzan
Course usually offered in spring term
Prerequisites: Junior-year or higher; at least one background course in nutrition, anthropology, sociology or economics
Activity: Lecture
1 Course Unit

NURS 318 Race, Gender, Class and the History of American Health Care
This multidisciplinary course surveys the history of American health care through the multiple perspectives of race, gender, and class, and grounds the discussions in contemporary health issues. It emphasizes the links between the past and present, using not only primary documents but materials from disciplines such as literature, art, sociology, and feminist studies that relate both closely and tangentially to the health professions and health care issues. Discussions will surround gender, class-based, ethnic, and racial ideas about the construction of disease, health and illness; the development of health care institutions; the interplay between religion and science; the experiences of patients and providers; and the response to disasters and epidemics. Skills for document analysis and critique are built into the course as is the contextual foundation for understanding the history of health care. This course satisfies both the Society & Social Structures and the Histories & Traditions sectors for the Nursing Class of 2012 and beyond.
Taught by: Fairman
Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: For Benjamin Franklin Scholars Nursing Honors Students.

NURS 319 Etiology and Treatment of Contemporary Chronic Diseases in America: Focus on Obesity and Cancer
This course will focus on two of the major public health problems in the United States—obesity and cancer. These diseases will be considered from a variety of perspectives: epidemiological, environmental, physiological and behavioral. In addition, the course will focus on the range of interventions being developed to treat as well as prevent both diseases.
Taught by: Glanz; Jacobs, L.; Sarwer
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 324 Children's Health in the United States, 1800-2000
This course explores the impact of historical ideas, events, and actors pertaining to the history of children's health care in the United States. Emphasis is placed on tracing the origins and evolution of issues that have salience for twenty-first century children's health care policy and the delivery of care. This course satisfies the History & Traditions Sector for Nursing Class of 2012 and Beyond.
Taught by: Connolly
Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: For Benjamin Franklin Scholars Nursing Honors Students

NURS 330 Theoretical Foundations of Health Care Ethics
The theoretical foundations of health care ethics including definitions of ethics, history of bioethics and nursing ethics, and the influence of religion, psychology of moral development and philosophy in the development of ethical theory. Nursing code of ethics, changing ideas in ethics, and discussion of the developing profession of nursing are included.
Taught by: Perlman; Ulrich
One-term course offered either term
Activity: Lecture
1 Course Unit
**NURS 331 Forensic Mental Health**

Forensic mental health is the interface between the law and mental health. This course examines the components of human behavior that bring people into a judicial setting. Content will cover: criminal personalities, forensic interview, and the role of forensic psychiatry. Domestic violence offenders, sex offenders, stalkers, gang members, and offenders who commit homicide will be discussed. Definitions and dynamics of criminal motherhood and the psychodynamics of violent juvenile offenders will be presented. Use of the internet by offenders will also be discussed. This course also offers a field experience in which student's interview incarcerated individuals. As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.

Taught by: Brown, K.; Sabella

Course usually offered in fall term

Activity: Lecture

1 Course Unit

**NURS 332 Forensic Science I**

This course discusses the interface of law and science. Forensic science is the application of scientific principles in the legal arena. This course examines the contribution of forensic science to criminal and civil investigation. Crime scene analysis is accomplished via disciplines within forensic science. The role of a medical examiner, the structure and function of crime laboratories, death investigation and the role of health care personnel in forensic cases is discussed. As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.

Taught by: Cronin, G.

Course usually offered in spring term

Activity: Lecture

1 Course Unit

**NURS 333 Victimology**

This course examines the wide range of victimization experiences from the perspective of the victim, their families and society. Crimes to be studied include workplace violence, corporate crime, robbery, burglary, assault, rape, stalking, domestic violence, homicide, suicide, elderly abuse and child sexual abuse and exploitation. The role of the medical examiner, health care providers and the FBI as they relate to victims of crime will be discussed. Emphasis will be given to exploring the elements of each crime and response patterns to victimizations. Services available to victims of crime will be discussed. As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.

Taught by: Cronin G

One-term course offered either term

Activity: Lecture

1 Course Unit

**NURS 334 Public Policy and the Nation's Health**

This course examines health care and social policy from domestic and international perspectives. It is designed to engage undergraduate students in critical thinking about health policy issues as they affect our health care, employment, taxes, and social investments. The current national debate on health care reform is used as a frame of reference for examining the strengths and weaknesses of health care services in the U.S. from the perspectives of patients/families, health professionals, health services providers, insurers, employers, and public policy makers, and the pros and cons of a range of prescriptions for system improvement from across the political spectrum. About a third of the course focuses more specifically on global public health challenges and the policy strategies for reducing health disparities worldwide. Please note, the online version of this course has a synchronous component (live online class sessions). The day/time will be listed in the course register.

Taught by: Sochalski

Course usually offered in spring term

Activity: Lecture

1 Course Unit

**NURS 335 Global Food Security for Ten Billion**

This is an interdisciplinary course on the problems of food demand and consumption, production and supply in our increasingly globalized and urbanizing world. Special attention will be given to the intersections of current technologies of food production, current nutritional problems, environmental change and resource degradation, and the changing quality of human social life under globalization. Where and how will sufficient nutritious food be produced sustainably and how can the politics and economics of equitable distribution in such large urban populations be achieved?

Taught by: Spooner; Compher; Muecke; Chrzan

Course usually offered in spring term

Activity: Lecture

1 Course Unit

Notes: Cross Currents Course

**NURS 343 Global Engagement Seminar Environmental Health Issues**

Cross Listed with NURS 543 All students must apply through the Penn Global Seminar Webiste for permission to register for this course. Those who are accepted will receive a permit to register for this course.

Prerequisites: General college-level chemistry and biology knowledge (e.g. CHEM/ BIOL 101, 102) to understand the science underlying environmental health topics or special permission

Activity: Seminar

1 Course Unit

Notes: This course will be a broad overview on current environmental health issues that contribute to significant global morbidity and mortality due to increased urbanization and growth in the economy. The course will cover basic principles of environmental epidemiology, toxicology, health effects of environmental exposures, risk assessment, as well as environmental policy and ethics. The class will have two portions. The first part of the class will be taught lectures, case studies, discussions on campus and a local field trip in the Philadelphia area. The second part of the course will involve a field trip to China during the early summer to help students gain a global perspective on environmental health concerns.
NURS 344 Etiology and Treatment of Contemporary Chronic Diseases in America: Focus on Obesity and Cancer
This course will focus on two of the major public health problems in the United States - obesity and cancer. These diseases will be considered from a variety of perspectives: epidemiological, environmental, physiological and behavioral. In addition, the course will focus on the range of interventions being developed to treat as well as prevent both diseases.
Taught by: Glanz; Sarwer; Jacobs, L.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 353 Health Comm Digital Age: Health Communication in the Digital Age
Activity: Lecture
1 Course Unit

NURS 354 Case Study - Addressing the Social Determinants of Health: Community Engagement Immersion
Prerequisite: Completion of sophomore year nursing requirements
Activity: Lecture
1 Course Unit
Notes: This case study offers students experiential learning to develop an in depth understanding of social determinants of health in vulnerable, underserved populations and to collaboratively design and refine existing health promotion programs based on the needs of the community site. Grounded on an approach that builds upon the strengths of communities, this course emphasizes the development of techniques to lead effective, collaborative, health-focused interventions for underserved populations. Students are required to draw on skills and knowledge obtained from previous classes related to social determinants of health and community engagement and will engage in specific creative, innovative community based programs developed for populations across the life span. These culturally relevant programs, which have been shown to positively impact communities, create opportunities for students to address the social determinants of health, build engagement and leadership skills and increase program success and sustainability.

NURS 355 Case Study: Self-Care of Chronic Illness
Self-care is done by lay people to prevent or manage chronic illness. In this case study, we will discuss the history, definitions, predictors, and outcomes of self-care in various chronically ill populations. A focus of discussion will be an in depth exploration of the factors that influence self-care. Understanding these factors will prepare nurses for their role in promoting self-care. Fieldwork experiences are designed to provide practical experience in engaging well individuals in preventing illness and helping chronically ill perform self-care.
Taught by: Riegel
Course usually offered in spring term
Prerequisite: NURS 215
Activity: Lecture
1 Course Unit
Notes: 2 hour seminar; 1 hour fieldwork / week

NURS 356 Case Study: Culture of Birth
This course will explore the cultural context of birth and the activities of women and professionals and/or attendants in meeting the health care needs of pregnant women. The history of caring for women at birth, international health care, cultural mores/societal values, place of birth, psychosocial factors, ethical decision-making and the role of technology are content areas that will be discussed.
Taught by: McCool
Course usually offered in spring term
Prerequisites: NURS 215, 225 or Permission of Instructor
Activity: Lecture
1 Course Unit

NURS 358 Case Study: Nurses and the Child Welfare System
Building on knowledge and skill acquired through undergraduate nursing courses, this case study offers nursing majors an in depth and interprofessional opportunity to study research, policy, and practice-based issues in children and families involved with the child welfare system. Special emphasis is placed on the role of the nurse in the child welfare system. Fieldwork experiences will enable students to gain practical experience regarding the needs of children and families with an emphasis on a consideration of how to achieve partnership and create alliances with parents and youngsters.
Taught by: Connolly
Course usually offered in fall term
Prerequisite: NURS 165; NURS 215
Activity: Lecture
1 Course Unit

NURS 359 Case Study: Quality Care Challenges in an Evolving Health Care Market
Quality care is an issue for consumers, providers, purchasers, and policy makers. This case study examines the multiple challenges that surround the quality of health care in the evolving United States health care marketplace. Through classroom discussion and special project experience, the student will become familiar with the concept of health care quality and approaches to the measurement and management of quality. Using Donabedian’s construct of structure, process and outcomes, strategies to improve quality while containing or reducing costs are reviewed, including the contributions of clinical practice guidelines. The evolving dominant structures for providing health care services, managed care and integrated delivery systems, and their approaches to quality management and reporting will be explored.
Taught by: Pinola, Sparrow
Course usually offered in spring term
Prerequisites: NURS 104, 106
Activity: Lecture
1 Course Unit

NURS 360 Case Study: Nursing Practice with HIV+ Patients
This course is directed at the need to increase nursing majors knowledge and clinical expertise in the care of persons with HIV/AIDS. Hands on clinical practice with nurses who are AIDS experts will be combined with seminars that provide epidemiologic, clinical assessment, infection control, symptom management, patient teaching, psychosocial, ethical, cultural, political, and policy information.
Taught by: Vincent
Course usually offered in fall term
Prerequisites: NURS 104, 106
Activity: Lecture
1 Course Unit
NURS 361 Case Study: Breast Feeding & Human Lactation
Human milk is recognized universally as the optimal diet for newborn infants. The health benefits of breastfeeding are so significant that a National Health Objective set forth by the Surgeon General of the United States for the year 2010 is to increase the proportion of mothers who breastfeed their babies in the postpartum period. Through classroom and clinical experiences, this course will provide an in depth examination of the anatomy and physiology of lactation, essential aspects of establishing and maintaining lactation, and the nurses’ role in counseling the breastfeeding family. Emphasis will be placed on current research findings in the content area.
Taught by: Spatz
Course usually offered in fall term
Prerequisites: NURS 104, 106
Activity: Lecture
1 Course Unit

NURS 363 Case Study: Aggressive Behavior in Healthcare: Assessment Prevention and Treatment
The escalating incidence and prevalence of aggression in the health care setting requires that providers acquire a new set of pragmatic competencies for managing its complex sequelae. This course presents theoretical frameworks for understanding, predicting, preventing and responding to aggressive behaviors across the life span. Historical, bio-behavioral, social, and cultural explanations for aggression will be synthesized and analyzed within the context of multiple points of entry into the health care system across clinical settings. Personal self-awareness, debriefing, and stress management techniques exemplify techniques to prevent untoward consequences in providers. This course also uses exemplars and a range of experiential learning strategies, including skill development, situation analysis, concept mapping, unfolding case studies and cooperative learning, to examine the assessment, prevention, treatment, and response to aggressive behavior in patients and management of its consequences in self and others.
Taught by: Coleman
Course usually offered in spring term
Prerequisites: NURS 104, 106
Activity: Lecture
1 Course Unit

NURS 364 Case Study: Cancer
This elective case study offers students the opportunity to learn about the etiology, diagnosis, and management of cancer across the lifespan. Building on existing clinical knowledge and skills, students will explore cancer care from the perspectives of prevention, early detection, treatment, survivorship, and death. Observational clinical experiences and selected case studies will enhance students’ understanding of patients’ and families’ cancer experience.
Taught by: Hollis
Course usually offered in spring term
Prerequisites: NURS 104, 106
Activity: Lecture
1 Course Unit

NURS 365 Case Study: Case Analysis in Clinical Nutrition
This course is designed for present and future nurse professionals who wish to increase their knowledge of nutrition and expertise and application of knowledge to achieve optimal health of clients and themselves. Principles of medical nutrition therapy in health care delivery are emphasized in periods of physiologic stress and metabolic alterations. Individual nutrient requirements are considered from pathophysiologic and iatrogenic influences on nutritional status. Nutritional considerations for disease states will be explored through epidemiological, prevalence, incidence, treatment and research data. Understanding application of medical nutrition therapy are included through case analysis and field experiences
Taught by: Dolan
Course usually offered in spring term
Prerequisite: NURS 065 or 112
Activity: Lecture
1 Course Unit

NURS 367 Case Study: Principles of Palliative Care
This course prepares students to collaborate effectively with an interdisciplinary team in assessing patients and families, and planning and evaluating palliative and end of life care for diverse populations with progressive illness in multiple health care settings. Course content and assignments focus on the nurse’s role in addressing the complex assessment and responses to the psychosocial and spiritual concerns of patients and caregivers across the trajectory of advanced illness.
Taught by: Ersek
Course usually offered in fall term
Prerequisites: NURS 104, NURS 106
Activity: Lecture
1 Course Unit

NURS 368 Case Study: Home Health Care
This course examines the major aspects of home-based care across patients’ life spans from acute to long term care. New trends, advances, and issues in home management of complex conditions, innovative delivery systems and legal, ethical and policy consideration will be explored.
Taught by: Doyle
Course usually offered in fall term
Prerequisites: NURS 104, NURS 106
Activity: Lecture
1 Course Unit

NURS 375 Nutrition Throughout The Life Cycle
Understanding and meeting nutritional needs from conception through adulthood will be addressed. Nutrition-related concerns at each stage of the lifecycle, including impact of lifestyle, education, economics and food behavior will be explored.
Taught by: Berman-Levine
Course offered fall; odd-numbered years
Prerequisites: NURS 54, or NURS 112, comparable nutrition course, or approved introductory course
Activity: Lecture
1 Course Unit
NURS 376 Issues in Nutrition, Exercise, and Fitness
An examination of the scientific basis for the relationship between nutrition, exercise and fitness. The principles of exercise science and their interaction with nutrition are explored in depth. The physiological and biochemical effects of training are examined in relation to sports performance and prevention of the chronic diseases prevalent in developed countries.
Taught by: Compher; Dougherty
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 377 Weight Management: Principles and Practices of Obesity Treatment
This course focuses on the principles and theories guiding the clinical care and treatment of people with obesity across the lifespan. We will discuss the effectiveness and evidence-base supporting a variety of obesity treatments diet, physical activity, behavioral therapy, pharmacological, surgical, and combined approaches. Emphasis will be placed on the practical aspects of providing obesity education and counseling to assist individuals and families in attaining and maintaining a healthy weight.
Course usually offered in spring term
Prerequisite: NURS065 or NURS112
Activity: Seminar
1 Course Unit

NURS 380 Nursing in the Community
This course considers how nursing influences the health and healing capacities of both communities as a whole (populations) and of groups, families, and individuals living within particular communities locally and globally. It addresses the complexity of nursing practice using a public health paradigm. It requires students to draw from prior class and clinical knowledge and skills and apply this practice base to communities across care settings, ages, and cultures with different experiences of equity and access to care. It provides the tools needed to engage in collaborative community work and to give voice to the community’s strengths, needs, and goals. It also moves students from an individual and family focus to a population focus for health assessment and intervention. Students consider the science, policies, and resources that support public health, and community based and community-oriented care. Clinical and simulated experiences in community settings provide sufficient opportunities for clinical reasoning, clinical care and knowledge integration in community settings. Students will have opportunities to care for patients and populations within selected communities.
Course usually offered in fall term
Prerequisite: NURS 225; NURS 235; NURS 245; NURS 255
Activity: Lecture
2 Course Units
Notes: Clinical 16 hours Weekly and 2 hours Simulated Laboratory Weekly
Also Offered Summer Session (12 Weeks)

NURS 386 Nursing Honors Research Project
This course is an advanced seminar for research and scholarship to be taken by honors students in nursing. Enrollment is concurrent with implementation of the individual student’s honors project. Practical considerations in carrying out such a project, including scholarly approach and scientific integrity as well as scholarly writing and dissemination will be discussed and illustrated, using exemplars and student projects. The various phases of students’ projects will be used as launching points for discussions and to complement students’ work with their faculty supervisors. Paths and planning for careers in nursing and related disciplines and the idea of scholarship and research trajectories will be developed throughout the course.
Taught by: Kagan, McCauley, K
Course not offered every year
Prerequisites: NURS 260 or NURS 637, NURS 385H
Activity: Seminar
1 Course Unit
Notes: Enrollment in Nursing Undergraduate Honors Program Required

NURS 389 Research/Inquiry-Based Service Residency
This course is designed to facilitate students’ intellectual curiosity and independence in exploring the research process relevant to an area of interest. Students expand their research knowledge base provided in NURS 230 and NURS 547 through a structured individualized faculty mentored experience based on specific learning objectives. Students identify a faculty advisor and, in collaboration with the advisor, define learning objectives to guide a plan of study. All research or inquiry residencies are under the guidance of a faculty member in the School of Nursing, but students may also interact with affiliated investigators and clinicians who contribute to and enrich the course. The residency offers students opportunities to experience at any level systematic methods for research, or service-based clinical inquiry or quality improvement. This mentored residency can be fulfilled by one of the following options: * Research-based practicum in basic science, clinical research, nursing history, healthcare policy, ethics, or informatics. * Inquiry-based Service practicum such as conducting quality improvement procedures or program evaluations in an affiliated healthcare institution. * Taking one of the University’s Academically Based Community Service (ABCS) courses with prior approval by the Steering Committee. * Individualized study abroad experience with prior approval by the Steering Committee.
Taught by: Curley; Leary, M.
One-term course offered either term
Prerequisite: NURS 547
Activity: Lecture
0.5 Course Units
Notes: 0.5 course units
NURS 390 Leadership in the Complex Healthcare System
This two-part course provides the didactic and clinical experiences in increasingly complex nursing care situations and environments which facilitate the students’ transition to independent practice. In the lecture component, the focus is on the integration of knowledge and skill for nursing practice and develops the ability of students to see nursing practice as part of a complex system. It examines systems thinking and complexity, development of a leadership role and skills, inter-professional communication and teamwork, and leading change in healthcare organizations. This course also examines the nurse’s role in improvement science and patient care delivery, focusing on quality improvement processes, patient safety, nurse sensitive process and outcome metrics with micro-systems. This course also allows students to develop the capacity for clinical expertise, leadership, and for translating the science of the profession into practice. Students also are assigned to a seminar component that is correlated with their selected site for the specialty clinical practicum. This aspect of the course allows the student to develop additional expertise in a specialty area of practice and to develop competences specific to that population of patients. These seminar components are adult health and illness; adult critical care, obstetrics/labor & delivery, psychiatric/mental health, and pediatrics. Advanced simulation experiences and extensive clinical practice in an area of the students’ choice provide multiple opportunities to synthesize the multidimensional aspects of nursing, and provide the environment which facilitates transition to professional nursing practice. Students select from a variety of settings in which to refine their practice skills. Principles of leadership, accountability and change will be applied to clinical practice as the student begins to operationalize the professional nursing role. Emphasis is placed on the nurse as a knowledgeable provider of health care who is both a change agent and advocate.
One-term course offered either term
Prerequisite: NURS 380
Activity: Lecture
3 Course Units
Notes: Clinical 16 hours Weekly and 2 hours Simulated Laboratory Weekly

NURS 400 Advances In Health Systems Research And Analysis
Capstone Course for NURS/WH Joint Degree Students.
Taught by: Sochalski; McHugh, M
Course offered spring; odd-numbered years
Activity: Seminar
1 Course Unit
Notes: by Permission Only

NURS 500 Introduction to Principles and Methods of Epidemiology
This course provides an introduction to epidemiologic methods and overview of the role of epidemiology in studies of disease etiology and in the planning, delivery and evaluation of health services. The population-based approach to the collection and analysis of health data will be emphasized throughout the course. Through textbook reading, problems sets, class discussion and review of the recent literature, students will become acquainted with the basic designs of epidemiologic studies in theory and in practice. Students will develop the basic skills necessary to use epidemiologic knowledge and methods as the basis for scientific public health practice. Please note, the online version of this course has a synchronous component (live online class sessions). The day/time will be listed in the course register.
Taught by: Schmitz
Course usually offered in spring term
Prerequisite: Elementary statistics
Activity: Lecture
1 Course Unit

NURS 503 Contemporary Issues in Human Sexuality and Health
Emphasizes the theories of sexual development and sexual behavior within the continuum of health and disease. Common sexual practices of people are studied in relation to life-style and/or situational life crisis. Contemporary issues in sexuality and health will be examined. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Guidera; Villari
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Junior and Senior undergraduates. Open to all graduate students

NURS 509 The Medically Fragile Child
This course is designed to assist prospective practitioners develop advanced skills in identifying the needs and interventions for medically fragile neonates, children and their families.
Taught by: Deatrick
Course usually offered summer term only
Activity: Lecture
1 Course Unit
Notes: Summer Session II

NURS 511 Loss, Grief and Bereavement
Loss, grief and bereavement are pervasive aspects of the human experience. The content of this course provides a basis both for personal development and professional growth. Through a series of seminars, key issues surrounding loss, death, dying, grief and bereavement will be examined.
Taught by: Sabella
Course usually offered summer term only
Activity: Lecture
1 Course Unit
Notes: Summer Session II

NURS 513 Obesity and Society
This course will examine obesity from scientific, cultural, psychological, and economic perspectives. The complex matrix of factors that contribute to obesity and established treatment options will be explored. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Compher
Course usually offered in fall term
Prerequisite: Undegraduates by permission of instructor
Activity: Lecture
1 Course Unit
NURS 515 Sociocultural Influences on Health
This course is intended for students interested in U.S/Global Healthcare. It includes lectures, discussions, readings, and written assignments focused on various social, cultural, and economic factors that impact the health and illness perceptions and behaviors of various ethnic and minority groups. In particular, it focuses on how culture affects health and disease, and how health and disease affect culture. This course takes a critical approach to knowledge development by scrutinizing values, theories, assumptions, and practices cross culturally. It relies upon a range of interdisciplinary approaches to analyze how disease is diagnosed, treated, and experienced differently in various cultural contexts. At the same time, students will have the opportunity to examine and critique cultural assumptions and theories, the shifting nature of cultures, the situational use of cultural traditions, and the ethnocentrism of contemporary Western health care. Special attention is given to the influence of race, class, gender, religious, and spiritual ideas about health and illness.
Taught by: Wall
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 516 International Nutrition: Political Economy of World Hunger
A detailed consideration of the nature, consequences, and causes of hunger and under-nutrition internationally. Approaches are explored to bringing about change, and to formulating and implementing policies and programs at international, national, and local levels, designed to alleviate hunger and under-nutrition. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Chrzan
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Graduate Students Only

NURS 517 Advanced Nutrition and Metabolism
Essentials of nutritional biochemistry from the molecular level to the level of the whole human organism. Nutrient functions and inter-relationships are explored with attention to the association between nutrients and disease risk. Topics include energy metabolism and regulation of fat storage, new functions of vitamins and minerals, gene nutrient interactions and current research topics.
Taught by: Compher
Course usually offered in spring term
Prerequisite: Nurs 54 or Nurs 112 (Students with extensive background in life sciences by permission of faculty)
Activity: Lecture
1 Course Unit

NURS 518 Nursing and the Gendering of Health Care in the United States and Internationally, 1860-2000
This course examines changing ideas about the nature of health and illness; changing forms of health care delivery; changing experiences of women as providers and patients; changing role expectations and realities for nurses; changing midwifery practice; and changing segmentation of the health care labor market by gender, class and race. It takes a gender perspective on all topics considered in the course. A comparative approach is used as national and international literature is considered. This focus is presented as one way of understanding the complex interrelationships among gender, class, and race in health care systems of the United States and countries abroad.
Taught by: Connolly
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 519 Etiology and Treatment of Contemporary Chronic Diseases in America: Focus on Obesity and Cancer
This course will focus on two of the major public health problems in the United States-obesity and cancer. These diseases will be considered from a variety of perspectives: epidemiological, environmental, physiological and behavioral. In addition, the course will focus on the range of interventions being developed to treat as well as prevent both diseases.
Taught by: Glanz; Jacobs, L.; Sarwer
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 521 Current Topics in Nutrition
The objective of the course is to integrate the nutrition knowledge obtained from previous course work in nutrition and provide the student the opportunity to explore, analyze and formulate implications of the research and related literature on a self-selected topic under the guidance of the faculty coordinator. Current topics and controversies in nutrition will be discussed weekly. Readings will be assigned in coordination with each discussion topic and students will be required to seek out other sources of information to add to the class discussion. Topics will change from year to year to reflect the most recent interests and issues.
Taught by: Compher
Course not offered every year
Activity: Seminar
0.5 Course Units

NURS 523 Advanced Nutrition: Molecular Basis of Nutrition
Prerequisite: NURS 065 or 112
Activity: Lecture
1 Course Unit
Notes: Essentials of nutritional biochemistry of macronutrient (protein, carbohydrate,lipid) metabolism from the molecular level to the level of the whole human organism. Linkages between energy and nitrogen balance and states of health anddisease are examined. Topics include energy metabolic pathways, nutrient transportation, nutrient catabolism, nutrient anabolism, body composition, and biomarkers.
NURS 524 Advanced Human Nutrition and Micronutrient Metabolism
Prerequisite: NURS 605 or NURS 112 or Special Permission
Activity: Lecture
1 Course Unit
Notes: Essentials of vitamin and mineral digestion, absorption, metabolism, and function in humans during states of health and disease are examined. Linkages between key vitamins and their function in biological systems, such as bone health, energy metabolism, hematopoietic function, and immune function, are explored in depth. Topics include pertinent research methodologies, biomarkers, deficiency and toxicity states, and requirements across the life cycle.

NURS 525 Ethical Aspects of Health and Technology
Interdisciplinary approach to the study of the interface between ethics and law in the provision of health and illness care. This course draws upon the disciplines of philosophy, law, biomedical engineering and nursing in examining such concepts as the use/nonuse of biomedical technology, who and how one decides what shall be done for a given “patient;” and the “rights” and responsibilities (accountability) of all persons involved in health/illness care decisions. The interplay of ethical theory, personal value systems, law and technology will be stressed throughout. Lectures, seminars and case studies will be used. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Ulrich
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 526 Child and Adolescent Mental Health
This course is designed to prepare advanced practice registered nurses to address mental health concerns of children, adolescents and their families from a bio-psycho-socio-cultural perspective. Prevention, assessment, and treatment of psychiatric disorders affecting children and adolescents in a variety of settings will be presented in the context of mental health, school and primary health care delivery systems. Students will explore both pharmacologic and nonpharmacologic treatment strategies, as well as methods to identify and implement evidence-based practice in child and adolescent populations. Mental health policy, as well as the unique needs of special populations (e.g., youth in the juvenile justice system) will also be discussed.
Taught by: Brawner
Course usually offered in fall term
Prerequisite: Matriculation in a MSN Program or permission of instructors
Activity: Lecture
1 Course Unit
Notes: Priority will be given to Psychiatric Mental Health NP students

NURS 531 Forensic Mental Health
Forensic mental health is the interface between the law and mental health. This course examines the components of human behavior that bring people into a judicial setting. Content will cover: criminal personalities, forensic interview, and the role of forensic psychiatry. Domestic violence offenders, sex offenders, stalkers, gang members, and offenders who commit homicide will be discussed. Definitions and dynamics of criminal motherhood and the psychodynamics of violent juvenile offenders will be presented. Use of the internet by offenders will also be discussed. This course also offers a field experience in which student’s interview incarcerated individuals. As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.
Taught by: Brown, K.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 532 Cognitive Behavior Strategies in Health Care
Cognitive therapy will be studied as it has been adapted to treat a broad spectrum of clinical disorders including depression, anxiety, phobias, substance, obesity, marital problems, sexual dysfunction, and psychosomatic disorders. Students will have an opportunity to study and observe the crucial link between thoughts and emotions and the sense of competency patients can develop through self-help techniques. The course utilizes didactic, experiential and observational techniques.
Taught by: Kuehlwein
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 533 Victimology
This course examines the wide range of victimization experiences from the perspective of the victim, their families and society. Crimes to be studied include workplace violence, corporate crime, robbery, burglary, assault, rape, stalking, domestic violence, homicide, suicide, elderly abuse and child sexual abuse and exploitation. The role of the medical examiner, health care providers and the FBI as they relate to victims of crime will be discussed. Emphasis will be given to exploring the elements of each crime and response patterns to victimizations. Services available to victims of crime will be discussed. As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.
Taught by: Cronin, G.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Offered Fall, Spring Summer I

NURS 534 Forensic Science I
This course discusses the interface of law and science. Forensic science is the application of scientific principles in the legal arena. This course examines the contribution of forensic science to criminal and civil investigation. Crime scene analysis is accomplished via disciplines within forensic science. The role of the medical examiner, the structure and function of crime laboratories, death investigation and the role of health care personnel in forensic cases is discussed. As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.
Taught by: Cronin, G.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
NURS 535 Comparing Health Care Systems in an Intercultural Context: Study Abroad
This course offers students an opportunity to: 1) expand their knowledge base in health care systems; 2) develop intercultural competency skills and 3) shape a conceptual framework for improving the quality of health care for the individual, the family, the community and society at large. Emphasizes the relational, contextual nature of health care and the inseparability of the notions of the health of individuals and the health of family, society, and culture. Includes field experience.
Taught by: Kagan; Stringer; Muecke
Course usually offered in spring term
Prerequisite: Permission of instructor
Activity: Lecture
1 Course Unit
Notes: Seminar held in Spring, study abroad field experience held intra-session

NURS 540 Current Issues In Health and Social Policy
Analysis of key contemporary issues in health and social policy that will provide students with a deeper understanding of the design and structure of the U.S. health care system, the policy initiatives that have shaped it, and the roles of the government, the private sector, and consumers and advocacy groups in setting the policy agenda. Seminars will examine the origins of each issue, the policies enacted and their effects, both intended and unintended, and will propose and debate the merits of alternative policy solutions. The role of health services and policy research in informing the policy debate and directions will be highlighted. Please note, the online version of this course has a synchronous component (live online class sessions). The day/time will be listed in the course register. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Sochalski; McHugh, M
Course usually offered summer term only
Activity: Lecture
1 Course Unit

NURS 541 Global Engagement Seminar Environmental Health Issues
Cross Listed with NURS 343
Prerequisites: General college-level chemistry and biology knowledge (e.g. CHEM/ BIOL 101, 102) to understand the science underlying environmental health topics or special permission
Activity: Seminar
1 Course Unit
Notes: This course will be a broad overview on current environmental health issues that contribute to significant global morbidity and mortality due to increased urbanization and growth in the economy. The course will cover basic principles of environmental epidemiology, toxicology, health effects of environmental exposures, risk assessment, as well as environmental policy and ethics. The class will have two portions. The first part of the class will be taught lectures, case studies, discussions on campus and a local field trip in the Philadelphia area. The second part of the course will involve a field trip to China during the early summer to help students gain a global perspective on environmental health concerns.

NURS 544 Etiology and Treatment of Contemporary Chronic Diseases in America: Focus on Obesity and Cancer
This course will focus on two of the major public health problems in the United States - obesity and cancer. These diseases will be considered from a variety of perspectives: epidemiological, environmental, physiological and behavioral. In addition, the course will focus on the range of interventions being developed to treat as well as prevent both diseases.
Taught by: Glanz; Sarwer; Jacobs, L.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 545 Maternal and Infant Care in the Americas
This clinical elective will provide an intensive historical, sociopolitical, and cultural perspective of health and health care delivery in the Americas with a special emphasis on Latin America and the Caribbean. Classroom, direct clinical care and field experiences are designed to provide students with a broad view of the history and culture system of the country of focus. The delivery of health care to women and children will be explored from a sociopolitical, cultural and historical context. Service learning experiences are an integral component of this course. The course includes 5 seminars on campus and 10-14 days on site in the country of focus. The country of focus may vary each semester.
Taught by: Guidera; Durain
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Registration By Permission of Instructor
NURS 548 Negotiations in Healthcare
This course examines the process that leads to change in health care settings and situations. Students will develop skills that lead to effective negotiations in interpersonal and organizational settings. Included in the discussion are: concepts of organizational structure and power, negotiating in difficult situations, and the role of the health care professional in negotiation and change. The course also examines techniques leading to successful implementation of negotiated change in the practice setting. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Aiken
Course usually offered in fall term
Prerequisite: Undergraduates must have permission of instructor
Activity: Lecture
1 Course Unit

NURS 550 Home Health Care Concepts: Mgmt. & Delivery of Community-Based Care
This course examines the major aspects of home-based care across patients' life spans from acute to long term care. New trends, advances, and issues in home management of complex conditions, innovative delivery systems and legal, ethical and policy consideration will be explored.
Taught by: Doyle
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 551 Applied Health Informatics
Catalogue Description: This course is designed to address issues related to the impact of information technology on health care practitioners and consumers of all ages. Students will learn about and gain experience with practical applications of information technology (Access, handheld devices, telehealth, Internet resources) that improve the quality of health care communication and delivery and facilitate health care research.
Class projects include working with clinical databases and evidence based information sources.
Taught by: Bowles
Course offered fall; even-numbered years
Prerequisites: Experience in using the Internet to retrieve information. Basic knowledge of Microsoft Access is expected.
Activity: Lecture
1 Course Unit

NURS 552 Health Care and Social Policy
This course is an area study or survey of social policy issues in contemporary health care. Topics include social contexts of health care and health policy; the organization and financing of health services; the health professions; health and illness over the life cycle; achieving equitable access to health services; the interface between health and social services. Health problems of national significance will be addressed including infant mortality, teenage pregnancy, AIDS, the chronically mentally ill and homeless, health impaired elderly.
Taught by: Aiken
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

NURS 553 Innovation & Applied Technology in Health Care II
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

NURS 555 Women and Incarceration
This elective course will afford students the opportunity to develop and implement health education workshops for incarcerated women in the Philadelphia jail system. Students will explore the social and historical framework and trends in the incarceration of women, as well as the needs of this population, and will identify specific areas that need to be addressed by particular disciplines or professions. Students will have direct contact with the jail system, its staff, and female inmates.
Taught by: Brown, K.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 556 Men and Incarceration
Students in this course will develop and implement health and wellbeing education programming for incarcerated men in the Philadelphia Department of Prisons. Evidence suggests improved self-regulation may enhance other therapeutic methodologies consequently reducing the frequency of reoffending. Students will explore the social and legal trends driving the incarceration of urban men and the resulting health and wellbeing needs of this population. Students will have direct contact with the jail system, its staff, and male inmates.
Taught by: Cronin
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Enrollment by Permission of Instructor

NURS 557 Principles of Palliative Care
This course examines national and global perspectives and clinical issues in the delivery of palliative care with diverse populations in multiple health care settings. Students focus on the care of persons with life-threatening, progressive illness, emphasizing respect for patients' and families' beliefs, values, and choices. Students also explore psychosocial and spiritual dimensions of palliative care. Historical, sociocultural, economic, legal, and ethical trends in palliative care are discussed. Factors affecting health care systems and societal attitudes are considered in evaluating the delivery of care during advanced illness and at the end of life. Students engage in the critical analysis of literature, research, and observational experiences concerning biopsychosocial needs of patients and families. Students acquire competencies in patient/family assessment, communication, decision-making, and interdisciplinary collaboration in palliative care. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Ersek
Course usually offered in fall term
Prerequisite: Undergraduate Students Need Permission
Activity: Lecture
1 Course Unit
Notes: for Graduate Students and Junior and Senior Undergraduate Nursing Students (with Course Faculty Permission)

NURS 558 Health Comm Digital Age: Health Communication in the Digital Age
Activity: Lecture
1 Course Unit
NURS 567 An Evidence-based Approach to Managing Symptoms in Advanced Illness
This course uses an evidence-based approach towards systematic assessment and management of common symptoms and symptom clusters accompanying progressive, life-limiting illnesses within a framework of nationally recognized standards and guidelines for palliative and end-of-life care. Students are prepared to apply principles of palliative management to diverse patient populations across clinical settings including acute, primary, long-term, and community care. Refer to course syllabus or email course faculty for respective requirements. Taught by: Meghan; Ersek
Course usually offered in fall term
Prerequisites: Undegrads Need Permission
Activity: Lecture
1 Course Unit

NURS 570 Introduction to Public Health
This course will provide a foundational overview of the field of public health and grounding in the public health paradigm. Content will include the history of public health, an introduction to the basic public health sciences including behavioral and social sciences, biostatistics, epidemiology, environmental public health, policy and management and prevention of chronic and infectious diseases and injuries, future directions for public health and an introduction to issues in international health, ethics, context analysis (specifically the notion of urban health), health promotion and disease prevention paradigms. Taught by: Buttenheim; Nguyen
Course usually offered in fall term
Prerequisite: Undegrads Need Permission
Activity: Lecture
1 Course Unit

NURS 573 Innovation in Health: Foundations of Design Thinking
Innovation, defined as a hypothesis-driven, testable, and disciplined strategy, is important to improve health & healthcare. Employing new ways of thinking, such as with design thinking, will help open up possibilities of ways to improve health & the process of healthcare. Incorporating current & emerging social & digital technologies such as mobile apps, wearables, remote sensing, and 3D printing, affords new opportunities for innovation. This course provides foundational content & a disciplined approach to innovation as it applies to health & healthcare. A flipped classroom approach with the in-class component focusing on group learning through design thinking activities. The course is open to undergraduate nursing students as a case study & upper-level undergraduates and graduate students from across the Penn campus. The course provides a theoretical foundation in design thinking & may provide an overview of innovation technology & digital strategies as well as social & process change strategies. To enhance the didactic component, students will actively participate in a design case study. Students will be matched by interest and skill level with teams & will work with community-based organizations, healthcare providers and/or innovation partners. Student teams will meet their partners to identify & refine a health or healthcare problem to tackle. Students will work throughout the semester to create an innovative solution that will be pitched to their community-based organization, healthcare provider, and/or innovation partner at the end of the semester. Taught by: Leary
Course usually offered in fall term
Prerequisites: Completed freshman & sophomore level courses or graduate student status.
Activity: Lecture
1 Course Unit

NURS 575 Health, Sustain & Design: Health, Sustainability & Built Environment Design
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: This foundational course is for students in nursing, public health, medicine, environmental policy, planning and design to be prepared for increasingly prevalent intersectoral professional work. Students will learn the social determinants of health through the design of place, including housing, schools, healthcare and the workplace. They will learn about design and planning theory that intersects with diseases, sustainability and climate action’s impact on health. Through case studies seminars and tours, students will be prepared to articulate the essential role of design and development processes to increase health professionals’ effectiveness. Rather than just combating diseases, health promotion through placemaking can be essential for healthy communities.

NURS 577 Advanced Practice Issues for Palliative Care Nurses
This course provides an in-depth examination of 1) key practice, policy, and ethical issues affecting the delivery of palliative care and 2) the responsibilities of advanced practice nurses (APRN) providing care to patients with progressive, life-limiting illness and their families. Learning experiences will focus on conducting patient/family conferences; examining selected ethical issues in palliative care; analyzing organizational, economic and health policy issues that affect the delivery of hospice and palliative care; exploring current and emerging models of palliative care delivery; and creating approaches to enhancing continuity of palliative care across settings. Students will choose assignments to meet their professional goals. Taught by: Ersek; Meghan; Polomano
Course usually offered summer term only
Prerequisite: NURS 557
Activity: Lecture
1 Course Unit
Notes: Undergraduates Need Permission

NURS 580 Pharmacology of Anesthesia and Accessory Drugs I
This course explores the various routes of anesthetic administration addressing the potential benefits and risk of each. Special emphasis is placed on specific anesthetic agents and their appropriate use. The responses and common complications associated with these agents are discussed. Taught by: Magro; Lynn
Course usually offered in fall term
Prerequisite: NURS 617
Activity: Lecture
1 Course Unit
NURS 587 Advanced Leadership Skills in Community Health
Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in healthcare advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discuss ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods.
Taught by: McCool; Klusaritz; Lipman
Course usually offered in spring term
Prerequisite: Enrollment in a Masters or Doctoral program
Activity: Lecture
1 Course Unit
Notes: Undergraduates with permission of the instructor

NURS 588 The Politics of Women's Health Care
This course will utilize a multidisciplinary approach to address the field of women's health care. The constructs of women's health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women's health care from an an obstetrical/gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity diversity of women's health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women's equality/inequality status and state of health. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: McCool; Durain; Lewis, L.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 600 Principles and Practice of Transformative Nursing Education
This course is designed to provide expert nurses with a theoretical foundation to promote excellence in teaching in both faculty and professional development roles. Principles of adult learning theory, learning styles and preferences are explored with a focus on impact for educational design. Students will review various learning domains and approaches for curriculum development including writing measurable learning objectives. Content also includes an examination of numerous didactic teaching strategies, general tactics for the use of simulation, approaches for inter-professional collaboration, and methods for evaluating learner competence.
Taught by: Keim; Wildenberg
Course usually offered in fall term
Prerequisites: Baccalaureate in Nursing plus a Master's Degree in Nursing or in a Health Related Area. Current Master or Doctoral Students with permission of the Program Director and the Course Director.
Activity: Lecture
1 Course Unit

NURS 601 Teaching Nursing in an Academic Environment
This course provides students with the fundamental knowledge and skills in preparation for teaching in a faculty role in an academic environment. Specific focus will be placed on program design, development of teaching skills in the didactic, simulation, clinical, and online learning environments, management of didactic and clinical course offerings including effective use of learning management systems, and methods for evaluation of student performance including various test constructions and paper grading rubrics. This course also reviews approaches and resources for working with students who have learning challenges or performance issues.
Taught by: Keim; Wildenberg
Course usually offered in spring term
Prerequisite: NURS 600
Activity: Lecture
1 Course Unit

NURS 604 Chronic Illness in the Community: Lifespan Approach
This course focuses on theory and research from the behavioral and nursing sciences on the psychological and social consequences of ongoing illness. In addition, the health policy issues engendered by these problems will be addressed.
Taught by: Shaughnessy, Buzby, Murphy
Course usually offered in spring term
Prerequisite: Primary Care Majors or instructor permission
Activity: Lecture
1 Course Unit

NURS 605 Biochemical and Physiological Aspects of Metabolism and Human Disease
Selected aspects of genetics, biochemistry, physiology and pharmacology are presented and applied to nursing care. Embryonic, histologic, and gross anatomical features of certain organ systems are functionally related to biochemical and physiological mechanisms essential for the maintenance of a stable internal environment. Special emphasis is placed upon integrating functions of the nervous and endocrine systems. Certain deviations from normal metabolism, structure and function are detailed.
Taught by: Lafferty; Malseed, Z.; Tkacs
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Summer I

NURS 607 Advanced Physiology and Pathophysiology
This course will integrate advanced physiology with pathophysiology and clinical implications across the lifespan for advanced nursing practice. Organ systems function and dysfunction from the level of the cell through integrated organ levels will be presented, and the genetic basis of disease will be discussed. Recent scientific advances will be discussed with application to new approaches to disease and symptom management. The interrelationships between basic physiology, clinical pathophysiology, and genetics are emphasized through lecture and case studies.
Taught by: Libonati
Course usually offered in fall term
Prerequisites: Completion of undergraduate courses that include Biochemistry, Nutrition, Anatomy and Physiology or permission of the instructor.
Activity: Lecture
1 Course Unit
NURS 608 Advanced Pharmacology and Therapeutics for Nursing Practice
Advanced principles of clinical pharmacology and therapeutics are applied to the nursing care of individuals across the life-stage spectrum. It focuses on the content and knowledge employed by the advanced practice registered nurse in the management of various conditions and disease states. The course builds on the pharmacology knowledge base acquired in the baccalaureate nursing program. The advanced pharmacology and therapeutics of several common diseases or conditions found in the acute care and primary care setting is presented. This is supplemented with pharmacotherapy modules to meet program specific needs.
Taught by: Boulatta; Carey; Manning
One-term course offered either term
Prerequisite: NURS 607 or NURS 685
Activity: Lecture
1 Course Unit

NURS 609 Advanced Pathophysiology
Integrates basic physiology and clinical pathophysiology for graduate nursing students. Whenever possible basic physiologic concepts will be used to illustrate specific pathophysiological problems. The interrelationships between clinical pathophysiology and basic physiology are emphasized.
Taught by: Tkacs; Staff
Course usually offered in spring term
Prerequisites: NURS 605, or 684, or 695
Activity: Lecture
1 Course Unit

Notes: Summer Session II

NURS 610 Concepts in Healthcare Economics
This course examines health care from an economic perspective tailored for the nurse manager and executive. Emphasis is on the allocation of health care resource policies in the United States with examination of different health care programs. Within the health care industry, focus is on public and private health care funding in addition to the role of managed care systems with relation to financing and delivery of health services. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Piper, A
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

NURS 611 Advanced Principles of Nurse Anesthesia Practice: Problem-Based Learning
Course usually offered in fall term
Prerequisite: NURS 609; NURS 858
Activity: Lecture
1 Course Unit

NURS 612 Principles and Practice of Healthcare Quality Improvement
Healthcare delivery is complex and constantly changing. A primary mission of leading healthcare organizations is to advance the quality of patient care by striving to deliver care that is safe, effective, efficient, timely, cost-effective, and patient-centered (Institute of Medicine). The goal of this interprofessional course is to provide students with a broad overview of the principles and tools of quality improvement and patient safety in healthcare as well address the knowledge, skills and attitudes as defined by the Quality and Safety Education for Nurses (QSEN) guidelines. It will provide a foundation for students or practicing clinicians who are interested in quality improvement and patient safety research, administration, or clinical applications. Content will address the history of the quality improvement process in healthcare, quality databases and improvement process tools and programs. Through the use of case studies and exercises students will become familiar with the use of several quality improvement programs and tools. For example, the Plan-Do-Study-Act (PDSA) cycle, Six Sigma and the Toyota Production System known as Lean Production processes will be addressed. Students can use this course to identify the tools and design the methods that they plan to employ in a quality improvement or patient safety project in their area of interest.
Taught by: Myers, J.; Burke, K.
Course usually offered in fall term
Also Offered As: HPR 504
Activity: Lecture
1 Course Unit

NURS 613 Behavioral Economics and Health
An introduction to the application of behavioral economics to health & health care. Behavioral economics, a field at the intersection of psychology & economics, help us understand how bounded rationality, common cognitive biases, and inconsistent time preferences lead us to act against our best interest (& sometimes against the interests of the patients, family members, or communities that we care for). The course provides a pragmatic, hands-on orientation to using behavioral economics in the diagnosis of behavioral bottlenecks & the design & testing of behaviorally-informed interventions.
Taught by: Buttenheim
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 621 Principles of Nurse Anesthesia Practice V
This course provides a systems approach to examining specialty surgical procedures and the anesthesia requirements for each. Analysis of the pre-anesthesia assessment, the intraoperative monitoring and the post-anesthesia care required for patients undergoing the surgical procedure will be presented. Population specific considerations will be emphasized.
Taught by: Magro; Lynn
Course usually offered in spring term
Prerequisite: NURS 620
Activity: Lecture
1 Course Unit

NURS 625 Clinical Modalities Across the Life Cycle in Advanced Practice Psychiatric Mental Health Nursing
Crises intervention, brief psycho-therapy, group processes and practices, milieu therapy, and intervention with families are examined as they relate to nursing practice in mental health.
Taught by: Coleman, C.
Course usually offered summer term only
Activity: Lecture
1 Course Unit
NURS 626 Family and Organizational Systems Across the Life Span
This course presents Bowen Family Systems Theory as it applies to families over the life and organizations over time. This is a theoretical course whose purpose is to provide the student with a broad, systemic perspective on human functioning. The course begins with a detailed presentation of Systems Theory, from both a family and organizational perspective. As presented there is a continual compare and contrast to other dominant theories of human functioning. It then applies the concepts of Systems Theory to the understanding and assessment of the stages of the normal family life cycle from a multi-generational, multi-cultural perspective. This is followed by discussions of the theory's application to the emotional problems of children, adolescents, adults and their families. Likewise, application to organizational behavior is made, including health care organizations. Relevant research is discussed throughout.

Taught by: Pollack, F.
Course usually offered summer term only
Activity: Lecture
1 Course Unit
Notes: Summer Session I

NURS 628 Mental Health and Aging
An examination of the psycho-socio-cultural processes which influence the behavior patterns, coping, and adaptation of older adults. The course emphasizes strategies to promote mental health as well as assessment, presentation, and intervention in the major acute and chronic psychiatric disorders affecting the older adult.

Taught by: Cacchione; Evans
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 629 Basic Principles of Nurse Anesthesia Practice
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 637 Introduction to Research Methods and Design
The relationships among nursing theory, research and practice will be examined. An emphasis will be placed on research competencies for advanced practice nurses (APNs), including understanding nursing research methods and strategies in order to evaluate research results for applicability to practice and to design projects for evaluating outcomes of practice. An understanding of statistical techniques will be integrated into the course and build on the required undergraduate statistics course. Published nursing research studies will be evaluated for scientific merit and clinical feasibility, with a focus on evidence-based practice. Please note, the online version of this course has a synchronous component (live online class sessions). The day/time will be listed in the course register.

Taught by: Polomano; Hatfield; Matura
One-term course offered either term
Prerequisites: Undergraduate Statistics Class. Must hold an RN license.
Activity: Lecture
1 Course Unit
Notes: Also offered in 6 week Summer Session I

NURS 640 Global Health and Health Policy
This participatory interdisciplinary seminar course examines contemporary issues in public health policy and global health. The organizing framework is social determinants of health. We consider evidence that inequalities in education, income, and occupation influence health status, and the policy dilemma that broad interventions to improve population health may increase health disparities. We critically examine whether prevention is always better than cure, and what modern medicine has to offer in terms of health. We explore the public policy process in health using the “tobacco wars” as a case example, of how politics, policy, law, commercial interests, and research intersect to affect the public’s health. We examine whether global health is in a state of decline, and the extent to which failures in public health, public policy, and foreign policy have contributed to increasing threats to world health. Likewise we will examine the potential for greater integration of health into foreign policy to create global infrastructure upon which to advance health. We will examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries.
There are no prerequisites. The course is designed for graduate students in the social and behavioral sciences, health professions, public health, business and law. Advanced undergraduate students will be admitted with permission.

Taught by: Aiken; Voet; McLaughlin
Course not offered every year
Activity: Lecture
1 Course Unit

NURS 641 Autism Spectrum Disorder: Prevalence, Etiology, Screening and Assessment
Through classroom and clinical experiences, this course provides an overview of the public health problem of autism spectrum disorder (ASD). Content addresses the natural history, etiology, rising prevalence, risk factors, and core features. Changes in prevalence statistics and possible causes are outlineThese subjects are described in general terms for an overall picture of the disorder. Taking a developmental approach, students begin case management and follow a family through screening, diagnosis and treatment planning. Key information is elaborated through case studies. The course highlights the important and evolving role of nurses in the care of people with ASD. Content is supported by the scientific literature. Students' clinical experiences start with the identification and collaborative work with a family that has a young child with ASD. The student follows that family and the child through diagnosis, treatments and long term planning. This case approach allows the student to work with the same family over the entire post-masters program to learn the value of interdisciplinary, contiguous care.

Taught by: Pinto-Martin; Souders
Course usually offered in fall term
Prerequisites: Post-BSN students only.
Activity: Lecture
1 Course Unit
Notes: Junior and senior undergraduate students may be admitted with course faculty permission.
NURS 642 Health and Behavioral Care Planning and Intervention for Autism Spectrum Disorder
Through classroom and clinical experiences, this course focuses on the application of various treatment approaches to the management of acute and chronic problems of autism spectrum disorder. Approaches to behavioral, psychological and medical co-morbidities are explored, practiced and evaluated. Students’ clinical experiences build on the previous semester and continue with the application of class instruction to patient and family care. The student works closely with behaviorists, psychologists and occupational therapists to integrate nursing care planning with other services. This case approach continues, and exposure to a second family is added to expand learning opportunities and develop nursing services.
Taught by: Pinto-Martín; Souders
Course usually offered in spring term
Prerequisite: NURS 641
Activity: Lecture
1 Course Unit

NURS 643 Leadership, Advocacy, and the Practice of Integrated Nursing Care of ASD
Emphasis is on the synthesis of course content practice. Through classroom and clinical experiences, students critically examine the role of nursing in the life-long care of people with ASD, and identify ways to expand the scope of nursing care for this vulnerable population. Students explore the availability of services in the community and discuss approaches to patient advocacy. Students have opportunities to select an area of specialization to develop specific practice expertise. Such areas are Diagnosis and Referral Practices (e.g. ADOS Training), Behavioral Therapy Training (e.g. Applied Behavioral Analysis), and clinical research. Practical issues of collaboration and reimbursement for services are explored. Students’ clinical experiences are designed to facilitate scholarship, independence and advanced specialization in a chosen component of ASD care, for example, behavioral analysis, screening and/or diagnosis, or an agenda for research. Students identify and implement an independent project.
Taught by: Pinto-Martín; Souders
Course usually offered summer term only
Prerequisite: NURS 641
Activity: Lecture
1 Course Unit
Notes: Spring and/or Summer Offering

NURS 644 Health Care in an Aging Society
Individual and societal influences on the care of older adults are examined in detail within the context of an emerging health care system. Normal changes in physical and psychological health are explored in depth. Significant issues affecting care of older adults and their families at the global and national level are discussed.
Taught by: Bradway;
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 646 Primary Care: Diagnosis and Management of Adults Across the Lifespan
This course focuses on development of critical thinking skills to address health care problems of adults across the lifespan, with an emphasis on middle-aged and older adults, develop differential problem solving skills and determine appropriate management interventions. The management of common acute and chronic health conditions will include evidence based primary preventions, drug and treatment therapeutics, and referral to other health care providers. Students have the opportunity to build on previously acquired skills and to apply concepts of primary care to manage the health problems of adults across the lifespan.
Taught by: Bradway; Cotter
Course usually offered in fall term
Prerequisite: NURS 657
Activity: Lecture
1 Course Unit

NURS 647 Primary Care Clinical Practicum: Diagnosis and Management of Adults across the Lifespan
Management and evaluation of primary care problems of middle-aged and older adults in a variety of ambulatory and occupational settings. Opportunity to implement the role of the nurse practitioner with middle-aged and older adults and their families in the community. Interdisciplinary experiences will be pursued & collaborative practice emphasized. Students are expected to assess and begin to manage common chronic health problems in consultation with the appropriate provider of care. The initiation of health promotion & health maintenance activities with individuals and groups is stressed. Includes 16 hours a week of clinical experience with a preceptor.
Taught by: Cross; O’Sullivan
Course usually offered in fall term
Prerequisite: NURS 657
Corequisite: NURS 646
Activity: Clinic
1 Course Unit

NURS 648 Primary Care: Complex Diagnosis and Management of Adults across the Lifespan
This course will build on concepts presented in the Diagnosis and Management of Adults across the Lifespan (NURS 646) course. The focus is on refining health assessment skills, interpreting findings, developing and implementing appropriate plans of care to meet common health maintenance needs of adults and to promote the health of adults with more complex health problems with an emphasis on the frail adult. The student will gain increased expertise in communication skills, health assessment skills, interpreting findings, epidemiological concepts and developing and implementing plans of care. The emphasis will be placed upon managing an aging population with complex, chronic healthcare needs and promoting healthy behaviors across the lifespan.
Taught by: Cotter
Course usually offered in spring term
Prerequisites: NURS 646, 647
Activity: Lecture
1 Course Unit
NURS 649 Primary Care Clinical Practicum: Complex Diagnosis and Management of Adults across the Lifespan
The focus of this course is the application of concepts presented in the Complex Diagnosis and Management of Adults Across the Lifespan (NURS 648) including initial workups of new patients, and the evaluation and management of patients with self-limiting acute problems, or stable chronic illnesses. Students will gain increased clinical expertise in a variety of community-based clinical settings including but not limited to health maintenance organizations, community clinics, long term care, assisted living, continuing care retirement communities, occupational health settings, and private practice. The student will gain increased expertise in communication skills, health assessment skills, interpreting findings, applying epidemiological concepts and developing and implementing plans of care for adults across the lifespan with health maintenance needs, and/or common acute and chronic health problems.
Taught by: Cotter; Taylor
Course usually offered in spring term
Prerequisites: NURS 646, 647
Corequisite: NURS 648
Activity: Clinic
1 Course Unit

NURS 650 Systems Thinking in Patient Safety
This blended online/in-classroom graduate level course integrates principles of systems thinking with foundational concepts in patient safety. Utilizing complexity theories, students assess healthcare practices and identify factors that contribute to medical errors and impact patient safety. Using a clinical microsystem framework, learners assess a potential patient safety issue and create preventive systems. Lessons learned from the science of safety are utilized in developing strategies to enhance safe system redesign. Core competencies for all healthcare professionals are emphasized, content is applicable for all healthcare providers including, but not limited to, nurses, pharmacists, physicians, social workers and healthcare administrators, and may be taken as an elective by non-majors.
Course usually offered in spring term
Also Offered As: HPR 650
Activity: Lecture
1 Course Unit

NURS 651 Nursing Informatics
This course is designed to introduce the student to fundamental concepts and issues surrounding technology and information management in today's rapidly changing health care environment. Emphasis will be placed on defining informatics and the models and theories used in its development. To prepare the student to take a leadership role in information system design and selection the class will study the process of information systems analysis, implementation and evaluation involving functional, organizational and human aspects.
Taught by: Bowles; Maffei
Course usually offered summer term only
Prerequisite: Basic Computer Skills
Activity: Online Course
1 Course Unit

NURS 652 Applied Healthcare Accounting and Business Planning
This course focuses on the management of financial resources in the healthcare industry particularly in inpatient and ambulatory care settings. Specific emphasis is on applied accounting, budgeting, capital planning, nursing staffing/scheduling and variance analysis. Additionally, students will apply concepts in developing a business/program plan including completion of an environmental scan, cost-benefit analysis and marketing plan. Students will engage in strategic planning, stakeholder analysis and benchmarking efforts.
Taught by: Keim; Fuir
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 655 Nursing Administration Practicum
This administrative practicum will be individually tailored to meet each student's career goals. Students will be placed with an expert role model who in most instances will be a practicing nurse executive. The setting may vary according to the student's interests and objectives. Examples include acute care, home care, long term care, occupational health, community based clinics, consulting groups and political/legislative experiences.
Taught by: Keim, DiMichele
One-term course offered either term
Prerequisite: NURS 699
Activity: Clinic
1 Course Unit

NURS 656 Professional Role Issues for Nurse Practitioners
This course is intended for students planning a career that involves primary health care delivery. It includes lectures, discussions, readings, and projects focused on health, social, economic and professional factors influencing health care delivery in the community.
Taught by: O'Sullivan, Bryan
Course usually offered in fall term
Corequisite: NURS 657
Activity: Lecture
1 Course Unit

NURS 657 Advanced Physical Assessment and Clinical Decision Making
This is a laboratory/clinical course designed to help prospective nurse practitioners develop advanced clinical assessment skills. Provider-patient interaction, data collection, and hypothesis formulation are emphasized. All participants engage in actual practice with fellow students, and/or models, and consenting patients.
Taught by: Buzby; Reger; Sherry
Course usually offered in fall term
Activity: Laboratory
1 Course Unit
NURS 658 Clinical Management of Primary Care with Young Families
Assessment and treatment of the young child in ambulatory care settings is the focus of this developmentally organized course. This course provides the nurse practitioner student with the necessary knowledge and experience to assist individuals with the most common health problems, including acute episodic illness as well as stable chronic disease. The concepts of health promotion and health maintenance are integrated throughout the curriculum. Using a developmental framework, the maturational tasks and problems of children and their families in relation to illness and health are explored.
Taught by: O'Sullivan
One-term course offered either term
Prerequisites: NURS 656, 657
Corequisite: NURS 659
Activity: Lecture
1 Course Unit

NURS 659 Clinical Practicum: Primary Care with Young Families
Management and evaluation of primary care problems of children in a variety of ambulatory settings. Opportunity to implement the role of nurse practitioner with children and their families in the community occurs under the guidance of faculty and experienced preceptors. The initiation of health promotion and health maintenance activities with individuals and groups is stressed. Collaborative, interdisciplinary practice is emphasized as students assess and manage common problems in consultation with an appropriate provider of care. 20 hours a week of clinical experience with a preceptor is arranged.
Taught by: O'Sullivan
One-term course offered either term
Prerequisites: NURS 656, 657
Corequisite: NURS 659
Activity: Clinic
1 Course Unit

NURS 660 Clinical Practice with Select Populations: Adolescents
Focus on assessment and treatment of adolescents in a variety of settings. Didactic emphasis is on the special needs encountered among adolescents. This course adds to the student's previous knowledge and skill in the delivery of primary care. Working with this specific population the student gains necessary knowledge and experience in assisting individuals with most common health problems, including acute episodic illness and stable chronic disease, as well as health promotion needs.
Taught by: O'Sullivan
Course usually offered summer term only
Prerequisites: NURS 656, 657, 658, 659
Activity: Clinic
1 Course Unit
Notes: Summer Session I

NURS 661 Clinical Management of Primary Care with Adults
Assessment and treatment of younger adults in ambulatory care settings is the focus of this clinical course. The course provides the nurse practitioner student with the necessary knowledge and experience to assist individuals with most common health problems, including acute episodic illness. The concepts of health promotion and health maintenance are integrated throughout the curriculum. Using a developmental framework, maturational tasks and problems of the adult and family in relation to illness and health are explored.
Taught by: O'Sullivan
Course usually offered summer term only
Prerequisites: NURS 646, 647 or NURS 658, 659
Activity: Clinic
0 Course Units
Notes: Summer Session I

NURS 663 Advanced Concepts in Primary Care
In conjunction with the development of advanced clinical skills, students focus on advanced practice role development and the study of issues in health service delivery related to the practice of primary health care. Economics, case management and cultural/ethical aspects of care are discussed.
Taught by: O'Sullivan
Course usually offered summer term only
Prerequisite: NURS 660 or NURS 661
Activity: Clinic
1 Course Unit
Notes: Summer Session II

NURS 664 Advanced Practice Nursing for Oncology Care
Students are introduced to cancer epidemiology and pathophysiology, cancer genetics, prevention, risk assessment and reduction for specific cancers, screening techniques, diagnostic procedures and criteria, and local and systemic therapies used to treat cancer. The influence of individual characteristics on health promotion, health behaviors, population cancer risk, and cancer detection are explored in the context of biological, psychological, socioeconomic and sociocultural factors across age groups from adolescents to older adults. Evidence-based practice guidelines and research are applied to promote healthy lifestyles, monitor cancer risk, address psychosocial issues, facilitate access to care, and reduce health care disparities for populations at risk and diagnosed with cancer, and cancer survivors.
Taught by: Hollis, Polomano
Course usually offered in fall term
Prerequisite: NURS 607; NURS 637
Activity: Online Course
1 Course Unit
Notes: Summer 12 Week Session; Permission to take this course as an elective must be approved by the course faculty.

NURS 666 Effects of Cancer and Cancer Therapy
Principles of cancer treatment, associated responses and symptom management are presented. Emphasis is on the development of advanced clinical decision making skills in identifying multiple alterations resulting from cancer and cancer therapy.
Taught by: Walker; Prechtel-Dunphy
Course usually offered in spring term
Prerequisites: NURS 646, 664
Corequisite: NURS 667
Activity: Online Course
1 Course Unit
NURS 667 Oncology Nursing: Assessment, Diagnosis, & Cancer Management
Emphasis is on the application of critical thinking and diagnostic reasoning skills in advanced clinical decision making. Students access, diagnose, and manage the care of oncology patients with a variety of cancers. The delivery of care and evaluation of role effectiveness within the health care system are examined.
Taught by: Polomano; Walker; Prechtel-Dunphy
Course usually offered in spring term
Prerequisites: NURS 664, NURS 666
Corequisite: NURS 666
Activity: Online Course
1 Course Unit
Notes: $60 Lab Fee

NURS 670 Principles of Adult Gerontology Acute Care I
This didactic course examines the epidemiologic, assessment, diagnostic, management and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. Students explore the dynamic interplay between the pathophysiologic basis of disease and the psychosocial and socio-cultural responses to acute and critical illness and injury as they develop clinical decision-making skills. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized. Cardiovascular and pulmonary systems, infectious and prevention issues commonly encountered by adults are covered. Particular focus is placed on specific issues related to the older adult such as frailty, dehydration, loss of functional mobility, falls, and other geriatric syndromes.
Taught by: Pawlow; Elgart; Becker; Doherty
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 671 Principles of Adult Gerontology Acute Care II
In this didactic course, students learn to integrate their advanced pharmacology and pathophysiology background with their understanding of acute illness and injury. The focus is on the evidence-based management of patients with neurologic, gastrointestinal, renal, oncologic, and metabolic health problems. Students develop skills to create a differential diagnosis when an adult/older-adult presents with a constellation of symptoms. Common and atypical presentations of illness and disease are explored. Focus is placed on holistic care including the psychosocial, cultural, and spiritual aspects of patients' response to their illness or injury. Epidemiology, assessment, diagnosis, management, and advanced clinical decision making based on current clinical research are emphasized.
Taught by: Pawlow; Elgart; Becker; Doherty
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 672 Principles of Adult Gerontology Acute Care III
This didactic course examines issues related to the epidemiology, assessment, diagnosis, management and evaluation of acute, critical and complex chronically ill adults across the adult-older adult age continuum. Students explore the dynamic interplay between the pathophysiologic basis of disease and the psychosocial and socio-cultural responses to illness and injury across the adult age continuum as they develop clinical decision-making skills. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized. Content focuses on special adult and older adult patient populations with commonly encountered health problems.
Taught by: Pawlow; Elgart; Becker; Doherty
Course usually offered summer term only
Activity: Lecture
1 Course Unit

NURS 673 Advanced Clinical Decisions in Adult Gerontology Acute Care
This didactic and fieldwork course focuses on development of a systematic approach to advanced physical assessment, the use and interpretation of diagnostic technologies and development of diagnostic reasoning as it applies to patient management of the adult-older adult acutely ill or injured patient. Emphasis is placed on development of competence to perform a comprehensive history and physical examination, incorporating the analysis of biotechnological data trends. Building fundamental skills in developing differential diagnoses and clinical decision making for acutely ill patients across the adult age continuum is a focus of this course.
Taught by: Pawlow; Griffith; Becker
Course usually offered in fall term
Prerequisites: NURS 607, 657
Corequisite: NURS 670
Activity: Seminar
1 Course Unit

NURS 674 Adult Gerontology Acute Care NP: Professional Role and Clinical Practicum I
This didactic and clinical fieldwork course explores issues relevant to the role of the Adult Gerontology Acute Care Nurse Practitioner within the complex U.S. health care system. Role development, reimbursement issues, provision of quality and ethical care and evidence-based nursing and medical interventions are introduced and discussed in the classroom. Clinical fieldwork focuses on assessment of complex acute, critical and chronically-ill patients for urgent and emergent conditions, using both physiologically and technologically derived data, to evaluate for physiologic instability and potential life-threatening conditions, development of differential diagnoses, application of diagnostic reasoning and formulation, implementation, evaluation and modification of individualized plans of care including pharmacological and non-pharmacological modalities. Development of advanced clinical competencies and clinical decision making abilities about adults across the age continuum is emphasized.
Taught by: Becker; Griffith
Course usually offered in spring term
Prerequisite: NURS 673
Activity: Lecture
1 Course Unit
NURS 675 Adult Gerontology Acute Care NP. Professional Role and Clinical Practicum II
This didactic and fieldwork course focuses on the role of the Adult Gerontology Acute Care Nurse Practitioner and the expansion of advanced clinical competencies and clinical decision making abilities. Clinical experiences in acute care settings provide the student with opportunities to refine history and physical examination techniques, diagnostic reasoning, formulation, implementation, evaluation and modification of individualized management plans. Specific attention is given to the unique presentation of syndromes and constellation of symptoms that may be typical or atypical presentation of complex acute, critical and chronic illness in adults and older adults. Facilitating transition of patients at varying life stages through the complex health care system is encouraged exploring the multiple governmental, social and personal resources available to acutely ill adults across the age continuum. The application of advanced nursing, medical and biopsychosocial knowledge in the management of patients and the collaboration between the nurse practitioner and the patient, family and interprofessional healthcare team are emphasized.
Taught by: Becker; Griffith; Doherty
Course usually offered summer term only
Prerequisites: NURS 670, 671, 672, 673, 674
Activity: Lecture
1 Course Unit
Notes: Summer I II - 12 Week Course

NURS 677 Environmental Toxicology: Risk Assessment and Health Effects
This course presents general principals of toxicology and the disposition of toxins in the body. Case studies of the effects of environmental and occupational toxins on individuals will be analyzed. This course is designed for students who desire a strong foundation in toxicological concepts and principals and provides an overview of major toxins in our environment and their association with human health.
Taught by: Liu
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Undergraduates Need Permission

NURS 681 Applied Physiology for Nurse Anesthetists I
This course provides an in-depth analysis of the anatomy, physiology and pathophysiology of the respiratory and cardiovascular systems and related anesthesia implications. The concepts of ventilation and perfusion as they relate to oxygen and anesthetic delivery and metabolism are examined. The effects of compromised cardiac and pulmonary function and their implications for the patient and anesthesia plan are reviewed. The impact of anesthesia on the structure and function of the heart as a pump as well as the characteristics of systemic circulation will be explored. The effect of surgery and anesthesia on the respiratory and cardiovascular systems will be emphasized.
Taught by: Magro; Lynn; Tkacs
Course usually offered summer term only
Activity: Lecture
1 Course Unit
Notes: 12 Week Summer Session

NURS 683 Applied Science Related to Anesthesia
This course is an in-depth analysis of the chemical and physical principles as they apply to nurse anesthesia practice. Aspects of organic and biochemistry including the chemical structures of compounds and its significance in pharmacology will be explored. Applications of the laws of physics as they pertain to nurse anesthesia practice will be reviewed with specific examples. Emphasis on the dynamics of the anesthesia delivery system and related equipment will be presented.
Taught by: Magro; Lynn; Scanga
Course usually offered in spring term
Prerequisites: NURS 607, 681, 682
Activity: Lecture
1 Course Unit

NURS 685 Advanced Developmental Physiology and Pathophysiology
This course will address advanced human embryology, physiology and pathophysiology. Biochemical genetics and the genetic basis of disease will be discussed. Normal fetal development and physiology of organ systems will be used as the foundation for understanding the pathophysiology of disease across the lifespan.
Taught by: Trimarchi; Marino
Course usually offered in fall term
Prerequisite: Undergraduate course in Anatomy & Physiology
Activity: Lecture
1 Course Unit

NURS 686 Well Woman Health Care
This course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care of women from adolescence through post-menopausal years. The content is directed at expanding the expertise of the student in meeting the primary women's health care needs in contemporary society. Social influences that have an impact on women's lives are also explored.
Taught by: Durain; Grube; Nagtalon-Ramos
Course usually offered in fall term
Prerequisite: NURS 657
Activity: Lecture
1 Course Unit
NURS 688 Complementary/Alternative Therapies in Women's Health
The dramatic rise in the use of complementary and alternative medicine (CAM) by the American public requires that the contemporary health care practitioner have an awareness of CAM therapies and modalities currently available. The end result of this course will not be proficiency in the practice of any of these modalities in particular, but rather a basic understanding of each approach to common conditions and their potential contribution to health and well-being. The focus of the CAM modalities discussed in this course will center on their use in women's health care provision.
Taught by: Grube
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 690 Family Focused Primary Care of the Middle-Aged and Older Adult
This course focuses on primary care problems encountered by middle-aged and older adults and their families. Students have the opportunity to build on previously acquired skills and to apply concepts of primary care to manage the complex health problems of middle-aged and older adults.
Taught by: O’Sullivan
Course usually offered in spring term
Prerequisites: NURS 656, 657
Corequisite: NURS 691
Activity: Lecture
1 Course Unit

NURS 691 Clinical Practicum: Family Focused Primary Care of the Middle Aged and Older Adult
The focus of this course is the evaluation and management of primary care problems in middle-aged and older adults. Students will have an opportunity to implement the role of the nurse practitioner in the clinical setting. Interdisciplinary collaborative experiences will be essential to the clinical practicum. The initiation of health promotion and health maintenance activities with individuals, groups, and families is stressed. Students are expected to assess and manage common chronic health problems in the clinical setting.
Taught by: O’Sullivan
Course usually offered in spring term
Prerequisites: NURS 656, 657
Corequisite: NURS 691
Activity: Clinic
1 Course Unit

NURS 693 Professional Issues in Midwifery
In-depth discussion of current issues facing the profession of nurse-midwifery which impact on professional education, certification, and practice. Includes ethical, legal, and political aspects of nurse-midwifery practice.
Taught by: McCool; Reale; Guidera
Course usually offered in fall term
Prerequisites: NURS 787, 788
Corequisite: NURS 786
Activity: Lecture
1 Course Unit

NURS 697 Leadership in Advanced Oncology Nursing Practice
Students explore the diagnosis and treatment of common cancers in a multidisciplinary approach. The broad array of bio-medical and psychosocial issues that result from the disease itself across the illness continuum are studied. Quality of life, rehabilitation and palliative care issues related to cancer care are addressed. Additionally, students complete an administrative practicum with a nursing leader in an oncology specialty area within a healthcare organization.
Taught by: Keim; Prechtel Dunphy; Sherry; Walker
Course usually offered summer term only
Prerequisites: NURS666 and all requisite nursing courses in the Nursing & Healthcare Administration (NADM) program. May be taken concomitantly with NURS699 or at the discretion of the NADM Program Director.
Activity: Field Work
1 Course Unit

NURS 698 Practicum: Quality Improvement in Healthcare
Building on coursework that provided a broad overview of the principles and tools of quality improvement and patient safety in healthcare, students will apply this knowledge through completion of a mentored quality improvement project in a healthcare organization. In collaboration with faculty and health organization preceptors, students will identify a quality improvement opportunity and develop specific project objectives including, but not limited to, the use of appropriate tools, identification of measureable aims and evaluation methods, sustainable recommendations for process improvement and a comprehensive report of findings and recommendations. This course is part of the Quality Improvement and Safety Processes in Healthcare Minor and should be completed by the student as the capstone course in that minor; students engage in 192 hours of on-site project work.
Taught by: Piper; Keim
Course usually offered in spring term
Prerequisites: NURS 650, NURS 537, NURS 612
Activity: Field Work
1 Course Unit
Notes: Summer and Fall Placement

NURS 699 Advanced Roles in Administrative Nursing Practice
Offered at the end of the Nursing and Health Care Administration or Health Care Leadership programs, this course prepares the graduate for entry into a myriad of administrative or leadership roles. Students will explore role responsibilities for various levels of management positions; health care consultants; health policy advocates; global health leaders; staff development directors; and administrators in non-traditional settings i.e., journal editors, professional associations etc.
Taught by: Rich ; Keim
Course usually offered summer term only
Prerequisites: NURS666 and all requisite nursing courses in the Nursing & Healthcare Administration (NADM) program. May be taken concomitantly with NURS699 or at the discretion of the NADM Program Director.
Activity: Lecture
1 Course Unit
NURS 705 Advanced Practice Nursing Practice: Psychiatric Mental Health NP I
Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Focus is on clinical assessment/diagnosis and decision-making. A minimum of 16 hours of practice and 3 hours of small group supervision is required.
Taught by: Leahy; Mulligan; Josey
Course usually offered in fall term
Activity: Seminar
1 Course Unit

NURS 706 Advanced Practice Nursing Practice: Psychiatric Mental Health NP II
Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Refinement and development of clinical intervention with an increasingly diverse caseload. A minimum of 16 hours of practice and 3 hours of small group supervision is required.
Taught by: Leahy; Mulligan; Josey
Course usually offered in spring term
Activity: Seminar
1 Course Unit

NURS 707 Advanced Practice Nursing Practice: Psychiatric Mental Health NP III
Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Outcome evaluation, termination and professional role development. A minimum of 16 hours of practice and 3 hours of small group supervision is required.
Taught by: Leahy; Mulligan; Josey
Course usually offered summer term only
Activity: Seminar
1 Course Unit
Notes: Summer Session I

NURS 708 Public Policy Leadership in the American Public/Private System of Health Care
This course will explore the philosophy and growth of public policy that has directed the American Health Care System in its ever expanding movement toward universal health care for all citizens. Analysis of health policy and systems content will assist the students to identify the knowledge and skills needed for the health or human service provider to assume leadership roles in the formulation of public policy for change; this includes system restructuring, service delivery and funding of health care. Emphasis will be on the effect of policy on the individual/family user of health care services rather than the effect on professional health care providers or health care delivery systems. Special attention will be given to the effect of policy on populations, both urban and rural, living near and below the poverty level.
Taught by: Durain
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NURS 714 Management of Critically Ill Children with Acute and Chronic Conditions: Nursing of Critically Ill Children Advanced Clinical
This clinical course is designed with emphasis on continued development of advanced clinical decision-making skills in the care of critically ill children. Emphasis is placed on knowledge and skills that allow the advanced practitioner to efficiently and effectively manage children who are dependent upon or assisted by technological devices to carry out life processes.
Taught by: Verger; Bartke
Course usually offered summer term only
Prerequisites: NURS 712, 713
Activity: Lecture
1 Course Unit
Notes: Summer Session II

NURS 715 Common Management Issues of Children with Acute and Chronic Conditions: Pediatric Oncology
This course examines the unique contribution made by nurses with advanced clinical skills in the care of children with oncologic and hematologic disorders, and their families, from the time of diagnosis throughout the treatment period and beyond. The course provides the student with the most recent advances in knowledge about cancer in childhood. While the focus is on oncology, hematologic disorders as well as AIDS will be discussed. Recent methods of treatment and the nursing management of children and their families will be addressed.
Taught by: Hobbie
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 720 Nursing of Children Theory I: Child and Family Development
This course focuses on developmental theories and concepts that form the basis for nursing assessment and intervention with children and families. Emphasis is given to current research and issues in child and family development and functioning.
Taught by: Deatrick; Murphy, K
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 721 Advanced Physical Assessment and Clinical Decision Making: Nursing of Children Clinical I
This clinical course is designed with emphasis on continued development of advanced clinical decision-making skills in the care of critically ill children. Emphasis is placed on knowledge and skills that allow the advanced practitioner to efficiently and effectively manage children who are dependent upon or assisted by technological devices to carry out life processes.
Taught by: Durain
Course usually offered in spring term
Activity: Lecture
1 Course Unit
NURS 731 High-Risk Neonate, Theory
This course focuses on the care of high-risk neonates within the context of the family unit. The biological and psychosocial aspects are studied as a basis for nursing practice. Emphasis is placed on the role of the Advanced Practice nurse in improving services to high-risk neonates with the purpose of decreasing mortality and morbidity rates and improving the quality of life of high-risk newborns and infants.
Taught by: Verger; Steele
Course usually offered in spring term
Prerequisites: NURS 684, 720, 721
Corequisite: NURS 733
Activity: Lecture
1 Course Unit
Notes: Summer Session I

NURS 733 Clinical Practicum for the High Risk Neonate
This clinical course focuses on the care of the high risk infant within the context of the family unit. Clinical experiences provide students with opportunities to expand their skills in managing the care of infants, both acutely ill and growing neonates. Students continue their experiences with neonatal nurse practitioners to examine role issues of these individuals.
Taught by: Verger; Steele
Course usually offered in spring term
Prerequisites: NURS 684, 720, 721
Corequisite: NURS 731
Activity: Lecture
1 Course Unit

NURS 734 Intermediate Principles of Pediatric Acute Care
This course focuses on evidenced based care for infants, children, and adolescents with complex acute and chronic health conditions. Emphasis is placed on developing a framework for practice based on a synthesis of knowledge from biological, behavioral, and nursing sciences through the process of advanced clinical decision making. The student gains the necessary clinical management skills to provide specialized patient centered care across the entire pediatric age spectrum from complex chronic illness to physiologic deterioration and life threatening instability with emphasis on the patient and family as a full partner in decision making.
Taught by: Murphy, K.; Verger
Course usually offered in spring term
Prerequisite: NURS 720; NURS 721; NURS 685 or NURS 607
Corequisite: NURS 735
Activity: Lecture
1 Course Unit

NURS 735 Pediatric Acute Care Nurse Practitioner: Professional Role and Intermediate Clinical Practice
This course focuses on the implementation of the professional role of the Pediatric Acute Care Nurse Practitioner (PNP-AC). Particular emphasis is placed on the role components of the nurse practitioner in pediatric acute care. Applications of nursing, biological and behavioral science are emphasized in the advanced clinical assessment, clinical decision making and management skills needed to care for complex, unstable acutely and chronically ill children and their families. The role of the advanced practice nurse in promoting optimal child/family outcomes is emphasized.
Taught by: Verger; Lipman; Schucker; Campisciano
Course usually offered in spring term
Prerequisite: NURS 720; NURS 721; NURS 685 or NURS 607
Corequisite: NURS 734
Activity: Lecture
1 Course Unit

NURS 736 Advanced Principles of Pediatric Acute Care
This course expands the student’s understanding evidenced based care for infants, children, and adolescents with complex acute and chronic health conditions. Emphasis is placed on advancing a framework for practice based on a synthesis of knowledge from biological, behavioral, and nursing sciences through clinical decision making. The student continues to gain the necessary clinical management skills to provide specialized patient centered care across the entire pediatric age spectrum from complex chronic illness to physiologic deterioration and life threatening instability with emphasis on the patient and family as a full partner in decision making.
Taught by: Murphy, K; Verger; Lipman
Course usually offered summer term only
Prerequisite: NURS 734; NURS 735
Corequisite: NURS 737
Activity: Lecture
1 Course Unit

NURS 737 Pediatric Acute Care Nurse Practitioner: Professional Role and Advanced Clinical Practice
This course focuses on the implementation of the professional role of the Pediatric Acute Care Nurse Practitioner (PNP-AC). This course adds to the students’ previous knowledge and skills and prepares them to deliver care to children of any age who require frequent monitoring and intervention. Applications of nursing, biological and behavioral science are emphasized in the advanced clinical assessment, clinical decision making and management skills needed to care for complex, unstable acutely and chronically ill children and their families.
Taught by: Verger; Lipman; Schucker; Campisciano
Course usually offered summer term only
Prerequisite: NURS 734; NURS 735
Corequisite: NURS 736
Activity: Lecture
1 Course Unit

NURS 740 Advanced Practice Concepts for the Childbearing Family
The seminar will provide students with the skills necessary to provide primary health care to high risk infants in ambulatory settings. Course material will include detailed physical assessment skills of the infant through the first year of life. The clinical component will include home visits and experience in the ambulatory and long term care settings.
Taught by: Steele
Course usually offered in fall term
Activity: Lecture
1 Course Unit
NURS 741 Management of Children with Acute and Chronic Conditions: Nursing of Children in the Community Advanced Clinical
This clinical course focuses on the implementation of the role of the advanced practice nurse with particular emphasis on providing continuity of care for children with specialized health needs across their transitions in sites of care delivery and throughout phases in the cycle of their illnesses. Application of nursing, biological and behavioral science is emphasized in the community aspects of clinical assessment and management of children with health care needs and their families. Taught by: Deatrick; Lipman; Murphy, K. Course usually offered summer term only Prerequisites: NURS 724, 725 Activity: Lecture 1 Course Unit Notes: For doctoral students in nursing

NURS 743 Fetal Evaluation
This course focuses on identifying at risk and high risk maternal fetal dyads, developing knowledge relating to assessment of fetal well being, and understanding the implications of obstetric, non obstetric, and fetal complications on the management of the high risk pregnancy. Additionally the course provides an understanding of the scientific basis for new technologies used to evaluate at risk and high risk populations. Information about the physics of ultrasound, pulse echo imaging, and doppler techniques will be provided. Students must be able to practice ultrasound skills while in this course. Taught by: Stringer Course usually offered in spring term Prerequisite: NURS 607 Activity: Lecture 1 Course Unit

NURS 745 Data Analytics
Activity: Lecture 1 Course Unit

NURS 748 Leadership Development in Healthcare
This course will provide the conceptual and theoretical framework for examining the concept of leadership within the contexts of health systems, health professionals and health policy. It will focus on characteristics of personal and professional leadership, change theory, and the application of critical thinking to the analysis of work environments, systems and the politics of health. Taught by: Fidyk Course usually offered in fall term Activity: Lecture 1 Course Unit

NURS 749 History, Health and Social Policy
This course explores the impact of historical ideas, events, and actors on current issues in health and illness care. Topics include the movement from hospitals to health care systems; the changing definitions of professionalism and professional practice patterns; and the ways historical context shapes definitions of leadership roles and theoretical knowledge. Taught by: D'Antonio Course usually offered in spring term Activity: Lecture 1 Course Unit

NURS 750 Inquiry and Nursing
This course introduces students to the process of intellectual inquiry. It explores the intellectual foundations of scholarly disciplines in general and the discipline of nursing in particular. Emphasis is placed on the process of knowledge development, with particular emphasis on historical, philosophical, positivist, and gendered and phenomenological ways of knowing. Emphasis is also placed on having students develop their particular intellectual approach to disciplinary inquiry and on formulating ideas for publications and presentations. Taught by: Richmond Course usually offered in fall term Activity: Lecture 1 Course Unit Notes: For doctoral students in nursing

NURS 752 Clinical Fieldwork for Nurse Anesthesia Practice II
This course provides the opportunity for students to integrate theoretical knowledge and research findings into practice within the clinical setting. The clinical progression allows students to provide anesthesia care to patient with complex, multisystem problems. Selected surgical specialty rotations begin, introducing the student to the particular requirements for these special. Techniques for managing the acute pain of clients are also emphasized. The student grows in the ability to individualize a plan of care specific to the patients needs and surgical requirements. The student also now possesses the ability to combine theories and skills in selected clinical situations. The guidance of CRNA faculty preceptors contributes to the development of the students critical thinking. Course usually offered in fall term Activity: Lecture 1 Course Unit Notes: For doctoral students in nursing

NURS 753 Evolving Nursing Science
A consideration of contemporary nursing research as it pertains to the current state of the art and directions for future study. Advanced analysis of methodology, assumptions, and theoretical structures that underpin the work. Taught by: Sommers; Riegel Course usually offered in spring term Prerequisite: NURS 750 Activity: Lecture 1 Course Unit Notes: For doctoral students in nursing

NURS 754 Quantitative Research Design and Methods
This one semester survey course provides an overview of quantitative clinical research design and methods. Ethical and legal considerations in human subjects research, access to patient populations, sampling designs and power analysis, experimental and non-experimental designs, measurement of variables, data collection techniques, and data management are included. This course is intended for doctoral students in the health sciences. Taught by: Pinto-Martin; Meghani Course usually offered in spring term Prerequisites: Students must have completed at least one doctoral-level statistics course. The current doctoral recommendations include: SOCI 535; SOCI 536; STAT 500; STAT 501; PUBH 501; EPID 524; EPID 525. Please contact course faculty for permission for courses taken outside of the above recommendations Activity: Lecture 1 Course Unit Notes: For doctoral students in nursing.
NURS 755 Application of Statistics to Nursing Research II
Integration of non-experimental quantitative research designs and methodologies, including common statistical techniques for analyzing resulting data. Statistical techniques examined include: factor analysis, multiple regression, canonical correlation, causal modeling, and logistic regression. Power analysis of statistical tests to estimate sample size discussed. Data analysis practice using computer software integrated throughout course.
Taught by: Tulman
Course usually offered in fall term
Prerequisite: NURS 754
Activity: Lecture
1 Course Unit
Notes: For doctoral students in nursing

NURS 756 Nurse Anesthesia Res I: Nurse Anesthesia Residency I
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 757 Nurse Anesthesia Res II: Nurse Anesthesia Residency II
Activity: Lecture
1 Course Unit

NURS 758 Nurse Anesthesia Residency III
This course is the third of four residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills will be emphasized. Students' progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.
Taught by: Winner; Bent
Prerequisite: NURS 757
Activity: Lecture
1 Course Unit

NURS 759 Nurse Anesthesia Residency IV
Course usually offered in fall term
Prerequisite: NURS 758
Corequisite: NURS 611
Activity: Lecture
1 Course Unit

NURS 764 Advanced Technologies & Clinical Decisions in Acute Care
This fieldwork course focuses on development of a systematic approach to advanced physical assessment, the use of diagnostic technologies and the development of a diagnostic reasoning as it applies to patient management of the acutely ill and injured. Emphasis is placed on development of competence to perform a comprehensive history and decision making for the management of acutely ill patients.
Taught by: Becker; Griffith; Bartke
Course usually offered in fall term
Prerequisites: NURS 607, 657
Activity: Lecture
1 Course Unit

NURS 768 Role of the Clinical Nurse Specialist
This clinical course provides students the opportunity to apply CNS theory to practice and enables students to develop strategies to overcome barriers to safe, quality healthcare delivery. Students acquire knowledge and skills characteristic of CNS practice particularly as it relates to clinical judgment, facilitation of learning, advocacy and moral agency, caring practice and response to diversity.
Taught by: Becker, Pawlow; Fisher
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NURS 769 Clinical Nurse Specialist Clinical I
This clinical course provides students the opportunity to apply CNS theory to practice and enables students to develop strategies to overcome barriers to safe, quality healthcare delivery. Students acquire knowledge and skills characteristic of CNS practice particularly as it relates to clinical judgment, facilitation of learning, advocacy and moral agency, caring practice and response to diversity.
Taught by: Becker; Dubendorf; Muller
One-term course offered either term
Prerequisite: NURS 657
Corequisite: NURS 768
Activity: Lecture
1 Course Unit

NURS 770 Clinical Nurse Specialist Clinical II
This clinical course focuses on the application of CNS theory to practice. Students focus on furthering the development of the knowledge and skills related to the core competencies of the CNS. Strategies to improve provider and system issues related to the provision of care to the population of interest are developed, implemented and evaluated. Developing leadership in the development of system-wide or healthcare policy is promoted. Advocating for the individual, family, caregiver and population of interest needs within the context of clinical practice and policy making is encouraged.
Taught by: Becker; Dubendorf; Muller
Course usually offered summer term only
Prerequisites: NURS 657, NURS 768, NURS 769
Activity: Lecture
1 Course Unit
Notes: Also Offered in Summer 12 Week Session
NURS 775 Post-Masters Psychiatric Mental Health NP Clinical Practicum & Seminar
This clinical course prepares individuals who have completed a Psychiatric Mental Health Clinical Nurse Specialist or an Adult Psychiatric Mental Health Nurse Practitioner program to meet the clinical requirements for certification as a Family Psychiatric Mental Health Nurse Practitioner. This clinical practicum and seminar will complement previous education in advanced practice Psychiatric Mental Health nursing. The focus of the course is on skill development in therapeutic relationships with clients, interviewing, assessing client strengths and needs for mental health services, selecting and implementing interventions including psychopharmacologic agents, and maintaining a role in a mental health setting which allows active collaboration with other health professionals. A minimum of 16 precepted practicum hours per week is required in a selected community or institutional setting and a minimum of 250 total precepted clinical hours during the semester is required. In addition, there will be on-campus seminars and individual and group supervision conference calls throughout the semester.
Taught by: Cacchione; Josey; Mulligan; Leahy
Course usually offered summer term only
Prerequisites: Masters degree in Psychiatric Mental Health Advanced Practice Nursing and approval of Program Director
Activity: Seminar
1 Course Unit
Notes: By Permission Only

NURS 776 High Risk Neonate Theory II
This course examines specific pathophysiological mechanisms which may result in body system failure. Strategies for clinical management are examined based on a synthesis of biological, behavioral, medical, pharmacological, and nursing knowledge. Theoretical analysis of the roles of the advanced practitioner with critically ill patients is emphasized.
Taught by: Verger; Steele
Course usually offered summer term only
Prerequisites: NURS 731, 733
Corequisite: NURS 777
Activity: Lecture
1 Course Unit

NURS 777 High Risk Neonate Clinical II
This clinical course is designed with emphasis on continued development of advanced clinical skills in the care of critically ill children. Emphasis is placed on integration of the roles of the advanced practitioner. This course adds to the student’s previous knowledge and skills in advanced practice and prepares them to manage care of critically ill children.
Taught by: Verger; Steele
Course usually offered summer term only
Prerequisites: NURS 731, 733
Corequisite: NURS 776
Activity: Lecture
1 Course Unit

NURS 778 High Risk Neonatal Clinical III
This clinical course is designed with emphasis on continued development of advanced clinical decision-making skills in the care of critically ill children. Emphasis is placed on knowledge and skills that allow the advanced practitioner to efficiently and effectively manage children who are dependent upon or assisted by technological devices to carry out life processes.
Taught by: Verger; Steele
Course usually offered summer term only
Prerequisites: NURS 776, 777
Activity: Lecture
1 Course Unit

NURS 780 Health Care of Women and Primary Care
The focus of this course is a clinical approach to primary care problems commonly encountered by women in an ambulatory setting. This course provides the women's health care nurse practitioner and midwifery student with the knowledge and problem solving approach to assist individuals with the most common health problems, including acute episodic illness as well as stable chronic disease. The concepts of health promotion and health maintenance are integrated throughout the curriculum.
Taught by: Grube; Nagtalon-Ramos
Course usually offered summer term only
Corequisite: NURS 657
Activity: Lecture
1 Course Unit

NURS 781 Well Women Health Care, Theory
This course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care of women from adolescence through post-menopausal years. The content is directed at expanding the expertise of the student in meeting the primary women's health care needs in contemporary society. Social influences that have an impact on women's lives are also explored.
Taught by: Durain; Grube; Nagtalon-Ramos
Course usually offered in fall term
Prerequisites: NURS 607, 657, 780
Corequisite: NURS 782
Activity: Lecture
1 Course Unit

NURS 782 Well Women Health Care, Clinical
This clinical course further prepares students in understanding and developing the Women’s Health Care Nurse Practitioner and Nurse-Midwifery roles. This clinical course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care needs of women from adolescence through post-menopausal years. Emphasis is placed on promoting and maintaining wellness, clinical decision making, systematic health interview, physical assessment, interpretation of laboratory findings, and diagnosis and treatment of gynecological problems.
Taught by: Durain; Grube; Nagtalon-Ramos
Course usually offered in fall term
Prerequisites: NURS 607, 657, 780
Corequisite: NURS 781
Activity: Lecture
1 Course Unit
NURS 783 Health Care of Childbearing Women, Theory
The antepartum course builds upon the well-woman health care course. The focus is management of prenatal care for the childbearing family. Conceptual threads of public policy and ethics are integrated within the content to help students to identify broader implications for prenatal care. Content includes theory and practice related to nurse-midwifery/ nurse practitioner management of the normal pregnant woman, and nurse-midwifery/ nurse practitioner management and strategies to reduce selected obstetric complications.

Taught by: Trout; Lewis, J.; Grube
Course usually offered in spring term
Prerequisites: NURS 781, 782
Corequisite: NURS 784
Activity: Lecture
1 Course Unit

NURS 784 Health Care of Childbearing Women, Clinical
This course focuses on the management and evaluation of the childbearing women and their families in primary care settings. The course presents the opportunity to implement the role of the Nurse Practitioner with the childbearing woman and her family. The focus is on comprehensive physical, psychosocial and educational management of women and their families during pregnancy and postpartum.

Taught by: Trout; Lewis, J.; Grube
Course usually offered in spring term
Prerequisites: NURS 781, 782
Corequisite: NURS 783
Activity: Lecture
1 Course Unit

NURS 785 Integration I
Intensive integration of theory and clinical practice in women's health care with emphasis on ambulatory care. Clinical practice in all areas of ambulatory women's health care, teaching rounds, case presentations, and seminars with professional colleagues.

Taught by: Stringer; McCool; Reale; Nagtalon-Ramos
Course usually offered summer term only
Prerequisites: NURS 783, 784
Activity: Clinic
1 Course Unit

NURS 786 Integration II: Midwifery Integration
Intensive integration of theory and clinical practice in women's health care with emphasis on intrapartum, postpartum, and newborn care. Clinical practice during the intrapartum and postpartum, teaching rounds, case presentations, and seminars with professional colleagues.

Taught by: McCool; Reale
Course usually offered in fall term
Prerequisites: NURS 783, 784
Corequisite: NURS 785
Activity: Clinic
1 Course Unit

NURS 787 Intrapartum / Postpartum / Newborn Care, Theory
Anatomy and physiology relevant to the care of the women and their families during the intrapartum, postpartum and newborn periods. Includes management of selected obstetrical emergencies and medical complications.

Taught by: McCool; Reale; Stringer
Course usually offered summer term only
Prerequisites: NURS 783, 784
Corequisite: NURS 788
Activity: Lecture
1 Course Unit

NURS 788 Intrapartum / Postpartum / Newborn Care, Clinical
Clinical care and management of women, newborns and their families during the intrapartum, postpartum and newborn periods. Includes management of selected obstetrical emergencies and medical complications. Clinical assignments related to module objectives.

Taught by: McCool; Reale
Course usually offered summer term only
Activity: Lecture
1 Course Unit

NURS 789 Principles of Patient Safety & Quality Improvement in Healthcare

Taught by: Gleason Scott
Activity: Lecture
1 Course Unit

NURS 790 Health Care Economics and Business Planning
Course usually offered in fall term
Activity: Online Course
1 Course Unit

NURS 792 Clinical Fieldwork in Nurse Anesthesia Practice II
This course provides the opportunity for students to integrate theoretical knowledge and research finding into practice within the clinical setting. Students progress by providing anesthesia care for patients with more complex health problems. Techniques for managing the acute pain of clients are emphasized. Anesthetic requirements as dictated by patient assessment including the surgical procedure are studied in greater depth. The student now possesses the ability to combine theories and skills in selected clinical situations. The guidance of CRNA faculty preceptors contributes to the development of the student's critical thinking.

Taught by: Magro; Lynn; Briel
Course usually offered in spring term
Prerequisite: NURS 791
Activity: Seminar
2 Course Units

NURS 795 Nurse Anesthesia Residency II
This course is the second of two residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.

Taught by: Magro; Lynn; Briel
Course usually offered in spring term
Prerequisite: NURS 794
Activity: Seminar
2 Course Units
NURS 796 Diagnosis and Management of Adult Gerontology Acute Care Patients I
This on-line, didactic course is designed for the practicing nurse practitioner or clinical nurse specialist who seeks to gain additional knowledge and skills related to the care of adult gerontology acutely ill patients with a specific focus on cardiovascular and pulmonary systems, thoracic issues, infectious processes, wound healing and diabetes. Particular focus is placed on specific issues related to the older adult such as frailty, dehydration, loss of functional mobility, falls, and other geriatric syndromes. The basics of ECG, CXR and PFT interpretation, ABG analysis and ventilator modes are highlighted. This course examines the epidemiologic, assessment, diagnostic, management and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. An evidence-based interdisciplinary approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized.
Taught by: Becker
Course usually offered in fall term
Activity: Online Course
1 Course Unit
Notes: For Streamlined Adult Gero Program Students Only

NURS 797 Diagnosis and Management of Adult Gerontology Acute Care Patients II
This online didactic course, designed for the practicing nurse practitioner or clinical nurse specialist seeking to gain knowledge and skills relative to care of adult gerontology acute care patients, focuses on the medical and surgical issues of the neurological, renal, gastrointestinal, hematological, oncological and orthopedic systems. This course examines the epidemiologic, assessment, diagnosis, management and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. An evidence-based, interprofessional team approach to the nursing and medical management of patients is emphasized.
Taught by: Becker
Course usually offered in spring term
Activity: Online Course
1 Course Unit
Notes: For Streamlined Adult Gero Program Students Only

NURS 798 Adult Gerontology Acute Care NP: Professional Role & Clinical Practicum for Primary Care Prepared Providers
This online didactic course and accompanying clinical fieldwork focuses on issues essential to the implementation of the role of the Adult Gerontology Acute Care Nurse Practitioner. Clinical fieldwork focuses on the unique assessment, diagnosis, management and evaluation of acutely, critically and complex chronically-ill adults, across the adult age continuum, experiencing acute, urgent and emergent conditions, using both physiologically and technologically derived data. Evaluating for physiologic instability and potential life-threatening conditions is emphasized. Attention is given to the typical and atypical presentation of syndromes and constellation of symptoms exhibited by adults and older adults experiencing complex acute, critical and complex chronic illness. Issues related to the transition of patients through the health care system are explored. Collaboration between the nurse practitioner, patient, family and interprofessional healthcare team are encouraged.
Taught by: Becker
One-term course offered either term
Prerequisite: NURS 796 completion
Activity: Online Course
1 Course Unit
Notes: For Streamlined Adult Gero Program Students Only

NURS 799 MSN Clinical Remediation
Students whose clinical performance would benefit from additional clinical exposure in order to demonstrate the expected competencies are, with course faculty and faculty advisor approval, eligible to register for NURS 799. This experience will be allotted no more than one credit unit and must be completed in a time frame to not exceed one academic semester. A course may be remediated only one time.
Course not offered every year
Activity: Clinic
1 Course Unit

NURS 800 Dissertation Seminar I
Advanced study and research in nursing leading to the completion of the dissertation proposal.
Taught by: Bowles, K.; Lake
Course usually offered in fall term
Prerequisites: NURS 750, 753, 754, 813, 2 semesters of Statistics, plus six concentration courses
Activity: Seminar
1 Course Unit
Notes: For doctoral students in nursing

NURS 803 Clinical Scholars in the Discipline of Nursing
This 2-semester course is designed to enhance the understanding of the practice of nursing as an intellectual discipline for doctoral students who have limited clinical practice experience prior to pursuing the PhD. It consists of individualized clinical experiences that are integrally related to the student’s area of research interest and which are facilitated by clinician guides in a variety of settings. Students actively participate in seminars that focus on examining the health needs of individuals and vulnerable patients, the praxis of nursing and its place within the complex healthcare delivery system, health policy and society at large. Research informing practice and practice informing research are highlighted using the clinical practice experiences as case exemplars. NURS 803 is a course designed specifically for two groups of PhD students: the Hillman Scholars in Nursing Innovation and post-baccalaureate students completing an MS in passing who have limited clinical experience as a professional nurse. This course is designed to expose students to carefully selected clinical experiences that provide opportunities to build a clinical appreciation of the practice of nursing as an intellectual discipline, to gain an enhanced understanding of the health care delivery system, and to examine the intersection of research, policy, and practice at the frontlines of nursing practice. To this end, this course combines the clinical experiences with a weekly seminar facilitated to dissect common issues experienced by vulnerable patients and families across care settings and specialties, to critically examine the contributions of nursing science to that care, and to examine how the health care system contributes or detracts from optimal care.
Taught by: Clinician Educators from the Standing Faculty
Two terms. Student must enter first term.
Prerequisite: Selection as a Hillman Scholar in Nursing Innovation or at the recommendation of the student’s PhD academic advisor
Activity: Seminar
2 Course Units
Notes: First Fall-Spring post-BSN semesters in the PhD program for Hillman Scholars
NURS 811 Historical Thought in Nursing
A seminar open to enrolled doctoral students who plan to conduct historical research as some aspect of their program. Meets for one semester on a schedule determined by participants and faculty.
Taught by: Fairman
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: For doctoral students in nursing

NURS 813 Qualitative Paradigm Empirical Nursing Research
Study of selected qualitative paradigm empirical research approaches, including design and methodology. Critique of selected qualitative research reports from the literature of nursing and related disciplines. Fieldwork exercise and research proposal required.
Taught by: Deatrick
Course usually offered in fall term
Prerequisite: NURS 750
Activity: Seminar
1 Course Unit
Notes: For doctoral students in nursing

NURS 814 Doctoral Seminar: Ethics and Nursing
A critical review of the theoretical and empirical literature dealing with bioethics, nursing ethics, moral development, women's ethics and specific ethical concerns in health and illness care. Students will study topics related to their own interests/needs, guided by the instructor in relation to the discipline of ethics.
Taught by: Deatrick
Course offered spring; odd-numbered years
Activity: Seminar
1 Course Unit
Notes: For doctoral students in nursing

NURS 817 Theoretical Perspectives of Growth and Development: A Health Care Perspective
This seminar will explore issues related to the theoretical perspectives of growth and development during childhood. Areas of emphasis will include: methodological issues related to research of childhood growth and development, the analysis of developmental data, and measurement issues common to research of development. Included in the discussion will be an analysis of theories in relationship to research of childhood development. The seminar will conclude with an agenda for future directions of research of growth and development.
Taught by: Medoff-Cooper; Deatrick; Lipman; O'Sullivan
Course usually offered in fall term
Activity: Seminar
1 Course Unit

NURS 818 Families and Research
This seminar will explore issues related to research of families. Included in the ongoing discussion will be an analysis of nursing and other theories in relationship to research of families. Methodological issues related to research of families will be discussed, as will the analysis of family data and measurement issues common to research of families. The seminar will conclude with an agenda for future directions to research of families.
Taught by: Deatrick
Course offered spring; even-numbered years
Activity: Seminar
1 Course Unit
Notes: For doctoral students in nursing

NURS 819 Seminar on the Social History of Nursing
This course will involve a guided review of the pertinent literature relating to the history of technology in 20th century America. The focus will include a critical examination and review of the social origins and implications of technological development and diffusion in healthcare. Various theoretical frameworks in the history of technology will be closely examined in attempt to assist the student in the development of their own framework.
Taught by: Fairman
Activity: Seminar
1 Course Unit
Notes: For doctoral students in nursing

NURS 821 Proseminar in Health Outcomes Research
This the first of a two-course sequence designed for doctoral students interested in conducting health outcomes research. The first course (821) focuses on conceptual, methodological, statistical, feasibility and data issues central to the conduct of health outcomes research; the second course (822) focuses on applying health outcomes research through the development and implementation of a research project. In the first course Penn faculty researchers will use their ongoing studies to illustrate how study design, sampling, measurement, and advanced statistical techniques can be employed to address the various challenges inherent in health outcomes research. In the second course, students will design and implement a health outcomes research project.
Taught by: Lake; Aiken
Course offered spring; odd-numbered years
Prerequisites: Prior coursework at undergraduate or masters level in statistics and quantitative methods.
Activity: Seminar
1 Course Unit
NURS 823 Designing Interventions to Promote Health and Reduce Health Disparities
Advanced analysis, design and evaluation of interventions to promote health and reduce health disparities with a focus on underserved vulnerable minority or ethnic populations, through culturally competent research, education and clinical practice. Areas to be evaluated include:
- Health disparities as it relates to health promotion and disease prevention behavioral intervention research in vulnerable communities
- Concepts of marginalization, race, ethnicity, class, gender and culture as it relates to health disparities
- Social-psychological theoretical and research approaches related to developing culturally congruent health promotion interventions to reduce health disparities for vulnerable populations
- The use of elicitation, focus groups and ethnographic techniques to tailor health behavior theory to meet the needs of the population
- Culturally competent research methodologies, involving education and/or clinical practice, e.g. culturally competent measures, recruitment, retention, and informed consent in hard to reach populations
- Community participatory research as a strategy for working with the community to build research partnership and build capacity for sustained health promotion initiatives
- Health promotion intervention strategies for reducing health disparities in vulnerable communities
- Strategies to evaluate the effectiveness of interventions using randomized controlled trials (RCTs) in community and clinical settings
- Strategies for tailoring successful evidenced-based health promotion interventions to a variety of different populations for use in clinical trials and community settings
- Examine approaches for the translating and disseminating evidenced-based intervention research

Taught by: Jemmott; Teitelman
Course offered spring; odd-numbered years
Activity: Seminar
1 Course Unit
Notes: For Doctoral Students Only

NURS 824 Health Equity: Conceptual, Linguistic, Methodological, and Ethical Issues
The course focuses on advanced analysis and evaluation of theories, concepts, and methods related to health equity. Topic areas include models and frameworks of health equity; linguistic choices related to equity, disparity, and vulnerability; role of economics, class, gender, sex, sexuality, race, and ethnicity; health equity in special populations; and issues in health policy, research ethics, and research methods. Emphasis is on advanced discourse and analysis of health equity theory and research.

Taught by: Sommers
Course offered fall; odd-numbered years
Activity: Seminar
1 Course Unit
Notes: For Doctoral Students Only

NURS 825 Seminar on Integrative Science in Aging
This fall semester interprofessional seminar will prepare students and fellows to identify appropriate measurement tools for use in aging research. We will specifically focus on analysis of selected concepts, models and measures central to the integrative science in aging. Topics include measurement of geriatric syndromes, models commonly used in integrative science of aging, outcomes of evidence-based care in older adults, regulatory and ethical issues specific to the conduct of research with older adults.

Taught by: Cacchione; Ersek
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: For Doctoral Students Only

NURS 826 Advanced Qualitative Research Methods
The course extends beginning qualitative research methods skills to a more advanced level. Students planning a dissertation or career focus in qualitative or mixed methods may use the course to refine interest and skill. The focus of the course centers on interactionist perspectives and collective analysis though methods tangential to these perspectives. Standpoint and participatory methods and analysis may be considered given sufficient student interest. Students are actively involved in selection and critique of seminal and critical readings. Students must have at their disposal a suitable dataset with commensurate permissions or have plans to collect qualitative data amenable to analysis during the course term. This data base can be from previous research proposals and fieldwork can be used as the building blocks for the course assignment(s). The course will focus on data collection, analyses, interpretation, and presentation of results. Skill building will center on collection and management of data; analytic technique including comparative, narrative, and text analysis; development and management of coding schemas; abstraction and development of situation specific theory; and dissemination and diffusion of findings, theories, and relevance to similar phenomena and use in practice.

Taught by: Kagan
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: For Doctoral Students Only

NURS 827 Self-Care of Chronic Illness
This course introduces the history, definitions, predictors, measurement, and outcomes of self-care in chronic illness. Historical, classic and current literature from various disciplines will be studied to give students a broadened perspective of the self-care construct and the issues that patients face when dealing with chronic illness.

Taught by: Riegel
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: For PhD Students Only
NURS 828 Response to Chronic Illness: Theory and Research
Millions of people of all ages live with chronic illness(es). A diagnosis of a chronic illness is a life-changing event, causing disruption and a sense of loss for many. Common early responses are stress, anxiety, depression, fear, and anger. Over time, with support and experience with the illness, many adjust. But, others report persistent feelings of loss due to physical, emotional, spiritual/existential, social, occupational, and/or financial influences of chronic illness. Those who adjust the best typically find a way to return to a sense of normalcy to their lives. Loved ones and caregivers are equally affected by chronic illness and much has been written in recent years about caregiver burden. However, some individuals (caregivers and patients) report positive responses to illness, including a deepened purpose for living and a reordering of life priorities. The focus of this course is on individual responses to chronic illness—the person diagnosed and his/her loved ones. This course is intended to complement N818, which focuses on families and dyads dealing with chronic illness. In this course we will explore the major theoretical perspectives that underlie this field. The literature describing common responses of both those diagnosed and their loved ones as well as the social and cultural context that helps explain the responses of individuals facing chronic illness will be examined. Methods used to study chronic illness will be explored in depth.
Taught by: Riegel
Course usually offered in fall term
Prerequisite: Permission of faculty
Activity: Seminar
1 Course Unit

NURS 829 Measurement of Physiologic Variables Related to Health Outcome Disparity
This graduate course is an advanced exploration of biometric methods (branch of science that includes the measurement of physiological variables and parameters) and their use in quantitative research. A particular focus will be on biological measures that can be used as outcome variables to evaluate interventions to promote health and health equity, and reduce health outcome disparities in vulnerable or marginalized populations. Areas to be evaluated include: * Measurement theory and instrument science as they relate to biological signals; role of biometrics in health outcomes disparity research * Ethical considerations and how they relate to biometrics; mitigating perceived threats (profiling, stereotyping); the role of human subjects considerations; the responsible conduct of research * Derivation and types of biologic signals; time-based characteristics * Accuracy and precision of biologic measures; random and non-random error; application and exemplars of strategies to determine accuracy and precision * Role of biological rhythms in biometric measurement; analysis of multiple data points and repeated measures of biological variables * Methods relative to vulnerable women, children, and families: genetics; environmental contaminants; digital image analysis; hormones, metabolites; drugs and alcohol
Taught by: Sommers
Course offered fall; even-numbered years
Activity: Seminar
1 Course Unit
Notes: For Pre-Doctoral and Post-Doctoral students interested in describing health disparities and developing and testing interventions in vulnerable women, children, and families.

NURS 830 Conducting Research in Global Women's Health
An introduction to theoretical and methodological issues as they relate to conducting research in global women's health. Advanced analysis of historical, social, cultural, economic, political, technological and geographical contexts as they influence the health of girls and women across the lifespan and their relation to health care systems as both clients and providers. This includes contextual issues that constrain the provision & receipt of adequate healthcare. A critical examination of theoretical and methodological issues pertaining to research on women and girls conducted around the world across disciplines. A focused and intensive exploration of place as it pertains to women and girls formal and informal structors of health care delivery as those needing and/ or seeking health care, and as those providing health care to others. Students will examine the multiple dimensions and qualities of these endeavors (e.g. activity, power, control, visibility, value, and remuneration) and the intersection of gender and health - locally, globally and across borders. Students will focus their examination on the implications of seeking and providing health care for women's and girls' health and well-being. By examining issues in local and global contexts and across geographical boundaries, students will have the opportunity to challenge gendered, class, political, and cultural assumptions related to women's health.
Taught by: Teitelman
Course usually offered in fall term
Prerequisites: Completion of course in global health (this may include a reputable online course eg: Coursera), or equivalent background (eg. global health field experience). Permission of Instructor.
Activity: Seminar
1 Course Unit
Notes: For graduate and professional students from any field with an interest in global women's health; Masters students by permission of instructor.

NURS 831 Advanced Topics in Health Informatics
This course is designed to survey a broad range of advanced topics in the field of health informatics. Course faculty and invited speakers will provide the content for weekly meetings conducted in a blended environment (both on-line and in the classroom). Each week, students will listen to a lecture and then participate in a group discussion. Approximately half of these lecture/discussion sessions will take place in a "live" classroom, while the remainder will be available asynchronously in an online setting (i.e. using Blackboard). There will be no textbook, however each speaker will provide links to web-based resources that provide either background information or further elaboration of their topic. A group of students (depending upon size of class, probably 2-3 per topic) will take the lead for each topic, communicating with the speaker and facilitating the class discussion. As a final project, these student groups will also develop a more complete web resource for their selected topic.
Taught by: Bowles
Course usually offered in spring term
Prerequisites: NURS 651, NURS 551, SYS 528, or permission of instructor
Activity: Lecture
1 Course Unit
NURS 832 Laboratory Based Biological Measures
This graduate course is an advanced, mentored exploration of biological measurement techniques used in nursing research. This course will provide an opportunity to gain a broad-based understanding of laboratory methodology, biomarkers, and translational research. Concepts of biological sample processing, storage, quality assurance and control and analysis will be covered. Laboratory measurements with a focus on genetic regulation of biomarkers related to stress, pain, and sleep/fatigue will be covered.
Taught by: Libonati; Muthukumaran
Course usually offered in fall term
Prerequisites: Biology, Chemistry, Physiology, and Permission of Instructor
Activity: Seminar
1 Course Unit
Notes: For Doctoral and Post-Doctoral students interested in biobehavioral research laboratory techniques.

NURS 833 Measurement of Health-Related Behavior and Determinants
Taught by: Karen Glanz
Activity: Seminar
1 Course Unit
Notes: This one semester seminar will provide a detailed overview of measurement of health-related behaviors and determinants of behavior. The course will cover characteristics of measures, data collection, and how to apply the science of measurement to specific health research questions. The course will emphasize how to apply the science of measurement to specific health research questions. This one semester seminar will provide a detailed overview of measurement of health-related behaviors and determinants of behavior. The course will cover characteristics of measures, data collection, and how to apply the science of measurement to specific health research questions. The course will emphasize how to apply the science of measurement to specific health research questions.

NURS 836 Patient-Reported Symptoms & Outcomes for Clinical Research
Patient-reported symptoms and outcomes are central to health science and have assumed increasing importance in the broader research arena. The research goal, conceptual clarity of variables, participant characteristics, instrument psychometrics, degree of coarseness/specificity, and participant burden are all essential to consider in selecting patient-reported symptom and outcome measures. This course focuses on linking study needs, design considerations, theoretical concepts, empirical measures, data collection strategies, and analytic approaches to patient-reported symptoms and outcomes for clinical research. Specific symptoms and outcomes examined in detail may include functional status, quality of life, health status, well-being, sleep, fatigue, weight, pain, shortness of breath, depression, stress, and nausea but each semester will be tailored to the research interests of the seminar participants.
Taught by: Richmond
Course usually offered in fall term
Activity: Seminar
1 Course Unit

NURS 837 Web-based Research Methodology
This doctoral elective course will provide an introduction to Web-based research methods in health-related disciplines. This course will examine research methods that have been adapted to the study of human subjects through the Web. This course will have particular emphasis on quantitative and qualitative empirical methods using the Web as a data collection medium. Another important feature of this course will be intensive analysis of ethical and methodological issues conducting research through the Web. Areas to be analyzed include: types of Web-based research; advantages and disadvantages of Web-based research; vehicles (e.g. funding, mentoring) that have supported Web-based research; human subject protection issues; issues/concerns in recruitment and data collection in Web-based research; and professional vehicles (e.g. scholarly publication, lay publications, speaking forums) that have helped disseminate the knowledge derived from Web-based research.
Taught by: Im
Course usually offered in fall term
Prerequisite: Enrollment in a Doctoral Program
Activity: Seminar
1 Course Unit

NURS 839 Mixed Methods Research
This course will focus on mixed methods research techniques including mixed methods designs, developing mixed methods research questions, data collection, analyses focusing on data integration of qualitative and quantitative data, interpretation, and presentation of results. Skill building will center on sampling, collection, and management of data; data integration techniques; data visualization, methodological rigor and reporting data including dissemination of findings. Students will complete a mixed methods “mini” proposal.
Taught by: Brawner
Course usually offered in fall term
Prerequisites: Qualitative Research Methods; Availability of qualitative & quantitative data sets.
Activity: Seminar
1 Course Unit

NURS 849 Exploring Data Science Methods with Health Care Data
The growth and development of electronic health records, genetic information, sensor technologies and computing power propelled health care into the big data era. This course will emphasize data science strategies and techniques for extracting knowledge from structured and unstructured data sources. The course will follow the data science process from obtaining raw data, processing and cleaning, conducting exploratory data analysis, building models and algorithms, communication and visualization, to producing data products. Students will participate in hands-on exercises whenever possible.
Taught by: Bowles, K; Milo
Course usually offered in spring term
Prerequisites: Students must have completed at least two, sequential graduate level statistics courses.
Activity: Lecture
1 Course Unit

NURS 851 Dnp Project I: Translating Evidence To Practice
Activity: Lecture
1 Course Unit

NURS 852 Translating Ev - Prac II: Dnp Project II
Activity: Lecture
1 Course Unit
NURS 853 Translating Ev- Prac III: Dnp Project III  
Activity: Lecture  
0.5 Course Units

NURS 854 DNP Project IV  
Course usually offered in fall term  
Activity: Lecture  
1 Course Unit

NURS 858 Professional Aspects & Leadership For Nurse Anesthesia Practice  
Course usually offered summer term only  
Activity: Lecture  
1 Course Unit

NURS 890 Nursing Doctoral Teaching Residency  
The purpose of this required one semester teaching residency is to enhance the expertise of students in the role of educator. The residency will be tailored to the student's individual learning needs. At the minimum, students with no or minimal prior teaching experience will gain a beginning level of expertise in course planning, course evaluation, dealing with difficult student situations, test construction, paper assignment construction and grading, content delivery methods, as well as other aspects of the faculty teaching role. Students with more extensive teaching experience will tailor their residencies with their residency supervisor to enhance their expertise in these various areas.  
Taught by: Designated Member of the School of Nursing Grad Group  
Course usually offered in fall term  
Activity: Independent Study  
1 Course Unit

Notes: For Nursing Doctoral Students Only

NURS 897 Nursing Doctoral Research Residency  
The purpose of this required one semester research residency is to enhance student research training early in the doctoral program by providing a mentored research experience. The residency is designed to be a tailored hands-on experience to provide students with exposure and the opportunity to participate in one or more aspects of an ongoing research project. Research residencies are experiential activities designed to meet the student's individual learning needs. At the minimum, students with no or minimal prior research experience will gain a beginning level of experience on a variety of components of an ongoing research project. Students with more extensive research experience will tailor their residencies with their residency supervisor to enhance their expertise in these various areas.  
Taught by: Designated Member of the School of Nursing Grad Group  
Course usually offered in fall term  
Activity: Independent Study  
1 Course Unit

Notes: For Nursing Doctoral Students Only

NURS 900 Directed Study  
Must be arranged with the written permission of the sponsoring faculty member prior to registration.  
One-term course offered either term  
Activity: Independent Study  
1 Course Unit

NURS 995 Dissertation  
Dissertation General Tuition  
One-term course offered either term  
Activity: Dissertation  
1 Course Unit
OPERATIONS, INFORMATION AND DECISIONS (OIDD)

OIDD 101 An Introduction to Operations, Information and Decisions
OIDD 101 explores a variety of common quantitative modeling problems that arise frequently in business settings, and discusses how they can be formally modeled and solved with a combination of business insight and computer-based tools. The key topics covered include capacity management, service operations, inventory control, structured decision making, constrained optimization and simulation. This course teaches how to model complex business situations and how to master tools to improve business performance. The goal is to provide a set of foundational skills useful for future coursework at Wharton as well as providing an overview of problems and techniques that characterize disciplines that comprise Operations and Information Management.
One-term course offered either term
Activity: Lecture
1 Course Unit

OIDD 105 Developing Tools for Data Access and Analysis (VBA and SQL Programming)
This course provides an introduction to the construction of data analysis tools that are commonly used for business applications, especially in consulting and finance. The course builds on the spreadsheet and analytical skills developed in OPIM101, providing a much more extensive treatment of spreadsheet application development and database management. The first portion of the course will focus on programming in VBA, the embedded programming language in the Microsoft Office suite of applications. This will be supplemented with discussion of industry best practice in software development, such as specification development, interface design, documentation, and testing. The second portion of the class will emphasize data access and analysis utilizing SQL, the industry standard language for interacting with database software.
Activity: Lecture
1 Course Unit

OIDD 201 Technology Management, Information and the Digital Economy
OIDD201 introduces students to two critically important and tightly linked concepts. The first is online business model innovation, including key opportunities to exploit information-based strategies in businesses as diverse as Capital One and Uber (newly vulnerable markets) and Amazon and Airbnb (online channel conflict). The second is computer-based simulation modeling to assess the viability of an online innovation, the strategies for its launch, and its economic value.
Activity: Lecture
0.5 Course Units

OIDD 210 Management Information Systems
This course provides a broad-based introduction to the management of information technology focusing on three interrelated themes: technology, organization, and strategy. The goal of this course is to equip students with the knowledge and tools to utilize information systems to pursue a firm's strategic and organizational goals. The course has no prerequisites other than a general interest in the applications of information technology.
One-term course offered either term
Activity: Lecture
1 Course Unit

OIDD 215 Intro to Analytics and the Digital Economy
Over the past decade, there has been a dramatic rise in the use of technology skills and data analytic thinking to solve business problems in many domains, including finance, HR, policy, transport, and strategy. As a result, the modern “analytic leader” increasingly requires the use of technology, statistics, and data skills to facilitate business analysis. This includes knowing how to effectively frame data-driven questions and use a new generation of technology tools that are becoming available to acquire, analyze, interpret, and communicate insights derived from data. Students in this hands-on course will engage with weekly labs that introduce them to new technologies, techniques, and data-driven business challenges.
Activity: Lecture
0.5 Course Units

OIDD 220 Introduction to Operations Management
This course introduces basic concepts of operations management and application of the same in business practice today. We will examine the theoretical foundations of operations management and how these principles or models can be employed in both tactical and strategic decision making. Topics covered in detail are forecasting techniques, planning under deterministic and uncertain demand, operations planning and scheduling, queuing theory, service operations management, newsvendor models, risk pooling strategies in firms, capacity and revenue management, and supply chain coordination. We will conclude by discussing how supply chains evolve under technological change.
One-term course offered either term
Activity: Lecture
1 Course Unit

OIDD 221 Operations Strategy and Process Management
This course examines how organizations can develop and leverage excellence in process management. The first module focuses on operations strategy. In these classes, we examine what constitutes an operations strategy and how organizations can create value by managing complexity, uncertainty, and product development. In the second half of the course, we discuss recent developments in both manufacturing and service industries. Specifically, we examine initiatives in quality, lean manufacturing and enterprise-wide planning systems. The course is recommended for those interested in consulting or operations careers, as well as students with an engineering background who wish to develop a better understanding of managing production processes.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Cross listed with ESE 522

OIDD 222 Internet Law & Policy
The Internet has become central to business and daily life. This course looks at how courts, legislatures, and regulators confront the major legal issues that the Internet poses. The fundamental challenge is that law comes from governments and other institutions in specific places, but the Internet is global and virtual. Conflicts such as the shutdown of the Napster peer-to-peer file-sharing service and the debate over “network neutrality” regulations for broadband access illustrate the challenge. How does the legal system think about Google, Skype, Twitter, and Facebook? How should it?
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: cross listed with LGST 222
OIDD 224 Analytics for Service Operations
This course considers tools and concepts that can generate operational excellence for the production and delivery of services in industries such as banking, transportation, health care, and communications. Since services typically are intangible, not storable or transportable, and often highly variable, the management of their operations is complex and involves distributed operations with a significant amount of customer contact. Therefore, the understanding and effective management of service operations requires specialized analytical tools and customer-centric focus. This course covers a mix of topics with the emphasis on quantitative methods, application of analytics and strategic frameworks. The class will introduce simple models and basic concepts that support analysis of tradeoffs in a variety of common service processes. Students also will have the opportunity to apply the ideas and analytical models developed in the course to a particular service industry. They will do so by conducting a guided, application group project which includes opportunities for in-depth analysis of a particular service process and field work.
Taught by: Faculty
Activity: Lecture
1 Course Unit

OIDD 236 Scaling Operations in Technology Ventures: Linking Strategy and Execution
This course helps students learn to make strategic scaling decisions that are grounded in operational reality. Students will study how to build and evaluate the "operation systems" of the firm to maximize value with the focus on scaling the firm's operations. This involves tailoring the firm's operational competencies, assets, and processes to a specific business strategy. The course will approach the challenge of scaling operations and operations strategy by taking a holistic view that incorporates competitive strategy, financial evaluation, and the customer experience.
Activity: Lecture
1 Course Unit

OIDD 240 Gamification for Business
See course description for LGST 240.
Activity: Lecture
1 Course Unit

OIDD 245 Advanced Analytics and the Digital Economy
This course is meant as a follow-on to OIDD 215 (or with instructor permission). The goal of this segment is to further immerse students in the world of data science projects. Specifically, we focus on working with large, unstructured data sources and gain experience with introductory machine learning concepts. Students who take this segment of the course will spend time inside and outside of the classroom combining data and code to develop data products for a number of new industries, including finance, the restaurant industry, and health care. At the end of the course, students will be expected to complete an advanced data project, which involves acquiring data from an online web property (e.g. Uber, Facebook) through an API and developing an interactive data visualization. Students who complete this course should have the necessary tools to begin building a portfolio of data science projects that they can share online through platforms such as GitHub or with future employers.
Prerequisite: OIDD 215
Activity: Lecture
0.5 Course Units

OIDD 261 Risk Analysis and Environmental Management
Taught by: Kunreuther
One-term course offered either term
Also Offered As: ESE 567
Activity: Lecture
1 Course Unit
Notes: Crosslisted with OIDD 761, BEPP 261, 761, 961, and ESE 567. See description under OIDD 761.

OIDD 263 Environmental & Energy Economics and Policy
This course examines environmental and energy issues from an economist's perspective. Over the last several decades, energy markets have become some of the most dynamic markets of the world economy, as they experienced a shift from heavy regulation to market-driven incentives. First we look at scarcity pricing and market power in electricity and gasoline markets. We then study oil and gas markets, with an emphasis on optimal extraction and pricing, and geopolitical risks that investors in hydrocarbon resources face. We then shift gears to the sources of environmental problems (many of which are energy-related), and policy makers can intervene to solve some of these problems. We talk about the economic rationale for a broad range of possible policies: environmental taxes, subsidies, performance standards and cap-and-trade. In doing so, we discuss fundamental concepts in environmental economics such as externalities, valuation of the environment and the challenge of designing international agreements. At the end of the course, there will be special attention for the economics and finance of renewable energy and policies to foster its growth. Finally, we discuss the transportation sector, and analyze heavily debated policies such as fuel-economy standards and subsidies for green vehicles.
Taught by: Arthur van Benthem
Activity: Lecture
1 Course Unit

OIDD 290 Decision Processes
This course is an intensive introduction to various scientific perspectives on the processes through which people make decisions. Perspectives covered include cognitive psychology of human problem-solving, judgment and choice, theories of rational judgment and decision, and the mathematical theory of games. Much of the material is technically rigorous. Prior or current enrollment in STAT 101 or the equivalent, although not required, is strongly recommended.
Prerequisites: STAT 101 or equivalent strongly recommended.
Activity: Lecture
1 Course Unit

OIDD 291 Negotiations
Negotiation is the art and the science of creating good agreements between two or more parties. This course develops managerial negotiation skills by mixing lectures and practice, using cases and exercises in which students negotiate with each other. The cases cover a wide range of problems and settings: one-shot deals between individuals, repeated negotiations, negotiations over several issues, and negotiations among several parties (both within and between organizations). Class participation and case studies account for half the course grade. Students will also write about a negotiation experience outside of class.
One-term course offered either term
Activity: Lecture
1 Course Unit
OIDD 292 Adv Topics Negotiation
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course builds upon and assumes familiarity with the negotiation concepts covered in the prerequisite for this course: "Negotiations." In this course, we extend the study and practice of negotiations, and we develop a deeper understanding of how specific aspects of the negotiation process impact outcomes. Through course lectures, readings, and exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.

Activity: Lecture
1 Course Unit

OIDD 298 Study Abroad: Negotiations
Activity: Lecture
1 Course Unit

OIDD 299 Judg & Dec Making Res Im
This class provides a high-level introduction to the field of judgment and decision making (JDM) and in-depth exposure to the process of doing research in this area. Throughout the semester you will gain hands-on experience with several different JDM research projects. You will be paired with a PhD student or faculty mentor who is working on a variety of different research studies. Each week you will be given assignments that are central to one or more of these studies, and you will be given detailed descriptions of the research projects you are contributing to and how your assignments relate to the successful completion of these projects. To complement your hands-on research experience, throughout the semester you will be assigned readings from the book Nudge by Thaler and Sunstein, which summarizes key recent ideas in the JDM literature. You will also meet as a group for an hour once every three weeks with the class's faculty supervisor and all of his or her PhD students to discuss the projects you are working on, to discuss the class readings, and to discuss your own research ideas stimulated by getting involved in various projects. Date and time to be mutually agreed upon by supervising faculty and students. The 1CU version of this course will involve approx. 10 hours of research immersion per week and a 10-page paper. The 0.5 CU version of this course will involve approx. 5 hours of research immersion per week and a 5-page final paper. Please contact Maurice Schweitzer if you are interested in enrolling in the course: schweitzer@wharton.upenn.edu

Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: Instructor permission required to enroll.

OIDD 311 Business Computer Languages
This course is taught with the more descriptive title of "Scripting for Business Analytics." "Business Analytics" refers to modeling and analysis undertaken for purposes of management and supporting decision making. The varieties of techniques and methods are numerous and growing, including simple equational models, constrained optimization models, probabilistic models, visualization, data analysis, and much more. Elementary modeling of this sort can be undertaken in Excel and other spreadsheet programs, but "industrial strength" applications typically use more sophisticated tools, based on scripting languages. Scripting languages are programming languages that are designed to be learned easily and to be used for special purposes, rather than for large-scale application programming. This course focuses on the special purposes associated with business analytics and teaches MATLAB and Python in this context. MATLAB and Python are widely used in practice (both in management and in engineering), as are the business analytic methods covered in the course. Prior programming experience is useful, but not required or presumed for this course.

One-term course offered either term
Activity: Lecture
1 Course Unit

OIDD 314 Enabling Technologies
Conducting business in a networked economy invariably involves interplay with technology. The purpose of this course is to improve understanding of technology (what it can or cannot enable) and the business drivers of technology-related decisions in firms. We will be discussing some of the new and most disruptive technologies right now to stimulate thought on new applications for commerce and new ventures, as well as their implications to the tech industry as a whole. Topics include social media, online advertising, big data, and cloud computing. The course will take a layered approach (from network infrastructure) to data infrastructure to applications infrastructure, or first, understanding and then, thinking about technology enablers. Network infrastructure layers include fundamentals of wired and wireless infrastructure technologies such as protocols for networking, broadband technologies - for last (DSL, Cable etc) and other miles (advances in optical networking) and digital cellular communications. Data infrastructure layers include usage tracking technologies, search technologies and data mining. Direct application layers include personalization technologies (CRM), design technologies for content and exchanges, software renting enablers, application service provision, agents and security mechanisms. Finally some emerging technology enablers (such as bluetooth, biometrics and virtual reality) are identified and discussed.

One-term course offered either term
Activity: Lecture
1 Course Unit
OIDD 315 Data Base Management Systems
Organizations continue to increase their reliance on computerized database management and information retrieval systems. Whether purchasing airplane tickets, managing retail merchandise, processing financial trades or simply sending email, data management defines the modern firm. This course aims to provide students with both a practical and theoretical introduction to the design, implementation, and use of such systems. Students are introduced to the fundamental concepts and principals of data management and gain practical experience by designing and deploying a working system. Throughout the course, case studies are used to illustrate theoretical concepts while acquainting students with innovative commercial uses of these systems.
One-term course offered either term
Activity: Lecture
1 Course Unit

OIDD 316 Systems Analysis, Design, and Implementation
At its surface this course introduces students to the management and technical issues associated with planning and designing large-scale computer systems. It does so in part as an elaboration of Fred Brooks's observation that "The technology, the surrounding organization, and the traditions of the craft conspire to define certain items of paperwork." But if that were our only goal, we would soon find ourselves mired in (and probably arguing about) the minutiae of how such paper items ought to be constructed - not a very helpful pedagogical exercise. So then, at a deeper level we seek to understand why the conspiracy endures, and why in spite of it, systems still take too long and cost too much to build as a systems project’s team members struggle to understand one another across disparate discourse communities and world views, differences in experience and training, and over long periods of time. More than anything else, within the context of working with the main tools and techniques of systems analysis and design, this course treats communication, corroboration, and thinking within the boundaries of a technology-oriented project as its primary subjects.
One-term course offered either term
Activity: Lecture
1 Course Unit

OIDD 319 Advanced Decision Systems: Evolutionary Computation
This course is taught with the more descriptive title of "Agents, Games, and Evolution." It explores applications and fundamentals of strategic behavior. Strategic, or game-theoretic, topics arise throughout the social sciences. The topics include--and we discuss--trust, cooperation, market-related phenomena (including price equilibria and distribution of wealth), norms, conventions, commitment, coalition formation, and negotiation. They also include such applied matters as design of logistics systems, auctions, and markets generally (for example, markets for electric power generation). In addressing these topics we focus on the practical problem of finding effective strategies for agents in strategic situations (or games). Our method of exploration will be experimental: we review and discuss experiments, principally computational experiments, on the behavior of boundedly rational agents in strategic (or game-theoretic) situations. Course work includes readings, discussions in class (organized as a seminar), examinations, and a course project on a topic chosen by the participants.
One-term course offered either term
Activity: Seminar
1 Course Unit

OIDD 321 Introduction to Management Science
Understanding how to use data and business analytics can be the key differential for a company's success or failure. This course is designed to introduce fundamental quantitative decisionmaking tools for a broad range of managerial decision problems. Topics covered include linear, nonlinear, and discrete optimization, dynamic programming, and simulation. Students will apply these quantitative models in applications of portfolio management, electricity auctions, revenue management for airlines, manufacturing, advertising budget allocation, and healthcare scheduling operations. Emphasis in this course is placed on mathematical modeling of real world problems and implementation of decision making tools.
One-term course offered either term
Activity: Lecture
1 Course Unit

OIDD 325 Computer Simulation Models
This course focuses on agent-based computational models in the social sciences, especially in economic, in commercial and in strategic (game-theoretic) contexts. This relatively recent and now rapidly-developing form of computer simulation seeks to explain and predict complex social phenomena "from the ground up", through interactions of comparatively simple agents. The course reviews experimental and theoretical results, and exposes the students to modern development environments for this form of simulation. Students have the opportunity to design and implement agent-based simulations. Programming, however, is not required. This course aims to integrate various topics in agent-based simulation, while developing an appreciation of the problems that are particularly characteristic of this form of simulation so that students will understand its promise and potential.
One-term course offered either term
Activity: Lecture
1 Course Unit

OIDD 335 Mathematical Modeling and its Application in Finance
Quantitative methods have become fundamental tools in the analysis and planning of financial operations. There are many reasons for this development: the emergence of a whole range of new complex financial instruments, innovations in securitization, the increased globalization of the financial markets, the proliferation of information technology and the rise of high-frequency traders, etc. In this course, models for hedging, asset allocation, and multi-period portfolio planning are developed, implemented, and tested. In addition, pricing models for options, bonds, mortgage-backed securities, and other derivatives are studied. The models typically require the tools of statistics, optimization, and/or simulation, and they are implemented in spreadsheets or a high-level modeling environment, MATLAB. This course is quantitative and will require extensive computer use. The course is intended for students who have strong interest in finance. The objective is to provide students with the necessary practical tools they will require should they choose to join the financial services industry, particularly in roles such as: derivatives, quantitative trading, portfolio management, structuring, financial engineering, risk management, etc. Prospective students should be comfortable with quantitative methods such as basic statistics and the methodologies (mathematical programming and simulation) taught in OIDD612 Business Analytics and OIDD321 Management Science (or equivalent). Students should seek permission from the instructor if the background requirements are not met.
One-term course offered either term
Prerequisite: OIDD321 (or a similar optimization class)
Activity: Lecture
1 Course Unit
OIDD 380 Operations Strategy Practicum
This course focuses on the management of operations at manufacturing and service facilities located in Israel that are used either by domestic corporations or by multinational companies. The emphasis is on the evolving patterns of operations strategies adopted by firms for producing products, sourcing manufacturing, distributing products, delivering services and managing product design as well as on programs for enhancing quality, productivity and flexibility and managing technology. We will focus on formulation and execution of such strategies for established Israeli multinationals with world class operations and innovative strategies as well as start-ups and smaller companies that are scaling their global supply chain infrastructure to support growth. The course will consist of a set of site visits in Israel during Winter Break that will provide the opportunity to observe company processes directly and in-class sessions which include lectures, case discussions and management speakers who will describe their companies’ current strategy. NOTE: THIS COURSE REQUIRES YOU TO SUBMIT AN APPLICATION FOR ADMISSION. Applications will be reviewed on a rolling basis and enrollment will be limited. Please contact Ramon Jones at ramjones@wharton.upenn.edu for more information. Prerequisites: OIDD 101 or an equivalent course that introduces basics concepts of operations management, supply chains and quantitative methods. Other OIDD and related courses or prior experience can also be used to satisfy the pre-requisite requirement (check with instructor).
Activity: Lecture
1 Course Unit

OIDD 397 Retail Supply Chain Management
Activity: Lecture
0.5 Course Units
Notes: See description under OIDD 697

OIDD 398 Retail Supply Chains
The course will examine how retailers understand their customers’ preferences and respond with appropriate products through effective supply chain management. The course class sections will deal with the following major items: (1) linking finance and operations in retailing, (2) what assortment of products should a retailer carry in each store, (3) optimizing the inventory carried of each SKU in each store, (4) markdown pricing, (5) store execution and (6) supply chain design. In addition, we will consider a broad range of issues facing two retailers, Mothers Work, and Best Buy, when we are visited by current and past senior executives from these firms. The course is highly recommended for students interested in careers in: (1) Retailing and retail supply chains, (2) Businesses like banking, consulting and information technology that provide services to retail firms, (3) Manufacturing companies that sell their products through retail firms. Even if you don’t expect to work for a retailer, this course can be useful to you in two ways. First, because retailers are such dominant players in many supply chains today, it is important that the processes they follow be understood by manufacturers and distributors, or by the consultants and bankers that service retailers and their suppliers. Second, the problems retailers face (e.g., making data accessible, interpreting large amounts of data, reducing lead-times, eliciting the best efforts from employees, and so forth), are shared by firms in many other industries. It’s easier to understand these issues through case studies in retailing because we all experience the industry as consumers and can readily relate to chronic problems such as stock outs and markdowns.
Activity: Lecture
1 Course Unit

OIDD 399 Supervised Study
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Instructor permission required to enroll (except section 002). Wharton Undergraduate students must also receive approval from the Undergraduate Division. Section 002 is the Management and Technology Freshman Seminar; instruction permission is not required for this section and is only open to MT students.

OIDD 410 Decision Support Systems
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Crosslisted with OIDD 672. See description under OIDD 672.

OIDD 415 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student.
Also Offered As: IPD 515
Corequisite: Studio Recitation (Spring Semester only)
Activity: Lecture
1 Course Unit

OIDD 416 Design and Development of Web-Based Products and Services
In this course, students will study innovation and new product development in the context of Web-based products and services. This course lies at the intersection of product design and information technology; it is intended for students with general interests in the design of new products and/or information technology management. The course builds from a general product design methodology. For example, students begin with opportunity identification and analysis of user needs. However, the course also extends principles and practices used in innovation and new product development to information technologies in general and the Web in particular. For example, design-for-manufacturing is addressed with open-source software and Web services. Robust Engineering and Design of Experiments is applied to paper prototyping and server log analysis. The course is an interdisciplinary, integrative project-based course. Through weekly assignments, students apply the tools and techniques to the design of a new product, culminating in the initial rollout of a working service. The course is open to juniors and seniors in SEAS or Wharton.
Activity: Lecture
1 Course Unit
OIDD 469 Information Strategy and Economics
The course is devoted to the study of the strategic use of information and the related role of information technology. The topics of the course vary year to year, but generally include current issues in selling digital products, intermediation, and disintermediation, designing and competing in electronic markets, outsourcing, and technology project management. Heavy emphasis is placed on utilizing information economics to analyze new and existing businesses in information-intensive industries.

Technology skills are not required, although a background in information technology management (equivalent to OPIM210), strategic management or managerial economics is helpful.

Activity: Lecture
1 Course Unit

OIDD 490 The Science of Behavior Change
The objective of this 14-week discussion-based seminar for advanced undergraduates is to expose students to cutting-edge research from psychology and economics on the most effective strategies for changing behavior sustainably and for the better (e.g., promoting healthier eating and exercise, encouraging better study habits, and increasing savings rates). The weekly readings cover classic and current research in this area. The target audience for this course is advanced undergraduate students interested in behavioral science research and particularly those hoping to learn about using social science to change behavior for good. Although there are no pre-requisites for this class, it is well-suited to students who have taken (and enjoyed) courses like OIDD 290: Decision Processes, PPE 203/PSYC 265: Behavioral Economics and Psychology, and MKTG 266: Marketing for Social Impact and are interested in taking a deeper dive into the academic research related to promoting behavior change for good. Instructor permission is required to enroll in this course. Please complete the application if interested in registering for this seminar: https://tinyurl.com/penn-bcfg-seminar

Activity: Seminar
1 Course Unit

Notes: Please complete the application if interested in registering for this seminar: https://tinyurl.com/penn-bcfg-seminar. Application deadline has been extended to July 18th, 2018.

OIDD 515 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student.

Also Offered As: IPD 515
Corequisite: Studio Recitation
Activity: Lecture
1 Course Unit

Notes: Only Wharton MBA candidates are allowed to register for OIDD 515. Non-MBA students must register for the OIDD 415, MEAM 415 or IPD 515 cross-listing for the course.

OIDD 611 Quality and Productivity
Matching supply with demand is an enormous challenge for firms: excess supply is too costly, inadequate supply irritates customers. In the course, we will explore how firms can better organize their operations so that they more effectively align their supply with the demand for their products and services. Throughout the course, we illustrate mathematical analysis applied to real operational challenges—we seek rigor and relevance. Our aim is to provide both tactical knowledge and high-level insights needed by general managers and management consultants. We will demonstrate that companies can use (and have used) the principles from this course to significantly enhance their competitiveness.

Course usually offered in fall term
Activity: Lecture
0.5 Course Units

OIDD 612 Business Analytics
"Managing the Productive Core: Business Analytics" is a course on business analytics tools and their application to management problems. Its main topics are optimization, decision making under uncertainty, and simulation. The emphasis is on business analytics tools that are widely used in diverse industries and functional areas, including operations, finance, accounting, and marketing.

Course usually offered in spring term
Activity: Lecture
0.5 Course Units

OIDD 613 Managing the Productive Core of the Firm: Information and Business Transformation
Information technology has transformed many industries, including media, financial services, and retailing, among others. These technologies have changed not only how we produce services (e.g., outsourcing and offshoring, and their newest extension, cloud computing) but what services we offer (virtual experiences, online advertising, long tail products and services, and social networking). The purpose of this course is to improve understanding of how information technologies enable transformation of business models within existing organizations as well as the development of completely new business models and new organizational forms. The course will serve as an introductory course on information technologies and will serve as a foundation on which students can explore more advanced technology concepts.

Course usually offered in spring term
Activity: Lecture
0.5 Course Units

OIDD 614 Innovation
The course is first and foremost an intensive, integrative, project course in which student teams create one ore more real businesses. Some businesses spun out of the course and now managed by alumni include Terrapass Inc. and Smatchy Inc. The project experience is and exciting context in which to learn key tools and fundamentals useful in innovation, problem solving, and design. Examples of these tools and fundamentals are: problem definition, identification of opportunities, generating alternatives, selecting among alternatives, principles of data graphics, and managing innovation pipelines. The course requires a commitment of at least 10 hours of work outside of class and comfort working on unstructured, interdisciplinary problems. Students with a strong interest in innovation and entrepreneurship are particularly encouraged to enroll. Please read carefully the syllabus posted on-line before registering for this course.

Course usually offered in fall term
Activity: Lecture
0.5 Course Units
OIDD 615 Operations Strategy
Operations strategy is about organizing people and resources to gain a competitive advantage in the delivery of products (both goods and services) to customers. This course approaches this challenge primarily from two perspectives: 1) how should a firm design their products so that they can be profitably offered; 2) how can a firm best organize and acquire resources to deliver its portfolio of products to customers. To be able to make intelligent decisions regarding these high-level choices, this course also provides a foundation of analytical methods. These methods give students a conceptual framework for understanding the linkage between how a firm manages its supply and how well that supply matches the firm’s resulting demand. Specific course topics include designing service systems, managing inventory and product variety, capacity planning, approaches to sourcing and supplier management, constructing global supply chains, managing sustainability initiatives, and revenue management. This course emphasizes both quantitative tools and qualitative frameworks. Neither is more important than the other.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

OIDD 621 Decision Models and Uncertainty
The applicability and use of management science models have increased dramatically in recent years due to the extraordinary improvements in computer, information, and communication technologies. Personal computers and friendly interfaces have become effective "delivery vehicles" for powerful decision models that were once the exclusive province of experts. This core course in management science has a twofold purpose. First, it seeks to introduce simple models and ideas that provide powerful (and oftentimes surprising) qualitative insights about a large spectrum of managerial problems. Its main topics include linear and integer programming, decision making under uncertainty, and simulation. Second, it aims to give a feeling for the kinds of problems that can be tackled quantitatively, the methods and software available for doing so and the difficulties involved in gathering the relevant data. The emphasis is on models that are widely used in diverse industries and functions areas, including finance, operations, accounting, and marketing.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: Lecture and discussion, with case studies and problem assignments.

OIDD 632 Operations Management: Supply Chain Management
Matching supply with demand is easiest when a firm has a flexible supply process, but flexibility is generally expensive. In this course we will 1) learn how to assess the appropriate level of supply flexibility for a given industry and 2) explore strategies for economically increasing a firm’s supply flexibility. While tactical models and decisions are part of this course, the emphasis is on the qualitative insights needed by general managers or management consultants. We will demonstrate that companies can use (and have used) the principles from this course to significantly enhance their competitiveness.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: Lectures, cases, class discussions.

OIDD 636 SCALING OPERATIONS: Linking Strategy and Execution
This course helps students learn to make strategic scaling decisions that are grounded in operational reality. Students will study how to build and evaluate the "operation systems" of the firm to maximize value with the focus on scaling the firm’s operations. This involves tailoring the firm’s operational competencies, assets, and processes to a specific business strategy. The course will approach the challenge of scaling operations and operations strategy by taking a holistic view that incorporates competitive strategy, financial evaluation, and the customer experience.
Prerequisites: OIDD 611, OIDD 612, STAT 613 or those who have a solid understanding of elementary probability and statistics.
Activity: Lecture
0.5 Course Units

OIDD 640 Digital Game Design Techniques for Business: Rules, Incentives, Applications
Why can’t work be fun? Leading firms are engaging in the practice of gamification, using the techniques of digital game designers to serve objectives as varied as marketing, human resources management, productivity enhancement, training, innovation, and customer engagement. This course will examine the mechanism of gamification and provide an understanding of their effective use in the modern firm.
Cross-listed with LGST 640. The course will draw upon interdisciplinary source material as well as real-world case studies and production game environments to identify effective analytical models, strategies, techniques, and metrics for the application of games to business. It will also identify a number of significant pitfalls to the successful implementation of gamification techniques, notably legal and ethical issues, the difficulty of making things fun, and the problems with implementing radical change in established firms. The course will include both in-person meetings and web-based online sessions.
Taught by: Werbach, Hunter
One-term course offered either term
Prerequisite: none
Activity: Lecture
1 Course Unit

OIDD 642 Analytics for Services
This course covers a range of analytical methods that are useful tools for capacity management in services, and it will provide you with insights into the economics of a range of services businesses including (i) High-level planning models that account for multiple dimensions of service capacity, (ii) Low-level models of system congestion that capture the relationship between capacity choices, quality of service and, in some cases, system revenue, (iii) Statistical estimation and forecasting models to characterize key measures of future supply and demand.
Prerequisites: Students who have already taken OIDD 611, OIDD 612, and STAT 613 should be welledquipped for the class. Other students should have a solid understanding of elementary probability, statistics and linear programming. For questions regarding the specifics of your background, please contact the instructor.
Activity: Lecture
0.5 Course Units
Notes: Class participation, case write-ups, online quizzes, self-study exercises and a final exam.
OIDD 643 Analytics for Revenue Management
This course introduces you to the essential concepts and techniques required to understand and implement revenue management (RM). The need for repeated, rapid cycles of estimation and optimization has driven the development of a set of analytical tools that are particularly well suited for RM. This course focuses on those tools.
Prerequisites: Students who have already taken OPIM 612 and STAT 613 should be well equipped for this class. Other students should have a solid understanding of elementary probability, statistics and constrained optimization. For questions regarding the specifics of your background, please contact the instructor.
Activity: Lecture
0.5 Course Units
Notes: Class participation, case write-ups, online quizzes, self-study exercises and a final exam.

OIDD 652 Advanced Management Science: Models and Applications
This course will cover applications of decision models to managerial problems in a variety of business functions. The course will use management science techniques such as mathematical programming (LP/IP/NLP), Monte-Carlo simulation, decision trees, probability theory and statistical analysis as the vehicle for applying diverse management theories to real-world problems. Potential in-class applications include product-line selection, risk management, corporate real options, and supply-chain restructuring. The course will emphasize the practical application of these techniques; problems will be solved using popular packages such as Excel, and Crystal Ball.
Course not offered every year
Prerequisite: OPIM 621
Activity: Lecture
0.5 Course Units

OIDD 653 Mathematical Modeling and its Application in Finance
Quantitative methods have become fundamental tools in the analysis and planning of financial operations. There are many reasons for this development: the emergence of a whole range of new complex financial instruments, innovations in securitization, the increased globalization of the financial markets, the proliferation of information technology and the rise of high-frequency traders, etc. In this course, models for hedging, asset allocation, and multi-period portfolio planning are developed, implemented, and tested. In addition, pricing models for options, bonds, mortgage-backed securities, and other derivatives are studied. The models typically require the tools of statistics, optimization, and/or simulation, and they are implemented in spreadsheets or a high-level modeling environment, MATLAB. This course is quantitative and will require extensive computer use. The course is intended for students who have strong interest in finance. The objective is to provide students the necessary practical tools they will require should they choose to join the financial services industry, particularly in roles such as: derivatives, quantitative trading, portfolio management, structuring, financial engineering, risk management, etc. Prospective students should be comfortable with quantitative methods quantitative methods, such as basic statistics and the methodologies (mathematical programming and simulation) taught in OPIM612 Business Analytics or OPIM321 Management Science (or equivalent). Students should seek permission from the instructor if the background requirements are not met.
Taught by: Tsoukalas
One-term course offered either term
Prerequisite: Either OPIM321 or OPIM612 (or a similar optimization class)
Activity: Lecture
1 Course Unit

OIDD 654 Product Design and Development
The course provides the student with a number of tools and concepts necessary for creating and managing product development processes. The course consists of two interwoven parts. First, it presents the basic steps that are necessary for moving from a "cool idea" to a product sufficiently mature to launch an entrepreneurial start-up. This includes cases, lectures, and exercises on topics like identifying customer needs, developing a product concept as well as effective prototyping strategies. The capstone of this first part is a real project in which student teams conceptualize and develop a new product or service up to the completion of a fully functional prototype. Second, the course discusses a number of challenges related to product development as encountered by management consultants, members of cross-functional development teams as well as general managers. We will analyze several cases related to, among others, resource allocation in R&D organizations, organizational forms of product development teams, as well as managing development projects across large geographic distances.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: Lectures, case and problem analyses, group presentations, the development of a new product to the prototype stage.

OIDD 655 Operations, Marketing, and Design Integration
This course covers topics that span marketing and operations management. Students will examine issues and decisions that require significant coordination between managers in marketing and operations. Topics include channel management, supply chain design, product variety management and service operations pricing and control.
Course usually offered in spring term
Prerequisites: MKTG 621, MKTG 622, OPIM 631, OPIM 632.
Activity: Lecture
0.5 Course Units
Notes: Crosslisted with MKTG 655

OIDD 656 Operations Strategy
This course examines how organizations can develop and leverage excellence in process management. The first module focuses on operations strategy. In these classes, we examine what constitutes an operation strategy and how organizations can create value by managing complexity, uncertainty, and product development. In the second half of the course, we discuss recent developments in both manufacturing and service industries. Specifically, we examine initiatives in quality, lean manufacturing and enterprise-wide planning systems. The course is recommended for those interested in consulting or operations careers, as well as students with an engineering background who wish to develop a better understanding of managing production processes.
One-term course offered either term
Prerequisites: OPIM 621, OPIM 631, and OPIM 632 or equivalent
Activity: Lecture
1 Course Unit
Notes: Crosslisted with ESE 522
OIDD 658 Service Operations Management
The service sector represents the largest segment of most industrial economies. In the U.S., for example, it accounts for approximately 70% of GDP and 70% of employment. In addition to this "pure" service sector, the operations and competitive positions of many manufacturing firms are becoming increasingly service-oriented. While operational excellence is critical for success in most industries today, in a wide range of service industries this is particularly true. For example, recent, significant deregulation in banking, health care, and communications has led to intensified competition and pressure on operations. At the same time, the rapid evolution of information technology has enabled firms to operate in a fashion - and offer a level of service - that has not been previously possible. Elements common to most services make the management of their operations complex, however. In particular, services are intangible, not storable or transportable, and often highly variable. Frequently their delivery involves distributed operations with a significant amount of customer contact. All of these factors make service operations end up looking quite a bit different than manufacturing operations, and the task of achieving excellence in them requires specialized analysis frameworks and tools. This course covers a mix of qualitative and quantitative models that provide the necessary tools. The class will focus on simple models that should help you to better understand both the difficulty of managing and the underlying economics of the service operations being considered. You will have the opportunity to apply these course tools in a group service assessment field project.
One-term course offered either term.
Prerequisites: Courses in operations management, linear programming, probability and statistics
Activity: Lecture
0.5 Course Units

OIDD 659 Advanced Topics
The specific content of this course varies from semester to semester, depending on student and faculty interest. Recent topics have included global operations, product design and development, quality management, and logistics strategy. See department for course description.
One-term course offered either term
Prerequisites: To enroll, you should have already completed one of the following courses: OIDD 415, MEAM 415, IPD 509, OIDD 515, IPD 515, MKTG 262, ARCH 725 or MKTG 853.
Activity: Lecture
1 Course Unit

OIDD 662 Enabling Technologies
This course is about understanding emerging technology enablers with a goal of stimulating thinking on new applications for commerce. No prerequisite or technical background is assumed. The class is self-contained (mainly lecture-based) and will culminate in a class-driven identification of novel businesses that exploit these enablers. No prerequisite or technical background is assumed. Students with little prior technical background can use the course to become more technologically informed. Those with moderate to advanced technical background may find the course a useful survey of emerging technologies. The course is recommended for students interested in careers in consulting, investemnt banking and venture capital in the tech sector.
Activity: Lecture
1 Course Unit
Notes: Lectures, discussions, assignments and class participation.
OIDD 670 Special topics in Information Systems: Simulation and Dynamic Competitive Strategy
This course introduces tools and techniques for modeling dynamic competitive strategies - strategies that evolve over time as you and competitors take actions in response to each other and to changes in the competitive environment. This goes beyond case discussions and approximates the rigor of theoretical or game theoretical analyses, even for problems for which no traditional analytical solutions exist. Students of the course will learn to model business environments and design simulators with the goal of gaining insight and designing policies for strategy implementation. Students will develop understanding of the timing and sequencing of the actions required, as well as understanding how to modify strategies on the fly based on changing conditions or objectives. Students are introduced to state of the art software for general purpose business modeling and simulation.
Course not offered every year
Activity: Lecture
0.5 Course Units

OIDD 672 Decision Support Systems
The past few years have seen an explosion in the amount of data collected by businesses and have witnessed enabling technologies such as database systems, client-server computing and artificial intelligence reach industrial strength. These trends have spawned a new breed of systems that can support the extraction of useful information from large quantities of data. Understanding the power and limitations of these emerging technologies can provide managers and information systems professionals new approaches to support the task of solving hard business problems. This course will provide an overview of these techniques (such as genetic algorithms, neural networks, and decision trees) and discuss applications such as fraud detection, customer segmentation, trading, marketing strategies and customer support via cases and real datasets.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Lectures and discussions, written assignments, projects using software package to build models.

OIDD 673 Global Supply Chain Mgmt.
Several forces, ranging from technology that has dramatically reduced the cost of communication, to political developments such as the opening up of China, Vietnam, and Eastern Europe, have created an avalanche of outsourcing and offshoring and lead to supply chains that stretch halfway around the world. This course will study the many questions that arise in the management of such global supply chains, including: Which design and production activities to do in-house and which to outsource? Where to locate various activities around the world? How to forecast the many factors that influence these decisions, including inflation in cost factors such as labor and freight, and the likelihood of future government regulation or political instability? How to keep the supply chain flexible so as to adapt to change? How to manage a geographically disbursed supply chain, including what relationships to have with vendors to ensure low cost, high quality, flexibility, safety, humane labor practices and respect for sustainability of the environment? The course is highly interactive, using case discussions in most classes and senior supply chain executives in many sessions.
Grades are based on one-third each on class participation, individual assignments and projects.
Activity: Lecture
0.5 Course Units

OIDD 676 Electronic Markets: Structures, Market Mechanisms and IT Enabled Strategies
This course deals with Electronic Markets and Market structures and the strategic uses of information within the firm. The course consists of four related modules on the design and functioning of Business to Business markets, use of technology to source services from global providers - i.e., outsourcing of business processes (as opposed to IT), the use of strategic technological platforms such as CRM and Web Services and the technology-enabled precision pricing techniques. Further, students are exposed to strategy formulation and execution in an online market where they compete both against each other and against (electronic) agents. This course is recommended for students interested in a career in consulting, strategic management and to students interested in information technology related professions. The course will be delivered through a mix of lectures, case discussions and hands-on trading in virtual markets using different market mechanisms. The course Web cafe will be used for discussions and responses from instructor and TA. We do not assume or require any specific technical knowledge. Workings of electronic markets and market mechanisms and how IT can enable the formulation of new strategies and empower firms to define new markets in ways that were not possible until recently. This is an advanced elective that covers several essential topics in information strategy - IT and market structure, impact of IT on knowledge-intensive products and services and creating hybrid markets that span multiple channels. Students will compete in simulated electronic markets, using different market mechanisms and formulate information-based strategies. Students will also study how IT has enabled the globalization of services through the outsourcing of processes (BPO) and how quasi market structures which combine elements of organization and markets are emerging in knowledge-intensive service industries.
Prerequisites: MGE 621 is recommended.
Activity: Lecture
0.5 Course Units

OIDD 680 Operations Strategy Practicum
This course will focus on the management of operations at manufacturing and service facilities of domestic corporations and foreign multinational companies. Our emphasis will be on the evolving patterns of operations strategies adopted by firms for producing products, sourcing manufacturing, distributing products, delivering services and managing product design as well as on programs for enhancing quality, productivity and flexibility. The course will focus on the formulation and execution of such strategies for a collection of firms in the context of the current dynamics of global competition. The course consists of a set of site visits and in-class sessions which include lectures, case discussions and management speakers who will describe their company's current strategy.
Activity: Lecture
1 Course Unit

OIDD 690 Managerial Decision Making
The course is built around lectures reviewing multiple empirical studies, class discussion, and a few cases. Depending on the instructor, grading is determined by some combination of short written assignments, tests, class participation and a final project (see each instructor’s syllabus for details).
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Crosslisted with MGMT 690.
OIDD 691 Negotiations
Negotiation is the art and science of creating good agreements. In this course we will work on both, studying economics and psychology for the science, and practicing actual negotiations for the art. Throughout we think of negotiation in general terms, relevant not only to salary negotiations and home buying, but performance evaluations, speeches, group collaborations and interpersonal relationships. We practice these kinds of negotiations in 2, 3, 4, and 6-person exercises. Potential reasons to skip this particular negotiation course are: 1) We have a strong attendance policy, 2) We have strong no-computers/phones policies, 3) the course is very discussion oriented, 4) We survey your work colleagues about your influence tactics, and 5) you have a short assignment due almost every class. Beginning with the second week of class, if you miss one class you lose a letter grade. If you miss two classes you fail. We have this policy because it is an experiential class, and because your attendance directly affects classmates you are paired with. For some weeks you can attend another section if necessary. Cross-listed with MGMT691 and LGST806.
One-term course offered either term
Prerequisites: STAT 621, OPIM 621
Activity: Lecture
1 Course Unit
Notes: Crosslisted with LGST 806, MGMT 691. Lectures, cases, presentations, and written assignments.

OIDD 692 Advanced Topics Negotiation
This is a course builds on the basic Negotiation course. In this course, we explore a wide range of negotiation topics from crisis and hostage negotiations, to the role of emotions including anxiety, envy and anger in negotiations, to backlash effects for women in negotiations, and the role of alcohol in negotiations. We will survey many aspects of current negotiation research, discuss historic negotiation cases, and students will participate in role-play exercise. Many of the role play exercises will involve multi-party negotiations and afford opportunities to hone skills in team-based negotiations.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Cases, presentations, lecture and discussion.

OIDD 693 Influence
One-term course offered either term
Activity: Lecture
0.5 Course Units
Notes: Cross listed with OPIM 261, BPUB 261, 761, 961, and ESE 567

OIDD 695 Semester in San Francisco Regional Seminar
As part of the Wharton Semester in San Francisco (SSF) program, this course is designed to (i) provide integrative material that emphasizes links between finance, marketing, product design, negotiations, and other themes in the SSF academic curriculum; (ii) link classroom theories and principles to actual practice by reflecting on the academic literature and (iii) highlight the unique characteristics of, and the programs proximity to, the Bay Area economy. All students participating in the SSF are required to register for this Regional Seminar.

Activity: Lecture
0.5 Course Units
Notes: Cross listed with OPIM 261, BPUB 261, 761, 961, and ESE 567

OIDD 697 Retail Supply Chain Management
This course is highly recommended for students with an interest in pursuing careers in: (1) retailing and retail supply chains; (2) businesses like banking, consulting, information technology, that provide services to retail firms; (3) manufacturing companies (e.g. P&G) that sell their products through retail firms. Retailing is a huge industry that has consistently been an incubator for new business concepts. This course will examine how retailers understand their customers' preferences and respond with appropriate products through effective supply chain management. Supply chain management is vitally important for retailers and has been noted as the source of success for many retailers such as Wal-mart and Home Depot, and as an inhibitor of success for e-tailers as they struggle with delivery reliability. See M. L. Fisher, A. Raman and A. McClelland, "Rocket Science Retailing is Coming - Are You Ready?" Harvard Business Review, July/August 2000 for related research.
One-term course offered either term
Activity: Lecture
0.5 Course Units
Notes: Lectures, case discussion, guest speakers. Class participation, papers, and a team report.

OIDD 698 Value Networks
This is a project-based course run in a seminar format to explore current trends and opportunities for integration and coordination in IT-enabled value-chain networks. The curriculum is structured around a live case; students will work in teams to synthesize data from the live case and evaluate possible operational strategies and IT enablers in the context of a real, on-going business restructuring decision. Students will review a set of operations strategies affecting production, fulfillment, procurement product design, and support that may prove relevant e.g. Postponement, Mass Customization, Customer Service Differentiation, Buyer/Supplier Coordination. We also consider functionality that underlies relevant information technologies like Enterprise Resource Planning (ERP) or Customer Relationship Management (CRM), e.g. data integration, information quality, and security. Finally, we invite different vendors into the class to provide students with the opportunity to compare and contrast state-of-the-art IT and Operations Management solutions.
Course not offered every year
Activity: Lecture
1 Course Unit

OIDD 761 Risk Analysis and Environmental Management
This course is designed to introduce students to the role of risk assessment, risk perception and risk management in dealing with uncertain health, safety and environmental risks including the threat of terrorism. It explores the role of decision analysis as well as the use of scenarios for dealing with these problems. The course will evaluate the role of policy tools such as risk communication, economic incentives, insurance, regulation and private-public partnerships in developing strategies for managing these risks. A project will enable students to apply the concepts discussed in the course to a concrete problem. Cross-listed with BPUB 761.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Cross listed with OPIM 261, BPUB 261, 761, 961, and ESE 567
OIDD 762 Environmental Sustainability and Value Creation
This course provides an overview of topics related to corporate sustainability with a focus on how sustainable approaches can create value for the firm. We will explore trends in corporate practices and consider several case studies to examine the interactions between the firm and the environment. Several guest lecturers will discuss how they have addressed sustainability within their company. This course has three objectives: to increase your knowledge as future top decision makers on key environmental questions; to recognize environmental concerns as competitive opportunities; to teach students to think strategically and act entrepreneurially on environmental issues. You will leave the class with a tool-kit for action.
One-term course offered either term
Activity: Lecture
0.5 Course Units

OIDD 763 Energy Markets & Policy
Activity: Lecture
1 Course Unit

OIDD 898 Advanced Topics
Course not offered every year
Activity: Lecture
1 Course Unit

OIDD 900 Foundations of Decision Processes
The course is an introduction to research on normative, descriptive and prescriptive models of judgement and choice under uncertainty. We will be studying the underlying theory of decision processes as well as applications in individual group and organizational choice. Guest speakers will relate the concepts of decision processes and behavioral economics to applied problems in their area of expertise. As part of the course there will be a theoretical or empirical term paper on the application of decision processes to each student's particular area of interest.
One-term course offered either term
Prerequisite: STAT 510 or 550
Activity: Lecture
1 Course Unit
Notes: Non-PhD students must contact instructor for permission to enroll.

OIDD 904 Experimental Economics
Many theories in economics can be tested usefully in experiments in which researchers control parameters that are uncontrolled in natural settings. This course presents the theory of the experimental method and validity along with several examples of experimental testing: simple competitive equilibrium, intertemporal competitive equilibrium, asset markets, futures markets, bargaining models, tournaments, reputation-building in repeated games, etc.
Course not offered every year
Prerequisite: OIDD900 or permission of the instructor
Activity: Lecture
1 Course Unit

OIDD 906 Proseminar in Operations and Information Management
Advanced seminar focusing on topics in Operations, Information and Decisions research
Course not offered every year
Activity: Seminar
1 Course Unit

OIDD 910 Concepts of Math Programming
Introduction to mathematical programming for PhD students who would like to be intelligent and sophisticated consumers of mathematical programming theory but do not plan to specialize in this area. Integer and nonlinear programming are covered, including the fundamentals of each area together with a sense of the state-of-the-art and expected directions of future progress.
Course usually offered in fall term
Also Offered As: ESE 504
Activity: Lecture
1 Course Unit
Notes: Crosslisted w/ ESE 504.

OIDD 912 Introduction to Optimization
This course constitutes the second part of a two-part sequence and serves as a continuation of the summer math camp. Mathematical optimization provides a unifying framework for studying issues of rational decision-making, optimal design, effective resource allocation and economic efficiency. It is a central methodology of many business-related disciplines, including operations research, marketing, accounting, economics, game theory and finance. In many of the disciplines, a solid background in optimization theory is essential for doing research. This course provides a rigorous introduction to the fundamental theory of optimization. It examines optimization theory in two primary settings: static optimization and optimization over time (dynamic programming).
Applications from problem areas in which optimization plays a key role are also introduced. The goal of the course is to provide students with a foundation sufficient to use basic optimization in their own research work and/or to pursue more specialized studies involving optimization theory.
The course is designed for entering doctoral students. The prerequisites are calculus, linear algebra and some familiarity with real analysis, as covered in summer math camp. Other concepts are developed as needed throughout the course.
Prerequisites: OIDD 910, OIDD 930.
Activity: Lecture
0.5 Course Units

OIDD 913 Advanced Linear Programming
Course not offered every year
Prerequisite: OIDD 910/ESE504 or equivalent
Activity: Lecture
1 Course Unit

OIDD 914 Advanced Non-Linear Programming
Course not offered every year
Prerequisite: OIDD910 or equivalent
Activity: Lecture
1 Course Unit
OIDD 915 Advanced Graph Theory
Deals mainly with algorithmic and computational aspects of graph
theory. Topics and problems include reachability and connectivity,
setcovering, graph coloring, location of centers, location of medians,
trees, shortest path, circuits, traveling salesman problem, network flows,
matching, transportation, and assignment problems.
Course not offered every year
Prerequisite: OIDD910 / ESE504 or equivalent
Activity: Lecture
1 Course Unit

OIDD 916 Advanced Integer Programming
In-depth review of solution methods: Lagrangean relaxation and column
generation, Benders partitioning, cross-decomposition, surrogate
relaxation, cutting planes and valid inequalities, logical processing,
probing, branch-and-bound, branch-and-price. Study of special problems
and applications: matching, location, generalized assignment, traveling
salesman, forest planning, production scheduling. Prerequisite:
OIDD 910/ESE 504 or equivalent. Please email the instructor for any
questions regarding the prerequisite.
Course not offered every year
Prerequisite: OIDD 910/ESE 504 or equivalent
Activity: Lecture
1 Course Unit

OIDD 920 Empirical Research in Operations Management
Empirical research in Operations Management has been repeatedly called
for over the last 10-15 years, including calls made from the academic
thought leaders in the field as well as by many of the editors of the top
academic journals. Remarkably though, most researchers in the field
would be pressed to name even three empirical papers published in
such journals like Management Science or Operations Research. But,
has there really been so little published related to empirical Operations
Management (you might be surprised to learn that all five bullets listed
above has been addressed by Management Science papers)? What
types of problems in operations are interesting and worthwhile studying
from an empirical viewpoint? How can one get started with an empirical
research project in Operations Management? These are the questions
that are at the heart of this course. Specifically, the objective of this
course is to (a) expose doctoral students to the existing empirical
literature and (b) to provide them with the training required to engage in
an empirical study themselves.
Activity: Lecture
0.5 Course Units

OIDD 930 Stochastic Models
This course introduces mathematical models describing and analyzing
the behavior of processes that exhibit random components. The theory
of stochastic processes will be developed based on elementary probability
theory and calculus. Topics include random walks, Poisson processes,
Markov chains in discrete and continuous time, renewal theory, and
martingales. Applications from the areas of inventory, production, finance,
queueing and communication systems will be presented throughout the
course.
Course usually offered in fall term
Prerequisite: STAT510 or 550 or equivalent
Activity: Lecture
0.5 Course Units

OIDD 931 Stochastic Processes II
Extension of the material presented in OIDD930 to include renewal theory,
martingales, and Brownian motion.
Course usually offered in spring term
Prerequisite: OIDD930
Activity: Lecture
0.5 Course Units

OIDD 932 Queuing Theory
This course presents the mathematical foundations for the analysis of
queueing systems. We will study general results like Little’s law and the
PASTA property. We will analyze standard queueing systems (Markovian
systems and variations thereof) and simple queueing networks,
investigate infinite server models and many server approximations, study
GI/G/1 queues through random walk approximations, and read papers on
applied queueing models.
Course offered spring; even-numbered years
Prerequisites: OIDD930 and OIDD931
Activity: Lecture
0.5 Course Units

OIDD 934 Dynamic Programming and Stochastic Models
The course goal is to provide a brief but fairly rigorous introduction to
the formulation and solution of dynamic programs. Its focus is primarily
methodological. We will cover discrete state space problems, over
finite or infinite time horizon, with and without discounting. Structured
policies and their theoretical foundation will be of particular interest.
Computational methods and approximation methods will be addressed.
Applications are presented throughout the course, such as inventory
policies, production control, financial decisions, and scheduling.
Course usually offered in spring term
Prerequisite: OIDD930
Activity: Lecture
0.5 Course Units

OIDD 937 Methods Stumblers: Pragmatic Solutions to Everyday
Challenges in Behavioral Research
This PhD-level course is for students who have already completed at
least a year of basic stats/methods training. It assumes students already
received a solid theoretical foundation and seeks to pragmatically bridge
the gap between standard textbook coverage of methodological and
statistical issues and the complexities of everyday behavioral science
research. This course focuses on issues that (i) behavioral researchers
are likely to encounter as they conduct research, but (ii) may struggle to
figure out independently by consulting a textbook or published article.
One-term course offered either term
Activity: Lecture
0.5 Course Units

OIDD 940 Operations Management
Concepts, models, and theories relevant to the management of the
processes required to provide goods or services to consumers in both
the public and private sectors. Includes production, inventory and
distribution functions, scheduling of service or manufacturing activities,
facility capacity planning and design, location analysis, product design
and choice of technology. The methodological basis for the course
includes management science, economic theory, organization theory, and
management information system theory.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Crosslisted with ESE 620
OIDD 941 Distribution Systems Seminar
Seminar on distribution systems models and theory. Reviews current research in the development and solution of models of distribution systems. Emphasizes multi-echelon inventory control, logistics management, network design, and competitive models.
Course usually offered in spring term
Prerequisite: OIDD940
Activity: Lecture
1 Course Unit

OIDD 943 Retail Operations
Activity: Lecture
0.5 Course Units

OIDD 950 Perspectives on Information Systems
Provides doctoral students in Operations and Information Management and other related fields with a perspective on modern information system methodologies, technologies, and practices. State-of-the-art research on frameworks for analysis, design, and implementation of various types of information systems is presented. Students successfully completing the course should have the skills necessary to specify and implement an information system to support a decision process.
One-term course offered either term
Activity: Lecture
1 Course Unit

OIDD 951 Seminar on Logic Modeling
Seminar on the elements of formal logic necessary to read and contribute to the Logic modeling literature, as well as the implementation principles for logic models. The primary topics include elements of sentence and predicate logic, elements of modal logics, elements of semantics, mechanical theorem proving, logic and database, nonmonotonic reasoning, planning and the frame problem, logic programming, and metainterpreters.
Course not offered every year
Prerequisites: Permission of the instructor and some prior knowledge of logic or Prolog
Activity: Seminar
1 Course Unit

OIDD 952 Computational Game Theory
Seminar on principles of knowledge-based systems including expert systems. Topics include basics of expert systems, knowledge representation, meta-level reasoning, causal reasoning, truth maintenance systems, model management, planning systems and other applications.
Course not offered every year
Prerequisites: Permission of instructor and knowledge of logic and Prolog or Lisp
Activity: Seminar
1 Course Unit

OIDD 955 Research Seminar in Information Systems
This course provides an overview of some of the key Information Systems literature from the perspective of Insormation Strategy and Economics (ISE) and Information Decision Technologies (IDT). This course is intended to provide an introduction for first year OIDD doctoral students, as well as other Wharton doctoral students, to important core research topics and methods in ISE and IDT in order for students to do research in the field of Information Systems. While it is intended as a "first course" for OPIM doctoral students in ISE and IDT, it may also be useful for students who are engaged in research or plan to perform information technology related research in other disciplines.
Activity: Lecture
1 Course Unit

OIDD 960 Research Seminar in Information Technology - Economic Perspectives
Explores economic issues related to information technology, with emphasis on research in organizational or strategic settings. The course will follow a seminar format, with dynamically assigned readings and strong student contribution during class sessions (both as participant and, for one class, as moderator.)
Course usually offered in fall term
Activity: Lecture
1 Course Unit

OIDD 961 Research Seminar in Information: Strategy, Systems and Economics
This is the advanced doctoral-level research research in information strategy and economics that builds on the foundations developed in OPIM960. Much of the content will be focused on current research areas in information strategy such as the information and organizational economics, information technology and firm performance, search cost and pricing, information and incentives, coordination costs and the boundary of the firm, and the economics of information goods (including pricing and intellectual property protection). In addition, promising empirical approaches such as the use of intelligent agents for data collection or clickstream data analysis will be discussed.
Activity: Lecture
1 Course Unit

OIDD 989 Topics in Operations and Information Management
The specific content of this course varies form semester to semester, depending on student and faculty interests.
Course not offered every year
Activity: Lecture
0.5 Course Units

OIDD 992 Conflict Mgmt Seminar
This seminar exposes students to the central issues in conflict management research. This course covers both analytic and behavioral perspectives of conflict management, and describes how the field has developed. Through discussions of theory and empirical research, the course aims to develop a foundation for understanding the extant literature and how common methodological tools have shaped the types of questions conflict management scholars have investigated - and neglected.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
ORGANIZATIONAL ANTHROPOLOGY (ORGC)

ORGC 160 Leading Teams
In this course, students learn about the basics of team dynamics. Students explore the foundations of effective teams, and understand why they inevitably become misaligned. Students then step through a process for generating passion and high-performance in any group that has to work together toward a common goal. Through engaging case studies and role plays, students get practice diagnosing and managing interpersonal issues that can derail teams.
Activity: Online Course
1 Course Unit

ORGC 201 Virtual Collaboration
Virtual Collaboration looks at interconnections and synergies that can be intentionally created in the virtual space of work by following frameworks and techniques that allow greater and more frequent exchange of views, freedom to express divergent views and harness the richness of variety of people, thoughts, geographies, cultures and social norms, intelligence and above all experience. Students practice course tools and techniques by collaborating and providing peer feedback in the virtual classroom environment.
Activity: Online Course
1 Course Unit
ORGANIZATIONAL DYNAMICS (DYNM)

DYNM 500 Foundations of Research and Scholarship
A main objective of this foundation course is to improve the academic papers and presentations in all Organizational Dynamics work, including the capstone. Because the discipline of writing for academic purposes is based on skills that are not common to business writing and because the writing process is central to learning in this program, Organizational Dynamics offers this course designed to assist participants in developing efficient, reliable, and fruitful academic writing and presentation techniques.
Taught by: Barstow, Greco, and Shapiro
Prerequisites: Non-DYNM students must complete a course permit request form: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Activity: Seminar
1 Course Unit
Notes: DYNM Category: F

DYNM 501 Perspectives on Organizational Dynamics
"Perspectives" is both a fundamental and integrating course intended for MSOD students at any point in the program who wish to understand and deploy a multiplicity of dynamics operative in organizations and in the minds that create and inhabit them. It is particularly useful for those in their first year and for non-MSOD students. One key focus is on understanding the implicit mental and emotional frameworks or metaphors that "inform" organizing so that we can virtually see more robust and complex approaches to effectiveness and to leadership within them. Several faculty members highlight their specialties. One special theme examines new management models and thinking frameworks designed to prevail in a 21st century context. Lectures, discussion, and experiential learning are used to build an informed grounding in the history, philosophy, theory and practice of Organizational Dynamics. The course requirements are active class participation, potential application projects/weekly journal, a midterm paper and a final paper.
Taught by: Greco

Prerequisites: Non-DYNM students must complete a course permit request form: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Activity: Seminar
1 Course Unit
Notes: DYNM Category: A; DYNM Concentration: LMC

DYNM 542 Theories, Models, and Practices that Inform Coaching
This course will examine how theory guides the effective practice of coaching. Students will be introduced to a theory and model that encompasses a multi-disciplinary approach to coaching in an organizational setting. With this framework as a basis, students will select, research, and present a theoretical model of their own choosing and design a coaching application that demonstrates theory in action. Students will leave the course with an array of theoretical frameworks and practical techniques that will enhance their own coaching capabilities as managers and consultants. Undergraduates may enroll in 500-level courses only with permission of the instructor.
Taught by: Orenstein
One-term course offered either term
Prerequisites: Permits for Non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Activity: Seminar
1 Course Unit
Notes: DYNM Course Category: F; DYNM Course Concentrations: LMC, OC

DYNM 551 Devil's Advocate: Power of Divergent Thinking
Short-term or long-term? Us or them? Build or buy? Margin or volume? My way or the highway! Ad infinitum, apparent forced choices--or no choice--and limited perspectives can create costly tugs of war or constricted judgment without our minds (and hearts) and in organization dynamics, persuasive, and often hidden, divergence in thinking offers great opportunity for learning, creativity, and sound decision-making. This course offers several robust, practical techniques for bringing the value of diverse perspectives in politically productive ways to leadership thinking, communications, and organization dynamics.
Taught by: Greco
One-term course offered either term
Prerequisites: Permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Activity: Seminar
1 Course Unit
Notes: DYNM Category: A; DYNM Concentration: LMC. Course meeting schedule: Tuesdays 5-9:30 from May 22-June 19th; Thursday, 5:00 to 9:00 pm June 21st ONLY; Fridays 4:30-8:30 from May 25-June 15th
DYNM 552 Strategic Crowdsourcing & Business Models
This online course offers insight on how innovative firms are organizing strategically to gain advantage from engaging online with the value distributed resources held by a global pool of individuals. Through cases derived from original research, including Amazon, Facebook, Netflix, oDesk, Kiva, Wikipedia, among others, this course unveils the business models that these organizations use to create new value by working with "crowds" online. Open, distributed, online approaches to work and innovation have been widely studied over the past decade in the context of the computer and software industry (e.g. Benkler 2002; Chesbrough 2003; von Hippel and von Krogh 2003). Many of those concepts have since then permeated other industries, eventually giving birth to a distributed organizational paradigm referred to as "crowdsourcing" (e.g. Howe 2008; Villarroel 2008). The crowdsourcing model has proven valuable for innovation, work, entrepreneurship, among other applications. For example, in 2011, a crowd innovation initiative involving 57,000 individuals solved a decade-old scientific problem in molecular biology in only 3 weeks. In 2012, the top 3 crowd labor platforms brought skilled work to 6 million people in over 200 counties. In 2013, US $5 billion are expected to be invested in crowd-funded projects around the world. The aims of this course are (1) to gain a solid understanding of the business models in crowdsourcing; (2) to benefit from first-hand experience with the "power of the crowd", (3) to critically analyze the potential and limitations of this new organizational paradigm.
Taught by: Villarroel
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu

DYNM 553 Becoming a Courageous Follower
This course will examine both personal and professional behaviors that constitute effective followership. While the leadership literature is saturated with books on becoming better leaders, there is a dearth of awareness on finding and supporting those who follow those leaders effectively. Students will use surveys from the limited literature on followership to profile their own organization's dynamics on styles of followership, and stories of success and failure in confronting organization mistakes and leadership errors will be researched. The outcome of the class will be a personal profile on followership style and an organizational profile on its followership culture.
Taught by: Eldred

Activity: Lecture
0.5 Course Units
Notes: For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu

DYNM 555 The Idea of Nationalism
Nationalism has been the most important geo-political phenomenon of the past two hundred years. Its continuing power has been amply demonstrated by recent events in many parts of the world. The principle of national self-determination and closely related notions of individualism and human rights shape the global context in which businesses, governments, organizations, and individuals must operate in the 21st century. This seminar course will explore the ideology of nationalism through the lens of institutions and organizations: corporations, nonprofits, government, NGOs, unions, religious communities, etc. Starting with concrete examples from students own experiences and the contemporary conflicts confronting governments, organizations, and businesses, we will examine the ideology of nationalism, its meaning and content, its philosophical foundations, its underlying assumptions about the nature of human identity, and its contemporary expressions in nationalist movements and ethno-political conflicts around the world. In the process, we will explore such questions as: What is a nation? Does every identifiable ethnic or national group have a valid claim to a nation-state of its own? How are claims to national self-determination justified? Why do nationalist movements seem so often to engender political extremism and violent ethno-political conflicts? Is national self-determination compatible with our commitments to individualism, rationality, and universal human rights? What are the best strategies to cope with the persistence of nationalism in the 21st century?

DYNM 555 Social Media and the Organization
If you don't yet believe in the social media revolution, then watch this: http://www.youtube.com/watch?v=ZQzsQkMFgHE. Facebook. Twitter. Pinterest. Tumblr. Path. Delicious. Digg. Youtube. LinkedIn. It's been less than a decade since many of these social media services have launched, yet they've transformed society in many significant ways. Social Media and the Organization will deepen your understanding of and offer real time practical experience with social media. The course will examine the current trends and use of social media in marketing, product development, customer service, networking and other facets of organizational policy and practice. Students will have hands-on participation online with the class blog, http://upennsocialbook.wordpress.com, sharing relevant case studies, analyzing social media campaigns and critiquing their own organization's culture and values surrounding social media including social media policy, staff challenges, and evaluation of challenges and opportunities in its use.

DYNM 559 Research Methods to Develop Dynamic Expertise
It’s not enough to be competent, educated, smart and professional. Globalization, technology, and vastly improved communications have increasingly led to “Winner Take All” markets. Consider the local opera house: 100 years ago, Iowa alone had more than 1,500 of them. Thousands of sopranos earned adequate, if modest, livings from the live performances, but now, thanks to i-pods, the world’s best soprano can be literally everywhere at once. And since it costs no more to transmit MP3s of Renee Fleming’s Mozart arias than her understudy’s, most opera fans listen to Fleming. Thus, Fleming earns several million dollars a year while most other sopranos, many of whom are almost as talented, struggle to get by. The same is increasingly true of other professions: Those who are recognized for being the best at what they do can sell their services anywhere and everywhere at top dollar, whereas those who lack such recognition find their services valued less and less—if they are valued at all. As graduate students at the University of Pennsylvania, you have an extraordinary opportunity to become the leading expert in a given domain in a few short years, maybe less.

DYNM 601 Gender, Power, and Leadership in Organizations
For the last several years, issues related to gender in organizations and organizational leadership have not been hot topics of discussion in the popular media, in organizations themselves, or in academia. That is no longer true. The advent of #metoo and the revelation of sexual harassment in corporations, government sector organizations, and nonprofits has highlighted the ways in which those with more power have been using their power to both harass and silence their victims, many of whom are women—although this dynamic is true for others belonging to groups with less power. Addressing these issues effectively will require more than lawsuits and more than sexual harassment and bystander training. This course will explore what will be required if we are to have organizations that effectively leverage the skills and talents of both men and women. Although in the last 30 years there has been some significant progress made in placing women in leadership roles in organizations, we will take a deep look at the data about where and how gender differences continue to exist in organizations including differences in both professional and outcomes.

DYNM 602 Leader-Manager as Coach
New work technologies, increased competition, and employees’ desire for more involvement in their work are changing the traditional role of the manager. Rather than directing, planning, and controlling the work, managers and leaders are facilitating processes and coaching and developing their employees. Team-based organizations are built on coaching as a core requirement of the team leader role. This course explores the theory and practices of individual coaching as leadership behavior. The focus is on helping managers develop their skills and improve their performances as coaches. We will examine the need to provide others with successful performance strategies, timely feedback on strengths and on development needs, and growth opportunities in order to challenge others to reach their potential. We will explore workplace environments that foster the growth and achievement of those we lead.

DYNM 603 Leading Emergence: Creating Adaptive Space in Response to Complex Challenges
This seminar is designed to be highly experiential so that participants can engage in the practices necessary to enable innovation and adaptation. Participants will examine emergent innovation theory by addressing the dynamics and conditions in which ideas emerge in an informal manner, garner organizational attention, and gain momentum towards becoming successful innovations or bold changes within complex organizations. This will include examining the need for adaptive space in generating value that drives growth by enabling an environment of idea generation, entrepreneurship and innovation while leveraging the benefits of existing, formal systems to scale these ideas. Participants will explore and engage in such topics as creative experimentation, idea emergence, organizational network analysis, social capital, design thinking, organizational analytics and complexity leadership.

DYNM 604 Entering Risk Management
Can enterprises undertake effective risk management in our globalized, interdependent economy? What risk management role do we play in our organizations? We will apply readings and engage in case studies to discuss whether our organizations do or should manage risks as strategically as opportunities. We'll also examine our involvement with our organizations' risk management. By the conclusion of the course, you will develop a framework for addressing risk in your current organization or future enterprise.

DYNM 605 Resolving Project Risk, Uncertainty, and the Unexpected
DYNM 605 is a uniquely blended content of thought leadership vetted by subject matter experts worldwide. This participant-centered seminar is an opportunity to increase both awareness and knowledge of risk and uncertainty by examining causes of unexpected events in predictive (classic) and adaptive (agile) project frameworks. Successful applications of non-deterministic approaches are explored as antidotes to constrained command and control project environments. Course content is valuable in roles, organizations, and sectors of all types. Prominent project/operational risk management methodologies are included in this seminar. Processes advanced by the Project Management Institute, U.K. Association for Project Management, International Council on Systems Engineering, and by the International Organization for Standardization are contrasted with industry specific practices, including the U.S. Food and Drug Administration, NASA, and the Departments of Defense and Energy. Case examples are based on relevant experience. Participants perform hands-on implementation of processes in realistic team working sessions and facilitated dialogue. Spreadsheet/network analysis using Monte Carlo Simulation tools will be included in the course and clinics (see syllabus).

DYNM 606 Leading from the Center: Unleashing Your Leadership Potential
This seminar is designed to support existing and emerging leaders who recognize their need for more adaptive leadership skills to effectively respond to rapidly changing environments. We will weave leadership theory and practice in a highly experiential seminar so that participants can actively engage in a leadership lab including deep reflective thinking, rapid prototyping and experimenting with new behaviors and practices. The purpose of the seminar is to evoke personal leadership at more impactful levels and improve organizational performance and personal satisfaction. Participants will examine their own, and others', leadership theories by identifying assumptions about leading, creating a preferred model for individual leadership, and field testing actual shifts in behavior. Participants will engage in a three-part exploration over the course of the seminar: first, we will have an opportunity to examine our own models and those of the leading theorists in the field; second, participants will be asked to articulate and improve their own model; and finally, participants will be asked to activate and test their model and report back on the experience. This course is designed to create an 'action-learning' community in which you will integrate your professional experience, this class, and other graduate course work with a final exploration of leadership concepts, theory, and applied practice. This course is also designed to strengthen your ability to lead, including as a colleague who can support leadership behavior in peers and as one who can promote leadership behavior in supervisors and subordinates.

DYNM 607 Psychodynamics of Organizations
As an area of study, the psychodynamics of organizations draws out attention to the tacit, implicit, and unconscious dimensions of organizational life. It presents that a person takes up his or her role at work by drawing on both individual history and the organizational context that helps define a role, its boundary, and the resources available to take it up. In both these aspects, the organizational context, and one's individual biography, people are often unaware of the thoughts and feelings that animate their behavior. This course will introduce students to some basic concepts of psychoanalysis, which focuses on individual motivation, and systems psychodynamics, which focuses on group dynamics and group psychology. System psychodynamics also emphasizes how an organization's primary task, or its "reason for being" influences individual experience. Readings include case studies as well as expositions of theory. The instructor will also draw on his own consulting cases.

DYNM 608 Organizational Dynamics of Working in a Global Marketplace
This course examines some of the sources of confusion, conflict, misperception and error that arise when representatives of U.S. organizations interact and work in the global marketplace. The aim is to heighten awareness, help avoid personal or professional pitfalls, and to more effectively manage some of the organizational and business challenges that arise when operating across dissimilar environments. We will focus on areas including: ethics, culture, language, ethnicity, religion, gender, the political and legal systems, labor, corruption, and corporate organization. Each class session will begin with a short, interactive introductory lecture, followed by discussion around assigned readings and mini-cases.

DYNM 609 From Traditional Project Management to Transformational Project Leadership
The primary objective of this course is to provide a comprehensive framework for analyzing both current and future expectations for success of Project Leaders in the context of Project Management, Project Teams, and the Project/Program/Portfolio Management Office (PMO) by addressing the following questions: 1) What is the track record of Project Management and what capabilities are required to succeed as a Project Leader in a complex and evolving business environment? 2) What characteristics does a Project Leader possess and can every Project Manager become a successful Project Leader? 3) How can Project Managers better integrate their left-brained analytic intelligence with their right-brained emotional intelligence to become successful Project Leaders? 4) What are the desired attributes of a transformational leader and what organizational barriers may impede transformational change? 5) What are the roles and responsibilities of the Project Leader as Team Leader, Coach, and Mentor? 6) How can Project Managers and Project Leaders better prepare themselves for integration into PMOs within their organizations?

DYNM 610 Knowing Yourself: The Coach as an Instrument of Change
Note: This class is predicated on the assumption that prior to offering coaching assistance, a coach should have a deep understanding of his or her own behavior and its impact on a client. Utilizing validated tools and strategies available for coaches, the students practice sets of coaching skills on each other. This includes practice in interviewing and observational skills. In addition, students will have the opportunity to give and analyze 360 degree feedback data, as well as use a variety of other instruments that can be foundational for a useful coaching experience. Premise: Coaching others is very serious business. Intrepid individuals willing to take on this responsibility should be willing to answer the following questions: Who am I as a leader and helper? What are the assets I bring to the coaching relationship? What are my deficits, overused strengths, or underutilized skills and behaviors? What historical influences from my family of origin influence my capacity to build a positive relationship with my coaching client? Are there discrepancies in relation to my self-perceptions and those who know me well--family members, peers, colleagues, friends, boss, and direct reports? As a result, are these specific areas of personal development that I need to address as I move? Similar to most traditional programs where the focus is on the management of change, the course is organized to: 1) A diagnostic phase in which the values, history, assumptions, and behaviors of the client will be assessed. In this case the client will be the student/coach. 2) The applied phase in which analysis, interpretation, and formal learning will be the central focus. The end result will be individuals with a deep and abiding understanding of their own psychodynamics and their personal impact. Finally, by modeling many of the tools and strategies useful in any effective coaching effort and practicing them on themselves and their student peers, it is hoped that the experiential nature of the course will allow maximum transference to the real work of coaching.

DYNM 611 Effective Collaboration for a Changing Global Workplace
Effective collaboration requires a combination of strong self-awareness and an ability to make adjustments at the individual and group level. This course provides tools for building teams that leverage individual strengths and a mutual learning process of continuously addressing collaboration barriers to improve team performance. This seminar/lab is designed to extend each participant’s analytical skills and gain practice implementing high performance practices through a team-based simulation. Specific learning objectives are to: 1. Understand leading-edge frameworks for building effective teams. 2. Learn and apply tools for diagnosing barriers to collaboration. 3. Develop implementation plans for teams and organizations consistent with best practices. 4. Provide tools for self-assessment of participants to leverage their strengths for teamwork success. 5. Apply learning from classroom-based teamwork simulation to participants’ real life experiences.

DYNM 612 Mastering Organizational Politics and Power
The purpose of this course is to explore, enhance, and expand the participants’ competence in organizational politics. Students will observe political dynamics as they occur in their own organizations and will interview senior managers in other organizations to learn how political realities vary from one organization to another. Theoretical ideas about a dimension of organizational politics of particular interest to each individual participant will be analyzed in a term paper. In addition, each participant will keep a personal diary of political dynamics in his or her own workplace. The course will also explore ways to master the political skills of networking, negotiating, influencing, leading, and following, as well as developing a political strategy.

DYNM 613 Is Bigger - Inevitable, Better or Worse in Organizations?
Is the modern large corporation alienating, inflexible, unproductive? Is the small organization or work team engaging, innovative or creative, productive? Has it always been this way in the U.S.? Is change possible? In this unique, informal, “turbo” seminar, we will examine the large corporation in terms of history, governance and control, and delivery of (office) work. We will consider whether “bigness” and bureaucracy are inevitable, and how organizations of the present, and probably the future, are affected by those of the past. This seminar has been structured to cover a good deal of ground in a short time. The seminar will meet on six Saturdays. The subject matter of the seminar is the large-scale organization. Questions to be raised include: 1) Is the modern large corporation alienating, inflexible, and unproductive? 2) Are bigness and bureaucracy inevitable? 3) Is the small organization or work team engaging, innovation, creative, and productive? 4) What does the historical record for the United States reveal? 5) Are organizational alternatives and change possible?

1 Course Unit
Notes: DYNM Category: F; DYNM Concentration: LMC. Course Schedule: 1/16, 23, 30; 2/6, 20, 27. 1/16 is 9 to 12; all other meetings are 9 to 5.

DYNM 614 Consulting/Coaching Tools and Techniques
This course will offer a conceptual comprehension of the tools and techniques used in effective internal and external organizational consulting engagements. By contrasting the theory and practice of alternative coaching models, we will build tools and techniques for effective coaching as a leadership competency. Through an analysis of the coaching relationships in your organization, you will learn to develop a personalized approach to coaching and expand upon and within organizational settings. Participants learn the “how and why” as well as consulting frameworks. Additionally, the relevant and often symbiotic connection between consulting and coaching will be studied. What process tools are most useful to today’s executive coach in a consultative environment? How do approaches to consulting and coaching differ? How are they similar? How can a confluence of coaching and consulting lead to more effective decision-making and wide-scale organizational performance? This course will be presented over five class meetings. The class sessions will be taught utilizing lectures, case studies, structured small group discussions, individual and team presentations, faculty and participant experience, and guest speakers.

**DYNM 615 Global PENNovation: Water Security in a Changing World**

Environmentalist Paul Hawken challenged a class of 2009 college graduates that they would have to "figure out what it means to be a human being on earth at a time when every living system is declining, and the rate of decline is accelerating." That theme is at the heart of this course. While we have seen the notion of sustainability gaining some traction in recent years, our quality of life in the near future very likely hinges on the development and implementation of sustainable solutions to enormously complex environmental and social problems. This course is designed to foster the thinking that is needed to address those enormous problems. It involves focusing on a critical global problem with sustainability and social dimensions—in this case global water security—and addressing it in detail as a project team over the course of a semester.

**DYNM 616 Myths to Media: Stories on a Mission**

What determines our behavior? How do we come to understand? Who determines our purpose? Is now the only time? When asked "What if there were nothing in the universe," one professor replied, "How do we know there isn’t?" The more our world seems to dis-integrate into discrete and unpredictable units and actors, the more we crave guidance from robust human models and conceptual frameworks of intellect, emotion, psyche, and action. Fortunately, our 100,000-year-old brains retain mechanisms enabling us even now to enhance our choice using the "stories beneath the stories" that—in form and content—have driven our purposes and actions since sentient beings could communicate. Yoda you should ask. This course offers several means of deploying these powerful ancient sense-making tools—myths and stories—to purposefully communicate and foment action with individuals, groups, and organizations, particularly in our global social media milieu. We will learn many practical story-based ways to apply this power to several "missions": enaging others in individual and collective action, increasing understanding of patterns in human behavior, and harnessing the driver of purpose for business and social enterprise. Seek help from Prometheus.

**DYNM 617 Economics of Human Behavior and Organizational Life**

As a society, we choose many different ways to organize different aspects of our lives. The institutions and organization we choose to provide us with the necessities and comforts of life range from the fundamental institutions of family and religious organizations, to firms in the capitalist market and democratically elected governments. We respond to this environment in unique ways: we marry, we worship, we buy and sell goods and services, and we vote. The primary goal of this course is an examination of the various aspects of human behavior in the context of organizational and institutional life from an economic perspective. We recognize that the choices we make are sensitive to the costs and benefits of different actions and use this economic perspective to gain insights into social, economic and political behavior in our daily lives. We start the course with an examination of how micro economists view the world and examine their favorite toolkit. We discuss concepts such as: efficiency, opportunity cost, marginal analysis, externalities, incentives, free-riding, rent-seeking, and transaction costs. These concepts are fundamental if an economic perspective and they will be presented using every day examples. Before concluding the course, we will look at several topics such as: Human capital and investment in education (Should you invest in an Ivy League school education?); Law and enforcement (When is it profitable to break the law?); Bribes and gifts (Quid pro quo?); Economics of information (Used cars and the market for "lemons"); Why we discriminate against minorities?; Property rights and externalities (The tragedy of the commons: Should we have smoke-free environments?); and Free-riding (Should I vote in the next election? Should I volunteer to clean up?)

**DYNM 618 Strategic Crowdsourcing and Business Models 2.0**

Crowdsourcing is among the most impactful innovations in organization of the 21st century, enabling the rise of distributed organizations. In this course, we will learn the radical business models used by a new generation of companies that transcend the format boundaries of the firm—e.g. Uber, oDesk, Kickstarter, among hundreds of such distributed organizations. The crowdsourcing economy is rapidly expanding, with at least 117 distributed work companies receiving venture capital in 2013—up from 17 in 2009 and 55 in 2011 (The Economist, 2015). Entrepreneurs taking this course will understand how crowdsourcing startups made big strides in the global economy. For example, five-year-old Uber—founded in 2009—developed operations in more than 50 countries, reaching sales of $1 billion in 2014. It received $3.3 in venture capital, valued at more than $41 billion in December 2014 (The Wall Street Journal, 2014). Uber offers an online platform connecting self-selected drivers and users who use a smartphone app to interact with the service. Any interested driver, who has a car and a smartphone, can sign up to be an Uber driver.

DYNM 619 Organizational Project Management
The course provides an overview of the concepts, procedures, and fundamental processes of project management for working professionals. Participants are introduced to the principles, tools, and techniques of project management within an integrative framework. The course emphasizes that, for most organizations, projects are the primary means for implementing strategic initiatives. Course Objectives: 1) Understand and critically evaluate expectations, procedures and processes of program management as currently practiced in large for-profit enterprises; 2) Understand the content and processes and standards of practice as defined by the Program Management Institute (PMI); 3) Understand how to build and manage effective project teams; 4) Become familiar with the critical components of effective project plans. In addition to the scheduled meeting dates, additional class activities will be planned between faculty and students.

DYNM 620 The Art and Science of Paradox in Organizations
This course introduces multiple approaches to understand and interpret the paradoxes that baffle us, such as: 1) Why is it that we go to hospitals to be healed and get well, but we leave sick and infected? 2) How is it that we come together to do purposeful work and end up doing mundane, boring tasks? 3) Why is it that banks were created to protect and ensure financial security, but banks have caused a global recession? 4) Why do we not learn from history? Why do we repeat the mistakes we have made before? 5) Why is it that the "Developed and Advanced" countries of the world are destroying the planet? This highly interactive, flexible, and remarkably diverse online course will offer frames to observe the paradox in ourselves, our families, our friendships, our workplace, and our relationships with individuals, teams, and systems—the three units of analysis that constitute every paradoxical situation. Paradox appears in our organizations, our relationships, and our experience as contributing members and leaders of our society.

DYNM 621 Project Portfolio Management
The primary objective of this course is to enable participants to gain a thorough understanding of and appreciation for the discipline of Project Portfolio Management. Ill-defined and poorly utilized in many organizations, Portfolio Management has struggled to become inculcated within the fabric of these cultures without direct intervention and sponsorship from the highest levels of Senior Management. Beginning with a decidedly strategic focus, the course brings together the very essence of Portfolio Management—technically robust analytics—with the softer elements of communication and decision-making to enable portfolio value maximization. The course is structured in such a way that it follows a unique Portfolio Management framework—CREOPMTM—created by the authors Bayney & Chakravarti in their book titled Enterprise Project Portfolio Management: Building Competencies For R&D and IT Investment Success. In each of the first 6 classes, the framework is followed sequentially and is then applied holistically to a case study in the final classes. The impact of risk and uncertainty to the quantification of project, program, and portfolio value is addressed through classic program and portfolio optimization. Students will be expected to apply many of the principles taught in this course to their own organizations and to deliver class presentations that address portfolio strategy, linkages between organizational plans, decomposing complex decisions, project prioritization, portfolio optimization, and Stage Gate Review (SGR) processes. In their final paper, students will be presented with a choice of analyzing their organizations portfolio health or a selected Kellogg School of Management case study in Portfolio Management using the CREOPMTM framework.

**DYNM 623 Building Intercultural Competence in A Global Work Environment**

This engaging course will promote intercultural competence and heighten cross-cultural awareness. You will engage in activities, simulations, and discussion about culture, values, perceptions, communication styles, and cultural patterns of thought and behavior that will help you understand the basic concepts, theories, and issues of intercultural communication related to intercultural relationships and how these concepts apply to your personal and professional lives. This fun and stimulating course will also explore ways to create an interculturally-competent work environment. Learning opportunities will examine tools to interact more positively with each other. As we build intercultural competence, we will sometimes encounter barriers as we interact with people whose cultural backgrounds vary from our own. As learners of intercultural communication, we will be bringing different cultural experiences and perspectives. As we interact and learn together, you will be exposed to different viewpoints and cultural lenses. We will all realize that as we unravel differences, you will find that what is acceptable and appropriate in one culture may be disrespectful from another cultural vantage point. As we cultivate, learn, and shape our intercultural competences, we may need to have an open mindset to learn new things and unlearn misinformation. The cultural competency of learning and unlearning, shaping and reshaping is a life skill that will be useful and extended well beyond the course to our work settings and personal lives.

**DYNM 624 Program Leadership Skills and Systems**

Program Leadership Skills and Systems takes a fresh look at how organizations (and the people who work for them) pursue strategic goals via initiatives that can be recognized as programs. Taking a broad view of the nature of programs, it examines the role of teams in delivering program success and how an individual team member’s knowledge, skills, and behaviors, should contribute to that success. Program Leadership Skills and Systems will progress through content that examines: 1) The important of programs: What are programs and why are they critical to organizational, professional, and personal success? 2) The challenges of programs: Why do most programs fail to deliver their intended benefits? 3) The leadership needs of programs: How does an individual’s leadership style and focus influence the likelihood of success of their programs—and the likelihood that they will get promoted? 4) The ideal program team: What should one look for when building a program team? 5) An individual’s role on a program team: What should program team members do to be a more successful team leader, manager, or member? 6) What experts say: What are the current “standards” of program management and how can you learn from them? It is expected that students who take Program Leadership Skills and Systems will achieve a greater understanding of how programs can be used to pursue organizational, professional, and personal goals. They will learn what it takes to effectively fill the role of a program team member, manager, and/or leader and to achieve personal and professional success in their roles.

**DYNM 625 Ethnography of Everyday Life: A Master Class**

Ethnography is a fundamental method within the social sciences that concerns the systematic study of culture. It involves a “thick description” of how people actually live their everyday lives, personal or professional. Ethnographers study how human groups form institutions and how these structures grow, function, maintain themselves, and persist. Also at issue is how people share their understandings and develop ideologies pertaining to these processes. Social negotiation and the development of “local knowledge” in the culture of interpersonal affairs will be emphasized, particularly as it is transmitted from one generation to the next. Through direct observation and discussion, students will treat Philadelphia as an “urban laboratory” and seek to identify, to study, and to learn about local people and places. In this vein, the class will visit communities and organizational settings to gain exposure to ordinary people but, particularly, to apply ethnographic methods to the complexities of the modern workplace as well as to everyday life of the city. The final paper will be a synthesis of ethnographic literature and observations of local urban life and culture, particularly as these issues apply to understanding and organization or a local community.

**DYNM 626 Navigating the Post-Professional World**

This course will explore the emerging space between virtual reality and augmented reality as they manifest themselves in the marketplace shifts in both startups and large corporations. The goal of this course is to design, from the future back to the present, a graduate curriculum that supports the evolution and transformation of traditional professional training and development. Leaders of professional services from disparate fields, including health/medicine, law, architecture/design, information technology, and spirituality/religion will be engaged to participate in identifying trends for future professional enhancement. These representatives would be asked to be both resources to the class and recruiters within their own organizations so we can obtain participants for a Delphi study for the future of that profession.

**DYNM 628 Organizational Diagnosis: Diagnostic Strengths for Effectiveness**

This seminar is designed to help participants learn multiple approaches to diagnosing the complex ways in which issues and/or problems manifest themselves in organizations. Frequently, when organizations find themselves in trouble, i.e., there are rumblings in the system about such things as lack of leadership, poor communication, diminished productivity, low morale, etc., there is a tendency to frame the problem(s) simplistically and/or locate blame in a few difficult individuals or groups. However, upon closer examination, problematic issues are often found to be symptomatic and/or symbolic of multiple issues within the organization. This course will help students understand how problems which appear at one level of the system (for example, at the personal or interpersonal level) often represent problems at other levels of the system (e.g., at the group and/or institutional level) or signify a range of inter-related issues. It will provide students with the theoretical constructs and application skills necessary for identifying and framing problem areas, collecting data, and organizing feedback to client systems. Real-time examples will inform our discussions as we consider the relationships between diagnosis, organizational reflection and appropriate action.

**DYNM 629 Strategic Approaches to Human Capital Management and Its Implications for Leaders**

In this course we look at how human capital strategy is changing in response to increasing demands for results and more purposeful practice. We look first at the broader landscape of human capital management and see what’s new in the way an organization should approach its human capital practice. Then, we look more closely at the specific challenges—demographically, structurally, and organizationally—facing managers and Human Capital professionals in an age of uncertainty, and learn what they can do to remain adaptive and competitive. By the end of the course, through meetings and discussions, assignments, presentations, case studies, research, and required reading, participants will: 1) Learn how to assess and adjust Human Capital Development (HCD) policies, processes, and practices; 2) Think strategically about the critical human capital concerns in their own organization; 3) Connect and align individual and organizational learning imperatives; 4) Learn how to reshape human capital goals to meet continuously changing global, political, and economic environments; 5) Inspire leadership of human capital that is results-oriented and ethical; 6) Identify and explore a specific human capital issue relevant and important to their organization and develop a strategic approach for addressing it.

**DYNM 630 The Discipline of Value-driven Business Process Management: Strategy Execution in a Digital World**

Business strategies and operations are driven by scores of ever-shifting factors: from demographic changes and capital availability to increasing regulations, technological innovations and all present digitalization. Static business models are no longer able to keep pace with such dynamic change. Companies need a next generation management approach that fits to this environment and drives collaboration across organizational boundaries. In effect, they need to know how and when to modify or enhance their business processes, which processes are best candidate for intervention, and how to move rapidly and at the lowest risk from business strategy to execution. Business Process Management (BPM) helps organizations master change successfully and create immediate as well as durable competitive advantage. It uses the opportunities of our digital world systematically. BPM has become a management discipline that delivers significant business value by converting strategy into people and technology-based execution—at pace with certainty. It is implemented through the "process of process management" that addresses all aspects of the lifecycle of a business process: design, implementatino, execution, an controlling of processes. It is about identifying the right focus to improve what really matters and to sustain those improvements. framework, approaches, methods and software for achieving and maintaining a

DYNM 631 Everyday Intergenerational Conversations: Baby Boomers and Millennials
This hybrid course delves into three big questions around the burning theme of everyday intergenerational conversations. The class-experience will be a living such conversation with Dr. Barstow, a Baby Boomer, and Amrita Subramanian, a millennial. The course format is 20% in person and 80% on a virtual platform. It’s a learner-centric and a learner-driven course. It is created to mine the practical know-how and life experiences of all participants, so all generations within the class can have a revealing experience that they can immediately apply at work and their personal relationships in life. At this exact point in time there are 300+ million people in the workforce and four generations at play. We begin to see the tiers of own understanding falling apart. It's no longer about stereotyping or simply managing by default or banking on quick-recall labels--and here's why--workplace performance or productivity or engagement or intergenerational respect and trust cannot be left to chance or opinions. We have to pause and consider the following questions: 1) Wht: What are the generation names and labels we use? What purpose do they serve? How do they help and how do they hurt? What do they help us see? What do they hide, obstruct or make us miss? 2) So what? Intergenerational communication is poor and we can do better. Understand it and skills (strategies and tactics) to prosper and cope. How to use agency and brokerage? What of cognitive dissonance? Responding versus reacting to Fake News? 3) What's next? What have we learned from this whole century about the 4 generations at work? At home? At meetings or webinars or potluck parties? What of families at Thanksgiving? How can we expect to have valuable and meaningful conversations and relationships with all generations—current and future?

DYNM 633 Leadership from the Middle of the Organization
Durable organizations have learned to encourage innovation from within. This course's objective is to give Organizational Dynamics graduates the skills and practical knowledge to organize change and improvement from a middle position within an existing organization. The course seeks to prepare students to assume responsibility for acting without authority by becoming the leader they have been looking for. The course's learning objectives are: (a) to gain a working understanding of the pragmatic, ethical/moral, and cognitive foundations for leading informally from mid organization; (b) to adapt an existing Leading from the Middle (LftM) process to each student's actual situation; and (c) to carry out small scale actions in accordance with the process between classes, and in each class to coach students in learning by doing leadership arts and skills such as negotiating, maximizing the feasibility of change plans, enlisting and coordinating cooperation on a team, identifying and addressing stakeholder points of view, maintaining legitimacy of an initiative, and crediting all who help. Students who take this course should already be concerned about one or more important opportunities or upsetting challenges in their present or previous organizational surroundings. The instructor will coach the class in functioning as an idealized design team. The design process has two phases, a base case projection and an idealized design. Phase 1, the base case projection, formulates the current reality without change, and projects the likely undesired effects and outcomes of maintaining status quo. Phase 2, idealized design, creates a leadership approach that all stakeholders would wish for, if all their feasible, sustainable and adaptable wishes could come true today. By participating in a design process, the class itself models many group dynamics of an actual LftM situation. Scholarly Commons describes the work done in this class with examples. (Please see Stankard, Martin (2011). Guest speakers from earlier years are invited to share experiences with course content and answer questions. **DYNM 634 Process Improvement Tools and Strategies**

Process improvement as taught in this course often provides high-leverage, high visibility opportunities for showcasing coaching and leadership skills as a member, coach, or leader of cross-functional process improvement teams. Cross-functional process improvement teams (running lean and six sigma projects) have evolved into a major pathway for developing leadership and coaching talent in such organizations as Baptist Healthcare, Federal Express, Ritz Carlton, Toyota Motor Co., and General Electric. Process improvement project leaders and team members use specific tools and capabilities to analyze as-is processes and to define and deploy new or improved processes that deliver better outcomes and customer satisfaction with less non-value added effort. Leading or serving on cross-functional process improvement teams creates opportunities to work and network with people from other parts of your organization and creates opportunities for visibility to executives and managers sponsoring strategic improvements. Participating in or leading process improvement is also a great leadership, coaching and professional development activity.

**DYNM 635 Organizational Essentials for Leadership**

Through presentations by expert speakers, case discussions, and participation in team projects, students will review and evaluate critical issues from across the frames of business, including general; human resource; marketing; information and stakeholder management; leadership; corporate culture; communications; organizational behavior; sales, marketing and public relations; finance and financial reporting; ethics and social responsibility; unions and government relations; and business law. Each of these elements will be studied in light of changing environmental conditions, including the economy; society; consumer behavior; market trends; regulation; politics; unpredictable events such as 9/11; organizational change; history; and internationalism.

**DYNM 636 21st Century Leadership Development: Integrating Cultural Influences into Coaching Practice**

Coaching has been used to support high-level leadership, to develop high potential talent, to overcome or remediate deficiencies or unproductive behaviors, and to support or manage performance during periods of change. As the use of organizational coaching has grown over the last decade, globalization of the economy has transformed organizational markets, operations, and workforces so that “culture” routinely influences interpersonal, group, and organizational interfaces. In this context leadership requires an ability to recognize and leverage the “cultural diversity” inherent in teamwork, communication, collaboration, conflict, and change. Coaching, as a leadership development practice, must help leaders grow in their ability to recognize and leverage the national, professional, functional, and organizational cultures that influence workforce engagement, productivity, satisfaction, and innovation. This course is intended for students with an interest in culturally complex leadership and organizational development. This course has a dual purpose. First, through reading, class discussion, and written reflection, the course will enhance student understanding of coaching models, methods, and cases informed by cross-cultural psychology, intercultural communication, anthropology, and international business disciplines. Secondly, through guided practice, students will develop their skills in coaching across cultural differences. Students will coach one another through a self-assessment, development planning process, and initial movement toward their objectives using Rosinski’s global coaching process as one illustrative example of this kind of coaching. This course is a hybrid of online and in-person meetings on the following schedule: 6/1: In-person and online; 6/25 & 26; 7/23 & 24: In-person; 8/10: In-person and online.

**DYNM 637 Creating High-Performing Groups and Teams: A Course in Real-Time Experiential Learning**

This course will be offsite in Pennsylvania, August 4th through 9th, 2017. This course will have an additional course fee to cover lodging and other program logistics. Registration permits will be issued upon signed Travel Agreement being returned to the Organizational Dynamics program office. This course is limited to 12 students. This five-day, offsite program is more about the “how” to develop high performing teams than the intellectual “what” of such teams. For five days the twelve members will immerse themselves into what differentiates a high performing team from the dysfunctional teams with which we are familiar. We will take a deep dive into the fundamentals of any group or team in our efforts to become such a team. We will, along the way, learn about the art of design–internalizing the skills and tools essential for building strategic interventions into a team in real time. Not only will we design them, but also we will be critiqued in relation to the quality of our efforts as well as to the facilitation skills we used during the process.

DYNM 638 Organizing for Entrepreneurial Effectiveness

Entrepreneurship has become a popular aspiration for many individuals in the United States and around the world. In fact, a recent survey by UK Trade & Investment confirmed that roughly 1 in 3 individuals under the age of 34 have expressed a desire to form their own new venture within the next five years. This represents a marked increase in aspirational levels over the past two decades. Although not all new ventures are entrepreneurial in nature, the motivation for starting a new venture is ultimately rooted in a desire to change one’s professional and/or personal circumstances. Most individuals never achieve this objective because they fail to take the first step in organizing their entrepreneurial aspirations into an effective plan. This course is designed for mid-career professionals who aspire to either form an independent new venture (i.e., entrepreneurial venture) or lead the creation of a new venture within their existing organization (i.e., intrapreneurial venture). Participants in this course will: 1) learn the internal and external motivation forces that drive individuals in general and themselves in particular; 2) become familiar with the general competencies and skills needed for a new venture to be effective; 3) understand the unique needs associated with creating a balance team for the new venture; 4) cover the practical aspects of developing an effective new venture; and 5) prepare a formal plan designed to marshal the necessary resources and support the new venture. The course will culminate with each student preparing a formal executive summary and professional presentation to support the creation of a new venture in a new or existing organization.

DYNM 639 Sustainable Change: Managing Organizational Culture to Achieve Leadership Goals

"Culture eats strategy for breakfast," as management guru Peter Drucker famously said. We know that leaders who can effectively manage their organization’s culture are better at adapting to market trends, retaining employees, and engaging external stakeholders who demand more corporate transparency and social responsibility. Yet most of us find it difficult to understand what culture really is, let alone manage it successfully. This challenge is magnified at a time when technological and demographic trends have made organizational boundaries more porous and ambiguous than ever, threatening to make traditional models of top-down change management ineffective. This course will therefore take a bottom-up, contextual approach to helping students understand and manage organizational culture in order to achieve their strategic and career goals. We will start with the individual, learning how culture works to shape organizational politics. We will then move to the group level, examining how cultural barriers form between teams, functions, and divisions, harming communication and coordination. The final section of the course will build to the organization level and provide students with a toolkit for creating strategies to achieve sustainable cultural change. The course will be heavily focused on practical application: students will conduct semester-long cultural research/consulting projects with organizations located in Philadelphia. We will also apply course frameworks and tools to case studies of leaders attempting to create sustainability-oriented cultures in their organizations.

DYNM 640 Virtual Collaboration

NOTE: Logitech ClearChat Headphones and Logitech QuickCam Pro9000 are required for this course. Please see the syllabus for other requirements. Across the globe companies, both large and small, are increasingly conducting culturally complex work through technology channels and virtual personnel transfers, making multicultural organization and virtual work inextricably intertwined. In this context electronically mediated collaboration and communication capabilities across time, distance, organization, culture, and other knowledge boundaries have become necessary for the everyday work of telecommuters, virtual teams, remote managers, professional knowledge communities, and electronic marketplaces. This course is primarily intended for students with an interest in globally distributed work and collaborative virtual organizations. The purpose of this elective is to enhance student understandings of virtual forms of human collaboration and to develop student abilities to work jointly with others via electronic tools. This course design makes typical social patterns encountered in virtual organizations visible so that students can learn from participating and collectively reflecting on their course experiences. This course has an online course fee of $150.

DYNM 641 The Art and Science of Organizational Coaching

Coaching has become a primary tool for consultants, human resources professionals and administrators interested in promoting and sustaining leadership and executive development, behavioral change, and role transition. This course explores the theory and practices associated with organizational coaching. We examine and practice the steps of the normative coaching process, the issues and boundaries that effect coaching, and pitfalls to avoid. This is an introductory course that follows a hybrid model of instruction, learning and application in class and in virtual class. The first class will be a weekend face-to-face experience followed by consecutive virtual classroom sessions with a variety of different applications. Students will practice phone coaching and virtual coaching as well as virtual group written discussion. Throughout the course we will contrast theory and practice through our own experience and observation via assignments and behavioral experimentation.

DYNM 644 Applied Organizational Change: Methods Dojo
This seminar is designed to support existing and emerging leaders who recognize their need for more adaptive practices to effect organizational and individual change in complex and rapidly changing environments. Building on a strong base of theory, this seminar is largely experiential. Students are expected to identify a real need in a system (work, internship, or volunteer), which, if improved, would have a substantial improvement on overall organizational performance and satisfaction. Beginning with this problem or dilemma, the seminar is designed as a 'dojo.' or practice space, where students can clarify their own assumptions about how and why change occurs and practice new techniques and approaches for eliciting change. Theory provides the foundation for our work and students will be expected to recognize and be able to articulate how they are operationalizing theory in their setting.

DYNM 646 Bringing New Technologies to Market
Each year, innovators attempt to bring dozens of new technologies to the mainstream, commercial market. Inevitably, most of them fail, but equally inevitably, a few of them succeed, sometimes spectacularly. Organizational professionals may be called upon to evaluate investments in new technologies in several ways. Some organizations may want to bring such new technologies to market embedded in new products. Other organizations will want to be pioneers in using new technologies to gain competitive advantage. Careful evaluation will be required to select the right technologies and provide them with the proper context to insure successful commercialization. This includes identifying promising candidates, considering packaging and design alternatives, understanding issues of timing and customer readiness, and looking at how pricing and distribution models are crafted. Choosing new technologies is just like making any other investment. Organizations seek high rewards at acceptable risks. In this course, real-world examples of technologies that failed versus those that succeeded will be presented and analyzed. We will do this by examining the technologies in related pairs, i.e., by comparing the Apple Newton and the Palm Pilot. Participants are invited to bring interesting new technologies to the attention of the class.

DYNM 650 Outdoor Dynamics
This course explores the implications of past and future changes in land use and population changes over time in one of the least densely populated areas of the country, but which serves as both a winter and summer playground for millions of urban residents each year. Set in the White Mountains of New Hampshire, only a day’s drive for over 10 million Americans, the area boasts some of the most pristine and exotic microenvironments in the world, left from the last Ice Age. Over 250,000 people visit the summit of Mt. Washington, the region’s highest peak, every year, driving, hiking or riding the cog railway to the top. The focus of this course is the growing interest in promoting “sustainable development,” which most people envision as protecting the environment and wild species from human encroachment and pollution. The course will examine the human sphere and the natural sphere as common ground in the analysis of competing issues; areas of compatibility; and future plans to promote a sustainable environment in this region. The course will focus on three themes: 1) how the people and institutions tasked with being the environment’s guardians go about their jobs; 2) how the area is used by visitors; and 3) how industry and its stakeholders have worked with local regulators and politicians to create jobs and promote growth. The course will ask students to overlay the principles of sustainability and issues management, in managing the increasing concern that the trajectory of land use and industrial growth will compromise the region’s native ecology and wilderness and backcountry attractiveness. Left to its own momentum, how will the future of the area fare versus promoting and implementing more sustainable goals? Changes in behavior will be needed to bring the two into line, and that leads to organizational dynamics. How will stakeholders resolve the natural tensions of the institutions’ (primarily those that operate in the region) mission and development goals with outsiders’ desires? What leverage do they and others have in the debate over the future of the region? In addition to an active outdoor week in the White Mountains, participants will meet with key players and leaders from the area and come away with a deeper understanding of the major issues in the tensions between “the place no one knew and the place that got loved to death.”

DYNM 651 Group Team Dynamics: Understanding the Overt and Covert Dynamics that Support Effective Work

Although groups and teams are often lauded as the mechanisms that provide the competitive edge for organizations in today's challenging economic environment, there is often little attention paid to the deeper social and psychological currents influencing group and team dynamics. Organizational leaders and facilitators frequently lack an in-depth understanding of how work groups, multifunctional teams, and cross-national executive groups develop, operate, accomplish their goals--or not--and end. Team members often struggle to make meaning of the myriad spoken, as well as unexpressed, factors influencing the process and outcomes of the groups of which they are a part. This course, by emphasizing both theory and practice, provides students with a thorough grounding in the ways groups and teams develop and learn. The class will also examine approaches to building group and team competencies related to effective communication, conflict-resolution, and solving complex strategic problems as well as ways to manage the range of intentional and more hidden dynamics that both support and challenge high performance. The course is designed to include seven 3-hour classroom meetings across the semester and two extended sessions that will afford students the opportunity to explore various theoretical frameworks. In addition to drawing on the extensive literature and research in group dynamics and team building, the class will rely on experiential methods to help students develop keener understanding and insight into the ways in which their own leadership and followership dynamics, as well as the dynamics of the group-as-a-whole, influence their team's ability to accomplish its tasks.

DYNM 653 Coaching Others to Manage Conflict

Not a day goes by when you or I, or a person we are coaching, is not faced with some tantalizing, challenging conflict. It may be with someone we love, a conflict in a team, a struggle between two direct reports, a difference with our boss, or the challenge of a difficult, perhaps aggressive persona in a meeting we facilitate. The problem is not that there is a conflict. The problem is that most of us have a very thin, often inadequate repertoire of responses to the conflicts that engage us on a daily basis. The result is that all too often we are predictable in our responses. Thus, if we take these same limited skills and attempt to provide them to a client in our role as a coach, the consequences will more than likely be similar. This course is about expanding your repertoire of responses to a wide array of conflict situations. In the process, you will increase your understanding of the theoretical constructs that underlie successful conflict management. Not only will your strategies for managing a variety of conflicts expand, but you will be better able to design unique responses that relate to the particular situation with which your client is faced. How you translate these ideas to your clients and, in the process, provide them the confidence to use them, will be a central theme throughout the course. This course provides a balance between intellectual theory, skills, and applied strategies along with the time to practice them.

DYNM 655 Using the Political Process to Effect Organizational Change
At one time or another, each of us has said something like, "I know what to do to make some really effective--and possibly even profitable--changes in this organization, but the politics make it almost impossible to get anything done." The sense is that, although there are changes that should be made to improve organizational performance, politics (internal, external, governmental) simply obstruct our ability to make a difference. Frustrations notwithstanding, depending on how it is employed, politics can be either an impediment or, more importantly, a source of opportunities for improving organizations. Politics is the art and science of coordinating individuals, departments, management, markets—the entire organizational environment—to effect a balance between the organization's objectives and the methods used to achieve them. As with the other factors that are employed to affect organizational performance—the methods used to improve manufacturing, marketing, sales, finance, and so on—politics is a means that organizations can use to initiate and maintain critical personal and institutional relationships.

One of the seminar readings—Latimer's "Why Do They Call It Business If It's Mostly Politics?"—is used to provide illustrations of the ambiguous nature of much of what is regarded as organizational politics. What is critical to understand and appreciate from the outset, however, is that politics is not an external factor that is imposed on organizations. Politics is not only a means for achieving personal or institutional power; it is also a method for developing and maintaining personal and institutional relationships within and among individuals and organizations of all types. This seminar will discuss organizational politics and the ways that it is used to identify, characterize, and effect change—both within and among organizations. After reviewing several perspectives on organizations and the roles that political processes play in decision-making, a series of cases is presented that illustrate the contexts and conditions for effective political communication and coordination.

DYNM 656 The New Normal: Racial and Ethnic Diversity in the 21st Century Workplace
This course examines the social construction of race and ethnicity, including relations within and across groups, with a particular focus on their implications for organizational culture and management. In a very real sense, the workplace is a microcosm of the larger society; a place where our individual experiences, beliefs, and biases related to race and ethnicity intersect, creating both opportunities and challenges. Our capacity to understand the different backgrounds and experiences that individuals and groups bring to the organization, as well as recognizing our own biases and the biases of others are directly implicated in our ability to both manage and be managed in the organizations that we are a part of. A primary objective in this course is to increase our capacity to first understand the contours of racial and ethnic diversity in twenty-first century America by investigating (1) the historical context that influences present-day understandings of racial/ethnic diversity (2) how and why individuals from different racial/ethnic backgrounds can "see" the same thing but interpret it very differently, depending on experience, culture, and social position relative to race/ethnicity (3) the meaning and importance of dominant and minority groups, the degree to which a racial hierarchy exists, and the implications of that hierarchy for important outcomes (4) the degree to which the workplace is, indeed, a microcosm of the larger society (5) the pitfalls of "colorblindness" (6) the nature of stigma and its workplace implications and (7) the benefits and drawbacks of affirmative action policy in the workplace.

DYNM 661 Organizational Culture Change: Theory and Practice
The importance of organizational culture as a factor that can influence organizational performance either positively or negatively gained renewed attention beginning in the mid-1990's. The success of high-profile firms with "quirky cultures" such as Southwest Airlines and the entrepreneurial cultures of high tech firms, along with the rise of interest in companies that have created "Great Places to Work" with associated awards programs have generated recognition that organizational culture can be a major factor contributing to organizational performance. The related emergence of "high performance organizations," acknowledgment that organizational culture can trump the implementation of organizational strategy, competition among companies to attract the best employees, and the failure of many financially-promising mergers and acquisitions all pointed to the importance of understanding and intentionally managing organizational culture. This course will address many of the major debates about organizational culture as well as provide students with tools for better assessing and understanding organizational culture and managing culture change.

Notes: DYNM Category: A; DYNM Concentration: LMC. Course Schedule: This course will meet on specific Monday evenings and Saturdays. Exact dates are listed below.
DYNM 662 Entrepreneurship and Leadership: Creating Winners
Peter Drucker once famously said that “entrepreneurs innovate.” The course looks at how innovation drives the entrepreneurial process in both large organizations and in startup ventures. It stresses the importance of bringing entrepreneurial vision and energy to all organizations: profit and non-profit, as well as government and institutional. The course examines the characteristics of successful entrepreneurs. Participants will learn how to develop their own entrepreneurial instincts and how to encourage an entrepreneurial culture in their organizations. The course examines the challenges of startup ventures and provides practical information to participants who are considering an entrepreneurial venture. It explores strategies for identifying opportunities, creating successful business models, valuing a business, raising capital and managing the business. The course builds understanding of how a culture of entrepreneurship and innovation are critical to any organization that wants to survive and prosper in the future. The course discusses how sustainability is becoming a global force for change, creating exceptional entrepreneurial opportunities. The course looks closely at the leadership roles of both the CEO in a large organization and the entrepreneur in a venture. The course examines how leaders in all kinds of organizations set priorities, identify game-changing opportunities, shape the organizational culture and motivate their teams to achieve outstanding performance or, sometimes, fail. The course stresses the leadership responsibilities of the board of directors in providing governance and oversight in both for-profit and non-profit organizations.

DYNM 663 Green Skepticism: Communicating and Implementing Sustainable Business

Green initiatives are creating competitive advantage for businesses. Smart companies are integrating environmental stewardship into their strategies, operations, marketing, and product innovation. Companies that successfully embed sustainability in their core business strategy and culture—rather than "bolting it on" as a peripheral activity—are gaining the most value added. Embedding sustainability requires the active engagement of all organizational stakeholders, many of whom may be green skeptics, dubious of the need to change. "Many people who feel passionately about sustainability cannot relate to those who have a harder time understanding the need for a change..." - Corporate associate & MBA candidate. The business case for sustainability has been made many times, yet skepticism about the need for change remains widespread. While adopting sustainable business practices must make sense financially, an economic argument alone may not be enough to convince people to purchase green business products and services or to implement sustainability practices. The course is based on the assumption that "task significance" is an important factor for implementing sustainable business practices. This means helping people see the connection between small tasks they are being asked to do and the big picture of global sustainable business. The first part of the course focuses on understanding sustainability driven changes in the global business landscape through a coherent framework. The second part of the course focuses on what those changes mean for business fundamentals: consumption, production systems, innovation, and emerging economies. The third part of the course focuses on communicating and implementing sustainable business strategies and initiatives. Students will have the opportunity, with a team, to design a communication and implementation program for an organization. Throughout the course, strategies and tactics that work to engage skeptics who do not understand the need for change, as well as tactics that don’t work, will be studied. The course is based on the instructor’s experience leading hundreds of business and environmental professionals from skepticism to enthusiasm for sustainable business over the past decade. This course is designed for everyone tasked with engaging others in implementing sustainable business practices and for entrepreneurs selling green business products and services. It will provide strategies for enhancing a technical and economic sales pitch. The course is also for those who may be skeptical themselves, and want to reconsider their skepticism. DYNM 664 Organizational Culture and Learning
What is organizational culture? What is organizational learning? How do organizations learn effectively and change their culture? A learning organization is skilled at creating, acquiring, and transferring knowledge, and at modifying its behavior to reflect new knowledge (Garvin, 1993). According to Ray Stata, Chairman of Analog Devices, “The rate at which individuals and organizations learn may become the only sustainable competitive advantage.” However we define and prioritize organizational learning, we must still struggle with how to do it. This is a tougher question. The thesis of this seminar is that an enriched understanding of culture can enhance organizational learning. Participants will explore the concept of culture, study the work of Chris Argyris, and discover practices and behaviors that promote organizational learning and culture change. The objective of this seminar is to help participants get beyond highly abstract philosophy and develop a deeper understanding and useful skills based on these concepts. This course will meet on the following Wednesdays: May 27th; June 3rd, 10th, and 17th; July 22nd and 29th.

DYNM 666 Systems and Design Thinking
This class is designed to challenge the traditional thinking of basic management strategy and practice. Through a series of lectures, interactive cases, and group discussions, faculty will challenge participants to rethink their assumptions and move beyond the traditional practice of management strategy formulation and execution. The prevailing pattern of thought employed by management is analytical. Analysis has come to dominate thought in the western world. But no amount of analysis can explain systemic interaction and organizational behavior. A new pattern of thought is required: synthetic. Systems Thinking involves both analysis - to produce knowledge of organizations (systems) - and synthesis to provide understanding. Without both, effective solutions to problems cannot be obtained. To go beyond understanding to wisdom requires awareness of the difference between doing things right (efficiency) and doing the right thing (effectiveness). The better we do the wrong thing, the more wrong we become. Today a great deal of energy is expended by organizations in an effort to increase the efficiency with which wrong things are done.

DYNM 667 Building a Business Case for Sustainability
What are the systemic changes that an organization must undergo in order to become sustainable? (Sustainability is defined here to mean that no aspect of business operations is harmful to the planet or future generations.) We will examine the issues of sustainability using Peter Senge's work on learning organizations, the Swedish sustainability model, The Natural Step, and Russell Ackoff's idealized design as our frameworks for building a business case for sustainability within an organization or department. Class participants will be asked to build a business case for sustainability within an organization or department and to prepare an interim progress report (5-7 pages) plus a final paper (15-20 pages) using the concepts and principles covered in this course and then will present their case to the class in the last sessions of the course.

DYNM 669 The Power of Confusion
Confusion is a lack of clarity about some situation that matters to you, which causes you to feel so uncertain or uncomfortable that you have a hard time making decisions. You may be confused about whether you fit into an organization; or about what work makes you feel great versus work that you are good at or about the right thing to do when you are frightened. The power of confusion is that it forces you to stop and seek clarity in your life and career. This seminar addresses seven types of personal and organizational confusion encountered in organizational life during a professional career: 1) confusion over which personal ethics, skills, and talents you find most meaningful; 2) confusion over discovering what is really going on in an organization; 3) confusion of who is in charge—leadership and which direction ‘we’ are moving toward? 4) confusion over ‘what’s in it for me?’ How motivation and satisfaction relate to incentives and pay schemes; 5) confusion caused by blaming, rather than developing skills needed to make lasting changes and improvements; 6) confusion about how teams pull together 7) confusion caused by committing random acts of improvement instead of building a system for making customer-oriented organizational innovations and improvements. You were not born with any inherited knowledge or wisdom, yet you are certain to face fear and confusion during your lifetime. You were born with curiosity and the ability to ask ‘why?’ when you face a confusing situation. You were also born with the ability to think for yourself, listen to others, and learn from experience. Confusion spurs you to use these abilities to gain the clarity that leads to understanding and wisdom; you will need tools to guide your learning. This seminar will show you how to use simple tools to achieve that clarity.

DYNM 671 Workplace Ethics: Ownership, Participation, Productivity
In this course, you will have the opportunity to: 1) examine ethical, religious, legal, technological, and economic bases for different ownership systems from early human history through the 20th century; 2) develop a theoretical framework for understanding ownership issues in the contemporary workplace; 3) review social science concerning ownership and the related organizational issues of motivation, performance, productivity, profitability, culture, diversity, and equity; 4) analyze a variety of cases to measure ownership’s effects across many industries and business situations; 5) learn about various forms of ownership and compensation in use today in small and large organizations, both public and private; 6) utilize a diagnostic tool for assessing the ways in which your own organization’s culture and business outcomes are impacted by the firm’s ownership system; 7) describe your own experiences of the different ownership systems with which you may have engaged, including: family, schools, little leagues and professional sports, volunteer service organizations, charities, religious institutions, professional service providers (e.g., doctors, lawyers, veterinarians), the places where you shop (e.g., think about Genuardi’s before and after it was sold to Safeway), and the different places you have worked...as a way of systems; 8) assess and refine your views regarding ownership in light of your own social, political, religious, and ethical commitments. Who is going to own what we all have a part in creating? The history of American business is an evolving answer to the question of ownership. Of all the issues relevant to organizational dynamics, ownership is arguably the most important and least understood. Matters of ownership have also been and remain of intimate concern to ordinary Americans—the slave yearning to be free, the young couple with a dream of home ownership, the entrepreneru who wants to be his own boss, the consultant who wants to form a partnership with her best friends, and the indebted, mid-level manager reviewing last year’s 401(k) statement.

DYNM 673 Stories in Organizations: Tools for Executive Development
As we all know, living in—and out—of organizations is getting exponentially harder. Things seem to be multiplying, splintering, and coalescing kaleidoscopically, and each of us is increasingly taxed to make sense of it all, let alone create meaning for ourselves and those we manage and care about. Remarkably, a powerful tool for helping us is one we have already mastered: stories. As humans we think, feel, speak, listen, explain, and believe in narrative form. Yet this capability is dramatically under-exploited at work. This course examines a variety of ways to bring the power of stories to organizational life. We will look at how stories enhance communication, support change, and intensify learning and development in individuals and organizations, thus informing your leadership style and effectiveness. We will have many opportunities in class to apply “story-based technologies” to issues you face in personal or professional life. Readings come from the literatures of human development, narrative psychology, organizational change, executive learning, and, of course, from literature itself.

DYNM 676 Communication Competence: Extracting Value in Key Organizational Interactions

Often an organization can facilitate its own success by employing fundamental communication practices during value-latent interpersonal interactions. In this course we explore the direct relationship between competent communication and the ability to extract maximum value in most Key Organizational Interactions. Starting off on a personal development note and building off time-tested principles, participants will conduct their own communication skills assessment to determine their own communication strengths and identify specific areas for improvement. Qualities such as effective empathy and active listening are also explored. Moving into the organizational realm, together we define then locate those Key Organizational Interactions, both within and external to the organization, that significantly impact how that organization is perceived. We explore all the possible value points within these Key Organizational Interactions, how they tie into the organization’s strategic objectives, and how to best approach them interpersonally.

DYNM 679 To Thrive Or To Survive? Our Question in the Evolving World

The seminar focuses on the implications for our own work and personal lives as we reinvent ourselves, our organizations, and our society in what is often called "the new normal." We begin with a realistic exploration of the relationship of the global economy to the widely different political systems which provide individuals with safety nets. We compare the United States to China and Europe and the ways in which our different systems both compete and support each other. Each participant will research a portion of the regional job market, analyzing the source of investments, patents, required skill level and experience of employees, and competitive outlook. The final presentation and paper will fit their regional analysis into the global picture. Where does it fit? What are its risks?

DYNM 683 Quantitative Project Risk Analysis Methods and Tools

DYNM 683 is an unusual opportunity for students to develop a working knowledge and set of skills in a seminar conducted by an experienced subject-matter while using their own Windows PC computers. Quantitative project risk analysis of cost estimates, critical path networks, and integrated cost-schedule models is a highly specialized capability that industry and government organizations increasingly seek to deploy. Sophisticated tools and methods used in this course can be applied across industry domain boundaries and are scalable from mega projects to volatile start-ups. These world-class tools and best practices have been validated through use in public and private organizations. (Academic licenses will be provided with the course.) Prospective students need previous experience using spreadsheet software (an installed version of Microsoft Excel is required). Also, it is preferable, but not required, for students to have some experience with planning/scheduling software (for example, Microsof t project or Oracle Primavera P6). Please contact the instructor with questions and to clarify expectations. The course is composed of 4 modules, each of which will be approximately two sessions in duration. Learning objectives are to answer these important questions—How confident are you in achieving your project’s cost and schedule objectives? What can you do to improve your confidence? Will the right resources be available to implement your responses when needed? Module 1: Develop project plans with resources and costs during uncertain conditions Module 2: Implement spreadsheet quantitative cost risk analysis (Monte Carlo simulation) Module 3: Implement Monte Carlo simulation of plans, CPM schedules, and decision trees Module 4: Integrate cost and schedule risk analysis using Monte Carlo Simulation.

DYNM 689 Balance of Power in the Global New Normal

The economy is global and every successful business in every nation must operate with awareness of its place in the interconnected dynamics of local, national, and global issues. This course uses many lenses, such as history, culture and economy to understand the global issues, their interconnections, and the impact they may have in different places, on different organizations, and in our personal decisions. Each of us needs to be able to engage systems thinking as we aim to understand others from the inside and ourselves from the outside. The central relationship in the global new normal is the United States and China. The weekly readings begin with recognition of the centrality of a liberal for the United States and the effect that has on China and the cultures of East Asia. This sets up three frames of reference: Human Rights, Democracy, and Capitalism. Current and potential Organizational Dynamics students with interest in Global Studies, particularly those focusing on Systems Thinking, Sustainable Development Policy, and international courses will find this course helpful. MPhil students with MSOD background can use this course as a foundation for advanced research in Global Studies.

DYNM 692 Innovation in Organizations
Most serious study of innovation has focused on its dynamics and how these dynamics can be managed. A broader range of studies also consider the nature of creativity and techniques to facilitate innovation. We survey these areas, emphasizing the relationship between innovation and organization, which are central to innovation both as facilitators and impediments. More generally, we consider the process of Organizing Innovation, the role of individuals, teams and organizations in effecting change and realizing its benefits. I cover one additional theme—improvisation—because it provides insight into dealing with novel situations, and also as antidote to the relentless organizational and institutional pressures that crush the "impulsivity" and "deviance" that we need for creativity and innovation. In the end, though, the core of the course are the real issues of your life and work. Creativity begins with questions, innovation begins with problems, and education begins with you. Reflect on the central issues of your life and work and come prepared to share them with the class. DYNM 693 The Global Leader
The "Global Leader" is a co-listed INTS/DYNM course, developed as part of the Lauder Institute's new Global Program that will prepare students for leadership roles in international and culturally diverse environments. The course will focus on developing skills through a hands-on approach that includes using case students, in-class exercises, movie clips, and class discussion, with readings that emphasize theory and application. The course is comprised of two modules. The first module - Globally Capable Leadership - will introduce students to the core qualities of leadership that transcend cultures, as well as examine how cultural context influences leadership efficacy. The second module - Managing Across Borders - will teach students how to negotiate effectively in a variety of contexts, including conflict resolution, transactional settings, conflict resolution, and across borders, such as those of gender, ethnic identity, national culture, and differences in values and beliefs.

DYNM 705 Capstone Course
This course requires the student to study a topic of their own choice, discuss their progress with the class in regular meetings and to deliver a final paper that meets the following criteria: 1. Makes an argument, describes or summarizes a position that is unique, original, or which directly applies to the student; 2. Uses primary sources or applies to a primary organization as much as possible; 3. Conforms to the style and format of good academic writing and the MSOD Capstone Presentation Guidelines; 4. Allows a student to demonstrate competencies gained from the courses completed in the Organizational Dynamics program. The role of the capstone professors is to coordinate the development of each student's capstone committee, to offer facilitation during peer-review discussion, to discuss the student's work as the capstone is written. A course professor may also be the student's primary advisor or a reader. For details about the capstone course, including delivery dates, please see the DYNM Canvas community site.

DYNM 720 Foundations of Organizational Consulting and Executive Coaching
This 5.5 day intensive course is the first in a six-course cohort program in Organizational Consulting and Executive Coaching. During this course students will experience the formation of a group (their cohort) and learn the dynamics that commonly affect groups. Students will be taught a variety of theoretical constructs which influence the helping professional role and also start to practice as helping professionals through live coaching and case studies. This course is a residential course. This course will have an additional course fee to cover lodging and other program logistics. Registration permits will be issued upon a signed Travel Agreement being returned to the Organizational Dynamics program office.

DYNM 722 Making Meaning from Organizational Experience and Establishing Frameworks for Consulting and Coaching
This course is designed to immediately follow the five-day DYNM 720 intensive in order to build on cohort member experiences by introducing a broad range of coaching and consulting theories. Using newly introduced theories and your own experiences and observations, you will begin applying them to assess, interpret, and make meaning of behavior at three levels: individual, group, and organizational. Using your knowledge and research, you will begin narrowing and deepening theories you are drawn toward to begin laying a foundation for your further work in DYNM 723 and 724. DYNM 722 culminates with each cohort member researching and executing a high-level presentation based on one theoretical approach. You will continue your cohort-based learning with your deeper appreciation of one approach, as well as benefitting from each of your cohort member's presentations.

DYNM 724 Building Consulting/Coaching Tools and Techniques
This course will offer a conceptual comprehension of the tools and techniques used in effective internal and external organizational consulting engagements. By contrasting the theory and practice of alternative coaching models, we will build tools and techniques for effective coaching as a leadership competency. Through an analysis of the coaching relationships in your organization, you will learn to develop a personalized approach to coaching and expand upon within organizational settings. Participants learn the "how and why" as well consulting frameworks. Additionally, the relevant and often symbiotic connection between consulting and coaching will be studied. What process tools are most useful to today's executive coach in a consultative environment? How do approaches to consulting and coaching differ? How are they similar? How can a confluence of coaching and consulting lead to more effective decision making and wide-scale organizational performance? DYNM 724 will be presented over five class meetings. The class sessions will be taught utilizing lectures, case studies, structured small group discussions, individual, and team presentations, faculty and participant experiences, and guest speakers.

DYNM 730 Capstone Portfolio Preparation and Proposal
In this course, students demonstrate their consulting and coaching mastery and scholarship by creating their capstone/thesis summary proposal. Throughout the program, participants will have systematically codified their learning experiences through the delivery and accumulation of various papers, project results, and other measures of performance. These will be contained in a Personal Portfolio which includes a record of understanding the assigned literature and classroom-based theory and experiences. In addition, each individual's personal coaching philosophy is framed in a theoretical and model developed over the course of the program. Personal reflections and insights are an essential aspect of the ongoing record of learning. Using all of these as source material, the participant writes and assembles a full case history drawn from the Practicum (DYNM 727) and the Internships (DYNM 728 and DYNM 729).

Taught by: Russo/Napier/Orenstein
One-term course offered either term
Corequisite: DYNM729
Activity: Seminar
1 Course Unit
Notes: For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu

DYNM 758 Sweden: Strategies for Thriving in the 21st Century
Neutral during WWII, and claiming a "Middle Way" between east and west in the post-war twentieth century, Sweden - its people, institutions, and culture - has left its mark on our global society. In today's world, the influence of Swedish ideas and innovations can be seen in government structures, health and social policies, business organizations, working life, education, science, art, literature, and, of course, the design and style of many products and services which enjoy high demand. These are impressive impacts from a nation-state of only eight million people. What lessons are there for Americans and our institutions as we enter the twenty-first century where our leadership position, ability to determine the rules and control the agenda of world economic and political affairs are diminished? In this course, we focus on "the people philosophy" of Sweden, its government, businesses and organizations. We cover healthcare issues and policy, sustainable development, the European Community and the human relations issues in organizations. This course will include meetings with academics and leaders from industry, government, health care, science, media, arts and culture. Students will meet with and learn from these representatives in order to explore Swedish organizational dynamics, both in terms of its economic prosperity and the problems Swedish society faces today.

Taught by: Barstow
Course usually offered summer term only
Activity: Seminar
1 Course Unit
Notes: For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu

DYNM 770 Process Excellence in South America: Chile on Its Journey to Productivity and Performance
This course will travel to Chile July 21st through 29th. The class will meet on campus before and after departure on dates to be determined. This course will have an additional course fee to cover lodging and other program logistics. Registration permits will be issued upon a signed Travel Agreement being returned to the Organizational Dynamics program office. Chile is a long and narrow strip of land along the pacific coast of South America. It is the longest country in the world, 2,700 miles in length, which is about the distance from San Francisco to New York. In 1973 the military imposed a dictatorship, led by Augusto Pinochet, who ruled the country until 1990. The Chilean strategy to be part of the world economy has been based on open markets and the development of Free Trade Agreements. A report by The Economist Intelligence Unit shows Chile has the best environment in the region for business and is among the top 20 countries worldwide. Chile stands out for the effectiveness of its policies, labor, and infrastructure. The strength and stability of its banking and financial systems have generated high credibility indexes in foreign markets, which has meant that big companies want to invest in the country, improving access to goods and services. Chilean companies have started improving the way they organize themselves. Business Process Management and Digitalization have become important topics in many organizations. The Universidad de Chile offers numerous courses and certificates in that field. Chile is making good progress on its journey to productivity and performance. Students will meet with academics and business leaders and observe the organizational dynamics of Chile.

Taught by: Kirchmer and Olivos
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: This course departs the US 4/28 and returns 5/6.

DYNM 766 Global Collaboration for Sustainability: The Food-Water-Energy Nexis in Italy
Environmentalist Paul Hawken challenged a class of 2009 college graduates that they would have to “figure out what it means to be a human being on earth at a time when every living system is declining and at the rate of decline is accelerating.” That theme is at the heart of this course. While we have seen the notion of sustainability gaining traction in recent years, our quality of life in the near future very likely hinges on the development and implementation of sustainable solutions to enormously complex environmental and social problems—particularly around food, water, and energy. This course is designed to foster the thinking and the collaborative spirit that is needed to address those enormous problems. It involves focusing on a critical global sustainability problem with vast social, cultural, and environmental dimensions—in this case, the need to balance global food, water, and energy needs in a manner that allows the world to feed 9.6 billion citizens by 2050 while preserving the environment for future generations. It also involves collaboration and the exchange of ideas between multi-disciplinary leaders from multiple countries and perspectives on how to manage diverse views and sustainability initiatives that are extremely relevant to the success of today's organizations (i.e., how to lead "big change" for competitive advantage).

Taught by: Finn
Prerequisites: Permits to register for this course will be issued upon receipt of a signed travel agreement.
Activity: Seminar
1 Course Unit
Notes: DYNM Category: A; DYNM Concentrations: LMC, GL, SD. Travel Agreement being returned to the Organizational Dynamics program logistics. Registration permits will be issued upon a signed Travel Agreement being returned to the Organizational Dynamics program office.

Notes: For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu
DYNM 771 Micro-Finance in India: The Past, Present and Future
This 2CU course includes travel and study in Bangalore, Mangalore and Mumbai, India, a country acknowledged as the world's largest democracy with a population of over 1 billion. India has a thriving microfinance industry that has come under scrutiny in the past year. While microfinance has been touted by many as the panacea in helping raise people out of poverty, empower women and aid in development from the grassroots level, it has come with some serious attendant costs. This course will discuss a variety of different models of microfinance and review the new trends of financial inclusion for the poor. We will start in Bangalore and continue to Mangalore, where we will visit local development projects, microfinance women's groups, and meet organizational leaders. We will see firsthand how and if microfinance and financial inclusion "work effectively" to achieve the goals of alleviating poverty. While in Mangalore, students will attend and participate in a conference: Micro Finance in India: The Past, Present and Future, being held at Nitte University. We will hear experts speak on current issues and how new legislation in India may change the face of microfinance. We will end the program in Mumbai, one of the most populous urban regions in the world and the richest city in India with the highest GDP of any city in South, West or Central Asia.
Taught by: Handy
Activity: Lecture
2 Course Units
Notes: For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu

DYNM 786 European Approaches to Multi-Stakeholder Project Management
In the interconnected world of global corporations, studying Project Management from the standpoint of U.S. firms is not enough. Broadening perspectives is the goal of the seminar in Paris, France. Dr. Jean-Marc Choukroun will lead Organizational Dynamics students in a study of European approaches to the challenges of large project management, particularly those involved in public-private and other multi-group projects. Dr. Choukroun notes that "In today’s global economy, managing multi-national, multi-cultural teams, devising innovative financing arrangements and securing public-private cooperation are increasingly becoming standard requirements for complex projects. European integration has made dealing with these issues a priority with many European organizations. Students will be exposed to new ideas, and new ways of applying time-tested methods and techniques that European organizations in general, and more specifically French organizations, have developed to address these issues. Properly adapted, some of these ideas should prove to be readily applicable in the US context. In addition, students will discover how French managers in the public and private sectors frame issues, approach problems and implement solutions."
Taught by: Choukroun
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: DYNM Category: A; DYNM Concentrations: LMC, GL. Travel Course Dates: 5/25 to 6/2.

DYNM 899 MPhil Capstone Registration
Activity: Masters Thesis
1 Course Unit
Notes: DYNM 899 is a required registration for MPhil candidates.
PERSIAN (PERS)

PERS 011 Elementary Persian I
This course is designed to help you start learning Persian and to give you the necessary tools to continue your study of Persian. This course introduces the Persian alphabet alongside grammar and vocabulary. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite.
For BA Students: Language Course
Taught by: Entezari
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PERS 012 Elementary Persian II
This course is designed to help you build upon what you have learned in Elementary Persian I. Emphasis is placed on using the language for interpersonal, interpretive, and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing as well as culture, vocabulary, grammar, and pronunciation are integrated into the course. Students must either have successfully completed PERS-011, or take the departmental exam.
For BA Students: Language Course
Taught by: Entezari
Course usually offered in spring term
Prerequisite: PERS 011 or equivalent
Activity: Lecture
1 Course Unit

PERS 013 Intermediate Persian I
This course is conducted in Persian and designed to help you continue expanding upon what you have learned in Elementary Persian II (PERS-012). In this course, we will begin to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed PERS-012 or take the departmental placement exam.
For BA Students: Language Course
Taught by: Entezari
Course usually offered in fall term
Prerequisite: PERS 012 or equivalent
Activity: Lecture
1 Course Unit

PERS 014 Intermediate Persian II
In this course, we will continue to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using Persian for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed PERS-013, or take the departmental placement exam.
For BA Students: Last Language Course
Taught by: Entezari
Course usually offered in spring term
Prerequisite: PERS 013 or equivalent
Activity: Lecture
1 Course Unit

PERS 015 Advanced Persian I
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: PERS 014 or PERS 018 or equivalent
Activity: Lecture
1 Course Unit

PERS 016 Advanced Persian II
For BA Students: Advanced Language Course
Taught by: Assefi-Shirazi
Course usually offered in spring term
Prerequisite: PERS015 or equivalent
Activity: Lecture
1 Course Unit

PERS 017 Persian for Heritage Speakers I
A course designed to teach the reading and writing of standard modern Persian to those with a competency in spoken Persian. The course will focus on the lexical and syntactic differences between written and spoken Persian, and the problems of Persian spelling.
Taught by: Assefi-Shirazi
One-term course offered either term
Prerequisites: Fluency in spoken Persian.
Activity: Lecture
1 Course Unit

PERS 018 Persian for Heritage Speakers II
A course designed to develop greater skills in reading and writing standard modern Persian for those with a competency in spoken Persian. The course will focus on the lexical and syntactic differences between written and spoken Persian, and the problems of Persian spelling.
One-term course offered either term
Prerequisites: PERS 017 or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

PERS 019 Advanced Persian in the Media
This course is designed for advanced students of Persian interested in contemporary Persian media from Iran as well as Afghanistan and abroad, who wish to gain a deeper understanding of contemporary Persian-speaking societies and politics. Students will advance their skills in reading and listening, as well as in writing and speaking.
Taught by: Assefi-Shirazi
Course usually offered in spring term
Prerequisites: PERS 016 or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.
PERS 111 Beginning Pashtu I
Reading, writing, basic grammar and elemental speaking.
For BA Students: Language Course
Taught by: Santry
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PERS 113 Intermediate Pashtu
A wide variety of reading genres, writing, and oral expression.
For BA Students: Language Course
Taught by: Santry
Course usually offered in fall term
Prerequisites: Beg. Pashto, or permission by instructor.
Activity: Lecture
1 Course Unit

PERS 114 Intermediate Pashtu Part II
Beg. Pashto, or permission of the instructor. A wide variety of reading genres, writing, and oral expression.
For BA Students: Last Language Course
Taught by: Santry
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: Offered through Penn Language Center. This is a two-semester course.

PERS 320 Persian Culture, Literature and Film for Advanced Learners I
Taught by: Shams Esmaeili
Activity: Lecture
1 Course Unit

PERS 321 Persian Culture, Literature and Film for Advanced Learners II
Taught by: Shams Esmaeili
Activity: Lecture
1 Course Unit

PERS 415 Classical Persian Prose
This course is designed for those junior and senior students who are eager to explore the major works of classical Persian prose. Students will become familiar with the medieval Persia through an in-depth reading of major mystical, historical and literary works of classical Persian prose. Depending on the text under discussion, students will be introduced to the socio-cultural context of Medieval Persia. Although no prerequisites are required, this course is a perfect follow-up for NELC 216 "Persian Poetry in Translation". Only basic knowledge of Persian language is required for this course as all texts will be read and compared against their English translation.
Taught by: Shams Esmaeili
One-term course offered either term
Activity: Seminar
1 Course Unit

PERS 512 Beginning Pashtu Part II
Reading, writing, basic grammar and elemental speaking.
For BA Students: Language Course
Taught by: Santry
Two terms. student must enter first term.
Prerequisites: For second semester, completion of the first semester.
Activity: Seminar
1 Course Unit
Notes: Offered through Penn Language Center. This is a two-semester course.

PERS 514 Intermediate Pashtu Part II
For BA Students: Last Language Course
Taught by: Santry
Two terms. student must enter first term.
Activity: Seminar
1 Course Unit
Notes: Offered through Penn Language Center. This is a two-semester course.

PERS 611 Elementary Persian I
This course is designed to help you start learning Persian and to give you the necessary tools to continue your study of Persian. This course introduces the Persian alphabet alongside grammar and vocabulary. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite.
For BA Students: Language Course
Taught by: Entezari
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PERS 612 Elementary Persian II
This course is designed to help you build upon what you have learned in Elementary Persian I. Emphasis is placed on using the language for interpersonal, interpretive, and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing as well as culture, vocabulary, grammar, and pronunciation are integrated into the course. Students must either have successfully completed PERS-611, or take the departmental exam.
For BA Students: Language Course
Taught by: Entezari
Course usually offered in spring term
Prerequisite: PERS 611
Activity: Lecture
1 Course Unit

PERS 613 Intermediate Persian I
This course is conducted in Persian and designed to help you continue expanding upon what you have learned in Elementary Persian II (PERS-012). In this course, we will begin to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed PERS-612 or take the departmental placement exam.
For BA Students: Language Course
Taught by: Entezari
Course usually offered in fall term
Prerequisite: PERS 612
Activity: Lecture
1 Course Unit
PERS 614 Intermediate Persian II
In this course, we will continue to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using Persian for interpersonal, interpretive and presentational modes of communication. Therefore, use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed PERS 613, or take the departmental placement exam.

For BA Students: Last Language Course
Taught by: Entezari
Course usually offered in spring term
Prerequisite: PERS 613
Activity: Lecture
1 Course Unit

PERS 615 Advanced Persian I
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: PERS 614
Activity: Lecture
1 Course Unit

PERS 616 Advanced Persian II
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: PERS 615
Activity: Lecture
1 Course Unit

PERS 617 Persian for Heritage Speakers I
An intensive, one-semester course designed to teach the reading and writing of standard Tehran Persian to those with a speaking knowledge of that language. In recent years there has been an increasing demand from Persian-speaking Iranian-American students for formal instruction in Persian. While many of these students have some degree of spoken fluency in Persian, they are often unable to read or write it. Their speaking ability makes it difficult to integrate them into first- or second-year classes of students who have started with no knowledge of Persian. If these Persian-speaking students could be brought to at least a second-year level of reading and writing, they could then be enrolled in more advanced courses in Persian where they would be more or less at the same level as other students. The course will focus on the lexical and syntactic differences between written and spoken Persian, and the problems of Persian spelling.

One-term course offered either term
Prerequisites: Fluency in spoken Persian.
Activity: Lecture
1 Course Unit

PERS 620 Persian Culture, Literature and Film for Advanced Learners I
Taught by: Shams Esmaeili
Activity: Lecture
1 Course Unit

PERS 621 Persian Culture, Literature and Film for Advanced Learners II
Taught by: Shams Esmaeili
Activity: Lecture
1 Course Unit
PHARMACOLOGY (PHRM)

PHRM 495 High Throughput discovery: A multidisciplinary approach to cancer
The newly developed massively parallel technologies have enabled the simultaneous analysis of many pathways. There are several large scale international efforts to probe the genetics and drug sensitivity of cancer cell lines. However, there are some rare cancers that have not been analyzed in depth. One of these rare cancers is malignant peripheral nerve sheet tumors (MPNST). MPNST, although a rare cancer, are common in patients with neurofibromatosis type 1. In the course, students will take part in a high throughput discovery effort in two phases. Phase 1 is a training phase, which will consist of quantitative profiling the sensitivity of MPNST cell lines to a library of 130 common and experimental cancer drugs. Phase 2 is an independent research project. We expect the course to be a hypothesis engine that generates ideas for further research.

Taught by: Staff Dr. Jeffrey Field; Dr. David Schultz; Dr. Simon Berritt
Course usually offered in spring term
Prerequisites: Prerequisites include a strong foundation in biology and chemistry. Students will prepare an abstract proposal by week four on their phase 2 projects, and a report in scientific paper style, due on the last day of the semester. In addition to attending the class lecture, an estimated 10 hours a week Independent Laboratory Research is expected.
Activity: Laboratory
1 Course Unit

PHRM 510 Neurotransmitter Signaling & Neuropsychopharmacology
The goals of this course are three-fold: 1) Provide an overview of major psychiatric disorders. 2) Provide in-depth information on neurotransmitters, emphasizing the wealth of new molecular information on how neurons function and communicate, as well as the basis for psychotherapeutics (one class per week). 3) Develop skills to appreciate, present and critically evaluate the the current literature in neurotransmitter signaling and neuropsychopharmacology (one class per week).

Taught by: Staff Dr. Steve Thomas; Dr. Chris Pierce; Dr. Wade Berrettini; Dr. Liz Heller
Course offered spring; even-numbered years
Also Offered As: NGG 510
Prerequisite: Permission of course director
Activity: Lecture
1 Course Unit
Notes: Meets two times per week.

PHRM 532 Human Physiology.
This course will present a survey of the physiology of most of the major organ systems. It will integrate knowledge of cellular and molecular mechanisms into an understanding of function at the tissue organ and organism levels. It will begin with a brief review of membrane physiology followed by electrophysiology and signaling in nerve. Then after a brief outline of neural control systems and their role in homeostasis it will present motility and muscle the cardiovascular system respiration the renal and gastrointestinal systems and selected topics from the endocrine system the reproductive systems environmental and exercise physiology. As well as providing a basis of integrative physiology for students in fields such as physiology bioengineering and pharmacology it should be of interest to students of cellular and molecular biology and genetic engineering who will need to appreciate the roles of specific systems and molecules at higher levels of organization.

Taught by: Tejvir Khurana, Ben Prosser, and Paul Titchenell
Prerequisites: Although not a formal prerequisite a good foundation in cell biology at the level of BIOM/CAMB 600 (or an equivalent upper level undergraduate course) is strongly recommended. A general understanding of the chemistry and biochemistry of macromolecules and of basic molecular biology will also be assumed. This course is primarily designed for 2nd year BGS students; 1st year students in BGS or other programs will require the permission of the instructor. This course is not open to undergraduates.
Corequisites: Students without BIOM 600 require the instructors permission.
Activity: Lecture
1 Course Unit

PHRM 534 Experimental Genome Science
This course will survey methods and questions in experimental genomics including next generation sequencing methods genomic sequencing in humans and model organisms functional genomics proteomics and applications of genomics methods. Students will be expected to review and discuss current literature and to propose new experiments based on material learned in the course.

Taught by: C. Brown, J. Murray
Also Offered As: GCB 534
Prerequisites: Undergraduates and Masters students need BIOL431 or equivalent
Activity: Lecture
0.01 Course Units
**PHRM 535 Introduction to Bioinformatics**

This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented and students will also be introduced to Python R and tools for reproducible research. This course emphasizes direct hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment genetic variation and analysis motif discovery study design for high-throughput sequencing RNA and gene expression single gene and whole-genome analysis machine learning and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science.

Taught by: B Voight, C Greene

Course usually offered in spring term

Also Offered As: GCB 535

Prerequisites: The course will assume a solid knowledge of modern biology. An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as BIOL 526 (Experimental Principles in Cell and Molecular Biology) BIOL 527 (Advanced Molecular Biology and Genetics) BIOL 528 (Advanced Molecular Genetics) BIOL 540 (Genetic Systems or equivalent) is a prerequisite.

Activity: Lecture

1 Course Unit

Notes: All students are required to bring a laptop to the lab sessions (Fridays). TAs will provide help with the material but students should be computer-capable with their own laptop and should be willing/capable to download and install free software from the internet.

**PHRM 542 Topics in Molecular Medicine**

TiMM is planned as a once-weekly seminar course whose goal is to introduce students to the ways in which biomedical research can provide new insights into clinical medicine and, conversely, how knowledge of clinical disease impacts scientific discovery.

Taught by: Skip Brass, MD, PhD; Gary Koretzky, MD, PhD; Mark Kahn, MD

Course usually offered in fall term

Prerequisites: The course will assume a solid knowledge of modern biology. An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as BIOL 526 (Experimental Principles in Cell and Molecular Biology) BIOL 527 (Advanced Molecular Biology and Genetics) BIOL 528 (Advanced Molecular Genetics) BIOL 540 (Genetic Systems or equivalent) is a prerequisite.

Activity: Seminar

1 Course Unit

Notes: The course is designed primarily for combined degree (MD/PhD) students, but will be available to all medical and graduate students as space permits. Priority will be given to 2st and 2nd year combined degree students. The optimal class size will be 14. Tentatively, the course will meet for one hour from 4 - 5 pm on Wednesday afternoons with occasional double sessions that will be two hours long.

**PHRM 564 DRUG DELIVERY**

In this course, students will learn about drug delivery systems with emphasis on targeted therapeutics and translational nanomedicine. The course will be directed and taught by Miriam Wattenbarger (CBE) and Vladimir Muzykantov (PHRM). Lectures will also be given by other faculty from the Penn School of Engineering and Applied Science and the School of Medicine. The four main topics for the course are traditional drug delivery, drug delivery systems and nanocarriers, targeted and smart drug delivery systems, and translational aspects of drug delivery systems. There will be a midterm, final, and a group project for the course. Students will form small groups for the project and research a drug delivery topic to propose an extension of a current research area. An oral and written proposal will be given by each group to the class at the end of the semester. The course is open to SEAS seniors and graduate students, SAS college pre-med, pre-CE and pre-BGS seniors, biotechnology MS students, PGG and BGS graduate students, Wharton and Dental School students.

Also Offered As: CBE 564

Activity: Lecture

1 Course Unit

**PHRM 570 Principles of Cardiovascular Biology: Vascular biology, medicine and engineering**

Lectures to be presented by various Medical School faculty members. Topics covered include: general principles of vascular biology and hemodynamics, endothelial cells and integral vascular functions, signaling in the cardiovascular system, angiogenesis, hemostasis and thrombosis, platelets, platelet/vascular interactions, vascular integrins and adhesion molecules, vascular inflammation and oxidative stress, white blood cells, vasoactive compounds and drugs, mechanisms of atherosclerosis, cholesterol and lipid metabolism, hypertension, novel vascular directed gene and enzyme therapies.

Taught by: Drs. Vladimir Muzykantov and Tilo Grosser

Course usually offered in spring term

Prerequisite: Permission of course director

Activity: Lecture

1 Course Unit

**PHRM 580 Topics In Pharmacogenetics**

This is a "literature-based" course (i.e. a seminar course/literature survey). It will survey the emerging technologies and computational advances that have permitted the field of pharmacogenetics to mature into a major biomedical discipline over the past few years. It will consider the likely impact on disease target identification, the development of new drugs for established and "niche" markets, the advent of "personalized medicine", including the selection of therapies that have maximum efficacy and minimum side-effect profiles. This course will also touch on some of the ethical issues associated with the routine genetic testing of patients to facilitate treatment choices and clinical monitoring.

Taught by: DR. A. STEVEN WHITEHEAD

Course usually offered in spring term

Prerequisite: Permission of course director

Activity: Seminar

1 Course Unit
**PHRM 590 Molecular Toxicology: Chemical and Biological Mechanisms**

Course Goals: Exposures to foreign compounds (drugs, carcinogens, and pollutants) can disrupt normal cellular processes leading to toxicity. This course will focus on the molecular mechanisms by which environmental exposures lead to end-organ injury and to diseases of environmental etiology (neurodegenerative and lung diseases, reproduction disruption and cardiovascular injury). Students will learn the difficulties in modeling response to low-dose chronic exposures, how these exposures are influenced by metabolism and disposition, and how reactive intermediates alter the function of biomolecules. Mechanisms responsible for cellular damage, aberrant repair, and end-organ injury will be discussed. Students will learn about modern predictive molecular toxicology to classify toxicants, predict individual susceptibility and response to environmental triggers, and how to develop and validate biomarkers for diseases of environmental etiology. Students are expected to write a term paper on risk assessment on an environmental exposure using available TOXNET information.

Taught by: Dr. Trevor M. Penning

Course usually offered in spring term

Prerequisites: Pre-requisites: Must have taken or will take Fundamentals of Pharmacology concurrently. Undergraduate course work in biochemistry and chemistry essential. Exceptions allowed based on past course work. Please consult with Course Director. Students: All 1st and 2nd year GGPS, CAMB, Neuro and BSTA students with required prerequisites; residents in Environmental and Occupational Health, and professional masters students (MPH and MTR).

Activity: Lecture

1 Course Unit

**PHRM 605 Drug Discovery and Devel**

Course usually offered in spring term

Also Offered As: BMB 605

Activity: Lecture

0 Course Units

**PHRM 623 Fundamentals of Pharmacology**

This course is designed to introduce students to basic pharmacological concepts with special emphasis on the molecular actions of drugs. Subject matter includes use of microcomputers to analyze pharmacological data.

Taught by: Dr. Jeffrey E. Field and staff

Course usually offered in fall term

Prerequisite: Permission of course director

Activity: Lecture

1 Course Unit

Notes: Meets three times per week

**PHRM 624 Medical Pharmacology**

This course surveys the major classes of drugs used to treat human conditions, and focuses in the detail on their molecular mechanisms of action. It consists of two 2-hour lectures per week and problem sets. Student evaluation is based 50% on exams and 50% on problem sets.

PHRM 624 is required of all 2nd year PG students. PG students must co-enroll in PHRM 532/CAMB 532 (Human Physiology).

Taught by: Course Directors: Paul H. Axelsen, Park Cho Park, Akiva Cohen, Steve Whitehead

Prerequisites: PHRM 623 - Fundamentals of Pharmacology; BIOM 600 - Cell Biology and Biochemistry Non-PG students must have permission from course director to enroll.

Activity: Lecture

2 Course Units

**PHRM 632 Cell Control by Signal Transduction Pathways**

This course, “Targeting the cancer cell: from mechanism to precision medicine”, will examine how various signal transduction mechanisms influence cell functions including replication, growth, transcription, translation and intracellular trafficking. We will also consider how non-cell autonomous mechanisms, such as the tumor microenvironment and the immune system influence cancer cell signaling. We will consider how important signaling pathways, such as Ras, Raf, Notch, Wnt, TGF beta, and various kinases/phosphatases become dysregulated in cancer, as well as delve into how the DNA damage response, immune system, and tumor microenvironment exert important influences on oncogenic signaling. In the first half of the course, invited faculty members will pick 2 relatively recent papers from their field that highlight important areas. Each paper will be assigned to a student, who will meet with the faculty mentor prior to the class to discuss the paper and their presentation. During the class, students will present each paper for approximately 45 minutes with time for discussion. Students will present the important background, break down the paper, look for strengths and weaknesses and come up with a plan of what the next set of experiments could or should be. In the second half of the course, students will independently pick a relevant paper for in class presentation and will also write a short “News and Views” style article based on the paper they have chosen. The goal of the course is to provide students with a view of the cancer cell that integrates both cell autonomous and non-cell autonomous signals and to use this information to consider how to successfully treat cancer.

Taught by: X. Hua, J. Field, A. Resnick, and W. Pear

Course usually offered in spring term

Prerequisites: BIOM 600, Molecular and Cell Biology Courses

Activity: Seminar

1 Course Unit

**PHRM 650 Current Biochemical Topics**

Participation in the “Dr. George W. Raiziss Biochemical Rounds”, a weekly seminar program sponsored by the Department of Biochemistry and Biophysics. Program deals with a wide range of modern biochemical and biophysical topics presented by established investigators selected from our faculty, and by leading scientists from other institutions.

Taught by: Black, B. & Shorter, J.

Also Offered As: BMB 650

Prerequisites: Course is limited to BGS graduate students and undergrads from the Vagelos Scholars Program.

Activity: Seminar

1 Course Unit

**PHRM 657 Introduction to Superfund Sites and Health Effects of Hazardous Waste**

Superfund hazardous waste sites are prevalent in our nation and the exposures to toxicants from these sites raise immediate health concerns. The aims of this course are to educate students about such sites and provide a scientific basis for hazard identification, hazard characterization, risk communication and risk management. The course will describe the effect of these hazardous chemicals on the ecosystem and vice-versa, and remediation and mitigation approaches. These environmental science issues will lead into the environmental health aspects of exposures including: biomonitoring (external and internal dose, biomarkers and the exposome), toxicological properties of contaminants and mode-of-action. The course will be complemented with visits to two Superfund sites in the region: Ambler (asbestos) and Palmerton (heavy metals).

Taught by: Jane Willenbring, Richard Pepino, Trevor Penning

Prerequisites: 400 level course in Biology/Chemistry and Biochemistry

Activity: Lecture

1 Course Unit
PHRM 660 Frontiers in Cancer Pharmacology
This advanced course for graduate students combines didactic lectures
from Penn faculty with oral presentations and oral assignments from the
students. Students should have either completed PHRM 560, Principles
in Cancer Signaling and Therapeutics or PHRM 640, Topics in Cancer
Pharmacology or equivalent classes. The faculty will present overviews
of current and emerging topics in cancer pharmacology. Emphasis of the
presentations will be on the translation of basic science discoveries into
therapeutic agents. Students will choose related topics to explore in more
detail. In consultation with Dr. Blair, students will prepare a 45-minute
presentation (using Power Point slides). Each student will give at least
two presentations during the semester. The faculty teaching the course
will be available for help with the presentations. The written assignment
will involve a 10-page double spaced paper (exclusive of references)
with a maximum of 25 references. The assignment will consist of a
literature review in the area of one of the presentation topics chosen by
the student. Additional information can be obtained from the Center for
Cancer Pharmacology web site: http://www.med.upenn.edu/ccp/
Taught by: Dr. Ian A. Blair
Course usually offered in fall term
Prerequisite: Permission of the course director
Activity: Lecture
1 Course Unit

PHRM 699 Laboratory Rotation
Activity: Laboratory
1 Course Unit

PHRM 799 Independent Study
One-term course offered either term
Activity: Independent Study
0.5 Course Units

PHRM 899 Pre-Dissertation Lab Rotation
Activity: Laboratory
1 Course Unit

PHRM 970 Candidacy Examination
One-term course offered either term
Activity: Lecture
2 Course Units

PHRM 995 Dissertation
Activity: Dissertation
1 Course Unit

PHRM 999 Research in Pharmacology
Independent or collaborative research in various fields of pharmacology
arranged individually with members of the staff.
One-term course offered either term
Prerequisite: Permission of staff member
Activity: Independent Study
1 Course Unit
PHILOSOPHY (PHIL)

PHIL 001 Introduction to Philosophy
Philosophers ask difficult questions about the most basic issues in human life. Does God exist? What can we know about the world? What does it mean to have a mind? How should I treat non-human animals? Do I have free will? This course is an introduction to some of these questions and to the methods philosophers have developed for thinking clearly about them.
For BA Students: Humanities and Social Science S
Taught by: Forbes
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Also fulfills General Requirement in History Tradition for Class of 2009 and prior. Freshman Seminar sections offered

PHIL 002 Ethics
Ethics is the study of right and wrong behavior. This introductory course will introduce students to major ethical theories, the possible sources of normativity, and specific ethical problems and questions. Topics may include euthanasia, abortion, animal rights, the family, sexuality, bioethics, crime and punishment and war.
For BA Students: Society Sector
Taught by: S.Meyer, Tan, Lord, M.Meyer
One-term course offered either term
Activity: Lecture
1 Course Unit

PHIL 003 History of Ancient Philosophy
“What is philosophy? How does it differ from science, religion, literature, and other modes of human discourse? This course traces the origins of philosophy as a discipline in the Western tradition, looking to thinkers of Ancient Greece and Rome. We will examine how natural philosophers such as Thales, Anaximander, and Heraclitus distinguished their inquiries from the teachings of poets such as Homer and Hesiod; how ancient atomism had its origins in a response to Parmenides’ challenge to the assumption that things change in the world; how Socrates reoriented the focus of philosophy away from the natural world and toward the fundamental ethical question, how shall I live? We will also examine how his pupil, Plato, and subsequently Aristotle, developed elaborate philosophical systems that address the nature of reality, knowledge, and human happiness. Finally, we will examine the ways in which later thinkers such as the Epicureans and Stoics transformed and extended the earlier tradition.”
For BA Students: History and Tradition Sector
Taught by: S.Meyer
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PHIL 004 History of Modern Philosophy
This course is an introduction to a few central themes in philosophy in the 17th and 18th centuries, and to some of the crucial thinkers who addressed those themes. Topics to be covered may include, among others, the nature of the human being (including the human mind), the relationship between God and the created world, the nature of freedom, and the relations among natural sciences, philosophy and theology in this rich period of human history.
For BA Students: History and Tradition Sector
Taught by: Hatfield, Detlefsen, Chignell
Course usually offered in spring term
Activity: Lecture
1 Course Unit

PHIL 005 Formal Logic I
An introduction to first-order logic including the completeness, compactness, and Lowenheim-Skolem theorems, and Godel's incompleteness theorems.
Taught by: Weinstein
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: This is a Formal Reasoning course.

PHIL 006 Formal Logic II
An introduction to first-order logic including the completeness, compactness, and Lowenheim-Skolem theorems, and Godel's incompleteness theorems.
Taught by: Weinstein
Course usually offered in spring term
Activity: Lecture
1 Course Unit

PHIL 007 Critical Thinking
This course will provide the student with informal techniques for identifying and analyzing arguments found in natural language. Special attention will be paid to developing the ability to assess the strength of natural language arguments, as well as statistical arguments.
Course not offered every year
Activity: Lecture
1 Course Unit

PHIL 008 The Social Contract
This is a critical survey of the history of western modern political philosophy, beginning from the Early Modern period and concluding with the 19th or 20th Century. Our study typically begins with Hobbes and ends with Mill or Rawls. The organizing theme of our investigation will be the idea of the Social Contract. We will examine different contract theories as well as criticisms and proposed alternatives to the contract idea, such as utilitarianism. Besides the above, examples of authors we will read are Locke, Rousseau, Hume, Mill and Marx.
For BA Students: Society Sector
Taught by: Tan
Course usually offered in spring term
Also Offered As: PPE 008
Activity: Lecture
1 Course Unit
PHIL 015 Logic and Formal Reasoning
This course offers an introduction to three major types of formal reasoning: deductive, inductive (probabilistic and statistical), and practical (decision-making). The course will begin with the study of classical sentential and predicate logics. It will move on to elementary probability theory, contemporary statistics, decision theory and game theory.
For BA Students: Formal Reasoning and Analysis
Taught by: Domotor
Course usually offered in spring term
Activity: Lecture
1 Course Unit

PHIL 024 Philosophy of Biology
An introductory course about conceptual and ethical issues in the life sciences. Topics may include the nature of species, adaptation, fitness, the evolution of altruism, and debates about human nature. No prior background about biology or its history are required.
Activity: Seminar
1 Course Unit

PHIL 025 Philosophy of Science
What counts as a scientific theory? What counts as evidence for a scientific theory? Are scientific inferences justified? Does science give us truths or approximate truths about a world that exists independently of us? How can we know? Does it matter? These are all perennial questions in the philosophy of science, and the goal of this course is to look at how philosophers have answered these questions since the scientific revolution. In addition to reading classic work by philosophers of science, we will read material from living and dead scientists in order to gain a deeper appreciation of the philosophical questions that have troubled the most brilliant scientists in Western science.
For BA Students: Natural Science and Math Sector
Taught by: Weisberg, Spencer
One-term course offered either term
Activity: Lecture
1 Course Unit

PHIL 026 Philosophy of Space and Time
This course provides an introduction to the philosophy and intellectual history of space-time and cosmological models from ancient to modern times with special emphasis on paradigm shifts, leading to Einstein's theories of special and general relativity and cosmology. Other topics include Big Bang, black holes stellar structure, the metaphysics of substance, particles, fields, and superstrings, unification and grand unification of modern physical theories. No philosophy of physics background is presupposed.
Taught by: Domotor
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PHIL 028 Introduction to Feminist Philosophy
This course is an introduction to feminist thought, both in theory and in practice. We will consider how feminist thought emerged and evolved, as well as how feminist theories respond to various intellectual, social and political challenges. Questions we will address include: What exactly is feminism? How does one's gender identity impact one's lived experiences? How should we revise, reformulate, or rethink traditional answers to political and ethical issues in light of feminist theories? How can feminist analyses contribute to the development of better science, and our conceptions of knowledge?
Taught by: M. Meyer
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Offered through the College of General Studies

PHIL 029 Philosophy of Sport
This is an introductory philosophy course that uses philosophical tools to understand and answer questions that arise in and about sports. Is there a principled basis for determining which methods of performance enhancement are acceptable? Developing a framework to answer this question will take us through: 1) questions about rules: what is their point in sports and what are appropriate reasons to change them; 2) questions about the point of participation in a sport; 3) questions about the kinds of virtues sports participants can demonstrate; and 4) questions about integrity of participants and a sport itself. A related set of questions concerns the appropriate competitors in sporting events: Should competition be restricted to single sex categories; Should competition be divided into disabled and non-disabled categories?
Taught by: M. Meyer
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 030 Plato: Democracy and the Power of Rhetoric
If you aspired to a political career in ancient Athens, public speaking was an essential skill. Athens was a direct democracy, which meant that having the ability to win over your fellow citizens was tantamount to political success. Young, ambitious citizens would therefore pay handsomely to study with rhetoricians, who professed to teach this all-important skill. Plato, however, was famously wary of the power of rhetoric. In this class, we will read selections from Plato’s dialogues in which many of the most prominent rhetoricians are engaged in discussion with Socrates about the nature of rhetoric, as well as its potential benefits and pitfalls. Students will then assume the role of citizens charged with speaking before the Athenian Assembly on various subjects. This will likely include a recreation of the trial of Socrates, who was himself accused of using rhetoric to make the weaker argument the stronger. By examining democracy at its threshold, and the power wielded by rhetoricians within a democracy, this CWiC seminar aims to provide both the context and the perspective to consider its later evolution. Grades will be based on at least two oral presentations, as well as general participation in other classroom activities.
Taught by: Reese
Activity: Seminar
1 Course Unit
PHIL 034 Philosophy of Religion
An introductory philosophical examination of questions regarding the nature of religious experiences and beliefs; arguments for and against the existence of God; the problem of evil; the relationships of faith, reason and science, the possibility of religious knowledge, the role of religious communities, etc. Readings from the history of philosophy, 20th century and contemporary philosophy.
Taught by: Steinberg
Course not offered every year
Activity: Lecture
1 Course Unit

PHIL 044 Introduction to Cognitive Science
Scope and limits of computer representation of knowledge, belief and perception, and the nature of cognitive processes from a computational perspective.
Taught by: Kearns, Liberman, Weinstein, Hatfield
Course usually offered in fall term
Also Offered As: CIS 140
Activity: Lecture
1 Course Unit
Notes: Formal Reasoning Course. All Classes

PHIL 050 Introduction to Indian Philosophy
This course will take the student through the major topics of Indian philosophy first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India--arguments for and against the existence of God, for example the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E. to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings to modern India.
For BA Students: History and Tradition Sector
Activity: Lecture
1 Course Unit

PHIL 051 Yoga and Philosophy
"Yoga" means to yoke in Sanskrit. Metaphorically, this is often interpreted as union, or integration. This course will explore central aspects of yogic philosophy and practice, and how they relate to, and might be integrated with, contemporary analytic philosophy, college life, and beyond. We will focus on three key issues: (1) What is yogic philosophy? How does it relate to the western philosophical tradition more commonly taught in philosophy departments in the U.S.? (2) What does the practice of yoga have to do with theoretical understanding? (3) Is it possible to integrate a yogic worldview and a scientific worldview? Is there scientific evidence that yoga "works"? What does that even mean? This course will contain both a theoretical component and a practice component. In addition to writing analytical essays on these topics, students will maintain a yoga practice and a reflective journal throughout the course. No prior experience with yoga is required.
Taught by: Miracchi
Activity: Seminar
1 Course Unit

PHIL 055 Existentialism
An introduction to the philosophy and literature of Existentialism. Readings from philosophers such as Nietzsche, Kierkegaard, Heidegger, de Beauvoir, Camus, Sartre, and writers such as Dostoyevsky, Ibsen, Kafka, and Beckett.
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 072 Biomedical Ethics
This course is an introduction to bioethics, focusing on ethical questions arising at the beginning and end of life. Topics will include procreative responsibilities, the question of wrongful life, and prenatal moral status as well as questions of justice related to markets for sperm, eggs and gestation. We will also attend to dilemmas at the end of life, including the authority of advance directives, euthanasia and the allocation of life-saving therapies.
For BA Students: Society Sector
Course not offered every year
Also Offered As: PPE 072
Activity: Lecture
1 Course Unit

PHIL 073 Topics in Ethics
This course examines some of the central theoretical and applied questions of ethics. For example, what is the good life? By what measure or principles do we evaluate the rightness and wrongness of actions? How does ethical reasoning help us understand and address real world problems such as world hunger, social injustice, sex and race discrimination, allocation of scarce resources and the like. The course can be organized around an applied topic or practical issue such as global ethics, just war, biomedical ethics or environmental ethics.
Taught by: Gibbons, M.Meyer
Course not offered every year
Also Offered As: PPE 073
Activity: Seminar
1 Course Unit

PHIL 074 Business Ethics
We will examine practical ethical issues facing businesses, and the philosophical tools for addressing them. Topics may include corporate responsibility, shareholders vs. stakeholders, whistle blowing, raiding and restructuring, the morality of markets, fair hiring practices, workers rights, sexual harassment, environmental impact.
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 076 Political Philosophy
An introduction to some central issues in social and political philosophy: liberty, equality, property, authority, distributive justice. Readings may be from Hobbes, Locke, Mill, Marx, and more recent theorists such as Rawls and Nozick.
Taught by: Freeman
Course not offered every year
Activity: Lecture
1 Course Unit
PHIL 077 Philosophy of Law
This course is an introduction to some of the central philosophical problems of law. What is law? What makes law? What is the relationship between law and morality? Can laws be unjust? Is there a moral obligation to obey the law? We will look at different theories of law, such as positivism and natural law theory, and discuss topics like civil disobedience, liberty and the law, and punishment and the law. The third and final section of the course will consider an unusual and particularly significant kind of law: constitutions. We will consider the purpose(s) of constitutions, how constitutionalism relates to democracy, and how constitutions ought to be understood and interpreted, in light of our answers to these first two questions. Throughout the course, we will engage with both classic and contemporary work, reading work by Michelle Alexander, Jeremy Bentham, Angela Davis, Ronald Dworkin, John Hart Ely, H.L.A. Hart, Thomas Hobbes, John Locke, John Stuart Mill, Robert Nozick, Martha Nussbaum, Richard Posner, Jeremy Waldron, and others.
For BA Students: Society Sector
Taught by: Hutler
Course not offered every year
Activity: Lecture
1 Course Unit

PHIL 079 Environmental Ethics
In this course we will investigate some of the ethical issues that arise from our relationship with the environment. Topics may include: What are our responsibilities toward the environment, as individuals and as members of institutions? How do our responsibilities toward the environment relate to other ethical considerations? Do non-human animals/species/ecosystems have intrinsic value? What should conservationists conserve?
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 080 Aesthetics
This course examines philosophical issues centering on the nature and value of the arts. Some questions we'll consider are: What is art? What does it mean to have an aesthetic experience? How are aesthetic experiences different from non-aesthetic ones? What is the relation between art and truth? How do the moral qualities in a work of art affect its aesthetic qualities? Why are emotions important in our interpretations of artworks? What is the relation between art and expression? Do forgeries necessarily have less aesthetic value than original artworks? What are aesthetic judgments, and are they merely expressions of taste? Lecture and discussion will center on both classical and contemporary works in aesthetics.
For BA Students: Arts and Letters Sector
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 155 Continental Philosophy
In this course we read various texts in the Enlightenment tradition and more recent ones critical of modern distortions of this tradition. Readings may include: Kant and Marx, two exemplars of this tradition, as well as the views of the Frankfurt School (e.g. Horkheimer and Adorno), Foucault, Derrida, Nietzsche and Saussure.
Taught by: Steinberg
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 203 Thinking with Models
When a flu pandemic strikes, who should get accinated first? What's our best strategy for minimizing the damage of global climate change? Why is Philadelphia racially segregated? Why do most sexually reproducing species have two sexes, in roughly even proportions? These and many other scientific and practical problems required us to get a handle on complex systems. And an important part of deepening our understanding and sharpening our intuitions requires us to think with models. Students in this laboratory-based course will learn about the varied practices of modeling, and will learn how to construct, analyze, and validate models.
For BA Students: Formal Reasoning and Analysis
Taught by: Weisberg
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 205 What is Meaning?
This course will survey several central topics in philosophy of mind and language, as well as investigate how these areas of philosophy interact with the scientific study of the mind. Questions addressed may include: What is it to have a mind? What is consciousness? What is it to think, to perceive, to act, to communicate, to feel emotions? What is the relationship between the mind and the brain? Can there be a science of the mind? Of language? What can it tell us? What can philosophy contribute to cognitive science? We will look for more precise ways of asking these questions, and we will study some canonical answers to them.
Course not offered every year
Activity: Lecture
1 Course Unit

PHIL 209 Introduction to Plato
A survey of selected dialogues of Plato, an Athenian philosopher of the fourth century BCE. Works read may include the Euthyphro, Crito, Gorgias, Laches, Charmides, Phaedo, Philebus, Statesman, and Plato's last dialogue, the Laws. The course will be run as a seminar. All works will be read in English translation. Topics to be discussed may include metaphysics, epistemology, psychology, ethics, and political theory.
Taught by: S. Meyer
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 210 Introduction to Aristotle
Aristotle (384-323 BCE) was one of the most important philosophers in Classical Greece, and his legacy had unparalleled influence on the development of the Western philosophical thought through the medieval period. We will study a selection of his works in natural philosophy, metaphysics, epistemology, psychology, ethics and politics. All texts will be read in English translation. No background in Greek philosophy or knowledge of Greek is required.
Taught by: S. Meyer
Course not offered every year
Activity: Lecture
1 Course Unit
PHIL 211 Ancient Moral Philosophy
A survey of ethical philosophy in the Ancient Greek tradition. We will study the work of Plato, Aristotle, Epicurus, and the Stoics, including writings of later Roman authors such as Cicero, Seneca, Epictetus, and Marcus Aurelius. The class will be run as a seminar. All works will be read in English translation.
For BA Students: Society Sector
Taught by: S. Meyer
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 221 Philosophy East and West
Our goal in this course is to bring Western Philosophy and Eastern Philosophy into dialogue. Topics we will cover include skepticism and knowledge, ethics and the good life, moral responsibility and personal relationships, and political obligations and justice. Do the Western and Eastern philosophical traditions approach these topics in the same way? Do they even share an understanding of what the problems and issues at stake are? And what can we learn from comparative philosophy? This freshman seminar does not presuppose prior knowledge of philosophy. Examples of authors we will study include Descartes, Aristotle, Mencius, and Confucius.
Taught by: Tan.
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 223 Philosophy and Visual Perception
In this course, we’ll use the biology, psychology and phenomenology of vision to explore philosophical questions about color, such as these: Color vision helps us get around in our environments, but in what sense is it a window onto reality, if it is? Are colors properties of objects, or are they inherently private, subjective properties of minds? What can non-human forms of color vision teach us about the nature of color, and how should we empirically study color vision? Do we need to see in color to understand it? How do our ordinary ways of talking and thinking about colors relate to the experiences we have in color? How does color vision figure in aesthetic judgment? And to what degree can it be influenced by learning, or by social biases like sexist or racist prejudices?
Taught by: Hatfield, Connolly
Activity: Seminar
1 Course Unit

PHIL 225 Introduction to Philosophy of Science
A discussion of some philosophical questions that naturally arise in scientific research. Issues to be covered include: The nature of scientific explanation, the relation of theories to evidence, and the development of science (e.g., does science progress? Are earlier theories refuted or refined?).
Taught by: Domotor
One-term course offered either term
Activity: Seminar
1 Course Unit

PHIL 226 Philosophy of Biology
This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin’s formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory: Richard Dawkins’ and Richard Lewontin’s. The remainder of the course will deal with a number of foundational issues including adaptation, the units of selections, the evolution of altruism, and the possibility of grounding ethics in evolutionary theory.
For BA Students: Natural Science and Math Sector
Taught by: Weisberg
Course not offered every year
Also Offered As: PPE 225
Activity: Seminar
1 Course Unit
Notes: Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs

PHIL 228 Philosophy of Social Science
This course is about the foundations of contemporary social science. It focuses on the nature of social systems, the similarities and differences between social and natural sciences, the construction, analysis, and confirmation of social theories, and the nature of social explanations. Specific topics may include: What are social norms and conventions? What does it mean to have one gender rather than another, or one sexual orientation rather than another? Should social systems be studied quantitatively or qualitatively?
Taught by: Weisberg, Bicchieri
Course not offered every year
Also Offered As: PPE 314
Prerequisites: PPE 008, ECON 001, ECON 002, PSCI 182, PPE 153, PPE 201
Activity: Lecture
1 Course Unit

PHIL 231 Epistemology
Two basic assumptions of academic research are that there are truths and we can know them. Epistemology is the study how knowledge, what it is, how it is produced, and how we can have it. Metaphysics, the study of the basic constituents of reality, the study of being as such. In this introduction to metaphysics and epistemology, we will ask hard questions about the nature of reality and knowledge. No philosophy background is required for this course.
Taught by: Singer
Course not offered every year
Activity: Seminar
1 Course Unit
PHIL 233 Philosophy of Economics
In this course, general philosophy of science issues are applied to economics, and some problems specific to economics are tackled. While analytical questions like “What is economics?” or “What is an economic explanation” must be pursued, the ultimate goal is practical: What is good economics? How can economists contribute to a better understanding of society, and a better society? How can we make economics better? Topics to be discussed include: specific object and method of economics as a social science; its relation with other disciplines (physics, psychology and evolutionary theory); values in economics (welfare, freedom, equality and neutrality); the role of understanding and possible limits of a quantitative approach to human behavior (purposefulness, freedom, creativity, innovation); prediction, unpredictability and the pretension of prediction; causation in econometrics and in economic theory (equilibrium); selfishness and utility maximization (cognitive and behaviorist interpretations); economic models and unrealistic assumptions (realism and instrumentalism); empirical basis of economics (observation and experiment); microeconomics and macroeconomics (reductionism and autonomy); pluralism in economics (mainstream economics and heterodox schools).
Taught by: Pereira Di Salvo,Carlos
Course not offered every year
Also Offered As: PPE 233
Activity: Lecture
1 Course Unit

PHIL 234 Philosophy of Religion
This course will focus on arguments for and against the existence of God. It will begin by examining the ontological, cosmological, and design arguments for the existence of God. Included will be a discussion of purported evidence for the existence of God from modern biology and cosmology. It will then examine arguments against the existence of God based on human and animal suffering, followed by arguments against the existence of God arising from the scarcity of credible miracle claims.
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 243 Topics In Metaphysics
In this class we employ science fiction thought experiments as a means of reflecting on questions like: What is reality? What is the nature of the self and mind? Might you be in a computer simulation (e.g., as in The Matrix)? Is time travel possible? Can your mind survive the death of your brain by uploading? Is time real or is it merely an illusion?
Taught by: Domotor
Course not offered every year
Prerequisites: PHIL 001 or PHIL 003 or PHIL 004, or permission of instructor.
Activity: Seminar
1 Course Unit

PHIL 244 Introduction to Philosophy of Mind
This course will survey several central topics in philosophy of mind, as well as investigating how philosophy of the mind interacts with scientific study of the mind. Among the questions we’ll be asking are: What is it to have a mind? What is the relationship between the mind and the brain? Can there be a science of the mind? What can it tell us? What can philosophy contribute to a science of the mind? What is consciousness? What is it to think, to perceive, to act? How are perception, thought, and action related to one another?
Taught by: Domotor, Miracchi
One-term course offered either term
Also Offered As: PPE 244
Activity: Seminar
1 Course Unit

PHIL 247 Marx
Precious few, if any, communist states exist today as Karl Marx would have imagined them. Indeed, almost every part of the 19th-century culture Marx put under his philosophical microscope has in one way or another vanished or been radically transformed: the state, the school, even sex have been fundamentally altered during a long 20th century filled with revolutions of culture. This class asks: is there a future for a philosopher whose political projects seem so precarious—if they have not failed outright—in the face of global capitalism? We will try to answer this question by examining the origins and the implications of Marx’s writings, but also his complex legacy, from Lenin through Guevara to Foucault and Zizek. The course will conclude with a consideration of the role of the radical in today's global politics and cultural sphere.
For BA Students: Humanities and Social Science S
Taught by: Jarosinski
Course not offered every year
Activity: Lecture
1 Course Unit

PHIL 249 Philosophy of Education
We sometimes see philosophy as an inaccessible subject and the philosopher a solitary academic musing about abstract concepts from her office chair. However, philosophical thinking lies at the heart of many aspects of human life. Anyone who has pondered over questions regarding goodness, value, personal identity, justice, how to live well, or even sex have been fundamentally altered during a long 20th century in which they are already thinking philosophically. In this course, we will study a variety of topics in philosophy with the aim of developing curricula and lesson plans for delivery in middle school (6th through 8th grades). Course participants will work with the instructor and with help from a curricular planner from Penn s Graduate School of Education to develop a series of one-hour lessons in philosophy, which participants will then teach to the middle school students in a local school. Part of the course will be held on Penn s campus, and part of the course will be held on-site with one of our partner schools. This course is an Academically Based Community Service course. Registration in this class requires a permit, following an interview with the instructor.
Taught by: Detlefsen
Course not offered every year
Activity: Seminar
1 Course Unit
PHIL 271 Global Justice
This course is an introduction to some of the central problems in global justice. Samples of these topics include: What are our duties to respond to world poverty and what is the basis of this duty? Is global inequality in itself a matter of justice? How universal are human rights? Should human rights defer to cultural claims at all? Is there a right to intervene in another country to protect human rights there? Indeed can intervention to protect human rights ever be a duty? Who is responsible for the environment? We will read some influential contemporary essays by philosophers on these topics with the goal of using the ideas in these papers as a springboard for our own further discussion and analysis.
Taught by: Tan
Course not offered every year
Also Offered As: PPE 271
Activity: Seminar
1 Course Unit

PHIL 277 Justice, Law and Morality
The course will focus on the philosophical background to the individual rights protected by the U.S. Constitution, including 1st Amendment freedoms of religion, expression, and association; the 14th amendment guarantee of Due Process and the rights of privacy, abortion, assisted suicide, and marriage; the Equal Protection clause and equal political rights and the legitimacy of affirmative action; and the Takings and Contract clauses and their bearing on rights of private property and economic freedoms. In addition to Supreme Court decisions on these issues, we will read works by political philosophers and constitutional theorists, including J.S. Mill, Ronald Dworkin, Cass Sunstein, Martha Nussbaum, Katherine MacKinnon and others.
Taught by: Freeman, Allen
Course not offered every year
Also Offered As: PPE 277
Activity: Lecture
1 Course Unit

PHIL 280 Topics in Aesthetics
What is beauty? What is the relationship between beauty and goodness? What does aesthetic judgment tell us, if anything, about the world? This course addresses these and other questions by focusing predominantly on Kant’s highly influential aesthetic theory. It situates this text in the context of other works on aesthetics. We begin with Plato’s view expressed in The Symposium that beauty is a form to which humans gain (some) access through love. We then turn to essays by Shaftesbury and Hume that introduce key aesthetic notions that Kant will elaborate (and revise) – including those of taste, common sense, harmony, and aesthetic disinterest. We also read selections from the work of Friedrich Schiller, John Dewey, and A. K. Coomaraswamy who offer alternative accounts of the relationship between beauty and ethical life – a relationship that Kant acknowledges but considers to be importantly limited. The question of the relationship between ethics and aesthetics will form the backdrop for this semester’s reading overall.

Activity: Seminar
1 Course Unit

PHIL 289 Philosophy of Race
Historically, philosophical questions about race have been about the nature and reality of race, the nature of racism, and social or political questions related to race or racism. In fitting with that history, the first part of the course will focus on the nature and reality of race, as understood in biology and as understood by ordinary people. We will begin by looking at biological race theories from Francois Bernier in 1684 to Pigliucci and Kaplan in 2003. Next, we will look at the philosophical work that has been done on the nature and reality of race as ordinarily understood in the contemporary United States. We will discuss racial anti-realism, social constructionism about race, and biological racial realism from well-known philosophers of race like Anthony Appiah, Sally Haslanger, and Joshua Glasgow. The second part of the course will focus on the nature of racism and social or political questions related to race or racism. In our discussion of racism, we will, at least, intrinsic racism, extrinsic racism, and institutional racism. In our discussion of social or political issues related to race or racism, we will look at whether any US racial groups should be used to diagnose, study, or treat genetic disorders.

Activity: Seminar
1 Course Unit

PHIL 295 Identity
The content of the course may include the following, and related, themes: what makes a human the same human over time? What constitutes our identities? Are gender, race, sexual orientation, and the like essential features of our identities, and if so, how do they become so? How do ethics, politics and identity interact? After learning this philosophical content, Penn students will develop lesson plans for introducing this content to Philadelphia public high school students. Mid way through the semester, Penn students will start to prepare the high school students to present their own original work on the philosophy of identity at a conference to be held at Penn in May 2017. Penn students will be assessed on their own written and other work for the course, and in no way on the written or oral work of the high school students. Enrollment by permit only. Please contact Professor Detlefsen detlefsen@sas.upenn.edu to schedule an interview for admission to the course.

PHIL 299 Independent Study
Student arranges with a faculty member to pursue a program of reading and writing on a suitable topic.
One-term course offered either term
Activity: Independent Study
1 Course Unit

PHIL 301 Directed Honors Research
Open only to senior majors in philosophy. Student arranges with a faculty member to do an honors thesis on a suitable topic.
One-term course offered either term
Activity: Independent Study
1 Course Unit
PHIL 325 Topics in Philosophy of Science
The aim of this course is to explore the relationships between philosophy and physics, with a focus on prominent foundational issues in modern physics. The course is organized around four main areas. In the first part, we focus on the philosophy and (classical and relativistic) structure of space and time, including the proliferations of physical geometries (Lobachevskian and Riemannian) of curved space time. Are space and time real? If so, what kind of entities are they? Metaphysically, we have a choice between presentism and eternalism, and regarding the nature of physical objects in space-time, there is a choice between endurantism and perdurantism. Is time travel possible? In the second part, we concentrate on the basic metaphysical and epistemological questions posed by physics: causality, determinism, randomness, and the nature of physical laws. How is cause conveyed from one physical body to another? Are the laws of physics true? In the third part, we turn to the principal philosophical issues raised by quantum physics: structural realism and the interpretations of quantum mechanics, non-locality and Bell’s theorem, the infamous Schrodinger cat paradox, hidden variables, and quantum measurement. What is primary—particles or waves? Finally in the fourth part, we investigate the metaphysics underlying Big Bang and Ekpyrotic cosmological theories, and evidence for a parallel universe and baby universes. All these philosophical issues will be addressed by looking at some simple examples or episodes taken from modern physics. The bulk of the readings will come from two textbooks (available at the Barnes & Noble University Bookstore) and articles in journals.
PREREQUISITES: The course is entirely self-contained. All topics in physics that are necessary for understanding the pertinent philosophical problems will be reviewed in class.
Taught by: Weisberg
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Department Majors Only

PHIL 330 Philosophy of Perception
Taking our perceptual experience as a given, what causes it? In a realistic mood, we accept that objects in the environment, or in the "external world," cause us to have the perceptual experiences that we do (as of a table with food, or as of a garden with flowers in it). Yet on this realistic view, our perception is the result of a causal chain that leads from object to eye to brain to experiences, and we are only given the last element: the experience. So how do we really know how our experiences are caused, and where do we get the idea that they are caused by an external world of physical objects? The seminar will focus on the problem of the external world as examined by David Hume, Thomas Reid, G. E. Moore, and Bertrand Russell, along with recent authors.
Taught by: Hatfield
Course not offered every year

1 Course Unit
Notes: Department Majors Only

PHIL 343 Philosophy of Mind
This majors seminar will focus on selected topics in Philosophy of Mind.
Taught by: Miracchi
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Department Majors Only

PHIL 359 Topics in Theoretical Philosophy
This majors seminar will cover selected topics in metaphysics, epistemology, philosophy of mind, philosophy of science, or philosophy of language. Topics will vary from term to term.
Taught by: Spencer
Activity: Seminar
1 Course Unit
Notes: Department Majors Only

PHIL 361 Ancient Philosophical Figures
A study of selected topics, texts, and figures from classical Greek philosophy. Topics will vary from term to term.
Taught by: S.Meyer
Course not offered every year
Prerequisite: PHIL 003
Activity: Seminar
1 Course Unit
Notes: Department Majors Only

PHIL 362 Modern Philosophical Figures
A study of selected topics, texts, and figures from 17th and 18th century European philosophy. Figures studied may include Descartes, Leibniz, Locke, Berkley, Hume, or Kant. Topics will vary from term to term.
Taught by: Hatfield, Detlefsen
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Department Majors Only

PHIL 370 Topics in Political Philosophy
This majors seminar will cover selected topics in political philosophy. The content will vary from semester to semester.
Taught by: Freeman.
Course not offered every year
Prerequisite: PHIL 002 (or consent of the instructor)
Activity: Seminar
1 Course Unit
Notes: Department Majors Only

PHIL 372 Topics in Ethics
This majors seminar will cover selected topics in ethics. The content will vary from semester to semester.
Taught by: Freeman
Course not offered every year
Prerequisite: PHIL 002 (or consent of the instructor)
Activity: Seminar
1 Course Unit
Notes: Department Majors Only

PHIL 376 Justice
This majors seminar will focus on contemporary works on liberalism, democracy, capitalism, and distributive justice. Questions to be discussed may include: Which rights and liberties are fundamental in a constitutional democracy? What is equality and what requirements does it impose? Are economic rights of property and freedom of contract equally important as personal liberties of speech, religion, and association? Does capitalism realize a just distribution of income and wealth? What is socialism and is it potentially just, or necessarily unjust? Readings from works by John Rawls, Robert Nozick, Milton Friedman, and others.
Taught by: Hatfield
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Department Majors Only

PHIL 379 Topics in Political Philosophy
This majors seminar will focus on various topics in political philosophy. Topics will vary from term to term.
Taught by: Pereira Di Salvo
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Department Majors Only
PHIL 405 Philosophy of Language
This course provides an overview of 20th century analytic philosophy of language. Questions we will ask may include: How do words refer? How do they combine to express thoughts? How do words relate to concepts or to thoughts more generally? What do words and sentences mean? How do we use them to communicate with each other? How does word and sentence meaning depend on the contexts in which they are spoken or heard, or on stable features of environments of linguistic speakers?
Taught by: Miracchi
Course not offered every year
Prerequisite: PHIL 005 or PHIL 505 or permission of instructor
Activity: Seminar
1 Course Unit

PHIL 407 Aristotle
A study of Aristotle's main writings on language, reality, knowledge, nature and psychology. All texts will be read in English translation. No background in Greek philosophy or knowledge of Greek is required, although previous work in philosophy is strongly recommended.
Taught by: S.Meyer
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 409 Plato's Selected Dialogues
A study of selected dialogues of Plato. All texts will be read in translation. No prior experience in Plato is required, but students should have some background in philosophy. Dialogues studied will vary from term to term.
Taught by: S.Meyer
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 410 Introduction to Logic and Computability
Taught by: Weinstein
Course not offered every year
Prerequisite: Math 371 or Math 503
Activity: Lecture
1 Course Unit

PHIL 412 Topics in Logic
The course focuses topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Taught by: Weinstein
Course not offered every year
Also Offered As: CIS 518
Activity: Seminar
1 Course Unit

PHIL 414 Philosophy of Mathematics
The course will focus on the development of the foundations and philosophy of mathematics from the late nineteenth-century through the present day. Topics may include logicism, formalism, intuitionism, and the foundations of set theory. Ample consideration will be given to some of the fundamental results of mathematical logic, such as the Godel incompleteness theorems and the independence of the Continuum Hypothesis from Zermelo-Fraenkel set theory, that have had a profound impact on contemporary approaches to the philosophy of mathematics.
Taught by: Weinstein, Ewald
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 423 Philosophy and Visual Perception
Central issues in the philosophy of perception from the modern period, including: what we perceive, the meaningful content of perception, and its relation to a mind-independent external world. Additional topics may include: (1) color perception and color metaphysics; (2) object perception in its interplay between Gestalt organizational factors and background knowledge; (3) the role of ecological regularities in the formation of our visual system and in the ongoing tuning of the system to the environment; (4) the geometry of visual space and the phenomenology of visual appearances of size and shape; (5) the problem of how visual scenes are experienced by means of images. Readings from authors such as Bertrand Russell, R. W. Sellars, Tim Crane, Evan Thompson, Robert Swartz, Wolfgang Metzger, Nelson Goodman, Richard Wollheim, and William Hopp, among others.
Taught by: Hatfield
One-term course offered either term
Activity: Seminar
1 Course Unit

PHIL 425 Philosophy of Science.
An advanced introduction to the central philosophical questions concerning the nature of scientific knowledge and its relation to experience, and the metaphysical assumptions underlying the natural sciences. Topics to be covered include: science versus pseudoscience, laws of nature, causation, determinism and randomness, theories and models in science, scientific explanation, underdetermination of theories by observation and measurement, realism and antirealism, reductionism and intertheory relations, objectivity and value judgments in science, hypothesis testing and confirmation of scientific theories, and classical paradoxes in scientific methodology.
Taught by: Domotor
One-term course offered either term
Prerequisites: Background in elementary logic and some rudiments of science
Activity: Seminar
1 Course Unit
PHIL 426 Philosophy of Psychology
An examination of major trends of thought in experimental psychology in relation to philosophy and the philosophy of science. What is the subject matter and object of explanation of experimental psychology? What is the relation between psychology and neuroscience? How is scientific psychology related to traditional philosophical investigations of the mental? The course covers the classical systems and schools of psychology (Wundt, James, behaviorism, Gestalt psychology, cognitive and perceptual psychology, and cognitive science) and such contemporary problems as consciousness, philosophical foundations of cognitive science, theories of the extended and embodied mind; and the relation between neuroscience and psychology.
Taught by: Hatfield
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 430 Philosophy of Mind
This course studies particular topics in contemporary philosophy of mind and cognitive science. Examples include: the nature of consciousness, naturalistic accounts of intentionality, the nature scope of scientific explanation in studying the mind, the intersection of philosophy of mind and epistemology, and theories of agency. Typically, readings include both philosophy and empirical work from relevant sciences.
Taught by: Miracchi
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 431 Theory of Knowledge
Selected topics in Epistemology such as: bridging the gap between mainstream and formal epistemology, the familiar tripartite definition of knowledge (knowledge as justified true belief), basic logical and probabilistic models of knowledge (Hintikka, Aumann, and Bayesian) and their multi-agent variants, logical omniscience and other problems (including the epistemic closure principle), attempts at formalizing joint and common knowledge, resource-bounded knowledge, knowledge under limited logical powers, and empirical knowledge obstructed by system complexity.
Taught by: Domotor
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 448 19th Century Philosophy
A study of selected figures in 19th century philosophy. Figures to be studied may include Hegel, Fichte, Schelling, Schopenhauer, Nietzsche and, Kierkegaard.
Taught by: Horstmann
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 450 African, Latin American and Native American Philosophy
This course is an introduction to philosophical work from Africa, Latin America, and the indigenous peoples of North America, covering topics in ethics, metaphysics, epistemology, philosophy of mind, aesthetics, social philosophy, and political philosophy. The course aims to give work from these traditions greater exposure and to provide a chance for students to encounter work that might spark an interest in future research. We will cover in some depth views held by Akan, Aztec, Blackfoot, Dogon, Iroquois, Lakota, Navajo, Ojibwa, and Yoruba peoples. We will also read work by a number of philosophers, including: Kwame Anthony Appiah, Kwame Gyekye, Julius Nyerere, Sor Juanna Ines de la Cruz, Simon Bolivar, Jose Marti, Jose Vasconcelos, Enrique Dussel, Gregory Cajete, Anne Waters, and many others. Throughout, we will also engage with related meta-philosophical issues that emerge with work from all three areas, allowing for interesting cross-discussion. Are these really proper subfields of philosophy? How do we make sense of the idea of African (or Latin American, or Native American) Philosophy as a field? Are there philosophically important differences between oral traditions and written traditions? How should we think of the "sage" figure in relation to philosophy? How do these traditions engage discussions of identity, autonomy, and post-colonialism? Should this work be incorporated into the mainstream philosophical canon?
Activity: Seminar
1 Course Unit

PHIL 465 Kant I
The course will concentrate on the Critique of Pure Reason and discuss in detail Kant's conception of knowledge and experience, his criticism of traditional metaphysics and the resulting project of a system of transcendental philosophy.
Taught by: Horstmann
Course not offered every year
Prerequisites: PHIL 004, one advanced Philosophy course, or permission of instructor
Activity: Seminar
1 Course Unit

PHIL 466 Kant II
This course is a study of Kant's moral and political philosophy. Texts may include Kant's Lectures on Ethics, Groundwork for the Metaphysics of Morals, Critique of Practical Reason, Religion within the Boundaries of Mere Reason, and Metaphysics of Morals.
Course not offered every year
Prerequisites: PHIL 002, PHIL 004, or permission of instructor
Activity: Seminar
1 Course Unit
PHIL 468 Hegel
A study of Hegel's philosophy, focusing primarily on his Phenomenology of Spirit, with attention to relevant passages in other works such as Hegel's Logic and Philosophy of Right. Topics may include: (1) Hegel's conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel's criticism of traditional metaphysics, (5) his notion of a 'concept' (Begriff), his theory of the Idea. The seminar will focus primarily on some of Hegel's early Jena writings, his Phenomenology of Spirit, on passages from different versions of Hegel's Logic and (maybe) on aspects of his Philosophy of Right. Topics that are dealt with include: (1) Hegel's conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel's criticism of traditional metaphysics, (5) his notion of a 'concept' (Begriff), his theory of the Idea. Other topics might become of interest as well.
Taught by: Horstmann
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 472 Survey of Ethical Theory
This course is an investigation of the main questions and problems in metaethics since the turn of the 20th century. We will investigate questions about the metaphysics of morality, the philosophy of language of moral talk, the philosophy of mind of moral thought, the epistemology of morality, and the objectivity of morality.
Taught by: Lord
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 479 Modern Political Philosophy
A survey of several works in modern political philosophy, including Thomas Hobbes's, Leviathan; John Locke's, Second Treatise on Government and Letter Concerning Toleration; David Hume's 'Of the Original Contract' and 'On Justice'; John Stuart Mill's Utilitarianism, On Liberty, and The Subjection of Women; excerpts from Karl Marx's Capital and other writings; and John Rawls's A Theory of Justice.
Taught by: Freeman
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 488 The Idea of Nationalism
Nationalism has been the most important geo-political phenomenon of the past two hundred years. This seminar course will explore the ideology of nationalism, what it means, its philosophical foundations, underling assumptions about the nature of human identity, moral implications, and political consequences. What is a nation? Does every identifiable ethnic or national group have a valid claim to a nation-state of its own? How are claims to national self-determination justified? How do nations differ from states, peoples, groups, communities, and citzenries? How does nationalism relate to notions of "chosenness" or ethnic and cultural superiority? Why do nationalist movements seem to so often engender political extremism and violent ethno-political conflicts? Is national self-determination compatible with our commitments to individualism, rationality, and universal human rights?
Taught by: Steinberg
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 489 Ethnicity, Identity and Nationhood
This MLA seminar will deepen our understanding of the role that political and cultural ideologies -- such as liberalism, conservatism, nationalism, totalitarianism, fundamentalism, etc. -- play in contemporary public discourse and the psychology of ideological thinking that makes political conflicts so difficult to resolve. Drawing on a series of case studies in contemporary political, social and cultural conflict such as recent political campaigns and nationalist movements around the globe, we will identify and examine the ideologies driving such conflicts, and from these we will draw out the common philosophical characteristics and psychological features of ideological thinking. We will begin by considering a series of case studies in contemporary political, social and cultural conflict, drawn from contemporary events such as the 2012 political campaigns, the 2011 debt ceiling debate in Congress, nationalist movements around the globe, etc. We will identify and examine the ideologies driving such conflicts, and from these we will draw out the common philosophical characteristics and psychological features of ideological thinking. Throughout, we will seek to understand the deep attraction of ideological commitments and why they tend to push public discourse and behavior to extremes and even violence. Finally, we will consider efforts to reduce or resolve ideological conflicts through strategies of political compromise, dialogue, toleration, and democratic deliberation.
Course not offered every year
Activity: Seminar
1 Course Unit

PHIL 505 Formal Logic I
This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantification logic, and logical decision problems.
Taught by: Domotor, Weinstein
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 506 Formal Logic II
An introduction to first-order logic including the completeness, compactness, and Lowenheim-Skolem theorems, and Godel's incompleteness theorems. UNDERGRADUATES NEED PERMISSION
Taught by: Weinstein
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Undergraduates Need Permission.

PHIL 511 Aristotle's Ethics
A study of Aristotle's ethical works, with emphasis on the NICOMACHEAN ETHICS. Topics may include moral psychology, practical reasoning, the nature of good, emotion and reason, responsibility, and friendship.
Taught by: Meyer
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission
PHIL 521 Philosophy of Biology
This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin's formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory. Richard Dawkins' and Richard Lewontin's. The remainder of the course will deal with a number of foundational issues including adaption, the units of selection, the evolution of altruism, and the possibility of grounding ethics in evolutionary theory. UNDERGRADUATES NEED PERMISSION
Taught by: Weisberg
One-term course offered either term
Also Offered As: PPE 225
Activity: Lecture
1 Course Unit
Notes: Undergraduates need permission

PHIL 525 Topics in the Philosophy of Science
For the last four centuries, scientific research has provided our most reliable understanding of the world. Although the scientific revolution started modestly with attempts to understand stellar movement, we now know the age and constitution of the universe, the basis of heredity, and we can make and break chemical bonds at will. By all appearances, science seems to have made substantial progress from the scientific revolution to the global scientific enterprise of the 21st century. This course is about how science has generated this knowledge, and whether it has been as progressive and reliable as it seems. We will consider methodological issues such as the sources of scientific knowledge, objectivity, the growing importance of computation in the natural sciences, and the nature of modeling. We will examine products of scientific research: explanations, models, theories, and laws of nature. And we will discuss questions about science and values, including whether non-scientific values can and should enter scientific research, the relationship between science and religion, and the role of the public in guiding the scientific enterprise.
Taught by: Weisberg, Bicchieri
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 526 Psychology of Philosophy
More than a century after Sigmund Freud transformed -- for better or worse -- our understanding of what it means to be human, Freudian psychoanalysis still exerts a profound influence in our culture. This seminar course is an exploration of the philosophical issues raised by Freudian psychoanalysis as a theory of mind and culture. After a close reading of Freud's theoretical writings on the nature of the mind and human behavior, we will explore why Freud's theories -- despite more than a century of criticism remain highly influential as a framework for the interpretation of art, literature, religion, society, politics, and history. Readings from Freud's meta-psychological, cultural, and social writings, Paul Ricoeur's Freud and Philosophy, and other contemporary authors in philosophy, psychoanalysis, and other fields.
Taught by: Steinberg
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 529 Philosophy of Mind
This course explores core issues in philosophy of mind, such as: the nature of mental states and events, the mind-body problem, and the relationship between philosophy of mind and related disciplines, such as cognitive science. We approach these issues through more specific topics, depending on the interests of the instructor. Topics may include: identity theories, grounding physicalism, functionalism, computationalism, disjunctivism and knowledge-first theories, internalism and externalism, consciousness, self-knowledge, perception, emotion, action, representationalism, mental causation, and intersections with psychology, artificial intelligence, linguistics, and neuroscience. For details in a specific year, consult with the instructor and/or department.
UNDERGRADUATES NEED PERMISSION.
Taught by: Hatfield, Miracchi
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 531 Social Norms
This is a graduate research seminar covering interdisciplinary research in psychology, philosophy, sociology and behavioral economics related to social norms. Social norms are informal institutions that regulate social life. We will devote particular attention to the following questions: 1. What is a good, operational definition of social norms? 2. Is there a difference between social and moral norms? 3. How can we measure whether a norm exists, and the conditions under which individuals are likely to comply with it? 4. Are behavioral experiments a good tool to answer questions 3? 5. How do norms emerge? 6. How are norms abandoned? 7. What is the role of trendsetters in norm dynamics?
Taught by: Bicchieri
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 532 Topics in Epistemology
This seminar will cover topics of interest to contemporary epistemologists. Possible topics may include skepticism, accounts of knowledge and justification, virtue epistemology, formal epistemology, social epistemology, feminist epistemology, meta-epistemology and epistemic normativity.
Taught by: Lord, Errol
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 536 Stoicism
A study of some major texts in Ancient Greek Stoicism, the school founded by Zeno of Citium in the post-Aristotelian period. Topics may include: ethics, natural philosophy, epistemology, and metaphysics. Authors may include: Cicero, Seneca, Epictetus, and Marcus Aurelius. All works will be read in English translation. Against the Ethicists will be the other major texts studied in this course. All readings will be in English translation. No knowledge of Greek or Latin is required.
Taught by: S. Meyer
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission
PHIL 540 Topics in Philosophy of Language
This course explores core issues in philosophy of language, such as: meaning, reference, truth, communication, speech acts, the norms governing language use, and the relationship between philosophy of language and related disciplines, such as linguistics. We approach these issues through more specific topics, depending on the interests of the instructor. Topics may include: the nature of propositions, truth, context-sensitive expressions, the relationship between logical structure and linguistic structure, the relationship between mental and linguistic meaning, the mechanisms of communication, the semantic/pragmatic distinction, the norms of assertion, relativism, expressivism, injustice in linguistic communication. For details in a specific year, consult with the instructor and Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 547 Leibniz/Locke
This course focuses on topics in philosophy of the 17-18th centuries. Topics may include natural philosophy in the early modern period, the relation of metaphysics to the 'sciences' (including what is meant by "metaphysics"), and what falls under the scope of the various sciences), and the special role played by the life sciences. An examination of the development of a few topics in natural philosophy in the early modern period, such as: method (the evolution of hypotheses and their reception, the relation of theory to empirical work, and the importance of different kinds of empirical work, e.e. observation, experiment, use of instruments); the relation of metaphysics to the 'sciences' (including what is meant by "metaphysics", and what falls under the scope of the various sciences); and the special role played by the life sciences.
Taught by: Detlefsen
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission.

PHIL 550 Topics in Philosophy of Education
In this course, we will examine problems in contemporary philosophy of education, including: how much control over a child’s education ought to be allocated to parents and how much to the state; what role, if any, ought religion to play in education; how do race and gender impact individuals’ educational experiences and how should such issues should be addressed in the classroom; what sort of (if any) civic education ought to be taught in schools (especially in wartime such as in the post 9-11 USA); and how should schools be funded? We will deal with a number of case studies, mostly recent, but some crucial historical cases as well. Our readings will be primarily philosophical texts, supplemented with those from other fields, such as psychology, history and sociology, in order to provide empirical context to the theoretical problems facing education today.
Taught by: Detlefsen
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission.

PHIL 551 Topics in Early Modern Philosophy
125 A seminar in philosophy of the early modern period (roughly 1600-1800), covering specific figures and/or topics. Examples of figures studied include (but are not limited to) Descartes Cavendish, Astell, Locke, Hume, Du Chatelet, or Kant. Examples of topics studied include (but again are not limited to) substance, causation, freedom, natural philosophy, education, the human being, the private and the public, or political authority.
Taught by: Detlefsen, Chignell
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 554 Contemporary Continental Philosophy
This MLA seminar is an introduction to 20th-century continental European philosophy, focusing on the origins and development of phenomenology, existentialism, hermeneutics, and deconstruction. No previous background in philosophy is required. We will begin with an introduction to the phenomenology of Edmund Husserl and the contemporary debate over its proper interpretation. Then we will examine three existentialist critics of Husserl, whose philosophies have influenced much of recent continental thought: Martin Heidegger, Jean-Paul Sartre, and Maurice Merleau-Ponty. Finally, we will examine the important influence of phenomenology and existentialism on contemporary trends in continental philosophy as exhibited in works by Paul Ricoeur, Hans Georg Gadamer, Jacques Derrida, Hannah Arendt, and Emmanuel Levinas.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 558 Truth & Concealment
This course is an exploration of traditional philosophical questions concerning objectivity in science. We will start by addressing central questions in feminist philosophy of science, such as what is objective reality and what is objective knowledge? Next, we will explore whether science discovers objective real entities or relations, which is a central topic in the scientific realism debate. We will also explore whether scientific knowledge is objective. We will read mostly 20th and 21st century philosophers of science, such as Goodman, Kuhn, Psillos, and Longino. We will also apply what we learn to at least one case study.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission.
PHIL 572 Contemporary Ethics
A venerable idea throughout the history of ethics is that rationality is a fundamental or foundational part of the metaphysics of the normative. The course will be an investigation of several different strains of this rationalist idea. We’ll discuss four rationalist views of the nature of normative reasons (Kantian, Humean, Aristotelian, and new-fangled constructivism). Our aim will be to investigate the plausibility of these rationalist views against the backdrop of a more recent hypothesis about the metaphysics of the normative—viz., the claim that normative reasons themselves are the fundamental constituents of the normative.
Taught by: Freeman, Meyer
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 576 Rationality, Morality and Law
This class will be dedicated to investigating topics related to rationality in its many forms. Potential areas of study are metaethics, epistemology, moral psychology, and the philosophies of mind, language and action.
UNDERGRADUATES NEED PERMISSION.
Taught by: Freeman, Lord
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates need permission.

PHIL 577 Topics in Philosophy of Law
This seminar will examine leading academic theories of constitutional interpretation, starting with classic texts by (for illustration) Thayer, Wechsler, Ely, Bobbitt, Dworkin, and Scalia, and emphasizing current debates within originalism and between originalists and their critics. While the focus will be on American constitutional interpretation, we will also see how that literature is currently running up against, and possibly contributing to, more "philosophical" or "jurisprudential" accounts of the contents of law. Consistent with the nature of the material, the reading load is likely to be somewhat heavier and more demanding than in the average seminar. Students will be expected to read the assigned material carefully and to participate actively in class discussions; they will have the option of submitting either a single research paper or several shorter papers.
Taught by: Perry, Berman, Finkelstein
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 578 Topics in Political Philosophy
This is a topics-based graduate philosophy seminar in modern political philosophy. Examples of topics we can examine in this course include distributive justice, liberty, equality, and global justice. Course readings will be drawn from a combination of seminal and more recent works on the selected topics.
Taught by: Freeman, Tan
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Undergraduates Need Permission

PHIL 579 Topics in Hellenistic Philosophy
This seminar will consider the main strands of Hellenistic philosophy, focusing on the main philosophical systems. The readings will include works of Plato, Aristotle, Epicurus, and Sextus Empiricus. The seminar will be an opportunity to explore the diversity of Hellenistic thought and to develop skills in critical thinking and argumentation.
Taught by: Singer, Daniel
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Graduate Students Only
PHIL 700 Dissertation Workshop
Registration required for all third-year doctoral students. Third-year
students and beyond attend and present their dissertation work or their
preliminary exam prospectus. From time to time, topics pertaining to
professional development and dissertation writing will be discussed.
Taught by: Weinstein, Scott
Two terms. Student must enter first term.
Activity: Seminar
1 Course Unit

PHIL 990 Masters Thesis
Taught by: Staff.
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

PHIL 995 Dissertation
Ph.D. candidates, who have completed all course requirements and have
an approved dissertation proposal, work on their dissertation under the
guidance of their dissertation supervisor and other members of their
dissertation committee.
One-term course offered either term
Activity: Dissertation
1 Course Unit

PHIL 998 Teaching Practicum (Independent Study)
Supervised teaching experience. Four semesters are required of all
Doctoral students in philosophy.
One-term course offered either term
Activity: Independent Study
1 Course Unit

PHIL 999 Independent Study
Directed readings in consultation with individual faculty members.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: May be repeated for credit
PHILOSOPHY, POLITICS, ECONOMICS (PPE)

PPE 008 The Social Contract
This is a critical survey of the history of western modern political philosophy, beginning from the Early Modern period and concluding with the 19th or 20th Century. Our study typically begins with Hobbes and ends with Mill or Rawls. The organizing theme of our investigation will be the idea of the Social Contract. We will examine different contract theories as well as criticisms and proposed alternatives to the contract idea, such as utilitarianism. Besides the above, examples of authors we will read are Locke, Rousseau, Hume, Mill and Marx.
For BA Students: Society Sector
Taught by: Freeman, Tan
Course usually offered in spring term
Activity: Lecture
1 Course Unit

PPE 036 Law and Economics
The relationship of economic principles to law and the use of economic analysis to study legal problems. Topics will include: property rights and intellectual property; analysis of antitrust and economic analysis of legal decision making.
Course usually offered in fall term
Prerequisite: ECON 001 or ECON 010
Activity: Lecture
1 Course Unit
Notes: Credit cannot be received for both ECON 036 and 234.

PPE 072 Biomedical Ethics
This course is an introduction to bioethics, focusing on ethical questions arising at the beginning and end of life. Topics will include procreative responsibilities, the question of wrongful life, and prenatal moral status as well as questions of justice related to markets for sperm, eggs and gestation. We will also attend to dilemmas at the end of life, including the authority of advance directives, euthanasia and the allocation of life-saving therapies.
For BA Students: Society Sector
Taught by: Gibbons
Course not offered every year
Activity: Lecture
1 Course Unit

PPE 073 Topics in Ethics
This course examines some of the central theoretical and applied questions of ethics. For example, what is the good life? By what measure or principles do we evaluate the rightness and wrongness of actions? How does ethical reasoning help us understand and address real world problems such as world hunger, social injustice, sex and race discrimination, allocation of scare resources and the like. The course can be organized around an applied topic or practical issue such as global ethics, just war, biomedical ethics or environmental ethics.
Taught by: Gibbons, M. Meyer
Course not offered every year
Activity: Seminar
1 Course Unit

PPE 153 Judgment and Decisions
Thinking, judgment, and personal and societal decision making, with emphasis on fallacies and biases.
One-term course offered either term
Prerequisite: One semester of statistics OR microeconomics
Activity: Lecture
1 Course Unit
Notes: An LPS section may be given

PPE 225 Philosophy of Biology
This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin's formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory: Richard Dawkins' and Richard Lewontin's. The remainder of the course will deal with a number of foundational issues including adaptation, the units of selection, the evolution of altruism, and the possibility of grounding ethics in evolutionary theory.
For BA Students: Natural Science and Math Sector
Taught by: Domotor, Spencer, Weisberg
Course not offered every year
Activity: Lecture
0 Course Units
Notes: Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs

PPE 233 Philosophy of Economics
In this course, general philosophy of science issues are applied to economics, and some problems specific to economics are tackled. While analytical questions like "What is economics?" or "What is an economic explanation" must be pursued, the ultimate goal is practical: What is good economics? How can economists contribute to a better understanding of society, and a better society? How can we make economics better? Topics to be discussed include the following: specific object and method of economics as a social science; its relation with other disciplines (physics, psychology and evolutionary theory); values in economics (welfare, freedom, equality and neutrality); the role of understanding and possible limits of a quantitative approach to human behavior (purposefulness, freedom, creativity, innovation); prediction, unpredictability and the pretension of prediction; causation in econometrics and in economic theory (equilibrium); selfishness and utility maximization (cognitive and behaviorist interpretations); economic models and unrealistic assumptions (realism and instrumentalism); empirical basis of economics (observation and experiment); microeconomics and macroeconomics (reductionism and autonomy); pluralism in economics (mainstream economics and heterodox schools). Course usually offered in fall term
Activity: Lecture
1 Course Unit

PPE 244 Introduction to Philosophy of Mind
This course will survey several central topics in philosophy of mind, as well as investigating how philosophy of the mind interacts with scientific study of the mind. Among the questions we'll be asking are: What is it to have a mind? What is the relationship between the mind and the brain? Can there be a science of the mind? What can it tell us? What can philosophy contribute to a science of the mind? What is consciousness? What is it to think, to perceive, to act? How are perception, thought, and action related to one another?
Taught by: Domotor, Miracchi
Course not offered every year
Activity: Lecture
1 Course Unit
PPE 271 Global Justice
This course is an introduction to some of the central problems in global justice. Samples of these topics include: What are our duties to respond to world poverty and what is the basis of this duty? Is global inequality in itself a matter of justice? How universal are human rights? Should human rights defer to cultural claims at all? Is there a right to intervene in another country to protect human rights there? Indeed can intervention to protect human rights ever be a duty? Who is responsible for the environment? We will read some influential contemporary essays by philosophers on these topics with the goal of using the ideas in these papers as a springboard for our own further discussion and analysis.
Taught by: Tan
Course not offered every year
Activity: Seminar
1 Course Unit

PPE 272 Ethics and the Professions
Since Louise Brown, the first so-called “test tube baby” was born in 1978, reproductive technologies have generated many new ways to “make” babies. These technologies mean that a number of difficult ethical questions are inescapable, not only for individuals who otherwise couldn’t have children (due to biological and/or social constraints) but for the larger society. This course will consider the prenatal moral status and identity of the fetus. It explores prenatal (and pre-implantation) genetic interventions and their possible effects on the autonomy of the child later in life as well as the possible eugenic implications of such interventions. It examines the potential conflict between a mother’s autonomy and an infant’s prenatal harm in the larger context created by new kinds of parents and new forms of kinship. Finally, it investigates the market for sperm, eggs, embryos and gestation and reflects on the questions of justice they imply.
Taught by: Tan
Course not offered every year
Prerequisites: At Least one of PHIL 002, 008, 009 or equivalent.
Activity: Seminar
1 Course Unit

PPE 275 Introduction to Political Psychology
This course will explore psychological approaches to understanding political beliefs, attitudes, and actions at the levels of both individual citizens and national leaders. It will also explore the possibility that psychological science itself is not immune to the political debates swirling around it. Specific topics will include: the workings of belief systems (and their power to shape what we “see”), cognitive biases (and their power to cause miscalculations), sacred values and their role in stabilizing belief systems and social interaction, personality and ideology (the linkages between the personal and the political), and clashing conceptions of morality and distributive and corrective justice (striking variations among people in what they consider to be fair). We shall also explore some topics that have sparked controversy in the psychological research literature and that tend to polarize opinion along political lines, including work on intelligence and unconscious bias.
Taught by: Tetlock
One-term course offered either term
Prerequisite: PSYC 001 or COGS 001
Activity: Lecture
1 Course Unit

Notes: NOTE: Students who are more interested in business-related issues may want Wharton 276x which is a modified version of this course specifically for Wharton undergraduates.

PPE 277 Justice, Law and Morality
The course will focus on the philosophical background to the individual rights protected by the U.S. Constitution, including 1st Amendment freedoms of religion, expression, and associaton; the 14th amendment guarantee of Due Process and the rights of privacy, abortion, assisted suicide, and marriage; the Equal Protection clause and equal political rights and the legitimacy of affirmative action; and the Takings and Contract clauses and their bearing on rights of private property and economic freedoms. In addition to Supreme Court decisions on these issues, we will read works by political philosophers and constitutional theorists, including J.S. Mill, Ronald Dworkin, Cass Sunstein, Martha Nussbaum, Katherine MacKinnon and others.
Taught by: Freeman, Allen
Course not offered every year
Activity: Lecture
1 Course Unit

PPE 311 Strategic Reasoning
This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and movies. Some interactive games will be played in class. There will be little formal theory, and the only pre-requisites are some high-school algebra and having taken Econ 1. However, general numeracy (facility interpreting and doing numerical graphs, tables, and arithmetic calculations) is very important. This course will also be accepted by the Economics department as an Econ course, to be counted toward the minor in Economics (or as an Econ elective).
Taught by: Dillenberger
Course usually offered in fall term
Prerequisites: Some high school algebra, ECON 001.
Activity: Lecture
1 Course Unit

Notes: This course may NOT be taken concurrently with or after Econ 212.

PPE 312 Public Policy Process
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to participants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government.
Taught by: Levendusky, Meredith
Course usually offered in spring term
Activity: Recitation
1 Course Unit
PPE 313 Behavioral Economics and Psychology
Our understanding of markets, governments, and societies rests on our understanding of choice behavior, and the psychological forces that govern it. This course will introduce you to the study of choice, and will examine in detail what we know about how people make choices, and how we can influence these choices. It will utilize insights from psychology and economics, and will apply these insights to domains including risky decision making, intertemporal decision making, and social decision making.
Taught by: Bhatia
Course usually offered in fall term
Prerequisites: ECON 001.
Activity: Lecture
1 Course Unit
Notes: Prerequisite: ECON 1

PPE 314 Philosophy of Social Science
This course is about the foundations of contemporary social science. It focuses on the nature of social systems, the similarities and differences between social and natural sciences, the construction, analysis, and confirmation of social theories, and the nature of social explanations. Specific topics may include: What are social norms and conventions? What does it mean to have one gender rather than another, or one sexual orientation rather than another? Should social systems be studied quantitatively or qualitatively?
Taught by: Bicchieri, Weisberg
Course usually offered in spring term
Prerequisites: ECON 001, ECON 002, and PHIL 008.
Activity: Lecture
1 Course Unit

PPE 401 Independent Study
Student arranges with a faculty member to pursue a research project on a suitable topic. For more information about research and setting up independent studies, visit: https://ppe.sas.upenn.edu/study/curriculum/independent-studies
One-term course offered either term
Activity: Independent Study
1 Course Unit

PPE 402 Research in Philosophy, Politics & Economics
Led by fellows in the Philosophy, Politics and Economics program, this course teaches students how to conduct research in PPE with an emphasis on creating a well-formed research question, determining what kinds of data or scholarly research bears on that question, and how to carry out an interdisciplinary, research-driven project on that question.
Taught by: Fellows in PPE
One-term course offered either term
Activity: Seminar
1 Course Unit

PPE 460 Experiments in Behavioral Ethics
In reality, our understanding of different mechanisms and (economic) relationships is hampered by the lack of data. More often than not, either the observation itself is difficult or the data is not reliable. Over the last decades, economic experiments have become a vital part of the scientific discourse, facilitating our understanding of the world we live in (much like in Biology, Chemistry, Physics or the like). Economic experiments allow exploring economic behavior under controlled conditions by generating observations under different experimental designs and controlled conditions. Pioneering this field of research, Daniel Kahneman and Vernon Smith were awarded the Nobel memorial prize in recognition of their work on behavioral and experimental economics. In this course, we provide you with the methodology of how to develop a research idea and a proper experimental design that allows to explore this idea. Essentially, you will learn how to think about ideas, generate predictions, and how to use economic experiments to test them.
Taught by: Bicchieri, Dimant
Activity: Seminar
1 Course Unit

PPE 470 Capstone: Social Policy
Social policy is the study of human wellbeing and is concerned with the effects in areas of health care, criminal justice, inequality, and education, among others. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Dimant
Course not offered every year
Activity: Seminar
1 Course Unit

PPE 471 Capstone: Political Economy
Political Economy studies the relationships between individuals and society and between markets and the state. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Sontuoso
Course not offered every year
Activity: Seminar
1 Course Unit

PPE 472 Capstone: Networks
Network Theory studies graphs as a representation of the structure of relationships between social entities. It can be used to examine how the behavior of individuals in a socio-economic system affects - and is affected by - the structure of connections of the system. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Sontuoso
Course not offered every year
Activity: Seminar
1 Course Unit
PPE 473 Capstone: Modeling
Modeling provides a way to identify and analyze the salient features of complex problems or dynamic social situations. Using models can further provide a way to see what strategies may be rational over time. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Funcke
Course not offered every year
Activity: Seminar
1 Course Unit

PPE 474 Capstone: Judgment and Decision Making
The interdisciplinary study of individual's and groups' judgments and decisions, including normative, descriptive, and prescriptive theories. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Hart
Course not offered every year
Activity: Seminar
1 Course Unit

PPE 476 Philosophy, Politics and Economics
This is an integrative senior seminar (open to others by departmental permission). The following website will give descriptions of the specific capstone courses that will be offered each semester: http://www.sas.upenn.edu/ppe/Courses/general
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission).

PPE 477 Capstone: Social Psychology
Social psychology explores how an individual's judgments and behaviors can be influenced or determined by others and their social context.
Taught by: Royzman
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission).

PPE 481 Capstone: Political Science
A PPE capstone offered by faculty in Political Science. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Berger
Course not offered every year
Activity: Seminar
1 Course Unit

PPE 482 Capstone: Psychology
A PPE Capstone offered by faculty in Psychology. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Bhatia
Course not offered every year
Activity: Seminar
1 Course Unit

PPE 483 Capstone: Economics
A PPE Capstone seminar offered by faculty in Economics. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Dillenberger
Course not offered every year
Activity: Seminar
1 Course Unit

PPE 484 Capstone: Philosophy
A PPE Capstone seminar offered by faculty in Philosophy. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Bicchieri
Course not offered every year
Activity: Seminar
1 Course Unit

PPE 498 Directed Honors Research
Student arranges with a faculty member to do research and write a thesis on a suitable topic. For more information on honors visit: https://ppe.sas.upenn.edu/study/curriculum/honors-theses
One-term course offered either term
Activity: Independent Study
1 Course Unit

PPE 499 Advanced Research
This course may be taken by a PPE student for advanced research. Enrollment by permit only.
Course not offered every year
Activity: Independent Study
1 Course Unit
PHYSICS (PHYS)

PHYS 008 Physics for Architects I
An introduction to the classical laws of mechanics, including static equilibrium, elasticity, and oscillations, with emphasis on topics most relevant to students in architecture. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 091 or 093 who complete PHYS008 will thereby surrender the AP or Transfer Credit.
For BA Students: Physical World Sector
Course offered fall; odd-numbered years
Prerequisites: Entrance credit in algebra and trigonometry.
Activity: Lecture
1 Course Unit
Notes: Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 091 or 093 who complete PHYS 008 will thereby surrender the AP or Transfer Credit.

PHYS 009 Physics for Architects II
Briefly reviews Newton’s laws, then introduces waves, sound, light, fluids, heat, electricity, magnetism, and circuits, with emphasis on topics most relevant to students in architecture. Illustrates physics principles using examples drawn from architecture. Students with a strong high-school physics background may take PHYS 008 and PHYS 009 in either order. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 092 or 094 who complete PHYS008 will surrender the AP or Transfer Credit.
For BA Students: Physical World Sector
Course offered fall; even-numbered years
Activity: Lecture
1 Course Unit
Notes: Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 092 or 094 who complete PHYS 008 will thereby surrender the AP or Transfer Credit.

PHYS 016 Energy, Oil, and Global Warming
The developed world’s dependence on fossil fuels for energy production has extremely undesirable economic, environmental, and political consequences, and is likely to be mankind’s greatest challenge in the 21st century. We describe the physical principles of energy, its production and consumption, and environmental consequences, including the greenhouse effect. We will examine a number of alternative modes of energy generation - fossil fuels, biomass, wind, solar, hydro, and nuclear - and study the physical and technological aspects of each, and their societal, environmental and economic impacts over the construction and operational lifetimes. No previous study of physics is assumed.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Prerequisites: Algebra and Trigonometry
Activity: Lecture
1 Course Unit
Notes: May be counted as Science Studies for students in Class of 2009 and prior. Target audience: Non-science majors (although science/engineering students are welcome).

PHYS 050 Physics Laboratory I
Experiments in classical mechanics.
One-term course offered either term
Prerequisites: AP score of 5 on the Physics B or Physics C - Mechanics exam, or transfer credit for PHYS 91 or PHYS 93. Only for students with above prerequisites.
Activity: Laboratory
0.5 Course Units
Notes: Course carries .5 course unit and student receives grade. Permit required. Only for students with above prerequisites.

PHYS 051 Physics Laboratory II
Experiments in electromagnetism and optics.
One-term course offered either term
Prerequisites: AP score of 5 on the Physics B or Physics C - Electricity and Magnetism exam, or transfer credit for PHYS 92 or PHYS 94.
PHYS 050. Only for students with above prerequisites.
Activity: Laboratory
0.5 Course Units
Notes: Course carries .5 course unit and student receives grade. Permit required. Only for students with above prerequisites.

PHYS 080 Physics and Consciousness
We will explore the link between physics, physical models and quantitative thinking to areas of consciousness and brain research. This will include examples and phenomena in classical and quantum physics, the nature of physical measurements, observation, the role of the observer, the role of the human mind in interpreting reality and consciousness. Brain imaging studies enabled by physical phenomena may be used to support certain theories of how we process information. The course will be based on cutting edge physical phenomena and as quantitative as possible. We will explore related areas of psychology including the area of emotions and try to explore new links between them and the limits of quantitative approaches in these topics. We will explore decision making and links to quantum theories. For example, the making of a decision has been hypothesized to collapse "a thought wave into a particle". Much of human thinking is probabilistic in nature and we will link this to physics. We will explore topics of quantum entanglement, quantum computing, information, and free will. We will explore other work showing that quantum models were able to predict effects shown in national surveys. We will explore how the brain works, how this is linked to physics, physicists’ ways of thinking, as well as psychology (and develop useful methods for rational living).
For BA Students: Natural Science and Math Sector
Activity: Lecture
1 Course Unit
PHYS 101 General Physics: Mechanics, Heat and Sound
An introduction to the classical laws of motion, including kinematics, forces in nature, Newton's laws of motion, conservation of energy and momentum, fluid statics and dynamics, oscillations, and waves. Suggested for students in a pre-health program. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 101 will thereby surrender the AP or Transfer Credit. For BA Students: Physical World Sector
Course offered summer, fall and spring terms
Prerequisites: Entrance credit in algebra and trigonometry.
Corequisite: PHYS 101 LAB
Activity: Lecture
1.5 Course Unit
Notes: Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 101 will thereby surrender the AP or Transfer Credit.

PHYS 102 General Physics: Electromagnetism, Optics, and Modern Physics
A continuation of PHYS 101 emphasizing an introduction to classical electricity and magnetism, light and optics, special relativity, the quantum theory of matter, and nuclear physics. Suggested for students in a pre-health program. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 102 will thereby surrender the AP or Transfer Credit. For BA Students: Physical World Sector
Course offered summer, fall and spring terms
Prerequisites: PHYS 101, 150, or 170, entrance credit in algebra and trigonometry.
Corequisite: PHYS 102 LAB
Activity: Lecture
1 Course Unit
Notes: Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 102 will thereby surrender the AP or Transfer Credit.

PHYS 137 Community Physics Initiative
This is an Academically Based Community Service Course (ABCS). It will be aligned to the Philadelphia School District curriculum in introductory physics at University City High School (UCHS). The UCHS curriculum roughly parallels the contents of first semester introductory physics (non-calculus) at Penn. Course usually offered in fall term
Activity: Lecture
1 Course Unit

PHYS 140 Principles of Physics I (without laboratory)
The topics of this calculus-based course are: Classical laws of motions; interactions between particles; conservation laws and symmetry principles; particle and rigid body motion; gravitation, harmonic motion, and applications of mechanics to real-world problems. Engineering students only.
One-term course offered either term
Corequisite: MATH 104
Activity: Lecture
1 Course Unit
Notes: For Engineering students whose course of study does not require a physics laboratory course. Those who are enrolled in a dual degree program with the College must register for the lab-based version of this course, PHYS 150.

PHYS 141 Principles of Physics II (without laboratory)
The topics of this calculus-based course are electric and magnetic fields; Coulomb's, Gauss's, Ampere's, and Faraday's laws; DC and AC circuits; Maxwell's equations and electromagnetic radiation. Engineering students only.
Course offered summer, fall and spring terms
Prerequisite: PHYS 140
Corequisite: MATH 114
Activity: Lecture
1 Course Unit
Notes: For Engineering students whose course of study does not require a physics laboratory course. Those who are enrolled in a dual degree program with the College must register for the lab-based version of this course, PHYS 151.

PHYS 150 Principles of Physics I: Mechanics and Wave Motion
This calculus-based course is recommended for science majors and engineering students. Classical laws of motion; interactions between particles; conservation laws and symmetry principles; particle and rigid body motion; gravitation, harmonic motion, and applications of mechanics to real-world problems. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 150 will thereby surrender the AP or Transfer Credit. For BA Students: Physical World Sector
One-term course offered either term
Prerequisites: Students in PHYS 150 should already have taken MATH 104 or the equivalent, or be taking it simultaneously with PHYS 150
Corequisite: PHYS 150 LAB
Activity: Lecture
1.5 Course Unit
Notes: Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 150 will thereby surrender the AP or Transfer Credit.
PHYS 151 Principles of Physics II: Electromagnetism and Radiation
The topics of this calculus-based course are electric and magnetic fields; Coulomb's, Gauss's, Ampere's, and Faraday's laws; DC and AC circuits; Maxwell’s equations and electromagnetic radiation. Credit is awarded for only one of the following courses. PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 151 will thereby surrender the AP or Transfer Credit. For BA Students: Physical World Sector
Course offered summer, fall and spring terms
Prerequisites: PHYS 150; Students in PHYS 151 should already have taken MATH 114 or the equivalent, or be taking it simultaneously with PHYS 151
Corequisite: PHYS 151 LAB
Activity: Lecture
1.5 Course Unit
Notes: Credit is awarded for only one of the following courses. PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 151 will thereby surrender the AP or Transfer Credit.

PHYS 170 Honors Physics I: Mechanics and Wave Motion
This course parallels and extends the content of PHYS 150, at a significantly higher mathematical level. Recommended for well-prepared students in engineering and the physical sciences, and particularly for those planning to major in physics. Classical laws of motion: interaction between particles; conservation laws and symmetry principles; rigid body motion; non-inertial reference frames; oscillations. Credit is awarded for only one of the following courses: PHYS 008 PHYS 101, 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 170 will thereby surrender the AP or Transfer Credit. For BA Students: Physical World Sector
Course usually offered in fall term
Prerequisite: MATH 104 or permission of instructor
Corequisites: MATH 114 or MATH 116, PHYS 170 lab
Activity: Seminar
1.5 Course Unit
Notes: Benjamin Franklin Seminar. Credit is awarded for only one of the following courses: PHYS 008 PHYS 101, 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 170 will thereby surrender the AP or Transfer Credit.

PHYS 171 Honors Physics II: Electromagnetism and Radiation
This course parallels and extends the content of PHYS 151, at a somewhat higher mathematical level. Recommended for well-prepared students in engineering and the physical sciences, and particularly for those planning to major in physics. Electric and magnetic fields; Coulomb's, Ampere's, and Faraday's laws; special relativity; Maxwell's equations, electromagnetic radiation. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 171 will thereby surrender the AP or Transfer Credit. For BA Students: Physical World Sector
Course usually offered in spring term
Prerequisites: Math 114 or Math 116 and Phys 150 or Phys 170, or permission of the instructor
Corequisites: MATH 240, MATH 260 or permission of instructor
Activity: Seminar
1.5 Course Unit
Notes: Benjamin Franklin Seminar. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 171 will thereby surrender the AP or Transfer Credit.

PHYS 230 Principles of Physics III: Thermal Physics and Waves
Laws of thermodynamics, gas laws and heat engines. Waves on a string, electromagnetic waves including optical phenomena such as refraction, interference and diffraction. Introduction to special relativity including time dilation, length contraction, simultaneity. Lorentz transforms and relativistic energy and momentum. Students are encouraged but not required to take Math 240 concurrently or in advance.
Course usually offered in fall term
Prerequisites: PHYS 150/151 or PHYS 170/171 and MATH 104, MATH 114 or 116
Corequisite: MATH 240
Activity: Lecture
1 Course Unit

PHYS 240 Principles of Physics IV: Modern Physics (without laboratory)
An introduction to the experimental basis for and principles of quantum mechanics, properties of electrons, protons, neutrons, and the elements of atomic structure and nuclear structure. Electromagnetic radiation and photons; interaction of photons with electrons, atoms, and nuclei. Students are encouraged but not required to take Math 241 concurrently or in advance.
Course usually offered in spring term
Prerequisite: PHYS 150/151 or PHYS 170/171
Corequisite: MATH 240 (Note: MATH 240 will become a prerequisite in Spring 2019)
Activity: Lecture
1 Course Unit

PHYS 250 Principles of Physics IV: Modern Physics
An introduction to the experimental basis for and principles of quantum mechanics, properties of electrons, protons, neutrons, and the elements of atomic structure and nuclear structure. Electromagnetic radiation and photons; interaction of photons with electrons, atoms, and nuclei. Students are encouraged but not required to take Math 241 concurrently or in advance.
Course usually offered in spring term
Prerequisite: PHYS 150/151 or PHYS 170/171
Corequisites: MATH 240. (Note: MATH 240 will become a prerequisite in Spring 2019)
Activity: Lecture
1 Course Unit

PHYS 280 Physical Models of Biological Systems
Classic case studies of successful reductionistic models of complex phenomena, emphasizing the key steps of making estimates, using them to figure out which physical variables and phenomena will be most relevant to a given system, finding analogies to purely physical systems whose behavior is already known, and embodying those in a mathematical model, which is often implemented in computer code. Topics may include bacterial genetics, genetic switches and oscillators; systems that sense or utilize light; superresolution and other newmicroscopy methods; and vision and other modes of sensory transduction.
Course usually offered in fall term
Prerequisites: PHYS 101 (or higher), MATH 104-MATH 114 or MATH 104-MATH 115 or MATH 116. Recommended: previous or concurrent PHYS 102; basic background in chemistry and biology.
Activity: Lecture
1 Course Unit
PHYS 299 Independent Study
Special projects and independent study under the direction of faculty member.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Repetitive credit

PHYS 314 Ocean-Atmosphere Dynamics and Implications for Future Climate Change
This course covers the fundamentals of atmosphere and ocean dynamics, and aims to put these in the context of climate change in the 21st century. Large-scale atmospheric and oceanic circulation, the global energy balance, and the global energy balance, and the global hydrological cycle. We will introduce concepts of fluid dynamics and we will apply these to the vertical and horizontal motions in the atmosphere and ocean. Concepts covered include: hydrostatic law, buoyancy and convection, basic equations of fluid motions, Hadley and Ferrel cells in the atmosphere, thermohaline circulation, Sverdrup ocean flow, modes of climate variability (El-Nino, North Atlantic Oscillation, Southern Annular Mode). The course will incorporate student led discussions based on readings of the 2007 Intergovernmental Panel on Climate Change (IPCC) report and recent literature on climate change. Aimed at undergraduate or graduate students who have no prior knowledge of meteorology or oceanography or training in fluid mechanics. Previous background in calculus and/or introductory physics is helpful. This is a general course which spans many subdisciplines (fluid mechanics, atmospheric science, oceanography, hydrology).
Taught by: Marinov
Prerequisites: MATH 114 or permission of the instructor.
Activity: Lecture
1 Course Unit

PHYS 351 Analytical Mechanics
An intermediate course in the statics and dynamics of particles and rigid bodies. Lagrangian dynamics, central forces, non-inertial reference frames, and rigid bodies.
Course usually offered in spring term
Prerequisites: PHYS 150/151 or PHYS 170/171, MATH 104/114, and MATH 240, or permission of instructor.
Activity: Lecture
1 Course Unit

PHYS 360 Statistics, Data Mining, and Machine Learning
This is a practical course on computing, numerical methods, statistics, and data analysis techniques with particular emphasis on data mining and machine learning applied to large datasets. Topics include basic numerical methods and algorithms, probability theory, classical and Bayesian statistical inference, model fitting, Monte Carlo methods, and classification. We will be using Python for the exercises. Prior experience in programming (in any language) is required.
Prerequisites: MATH240, CIS110 or prior experience in programming
Activity: Lecture
1 Course Unit

PHYS 361 Electromagnetism I: Electricity and Potential Theory
First term course in intermediate electromagnetism. Topics include electrostatics, static potential theory, multipole expansions, Laplace equation, image solutions, fields in polarized matter.
Course usually offered in fall term
Prerequisites: PHYS 151 or 171, and MATH 241
Activity: Lecture
1 Course Unit

PHYS 362 Electromagnetism II: Magnetism, Maxwell's Equations, and Electromagnetic Waves
Second term course in intermediate electromagnetism. Topics include magnetostatic forces and fields, magnetized media, Maxwell's equations, Poynting and stress theorems, free field solutions to Maxwell's equations, and radiation from separable and nonseparable time dependent charge and current distributions.
Course usually offered in spring term
Prerequisite: PHYS 361
Activity: Lecture
1 Course Unit

PHYS 364 Laboratory Electronics
A laboratory-intensive survey of analog and digital electronics, intended to teach students of physics or related fields enough electronics to be effective in experimental research and to be comfortable learning additional topics from reference textbooks. Analog topics include voltage dividers, impedance, filters, operational amplifier circuits, and transistor circuits. Digital topics may include logic gates, finite-state machines, programmable logic devices, digital-to-analog and analog-to-digital conversion, and microcomputer concepts. Recommended for students planning to do experimental work in physical science.
One-term course offered either term
Prerequisites: Familiarity with electricity and magnetism at the level of PHYS 102, 141, 151 or 171.
Activity: Lecture
1 Course Unit

PHYS 401 Thermodynamics and the Introduction to Statistical Mechanics and Kinetic Theory
Entropy, temperature, and introduction to ensemble theory, distribution functions, and phase transitions.
Course usually offered in fall term
Prerequisite: PHYS 240 or 250
Activity: Lecture
1 Course Unit

PHYS 411 Introduction to Quantum Mechanics I
An introduction to the principles of quantum mechanics designed for physics majors and graduate students in physics-related disciplines. The Schrodinger equation operator formalism, central field problem, angular momentum, and spin. Application to one-dimensional and central field problems.
Course usually offered in fall term
Prerequisites: PHYS 150 or 170, 240 or 250, and MATH 240 or MATH 260
Activity: Lecture
1 Course Unit

PHYS 412 Introduction to Quantum Mechanics II
Perturbation theory, variational principle, application of the quantum theory to atomic, molecular, and nuclear systems, and their interaction with radiation.
Course usually offered in spring term
Prerequisite: PHYS 411
Activity: Lecture
1 Course Unit
**PHYS 414 Laboratory in Modern Physics**
In this course you will have the opportunity to do a variety of experiments, ranging from "classic experiments" such as measuring G with a torsion balance, determining the relativistic mass of the electron, and muon lifetime, to experiments studying atomic spectroscopy, NMR, Optical pumping, Mossbauer effect, nuclear energy levels, interaction of gamma rays with matter, single photon interference, and magnetic susceptibility. There are also experiments using a High-Tc superconducting tunnel junction and a PET scanner. You will learn basic statistics, become proficient in analysis using Python, acquire an understanding of systematic errors, and learn how to write a professional report. Many of the laboratories provide excellent opportunities to exercise, and expand upon, the knowledge you have gained in your physics courses.
Course usually offered in spring term
Prerequisite: PHYS 411
Activity: Lecture
1 Course Unit

**PHYS 421 Modern Optics**
Course not offered every year
Prerequisites: PHYS 240 or 250 and 362, or permission of instructor
Activity: Lecture
1 Course Unit

**PHYS 433 Order of Magnitude Physics**
This course focuses on the art of estimating physical quantities to within the nearest factor of ten. Problem solving techniques such as dimensional analysis and scaling relations will be covered and applied to a wide range of topics including fluid mechanics, waves and sound, atomic physics, material properties, astrophysics, everyday life, and more. The course is intended for advanced undergraduate students.
One-term course offered either term
Prerequisite: Prerequisites: PHYS 411 or permission from instructor
Activity: Lecture
1 Course Unit

**PHYS 499 Senior Honor Thesis**
Experimental and theoretical research projects in various areas of physics planned by student in consultation with a member of faculty. A written thesis and an oral presentation and defense are required.
One-term course offered either term
Prerequisites: PHYS 412 and 414
Activity: Independent Study
1 Course Unit

**PHYS 500 Mathematical Methods of Physics**
A discussion of those concepts and techniques of classical analysis employed in physical theories. Topics include complex analysis, Fourier series and transforms, ordinary and partial equations, Hilbert spaces, among others.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

**PHYS 501 Introduction to Research**
Introduction to research in particle, nuclear, condensed matter and astrophysics. Selected current topics from journals.
One-term course offered either term
Activity: Lecture
0 Course Units
Notes: Taken by all first-year graduate students. This is a required seminar that does not carry credit or a grade.

**PHYS 503 General Relativity**
This is a graduate level, introductory course in general relativity. The basics of general relativity will be covered with a view to understanding the mathematical background, the construction of the theory, and applications to the solar system, black holes, gravitational waves and cosmology. The latter part of the course will cover some of the basic modern topics in modern cosmology, including the current cosmological model, the accelerating universe, and open questions driving current research.
One-term course offered either term
Activity: Lecture
1 Course Unit

**PHYS 505 Introduction to Cosmology**
Introduction to physical cosmology emphasizing recent ideas on the very early evolution of the universe. The course will introduce standard big bang cosmology, new theories of the very early universe, and the key observations that have tested and will be testing these ideas. No prior knowledge of astrophysics, cosmology, general relativity, or particle physics will be assumed, although aspects of each will be introduced as part of the course. The course is intended for graduate students and advanced undergraduates.
Course offered spring; odd-numbered years
Prerequisite: Graduate standing in physics or permission of instructor
Activity: Lecture
1 Course Unit

**PHYS 516 Electromagnetic Phenomena**
Survey of electrodynamics, focusing on applications to research done in the Department. Topics include mathematical structure and relativistic invariance properties of Maxwell equations, tensor methods, and the generation and scattering of radiation, in vacuum and in materials. Applications vary from year to year but include optical manipulation, astrophysical phenomena, and the generalizations from Maxwell's theory to those of other fundamental interactions (strong, electroweak, and gravitational forces).
Course usually offered in spring term
Activity: Lecture
1 Course Unit

**PHYS 517 Particle Cosmology**
This introduction to cosmology will cover standard big bang cosmology, formation of large-scale structure, theories of the early universe and their observational predictions, and models of dark energy. It is intended for graduate students or advanced undergraduates. No prior knowledge of general relativity or field theory will be assumed, although aspects of each will be introduced as part of the course.
One-term course offered either term
Activity: Lecture
1 Course Unit
PHYS 518 Introduction to Condensed Matter Physics
An introduction to condensed matter physics designed primarily for advanced undergraduate and graduate students desiring a compact survey of the field. Band theory of solids, phonons, electrical magnetic and optical properties of matter, and superconductivity. Course usually offered in spring term
Prerequisites: Undergraduate training in quantum mechanics and statistical thermodynamics
Activity: Lecture
1 Course Unit

PHYS 521 Advanced Laboratory
In this course you will have the opportunity to do a variety of experiments, ranging from "classic experiments" such as measuring G with a torsion balance, determining the relativistic mass of the electron, and muon lifetime, to experiments studying atomic spectroscopy, NMR, Optical pumping, Mossbauer effect, nuclear energy levels, interaction of gamma rays with matter, single photon interference, and magnetic susceptibility. There are also experiments using a High-Tc superconducting tunnel junction and a PET scanner. You will learn basic statistics, become proficient in analysis using Python, acquire an understanding of systematic errors, and learn how to write a professional report. Many of the laboratories provide excellent opportunities to exercise, and expand upon, the knowledge you have gained in your physics courses. Course usually offered in spring term
Activity: Lecture
1 Course Unit

PHYS 522 Introduction to Elementary Particle Physics
An introduction to elementary particles (photons, leptons, hadrons, quarks), their interactions, and the unification of the fundamental forces. Course not offered every year
Prerequisites: Permission of instructor required.
Activity: Lecture
1 Course Unit

PHYS 526 Astrophysical Radiation
This is a course on the theory of the interaction of light and matter designed primarily for graduate and advanced undergraduate students to build the basic tools required to do research in astrophysics. Topics to be discussed include structure of single- and multi-electron atoms, radiative and collisional processes, spectral line formation, opacity, radiation transfer, analytical and numerical methods, and a selection of applications in astrophysics based on student research interest. Course offered fall; even-numbered years
Activity: Lecture
1 Course Unit

PHYS 528 Introduction to Liquid Crystals
Overview of liquid crystalline phases, their elasticity, topology, and dynamics. One-term course offered either term
Activity: Lecture
1 Course Unit

PHYS 529 Modern Optics
Course offered spring; even-numbered years
Activity: Lecture
1 Course Unit

PHYS 530 Modern Optical Physics and Spectroscopy
Introduction to contemporary optics. Topics include propagation and guiding of light waves, interaction of electromagnetic radiation with matter, lasers, non-linear optics, coherent transient phenomena, photon correlation spectroscopies and photon diffusion. Course not offered every year
Prerequisites: Working knowledge of electricity and magnetism and quantum mechanics. For example, at least at the level of Physics 362, PHYS 411.
Activity: Lecture
1 Course Unit
Notes: Graduate level course designed for beginning or intermediate graduate students in physics, but it is likely to be of use to a broader community including beginning graduate students whose research involves light scattering in electrical engineering, chemistry, and biophysics, and advanced undergraduates.

PHYS 531 Quantum Mechanics I
Graduate-level introduction to quantum theory. Topics covered include the postulates of quantum mechanics, unitary operators, time evolution and Schrodinger’s equation, theory of angular momentum, density matrices, and Bell’s inequalities. Other topics may include semi-classical (WKB) approximation, bound state techniques, periodic potentials and resonance phenomena. Course usually offered in fall term
Prerequisites: A minimum of one semester of quantum mechanics at the advanced undergraduate level.
Activity: Lecture
1 Course Unit

PHYS 532 Quantum Mechanics II
Continuation of PHYS 531. Topics covered include the path integral formulation, symmetries in quantum mechanics, scattering theory, and decoherence. Other topics may include time independent and time dependent perturbation theory, and atomic and molecular systems. Course usually offered in spring term
Prerequisite: PHYS 531
Activity: Lecture
1 Course Unit

PHYS 533 Topics in Cosmology
This course aims to survey three or four topics of current research interest in cosmology, mostly at the level of review articles. The topics will be covered in greater depth and with more connections to ongoing research than the introductory cosmology course, ASTR 525. The course will be largely accessible to first and second year graduate students. Some exposure to cosmology and general relativity will be helpful but the first two weeks will attempt to bridge that gap. The topic selection will be done in part with input from the students.
Course not offered every year
Activity: Lecture
1 Course Unit
PHYS 535 Topics in Theory of Living Systems
The goal of this course is to discuss broad conceptual theories that address complex phenomena of living systems. Example questions include: what is the molecular architecture of information processing in cells and developing organisms? What is the functional architecture of cooperative organization from molecules in a cell to whole organism social interactions? How is complex multi-factorial information represented in organisms? The course will meet once a week and students will research relevant papers, lead discussions, and generate synopsis of group discussions. At the end of the semester, faculty and students are expected to co-author a review report of the discussed topics.
Taught by: Kim, Goulian, Akcay, Balasubramanian, Raj, Mossel
Course not offered every year
Prerequisite: Permission of instructor
Activity: Seminar
0.5 Course Units

PHYS 561 Electromagnetism I
First term course in intermediate electromagnetism. Topics include electrostatics, static potential theory, multipole expansions, Laplace equation, image solutions, fields in polarized matter.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PHYS 562 Electromagnetism II: Magnetism, Maxwell's Equations, and Electromagnetic Waves
Second term course in intermediate electromagnetism. Topics include magnetostatic forces and fields, magnetized media, Maxwell's equations, Poynting and stress theorems, free field solutions to Maxwell's equations, and radiation from separable and nonseparable time dependent charge and current distributions.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

PHYS 564 Laboratory Electronics
A laboratory-intensive survey of analog and digital electronics, intended to teach students of physics or related fields enough electronics to be comfortable learning additional topics on their own from a reference such as Horowitz and Hill. Specific topics will vary from year to year from the selection of topics listed below. Analog topics may include voltage dividers, impedance, filters, operational amplifier circuits, and transistor circuits. Digital topics may include logic gates, finite-state machines, programmable logic devices, digital-to-analog and analog-to-digital conversion, and microcomputer concepts. Recommended for students planning to do experimental work in physical science.
One-term course offered either term
Activity: Lecture
1 Course Unit

PHYS 580 Biological Physics
The course will explore the basic physical principles behind the structure and function of life across many length and time scales (molecule, cell, organism, population). Emphasis will be given on overarching physical themes such as entropy and biological noise, and how they affect the organization of living matter and its emergent properties. Topics may include biopolymers and single molecule biophysics, molecular motors, gene and transcription networks, pattern formation in biological systems, phyllotaxis, neural computing and evolution.
Course not offered every year
Prerequisites: MATH 240 and MATH 241 (or equivalent preparation), PHYS 401 or familiarity with statistical mechanics and thermodynamics.
Activity: Lecture
1 Course Unit
Notes: Recommended: Basic background in biology.

PHYS 581 Thermodynamics
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PHYS 582 Medical Radiation Engineering
This course in medical radiation physics investigates electromagnetic and particulate radiation and its interaction with matter. The theory of radiation transport and the basic concept of dosimetry will be presented. The principles of radiation detectors and radiation protection will be discussed.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PHYS 585 Theoretical and Computational Neuroscience
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.
Course usually offered in spring term
Also Offered As: BE 530, NGG 594
Activity: Lecture
1 Course Unit

PHYS 601 Introduction to Field Theory
Elementary relativistic quantum field theory of scalar, fermion, and Abelian gauge fields. Feynman Diagrams.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PHYS 611 Statistical Mechanics
Course usually offered in fall term
Prerequisites: PHYS 401, 531, or equivalent
Activity: Lecture
1 Course Unit
PHYS 612 Advanced Statistical Mechanics
In depth study of classical and quantum lattice spin models, perturbation techniques, and the renormalization group.
Course not offered every year
Prerequisite: PHYS 611 or equivalent
Activity: Lecture
1 Course Unit

PHYS 622 Introduction to Elementary Particle Physics
Introduction to the phenomenology of elementary particles, strong and weak interactions, symmetries.
Course not offered every year
Prerequisite: PHYS 601
Activity: Lecture
1 Course Unit

PHYS 632 Relativistic Quantum Field Theory
Advanced topics in field theory, including renormalization theory.
Course not offered every year
Prerequisite: PHYS 601
Activity: Lecture
1 Course Unit

PHYS 633 Relativistic Quantum Field Theory
A continuation of PHYS 632, dealing with non-Abelian gauge theories.
Course not offered every year
Prerequisite: PHYS 632
Activity: Lecture
1 Course Unit

PHYS 661 Solid State Theory I
This course is intended to be an introductory graduate course on the physics of solids, crystals and liquid crystals. There will be a strong emphasis on the use and application of broken and unbroken symmetries in condensed matter physics. Topics covered include superconductivity and superfluidity.
Course not offered every year
Activity: Lecture
1 Course Unit

PHYS 662 Solid State Theory II
A continuation of PHYS 661.
Course not offered every year
Activity: Lecture
1 Course Unit

PHYS 696 Advanced Topics in Theoretical Physics
Course not offered every year
Activity: Lecture
1 Course Unit

PHYS 990 Masters Thesis
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

PHYS 995 Dissertation
One-term course offered either term
Activity: Dissertation
1 Course Unit

PHYS 999 Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit
PSCI 100 Freshman Seminars
Freshmen seminars are small, substantive courses taught by members of the faculty and open only to freshmen. These seminars offer an excellent opportunity to explore areas not represented in high school curricula and to establish relationships with faculty members around areas of mutual interest. See www.college.upenn.edu/admissions/freshmen.php
One-term course offered either term
Activity: Seminar
1 Course Unit

PSCI 107 Introduction to Data Science
Understanding and interpreting large, quantitative data sets is increasingly central in political and social science. Whether one seeks to understand political communication, international trade, inter-group conflict, or other issues, the availability of large quantities of digital data has revolutionized the study of politics. Nonetheless, most data-related courses focus on statistical estimation, rather than on the related but distinctive problems of data acquisition, management and visualization—in a term, data science. This course addresses that imbalance by focusing squarely on data science. Leaving this course, students will be able to acquire, format, analyze, and visualize various types of political data using the statistical programming language R. This course is not a statistics class, but it will increase the capacity of students to thrive in future statistics classes. While no background in statistics or political science is required, students are expected to be generally familiar with contemporary computing environments (e.g. know how to use a computer) and have a willingness to learn a variety of data science tools. You are encouraged (but certainly not required) to register for both this course and PSCI 338 at the same time, as the courses cover distinct, but complimentary material.
Taught by: Hopkins
Course not offered every year
Activity: Recitation
1 Course Unit

PSCI 110 Introduction to Comparative Politics
This course is designed to introduce students to comparative political analysis. How can the political behavior, circumstances, institutions, and dynamic patterns of change that people experience in very different societies be analyzed using the same set of concepts and theories? Key themes include nationalism, political culture, democratization, authoritarianism, and the nature of protracted conflict.
For BA Students: Society Sector
One-term course offered either term
Activity: Recitation
1 Course Unit

PSCI 116 Political Change in the "Third World"
This is a comparative politics course that examines political and socio-economic change in the so-called "Third World" defined here as post-colonial developing areas in Asia, Africa and Latin America. The course is not as concerned with keeping up with current events as with analyzing the relationships between colonial legacies, the initial challenges of post-colonial political and socioeconomic development, and how these interact with contemporary problems and global trends. Although chiefly concerned with "political change" within countries, it will also devote substantial attention to economic, socio-cultural and international factors. The course is divided into three parts. The first examines the common and distinctive features of colonial rule in different regions as well as the varying challenges of political and economic development in diverse post-colonial settings. The second part focuses on elaborating on the themes developed in the first by looking more closely at the developmental experiences of Brazil, India, Algeria, Iran, Nigeria, and South Korea (with passing references to other countries as comparative referents). The third part focuses on trends and challenges that have emerged over the last two decades - including market reforms, democratization, and problems related to gender and the environment.
For BA Students: Society Sector
Taught by: Sil
One-term course offered either term
Activity: Recitation
1 Course Unit

PSCI 130 Introduction to American Politics
This course is intended to introduce students to the national institutions and political processes of American government. What are the historical and philosophical foundations of the American Republic? How does American public policy get made, who makes it, and who benefits? Is a constitutional fabric woven in 1787 good enough for today? How, if at all, should American government be changed, and why? What is politics and why bother to study it? If these sorts of questions interest you, then this course will be a congenial home. It is designed to explore such questions while teaching students the basics of American politics and government.
For BA Students: Society Sector
One-term course offered either term
Activity: Recitation
1 Course Unit

PSCI 131 American Foreign Policy
This course analyzes the formation and conduct of foreign policy in the United State. The course combines three elements: a study of the history of American foreign relations; an analysis of the causes of American foreign policy such as the international system, public opinion, and the media; and a discussion of the major policy issues in contemporary U.S. foreign policy, including terrorism, civil wars, and economic policy.
Taught by: Horowitz, Vitalis
One-term course offered either term
Activity: Recitation
1 Course Unit
PSCI 135 The Politics of Food and Agriculture
Students will use course readings and their community service to analyze the institutions, ideas, interests, social movements, and leadership that shape the "politics of food" in different arenas. Service opportunities include work with the Urban Nutrition Initiative, Community School Student Partnerships, and the possibility of other placements as approved by the professors.
Taught by: Summers
Course not offered every year
Activity: Lecture
1 Course Unit

PSCI 136 Urban Politics in the United States
This course explores the political character of contemporary urban American life. Particular attention is given to the relationship between urban politics and policymaking – including the structural and ideological factors (e.g., dynamics of political economy, race, ethnicity, pluralism and gender) that constrain the policy context and shape the urban environment as a terrain for competition, conflict and cooperation over uses of space. It makes considerable use of case studies to throw into relief the complex and sometimes subtle processes that shape urban life.
For BA Students: Society Sector
Taught by: Reed
Course usually offered in spring term
Activity: Lecture
1 Course Unit

PSCI 139 Politics Of Poverty & Development
This academically based community service seminar will explore the ideas and theories, alliances and opposition that have shaped policy and organizing efforts addressed to the problems associated with urban poverty in the United States. There will be a special focus on the issues of increasing inequality, education, low wage work, health and nutrition, welfare reform and social security. Students will evaluate contemporary policy debates and programs in the light of selected case studies, readings, and their own experience working with community groups, institutions, and federal programs in West Philadelphia.
For BA Students: Humanities and Social Science Sector
Taught by: Summers
Course not offered every year
Activity: Seminar
1 Course Unit

PSCI 144 Communism
The rise and fall of Communism dominated the history of the short twentieth century from the Russian revolution of 1917 to the collapse of the Soviet Union in 1991. As a system of government, Communism is more or less dead, but its utopian ideals of liberation from exploitation and want live on. Communism remains the one political-economic system that presented, for a time, an alternative to global capitalism. In this course, students will gain an introduction to socialist and Communist political thought and explore Communist political and economic regimes - their successes and failures, critics and dissidents, efforts at reform, and causes of collapse. We will learn about the remnants of Communism in China, North Korea, and Cuba and efforts of contemporary theorists to imagine a future for Communism.
For BA Students: Society Sector
Taught by: Orenstein
Course not offered every year
Activity: Lecture
1 Course Unit

PSCI 150 Introduction to International Relations
This course is an introduction to the major theories and issues in international politics. The goals of the course are to give students a broad familiarity with the field of international relations, and to help them develop the analytical skills necessary to think critically about international politics. The course is divided into four parts: 1) Concepts and Theories of International Relations; 2) War and Security; 3) The Global Economy; and 4) Emerging Issues in International Relations.
For BA Students: Society Sector
Taught by: Mansfield
One-term course offered either term
Activity: Recitation
1 Course Unit

PSCI 151 International Security
This lecture course introduces students to the subfield of international security or strategic studies. In order to grasp the usefulness of the theoretical ideas presented in readings and lectures, abstract concepts are linked with a study of the national security policies states have adopted in the decades following World War II. Topics include current debates about nuclear proliferation, terrorism, the Iraq war, Europe's changing international role, the rise of China, Asian "flashpoints" (Korea, the Taiwan Strait), and US security policy for the 21st century - considering some of the main strategic alternatives to the US as well as their implications for the types of forces deployed (the impact of the "revolution in military affairs," the future of missile defense, and the economic burden to be shouldered).
Taught by: Goldstein

PSCI 152 International Political Economy
This course examines the politics of international economic relations. The course will analyze the interplay between politics and economics in three broad areas: international trade, international finance, and economic development. In each section, we will first discuss economic theories that explain the causes and consequences of international commerce, capital flows, and economic growth. We will then explore how political interests, institutions, and ideas alter these predictions, examining both historical examples and current policy debates.
Taught by: Gray,Brutiger
Course not offered every year

PSCI 150 Introduction to International Relations
This course is an introduction to the major theories and issues in international politics. The goals of the course are to give students a broad familiarity with the field of international relations, and to help them develop the analytical skills necessary to think critically about international politics. The course is divided into four parts: 1) Concepts and Theories of International Relations; 2) War and Security; 3) The Global Economy; and 4) Emerging Issues in International Relations.

PSCI 153 International Law & Institutions
This lecture course examines the role that international law and institutions play in international relations. The course begins by exploring broad theoretical questions - questions about why states create international law and international institutions; how states design institutions; the impact that institutional design may have on the effectiveness of international institutions; and the conditions under which states are likely to comply with the rules set out by international institutions and the dictates of international law. Specific topics include collective security institutions such as the League of Nations, the United Nations, and NATO; human rights law; the laws of war; international intervention and peacekeeping; international justice and the International Criminal Court; environmental law; international trade law and the World Trade Organization; economic development and the World Bank; and international finance and the role of the International Monetary Fund. One-term course offered either term

1 Course Unit

PSCI 180 Ancient Political Thought
Through reading texts of Plato (Socrates), Aristotle, Augustine and Aquinas, the student encounters a range of political ideas deeply challenging to--and possibly corrosive of--today's dominant democratic liberalism. Can classical and medieval thinking offer insight into modern impasses in political morality? Is such ancient thinking plausible, useful, or dangerous?

0 Course Units

PSCI 181 Modern Political Thought
This course will provide an overview of major figures and themes of modern political thought. We will focus on themes and questions pertinent to political theory in the modern era, particularly focusing on the relationship of the individual to community, society, and state. Although the emergence of the individual as a central moral, political, and conceptual category arguably began in earlier eras, it is in the seventeenth century that it takes firm hold in defining the state, political institutions, moral thinking, and social relations. The centrality of "the individual" has created difficulties, even paradoxes, for community and social relations, and political theorists have struggled to reconcile those throughout the modern era. We will consider the political forms that emerged out of those struggles, as well as the changed and distinctly "modern" conceptualizations of political theory such as freedom, responsibility, justice, rights and obligations, as central categories for organizing moral and political life.

PSCI 182 Contemporary Political Thought
This course is intended as a general introduction to political theory since 1900, examining prominent theorists of politics including Max Weber, Hannah Arendt, Carl Schmitt, Isaiah Berlin, Jurgen Habermas, John Rawls, Michel Foucault, and Jacques Derrida. Our theme for the Fall 2012 course will be: The Disenchantment of the World? Topics include: the nature of the the political and the concern, particular to the last century, that politics is itself under attack; the spread of liberal democracy across the globe and a critical appraisal of the moral meaning of this regime; contemporary theories of social justice; and an exploration of various issues pertaining to violence and the politics of security.

PSCI 183 American Political Thought
Whether America begins with the Puritans and the Mayflower Compact, or with the Declaration of Independence and the Revolution, it is founded in resistance to empire. In the generations between, Americans have desired, dreaded and debated empire. This course will focus on empire and imperialism in American political thought. We will read primary texts addressing empire: from the departure and dissent of the Puritans, and Burke’s Speech on Conciliation with the Colonies, to twentieth and twenty-first century debates over America’s role in the world. These texts will include political pamphlets and speeches, poetry, novels, policy papers and film.

PSCI 208 International Organizations in Latin America
International Organizations play a powerful role in mitigating conflict at the global level. What role do they play in solving problems related to global politics, economic development, corruption, inequality and civil society in Latin America? How much power, influence and control do they possess in the region? This course examines the role and impact international organizations have had on Latin America since the mid-20th century. After a review of theoretical and methodological perspectives on the significance of IOs in international relations, students will examine the workings, issues and often controversies surrounding IOs in Latin America, including the IMF, World Bank, UN, OAS and ICC as well as regional organizations such as the Inter-American Court of Human Rights and area trade blocs and agreements of Mercosur, NAFTA and others. Students will also explore the regional impact of transnational civil society organizations, such as human rights organizations and the International Olympic Committee. Students will be invited to participate in the Washington Model OAS from April 10-17.

PSCI 210 Contemporary African Politics
This class provides an introduction to contemporary African politics. The core questions that motivate the course are (i) to what extent are political outcomes in contemporary Africa a consequence of its history, culture and geography? (ii) Why are state structures and institutions weaker in Africa than elsewhere? (iii) What accounts for Africa's relatively slow economic growth? (iv) Why have some African countries been plagued by high levels of political violence while others have not? (v) What explains the behavior of key African actors: parties or politicians?
Taught by: Grossman

1 Course Unit

PSCI 211 Politics in the Contemporary Middle East
This course is an introduction to the most prominent historical, cultural, institutional, and ideological features of Middle Eastern politics. Typical of the questions we shall address are why processes of modernization and economic change have not produced liberal democracies, why Islamic movements have gained enormous strength in some countries and not others, why conflicts in the region—between Israel and the Arabs, Iran and Iraq, or inside of Lebanon—have been so bitter and protracted; why the era of military coups was brought to an end but transitions to democracy have been difficult to achieve; why Arab unity has been so elusive and yet so insistent a theme; and why oil wealth in the Gulf, in the Arabian Peninsula, and in North Africa, has not produced industrialized or self-sustaining economic growth.

PSCI 215 The European Union
This lecture course, after introductory sessions which outline the EU's core institutions, is built on an exposition of the works of major thinkers who have reflected on the European Union's origins, outcomes and significance. It critically reviews their arguments, especially their relevance to major recent crises, notably: the failure of the European Constitution, the current crisis of credibility facing the Euro. Whether the European Union is a confederation, a federation, an empire, or a novel political formation shall be examined. Whether its recent major widening signals an end to its institutional deepening will be discussed. Whether the Union has "a democratic deficit" is examined, as is the claim that in external relations it represents a novel form of soft power.

1 Course Unit

PSCI 217 Russian Politics
This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a brief discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implications of economic reform, and prospects for Russia's future in the Putin and post-Putin era.

1 Course Unit

PSCI 221 Comparative Health Politics
This course examines the relationship between politics and the health of populations in the worlds rich democracies, including the United States. The key questions the course addresses are how and why countries differ in their health care policies, public health policies, and policies that affect the social determinants of health. There are no prerequisites, but prior coursework in comparative politics at the 100 or 200 level will be helpful.
Taught by: Lynch
Course not offered every year
Activity: Lecture
1 Course Unit

PSCI 223 Issues Comp Pol/Gender
Struggles over gender roles and rights have been prominent in the Middle East and North Africa since the 19th century and continue to mark contemporary political and social discourses. Since the colonial period, gender categories and sexualities have been critiqued and negotiated on behalf of empire, the nation, modernity, personal freedom; today debates and struggles over global rights, Islamic law, and modernity continue to mark politics. Despite the particularity of ideas and events in the region, a comparative framework helps to overcome exoticization of the region and develop a more acute understanding. The topics of the course include engagement with the discourse of the Exotic Other, the effects of modernity, the role of nationalism and the state, state-society negotiation, Islamic formulations, and continuously, the question: where does change come from? Issues of the veil and Islamic dress the expansion of anti-gay laws, the disciplining of bodies in state and social settings - these issues of gender and sexuality extend the realm of the political into intimate spaces. Assignments include a midterm and a short paper that develops research and analytical skills. The course is 200 level. While background in the study of the Middle East or gender is not necessary, an introductory political science or social science course is required.
Taught by: Harrold
Course not offered every year
Activity: Seminar
1 Course Unit

PSCI 224 Political Economy of Development
The course surveys some of the principal themes in the political economies of lower income countries. The questions we shall seek to address cover a broad terrain. Who are the key actors? What are their beliefs, interests and motivations? What are their constraints? How are these being affected by closer economic linkages between national economies? While there is no single integrative framework or paradigm into which these themes neatly fit, a common thread is the changing dynamics and interplay between the local, the national, and the global. A familiarity with basic economic concepts will be helpful, but is not necessary.

1 Course Unit

PSCI 225 Sex and Power
Gender has been a primary way of organizing power relations throughout history. This class asks how transformations in the global economy, technological change, new patterns of household formation, and social movements, have influenced women’s access to economic and political positions over the past two centuries. We will examine how women’s mobilization contributed to the abolition of slavery, reform of property and franchise laws, and to the formation of the welfare state. Next, we turn to thinking about how women’s increasing labor force participation was hindered by institutions like marriage bars and union policy. Third, we look at cross-national patterns of women’s political participation and descriptive representation including whether and how the adoption of electoral quotas influences gender equality more generally. Finally we study how institutional norms and gender stereotypes affect political representation. This class will draw on examples from around the world, and will look at experiences of women from all economic, social, and ascriptive backgrounds.
Taught by: Teele
Course not offered every year
Activity: Lecture
1 Course Unit
PSCI 227 China: Inst & the Econ
The rise of China since its economic reform starting from 1978 is one of the most important developments the world witnessed in the twenty first century. In this seminar course, we explore topics including the political logic of China’s economic reform, the institutional foundations of the Chinese economic growth miracle, as well as detailed analysis of Chinese financial markets, housing markets, fiscal reform, corruption/ anti-corruption, labor market transitions, China’s integration into the world economy, village democracy and its impact on resource allocation, the impact of population ageing, the impact of China on US economy and politics, among others. The discussions will focus on China, but will relate broadly to emerging and developed economies. The course will be based on reading and discussing research articles and books selected by the instructors.

PSCI 229 China’s Domestic Politics
This is an advanced course on the main issues of contemporary Chinese politics, economy and social change. There is a strong focus on the reform period (post 1978). We will spend considerable time and energy on understanding the major themes and challenges of China’s reforms, including the political system, the legal system, the inequality, foreign direct investment, village elections, lawmaking, environmental degradation, social opposition, corruption, and religion. We also investigate the many political and social consequences of reform and changing landscape of Chinese politics. A prior course on Chinese politics (for example, PSCI219) is highly recommended.

PSCI 231 Race and Ethnic Politics
This course examines the role of race and ethnicity in the political discourse through a comparative survey of recent literature on the historical and contemporary political experiences of the four major minority groups (Blacks or African Americans, American Indians, Latinos or Hispanic Americans, and Asian Americans). A few of the key topics will include assimilation and acculturation seen in the Asian American community, understanding the political direction of Black America in a pre and post Civil Rights era, and assessing the emergence of Hispanics as the largest minority group and the political impact of this demographic change. Throughout the semester, the course will introduce students to significant minority legislation, political behavior, social movements, litigation/court rulings, media, and various forms of public opinion that have shaped the history of racial and ethnic minority relations in this country. Readings are drawn from books and articles written by contemporary political scientists.

Course not offered every year
Activity: Lecture
1 Course Unit

PSCI 233 Introduction to African American Politics
This course is an historical survey of the main bases and substances of politics among black Americans and the relation of black politics to the American political order. Its two main objectives are: 1) to provide a general sense of pertinent historical issues and relations as a way of helping to make sense of the present and 2) to develop criteria for evaluating political scientists’ and others’ claims regarding the status and characteristics of black American political activity.
Taught by: Reed
Course not offered every year
Activity: Lecture
1 Course Unit

PSCI 234 Changing American Electorate
In 1960, a Democratic candidate won a very narrow Presidential victory with just 100,000 votes; in 2000, the Democratic candidate lost but received 500,000 more votes than his opponent. Still, contemporary scholars and journalists have made a variety of arguments about just how much the American political landscape changed in the intervening 40 years, often calling recent decades a transformation. This course explores and critically evaluates those arguments. Key questions include: how, if at all, have Americans political attitudes and ideologies changed? How have their connections to politics changed? What has this meant for the fortunes and strategies of the two parties? How have the parties base voters and swing voters changed? What changes in American society have advantaged some political messages and parties at the expense of others? Focusing primarily on mass-level politics, we consider a wide range of potential causes, including the role of race in American politics, suburbanization, economic transformations, the evolving constellation and structure of interest groups, declining social capital, the changing role of religion, immigration, and the actions of parties and political elites. For three weeks in the semester, we will take a break from considering broader trends to look at specific elections in some depth.
Taught by: Hopkins
Course not offered every year
Activity: Recitation
1 Course Unit
PSCI 236 Public Policy Process
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to ticipants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government.
Taught by: Levendusky, Meredith

1 Course Unit

PSCI 237 The American Presidency
This course surveys the institutional development of the American presidency from the Constitutional convention through the current administration. It examines the politics of presidential leadership, and how the executive branch functions. An underlying theme of the course is the tensions between the presidency, leadership, and democracy.
Taught by: Gottschalk
Course usually offered in fall term
Activity: Recitation
1 Course Unit

PSCI 241 Polarization
Are ordinary Americans polarized? What about political elites? Is there any connection between mass and elite polarization? What do we even mean when we say some group is “polarized”? This class will explore these questions in some detail, and try to sort out all of the discussions about polarizations, red states and blue states, and the like.
Taught by: Levendusky
Course not offered every year
Activity: Seminar
1 Course Unit

PSCI 243 Dilemmas of Immigration
Beneath the daily headlines about refugees blocked entry, and undocumented migrants deported there is a set of hard questions which deserve closer attention: Should countries have borders? If countries have borders, how should they decide who is kept out and who is allowed in? How many immigrants is “enough”? Are immigrants equally desirable? What kinds of obligations do immigrants have to their receiving society? What kinds of obligations do host societies have to immigrants? Should there be “pathways” to citizenship? Can citizenship be earned? Should citizenship be automatic? This course explores these and other dilemmas raised by immigration.

PSCI 250 C.I.A. Assassinations and Coups in Latin America
Why has the United States government participated in political assassinations and coups d’état in Latin America? How have these interventions affected Latin American political and economic outcomes? How have they helped or hurt U.S. interests in the region? This lecture course provides an introduction to the history and politics of U.S.-led assassinations and coups in Latin America since 1949. For each event, the course will help students understand (1) the goals of the U.S. government; (2) the historical and political context of the intervention; and (3) the outcomes and consequences, both in Latin America and for the United States. Knowledge of the history of U.S. involvement in regime change is critical for understanding contemporary foreign policy.
Taught by: Kronick
Course offered spring; odd-numbered years
Activity: Lecture
1 Course Unit

PSCI 251 Arab Israeli Relations
In this course the Arab-Israeli dispute from 1948 to the present will serve as a vehicle for understanding how domestic and global political processes interact to shape, contain, or aggravate Middle Eastern wars between states and non-state actors. Particular stress will be placed on understanding how wars affect international politics in states and political organizations and how ideological and structural features of states and organizations find expression in wars and complicate or enable the search for peace. In addition, the key features of the conflict will be interpreted as both a clash between the political interests of national and/or religious groups and as a reflection of global political power struggles. Attention will be given toward the end of the course to alternative ideas about possible resolution of the conflict as well as to the increasingly prominent argument that, in this case, there is no solution.
Taught by: Lustick
One-term course offered either term
Activity: Recitation
1 Course Unit

PSCI 252 War, Strategy and Politics
This class examines the strategy and politics of warfare, focusing on the way actors plan military campaigns and the factors that are likely to lead to victory and defeat. The course readings center in particular on the factors driving changes in warfare and civil-military relations. The course will cover a wide range of topics from theories of war-fighting to historical military campaigns to insurgency warfare, terrorism, and the future of war.
Taught by: Horowitz
One-term course offered either term
Activity: Recitation
1 Course Unit
PSCI 253 International Politics of the Middle East
This course will focus primarily on episodes of external intervention by Great Powers in the politics of Middle Eastern states. We shall begin by examining the emergence of the Middle Eastern state system after the disappearance of the Ottoman Empire in the early part of the 20th century. This discussion will provide opportunities to develop key concepts in the study of international politics and will serve as crucial historical background. We shall then turn our attention to the primary concern of the course - a systematic consideration of the motives, operational results, and long-term implications of a number of important examples of intervention by Great Powers in the Middle East. Among the episodes to be considered will be British policies toward the end of World War I, in Palestine in the 1930s, and, along with the French, in Suez in 1956. Soviet intervention in the first Arab-Israeli war, in 1948, will be analyzed along with Soviet policies toward Egypt in the early 1970s. American intervention in Iran in 1953 and in the Gulf War in 1991 will also be examined.
Taught by: Lustick
Course usually offered in spring term
Activity: Recitation
1 Course Unit

PSCI 255 The Causes of War & Peace
The existence and endurance of war provides one of the most important puzzles of politics: why is it that people keep making use of such a destructive and painful way of resolving their disputes? This course addresses this question and the related question of what factors contribute to peace, focusing on both academic and popular explanations for conflict, including among others anarchy, over-optimism, shifting power, diversionary war, the malevolent influence of war profiteers, and a variety of explanations grounded in culture, religion and other ideational variables. In this discussion, we will focus on both interstate and civil wars, and on both the onset and the eventual termination of war. At various points in the course we will discuss a wide range of historical and contemporary cases, including the World Wars, Vietnam, the Gulf War, the Iraq War, the various Arab-Israeli wars, the India-Pakistan rivalry, and a number of recent civil conflicts such as the wars in Yugoslavia, Congo, and Sudan. The course concludes with a discussion of strategies for managing ongoing conflicts and for securing peace in post war settings.

PSCI 261 Emerging Technologies and the Future of the World
Technological change is always occurring, but the rate of change seems to be accelerating. Advances in robotics, artificial intelligence, cyber, biotechnology, and other arenas generate promise as well as peril for humanity. Will these emerging technologies unleash the innovative capacity of the world, generating new opportunities that help people live meaningful lives? Alternatively, are automation and other technologies chipping away at the labor market in a way that could create severe generational dislocation at best, and national and international turmoil at worst? These questions are important, and have consequences for how we live our lives, how nations interact, and the future of the world writ large. Emerging technologies could shape public policy at the local, national, and international level, and raise questions of fairness, ethics, and transparency. This course takes a unique approach, combining insights from engineering, political science, and law in an interdisciplinary way that will expose students both to the key technologies that could shape the future and ways to think about their potential politics, and society.

PSCI 314 Democracy in Latin America
Since the inception of the twenty first century, Latin America has undergone major economic, social, and political transformations. Many of the neoliberal policies of the last quarter of the twentieth century were reversed or revisited, economic inequality decreased significantly across the region, and anumber of governments turned to the left of the political spectrum, often instituting major public policy and constitutional reforms. How have those changes affected citizenship and democracy in the region? In particular, have citizens' channels for representation and participation changed in the recent past? What has happened to local participatory institutions since the return to the right in some countries of the region? The course will explore these and related questions. Students will develop their own research projects throughout the semester. While not a requirement, the ability to read Spanish or Portuguese will significantly enhance students' learning experience.

PSCI 320 Who Gets Elected and Why? The Science of Politics
What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century? This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for public office and will discuss the various influences on getting elected, including: Campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization. Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania.
Taught by: Rendell

1 Course Unit
PSCI 327 Modern India
This course attempts to examine the experience of representative democracy in India and the country’s development record in a historical framework. It will ask questions such as: How did representative democracy emerge in India and what explains its persistence? What are the sources of its vulnerability? What kind of a sense of nationhood does this democratic experience rest upon? What are the exclusions built into this conception of nationhood? What is the relationship between India’s development experience and its democratic experiment? How have India’s "traditional" institutions adapted or failed to adapt to modern circumstances? Why has India performed well in certain economic sectors such as IT even while its record in providing basic social services has been poor? How has India’s self-perception about its place in the world changed in recent years and what are its implications?
Taught by: Kapur

PSCI 328 Democracy in Trouble: OAS to the Rescue?
Democracy in the Americas is in trouble. Entrenched political, economic, and social inequality, combined with environmental degradation, weak institutions, pervasive health epidemics, weapon proliferation, and other pressing issues pose formidable challenges for strengthening democratic ideals and institutions. The Organization of American States (OAS), is uniquely poised to confront and purposively focused to strengthen peace, security, democracy, and human rights. In this community based course, students will study the role and history of the OAS while working directly with area public high school students in preparation for the OAS annual high model OAS simulation in Washington, DC.

PSCI 332 Survey Research & Design
Survey research is a small but rich academic field and discipline, drawing on theory and practice from many diverse fields including political science and communication. This course canvasses the science and practice of survey methods, sampling theory, instrument development and operationalization, and the analysis and reporting of survey data. Major areas of focus include measurement and research on survey errors, application to election polling, new frontiers in data collection, overall development of data management and introductory statistics.
Taught by: Dutwin
Course not offered every year
Activity: Seminar
1 Course Unit

PSCI 333 Political Polling
Political polls are a central feature of elections and are ubiquitously employed to understand and explain voter intentions and public opinion. This course will examine political polling by focusing on four main areas of consideration. First, what is the role of political polls in a functioning democracy? This area will explore the theoretical justifications for polling as a representation of public opinion. Second, the course will explore the business and use of political polling, including media coverage of polls, use by politicians for political strategy and messaging, and the impact polls have on elections specifically and politics more broadly. The third area will focus on the nuts and bolts of election and political polls, specifically with regard to exploring traditional questions and scales used for political measurement; the construction and considerations of likely voter models; measurement of the horserace; and samples and modes used for election polls. The course will additionally cover a fourth area of special topics, which will include exit polling, prediction markets, polling aggregation, and other topics. It is not necessary for students to have any specialized mathematical or statistical background for this course.

PSCI 335 Healthy Schools
This Fox Leadership and academically based community service seminar will use course readings and students’ own observations and interviews in their service learning projects in West Philadelphia schools to analyze the causes and impact of school health and educational inequalities and efforts to address them. Course readings will include works by Jonathan Kozol, studies of health inequalities and their causes, and studies of No Child Left Behind, the CDC’s School Health Index, recess, school meal, and nutrition education programs. Course speakers will help us examine the history, theories, politics and leadership behind different strategies for addressing school-based inequalities and their outcomes. Service options will focus especially on the West Philadelphia Recess Initiative. Other service options will include work with Community School Student Partnerships and the Urban Nutrition Initiative.

Political Science (PSCI)

PSCI 338 Statistical Methods PSCI
The goal of this class is to expose students to the process by which quantitative political science research is conducted. The class will take us down three separate, but related tracks. Track one will teach some basic tools necessary to conduct quantitative political science research. Topics covered will include descriptive statistics, sampling, probability and statistical theory, and regression analysis. However, conducting empirical research requires that we actually be able to apply these tools. Thus, track two will teach us how to implement some of these basic tools using the computer program R. However, if we want to implement these tools, we also need to be able to develop hypotheses that we want to test. Thus, track three will teach some basics in research design. Topics will include independent and dependent variables, generating testable hypotheses, and issues in causality. You are encouraged to register for both this course an PSCI 107 at the same time, as the courses cover distinct but complementary material. But there are no prerequisites nor is registering for PSCI 107 necessary, in order to take this course. The class satisfies the College of A Science Quantitative Data Analysis (QDA) requirement.

PSCI 395 Power Sharing in Deeply Divided Places - BFS
This course examines conceptual, explanatory and normative debates over power-sharing systems. We explore the circumstances in which federal, consociational and other power-sharing institutions and practices are proposed and implemented to regulate deep national, ethnic, religious or linguistic divisions. We evaluate these systems, seeking to explain why they are formed or attempted, and why they may endure or fail, paying special attention to bi- and multi-national, multi-ethnic, multi-religious and multi-lingual environments.

Taught by: O'Leary
Course not offered every year
Corequisites: Benjamin Franklin Scholars, seniors and juniors in Political Science, seniors in PPE; others by permission.

Activity: Seminar
1 Course Unit

PSCI 412 Comparative Politics
This seminar focuses on comparative political systems. Themes include political participants, leadership, institutions, instability, and system transformation in developed and less developed countries.

Course not offered every year
Activity: Lecture
1 Course Unit
PSCI 413 Evidence Based Policies of Economic and Political Development
This class provides a "hands-on" introduction to the promises and limitations of using Randomized Control Trials (RCTs) to inform policy makers, practitioners, and academics of the conditions under which policies likely would have a positive effect on economic and political outcomes, in the context of international development. This course has three parts: the first is devoted to understanding the "nuts and bolts" of running field experiments / RCTs in developing countries. In part, we will be reading Glennester and Takavarasha’s Running Randomized Evaluations: A Practical Guide. In addition, we will discuss core behavioral concepts from both behavioral economics and social psychology (prospect theory). The second part of the course will be devoted to demonstrating how schools have used RCTs to inform core policy debates (e.g. What are some effective ways to reduce corruption? How can we improve the performance of frontline service providers? How can politicians be more responsive to their constituents?) In the third part, students will be presenting their own research proposals, explicitly designed to address either a core policy question in the developing world or--for those interested--in the USA. Here students will have an opportunity to partner with the Social and Behavioral Sciences Team (https://sbst.gov), which is under the National Science and Technology Council.
Taught by: Grossman
One-term course offered either term
Activity: Seminar

PSCI 418 Evolution, Politics and Computer Simulation
In this course we shall explore how recent developments in evolutionary theory relate to larger questions raised by students of complexity and complex adaptive systems. We shall study how they together provide a basis for important critiques of standard approaches in political science and enable fascinating and powerful understandings of politics and political phenomena – including national identity and identity change, state formation, revolution, globalization, and leadership. An important vehicle for the application of these insights for understanding politics is computer simulation featuring agent-based modeling. Students will use "PS-I" an agent based computer simulation platform, to develop their own models, conduct experiments, test hypotheses, or produce existence proofs in relation to popular theoretical positions in contemporary political science. No knowledge of computer programming is required.
Taught by: Lustick
One-term course offered either term
Also Offered As: PPE 476
Activity: Seminar
1 Course Unit

PSCI 433 Social Movements
Social movements and political protest have become some of the most effective tools for citizens and non-citizens to influence the political system. This course is designed to introduce students to the theoretical and methodological approaches taken in understanding these behaviors. Analyzing social movements that range from civil discontent to contentious political protest, the course will address a variety of questions: What is the origin of movement behavior and why do individuals turn to these actions in lieu of simply engaging in institutional modes of political action such as voting? What were the strategies of these movements? What are the political conditions that allow social movements to resonate with the American public? In addition to addressing these topics, this course surveys the policy successes of major social and political movements. From the Civil Rights and Women’s Right Movement to the recent Tea Party movement and Hong Kong demonstrations over democracy, this course explores the various public policies that have resulted from citizens’ protest actions. While state level and local level government responsiveness will be addressed, special attention will be given to how political protest influences public policy in all three branches of the federal government.

PSCI 434 Advanced Topics in American Politics
This seminar is designed to serve as a "capstone" experience for advanced undergraduates interested in American politics. It exposes students to some of the issues currently being studied and debated by the leading scholars in the field. For each topic we will read works that take competing or opposing positions on an issue; for example we will examine the current controversy over the causes and and consequences of divided government. Students will write a research paper analyzing one of the debates.
Taught by: Gillion
Course not offered every year
Activity: Seminar
1 Course Unit

PSCI 436 Political Psychology
How do campaign advertisements influence voters' perceptions and behavior? What roles do emotions play in politics? Do we all harbor some measure of racism, sexism, or homophobia, and what role do these stereotypes play in political behavior? How and why do ideologies form, and how does partisanship influence the way that voters understand the political world? How do people perceive threat, and what are the psychological consequences of terrorism? These questions, and many others, are the province of political psychology, an interdisciplinary field that uses experimental methods and theoretical ideas from psychology as tools to examine the world of politics. In this course, we will explore the role of human thought, emotion, and behavior in politics and examine the psychological origins of citizens' political beliefs and actions from a variety of perspectives. Most of the readings emphasize politics in the United States, though the field itself speaks to every aspect of political science.
Taught by: Margolis
Course not offered every year
Activity: Seminar
1 Course Unit
PSCI 437 Race & Criminal Justice
Why are African Americans and some other minority groups disproportionately incarcerated and subjected to penal sanctions? What are the political, social and economic consequences for individuals, communities, and the wider society of mass incarceration in the United States? What types of reforms of the criminal justice system are desirable and possible? This advanced seminar analyzes the connection between race, crime, punishment, and politics in the United States. The primary focus is on the role of race in explaining why the country’s prison population increased six-fold since the early 1970s and why the United States today has the highest incarceration rate in the world. The class will likely take field trips to a maximum-security jail in Philadelphia and to a state prison in the Philadelphia suburbs.
Taught by: Gottschalk
Course not offered every year
Activity: Seminar
1 Course Unit

PSCI 439 Experimental Methods of Inquiry
The main goal of this course is to familiarize students with experiments, quasi-experiments, population-based survey experiments and field experiments as they are widely used in the social sciences. By the end of the course, students will be expected to understand what it is about a study that allows for a strong causal inference. Whether one is reading about studies in a newspaper or reading academic journal articles, it is important to know how to distinguish convincing versus unconvincing evidence of any given claim. As a final project, students will be expected either to develop their own original experimental design or to analyze the evidence pertaining to a causal claim of their own choosing based on what they have learned in class. Throughout the course of the semester, we will also consider how to deal with the issue of causality as it occurs in observational studies, and draw parallels between experimental and observational research.

1 Course Unit
PSCI 517 Russian Politics
This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a brief discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implications of economic reform, and prospects for Russia’s future in the post-Yeltsin era. This course may also be taken as a graduate seminar (PSCI 517) with the permission of the instructor and the completion of additional requirements.

Activity: Seminar
1 Course Unit

PSCI 531 Public Opinion & Elections
This course is designed to give advanced undergraduates and graduate students exposure to the literature on political behavior in American politics (the course is part of the departments 3-course graduate sequence in American politics). The course will cover both the classics of public opinion and political behavior from the Columbia, Michigan, and Rochester schools, as well as more current topics and debates in the literature. Topics include (but are not limited to) the early voting studies, the role of partisanship, the nature and origins of ideology, mass-elite interactions, heuristics and low information rationality, the nature of the survey response, campaign and media effects, framing effects, and the role of institutions in structuring behavior. Undergraduates are welcome in the class, but they should know that the class assumes familiarity with quantitative approaches to studying politics.

PSCI 552 Game Theory
This course provides an introduction to non-cooperative game theory and its applications to political science. The goal of the course is to provide students with the background and understanding necessary to read published game-theoretic work in political science journals. To that end, the course covers the basic concepts of game theory, including Nash equilibrium and its main refinements, simultaneous and sequential games, repeated games, evolutionary game theory, and games of incomplete and private information. In addition, we will cover some of the central models used in political science, notably models of public choice (such as the median voter theorem) and models of bargaining.
Taught by: Weisiger
Course not offered every year
Activity: Seminar
1 Course Unit

PSCI 558 Human Rights
This course will examine the theoretical, historical and political foundations of contemporary human rights debates. The course will cover not only broad conceptual issues, but also specific issue areas (e.g., civil rights, economic rights, women’s rights, business and human rights), as well as the question of how new rights norms emerge and diffuse in the international arena. The course is open to students in the Master of Liberal Arts Program, as well as students who are actively pursuing the Graduate Certificate in Interdisciplinary Studies in Global Human Rights.
Taught by: Doherty-Sil
Activity: Recitation
1 Course Unit

PSCI 584 Political Philosophy
An examination of basic theoretical problems of political science divided into three parts. First, specific features of social sciences will be examined and three most important general orientations of social sciences (analytical, interpretative and critical) will be compared and analyzed. Second, basic concepts of social and political sciences will be studied: social determination, rationality, social change, politics, power, state, democracy. Third, the problem of value judgments will be considered: Is there a rational, objective method for the resolution of conflicts in value judgments? Is morality compatible with politics?
Course not offered every year
Activity: Seminar
1 Course Unit

PSCI 598 Selected Topics
Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: Race Development and American International Relations, Hegel and Marx, and Logic of the West.
One-term course offered either term
Activity: Seminar
1 Course Unit
PSCI 600 International Relations Theory
This course is designed to introduce students to a wide range of theories of international politics. During the semester, we will examine neo-realism, power transition theory, hegemonic stability theory, the modern world system, international regimes and interdependence, the democratic peace, bureaucratic politics, organizational theory, constructivism, and decision-making theory. Second, the course will sharpen students' research design skills. The written assignments require students to take the often abstract theories presented in the readings and develop practical research designs for testing hypotheses derived from the theories. The papers will not include data collection or the execution of actual tests. Rather, they will focus on the conceptual problems of designing tests which eliminate competing hypotheses, operationalizing variables, and identifying potential sources of data. Student grades will be based on five short research designs and discussion leadership. Course not offered every year.
Activity: Seminar 1 Course Unit

PSCI 605 Great Books Comp Pol
Activity: Seminar 1 Course Unit

PSCI 610 Comparative Political Analysis
This seminar is aimed primarily at graduate students planning to take doctoral exams in comparative politics. It provides a critical survey of the field of comparative politics, tracing the intellectual history of the field, examining shifts in conceptual frameworks and research traditions, and comparing alternative methodological approaches. The first half of the course generally examines how processes of political, economic, and social change have been theorized in the social sciences from the mid-19th century to the present. In this process, particular attention is paid to the bifurcation between theories that emphasize the "universal" (e.g., the homogenizing effects of specific processes or variables) and the "particular" (e.g., the persistence of distinctive historical legacies and trajectories). Since this bifurcation is reinforced by distinct styles and methods of research, the seminar also probes the recent battles between rational-choice, cultural, and structuralist scholars, while considering the trade-offs between varieties of formal, quantitative, and qualitative methods. In the second half, the focus shifts to the range of substantive problems investigated by scholars in the field of comparative politics. These topics cover the complex relations among nations, states and societies; the origins, consolidation, and patterns of democratic governance; political economy in relation to development processes and social policies; the intersection of international/global economy and domestic politics; the dynamics of revolutions and social movements; and alternative problematiques constructed from the point of view of real actors such as workers, women, and local communities. In all cases, as a whole, the course is designed to provide an introduction to important issues and debates that comparativists have regularly engaged in; to help you understand the assumptions behind, and differences between, particular approaches, methods, and styles of research; to examine whether current debates are spurring new or better research in a given field in light of past approaches; and to gauge whether there has been progress, fragmentation, or stagnation in the field of comparative politics as a whole.

Course not offered every year
Activity: Seminar 1 Course Unit

PSCI 615 Political Economy of Development
This seminar examines the debate in development studies arising from recognition that economic models, theories, methods, and strategies abstracted from the specific experience of western societies and cultures do not have general applicability. A broader social science approach is adopted, one which emphasizes the need to understand the social structures and cultures of the developing countries, the capabilities of weak versus strong states, and the links with the international system that influence transformative processes to which industrializing economies are subjected. The readings offer an overview of the most influential theories of development and underdevelopment that structured debate from the 1960's through the 1990's, and focus on the elements of these approaches that advance understanding of development and stagnation in several key countries, including Brazil, Mexico, India, and selected countries in East and Southeast Asia.
Taught by: Grossman
Course not offered every year
Activity: Seminar 1 Course Unit

PSCI 618 International Political Economy
Examination of the relationship between the international, political, and economic systems from a variety of theoretical perspectives that have emerged in the postwar period, including liberalism, transnationalism, statism, Marxism, and dependency.
Taught by: Mansfield
Course not offered every year
Activity: Seminar 1 Course Unit

PSCI 619 Strategic Studies Seminar
This seminar offers graduate students an introduction to the subfield of international relations labeled strategic studies (or security studies). In addition to exploring key theoretical issues, we consider their usefulness for understanding relevant events in international politics since World War II. Although the course emphasizes the distinctive features of great power strategy in the nuclear age, we also look at the continuing role of conventional forces, the strategic choices of lesser powers, and selected security problems in the post-Cold War world (e.g., proliferation, terrorism).
Taught by: Goldstein
Course not offered every year
Activity: Seminar 1 Course Unit

PSCI 631 American Political Development
This course examines the debate in development studies arising from recognition that economic models, theories, methods, and strategies abstracted from the specific experience of western societies and cultures do not have general applicability. A broader social science approach is adopted, one which emphasizes the need to understand the social structures and cultures of the developing countries, the capabilities of weak versus strong states, and the links with the international system that influence transformative processes to which industrializing economies are subjected. The readings offer an overview of the most influential theories of development and underdevelopment that structured debate from the 1960's through the 1990's, and focus on the elements of these approaches that advance understanding of development and stagnation in several key countries, including Brazil, Mexico, India, and selected countries in East and Southeast Asia.

PSCI 633 Hegemonic Analysis: Theories and Applications
An important strain within contemporary political science has been the attempt to explain how power is exercised through the manipulation or exploitation of consciousness, habits, and cultural predispositions. One of the key concepts in the study of these issues is that of "hegemony" -- the establishment of particular beliefs as commonsensical presumptions of political life. In this course that notion will be systematically explored. Of particular interest will be how authors who conduct hegemonic analysis cope with the problem of analyzing the effect of what the objects of their analysis, by definition, do not and, in some sense, cannot, think about. Illustrations of hegemonic phenomena and attempts to analyze them will be drawn from a variety of fields, such as political theory, historiography, comparative politics, American politics, rational choice theory, agent based modeling, and epistemology.

PORTUGUESE (PRTG)

PRTG 110 Elementary Portuguese I
Portuguese 110 is a first-semester introductory language course for students who have not studied Portuguese before, or who have had little exposure to the language. The course will emphasize the development of foundational reading, writing, listening and speaking abilities within a cultural context. Students will participate in paired and group activities designed to elicit meaningful and accurate exchanges of information. The course will introduce students to Portuguese and Lusophone culture through a variety of authentic materials, including texts, songs, films and other audio and video material. Classes will be conducted in Portuguese. For BA Students: Language Course
Course usually offered in fall term
Activity: Seminar
1 Course Unit

PRTG 114 Portuguese for Spanish Speakers I
Portuguese 114 is designed for students who have studied Spanish. The course begins with exposure to basic vocabulary and structures, advancing at an accelerated pace. Classroom activities will emphasize pronunciation, spoken production as well as language structures and vocabulary. Students will participate in pairs, small-groups and whole-class activities that focus on the meaningful and accurate exchange of information. The class will be conducted in Portuguese.
One-term course offered either term
Activity: Seminar
1 Course Unit

PRTG 120 Elementary Portuguese II
This class continues the development of a basic proficiency that will help reinforce the student’s abilities and confidence. A broad range of lively, high-interest readings such as newspaper and magazine articles in current events on Brazilian culture will allow the student to gain a genuine sense of current usage. A Brazilian movie is presented and discussed in groups. Daily homework assignments involve writing exercises, short compositions and group projects. For BA Students: Language Course
Course usually offered in spring term
Prerequisite: PRTG 110 or instructor’s permission
Activity: Seminar
1 Course Unit

PRTG 130 Intermediate Portuguese I
This is a third-semester intermediate course, in a four-course strand, designed for students who have taken at least two semesters of Portuguese. Classroom activities will emphasize pronunciation, spoken production, language structures and vocabulary, as students explore movies, music and other authentic media to further develop their ability to communicate in Portuguese. The course will be conducted in Portuguese.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: PRTG 120 or instructor’s permission
Activity: Seminar
1 Course Unit

PRTG 134 Portuguese for Spanish Speakers II
Portuguese 134 is an accelerated intermediate course designed for students who have taken Portuguese for Spanish Speakers I, or its equivalent. Classroom activities will emphasize the development of pronunciation and spoken production, the use of language structures and vocabulary at the intermediate level. In addition, students will explore movies, music, short stories, and other media as they further develop reading, speaking and interpretive skills in Portuguese. The course will be conducted in Portuguese.
One-term course offered either term
Prerequisite: PRTG 114
Activity: Seminar
1 Course Unit

PRTG 140 Intermediate Portuguese II
This is a forth-semester intermediate course, in a four-course strand, designed for students who have taken at least three semesters of Portuguese. Classroom activities will emphasize pronunciation, spoken production, grammar and language structures, and vocabulary at the advanced intermediate level. Students will explore movies, readings, news, music and other media as they further develop speaking, writing, reading and interpretive skills in Portuguese. The course will be conducted in Portuguese.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: PRTG 130 or instructor’s permission
Activity: Seminar
1 Course Unit

PRTG 202 Advanced Portuguese
This course is designed for students who have already taken basic and intermediate levels of Portuguese. It complements students’ knowledge of Portuguese by emphasizing the use of advanced grammatical structures and vocabulary. Classes will focus on practicing such advanced language structures by reading a diverse range of texts, including short stories by different authors of the Lusophone countries, and one novel; speaking and writing about a variety of contemporary texts; watching movies and documentaries; and listening to news, songs and other authentic audio material. The emphasis will be on language usage and culture. This course will be conducted in Portuguese.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisites: PRTG 134, PRTG 140 or instructor’s permission
Activity: Seminar
1 Course Unit

PRTG 215 Portuguese for the Professions
Portuguese for the Professions is designed for advanced-level students to develop their ability to use a wide technical vocabulary. The course will cover an array of topics in the areas of Economy, Politics, Science, Technology, Law and others as they pertain to the societies and cultures of the Lusophone countries, with particular emphasis placed on Brazil. Through readings, movies, discussions, essays and presentations, students will enhance their ability to write about and discuss these topics while employing the appropriate technical vocabulary.
One-term course offered either term
Prerequisite: Portuguese 202
Activity: Seminar
1 Course Unit
PRTG 217 Portuguese for the Professions II
Portuguese for the Professions II is a second-semester course designed to provide advanced-level students with exposure to, and practice in, a wide variety of technical vocabulary, and to develop their communicative skills on topics related to Brazil’s economic, social and historical context. Classroom activities will be based on the readings and discussions of articles, papers, the viewing of documentaries and other visual media, covering an array of topics within the proposed themes. The course will be conducted in Portuguese.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: Portuguese 202
Activity: Seminar
1 Course Unit

PRTG 221 Perspectives in Brazilian Culture
Topics vary. For current course description, please see department’s webpage: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Taught by: Mercia Flannery
Course not offered every year
Prerequisite: Portuguese 202
Activity: Seminar
1 Course Unit

PRTG 240 Topics in Brazilian Culture
Topics vary. For current course description, please see department’s webpage: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
One-term course offered either term
Activity: Seminar
1 Course Unit
PROFESSIONAL WRITING (PROW)

PROW 100 Fundamentals of Professional Writing
Using an immersive, case-based teaching style, this course introduces the basic concepts and vocabulary students build upon throughout the remainder of the certificate and draw upon in all future writing tasks. Students become equipped with a deep understanding of how to analyze any writing situation and make their writing a purposeful act of communication. Students engage with a series of authentic writing scenarios and a range of activities that provide hands-on practice and instructor coaching and feedback, as well as targeted exercises for improving grammar, mechanics, clarity, precision and persuasiveness. This collaborative, problem-based learning approach provides students with the strategies and flexibility they need to adapt to an ever-changing multimedia communication environment.
Activity: Online Course
1 Course Unit

PROW 101 Writing For Specialized Audiences: Private Sector
Using case studies and other real-world examples, this course provides an introduction to writing for audiences in the private sector, including business, technical and professional organizations. Students learn to identify the different purposes, genres and specialized audiences one encounters when writing in the private sector, as well as methods for effectively reaching and persuading these audiences. The course also provides practical simulations to aid students as they adapt their processes and styles to specialized situations, expanding their writers' repertoire while deepening their understanding of writing for a specific context. Genres to be studied include e-mail, letters (for example sales, job applications, rejection letters, responses to complaints), mission/vision/goal statements, biographical notes, organization descriptions and reports. PROW 100 is a prerequisite for students who are enrolled in the PROW certificate.
Activity: Online Course
1 Course Unit

PROW 102 Writing Studio
This is an intensive, hands-on, guided practice to writing intended for those who would like to work on their basic writing skills or on a particular type of writing—for instance, targeting practice to real-world examples from their workplace. Receiving extensive individualized attention, students draft and revise their writing as well as engage in targeted exercises to address particular areas that need improvement. Students may focus on grammar and mechanics, as well as deeper structure, content and stylistic issues. PROW 100 is a prerequisite for students who are enrolled in the PROW certificate.
Activity: Online Course
1 Course Unit
PSYCHOLOGY (PSYC)

PSYC 001 Introduction to Experimental Psychology
This course provides an introduction to the basic topics of psychology including our three major areas of distribution: the biological basis of behavior, the cognitive basis of behavior, and individual and group bases of behavior. Topics include, but are not limited to, neuropsychology, learning, cognition, development, disorder, personality, and social psychology.
For BA Students: Living World Sector
One-term course offered either term
Activity: Lecture
1 Course Unit

PSYC 070 Psychology of Food
Taught by: Rozin
Activity: Seminar
1 Course Unit
Notes: Does not count for the Psych major. To apply: https://www.curf.upenn.edu/spring-2018-bfs-seminars

PSYC 097 Decision Theory
One-term course offered either term
Activity: Lecture
1 Course Unit

PSYC 109 Introduction to Brain and Behavior
Introduction to the structure and function of the vertebrate nervous system, including the physiological bases of sensory activity, perception, drive, motor control and higher mental processes. The course is intended for students interested in the neurobiology of behavior. Familiarity with elementary physics and chemistry will be helpful.
For BA Students: Living World Sector
One-term course offered either term
Activity: Lecture
1 Course Unit

PSYC 111 Perception
How the individual acquires and is guided by knowledge about objects and events in their environment.
One-term course offered either term
Prerequisite: PSYC 001 or COGS 001
Activity: Lecture
1 Course Unit

PSYC 127 Physiology of Motivated Behaviors
This course focuses on evaluating the experiments that have sought to establish links between brain structure (the activity of specific brain circuits) and behavioral function (the control of particular motivated and emotional behaviors). Students are exposed to concepts from regulatory physiology, systems neuroscience, pharmacology, and endocrinology and read textbook as well as original source materials. The course focuses on the following behaviors: feeding, sex, fear, anxiety, the appetite for salt, and food aversion. The course also considers the neurochemical control of responses with an eye towards evaluating the development of drug treatments for: obesity, anorexia/cachexia, vomiting, sexual dysfunction, anxiety disorders, and depression.
Taught by: Grill
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1 Course Unit

PSYC 149 Cognitive Neuroscience
The study of the neural systems that underlie human perception, memory and language; and of the pathological syndromes that result from damage to these systems.
Taught by: Epstein or Mackey
One-term course offered either term
Prerequisite: PSYC 001 or COGS 001
Activity: Lecture
1 Course Unit

PSYC 151 Language and Thought
This course describes current theorizing on how the human mind achieves high-level cognitive processes such as using language, thinking, and reasoning. The course discusses issues such as whether the language ability is unique to humans, whether there is a critical period to the acquisition of a language, the nature of conceptual knowledge, how people perform deductive reasoning and induction, and how linguistic and conceptual knowledge interact.
Taught by: Trueswell
One-term course offered either term
Prerequisites: PSYC 001, COGS 001, LING 105, or PSYC 207
Activity: Lecture
1 Course Unit

PSYC 160 Personality and Individual Differences
This course provides an introduction to the psychology of personality and individual differences. Many psychology courses focus on the mind or brain; in contrast to those approaches of studying people in general, the focus in this course is on the question “How are people different from each other?” It will highlight research that take a multidimensional approach to individual differences and attempts to integrate across the biological, cognitive-experimental, and social-cultural influences on personality.
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1 Course Unit

PSYC 162 Abnormal Psychology
The concepts of normality, abnormality, and psychopathology; symptom syndromes; theory and research in psychopathology and psychotherapy.
Taught by: Ruscio
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1 Course Unit

PSYC 170 Social Psychology
An overview of theories and research across the range of social behavior from intra-individual to the group level including the effects of culture, social environment, and groups on social interaction.
For BA Students: Society Sector
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1 Course Unit
PSYC 181 Intro to Developmental Psychology
The goal of this course is to introduce both Psychology majors and non-majors majors to the field of Developmental Psychology. Developmental Psychology is a diverse field that studies the changes that occur with age and experience and how we can explain these changes. The field encompasses changes in physical growth, perceptual systems, cognitive systems, social interactions and and much more. We will study the development of perception, cognition, language, academic achievement, emotion regulation, personality, moral reasoning, and attachment. We will review theories of development and ask how these theories explain experimental findings. While the focus is on human development, when relevant, research with animals will be used as a basis for comparison.
Taught by: Brannon
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1 Course Unit

PSYC 207 Introduction to Cognitive Science
Cognitive Science is founded on the realization that many problems in the analysis of human and artificial intelligence require an interdisciplinary approach. The course is intended to introduce undergraduates from many areas to the problems and characteristic concepts of Cognitive Science, drawing on formal and empirical approaches from the parent disciplines of computer science, linguistics, neuroscience, philosophy and psychology. The topics covered include Perception, Action, Learning, Language, Knowledge Representation, and Inference, and the relations and interactions between such modules. The course shows how the different views from the parent disciplines interact, and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories, and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Taught by: Brainard/Ungar
One-term course offered either term
Also Offered As: CIS 140
Prerequisites: An Introductory Course in Computer Science, Linguistics, Neuroscience, Philosophy, or PSYC 001
Activity: Lecture
1 Course Unit

PSYC 217 Visual Neuroscience
An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.
Taught by: Stocker
Course usually offered in spring term
Prerequisite: PSYC 109
Activity: Lecture
1 Course Unit

PSYC 225 Drugs, Brain, and Mind
The course will begin with a review of basic concepts in pharmacology: routes of drug administration, drug metabolism, the dose response curve, tolerance, and sensitization. Following a brief overview of cellular foundations of neuropsychopharmacology (cell biology, synaptic and receptor function), the course will focus on various classes of drugs used to treat neuropsychiatric disorders including, among others, depression, schizophrenia, and anxiety. We will additionally consider mechanisms mediating the mind-altering, addictive and neurotoxic effects of abused drugs.
Taught by: Kane
Course usually offered in spring term
Prerequisite: PSYC 109 or BIOL 109
Activity: Lecture
1 Course Unit

PSYC 231 Evolution of Behavior: Animal Behavior
The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territoriality and communication.
One-term course offered either term
Prerequisite: PSYC 001 or BIOL 102 or COGS 001
Activity: Lecture
1 Course Unit

PSYC 235 Psychology of Language
This course describes the nature of human language, how it is used to speak and comprehend, and how it is learned. The course raises and discusses issues such as whether language ability is innate and unique to humans, whether there is a critical period for the acquisition of a language, and how linguistic and conceptual knowledge interact.
Taught by: Dahan
One-term course offered either term
Prerequisite: PSYC 151 or LING 001
Activity: Lecture
1 Course Unit

PSYC 239 Neuroendocrinology
This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates.
Taught by: Flanagan-Cato
One-term course offered either term
Prerequisite: PSYC 109
Activity: Lecture
1 Course Unit
**PSYC 247 Neuroscience and Society**
Cognitive, social, and affective neuroscience have made tremendous progress in the last two decades. As this progress continues, neuroscience is becoming increasingly relevant to all of the real-world endeavors that require understanding, predicting, and changing human behavior. In this course, we will examine the ways in which neuroscience is being applied in law, criminal justice, national defense, education, economics, business, and other sectors of society. For each application area, we will briefly review those aspects of neuroscience that are most relevant, and then study the application in more detail.

Taught by: Gerstein
One-term course offered either term
Prerequisite: PSYC 109 or PSYC 149
Activity: Lecture
1 Course Unit

**PSYC 253 Judgment and Decisions**
Thinking, judgment, and personal and societal decision making, with emphasis on fallacies and biases.

One-term course offered either term
Also Offered As: PPE 153
Prerequisite: One semester of statistics or microeconomics
Activity: Lecture
1 Course Unit

**PSYC 265 Behavioral Economics and Psychology**
This course will introduce you to the study of choice, and will examine in detail what we know about how people make choices, and how we can influence these choices. It will utilize insights from psychology and economics, and will apply these insights to domains including consumer choice, risky decision making, and prosocial decision making.

Taught by: Bhatia
One-term course offered either term
Also Offered As: PPE 313
Prerequisites: Microeconomics and PSYC 001
Activity: Lecture
1 Course Unit

**PSYC 266 Introduction to Positive Psychology**
An introduction to the study of positive emotions, positive character traits, and positive institutions. The positive emotions consist of emotions about the past (e.g., serenity, satisfaction, pride), about the future (e.g., hope, optimism, faith), and emotions about the present (pleasure and gratification). The distinction among the pleasant life, the good life, and the meaningful life is drawn. The positive traits include wisdom, courage, humanity, justice, temperance, and spirituality, and the classification of these virtues is explored. The positive institutions are exemplified by extended families, free press, humane leadership, and representative government.

Course usually offered in spring term
Prerequisite: PSYC 001
Activity: Lecture
1 Course Unit

**PSYC 272 Evolutionary Psychology**
This course introduces the field of evolutionary psychology, which is an approach to the study of human behavior. We will consider the theoretical underpinnings of the field, including evolutionary theory, development, kinship, and adaptations for social life, and will sample some of the recent empirical contributions to this growing area.

Taught by: Kurzban
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1 Course Unit

**PSYC 275 Introduction to Political Psychology**
This course will explore psychological approaches to understanding political beliefs, attitudes, and actions at the levels of both individual citizens and national leaders. It will also explore the possibility that psychological science itself is not immune to the political debates swirling around it. Specific topics will include: the workings of belief systems (and their power to shape what we “see”), cognitive biases (and their power to cause miscalculations), sacred values and their role in stabilizing belief systems and social interaction, personality and ideology (the linkages between the personal and the political), and clashing conceptions of morality and distributive and corrective justice (striking variations among people in what they consider to be fair). We shall also explore some topics that have sparked controversy in the psychological research literature and that tend to polarize opinion along political lines, including work on intelligence and unconscious bias.

Taught by: Tetlock
One-term course offered either term
Also Offered As: PPE 275
Prerequisite: PSYC 001 or COGS 001
Activity: Lecture
1 Course Unit

Notes: NOTE: Students who are more interested in business-related issues may want Wharton 276x, which is a modified version of this course specifically for Wharton undergraduates.

**PSYC 280 Developmental Psychology: Social and Emotional Development**
This course will cover theory and research related to the development of attachment, emotional regulation, peer and intimate relationships, personality, moral reasoning, and emotional and behavioral disorders. The course will emphasize the degree to which family, peer, and community contexts influence development from infancy into adulthood. Efforts will be made to integrate biological and environmental accounts of development across the lifespan.

One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1 Course Unit

**PSYC 281 Cognitive Development**
What infants and young children come to know about the world, and how they learn it. Topics will include changes in children’s thinking, perceptual development, language acquisition, and current theories of cognitive development.

Taught by: Swingley
One-term course offered either term
Prerequisite: PSYC 001 or COGS 001
Activity: Lecture
1 Course Unit
PSYC 311 Research Experience in Perception
In this research course, students will begin by first replicating earlier experiments to measure human visual memory capacity. After several class discussions to discuss ideas, each student will design and conduct their own experiment to further investigate visual and/or familiarity memory.
Taught by: Rust
One-term course offered either term
Prerequisites: One semester of statistics, and one of the following: PSYC 111, 149, 151, 217, or permission of instructor.
Activity: Seminar
1 Course Unit
Notes: Dept permission required. Undergraduates only.

PSYC 351 Research Experience in Cognitive Psychology
Students will work in small groups to develop, empirically test, and report on a research question in the field of cognitive psychology. Through this process, students will learn how to conduct and report a psychological study, including the appropriate statistical tests. Class discussions will help students craft their projects, and in-class presentations will provide the opportunity to develop and refine presentation skills. Psychology majors only. Class size is limited to 16 students.
Taught by: Weisberg
One-term course offered either term
Prerequisites: One semester of statistics.
Activity: Seminar
1 Course Unit
Notes: Dept permission required. Psych majors only.

PSYC 362 Research Experience in Abnormal Psychology
PSYC 362-301 is a two-semester course starting in the Fall. Class size limited to 8 students.
Taught by: Dr. Melissa Hunt
Prerequisites: PSYC 162 and one semester of statistics. Psych majors only. Instructor permission required.
Activity: Seminar
1 Course Unit
Notes: PSYC 362-301 is a two-semester course starting in the Fall.

PSYC 370 Research Experience in Social Psychology
In this course students will work in small groups to develop, empirically test, and report on a research question within one of the domains of social psychology. Depending on the nature of the project, students will employ survey, experimental, or observational research methodology, and learn how to conduct and report the appropriate statistical tests with Excel and/or SPSS (typically, correlations, t-tests, ANOVA and ANCOVA, multiple regression, factor analysis, and measures of reliability). Class discussions will help students craft their projects, and in-class presentations will provide the opportunity to develop and refine presentation skills. Psychology majors only. Class size is limited to 12 students.
Taught by: Royzman
Prerequisites: PSYC 170 AND one semester of statistics.
Activity: Seminar
1 Course Unit
Notes: Dept permission required. Psychology majors only.

PSYC 399 Individual Empirical Research
Individual research involving data collection. Students do independent empirical work under the supervision of a faculty member, leading to a written paper. Normally taken in the junior or senior year.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Dept permission required.

PSYC 400 Senior Honors Seminar in Psychology
Open to senior honors candidates in psychology. A two-semester sequence supporting the preparation of an honors thesis in psychology. Students will present their work in progress and develop skills in written and oral communication of scientific ideas.
Taught by: Thompson-Schill
Prerequisite: acceptance into the Honors Program in Psychology
Activity: Seminar
0.5 Course Units
Notes: Dept permission required.

PSYC 407 Behavioral Genetics
This course will cover basic principles of human and animal behavior genetics, including the genetics of normal variation as well as extreme phenotypes represented by behavioral, psychiatric and neurologic disorders. The course will focus on methods necessary to critically evaluate research findings on normal and abnormal human behavior. Animal models will also be reviewed.
Taught by: Price
One-term course offered either term
Prerequisite: Basic statistics or permission of instructor
Activity: Seminar or permission of instructor
1 Course Unit

PSYC 421 Neurobiology of Learning and Memory
This advanced course focuses on the current state of our knowledge about neurobiological basis of learning and memory. Students will explore the molecular and cellular basis of learning invertebrates and vertebrates from a behavioral and neural perspective.
Taught by: Gerstein
One-term course offered either term
Also Offered As: NGG 575
Activity: Seminar
1 Course Unit
PSYC 429 Big Data, Memory, and the Human Brain
Advances in brain recording methods over the last decade have generated vastly more brain data than had been collected by neuroscientists during the previous century. To understand the human brain, scientists must now use computational methods that exploit the power of these huge data sets. This course will introduce you to the use of big data analytics in the study of human memory and its neural basis. Through hands-on programming projects, we will analyze multi-terabyte data sets both to replicate existing phenomena and to make new discoveries. Although the course has no formal neuroscience or psychology prerequisites it does require CIS121 and Python experience. Because of the heavy computing resources required to perform the assignments enrollment is limited to 15 students and there is a required course application. http://psychology.sas.upenn.edu/undergraduate/forms
Taught by: Kahana
Prerequisite: CIS121 & Python experience
Activity: Seminar
1 Course Unit
Notes: Instructor permission required. Application form can be found here: http://psychology.sas.upenn.edu/undergraduate/forms

PSYC 431 Seminar in Animal Cognition
The aim of this course will be to provide advanced undergraduates with a detailed review of a number of research areas in behavioral ecology. One-term course offered either term
Prerequisite: PSYC 231/Biol 231/ BIBB 231
Activity: Seminar
1 Course Unit

PSYC 435 Psycholinguistics
Taught by: Dahan
Prerequisites: PSYC 151, or PSYC 235, or LING 001, or permission of instructor.
Activity: Seminar
1 Course Unit

PSYC 439 Neuroendocrinology Seminar
This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.
Taught by: Flanagan-Cato
One-term course offered either term
Prerequisite: PSYC 109
Activity: Seminar
1 Course Unit

PSYC 440 Sleep and Sleep Disorder
Activity: Lecture
1 Course Unit

PSYC 447 Seminar in Neuroscience
Neurology
Taught by: Gottfried
One-term course offered either term
Prerequisite: PSYC 109
Activity: Seminar
1 Course Unit
Notes: Undergraduates only.

PSYC 449 Seminar in Cognitive Neuroscience
Topics vary each semester. PSYC 449 (Gerstein) Neuroscience for Policymakers: This seminar will provide an overview of the neuroscience behind some of the most relevant issues in public health policy today. We will examine the primary scientific literature as well as delve into lay articles about the science and policy surrounding each issue. /PSYC 449 (Epstein) Consciousness: Consciousness is our subjective experience of the world, including both perceptions and felt internal states. In this seminar, we will explore the the burgeoning scientific literature on the neural basis of consciousness. We will focus in particular on three topics: What are the neural systems underlying visual awareness? What are the mechanisms that control the progression of conscious contents to create our stream of thought? What is the relationship between consciousness and behavior? /PSYC 449 (Jenkins) The Social Brain: This seminar examines the cognitive and neural mechanisms that enable humans to predict and understand people’s behavior. We will be propelled throughout the course by fundamental questions about the human social brain. For example, why are humans so social? Does the human brain have specialized processes for social thought? Consideration of these questions will involve advanced treatment of a range of topics.
Prerequisite: PSYC 149
Activity: Seminar
1 Course Unit
Notes: PSYC 449-601 is an LPS course. PSYC 449-301,-302 and -303 are Psych Dept. courses.

PSYC 453 Seminar in Decision Making: Judgment and Decisions
This seminar will be a series of engaging discussions on a variety of topics that are important to the field of behavioral decision theory. We'll cover issues such as constructed preferences, loss aversion, nudging, emotions, well-being, other-oriented decisions, intuitive predictions, unethical choices, and more. Students will be asked to present papers and generate ideas for potential research projects each week. Grades will be based on class contributions and a paper that is either a literature review or a careful and detailed proposal for a research project.
Taught by: Mellers
One-term course offered either term
Prerequisite: PSYC 253 or PSYC 265
Activity: Seminar
1 Course Unit
Notes: Undergraduates only.

PSYC 460 Body Image: Etiology, Psychopathology and Treatment
Course not offered every year
Activity: Seminar
1 Course Unit

PSYC 462 Seminar in Abnormal Psychology
Topics vary each semester.
Prerequisite: PSYC 162
Activity: Seminar
1 Course Unit
Notes: Undergraduates only. 462-601 is an LPS course.

PSYC 470 Seminar in Social Psychology
Topics vary each semester.
One-term course offered either term
Prerequisite: PSYC 170
Activity: Seminar
1 Course Unit
Notes: Undergraduates only.
PSYC 472 Behavioral Biology of Women
A course that explores female behavior focusing on evolutionary, physiological, and biosocial aspects of women’s lives from puberty, through reproductive processes such as pregnancy, birth, lactation to menopause and old age. Examples are drawn from traditional and modern societies and data from nonhuman primates are also considered. Taught by: Apicella
One-term course offered either term
Prerequisites: PSYC 272 or permission of instructor.
Activity: Seminar
1 Course Unit

PSYC 473 Neuroeconomics
This course will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. A particular focus will be on how evidence about the neural processes associated with choices might be used to constrain economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, reinforcement learning, strategic interactions and games, and social preferences. Taught by: Kable
One-term course offered either term
Also Offered As: NGG 706
Prerequisites: PSYC 149, 253, or 265
Activity: Seminar
1 Course Unit

PSYC 474 PSYC 474-301: Being Human; PSYC 474-601: Cultural Psychology
Taught by: Platt (PSYC 474-301); Abiola (PSYC 474-601)
Prerequisite: PSYC 001
Activity: Seminar
1 Course Unit
Notes: Undergraduates only. PSYC 474-601 is an LPS course.

PSYC 477 Seminar in Political Psychology: Terrorism, Radicalization, Martyrdom and Revolution
Seminar will focus on rare events that change history: terrorism; revolution, and martyrdom (not to be confused with suicide bombing). Applying theory and research from social psychology, evolutionary psychology and behavioral economics we will try to understand these phenomena from the inside out: from individual psychology of terrorists, revolutionaries and martyrs to mass psychology of large publics moved by these individuals. Taught by: Moskalenko
One-term course offered either term
Prerequisite: PSYC 170
Activity: Seminar
1 Course Unit
Notes: Undergraduates only.

PSYC 478 CAPSTONE: SOCIAL PSYCHOLOGY
Though almost half a century old, Milgram's 1961-1962 studies of "destructive obedience" continue to puzzle, fascinate, and alarm. In this seminar, we will take an in-depth look at these famous studies (along with the more recent replications) and explore their various psychological, historical, and philosophical ramifications. This course has a number of intellectual goals that go beyond simply rarifying one’s understanding of a particular content area (important and generative as it may be). One such a goal is to enable you to think critically (though not disparagingly) about other people's research and theoretical claims that ensue from it, all with the hope that you can then apply the self-same critical acumen to your own future work. Second, this course will offer a hospitable environment for developing (and exchanging) creative ideas of your own. Your work on your individual reaction papers and on the term paper in particular will be a key element in achieving this goal. Taught by: Royzman
Also Offered As: PPE 477
Prerequisite: PSYC 170
Activity: Seminar
1 Course Unit

PSYC 480 Seminar in Developmental Psychology
PSYC 480-301 (Brannon): The field of educational neuroscience is an emerging field with the goal of joining knowledge gained from the disciplines of neuroscience, cognitive science, developmental psychology, and education. This interdisciplinary course will focus on how scientific exploration of the mind and brain can inform educational practices. PSYC 480-302 (Connolly): This advanced discussion-based seminar will focus on approaches to success in domains of modern life such as social living and academia. The first portion of this seminar will be a psychology book club where we read various books written by psychology researchers. This will contribute to an ongoing discussion about scientific communication, and the presentation of psychological research to various audiences. From there, students will focus on a specific area of interest, and write a literature review based on contemporary empirical research critiquing their given topic. Students must understand the workload for this seminar requires intensive reading culminating in a large written assignment. Taught by: Weisberg, Brannon, or Connolly
Prerequisite: PSYC 001
Activity: Seminar
1 Course Unit
Notes: Undergraduates only.
**PSYC 482 Inside the Criminal Mind**
This seminar explores the development of antisocial behavior including psychopathy, aggression, and violence. At its core, this course examines what increases the risk that children will develop behavior problems and go onto more chronic and extreme forms of violence and psychopathic personality that results in harm to others. We will examine psychiatric diagnoses associated with these antisocial behaviors in both childhood and adulthood and how they link to other relevant forms of psychopathology (e.g., substance use, ADHD). We will explore research elucidating the neural correlates of these behaviors, potential genetic mechanisms underlying these behaviors, and the environments that increase risk for these behaviors. Thus, there will be a focus on neurobiology and genetics approaches to psychiatric outcomes, as well as a social science approach to understanding these harmful behaviors, all while considering development across time. We will also consider ethical and moral implications of this research.

Taught by: Waller
Prerequisites: PSYC 162 and PSYC 181
Activity: Seminar
1 Course Unit
Notes: Undergraduates only.

**PSYC 492 Social Cognition**
Activity: Seminar
1 Course Unit

**PSYC 511 Visual Tasks, Models, Processing, Receptors & Stimuli**
Activity: Lecture
1 Course Unit

**PSYC 521 Judgment & Decisions**
Activity: Seminar
1 Course Unit

**PSYC 525 Controversies in Psychology and Neuroscience**
In this seminar, we will discuss several recent controversies in psychology and neuroscience, for example: "p-hacking," replicability, methodological terrorists, neural activity in dead salmon and failures to control the false positive rate in neuroimaging, "voodoo correlations" and double dipping, whether Tic-Tacs can improve self-control and whether reading "old" makes you walk slower. Our goal is not just to engender ennui and/or schadenfreude, but also to ask what we can learn from these discussions about how to do science in the most rigorous, reproducible manner possible.
Activity: Seminar
1 Course Unit

**PSYC 539 Theoretical and Computational Neuroscience**
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.
Taught by: Balasubramanian
Course not offered every year
Also Offered As: NGG 594
Activity: Lecture
1 Course Unit

**PSYC 547 Foundations of Social, Cognitive, and Affective Neuroscience**
Activity: Lecture
1 Course Unit

**PSYC 549 Neuroscience and Society**
Activity: Lecture
1 Course Unit

**PSYC 557 Neuroscience, Ethics & Law**
How does the neuroscience of human decision-making and emotion impact our understanding of ethics and law? What can neuroscience tell us about why people find actions moral or immoral, worthy of praise or punishment? What, if anything, can it tell us normatively about morality, agency and responsibility? And what other insights might neuroscience offer regarding other morally and legally relevant phenomena such as stereotyping and bias, the causes of antisocial behavior and the detection of deception?
Activity: Seminar
1 Course Unit

**PSYC 579 Exp Methods Perception**
Activity: Lecture
1 Course Unit

**PSYC 600 Proseminar in General Psychology**
Choice of half or full course units each sem. covering a range of subjects and approaches in academic psychology. One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Dept permission required

**PSYC 609 Systems and Integrative Neuroscience**
Course usually offered in fall term
Also Offered As: NGG 573
Activity: Lecture
1 Course Unit
Notes: Fulfills the Brain requirement

**PSYC 611 Statistics for Psychologists**
Course usually offered in fall term
Activity: Lecture
1 Course Unit

**PSYC 612 Introduction to Nonparametric Methods and Log-linear Models**
Course usually offered in spring term
Activity: Lecture
1 Course Unit
PSYC 671 Violence: A Clinical Neuroscience Approach
Developed for both Psychology and Criminology graduate students, this interdisciplinary course outlines a clinical neuroscience approach to understanding violence in which the tools of neuroscience—neuroanatomy, neurophysiology, neurocognition, neuroendocrinology, neuropharmacology, molecular and behavioral genetics—are used to help inform the etiology and treatment of violence. Clinical components include psychopathy, proactive and reactive aggression, homicide, domestic violence, conduct disorder, oppositional defiant disorder, antisocial personality disorder, crime, and delinquency as well as their comorbid conditions (schizophrenia, drug abuse, hyperactivity). The interaction between social, psychological, and neurobiological processes in predisposing to violence will be highlighted, together with neurodevelopmental perspectives on violence focusing on prospective longitudinal and brain imaging research. Key implications for the criminal justice system, neuroethics, forensics psychology, and intervention will also be outlined.
Taught by: Raine
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Graduate students only.

PSYC 698 Laboratory Rotation.
Lab rotation for psychology grad students.
One-term course offered either term
Activity: Lecture
3 Course Units
Notes: Dept permission required. Open only to psychology dept graduate students.

PSYC 699 Individual Research for First-Year Graduate Students
Two terms. student must enter first term.
Activity: Independent Study
3 Course Units

PSYC 703 Special Topics in Psychology
One-term course offered either term
Activity: Seminar
1 Course Unit

PSYC 704 Research Methods and Statistical Procedures for Social and Clinical Sciences
This course has three primary objectives: 1) developing criteria and strategies for strong inference of causal relationships in social and clinical psychology research; 2) examining the array of research designs employed in the social/clinical sciences together with the threats to internal and external validity associated with each; 3) learning and applying statistical analytical methods appropriate for questions in the social/clinical sciences. The course will employ a seminar format and a project-oriented approach to learning. Students will be encouraged to utilize examples from their own research programs in applying the design and analysis concepts covered in the course.
One-term course offered either term
Activity: Seminar
1 Course Unit

PSYC 705 Neuroethics
Neuroscience is increasingly affecting all aspects of human life, from the relatively familiar medical applications in neurology and psychiatry, to new applications in education, business, law, and the military. Today's neuroscience graduate students will be among the scientists, citizens, and policymakers who will lead society through the maze of decisions regarding the appropriate uses of neuroscience. This course provides a survey of the key ethical, legal, and social issues at the intersection of neuroscience and society. It will include a combination of traditional classroom lectures, discussion and debates, as well as an online component coordinated with a course at Wisconsin's Neuroscience and Public Policy graduate program.
Taught by: Farah
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Dept permission required.

PSYC 709 Special Topics in Clinical Psychology
In this seminar we will survey substantive, methodological and statistical issues that arise in the planning, conduct, and interpretation of empirical inquiries about the effects of psychotherapies. Challenges presented in efforts to disseminate evidence-based clinical practices will also be addressed.
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Graduate students only.

PSYC 711 Basic Problems in Developmental II
One-term course offered either term
Activity: Seminar
1 Course Unit

PSYC 712 Regression & Anova II
One-term course offered either term
Activity: Seminar
1 Course Unit

PSYC 745 Special Topics in Cognitive Neuroscience
One-term course offered either term
Activity: Seminar
1 Course Unit

PSYC 810 Psychodiagnostic Testing
Course usually offered in fall term
Activity: Seminar
1 Course Unit

PSYC 811 Psychodiagnostic Interviewing
Course usually offered in fall term
Activity: Seminar
1 Course Unit

PSYC 815 Introductory Practicum
Course usually offered in spring term
Activity: Seminar
1 Course Unit

PSYC 820 Advanced Practicum
Intensive studies of single individuals including interviews, tests, and experiments; also clinical experience at appropriate community agencies.
One-term course offered either term
Activity: Seminar
1 Course Unit
PSYC 999 Individual Study and Research
One-term course offered either term
Activity: Independent Study
0.5 Course Units
PUBLIC HEALTH STUDIES (PUBH)

PUBH 500 Foundations of Public Health
This course will provide a topical overview of the inter-disciplinary field of public health and provides grounding in the public health paradigm. Through a series of lectures and recitation sessions, students will learn about the history of public health and the core public health sciences including behavioral and social sciences, biostatistics, epidemiology, environmental health, and policy and management. Other topics include ethics in public health, context analyses (specifically sociographic mapping and urban health), community participation in research, public health promotion, and the prevention of chronic and infectious diseases. Course usually offered in fall term
Activity: Lecture
1 Course Unit

PUBH 501 Introduction to Biostatistics
Introduction to Biostatistics
This course is designed to provide a broad overview of biostatistics methods as well as applications commonly used for public health research. Topics covered include measurement and categorizing variables, use and misuse of descriptive statistics, testing hypotheses, and applying commonly used statistical tests. An emphasis will be placed on the practical application of data to address public health issues, rather than theoretical and mathematical development. Students will learn how to choose and apply statistical tools to data sources, when and how statistical tools can be used to analyze data, and how to interpret others' quantitative studies. Students will gain experience using online datasets and the STATA statistical software package.
Taught by: Shofer, Hanlon
One-term course offered either term
Activity: Lecture
1 Course Unit

PUBH 502 Introduction to the Principles and Methods of Epidemiology
This course will provide an introduction to the principles and methods of epidemiology as a research science. The course introduces the student designs applied to human populations, including randomized trials and observational studies (cohort, case-control, cross-sectional, ecological). Homework and in-class assignments focus on building skills in locating, assessing, and synthesizing evidence from the epidemiologic literature, with an emphasis on critical thinking, causal inference, and understanding bias and confounding.
Taught by: Smith, Cannuscio
One-term course offered either term
Activity: Lecture
1 Course Unit

PUBH 503 Environmental and Occupational Health
This course will provide a broad introduction to the scientific basis of occupational and environmental health. Content will address issues in the ambient, occupational and global environments as well as the tools, concepts and methods used in environmental health.
Taught by: Howarth, Pepino, Klinger Kutcher
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PUBH 504 Public Health Theories & Frameworks
This course provides students with a solid foundation in behavioral and social science theory, research, and interventions as they pertain to public health. Content will provide exposure to a broad range of theories, including the theoretical foundations of social science applications for help-seeking, gender, race, ethnicity and social class. These theories will be discussed using examples of their applications to numerous public health problems including HIV/AIDS, violence, cancer, cardiovascular diseases, obesity, and diabetes.
Taught by: Ruggieri, Fleisher
One-term course offered either term
Activity: Lecture
1 Course Unit

PUBH 505 Public Health Policy and Administration
This course is an introduction to health policy and management. It examines both the historical and current state of health policy in America and integrates these concepts within the context of public health practice. We will examine key concepts in understanding US health care organization, financing and delivery, our current political and economic debate on health care reform, examining the role and management issues of public health departments, and case studies in public health policy and management.
Taught by: Noonan, Klusaritz
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PUBH 506 Methods for Public Health Practice
This is a course designed around modules whose objective is to provide students with greater familiarity in a range of methods essential to public health practice. The course will be framed around an indepth capacity and needs assessment and community public health planning in Philadelphia. Topics covered will include data collection and evaluation, both quantitative and qualitative, uses of informatics in public health, analysis of vital statistics, working with communities, methods for developing and facilitating solutions to public health problems, including concepts of advocacy and policy formation and development of interventions. The course demonstrates how core public health competency areas in data analysis and communication provide foundations for applications for both practice and practice-based research.
Taught by: Solomon, Hall, Leary
One-term course offered either term
Activity: Lecture
1 Course Unit

PUBH 507 Public Health Law & Ethics
What is best - or, at least, seems best -- for the public's health is not always consistent with society's view of what is legal, ethical, or good policy. This course introduces key concepts of legal, ethical, and policy analysis and attempts to demonstrate with current examples how these forces empower, guide, and constrain public health decision-making and actions. The course will combine lecture, Socratic dialogue, and group discussion in an informal setting. The course will feature guest lectures by several distinguished experts from Penn and from other universities.
Taught by: Anderson
Course usually offered in fall term
Activity: Lecture
1 Course Unit
PUBH 508 Capstone Seminar I
The Capstone is a culminating experience required for graduation in the Master of Public Health Program. In two Capstone seminars, students will have an opportunity to synthesize the knowledge and public health competencies they have developed through their coursework. Capstone students will apply their knowledge and skills to public health problems in a chosen area of interest. They will engage their peers in scholarly discussion, drawing from relevant scientific literature and public health experience in order to begin to develop a common grounding and identity as public health professionals. The Capstone incorporates two semester-long seminars and a research project. Over the course of the Castone, students will develop, propose, revise, implement, and present their projects. As their projects successfully come to fruition they will also advise their junior colleagues still in the proposal stage.
Taught by: Frasso, Anderson, Levy, Grisso
Two terms. student may enter either term.
Activity: Lecture
1 Course Unit

PUBH 514 Experiential Learning in Environmental and Occupational Health
This course will provide an introduction to GIS in public health research and practice. Through a series of lectures and labs students will explore theories linking health and the environment, spatial analysis and spatial epidemiology, and applications of GIS-related data collection and analysis.
Taught by: Wiebe
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PUBH 517 Geography and Health
This course presents an overview of issues in global health from the viewpoint of many different disciplines, with emphasis on economically less developed countries. Subjects include: millennium goals; measures of disease burden; population projections and control; environmental health and safe water; demography of disease and mortality; zoonotic infectious diseases; AIDS and HIV prevention; vaccine utilization and impact; eradication of polio virus; chronic diseases; tobacco-associated disease and its control; nutritional challenges; social determinants of global health; harm reduction and behavioral modifications; women's reproductive rights; health economics and cost-effective interventions; health manpower and capacity development; bioethical issues in a global context.
Taught by: McLaughlin
Course usually offered in fall term
Prerequisites: Undergraduates must have completed HSOC-010-401.
Activity: Lecture
1 Course Unit

PUBH 519 Issues in Global Health
This course will provide an introduction to GIS in public health research and practice. Through a series of lectures and labs students will explore theories linking health and the environment, spatial analysis and spatial epidemiology, and applications of GIS-related data collection and analysis.
Taught by: Wiebe
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PUBH 521 Program Evaluation in Public Health
There are many public health programs developed to promote change. The question most funders have for public health programs is: what outcomes do you expect? This course is designed to review the principles of identifying short term, mid term and long term outcomes and methods of measurement. Students learn about the application of data collection skills to all phases of developing a public health program or service innovation, from needs assessment to analysis of finding to implementation of changes based on results. Students learn to appreciate how these skills can be used as practical tools for identifying public health problems, program development, program implementation including taking a reflective practice approach, ensuring equity and fairness in program delivery (i.e. combating disparities), and generally promoting public health through effective and efficient programmatic efforts.
Taught by: Karpyn
Course offered spring; odd-numbered years
Activity: Lecture
1 Course Unit

PUBH 525 Developing Effective Public Health Programs Using a Humans Rights Based Approach
This course will engage students in discussion of how a human rights approach, informed by international human rights declarations and covenants as well as gender theory, can more comprehensively inform the development of a variety of public health programs. Specifically, the class will discuss how health policies, programs and practices can impact on human rights (e.g. mandatory reporting of certain communicable diseases, quarantine, accessibility of services, etc.); how violations of human rights affect health (e.g. torture, discrimination, etc.) and how health and human rights are ultimately inextricably linked and programming for public health must use a framework that ensures a balance of interests between the two disciplines.
Taught by: Voet
Course usually offered summer term only
Activity: Lecture
1 Course Unit

PUBH 526 Anthropology and Public Health
Taught by: Barg
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: In this course, we examine three types of relationships between anthropology and public health. Anthropology and public health will examine complementary and competing concepts fundamental to each discipline and ways that these concepts make it essential and difficult for the disciplines to work together. Anthropology on public health takes a critical look at assumptions in public health praxis. Anthropology in public health will focus on ways that anthropology theory and methods inform the practice of public health. Using these three approaches, we will examine topics in public health such as mental health, health promotion/disease prevention communication, cancer disparities, reproductive health, violence and infectious disease. Students will learn and apply anthropologic research methods to these problems.
PUBH 527 Media, Advocacy and Public Health
This course will examine the ways in which the media can be used as a tool to improve health. It will also investigate the ways in which the media has had an negative impact on health behaviors in the population. Looking at specific topics like tobacco, food and nutrition, and HIV/AIDS, we will explore the intersection of media, advocacy, advertising and entertainment and the impact of media broadly on health behavior and society. The course will also provide students the opportunity to practice strategically working with the media to address health problems.
Taught by: TBA
Course not offered every year
Activity: Seminar
1 Course Unit

PUBH 528 Class, Inequality and Health: Ethnographic Perspectives
Taught by: Bourgois
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: This seminar examines anthropological approaches to the concept of class and social inequality through a close reading of a dozen ethnographies that deal with a broad definition of health, illness, and social suffering. Readings span many of the theoretical, political, sub-disciplinary and area studies debates in anthropology and the larger fields of poverty, social inequality, international development, violence studies, science studies, governmentality, and social policy interventions over the past century.

PUBH 529 Topics in Family Planning
This course will survey a range of key current and historic topics in family planning nationally and internationally. Policy, epidemiology, clinical practice, advocacy, and service delivery topics will be covered through presentations and conversations with leaders in the field of reproductive health. The course will provide students with a broad general introduction to family planning which is appropriate for those interested in either public health or clinical aspects of the field. For students who wish to pursue a focused career in this area this course is a necessary introduction, while students who will be working in related areas of public health will have a broad general understanding of family planning. Students will participate through an interactive seminar style and will prepare an oral presentation on a relevant topic of their choice.
Taught by: Bennett, Schreiber
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PUBH 530 Environmental Toxicology: Risk Assessment and Health Effects
This course presents general principals of toxicology and the disposition of toxins in the body. Case studies of the effects of environmental and occupational toxins on individuals will be analyzed. This course is designed for students who desire a strong foundation in toxicological concepts and principals and provides an overview of major toxins in our environment and their association with human health.
Taught by: Liu
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Undergrads need Permission

PUBH 531 Public Health Nutrition
Activity: Lecture
1 Course Unit

PUBH 532 Public Health Nutrition
Notes: Undergrads need Permission

PUBH 533 Public Health Nutrition
Activity: Lecture
1 Course Unit

PUBH 534 Public Health Nutrition
Activity: Lecture
1 Course Unit

PUBH 535 Urban Poverty and Violence
Taught by: Bourgois
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: This seminar examines anthropological approaches to poverty and violence through a close reading of eight ethnographies. Readings span many of the theoretical, political, sub-disciplinary and area studies debates in anthropology and the larger fields of poverty, social inequality, international development, and violence studies over the past century. My hope is to bring the subjects of urban poverty, violence, social suffering and a critique of neoliberal governmentality into the center of the disciplines of anthropology and public health specifically, and the social sciences, humanities and medicine more broadly. In the seminar we will be bringing students from anthropology, and other social science and humanities disciplines in dialogue with students in public health, science studies, and clinical medicine.

PUBH 537 Evidenced-Based Health Policy
Achieving Evidence-Based Health Policy examines how research can influence health policy. Individual sessions will be devoted to topics such as the NurseFamily Partnership program, health insurance, smoking, and early childhood mental health. Sessions will examine how selection of research methods may influence results; the dialectical relationship between research and policy; and the role of various stakeholders (the media, foundations, government, advocates) in both research and policy debates. Didactic topical research presentations will be followed by interactive discussions examining how research finds translates (or, as the case may be, do not translate) into policy. Guest speakers will include research and policy experts from the public and private sectors. Prerequisites are Fundamentals of Health Policy (offered through the Master's of Science in Health Policy); PUBH 505 Public Health Administration and Policy; or permission of instructor. Enrollment limited to 12.
Taught by: Gerdes, Zlotnik
Course usually offered in spring term
Prerequisites: HPR 606 and PUBH 505 or permission of instructor
Activity: Lecture
1 Course Unit

PUBH 538 Qualitative Methods in Health
The purpose of this course is to expose students to a variety of qualititative approaches/methodologies that may be used in health services/policy research. In didactics we will discuss the pros and cons of various methods, explaining how the method is actually implemented (with multiple experts presenting their approaches), and pair the presentation with a broader discussion in which we compare and contrast health oriented articles in which the method was used.
Taught by: Barg, Shea
Course usually offered summer term only
Also Offered As: HPR 503
Activity: Lecture
1 Course Unit

PUBH 539 Designing Interventions To Promote Health and Reduce Health Disparities
Activity: Seminar
1 Course Unit

PUBH 540 Goglobal: Ghana
Activity: Lecture
1 Course Unit
PUBH 541 Social Epi: Social Epidemiology
Activity: Lecture
1 Course Unit

PUBH 545 Contemporary Issues in Maternal Child Health
Activity: Lecture
1 Course Unit

PUBH 551 Global Health Policy and Delivery
This participatory interdisciplinary seminar course examines contemporary issues in global health policy and delivery. The overall organizing framework for the class is the social determinants of health. The class will consider evidence that inequalities in education, income, and occupation influence health status. Students will develop skills in policy analysis, policy brief development, and policy impact monitoring. The public policy process will be explored using a variety of contemporary global health case studies which focus on content areas such as maternal health, HIV policy, refugee health, and global healthcare delivery. Finally, we will examine the global health workforce and its impact of widespread global migration of health professionals on receiving and sending countries.
Taught by: McLaughlin and Voet
Course usually offered in spring term
Activity: Lecture
1 Course Unit

PUBH 553 Science & Politics of Food
Activity: Lecture
1 Course Unit

PUBH 554 Impact Evaluation of Global Health Programs
Activity: Lecture
1 Course Unit

PUBH 558 Health & Disease For Public Health Practitioners
Activity: Lecture
1 Course Unit

PUBH 555 Health Communication in the Digital Age
Activity: Lecture
1 Course Unit

PUBH 556 Health Communication in the Digital Age
Activity: Lecture
1 Course Unit

PUBH 557 Adolescent & Young Adult Health/Health Policy
Course usually offered in spring term
Activity: Lecture
1 Course Unit

PUBH 558 Intimate Violence: Intimate Violence
Activity: Lecture
1 Course Unit

PUBH 559 Implementing the Aca-Obamacare: Multi-Stakeholder Perspectives
Activity: Lecture
1 Course Unit

PUBH 588 Advanced Leadership Skills in Community Health
Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in healthcare advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discuss ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods.
Taught by: Margo; Klusaritz; Lipman
Course usually offered in spring term
Also Offered As: HPR 588
Prerequisite: Enrollment in a Masters or Doctoral program
Activity: Lecture
1 Course Unit
Notes: Undergraduates with permission of the instructor

PUBH 589 The Public Health Challenges of Alzheimer's Disease and Cognitive Aging
Activity: Lecture
1 Course Unit

Taught by: Nelson, Grisso
One-term course offered either term
Corequisites: For BGS Public Health Certificate students only.
Activity: Seminar
1 Course Unit

PUBH 598 Immersion Experience in Global Public Health
Taught by: Nguyen
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: This independent educational experience seeks to provide motivated students with the opportunity to expand their knowledge in global health through focused experiential learning at international sites that provide direct public health services. Such learning will allow students to gain real-world experience concerning the core competencies of public health (health policy, behavior/social sciences, environmental health, epidemiology, or biostatistics).

PUBH 599 Independent Study in Public Health
One-term course offered either term
Activity: Independent Study
1 Course Unit

PUBH 602 Epi Methods Dis/Prev: Intermediate Epi and Statistical Methods For Ph Practice
Activity: Lecture
1 Course Unit

PUBH 603 Adv Research Methods: Advanced Research Methods For Scholarship
Activity: Lecture
1 Course Unit
PUBH 604 Qualitative Research in Social Sciences
Course usually offered in fall term
Activity: Lecture

PUNJABI (PUNJ)

PUNJ 404 Beginning Punjabi Part I
This course emphasizes speaking and reading skills in Punjabi. Upon completion of this course, students should be able to interact meaningfully and in a socially acceptable manner in a variety of simple situations involving everyday conversational topics. Further, students should be able to read and understand the main idea and most details of simple connected texts. This course will utilize authentic printed, audio, and video materials and will provide opportunities for natural communication both within and outside the classroom.
For BA Students: Language Course
Taught by: Gahunia
Course usually offered in fall term
Activity: Lecture
1 Course Unit

PUNJ 405 Beginning Punjabi Part II
This course emphasizes speaking and reading skills in Punjabi. Upon completion of this course, students should be able to interact meaningfully and in a socially acceptable manner in a variety of simple situations involving everyday conversational topics. Further, students should be able to read and understand the main idea and most details of simple connected texts. This course will utilize authentic printed, audio, and video materials and will provide opportunities for natural communication both within and outside the classroom.
For BA Students: Language Course
Taught by: Gahunia
Course usually offered in spring term
Activity: Seminar
1 Course Unit

PUNJ 424 Intermediate Punjabi Part I
This course is designed as a continuation of Beginning Punjabi, but can also be taken by anyone who can demonstrate a similar level in proficiency of the language. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar review and comprehension exercises. A special emphasis will also be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of the spoken and written language.
For BA Students: Language Course
Taught by: Gahunia
Two terms. student must enter first term.
Activity: Lecture
1 Course Unit

PUNJ 425 Intermediate Punjabi Part II
This course is designed as a continuation of Beginning Punjabi, but can also be taken by anyone who can demonstrate a similar level in proficiency of the language. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar review and comprehension exercises. A special emphasis will also be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of the spoken and written language.
For BA Students: Language Course
Taught by: Gahunia
Course usually offered in spring term
Prerequisites: Intermediate Punjabi Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit

PUNJ 434 Advanced Punjabi
The objective of the course is to improve proficiency in speaking, listening, reading and writing. Fall semester: Readings in Punjabi Literature - This course addresses the individual needs of learners. This is a one semester course. The focus of the course will be to study the interpretation of written and oral materials on social, political and contemporary cultural topics from modern literature, literary criticism, poetry and drama. Weekly written compositions and oral presentations will be assigned. Grading will be based on this. Spring semester: Punjabi Popular Culture - This course focuses on different aspects of popular Punjabi culture as they are represented in media - television, internet, magazines, newspapers, film, and music. This course aims at making the best use of class participation to improve all four language skills. This is also a one semester course.
For BA Students: Advanced Language Course
Taught by: Gahunia
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: This course is offered through the Penn Language Center.
QUECHUA (QUEC)

QUEC 110 Elementary Quechua I
For BA Students: Language Course
Taught by: Mendoza-Mori, Americo
One-term course offered either term
Activity: Seminar
1 Course Unit

QUEC 120 Elementary Quechua II
For BA Students: Language Course
One-term course offered either term
Activity: Seminar
1 Course Unit

QUEC 130 Intermediate Quechua I
For BA Students: Language Course
Course usually offered in fall term
Activity: Seminar
1 Course Unit
REAL 204 Real Estate Law
This course examines the fundamentals of real estate finance and development from a legal and managerial perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. One-term course offered either term
Activity: Lecture
1 Course Unit

REAL 205 Global Real Estate: Risk, Politics and Culture
This is an introductory course to global real estate markets, with a focus on income-producing real estate assets. Globally, estimates suggest the value of investable real estate assets in the world exceeds $60 trillion. We will discuss the basics of valuation and risk management, emphasizing concepts that are salient in the global context, including political risk, currency risk, property rights and culture. The course will cover markets outside the United States, except for one special topic on international investors in the United States. We will focus more on the qualitative aspects of real estate investment analysis and less on quantitative aspects. As firms expand their ventures across borders, there is a growing emphasis on the ability to assess and manage risk in a global business environment. Many of these decisions have implications on real estate assets. In this class, we will discuss the real estate business decisions of global firms, such as Blackstone, Hilton, AirBNB, WeWork, Prologis, Walmart and Amazon. This is a full semester course, open to undergraduates and MBA’s.
Taught by: Maisy Wong
Course usually offered in fall term
Prerequisites: There is no prerequisite for the course. No prior real estate experience is needed and no prior financial modelling experience is needed.
Activity: Lecture
1 Course Unit
Notes: Lecture with discussion required.

REAL 208 Housing Markets
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 250 (undergrads) or MGEC 611 and 612 for MBA’s. Non-Wharton students should have taken the equivalent course in the College.
Taught by: GYOURKO
Course usually offered in spring term
Prerequisites: Managerial Economics (BEPP 250) or equivalent.
Activity: Lecture
1 Course Unit
Notes: Lecture with discussion required.

REAL 209 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two midterms, (depending on instructor).
Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong
One-term course offered either term
Prerequisite: FNCE 100
Activity: Lecture
1 Course Unit

REAL 215 Urban Real Estate Economics
Urban Real Estate Economics uses economic concepts to analyze real estate markets, values and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and an optional second exam.
Taught by: Wachter
One-term course offered either term
Prerequisite: FNCE 100 & FNCE 101
Activity: Lecture
1 Course Unit
REAL 230 Urban Fiscal Policy
The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent financial crises, local services and taxes as important determinants of real estate prices, the infrastructure crises, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.
Taught by: Inman
Course usually offered in fall term
Prerequisites: FNCE 101 and ECON 001
Activity: Lecture
1 Course Unit

REAL 236 International Housing Comparisons
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Taught by: Wachter
Course usually offered in spring term
Prerequisites: FNCE 101 MONETARY ECON & GLOBAL ECO, ECON 010 INTRO TO ECON FOR BUS
Activity: Lecture
1 Course Unit

REAL 240 Advanced Real Estate Investment and Analysis
This course is designed for majors in Real Estate, but is also open to finance-oriented students who wish a deeper analysis of real estate investment and investment analysis issues than that offered in REAL 209. The class will contain a mixture of lectures, guest speakers and case discussions. Academic research is paired with recent industry analysis of key issues in order to marry sound theory and empirical results with current events and practices. Several classes will include lectures outlining what economics and finance tell us about a number of topics. Generally, these will be followed by guest lectures from industry professionals who will focus on a specific application of the principles introduced in the lectures.
Taught by: Sinai
Course usually offered in spring term
Prerequisite: REAL 209 or FNCE 209
Activity: Lecture
1 Course Unit

REAL 321 Real Estate Development
REAL 821
One-term course offered either term
Activity: Lecture
1 Course Unit

REAL 390 International Real Estate Comparisons
As a truly non-U.S. focused course, we explore the world of cross-border real estate development, with a focus on fast growing emerging market economies. Topics will emphasize the importance of strategy and implementation in cross-border real estate investment and include: the rationale, opportunities and risks of international real estate investing; the macro factors that influence the performance of real estate markets across countries; market specific factors that impact RE investment performance (property rights, taxes, transparency, planning procedures); the qualitative aspects of identifying and achieving successful projects; and the growing market for international RE securities and strategies for portfolio management. Classes will combine a lecture on specific aspects of global cross-border RE in the first half of the class and international case presentations in the second half. Cases will be presented by leading executives in charge of major international RE projects or funds. Cases have been selected to cover different types of RE development-residential, office, retail, hospitality and logistics- important emerging market countries/continents (East/South Asia, Latin America, Sub-Saharan Africa, the Middle East) and different development and investment strategies.
Course usually offered in fall term
Prerequisite: REAL 209 OR FNCE 209
Activity: Seminar
0.5 Course Units
Notes: This class is offered in the second half of the semester.

REAL 396 Real Estate Entrepreneurship
What makes a successful entrepreneur in the real estate industry? This half semester mini-course exposes undergraduates and MBA students to the broad entrepreneurial aspects of creating and executing real estate investments. The course consists of lectures by the professor, case discussions and guest lectures by leading entrepreneurs. Lectures and discussions will emphasize real estate entrepreneurship, leadership and challenges often encountered in creating successful real estate investments rather than development processes. Cases will be used to illustrate investment decision making and financial evaluations. Short written responses to questions raised in each case will be assigned. Class members are expected to engage the speakers with questions and discussion as well as explain their views on cases. Class participation and writings will each represent 50% of the grade.
One-term course offered either term
Activity: Lecture
0.5 Course Units
Notes: Offered in the first half of the semester.

REAL 399 Independent Study
All independent studies must be arranged and approved by a Real Estate department faculty member.
One-term course offered either term
Activity: Independent Study
1 Course Unit
REAL 705 Global Real Estate: Risk, Politics and Culture
This is an introductory course to global real estate markets, with a focus on income-producing real estate assets. Globally, estimates suggest the value of investable real estate assets in the world exceeds $60 trillion. We will discuss the basics of valuation and risk management, emphasizing concepts that are salient in the global context, including political risk, currency risk, property rights, and culture. The course will cover markets outside the United States, except for one special topic on international investors in the United States. We will focus more on the qualitative aspects of real estate investment analysis and less on the quantitative aspects. As firms expand their ventures across borders, there is a growing emphasis on the ability to assess and manage risk in a global business environment. Many of these decisions have implications on real estate assets. In this class, we will discuss the real estate business decisions of global firms, such as Blackstone, Hilton, AirBNB, WeWork, Prologis, Walmart and Amazon. This is a full semester course, open to undergraduates and MBA’s.
Taught by: Maisy Wong
Course usually offered in fall term
Prerequisites: There is no pre-requisite for the course. No prior real estate experience is needed and no prior financial modelling experience is needed.
Activity: Lecture
1 Course Unit
Notes: Lecture with discussion required.

REAL 708 Housing Markets
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy and analysis applied to a current housing markets-related issue. This course presumres knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 250 (undergrads) or MGEC 611 and 612 for MBA’s. Non-Wharton students should have taken the equivalent course in the College.
Taught by: YOURKO
Course usually offered in spring term
Prerequisites: Microeconomics for Managers (MGEC 611) and Microeconomics for Managers (Advanced) (MGEC 612) or equivalent.
Activity: Lecture
1 Course Unit
Notes: Lecture with discussion required.

REAL 721 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two mid-terms, (depending on instructor). Cross-listed with FNCE 721.
Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong
One-term course offered either term
Prerequisite: FNCE 611 or FNCE 612
Activity: Lecture
1 Course Unit
Notes: Lecture with discussion required.

REAL 723 Introduction to Real Estate
The goal of this class is to help students become informed consumers of real estate advice. The class material breaks down into four major sections: 1) The financial risk and return of property level real estate investments. Be able to interpret, understand and evaluate a real estate property investment pro forma. 2) The legal landscape for investing in real estate and using legal structures to manage risk. 3) The economics of commercial real estate markets. Understanding the forces that will determine the value and income-producing potential of a real estate investment. 4) Important real estate issues of the day.
Taught by: Sinai
One-term course offered either term
Activity: Lecture
0.5 Course Units
Notes: WEMBA COURSE

REAL 724 Urban Real Estate Economics
Urban Real Estate Economics uses economic concepts to analyze real estate markets, values, and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and optional second exam.
Taught by: Wachter
One-term course offered either term
Prerequisites: MGEC 621, Managerial Economics
Activity: Lecture
1 Course Unit
Notes: Lecture.
REAL 730 Urban Fiscal Policy
The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crises, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.
Taught by: Inman
Course usually offered in fall term
Prerequisites: MGEC 621, FNCE 611
Activity: Lecture
1 Course Unit
Notes: Lecture, discussion.

REAL 804 Real Estate Law
This course examines the fundamentals of real estate finance and development from a legal perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. Format: Although some of the material is presented by lecture, the instructor expects considerable class participation. Cross-listed with LGST 804.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Although some of the material is presented by lecture, the instructor expects considerable class participation.

REAL 821 Real Estate Development
This course evaluates "ground-up" development as well as re-hab, re-development, and acquisition investments. We examine raw and developed land and the similarities and differences of traditional real estate product types including office, R & D, retail, warehouses, single family and multi-family residential, mixed use, and land as well as "specialty" uses like golf courses, assisted living, and fractional share ownership. Emphasis is on concise analysis and decision making. We discuss the development process with topics including market analysis, site acquisition, due diligence, zoning, entitlements, approvals, site planning, building design, construction, financing, leasing, and ongoing management and disposition. Special topics like workouts and running a development company are also discussed. Course lessons apply to all markets but the class discusses U.S. markets only. Throughout the course, we focus on risk management and leadership issues. Numerous guest lecturers who are leaders in the real estate industry participate in the learning process. Format: predominately case analysis and discussion, some lectures, project visits.
One-term course offered either term
Prerequisites: REAL 721 OR FNCE 721. The prerequisite is STRICTLY enforced for this class unless it is undersubscribed.
Activity: Lecture
1 Course Unit
Notes: Predominately case analysis, discussion, some lectures, and project visits.

REAL 836 International Housing Comparisons
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on development of securitization markets and addresses current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and potential market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Taught by: Wachter
Course usually offered in spring term
Prerequisites: FNCE 613 Macroeconomics and the Global Economic Environment
Activity: Lecture
1 Course Unit

REAL 840 Advanced Real Estate Investment and Analysis
This course, is designed for majors in Real Estate, but is also open to finance-oriented students who wish a deeper analysis of real estate investment and investment analysis issues than that offered in REAL/ FNCE 721. The class will contain a mixture of lectures, guest speakers and case discussions. Academic research is paired with recent industry analysis of key issues in order to marry sound theory and empirical results with current events and practices. Several classes will include lectures outlining what economics and finance tell us about a number of topics. Generally, these will be followed by guest lectures from industry professionals who will focus on a specific application of the principles introduced in the lectures. Format: Lecture, industry speakers.
Taught by: Sinai
Course usually offered in spring term
Prerequisite: REAL 721 OR FNCE 721
Activity: Lecture
1 Course Unit
REAL 890 International Real Estate Comparisons
As a truly non-U.S. focused course, we explore the world of cross-border real estate development, with a focus on fast growing emerging market economies. Topics will emphasize the importance of strategy and implementation in cross-border real estate investment and include: the rationale, opportunities and risks of international real estate investing; the macro factors that influence the performance of real estate markets across countries; market specific factors that impact RE investment performance (property rights, taxes, transparency, planning procedures); the qualitative aspects of identifying and achieving successful projects; and the growing market for international RE securities and strategies for portfolio management. Classes will combine a lecture on specific aspects of global cross-border RE in the first half of the class and international case presentations in the second half. Cases will be presented by leading executives in charge of major international RE projects or funds. Cases have been selected to cover different types of RE development-residential, office, retail, hospitality and logistics- important emerging market countries/continents (East/South Asia, Latin America, Sub-Saharan Africa, the Middle East) and different development and investment strategies. Course usually offered in fall term  
Prerequisites: REAL 721 OR FNCE 721 or comparable knowledge/work experience.  
Activity: Seminar  
0.5 Course Units  
Notes: This class is offered in the second half of the semester.

REAL 891 Real Estate Entrepreneurship
What makes a successful entrepreneur in the real estate industry? This half semester mini-course exposes undergraduates and MBA students to the broad entrepreneurial aspects of creating and executing real estate investments. The course consists of lectures by the professor, case discussions and guest lectures by leading entrepreneurs. Lectures and discussions will emphasize real estate entrepreneurship, leadership and challenges often encountered in creating successful real estate investments rather than development processes. Cases will be used to illustrate investment decision-making and financial evaluations. Short written responses to questions raised in each case will be assigned. Class members are expected to engage the speakers with questions and discussion as well as explain their views on cases. Class participation and writings will each represent 50% of the grade. 
Course usually offered in fall term  
Activity: Lecture

1 Course Unit

REAL 945 Urban Real Estate Economics
Urban Real Estate Economics uses economic concepts to analyze real estate markets, values, and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and optional second exam. All PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements. 
Taught by: WACHTER  
One-term course offered either term  
Prerequisite: MGEC 601  
Activity: Lecture  
1 Course Unit

REAL 946 Advanced Topics in Urban Economics
This course addresses advanced topics in urban and real estate economics. The course will mix theory and empirics and will cover a broad range of topics including the modeling and estimation of agglomeration economies, land use and urban costs, transportation in cities, urban growth, migration between cities etc. The classes will mix formal presentations made by the instructor and student-led discussions of recent academic papers. In addition to presentations, students will be expected to complete a series of assignments including a short original research paper. 
Taught by: FERREIRA,DURANTON  
One-term course offered either term  
Prerequisites: The course assumes that students have familiarity with standard first year econometrics and microeconomics.  
Activity: Lecture  
1 Course Unit  
Notes: All PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements.

REAL 947 Advanced Real Estate and Urban Economics
This course covers fundamental and cutting-edge topics in urban economics and real estate as well as the most important econometric issues that arise in the estimation of urban economics and real estate models. The first part of the course focuses on the application of modern econometric methods to analyze empirical questions in the broad urban economics field, which includes topics from public economics and local finances, such as household sorting and valuation of public goods. This part of the course is especially concerned about dealing with non-experimental data, and also provides a guide for tools that are useful for applied research. The second and third parts of the course examine the economic modeling and intuition of a range of topics in urban economics and real estate, such as spacial equilibrium, supply and demand of space, housing prices and cycles. In addition, special emphasis is given to how the understanding of economic theory and institutions can help any empirical analysis. At the end of the course students should have a firm grasp of theory and econometric tools that lead to convincing empirical applications. All Ph.D. students will be expected to complete a research paper in addition to the successful completion of the course examination requirements. 
Taught by: Ferreira  
One-term course offered either term  
Activity: Lecture  
1 Course Unit
REAL 962 Applied Economics Seminar
The goal of this course is to help doctoral students develop critical thinking skills through both seminar participation and writing of referee reports. To this end students will attend the Wharton Applied Economics each Wednesday at noon seminar when it meets; prepare two written referee reports on WAE papers per semester, due before the seminar is presented. After attending the seminar and the ensuing discussion of the paper, students will prepare follow-up evaluations of their referee report reports, due one week after the seminar.
Taught by: Fernando Ferreira
Two terms. student may enter either term.
Prerequisites: None.
Activity: Seminar

REG 510 Introduction to Clinical and Translational Research
This introductory course lays the foundation for understanding practical aspects of conducting clinical research in an academic environment. The course is divided into two modules: Module 1: Research Methods & Protocol Development and Module 2: Regulatory Environment for Clinical Trials. The first module introduces clinical research, clinical protocols, study designs and biostatistics that underlie such studies. The second module covers ethical considerations in clinical research, study execution and oversight, and the regulatory environment for clinical research. Upon completion, students should have a strong foundation in the fundamentals of clinical research and should be able to apply contemporary research tools to clinically relevant areas of investigation. Taught by: Emma Meagher, MD
Course usually offered in fall term
Also Offered As: MTR 510
Activity: Lecture
1 Course Unit
Notes: This course requires permission to register. Please contact Anna Greene (acgreene@upenn.edu) to register.

REG 610 Fundamentals of FDA Regulation
This introductory course provides an overview of Regulatory Affairs in relation to three key areas of development: Drugs, Biologics, and Medical Devices. The course will look at the rules governing prescription and over-the-counter drugs as well as the changes introduced by the influence of genetic engineering and biological product development. Throughout the course, practical issues facing regulatory specialists as they work with the FDA and other international regulatory bodies to secure and keep product approval will be addressed. Taught by: Monica Ferrante
Course usually offered summer term only
Prerequisites: Permission needed to register. Contact Anna Greene (acgreene@upenn.edu) to register.
Activity: Lecture
1 Course Unit

REG 611 Clinical Study Management
This course will focus on the practical aspects of conducting clinical research in an academic environment. Upon course completion, students will be able to apply scientific principles of research to the implementation and management of both investigator-initiated and industry-sponsored clinical research studies. Students will be guided through the operational aspects and regulatory processes for the three stages of study management: pre study start-up, ongoing study management and study close out. Students will learn strategies for navigating the complex regulatory/operational clinical research environment and for successful protocol development and approval, subject recruitment, data management and IRB clinical practices guiding research in humans is a critical concept that will be integrated throughout each of the lectures. Taught by: Emma A. Meagher, MD
Activity: Lecture
1 Course Unit
Notes: Permission needed to register. Contact Anna Greene (acgreene@upenn.edu) to register.

REG 612 Introduction to Drug Development
This introductory course lays the foundation for conducting pharmaceutical research in many ways. It begins with a brief review of the history of drug development and explains the phases of drug development in detail. The decision making process, drug development milestones and compound progression metrics are defined and explained with examples. At the conclusion of this course, students should have a working knowledge of the drug development process, understand the regulatory basis by which new chemical entities are evaluated and ultimately approved, and appreciate the time and expense of drug development. Taught by: Jeffrey S. Barrett, PhD, FCP
Course usually offered in spring term
Prerequisites: Undergraduates and graduate students from other departments are welcome. Please contact acgreene@upenn.edu to request permission to register.
Activity: Lecture
1 Course Unit

REG 614 Biopharmaceutical Product Development, Manufacturing and Regulatory Affairs
Biopharmaceutical protein products have been successfully used to treat a number of diseases and currently represent a large segment of the product pipeline in most major pharmaceutical companies. More than half of the current top 20 blockbuster drugs are biopharmaceuticals. Drugs like Activase, Humira, and Avastin have revolutionized the drug industry in treating the unmet medical needs of many patients. With innovation at the heart of the biopharmaceutical industry, this course is aimed at developing the student's understanding of the application of basic research in molecular biology and genetics to the development of novel drugs for treating diseases. The course is designed to provide an overview of biopharmaceutical protein drug development and manufacturing processes with an emphasis on regulatory affairs activities. The class has been developed and is taught by a former VP of biopharmaceutical product development with over 30 years of experience in biotechnology and the biopharmaceutical industry. The course director will provide insights into the unique challenges and opportunities facing the biopharmaceutical industry and how they relate to regulatory affairs. Subject area experts from industry will also participate as guest lecturers. Taught by: Marcia Federici, PhD
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Permission required to register. Please contact Anna Greene (acgreene@upenn.edu) to request a permit.

REG 615 Post-Approval Maintenance of Drugs, Biologics, and Devices.
The FDA regulates prescription drugs, biologics and medical devices for utilization in the United States. The approval of a marketing application is a major accomplishment; however, it comes with significant responsibilities for a sponsor including numerous reporting requirements and activities to maintain a license as well as a need for lifecycle maintenance activities to stay competitive. The purpose of this course is to provide an overview of post-approval activities required for drugs, biologics and devices. Taught by: Ajay Parashar, BPharm, MS, MDD, RAC
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Contact Anna Greene (acgreene@upenn.edu) to receive a permit for registration.
REG 621 Cell and Gene Therapy
This course will provide students with a general overview of translational research in the area of gene and cell therapy. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area.
Taught by: Michael C. Milone, MD, PhD
Course usually offered in spring term
Prerequisites: At least one course in immunology.
Activity: Lecture
1 Course Unit

REG 622 New Trends in Medicine and Vaccine Discovery
Modern drug discovery has evolved to include human genetic diagnosis and various biological approaches which has enabled progress in a variety of fields, including rare diseases, immuno-oncology, precision medicine, and biomarkers. The goal of this course is for students to understand newer treatment modalities and approaches beyond one size fits all small molecule drugs, as well as the technologies that empower them. Students will learn regulatory processes that govern medicine discovery and development and also consider business and societal aspects of medical progress. Students will be able to apply concepts directly to work in the healthcare industry. Students will be taught by experts in the field internal and external to Penn.
Taught by: Claudine Bruck, PhD
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Permission required to register. Please contact Anna Greene (acgreene@upenn.edu) to request a permit.
RELIGIOUS STUDIES (RELS)

RELS 002 Religions of the West
This course surveys some of the core beliefs and practices within Judaism, Christianity, and Islam. To do so, we will focus on history and memory, exploring how key figures and formative events from the past have been made present, from generation to generation, through scripture, ritual, liturgy, and remembrance. Special attention will be given to points of interaction between Jews, Christians, and Muslims, as well as to the impact of their intertwined histories on the formation and development of Western cultures. Fulfills History & Tradition Sector.
For BA Students: History and Tradition Sector
Taught by: Reed
One-term course offered either term
Activity: Lecture
1 Course Unit

RELS 003 Religion and Literature
A consideration of how great works of literature from different cultural traditions have reclaimed and reinterpreted compelling religious themes. The focus this semester will be on themes of creation, especially the creation of human beings, from ancient myths of different cultures to modern science fiction. This course fulfills the General Requirement in Sector 3, Arts and Letters.
For BA Students: Arts and Letters Sector
Taught by: Matter
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Theme of the course will change from term to term. See syllabus for more info.

RELS 004 Art and Religion
What is religious art and what makes art religious? This course will survey a wide variety of artistic expressions from a number of religious traditions which draw on spiritual themes, are inspired by religious experiences or texts, and which serve an important role in religious practice and belief. Some of the themes which this course will explore are: visualization and action within the cosmos, passion and religious ecstasy, the material culture of personal devotion, icons and iconoclasm, depictions of the miraculous, and the relationship between word and image. Objects and images from Christianity, Islam, Judaism, and Buddhism and will be explored along with examples from other traditions.
Taught by: Muravchick
One-term course offered either term
Activity: Lecture
1 Course Unit

RELS 005 Gender, Sexuality, & Religion
What does it mean to be a Muslim, Hindu, Jewish, Christian, or spiritual woman or man? How important are the gender differences in deciding social roles, ritual activities, and spiritual vocations? How does gender intersect with nationality, language, and politics? This course tackles all of these questions, showing how gender - it's definition and the way it is taught and performed - is central to understanding religion. In this course we will learn about women's and men's rituals, social roles, and mythologies in specific religious traditions. We will also look at the central significance of gender to the field of religious studies generally, with particular attention to non-binary genders. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of women in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will read religion through a variety of feminist and queer theory lenses - exploring the key characteristics of diverse feminist analyses of religion, as well as limits of specific feminist approaches.
Taught by: Robb
One-term course offered either term
Activity: Lecture
1 Course Unit

RELS 010 Religion in Public Life
This seminar is an introduction to several aspects of the hotly debated relation between religion and public life in America. In the first half of the course we will study two books by law professors, one Jewish and the other Christian. Their debate will introduce us to the legal and historical background, and to the continuing challenges of church-state separation in America. The second half of the course will examine the claim that we now live in a "new religious America," one in which the increasing presence of Hindus, Buddhists and Muslims has created a new pluralism and a new set of challenges. We will then consider the argument of one historian that diversity and difference have characterized religious groups in America since at least the 19th century, and that this has resulted in a number of paradoxical social situations. Finally, we will close with a brief look at the claim that there exists in America a "civil religion," one that unites all citizens despite their other religious differences.

RELS 013 Gods, Ghosts, and Monsters
This course seeks to be a broad introduction. It introduces students to the diversity of doctrines held and practices performed, and art produced about "the fantastic" from earliest times to the present. The fantastic (the uncanny or supernatural) is a fundamental category in the scholarly study of religion, art, anthropology, and literature. This course will focus both theoretical approaches to studying supernatural beings from a Religious Studies perspective while drawing examples from Buddhist, Shinto, Christian, Hindu, Jain, Zoroastrian, Egyptian, Central Asian, Native American, and Afro-Caribbean sources from earliest examples to the present including mural, image, manuscript, film, codex, and even comic books. It will also introduce students to related humanistic categories of study: material and visual culture, theology, cosmology, shamanism, transcendentalism, soteriology, eschatology, phantasmagoria, spiritualism, mysticism, theophany, and the historical power of rumor. It will serve as a gateway course into the study of Religion among numerous Asian, and East Asian Studies, as well as Visual Culture and Film Studies. It will include guest lectures from professors from several departments, as well as an extensive hands-on use of the collections of the Penn Museum of Archaeology and Anthropology and the manuscripts held in the Schoenberg Collection of Van Pelt Library. It aims to not only introduce students to major approaches, and terms in the study of religion and the supernatural, but inspire them to take more advanced courses by Ilya Vinitsky, Liliane Weissberg, Projit Mukharji, Talya Fishman, Annette Reed, David Barnes, David Spafford, Frank Chance, Michael Meister, Paul Goldin, Renata Holod, Paul Rozin, among several others.

RELS 014 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focussing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death and destruction. The course will cover not only the better known cultures from the area, such as Egypt and Mesopotamia, but also some lesser known traditions, such as those of the Hurrians, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example the relationship between religion and magic, and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals and liturgies.

RELS 024 Archaeology and the Bible
Archaeology and the Bible is a chronological survey of the long span of human occupation in the Land of the Bible, known by the names of the modern nation-states and political entities that occupy the area, as well as various short hands such as Levant and Syria-Palestine, from ca. 10,000 BCE, when humans first began to farm and herd animals through the time of the Divided Monarchy of Israel and Judah. While archaeology has moved beyond a primary concern with illuminating the Bible, NELC155 will investigate the broader import of archaeological discoveries for our understanding of ancient Israel and its neighbors.

RELS 027 Great Books of Judaism
The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision, bar/bat mitzva and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will be provided.

RELS 030 Gurus, Prophets & Aliens: Understanding New Religious Movements
This course offers a thematic introduction to the history of New Religious Movements (NRM) from the mid-19th century to the present day. Often labeled as "cults" by the state and established religious institutions, new religions offer modern believers alternative spiritual and ideological solutions to age-old problems. In this class, students will be introduced to the teachings and practices of prominent NRMs in North America, Europe, Asia, and Australia, from wide-spread movements such as Scientology, Mormonism, and the Unification Church to lesser known groups such as the Church of the Almighty God, Neo-Paganism, and Raelism. We will explore the emergence of the anti-cult campaign in the second half of the 20th century, the relationship between apocalyptic sects such as the Peoples Temple and the Branch Davidians and political and social protest, and the role of Asian religions such as the Maharishi Mahesh Yogi's Transcendental Meditation in the development of New Age religiosity. In addition, we will learn how new religious movements such as Wicca and the Children of God helped reshape gender roles and changed mainstream views about sexuality, and how developments in mass media and popular culture contributed to the creation of new groups such as the Star Wars inspired Temple of the Jedi Order (Jediism), the Church of the Latter-Day Dude (Dudeism), as well as UFO religions such as Heaven's Gate. Throughout the semester, students will be exposed to a wide variety of primary and secondary sources, from academic articles and scholarly essays to documentaries, feature films, and TV shows. No previous knowledge in Religious Studies is required.

1 Course Unit

RELS 031 Religion and Violence
Perhaps nothing haunts modern politics more than religious violence. Killing sprees done in the name of God reveal the limits of political power. What space is left for the rule of law when appeals to dogma and the divine supersede reason? The causes and nature of divinely motivated violence are so mystifying that they are a constant topic of debate among academics, political parties, and news commentators. What really motivates religious violence? Is it just economic of class grievances in disguise? Are all religions prone to violence? Are some religions more violent than others? Or, are religions only violent when they go awry, denying their true messages? And does religion need to be quarantined and privatized, to keep us all safe? In this course, we’ll probe the dividing line separating religion from politics in an effort to better understand the causes and nature of religious violence. How do we know the difference between religious violence and political violence? What makes religion violent, and what makes violence religious?
Activity: Seminar
1 Course Unit

RELS 033 Modern Catholic Christianity
At the turn of the twentieth century, Sigmund Freud hypothesized that religion was a dead duck. Many other thinkers of "modernity" have agreed with his thesis; and yet, over a century later, it is clear that religion is still a forceful presence in human culture. One religious tradition that has survived to the surprise (and even consternation) of some critics, is Roman Catholic Christianity. This Freshman Seminar will look closely at the Catholic Church in the twenty-first century, to explore the ways in which Catholicism has (and has not) adapted to modernity. We will begin with an investigation into the history of Roman Catholicism; how it is defined, and how it developed in relation to politics and culture in the Roman Empire, medieval and early modern Europe, and in the Americas; but most of the semester will focus on the Catholic Church of the past 200 years, especially as it appears in the United States. We will consider the relationship of Catholicism to many aspects of modern life, including science and technology, political systems and leaders, aesthetics (visual arts, music, literature and film), and understandings of gender and sexuality. There will be a mid-term examination and a final paper of 6 to 10 pages.

RELS 069 Love Sex and Death
This course focuses on important constants of human life as they are grappled with across religious traditions. Drawing on data across a range of religious traditions (such as Christianity, Hinduism, Judaism, Islam, Buddhism and Mesoamerican Religion), we will explore topics such as sexual identity, politics, religion and the individual in contemporary life; and eroticism, sex and love as they are reflected in religious literature, art and history. Divine love and religious devotion will be examined in relation to acts of violence, including human sacrifice and self-sacrifice in the past as well as the present. Other important questions considered in this course include: how does the body function as the locus in which religion is enacted? What is the conflict between our agency over our bodies and socioreligious claims over individual autonomy? Is violence an integral part of religion? What are religious understandings of the relationship between our agency over our bodies and socioreligious claims over individual autonomy? Is violence an integral part of religion? What are religious understandings of the relationship between love and sex? What does it mean for human beings to love God?

RELS 101 Religion and Evolution
This class will explore encounters between religion and evolutionary sciences, from the 19th century to the present. We will consider the history of evolutionary biology's entanglements with faith, from the initial explosion of interest in the wake of Darwin's Origin of the Species in 1859 to contemporary debates about creationism and intelligent design here in Pennsylvania in the 21st century. In the first half of the class, we will look at how writers, philosophers, and theologians from around the world and a range of religious traditions have assessed the evolution-religion relationship — some seeing conflict, others concord. In the second half, we will consider evolutionary approaches to the origins of religion, from late-19th century accounts to modern cognitive science and group selection theories. Topics covered will include scientific racism, sociobiology and the evolutionary origins of morality, primate religion, and the relationship between science, religion, and politics.

RELS 102 Sacred Stuff: Religious Bodies, Places, and Objects
Does religion start with what's in our heads? Or are religious commitments made, shaped and strengthened by the people, places, and things around us? This course will explore how religion happens in the material world. We'll start with classical and contemporary theories on the relationship of religion to stuff. We'll then consider examples of how religion is animated not just by texts, but through interactions with objects, spaces, bodies, monuments, color, design, architecture, and film. We'll ask how these material expressions of religion move beyond private faith and connect religion to politics and identity.

RELS 108 Introduction to Folklore
The purpose of this course is to introduce you to the subjects of the discipline of Folklore, their occurrence in social life, and the scholarly analysis of their use in culture. As a discipline, folklore explores the manifestations of expressive forms in both traditional & modern societies, in small-scale groups where people interface with each face-to-face, and in large-scale, often industrial societies, in which the themes, symbols, and forms that permeate traditional life, occupy new positions, or occur in different occasions in everyday life. For some of you, the distinction will not be helpful. In traditional societies, and within all groups that define themselves ethnically, professionally, or culturally, within modern heterogenous societies in the Americas, Africa, Asia, Europe and Australia, folklore plays a more prominent role in society than it appears to play in literate cultures on the same continents. Consequently, the study of folklore and the analysis of its forms are appropriate in traditional as well as modern societies, and in any society that is in a transitional phase.

RELS 109 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft-- including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property--lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

1 Course Unit
Overview:

1. **God & Money (RELS 111)**
The relationship between how people understand god(s) and money has always been a complicated one. Many religions have a relationship to money, whether in offerings, asking for blessings, or to build and create places of worship. God and Money explores the relationship between how religions view money, capitalism, and religion, and how movements like the prosperity gospel have expanded and complicated the interplay between religion, money and capitalism around the world.

   1 Course Unit

2. **Religious Ethics and Modern Society (RELS 112)**
Religious beliefs of Malcolm X and MLK formed their social action during the Civil Rights for African Americans. This seminar will explore the religious religious biographies of each leader, how religion shaped their public and private personas, and the transformative and transgressive role that religion played in the history of the Civil Rights movement in the United States and abroad. Students in this course will leave with a clearer understanding of religious beliefs of Christianity, The Nation of Islam, and Islam, as well as religiously based social activism. Other course emphases include the public and private roles of religion within the context of the shaping of ideas of freedom, democracy, and equality.

REL 130 How to Read the Bible
While the Bible may be the most read text in the world, it is not clear that anyone understands what it actually means. Secular scholars read the Bible as they would any other ancient document, trying to understand who wrote it and what it reveals about the past, but that is not how the Bible is understood by hundreds of millions of readers who embrace it as a message from God and read its contents not just to learn about the past but to understand what the meaning of life is, how to be a good person, and where the world is headed. How is it that the Bible is read in such different ways by the secular and the religious? Who is right in the struggle over its meaning, and how does one go about deciphering that meaning in the first place?
Taught by: WIEITZMAN
Activity: Seminar
1 Course Unit

REL 132 The History of God
This course introduces the history of God as understood by modern scholars of religion. Why do people believe in gods in the first place? How is the God of the Old Testament different from earlier Near Eastern deities, or different from God as represented in the New Testament and the Quran? When and why did people come to question the existence of God, and how has the idea of God changed in the last century in light of experiences like the Holocaust, social movements like feminism, and the rise of new technologies like the Internet? This course will address these questions as it surveys the approaches scholars have developed to comprehend the history of a being who would seem beyond human comprehension.
Taught by: Wietzman
Activity: Seminar
1 Course Unit

REL 135 Introduction to the New Testament
What can be known - from historical perspectives - about the life and teachings of Jesus and his earliest followers? Did Jesus see himself as a teacher and/or a revolutionary and/or the messiah? If Jesus and the apostles were all Jews, how did Christianity emerge as a distinct "religion"? distinct from Judaism? And how is that this small Galilean and Judean movement came to shape world history and Western culture even to this day? This course explores these questions through a focus on the formation of the New Testament - from the letters of Paul in the early first century CE, to the collection and closure of the canon of Christian Scriptures in the fourth century CE. In the process, we will explore the lived worlds of the first followers of Jesus through readings of texts within and outside the New Testament but also through art, artifacts, and manuscripts at Penn and in Philadelphia.

Activity: Lecture
1 Course Unit

RELS 164 History, Culture, and Religion in Early India
This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the Aryan invasion and vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabharata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings students will read select primary sources on the history religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India’s early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.

1 Course Unit
RELS 172 East Asian Religions
This course introduces religious traditions in China, Japan, and
Taiwan from ancient to contemporary times, with emphases on
their sociopolitical contexts, visual and material dimensions, and
entanglement with gender, sexuality and the body. We will examine
the history of Confucianism, Daoism, Buddhism, Shinto, as well as the
practices, thoughts, and institutions that do not fall squarely into those
categories. We will pay attention to the relationship between textual and
oral traditions, and that between canons, rituals and the popular practices
from both historical and anthropological perspectives.
Taught by: Cheng H
Activity: Lecture
1 Course Unit

RELS 173 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines
held and practices performed by Buddhists in Asia. By focusing on
how specific beliefs and practices are tied to particular locations
and particular times, we will be able to explore in detail the religious
institutions, artistic, architectural, and musical traditions, textual
production and legal and doctrinal developments of Buddhism over time
and within its socio-historical context. Religion is never divorced from
its place and its time. Furthermore, by geographically and historically
grounding the study of these religions we will be able to examine
how their individual ethic, cosmological and soteriological systems
effect local history, economics, politics, and material culture. We will
concentrate first on the person of the Buddha, his many biographies
and how he has been followed and worshipped in a variety of ways from
Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational
teachings of the Buddha with an eye to how they have evolved and
transformed over time. Finally, we focus on the practice of Buddhist
ritual, magic and ethics in monasteries and among lay communities in
Asia and even in the West. This section will confront the way Buddhists
have thought of issues such as “Just-War,” Women’s Rights and Abortion.
While no one quarter course could provide a detailed presentation of the
beliefs and practices of Buddhism, my hope is that we will be able to look
closely at certain aspects of these religions by focusing on how they are
practiced in places like Nara, Japan or Vietnam, Laos.
Taught by: McDaniel
One-term course offered either term
Activity: Lecture
1 Course Unit

RELS 184 What is Taoism?
Our main goal in this course will be to answer the question, “what is
Daoism?” Students will be introduced to a wide variety of ideas and
practices that have at one time or another been labeled as “Daoist” in
order to sort out the different senses of the term, and consider whether
they have any common features. The course will begin with the Laozi, the
most translated work in world literature besides the Bible and the one text
affirmed by virtually all “Daoist” traditions as foundational. We will also
survey several other bio-spiritual practices, such as the meditational
techniques of Internal Alchemy and the self-cultivation regimens known
today as Qigong and Tai-chi, and familiarize ourselves with theological
and ritual foundations of the organized religious tradition known as
“Daoism,” which is still widely practiced across East Asia. No knowledge
of Chinese is presumed. All readings will be in English.
Taught by: Goldin

Activity: Lecture
1 Course Unit

RELS 203 The Religious Other
Course explores attitudes toward monotheists of other faiths, and claims
made about these “religious Others” in real and imagined encounters
between Jews, Christians and Muslims from antiquity to the present.
Strategies of “othering” will be analyzed through an exploration of claims
about the Other’s body, habits and beliefs, as found in works of scripture,
law, theology, polemics, art, literature and reportage. Attention will be
paid to myths about the other, inter-group violence, converts, cases of
cross-cultural influence, notions of toleration, and perceptions of Others
in contemporary life. Primary sources will be provided in English.

RELS 204 The Graphic Novel and Religious Identities
Graphic novels and comic books express a variety of popular conceptions
concerning religion and, as such, are capable of showing us where (and
how) religious identities and phenomena exist in modern societies.
Viewing comics as material-semiotic objects with multiple origins,
audiences, and effects, this course investigates how religions, religious
identity, and religious phenomena are expressed in and through the comic
book. Situated at the intersection of religious studies, critical theory,
media studies, and literary analysis, the course asks students to consider
a number of issues and concerns, including: the appropriateness of
the medium to express religious ideas, practices, texts, and histories;
the different ways in which narratives of salvation and spiritual
transformation are visualized; the role of alternative comix in the critique
of popular religion; the use of comics as a means to proselytize, confess,
memorialize, and historicize; and the cultural status of comics as
material objects of religious import.

RELS 208 A History of Films By and About Native Americans
This course will examine films by and about Native Americans. From the
very beginnings of film history, Native Americans have been a centrally
important subject. While much of the writing about Native American
films tends to focus on the perpetuation of stereotypes, this class
will concentrate on four primary themes: 1) the role that film plays in
helping the audience to understand the exceedingly complex place of
indigenous people in “American” identity (with “American” signifying, in
this instance, a hemispheric sense of identity); 2) the myriad of ways that
indigenous people have been involved in the history of film as extras,
actors, directors, producers; 3) how representations changed when Native
Americans took control of production; 4) the ways in which films by
and about Native Americans have helped to heal the historical trauma
resulting from the “Indian Wars” that have gone on for 500+ years on the
North American continent.

RELS 211 Religion and Ecology
This class will introduce the overlaps between religion and ecology. Rather than assuming that there is a necessary positive or negative relationship between religion and ecology, we will look at how these relationships have materialized in complicated ways at different moments in history. We’ll consider perspectives and case studies from a range of different traditions, with a special attention paid to the genesis of the field of Religion and Ecology in critiques of Christian attitudes toward the environment in the 1960s and 1970s.

RELS 223 Jewish Literature in the Middle Ages in Translation
Course explores the cultural history of Jews in the lands of Islam from the time of Mohammed through the late 17th century (end of Ottoman expansion into Europe) -- in Iraq, the Middle East, al-Andalus and the Ottoman Empire. Primary source documents (in English translation) illuminate minority-majority relations, internal Jewish tensions (e.g., Qaraism), and developments in scriptural exegesis, rabbinic law, philosophy, poetry, polemics, mysticism and liturgy. Graduate students have additional reading and meetings. Spring 2015.

RELS 224 The Bible in Translation
This course introduces undergraduates and graduate students to one specific Book of the Hebrew Bible. "The Bible in Translation" involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. Although no prerequisites are required, RELS 224 is a perfect follow-up course for RELS 125 "Intro to the Bible."

RELS 233 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.

1 Course Unit

RELS 235 Eastern Christianities
The history of Christianity is often told from the perspective of its spread westward from Israel to Rome. Yet, in the first millennium, there were more Christians living in the East, in places as far away as Persia, Yemen, India, China, and Mongolia, than in the West. Spread across the Asian continent, these Christians were actively involved in local and imperial politics, composed theological literature, and were deeply embedded in the cultural fabric of their host societies. This course traces the spread of Christianity eastward, paying particular attention to its regional developments, its negotiations with local political powers, and its contact with other religions, including Buddhism, Manichaeism, and Islam. Readings will cover a broad range of sources, including selections from classical Syriac literature, Manichaean texts, Mesopotamian magic bowls, the so-called “Jesus Sutras,” and the Quran. All readings will be provided in English, and no background is presumed.

RELS 236 The Devil’s Pact in Literature, Music and Film
For as long as we have been modern, the legend of the devil’s pact has been the preferred metaphor for the desire to surpass the limits of human knowledge and power at any cost. Starting with the sixteenth-century Faust Book, which recounts the story of a scholar, alchemist and necromancer who sold his soul to the devil, and extending to the present, this course offers students a chance to explore our enduring fascination with the forbidden.

RELS 239 Death, Disease & Demons in the Medieval World
How did life end for people in the medieval world? For most, death was not considered an end point because the soul journeyed on after the end of the body. But to where did it journey? And how would it be re-united with the body in the future? Between the classical period and the High Middle Ages, death shifted from a moment of quiet release to a frightening struggle in which angels and demons lay in wait for a soul as soon as it exited the body. This course will examine these changing beliefs about dying, focusing primarily on Christian medieval Europe but drawing comparative examples from Judaism, the Roman world, and Byzantine Christianity. Other topics we’ll consider include martyrdom and fears of bodily dismemberment; the emergence of purgatory and depictions of the afterworld; and the development of Christian rites for the dead. We’ll also investigate beliefs about the invisible powers of demons and the apocalyptic end of times. The course will also explore not only the process by which people entered the afterlife in the Middle Ages but also the causes of their deaths—what kinds of disease primarily afflicted medieval society, and how did age, class and gender intersect with disease to affect certain populations? We will end the semester by examining that most apocalyptic of Medieval events— the Black Death—in light of recent scientific discoveries, medieval medical explanations, and social changes brought on by this demographic catastrophe. Students will be exposed to a range of primary sources as well as evidence from tombstone inscriptions, architecture and manuscript illuminations, and archaeology. No prior knowledge of Medieval history is necessary.

RELS 242 Muslim Sainthood Practices
This course aims at introducing various classical, popular and modern Muslim saints in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will learn about the major concepts initiated and circulated by these saints and their distinctive ways of dealing with spiritual aspects. While focusing on their sainthood practices, we also study the nature of the dialogue which addresses the questions such as pluralism, localism, and a new paradigm of spirituality that continually interacts with diverse modes of everyday life in South Asia. In order to understand their impact on visual and meida cultures, we also watch two documentaries and compare these visual sources with sainthood literature and practices.

Activity: Seminar
1 Course Unit

RELS 244 From Miracles to Mindfulness
In 1902, the most famous philosopher in America, William James, revolutionized the study of religion by analyzing religion as an experience rather than as a set of doctrines or scriptures. In this course, we will pick up the inquiry that James and scholars such as Sigmund Freud began by exploring new approaches to the science and philosophy of religious experience. We will invite a series of experts from a wide range of fields—neuroscience, psychoanalysis, phenomenology, psychology, anthropology, to name only a few—to present their cutting-edge research on the nature of religious experience. How can religious experience be studied? What does the research reveal about religious experience? And what can we learn from such experiences about the workings of the human mind and human society? The course has two components: 1) a discussion-centered mini-seminar from 3:30-5:00, featuring leading scholars who approach religious experience from different disciplinary angles or in light of different questions.
Taught by: Steve Weitzman
Activity: Lecture
1 Course Unit

RELS 245 Sufism
This course is a survey of the large complex of Islamic intellectual and social perspectives subsumed under the term Sufism. Sufi philosophies, beliefs, practices, and social organizations have been a major part of the Islamic tradition in all historical periods and Sufism has also served as a primary muse behind Islamic aesthetic expression in poetry, music, and the visual arts. In this course, we will attempt to understand the nature and importance of Sufism by addressing both the world of ideas and socio-cultural practices. We will trace the development of Sufism as a form of Muslim piety linked to key notions in the Quran as well as living practices of venerating the Prophet Muhammad. We will then immerse ourselves in Sufi theoretical writings through a select list of primary sources introducing foundational Sufi concepts concerning the annihilation of oneself in God, and the various stages of the Sufi quest for spiritual union. From there, we will shift to a discussion of the interactions between Sufism and philosophy by looking at the writings of two of the most influential Sufi thinkers, Al-Ghazali and Ibn al-Arabi. We will also study the important role of Sufi poetry through a close reading of a selection of Rumi’s works. In our discussion of the social and political dimensions of Sufism, we will explore the relations between Sufi movements and religious and political authority, focusing on antinomianism and patronage in the Ottoman Empire, and on Sufi responses to colonial rule. The last part of the course will look at the roles of Sufis and Sufism in contemporary societies from South Asia to North America.

RELS 246 Spirituality in the Age of Global Warming: Designing a Digital Mapping Project in Scalar
We are living in the midst of one of the most severe crises in the Earth's history. Science confirms the glaciers are melting, hurricanes are growing more intense, and the oceans are rising. But there is also a deeply spiritual dimension to global warming that does not factor into the scientific explanations of the Anthropocene. "Spirituality" will be defined not in terms of one particular religion, but in relationship to a passionate study of the environment and nature. Readings will include materials from both the sciences and the humanities such as Donella Meadows's Thinking in Systems, Elizabeth Kolbert's The Sixth Extinction, Barbara Kingsolver's Flight Behavior, and films such as Black Fish and Wale Rider. The theoretical focus of the course will be how "multispecies partnerships" can help us better understand and mitigate the effects of Climate Change. This class will work collaboratively on a digital archive with an interactive mapping interface designed in Scalar. This newly developed platform allows for the creation of multimedia exhibits that will document how Global Warming is affecting coral reefs in the tropics, glaciers in the Arctic and Antarctic, rainforests in the Amazon and rivers of Philadelphia. Students will also work individually to design interactive maps on the Scalar platform documenting their own more personal interactions with the environment.

RELS 248 Introduction to Islamic Law
This course will introduce students to classical Islamic law, the all-embracing sacred law of Islam. Among the world's various legal systems, Islamic law may be the most widely misunderstood and even misrepresented; certainly, misconceptions about it abound. Islamic law is, however, the amazing product of a rich, fascinating and diverse cultural and intellectual tradition. Most of the readings in this course will be taken from primary sources in translation. Areas covered will include criminal law, family law, law in the Quran, gender and sexuality, the modern application of Islamic law, Islamic government and other selected topics.

RELS 249 Re-enchanting Modernity: A Guide to Sufism in South Asia
This undergraduate level course introduces students to Sufism in modern South Asia, with a particular focus on how Muslim 'mystics' and their 'mystical' methods interacted with modernity, colonialism, technological developments and globalization. This course is divided into three parts. In the first part of this course, students are provided with an overview of the theological and historical background of the dominant expression of Islam that came to be identified as 'Sufism' of 'Islamic mysticism', the historical development of Sufi institutions and spaces in South Asia, and the historical emergence of South Asia as a prominent global center of Sufism. The second and main part of this course introduces students to a range of anthropological and historical works that are revelatory about how Sufi in modern South Asia were and remain intimately connected to modern political and technological developments. Providing students with an overview of Sufi re-enchantments of modernity from the 19th to 21st century, this section of the course focuses upon Sufi movements and masters who perpetuated or defended customary Islam through sophisticated appropriations of technologies and print networks, and negotiations with non-Muslim rulers and societies. Moreover, students will be introduced to anthropological and historical scholarship on religious worlds in modern South Asia that were and remain steeped in 'customary Islam' and Sufi performances and interpretations of Islam. These sources reveal how 'mystical' methods of performing Islam through ecstasy and spiritual restoration, and interpretations of dreams and visions, have regularly interacted with contemporaneous technologies. The third part of this course introduces students to the globalization of South Asian Sufism in North America, Europe and Southeast Asia. Herein, students will be encouraged to engage with anthropological and literary works pertaining to itinerant South Asian Sufi masters and their devotional cults, and introduced to active South Asian Sufi centers in Philadelphia.

RELS 251 History of Hinduism
This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacral kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes a well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

RELS 254 Violence, Tolerance, Freedom
This seminar examines how the adjective "religious" has been used to modify the nouns "violence," "tolerance," and "freedom." It traces the historical development of liberal ideas of tolerance and human rights, interrogates the common assumption that religion exerts a perverse influence on politics and vice versa, critically examines the concept of terrorism, and connects the neoliberal ideal of unfettered free markets to the idea of being "spiritual but not religious."
Taught by: Jolyon Thomas
Activity: Seminar
1 Course Unit

RELS 256 Existential Despair
This is an experimental course that seeks to combine creative pedagogical methods and alternative scheduling to encourage intellectual reflection and emotional vulnerability through an in-depth study of the way people cope with existential despair. Through a reading of memoirs, novels, poetry, and essays in an atmosphere conducive to close-reading and full-participation students will explore a wide-range of ways of coping with, describing, and comprehending moments of great despair. Lectures will explain the ritual, liturgical, homiletic, meditative, reflective, self-destructive, psycho-somatic, and ascetic ways despair is both conditioned and mitigated by different thinkers from various traditions over time. Format: This course is different from most others in that there is no homework, no class participation, no outside reading, and no research papers. There will be no work given to students or expected of them outside of class. All work is done in class and class is very long (8 hours straight, once a week, from four PM to midnight). Students will eat together in class, there will be three bathroom breaks, but there will be no internet, no phones, no computers, and no auditors. Each student must be fully committed to the class and 75% of the grade will be determined by class participation.
Taught by: McDaniel
Prerequisite: Permission needed from instructor

RELS 259 Ultimate Meanings
Does life have some ultimate meaning? In their search for an answer to this question, people tell stories—stories about the creation of the world, about great human beings confronted with the mysteries of existence, about what happens to people after death. To explore the role of stories in finding meaning in life, we will focus on some of the most meaningful stories ever composed: the biblical stories of Adam and Eve, Abraham and his family, the Exodus, Job and his friends, and the life and death of Jesus. One of our goals is to try to retrieve the original meaning of these narratives, what their authors intended, but we will also explore what they have come to mean for readers in our own day for believers and skeptics, scientists and artists, fundamentalists and feminists.

Activity: Lecture
1 Course Unit

RELS 271 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan’s past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan’s nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

RELS 303 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine ancient Greece and Rome as the cradles of democracy and republicanism, the early Judea as pious theocracy, but the evidence tells us that monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). Despite their ubiquity, the King was a polarizing figure— in reality and in conception. On the one hand, some idealized the monarchy as the ideal leader, and monarchy provided the language with which to describe and even imagine the very gods— but on the other, monarchs were widely reviled in both theory and practice, from the Greek tyrant to the biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of "king," even as he ruled alone and was revered as a god. In other words, kings stood for both the ideal ruler and the worst form of government. This class confronts the paradox of the King. This class will take a special look at the idea and institution of kingship in the Near East, among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences among these cultures. Through the lens of the "king" we will explore the idea of god, government, human frailty, and utopianism. Why did the rule of one prevail, why was it so attractive to so many? How was the royal rule legitimized? What role did religious beliefs play for keeping a monarchical system stable? What did people expect from their rulers and what happened if the ruler failed to fulfill these expectations? How was the concept of monarchical rule adopted and transferred into other spheres, such as religious belief systems or hopes for messianic kingship? While kingship is a rich field of scholarly inquiry, the question of its ubiquity, and the entanglement and divergences of these three cultures is rarely studied in context and comparison.

RELS 311 Muslims, Christians, and Jews in the Middle East: Historical Perspectives
A reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and Middle Eastern History is required. This class is intended for juniors, seniors, and graduate students.

RELS 401 Sacred Stuff in Medieval & Early Modern Europe
During devotional activities people engage with various objects and believe that they are imbued with religious significance. In this seminar, we will explore the material culture of religion across medieval and early modern Europe. From rosary beads and crucifixes to devotional books, prints, and paintings, a range of "sacred stuff" populated the lives of medieval and early modern Europeans. We will consider objects associated with daily life as well as rites of passage. We will study objects of Christian devotion and will consider how the advent of Protestantism and the Catholic Reformation influenced the types of objects devotees used for their devotion. In this seminar, we will discuss the material culture of Judaism and Islam, religions also practiced in medieval and early modern Europe. We will engage with "sacred stuff" from a variety of disciplinary perspectives, including art history, literature, archaeology, social history, and cultural history. We will then hone these skills with visits to local museums and libraries where we will view medieval and early modern books, objects and images. Course assignments will include an in-depth analysis of a devotional object from medieval or early modern Europe chosen by the student. Taught by: Tycz

RELS 434 Christian Thought From 1000-1800
This course will trace the development of Christian thought (including philosophy, theology, spirituality and mysticism) from the early Scholastic period to early Modernism. Readings will be from both primary and secondary sources. A research paper will be required of each student. Spring 2014: This course will give an overview of the main currents of Western Christian thought from the first age of reform (that is, the Central Middle Ages) through the Reformations of the sixteenth century, to the eve of the Enlightenment. In these centuries, "Christendom" underwent an almost constant process of internal and external self-definition. The most striking results of this process were the definitive separation of eastern and western Christianity and the division of the western church into what became known as Protestant and Catholic Christianity. Our focus will be on the changing definitions of Christian culture, including theological formulations (definitions of orthodoxy and heterodoxy), trends of spirituality and mysticism, forms of worship, and gender roles and definitions. Attention will also be given to institutional questions such as ecclesiastical hierarchy, monasticism, scholasticism and the rise of universities, and the changing relationship between the secular and religious worlds. Readings will be from both original and secondary sources. Additional primary sources will be available online, attached to the course Blackboard page. I will supply copies of other readings.

1 Course Unit

RELS 438 Topics in Medieval History
This seminar introduces students to the development of Jewish and Christian biblical interpretation by focusing on ancient, medieval, and modern interpretations of the Sermon on the Mount. The Sermon on the Mount is part of the Gospel of Matthew and is often considered to summarize the essential teachings of Jesus of Nazareth. Students will encounter a variety of important interpreters (including Origen, John Chrysostom, Augustine of Hippo, Thomas Aquinas, Martin Luther, Leo Tolstoy, Albert Schweitzer, Dietrich Bonhoeffer, Clarence Jordan, and Hans Dieter Betz), guided by appropriate secondary materials. The seminar will utilize a combination of lecture, discussion, student presentations, reports, close reading, and a research paper. Students will be encouraged to do original research in the primary sources. This course has no prerequisites. The readings will be made available in English. The class will utilize a combination of lecture, discussion, student presentations, reports, close reading, and a research paper.

RELS 439 Religion, Social Justice & Urban Development
Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha’i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.
Taught by: Lamas

RELS 440 Later Islamic Art & Architecture
Istanbul, Samarkand, Isfahan, Cairo and Delhi as major centers of art production in the fourteenth to seventeenth centuries. Attention is given to urban and architectural achievement as well as to the key monuments of painting and metalwork. The visual environment of the "gunpowder empires" is discussed.
Taught by: Holod
Activity: Lecture
1 Course Unit

RELS 446 Digital Humanities
Penn recently opened the Price Lab for Digital Humanities as part of the university’s new strategic plan, so it is a very exciting moment for DH at Penn. This class might be considered an advanced introduction to the relatively short history of DH. It will focus on one of the questions that has vexed the field from the beginning: Why are the Digital Humanities So White? as Tara McPherson put it rather bluntly in a chapter of Debates in the Digital Humanities. The class will provide an overview of some of the foundational texts of DH, but the primary focus of the class will be involving students in a new DH project to construct an interactive timeline, built in Omeka. The spatio-temporal timeline seeks to represent Iroquois history as seen from the perspective of Iroquois scholar and Faithkeeper, Richard Hill. Hill is the director of the Deyohahage: Indigenous Knowledge Centre on the Six Nations reserve in the Grand River region of Ontario and one of the most highly regarded traditional knowledge keepers of his generation, so it is a great honor to be able to work with him. On a more theoretical level, the class will be addressing the relationship between cultural codes and digital codes. In other words, how to represent Iroquois spiritual history (i.e., mythical events) on a chronological timeline? How to represent indigenous space on maps created by the people who colonized the Iroquois (e.g., the boarder between Canada and the US cuts the Iroquois traditional homeland in half)? Students will learn how to evaluate a complex and challenging project like this, which is still in its earliest stages. On a more practical level, students will learn skills in the exhibit building software Omeka. The class will engage many different forms of history from archival documents to YouTube videos, in its study of how digital technology makes it possible to represent the indigenous oral tradition much more accurately than is possible on the printed page.
Taught by: Tim Powell
Activity: Seminar
1 Course Unit
RELS 471 Religion in Eleven Objects
This advanced course for Religious Studies majors and minors approaches the study of religion through material objects. By looking at both sacred and everyday objects like rosaries melted in atomic blasts, magical amulets used in healing rituals, temple murals defaced by invading armies, manuscript stained by hold water, we will explore the many ways people express their spiritual aspirations and existential fears through objects. Not only will a different object from a variety of religious traditions be examined each week (eleven in total), but we will also explore different methodological and theoretical approaches to the study of religion. Psychological, phenomenological, bio-genetic, sociological, art historical, discursive, post-modern, and narrative approaches will be discussed.

RELS 501 Topics in the Study of Religion
This course deals with various religious topics, such as Mass Religious Conversion.
Taught by: Klausner
Course not offered every year
Activity: Seminar
1 Course Unit

RELS 505 Religion & Cinema
This course looks at religion in film. As we will see, this is not just a question of how religion is represented onscreen, but how cinematic objects make religious subjects. We’ll explore the ways films are crafted through technique, performance, and distribution, then consider how these components shape religious bodies and religious traditions in turn.
Taught by: Schaefer
Course usually offered in spring term
Activity: Seminar
1 Course Unit

RELS 509 Teaching Religious Studies
Many faculty in academia, especially at a research university, think of themselves as scholars first and teachers second. The emphasis on scholarship is essential for a position at a research university, but what the culture of such institutions can obscure is the importance of teaching as part of the academic vocation. The purpose of this course is to help prepare graduate students to teach academic religious studies, not to teach them how to teach, a skill developed through experience and feedback, but to encourage students to plan in advance for their work as educators and to develop their teaching aspirations and approach in dialogue with issues and debates in Religious Studies, the Humanities and the field of Education.
Taught by: Weitzman
Course usually offered in fall term
Activity: Seminar
1 Course Unit

RELS 510 Civil Religion
In the first half of the course, we will examine the theoretical question of whether modern liberal societies need a civil religion - an idea first proposed in the late eighteenth century by writer who feared that without some unifying ideal or principle the centrifugal forces at work in modern societies would lead them to disintegrate. We will examine various authors who have defended the idea of civil religion in these terms (including J.J. Rousseau, J.G. Herder, and G.W.F.Hegel) as well as several who (implicitly or explicitly) have rejected the argument (Max Weber, Michael Oakeshott, Daniel Bell, and Niklas Luhmann). In the second half of the class, we will turn to the American context and explore the way these arguments have played themselves out from the time of the constitutional frames to today. In this part of the class, we will read and discuss excerpts from the Federalist Papers and Tocqueville's Democracy in America, selected presidential speeches, nineteenth-century debates surrounding Manifest Destiny and American Exceptionalism, John Dewey/Richard Rorty's proposal for a religion of democratic "common faith," and the neoconservative case for a civil religion of "national greatness." Along the way we will also have occasion to examine sociological treatments of civil religion by such authors as Emile Durkheim, Robert Bellah, and Seymour Martin Lipset.

RELS 517 Topics in American Religion
From Marvin Gaye, to Tammy Faye Baker, to Sarah Palin and James Baldwin, Pentecostalism has influenced many, including politicians, preachers, writers, and the media. One of the fastest growing religious movements in the world, Pentecostalism continues to have a profound effect on the religious landscape. Pentecostalism's unique blend of charismatic worship, religious practices, and flamboyant, media-savvy leadership, has drawn millions into this understudied and often controversial religious movement. This course will chronicle the inception and growth of Pentecostalism in the United States, giving particular attention to beliefs, practices, gender, ethnicity, and Global Pentecostalism.

1 Course Unit

RELS 520 Spirit and Law
While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.
Taught by: Fishman
Course not offered every year
Activity: Seminar
1 Course Unit
RELS 523 Studies in Medieval Jewish Culture
Course examines features of 9th-16th century Jewish culture within their broader historical, regional and cross-cultural contexts, whether Christian or Islamic. Emphasis is placed on primary sources in Hebrew. Topics vary and have included "Reconstructing Rabbinic Judaism prior to the First Millenium"; "Custom Medieval Jewish Cultures"; "Jewish Culture in the Islamicate World"; "Nature in Medieval Jewish Culture." Students should be able to read unpointed Hebrew. May be repeated for credit.
Taught by: Fishman
One-term course offered either term
Prerequisite: Reading knowledge of Hebrew.
Activity: Seminar
1 Course Unit

RELS 537 Medieval Christian Mysticism
The course traces the flowering visionaries (mostly women) in Italy between the thirteenth and seventeenth centuries. We will pay close attention to the writings of some of the more famous women, notably Claire of Assisi, Catherine of Siena, Angela of Foligno, and Lucia Brocadelli, (all of whom can be read in English as well as in the original) and contextualize them with secondary sources about gender roles and the aspects of "female Christianity," especially connected to the materiality of women in pre-modern Italy (Bynum, McGinn, Zarri, etc.). We will meet in the library to take advantage of the manuscript and early book holdings that Penn has to offer.

RELS 541 Religion and the Visual Image: Seeing is Believing
Seeing is Believing engages in a historical, theoretical, and cross-cultural analysis of the place of visuality in religion and of religion in visual culture. We will examine images, buildings, places, objects, performances and events. The geographical, cultural and historical scope of the material is broad, including subjects from Europe, the Islamic World, non-Muslim South Asia, the US and Latin America from the medieval period until the present. Theoretical works will be read in conjunction with representative examples to invite intellectual engagement in a socially and historically grounded way. Important issues to be covered include the relationship of visual to material culture; visual theories versus theories of vision; locating religion in human sensory experience; perception at individual and collective levels; authentics, fakes and simulacra; iconoclasm and image veneration; aesthetics, use and utility; and things.

Course not offered every year
Activity: Seminar
1 Course Unit

RELS 551 History of Hinduism
This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacrality, kinship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as a well highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.
Taught by: Ali
Activity: Seminar
1 Course Unit

RELS 552 Emotion and Power
Is power smart? Conventional models of power—both in everyday, commonsense understandings and in academic studies—tend to be instrumentalist. They understand power as a thoughtful exercise designed to achieve particular ends. But as we consider the political-cultural landscape, does the assumption that power is rational hold up? This seminar will bring together an in-depth exploration of Michel Foucault’s theory of power with contemporary affect theory to address this question. We will begin by mapping out Foucault’s “analytics of power,” from his early work on power knowledge to his late work on embodiment, desire, and the care of the self. We will then consider a series of interpretations of Foucault within contemporary affect theory, an approach which centralizes the non-rational, emotive force of power. Along the way, we will consider formations of sex, race, religion, material culture, and cinema. No previous knowledge of theory is required. Students will be encouraged to connect the theoretical frames of the class to their own fields and areas of interest.
Taught by: Schaefer
One-term course offered either term
Activity: Seminar
1 Course Unit
RELS 557 Seminar in Rabbinic Judaism
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor.
Taught by: Stern, Reed
Course not offered every year
Prerequisites: Proficiency in Hebrew and/or Greek recommended.
Undergraduates need permission to enroll.
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit.

RELS 571 Advanced Topics in Buddhism
This is an advanced course for upper level undergraduates and graduate students on various issues in the study of Buddhist texts, art, and history. Each semester the theme of the course changes. In recent years themes have included: Magic and Ritual, Art and Material Culture, Texts and Contexts, Manuscript Studies. Fall 2013 Topic: Buddhist repertoires (idiosyncratic and personal assemblages of beliefs, reflections, wonderings, possessions, and practices) for a large part, material and sensual. Buddhists are often sustained by their collection, production, and trading of stuff amulets, images, posters, protective drawings, CDs, calendars, films, comic books, and even Buddhist-themed pillow cases, umbrellas, and coffee mugs. Aspirations are interconnected with objects. Beliefs are articulated through objects. Objects are not empty signifiers onto which meaning is placed. The followers and the objects, the collectors and their stuff, are overlooked in the study of religion, even in many studies in the growing field of material culture and religion. What is striking is that these objects of everyday religiosity are often overlooked by art historians as well. Art historians often remove (through photography or physical movement to museums or shops) images and ritual implements from their ritual context and are seen as objets d’art.

RELS 581 Environmental Activism & Digital Humanities
We are living in a moment of Environmental crisis as the oceans rise and carbon emissions warm the planet. And yet more than half the US population believes climate change will not harm them personally and 30% feel they cannot trust science. As the standoff at Standing Rock and the #NoDapl movement made clear, Native Americans’ spirituality is playing a central role in galvanizing the public and providing alternative narratives to capitalist consumption. Students will work on ongoing projects to build partnerships between Penn and two Native American communities—Sitting Bull College on the Standing Rock Sioux reservation in South Dakota and a UNESCO World Heritage Site nomination submitted by Ojibwe First Nations in Canada to preserve 24,000 sq. kms. of boreal forest through the use of Traditional Ecological Knowledge. This class will learn to build multi-media exhibits using Scalar, Omeka, Google Earth, and StoryMap. No previous experience is necessary. Students will learn about choosing a platform, creating dynamic narratives that incorporate videos and interactive features, and learning about grant writing in order to sustain digital projects and benefit Indigenous communities. Although the emphasis will be on practical applications or praxis, the course will also engage with new theories from the fields of Digital Humanities and Environmental Humanities as a basis for building new exhibits.
Taught by: Powell

RELS 620 Godliness, Miracles, Madness
This graduate-level course introduces students to religious worlds within port cities of the modern Indian Ocean that were centered upon peripatetic Muslim, Saiva, Christian and Sikh miracle-workers, missionaries and 'gods.' This course will particularly consider how extant, published sources reveal how religion in the 19th and 20th century cosmopolitan port cities and islands was centered upon holy men and women or spiritual beings, and intricately connected to modern economic, political and technological developments in the Indian Ocean. This course is divided into three parts. In the first part of this course, students will be introduced, on the one hand, to the scholarhip on port cities or islands of, and religions or religious networks in, the modern Indian Ocean. On the other hand, to anthropological, historical and literary works on Muslim saints, Christian missionaries and Saiva gods in the Indian Ocean. In the second and main section of this course, students will be introduced to contemporary academic literature pertaining to the inter-linkages between itinerant miracle-workers, missionaries, 'gods' and devotional cults, and economic, political and technological developments in the Indian Ocean. As well as works that explore European institutions, barracks, plantations, cells and asylums, and the steam travel being steeped, in customary religion, carnivals, ecstasy, madness and miracle stories. Here, students will be encouraged to consider ways in which a study of religion and religious economies of modern Indian Ocean port cities can be recovered through extracts from a range of anthropological, literary and historical sources. In the third part of this course, students will be encouraged to engage with the question of whether the religion of devotional cults, preoccupied with the powers of Muslim, Saiva, Christian, and Sikh miracle-workers, missionaries and 'gods' in cosmopolitan port cities, was a distinct product of circulations within the Indian Ocean.
Taught by: Sevea

RELS 630 Gender and Religion in China
This course examines gender in Chinese religious culture from ancient to contemporary times. We will explore topics including the Buddhist accommodation of Chinese family system, Chinese transformation of the bodhisattva Guanyin, female dieties in Daoist and popular religious pantheons, writings about religious women, female ghosts and fox spirits in literary imagination and folk tales, and the signficance of yin force in Chinese medicine and Daoist alchemy. Through the case of China, we will look at how gender plays critical and constitutive roles in religious traditions, and how religion can be used both to reinforce and to challenge gender norms.

Course not offered every year
Activity: Seminar
1 Course Unit

RELS 632 Hinduism and Colonial Modnty: Hinduism and Colonial Modernity
This seminar deals with the question of modernity in South Asia, with a specific focus on the construction, dissemination, and politicization of Hinduism in nineteenth and twentieth century India. It focuses on three central heuristic lenses—namely those of European imperialism, Orientalism, and nationalism—to study modernity and its discontents. What was at stake in the encounter between colonial modernity and India's religions in nineteenth and early twentieth centuries? How did colonial and native discourses on "reform" and "revival" shape Indian religions as we understand them today? How is modern "Hinduism" inextricably hinged to early forms of cultural transnationalism, Orientalism, and incipient forms of nationalism? This seminar approaches questions such as these and others, with an eye to understanding how nineteenth and early twentieth century discourses continue to shape contemporary understandings of Hinduism in deep and highly politicized ways.
One-term course offered either term
Activity: Seminar
1 Course Unit

RELS 643 The Persian Intellectual Tradition
What makes Persian culture distinctive within broader Islamic intellectual history, and what constitutes the historical and geographical boundary of the Persianate intellectual and cultural zone? These questions lie at the center of inquiry in this seminar in which participants will read and discuss a broad range of works from the 11th to the 20th centuries. Readings will include works on philosophy and language, Sufi epic poems, religious and cultural geographies, accounts of natural and manufactured wonders, urban and political histories, as well as other kinds of texts. All readings will be in English for the regular meeting of the seminar; students with a reading knowledge of Persian and an interest in participating in an additional meeting to read the assignments in their original language should register for the higher of the two numbers listed for this course.
Taught by: Elias
Course not offered every year
Prerequisite: prior knowledge of Persian is required
Activity: Seminar
1 Course Unit

RELS 670 Religious Bodies and Sex in South Asia
This graduate-level course introduces students to the writings of key religious scholars in modern South Asia who associated the regeneration of Hinduism, Islam, and Sikhism with the cultivation of bodies and sexual practices. Particular attention will be paid towards religious texts produced in modern India, Pakistan and Bangladesh pertaining to sexual bodies, exercises and health; celibacy; body-building; the transmission of sexual knowledge; and the political roles of the 'Hindu,' 'Muslim' and 'Sikh' body. In this course, students will be encouraged to engage a range of sources including religio-sexual manuals, autobiographies, novels, speeches, pamphlets, official records, recipes and films. Moreover, students will be introduced to the academic literature on South Asian religious scholars and 'sex gurus' in South and Southeast Asia; religious sexuality in South Asia, Southeast Asia, the Middle East and Europe; and, the transcultural literary networks that led to the production of religio-sexual texts in modern South Asia.

1 Course Unit

RELS 702 Topics in Medieval Art
Spring 2017: For the Christians of Middle Europe, pilgrimages were one of the key embodied experiences of faith. Reliquaries, churches with their welcoming portals, manuscripts and music: all were crafted to augment the corporeal experience of the divine. This seminar will take the material culture surrounding the relic and its veneration as a lens for exploring the Middle Ages, from the Early Christian to the High Gothic. Cross-disciplinary methodologies and cross-cultural examples will be considered to advance our understanding of these phenomena. While proceeding chronologically, each week will focus on a distinct strategy for shaping the interaction between faith and matter.

RELS 738 The Long Reformation in Britain and America
This seminar will explore how protestantism infiltrated and shaped the British Isles and colonies at multiple levels, and in particular how it was imposed from above, received in the pew, and negotiated across the gap between the two. We shall examine this process during the century and a half following the official Reformations in England, Scotland, Anglo-Ireland, the Gaidhealtachd, and British settlements in North America. Readings will be for the most part recent (and some classic) historical monographs, with a sampling of primary sources including spiritual autobiographies, diaries, church court records, and sermons. Depending on student interest, readings in anthropology of religion and ritual may be added. The course will begin with readings in secondary literature, then turn to primary research. Each participant will produce a short work (ca. 12 pp. - the length of a conference paper) of original research in primary materials. An introduction to paleography will allow you to use scanned or microfilmed manuscript sources as well as early printed works. We meet in a library seminar room in order to incorporate the material history of the early modern religious text (manuscript and print) and print image as well, with the help of our rare books and manuscripts curators.

RELS 742 Qur’anic Studies
This seminar explores the nature and uses of the Qur’an. It focuses on the practice and theory of Qur’an commentary and interpretation (safsir and ta’wil). A major portion of the course will involve a close examination of manuscripts of the Qur’an at the Philadelphia Museum of Art and the Kislak Center at the University of Pennsylvania, concentrating on the relationship between the text and marginalia as well as on the peculiarities of individual manuscripts. The rest of the course will center around reading commentaries on the Qur’an in manuscript as well as print. In addition, we will read and discuss theoretical works on the history and nature of Qur’an commentary, literary criticism and textual analysis, and spend some of the later section of the course discussing issues of translation and editorial processes involved in popularizing Qur’an commentaries on the internet. READING KNOWLEDGE OF ARABIC REQUIRED.

RUSSIAN (RUSS)

RUSS 001 Elementary Russian I
This course develops elementary skills in reading, speaking, understanding and writing the Russian language. We will work with an exciting range of authentic written materials, the Internet, videos and recordings relating to the dynamic scene of Russia today. At the end of the course students will be comfortable with the Russian alphabet and will be able to read simplified literary, commercial, and other types of texts (signs, menus, short news articles, short stories) and participate in elementary conversations about daily life (who you are, what you do every day, where you are from, likes and dislikes).
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1 Course Unit

RUSS 002 Elementary Russian II
Continuation of RUSS001. Further work developing basic language skills using exciting authentic materials about life in present-day Russia. At the conclusion of the course, students will be prepared to negotiate most basic communication needs in Russia (getting around town, ordering a meal, buying goods and services, polite conversation about topics of interest) and to comprehend most texts and spoken material at a basic level.
For BA Students: Language Course
Taught by: Peeney/Alley
Course usually offered in spring term
Prerequisite: RUSS 001 or equivalent
Activity: Lecture
1 Course Unit

RUSS 003 Intermediate Russian I
This course will develop your ability to use the Russian language in the context of typical everyday situations, including university life, family, shopping, entertainment, etc. Role-playing, skits, short readings from literature and the current press, and video clips will be used to help students improve their language skills and their understanding of Russian culture. At the end of the semester you will be able to read and write short texts about your daily schedule and interests, to understand brief newspaper articles, films and short literary texts, and to express your opinions in Russian. In combination with RUSS 004, this course prepares students to satisfy the language competency requirement.
For BA Students: Language Course
Taught by: Peeney/Alley
Course usually offered in fall term
Prerequisites: RUSS 001 and 002 or placement exam.
Activity: Lecture
1 Course Unit

RUSS 004 Intermediate Russian II
A continuation of RUSS003. This course will further develop your ability to use the Russian language in the context of everyday situations (including relationships, travel and geography, leisure activities) and also through reading and discussion of elementary facts about Russian history, excerpts from classic literature and the contemporary press and film excerpts. At the end of the course you will be able to negotiate most daily situations, to comprehend most spoken and written Russian, to state and defend your point of view. Successful completion of the course prepares students to satisfy the language competency requirement.
For BA Students: Last Language Course
Taught by: Peeney/Alley
Course usually offered in spring term
Prerequisite: RUSS 003 or placement exam
Activity: Lecture
1 Course Unit

RUSS 009 Central and Eastern Europe: Cultures, Histories, Societies
The reappearance of the concept of Central and Eastern Europe is one of the most fascinating results of the collapse of the Soviet empire. The course will provide an introduction into the study of this region its cultures, histories, and societies from the foundation of the Holy Roman Empire to the enlargement of the European Union. Students are encouraged to delve deeper into particular countries, disciplines, and sub-regions, such as Central Europe, Eastern Europe, and the Balkans, through an individual research paper and class presentations.
Taught by: Steiner/Orenstein/Verkholantsev
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: This course is one of two required core courses for the Russian and East European Studies (REES) Major.

RUSS 010 Intro to Russia and Eurasia: Histories, Cultures, Societies
This course is designed as a broad introduction to the study of Russia and Eurasia that will offer students a multi-disciplinary overview of the cultures, histories and societies of this large and diverse region of the world. It is organized in units that illustrate the approaches of various disciplines to the study of the region, including history, literary studies, cinema studies, art history, and social scientific inquiry. At the conclusion of the course, students will be acquainted with these various disciplinary frameworks and the differences between them, with the modes of analysis and writing that pertain to them, and with fundamental knowledge of the region. They will be prepared for further study of the region in a variety of programs of study, including the Russian and East European Studies major, for which the course serves as a foundation.

Course usually offered in fall term
Activity: Lecture
1 Course Unit
RUSS 026 BEHIND THE IRON CURtain
This first-year seminar provides an introduction to the histories, cultures, and societies of Central and Eastern Europe, including Poland, the Czech Republic, Slovakia, Hungary, Romania, Bulgaria, Albania, and the successor states of Yugoslavia. Through a selection of articles and essays written by anthropologists and sociologists and based on their extended fieldwork in the region, students will explore both the ethnographic method and the experience of everyday life during and after the communist era. Topics will include: popular music under socialism, food and wine, environmental concerns, the status of Muslim minorities, social aesthetisms, public arts and cultures of commemoration, privatization, advertising, women’s rights, gender and sexuality, emergent nationalism, and the rise of income inequality and homelessness. All readings and assignments in English.
Taught by: GHODSEE
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: In this course, first-year students gain knowledge about the cultures and societies of Central and Eastern Europe through the reading of ethnographic texts about the socialist (1945-1989) and post-socialist (1990 to the present) eras. The course takes a multidisciplinary approach in that it combines ethnographic works from both anthropology and sociology and discusses how qualitative methodologies differ from survey research or other forms of quantitative analysis. By exposing students to the critical examination of how different types of knowledge are produced through the close study of Central and Eastern Europe, the course aims to teach them to be critical consumers of essentialized truths underpinning fix notions about concepts such as “culture” and “society.” At the end of the course students should develop a deep understanding of the value of the ethnographic method and the contested terrain of knowledge production about the socialist and post-socialist past, and will be able to speak and write about these issues with competence and confidence.

RUSS 048 The Rise and Fall of the Russian Empire, 1552-1917
How and why did Russia become the center of the world’s largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

One-term course offered either term
Activity: Lecture
1 Course Unit

Out of an obscure, backward empire, the Soviet Union emerged to become the great political laboratory of the twentieth century. This course will trace the roots of the world’s first socialist society and its attempts to recast human relations and human nature itself. Topics include the origins of the Revolution of 1917, the role of ideology in state policy and everyday life, the Soviet Union as the center of world communism, the challenge of ethnic diversity, and the reasons for the USSR’s sudden implosion in 1991. Focusing on politics, society, culture, and their interaction, we will examine the rulers (from Lenin to Gorbachev) as well as the ruled (peasants, workers, and intellectuals; Russians and non-Russians). The course will feature discussions of selected texts, including primary sources in translation.

RUSS 095 UNIVERSAL LANGUAGE: FROM THE TOWER OF BABEL TO ARTIFICIAL INTELLIGENCE
This is a course in European intellectual history. It explores the historical trajectory, from antiquity to the present day, of the idea that there once was, and again could be, a universal and perfect language among the human race. If recovered, it can explain the origins and meaning of human experience, and can enable universal understanding and world peace. The tantalizing question of the possibility of a universal language have been vital and thought-provoking throughout the history of humanity. The idea that the language spoken by Adam and Eve was a language which perfectly expressed the nature of all earthly objects and concepts has occupied the minds of intellectuals for almost two millennia. In defiance of the Christian biblical myth of the confusion of languages and nations at the Tower of Babel, they have over and over tried to overcome divine punishment and discover the path back to harmonious existence. By recovering or recreating a universal language, theologians hoped to be able to experience the divine; philosophers believed that it would enable apprehension of the laws of nature, while mystic cabbalists saw in it direct access to hidden knowledge. In reconstructing a proto-language, 19th-century Indo-Europeanist philologists saw the means to study the early stages of human development. Even in the 20th century, romantic idealists, such as the inventor of Esperanto Ludwik Zamenhof, strived to construct languages to enable understanding among estranged nations. For writers and poets of all times, from Cyrano de Bergerac to Velimir Khlebnikov, the idea of a universal and perfect language has been an inexhaustible source of inspiration. Today, this idea echoes in theories of universal and generative grammars, in approaching English as a global tongue, and in various attempts to create artificial languages, even a language for cosmic communication.

RUSS 115 Before Transgender: Hermaphrodites in 19th Century Literature
This course provides a literary and cultural prehistory to contemporary discourses on transgender identity by focusing on the figure of the hermaphroditic in 19th Russia and the West. Far from a marginal subject, the hermaphroditic and intersex characters played central roles in the novels of Balzac, Tolstoy, Dostoevsky, and many others whose work we will read in this course. Interdisciplinary in nature, this course draws on 19th century discourses in medicine, psychology, opera, religious philosophy, and political theory to understand why characters who exist outside of the male/female gender binary feature so prominently in 19th century literature and cultural texts across a wide range of traditions (Anglophone, French, and Russian, and others.)
Taught by: Wilson
Activity: Lecture

RUSS 123 Russia and Eastern Europe in International Affairs
Russia and the European Union (EU) are engaged in a battle for influence in Eastern Europe. EU foreign policy towards its Eastern neighbors is based on economic integration and the carrot of membership. With the application of this powerful incentive, Central and Southeastern European countries such as Poland, Hungary, the Czech Republic, and Croatia have progressed rapidly towards integration with the EU (and NATO). Yet, given Russia’s opposition to the further enlargement, membership is off the table for the large semi-Western powers such as Russia itself and Turkey and the smaller countries inhabiting an emerging buffer zone between Russia and the EU, such as Georgia, Ukraine, Azerbaijan, Moldova, and Belarus. These in-between countries find themselves subject to intense competition for influence between Eastern and Western powers. In this context, EU countries must balance their energy dependence on Russia and need for new markets and geopolitical stability with concern for human rights, democratic governance, and self-determination. What are the trade-offs implicit in the foreign policies of Russia, EU member states, and Eastern Europe? What are the best policy approaches? What are the main opportunities and obstacles?

RUSS 125 The Adultery Novel
The object of this course is to analyze narratives of adultery from Shakespeare to the present and to develop a vocabulary for thinking critically about the literary conventions and social values that inform them. Many of the themes (of desire, transgression, suspicion, discovery) at the heart of these stories also lie at the core of many modern narratives. Is there anything special, we will ask, about the case of adultery—once called “a crime which contains within itself all others”? What might these stories teach us about the way we read in general? By supplementing classic literary accounts by Shakespeare, Pushkin, Flaubert, Chekhov, and Proust with films and with critical analyses, we will analyze the possibilities and limitations of the different genres and forms under discussion, including novels, films, short stories, and theatre. What can these forms show us (or not show us) about desire, gender, family and social obligation? Through supplementary readings and class discussions, we will apply a range of critical approaches to place these narratives of adultery in a social and literary context, including formal analyses of narrative and style, feminist criticism, Marxist and sociological analyses of the family, and psychoanalytic understandings of desire and family life.

RUSS 134 Communism
The rise and fall of Communism dominated the history of the short twentieth century from the Russian revolution of 1917 to the collapse of the Soviet Union in 1991. As a system of government, Communism is more or less dead, but its utopian ideals of liberation from exploitation and want live on. Communism remains the one political-economic system that presented, for a time, an alternative to global capitalism. In this course, students will gain an introduction to socialist and Communist political thought and explore Communist political and economic regimes their successes and failures, critics and dissidents, efforts at reform, and causes of collapse. We will learn about the remnants of Communism in China, North Korea, and Cuba and efforts of contemporary theorists to imagine a future for Communism.

RUSS 135 Cold War: A Global History
The Cold War was more than simply a military confrontation between the United States and the Soviet Union; it was the frame within which the entire world developed (for better or worse) for nearly five decades. This course will examine the Cold War as a global phenomenon, covering not only the military and diplomatic history of the period, but also examining the social and cultural impact of the superpower confrontation. We will cover the origins of the conflict, the interplay between periods of tension and detente, the relative significance of disagreements within the opposing blocs, and the relationship between the "center" of the conflict in the North Atlantic/European area and the global "periphery".

RUSS 136 Portraits of Russian Society: Art, Fiction, Drama
This course covers 19C Russian cultural and social history. Each week-long unit is organized around a single medium-length text (novella, play, memoir) which opens up a single scene of social history/birth, death, duel, courtship, tsar, and so on. Each of these main texts is accompanied by a set of supplementary materials/paintings, historical readings, cultural-analytical readings, excerpts from other literary works, etc. The object of the course is to understand the social codes and rituals that informed nineteenth-century Russian life, and to apply this knowledge in interpreting literary texts, other cultural objects, and even historical and social documents (letters, memoranda, etc.). We will attempt to understand social history and literary interpretation as separate disciplines yet also as disciplines that can inform one another. In short: we will read the social history through the text, and read the text against the social history.

RUSS 145 Masterpieces of 19th Century Russian Literature
A bronze monument to an all-powerful emperor comes to life and pursues a poor everyman through the streets, driving him to his death. A studious young man kills an old woman as a philosophical experiment. A young woman at the height of aristocratic society abandons her husband and young son to devote herself to her lover. These and other tales from the classics of nineteenth-century Russian literature will touch and delight you, get under your skin, and even attempt to show you how to live. We will read these tales in order to understand how books can become events in their own right, how Russian literature gained such power and prestige, and what it can still teach us today. Works will include Pushkin's The Bronze Horseman, Turgenev's Fathers and Children, Dostoevsky's Crime and Punishment, Tolstoy's Anna Karenina, Khvoshchinskaya's City Folk and Country Folk, Chekhov's Cherry Orchard, and others.

RUSS 149 Slavery, Serfdom, and Cultures of Bondage in the U.S. and Russia
During the Cold War, the United States and Russia were locked in an ideological battle, as capitalist and communist superpowers, over the question of private property. So how did these two countries approach the most important question regarding property that ever faced human civilization: how could governments justify the treatment of its subjects, people, as property? In 1862, Russia abolished serfdom, a form of human bondage that had existed in its territories since the 11th century. Just a year later, in 1863, Abraham Lincoln signed the Emancipation Proclamation, declaring America's slaves "then, thenceforward, and forever free." What forces, both domestic and international, both political and cultural, influenced this near simultaneous awakening in which huge swaths of the Russian and U.S. populations were libereted? While scholars have often sought to compare slavery and serfdom as institutions, this course does not attempt to draw connections between the two. Rather, we will focus on how the slavery/anti-slavery and serfdom/anti-serfdom debates were framed in each respective country as well as how Russia used American slavery and the U.S. used Russian serfdom to shape their own domestic debates.

RUSS 159 Population and Public Health in Eastern Europe
Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism have forced millions to migrate to the West. This course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.

Activity: Lecture
1 Course Unit

RUSS 171 The Socialist City
This course will explore the ideology and politics of the socialist city in the Soviet Union, East Europe, and the Second World. We will focus on how design professionals, politicians, and residents realized utopian socialist values in the face of national design traditions, local politics, and limited resources. Beginning with the Soviet case, the course will consider how planners and architects addressed modernization, multi-family housing, and neighborhood units in new city plans. We will consider capitals, like Moscow, as well as less well-known regional centers that had strong local identities, such as Tashkent, Belgrade, and Prague. We will examine the state’s use of public spaces for commemorations and preservationists’ reinterpretation of existing historic sites. In addition, we will consider how everyday residents experienced the socialist city, such as multi-family housing, shopping centers, and subway systems. We will address how citizens circumvented official state channels to obtain state housing and illegally build homes for themselves, sometimes in a folk style. The course will center on Soviet and East European cities, but also address socialist cities in Cuba and Africa whose design was influenced by transnational exchanges. Most broadly, this course explores the question, what was the socialist city? How did its planners, architects, and politicians understand it, and what did they intend to construct? And, what resulted? In the past fifteen years, North American scholars have begun to take seriously the study of the socialist city, and this course draws on the emerging scholarship on this exciting, cross-disciplinary topic. How do scholars understand the socialist city today? We will examine the shared legacies that socialist cities across East Europe shared with their Western European counterparts, as well as the particularities of design that have sparked North American scholars’ debates on what distinguished the socialist city from those that emerged in a capitalist context. In our discussions, we will seek to understand how socialist design professionals understood their work and the emerging cities at the time, as well as how North American scholars view the socialist city today. Disciplinarily, the focus of the call will fall at the intersection of architectural history and politics.

Taught by: Platt
Activity: Lecture
1 Course Unit
Notes: All readings and lectures in English

RUSS 189 Soviet and Post-Soviet Economy
The course will cover the development and operation of the Soviet centrally planned economy—one of the grandest social experiments of the 20th century. We will review the mechanisms of plan creation, the push for the collectivization and further development of Soviet agriculture, the role of the Soviet educational system and the performance of labor markets (including forced labor camps—GULags). We will discuss the strengths and weaknesses of the Soviet system and the causes of its collapse. Privatization, called by some “piratization,” will be one of the central issues in our consideration of central planning to a market economy in the early 1990s. Even though our main focus will be on the Soviet economy and post-Soviet transition, we will occasionally look back in time to the tsarist era and even further back to find evidence to help explain Soviet/Russian economic development.
Taught by: Vekker
Activity: Lecture
1 Course Unit

RUSS 191 Putin's Russia: Culture, Society and History
Winston Churchill famously said that Russia “is a riddle, wrapped in a mystery, inside an enigma.” Strikingly, today many informed Russians would agree: no one can provide definitive answers concerning what has driven Russian public life and politics over the past three years, as it ricocheted from the mass protests of 2011 and 2012, into the Pussy Riot scandal, then the Olympics, and most recently to the intense patriotism of the mass protests of 2011 and 2012, into the Pussy Riot scandal, then the Olympics, and most recently to the intense patriotism of Crimea and intervention in Ukraine.
In this course we will examine how Russians themselves communicate about and represent Russia and what that reveals about this complex society and its development. We will consider print journalism, novels, films, televised media, and the internet-paying close attention both to particular representations and to social institutions for their production, dissemination and consumption. Topics of special concern will include: conspiracy theories, representations of Russian history, collective identity and patriotism, intellectuals and elites, gender and sexuality, consumption and wealth. Putins Russia is an introductory level course for which no prior knowledge Russian history, culture or society is required. All readings and screenings will be in English.
For BA Students: Society Sector

Activity: Lecture
1 Course Unit
Notes: No prior knowledge of Russian is required.

RUSS 193 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional “fog of war” describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war’s traditional dependence on declaration is often warped by language games—“police action,” “military intervention,” “nation-building,” or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terrorist or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation—propaganda, nationalist messaging, memorialization, xenophobic depiction—affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war’s shaping influence? The class will concentrate on literary objects—short stories, and graphic novels—as well as film and television. Students of every level and major are welcome and encouraged to join this class, regardless of literary experience.

RUSS 196 Russian Short Story
This course studies the development of 19th and 20th-century Russian literature through one of its most distinct and highly recognized genres—the short story. The readings include great masters of fiction such as Pushkin, Gogol, Dostoevsky, Tolstoy, Chekhov, Solzhenitsyn, and others. The course presents the best works of short fiction situating them in a larger cultural-political context. The students learn about the historical formation, poetic virtue, and thematic characteristics of major narrative modes such as sentimentalism, romanticism, utopia, realism, modernism, and socialist realism. We study literary devices, styles, and trends of storytelling such as irony, absurd, satire, grotesque, anecdote, etc. Main topics include culture of the duel; the role of chance; the riddle of death; anatomy of madness; imprisonment and survival.

1 Course Unit
RUSS 197 Madness and Madmen in Russian Culture
Is “insanity” today the same thing as “madness” of old? Who gets to define what it means to be “sane,” and why? Are the causes of madness biological or social? In this course, we will grapple with these and similar questions while exploring Russia’s fascinating history of madness as a means to maintain, critique, or subvert the status quo. We will consider the concept of madness in Russian culture beginning with its earliest folkloric roots and trace its depiction and function in the figure of the Russian “holy fool,” in classical literature, and in contemporary film. Readings will include works by many Russian greats, such as Pushkin, Gogol, Dostoevsky, Chekhov, Bulgakov and Nabokov.

RUSS 201 Dostoevsky and His Legacy
This course explores the ways Fyodor Dostoevsky (1821-1881) portrays the “inner world(s)” of his characters. Dostoevsky’s psychological method will be considered against the historical, ideological, and literary contexts of middle to late nineteenth-century Russia. The course consists of three parts External World (the contexts of Dostoevsky), “Inside” Dostoevsky’s World (the author’s technique and ideas) and The World of Text (close reading of Crime and Punishment and The Brothers Karamazov). Students will write three essays on various aspects of Dostoevsky’s “spiritual realism.”
Activity: Seminar
1 Course Unit

RUSS 202 Tolstoy
Few authors have ever been able to combine their moral and artistic visions as closely as Tolstoy. Over the course of the semester, we will plot how Tolstoy’s ethical concerns changed over the course of his life and how this was reflected in works, which include some of the greatest prose ever written. We will begin by surveying the majestic and far-reaching world of his novels and end with some of Tolstoy’s short later works that correspond with the ascent of “Tolstoyism” as virtually its own religion.

1 Course Unit
Notes: Ben Franklin Seminar

RUSS 213 Saints and Devils in Russian Literature and Tradition
This course is about Russian literary imagination, which is populated with saints and devils, believers and religious rebels, holy men and sinners. In Russia, where people’s frame of mind had been formed by a mix of Eastern Orthodox Christianity and earlier pagan beliefs, the quest for faith, spirituality, and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Is humility the way to salvation? Should one live for God or for the people? Does God even exist? In “Saints and Devils” we read works of great masters of Russian literature and learn about the historic trends that have filled Russia’s national character with religious and mystical spirit. We start with old Russian fanciful stories and legends of crafty demons and all-forbearing saints. The master of fantastic writing, Nikolai Gogol, will teach us how to triumph over the devil. Together with Anton Chekhov and Leo Tolstoy, we contemplate an ambivalent cultural image of woman as a victim or a sinful agent of the devil. Immersed in the world of Dostoevsky’s The Brothers Karamazov, we follow the characters in their search for truth, faith, and love. In The Master and Margarita, Mikhail Bulgakov will tell us his fantastic and devilish story of Pontius Pilate and we will see for ourselves that “A man will receive his deserts in accordance with his beliefs.”

RUSS 217 Russian Politics
This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a brief discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implicatons of economic reform, and prospects for Russia’s future in the Putin and post-Putin era.
Course usually offered in spring term
Activity: Recitation
1 Course Unit
RUSS 220 Russia and the West
This course will explore the representations of the West in eighteenth- and nineteenth-century Russian literature and philosophy. We will consider the Russian visions of various events and aspects of Western political and social life: Revolutions, educational system, public executions, resorts, etc. within the context of Russian intellectual history. We will examine how images of the West reflect Russia's own cultural concerns, anticipations, and biases, as well as aesthetic preoccupations and interests of Russian writers. The discussion will include literary works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy, as well as non-fictional documents, such as travelers' letters, diaries, and historiographical treatises of Russian Freemasons, Romantic and Positivist thinkers, and Russian social philosophers of the late Nineteenth Century. A basic knowledge of nineteenth-century European history is desirable. The class will consist of lectures, discussion, short writing assignments, and two in-class tests.
For BA Students: Humanities and Social Science
Activity: Seminar
1 Course Unit
Notes: From the Other Shore: Russia and the West

RUSS 222 Imagining Asia: Russia and the East
This course examines the important role of the East in Russian literature and nationalism. Focusing specifically on the Caucasus, Central Asia, Iran, and Turkey, this course will analyze how Russian writers connected the East to Russian identity, and how their approaches implicate different artistic periods (Romanticism, Realism, Socialist Realism, Post-Modernism) and different political atmospheres (Tsarist Russia, Soviet Union, Post-Soviet). Students will also ascertain how Russian literature on the East has affected and influenced literature and political movements produced in the East. In particular, students will analyze how Soviet Central Asian writers, Iranian Socialists, and contemporary Turkish writers were influenced by Russian literature and Soviet ideology. Ultimately, this course examines the impact of Russian cultural and political history in 20th century Central Asia and the Middle East.
Readings will include works by: Pushkin, Lermontov, Tolstoy, Dostoevsky, Platonov, Chingiz Aitmatov, Sadek Hedayat, Orhan Pamuk, and others.
Activity: Seminar
1 Course Unit

RUSS 234 Medieval Russia: Origins of Russian Cultural Identity
This course offers an overview of the cultural history of Rus from its origins to the eighteenth century, a period which laid the foundation for the Russian Empire. The course takes an interdisciplinary approach to the evolution of the main cultural paradigms of Russian Orthodoxy viewed in a broader European context. Although this course is historical in content, it is also about modern Russia. The legacy of Medieval Rus is still referenced, often allegorically, in contemporary social and cultural discourse as the Russian, Ukrainian and Belarusian societies attempt to reconstruct and reinterpret their histories. In this course, students learn that the study of the medieval cultural and political history explains many aspects of modern Russian society, its culture and mentality.

RUSS 240 Napoleonic Era and Tolstoy
In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy's War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the novel and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great novel? Because we will read War and Peace over the course of the entire semester, readings will be manageable (circa 100 pages of the epic and 50 pages of additional reading per week) and very enjoyable.

Notes: All readings and lectures in English.

RUSS 250 Tarkovsky's Passions
Andrei Tarkovksy is universally acknowledged to be the greatest Soviet filmmaker of the last half of the twentieth century. In Kurosawas assessment following Tarkovskys death in the late 1980s, he had no equal among film directors alive now. In Ingmar Bergmans words, Tarkovsky was a miracle. His films are beautiful, intellectually challenging, and spiritually profound. They range from Ivans Childhood, an exploration of wartime experience through the eyes of a child; to Solaris, a philosophical essay in the form of a science-fiction thriller; to Andrei Rublev, an investigation of the power of art and spirituality. In this course, we will study Tarkovskys films and life, with attention both to his formal and artistic accomplishments, his thought and writings concerning art and film, and the cultural and political contexts of his work.

1 Course Unit

RUSS 261 Russian Thinkers
This class focuses on the complex relations between philosophy, history, and art in Russia and offers discussions of works of major Russian authors (such as Dostoevsky, Tolstoy, Khlebnikov), religious and political thinkers (Chaadaev, Herzen, Berdiaev, Lenin, Bogdanov), avant-garde artists (Filonov, Malevich), and composers (Skriabin) who created and tested in their lives their own, sometimes very peculiar and radical, worldviews. We will consider these worldviews against a broad cultural background and will reenact them in class in the form of philosophical mini-dramas. The only prerequisite for this course is intellectual curiosity and willingness to embrace diverse, brave and often very weird ideas.
Course not offered every year
Activity: Seminar
1 Course Unit
RUSS 275 Russian History in Film
This course draws on fictional, dramatic and cinematic representations of Russian history based on Russian as well as non-Russian sources and interpretations. The analysis targets major modes of imagining, such as narrating, showing and reenacting historical events, personae and epochs justified by different, historically mutating ideological postulates and forms of national self-consciousness. Common stereotypes of picturing Russia from "foreign" perspectives draw special attention. The discussion involves the following themes and outstanding figures: the mighty autocrats Ivan the Terrible, Peter the Great, and Catherine the Great; the tragic ruler Boris Godunov; the brazen rebel and royal impostor Pugachev; the notorious Rasputin, his uncanny powers, sex-appeal, and court machinations; Lenin and the October Revolution; images of war; times of construction and times of collapse of the Soviet Colossus. Taught by: Todorov
Course not offered every year
Activity: Lecture
1 Course Unit

RUSS 299 Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit

RUSS 311 Advanced Russian Conversation and Composition I
This course develops students’ skills in speaking and writing about topics in Russian literature, contemporary society, politics, and everyday life. Topics include women, work and family; sexuality; the economic situation; environmental problems; and life values. Materials include selected short stories by 19th and 20th century Russian authors, video-clips of interviews, excerpts from films, and articles from the Russian media. Continued work on grammar and vocabulary building. For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisites: RUSS 004 or placement exam.
Activity: Lecture
1 Course Unit

RUSS 312 Advanced Russian Conversation and Composition II
Primary emphasis on speaking, writing, and listening. Development of advanced conversational skills needed to carry a discussion or to deliver a complex narrative. This course will be based on a wide variety of topics from everyday life to the discussion of political and cultural events. Russian culture and history surveyed briefly. Materials include Russian TV broadcast, newspapers, Internet, selected short stories by contemporary Russian writers. Offered each spring. For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: RUSS 311 or placement exam
Activity: Lecture
1 Course Unit

RUSS 360 Russian for Heritage Speakers I
This course is intended for students who have spoken Russian at home and seek to achieve proficiency in the language. Topics will include an intensive introduction to the Russian writing system and grammar, focusing on exciting materials and examples drawn from classic and contemporary Russian culture and social life. Students who complete this course in combination with RUSS361 satisfy the Penn Language Requirement. Taught by: Nazyrova
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Previous language experience required

RUSS 361 Russian for Heritage Speakers II
This course is a continuation of RUSS360. In some cases, students who did not take RUSS360 but have basic reading and writing skills may be permitted to enroll with the instructor’s permission. Students who complete RUSS361 with a passing grade will satisfy the Penn Language Requirement. For BA Students: Last Language Course
Taught by: Nazyrova
Course usually offered in spring term
Prerequisites: Prerequisites: Russian 360 or at least three and no more than six years of Russian formal schooling, or instructor’s permission. Activity: Lecture
1 Course Unit

RUSS 399 Supervised Work
Hours and credits on an individual basis.
One-term course offered either term
Activity: Independent Study
1 Course Unit

RUSS 408 Reading Russian History
The course explores defining episodes, concepts, and figures in Russian history, from the earliest time to the present day, and their reception in today’s scholarship and society. Students learn about Russian historical heritage through the reading of primary sources and analytical essays, as well as examining how this history is used in the present socio-political and ideological discourse. Work on language focuses on matters of style, sentence structure, and vocabulary building. Taught by: Verkholantsev
Course not offered every year
Prerequisite: RUSS312 or placement exam
Activity: Seminar
1 Course Unit

RUSS 410 Russian Folk and Literary Tale
This course continues developing students’ advanced skills in Russian. It focuses on the language, style, and narrative techniques of Russian tales. Course materials include written, animated, and cinematic versions of folk fairy tales, epic songs, and literary tales by major Russian authors, such as Alexander Pushkin, Nikolai Gogol, and Leo Tolstoy. The course aims to improve students’ knowledge of idiomatic language and to expand their knowledge of Russian popular culture. Taught by: Verkholantsev
Course not offered every year
Prerequisites: Russian 312 or placement exam.
Activity: Seminar
1 Course Unit
Notes: Conducted in Russian.
RUSS 412 Nineteenth-Century Russian Literature and Culture: Romantics and Realists
This course continues developing students’ advanced skills in Russian, and combines advanced study of the Russian language with an examination of the fundamental literary movements and figures of nineteenth-century Russian literature and culture. Course materials include prosaic and poetic texts by Pushkin, Gogol’, Lermontov, Dostoevsky, Tolstoy, Chekhov, as well as films and art. Language work will be devoted to writing, syntactical and stylistic analysis, vocabulary, academic speech, and listening comprehension.
Taught by: Bourlatskaya
Course not offered every year
Prerequisites: Russian 312 or placement exam.
Activity: Lecture
1 Course Unit
Notes: Conducted in Russian.

RUSS 413 Twentieth-Century Russian Literature, Film and Culture: Utopia, Revolution and Dissent
This course continues developing students’ advanced skills in Russian, and introduces students to major movements and figures of twentieth-century Russian literature and culture. We will read the works of modern Russian writers, and watch and discuss feature films. The course will introduce the first Soviet films and works of the poets of the Silver Age and beginning of the Soviet era as well as the works from later periods up to the Perestroika and Glasnost periods (the late 1980s).
Taught by: Bourlatskaya
Course not offered every year
Prerequisites: Russian 312 or placement exam.
Activity: Seminar
1 Course Unit
Notes: Conducted in Russian.

RUSS 414 Nineteenth-Century Russian Literature and Culture: Romantics and Realists
This course continues developing students’ advanced skills in Russian, and is designed to familiarize students with contemporary Russian society, its historical background and its present political and economic structure, and to develop functional proficiency in speaking, writing, reading and listening. The course will focus on a variety of issues central to Russian society since the fall of the Soviet Union, including changing values, political parties and movements, the business climate and businessmen, various nationalities within Russia, women in the family and at work. Course materials will include interviews, articles, essays by leading Russian journalists and statesmen, and contemporary Russian movies.
Taught by: Bourlatskaya
Course not offered every year
Prerequisites: RUSS 312 or placement exam.
Activity: Seminar
1 Course Unit
Notes: Conducted in Russian.

RUSS 415 Business and Democracy in the New Russia
This course continues developing students’ advanced skills in Russian, and offers intensive study of Russian film, arguably the most powerful medium for reflecting changes in modern society. This course will examine Russia’s transition to democracy and market economy through the eyes of its most creative and controversial cinematographers. The course will focus on the often agonizing process of changing values and attitudes as the country moves from Soviet to Post-Soviet society. Russian films with English subtitles will be supplemented by readings from contemporary Russian media sources. The course provides an excellent visual introduction to the problems of contemporary Russia society.
Taught by: Bourlatskaya
Course not offered every year
Prerequisites: Russian 312 or placement exam.
Activity: Seminar
1 Course Unit
Notes: Conducted in Russian.

RUSS 416 Business and Democracy in the New Russia
This course continues developing students’ advanced skills in Russian, and is designed to familiarize students with contemporary Russian society, its historical background and its present political and economic structure, and to develop functional proficiency in speaking, writing, reading and listening. The course will focus on a variety of issues central to Russian society since the fall of the Soviet Union, including changing values, political parties and movements, the business climate and businessmen, various nationalities within Russia, women in the family and at work. 1 Course Unit
Notes: Conducted in Russian.

RUSS 417 Russian Song and Folklore
This course offers a general introduction to the history of Russian folklore, song and musical culture. Students will explore the history of song in Russia and various song genres including folk songs, gangster songs, cabaret, war songs, Soviet ideological songs, and Russian rock and pop music. We will discuss ritual functioning of songs in Russian calendar rites, examine the aesthetic properties of song lyrics and music, and analyze the educational, community-building and ideological roles of song in Russian society.

Prerequisites: Russian 312 or placement exam.
Activity: Seminar
1 Course Unit
Notes: Conducted in Russian.

RUSS 419 The Life and Art of Anton Chekhov
This course continues to develop students’ advanced skills in Russian. Language work will be combined with an examination of the life and creative work of one of Russia’s greatest writers, Anton Chekhov. Chekhov’s prose and drama will be analyzed using the political, social and literary currents of his time as the background. This course will introduce students to the literary technique, poetics, and deeply humane worldview of Chekhov. Course materials will include short stories and drama, as well as some background readings. The advanced study of Russian language will have an emphasis on improving pronunciation, significantly expanding the vocabulary, mastering complicated grammatical and syntactical structures, and learning the basic conventions of academic discourse. As part of this course, students will be asked to write short response papers and some pieces of creative writing. Students will also produce a short film and stage a scene from a play. All class discussions and primary sources will be in Russian. Some secondary readings will be in English.
Activity: Seminar
1 Course Unit
Notes: Conducted in Russian.
RUSS 426 Chekhov: Stage & Screen
What's so funny, Mr. Chekhov? This question is often asked by critics and directors who still are puzzled with Chekhov's definition of his four major plays as comedies. Traditionally, all of them are staged and directed as dramas, melodramas, or tragedies. Should we cry or should we laugh at Chekhovian characters who commit suicide, or are killed, or simply cannot move to a better place of living? Is the laughable synonymous to comedy and the comic? Should any fatal outcome be considered tragic? All these and other questions will be discussed during the course. The course is intended to provide the participants with a concept of dramatic genre that will assist them in approaching Chekhov's plays as comedies. In addition to reading Chekhov's works, Russian and western productions and film adaptations of Chekhov's works will be screened. Among them are, Vanya on 42nd Street with Andre Gregory, and Four Funny Families. Those who are interested will be welcome to perform and/or direct excerpts from Chekhov's works.
Taught by: Zubarev
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Forms a part of the LPS Masters in Liberal Arts Program.

RUSS 430 Nationalism and Ethnic Conflict in Film
This course studies the cinematic representation of civil wars, ethnic conflicts, nationalist doctrines, and genocidal policies. The focus is on the violent developments that took place in Russia and on the Balkans after the collapse of the Soviet Bloc and were conditioned by the new geopolitical dynamics that the fall of communism had already created. We study media broadcasts, documentaries, feature films representing the Eastern, as well as the Western perspective. The films include masterpieces such as "Time of the Gypsies", "Underground", "Prisoner of the Mountains", "Before the Rain", "Behind Enemy Lines", and others.
Taught by: Todorov
Course not offered every year
Activity: Online Course
1 Course Unit
Notes: Forms a part of the LPS Masters in Liberal Arts Program.

RUSS 432 Fate and Chance in Literature and Culture
In Fate and Chance in Literature and Culture, we will explore these two interrelated concepts in comparative perspective over a broad historical range. As a result, the students will learn how the philosophy of fate and chance has been reflected in works of different Russian authors and in different cultural and political environments. In Russian as well as western systems of belief fate and chance represent two extreme visions of the universal order, or, perhaps, two diametrically opposed cosmic forces: complete determinism, on the one hand, and complete chaos or unpredictability, on the other. These visions have been greatly reflected by various mythopoetic systems. In this course, we will investigate religious and folkloric sources from a series of Russian traditions compared to other Indo-European traditions (Greek, East-European). Readings will include The Song of Prince Igor's Campaign, The Gambler by Dostoevsky, The Queen of Spades by Pushkin, Vij by Gogol, The Black Monk by Chekhov, The Fatal Eggs by Bulgakov, and more.
Taught by: Zubarev
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Forms a part of the LPS Masters in Liberal Arts Program.

RUSS 455 The Living & the Dead: The Great Patriotic War in Russ Cultural Imagination
This course is dedicated to the 70th anniversary of the Great Patriotic War, 1941-45. Students will explore the cultural myth of the war, created in the 1960-80s. The materials will include literary texts, documentaries, photographs, and films. We will focus on three major themes of this myth: 1. moral strength and courage; 2. respect for Russia's military past; and 3. the rise of national consciousness.
Course not offered every year
Prerequisites: RUSS361 or comparable language competence
Activity: Seminar
1 Course Unit

RUSS 464 Russian Humor
One of the most fascinating and most difficult things for a student of foreign culture is to understand national humor, as it is presented in various stories and films, jokes and shows. To an extent, humor is a gateway to national mentality. In the present course we will examine Russian cultural history, from the sixteenth through the twenty-first centuries, through the vehicle of Russian humor. How does Russian humor depend on religion and history? What was considered funny in various cultural trends? What are the peculiarities of Russian humorist tradition? Students will be familiarized with different Russian theories of humor (Bakhtin, Likhachev, Panchenko, Tynianov, etc.) and, of course, with a variety of works by Russian kings of humor Pushkin and Gogol, Chekhov and Zoshchenko, Bulgakov and Ilf and Petrov, Erofeev and Kibirov, etc. Class lectures will be supplemented by frequent video and musical presentations ranging from contemporary cartoons to high comedies and from comic songs (Chaliapins The Flea) to the music of Shostakovich (The Nose). This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language.
Course not offered every year
Prerequisites: RUSS361 or comparable language competence
Activity: Seminar
1 Course Unit
Notes: Conducted in Russian.
RUSS 466 Russian Revolution
This course is a content-based course intended for students who speak Russian at home and seek to improve their command of formal and professional registers of the Russian language. Paying tribute to the centennial of the Russian Revolution, the course examines the sociopolitical milestone of the 20th century through the works of literature, art, music, film, and material culture that both refracted the revolutionary situation and responded to the revolutionary change. The course’s primary sources include works of Russian symbolist poets (e.g. Blok) and realist writers (e.g. Kolenko, Chekhov, Gorky, Andrei Platonov), the music of modernist composers, Soviet montage films, and the Soviet architecture of the International Style. The specific attention will be on the relationship between sociopolitical transformation and the raise of avant-garde movements in visual arts and poetry known as the artistic revolution (e.g. Khlebnikov, Maiakovskii, Kandinskii, Goncharova, Malevich, Chagall).
Taught by: Nazyrova

Activity: Seminar
1 Course Unit

RUSS 467 Classic Russian Literature Today
This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. A study of classic Russian literature in the original. Readings will consist of some of the greatest works of 19th and 20th-century authors, such as Pushkin, Gogol, Tolstoy, Dostoevsky, and Bulgakov. Students will examine various forms and genres of literature, learn basic techniques of literary criticism, and explore the way literature is translated into film and other media. An additional focus of the course will be on examining the uses and interpretations of classic literature and elist culture in contemporary Russian society. Observing the interplay of the “high” and “low” in Russian cultural tradition, students will develop methodology of cultural analysis.
Course not offered every year
Prerequisites: RUSS361 or comparable language competence
Activity: Lecture
1 Course Unit
Notes: Conducted in Russian.

RUSS 471 Moscow: Cultural History
This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. An extraordinary diverse city, Moscow has acquired a number of names, referring both to its size and role in the national history: The Third Rome, The Whitestone One, The First Throne, The Forty Forties, The Hero City, and even The Big Village. In this course, students will examine the cultural history of the great city from 1147 to the present. The “itinerary” for this imaginary trip will include the Kremlin and the banyas, Saint Basil’s Cathedral and the Bolshoi Theater, the Ostankino Tower and the underground palaces of the Metro, the workers’ canteen and the dining rooms of the posh restaurants, etc. The course discussions will be centered on literary texts, travelers’ accounts, films, and works of art and architecture.
Course not offered every year

Prerequisite: RUSS361 or comparable language competence
Activity: Seminar
1 Course Unit

RUSS 485 Russian Poetics
Introduction to the analysis of poetic texts, based on the works of Batyushkov, Lermontov, Tютчев, Fet, Mandelshtam, and others.
Taught by: Steiner
Course not offered every year
Prerequisites: RUSS361 or comparable language competence
Activity: Seminar
1 Course Unit
Notes: This course is open to all advanced students of Russian (including students who speak Russian at home).

RUSS 508 Advanced Russian for Business
This advanced language course focuses on developing effective oral and written communication skills for working in a Russian-speaking business environment. Students will discuss major aspects of Russian business today and learn about various Russian companies using material from the current Russian business press. In addition, students will be engaged in a number of creative projects, such as business negotiation simulations, and simulation of creating a company in Russia.
For BA Students: Advanced Language Course
Taught by: Bourlatskaya
Course not offered every year
Prerequisites: At least one RUSS400-level course or comparable language competence
Activity: Seminar
1 Course Unit

RUSS 518 Old Church Slavonic: History, Language, Manuscripts
The language that we know today as Old Church Slavonic (OCS) was invented, along with the Slavic alphabet(s), in the 9th century by two Greek scholars, Sts. Cyril and Methodius. They had been tasked by the Byzantine Emperor with bringing the Christian faith to the Slavic-speaking people of Great Moravia, a powerful medieval state in Central Europe. From there, literacy, along with the Christian faith, spread to other Slavs. OCS is thus the language of the oldest written texts of the Slavic-speaking world, which today is comprised of the following languages: Belarusian, Bosnian, Bulgarian, Croatian, Czech, Macedonian, Montenegrin, Russian, Polish, Slovak, Serbian, Slovene, and Ukrainian. Therefore, knowledge of OCS aids in understanding the cultural, literary, and linguistic history of any modern Slavic language. For learners of Russian and other Slavic languages, OCS provides a layer of elevated stylistic vocabulary and conceptual terminology, similar to, and even greater than, the role of Latin and Greek roots in the English language. For historical linguists, OCS provides valuable material for comparison with other ancient Indo-European languages, such as Latin, Greek, and Sanskrit. This course introduces students to the basics of OCS, as well as to the cultural and historical circumstances of the emergence of Slavic literacy and its material culture - manuscripts. It is suitable for both undergraduate and graduate students.
Taught by: Verkholantsev
Course not offered every year
Activity: Seminar
1 Course Unit
RUSS 519 History of Russian Literary Language and Culture
This course examines the linguistic, literary, and social history of the Russian language from the medieval period to the modern day. Course topics include: the creation of the Slavic alphabets and the first literary language of the Slavs, Old Church Slavonic; the beginnings and development of writing and literacy in Old Russia; the evolution of the Russian literary language, its styles, and registers; grammatical categories of Russian; features of Russian lexicography; the social history and politics of language use; analysis of texts. Taught in Russian; readings in Russian & English; advanced language proficiency required. Taught by: Verkholantsev
Course not offered every year
Prerequisites: Any RUSS 400 level course or comparable proficiency.
Activity: Seminar
1 Course Unit

RUSS 545 Russian Dead Poets Society
This course, designed for the lovers of poetry, will focus on close readings of the works of marvelous Russian poets from the 18th to the 20th c. These poems will be read against a broad historical and cultural background. Our goal will be to "resurrect" the distinct voice of each poet as a part of a cultural myth of Russian poetry. The list of dead poets to be summoned includes a number of major names, such as Gavriil Derzhavin, Alexander Pushkin, Mikhail Lermontov, Alexander Blok, Osip Mandelstam, and Iosif Brodsky, as well as a "short list" of minor, yet very representative and provocative, authors such as the notorious "pornographic" poet Ivan Barkov and a "ghost poet" Kozma Prutkov.
Course not offered every year
Activity: Seminar
1 Course Unit

RUSS 549 Stalinist Culture
In the Soviet Union in the late 1920s the dynamic cultural life of the revolutionary era, characterized by avant-gardism, experimentation, and diversity, gave way to a new organization of Soviet cultural life-one dominated by the newly formulated official style of "Socialist Realism" and bureaucratic institutions such as the Soviet Writers Union. In this course we will study the conditions that gave rise to this new era, its institutional realities, and masterworks in film, photography and literature of official art, including those by Kavelin, Pasternak and Eisenstein. We will also examine the social phenomena of cultural resistance and non-conformism of this period and its works written "for the drawer" or for non-official consumption, such as those of Akhmatova, Mandelstam, Bulgakov, Khasms and Druskin.
Taught by: Platt/Staff
Course not offered every year
Activity: Seminar
1 Course Unit

RUSS 575 Russian History in Film
The course draws on the cinematic/fictional representation of the Russian/Soviet history based on Russian as well as non-Russian sources. The analysis targets major modes of imagining, staging and reenacting history, construction of images that satisfy dominant political, cultural and ideological stereotypes, and help create national identities. Bias, eye-witness accounts, propaganda uses and abuses of history, forgeries and the production of alt-facts become topics of particular interest. The discussions involve nation builders, iconic heroes and charismatic antiheroes, great commanders and revolutionaries such as Alexander Nevsky, Ivan the Terrible, Rasputin and the Fall of the Romanovs, Lenin and the October Revolution, Stalin and the construction of the Soviet Colossus, the Storming of the Winter Palace, the Civil War, the Great Purge, the Red Scare in the US, etc.

SCND 504 Intermediate Swedish II

Part two of the intermediate level Swedish course. Through in- and out-of-class interactions, you will continue to engage with your peers and native or fluent Swedish speakers. We will look at Swedish products, practices and perspectives, and we will discuss how Swedish culture and society are adapting to a rapidly changing world. We will complement the course literature with relevant authentic sources, such as online media, films, newspapers, etc. With a small class size, we have the flexibility to adapt the content to individual interests, and you will have plenty of opportunity to contribute to the total learning experience while elevating your Swedish vocabulary, grammar and communication skills.

For BA Students: Last Language Course

Taught by: Aahren

Course offered spring; odd-numbered years

Prerequisite: SCND 503 or equivalent

Activity: Lecture

SCIENCE, TECHNOLOGY & SOCIETY (STSC)

STSC 001 Emergence of Modern Science
During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific world view from the Renaissance through the end of the 20th century. By focusing on the life, work, and cultural contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they relate to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a "Western Civ" course with a difference, open to students at all levels.
For BA Students: Hum/Soc Sci or Nat Sci/Math Sector
Taught by: Kucuk
Course usually offered in fall term
Activity: Lecture
1 Course Unit

STSC 002 Medicine in History
This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2) to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole--recognizing that medicine has always aspired to "treat" healthy people as well as the sick and infirm. Rather than history "from the top down" or "from the bottom up," this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.
For BA Students: History and Tradition Sector
Taught by: Barnes
Course usually offered in fall term
Activity: Lecture
1 Course Unit

STSC 003 Technology & Society
Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technologies affect social relations, and conversely how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism and communism? Can specific technologies promote democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we will consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet.

Course usually offered in spring term
Activity: Lecture
1 Course Unit

STSC 021 From Darwin to DNA
Evolution has been one of the productive and important ideas in the history of biology. It has also been a scientific idea with many complex social and political meanings. In this freshman seminar, we explore the history of ideas about evolution, heredity, DNA and genomics, attentive to the profound social dimensions of biological ideas. We consider the political and intellectual history of genetics and genomics, from pre-Darwinian ideas about evolution (there were many theories before Darwin’s) to contemporary debates about ancestry testing and creation science. We look at evolution’s role in the politics of race, eugenics, creation science and identity. This course will provide students with critical historical and social perspectives on science, technology and medicine.

Notes: Also fulfills General Requirement in Science Studies for Class of 2009 and prior
STSC 062 American Way of War
Do Americans fight wars differently than do the people of other nations? Are there unique American tactics or technologies? Does America’s success in war owe to its arsenal of sophisticated weapons, or to the fighting spirit of its people? What characterizes the American experience in combat? A respect for limits, or a willingness to win at any cost? And can we even answer these questions, or do the myths we tell ourselves about our past get in the way? This seminar explores the scientific and technological development of warfare in the United States from the time of European settlement of the Americas to the era of unmanned aerial vehicles. The changing nature of warfare beginning in 1775 and continuing through 2014 involved the creation and deployment of increasingly complex and powerful weapons, as well as a corresponding evolution in tactics and strategy.
Course not offered every year
Activity: Seminar
1 Course Unit

STSC 077 Voyages of Discovery
Across the nineteenth century, voyages of sail and steam made possible the creation of empires and a globalized world, through the transportation of people and commodities. Similarly, this course is a voyage of discovery based on the study of actual ship’s logs held in Penn’s Rare Book collection. We will use these accounts to guide our investigation into the science, technology, medicine, economic and environmental history of life at sea and in the ports of call for these ships around the Indian and Atlantic Oceans. Collectively, the seminar will produce an online exhibition built on logs, diaries and other sources held at Penn, in other local collections and gleaned from archives around the world.
Taught by: Petrie
Course not offered every year
Activity: Seminar
1 Course Unit

STSC 078 Everyday Technologies and the Making of the Modern World
Long before iPhones and Fitbits, personal technology – small(ish), portable, purchasable – had a tremendous impact on the lives of people around the globe. Items such as wristwatches, bicycles, sewing machines and radios could empower their users (or sometimes discipline them), creating economic, educational or recreational opportunities while also being associated with grander ideas and ideologies. This course will explore such everyday technologies across the nineteenth and twentieth centuries, in locations spanning the Americas, Europe, Africa and Asia. We will consider how the use and significance of particular technologies varied according to time and place, how these everyday items could contribute to “self-fashioning” for individuals, nations, and empires; and how, through use and modification, consumers themselves could become part of the story of technological change. In addition to reading a variety of classic and recent scholarship, students will work with a wide array of primary sources (newspapers, photographs, patent records, trade cards) and use digital tools to present their own research projects.
Taught by: Petrie
Activity: Seminar
1 Course Unit

STSC 107 Science, Technology & Medicine in Colonial India
In this course we will explore the broad contours of the histories of Science, Medicine and Technology in Colonial India (c. 1757 - 1947). This broad overview will be developed each week through a case study based on any one particular scientific discipline, technological project or medical event. Overall the course will attempt to locate the development of science, technology and medicine within the social, political and cultural context of colonial India. It is also worth noting that ‘Colonial India’, will include discussions of regions which today make up the Republic of India, Pakistan and Bangladesh.
Taught by: Mukharji
One-term course offered either term
Activity: Seminar
1 Course Unit

STSC 110 Science and Literature
This course will explore the emergence of modern science fiction as a genre, the ways it has reflected our evolving conceptions of ourselves and the universe, and its role as the mythology of modern technological civilization. We will discuss such characteristic themes as utopias, the exploration of space and time, biological engineering, superman, robots, aliens, and other worlds—and the differences between European and American treatment of these themes.
For BA Students: Arts and Letters Sector
Course usually offered in spring term
Activity: Lecture
1 Course Unit

STSC 135 Modern Biology and Social Implications
This course covers the history of biology in the 19th and 20th centuries, giving equal consideration to three dominant themes: evolutionary biology, classical genetics, and molecular biology. The course is intended for students with some background in the history of science as well as in biology, although no specific knowledge of either subject is required. We will have three main goals: first, to delineate the content of the leading biological theories and experimental practices of the past two centuries; second, to situate these theories and practices in their historical context, noting the complex interplay between them and the dominant social, political, and economic trends; and, third, to critically evaluate various methodological approaches to the history of science.

One-term course offered either term
Activity: Seminar
1 Course Unit
STSC 145 Comparative Medicine
This course explores the medical consequences of the interaction between Europe and the "non-West." It focuses on three parts of the world Europeans colonized: Africa, South Asia, and Latin America. Today's healing practices in these regions grew out of the interaction between the medical traditions of the colonized and those of the European colonizers. We therefore explore the nature of the interactions. What was the history of therapeutic practices that originated in Africa or South Asia? How did European medical practices change in the colonies? What were the effects of colonial racial and gender hierarchies on medical practice? How did practitioners of "non-Western" medicine carve out places for themselves? How did they redefine ancient traditions? How did patients find their way among multiple therapeutic traditions? How does biomedicine take a different shape when it is practiced under conditions of poverty, of inequalities in power? How do today's medical problems grow out of this history? This is a fascinating history of race and gender, of pathogens and conquerors, of science and the body. It tells about the historical and regional roots of today's problems in international medicine.

STSC 160 The History of the Information Age
Certain new technologies are greeted with claims that, for good or ill, they must transform our society. The two most recent: the computer and the Internet. But the series of social, economic and technological developments that underlie what is often called the Information Revolution include much more than just the computer. In this course, we explore the history of information technology and its role in contemporary society. We will explore both the technologies themselves—calculating machines, punched card tabulators, telegraph and telephone networks, differential analyzers, digital computers, and many others—and their larger social, economic and political contexts. To understand the roots of these ideas we look at the prehistory of the computer, at the idea of the post-industrial or information society, at parallels with earlier technologies and at broad historical currents in the United States and the world.

Taught by: Dick
One-term course offered either term
Activity: Lecture
1 Course Unit

STSC 162 Technology and Medicine in Modern America
Medicine as it exists in contemporary America is profoundly technological; we regard it as perfectly normal to be examined with instruments, to expose our bodies to many different machines; and to have knowledge produced by those machines mechanically/electronically processed, interpreted and stored. We are billed technologically, prompted to attend appointments technologically, and often buy technologies to protect, diagnose, or improve our health: consider, for example, HEPA-filtering vacuum cleaners; air-purifiers; fat-reducing grills; bathroom scales; blood pressure cuffs; pregnancy testing kits; blood-sugar monitoring tests; and thermometers. Yet even at the beginning to the twentieth century, medical technologies were scarce and infrequently used by physicians and medical consumers alike. Over the course of this semester, we will examine how technology came to medicine's center-stage, and what impact this change has had on medical practice, medical institutions and medical consumers - on all of us!
Taught by: Johnson
Course usually offered summer term only
Activity: Seminar
1 Course Unit

STSC 168 Environment and Society
This course examines contemporary environmental issues such as energy, waste, pollution, health, population, biodiversity and climate through a historical and critical lens. All of these issues have important material, natural and technical aspects; they are also inextricably entangled with human history and culture. To understand the nature of this entanglement, the course will introduce key concepts and theoretical frameworks from science and technology studies and the environmental humanities and social sciences.
For BA Students: Humanities and Social Science S
Taught by: Benson
Course not offered every year
Activity: Lecture
1 Course Unit

STSC 179 Environmental History
This course provides an introduction to environmental history—the history of the interrelationship between humans and the rest of nature. In the words of historian J.R. McNeill, "Human history has always and will always unfold within a larger biological and physical context, and that context evolves in its own right. Especially in recent millennia, that context has co-evolved with humankind." In this course we will study this co-evolution between human actors and non-human actors in global history, analyzing political, social, cultural and economic factors that affect ideas about nature and material effects on nature. We will consider the concept of the Anthropocene and study current environmental changes and challenges.
Taught by: Greene, A
Course not offered every year
Activity: Lecture
1 Course Unit
STSC 201: Hist Phys Sci 19th & 20th Century
Over the last two centuries, scientists have produced a broad range of knowledge about the physical world, from light to electromagnetism to atoms to nuclei, facilitating or explaining an ever-increasing mastery over the natural world. Because of their success, these developments played an important role in forming our views of how to effectively generate knowledge of the natural world. This course will examine some of the major developments in the physical sciences during the 19th and 20th century, asking how that knowledge and the means by which it was produced related to institutions, technical practices and broader cultural knowledge and knowledge production to explore how past practices have, or have not, left their traces in later science. The course will meet twice a week for lecture and discussion. Readings will consist of Pursuing Power and Light: Technology and Physics from James Watt to Albert Einstein by Bruce J. Hunt When Physics Became King by Iwan Rhys Morus Night Thoughts of a Classical Physicist by Russel McCormmach as well as articles from a course reader. Students will produce three short papers (about three pages) and a term paper (about ten pages)
Taught by: Ashrafi

Activity: Lecture
1 Course Unit

STSC 208: Science and Religion: Global Perspectives
This survey course provides a thematic overview of science and religion from antiquity to the present. We will treat well-known historical episodes, such as the emergence of Muslim theology, the Galileo Affair and Darwinism, but also look beyond them. This course is designed to cover all major faith traditions across the globe as well as non-traditional belief systems such as the New Age movement and modern Atheism
Taught by: Kucuk
Course not offered every year
Activity: Lecture
1 Course Unit

STSC 209: Race and Gender in Global Science
This course critically examines the creation of scientific conceptions of ‘race’ and ‘sex’ in the modern era and their global impact. How did ‘race’ and ‘sex’ come to be the primary categories through which human variation has been classified in the modern West? What concepts of “race” and “sex” did colonial scientists, doctors, naturalists, and other experts invent, and how and why did they do this? How have scientific conceptions of ‘race’ and ‘sex’ been adapted to fit the sociopolitical projects of formerly colonized regions? And how have recent developments in genomic science sought to reinvent these categories? With these questions in mind, this course challenges us to think critically about the political contexts in which conceptions of ‘race’ and ‘sex’ have been crafted as well as how they have been contested and re-defined.
Taught by: Gil-Riano
Course usually offered in spring term
Activity: Seminar
1 Course Unit

STSC 210: Race, Science, and Globalization
This course examines how the practice of sorting humans into distinct races is connected to the rise of modern science and to the economic globalization sparked by Columbus’ arrival in the Americas in 1492. By examining the trajectory of race in science from the Iberian conquest of the Americas until the present, we will examine the ways in which colonial logics and structures persist into the present and the ways they’ve been disrupted by various revolutionary, anti-colonial, and anti-racist movements. Along the way, we will observe how cultural ideas about race have been woven into the conceptual fabric of modern scientific disciplines such as anthropology, biology, psychology, and sociology and how these disciplines have sought to redeem themselves from their racist pasts.
One-term course offered either term
Activity: Seminar
1 Course Unit

STSC 212: Science Technology and War
In this survey we explore the relationships between technical knowledge and war in the nineteenth and twentieth centuries. We attend particularly to the centrality of bodily injury in the history of war. Topics include changing interpretations of the machine gun as inhumane or acceptable; the cult of the battleship; banned weaponry; submarines and masculinity; industrialized war and total war; trench warfare and mental breakdown; the atomic bomb and Cold War; chemical warfare in Viet Nam; and “television war” in the 1990s.

1 Course Unit

STSC 218: Climate Change: Science, Technology and Society
Climate change is a sign that humans have become a force with planet-altering power. We need to understand how human societies work if we hope to respond to its dangers effectively. This course will use history to help students see climate change’s social and political aspects. We’ll examine how previous societies have responded to episodes of non-anthropogenic climate change, exploring market-based policies, power imbalances, and vulnerability. Through the history of science, we will investigate and critique how the growth of scientific knowledge often led climate change to be framed as a techno-scientific problem, best addressed through research and technological innovation. Students will learn how climate politics have been pushed by environmental and social justice activists, as well as by anti-communist scientists and corporate-sponsored cultivation of public doubt. Assignments will help students learn how to translate scholarly insights into engaging media that can reach various publics.

STSC 231 Insect Epidemiology Pests, Pollinators and Disease Vectors
Malaria, Dengue, Chagas disease, the Plague- some of the most deadly and widespread infectious diseases are carried by insects. The insects are also pernicious pests; bed bugs have returned from obscurity to wreak havoc on communities, invasive species decimate agricultural production, and wood borers are threatening forests across the United States. At the same time declines among the insects on which we depend- the honeybees and other pollinators--threaten our food security and ultimately the political stability of the US and other nations. We will study the areas where the insects and humans cross paths, and explore how our interactions with insects can be cause, consequence or symptom of much broader issues. This is not an entomology course but will cover a lot about bugs. It’s not a traditional epidemiology course but will cover some fascinating epidemiological theory originally developed for the control of disease vectors. It will cover past epidemics and infestations that have changed the course of the history of cities and reversed advancing armies. HSOC 241. Stem Cells, Science and Society. Gearhart/Zaret.

STSC 260 Cyberculture
Computers and the internet have become critical parts of our lives and culture. In this course, we will explore how people use these new technologies to develop new conceptions of identity, build virtual communities and affect political change. Each week we’ll see what we can learn by thinking about the internet in a different way, focusing successively on hackers, virtuality, community, sovereignty, interfaces, algorithms and infrastructure. We’ll read books, articles, and blogs about historical and contemporary cultures of computing, from Spacewar players and phone phreaks in the 1970s to Google, Facebook, World of Warcraft, WikiLeaks, and Anonymous today. In addition, we’ll explore some of these online communities and projects ourselves and develop our own analyses of them.
Taught by: Dick
One-term course offered either term

1 Course Unit

STSC 270 Digital Democracy
Technological infrastructure shapes what forms of political life are possible within a society. Political campaigns, investigative journalism, public engagement, protest, government - all unfold on different time scales, in different forms, and with different consequences depending on what machines mediate them. This course explores the forms of American political life that have taken shape in and through modern digital computing. We will investigate especially a perceived tension at the heart of computing technologies - from artificial intelligence to social media - as they have been introduced to so many corners of American political life: Are computing technologies agents of liberation, or of control? The internet, for example, was embraced by some as an inherently democratizing and liberating force, giving users equal access to voice and information. On the other hand, many feared the internet as an unprecedented platform for corporate and government surveillance and manipulation. This course will analyze and historicize this tension, looking to unpack the complex and controversial role of computers in American political life from the Cold War to @POTUS.
Taught by: Dick
Course usually offered in fall term
Activity: Seminar
1 Course Unit

STSC 272 Energy in America
Energy issues are central to all aspects of American life -social, cultural, environmental, political and economic. The United States possesses abundant energy resources, and Americans have long enjoyed high, even profligate energy consumption. With 5% of the world’s population, the United States currently consumes 24% of the world energy. How did the United States’ energy system come to be? This course looks at how this energy system developed over time, in order to understand how Americans’ energy choices have been shaped by environmental conditions, economic arrangements, political practices, social structures, and cultural values. It examines the kinds of energy and power used by Americans, energy adoption and transitions, the development of power systems, the role of consumption, and the influence of energy beliefs. It emphasizes the themes of system, contingency, complementarity, and choice. Ongoing topics are the history of energy at the University of Pennsylvania and in the mid-Atlantic region, the meaning of energy efficiency, and the problem of sustainable energy.

STSC 278 Prove It: Mathematics and Certainty
Mathematical knowledge is often held up as our most reliable and certain knowledge. The truths of mathematics serve as exemplars of certainty that are not tied to any specific time and place. Yet, throughout history, mathematics has been understood and practiced in quite different ways, for quite different reasons, and by quite different people. Mathematical certainty has been shaped by different beliefs and practices. Mathematicians and their work have been shaped by rich interactions with different dimensions of social life from religion and politics to architecture and war. Mathematics is not simply surrounded by a society external to it, it is an integral and complex part of it. What concerns have motivated mathematical research through history? How has mathematics been put to work in different domains of culture? What does it mean to be a mathematician in different times and places? Does mathematical knowledge bear traces of the conditions in which it was produced? What counts as proof and to whom? How do we reconcile the changing character of mathematical research with the traditional understanding of mathematical knowledge as time and place independent? This course takes up these questions by looking to different worlds in which mathematics and mathematical certainty have taken shape.

1 Course Unit
STSC 279 Nature’s Nation: Americans and Their Environment
The United States is “nature’s nation.” Blessed with an enormous, resource-rich geographically diverse and sparsely settled territory, Americans have long seen “nature” as central to their identity, prosperity, politics and power, and have transformed their natural environment accordingly. But what does it mean to be “nature’s nation”? This course describes and explores how American “nature” has changed over time. How and why has American nature changed over the last four centuries? What have Americans believed about the nation’s nature, what have they known about the environment, how did they know it and how have they acted on beliefs and knowledge? What didn’t or don’t they know? How have political institutions, economic arrangements, social groups and cultural values shaped attitudes and policies? How have natural actors (such landscape features, weather events, plants, animals, microorganisms) played roles in national history? In addition to exploring the history of American nature, we will look for the nature in American history. Where is “nature” in some of the key events of American history that may not, on the surface, appear to be “environmental?”

STSC 308 Science, Technology and Global Capitalism
Modern capitalism has been defined by the circulation of commodities, from gold in the 16th century to sugar in the 17th, tobacco in the 18th, cotton in the 19th, oil in the 20th, and financial derivatives in the 21st. But the world is always messy and complex, rather than neatly divided into products and goods. How, why, and for whose benefit do we divide nature into the abstractions of the marketplace? Who holds power over where, why, and how that happens? In this seminar, we’ll use a wide range of scholarship from the humanities, social sciences, and the sciences, along with primary texts and other sources, in order to understand the close links among global capitalism, science and technology, and the natural world.??

STSC 315 Theories of Color: Ideas and Context
In this course we will investigate ideas about color and color practices from antiquity to the nineteenth century. Our historical survey will follow three intertwined threads. We will examine physical color theories, namely, what various writers thought color was in things themselves and how color was related to light. We will study anatomical and physiological accounts of the eye, especially the way in which ocular anatomy was intimately tied to ideas about color. And we will trace the history of color technology, namely, how people in the past have struggled to bring color under control. As a part of this we will study the long history of alchemy, which was in a sense born out of attempts to mimic precious stones and metals - especially their color - and we will touch on the closely related histories of dyeing, pigments, and painting. When possible we will reproduce notable historical anatomies, particularly the anatomical procedures of Galen, Vesalius, and others, and we will also replicate some key historical experiences and experiments concerning color.
Taught by: Baker
Activity: Seminar
1 Course Unit
Notes: This course can count toward Sector A or B (Stage 2 or 3) of the Visual Studies Major.

STSC 316 Science, Technology and Society in Modern East Asia
The course aims to survey the history of science and technology in East Asian countries-China, Japan and Korea-since the late 19th century. Since Japan was the only nation in East Asia that succeeded in modernizing itself by adopting Western science, technology and politics, it will be studied first. The Chinese and Korean cases then will be reviewed with different angles. The course will emphasize the mutual influence between science & technology and society to answer how these countries became major industrial powers in the 21st century.

STSC 338 Hybrid Science: Nature, health, and society in Latin America
What role did science and medicine play in the creation and growth of the Spanish and Portuguese empires? And why was the creation of science and health institutions crucial to the revolutionary movements for independence in Latin America? This course examines science and medicine in Latin America by attending to the ways that knowledge of nature and health has been central to the political struggles of the countries in this region. A crucial dynamic shaping the history and culture of this region is the interplay between the healing practices and cosmologies of European settlers, indigenous Americans, and the descendants of African slaves. Bearing this interplay in mind, this course explores how Latin America has been a fertile site of scientific creativity. It also examines the ways in which Latin American scientists and medical experts have refashioned concepts and practices from Europe and North America to fit local circumstances.
Taught by: Gil-Riano
Course usually offered in spring term
Activity: Seminar
1 Course Unit

STSC 360 Data Dreams
The idea of solving problems by collecting as much data as possible about them is an old dream that has recently been revitalized. This course examines the hunger for data from a historical and social perspective, seeking to understand when, why, and how the collection of vast amounts of data has come to seem valuable and desirable, sometimes in ways that exceed any reasonable expectation of utility or feasibility. Topics include state surveillance, online tracking, the quantified self, citizen science, civic hacking, human genomics, bioinformatics, and climate science.

STSC 368 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The "origins of environmentalism" lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.

STSC 370 The Many Lives of Data: Population, Environment, and Planning in the United States, 1850 to the Present
This is a class about the live(s) and afterlives of information from 1850 to the present. Not only can information be reproduced (in a variety of material conditions); it can be repurposed and funneled through a variety of different applications, some of them serving radically different purposes than the first purpose of gathering it. Thoreau’s journals of plant flowering, for instance, have become important indicators of climate change. More controversial is the sale of biomedical information by personal genomics services for drug discovery, or the construction of forensic databases consisting of the DNA of suspects arrested as a result of racial profiling. We will study the ways in which data has become a way for us to understand and define change, stability, place, and time, beginning in the mid-nineteenth century, a period of accelerated and increasingly systematic gathering of data, particularly medical, forensic, and environmental data. The class will proceed both chronologically and thematically in three units, from the gathering and use of biomedical data as a way to make patient populations “legible” (to borrow from James Scott), to data as a way to make the environment understandable, and finally to data as a tool for producing and reproducing social relations. As a final project, students will trace a particular data set from its original gathering to its latest usage. Students will also have an opportunity to create their own course content in the final three weeks of class.

STSC 379 Animals in Science Medicine Technology
This course explores human-animal relationships: the wide range of these relationships, why they originated and how they have changed over time. How have humans classified, valued, utilized, consumed, behaved toward and understood animals? Where is the boundary between humans and other animals, and how do we know, since humans are also animals? How is that boundary been maintained and redefined? Are humans part of the animal “natural” world- or apart from it? How are humans similar to and different from other kinds of animals? How do we know about animals and what is it we know? To what extent are questions about animals really questions about humans? How has the meaning of animal changed over time? The course focuses in particular to the roles and relationships of animals within science and medicine, and as biotechnologies.

STSC 391 Bioethics and National Security
At least since Augustine proposed a theory of “just war,” armed conflict has been recognized as raising ethical issues. These issues have intensified along with the power and sophistication of weapons of war, and especially with increasing engineering capabilities and basic knowledge of the physical world. The life sciences have had their place in these developments as well, perhaps most vividly with the revelations of horrific experiments conducted by the Nazi and Imperial Japanese militaries, but with much greater intensity due to developments in fields like genetics, neuroscience and information science, and the widely recognized convergence of physics, chemistry, biology and engineering. The fields of bioethics and national security studies both developed in the decades following World War II. During the cold war little thought was given to the fact that many national security issues entail bioethical questions, but this intersection has been increasingly evident over the past two decades. In spite of the overlapping domains of bioethics and national security, there has been remarkable little systematic, institutional response to the challenges presented by these kinds of questions:
- What rules should govern the conduct of human experiments when national security is threatened? - Is it permissible to study ways that viruses may be genetically modified in order to defeat available vaccines, even for defensive purposes? - What role may physicians or other health care professionals play in interrogation of suspected terrorists? - Must warfighters accept any and all drugs or devices that are believed to render them more fit for combat, including those that may alter cognition or personality? - What responsibilities does the scientific community have to anticipate possible “dual purpose” uses or other unintended consequences of its work? Deploying the resources of ethics, philosophy, history, sociology and theory, this course will address these and other problems.

STSC 400 Undergraduate Seminar in Science Technology and Society
This is a capstone seminar for STSC majors, and a required seminar for any STSC junior who wishes to write a senior thesis for honors in the major. It is designed to provide the tools necessary to undertake original research by guiding students through the research and writing process. Students will produce either a polished proposal for a senior thesis project, or a completed research paper by the end of the term. Although each student will work on a different topic, the class will focus on general aspects of historical, and social scientific research and guide students through a close reading of key texts in science and technology studies.
Course usually offered in spring term
Activity: Seminar
1 Course Unit
STSC 408 Depicting Data and Picturing Nature
Scientific knowledge has always relied on images, as in the cases of big, beautiful books of pictures like Audubon’s Birds of America, photographs taken through telescopes, maps, readouts and today, digital images. These images can be a shorthand or guide to make patterns clearer or sometimes are taken to represent the natural world itself. With questions about how to represent “big data,” the interpretation of medical images, and about the manipulability of digital images, the role of images in contemporary science is hardly straightforward. This course will look at the development of image-making as a part of knowledge production in medicine and the sciences. We will read works by visual specialists, historians, scientists and artists, and critically examine scientific images themselves, developing our own visual literacy.
Taught by: Berkowitz
Course usually offered in spring term
Activity: Seminar
1 Course Unit

STSC 411 Sports Science Medicine Technology
Why did Lance Armstrong get caught? Why do Kenyans win marathons? Does Gatorade really work? In this course, we won’t answer these questions ourselves but will rely upon the methods of history, sociology, and anthropology to explore the world of the sport scientists who do. Sport scientists produce knowledge about how human bodies work and the intricacies of human performance. They bring elite (world-class) athletes to their laboratories or their labs to the athletes. Through readings, discussions, and original research, we will find out how these scientists determine the boundary between “natural” and “performance-enhanced,” work to conquer the problem of fatigue, and establish the limits and potential of human beings. Course themes include: technology in science and sport, the lab vs. the field, genetics and race, the politics of the body, and doping. Course goals include: 1) reading scientific and medical texts critically, and assessing their social, cultural, and political origins and ramifications; 2) pursuing an in-depth The course fulfills the Capstone requirement for the HSOC/STSC majors. Semester-long research projects will focus on “un-black-boxing” the metrics sport scientists and physicians use to categorize athletes’ bodies as “normal” or “abnormal.” For example, you may investigate the test(s) used to define whether an athlete is male or female, establish whether an athlete's blood is “too” oxygenated, or assess whether an athlete is “too” fast (false start). Requirements therefore include: weekly readings and participation in online and in-class discussions; sequenced research assignments; peer review; and a final 20+page original research paper and presentation.

STSC 429 The Neurological Condition
Few aspects of our physical makeup are as closely linked to who we are as people as the nervous system. We define our selves by our capacity to think, to react, by our memories. In large part, we believe we are our brains. Yet such perceptions have a history far deeper than our current neuro-obsessed moment. In this course we explore the neurological condition as the human condition: the growing sense since the nineteenth century that we are defined by our nervous systems, and the science that has fostered this vision. From theories of diminishing “nerve force” and the electric cures of the Victorian era, to fMRIs and Obama’s 2013 BRAIN Initiative, we explore how science, medicine, and technology have shaped our understanding of the brain and nervous system as the center of human identity. Course topics include the rise of professional neurology and neuroscience, cultural meanings of nerves and the brain, and the intimate role of patients and human subjects in formulating this science from the nineteenth century to the present.

STSC 436 Biopiracy: Medicinal Plants and Global Power
Biopiracy has emerged as the name of conflict between multinational pharmaceutical companies attempting to get genetic patents on medicinal plants and indigenous communities in the Global South who have long known and used these plants for medicinal purposes. Today the story of Biopiracy is an unfolding story of plants, patents and power. The extraction and commercial exploitation of plants and knowledge about them from the Global South however is not new. It has been happening at increasing pace for at least the last two centuries. Both the anti-malarial drug quinine and the cancer drug vincristine for instance have their plant-origins in the Global South where local communities used them medicinally long before their discovery by biomedicine. This course will put the current debates around Biopiracy in context and explore how the entanglements of plants and power have changed or not changed.

Activity: Seminar
1 Course Unit

STSC 442 Hospital as Curing Machine
This course examines the technological, scientific, and spatial evolution of the modern hospital from the miasmatic, vermin-infested medieval European hospital-as-alms house, to the late twentieth-century ideal of the modern hospital as a condenser of sophisticated technologies, scientific expertise, and Taylorist efficiencies. In so doing, we will see how designers of hospital space, consciously or not, have striven to realize the mechanized, technological vision of the hospital as curing machine a phrase first invoked by 18th century French surgeon and anatomist Jacques Tenon. While the early nineteenth-century hospital had been a locus for fears about contagion, death, and disease in a pre-germ theory world, through its eventual integration of antiseptic practices, spatially produced zones of medical expertise (the operating suite, the laboratory, pediatric and maternity wards), novel technologies (incubators, hyperbaric chambers, x-rays, ultrasounds) and factory-like efficiencies the hospital came into its own as the epitome of rational modernist space. But, over the course of its evolution, the modern hospital other change as well: as an incubator for super-bugs, as an engine for projects of patient renewal, and as a site for the cultural transformation of the meaning of birth, death, and health itself.

1 Course Unit
STSC 443 Science and the Senses: Visual Culture, Material Objects
Using various types of readings, podcasts, and visits to area museums and centers of research, this course examines the relationships between seeing, sensing, and knowing in science. What roles do the senses and the material objects they observe play in production of science, and how has that changed historically? Are the senses reliable and standardizable, and if so, how can we talk about them with a common vocabulary? Are some more important than others? We will begin to answer those questions historically, following the role of the senses in science from the early modern period up to the present. We will look at ways in which vision was constructed as the primary sense during the Enlightenment and at ways in which it was made objective and instrumentalized in the modern period. We will also look at objects themselves. How do museum displays, illustrations jarred specimens, photographs, and movies make and convey knowledge?
Taught by: Berkowitz

STSC 461 The Child in the City
This course examines the problem of the child in urban space in 19th and 20th century European and American discourses. This course does not propose to recover the subjective experience of the child but, rather, views the child as an object around which numerous adult anxieties connected to industrialization, urbanization, and modernity itself cohered. Discourses on public health, environmental pollution, sexuality, criminality, and racial degeneration all focused their attention, anxieties, and energies on how to deal with the unique vulnerability of the child in modern urban space. This interdisciplinary course focuses specifically on atmospheres, environments, and architectures in urban settings as diverse as Chicago, New York, Paris, and London. We will examine how the built environment was envisioned as part of a set of critical technologies for resolving the threat that urban space posed to the child. We will explore objects and envir as diverse as tenement babycages, wartime floating hospitals, open-air schools, adventure playgrounds in post-WWII London, car-less communities in Radburn, NJ, and American chil books about urban blight and renewal.

STSC 472 Invisible Labor in the Human Sciences
This course looks at those disciplines that take people as their subjects of research—including biology and biomedicine as well as anthropology, linguistics, and sociology—to explore the contributions of a wide range of research participants. We will focus on the sciences of human behavior, information, and medicine to analyze the labors of behind-the-scenes actors including tissue donors, survey respondents, student subjects, patients, translators, activists, ethics review boards, data curators, and archivists. Our job will be to analyze the experiences of these technoscientific laborers with a view to systems of knowledge and power in the production and maintenance of Knowledge about humans and their bodies.

SLAV 500 History of Literary Theory
Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing and often confrontational dialogues between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the /professional /study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature we will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism. There will be no examinations. Students will make one class presentation, which will then be reworked into a paper (1200-1500 words) to be submitted one week after the presentation. A second paper will be an annotated bibliography on a theoretical issue or issues that a student wishes to explore further. The bibliography will be developed in consultation with the instructor: it will typically include three or four books and six to eight articles or their equivalent. The annotated bibliography will be prefaced by a five or six page introduction; the whole will add up to between 5000 and 6000 words of prose. Students will prepare position notes each week, which will either be posted on a weblog or circulated in class.

SLAV 501 Elementary Polish I
This course is for students who want to acquire the linguistic skills necessary for communication in everyday situations and that would constitute a solid base for further study of the Polish language. In addition students will become acquainted with various aspects of Polish culture (including Polish films), history and contemporary affairs. Students will learn through classroom exercises based on a modern textbook, completion of individual and group assignments and work with various audio and video materials. The textbook Hurra - Po Polsku 1 is written in the spirit of the communicative approach, which makes it possible to communicate from the very beginning of the learning process. The special attention, however, will be paid on systematic development of all language skills: listening, reading, speaking and writing.

For BA Students: Language Course
Taught by: Dziedzic
Two terms. student may enter either term.
Prerequisites: No prerequisite.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.

SLAV 502 Elementary Polish II
This course is a continuation of the SLAV501 680. This is for students who want to acquire the linguistic skills necessary for communication in everyday situations and that would constitute a solid base for further study of the Polish language. In addition students will become acquainted with various aspects of Polish culture (including Polish films), history and contemporary affairs. Students will learn through classroom exercises based on a modern textbook, completion of individual and group assignments and work with various audio and video materials. The textbook Hurra - Po Polsku 1 is written in the spirit of the communicative approach, which makes it possible to communicate from the very beginning of the learning process. The special attention, however, will be paid on systematic development of all language skills: listening, reading, speaking and writing.

For BA Students: Language Course
Taught by: Dziedzic
Two terms. student may enter either term.
Prerequisites: SLAV 501 or Instructor’s permission.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.

SLAV 503 Intermediate Polish I
This is a first-semester intermediate -level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will learn through classroom exercises based on a modern textbook: Hurra Po Polsku 2, completion of individual and group assignments and work with various audio and video materials. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the Polish cases; the aspect of the verbs, the development of writing skills.

For BA Students: Language Course
Taught by: Wolski-Moskoff
Two terms. student may enter either term.
Prerequisites: SLAV 502 or placement exam.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.
SLAV 504 Intermediate Polish II
This course is a continuation of the SLAV503 680. This is a second-semester intermediate-level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will learn through classroom exercises based on a modern textbook: Hurra Po Polsku 2, completion of individual and group assignments and work with various audio and video materials. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the Polish cases; the aspect of the verbs, the development of writing skills.
For BA Students: Last Language Course
Taught by: Wolski-Moskoff
Two terms. student may enter either term.
Prerequisite: SLAV 503 or placement
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.

SLAV 505 Polish for Heritage Speakers I.
The course is addressed to students who have spoken Polish at home and seek to achieve proficiency in the language. The main goal of this course is to provide instruction directed at students continued development of existing competencies in the Polish language. Students will acquire skills that range from learning grammar and spelling, and developing vocabulary, to interpretation and analysis of different literary genres. Students will explore a broad variety of cultural themes. Topics will include: Polish literature - classic and modern, social life, contemporary affairs and films. Upon completion of the Polish for Heritage Speakers course, students are expected to confidently understand, read, write and speak Polish with an increased vocabulary and a better command of Polish grammar. They will increase their reading skills through interpretation and analysis of different Polish literary genres. Students will be able to organize their thoughts and write in a coherent manner. They will increase their writing skills by writing personal essays, compositions and others. Students will further their knowledge of the Polish language and will engage in class discussion on various topics. Students will gain a better understanding of the Polish culture.
For BA Students: Language Course
Taught by: Dziedzic
Course not offered every year
Prerequisite: Instructor permission required
Activity: Lecture
1 Course Unit
Notes: STUDENTS WHO COMPLETE TWO SEMESTERS OF THIS COURSE SATISFY THE PENN LANGUAGE REQUIREMENT. Polish is used exclusively in the classroom.

SLAV 506 Polish for Heritage Speakers II
Continuation of SLAV505
For BA Students: Last Language Course
Taught by: Dziedzic
Course not offered every year
Prerequisites: SLAV505 or placement test.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

SLAV 530 Elementary Czech I
An introduction to the fundamentals of the Czech language, acquisition of conversational, reading and writing skills.
For BA Students: Language Course
Two terms. student may enter either term.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.

SLAV 575 Slavic Literary Theory in Western Context
This course will compare selected theoretical concepts advanced by Russian Formalists, Prague Structuralists, and the Bakhtin group (e.g., defamiliarization, aesthetic sign, dialogue) with similar or analogous notions drawn from Western intellectual tradition.
Taught by: Steiner
Activity: Seminar
1 Course Unit

SLAV 590 Elementary Ukrainian I
An introduction to the fundamentals of the Ukrainian language, acquisition of conversational, reading and writing skills. This course is designed for students who have no or little background in studying Ukrainian. Students will be able to develop the base for the further study of the Ukrainian language. This course provides a comprehensive introduction to modern Ukrainian language and culture for those who would like to speak Ukrainian or use the language for reading and research. The course stresses all four major communicative skills (speaking, listening comprehension, reading, writing).
For BA Students: Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

SLAV 591 Elementary Ukrainian II
Continuation of SLAV 590. During the second semester, the students will be able to organize their thoughts and write in a coherent manner. They will increase their reading skills through interpretation and analysis of different Polish literary genres. Students will be able to organize their thoughts and write in a coherent manner. They will increase their writing skills by writing personal essays, compositions and others. Students will further their knowledge of the Polish language and will engage in class discussion on various topics. Students will gain a better understanding of the Polish culture.
For BA Students: Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Prerequisite: SLAV 590 or Placement
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

SLAV 592 Elementary Ukrainian III
Continuation of SLAV 591. During the second semester, the students will be able to organize their thoughts and write in a coherent manner. They will increase their reading skills through interpretation and analysis of different Polish literary genres. Students will be able to organize their thoughts and write in a coherent manner. They will increase their writing skills by writing personal essays, compositions and others. Students will further their knowledge of the Polish language and will engage in class discussion on various topics. Students will gain a better understanding of the Polish culture.
For BA Students: Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.

SLAV 595 Slavic Literary Theory in Western Context
This course will compare selected theoretical concepts advanced by Russian Formalists, Prague Structuralists, and the Bakhtin group (e.g., defamiliarization, aesthetic sign, dialogue) with similar or analogous notions drawn from Western intellectual tradition.
Taught by: Steiner
Activity: Seminar
1 Course Unit

SLAV 596 Slavic Literary Theory in Western Context
This course will compare selected theoretical concepts advanced by Russian Formalists, Prague Structuralists, and the Bakhtin group (e.g., defamiliarization, aesthetic sign, dialogue) with similar or analogous notions drawn from Western intellectual tradition.
Taught by: Steiner
Activity: Seminar
1 Course Unit

SLAV 597 Slavic Literary Theory in Western Context
This course will compare selected theoretical concepts advanced by Russian Formalists, Prague Structuralists, and the Bakhtin group (e.g., defamiliarization, aesthetic sign, dialogue) with similar or analogous notions drawn from Western intellectual tradition.
Taught by: Steiner
Activity: Seminar
1 Course Unit
SLAV 592 Intermediate Ukrainian I
This is a first-semester intermediate-level Ukrainian language course which is designed to make students practice reading, speaking and writing in Ukrainian. Current issues of Ukrainian newspapers, especially the weekly, will serve as the basic source for the study of the contemporary Ukrainian idiom. Reading, translation and discussion of featured articles on such topics as business, education, politics, science, sports et al. including advertising and horoscope style and terminology will not only be used to hone the language skills and build up vocabulary but also to acquaint the student with the latest linguistic developments in Ukraine, such as the loan-words and loan-translations, abbreviations and acronyms, ancient folk proverbs and sayings as well as contemporary technical terms.
For BA Students: Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Prerequisite: SLAV 591 or placement test.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

SLAV 593 Intermediate Ukrainian II
This second-semester intermediate-level Ukrainian language is the continuation of the SLAV 592. Students will be able to practice reading, listening, writing and speaking Ukrainian more in the context of Ukrainian history politics, and culture. Students will be provided with the newspapers in Ukrainian and other authentic materials that will be the basis of both the classroom discussions and homework.
For BA Students: Last Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Prerequisite: SLAV 592 or Placement
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

SLAV 594 Advanced Ukrainian I
This advanced Ukrainian course is addressed to the students who have taken SLAV592 and SLAV593 or can already speak and read Ukrainian. The course emphasizes on the advanced vocabulary building, conversation and reading skills. It also includes the advanced grammar review with the use of Ukrainian grammar terms. Students will learn more about Ukrainian literature, history, and modern life through the authentic materials, poems and parts literature extracts.
For BA Students: Advanced Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Prerequisite: SLAV 593 or Placement
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

SLAV 595 Advanced Ukrainian II
Continuation of SLAV 594. The course focuses on all the language skills (reading, writing, speaking, listening) on the level with the use of the authentic materials mostly from Ukrainian literature and newspapers. Students will work on reading one of the modern Ukrainian plays to be able to perform it at the end of the course. This course is a good foundation for doing the research in Ukrainian or working or studying in Ukraine.
For BA Students: Advanced Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Prerequisite: SLAV 594 or Placement
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

SLAV 599 Inter Serbo-Croatian II
Activity: Independent Study
1 Course Unit

SLAV 619 East & West in Medieval Europe: Bohemia as Center in the Age of the Luxemburgs
The seminar will examine a range of topics in Medieval Studies viewing European medieval civilization as encompassing the whole (“global”) geographic and cultural space of Europe and ignoring reference to contemporary socio-political division of Europe into “Western” and “Eastern.” As a case study, the course focuses on the 14th-century Holy Roman Empire from Henry VII to the Emperor Sigismund, and particularly on the reign of Charles IV, in a context in which Prague becomes the imperial capital and Bohemia a center of Europe. A detailed examination of this monarch’s vision of a “Global Europe” will allow us to explore a network of connections, a network that stretches from Prague to the farthest western, eastern and southern corners of the European continent. We will examine correspondences and differences between various linguistic, textual, political, and religious communities, while attempting to show how Latin and Slavic European cultures were interwoven. Some of the titles from the reading list are Charles IV’s The Life of St. Wenceslas and Autobiography, The Golden Bull, Dante’s Letters & Monarchia, Machaut’s Judgement of the King of Bohemia, Petrarch’s Epistolae & Poems, Froissart’s Prison of Love, Johannes von Tepl’s The Plowman of Bohemia, The Life of St. Constant in the Philosopher, fragments from Czech, French, Italian, Polish, Hungarian and Rus medieval chronicles, etc. All reading will be done in English, with original language versions always available.

SOCIAL WORK (SWRK)

SWRK 593 Design Thinking for Social Impact
Thinking like a designer can transform the way people and organizations develop products, services, processes, and strategy. This approach, called design thinking, brings together what is desirable from a human point of view with what is technologically feasible and economically viable. It also allows people who aren’t trained as designers to use creative tools to address a vast range of challenges. Design thinking is a deeply human process that taps into abilities we all have but get overlooked by more conventional problem-solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols.
Course usually offered summer term only
Activity: Lecture
1 Course Unit

SWRK 595 Effective Communication and Storytelling
Great leaders are storytellers. They are able to engage and entertain their communities, and tell a compelling narrative about how the world works. They use language powerfully and communicate in ways that uplift and inspire others. In this class, we will explore the power of telling great stories, and learn how to do it most effectively when promoting your campaigns to make the world a better place. We will also look at the skills of framing language in ways that will win over an audience. Finally, we will look at other key skills of effective communication, including the best strategies for persuasion, negotiation, and conflict resolution.
Course usually offered summer term only
Activity: Lecture
1 Course Unit

SWRK 596 Design and Incorporation of High Impact Nonprofits
Design and Incorporation of High Impact Not-For-Profits is designed for those who have a practitioner’s interest in the design, governance, leadership, and management of high impact not-for-profit organizations. This course is taught through learning best practice theory, applying this theory to a simulation experience, and providing students the opportunity to apply their new knowledge and experience in an interview with a current not-for-profit leader. Students, through the combination of theory and practice, are provided with the essential competencies and tools to design and incorporate a not-for-profit, conduct in-depth analysis of a not-for-profit’s effectiveness including, but not limited to, governance, leadership, social impact, financial sustainability, and systems and policy influence. Through the mock simulation process of designing, incorporating, and governing, students will leave with a “best practice” for not-for-profit manual that includes articles of incorporation, bylaws, governance deliverables, strategic business plan, organizational scorecard, 3-5 year budget, development plan and public policy strategy.
Activity: Lecture

SWRK 601 History and Philosophy of Social Work and Social Welfare
This course traces the development of social welfare policy in the United States and its relationship to social work. It analyzes the values and assumptions that form the foundation of existing welfare programs and institutions and explores the social, economic, political and cultural contexts in which they have developed. The course examines the development of cash assistance and social services programs in light of the enduring legacy of poverty, racism, and sexism. The view of "outsiders" in U.S. society - low-income persons, people of color, gays and lesbians - allows us to gain perspective on the source of conflict and consensus in American history, which augments material about institutional racism learned in SWRK 603 and content about behavioral responses learned in SWRK 602. The course traces, as well, the roles that social workers have played in the formulation and implementation of social welfare policy and links these historical examples to contemporary policy practice.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: This course may schedule sequence-wide lectures for all sections at various points in the semester, and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.

SWRK 602 Human Behavior in the Social Environment
This course introduces the student to the individual and family components of social interaction in a variety of different milieus. Theories of self and personality are studied, along with theories related to traditional and non-traditional family styles, different social and ethnic groups, and of assimilation and acculturation. Emphasis is given to the impact of different cultures and traditions on individual functioning. Additional attention is given to selected social characteristics of the larger society, such as factors of socio-economic class which influence individual and family behavior and functioning.

Activity: Lecture
1 Course Unit
Notes: This course may schedule sequence-wide lectures for all sections at various points in the semester, and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.

SWRK 603 American Racism and Social Work Practice
This course explores racism in America as an historical and contemporary phenomenon. It emphasizes the development of evidence-based knowledge about institutional systems of racism, analytical skill in understanding the complexity of institutional racism and other forms of oppression more broadly defined, self-awareness, and the implications of racism for social work services and practices.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: This course may schedule sequence-wide lectures for all sections at various points in the semester, and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.
**SWRK 604 Foundations of Social Work Practice I**
This is a first of a four-course sequence designed to help students develop a professional stance and evidence-based framework for social work services to individuals, groups, families, and communities. It integrates the student's theoretical learning with the experience in the field placement agency. The student is introduced to a holistic process-oriented approach to social work practice and to methods for implementation. The course emphasizes the social context for practice with special attention to agency purpose, functions and structure; the client system and its perceptions of need; goals and resources and the social worker as a facilitator of change.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: This course may schedule sequence-wide lectures for all sections at various points in the semester, and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.

**SWRK 614 Foundations of Social Work Practice II**
This is the second in a four-course sequence and continues to examine varied practice frameworks and methods for service delivery in working with individuals, groups, families and communities. It emphasizes the eradication of institutional racism and other forms of oppression along with the integration of a culturally-sensitive approach to social work practice. Attention is given to understanding client problems in the context of different social work practice approaches and service requirements and to increased use of professional values to guide and inform practice.
Course usually offered in spring term
Prerequisite: SWRK 604
Activity: Lecture

Notes: This course may schedule sequence-wide lectures for all sections at various points in the semester, and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.

**SWRK 615 Introduction to Social Work Research**
This course presents the broad range of research tools that social workers can use to improve the effectiveness and efficiency of their practice. The course emphasizes the process of theory development, conceptualization, and hypothesis formulation across a broad spectrum of social work practice situations. The course includes methodological considerations relating to concept operationalization; research design (experimental, survey, and field), sampling instrumentation, methods of data collection and analysis, and report preparation and dissemination. The course also emphasizes how social work research can help professionals better understand and more effectively impact problems of racism and sexism in contemporary American society.
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: This course may schedule sequence-wide lectures for all sections at various points in the semester and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.

**SWRK 620 Integrative Seminar**
All Advanced Standing students are required to take this non-credit Integrative Seminar in the summer upon beginning the program. The seminar meets weekly during the second summer session and supports students as they begin their field placement. In order to enroll in the fall, students must achieve satisfactory performance in the Integrative Practice Seminar and summer field placement.
Course usually offered summer term only
Prerequisite: Advanced Standing MSW students only
Activity: Seminar
0 Course Units

**SWRK 701 Health and Mental Health Policy**
This course provides an overview of the historical, social and economic dimensions of the health care delivery system: how health policies are developed and implemented, and how such policies influence social work practice, program planning, and research. Key health policy issues such as financing, cost, access, and the allocation of resources are explored in the context of health reform proposals. Students investigate how health policy affects specific population groups such as women and children, persons with chronic mental illnesses, persons with AIDS, older adults, and minorities.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: MSW Policy Option

**SWRK 702 Social Work Practice in Health Care**
This course focuses on key issues in social work practice in health care settings. Social aspects of health and illness, including cultural variations, health beliefs and behavior, and the impact of illness on the patient and the family, are examined and their relevance for practice is discussed. Appropriate theoretical models for practice are identified and applied to practice in the areas of prevention, primary care, chronic and long-term care. New roles for social work in varied health delivery systems and inter-professional collaboration are explored.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective

**SWRK 703 Impacting Government: Policy Analysis & Coalition Building**
This course focuses on developing a theoretical foundation for actionable skills in policy analysis and coalition building across a wide-range of constituencies. The material begins with a structured focus on the ideological underpinnings of social welfare in the United States and the ways in which these perspectives shape our conception of equity, equality, and allocation of resources along the lines of race, class, gender, immigration status, and other identities. We will then utilize this basis for developing analysis frameworks, policy briefs, and media messaging that students will utilize when working with legislative bodies to advocate for and with the populations they serve. Distinct emphasis is placed on becoming conversant across differential systems, ideas, values, and assumptions while remaining grounded in relevant research and empirical approaches.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Macro Practice Elective
SWRK 704 Advanced Clinical Social Work Practice I
Clinical Social Work Practice I and Field Practice builds on the generalist model of practice established in the foundation social work practice courses. The course work and assignments are closely linked to the students’ learning objectives and experiences in the field. This course has students critically examine and deepen their understanding of advanced theoretical frameworks and specific skills to be applied in clinical practice with children, adolescents, adults, and families. Students begin with classic and modern formulations of psychodynamic work and use this as a foundation for understanding theoretically and empirically drive models of family intervention. In addition, use of self and social work values and ethics and working with diverse clients are addressed at an advanced level.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Required for Clinical Practice Concentration; This course may schedule sequence-wide lectures for all sections at various points in the semester, and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.

SWRK 706 Policies for Children and Their Families
This course examines policies for children and their families with a specific focus on child welfare policy. The course examines the interrelationship between: the knowledge base on child abuse and neglect; evaluations of interventions; programs and policies designed to protect maltreated children; and child welfare policy at the state and national level. The course also examines federal and state laws that govern the funding and operation of child welfare systems; the history of child welfare policies; the operation of child welfare systems; and the legal, political and social forces that influence the structure and function of child welfare systems in the United States.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Policy Option

SWRK 708 Advanced Macro Social Work Practice I
Advanced Macro Social Work Practice I and Field Practice builds on the foundation social work practice courses and focuses on three areas: (1) context of macro practice; (2) organizational structure with a focus on nonprofits; and (3) program design and development. The course begins with providing theoretical frameworks for macro practice and then moves to focus on delivery of services at the community level. Knowledge and skill development focuses primarily on social work practice within communities and organizations. Students learn how to organize and build relationships with communities and develop, plan, manage, fund and assess/evaluate community-based programs. Specific skill development includes learning how to research, develop, write, and pitch a grant proposal. Course content is integrated with fieldwork and is specific to the service needs of the populations with whom students are working in their field agencies.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Required for Macro Practice Concentration; This course may schedule sequence-wide lectures for all sections at various points in the semester and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.

SWRK 710 Supervision Seminar
Students in the Employed Practitioners Program are required to take this non-credit seminar in the fall and spring terms of their second year of study. The class meets every other week. In a limited number of cases, advanced-year students may be placed in agencies where there is no available MSW field instructor. In such instances, the student is required to attend the Clinical or Macro Supervision Seminar (depending on their concentration), which meets every other week during the academic year. Students who are required to participate in the clinical or macro supervision seminars will be given 1.5 hours of compensatory time off from their field placement every other week.
Activity: Seminar
0 Course Units
Notes: Non-credit course required for students in the Employed Practitioners Program OR Non-credit course required for students without an MSW supervisor at their field placement

SWRK 711 Contemporary Social Policy
This course introduces students to the analysis of contemporary social welfare policy. Several social welfare policy areas, including social inequality, poverty, health care, and housing are examined. Each topic area is also used to illustrate a component of the policy analysis process, including the analysis of ideologies and values as they shape policy formulation, the process by which legislation is proposed and enacted, the roles of advocacy and lobbying organizations, and the challenges of policy implementation and evaluation.
One-term course offered either term
Activity: Lecture
1 Course Unit

SWRK 712 City Limits: The Impact of Urban Policy
This course assesses the changing role of public policy in American cities. In the past, government often believed that it could directly manage urban development. New realities - the rise of an informal labor market, global capital and labor flows, the flight of businesses and the middle class to the suburbs - have demonstrated that government must see itself as one - but only one - 'player' in a more complex, transactional process of policy making that crosses political boundaries and involves business, organized interest groups, and citizens. This seminar uses a case-study method to study how public policy can make a difference in the revitalization of distressed American cities. The seminar is designed for advanced undergraduates and graduate students. Seminar readings and projects will be organized around three themes: 1) history and vision, 2) data and analysis, and 3) policy and implementation. Students will be divided into project teams assigned to work on current development issues that will be reviewed by both public and private-sector experts. Extensive use will be made of real estate, economic development, and social indicator data to understand the complex forces at work in both large and small cities. Students will learn to access, analyze, and map information; to frame and interpret these data within a regional perspective; and to construct profiles of cities and neighborhoods. Students will study recent urban redevelopment initiatives in the Philadelphia region, including Philadelphia's Neighborhood Transformations Initiative and New Jersey's Camden Revitalization plans.
Course usually offered in spring term
Prerequisites: Students must have taken an introduction to research methods.
Activity: Seminar
1 Course Unit
SWRK 713 Understanding Social Change: Issues of Race and Gender
This course builds upon the foundation of historical, psychological, sociological, economic, political, and personal knowledge about institutionalized forms of racism and discrimination developed in SWRK 603, American Racism and Social Work Practice. The course uses understanding elements of oppression to critically examine strategies for addressing racism and sexism in organizations and communities through systematic assessment and planning for social change. The course examines change at three levels: organizations, communities, and social movements.
Course usually offered in spring term
Prerequisite: SWRK 603
Activity: Lecture
1 Course Unit
Notes: This course may schedule sequence-wide lectures for all sections at various points in the semester and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.

SWRK 714 Advanced Clinical Social Work Practice II
The focus of learning in this semester is theories and skills related to clinical practice with individuals and groups, differential intervention, and the broadening of the professional role and repertoire. The course content and assignments are closely linked with the students' learning objectives and experiences in the field. Students extend and refine their practice knowledge and skills and learn to intervene with cognitive, behavioral, and narrative modalities. This semester focuses also on work with complex trauma across systems and populations. Students consolidate their identification as professionals and learn to constructively use the environment to effect systems changes.
Course usually offered in spring term
Prerequisite: SWRK 704
Activity: Lecture
1 Course Unit
Notes: Required for Clinical Practice Concentration; This course may schedule sequence-wide lectures for all sections at various points in the semester and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.

SWRK 716 Comprehensive School Reform: From 'No Child Left Behind' through 'Race to the Top' to 'Every Student Succeeds Act'
This course examines how K-12 education policy is designed and implemented in the United States. It uses a systems analysis as the framework for looking at who makes what kinds of demands on the education policy system, how these demands are placed on the policy agenda, the decision making process, and resulting education policies and policy outcomes. The course pays particular attention to the roles of federal, state and local governments in education policy, and the impact of our intergovernmental system on the design and implementation of policy. Students will also examine major education policies and debate key education policy issues that arise at each level of government.
Activity: Seminar
1 Course Unit

SWRK 717 Art and Social Work: Art and the Ecology of Justice
How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.
Course not offered every year
Activity: Seminar
1 Course Unit

SWRK 718 Advanced Macro Social Work Practice II
Advanced Macro Social Work Practice II and Field helps students broaden and deepen the specific knowledge and skills required to become an effective and creative social work practitioner. The course focuses on five areas of macro practice: (1) community assessment and practice; (2) policy advocacy; (3) fiscal management and fundraising; (4) global human rights; and (5) emerging areas of macro practice. Students learn how to conduct a community practice analysis, engage in policy advocacy, develop an idea for a social enterprise, write an agency fundraising plan, and conduct an agency fiscal evaluation. Students learn to utilize administrative skills to promote social change within a variety of systems that influence the lives of client populations. Course content is integrated with fieldwork and is specific to the service needs of the populations with whom students are working in their field agencies.
Course usually offered in spring term
Prerequisite: SWRK 708
Activity: Lecture
1 Course Unit
Notes: Required for Macro Practice Concentration; This course may schedule sequence-wide lectures for all sections at various points in the semester and attendance is mandatory for all registered students. Joint lectures are scheduled on Mondays between 6:30-8:30PM; students should not register for other courses on Monday nights that would conflict with this time slot.

SWRK 721 Social Work Healthcare Proseminar
Activity: Seminar
0 Course Units
Notes: non-credit seminar for SWIHCS students only
SWRK 722 Practice with Children and Adolescents
This course provides a foundation for social work practice with children and adolescents. Beginning with an overview of normative child and adolescent development and psychosocial developmental theory, the course covers various methods for helping at-risk children and adolescents and their families. Emphasizing the complex interplay between children and adolescents and their social environments, consideration will be given to biological, temperamental, and developmental status; the familial/cultural context; the school context; and other aspects of the physical and social environment. Particular attention is paid to working with socially, emotionally, financially, and physically challenged and deprived children and adolescents and their families.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective; Option for Home and School Visitor (HSV) specialization

SWRK 724 Developmental Disabilities
This course enhances the students’ ability to practice social work with and on behalf of people with developmental disabilities and their families. The course provides a base of knowledge about developmental disabilities and differences, their causes and characteristics. Students learn how disabilities and learning differences impact personal, familial, educational, social, and economic dimensions for the individual, family and society, with attention to the person’s special life cycle needs and characteristics. The course also emphasizes legislative, programmatic, political, economic, and theoretical formulations fundamental to service delivery.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective; required for students in the HSV program

SWRK 726 Brief Treatment and Crisis Intervention
This course focuses on theory and practice of planned brief treatment in social work practice, primarily with individuals but with attention to couples, families and other groupings. The course covers the history of and different approaches to brief treatment. Topics include treatment issues such as criteria for selection of clients, understanding the importance of time in the treatment relationship, the use of history, the importance of focusing, the process of termination and other issues related to brief interventions. Particular attention will be paid to the use of brief treatment approaches in crisis situations. The course presents various methods of assessing an individual’s crisis and of helping clients mobilize their strengths to utilize customary methods of coping and learn newer ways of coping.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective

SWRK 727 Practice with Families
This course provides students with assessment and intervention skills for social work practice with varied family/partner configurations. The course begins with a grounding in family systems theory and proceeds to explore patterns of interaction in terms of the wide range of problems that families and partners bring to social agencies. Emphasis is given to exploring ways of supporting change in interaction patterns. Readings are augmented by videotapes of family sessions and simulations of clinical situations from students’ field practice.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective

SWRK 729 Social Statistics
This course provides students with a broad range of statistical methods and applications. It introduces social work students to the use of quantitative data for planning and evaluating social programs and social policy. Course topics include conceptualization and measurement of variables and basic techniques and concepts for exploring and categorizing data, for generalizing research findings and testing hypotheses, and for statistical data processing. Students will gain experience in using a Windows-based statistical software package on personal computers. Emphasis is placed on the practical application of data to address social policy and social work practice issues. Students have the opportunity to critique the application of data analysis and presentation in technical reports and professional journals.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Research Option

SWRK 730 Community Mapping
Geographic space is important to family and community well-being, as we know. Community Mapping introduces students to geographic information systems (GIS), computer software for making maps and analyzing spatial data. Students will learn how maps have been used in social welfare history as well as how GIS can be used for needs assessments, asset mapping, program evaluation, and program planning. The course builds on research skills developed in SWRK 615. For the final project, students have an opportunity to apply their GIS skills to creating maps related to their field placement. The use of such maps may lead to both program and policy change in neighborhoods and communities.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Macro Practice Elective
SWRK 731 Clinical and Macro Child Welfare Practice
Students enrolled in this course will learn about the various contexts in which child welfare practice and policy services take place and the skills and modalities that are used with children, youth, and families who are the focus of child welfare intervention. Students learn about the social conditions and unmet needs that have typically precipitated child welfare policy and ideological debates informing child welfare policy. How to structure organizations and implement planning in support of strengthening front-line practice is also addressed. Taking stock of these policies and organizational factors, students gain a firm understanding of how they influence, shape, and govern direct clinical practice in child protection and casework. Particular attention will be devoted to developing students’ practice skills in safety assessment and safety planning, risk assessment, and permanency planning. Implementation of evidence-based, trauma-informed interventions to promote positive developmental outcomes among the racially/ethnically diverse pool of children and adolescents placed in out-of-home care will also be a focus of attention. Other topics include separation, loss, and identity development; disproportionality and disparity; and self-care in child welfare practice. In the spirit of bridging connections between macro and clinical practice, course content will delve into how direct casework services influence dependency actions in the juvenile courts. How these direct practices or interventions influence case outcomes as reported by a number of federal data reporting systems will also be discussed. A social justice framework will be applied to understand how child welfare policies and organizational services sustain child and family inequalities, especially for historically oppressed and marginalized populations who are disproportionately represented in the child welfare system. Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: Clinical and Macro Practice Elective

SWRK 732 Integrative Seminar in Child Welfare
This capstone course in the Child Well-Being and Child Welfare specialization will integrate direct/micro and macro levels of practice; research in child welfare and related fields, as the research relates to all levels of practice; the relationship of child maltreatment and other social problems; and perspectives from several disciplines, specifically social work, other mental health professions, law, and medicine, as these disciplines address problems of child maltreatment and child welfare. The seminar will highlight issues of social justice, disproportionality - particularly the over-representation of children and families of color in the child welfare system, and disadvantaged populations, including children in general and poor children in particular. Faculty from other disciplines will be features as guest speakers throughout the course.
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: Clinical and Macro Practice Elective

SWRK 736 Building Community Capacity
This course provides an introduction to community organization and community capacity building. The course encompasses strategies, models, and techniques for the creation of organizations, the formation of federations of existing organizations; and coalition-building, all designed to address problems requiring institutional or policy changes or reallocation of resources to shift power and responsibility to those most negatively affected by current socio-economic and cultural arrangements. The course emphasizes development of strategies and techniques to organize low-income minority residents of urban neighborhoods, and to organize disenfranchised groups across geographic boundaries as the first required steps in an empowerment process.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Macro Practice Elective

SWRK 737 Bioethics in Social Work in Diverse Healthcare Settings
As medical technology develops and evolves, ethical dilemmas are occurring more frequently in many diverse healthcare settings. Social workers play an integral and unique role in bioethics: primarily as patient advocates but also as guardians of autonomy and dignity. This can come into direct conflict with decisions patients, families, and healthcare teams are asked to make on a daily basis in healthcare settings. This course will explore many of the major ethical challenges confronting medicine, social work, and biomedical sciences. We will examine legal, institutional and personal positions, beliefs, and values as we consider and debate opposing arguments. You will be challenged to think and write critically, utilizing philosophical, bioethical, and social work frameworks to structure your arguments and ethical decision making. This course will prepare students to actively participate in ethics committees, mediation, patient/family conferences with diverse populations and interdisciplinary collaborative discussions regarding ethical issues in medical settings.
Activity: Lecture
1 Course Unit

SWRK 738 Anxiety and Depression
Anxiety and depression are two of the most common mental disorders seen in social work clients, and frequently they occur concurrently. This course describes the medical and "physical" concomitants and psychosocial factors associated with both conditions and introduces diagnostic and assessment procedures and methods of intervention that social workers use in working with clients with these conditions. The course also considers how culture, social class, gender, and other social differences affect the expression of these disorders and their concomitant treatment.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective
SWRK 739 Illness and Family Caregiving
This course focuses on social work practice in medicine and the relationships between physical health, social environments, and psychosocial functioning. Student learning will be grounded in the biopsychosocial-spiritual model, and will address a number of domains, including the impact of illness on families over the life course, the impact of a diagnosis on family functioning, medical decision making, coping, health beliefs and spirituality, culture and social class. Classroom content will include conceptualization of illness challenges from the presentation/prevention of symptoms to the end of life, in addition to writing case material, building self-awareness and identifying clinical interface issues, and the compilation of a "clinician's toolbox" for direct practice on the front lines. Activities will include the unique opportunity to participate in hands-on, interdisciplinary training at the Simulation Center in the School of Nursing.
Course usually offered in fall term
Activity: Lecture
Notes: Clinical Practice Elective

SWRK 740 Strategic Planning and Resource Development for Public and Nonprofit Organizations
Resilient organizations engage in a continuous process of self-review and refocusing. Referred to as "strategic planning," this process requires the active participation of a broad range of agency "stakeholders" who, in their work together, seek to realign the organization's goals, structures, and programs to make them more responsive to the changing needs of their service populations. Building on the content of foundation practice foundation courses, "Strategic Planning and Resource Development" has been designed to strengthen the the student's leadership capacity for engaging in strategic planning and resource development practice across a broad range of governmental (GOs) and civil society organizations (CSOs). The importance of organizational flexibility, innovation, and the creation of cooperative public-private partnerships is emphasized throughout the course.

Activity: Lecture
Notes: Macro Practice Elective

1 Course Unit

SWRK 741 Gender & Social Policy
Gender and Social Policy develops an advanced understanding of social policies through a focus on social issues and conditions through the lens of gender, economic and critical theory. The specialized focus on gender and social policy provides students with the opportunity to develop more specialized knowledge about how market dynamics and government policies respond to the needs and risks faced by women. Specific emphasis is placed on utilizing theoretical frameworks to evaluate the intersection between social policy, history and social science in relationship to gender issues. Students are also expected to conduct a policy analysis that includes an evaluation of how current and former social movements surrounding gender issues shaped their policy of interest.

Notes: Policy Option

1 Course Unit

SWRK 742 Practice with At-Risk Youth
The discourse on juvenile justice in the United States, once driven by themes of treatment and rehabilitation, has been dominated in recent years by vocabularies of punishment and incapacitation. The juvenile court, an enterprise founded by social reformers and the social work profession at the turn of the century to "save children," is now under severe political and legislative pressure to impose harsher penalties on younger and younger offenders who are increasingly portrayed as violent "super-predators," while its most vulnerable segments, children and youth, stand in greatest need of what a social service system can offer. Not surprisingly, those most likely to wind up under supervision are economically poor, under-educated, disproportionately of color and disproportionately at-risk to become victims of violent crimes. How does the profession situate itself in this discourse and what are individual social workers to do?
Course usually offered in fall term
Activity: Lecture
Notes: Clinical and Macro Practice Elective; Option for Home and School Visitor Requirement

1 Course Unit

SWRK 743 Action Research
Action research is a form of social research that combines research with intervention. It is characterized by a collaborative relationship between the researcher and a client organization that is in an immediate problematic situation. The research process is directed toward addressing the problem situation and producing knowledge that contributes to the goals of social science. Action research is compatible with many of the values and principles of social work. This course also addresses issues of social work ethics and values encountered by the action researcher.
One-term course offered either term
Prerequisite: SWRK 615
Activity: Lecture
Notes: Research Option

1 Course Unit

SWRK 744 Direct Practice Research
This course provides graduate social work students with research knowledge and skills aimed at enhancing their direct practice with clients. The course examines methods of assessment, methods for choosing and evaluating techniques of intervention, methods for determining the effectiveness of practice and the use of research in social work decision-making. A successful outcome of the course will be that students perceive a more positive relationship between research and social work practice and possess a set of tools that they will be able to utilize in their future careers as social workers. The course starts from an assumption that students have some familiarity with research and are primarily engaged in direct practice with individuals, families or groups. Course usually offered in fall term
Prerequisites: SWRK 615, Introduction to Social Work Research
Activity: Online Course
Notes: Research Option; Course may be offered online or in classroom setting; Online section is designed for clinical direct practice students only and requires an orientation meeting.

1 Course Unit
SWRK 746 Political Social Work
This course focuses on the role of social workers and the social work profession in advocacy and the political arena. It examines the methods of advocacy (e.g., case, class, and legislative) and political action through which social workers can influence social policy development and community and institutional change. The course also analyzes selected strategies and tactics of change and seeks to develop alternative social work roles in the facilitation of purposive change efforts. Topics include individual and group advocacy, lobbying, public education and public relations, electoral politics, coalition building, and legal and ethical dilemmas in political action.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Macro Practice Elective

SWRK 748 Microfinance and Women's Empowerment in India
This course examines microfinance and its engagement with marginalized communities such as those in India. It is designed to provide students with an understanding of the phenomena of microfinance and its role in poverty alleviation. By studying the use of self-help groups with NGO facilitation, their impact on women’s empowerment will be examined and understood through interaction with women engaged in microfinance activities.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Application required - www.sp2.upenn.edu/global/courses;
Program Fee

SWRK 749 Civil Society Promoting Coexistence in Israel
This course offers a unique opportunity to experience the challenges and complexities of coexistence in Israel, the Holy Land for Christians, Jews and Muslims; a key point of interest and dispute for the international community, and the homeland shared and claimed by both Israelis and Palestinians. The course will focus on activities carried out by nonprofit organizations operating within the Israeli civil society, dealing with issues related to coexistence and to the protection and advancement of the civil and social rights of different populations, with special emphasis on the Arab-Palestinian population in Israel. These activities include educational and social services programs, community work and advocacy activities, aimed at creating dialogues and building coexistence among the different populations in the Israeli society and Palestine.
Course usually offered summer term only
Activity: Seminar
1 Course Unit
Notes: Application required - www.sp2.upenn.edu/global/courses;
Program Fee

SWRK 755 International Social Work: Practicing in the Global South
This interdisciplinary course will introduce students to societal problems in the developing world; familiarize them with global professions in social work, education, public health, etc.; identify numerous strategies and skills social workers and other professionals have used to collaboratively build interventions within the human rights, social welfare, education, health care and sustainable community development arenas. The course will expose students to views of development as they relate to individual, interpersonal, family, community, societal and international change. Students will learn about the history of specific global problems, how cultures affect response, different social services delivery systems and initiatives aimed at resolution. Students will explore a specific development issue within a country and community.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

SWRK 756 Human Sexuality
The aim of this course is to increase students' ability to deal more comfortably with the sexual aspect of human functioning. Readings, written assignments, and classroom presentations are directed to realizing the diversity, complexity, and range of human sexual expression. Current information about sexuality from the biological and physiological sciences is reviewed to increase comfort and skill in discussion and handling of sex-related behavior, personal and societal attitudes will be explored. A variety of sex-related social problems encountered by social workers in family, education, health, and criminal justice settings are discussed. Diagnostic interviewing and treatment methods are presented in role play, group exercises and case studies.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

SWRK 757 Loss through the Life Cycle
This course considers loss as a central theme throughout the life cycle. Content focuses on the physical, psychosocial, spiritual, and cultural aspects of loss, dying and bereavement processes and the interaction among individuals, families and professionals. Students examine historical trends of family, community, and institutional support for the terminally ill and those experiencing traumatic loss and learn ways to advocate for a system of services that supports full decision-making on the part of the client. Course materials, journals, and special projects identify how self and other factors impact service delivery to individuals, families, and communities experiencing loss, including ethical considerations prompted by cost, technology, and end of life issues.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective

SWRK 758 Substance Use Interventions
This course addresses intervention approaches used in social work practice with individuals, families, and groups who misuse addictive substances themselves or are affected by another's misuse. Students learn about addictive substances, models of intervention, how to engage and assess clients, and how to intervene and evaluate the effectiveness of their interventions. The course incorporates theory and research findings on various strategies of intervention.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective; Attendance at first class required
SWRK 760 Mental Health Diagnostics
This course familiarizes students with mental health and mental disorders within the context of the life cycle, viewed from a biopsychosocial perspective. Prevalent categories of psychiatric disorders are considered with respect to their differentiating characteristics, explanatory theories, and relevance for social work practice, according to the DSM and other diagnostic tools. The course includes biological information and addresses the impact of race, ethnicity, social class, age, gender, and other sociocultural variables on diagnostic processes.
Course offered summer, fall and spring terms
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective; Required for Clinical Practice Concentration

SWRK 763 Global Human Rights & US Immigration: Implications for Policy & Practice
This course will begin with the history of migration to the US, as well as legal definitions of newcomers, including obtaining documents for lawful permanent residence, refugee status, as well as grounds for exclusion and deportation, and paths to naturalized citizenship. We will then review how a framework of cultural competence, and a strength or asset-based approach can inform service to immigrant clients. The core portion of the course will then focus first on the intersection of immigrants and health, mental health, employment, crimes, public entitlements, and public education. The course will conclude with family issues relevant to immigrant families: women, children, lesbian and gay, and elderly immigrants. Public policy issues will be integrated throughout, and the course will end with specific suggestions on systems change at various levels. By the end of the course students should be able to identify strategies for individual clients advocacy (micro); agency and community strategies (mezzo), and government advocacy (macro) to empower immigrant clients to become full community participants.
Taught by: Chany-Muy
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Policy Option; Macro Practice Elective

SWRK 765 Supervision and Leadership in Human Services Organizations
This course builds on social work knowledge, values, and skills gained in foundation practice courses and links them to the roles and functions of social workers as supervisors and managers in human service organizations. Course focus is on providing students with an overview of basic supervisory and human resource development concepts so they may be better prepared as professional social workers to enter agencies and provide direct reports (supervisees) with meaningful and appropriate direction, support, and motivation.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Clinical and Macro Practice Elective

SWRK 766 Organizational Politics and the Dynamics of Change
This is one of the courses referred to as "The Power Lab at Penn." This course explores how and when organizational change is possible. It is based on two bodies of thought: (1) the behavior of individuals within groups and the behavior of groups within organizations, and (2) the ways conflicts emerge and develop a "life of their own" within human systems. The dilemmas associated with both creating and changing human systems are investigated using a paradoxical lens, spotlighting counterintuitive ideas such as "to change, preserve the status quo," and "to grow, cutback." The effectiveness of the change strategies adopted by the "powerful," the "powerless," and those caught in the middle is examined. This intensely experiential course is designed for those providing group and institutional leadership at any level of a human enterprise, managing work groups, chairing committees, serving on special task forces, conducting support groups facilitating groups in clinical settings, etc. Participants will focus on two topics: 1) An in-depth understanding of group dynamics while they are in action; 2) The organizational relationship between groups that are in a powerful position, groups locked in a powerless state and those caught in the middle between the powerful and the powerless. Course Structure: This course has six components: (1) A pre-course discerning process, which consists of a one evening plus one full day Primer workshop; (2) Module 1 which is focused on group dynamics; (3) reading an assigned book and writing a paper based on Module 1 experiences; (4) Module 2 which addresses power relationships among groups with differential resources; (5) reading two assigned books and writing a paper based on Module 2 experiences; and (6) a post-course debriefing. The Primer provides all potential participants with a common conceptual base for engaging in the essential learning and lays out the intellectual foundations of the course.
Course not offered every year
Prerequisites: Permit required; all potential participants are required to attend a Primer class which consists of one evening session AND an all day session. Permits are granted only after students have completed the primer classes.
Activity: Lecture
1 Course Unit
Notes: Students from all graduate programs at Penn are welcome to apply. Contact the NPLD program for more information.

SWRK 768 Social Policy Through Literature
Fiction provides a lens to look at social issues and social policy through the rich and understandable lives of human beings, their challenges, and their triumphs in the holistic context of their worlds. Through appreciation of the human condition as portrayed in literature, students learn to frame issues more precisely and present arguments in compelling and convincing ways, thus enhancing the capabilities of social workers, social policymakers, and other agents to influence policy change.
Course not offered every year
Activity: Lecture
1 Course Unit
SWRK 769 Aging: The Intersection of Policy and Practice
This course examines a variety of social welfare policies that affect the rights and interests of older adults. These include policies related to economic security, health, long term care, and civil rights. In addition, the course reviews the policy-making process with a discussion of the influence of legislative sanctions and case law in establishing aging policy in the U.S. The focus of the course is on critical analysis of the key assumptions driving policy and policy change, e.g. social responsibility vs. individual responsibility. Finally, the course includes a critical examination of the intersection between policy and practice, that is, the influence that policy has on the design of interventions and service delivery practices at the state and local level and the impact of changing policies on communities, providers, and older adults.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Macro Practice Elective; required for students in the PAC program

SWRK 772 Postcolonial Social Work Practice: International Social Welfare in India
In this course, students examine the global welfare system and its engagement with marginalized communities. This six-week course in Kolkata, India, centers around a sex workers’ collaborative in Sonagachi, one of Asia’s largest red light districts. Interviews with the collaborative’s workers and study of their grassroots movement are combined with class discussions and research projects in which students engage with texts on HIV, sex work, Feminist postcolonial theory and international social work.
Taught by: Ghose
Course usually offered summer term only
Activity: Lecture
1 Course Unit
Notes: Application Required; Program Fee

SWRK 773 Mental Health Challenges in Childhood and Adolescence
This course will be an opportunity for the student and the instructor to explore the concept “psychopathology” as it has been and is applied to childhood and adolescence. There are some psychopathological challenges that are unique to childhood and some which can manifest themselves throughout childhood into adolescence and adulthood. The social worker/practitioner will encounter a wide range of symptomatic presentations among his/her clients. At this time in the fields of clinical social work, psychology, psychiatry, and psychotherapy there are numerous frameworks available to the practitioner to aid in an understanding of symptoms in children and adolescents. During the next several weeks three conceptual frameworks will be articulated. These three frameworks will elucidate the possible meaning, origin, and/or function of the symptoms and offer to the student a vocabulary with which to engage the situation. At the turn of the 19th century into the 20th century, psychoanalysis emerged in Europe as a method of understanding symptoms from the point of view of internal conflict within the child or adolescent. After World War II in the U.S.A., a model of understanding symptoms from a systemic/cybernetic point of view revolutionized the diagnostic processes involved in working with children and adolescents. Since the late 1980’s, postmodern ideas, primarily from Europe and Australia, have greatly influenced and informed the understanding of psychopathology in children and adolescents. Narrative, social constructivist, and linguistic usage patterns have become a common vocabulary in the discourse on psychopathology. This course is not intended to be a reading of the history of child psychopathology. It is intended to expose the student to the most influential paradigms in the field of child psychopathology.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: MSW Elective

SWRK 774 Program Evaluation
This course introduces students to theoretical and practical aspects of social service program evaluation. Students learn about the design and implementation of all phases of an evaluation, from needs assessment to analysis of findings. Skills such as survey construction and budgeting are introduced. Intensive analysis of existing studies illustrates how evaluations are designed and how findings affect social programs and policy.
One-term course offered either term
Prerequisites: SWRK 615, Introduction to SW Research
Activity: Lecture
1 Course Unit
Notes: Research Option

SWRK 775 Intimate Violence
The purpose of this course is to familiarize students with the definition, theories, causes, processes, consequences, and social interventions in intimate violence. The course will attempt to provide insight on the phenomenon of intimate violence by examining the ways in which it affects survivors, perpetrators, and their children. This will be accomplished by reviewing the current research as well as by exploring how intimate violence is constructed by the participants on the personal, interpersonal, and social structural level.
Course not offered every year
Activity: Lecture
1 Course Unit
**SWRK 777 Cognitive Behavioral Therapy**
This Cognitive Behavioral Therapy course will be taught in a one-week intensive class Monday-Friday 9am-5pm. Students are expected to start a pre-course assignment approximately 2 months prior to the first day of the course. Students will receive an information request from the instructor during course registration and must reply in a timely fashion. Cognitive Behavioral Therapy (CBT) is the world’s most effective, empirically-based psychotherapy with strong scientific evidence. CBT is a collaborative and empowering psychotherapy that educates and helps clients to motivate themselves, set goals, develop, and implement treatment plans to reach those goals. This experiential/didactic advanced clinical skills course will present a CBT model to evidence-based practice that can serve as a conceptual framework for clinical applications to a wide variety of presenting problems and populations. The purpose of this course is to introduce graduate students to the theory of CBT and to begin to apply the basic principles through the stages of a self-directed case.

One-term course offered either term
Prerequisite: Completion of MSW Foundation year curriculum or equivalent
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective

---

**SWRK 778 Dialectical Behavioral Therapy**
In this course we will examine the underlying theories, empirical foundations, and fundamental skill sets associated with dialectical behavioral therapy (DBT). Students will be expected to participate in role plays, lead mindfulness exercises, and carry out chain analyses.

One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective

**SWRK 780 Policy and "Difference" in Postmodernity**
Social constructions of "difference" permeate the institutions, spaces, and assumptions of our society. These social constructions include but are not limited to the racialized, gendered, sexed, classed, and dis/abled constructions of the body. By leaning on postmodern thinkers such as Iris Marion Young, Pierre Bourdieu, Judith Butler, Jacques Derrida, Ernesto Laclau, and Michel Foucault, this seminar course will begin by engaging the questions of what is "difference" and how is "difference" discursively constructed and reproduced in society. Using a postmodern lens, the remainder of the course will engage various social science texts that deal with the varieites of "difference" (i.e. race, gender, class, sexuality) and the explicit and/or implicit policy implications of these works. Thus, we will critically engage policies such as welfare, affirmative action, economic policies of taxation, and same-gender marriage, among others. The underlying questions throughout the course will be to what extent does social policy enable the possibilities of freedom, justice, and democracy for the "Other", the deviant, the abject, the marginalized, those of assumed "difference"? And, to what extent does policy constrain those possibilities at the same time?
Taught by: Dixon-Roman
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Policy Option

---

**SWRK 781 Qualitative Research**
Qualitative research encompasses a variety of methods that enable the researcher to enter into the "lived experience" of research participants. These methods are particularly sensitive to the voices of populations whose perspectives are silenced by dominant societal discourses. The course begins by giving attention to underlying philosophical issues and traditions of qualitative research and proceeds to examine qualitative research design, methods of data collection, strategies to ensure rigor, data analysis, and presentation of findings. Students will learn about research interviewing, focus groups, and participant observation and ways in which qualitative research can be used to inform and evaluate social work practice and programs. Students will have the opportunity to apply qualitative research methods to in-class activities and individual or group projects.

Course usually offered in fall term
Prerequisites: SWRK 615, Introduction to Social Work Research
Activity: Lecture
1 Course Unit
Notes: Research Option

---

**SWRK 783 Advanced Mental Health Practice with U.S. Veterans**
Although this course is open to all students, it is designed for students in the clinical concentration and is required for students in the Cohen Veterans Network Scholars program. The course will focus on clinical knowledge and evidence-based practice skills for common mental health problems in veteran settings. The course will introduce students to the assessment and treatment of Post-Traumatic Stress Disorder (PTSD), Depression and Anxiety Disorders, Substance Abuse, Military Sexual Trauma (MST) and Suicide Assessment and Management among veteran populations. Other topics may include cultural competency, homelessness, and combat stress disorders. Since this is a seminar course, some classes will be taught by social workers/psychologists from the Veterans Hospital in Philadelphia and the Cohen Veterans Outpatient Clinic.

Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective; Required for Cohen Veteran Network students

---

**SWRK 785 Criminal Justice Policies: Implications for Social Work**
The United States prison population has risen more than three hundred percent in the last three decades. More people are currently incarcerated than at any other point in the history of the United States, and that of the world. This unprecedented period of incarceration has gone largely invisible although it represents one of the greatest social epidemics in the history of the United States. This course provides a critical analysis of the criminal justice system in the United States from a historical and contemporary perspective. It examines the implications of significant criminal justice policies such as the Rockefeller Drug Laws, 3-Strike Legislations, and Mandatory Minimums on the current state of incarceration, and the phenomenon of "Reentry" and "Recidivism". The intersections of criminal justice and social work practice are unmistakable when examining staples of social work practice such as homelessness, mental health and substance abuse, thus the course is intended to facilitate a more informed/holistic practice for all social work students.

Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Policy Option
SWRK 786 Social Work Practice & Trauma
This course integrates trauma theory and practice and expands practice knowledge to include the treatment and assessment of the survivors of trauma. Emphasis is placed on differentiating PTSD from Complex Trauma in order to identify appropriate, evidence-based intervention strategies. Topics covered in the course include an historical overview of the development of our understanding of trauma and the exploration of various types of trauma including war trauma, domestic violence, childhood sexual and physical abuse, natural disasters, the experiences of political refugees and organizational trauma. Among the interventions covered in this course are CBT, EMDR, group and psychodynamic treatment. Students will consider issues that affect those treating the survivors of trauma, such as vicarious trauma, and will explore approaches to self-care. This is an advanced clinical course. Through assignments and class discussions, students are encouraged to use their experiences in the field to deepen their understanding of the material covered in the course. One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective

SWRK 787 Social Impact Strategy, Analysis, and Leadership
Around the world, new types of organizations are emerging, advances in technology and access to information continue, and there is a growing recognition that all sectors - business, public, and private nonprofit - have a role to play in creating social impact. While the desire to create social impact is clear, the field is just beginning to grapple with ways to translate these aspirations into real and meaningful change. Since 2006, Penn's Center for High Impact Philanthropy has been a pioneer in developing approaches for identifying, assessing, and growing opportunities for social impact. Team-taught by the center for High Impact Philanthropy, the course will be directed by the Center's founding executive director, Katherina 'Kat' Rosqueta, and will include guest lectures from other leading faculty and social impact innovators working in Philadelphia and around the world. Through hands-on practice, team projects, and highly interactive case-based discussions, students will gain the skills needed to: analyze opportunities for impact and potential for impact, including how to determine the scale and scope of an opportunity and how to use the tools of social impact economics to determine the cost implications of the opportunity; confidently address the strategic issues and key tasks faced by managers/leaders with a social impact mandate; influence others towards social impact by leveraging relevant research and real-world examples of effective communication and stakeholder management; and apply their research and effective storytelling skill to present their impact analysis in projects using different formats (e.g. video short, venture capitalist/donor pitch, policy brief). One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective

SWRK 788 Harm Reduction on the Borders: Substance Use and HIV Treatment in Puerto Rico
This course examines the U.S.-based substance use and HIV treatment systems, and its engagement with injection drug users in Fajardo, Puerto Rico. It is designed to provide the students with an understanding of the political economy of harm reduction initiatives, and the manner in which it is shaped by the complicated relationship between Puerto Rico and the U.S. Students are expected to gain an understanding of Puerto Rico’s welfare environment, the role of social welfare and social workers in such a context, and the interweaving of social control and social change embedded in welfare initiatives in “borderlands” such as Fajardo. During the four week course in Fajardo, students will complete a placement in a needle exchange program, and engage with texts on HIV, substance use, postcolonial theory and international social work. Course usually offered summer term only
Activity: Seminar
1 Course Unit
Notes: Clinical Practice Elective and Macro Practice Elective; Application required

SWRK 792 Psychodynamic Theory
The purpose of this course is to review the evolution of psychodynamic theory and consider key concepts in psychoanalysis, ego psychology, object relations theory, self-psychology, attachment theory, relational and intersubjective theories and current findings in cognitive neuroscience. Participants will explore human psychological functioning as explained by these various psychodynamic theories and through the biopsychosocial lens that informs social work practice. Students will examine how external factors such as race, class, gender, culture and biology are interwoven with often unconscious, internal psychological determinants, creating the complexities of human behavior that challenge us in our clinical work. Case presentations by students, the instructor and guest lecturers will demonstrate how concepts from psychodynamic theory can be applied to social work practice with diverse clients in varied settings.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Clinical Practice Elective
SWRK 793 Global Health and Health Policy
This participatory interdisciplinary seminar course examines contemporary issues in public health policy and global health. The organizing framework is social determinants of health. We consider evidence that inequalities in education, income, and occupation influence health status, and the policy dilemma that broad interventions to improve population health may increase health disparities. We critically examine whether prevention is always better than cure, and what modern medicine has to offer in terms of health. We explore the public policy process in health using the “tobacco wars” as a case example, of how politics, policy, law, commercial interests, and research intersect to affect the public’s health. We examine whether global health is in a state of decline, and the extent to which failures in public health, public policy, and foreign policy have contributed to increasing threats to world health. Likewise we will examine the potential for greater integration of health into foreign policy to create global infrastructure upon which to advance health. We will examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries. There are no prerequisites. The course is designed for graduate students in the social and behavioral sciences, health professions, public health, business and law. Advanced undergraduate students will be admitted with permission. Course not offered every year Activity: Lecture 1 Course Unit

SWRK 794 Practice with Older Adults and Families
This course focuses on practice with older adults and families within a life course and resiliency perspective. It examines the nature of the aging process, needs and life issues, the ways in which persons adapt to changes, and the ways in which interventions may assist with these adaptations. Students learn assessment, case management, and intervention skills, including the use of rapid assessment and diagnostic tools, needed to work effectively with older populations and family caregivers in a variety of community-based and institutional settings. The course emphasizes evidence-based practices that enhance quality of life, dignity, respect for differences, and maximum independent functioning. Course usually offered in fall term Activity: Lecture 1 Course Unit Notes: Clinical Practice Elective; Required for Penn Aging Concentration (PAC) students

SWRK 796 Family Economic Mobility
In this course, the experiences and voices of mothers, fathers, children, employers, children's school teachers, human service workers, job training providers, policymakers, and others in cities across America graphically illustrate the “real life” economic challenges facing today’s families and organizations. These people, organizations, and policies dramatically show how economic, educational, and cultural practices and conditions intersect to perpetuate inequality among low-income and even many middle-income working families. The labor market, welfare and workforce programs, public schools and government are some of the institutions implicated in this intersection. In the course, notions such as "work ethic," "family-friendly workplace," "good jobs" and "hard work pays off" are deconstructed in terms of their meaning for today’s families, organizations and policies. At base, this course examines occupational mobility in America from multiple perspectives within the broad framework of capitalism, democracy, race, ethnicity, and gender. Students read classic and contemporary literature from occupational social work, sociology, cultural anthropology, and political science to explore generative roles and directions for "meso-oriented" clinical, macro, and policy professionals. Course usually offered in spring term Activity: Lecture 1 Course Unit Notes: Policy Option

SWRK 797 Social Policy in Revolutionary Cuba (1959-2017)
Cuba represents one of the world's long-standing institutionalized revolutions whose narrative and policies have changed from a strong nationalism yearning for independence, to an alignment with communism's ideology and modus operandi, to a nostalgic, post-Soviet Union "socialism" ruled by a binary, state-controlled capitalism. In addition to the myriad of social and political changes affecting the island, the transition of leadership from Fidel Castro to his brother, Raul, and the death of the former in 2016, has put into question the theoretical pillars of the Revolution, thus undermining its initial legitimacy. This course is designed to provide students with the critical and analytical tools to dissect Cuban revolutionary politics, policies, and identity mutations within the island's historical trajectory. We will begin by critically reviewing key points of diplomatic and historical relationships between the U.S and Cuba, followed by an analysis of the notion of independence - upon which Castro relied to gather massive support - in the context of the 60's debates on decolonization and underdevelopment. In addition, we will delve into the theoretical foundations of the Revolution focusing, among other texts, on the literature by Cuba's "founding father" Jose Marti, who deeply influenced the Spanish-American war (1898)'s outcomes as well as Fidel Castro's vision for Cuba. Throughout the course, students will also have the opportunity to critically read and discuss main Cuban social policies such as its famous Literacy Campaign, and other Education, Housing, Cultural, Health, and Immigration policies, as well as the island's complex relationship with technological development and communications. Finally, we will study identity and race dynamice, which are inextricably embedded in Cuba's political landscape. Course usually offered in spring term Activity: Lecture 0 Course Units Notes: Application deadline: 11/20/17 at 5pm; Class dates in Havana: May 17-May 31; Pre-departure sessions at Penn: April (TBA); application available at: www.sp2.upenn.edu/global/courses

Activity: Lecture
1 Course Unit

SWRK 799 Independent Study
Independent studies provide a flexible opportunity for standing faculty and students to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising standing faculty member. Part-time faculty members are not eligible to offer independent studies.
Activity: Independent Study
1 Course Unit

SWRK 803 History and Philosophy of Social Welfare
This seminar traces the evolution of social welfare from ancient to modern times focusing on its implications for the development of contemporary social welfare in the United States. The course examines the development of social welfare systems and the underlying philosophies in the context of the social, economic, political, and cultural environments in which they emerged. Topics include the evolution of modern conceptions of the "welfare state," the role of public, private and voluntary sectors in the social services, trends in social and family history and their relationship to social welfare, the professionalization of social work, and methods of historical and social policy analysis.
Taught by: Stern
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: PhD students only

SWRK 804 Methods of Inquiry: Quantitative Research Methods
The purpose of this course is to teach the basics of practice research, with an emphasis on intervention research. This course will focus on research ethics, building a conceptual framework, source credibility, question and hypothesis formulation, design, sampling, measurement, and scale construction and selection. Special emphasis will be placed on the development of designing feasible and practical research studies to answer questions of importance to social work practice. The course will emphasize the selection and development of outcome measures, intervention manuals, and fidelity measures. It will closely examine the use and development of practice guidelines, evidence-based practice and meta-analytic procedures.
Course usually offered in fall term
Prerequisites: Must be enrolled in D.S.W. program.
Activity: Online Course
1 Course Unit

SWRK 805 Methods of Inquiry: Qualitative Research Methods
This course will cover the essentials of qualitative research. Students will learn how to “situate themselves” in the research process so as to best capture the lived experience of the subjects under investigation. The course will explore the appropriate use of intensive interviews, grounded theory and ethnography. Mixed methods that employ both qualitative and quantitative approaches, will also be covered.
Course usually offered in spring term
Prerequisites: SWRK 804. Must be enrolled in D.S.W. program
Activity: Online Course
1 Course Unit

SWRK 811 Social Theory
Course reading consists of the original works of theorists who offer classical, contemporary and postmodern perspectives on social thought, social interaction and issues germane to social welfare. Through intensive examination of multiple theoretical frameworks, students are expected to increase their analytical and critical orientation to theory. This course is designed to enhance understanding about epistemology, underlying assumptions, and theory construction can then be used to inform the student’s substantive field of study and methodological orientation to research. This course is conducted in mixed lecture-seminar format. Students have the opportunity to practice pedagogical techniques and exercise class leadership.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Required for PhD Program

SWRK 812 Clinical Theory I
The purpose of this course is to broaden and deepen participants’ mastery of several theories of development, personality, and behavior that have contributed to social work’s knowledge base across the decades and continue to inform clinical social work epistemology today. Drawing primarily from original sources, we will consider key assumptions, constructs, and propositions of each theory in terms of its congruence with social work’s principles, values, and mission and in relation to the profession’s person-in-environment perspective. In this first semester, we will study the evolution of theories central to psychodynamic thought, from Freud’s early biological model of the mind, through various relational perspectives, to contemporary work in the fields of attachment and interpersonal neurobiology. This examination will constitute a case study of the manner in which theories are socially constructed and will lay the foundation for critical inquiry into the social and political biases inherent in the Western European intellectual tradition from which most theories of human behavior have emerged.
Course usually offered in fall term
Prerequisites: Must be Enrolled in D.S.W. program
Activity: Online Course
1 Course Unit

SWRK 813 Clinical Theory II
The purpose of this course is two-fold. First, the course is aimed at continuing to broaden and deepen students’ mastery of theories of behavior and cognition as related to clinical practice. The course is designed to segue from psychodynamic theories from last semester into behavioral and cognitive theories this semester. The history and fundamentals of behavioral theory, and its iterations will be reviewed to ground you firmly in a tradition that emphasizes empirical research. We will critically analyze and discuss the evidence and its application, and you will have opportunities to deepen or expand your knowledgebase of trending approaches to try in your practice either through the material presented or through your choice of the final assignment. Case conceptualizations are emphasized as critical to informing behavioral and cognitive interventions. The second aim of the course involves using discussion and the research literature to critically examine the effectiveness and feasibility of ascribing to a single theoretical orientation. As an alternative, a more process-oriented approach through psychotherapy will be explored.
Course usually offered in spring term
Prerequisites: SWRK 812. Must be enrolled in D.S.W. program.
Activity: Online Course
1 Course Unit
**SWRK 814 Applied Statistics**
This course is designed to provide students with a range of statistical methods and applications used for research in human services and clinical practice settings. Topics covered include types of measurement and variables, and basic concepts and techniques for exploring and categorizing data, for generalizing data from sample to population and tests of significance. An emphasis will be placed on the practical applications of data to address social work practice issues. Students will learn how to choose and apply statistical tools to data sources, when and how statistical tools can be used to analyze data, and how to interpret others’ quantitative studies. Students will gain hands-on experience in using windows-based statistical software to manage and analyze quantitative data.
Prerequisites: Must be enrolled in D.S.W. program
Activity: Online Course
1 Course Unit

**SWRK 815 Dissertation Seminar I**
This seminar is designed to prepare participants for dissertation proposal writing and defense. Each component of this workshop moves the student closer to the two culminating assignments: a concisely crafted and well-supported 15-25 page written draft of the dissertation proposal and a presentation of the proposal with accompanying Powerpoint.
Activity: Online Course
1 Course Unit

**SWRK 816 Dissertation Seminar II**
This seminar continues the student's dissertation work beyond the proposal. Under the direction of the dissertation chair and committee, the student begins the process of collecting and analyzing data in preparation for the final write-up and defense of the dissertation.
Prerequisites: SWRK 815. Must be enrolled in the DSW program.
Activity: Online Course
1 Course Unit

**SWRK 852 Social Work Research**
This is the foundation course in social work research. It deals with the nature of scientific inquiry; theory and its relation to research design and hypothesis testing; and various models of data collection, sampling, and analysis of research and is supported in following personal interests within the structure of ethical scientific research. Each student prepares an original study which demonstrates integration of the semester's work. Students learn to work on their own. Students completing this class are prepared for more advanced coursework in research.
Taught by: Solomon
Course usually offered in fall term
Prerequisites: Completion of concurrent enrollment in a course on introductory Social Statistics.
Activity: Lecture
1 Course Unit

**SWRK 855 Advanced Research Methods**
The methodology of accountability research in human service programs is studied. Emphasis is placed on social program evaluation, idiochicographic research, and secondary data analysis in policy research as specialized methods of social work research. Students undertake a laboratory experience in an ongoing program evaluation project.
Course usually offered in spring term
Prerequisites: SWRK 852 and Introduction to Statistics
Activity: Lecture
1 Course Unit
Notes: PhD course

**SWRK 861 Policy Analysis**
This course examines alternative models of policy development and applies them to current issues in social welfare. It emphasizes frameworks for policy research and secondary analysis of governmental data. Topics include: race, class, and sex in policy outcomes; major social welfare programs; and the design, implementation, and evaluation of social service systems.
Course usually offered in spring term
Prerequisite: Must have successfully completed a course in multivariate statistics
Corequisite: PhD course
Activity: Lecture
1 Course Unit

**SWRK 900 Clinical DSW**
Topics vary; see department for current course descriptions
Course offered summer, fall and spring terms
Prerequisites: Must be enrolled in D.S.W. program
Activity: Seminar
0 Course Units

**SWRK 901 Proseminar**
This course is a weekly, 90-minute (.5 course unit) proseminar. The course contains two main components: a research seminar (i.e., faculty and student presentations of their in-progress research) and skills training (e.g., how to write an abstract, software demonstrations). The two are interwoven throughout the academic year (e.g., 2 weeks of the month devoted to the research seminar and 2 weeks of the month devoted to skills training). The proseminar is required of all students until they successfully defend their dissertation proposal.
One-term course offered either term
Corequisite: PhD course
Activity: Lecture
0.5 Course Units

**SWRK 902 Trauma-informed Social Work Practice**
The majority of clients who present to a wide variety of social services have been exposed to adversity and trauma, often beginning in childhood. As a result, the current standard of care requires that human service delivery systems of all kinds need to be “trauma-informed.” This course will explore what that actually means, since administering “trauma-specific treatment” alone is not sufficient to encompass the complexity of the multigenerational, widespread problems that confront us in the world around us. Based on an understanding that our organizations are living systems, students will draw parallels between the individual experience of trauma and the organizational aspects of trauma and loss. Using these parallel processes as a basis, students will explore a trauma-informed, parallel process of organizational recovery called the “Sanctuary Model.”
Prerequisites: Must be enrolled in D.S.W. program
Activity: Online Course
1 Course Unit
SWRK 903 Relational Theory
This course will introduce the relational turn in theories of developments and psychotherapy. Relational theory emerged in the epistemological shift to postmodernism and social constructionism, characterized by concepts of knowledge as perspectival, constructed increased skill in developing a literature search, 3) developing a capacity to create operational hypotheses or questions, 4) developing a research design, and 5) designing a data analysis and interpretation plan. The aim of this course is to identify the shared principles of relational theories and apply these principles to clinical social work practice. Students will critically evaluate and compare and contrast relational psychoanalysis with relational-cultural theory. Students will evaluate the viability of relational theory in the field of clinical social work and consider the application of relational theory beyond the therapy room to the supervisory, agency and teaching contexts. The focus on case studies as examples will be key to understanding the clinical applications of the various medications we will discuss.
Prerequisites: Enrolled in the D.S.W. program
Activity: Online Course
1 Course Unit

SWRK 904 Teaching
This class will focus on classroom dynamics, class culture and instructor skills using an organismic model in which the class has a life of its own and is capable of growth and development. In addition, students will learn underlying theories, research, practice wisdom, etc. that we need to communicate to our students. The course should be helpful in thinking about issues that are central to effective teaching regardless of the practice models you present to your students or the content of courses including policy, research, etc. Students will have an opportunity to share their current or past teaching with a particular emphasis on those difficult moments when they had second thought about classroom teaching as a career. Examples will be used to help illustrate the theoretical content and the readings and bring the ideas to life as they address the real day-to-day issues we all face in teaching.
Prerequisites: Enrolled in the D.S.W. program
Activity: Online Course
1 Course Unit

SWRK 905 Family-Based Interventions
This advanced-level course focuses on social work interentions with children, couples and families. Theories and research that ground family-based interventions are explored and interrogated. Through case conceptualizations, role plays and other in-vivo exercises, students will practice techniques for assessment and treatment of family systems.
Prerequisites: Must be enrolled in D.S.W. program
Activity: Online Course
1 Course Unit

SWRK 968 Social Welfare and Social Economics
This course examines the social welfare aspects of major economic decisions in the United States. Particular attention is paid to exploring the implications of social choices in relation to the goals of the achievement of increased equity and equality in the distribution of income and power, the elimination of unemployment, and the control of inflation. The growth of public welfare programs and the base of funding for social services are examined in terms of the nation’s economic and political objectives.
Activity: Lecture
1 Course Unit

SWRK 995 Doctoral Dissertation
Doctoral Dissertation
Activity: Dissertation
1 Course Unit
SOCIOLOGY (SOCI)

SOC 001 Introduction to Sociology
Sociology provides a unique way to look at human behavior and social interaction. Sociology is the systematic study of the groups and societies in which people live. In this introductory course, we analyze how social structures and cultures are created, maintained, and changed, and how they affect the lives of individuals. We will consider what theory and research can tell us about our social world.
For BA Students: Society Sector
Taught by: Imoagene, Jacobs, Lareau, Wilde, Zuberi
One-term course offered either term
Activity: Lecture
1 Course Unit

SOC 002 Social Problems and Public Policy
This course approaches some of today’s important social and political issues from a sociological vantage point. The course begins by asking where social problems come from. The main sociological perspectives of Marx, Weber and Durkheim are developed in connection with the issues of inequality, social conflict and community. We then turn to the social construction of social problems by examining how various issues become defined as social problems. This involves a consideration of the role of the media, social experts and social movements. The last section of the course considers how social problems are addressed. Here we discuss the relative strengths and weaknesses of government programs and regulations versus market-based approached. We also discuss the role of philanthropy and volunteerism. Finally, we consider the risk of unanticipated consequences of reforms. Along the way, we will consider a variety of social issues and social problems, including poverty, immigration, crime, global warming, and education.
Taught by: Bosk, Jacobs
Course not offered every year
Activity: Seminar
1 Course Unit

SOC 003 Deviance and Social Control
A sociological analysis of the origins, development, and reactions surrounding deviance in contemporary society. Topics include labeling theory, stigma, social organization, tradition, social power, crime, sexual deviance, drug use, and racism. Theoretical and methodological issues will be discussed and evaluated.
For BA Students: Society Sector
Taught by: Bosk
One-term course offered either term
Activity: Lecture
1 Course Unit

SOC 004 The Family
Most men and women get married during their lifetimes. In addition, most men and women become fathers and mothers at some point. This class presents social science evidence on the family. For example, it shows how “greedy” workplaces, which require long work hours, create work-family conflicts for husbands and wives. The class also illuminates how men and women have different experiences within families. The lectures will also examine how economic inequality shapes family life. Students will have the opportunity to apply key concepts to daily life. All are welcome.
For BA Students: Society Sector
Taught by: Lareau, Gonalons
One-term course offered either term
Activity: Lecture
1 Course Unit

SOC 005 American Society
What is American Society? The literary critic, Leslie Fielder once wrote, “...to be an American...precisely to imagine a destiny rather than to inherit one; since we have always been, insofar as we are Americans at all, inhabitants of myth rather than history...” In this course we will explore the elements of the myth that form the basis of the civil religion as well as the facts on the ground that contradict our conceptions of American Society. Examples of mythic elements and their contradiction that we will explore are: A nation founded to pursue liberty and freedom yet allowed slavery, equality of opportunity and persistent structural inequality, and a welcoming of the Immigrant coupled with a suspicion of the outsider.
For BA Students: Humanities and Social Science S
Taught by: Bosk
One-term course offered every year
Activity: Lecture
1 Course Unit
Notes: Also fulfills General Requirement in Society for Class of 2009 and prior

SOC 006 Race and Ethnic Relations
The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, Asian Americans and multiracials.
Taught by: Charles, Zuberi
One-term course offered either term
Activity: Lecture
1 Course Unit
**SOCI 007 Population and Society**
The course serves as an introduction to the study of population and demography, including issues pertaining to fertility, mortality, migration, and family formation and structure. Within these broad areas we consider the social, economic, and political implications of current trends, including: population explosion, baby bust, the impact of international migration on receiving societies, population aging, racial classification, growing diversity in household composition and family structure, population and environmental degradation, and the link between population and development/poverty.
For BA Students: Society Sector
Taught by: Flippen, Kohler, Zuberi
One-term course offered either term
Activity: Lecture
1 Course Unit

**SOCI 010 Social Stratification**
In this course we study the current levels and historical trends of inequality in the United States especially in cross-national comparative perspective. We discuss causes and consequences of inequality as well as various policy efforts to deal with inequality. Topics include intergenerational social mobility, income inequality, education, gender, race and ethnicity among others.
For BA Students: Society Sector
Taught by: Jacobs, Staff
Course not offered every year
Activity: Lecture
1 Course Unit

**SOCI 011 Urban Sociology**
This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories urbanism, as well as more specific areas of inquiry, including American urbanism, segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization and the process of urbanization in less developed counties.
Taught by: Flippen
Course not offered every year
Activity: Seminar
1 Course Unit

**SOCI 012 Globalization**
This course analyses the current state of globalization and sets it in historical perspective. It applies the concepts and methods of anthropology, history, political economy and sociology to the analysis and interpretation of what is actually happening in the course of the semester that relates to the progress of globalization. We focus on a series of questions not only about what is happening but about the growing awareness of it and the consequences of the increasing awareness. In answering these questions we distinguish between active campaigns to cover the world (e.g. Christian and Muslim proselytism, free-trade agreements, democratization) and the unplanned diffusion of new ways of organizing trade, capital flows, tourism and remote interaction via the Internet. The body of the course deals with particular dimensions of globalization, reviewing both the early and recent history of each. The overall approach is historical and comparative, setting globalization on the larger stage of the economic, political and cultural development of various parts of the modern world. The course is taught collaboratively by an anthropologist, an historian, and a sociologist, offering the opportunity to compare and contrast distinct disciplinary approaches. It seeks to develop a general social-science-based theoretical understanding of the various historical dimensions of globalization: economic, political, social and cultural.
For BA Students: Humanities and Social Science S
Taught by: Guillen, Spooner
Course usually offered in fall term
Activity: Lecture
1 Course Unit

**SOCI 027 Introduction to Africana Studies**
The aim of this course is to provide an interdisciplinary examination of the complex array of African American and other African Diaspora social practices and experiences. This class will focus on both classic texts and modern works that provide an introduction to the dynamics of African American and African Diaspora thought and practice.
For BA Students: Humanities and Social Science S
Taught by: Charles, Zuberi
One-term course offered either term
Activity: Lecture
1 Course Unit

**SOCI 033 Technology & Society**
Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technologies affect social relations, and conversely how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism and communism? Can specific technologies promote democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we'll consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet.

1 Course Unit
Notes: Freshman Seminars. Topics vary from semester to semester. See Freshman Seminar and Sociology websites for current offerings.

SOCI 100 Introduction to Sociological Research
One of the defining characteristics of all the social sciences, including sociology, is a commitment to empirical research as the basis for knowledge. This course is designed to provide you with a basic understanding of research in the social sciences and to enable you to think like a social scientist. Through this course students will learn both the logic of sociological inquiry and the nuts and bolts of doing empirical research. We will focus on such issues as the relationship between theory and research, the logic of research design, issues of conceptualization and measurement, basic methods of data collection, and what social scientists do with data once they have collected them. By the end of the course, students will have completed sociological research projects utilizing different empirical methods, be able to evaluate the strengths and weaknesses of various research strategies, and read (with understanding) published accounts of social science research.
Taught by: Armenta, Koppel, Park, Smith, Wilde
One-term course offered either term
Activity: Lecture
1 Course Unit

SOCI 101 Bioethics
This course will take an historical approach to the development of modern bioethics, which is the study of ethical issues in medicine and the life sciences. The first part of the course will be devoted to an introduction to the standard principles of academic bioethics and the way they have structured the field over the last 35 years. We will then consider topics to which the principles have long been applied, such as the care of gravely ill newborns, death and dying, and the ethics of research involving human subjects. The last part of the course will address more recent life sciences policy areas including genetics, cloning, stem cells, biodefense, and neuroscience in relation to national security. Throughout the course I will emphasize the interplay between the development of bioethics and its cultural context.
Taught by: Moreno
Course not offered every year
Activity: Lecture
1 Course Unit

SOCI 103 Asian Americans In Contemporary Society
This class will introduce you to sociological research of Asian Americans and engage in the "model minority" stereotype. We begin by a brief introduction to U.S. immigration history and sociological theories about assimilation and racial stratification. The class will also cover research on racial and ethnic identity, educational stratification, mass media images, interracial marriage, multiracial, transracial adoption, and the viability of an Asian American panethnic identity. We will also examine the similarities and differences of Asian Americans relative to other minority groups.
For BA Students: Society Sector
Course not offered every year
Activity: Lecture
1 Course Unit

SOCI 105 Industrial Relations and Human Resource Management
One-term course offered either term
Activity: Lecture
1 Course Unit

SOCI 110 The Rich and The Poor
Who is rich? Who is poor? This course examines how wealth and income are distributed in the United States, and how its distribution affects individuals, groups, institutions, and society. We will gain a fuller understanding of what social class is and discuss how it affects all aspects of life, including: quality of schooling, access to employment, child rearing, and even tastes, preferences, and identity.
Taught by: Armenta, Lareau, Staff
Course not offered every year
Activity: Lecture
0 Course Units

SOCI 111 Health of Populations
This course is designed to introduce students to the quantitative study of factors that influence the health of populations. Topics to be addressed include methods for characterizing levels of health in populations, comparative and historical perspectives on population health, health disparities, health policy issues and the effectiveness of interventions for enhancing the health of populations. These topics will be addressed both for developed and developing world populations. The course will focus on specific areas of health and some of the major issues and conclusions pertaining to those domains. Areas singled out for attention include chronic diseases and their major risk factors, such as smoking, physical activity, dietary factors and obesity. Throughout the course, the focus will be on determining the quality of evidence for health policy and understanding the manner in which it was generated.
Taught by: Elo, Kohler
One-term course offered either term
Activity: Lecture
1 Course Unit

SOCI 112 Discrimination: Sexual and Racial Conflict
This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual government policies and alternatives policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.
For BA Students: Sociology Sector
Taught by: Madden
Course not offered every year
Activity: Lecture
1 Course Unit
**SOCI 117 Sociology of Work**
The material world is shaped and maintained through work, but so is the social world. How work is organized, allocated, and rewarded determines the opportunities people have for developing their own capacities, the kinds of ties they will have with others, and how much control they will have over their own lives. We will consider various sociological perspectives on work and compare alternative ways of organizing work, with a focus on the contemporary United States.

Taught by: Jacobs, Leidner
Course not offered every year
Activity: Lecture
1 Course Unit

**SOCI 118 Sociology of Bioethics**
The Sociology of Bioethics explores the sociological approach to bioethics. The Sociology of Bioethics is not a course in bioethics itself; rather than discussing the merits of a position (Is assisted suicide ethical?), we will ask how the debate has been framed, who is promoting which arguments, why the debate has arisen now, and how the issue is reflected in policy. In order to do so we will make use of social science research, along with philosophical treaties, legislation, and the popular media. The course is also not designed as a comprehensive treatment of the field; it will focus instead on choice topics that we will explore in depth. Our goal is to understand the nature of the bioethics profession and its modes of argumentation, and to explore the cultural, social, political, and professional underpinnings of bioethical debates.

Taught by: Bosk
One-term course offered either term
Activity: Lecture
1 Course Unit

**SOCI 120 Social Statistics**
This course offers a basic introduction to the application/interpretation of statistical analysis in sociology. Upon completion, you should be familiar with a variety of basic statistical techniques that allow examination of interesting social questions. We begin by learning to describe the characteristics of groups, followed by a discussion of how to examine and generalize about relationships between the characteristics of groups. Emphasis is placed on the understanding/interpretation of statistics used to describe and make generalizations about group characteristics. In addition to hand calculations, you will also become familiar with using PCs to run statistical tests.

Taught by: Allison, Charles, Guillot, Koppel, Park, Parrado
One-term course offered either term
Activity: Recitation
0 Course Units

**SOCI 122 The Sociology of Gender**
Gender is an organizing principle of society, shaping social structures, cultural understandings, processes of interaction, and identities in ways that have profound consequences. It affects every aspect of people's lives, from their intimate relationships to their participation in work, family, government, and other social institutions and their place in the stratification system. Yet gender is such a taken for granted basis for differences among people that it can be hard to see the underlying social structures and cultural forces that reinforce or weaken the social boundaries that define gender. Differences in behavior, power, and experience are often seen as the result of biological imperatives or of individual choice. A sociological view of gender, in contrast, emphasizes how gender is socially constructed and how structural constraints limit choice. This course examines how differences based on gender are created and sustained, with particular attention to how other important bases of personal identity and social inequality—race and class—interact with patterns of gender relations. We will also seek to understand how social change happens and how gender inequality might be reduced.

For BA Students: Society Sector

Taught by: Leidner
One-term course offered either term
Activity: Lecture
1 Course Unit

**SOCI 125 Classical Sociological Theory**
This course will cover the founding classics of the sociological tradition including works of Tocqueville, Marx and Engels, Weber, Durkheim, Mauss, Simmel, and G.H.Mead. We will also examine how the major traditions have continued and transformed into theories of conflict, domination, resistance and social change; social solidarity, ritual and symbolism; symbolic interactionist and phenomenological theory of discourse, self and mind. This course satisfies the theory requirement for sociology majors.

One-term course offered either term
Activity: Lecture
1 Course Unit

**SOCI 126 Contemporary Sociological Theory**
This course will explore contemporary social theory with an emphasis on theories and theoretical orientations related to social interaction, identity, culture, and inequality. For example, we will discuss sociological theories from the last half century about race and racism, gender, social class, education, emotion, and violence. Importantly, we will consider theory in the context of its application to empirical social science research and real world concerns. The course fulfills the theory requirement for sociology minors and all sociology majors.

One-term course offered either term
Activity: Lecture
1 Course Unit
SOCI 128 Introduction to Demographic Methods
This course provides an introduction to basic demographic concepts, data, indicators, and techniques. The course emphasizes hands-on applications of techniques in the analysis of population dynamics in the U.S. and elsewhere. Students will learn about the main sources of demographic data, including censuses, surveys, and vital statistics, and methods to estimate demographic processes (e.g. mortality, fertility). Students will leave the course with a solid grounding in a) the sources and limitations of demographic data; b) the construction of basic demographic indicators; and c) appropriate use of basic demographic techniques to answer questions about human populations.
Taught by: Elo, Hannum, Smith
One-term course offered either term
Activity: Lecture
1 Course Unit

SOCI 134 Health and Social Policy
Health and Social Policy is an interdisciplinary course examining health care and social policy from domestic and international perspectives. The course is designed to engage students in critical thinking about social determinants of health, the organization and outcomes of health care systems and institutions, global health priorities and challenges, and the implications for public policy. Topics include the social inequalities and health; how organizational context of health care impacts outcomes; management of human resources in health nationally and globally; analysis of medical error, its causes, and consequences; review and critique of public policies in U.S. health care; and global health priorities and international health policy. Issues of current public debate in health and health care will provide a context for learning. There are no prerequisites. The course is intended for general lists as well as for those planning careers in health care.
For BA Students: Society Sector
Taught by: Aiken, Lake
Course usually offered in spring term
Activity: Lecture
1 Course Unit

SOCI 135 Law and Society
After introducing students to the major theoretical concepts concerning law and society, significant controversial societal issues that deal with law and the legal systems both domestically and internationally will be examined. Class discussions will focus on issues involving civil liberties, the organization of courts, legislatures, the legal profession and administrative agencies. Although the focus will be on law in the United States, law and society in other countries of Africa, Asia, Europe and Latin America will be covered in a comparative context. Readings included research reports, statutes and cases.
Taught by: Bosk, Fetni
One-term course offered either term
Activity: Lecture
1 Course Unit

SOCI 137 The Sociology of Media and Popular Culture
This course relies on a variety of sociological perspectives to examine the role of media and popular culture in society, with a particular emphasis on the power of the mass media industry, the relationship between cultural consumption and status, and the social organization of leisure activities from sports to shopping.
For BA Students: Society Sector
Taught by: Grazian
One-term course offered either term

1 Course Unit
Notes: Also fulfills General Requirement in Arts Letters for Class of 2009 and prior

SOCI 140 Social Conflict
This course will emphasize violent conflict, what leads up to it, and what determines whether it actually happens or not. Micro-sociological observations of conflict and violence as it appears in real-life observations, photos and videos. Topics include: fights and brawls; military combat; crowd and crowd-control violence; bullying and holdups; fair fights and dueling; carousing; sports violence; police violence; gangs violence; terrorist and clandestine violence; school and workplace rampages.
Course not offered every year
Activity: Seminar
1 Course Unit

SOCI 143 Modern Social Movements
Throughout modern times groups of people have come together in an attempt to change their social world. Their successes and failures teach us about society, organizations, and individuals. This course will examine case studies of historical and contemporary social movements. Using these case studies, this course will evaluate different approaches to understanding social movements, and investigate what these different approaches suggest about individuals, the society in which they live, and the potential for social change.
Course not offered every year
Activity: Lecture
1 Course Unit

SOCI 152 American Health Policy
This lecture course will introduce students to a broad range of topics that fall under the heading of American health policy. Its main emphasis will be on the history of health care in America from the U.S. Civil War to Obamacare. The primary objective of the course will be to consider why the U.S., until very recently, remained one of the only industrialized nations to have a private, non-nationalized health care system. Some of the themes addressed include: private health insurance(such as Blue Cross/Blue Shield), industrial health and workmen's compensation, the welfare state (in Europe, Canada, and the U.S.), women's health, especially maternal and infant care programs, Medicare/Medicaid, the Clinton Health Plan of 1993, injured soldiers and the Veterans Administration.

SCSI 161 The History of the Information Age
Certain new technologies are greeted with claims that, for good or ill, they must transform our society. The two most recent: the computer and the Internet. But the series of social, economic and technological developments that underlie what is often called the Information Revolution include much more than just the computer. In this course, we explore the history of information technology and its role in contemporary society. We will explore both the technologies themselves—calculating machines, punched card tabulators, telegraph and telephone networks, differential analyzers, digital computers, and many others—and their larger social, economic and political contexts. To understand the roots of these ideas we look at the prehistory of the computer, at the idea of the post-industrial or information society, at parallels with earlier technologies and at broad historical currents in the United States and the world.

SCSI 175 Medical Sociology
This course will give the student an introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. Although we will not explore everything, we will attempt to cover as much of the field as possible through four thematic units: (1) the organization and development of the profession of medicine, (2) the delivery of health-care, especially doctor-patient interaction, (3) the social and cultural factors that affect how illness is defined, and (4) the social causes of illness. The class will emphasize empirical research especially but not only quantitative research.
For BA Students: Society Sector
Taught by: Schnitker
Activity: Lecture
1 Course Unit

SCSI 200 Criminal Justice
This course examines how the criminal justice system responds to crime in society. The course reviews the historical development of criminal justice agencies in the United States and Europe and the available scientific evidence on the effect these agencies have on controlling crime. The course places an emphasis on the functional creation of criminal justice agencies and the discretionary role decision makers in these agencies have in deciding how to enforce criminal laws and whom to punish. Evidence on how society measures crime and the role that each major criminal justice agency plays in controlling crime is examined from the perspective of crime victims, police, prosecutors, jurors, judges, prison officials, probation officers and parole board members. Using the model of social policy evaluation, the course asks students to consider how the results of criminal justice could be more effectively delivered to reduce the social and economic costs of crime.
For BA Students: Society Sector
Taught by: MacDonald
One-term course offered either term
Activity: Lecture
1 Course Unit

SCSI 211 Sample Survey Methods
This course provides an introduction to survey data collection. In meeting this objective, we examine the major planning tasks necessary for conducting surveys, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training and field management, code development and coding of data, and data cleaning and management. We critically explore the design of surveys and collection of data from epistemological and ethical perspectives. Students will leave the class with a solid understanding of the basic process of survey data collection and a familiarity with its strengths and weaknesses as a method of inquiry into human behavior.
Taught by: Hannum, Parrado
Course not offered every year
Activity: Seminar
1 Course Unit

SCSI 222 Field Methods of Sociological Research
This course is designed to introduce students to field methods in sociological research, with a focus on participant-observation and interviewing. During this course, students will read original research based on field methods and discuss their strengths, limitations, and ethical dilemmas. Most importantly, students will design their own research projects and become ethnographers and interviewers. Students will be guided through the fieldwork process from data collection to analysis, and will turn in multiple assignments and original research paper.
Taught by: Armenta, Bosk, Koppel, Lareau
Course not offered every year
Activity: Seminar
1 Course Unit

SCSI 233 Criminology
This introductory course examines the multi-disciplinary science of law-making, law-breaking, and law-enforcing. It reviews theories explaining where, when, by whom and against whom crimes happen. Police, courts, prisons, and other institutions are also critically examined. This course meets the general distribution requirement.
For BA Students: Society Sector
Taught by: Adler
One-term course offered either term
Activity: Lecture
1 Course Unit

SCSI 235 Law and Social Change
Beginning with discussion of various perspectives on social change and law, this course then examines in detail the interdependent relationship between changes in legal and societal institutions. Emphasis will be placed on (1) how and when law can be an instrument for social change, and (2) how and when social change can cause legal change. In the assessment of this relationship, emphasis will be on the laws of the United States. However, laws of other countries and international law relevant to civil liberties, economic, social and political progress will be studied. Throughout the course, discussions will include legal controversies relevant to social change such as issues of race, gender and the law. Other issues relevant to State-Building and development will be discussed. A comparative framework will be used in the analysis of this interdependent relationship between law and social change.
Taught by: Fetni
One-term course offered either term
Activity: Lecture
1 Course Unit
SOCI 238 Media Culture & Society in Contemporary China
This course studies contemporary Chinese media, culture, and society in the context of globalization. Major topics include Internet expression and censorship, mass media commercialization, entertainment media, middle class and consumerism, environmental degradation, new forms of inequality, and civil society and popular protest. Taking a sociological approach, this course introduces methods and theories for analyzing media, institutions, inequality, and social change.
Taught by: Yang
One-term course offered either term
Activity: Lecture
1 Course Unit

SOCI 239 Sociology of Religion
How do the many religious institutions in our society differ, and what common qualities do they share? Why do some religious institutions adapt to modernity while others do not? In particular, why are the politics of sex and gender so fundamental to the current organization of the American religious landscape? These questions will be the central motivating questions for the semester. The course will begin with an introduction to current theories in the sociology of religion. We will then apply and critique those theories as we learn more about the histories, members, practices and beliefs of all the major religious groups in the US today, including Mainline, Fundamentalist and Evangelical Protestantism, Roman Catholicism, Judaism, and other groups such as the Seventh Day Adventists, Jehovah’s Witnesses and Mormons. Students will pick two religious groups (one liberal and one conservative) to observe over the course of the semester and will write papers comparing and contrasting the two groups.
Taught by: Wilde
Course not offered every year
Activity: Seminar
1 Course Unit

SOCI 250 Minorities And The Media
This course considers the theory and practice of minority representation in the public domain: film, theater, television, music, advertising and museums. How has "minority" been defined - who is included and why? How have notions of "minority" status been constructed in our public languages and what may be the impact of those images on both minority and non-minority populations? Our focus will be on representation and how it may work to marginalize or empower members of minority populations. While we will concentrate primarily on ethnic minorities, we will also consider how these same issues might affect sexual minorities. Our discussions will be supplemented by film and video examples. While the course will be theoretically situated in communication, it will consider how the perspectives of anthropology, feminism, and literary and ethnic studies have affected our understanding of public representations.
Course not offered every year
Activity: Lecture
1 Course Unit

SOCI 254 Cities, Suburbs, Regions
This course will explore the political, economic, social, and demographic forces impacting development patterns in metropolitan areas, with a particular focus on Philadelphia. We will examine the government policies, economic forces, and social attitudes that affect the way a region grows, and the impact of these forces on poverty, equity and segregation. Specific topics to be discussed include the factors that make a region competitive, the city's changing role in the region, the impact place has on opportunity, and approaches to revitalizing and improving communities.
Taught by: Black
Course offered spring; even-numbered years
Activity: Seminar
1 Course Unit

SOCI 259 Social Determinants of Health
Over the last century, we have witnessed dramatic historical change in population incidence and mortality, e.g. rising numbers of women diagnosed with breast cancer and dramatic declines in death from stomach cancer. There has also been a highly visible social patterning of health and disease, such as socio-economic disparities in AIDS, substance abuse, and asthma in the U.S. today or the association of breast cancer with affluence globally. This course will explore the way researchers, activists, politicians and others in different eras have made sense of these changes and patterns and have responded to them. The course is historical and sociological. At the same time that we examine evidence and theories about the way poverty, affluence, and other social factors influence individual and population health, we will try to understand how social and historical forces have shaped how health and disease have been understood and categorized. In examining our current obesity "epidemic," for example, we will not only consider evidence and claims made about the causal role of market forces and changes in the built environment, but ask why (besides the fact that we are heavier) obesity has become such a visible and important medical and public health issue in the U.S. today.
Taught by: Aronowitz
Course not offered every year
Activity: Lecture
1 Course Unit

SOCI 260 Cyberculture
Computers and the internet have become critical parts of our lives and culture. In this course, we will explore how people use these new technologies to develop new conceptions of identity, build virtual communities and affect political change. Each week we'll see what we can learn by thinking about the internet in a different way, focusing successively on hackers, virtuality, community, sovereignty, interfaces, algorithms and infrastructure. We'll read books, articles, and blogs about historical and contemporary cultures of computing, from Spacewar players and phone phreaks in the 1970s to Google, Facebook, World of Warcraft, WikiLeaks, and Anonymous today. In addition, we'll explore some of these online communities and projects ourselves and develop our own analyses of them.
One-term course offered either term
Activity: Seminar
1 Course Unit
SOCI 264 Poverty, Race and Health
This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions.
Taught by: Elo
Course not offered every year
Activity: Seminar
1 Course Unit

SOCI 266 Latinos in United States
This course presents a broad overview of the Latino population in the United States that focuses on the economic and sociological aspects of Latino immigration and assimilation. Topics to be covered include: construction of Latino identity, the history of U.S. Latino immigration, Latino family patterns and household structure, Latino educational attainment. Latino incorporation into the U.S. labor force, earnings and economic well-being among Latino-origin groups, assimilation and the second generation. The course will stress the importance of understanding Latinos within the overall system of race and ethnic relations in the U.S., as well as in comparison with previous immigration flows, particularly from Europe. We will pay particular attention to the economic impact of Latino immigration on both the U.S. receiving and Latin American sending communities, and the efficacy and future possibilities of U.S. immigration policy. Within all of these diverse topics, we will stress the heterogeneity of the Latino population according to national origin groups (i.e. Mexican, Puerto Rican, Cuban, and other Latinos), as well as generational differences between immigrants and the native born.
Taught by: Parrado, Armenta
One-term course offered either term
Activity: Lecture
1 Course Unit

SOCI 268 Contemporary Issues in African Society
This course will deal with law and society in Africa. After surveying the various legal systems in Africa, the focus will be on how and to what extent the countries of Africa “re-Africanized” their legal systems by reconciling their indigenous law with western law and other legal traditions to create unified legal systems that are used as instruments of social change and development. Toward this end, the experiences of various African countries covering the various legal traditions will be included. Specific focus will be on laws covering both economic and social relations. This emphasis includes laws of contracts and civil wrongs, land law, law of succession, marriage and divorce and Africa’s laws of International Relations, among other laws. Throughout this course a comparative analysis with non-African countries will be stressed.
Taught by: Omoagene, Zuberi
Activity: Lecture
1 Course Unit

SOCI 270 The Immigrant City
Immigration is among the most important phenomena shaping neighborhoods, cities, and regions. Understanding migration is fundamental to understanding urbanization, community development, and urban society today. This course examines the development of immigrant communities in United States cities and suburbs. Class readings, discussions, and visits to a variety of Philadelphia immigrant neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, and the public sphere. We study the diverse dynamics and impacts of immigration through foundational readings and close observation of various newcomer and receiving communities. The first part of the course surveys migration and community formation among a broad range of ethnic groups in different sorts of city and suburban neighborhoods, mainly through history, sociology, and geography. The second part focuses on public policy and community and economic development practices related to migration at the local, regional, national, and trans-national scales.
For BA Students: Society Sector
Taught by: Vitiello, Domenic
Course usually offered in spring term
Activity: Seminar
1 Course Unit

SOCI 277 Mental Illness
This course is designed to introduce students to current literature on mental illness. We will be concerned with describing the contributions of sociological research and exploring how these contributions differ from those of psychology, psychiatry, and social work. This overview will be done in three parts: we will discuss (i) what “mental illness” is, (ii) precisely how many Americans are mentally ill, (iii) how social factors (e.g. race, gender, class) and social arrangements (e.g. social networks) lead to mental illness, and (iv) how we as a society respond to and treat the mentally ill. Throughout the course, we will be concerned with uncovering the assumptions behind different definitions of mental health and exploring their political, social, and legal implications.
Taught by: Schnittker
One-term course offered either term
Activity: Lecture
1 Course Unit
SOCI 280 Social Issues in Contemporary China
China’s transition to a market-oriented society has effected fundamental changes in the lives of citizens. This class will consider pressing social concerns that China must struggle to address as it continues down the path of market reforms. Using topical problems to illustrate broader issues of social inequality along lines of gender, ethnicity, residence status, and poverty status, we will consider questions such as the following: How are women and men faring differently in China’s new labor market and workplaces? Are rural peasants and the emerging underclass of urban laid-off workers being left behind by market transition? How are minorities faring in China’s transition? How does the emerging digital divide play into the dichotomies of east-west and urban-rural in China? What is the plight of millions of “floaters” migrating into China’s cities, with minimal legal rights and protections? Can China’s rapidly-changing public health system handle emerging diseases such as SARS and AIDS? How has the one-child policy affected women, children, and society in China? Who are the “missing girls” of China, and what are the social implications of their disappearance? How was the welfare of children and adolescents changed with market reforms? The class will combine lectures, academic readings, case studies, films, and discussions.
Taught by: Hannum

Activity: Lecture
1 Course Unit

SOCI 299 Independent Study
Directed readings and research in areas of sociology. Permission of instructor needed.
One-term course offered either term
Activity: Independent Study
1 Course Unit

SOCI 300 Thesis Workshop
The purpose of this course is to guide senior sociology majors in writing a research proposal for a senior honors thesis. Students will learn about various research approaches, how to write a focused literature review, and kinds of data necessary to answer a wide variety of research questions, including their own. Throughout the course, students will work on designing a research question, generation researchable hypotheses, and coming up with a design for their proposed study. The final paper for this course will be a research proposal that is the basis for students’ independent research project. This course satisfies the research requirement for sociology majors and is designed primarily for seniors who are planning to write an honors thesis.
One-term course offered either term
Prerequisite: SOCI 100
Activity: Seminar
1 Course Unit

SOCI 301 Thesis Workshop II
This is the second part of the Thesis Workshop course. Prerequisite: SOCI 300. Permission must be granted by the department.
Taught by: Flippin
One-term course offered either term
Prerequisite: SOCI 300
Activity: Independent Study

Activity: Independent Study
1 Course Unit

SOCI 399 Independent Study
Independent study section for senior Sociology majors working on an honors thesis. Students are assigned an advisor by the undergraduate chair.
Taught by Sociology Faculty
One-term course offered either term
Activity: Independent Study
1 Course Unit

SOCI 410 Research Seminar in Experiments in Crime and Justice
This seminar focuses on examining data from experiments in criminology including: randomized controlled trials of criminal justice policies, “natural” experiments in crime, and other quasi-experimental studies. A series of experiments conducted by Penn scholars and elsewhere will be examined. This seminar also guides criminology majors in writing a research proposal for their thesis. Students will learn about how to formulate a research question, develop a review of the literature, and how to apply necessary empirical methods. The final paper for this course will be a research proposal that can serve as the basis for the student’s senior thesis and to satisfy the senior capstone requirement. Readings will come from the disciplines of criminology, sociology, psychology, economics, and urban planning.
Taught by: Loeffler
Course usually offered in fall term
Activity: Seminar
1 Course Unit

SOCI 420 Perspectives on Urban Poverty
This course provides an interdisciplinary introduction to 20th century urban poverty, and 20th century urban poverty knowledge. In addition to providing an historical overview of American poverty, the course is primarily concerned with the ways in which historical, cultural, political, racial, social, spatial/geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing analytic trends in the social sciences and their respective implications in terms of the question of what can be known about urban poverty in the contexts of social policy and practice, academic research, and the broader social imaginary. We will critically analyze a wide body of literature that theorizes and explains urban poverty. Course readings span the disciplines of sociology, anthropology, urban studies, history, and social welfare. Primacy will be granted to critical analysis and deconstruction of course texts, particularly with regard to the ways in which poverty knowledge creates, sustains, and constricts meaningful channels of action in urban poverty policy and practice interventions.

1 Course Unit

SOCI 431 Modern Mexican Society
Upper level advance topics vary from semester to semester.
Course not offered every year
Activity: Seminar
1 Course Unit
SOCI 435 Globalization & The City: Global Urbanization
In 2008, the UN estimated that the world's population had become primarily urban, for the first time in history. According to the OECD, by the end of the century, close to 85% of the projected population will live in cities. The transition towards an urban planet is likely to have far-reaching economic, environmental, social, political, and cultural impacts on our species, many of which we cannot yet predict. But what is urbanization? Will it lead to more inequality, exploitation, conflict, resource consumption, and exposure to natural disasters and climate change, or is it an opportunity to move the world in a more sustainable and equitable direction? Taught by Chandan Deuskar and Patricio Zambrano Barragan, this course aims to explore these questions. In the first half of the semester, we will discuss various challenges associated with global urbanization and its impacts. In the second half, we will focus on responses to these challenges. The assignments will allow students to explore some of the most salient debates around global urbanization. By the end of the semester, students will be better able to understand the context for any future academic research, professional work, or business activities in the cities of the 'developing world'. The course will help provide a foundation for any students considering graduate studies or professional work in the fields of urban planning or international development.
Taught by: Chandan Deuskar and Patricio Zambrano Barragan
Course not offered every year
Activity: Seminar
1 Course Unit

SOCI 438 Social Science Studio: Immigrants Make the City
How do American cities grow? Studies of urban transformation have focused on anchor institutions, the growth model of big business-generated employment, and "creative class" gentrification. After decades of decline, many major cities like Philadelphia are seeing gains in population again, as well as new commercial activity and street life, spurred by the influx of new immigrant communities. Yet few scholars have asked: What role do immigrants play in the current revival of the American metropolis? In this Social Science Studio course, 16 students will work collaboratively as a design studio to conduct research that can answer this important social-scientific question. Students will work on independent projects that engage multiple methods and fields to produce new types of knowledge. They will be introduced to multiple methods drawn from architecture, planning, anthropology and political science, including mapping, interviewing, fieldnotes, socio-economic surveys, sketching, photography and web design to develop independent projects. No prior knowledge is required but students with experience in GIS, STATA, photography, drawing or web design are encouraged to apply.
Taught by: Choudhury, Kushanava
Course not offered every year
Activity: Seminar
1 Course Unit

SOCI 453 Metropolitan Growth and Poverty
This course analyzes the role of metropolitan regions in the U.S. and global economies, including the sources of metropolitan productivity, the ways that metropolitan structures affect residents, and analyses of public policy in metropolitan areas. The economic, political, and social forces that have shaped World War II urban and regional development are explored, including technology, demography, and government. Special attention is paid to how metropolitan change affects residents by income and race. Topics include: gentrification, schools, suburbanization, sprawl, metropolitan fragmentation, concentration of poverty, race, and various economic revitalization initiatives.
Taught by: Madden
One-term course offered either term
Activity: Seminar
1 Course Unit

SOCI 473 Community Organizing: History and Theory
Power is the ability to create change. This course will integrate the history and theories of community organizing so that each student will be able to develop a transformational praxis. We will examine social inequality and intersectionality, and explore effective strategies in organizing for social change. This course is inter-disciplinary, involving political economy, sociology, history, social work and leadership theory. Inquiry-based and problem-posing methods will serve as the primary means of formative assessment.
Taught by: Becker
Course not offered every year
Activity: Seminar
1 Course Unit

SOCI 488 Culture, Sexuality and Global Health
What, if anything, is global in "global health"? Whatever this field might be, it is more often than not actively produced through a range of conflicting ethical commitments of multiple expert cultures, social movements and laypersons. This course explores critical themes in the historical and sociocultural study of global health. Students will engage a number of disciplinary perspectives within the social sciences including the history, sociology, and anthropology of science, and we will pay particular attention to feminist, queer, and postcolonial science studies perspectives. Throughout, we will consider how both global and local cultural transformations have shaped the emergence of this multidisciplinary field of study. To understand the complexity of global health, students will engage with a number of theoretical and ethnographic texts while questioning its stability and coherence as a self-same object given its interdisciplinary character. In doing so, we will explore the ways in which diverse sets of interests converge to constitute as well as contest the ever-shifting boundaries of global health.
Taught by: Fiereck
Course usually offered in fall term
Activity: Seminar
1 Course Unit
**SOCI 535 Quantitative Methods in Sociology I**
This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and--with the permission of the instructor--advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory "lab." Taught by: Allison, Smith
Course usually offered in fall term
Prerequisite: Basic algebra
Activity: Lecture
1 Course Unit

**SOCI 536 Quantitative Methods in Sociology II**
As the second part of a two-semester sequence, this graduate course focuses on regression analysis as used in social science research. In particular, we discuss features and assumptions of linear regression and logistic regression models. We learn how to apply regression models to real social science data using Stata and how to interpret the results. Taught by: Allison, Kohler, Park, Schnittker, Smith
Course usually offered in spring term
Prerequisite: SOCI 535 or permission of instructor
Activity: Lecture
1 Course Unit

**SOCI 553 Field Methods in Qualitative Research**
This course is designed to introduce graduate students to basic skills and concepts in ethnographic field research, including participant observation, interviewing, field documentation, and the scholarly presentation of qualitative data. Students will learn to apply these skills and concepts through an assigned set of exercises in concert with a semester-long project based on intensive fieldwork at a research site of their choosing. In addition, we will examine exemplars of published fieldwork in both classical and contemporary sociology. Students outside of the Department of Sociology need permission of the instructor to enroll.
Taught by: Bosk, Grazian, Lareau
One-term course offered either term
Activity: Seminar
1 Course Unit

**SOCI 555 Pro-Seminar in Sociological Research**
In the non-credit seminar students will be introduced to key areas in sociological research, and a set of professional skills necessary to navigate graduate school and a successful academic career. Students will also be introduced to faculty and resources available at Penn. This course is required for all first-year graduate students in Sociology
Taught by: Hannum, Jacob, Kao, Leidner, Smith
Course usually offered in fall term
Activity: Seminar
0 Course Units

**SOCI 556 Pro-Seminar in Sociological Research II**
This graduate seminar for first-year graduate students will be a two-semester course covering the major subfields of sociology--their classical and contemporary theories, current methods and substance.
Taught by: Collins, Grazian, Hannum, Park, Schnittker, Smith, Wilde
One-term course offered either term
Activity: Seminar
1 Course Unit

**SOCI 561 Class Cultures and Historical Change**
Studies culture as values, scripts, practice, performance, and style in the contexts of everyday life, social class, and status groups, social movements, and changes of communication technologies. Approaches politics, society, institutions, identities, and social change as dynamic processes and complex interactions at both micro/meso and meso/macro levels. Examines the production, reception, circulation and effects of signs, symbols, and stories. Readings include both classic authors (Elias, Simmel,Bakhtin, Goffman, Foucault, Bourdieu, Raymond Williams, etc.) and contemporary works from sociology and communication studies.
Taught by: Yang
Course not offered every year
Activity: Seminar
1 Course Unit

**SOCI 562 Social Movements & Political Science**
Activity: Lecture
1 Course Unit

**SOCI 596 Sociology of Education**
This graduate seminar will introduce students to some of the key theoretical and empirical work in the sociology of education. We will examine how schools work to maintain or alleviate inequality, and focus on differences in educational achievement and attainment by race, ethnicity, immigrant status, class, and gender. We will review work on the educational experiences of youth from early childhood to young adulthood.
Course not offered every year
Activity: Seminar
1 Course Unit

**SOCI 601 Contemporary Social Theory**
This is a graduate-level seminar structured around the main theoretical debates of contemporary sociology, including the interplay of rationality and emotion, the relationship between structure and agency, the nature of power, and the role of chance and contingency. In considering alternative positions on these debates, we will encounter the major theorists of the past fifty years, including Parsons, Merton, Goffman, Homans, Schutz, Coleman, Bourdieu, Luhmann, Habermas, Collins, and Giddens.
Requirements include intensive primary source reading, writing, and participation. The course assumes, and does not provide, prior familiarity with the main theoretical perspectives, and thus does not substitute for the undergraduate theory course (SOCI 126)
Course not offered every year
Activity: Seminar
1 Course Unit

**SOCI 602 Proseminar in Classical Sociology**
This course is designed to introduce graduate students to the classical foundations of sociology by drawing on canonical readings by Marx, Engels, Durkheim, Weber, Du Bois, Addams, Simmel, Park, and Goffman, among others. We will read these texts in the context of three major sociological themes: work and social inequality, culture and social structure, and urban interaction and culture in the city. Final papers will require students to draw on classical sociological works in their analyses of contemporary empirical research in sociology.
Taught by: Grazian
One-term course offered either term
Activity: Seminar
1 Course Unit
**SOCI 603 Master's Research in Sociology**
This graduate course is intended to be helpful to students as they produce an MA thesis. The course is structured to provide social support and feedback as students move through the stages in the development of a project (i.e., data analysis, review of the literature, development of a thesis, and revision). Students should begin the semester with a data set in hand; additional data analysis will occur during the term. In some cases, students may be finishing their data collection.) In addition, the course is intended to provided professional development opportunities for students by providing "insider" information about the publication process. Students will be given examples of journal review (including reviews that reject a paper), copies of papers as they move through the revision process, and guidelines for producing a publishable piece of work. The goal is for students to produce a manuscript that can be submitted for publication in the near future. This is a required course for second year graduate students in Sociology.
Taught by: Bosk, Grazian, Jacobs, Kao, Lareau, Leidner, Park, Schnittker
One-term course offered either term
Activity: Seminar
1 Course Unit

**SOCI 604 Methodology of Social Research**
This course will give students familiarity with the common research methods social scientists use to conduct research. Ethnographic, interview, survey, experimental and historical/comparative research methods will be covered. Four themes will be explored: 1) the basics of solid research design, 2) the various advantages and disadvantages of each method, 3) when the use of a method is appropriate or inappropriate for the research question, and 4) how to evaluate researchers' claims on the basis of the evidence they present. These themes will be explored by reading examples of and conducting exercises designed to give students hands-on experience in each of the methods. Students will conduct the exercises on a topic of their choice, which together will culminate in their final paper. The course is required and restricted to second year students in sociology and demography.
Taught by: Smith, Wilde, Zuberi
One-term course offered either term
Activity: Lecture
1 Course Unit

**SOCI 607 Introduction to Demography**
A nontechical introduction to fertility, mortality and migration and the interrelations of population with other social and economic factors. Course usually offered in fall term
Activity: Lecture
1 Course Unit

**SOCI 609 Basic Methods of Demography**
The course is designed to introduce students to basic concepts of demographic measurement and modeling used to study changes in population size and composition. The course covers basic measures of mortality, fertility and migration; life table construction; multiple decrement life tables; stable populations; population projections; and age patterns of vital events. Students will learn to apply demographic methods through a series of weekly problem sets.
Taught by: Elo, Guillot, Smith
One-term course offered either term
Activity: Lecture
1 Course Unit

**SOCI 611 Structural Equation Models**
Statistical modeling with multiple equations and latent variables. The first part of the course will focus on linear models that could be estimated with any of the well-known SEM programs (e.g., LISREL, EQS, or Amos). Both Mplus and SAS will be used exclusively in this part of the course. The second part will focus on Mplus models for variables that are categorical, count, or censored. Maximum likelihood methods for missing data will also be covered.
Taught by: Allison
Course not offered every year
Activity: Lecture
1 Course Unit

**SOCI 612 Categorical Data Analysis**
This course deals with techniques for analyzing multivariate data which the dependent variable is a set of categories (a dichotomy or polytomy). Topics will include linear probability models, logit (logistic) regression models, probit models, logit analysis of contingency tables, cumulative logit and probit (for ordinal data), multinomial logit, conditional logit (discrete choice), unobserved heterogeneity, log-linear models, square tables, response-based sampling, and repeated measures. Methods will be illustrated using the Stata System. There will be several assignments using Stata to analyze data provided by the instructor.
Taught by: Allison, Smith
Course not offered every year
Activity: Lecture
1 Course Unit

**SOCI 613 Event History**
An applications-oriented course on statistical methods for the analysis of longitudinal data on the occurrence of events, also known as survival analysis, failure-time analysis, hazard analysis or duration analysis. Emphasis on regression-like models in which the risk of event occurrence is a function of a set of explanatory variables. Topics include accelerated failure-time models, hazard models, censoring, Cox regression models, time-dependent covariates, completing risks, repeated events, unobserved heterogeneity, discrete-time methods.
Taught by: Allison
Course not offered every year
Prerequisite: SOCI 536 or equivalent
Activity: Lecture
1 Course Unit

**SOCI 620 Doctoral Seminar in Sociological Research II**
This course is intended to aid in the selection, framing, writing and revising of sociological dissertation proposals. It is also intended to provide a forum for the presentation of dissertation research in progress. The goal is to provide a forum for the acquisition of professional socialization in sociology. We will discuss the framing of research questions, the design of research strategies, and the writing of dissertation proposals. We will discuss the process of submitting manuscripts for conferences and journals, preparing a curriculum vitae, job search strategies, and preparing for effective colloquium presentations. We will also review articles currently under review at the American Sociological Review. It is expected that third year graduate students in Sociology will enroll in this class.
Taught by: Grazian, Hannum, Jacobs, Schnittker, Wilde
One-term course offered either term
Prerequisite: Third year graduate students
Activity: Seminar
1 Course Unit
SOCI 621 Mortality
The course focuses on the description and explanation of health and mortality in human populations and their variability across several dimensions such as age, time, place, social class, race, etc. The course includes general theories of health, mortality and morbidity, investigations of mortality and related processes in developing and developed countries, and discussions of future mortality trends and their implications for individual lives and the society at large.
Taught by: Elo, Kohler
Course not offered every year
Activity: Lecture
1 Course Unit

SOCI 622 Fertility
The biological, social and demographic factors explaining the levels, trends and differentials in human fertility. Data, measures, and methods used in the context of the more and the less developed countries, with an emphasis on the historical and current course of the fertility transition.
Taught by: Kohler, Smith
Course not offered every year
Activity: Seminar
1 Course Unit

SOCI 634 Population Processes II
Population Processes II is part of a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, and migration) and recent developments in the field. PP II is divided into two parts. The first focuses on family demography and the biological, social and demographic factors explaining levels, trends, and differentials in human fertility transition with an emphasis on the historical and current course of fertility transition in developed and developing countries. The second part of the course provides a comprehensive review of theories and research on international migration. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significant attention to theoretical and empirical perspectives on immigrant adaptation, including the relationship between gender and migration.
Taught by: Flippens, Kohler, Parrado, Smith
Course usually offered in spring term
Activity: Seminar
1 Course Unit

SOCI 643 Social Stratification
This is an advanced level graduate seminar where we will review contemporary research on social stratification and mobility. We will examine empirical and theoretical studies not only in the US but also in other countries to address how the pattern of social stratification varies across societies and over time. The main topics to be discussed are social mobility, occupational attainment, educational inequality, gender and race, and family processes and stratification. We will also examine studies that address how national contexts mediate social stratification. Advanced undergraduate students will be admitted with permission.
Taught by: Jacobs, Park
Course not offered every year
Activity: Lecture
1 Course Unit

SOCI 649 A Course on Elites
Most of the studies of inequality look at poverty and the impact of poverty. This course will be a study of those at the top of the social stratification system. We will take a broad vision of elites of to include the upper-middle-class as well as those in the top 1%. The course will examine the concentration of wealth in American society. It will examine elite families. It will also look at elite education. There will be a unit on the financial industry, the 2008 debacle, and the failure of the government to regulate this important industry. We will also study the influence of race by comparing the black upper-middle-class with white upper-middle-class families. Thus, we will also look at the power of elites in a number of spheres. Finally, we will also read theoretical perspectives including the work of C. Wright Mills, Marx, and Bourdieu. Thus, in addition to the focus on social stratification, this course cuts across sociology of the family, economic sociology, cultural sociology, and race and ethnic relations.
Taught by: Lareau
Activity: Seminar
1 Course Unit

SOCI 662 Panel Data Analysis: Panel Data Analysis-Missing Data
Activity: Lecture
1 Course Unit

SOCI 664 Digital Media & Soc Theo
This seminar explores critical issues in contemporary society through the lens of digital media studies and social theory. Special attention will be given to how social theory may inform the theorizing and empirical analysis of digital culture, digital politics, and digital practices. We will read recent monographs on the meanings and uses of digital media in international development, international migration, state power and popular protest, symbolic violence, and the formation and contestation of identities, communities, and publics. These works will be examined alongside the social theories of Jeffrey Alexander, Ulrich Beck, Bourdieu, Judith Butler, Foucault, Giddens, Goffman, Habermas, Melucci, Victor Turner, and others. A term paper required
One-term course offered either term
Activity: Seminar
1 Course Unit

SOCI 667 Social Interaction
The dynamics of interpersonal interaction, especially in face-to-face encounters during limited short periods of time. Topics include: the theory of interaction rituals deriving from Durkheim, Goffman and their contemporary followers; conversation analysis; micro-ethnographic studies of non-verbal behavior and embodied interaction; sociology of emotions; symbolic interactionist theory and the social nature of mind, self, and inner dialogue; electronically mediated interaction and its effects on social ties; and the relationship between micro and macro sociology.
Course not offered every year
Activity: Seminar
1 Course Unit
SOCI 677 International Migration
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800?1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes signification attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.

1 Course Unit

SOCI 707 Second-Year Research Seminar I
This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master's papers and second year research papers are written. This is a required course for second year graduate students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

SOCI 708 Seminar: Demographic Research II
Demography 708 is the second part of a two-course sequence designed to introduce and familiarize second year students with current norms for academic research, presentation and publishing in the field of Demography. In Demg708 students are expected to finalize the analyses and to complete their second year research paper. This is a required course for second year demography students. Others interested in enrolling in the course may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

SOCI 731 Advanced Demographic Methods
This course considers a variety of procedures for measuring and modeling demographic processes. We will consider both deterministic (drawn from classic demographic methods, stable population theory, and the like) and stochastic (drawn from statistics) perspectives and methods, including their integration. Pre-requisites: DEMG 609 and SOCI 536 (or its equivalent).
Taught by: Smith
Course not offered every year
Prerequisites: DEMG 609 and SOCI 536 (or its equivalent)
Activity: Seminar
1 Course Unit

SOCI 796 Demographic, Economic, and Social Interrelations
The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demography change? How does immigration to the US affect the ethnic composition of the population, the earnings of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women's participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development with low income countries? In addition to these topics, the course also covers selected methods not included in DEMG/ SOCI 535/536 and 609.

SOUTH ASIA STUDIES (SAST)

SAST 001 Introduction to Modern India
This introductory course will provide an outline of major events and themes in Indian history, from the Mughal Empire in the 16th century to the re-emergence of India as a global player in the 21st century. The course will discuss the following themes: society and economy in Mughal India; global trade between India and the West in the 17th century; the rise of the English East India Company’s control over Indian subcontinent in the 18th century; its emergence and transformation of India into a colonial economy; social and religious reform movements in the 19th century; the emergence of elite and popular anti-colonial nationalisms; independence and the partition of the subcontinent; the emergence of the world’s largest democracy; the making of an Indian middle class; and the nuclearization of South Asia.

SAST 002 The City in South Asia
This introductory social science course examines key topics, themes, and analytic methods in the study of South Asia by focusing on significant South Asian cities. With one-fifth of the world’s population, South Asia and its urban centers are playing an increasingly important role in recent global economic transformations, resulting in fundamental changes within both the subcontinent and the larger world. Drawing primarily on ethnographic studies of South Asia in the context of rapid historical change, the course also incorporates research drawn from urban studies, architecture, political science, and history, as well as fiction and film. Topics include globalization and new economic dynamics in South Asia; the formation of a new urban middle class; consumption and consumer culture; urban political formations, democratic institutions, and practices; criminality & the underworld; population growth, changes in the built environment, and demographic shifts; everyday life in South Asia and ethnic, cultural, and linguistic identities, differences, and violence in South Asia’s urban environments. This is an introductory level course appropriate for students with no background in South Asia or for those seeking to better understand South Asia’s urban environments in the context of recent globalization and rapid historical changes. No prerequisites. Fulfills College sector requirement in Society and foundational approach in Cross-Cultural Analysis.

SAST 003 History, Culture, and Religion in Early India
This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the “Aryan Invasion” and Vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabharata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings students will read select primary sources on the history of religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India’s early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.

**SAST 006 Hindu Mythology**
Premodern India produced some of the world's greatest myths and stories: tales of gods, goddesses, heroes, princesses, kings and lovers that continue to capture the imaginations of millions of readers and hearers. In this course, we will look closely at some of these stories especially as found in Purana-s, great compendia composed in Sanskrit, including the chief stories of the central gods of Hinduism: Visnu, Siva, and the Goddess. We will also consider the relationship between these texts and the earlier myths of the Vedas and the Indian Epics, the diversity of the narrative and mythic materials within and across different texts, and the re-imagining of these stories in the modern world.

**SAST 009 Introduction to Hinduism**
This course introduces students to the history, texts, philosophies and rituals of South Asia's oldest living religious traditions, represented today by the term "Hinduism." At the same time, it problematizes the idea of a monolithic "Hindu Tradition," in favor of an approach that recognizes several distinct, dynamic, yet symbiotic Hindu religious cultures. The course also places emphasis on the vitality of today's Hinduism(s), and the various historical, ritual, cultural, and social contexts that they represent and constitute. The course is organized around six modules: (1) issues in the Academic Study of Hinduism; (2) Sanskrit (textual) tradition; (3) Philosophy; (4) Theology; (5) Ritual; and (6) Modernity and Contemporary Politics.

**SAST 012 Spices, Gunpowder, and Pagodas: A History of Southeast Asia**
This undergraduate course introduces students to the history of Southeast Asia from the earliest centuries of the Common Era to c.1950. It introduces students to Southeast Asia as religion, constituent historical societies of the region, and to the major academic literature and debates pertaining to the historical development of Southeast Asian societies and the region. Key themes explored include the origins and character of early civilizations, ideas and ideology about power and prowess, material culture, the transformation of ethnic, class, and gender relations, the impact of the arrival of world religions and early European expansion, and the nature of indigenous responses to the diffusion of new beliefs and ideas and intercultural contact.
Taught by: Sevea
Course not offered every year

1 Course Unit

**SAST 050 Introduction to Indian Philosophy**
This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India -- arguments for and against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.

SAST 057 Planning to be Off-shore?
Freshman Seminar. In this course we will trace the economic development of India from 1947 to the present. Independent India started out as a centrally planned economy in 1949 but in 1991 decided to reduce its public sector and allow, indeed encourage, foreign investors to come in. The Planning Commission of India still exists but has lost much of its power. Many in the U.S. complain of American jobs draining off to India, call centers in India taking care of American customer complaints, American patient histories being documented in India, etc. At the same time, the U.S. government encourages highly trained Indians to be in the U.S. Students are expected to write four one-page response papers and one final paper. Twenty percent of the final grade will be based on class participation, 20 percent on the four response papers and 60 percent on the final paper.
Taught by: Gangulee

1 Course Unit

Sugar and Spices. Tea and Coffee. Opium and Cocaine. Hop aboard the Indian Ocean dhows, Chinese junks, Dutch schooners, and British and American clipper ships that made possible the rise of global capitalism, new colonial relationships, and the intensified forms of cultural change. How have the desires to possess and consume particular commodities shaped cultures and the course of modern history? This class introduces students to the cultural history of the modern world through an interdisciplinary analysis of connections between East and West, South and North. Following the circulation of commodities and the development of modern capitalism, the course examines the impact of global exchange on interactions and relationships between regions, nations, cultures, and peoples and the influences on cultural practices and meanings. The role of slavery and labor migrations, colonial and imperial relations, and struggles for economic and political independence are also considered. From the role of spices in the formation of European joint stock companies circa 1600 to the contemporary cocaine trade, the course’s use of both original primary sources and secondary readings written by historians and anthropologists will enable particular attention to the ways that global trade has impacted social, cultural, and political formations and practices throughout the world.

Activity: Lecture
1 Course Unit

SAST 106 Beginning Sitar I
This course is an introduction to the repertoire and performance practices of the North Indian sitar. Fundamentals of sitar technique, composition, and improvisation are presented and practiced in class. Class lectures and discussions, audio and video material, and reading and listening assignments on selected topics supplement practice, to provide an overview of the social and historical context and the formal structures of North Indian music in general. There are no prerequisites for the course, but some experience with instrumental or vocal music is suggested. Each student is expected to put in two hours of individual practice per week, and complete reading, audio, and written assignments. The class gives a group performance at the end of the semester.
Taught by: Miner
Course usually offered in fall term
Activity: Lecture
1 Course Unit

SAST 107 Beginning Sitar II
This is the second semester of a performance course in the North Indian sitar. Students who have not taken the first semester but play any musical instrument are permitted to join. Principles of composition and improvisation will be explored in practice and supplemented by readings and listening. The class gives a group performance at the end of the semester.
Taught by: Miner
Course usually offered in spring term
Activity: Lecture
1 Course Unit

SAST 108 Intermediate Sitar I
This is a performance course open to students who have completed both semesters of Beginning Sitar, or to others by permission from the instructor. Students will work with right and left-hand techniques, study three ragas in depth, learn the contours of several other ragas, and work with concepts of tala, composition, and improvisation. Assigned readings and listenings will complement the performed material. A group performance will be given at the end of the semester.

SAST 112 Religion and Cinema in India
This seminar examines key themes in the study of religion and Indian cinema. The aim of the seminar is to foreground discussions of performativity, visual culture, representation, and politics in the study of modern South Asian religions. Themes include mythological cinema, gender and sexuality, censorship and the state, and communalism and secularism. The films we will be deploying as case studies will be limited to those produced in Hindi, Telugu and Tamil (the three largest cinema cultures of India). No knowledge of any South Asian language is needed for this course however.
Taught by: Soneji
Course not offered every year
Activity: Lecture
1 Course Unit

SAST 116 Music Cultures of North India and Pakistan
A great variety of song and instrumental genres have thrived in the Hindu and Muslim milieus of North India and Pakistan. In this course we examine a selection of urban and rural musics, such as instrumental music in Baluchistan, qawwali in Delhi, the garba of Gujarat, ballad singing of Rajasthan and the urban music of Calcutta. We will explore the sounds, poetry, historical, and social contexts of chosen genres and trace aspects of continuity and adaptation in the changing environment of contemporary South Asia. Readings are supplemented by audio-visual material and live performances.
Taught by: Miner
Course not offered every year
Activity: Lecture
1 Course Unit

SAST 120 Literature of the South Asian City: Space, Culture, Politics
The South Asian city as a way of organizing space and social relations, as a symbol, as a memories the subject of this course. Through primarily, though by no means exclusively, readings of literature in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary flâneurie. We will see reflections of the city in poetry recited in its homes, detective novels sold in its train stations, stories scribbled in its cafes, plays staged in its theaters, and films produced in its backlots. Readings will attempt to address urban spaces across South Asia, and will include works by writers such as Mirza Ghalib, Rabindranath Tagore, Saadat Hasan Manto, and Vijay Tendulkar. We will examine these works in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.
Taught by: Goulding
One-term course offered either term
Activity: Lecture

SAST 124 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.

SAST 139 Introduction to Islam
This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.
Taught by: Elias
One-term course offered either term
Activity: Lecture
1 Course Unit

SAST 142 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and its time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems effect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among lay communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as “Just-War,” Women’s Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.
Taught by: McDaniel
One-term course offered either term
Activity: Lecture
1 Course Unit
SAST 144 Modern Islam and Poetry
This course focuses on a basic question: How and why a modern poem turns into a narrative device to debate contemporary Islamic discourses? We begin exploring this question by taking note of how a 12th-century Persian poet Rumi became - as described by Time magazine - "the best-selling poet in the US today," and then introduces students to poems and various social, cultural and religious moments that were key in the making of modern Islam. Although the course primarily emphasizes the study of poetry produced and circulated among various Muslim communities world-wide, it also covers a diverse set of secondary readings from the field of religious studies, anthropology and literature to outline more clearly the contours of contemporary Islam. Readings begin with internationally famous Rumi and then include poets emerging from Arabic, Persian, Urdu, and several vernacular literary cultures in both Muslim and non-Muslim countries.
Course not offered every year
Activity: Seminar
1 Course Unit

SAST 146 Islam in the Modern World
This course key issues facing Muslims in the modern world with an emphasis on gaining an understanding of how Muslims view themselves and the world in which they live. Beginning with a discussion of the impact of colonialism, we will examine Islamic ideas and trends from the late colonial period until the present. Readings include religious, political and literary writings by important Muslim figures and focus on pressing issues in the Islamic world an beyond: the place of religion in modern national politics; the changing status of women; constructions of sexuality (including masculinity); pressing issues in bioethics; Islam, race and immigration in America; the role of violence; and the manifestations of religion in popular culture.

1 Course Unit

SAST 147 Love, Sex & Power
This course explores the ways in which some of the biggest issues in human life are dealt with across religious traditions. Beginning with important questions of sexual identity, politics, religion and the individual in contemporary life, we will examine questions of eroticism, sex and love as they are reflected in religious literature, art and history. The concept of divine love and religious devotion will be explored in relation to acts of violence, including human sacrifice and self-sacrifice in the form of martyrdom seen in pre-modern concepts of saintly martyrdom and religious chivalry as well as the religious legitimacy of modern self-sacrifice of soldiers in war and terrorist suicides. The course focuses in particular on examples drawn from Christianity, Hinduism, Islam and Mesoamerican Religion, although discussions of contemporary issues will be conducted with a broader sweep. Important questions considered in this course include: how does the body function as the locus in which religion is enacted? What is the conflict between our agency over our bodies and socioreligious claims over the individual? Is violence an integral part of religion? What are religious understandings of the relationship between love and sex? How can a human being love gods erotically?

SAST 169 Merchants, Saints, Slaves and Sojourners: the Worlds of the Indian Ocean
Do oceans serve to divide and demarcate distinct cultures and regions? Or do they facilitate exchange, connection and cosmopolitanism? This course will explore the manner in which the Indian Ocean has played both roles throughout history, and how the nature of those divisions and connections has changed over time from the ancient to the modern world. We will reconstruct the intertwined mercantile, religious and kinship networks that spanned the Indian Ocean world, across the Middle East, East Africa, South Asia, Southeast Asia and China, illuminating the histories of Hinduism, Buddhism and Islam, while also considering the role of successive imperial political formations, from Rome to Britain. Throughout the semester we will seek to understand the Indian Ocean through the people who lived and worked in its milieu - from consuls and military commanders, to traders, brokers, sailors, prisoners and slaves. Course materials will draw on a variety of disciplines (anthropology, archaeology, material culture, religious studies) to construct the cultural, economic, and environmental history of the Indian Ocean.

SAST 189 Islam and the West
How did Muslims and modern South Asia interact with the West? What Islamic idioms, orientations and movements emerged in the nineteenth and twentieth centuries? Was South Asia a prominent global center of Islam? What kinds of Islamic educational institutions developed in modern South Asia? How did Muslims appropriate technologies? What materials were printed by Muslims? Were Muslims part of the British army? What was jihad in modernity? How did Muslim ‘modernists’ and ‘traditionalists’ respond to the challenges of colonialism and modernity? What was the nature of Sufism in modern South Asia? What was the nature of political Islam in South Asia? How did some Muslims demand a Muslim State? What was the Partition? How has Muslim history been remembered in Bangladesh, India and Pakistan? This is an introductory course, and aims to introduce students to a facet of the long history of Islam, Muslims, and the West.

SAST 200 Introduction to Art in South Asia
This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as 'traditional' or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe, and as diverse. This course attempts to introduce the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.

SAST 208 Doing Research: Qualitative Methods and Research Design
This interdisciplinary course introduces students to qualitative research methods and frameworks in the social sciences and humanities. Students will learn how to frame an effective research question, situate it in relation to existing research, select the most appropriate methods for addressing the question, and develop an effective research plan. Each week students will be introduced to a new set of frameworks for analysis, see specific examples of their application drawn from anthropological, historical, and related scholarship and have opportunities to practice applying and evaluating the strengths and weaknesses of specific methodological tools. The goals of the semester will be for each student to develop their own research proposal for a specific project. Students will be introduced to a range of textual, archival and media collections and databases available at Penn, with particular attention to South Asia and other specific regions of interest to course participants. Students will also have the opportunity to identify sources of funding for summer and/or thesis research projects, and submit applications for these opportunities as part of the course. The course is ideal for students considering summer research, an undergraduate thesis, or an application to the Fulbright or other research program. It may be taken by itself as a freestanding course, or may be sequenced with SAST 209, Writing Research, the following fall semester.

SAST 241 Religion and Poetry of South Asia
This course is designed to introduce students to the wide array of devotional and mystical literatures of pre-modern South Asia. We will focus on the texts, practices, and discourses of the religious and literary communities which create these forms of literature, placing them within social and historical contexts. Topics covered include the formation of Sufi silsilahs in India, Krishna bhakti and the Vais?ava sects, Kabir, Guru Nanak and the Sikhs, Tulsidas’s Ramcharitmanas, and other texts in translation.

1 Course Unit

SAST 247 Gender and Sexuality in Hinduism
Issues related to gender and sexuality occupy a complex, often contradictory place in Hinduism. Sexual desire, sexual activity, and the body are simultaneously celebrated, manipulated, controlled, and restricted. This fundamental ambiguity is at the core of this course, which concerns itself with religious perspectives on the body, gender and sexual activity in Hinduism. Topics include: dharma, morality, and sexual practice; menstruation; pregnancy and childbirth; Bhakti and Tantra; same-sex relations; masculinities; hijras and the notion of the "third sex"; eroticism in the literary, visual, and performing arts; colonialism; and somatic nationalism.

Two terms. student must enter first term.
Activity: Seminar
1 Course Unit
SAST 249 Re-enchanting Modernity: A Guide to Sufism in South Asia
This undergraduate level course introduces students to Sufism in modern South Asia, with a particular focus on how Muslim 'mystics' and their 'mystical' methods interacted with modernity, colonialism, technological developments and globalization. This course is divided into three parts. In the first part of this course, students are provided with an overview of the theological and historical background of the dominant expression of Islam that came to be identified as 'Sufism' or 'Islamic mysticism', the historical development of Sufi institutions and spaces in South Asia, and the historical emergence of South Asia as a prominent global center of Sufism. The second and main part of this course introduces students to a range of anthropological and historical works that are revelatory about how Sufi in modern South Asia were and remain intimately connected to modern political and technological developments. Providing students with an overview of Sufi re-enchantments of modernity from the 19th to 21st century, this section of the course focuses upon Sufi movements and masters who perpetuated or defended customary Islam through sophisticated appropriations of technologies and print networks, and negotiations with non-Muslim rulers and societies. Moreover, students will be introduced to anthropological and historical scholarship on religious worlds in modern South Asia that were and remain steeped in 'customary Islam' and Sufi performances and interpretations of Islam. These sources reveal how 'mystical' methods of performing Islam through ecstasy and spiritual restoration, and interpretations of dreams and visions, have regularly interacted with contemporaneous technologies. The third part of this course introduces students to the globalization of South Asian Sufism in North America, Europe and Southeast Asia. Herein, students will be encouraged to engage with anthropological and literary works pertaining to itinerant South Asian Sufi masters and their devotional cults, and introduced to active South Asian Sufi centers in Philadelphia.

SAST 250 History of Hinduism
This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacral kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

Activity: Lecture
1 Course Unit

SAST 251 Muslim Sainthood Practices
This course aims at introducing various classical, popular and modern Muslim saints in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will learn about the major concepts initiated and circulated by these saints and their distinctive ways of dealing with spiritual aspects. While focusing on the sainthood practices, we also study the nature of the dialogue which addresses the questions such as pluralism, localism, and a new paradigm of spirituality that continually interacts with diverse modes of everyday life in South Asia. In order to understand their impact on visual and media cultures, we also watch two documentaries and compare these visual sources with sainthood literature and practices.

SAST 252 Music, Religion, Ritual in South and Southeast Asia.
What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today's public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.

Activity: Lecture
1 Course Unit
SAST 262 The Making of Medieval India
This course will provide an in-depth understanding of South Asia in what is often called its 'medieval' period—from the rise of the great temple kingdoms until the end of the Delhi Sultanate in the sixteenth century (c. 500 CE - c. 1500 CE). This millennium is arguably one of the most transformative in South Asia's history, a period when many of its most distinctive social and cultural features evolved. The course will provide both an overview of the period as well as an introduction to major interpretations and types of sources (textual, visual, and archaeological). The focus throughout the course will be on the heterogeneous development of states, societies and cultures with special attention to long-term processes of transformation. One set of themes explored will be largely social and economic, focusing on the development of agrarian and peasant societies, aristocracies and intellectuals, as well as the role of mercantile, pastoralist, nomadic and forest-living groups. Another set of themes will explore cultural transformation, including the development, transformation and interaction of religious practices, the emergence of cosmopolitan and regional literary cultures, and the rise of distinctive urban, courtly, and rural world views. Special themes of discussion may include violence and manners, material cultures, religious conflict, devotional religion and gender relations.

SAST 269 Migration and the Middle East
This reading and discussion-intensive seminar examines the phenomenon of migration into, out of, within, and across the Middle East and North Africa. We will focus on the period from the late nineteenth century to the present, and will emphasize the cultural (rather than economic) consequences of migration. Along the way we will trace connections between the Middle East and other regions-- notably the Americas, sub-Saharan Africa, South Asia, the Caucasus, and Western Europe. Readings are interdisciplinary and include works of history, anthropology, sociology, medical research, literature, political science, geography, and human rights advocacy. As students develop final projects on topics of their choice, we will spend time throughout the semester discussing tactics for research and writing.

Notes: This is a topics course and will vary from year to year.

SAST 290 South Asians in the United States
This course investigates the everyday practices and customs of South Asians in America. Every immigrant group has its own history, customs, beliefs and values, making each unique while simultaneously a part of the "melting pot" or salad bowl" of American society. Yet how do people define themselves and their ethnicities living in a diasporic context? By taking into account the burgeoning South Asian American population as our model, this course will explore the basic themes surrounding the lives that immigrants are living in America, and more specifically the identity which the second generation, born and/or raised in American, is developing. South Asians in the U.S. will be divided thematically covering the topics of ethnicity, marriage, gender, religion, and pop culture. Reading and assignments will discuss a variety of issues and viewpoints that are a part of the fabric of South Asia, but will focus on the interpretation of such expressive culture in the United States.

SAST 293 Caste & Class in South Asia
This course will explore the reality of caste and class in South Asian society, and the theories, classical and modern, that attempt to explain it. We shall survey a wide sweep of sources, from the earliest evidence for a division into caste-classes in the Rig-Veda to reports in modern media of caste-related social problems; from orthodox Hindu normative texts justifying and upholding a rigid hierarchical division of society to voices, in Sanskrit and in vernaculars, criticizing the caste system. Our goal is to gain a nuanced and many-sided insight into a deeply pervasive phenomenon that has shaped South Asian society, culture, and religion in general (Muslim, Sikh, and Christian castes) from ancient time up to the twentieth century.

SAST 297 Nature Culture Environmentalism: Urban Water
In Spring 2018, this course is specially designed to appeal to students with interests in urban studies and environmental studies across different disciplines. We will explore the natures, cultures and environmentalisms of cities by exploring the matter of urban water. Cities have long been made through historic projects to tame the unruly relations between land and water. As the catastrophic human disasters in Houston, Florida and Puerto Rico have recently shown, these relations are today everywhere being unsettled and exacerbated by climate change. In cities as diverse as Philadelphia and Mumbai, climate change promises to exacerbate social inequalities and further squeeze non-human natures. How is the urban environment produced, magnified, divided and shrunk with water? In these times, how might we make space for social justice and non-human natures in and along rising urban waters?

SAST 340 Religious Bodies and Sex in South Asia
This graduate-level course introduces students to the writings of key religious scholars in modern South Asia who associated the regeneration of Hinduism, Islam, and Sikhism with the cultivation of bodies and sexual practices. Particular attention will be paid towards religious texts produced in modern India, Pakistan and Bangladesh pertaining to sexual bodies, exercises and health; celibacy; body-building; the transmission of sexual knowledge; and the political roles of the 'Hindu', 'Muslim' and 'Sikh' body. In this course, students will be encouraged to engage a range of sources including religio-sexual manuals, autobiographies, novels, speeches, pamphlets, official records, recipes and films. Moreover, students will be introduced to the academic literature on South Asian religious scholars and 'sex gurus' in South and Southeast Asia; religious sexuality in South Asia, Southeast Asia, the Middle East and Europe; and, the transcultural literary networks that led to the production of religio-sexual texts in modern South Asia.

SAST 400 Beginning Hindi-Urdu Online (Startalk)
This introductory, proficiency-based course covers the core content of first-year Hindi-Urdu. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing), but there is a special focus on developing speaking and listening skills. Students will also develop literacy skills in one script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All classes are interactive and students acquire the language by using it in realistic contexts. Culture is introduced through various authentic materials including Bollywood songs. This program has a special application process. Please visit our website (https://www.southasiacenter.upenn.edu/startalk) for more information on the program and how to apply.
Taught by: Pien, J.
Course usually offered summer term only
Activity: Lecture
1 Course Unit
Notes: This is a summer online course known also as Startalk.

SAST 405 Beginning Pashtu I
The first semester is focused on mastering the writing system, basic structures, and simple conversation using texts, writing samples, and numerous structure and dialogue drills. We remain within the present and future tenses only, developing vocabulary with lessons and discussions centered around greetings, family, weather, foods, and directions. Students use authentic online and textbook materials.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center

SAST 406 Beginning Pashtu Part II
The second semester covers more advanced structures with reinforcing drills, and begin reading longer texts of an assorted variety, mostly short stories and some news articles. The past tense is introduced, as well as longer more complex texts. Topics within simple simulated contexts (taxi, hotel, restaurant, food shopping, time, family). Short writing exercises and dictations are expected at this time, as well as simultaneous translations to and from Pashto.
For BA Students: Language Course
Course usually offered in spring term
Prerequisites: Beginning Pashtu Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit
Notes: Offered through Penn Language Center.
SAST 407 Beginning Kannada Part I
This is a systematic introduction to the Kannada language and culture for beginners. The course aims at developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Kannada script is introduced from the beginning and the language is presented in its socio-cultural context for achieving a meaningful and operational control of the language. Students acquire basic rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments.

For BA Students: Language Course
Taught by: Swaminathan
Course usually offered in fall term
Activity: Lecture

Notes: Offered through Penn Language Center

SAST 408 Beginning Kannada Part II
This is a systematic introduction to the Kannada language and culture for beginners. The course aims at developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Kannada script is introduced from the beginning and the language is presented in its socio-cultural context for achieving a meaningful and operational control of the language. Students acquire basic rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments.

For BA Students: Language Course
Taught by: Swaminathan
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center

SAST 410 Beginning Marathi Part I
The first year course in Marathi begins with learning the Devnagari script which is common for other important languages like Hindi and Nepali. With proper emphasis on grammar, vocabulary, and phonetics, the syllabus will see the student becoming able to speak conversational Marathi, read Marathi data from the Internet, and compose simple short essays on selected topics.

For BA Students: Language Course
Taught by: Ranade
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center

SAST 411 Beginning Marathi Part II
Simple sentences in the present tense, narration (spoken as well written) of day to day activities, expressing likes & dislikes, culturally appropriate greetings and addressing, ability to describe events happening in present and present incomplete tense, consolidation of reading and writing skill acquired in the previous semester as well as proper pronunciations of common usage words and phrases. Speaking practices based upon the My Marathi Text book created by University of Mumbai.

For BA Students: Language Course
Taught by: Ranade
Course usually offered in spring term
Prerequisite: Beginning Marathi Part I or equivalent ascertained through placement test or permission of instructor
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center

SAST 412 Intermediate Marathi Part I
Intermediate Marathi builds up upon the Beginning Level of Marathi. Gaining ability to speak about past and future is the most important skill in the intermediate course. Students learn the grammar, vocabulary, sentence structures to narrate and write in simple language about their experiences, short anecdotes, their observations and opinions and future plans.

For BA Students: Language Course
Taught by: Ranade
Course usually offered in fall term
Prerequisite: Beginning Marathi Part II or equivalent ascertained through placement test or permission of instructor
Activity: Seminar
1 Course Unit
Notes: Offered through Penn Language Center

SAST 413 Intermediate Marathi Part II
In the syllabus for the fourth semester Marathi course gaining language inputs regarding Marathi culture and day to day daily life in Maharashtra becomes one important topic. Day to day communication skills necessary to survive in Maharashtra on the street like interaction with a grocery store clerk or a vegetable sales woman in the market, a rikshaw driver, a policeman, a commoner, asking and providing directions on the street and various day to day real life situations are improvised and practiced. Vocabulary, sentence structures and associated grammar is acquired during practice and real life situations based exercises.

For BA Students: Last Language Course
Taught by: Ranade
Course usually offered in spring term
Prerequisites: Intermediate Marathi Part II or equivalent ascertained through placement test or permission of instructor
Activity: Seminar
1 Course Unit
SAST 421 Intermediate Urdu
In Intermediate Urdu, the curriculum focuses on the development of reading, listening and speaking skills. Although there are short assignments for writing in Urdu, the emphasis on developing writing as a skill is not part of the course objectives. Authentic texts in the three skills include conversations, short stories, current events, articles, films and plays. There is a continuous emphasis on vocabulary development and students are expected to add about five hundred new words to their active vocabulary per semester. The rules of grammar for structural accuracy and sociocultural propriety are parts of the regular curriculum. Class activities include students' short presentations, role-plays, singing and conversations. There are weekly assignments and quizzes, a mid-term and a final examination. The final evaluation will rest on class participation, performance in quizzes and tests, and completed assignments. This is a two-semester course.
Taught by: Menai
Two terms. student must enter first term.
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center.

SAST 425 Intermediate Pashtu Part I
A more in-depth study of the Pashto language. Reading, writing, speaking, and listening comprehension are all stressed in this more advanced course which also builds on the grammar of beginning level.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center.

SAST 426 Intermediate Pashtu Part II
The second semester of intermediate study and a more in-depth study of the Pashto language. Reading, writing, speaking, and listening comprehension are all stressed in this more advanced course which also continues to build on grammar skills.
Two terms. student must enter first term.
Prerequisites: Intermediate Pashtu Part II or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit
Notes: Offered through Penn Language Center.

SAST 427 Intermediate Kannada Part I
This course continues the study of the Kannada language and culture from where the beginners II course ended. The course continues developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Kannada script is learned in its socio-cultural context for achieving a meaningful and operational control of the language. Students acquire rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments.
For BA Students: Language Course
Taught by: Sundaram
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center.

SAST 428 Intermediate Kannada Part II
Students continue their study of Intermediate Kannada I, both in language and culture. The course aims at honing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Kannada script is learned in its socio-cultural context for achieving a meaningful and operational control of the language. Students acquire basic rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments.
For BA Students: Last Language Course
Taught by: Sundaram
Course usually offered in spring term
Prerequisites: Intermediate Kannada Part II or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit
Notes: Offered through Penn Language Center.

SAST 447 Advanced Kannada: Selected Topics
Directed topics vary by semester in advanced level Kannada.
Taught by: Rajagopalan
One-term course offered either term
Activity: Lecture
1 Course Unit

SAST 449 Advanced Marathi
Theater and Films, Literature and poetry, Folk Songs, Dance and Music; this one semester course will explore the rich Marathi culture as well as will work on increasing the spoken, listening, reading and written proficiency of the students. News stories from the Marathi print media as well as glimpses from Marathi Television, News as well as Serials and popular comedy shows become the authentic materials in this course. Students learn the linguistic as well as cultural aspect of the variety of material through discussions, presentations in which students acquire and use the language to describe, narrate, express their opinions, evaluate, critique and appreciate these aspects of Marathi urban and rural culture.

SAST 503 Historical Transitions In Early India
This course will focus on major historical transitions in the South Asian subcontinent until approximately AD 1200. It will focus on particularly on political, social and liturgical philosophical change. It will also introduce students to the major narratives and interpretations of the ancient and early medieval periods as they bear on these questions and will also familiarize students with the sources upon which this history has been based. It will review debates, critical perspectives and recent trends in this historiography with a view toward developing a sensitivity to the theoretical problems that attend the study of pre-modern India. Its persistent themes will be historical continuity and disjuncture in the history of religious practices and ideas, the emergence of political forms and the nature of the ‘state’ in precolonial India, transformations of society and economy, and the relationship between discursive production and relations of power. It will be of interest to students of history, literature, religion and archaeology.

SAST 508 Doing Research: Qualitative Methods and Research Design
This interdisciplinary course introduces students to qualitative research methods and frameworks in the social sciences and humanities. Students will learn how to frame an effective research question, situate it in relation to existing research, select the most appropriate methods for addressing the question, and develop an effective research plan. Each week students will be introduced to a new set of frameworks for analysis, see specific examples of their application drawn from anthropological, historical, and related scholarship and have opportunities to practice applying and evaluating the strengths and weaknesses of specific methodological tools. The goals of the semester will be for each student to develop their own research proposal for a specific project. Students will be introduced to a range of textual, archival and media collections and databases available at Penn, with particular attention to South Asia and other specific regions of interest to course participants. Students will also have the opportunity to identify sources of funding for summer and/or thesis research projects, and submit applications for these opportunities as part of the course. The course is ideal for students considering summer research, an undergraduate thesis, or an application to the Fulbright or other research program.

SAST 541 Religion and the Visual Image: Seeing is Believing
Seeing is Believing engages in a historical, theoretical, and cross-cultural analysis of the place of visuality in religion and of religion in visual culture. We will examine images, buildings, places, objects, performances and events. The geographical, cultural and historical scope of the material is broad, including subjects from Europe, the Islamic World, non-Muslim South Asia, the US and Latin America from the medieval period until the present. Theoretical works will be read in conjunction with representative examples to invite intellectual engagement in a socially and historically grounded way. Important issues to be covered include the relationship of visual to material culture; visual theories versus theories of vision; locating religion in human sensory experience; perception at individual and collective levels; authentics, fakes and simulacra; iconoclasm and image veneration; aesthetics, use and utility; and things.

**SAST 550 History of Hinduism**
This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacral kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

**SAST 551 Muslim Sainthood Practices**
This course aims at introducing various classical, popular and modern Muslim saints in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will learn about the major concepts initiated and circulated by these saints and their distinctive ways of dealing with spiritual aspects. While focusing on this sainthood practices, we also study the nature of the dialogue which addresses the questions such as pluralism, localization, and a new paradigm of spirituality that continually interacts with diverse modes of everyday life in South Asia. In order to understand their impact on visual and media cultures, we also watch two documentaries and compare these visual sources with sainthood literature and practices.

**SAST 560 Modern History of Pakistan**
This course is designed as an introduction to the contemporary history of Afghanistan and Pakistan, with an emphasis on the intertwined history of both countries; their other regional neighbors; and global politics. The course focuses on global trends such as empire, nationalism, the Cold War, superpower competition, and transnational Islamism. At the same time, participants will explore how local people viewed their lives amidst these trends, and how local dynamics on this northwestern fringe of the Subcontinent changed the face of global politics. The readings supplement political and economic history with primary sources drawn from popular poetry, oral narrative, and memoir. Finally, we'll be following current events in the region, and placing them in their sociohistorical context. Therefore, there are two main goals for this course: (1) to introduce the specific history of Afghanistan and Pakistan up to present, and (2) to introduce typologies of social institutions and events, assisting class participants to develop their own frameworks for interpreting current events in the region after the end of the course.

**SAST 562 The Making of Medieval India**
This course will provide an in-depth understanding of South Asia in what is often called its 'medieval' period--from the rise of the great temple kingdoms until the end of the Delhi Sultanate in the sixteenth century (c. 500 CE - c. 1500 CE). This millennium is arguably one of the most transformative in South Asia's history, a period when many of its most distinctive social and cultural features evolved. The course will provide both an overview of the period as well as an introduction to major interpretations and types of sources (textual, visual, and archaeological). The focus throughout the course will be on the heterogeneous development of states, societies and cultures with special attention to long-term processes of transformation. One set of themes explored will be largely social and economic, focusing on the development of agrarian and peasant societies, aristocracies and intellectuals, as well as the role of mercantile, pastoralist, nomadic and forest-living groups. Another set of themes will explore cultural transformation, including the development, transformation and interaction of religious practices, the emergence of cosmopolitan and regional literary cultures, and the rise of distinctive urban, courtly, and rural worldviews. Special themes of discussion may include violence and manners, material cultures, religious conflict, devotional religion and gender relations.

SAST 589 Islam and the West
This course introduces students to Islam in modern South Asia, with a particular focus on the development of 'new' Muslim religious idioms, orientations, pedagogies and movements in 19th and 20th century South Asia. This course is divided into three parts. In the first part of this course, students are provided with an overview of: Muslim institutions and spaces in pre-colonial South Asia, the historical emergence of South Asia as a prominent global center of Islam, and the development of Urdu as an Islamic idiom. The second and main part of this course introduces students to academic literature concerning sophisticated encounters between the Muslim elite in north India and modern political and technological developments. The intimate interactions of the 'Mullah' and the 'Englishman' from the 19th to 20th century will thus be revealed to students. This part focuses upon, on the one hand, the role of Islam and pious Muslims in the colonial army, and on the other hand, Muslim initiatives to educate an Islamic 'modernism', 'traditionalism', 'fundamentalism' and 'Sufism', and appropriate print technologies for the creation of public spheres. Students will be introduced to historical scholarship revelatory of how these Muslim pedagogies and print initiatives were based upon sophisticated transcultural networks and exchange. In the third part of this course, students will be encouraged to engage with contemporary literature on South Asian Muslim political philosophy and nationalism, and the transcultural intellectual exchanges that produced key Muslim political ideologies.

SAST 593 Caste & Class in South Asia
This course will explore the historiography and theory of caste and class in South Asia. While we will survey the evidence from the pre-modern period briefly, the primary focus of the course will be on the period between the eighteenth and twentieth centuries. We will examine the degree to which colonial rule triggered particular kinds of class-oriented and caste-oriented `reform', and the extent to which South Asian actors themselves shaped the nature of such change. The course will also provide an introduction to the work of the Subaltern school historians who have engaged with such questions, and situate them within the wider field of South Asian historiography.

SAST 604 Neoliberalism and the City
Over fifty percent of the world's population now lives in cities. Neoliberalism—the ideology and accompanying policies and practices that champion the shifting of political decision making from the public sector to the private sector - has been widely recognized as having shown dramatic growth worldwide since the 1970s. It has also been widely regarded as a product of globalization. This course traces the history of neo-liberalism in global context with particular attention to neoliberalism's relationship to cities, and exam the role that urban growth has played in spurring neoliberal policies and practices. It asks how policy makers, voters, and private interest worldwide have responded to the growth of urban poverty and slums, challenges withing urban public education, unequal resource distribution, environmental pressures experienced within urban sanitation and waste disposal systems, and increased demands for municipal services like water, electricity, and transport infrastructers, and examined the rise of public-private partnerships, gated communities, initiatives to privatized education and municipal services, and efforts to relocate slum-dwellers and beautify cities as explicit strategies for attracting "global capital". The course also asks how the recent rise of neoliberal policies and practices differs from earlier market-driven and private sector led forms of political governance. The British and Dutch East India Companies are two famous examples of joint stock companies that assumed administrative and political roles over their colonies. How did the rise of these colonial relationships differ from current neoliberal shifts. Readings will draw heavily from ethnographic and urban studies, scholarship on South Asia, as well as Latin America, South Africa, the Middle East, Europe, and North America, exploring what each of these specific contexts has to teach us more generally about the relationship between urbanization, global capitalism, public and private sectors, and political processes and decision making.

SAST 617 Readings in Modern Indian History
This course will introduce students to the major themes and debates of modern Indian historiography. Though the course will not provide a survey outline of events, it will be organized around themes that have a broad chronological sequence. It will touch on key topical themes like the transition to colonialism, the development of the colonial economy, the evolution and significance of colonial knowledge systems, the impact and shape of religious and social reform, the rise of nationalism and communalism, and peasant, labour and subaltern history. The goal of the course will be to provide students with an understanding of the significance of debates around key themes in modern Indian history and a familiarity with the different 'schools' or 'traditions' of historical interpretation, including Nationalist, Marxist, the so-called 'Chicago', and 'Cambridge' schools, as well as the Subaltern collective and post-Subaltern historiography.

SAST 620 Godliness, Miracles, and 'Madness' in Indian Ocean Port Cities
This graduate-level course introduces students to religious worlds within port cities of the modern Indian Ocean that were centered upon peripatetic Muslim, Saiva, Christian and Sikh miracle-workers, missionaries and 'gods'. This course will particularly consider how extant, published sources reveal how religion in 19th and 20th century cosmopolitan port cities and islands was centered upon holy men and women or spiritual beings, and intricately connected to modern economic, political and technological developments in the Indian Ocean. This course is divided into three parts. In the first part of this course, students will be introduced, on the one hand, to the scholarship on the port cities or islands of, and religions or religious networks in, the modern Indian Ocean. On the other hand, to anthropological, historical and literary works on Muslim saints, Christian missionaries and Saiva gods in the Indian Ocean. In the second and main section of this course, students will be introduced to contemporary academic literature pertaining to the inter-linkages between itinerant miracle-workers, missionaries, 'gods' and devotional cults, and economic, political and technological developments in the Indian Ocean. As well as works that explore European institutions, barracks, plantations, cells and asylums, and and steam travel being steeped in customary religion, carnivals, ecstasy, madness and miracle stories. Here, students will be encouraged to consider ways in which a study of religion and religious economies of modern Indian Ocean port cities can be recovered through extracts from a range of anthropological, literary and historical sources. In the third part of this course, students will be encouraged to engage with the question of whether the religion of devotional cults preoccupied with the powers of Muslim, Saiva, Christian, and Sikh miracle-workers, missionaries and 'gods' in cosmopolitan port cities, was a distinct product of circulations within the Indian Ocean.

SAST 623 Literary History and Aesthetics in South Asia
This seminar surveys the multiple components of literary culture in South Asia. Students will engage critically with selected studies of literary history and aesthetics from the past two millennia. In order to introduce students to specific literary cultures (classical, regional, contemporary) and to the scholarly practices that situate literature in broader contexts of culture and society, the course will focus both on the literary theories - especially from the nineteenth and twentieth centuries - that position South Asia's literary cultures within broader disciplinary frameworks that use literary documents to inform social, historical and cultural research projects. The aim is to open up contexts whereby students can develop their own research projects using literary sources.

SAST 625 PHILOLOGY AND HISTORY: READING SOUTH ASIAN TEXTS
Taught by: Patel, D
Activity: Seminar
1 Course Unit

SAST 627 South Asia Literature as Comparative Literature
This course takes up the question of reading South Asian Literature both as a collection of diverse literary cultures, as well as the basis for a methodology of reading that takes language, region, and history into account. It takes as a starting point recent work that foregrounds the importance of South Asian language literatures, and their complex interactions, to an understanding of South Asian literary history, as well as critiques of the concept of world literature that question its underlying assumptions and frequent reliance on cosmopolitan languages such as English. In what ways can we describe the many complex interactions between literary cultures in SOuth Asia, rooted in specific historical contexts, reading practices, and cultural expectations, while maintaining attention to language and literary form? How, in turn, can we begin to think of these literatures in interaction with larger conversations in the world? With these considerations in mind, we will examine works of criticism dealing with both modern and pre-modern literatures, primarily but not exclusively focused on South Asia. Topics will include the concept of the cosmopolis in literary and cultural history, the role of translation, the transformations of literature under colonialism, and twentieth century literary movements such as realism and Dalit literature. Readings may include works by Erich Auerbach, Frederic Jameson, Aljaz Ahmad, Gayatri Spivak, Aamir Mufti, Sheldon Pollack, David Shulman, Yigal Bronner, Shamshur Rahman Faruqui, Francesca Orsini, Subramaniam Shankar, Sharankumar Kimbale, and Torlaijatin Gajarawala. We will also examine selected works, in English and in translation, as case studies for discussion. This course is intended both for students who intend to specialize in the study of South Asia, as well as for those who focus on questions of comparative literature more broadly.

SAST 632 Hinduism and Colonial Modernity
This seminar deals with the question of modernity in South Asia, with a specific focus on the construction, dissemination, and politicization of Hinduism in nineteenth and twentieth century India. It focuses on three central heuristic lenses—namely those of European imperialism, Orientalism, and nationalism—to study modernity and its discontents. What was at stake in the encounter between colonial modernity and India's religions in nineteenth and early twentieth centuries? How did colonial and native discourses on "reform" and "revival" shape Indian religions as we understand them today? How is modern "Hinduism" inextricably hinged to early forms of cultural transnationalism, Orientalism, and incipient forms of nationalism? This seminar approaches questions such as these and others, with an eye to understanding how nineteenth and early twentieth century discourses continue to shape contemporary understandings of Hinduism in deep and highly politicized ways.

SAST 633 THE PERSIAN INTELLECTUAL TRADITION
What makes Persian culture distinctive within broader Islamic intellectual history, and what constitutes the historical and geographical boundary of the Persianate intellectual and cultural zone? These questions lie at the center of inquiry in this seminar in which participants will read and discuss a broad range of works from the 11th to the 20th centuries. Readings will include works on philosophy and language, Sufi epic poems, religious and cultural geographies, accounts of natural and manufactured wonders, urban and political histories, as well as other kinds of texts. All readings will be in English for the regular meeting of the seminar; students with a reading knowledge of Persian and an interest in participating in an additional meeting to read the assignments in their original language should register for the higher of the two numbers listed for this course.

SAST 640 Religious Bodies and Sex in South Asia
This graduate-level course introduces students to the writings of key religious scholars in modern South Asia who associated the regeneration of Hinduism, Islam, and Sikhism with the cultivation of bodies and sexual practices. Particular attention will be paid towards religious texts produced in modern India, Pakistan and Bangladesh pertaining to sexual bodies, exercises and health; celibacy; body-building; the transmission of sexual knowledge; and the political roles of the ‘Hindu,’ ‘Muslim’ and ‘Sikh’ body. In this course, students will be encouraged to engage a range of sources including religio-sexual manuals, autobiographies, novels, speeches, pamphlets, official records, recipes and films. Moreover, students will be introduced to the academic literature on South Asian religious scholars and ‘sex gurus’ in South and Southeast Asia; religious sexuality in South Asia, Southeast Asia, the Middle East and Europe; and, the transcultural literary networks that led to the production of religio-sexual texts in modern South Asia.

SAST 713 Literature in Translation: South Asia and the World
This course primarily introduces how to critically read literature in light of major global developments in contemporary literary theory and aesthetics from the past centure (including structuralism, semiotics, reception theory, deconstruction, Marxist approaches to literature, feminist readings of texts, translation theory, etc.). It also draws attention to scholatic practices of textual criticism, paleography, and the preparation of critical editions. In doing so, the course emphasizes specific texts and essays related to South Asian literature, literary theory, and aesthetics from the past two millennia as case studies in order to:

a) supplement students' knowledge of South Asian cultural production,
b) frame social and historical questions related to art and aesthetics in contexts that have been otherwise under-explored, and
c) to inspire debate about the extent to which analytical models and approaches developed within a given cultural setting are translatable to literary materials produced elsewhere. Students will develop their own projects, workshop what they have already begun, or explore new directions for studying literature and literary culture. Comparative approaches with other literary traditions are welcome and no background in South Asian languages or history is required.

SAST 762 Women in South Asia
This course on women in South Asian history has several objectives. To comprehend the genres of narratives in which South Asian women between the sixteenth and twentieth centuries have spoken and have been spoken about. To gain an understanding of evolving institutions and practices shaping women’s lives, such as the family, law and religious traditions. To understand the impact of historical processes – the formation and and breakdown of empire, colonialism, nationalism and decolonization – upon South Asian women between the sixteenth and twentieth centuries. We will read primary sources in addition to familiarizing ourselves with the historiography of women in South Asia.

SAST 769 Feminist Theory
Specific topic varies. Dissent is a key word in our world today--from the Arab Spring to the American Fall, we have seen expressions of political disobedience and protest around the world. It is more urgent than ever to consider what dissent might mean, what shapes it has taken historically, what connection might exist between it and literature, and what futures are possible. We will read key critical and theoretical work alongside some powerful, tender and controversial writings and films (largely but not exclusively produced in the postcolonial world), to inquire into the politics and poetics of governance and dissent. Students are invited to make connections with other historical and geographical contexts, and explore the different forms of dissent individual, collective, urban, rural, nationalist, pan-nationalist, religious, marxist, or feminist, to name but a few. We will pay special attention to different performances of dissent at a popular, mass or individual level. We will think about the social and cultural channels attention to different performances of dissent at a popular, mass or See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.

SPANISH (SPAN)

SPAN 110 Elementary Spanish I
Spanish 110 is a first-semester language course that emphasizes the development of foundational listening, speaking, reading and writing skills while exploring the rich cultural mosaic of the Spanish-speaking world. Through listening activities and videotaped interviews with native speakers, your aural and oral abilities will improve at the same time that you will become familiarized with different varieties of standard spoken Spanish. You will be given ample opportunities to practice orally and in writing so that you can reinforce newly acquired vocabulary and grammatical structures. Reading strategies will facilitate your comprehension of the texts included in the course syllabus. Readings focused on a specific country or region, visual items (such as maps, photos, films) and a class project will advance your knowledge of Hispanic cultural practices and products while increasing your intercultural competence. Conducted entirely in Spanish, this class will provide you with guided practice before moving to more independent and spontaneous language production. Working in small groups and in pairs, you will participate in class activities that simulate real-life situations that will help you gain confidence communicating in Spanish. Goals: By the end of this course you can expect to handle a variety of day-to-day situations in a Spanish-speaking setting: 1) Greet and introduce people, invite people to events, accept or reject invitations, ask for directions, tell time, shop and order meals in a restaurant. 2) Talk about yourself, family, and friends regarding physical and emotional states, daily routines, leisure, preferences and plans. 3) Use the cultural information learned in class as an icebreaker to find common ground with a wide variety of Spanish speakers.

SPAN 115 Spanish for the Medical Professions, Elementary I
Spanish 115 is a first-semester elementary Medical Spanish Language course and the first in the Spanish for Medical Professions sequence. It is designed for students with no prior coursework in Spanish. This course teaches beginning students the fundamentals of practical Spanish with an emphasis on medical situations and basic medical terminology. In this course, particular attention will be given to developing speaking and listening skills, as well as cultural awareness. It incorporates activities, vocabulary, and readings of particular interest to healthcare practitioners, while adhering to the goals and scope of Spanish 110, the first-semester Spanish language course. Students who have already taken Spanish 110 will not receive credit for Spanish 115. Although these courses have different numbers, they are at the same level. Students who have already fulfilled the language requirement (AP, SAT II, etc.) or have taken courses at the 200- and 300-level may not take basic level language courses (100-level courses) in the same language. They will not receive credit for this course (Spanish 115).

SPAN 121 Elementary Spanish I and II: Advanced Beginners
Spanish 121 is designed for students who have some prior experience in Spanish. It is an intensive elementary-level language course that in one semester covers the material studied over two semesters in our Spanish 110 and Spanish 120. The course provides a quick-paced review of material normally covered in a first-semester Spanish course and then proceeds to introduce new material so students will be prepared to take Spanish 130 during the subsequent semester. As in other Spanish courses, Spanish 121 emphasizes the development of foundational listening, speaking, reading, and writing skills while exploring the rich cultural mosaic of the Spanish-speaking world. Through listening activities and mini documentaries shown in class, students will develop their aural and oral skills at the same time that they will become familiarized with different varieties of standard spoken Spanish. Students will be given ample opportunities to practice orally and in writing so that they can reinforce newly acquired vocabulary and linguistic structures. Readings focused on a specific country or region, visual items (such as maps, photos adn films) and a class project will advance students’ knowledge of Hispanic cultural practices and products while increasing their intercultural competence. Conducted entirely in Spanish, this class will provide you with guided practice before moving to more independent and spontaneous language production. You will participate in paired, small-group and whole-class activities that simulate real-life situations that will help you gain confidence communicating in Spanish. Goals: By the end of this course students can expect to handle a variety of day-to-day situations in a Spanish-speaking setting such as: 1) Introduce themselves, use greetings, describe people, places and things, give instructions, tell time, go shopping, order meals in a restaurant, and make travel plans. 2) Talk about themselves, families, and friends regarding academic life, daily routines, health, work, leisure, and preferences (using the present and past tenses). 3) Use the cultural information learned in class as an icebreaker to find common ground with a wide variety of Spanish speakers.

SPAN 130 Intermediate Spanish I
Spanish 130, a first-semester intermediate-level course, emphasizes students’ acquisition of new vocabulary and linguistic structures in a cultural and communicative context while building on their previous speaking, reading, listening and writing skills. A substantial amount of the course is devoted to learning and using the past tenses. As in other Spanish courses, students will take part in a wide range of activities, including video blogging, role-plays, film viewings, listening to music and class discussions of current social and cultural topics. Unique to this course is the creation of a "cultural journal" throughout the semester in which students pursue their own interests in the Spanish-speaking world while taking advantage of some of the rich resources within Philadelphia’s own Hispanic community. Goals: By the end of this course students can expect to handle a variety of common situations in a Spanish-speaking setting such as: 1) Narrate past actions, ranging from personal anecdotes to historical events 2) Give advice, recommendations, and commands to people 3) Express their feelings and doubts when reacting to what others have said 4) Talk about their future expectations and wishes 5) Demonstrate their knowledge and understanding of Hispanic cultural practices and products

SPAN 134 Intermediate Spanish I and II: Accelerated
During the spring semester, Spanish 134 is limited to those students who have satisfied the language requirement in another language. During the summer, (at the Penn campus and the Penn-in-Buenos Aires Summer Abroad Program), Spanish 134 is open to all students. Spanish 134 is an intensive intermediate-level language course that covers the material presented in Spanish 130 and Spanish 140. The course emphasizes the development of the four canonical skills (reading, writing, listening and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will participate in pair, small-group and whole-class activities to practice linguistics skills in a meaningful context. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense, and outside the medical field. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense, and the development of writing skills at a paragraph level with transitions. Students who have already taken Spanish 130 will not receive credit for Spanish 135. Although these courses have different numbers, they are at the same level. Students who have already fulfilled the language requirement (AP, SAT II, etc.) or have taken courses at the 200- and 300-level may not take basic-level language courses (100-level courses) in the same language. They will not receive credit for this course (Spanish 135).

SPAN 135 Spanish for the Medical Professions, Intermediate I
Spanish 135 is a first-semester intermediate-level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking), and the acquisition of medical terminology. Students will be expected to participate in classroom activities such as role-plays based on everyday situations that they may encounter at work settings such as doctors’ offices, clinics, hospitals, and emergency rooms in order to develop meaningful and accurate communication skills in the target language. Students will also review and acquire other essential tools of communication in the target language applicable both within and outside the medical field. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense, and the development of writing skills at a paragraph level with transitions. Students who have already taken Spanish 130 will not receive credit for Spanish 135. Although these courses have different numbers, they are at the same level. Students who have already fulfilled the language requirement (AP, SAT II, etc.) or have taken courses at the 200- and 300-level may not take basic-level language courses (100-level courses) in the same language. They will not receive credit for this course (Spanish 135).
For BA Students: Language Course
Course usually offered in fall term
Prerequisites: The prerequisites for registering for this course are clearly detailed in this Credit Regulation Form, which students will have to complete and submit during the first week of classes so their instructors can verify that they are enrolled in the appropriate course.
http://ccat.sas.upenn.edu/roml/spanish/undergraduate/SPANISH%20134%20SPRING%20CRF.pdf (Spring CRF) or http://ccat.sas.upenn.edu/roml/spanish/undergraduate/SPANISH%20134%20SUMMER%20CAMPUS%20crf.pdf (Summer CRF)
Activity: Seminar
2 Course Units
SPAN 140 Intermediate Spanish II
Spanish 140 is a fourth-semester language course that both reinforces and enhances the communicative skills (listening, speaking, reading and writing) previously acquired while exploring the rich cultural mosaic of the Spanish-speaking world. Class activities are designed so that students can build up these four skills in order to function at an intermediate language level. Readings focused on contemporary social and political issues of the Hispanic world will advance your knowledge of Hispanic and cultural practices while increasing your intercultural competence. Unique to this course is the preparation of an oral presentation on a topic related to the Hispanic world throughout the semester and presented during the last days of classes. The purpose of this task is to help students develop their presentational competence in Spanish. Conducted entirely in Spanish, this class will provide students with ample opportunities to work in small groups and in pairs while gaining confidence communicating in Spanish. This course satisfies the language requirement at Penn. Goals: By the end of this course, students can expect to handle a variety of situations in a Spanish-speaking setting, such as: 1) Express their opinions on a variety of contemporary events and issues 2) Defend their position when presented with a hypothetical situation 3) Deliver short presentations on a chosen subject after thorough preparation 4) Demonstrate their knowledge and understanding of Hispanic cultural practices and products
For BA Students: Last Language Course
One-term course offered either term
Prerequisites: The prerequisites for registering for this course are clearly detailed in this Credit Regulation Form, which students will have to complete and submit during the first week of classes so their instructors can verify that they are enrolled in the appropriate course.

Activity: Seminar
1 Course Unit

SPAN 145 Spanish for the Medical Professions, Intermediate II
Spanish 145, the continuation of Spanish 135, is an intermediate-level integrated skills language course. It emphasizes the development of reading, writing, listening, and speaking abilities. Students will be expected to participate actively in classroom activities such as communicative activities, role-playing based on typical doctor/patient interactions as well as other medical situations. Students will also review and learn other essential tools of communication applicable both inside and outside the medical field. Students who have already taken Spanish 140 will not receive credit for Spanish 145. Although these courses have different numbers, they are at the same level. Students who have already fulfilled the language requirement (AP, SAT II, etc.) or have taken courses at the 200- and 300-level may not take basic level language courses (100-level courses) in the same language. They will not receive credit for this course (Spanish 145). This course satisfies the language requirement in Spanish.
For BA Students: Last Language Course
One-term course offered either term
Prerequisites: The prerequisites for registering for this course are clearly detailed in this Credit Regulation Form: https://www.sas.upenn.edu/hispanic-portuguese-studies/sites/www.sas.upenn.edu.hispanic-portuguese-studies/files/SPANISH%20110%20CRF.pdf Students will have to complete and submit this form during the first week of classes so their instructors can verify that they are enrolled in the appropriate course.
Activity: Seminar
1 Course Unit
Notes: Offered through the Penn Language Center.

SPAN 180 Spanish Conversation
Must be a resident of the Modern Language College House.
Two terms. student must enter first term.
Prerequisite: Residence in Modern Language House
Activity: Seminar
0.5 Course Units

SPAN 202 Advanced Spanish
The purpose of this course is twofold: (a) to develop students’ communicative abilities in Spanish, that is, speaking, listening, reading and writing, and (b) to increase their awareness and understanding of Hispanic cultures and societies. Homework and classroom activities are designed to help students build their oral proficiency, expand and perfect their knowledge of vocabulary and grammatical structures, improve their reading and writing skills, and develop their critical thinking abilities. The material for this class includes short stories, newspaper articles, poems, songs, cartoons, video clips and a novel, such as Cesar Aira’s La villa. At the completion of this course, students will feel confident discussing and debating a variety of contemporary issues (cultural and religious practices, family relationships, gender stereotypes, political events, immigration to the USA, etc.). Any questions about placement should be addressed to the Director of the Spanish Language Program.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisite: Successful completion of Spanish 140 or equivalent
Activity: Seminar
1 Course Unit

SPAN 205 Advanced Spanish for the Medical Professions
The goal of this course is to provide advanced practice in Spanish to those students who are interested in pursuing careers in the medical and health care fields. Through readings and authentic materials on contemporary health issues, for example, i.e., H1N1 influenza, comparative healthcare systems, obesity, “chagas” disease, etc., students will acquire the vocabulary and grammatical structures needed to discuss a wide array of topics pertaining to the health-related professions. Students will also gain awareness of those health care issues affecting the Hispanic/Latino patient. Oral and written presentations will complement topics covered in class.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisites: Successful completion of Spanish 140 or 145 or equivalent
Activity: Seminar
1 Course Unit

SPAN 208 Business Spanish I
Spanish for Business I provides advanced-level language students with technical vocabulary and communicative skills covering business concepts as they apply to the corporate dynamics of the Spanish-speaking world, with a special emphasis on Latin America. Through readings, presentations, discussions, and video materials, we shall analyze those cultural aspects that characterize the business environment in the region as well as focus on economies and markets in light of their history, politics, resources and pressing international concerns.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisite: Successful completion of Spanish 140 or equivalent
Activity: Seminar
1 Course Unit
SPAN 209 Business Spanish II
This course is specifically designed for advanced speakers of Spanish (e.g., native speakers, high-level heritage speakers, and students who have studied in a Spanish-speaking country for at least one semester). Students will take an in-depth look at the corporate dynamics of a number of countries in Latin America, focusing on their economies and markets, as well as on the cultural and business protocols of each region. Through the creation of an entrepreneurial project and the writing of a business plan, students will enhance their business and language skills. Any questions about placement should be addressed to the Director of the Spanish Language Program.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: Permission from the instructor
Activity: Seminar
1 Course Unit

SPAN 215 Spanish for the Professions
Spanish for the Professions is designed to provide advanced-level language students with a wide-ranging technical vocabulary and the enhancement of solid communicative skills within the cultural context of several developing Latin American countries. Focusing on topics such as politics, economy, society, health, environment, education, science and technology, the class will explore the realities and underlying challenges facing Latin America. Through essays, papers, articles, research, discussions, case studies, and videotapes, we shall take an in-depth look at the dynamics of Latin American societies. The course will focus on— but not be restricted to— Mexico, Cuba and Argentina. Any questions about placement should be addressed to the Director of the Spanish Language Program.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: Spanish 202 or equivalent
Activity: Seminar
1 Course Unit

SPAN 219 Hispanic Texts and Contexts
The primary aim of this course is to develop students’ knowledge of the geographical, historical and cultural contexts in those regions where Spanish is used. At the same time that they are introduced to research techniques and materials available in Spanish, students strengthen their language skills through readings, class discussions, and frequent writing assignments. This course is designed to give students a broad understanding of Hispanic culture that will prepare them for upper-level course work and study abroad.
For BA Students: Humanities and Social Science Sector
One-term course offered either term
Prerequisites: Spanish 202 or Spanish 212.
Activity: Seminar
1 Course Unit

SPAN 223 Introduction to Literary Analysis
By helping students develop skills to carefully read and analyze Spanish literary works, Spanish 223 prepares them for upper-level courses and study abroad. After reviewing the main elements and conventions of the most popular genres (narrative, poetry, theater and essay), students become familiarized with current theoretical approaches to the study of literature with the purpose of applying them to their own analytical writing. The last weeks of the semester are devoted to the reading of a well-crafted detective novel and the examination of both its formal features and its ideological underpinnings. Throughout the course, students will have ample opportunities to hone their skills through the close reading and class discussion of varied and stimulating literary works produced by canonical and non-canonical Hispanic authors. For BA Students: Arts and Letters Sector
One-term course offered either term
Prerequisites: Spanish 202 or Spanish 212.
Activity: Seminar
1 Course Unit

SPAN 317 Spanish Phonetics and Morphology
This course is an introduction to Hispanic linguistics, with special emphasis on the Spanish sound system (phonetics and phonology) and Spanish word-formation (morphology). Topics to be covered include articulatory phonetics, use of the phonetic alphabet, English and Spanish contrastive phonology, regional and social variations of Spanish pronunciation, word formation (derivation and composition), and the structure of the Spanish verb (inflection). Evaluation will be based on participation and homework, periodic quizzes, mid-term exam, and a final examination during finals week. Students will be required to write a linguistic autobiography.
Course not offered every year
Prerequisites: Spanish 219 or Spanish 223.
Activity: Seminar
1 Course Unit

SPAN 319 History of the Spanish Language
A survey treatment of the development of Latin to modern Spanish, with emphasis on relations between external history and the development of grammatical structure and vocabulary, and major sound shifts. Lectures and discussions of reading.
Course not offered every year
Prerequisites: Spanish 219 or Spanish 223.
Activity: Seminar
1 Course Unit
SPAN 330 Medieval Literature
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisites: Spanish 219 or Spanish 223.
Activity: Seminar
1 Course Unit

SPAN 348 Don Quijote
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisites: Spanish 219 or Spanish 223.
Activity: Seminar
1 Course Unit

SPAN 350 Spanish Literature of the Golden Age
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisites: Spanish 219 or Spanish 223.
Activity: Seminar
1 Course Unit

SPAN 380 Contemporary Spanish Literature
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisites: Spanish 219 or Spanish 223.
Activity: Seminar
1 Course Unit

SPAN 384 Spanish Novel Since 1939
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisites: Spanish 219 or Spanish 223.
Activity: Seminar
1 Course Unit

SPAN 386 Studies in Spanish Culture
This course covers topics in contemporary Spanish Culture, its specific emphasis varying with the instructor. Please see the Spanish Department’s website for the course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
One-term course offered either term
Prerequisites: Spanish 219 or Spanish 223.
Activity: Seminar
1 Course Unit

SPAN 388 Topics in Spanish and Latin American Cinema
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
One-term course offered either term
Prerequisites: Spanish 219 or Spanish 223.
Activity: Seminar
1 Course Unit

SPAN 390 Introduction to Spanish American Literature
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisite: Spanish 219 or Spanish 223
Activity: Seminar
1 Course Unit

SPAN 394 Spanish American Fiction
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisite: Spanish 219 or Spanish 223
Activity: Seminar
1 Course Unit

SPAN 395 Hispanic Theater
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisite: Spanish 219 or Spanish 223
Activity: Seminar
1 Course Unit

SPAN 396 Studies in Spanish American Culture
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisite: Spanish 219 or Spanish 223
Activity: Seminar
1 Course Unit

SPAN 397 History of Spanish American Culture
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisite: Spanish 219 or Spanish 223
Activity: Seminar
1 Course Unit

SPAN 398 Honors Thesis
Honors thesis in Hispanic Studies. This course is open to undergraduate majors by permit only.
Course not offered every year
Prerequisite: Spanish 219
Activity: Independent Study
1 Course Unit

SPAN 523 Modern Novel
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc
Course not offered every year
Prerequisite: Spanish 219 or Spanish 223
Activity: Seminar
1 Course Unit

SPAN 523 Modern Novel
SPAN 528 Modern Spain and Hispanic America  
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc  
Course not offered every year  
Activity: Seminar  
1 Course Unit  

SPAN 606 Pedagogy Across the Spanish Curriculum  
The aim of this seminar is to prepare graduate students in Hispanic Studies to teach a wide range of courses typically offered at North American universities and colleges—from the elementary Spanish language level to upper-division seminars—while familiarizing themselves with current approaches and methodological trends in foreign language instruction. By designing a content-based syllabus, including selecting and sequencing of reading materials and choosing the appropriate learning outcomes and assessment methods, graduate students will gain a greater awareness of curricular planning and development and acquire skills that will significantly ease their future teaching endeavors such as using a backward design model, incorporating their own research interests into their lessons and courses, or taking advantage of the resources available to language learners on campus. By the end of the course, graduate students will be able to talk about and reflect on their teaching in an effective and professional manner.  
Course usually offered in fall term  
Activity: Seminar  
1 Course Unit  

SPAN 630 Studies in the Spanish Middle Ages  
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc  
Course not offered every year  
Activity: Seminar  
1 Course Unit  

SPAN 648 Don Quijote  
Topics vary. Please see the Spanish Department’s website for the current course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

One-term course offered either term
Activity: Independent Study
1 Course Unit
STATISTICS (STAT)

STAT 101 Introductory Business Statistics
Data summaries and descriptive statistics; introduction to a statistical computer package; Probability. distributions, expectation, variance, covariance, portfolios, central limit theorem; statistical inference of univariate data; Statistical inference for bivariate data: inference for intrinsically linear simple regression models. This course will have a business focus, but is not inappropriate for students in the college.
One-term course offered either term
Prerequisite: MATH 104 or MATH 110 or equivalent; successful completion of STAT 101 is prerequisite to STAT 102
Activity: Lecture
1 Course Unit

STAT 102 Introductory Business Statistics
One-term course offered either term
Prerequisite: STAT 101
Activity: Lecture
1 Course Unit

STAT 111 Introductory Statistics
Introduction to concepts in probability. Basic statistical inference procedures of estimation, confidence intervals and hypothesis testing directed towards applications in science and medicine. The use of the JMP statistical package.
One-term course offered either term
Prerequisites: High school algebra.
Activity: Recitation
1 Course Unit

STAT 112 Introductory Statistics
Further development of the material in STAT 111, in particular the analysis of variance, multiple regression, non-parametric procedures and the analysis of categorical data. Data analysis via statistical packages.
One-term course offered either term
Prerequisite: STAT 111
Activity: Lecture
1 Course Unit

STAT 399 Independent Study
One-term course offered either term
Prerequisites: Written permission of instructor and the department course coordinator.
Activity: Independent Study
1 Course Unit

STAT 405 Statistical Computing with R
The goal of this course is to introduce students to the R programming language and related eco-system. This course will provide a skill-set that is in demand in both the research and business environments. In addition, R is a platform that is used and required in other advanced classes taught at Wharton, so that this class will prepare students for these higher level classes and electives.
Taught by: Stine, Waterman, Zhang
One-term course offered either term
Prerequisite: STAT 102 or STAT 112 or STAT 430
Activity: Lecture
0.5 Course Units

STAT 422 Predictive Analytics for Business
This course follows from the introductory regression classes, STAT 102, STAT 112, and STAT 431 for undergraduates and STAT 613 for MBAs. It extends the ideas from regression modeling, focusing on the core business task of predictive analytics as applied to realistic business related data sets. In particular it introduces automated model selection tools, such as stepwise regression and various current model selection criteria such as AIC and BIC. It delves into classification methodologies as well as logistic regression. It also introduces classification and regression trees (CART) and the popular predictive methodology known as the random forest.
One-term course offered either term
Prerequisite: STAT 102 or STAT 112 or STAT 431
Activity: Lecture
0.5 Course Units

STAT 424 Text Analytics
This course introduces methods for the analysis of unstructured data, focusing on statistical models for text. Techniques include those for sentiment analysis, topic models, and predictive analytics. Course includes topics from natural language processing (NLP), such as identifying parts of speech, parsing sentences (e.g., subject and predicate), and named entity recognition (people and places). Unsupervised techniques suited to feature creation provide variables suited to traditional statistical models (regression) and more recent approaches (regression trees). Examples that span the course illustrate the success of text analytics. Hierarchical generating models often associated with nonparametric Bayesian analysis supply theoretical foundations.
Taught by: Stine
One-term course offered either term
Prerequisites: Students should be familiar with regression models at the level of STAT 102 and the R statistics language at the level of STAT 405. Familiarity with the R-Studio development environment is presumed, as well as common R packages such as stringr, dplyr and ggplot. Those with more knowledge of Statistics, such as from STAT 422, or computing skills will benefit. The predominant software used in the course is R, with bits of JMP when helpful for interactive illustration. Familiarity with basic probability models is helpful but not presumed.
Activity: Lecture
0.5 Course Units

STAT 430 Probability
Discrete and continuous sample spaces and probability; random variables, distributions, independence; expectation and generating functions; Markov chains and recurrence theory.
One-term course offered either term
Prerequisite: MATH 114 or MATH 115 or equivalent
Activity: Lecture
1 Course Unit

STAT 431 Statistical Inference
Graphical displays; one- and two-sample confidence intervals; one- and two-sample hypothesis tests; one- and two-way ANOVA; simple and multiple linear least-squares regression; nonlinear regression; variable selection; logistic regression; categorical data analysis; goodness-of-fit tests. A methodology course. This course does not have business applications but has significant overlap with STAT 101 and 102.
One-term course offered either term
Prerequisite: STAT 430
Activity: Lecture
1 Course Unit
STAT 432 Mathematical Statistics
An introduction to the mathematical theory of statistics. Estimation, with a focus on properties of sufficient statistics and maximum likelihood estimators. Hypothesis testing, with a focus on likelihood ratio tests and the consequent development of "t" tests and hypothesis tests in regression and ANOVA. Nonparametric procedures.
Course usually offered in spring term
Prerequisite: STAT 430 or 510 or equivalent
Activity: Lecture
1 Course Unit

STAT 433 Stochastic Processes
An introduction to Stochastic Processes. The primary focus is on Markov Chains, Martingales and Gaussian Processes. We will discuss many interesting applications from physics to economics. Topics may include: simulations of path functions, game theory and linear programming, stochastic optimization, Brownian Motion and Black-Scholes.
One-term course offered either term
Prerequisites: STAT 430, or permission of instructor
Activity: Lecture
1 Course Unit

STAT 435 Forecasting Methods for Management
This course provides an introduction to the wide range of techniques available for statistical forecasting. Qualitative techniques, smoothing and decomposition of time series, regression, adaptive methods, autoregressive-moving average modeling, and ARCH and GARCH formulations will be surveyed. The emphasis will be on applications, rather than technical foundations and derivations. The techniques will be studied critically, with examination of their usefulness and limitations.
Taught by: Shaman
One-term course offered either term
Prerequisite: STAT 102 or 112 or 431
Activity: Lecture
1 Course Unit

STAT 436 Introduction to Large-Scale Data Science
The course will focus on computational approaches to large-scale data analysis. The lectures will introduce the relevant concepts, and students will be asked to work on projects, implementing the methods and experimenting with large-scale datasets. The course will cover various techniques for updating models in an online fashion, as well as subsampling and dimensionality-reduction techniques. The students will experiment with neural network architectures and learn to build predictive models for modern machine learning tasks.
One-term course offered either term
Prerequisites: Linear Algebra and basic R programming
Activity: Lecture
1 Course Unit

STAT 442 Introduction to Bayesian Data Analysis
The course will introduce data analysis from the Bayesian perspective to undergraduate students. We will cover important concepts in Bayesian probability modeling as well as estimation using both optimization and simulation-based strategies. Key topics covered in the course include hierarchical models, mixture models, hidden Markov models and Markov Chain Monte Carlo.
Taught by: Jensen
Course usually offered in spring term
Prerequisites: A course in probability (STAT 430 or equivalent); a course in statistical inference (STAT 102, STAT 112, STAT 431 or equivalent); and experience with the statistical software R (at the level of STAT 405 or STAT 470)
Activity: Lecture
1 Course Unit

STAT 451 Fundamentals of Actuarial Science I
This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums.
Taught by: Lemaire
Course usually offered in fall term
Prerequisites: MATH 104, STAT 430. STAT 430 can be taken concurrently with BEPP 451 or STAT 451
Activity: Lecture
1 Course Unit

STAT 452 Fundamentals of Actuarial Science II
This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans.
Taught by: Lemaire
Course usually offered in spring term
Prerequisite: BEPP 451 or STAT 451
Activity: Lecture
1 Course Unit
STAT 453 Actuarial Statistics
This course covers models for insurer's losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains.
Taught by: Lemaire
Course usually offered in fall term
Prerequisite: STAT 430
Activity: Lecture
1 Course Unit

STAT 454 Applied Statistical Methods for Actuaries
One half of the course is devoted to the study of time series, including ARIMA modeling and forecasting. The other half studies modifications in random variables due to deductibles, co-payments, policy limits, and elements of simulation. This course is a possible entry point into the actuarial science program. The Society of Actuaries has approved STAT 854 for VEE credit on the topic of time series.
Taught by: Lemaire
Course usually offered in spring term
Prerequisites: STAT 430, STAT 431
Activity: Lecture
1 Course Unit

STAT 470 Data Analytics and Statistical Computing
This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scrubbing, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests).
Taught by: Buja
One-term course offered either term
Prerequisites: STAT 101 and 102 or STAT 111 and 112 or STAT 431 or ECON 103 and ECON 104
Activity: Lecture
1 Course Unit

STAT 471 Modern Data Mining
Modern Data Mining: Statistics or Data Science has been evolving rapidly to keep up with the modern world. While classical multiple regression and logistic regression technique continue to be the major tools we go beyond to include methods built on top of linear models such as LASSO and Ridge regression. Contemporary methods such as KNN (K nearest neighbor), Random Forest, Support Vector Machines, Principal Component Analyses (PCA), the bootstrap and others are also covered. Text mining especially through PCA is another topic of the course. While learning all the techniques, we keep in mind that our goal is to tackle real problems. Not only do we go through a large collection of interesting, challenging real-life data sets but we also learn how to use the free, powerful software "R" in connection with each of the methods exposed in the class.
Taught by: Zhao
One-term course offered either term
Prerequisite: STAT 102 or 112 or 431
Activity: Lecture
1 Course Unit

STAT 474 Modern Regression for the Social, Behavioral and Biological Sciences
Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis.
Taught by: Berk
Course usually offered in spring term
Prerequisite: STAT 102 or 112 or equivalent
Activity: Lecture
1 Course Unit

STAT 475 Sample Survey Design
This course will cover the design and analysis of sample surveys. Topics include simple sampling, stratified sampling, cluster sampling, graphics, regression analysis using complex surveys and methods for handling nonresponse bias.
Course not offered every year
Prerequisite: STAT 102 or 112 or 431
Activity: Lecture
1 Course Unit

STAT 476 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of customer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.
Taught by: Fader
Course usually offered in spring term
Prerequisites: A high comfort level with basic integral calculus and recent exposure to a formal course in probability and statistics such as STAT 430 is strongly recommended.
Activity: Lecture
1 Course Unit
STAT 480 Advanced Statistical Computing
This course will build on the fundamental concepts introduced in the prerequisite courses to allow students to acquire knowledge and programming skills in large-scale data analysis, data visualization, and stochastic simulation.
Taught by: Buja
Course usually offered in spring term
Prerequisites: STAT 470 or STAT 405 or equivalent background acquired through a combination of online courses that teach the R language and practical experience.
Activity: Lecture
1 Course Unit

STAT 490 Causal Inference
Questions about cause are at the heart of many everyday decisions and public policies. Does eating an egg every day cause people to live longer or shorter or have no effect? Do gun control laws cause more or less murders or have no effect? Causal inference is the subfield of statistics that considers how we should make inferences about such questions. This course will cover the key concepts and methods of causal inference rigorously. The course is intended for statistics concentrators and minors.
Taught by: Small
Course usually offered in spring term
Prerequisites: STAT 430 is a required course for this class. One of STAT 102, STAT 112 or STAT 431 is also required for this class. Knowledge of R such as that covered in STAT 405 or STAT 470.
Activity: Lecture
1 Course Unit

STAT 500 Applied Regression and Analysis of Variance
An applied graduate level course in multiple regression and analysis of variance for students who have completed an undergraduate course in basic statistical methods. Emphasis is on practical methods of data analysis and their interpretation. Covers model building, general linear hypothesis, residual analysis, leverage and influence, one-way anova, two-way anova, factorial anova. Primarily for doctoral students in the managerial, behavioral, social and health sciences.
Taught by: Rosenbaum
Course usually offered in fall term
Prerequisite: STAT 102 or 112 or equivalent
Activity: Lecture
1 Course Unit

STAT 501 Introduction to Nonparametric Methods and Log-linear Models
An applied graduate level course for students who have completed an undergraduate course in basic statistical methods. Covers two unrelated topics: loglinear and logit models for discrete data and nonparametric methods for nonnormal data. Emphasis is on practical methods of data analysis and their interpretation. Primarily for doctoral students in the managerial, behavioral, social and health sciences. May be taken before STAT 500 with permission of instructor.
Taught by: Rosenbaum
Course usually offered in spring term
Prerequisite: STAT 102 or 112 or equivalent
Activity: Lecture
1 Course Unit

STAT 502 Advanced Statistical Inference
STAT 502 is aimed at first-year Ph.D. students and builds a good foundation in statistical inference from the first principles of probability.
Taught by: Low
Course usually offered in fall term
Prerequisites: STAT 430 and STAT 431 and MATH 114 and MATH 240 or equivalent
Activity: Lecture
1 Course Unit

STAT 503 Data Analytics and Statistical Computing
This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scrubbing, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests).
Taught by: Buja
One-term course offered either term
Prerequisites: Two courses at the statistics 400 or 500 level.
Activity: Lecture
1 Course Unit

STAT 510 Probability
One-term course offered either term
Prerequisite: A one year course in calculus
Activity: Lecture
1 Course Unit

STAT 511 Statistical Inference
Graphical displays; one- and two-sample confidence intervals; one- and two-sample hypothesis tests; one- and two-way ANOVA; simple and multiple linear least-squares regression; nonlinear regression; variable selection; logistic regression; categorical data analysis; goodness-of-fit tests. A methodology course.
One-term course offered either term
Prerequisite: STAT 510 or equivalent
Activity: Lecture
1 Course Unit

STAT 512 Mathematical Statistics
An introduction to the mathematical theory of statistics. Estimation, with a focus on properties of sufficient statistics and maximum likelihood estimators. Hypothesis testing, with a focus on likelihood ratio tests and the consequent development of "t" tests and hypothesis tests in regression and ANOVA. Nonparametric procedures.
Course usually offered in spring term
Prerequisite: STAT 430 or 510 or equivalent
Activity: Lecture
1 Course Unit

STAT 513 Statistical Computing
Course usually offered in spring term
Prerequisites: STAT 470 or STAT 405 or equivalent background acquired through a combination of online courses that teach the R language and practical experience.
Activity: Lecture
1 Course Unit

STAT 514 Advanced Statistical Inference II
STAT 514 is a natural continuation of STAT 513, and the main focus is on asymptotic evaluations and regression models. Time permitting, it also discusses some basic nonparametric statistical methods.
Taught by: Ma
Course usually offered in spring term
Prerequisite: STAT 513
Activity: Lecture
1 Course Unit

STAT 515 Advanced Statistical Inference I
STAT 515 is aimed at first-year Ph.D. students and builds a good foundation in statistical inference from the first principles of probability.
Taught by: Low
Course usually offered in fall term
Prerequisites: STAT 430 and STAT 431 and MATH 114 and MATH 240 or equivalent
Activity: Lecture
1 Course Unit

STAT 516 Advanced Statistical Inference II
STAT 516 is a natural continuation of STAT 515, and the main focus is on asymptotic evaluations and regression models. Time permitting, it also discusses some basic nonparametric statistical methods.
Taught by: Ma
Course usually offered in spring term
Prerequisite: STAT 515
Activity: Lecture
1 Course Unit
STAT 520 Applied Econometrics I
This is a course in econometrics for graduate students. The goal is to prepare students for empirical research by studying econometric methodology and its theoretical foundations. Students taking the course should be familiar with elementary statistical methodology and basic linear algebra, and should have some programming experience. Topics include conditional expectation and linear projection, asymptotic statistical theory, ordinary least squares estimation, the bootstrap and jackknife, instrumental variables and two-stage least squares, specification tests, systems of equations, generalized least squares, and introduction to use of linear panel data models.
Taught by: Shaman
Course usually offered in fall term
Prerequisites: MATH 114 and MATH 312 or equivalents, and an undergraduate introduction to probability and statistics
Activity: Lecture
1 Course Unit

STAT 521 Applied Econometrics II
Topics include system estimation with instrumental variables, fixed effects and random effects estimation, M-estimation, nonlinear regression, quantile regression, maximum likelihood estimation, generalized method of moments estimation, minimum distance estimation, and binary and multinomial response models. Both theory and applications will be stressed.
Taught by: Shaman
Course usually offered in spring term
Prerequisites: STAT 520. This is a continuation of STAT 520
Activity: Lecture
1 Course Unit

STAT 533 Stochastic Processes
An introduction to Stochastic Processes. The primary focus is on Markov Chains, Martingales and Gaussian Processes. We will discuss many interesting applications from physics to economics. Topics may include: simulations of path functions, game theory and linear programming, stochastic optimization, Brownian Motion and Black-Scholes.
One-term course offered either term
Prerequisite: STAT 510 or equivalent
Activity: Lecture
1 Course Unit

STAT 542 Bayesian Methods and Computation
Sophisticated tools for probability modeling and data analysis from the Bayesian perspective. Hierarchical models, mixture models and Monte Carlo simulation techniques.
Taught by: Jensen
Course usually offered in spring term
Prerequisite: STAT 430 or 510 or equivalent or permission of instructor
Activity: Lecture
1 Course Unit

STAT 571 Modern Data Mining
Modern Data Mining: Statistics or Data Science has been evolving rapidly to keep up with the modern world. While classical multiple regression and logistic regression technique continue to be the major tools we go beyond to include methods built on top of linear models such as LASSO and Ridge regression. Contemporary methods such as KNN (K nearest neighbor), Random Forest, Support Vector Machines, Principal Component Analyses (PCA), the bootstrap and others are also covered. Text mining especially through PCA is another topic of the course. While learning all the techniques, we keep in mind that our goal is to tackle real problems. Not only do we go through a large collection of interesting, challenging real-life data sets but we also learn how to use the free, powerful software "R" in connection with each of the methods exposed in the class.
Taught by: Zhao
One-term course offered either term
Prerequisite: Zhao
Activity: Two courses at the statistics 400 or 500 level or permission from instructor
1 Course Unit

STAT 580 Advanced Statistical Computing
This course will build on the fundamental concepts introduced in the prerequisite courses to allow students to acquire knowledge and programming skills in large-scale data analysis, data visualization, and stochastic simulation.
Taught by: Buja
Course usually offered in spring term
Prerequisites: STAT 503 or equivalent background acquired through a combination of online courses that teach the R language and practical experience.
Activity: Lecture
1 Course Unit

STAT 590 Causal Inference
Questions about cause are at the heart of many everyday decisions and public policies. Does eating an egg every day cause people to live longer or shorter or have no effect? Do gun control laws cause more or less murders or have no effect? Causal inference is the subfield of statistics that considers how we should make inferences about such questions. This course will cover the key concepts and methods of causal inference rigorously.
Taught by: Small
Course usually offered in spring term
Prerequisites: Background in probability and statistics; some knowledge of R.
Activity: Lecture
1 Course Unit
STAT 613 Regression Analysis for Business
This course provides the fundamental methods of statistical analysis, the art and science if extracting information from data. The course will begin with a focus on the basic elements of exploratory data analysis, probability theory and statistical inference. With this as a foundation, it will proceed to explore the use of the key statistical methodology known as regression analysis for solving business problems, such as the prediction of future sales and the response of the market to price changes. The use of regression diagnostics and various graphical displays supplement the basic numerical summaries and provides insight into the validity of the models. Specific important topics covered include least squares estimation, residuals and outliers, tests and confidence intervals, correlation and autocorrelation, collinearity, and randomization. The presentation relies upon computer software for most of the needed calculations, and the resulting style focuses on construction of models, interpretation of results, and critical evaluation of assumptions.
Course usually offered in fall term
Prerequisites: The basic mathematical skills covered in STAT 611, Mathematics for Business Analysis
Activity: Lecture
1 Course Unit
Notes: Lecture and discussion, assigned exercises, data analysis project, quizzes and a final exam.

STAT 621 Accelerated Regression Analysis for Business
STAT 621 is intended for students with recent, practical knowledge of the use of regression analysis in the context of business applications. This course covers the material of STAT 613, but omits the foundations to focus on regression modeling. The course reviews statistical hypothesis testing and confidence intervals for the sake of standardizing terminology and introducing software, and then moves into regression modeling. The pace presumes recent exposure to both the theory and practice of regression and will not be accommodating to students who have not seen or used these methods previously. The interpretation of regression models within the context of applications will be stressed, presuming knowledge of the underlying assumptions and derivations. The scope of regression modeling that is covered includes multiple regression analysis with categorical effects, regression diagnostic procedures, interactions, and time series structure. The presentation of the course relies on computer software that will be introduced in the initial lectures.
Taught by: George
Course usually offered in fall term
Prerequisites: Recent exposure to the theory and practice of regression modeling.
Activity: Lecture
0.5 Course Units
Notes: Lecture and discussion, assigned exercises, data analysis, quizzes, and a final exam.

STAT 701 Modern Data Mining
Modern Data Mining: Statistics or Data Science has been evolving rapidly to keep up with the modern world. While classical multiple regression and logistic regression technique continue to be the major tools we go beyond to include methods built on top of linear models such as LASSO and Ridge regression. Contemporary methods such as K nearest neighbor, Random Forest, Support Vector Machines, Principal Component Analyses (PCA), the bootstrap and others are also covered. Text mining especially through PCA is another topic of the course. While learning all the techniques, we keep in mind that our goal is to tackle real problems. Not only do we go through a large collection of interesting, challenging real-life data sets but we also learn how to use the free, powerful software "R" in connection with each of the methods exposed in the class.
Taught by: Zhao
One-term course offered either term
Prerequisite: STAT 613 or equivalent
Activity: Lecture
1 Course Unit

STAT 705 Statistical Computing with R
The goal of this course is to introduce students to the R programming language and related eco-system. This course will provide a skill-set that is in demand in both the research and business environments. In addition, R is a platform that is used and required in other advanced classes taught at Wharton, so that this class will prepare students for these higher level classes and electives.
Taught by: Stine, Waterman, Zhang
One-term course offered either term
Prerequisites: STAT 613 or STAT 621 or waiving the Statistics Core completely.
Activity: Lecture
0.5 Course Units

STAT 711 Forecasting Methods for Management
This course provides an introduction to the wide range of techniques available for statistical forecasting. Qualitative techniques, smoothing and decomposition of time series, regression, adaptive methods, autoregressive-moving average modeling, and ARCH and GARCH formulations will be surveyed. The emphasis will be on applications, rather than technical foundations and derivations. The techniques will be studied critically, with examination of their usefulness and limitations.
Taught by: Shaman
One-term course offered either term
Prerequisite: STAT 613 or equivalent
Activity: Lecture
1 Course Unit
STAT 722 Predictive Analytics for Business (formerly STAT 622)
This course follows from the introductory regression classes, STAT 102, STAT 112, and STAT 431 for undergraduates and STAT 613 for MBAs. It extends the ideas from regression modeling, focusing on the core business task of predictive analytics as applied to realistic business related data sets. In particular it introduces automated model selection tools, such as stepwise regression and various current model selection criteria such as AIC and BIC. It delves into classification methodologies such as logistic regression. It also introduces classification and regression trees (CART) and the popular predictive methodology known as the random forest.
One-term course offered either term
Prerequisite: STAT 613 or STAT 621 or having waived the statistics core completely
Activity: Lecture
0.5 Course Units

STAT 724 Text Analytics
This course introduces methods for the analysis of unstructured data, focusing on statistical models for text. Techniques include those for sentiment analysis, topic models, and predictive analytics. Course includes topics from natural language processing (NLP), such as identifying parts of speech, parsing sentences (e.g., subject and predicate), and named entity recognition (people and places). Unsupervised techniques suited to feature creation provide variables suited to traditional statistical models (regression) and more recent approaches (regression trees). Examples that span the course illustrate the success of text analytics. Hierarchical generating models often associated with nonparametric Bayesian analysis supply theoretical foundations.
Taught by: Stine
One-term course offered either term
Prerequisites: Students should be familiar with regression models at the level of STAT 613 and the R statistics language at the level of STAT 705. Familiarity with the R-Studio development environment is presumed, as well as common R packages such as stringr, dplyr and ggplot. Those with more knowledge of Statistics, such as from STAT 722, or computing skills will benefit. The predominant software used in the course is R, with bits of JMP when helpful for interactive illustration. Familiarity with basic probability models is helpful but not presumed.
Activity: Lecture
0.5 Course Units

STAT 770 Data Analytics and Statistical Computing
This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scrubbing, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests).
Taught by: Buja
One-term course offered either term
Prerequisites: STAT 613 or STAT 621 or having waived the statistics core completely.
Activity: Lecture
1 Course Unit

STAT 776 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical "building blocks" that will allow them to develop and implement powerful models of customer behavior. Over the years, researchers and practitioners have used these methods for a wide variety of applications, such as new product sales forecasting, analyses of media usage, customer valuation, and targeted marketing programs. These same techniques are also very useful for other types of businesses (and non-business) problems. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.
Taught by: Fader
Course usually offered in spring term
Prerequisites: Students must have a high comfort level with basic integral calculus, and recent exposure to a formal course in probability and statistics is strongly recommended.
Activity: Lecture
1 Course Unit
Notes: Format: Lecture, real-time problem solving

STAT 780 Advanced Statistical Computing
This course will build on the fundamental concepts introduced in the prerequisite courses to allow students to acquire knowledge and programming skills in large-scale data analysis, data visualization, and stochastic simulation.
Taught by: Buja
Course usually offered in spring term
Prerequisites: STAT 770 or STAT 705 or equivalent background acquired through a combination of online courses that teach the R language and practical experience.
Activity: Lecture
1 Course Unit

STAT 851 Fundamentals of Actuarial Science I
This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums.
Taught by: Lemaire
Course usually offered in fall term
Prerequisite: One semester of calculus
Activity: Lecture
1 Course Unit
STAT 852 Fundamentals of Actuarial Science II
This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans.
Taught by: Lemaire
Course usually offered in spring term
Prerequisite: STAT 851 or BEPP 851
Activity: Lecture
1 Course Unit

STAT 853 Actuarial Statistics
This course covers models for insurer’s losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains.
Taught by: Lemaire
Course usually offered in fall term
Prerequisite: Two semesters of Statistics
Activity: Lecture
1 Course Unit

STAT 854 Applied Statistical Methods for Actuaries
One half of the course is devoted to the study of time series, including ARIMA modeling and forecasting. The other half studies modifications in random variables due to deductibles, co-payments, policy limits, and elements of simulation. This course is a possible entry point into the actuarial science program. The Society of Actuaries has approved STAT 854 for VEE credit on the topic of time series.
Taught by: Lemaire
Course usually offered in spring term
Prerequisite: One semester of probability
Activity: Lecture
1 Course Unit

STAT 899 Independent Study
One-term course offered either term
Prerequisites: Written permission of instructor, the department MBA advisor and course coordinator.
Activity: Independent Study
1 Course Unit

STAT 910 Forecasting and Time Series Analysis
Fourier analysis of data, stationary time series, properties of autoregressive moving average models and estimation of their parameters, spectral analysis, forecasting. Discussion of applications to problems in economics, engineering, physical science, and life science.
Taught by: Stine
Course offered spring; odd-numbered years
Prerequisite: STAT 520 or 961 or equivalent
Activity: Lecture
1 Course Unit

STAT 915 Nonparametric Inference
Statistical inference when the functional form of the distribution is not specified. Nonparametric function estimation, density estimation, survival analysis, contingency tables, association, and efficiency.
Course not offered every year
Prerequisite: STAT 520 or equivalent
Activity: Lecture
1 Course Unit

STAT 920 Sample Survey Methods
This course will cover the design and analysis of sample surveys. Topics include simple random sampling, stratified sampling, cluster sampling, graphics, regression analysis using complex surveys and methods for handling nonresponse bias.
Taught by Small
Course not offered every year
Prerequisites: STAT 520, 961 or 970 or permission of instructor
Activity: Lecture
1 Course Unit

STAT 921 Observational Studies
This course will cover statistical methods for the design and analysis of observational studies. Topics will include the potential outcomes framework for causal inference; randomized experiments; matching and propensity score methods for controlling confounding in observational studies; tests of hidden bias; sensitivity analysis; and instrumental variables.
Taught by Small
Course usually offered in fall term
Prerequisites: STAT 520, 961 or 970 or permission of instructor
Activity: Lecture
1 Course Unit

STAT 925 Multivariate Analysis: Theory
This is a course that prepares PhD students in statistics for research in multivariate statistics and high dimensional statistical inference. Topics from classical multivariate statistics include the multivariate normal distribution and the Wishart distribution; estimation and hypothesis testing of mean vectors and covariance matrices; principal component analysis, canonical correlation analysis and discriminant analysis; etc. Topics from modern multivariate statistics include the Marcenko-Pastur law, the Tracy-Widom law, nonparametric estimation and hypothesis testing of high-dimensional covariance matrices, high-dimensional principal component analysis, etc.
Taught by: Ma
Course not offered every year
Prerequisites: STAT 930, 970 and 972 or permission of instructor
Activity: Lecture
1 Course Unit
STAT 926 Multivariate Analysis: Methodology
This is a course that prepares PhD students in statistics for research in multivariate statistics and data visualization. The emphasis will be on a deep conceptual understanding of multivariate methods to the point where students will propose variations and extensions to existing methods or whole new approaches to problems previously solved by classical methods. Topics include: principal component analysis, canonical correlation analysis, generalized canonical analysis; nonlinear extensions of multivariate methods based on optimal transformations of quantitative variables and optimal scaling of categorical variables; shrinkage- and sparsity-based extensions to classical methods; clustering methods of the k-means and hierarchical varieties; multidimensional scaling, graph drawing, and manifold estimation.
Taught by: Buja
Course not offered every year
Prerequisite: STAT 961 or permission of instructor
Activity: Lecture
1 Course Unit

STAT 927 Bayesian Statistical Theory and Methods
This graduate course will cover the modeling and computation required to perform advanced data analysis from the Bayesian perspective. We will cover fundamental topics in Bayesian probability modeling and implementation, including recent advances in both optimization and simulation-based estimation strategies. Key topics covered in the course include hierarchical and mixture models, Markov Chain Monte Carlo, hidden Markov and dynamic linear models, tree models, Gaussian processes and nonparametric Bayesian strategies.
Taught by: Jensen
Course not offered every year
Prerequisite: STAT 430 or STAT 510
Activity: Lecture
1 Course Unit

STAT 928 Statistical Learning Theory
Statistical learning theory studies the statistical aspects of machine learning and automated reasoning, through the use of (sampled) data. In particular, the focus is on characterizing the generalization ability of learning algorithms in terms of how well they perform on "new" data when trained on some given data set. The focus of the course is on: providing the fundamental tools used in this analysis; understanding the performance of widely used learning algorithms; understanding the "art" of designing good algorithms, both in terms of statistical and computational properties. Potential topics include: empirical process theory; online learning; stochastic optimization; margin based algorithms; feature selection; concentration of measure.
Course usually offered in spring term
Prerequisites: Probability and linear algebra.
Activity: Lecture
1 Course Unit

STAT 930 Probability
Taught by: Pemantle
Course usually offered in fall term
Prerequisite: STAT 430 or 510 or equivalent
Activity: Lecture
1 Course Unit

STAT 931 Stochastic Processes
Taught by: Pemantle
Course usually offered in spring term
Prerequisite: STAT 930
Activity: Lecture
1 Course Unit

STAT 955 Stochastic Calculus and Financial Applications
Selected topics in the theory of probability and stochastic processes.
Course usually offered in fall term
Prerequisite: STAT 930 or equivalent
Activity: Lecture
1 Course Unit

STAT 957 Seminar in Data Analysis
Survey of methods for the analysis of large unstructured data sets: detection of outliers, Winsorizing, graphical techniques, robust estimators, multivariate problems.
Course not offered every year
Prerequisites: STAT 961, 971, 972, 925, or equivalents; permission of instructor
Activity: Seminar
1 Course Unit

STAT 961 Statistical Methodology
This is a course that prepares 1st year PhD students in statistics for a research career. This is not an applied statistics course. Topics covered include: linear models and their high-dimensional geometry, statistical inference illustrated with linear models, diagnostics for linear models, bootstrap and permutation inference, principal component analysis, smoothing and cross-validation.
Taught by: Buja
Course usually offered in fall term
Prerequisites: STAT 431 or 520 or equivalent; a solid course in linear algebra and a programming language
Activity: Lecture
1 Course Unit

STAT 962 Advanced Methods for Applied Statistics
This course is designed for Ph.D. students in statistics and will cover various advanced methods and models that are useful in applied statistics. Topics for the course will include missing data, measurement error, nonlinear and generalized linear regression models, survival analysis, experimental design, longitudinal studies, building R packages and reproducible research.
Taught by: Small
Course usually offered in spring term
Prerequisite: STAT 961
Activity: Lecture
1 Course Unit

STAT 970 Mathematical Statistics
Decision theory and statistical optimality criteria, sufficiency, point estimation and hypothesis testing methods and theory.
Taught by: Small
Course usually offered in fall term
Prerequisites: STAT 431 or 520 or equivalent; comfort with mathematical proofs (e.g., MATH 360)
Activity: Lecture
1 Course Unit
STAT 971 Introduction to Linear Statistical Models
Taught by: Ma
Course usually offered in spring term
Prerequisite: STAT 970
Activity: Lecture
1 Course Unit

STAT 972 Advanced Topics in Mathematical Statistics
A continuation of STAT 970.
Taught by: Cai
One-term course offered either term
Prerequisites: STAT 970 and 971
Activity: Lecture
1 Course Unit

STAT 974 Modern Regression for the Social, Behavioral and Biological Sciences
Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis.
Taught by: Berk
Course usually offered in spring term
Prerequisites: Two statistics courses at the graduate school level including a solid foundation in the generalized linear model.
Activity: Lecture
1 Course Unit

STAT 991 Seminar in Advanced Application of Statistics
This seminar will be taken by doctoral candidates after the completion of most of their coursework. Topics vary from year to year and are chosen from advance probability, statistical inference, robust methods, and decision theory with principal emphasis on applications.
One-term course offered either term
Activity: Seminar
1 Course Unit

STAT 995 Dissertation
One-term course offered either term
Activity: Dissertation
1 Course Unit

STAT 999 Independent Study
One-term course offered either term
Prerequisites: Written permission of instructor and the department course coordinator.
Activity: Independent Study
1 Course Unit
TAMIL (TAML)

TAML 406 Beginning Tamil Part I
This course introduces students to colloquial Tamil and formal written Tamil. A balance between production skills, namely writing and speaking, and comprehension skills, namely reading and listening, will be maintained throughout the course. Reading materials will introduce students to customs and habits of the Tamil speakers in Tamil Nadu, Sri Lanka, Malaysia, and Singapore. Lessons in the class will be based on a set of Tamil learning lessons and videos made available at http://www.southasia.upenn.edu/tamil and the book by the Instructor titled "Tamil Language in Context", information available at http://www.thetamillanguage.com. By the end of the semester, students will have a working knowledge in reading Tamil text with a basic skill to write and speak the language at ACTFL's Beginner mid level.
For BA Students: Language Course
Taught by: Renganathan
Course usually offered in fall term
Activity: Lecture
1 Course Unit

TAML 407 Beginning Tamil Part II
This course is a continuation of the Beginner Tamil TAML406. It continues to teach grammar and spoken siffl from semester I. Lessons in the class will be based on a set of Tamil learning lessons and videos made available at http://www.southasia.upenn.edu/tamil and the book by the Instructor titled "Tamil Language in Context", information available at http://www.thetamillanguage.com. By the end of the semester, students will have a working knowledge in reading Tamil text with a basic skill to write and speak the language at ACTFL's Beginner High level.
For BA Students: Language Course
Taught by: Renganathan
Course usually offered in spring term
Prerequisites: Beginning Tamil Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit

TAML 426 Intermediate Tamil Part I
This course develops the skills obtained either from the Beginning Tamil course or from students' prior exposure to Tamil by some other means. Basic knowledge of Tamil script, reading and writing in Tamil is required to take this course. Heavy emphasis will be made on using the language in actual environments both in spoken medium and in written medium. Multimedia materials such as audio and video facilities from the book and the website Tamil Language in Context (http://www.southasia.upenn.edu/tamil) will be used extensively to provide students an exposure to the Tamil culture and customs as authentic as possible. Besides improving their speech and writing, students will also be introduced gradually to Tamil literature, which has two thousand years of literary history. By the end of this course, students will have ACTFL's intermediate high proficiency level.
For BA Students: Language Course
Taught by: Renganathan
Course usually offered in fall term
Activity: Lecture
1 Course Unit

TAML 427 Intermediate Tamil Part II
This course is a continuation of Intermediate Tamil I (TAML426) and it continue to develop the skills obtained either from the Beginning Tamil course or from students' prior exposure to Tamil by other means. The emphasis will be on using the language in actual environments both in spoken medium and in written medium. Multimedia materials such as audio and videos as provided in the website http://www.southasia.upenn.edu/tamil or http://www.thetamillanguage.com will be extensively used to provide students an exposure to the Tamil culture and customs as authentic as possible. Besides improving their speech and writing, students will also be introduced gradually to Tamil literature, which has two thousand years of literary history. By the end of this course, students will have ACTFL's intermediate high proficiency level.
For BA Students: Language Course
Taught by: Renganathan
Course usually offered in spring term
Prerequisites: Intermediate Tamil Part II or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit

TAML 446 Advanced Tamil
This course is a continuation of the Advance Tamil Course I and its primary focus is to concentrate particularly on any one of the genres of the Tamil language namely Sangam, medieval or modern Tamil, which span a vast variety of texts from Aham, Puram, religious poems along with a whole array of Tamil inscriptions. The familiarity from Advanced Tamil I course will be adequately used to master in any aspect of these three genres of the Tamil language. Based on the general interests of the students who are enrolled in this course specific variety of the text to concentrate upon will be selected. In the past, we have read poems from the Sangam genre Purananuru, Ahananuru, Silappatikaram, Manimekalai etc., along with the parallel religious poems from Tirumurai, Nalayira Divyaprabandam and so on. We have also read as part of this course texts from Islam literature, Tamil inscriptions and other related kinds. Text from the instructors book (to be published), "Ilakkiyap payaNangkal" will be used to give a birds eye view to students about Tamil literature and the transitions that took place from Sangam, medieval and modern period. This course will train students to have a near-native proficiency in Tamil along with a professional skill in any particular variety of the Tamil language.
For BA Students: Advanced Language Course

TELU 409 Beginning Telugu Part I
This course introduces students to the basic Telugu language skills, with an emphasis on practice for listening comprehension, and speaking Telugu. Combined with exposure to Andhra culture, the classroom and online work in this course will enable interested students to pursue further language study in Telugu at the intermediate level, to carry out field research in Andhra Pradesh, or to prepare them to advanced work in Telugu Studies. An introduction to Telugu like this will also be useful for students who just want to acquire basic Telugu language skills for learning a new language or being able to communicate with Telugu speaking family and friends or to enjoy Telugu music and films.
For BA Students: Language Course
Taught by: Magier
Course usually offered in fall term
Activity: Lecture
1 Course Unit

TELU 410 Beginning Telugu Part II
This course continues students to the basic Telugu language skills, with an emphasis on practice for listening comprehension, and speaking Telugu. Combined with exposure to Andhra culture, the classroom and online work in this course will enable interested students to pursue further language study in Telugu at the intermediate level, to carry out field research in Andhra Pradesh, or to prepare them to advanced work in Telugu Studies. An introduction to Telugu like this will also be useful for students who just want to acquire basic Telugu language skills for learning a new language or being able to communicate with Telugu speaking family and friends or to enjoy Telugu music and films.
For BA Students: Language Course
Taught by: Magier
Course usually offered in spring term
Prerequisites: Beginning Telugu Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Lecture
1 Course Unit

TELU 429 Intermediate Telugu Part I
This course is designed to expand the students' basic language skills in Telugu in order to allow them to function adequately in a Telugu-speaking environment, to immerse themselves in the rich Andhra culture, and to accomplish a more advanced competency in an interesting foreign language. This course is also aimed at students planning to conduct scholarly research in Telugu history, literature or society, or humanities or social science fieldwork in Telugu speaking areas.
For BA Students: Language Course
Taught by: Magier
Two terms. student must enter first term.
Prerequisites: Beginning Telugu Part II or equivalent ascertained through placement test or permission of instructor.
Activity: Lecture
1 Course Unit

TELU 430 Intermediate Telugu Part II
This course is designed to expand the students' basic language skills in Telugu in order to allow them to function adequately in a Telugu-speaking environment, to immerse themselves in the rich Andhra culture, and to accomplish a more advanced competency in an interesting foreign language. This course is also aimed at students planning to conduct scholarly research in Telugu history, literature or society, or humanities or social science fieldwork in Telugu speaking areas.

THEATRE ARTS (THAR)

THAR 073 Radical Arts: Literature, Visual Arts, Theater and Cinema in the Americas
Activity: Lecture
1 Course Unit

THAR 076 Theatre in Philadelphia
This course will investigate the state of the contemporary, non-profit theatre culture of Philadelphia by examining the history, artistic mission, and current production work of selected city theatre companies. This course will also explore the creative process of theatre-making as undertaken by these theatres through the reading of plays being produced by them this fall, through an analysis of the collaborative contribution of the playwright, director, actors, and designers to the creation of a production, and, finally, through attendance at those productions mounted by the theatre companies under investigation. The members of the class will write individual essays responding to these productions, do research and give group presentations on other Philadelphia theatre companies, and participate daily in a spirited dialogue about the vitality, level of artistic accomplishment, and cultural/social value of contemporary theatre in Philadelphia.
Taught by: Malague and Schlatter
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Frequently offered as a Freshmen Seminar

THAR 100 Introduction to Theatre Arts
An introduction to different approaches to understanding and analyzing performance, representational theatre, and non-representational theatre, using as test cases both dramatic scripts and live performance. Different aspects of theatre art and theatrical process (acting, design, audience, musical theatre) will be taught by guest lecturers drawn from the Theatre Arts faculty and local professionals.
For BA Students: Arts and Letters Sector
Taught by: Malague and Schlatter
One-term course offered either term
Activity: Lecture
1 Course Unit

THAR 101 Theatre, History, Culture I: From Classical to the Middle Classes
This course investigates the history of theatre practice from the end of the Eighteenth-Century to the present, with an emphasis on the interplay of mainstream practices with the newly emerging aesthetics of acting, scenography, and theatrical theory, and the interplay of popular entertainment and audiences with the self-defined aesthetic elitism of the Avant Garde. Among the aesthetics and phenomena we will examine are romanticism and melodrama; bourgeois realism and revolutionary naturalism; emotional-realist acting; the reaction against realism; political theatre; physical theatre; theatre and media; non-dramatic theatre; and theatre that challenges long-standing categories of national identity, empire, gender, and sexuality.
For BA Students: Arts and Letters Sector
Activity: Lecture
1 Course Unit

THAR 102 Theatre, History, Culture II: Romantics, Realists and Revolutionaries

1 Course Unit
Notes: Frequently offered as a Freshmen Seminar

THAR 114 Playwriting Workshop
This course is designed as a hands-on workshop in the art and craft of dramatic writing. It involves the study of new plays, the systematic exploration of such elements as storytelling, plot, structure, theme, character, dialogue, setting, etc., and most importantly, the development of students' own short plays through a series of written assignments and in-class exercises. Since a great deal of this work takes place in class - through lectures, discussions, spontaneous writing exercises, and the reading of student work - weekly attendance and active participation is crucial. At the end of the semester, students' plays are read in a staged reading environment by professional actors.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

THAR 120 Introduction to Acting
Rooted in the system devised by Constantine Stanislavsky, but incorporating a wide variety of approaches, including improvisation, this course takes students step by step through the practical work an actor must do to live and behave truthfully on-stage. Beginning with relaxation and physical exercise, interactive games, and ensemble building, students then learn and put into practice basic acting techniques, including sensory work, the principles of action, objectives, given circumstances, etc. The semester culminates in the performance of a scene or scenes, most often from a play from the Realist tradition. This course strongly stresses a commitment to actor work and responsibility to one's fellow actors. Practical work is supplemented by readings from Stanislavsky and a variety of other acting theorists that may include Uta Hagen, Robert Cohen, Stella Adler, among others. Students are required to submit short essays over the course of the semester in response to the readings and in preparation for their final scene project.
Taught by: Ferguson, Malague, Schlatter, and Staff
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Required of all Theatre Arts Majors
THAR 121 Introduction to Directing
This class will introduce the basic principals of stage directing, beginning with the fundamentals of three-dimensional storytelling in script and character analysis. The aim of this course is to provide students with a basic knowledge of directing through an introduction to the functional tools of the craft. Classes provide lectures and practical work in dealing with topics such as the function of the director, analyzing a script, visual composition, blocking, stage business, and working with actors. This course is a prerequisite for Advanced Directing.
Taught by: Ferguson, Malague, Mazer, Schlatter and O’Harra
One-term course offered either term
Prerequisite: Thar 120
Activity: Seminar
1 Course Unit
Notes: Required of all Theatre Arts Majors

THAR 125 The Play: Structure, Style, Meaning
How does one read a play? Theatre, as a discipline, focuses on the traditions of live performance. In those traditions, a play text must be read not only as a piece of literature, but as a kind of “blueprint” from which productions are built. This course will introduce students to a variety of approaches to reading plays and performance pieces. Drawing on a wide range of dramatic texts from different periods and places, we will examine how plays are made, considering issues such as structure, genre, style, character, and language, as well as the use of time, space, and theatrical effects. Although the course is devoted to the reading and analysis of plays, we will also view selected live and/or filmed versions of several of the scripts we study, assessing their translation from page to stage.
Taught by: Malague and Schlatter
One-term course offered either term
Activity: Lecture
1 Course Unit

THAR 130 Introduction to Light, Set, and Costume Design
Design for theatre (and all of the performing arts) is a dynamic, collaborative process that engages both intellect and emotion in staging the dramatic moment. The personal vision of the designer must navigate the often-uncharted waters of the production process, from the earliest, personal moments of design inspiration to the opening night performance. Design flows from creativity, is structured by research and theory, and is realized in living form by collaboration in the dynamic process of theatre-making. This class will integrate history, theory and practice of stage design in the interactive setting of the Collaborative Classroom in Van Pelt Library in this special interdisciplinary, active-learning course offering open to all Penn students. Group and individual projects, field visits, practical projects and guest speakers will be featured in this newly-revised course.
Taught by: Baratta
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Required of all Theatre Arts Majors

THAR 131 Concepts of Lighting
In this course we will cover the basic concepts of the art and craft of Stage Lighting Design. As a craft we will examine mechanics and technology of lighting design including light sources, power distribution, optics, and control. As an art we will explore how lighting ties together all the visual elements of a production and helps create an appropriate atmosphere that heightens the audience's understanding and enjoyment of the play. Topics include: what light is, what it does, and how light influences our perception and understanding of what we see. Exercises will help the student learn how to see and to understand how light shapes and affects the appearance people and objects on stage and in everyday life. Projects work will emphasize design theory and practice (design methods, script analysis, and drafting skills). Lighting design has it roots in the theatre. The theatre continues to be a prime training ground for lighting designers, no matter what their field.
Taught by: Whinnery
Course usually offered in fall term
Activity: Seminar
1 Course Unit

THAR 132 Costume
Costume history and design provides a framework for organized study and practice in this particular facet of theatre production. It is a one-semester course, scheduled to meet once a week for a three hour session.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

THAR 133 Concepts of Stage Design
In this course we will cover the basic concepts of Scenic Design for the stage. Scene Design is about the look or physical appearance of the stage for a play. It reflects the way that the stage is composed artistically in regard to props, actors, shapes and color. We will explore Scene Design and the Theatre (story telling, place and local, time and period, society and culture), Scene Design as a Visual Art (principals of design and composition, style, use of space, expression of concept) and examine how it ties together all the visual elements of a production to create an appropriate atmosphere that heightens the audience's understanding and enjoyment of the play. Topics will include: Script Analysis, Technical Production, Period Decor and Ornament; Drawing, Drafting, Model Making, and Scene Painting.
Taught by: Whinnery
Course usually offered in fall term
Activity: Seminar
1 Course Unit
THAR 170 Voice for the Actor
This introductory course is designed to help the actor find new freedom and range of expression with their voice and to connect their voice to their impulse. Our focus on relaxation, sensitivity and awareness, using Fitzmaurice Voicework techniques inspired by yoga and meditation, help the student access and develop their own authentic sound. They will learn how to support their voice in a healthy way, with a view to longevity, spontaneity and flexibility of use. In this course, these kinds of vocal exercises will be applied to short, character monologues, in order to foster sensitivity to our voices and breath and to the habits and tensions we have formed around speaking in public. For an actor, reconnecting with their authentic voice is essential for an honest, connected and compelling performance. This training is also useful for anyone who wants to speak in public with confidence, sincerity and ease.
Taught by: Doherty
Course usually offered in fall term
Prerequisites: THAR 120 or equivalent.
Activity: Seminar
1 Course Unit

THAR 171 Movement for the Actor
The study of the art of bodily expression throughout history in theory and practice, from Classical and Oriental, African and Latin forms of dance and movement theater to the contemporary dance and theater, including mime, modern dance, post modern dance, physical theater, film, and performance art.
Taught by: Fischbeck
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: Primarily for majors. Non-majors need permission of the instructor

THAR 214 Advanced Playwriting
This course is intended to reinforce and build upon the areas covered in Level 1 Playwriting (THAR-114) so that students can refine the skills they've acquired and take them to the next level. Topics covered will include techniques for approaching the first draft, in-depth characterization, dramatic structure, conflict, shaping the action, language/dialogue (incl. subtext, rhythm, imagery, exposition etc), how to analyse your own work as a playwright, dealing with feedback, the drafting process, techniques for rewriting, collaboration (with directors, actors etc) and the 'business of the art' - working with theatres, agents, dramaturgs etc. Students will undertake to write their own one-act plays over the course. The classes will be a mixture of lecture, discussion, study of dramatic texts, writing exercises and in-class analysis of students' work.
Course not offered every year
Prerequisite: Thar 114 - Playwriting Workshop or Permit of the instructor
Activity: Lecture
1 Course Unit

THAR 236 Topics in Renaissance Drama: Acting Shakespeare
This is a hands-on studio course designed to empower actors (and directors, designers and dramaturgs) to use the structure of Shakespeare's language and the conventions of Shakespeare's stage to build performance, using the skills and method of the contemporary actor. After the class works collectively on sonnets and speeches, all of the speech- and scene-work will be drawn from a single Shakespeare play (to be determined), with two reciprocal goals: to use the script to build the performance, and to use what we discover through performance to build an interpretation of the script. NOTE: the normal prerequisite for this course is THAR 120 or THAR 121 or their equivalents; but exceptions will be made by permission of he instructor.
Taught by: Mazer
Course not offered every year
Prerequisite: THAR 120 or 121 or their equivalent or Permission of Instructor
Activity: Seminar
1 Course Unit
Notes: This course is not open to freshmen. Instructor permission is required.

THAR 240 Advanced Topics in Theatre History
The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event--acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.--relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place.
Taught by: Mazer
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: This class is the next level up from Thar 140 - Topics in Theatre History.

THAR 250 Theatre Workshop
This course will examine a specific aspect of theatrical practice, taught by a visiting professional theatre artist. The course, with different topics, may be repeated for credit. Recent topics have included performance art, Jacques LeCoq technique, Suzuki, and Viewpoints.
Taught by: Various Theatre Professionals
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Cross-listings are contingent upon topics offered. For the current topics contact the Theatre Arts office.
THAR 271 American Musical Theatre
The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.
Taught by: Fox
Course not offered every year
Activity: Seminar
1 Course Unit

THAR 272 American Theatre and Performance
This course examines the development of the modern American theatre from the turn of the century to the present day. Progressing decade by decade the course investigates the work of playwrights such as Eugene O'Neil, Arthur Miller, Tennessee Williams, Edward Albee, David Mamet, August Wilson and Tony Kushner, theatre companies such as the Provincetown Players and the Group Theatre, directors, actors, and designers. Some focus will also be given to major theatrical movements such as the Federal Theatre Project, Off-Broadway, regional theatre, experimental theatre of the Sixties, and feminist theatre.
Taught by: Schlatter and Malague
Course not offered every year
Activity: Lecture
1 Course Unit

THAR 274 Dramaturgy
This course will examine the functions and methods of the dramaturg—the person in the theatrical process who advises the artistic collaborators on (among other things) new play development, the structure of the script, the playwright's biography and other writings, the play's first production and its subsequent production history, and the historical and regional details of the period depicted in the plays action. We will study the history of the dramaturg in the American theatre and discuss contemporary issues relating to the dramaturg's contribution to the theatrical production (including the legal debates about the dramaturg's contribution to the creation of RENT). And, in creative teams, the class will create dramaturgical portfolios for a season of imaginary (and, potentially, a few actual) theatrical productions.
Taught by: Mazer
Course not offered every year
Activity: Seminar
1 Course Unit

THAR 275 Advanced Topics in Theatre
This course will combine an intensive practical and intellectual investigation of some area of the making of theatre: performance techniques, theatrical styles, a particular period of theatre history. Please visit the Theatre Arts Program website for current topics for Thar 275 and other Theatre Arts Courses and special topics: https://theatre.sas.upenn.edu Please visit the Theatre Arts Program website each semester for information on the available THAR 275 special topics courses: https://theatre.sas.upenn.edu
Taught by: Fox, Ferguson, Malague, Mazer, O’Harra & Schlatter
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: This course, which may with different topics, be repeated for credit, will examine a specific aspect of theatrical practice. Recent topics have included performance art, Jacques Lecoq technique, improvisation, and puppetry.

THAR 279 Women in Theatre and Performance
Theatre began as a form that excluded women entirely. The plays of ancient Greece and Elizabethan England were written and performed only by men, beginning a long tradition of theatre that represented women only from male perspectives. Has that tradition been so dominant for so long that women’s voices on stage are still a novelty? This course focuses on a wide range of plays and performances by and about women; the work we read (and view) will evidence artistic attempts to represent women’s lives, experiences and perspectives on the stage. Among the issues encountered and examined in these works are the roles of love, sexuality, friendship, career, community, marriage, motherhood, family, and feminism in women’s lives - as well as the economic and political position(s) of women in society. The course will also offer contextual background on feminist theatre history, theory, and literature, as well as the diverse (and divergent) creative efforts of female artists to use use live performance as a means of creating social and political change.
Taught by: Malague
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: This is a topics class which include: Dangerous Women and Provocative Performance.

THAR 320 Scene Study
Scene Study is an advanced acting class that combines intensive script analysis with performance of scenes; material to be explored will be chosen specifically for the members enrolled in class. Open to students who have successfully completed Introduction to Acting, this course continues with greater emphasis on the actor’s work with the text. We will study several plays together as a group, conducting Stanislavskian table work. We will then workshop and perform scenes from these plays in subsequent class sessions. In consultation with the instructor, students will identify individual goals, building on discoveries made in other Theatre Arts courses and/or prior stage work, exploring roles and plays that present actors with new challenges and expand their range. Depending on the number of students enrolled in the class, we are likely to perform at least three scenes and a monologue. Plays will be read alongside key theoretical texts, and class work will be complemented by attendance at selected live productions on campus and in Philadelphia.
Taught by: Malague
Course usually offered in fall term

TURKISH (TURK)

TURK 021 Elementary Turkish I
This is a course for beginners who have no previous knowledge of Turkish. Using a communicative approach, Elementary Turkish introduces basic vocabulary and grammar rules and focuses on building language competencies in listening, reading, speaking and writing. By the end of the course, students will be able to participate in simple conversations, to know daily expressions, and will understand simple dialogues in day-to-day context and will be able to count and tell time. Will be able to speak about events that happened in the past and express plans for the future. Students will also develop writing strategies that will allow them to write simple letters and fill in commonly-used forms.
For BA Students: Language Course
Taught by: Hatiboglu
Course usually offered in fall term
Activity: Lecture
1 Course Unit

TURK 022 Elementary Turkish II
This course is a continuation of TURK 021 and is designed to strengthen and extend students' listening, speaking, reading and writing competence and to deepen an understanding of Turkish people in Turkey. By the end of this course, students will be able to handle a variety of day to day needs in Turkish-speaking settings and engage in simple conversations. Students can expect to be able to order food and drinks, purchase things, and to be able to be familiar with current social topics. Students will be able to talk about all tenses, present, future, past, past continuous, make comparisons, describe people and things in detail, make travel plans, make reservations in hotels and holiday resorts, write complaint letters. By the end of the course, students will be able to talk about their studies and their plans for the future. Also, students will develop reading strategies that should allow them to understand the general meaning of articles, and short literary texts. Students will learn practical life in Turkey and will explore Turkish culture on the internet.
For BA Students: Language Course
Taught by: Hatiboglu
Course usually offered in spring term
Prerequisites: TURK 021, Elementary Turkish I, or equivalent.
Activity: Lecture
1 Course Unit

TURK 023 Intermediate Turkish I
A continuation of elementary Turkish, with emphasis on grammar and reading. This course is for students who have previous knowledge of Turkish or students who have completed Elementary Turkish I and II. This course is designed to improve students' writing and speaking competence, to increase vocabulary, to deepen grammar usage and to help develop effective reading and listening strategies in Turkish. Students' Turkish language proficiency and cultural awareness and knowledge will increase by exposing to authentic materials and coursework. and in order give them cultural knowledge, students are exposed to authentic materials.

TURK 121 Advanced Turkish Culture & Media I
This course is for students who are from all different levels of Turkish knowledge. They are expected to write and talk about Turkish movies, culture, politics according to their own level and pace. They will talk to Turkish visitors and interview them. Turkish movies will be part of the course and once a month, students will watch a Turkish movie and analyze it. Discussions will take place and students will write essays about the movie. This course is designed with a technology-rich, project based approach. The materials will go beyond instruction in grammar and vocabulary to support the acquisition of sociocultural pragmatics, and intercultural learning.

TURK 122 Advanced Turkish Culture & Media II
Similar to TURK 212, Advanced Turkish Culture & Media I, in this course students also will have exposure to social Turkish clubs and to establish their own. They will arrange their Turkish tea parties and learn about Turkish cuisine. Expose Turkish daily news and media will be discussed in class. Students will have chance to interview interview Turkish businessman, writer, journalists in class and/or skype or zoom people in Turkish. Team spirit or ethics with those of the United States. Students will present and prepare a drama. Mainly students will create and decide their activities and discussions. and the instructor will just monitor them most of time. They will continue watching Turkish movies and expose to Turkish culture through these films. After each movie discussions and essay writings will be expected.

Activity: Lecture
1 Course Unit

TURK 627 Advanced Spoken Turkish and Cinema I
In this course, we will look at differing degrees of interaction between literature and the films it inspires. Discussions of each novel will be followed by screening the related film, allowing us to explore themes such as the different forms of banditry (old school vs. organized), honor killings, the use of books in films, the problems of artistic representation. This course will give students the opportunity to improve significantly written and spoken discourse strategies and raise language competence to an academic register. Students work across Turkish Language, literary genres and media as they interpret and analyze cultural, political and historical moments in Turkish movies. Students will attempt to understand how political shifts over the past 20 years have impacted the current situation and cultural conception, religious and cultural norms and traditions. Contemporary Turkish authors' books will be analyzed and discussed in this course. We'll have sessions in Penn Museum related to exhibitions from Turkey and the region.

URBS 010 Homelessness & Urban Inequality
This freshman seminar examines the homelessness problem from a variety of scientific and policy perspectives. Contemporary homelessness differs significantly from related conditions of destitute poverty during other eras of our nation’s history. Advocates, researchers and policymakers have all played key roles in defining the current problem, measuring its prevalence, and designing interventions to reduce it. The first section of this course examines the definitional and measurement issues, and how they affect our understanding of the scale and composition of the problem. Explanations for homelessness have also been varied, and the second part of the course focuses on examining the merits of some of those explanations, and in particular, the role of the affordable housing crisis. The third section of the course focuses on the dynamics of homelessness, combining evidence from ethnographic studies of how people become homeless and experience homelessness, with quantitative research on the patterns of entry and exit from the condition. The final section of the course turns to the approaches taken by policymakers and advocates to address the problem, and considers the efficacy and quandaries associated with various policy strategies. The course concludes by contemplating the future of homelessness research and public policy.

URBS 046 Urban Sound Studies
Sound is all around us and shapes almost every aspect of our everyday days, and yet, in comparison to our rich descriptions of visual culture, we often lack the explanatory power to analyze and assess the overwhelming influence of the sonic. This introduction to sound studies course will combine a rigorous conceptual and a creative, hands-on approach. We will explore how sound and auditory cultures have been theorized, how soundscapes shape built environments and transform social relations, and how technologies have affected our relationships to sound. The course will focus on urban spaces. Cutting across disciplinary, historical and geographical boundaries, we will cover themes including sound-reproduction and mobile technologies, sonic consumption, noise regulation, protest, the politics of listening under Trumpism. We will encounter a wide variety of materials from literary texts to mobile apps and video games, not to mention a vast range of sounds drawn from fieldwork around the world from Las Vegas to Shanghai, Paris to Johannesburg. Alongside written work, you will make fieldwork recordings on the streets of Philadelphia and develop creative projects using media of your choice to reflect upon urban sound.

URBS 050 Womanism and Identity Politics in the Realm of Hip-Hop
This course centers on the intersections of womanism, woman of color identity development, and agency within hip-hop culture. We will touch on several topics that uncover the condition of minoritized women in hip-hop media, including creating/owning space, lyrical assault, defining womanhood, sexuality, and fetishes. In exploring music, literature, advertisements, film, and television, we will discuss the ways women of color construct understandings of self, while navigating and reimagining reality within hip-hop contexts.
Taught by: Patterson
Activity: Seminar
1 Course Unit

URBS 103 Industrial Metropolis
Although we no longer think of most U.S. cities as industrial cities, metropolitan areas today are all products of industrial economies, technologies, and social systems. This course explores the industrialization and deindustrialization of American cities within their evolving global context from the era of European colonization to the present. It includes weekly readings and discussion, regular response papers and walking tours, in-class exercises, and a research paper using primary sources. Themes include energy and ecology, labor and production, inner city and suburban development, globalization, and economic restructuring. Ultimately, the class aims to give students a broad knowledge of 1) the history of industrial capitalism, 2) its effects on cities and regions over the past three centuries, and 3) analytical tools for understanding the past, present, and future of metropolitan economies, geography, and society.

URBS 104 The Transformation of Urban America
The course traces the economic, social, and political history of American cities after World War II. It focuses on how the economic problems of the industrial city were compounded by the racial conflicts of the 1950s and 1960s and the fiscal crises of the 1970s. The last part of the course examines the forces that have led to the revitalization of cities in recent years.
For BA Students: Society Sector

Course usually offered in spring term
Activity: Lecture
1 Course Unit
URBS 106 Freshman Seminar
Topic varies. Fall 2017: This course will examine the fascination with ecology in artistic thinking from late Modernism to the present, with a particular attention to the developing interest in social and environmental systems in the late 1960’s and early 1970’s. From Robert Smithson’s Spiral Jetty to Rachel Carson’s Silent Spring, artists, scholars and activists of this generation were deeply invested in the interconnectedness of life in all its forms. This new sensitivity to the affinities that bind individuals, and our vulnerability to social, political and economic environments, enabled new aesthetic approaches that have continued relevance today. As part of the course, we will meet with a range of artists, curators and institutions in Philadelphia who are continuing these investigations, including the Colored Girls Museum in Germantown and the Health Ecologies Lab here at Penn. No familiarity with contemporary art is required.
Activity: Seminar
1 Course Unit
Notes: For Freshmen Only

URBS 112 Urban Sociology
This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories urbanism, as well as more specific areas of inquiry including American urbanism, segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization and the process of urbanization in less developed counties.

URBS 120 Literature of the South Asian City: Space, Culture, Politics
The South Asian city as a way of organizing space and social relations, as a symbol, as a memory is the subject of this course. Through primarily, though by no means exclusively, readings of literature in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary flâneurie. We will see reflections of the city in poetry recited in its homes, detective novels sold in its train stations, stories scribbled in its cafes, plays staged in its theaters, and films produced in its backlots. Readings will attempt to address urban spaces across South Asia, and will include works by writers such as Mirza Ghalib, Rabindranath Tagore, Saadat Hasan Manto, and Vijay Tendulkar. We will examine these works in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives.

URBS 121 Origin and Culture of Cities
The UN estimates that 2.9 of the world’s 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the “origin” of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.

URBS 122 The City in South Asia
This interdisciplinary social science course examines key topics, themes, and analytic methods in the study of South Asia by focusing on significant South Asian cities. With one-fifth of the world’s population, South Asia and its urban centers are playing an increasingly important role in recent global economic transformations, resulting in fundamental changes within both the subcontinent and the larger world. Drawing primarily on ethnographic studies of South Asia in the context of rapid historical change, the course also incorporates research drawn from urban studies, architecture, political science, and history, as well as fiction and film. Topics include globalization and new economic dynamics in South Asia; the formation of a new urban middle class; consumption and consumer culture; urban political formations, democratic institutions, and practices; criminality & the underworld; population growth, changes in the built environment, and demographic shifts; everyday life in South Asia and ethnic, and ethnic, cultural, and linguistic identities, differences, and violence in South Asia’s urban environments. This is an introductory level course appropriate for students with no background in South Asia or for those seeking to better understand South Asia’s urban environments in the context of recent globalization and rapid historical changes.
No prerequisites. Fulfills College sector requirement in Society and foundational approach in Cross-Cultural Analysis.

This course focuses on political responses to urbanization in the United States. Topics include local government, national urban politics, and the changing nature of cities.
For BA Students: Society Sector
Taught by: Reed
Course usually offered in spring term
Activity: Lecture
1 Course Unit
URBS 139 Ancient Civilizations of the World
This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist of a guided tour of a relevant gallery, as well as a hands-on object-based lab with archaeological materials selected by the instructor. This course meets the General Education Curriculums Cross Cultural Analysis foundational approach, whose aim is to help students understand and interpret the cultures of peoples (even long-dead peoples) with histories different from their own; it also fulfills the History and Tradition Sector breadth requirement.
For BA Students: History and Tradition Sector
Taught by: Zettler
Course not offered every year

This seminar will examine the experiences of recent African immigrants and refugees in Philadelphia in an historical framework. We will employ a variety of sources-newspapers, census data, legal briefs, literature and film, and diaspora internet sites-to explore the lives, aspirations, and perceptions of Philadelphia’s African residents. There will be opportunities for dialogue with high school students, teachers, and parents; with representatives of African community and business organizations; and with local government and service agencies. Students will be required to do a final project which involves volunteering with an African immigrant non-profit or business and/or conducting focused research on specific African communities in Philadelphia.
Taught by: Cassanelli
Course not offered every year
Activity: Seminar
1 Course Unit

URBS 171 The Socialist City
This course will explore the ideology and politics of the socialist city in the Soviet Union, East Europe, and the Second World. We will focus on how design professionals, politicians, and residents realized utopian socialist values in the face of national design traditions, local politics, and limited resources. Beginning with the Soviet case, the course will consider how planners and architects addressed modernization, multi-family housing, and neighborhood units in new city plans. We will consider capitals, like Moscow, as well as less well-known regional centers that had strong local identities, such as Tashkent, Belgrade, and Prague. We will examine the state’s use of public spaces for commemorations and preservationists’ reinterpretation of existing historic sites. In addition, we will consider how everyday residents experienced the socialist city, such as multi-family housing, shopping centers, and subway systems. We will address how citizens circumvented official state channels to obtain state housing and illegally build homes for themselves, sometimes in a folk style. The course will center on Soviet and East European cities, but also address socialist cities in Cuba and Africa whose design was influenced by transnational exchanges. Most broadly, this course explores the question, what was the socialist city? How did its planners, architects, and politicians understand it, and what did they intend to construct? And, what resulted? In the past fifteen years, North American scholars have begun to take seriously the study of the socialist city, and this course draws on the emerging scholarship on this exciting, cross-disciplinary topic. How do scholars understand the socialist city today? We will examine the shared legacies that socialist cities across East Europe shared with their Western European counterparts, as well as the particularities of design that have sparked North American scholars’ debates on what distinguished the socialist city from ones that emerged in a capitalist context. In our discussions, we will seek to understand how socialist design professionals understood their work and the emerging cities at the time, as well as how North American scholars view the socialist city today. Disciplinarily, the focus of the call will fall at the intersection of architectural history and politics.

URBS 178 Faculty-Student Collaborative Action Seminar in Urban University-Community Relations
One of the goals of this seminar is to help students develop their capacity to solve strategic, real-world problems by working collaboratively in the classroom, on campus, and in the West Philadelphia community. Research teams help contribute to the improvement of education on campus and in the community, as well as the improvement of university-community relations. Among other responsibilities, students focus their community service on college and career readiness at West Philadelphia High School and Sayre High School. Students are typically engaged in academically based community service learning at the schools for two hours each week.

URBS 180 Asian American Food
You are what you eat. Asian American Food explores the history, politics, and ethnic identity of food through a cultural lens. Growing food, eating, and sharing meals serve as intimate expressions of self and community. By examining the production and consumption of food, the course investigates the ways that Asian Americans navigate traditions, gender norms, religious dietary laws, food habits, and employment as they create lives in the United States. The course overviews the history of Asian American foodways, but has a particular focus on Philadelphia’s Asian American communities.

URBS 181 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands. This hybrid course combines online instruction with a short-term study abroad experience in Berlin and Rotterdam. During the pre-tip online portion of the course, students will become acquainted with the cultural histories of German and Dutch attitudes toward sustainability and the environment through a combination of recorded lectures by the instructor, reading assignments, viewing assignments (documentary and feature films), threaded discussions, and short written assignments. The goal of the pre-trip instruction are to help students develop tools for analyzing and interpreting cultural difference, construct working models of German and Dutch concepts of sustainability, and formulate hypotheses about the relation between culture and policy in Germany and the Netherlands.

URBS 200 Urban Research Methods
This course will examine different ways of undertaking urban research. The goal will be to link substantive research questions to appropriate data and research methods. Computer-based quantitative methods, demographic techniques, mapping / GIS and qualitative approaches will be covered in this course. Student assignments will focus on constructing a neighborhood case study of a community experiencing rapid neighborhood change.
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Fulfills Quantitative Data Analysis Requirement
URBS 202 Urban Education
This seminar focuses on two main questions: 1) How have US schools and urban ones in particular continued to reproduce inequalities rather than ameliorating them? 2) In the informational age, how do the systems affecting education need to change to create more successful and equitable outcomes? The course is designed to bridge the divide between theory and practice. Each class session looks at issues of equity in relation to an area of practice (e.g. lesson design, curriculum planning, fostering positive student identities, classroom management, school funding, policy planning...), while bringing theoretical frames to bear from the fields of education, sociology, anthropology and psychology. Among the theoretical frames students will learn will be the tools of systems thinking (Bertalanffy, 1968). While most of us have internalized the key lesson of the industrial revolution—that to understand something we must break it into its parts; systems thinking, in contrast, is about understanding the parts in relation to whole. The power of systems thinking is that each point of connection also serves as a point of intervention. By showing the importance of decisions of those within classrooms and those outside of them, this course is well-suited to students of education, but also any who seek a role in creating a more just society.

URBS 204 Urban Law
This course will focus on selected aspects of urban law that are particularly relevant to areas of high population density. After an introduction to the American judicial system, it will examine the legal issues that arise in the management of land development and use, with special attention to constitutional questions involving equal protection, due process, and the "takings" clause, and routine run-of-the-mill zoning challenges. This course meets the Cultural Diversity requirement.
Taught by: Keene
Course usually offered in fall term
Activity: Lecture
1 Course Unit

URBS 205 People and Design
The built environment of a city is more than a mere backdrop; the design can actually affect people’s experiences. Environmental design primarily focuses on the relationship between people and the built environment. It also looks at how the built environment interacts with the natural one (and the potential for greater sustainability). This course will allow students to gain a deeper understanding of how people create, perceive, and use the designed environment. We’ll approach these concepts by analyzing design at a variety of scales, from products to interior design to architecture. Finally, using that knowledge, we’ll conclude by analyzing urban spaces of the city.
Taught by: Berman
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 206 Public Environment of Cities: An Introduction to the Urban Landscape
This course will explore the role of public spaces - streets, boulevards, parks and squares - in cities and their social uses. With the University of Pennsylvania campus and the City of Philadelphia serving as our laboratory, we will critically examine the evolution of the movement of corridors, open space and buildings of the urban landscape and their changing uses. Case studies of social spaces on campus and public open spaces in Center City will help inform our understanding of how public environment serves, well or poorly, the varying needs of diverse users. While graphic skills are not required, graphic means as well as writing will be employed to communicate critical thought, ideas, and conclusions.
Taught by: Nairn
Course usually offered in spring term

URBS 213 Urban Ethnography: Capturing the Cultures of Cities
With its multi-ethnic neighborhoods and rich cultural life, Philadelphia is an ideal site for learning how to carry out urban ethnography. In the course, students will understand the ethnographic approach and learn skills to conduct their own ethnography as they explore urban life and culture in the nation’s sixth largest city. The course is structured as a seminar in which students will read ethnographic studies of Philadelphia and other urban settings. With our focus on the urban landscape, we will gain an appreciation for the macro processes, such as globalization, that shape the city. Ethnography attends to such processes as well as how humans experience them. The class will explore various themes, including the ethnic city, the gendered city, the contested city, the sacred city, the global city, and the aesthetic and expressive city. In addition to reading assignments, we will look at images, videos, and online material. Students will design and execute their own ethnographic fieldwork project on an urban topic that interests them. Through step-by-step instruction throughout the semester, students will learn qualitative research techniques such as field notes, participant-observation, interviewing, and how to interpret their own data, so that they will be able to complete their semester project.

URBS 220 Jews and the City: Advanced Benjamin Franklin Seminar
Jews have always been an extraordinarily urban people. This seminar explores various aspects of the Jewish encounter with the city, examining the ways that Jewish culture has been shaped by and has helped to shape urban culture. We will examine European and American cities as well as some in Palestine/Israel, covering an expansive view of urban culture. We will consider Jewish involvement in political and cultural life, the various neighborhoods in which Jews have lived, relations with other ethnic groups, as well as many other topics. We will read some classic works in the field along with contemporary scholarship. No prior background in Jewish history is required. *This course may be applied toward the US, European, or Middle East requirements for the History Major or Minor, depending upon the research paper topic. Students must consult with the instructor to determine which geographic requirement will be fulfilled.*

URBS 236 Iraq: Ancient Cities and Empires
This course consists of an analytical survey of civilization in the ancient Mesopotamia from prehistoric periods to the middle centuries of the first millennium B.C. A strong focus is placed on Mesopotamia (Iraq, eastern Syria) proper, but it occasionally covers its adjacent regions, including Anatolia (Turkey), north-central Syria, and the Levantine coast. As we chronologically examine the origin and development of civilization in the region, various social, political, economic, and ideological topics will be explored, including subsistence, cosmology, writing, trade, technology, war, private life, burial custom, and empire. Based on both archaeological and historical evidence, these topics will be examined from archaeological, anthropological, historical and art historical perspectives. Students will be exposed to a variety of theoretical approaches and types of relevant evidence, including settlement survey data, excavated architectural remains and artifacts, and written documents. The course aims to provide students with a strong foundation for further study in Near Eastern civilization.
Taught by: Zettler

1 Course Unit

URBS 237 Berlin: History, Politics, Culture
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, its transformation into an industrial city in the late nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin. Indeed, Berlin will be a specific example to explore German history and cultural life of the last 300 years. The course will be interdisciplinary with the fields of German Studies, history, history of art, and urban studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

Notes: All readings and lectures in English

URBS 244 Metropolis: Culture of the City
An exploration of modern discourses on and of the city. Topics include: the city as site of avant-garde experimentation; technology and culture; the city as embodiment of social order and disorder; traffic and speed; ways of seeing the city; the crowd; city figures such as the detective, the criminal, the flaneur, the dandy; film as the new medium of the city. Special emphasis on Berlin. Readings by, among others, Dickens, Poe, Baudelaire, Rilke, Doeblin, Marx, Engels, Benjamin, Kracauer. Films include Fritz Lang's Metropolis and Tom Tykwer's Run Lola Run.

URBS 250 Urban Public Policy: Philadelphia -- A Case Study
An introduction to a broad range of substantive policy areas affecting the city, and an exploration into the complexities of policy formulation and implementation in a large and pluralistic metropolitan setting. The course subtitle, "Philadelphia -- A Case Study," describes our approach. Donna Cooper leads the region's foremost child advocacy organization focused on poverty, child welfare and education issues, she formerly served as the Deputy Mayor for Policy for the City of Philadelphia, and Secretary of Policy of the Commonwealth of Pennsylvania.
Taught by: Donna Cooper

Activity: Seminar
1 Course Unit

URBS 252 Urban Journalism
This course will examine the state of urban journalism today with special emphasis on how large newspapers are redefining themselves, and the news, in an era of dwindling readership and growing financial pressures. The course will look at online journalism, ethics, and alternative sources of news, and will explore the techniques journalists use in reporting the news. Students will report and write four pieces of their own about Philadelphia and its environs. The course is taught by Dan Biddle, the Philadelphia Inquirer's former politics editor, an award-winning journalist for 40 years.
Taught by: Biddle
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 253 Cities, Suburbs, Regions
This course will explore the political, economic, social, and demographic forces impacting development patterns in metropolitan areas, with a particular focus on Philadelphia. We will examine the government policies, economic forces, and social attitudes that affect the way a region grows, and the impact of these forces on poverty, equity and segregation. Specific topics to be discussed include the factors that make a region competitive, the city's changing role in the region, the impact place has on opportunity, and approaches to revitalizing and improving communities.
Taught by: Black
Course offered spring; even-numbered years
Activity: Seminar
1 Course Unit
URBS 264 Poverty, Race and Health
This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions.

URBS 270 The Immigrant City
Immigration is among the most important phenomena shaping neighborhoods, cities, and regions. Understanding migration is fundamental to understanding urbanization, community development, and urban society today. This course examines the development of immigrant communities in United States cities and suburbs. Class readings, discussions, and visits to a variety of Philadelphia immigrant neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, and the public sphere. We study the diverse dynamics and impacts of immigration through foundational readings and close observation of various newcomer and receiving communities. The first part of the course surveys migration and community formation among a broad range of ethnic groups in different sorts of city and suburban neighborhoods, mainly through history, sociology, and geography. The second part focuses on public policy and community and economic development practices related to migration at the local, regional, national, and transnational scales.
For BA Students: Society Sector
Taught by: Vitiello, Domenic
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 273 Advanced Non-Fiction Writing
Writing with a view to publication in the freelance sections of newspapers such as THE PHILADELPHIA INQUIRER and THE NEW YORK TIMES, in magazines such as THE ATLANTIC and THE NEW YORKER, and in the literary quarterlies and the journals of opinion. Among the areas likely to be considered are writing as a public act, issues of taste and of privacy, questions of ethics and of policy, methods of research and of checking, excerpting, marketing, and the realistic understanding of assignments and of the publishing world. Student papers will be the basis of weekly editorial sessions, with concentration on the language: how to render material literate, how to recognize and dispose of padding and self-indulgence, how to tighten structure and amplify substance. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: This course is not open to freshmen. May be repeated for credit with a different instructor.

URBS 274 Advanced Topics in Theatre
This course will combine an intensive practical and intellectual investigation of some area of the making of theatre: performance techniques, theatrical styles, a particular period of theatre history. For the current topics contact the Theatre Arts office or visit the website. One section of 275 every other Spring will consist of a small number of Theatre Arts majors selected by the faculty to become members of "the Edinburgh Project." This ensemble will mount a production that will be performed at the Edinburgh Festival Fringe in August. Many of the readings and exercises in this course will be geared to prepare for production; rehearsals for the project will continue after the exam period at the end of the semester.
Taught by: Fox, Ferguson, Malague, Mazer, Schlatter
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: This course, with different topics, may be repeated for credit. Please look at the program website for the current semester’s topic(s).

URBS 280 Neighborhood Dynamics of Crime
Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.
Taught by: Loeffler
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 290 Metropolitan Nature
In order to understand the complex and often skewed relationship between the built and natural systems, we must think in processes and examine different scales simultaneously. The course explores urban sustainability and resilience. At its core, sustainability is a radical concept that integrates the economy, equity (social justice), and the environment. Co-opted by marketing slogans, stripped of meaning and context, it has become vague and pliable. Sustainability and resilience demand a holistic systems view of the world. The course focuses on communities such as New Orleans and Eastwick where urban development has focused on economic concerns at the expense of the environment and equity resulting in unintended, and sometimes, catastrophic consequences. Students will have the opportunity to interact with community residents who have organized to develop strategies to address these ongoing issues.
Taught by: Nairn
Course usually offered in fall term
Activity: Seminar
1 Course Unit
URBS 294 Cities of the Future: Urbanization in the Global South
This course examines the futures of urbanization in most of the world. With cities in “developing” countries set to absorb 95% of urban population growth in the next generation, the course explores the plans, spaces and social experiences of this dramatic urban century. How do proliferating urban populations sustain themselves in the cities of Latin America, Africa and Asia? What kinds of social and political claims do these populations make more just and sustainable cities? The course investigates the ongoing experiences in urban planning, infrastructure development and environmental governance in cities of the Global South.

In so doing, it imagines new forms of citizenship, development and sustainability that are currently unfolding in these cities of the future.

Taught by: Anand
Course not offered every year
Activity: Seminar
1 Course Unit

URBS 300 Fieldwork Seminar
Students work 15 hours per week in field placement and meet weekly with class and instructors. The class is intended to help students reflect from a variety of perspectives on the work they are doing in their placement organizations. The class format is primarily discussion.

Students are required to complete assigned readings, prepare written and oral presentations, and submit a final project.

Course usually offered in spring term
Activity: Seminar
2 Course Units
Notes: Urban Studies majors and minors only.

URBS 320 Who Gets Elected and Why? The Science of Politics
What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century?

This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for public office and will discuss the various influences on getting elected, including: Campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization.

Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania.

Taught by: Rendell
Course usually offered in fall term
Activity: Lecture
1 Course Unit

URBS 321 Urban Ethnography: Documenting The City of Brotherly Love
How do qualitative social scientists study urban communities? What kinds of powerful tales can be told about urban lifestyles and social issues/conflicts in places like Philadelphia? This course will allow students to study various ethnographic treatments of urban communities in the United States, using films, articles, TV serials, and books as guides for the framing of their own independent research on the streets of Philadelphia. Students will also form production teams of two or three people, and these production teams will be responsible for (i) identifying and researching an important urban issue in contemporary Philadelphia and (ii) turning that research into a 15-30 minute radio documentary that will be broadcast on a local Philadelphia radio station, WURD 900AM.

Mixing radio/audio journalism with ethnographic methods, will enhance their skills at archival and social research, participant-observation, interviewing techniques, sound editing, and production. This course is intended to be a rigorous and exciting opportunity for students to tell empirically grounded stories using the voices of their subjects and the sounds of the city. Potential texts include: Sidewalk (a book and documentary film my Mitchell my Mitchell Duneier), Righteous Dopefiend (a book and museum exhibit by Philippe Bourgois), and excerpts from other ethnographic work by Ana Ramos-Zayas, Elijah Anderson, Todd Wolfson, David Grazian, Setha Low, Ulf Hannerz, Leith Mullings, John Gwaltney, Dana-ain Davis, Carol Stack, Melissa Checker, Katherine S. Newman, and others. By Permission Only.

Taught by: Jackson
Prerequisite: COMM 220 or permission of instructor
Activity: Seminar
1 Course Unit

URBS 322 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement couples step-by-step analysis of the process of designing with painting a mural. In addition, students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The instructor, Jane Golden, is the founder and Director of the Philadelphia Mural Arts Program.

Taught by: Golden/Walinsky
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Previously URBS 222. The Undergraduate Fine Arts Department will now include a $75 fee for this course.

URBS 323 Tutoring School: Theory and Practice
This course represents an opportunity for students to study various academically-based community service involving tutoring in a West Phila. public school. This course will serve a need for those students who are already tutoring through the West Phila. Tutoring Project or other campus tutoring. It will also be available to individuals who are interested in tutoring for the first time.

Taught by: Parker, Cheryl
Course usually offered in fall term
Activity: Seminar
1 Course Unit
URBS 326 Tutoring in Urban Public Elementary Schools: A Child Development Perspective
The course provides an opportunity for undergraduate students to participate in academically based community service learning. Student will be studying early childhood development and learning while providing direct, one-to-one tutoring services to young students in Philadelphia public elementary schools. The course will cover foundational dimensions of the cognitive and social development of preschool and elementary school students from a multicultural perspective. The course will place a special emphasis on the multiple contexts that influence children's development and learning and how aspects of classroom environment (i.e., curriculum and classroom management strategies) can impact children's achievement. Also, student will consider a range of larger issues impacting urban education embedded in American society. The course structure has three major components: (1) lecture related directly to readings on early childhood development and key observation and listening skills necessary for effective tutoring, (2) weekly contact with a preschool or elementary school student as a volunteer tutor and active consideration of how to enhance the student learning, and (3) discussion and reflection of personal and societal issues related to being a volunteer tutor in a large urban public school.
Taught by: Fantuzzo
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 330 GIS Applications in Social Science
This course will introduce students to the principles behind Geographic Information Science and applications of (GIS) in the social sciences. Examples of GIS applications in social services, public health, criminology, real estate, environmental justice, education, history, and urban studies will be used to illustrate how GIS integrates, displays, and facilitates analysis of spatial data through maps and descriptive statistics. Students will learn to create data sets through primary and secondary data collection, map their own data, and create maps to answer research questions. The course will consist of a combination of lecture and lab.
Taught by: tba
Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: Fulfills the Qualitative Data Analysis Requirement

URBS 352 Food Habits in Philadelphia Communities: Exploring Eating and Changing Food Habits in Philadelphia Middle Schools
In this course, Penn undergraduates will explore and examine food habits, the intersection of culture, family, history, and the various meanings of food and eating, by working with a middle-school class in the Philadelphia public schools. The goal of the course will be to learn about the food habits of a diverse local community, to explore that community's history of food and eating, and to consider ways and means for understanding and changing food habits. Middle school students will learn about the food environment and about why culture matters when we talk about food. Topics include traditional and modern foodways, ethnic cuisine in America, food preferences, and 'American cuisine'. The course integrates classroom work about food culture and anthropological practice with frequent trips to middle school where undergraduates will collaborate with students, their teachers, and a teacher partner from the Agatson Urban Nutrition Initiative (UNI). Students will be required to attend one of two time blocks each week to fulfill the service learning requirement-times TBA. Undergraduates will be responsible for weekly writing assignments responding to learning experience in the course, for preparing materials to use middle school children, being participant-learners with the middle school children, and for a final research project. The material for the course will address the ideas underlying university-community engagement, the relationships that exist between food/eating and culture, and research methods.
Taught by: Kauer
One-term course offered either term
Activity: Seminar
1 Course Unit

URBS 359 Nutritional Anthropology
This course will explore the significance as it relates to food behaviors and nutritional status in contemporary human populations. The topics covered will be examined from a biocultural perspective and include 1) definition and functions of nutrients and how different cultures perceive nutrients, 2) basic principles of human growth and development, 3) methods to assess dietary intake, 4) food taboos, 5) feeding practices of infants and children, 6) food marketing, 7) causes and consequences of under- and over-nutrition, and 8) food insecurity and hunger.
Course not offered every year
Activity: Seminar
1 Course Unit

URBS 362 Philadelphia, 1700-2000
Using Philadelphia as a lens, this course will examine the transformation of American cities from the colonial period to the present. Through readings, lectures, and tours, we will consider urbanization and suburbanization, race, class, and ethnicity, economic development, poverty and inequality, housing and neighborhood change, urban institutions, and politics and public policy.
Taught by: Sugrue
Course not offered every year
Activity: Lecture
1 Course Unit
URBS 390 Urban Agriculture
Urban Agriculture is a growing global trend. This course examines urban agriculture as an issue of sustainability, social justice, public health, and vacant land. It explores the potential of urban agriculture in both the Global North and South to provide a safe and secure source of food to city residents. Major topics include sustainable agricultural practices, operational and spatial requirements, distribution systems, and access to fresh food. Using Philadelphia as a laboratory, the course explores its robust agricultural scene of community gardens, guerilla gardens, and entrepreneurial farms, as well as its distribution system including programs such as City harvest, the emerging Common Market, and established farmers’ markets. The course will integrate lectures about sustainable agricultural practices with field trips to and hands-on work at community gardens and farms.
Taught by: Nairn
Course usually offered summer term only
Activity: Seminar
1 Course Unit

URBS 400 Senior Seminar
Urban Studies senior research project
Taught by: Grossman/McGlone/Simon
Course usually offered in fall term
Prerequisite: URBS 200; URBS 300
Activity: Seminar
1 Course Unit

URBS 401 Urban Studies Honors
Students in the fall Urban Studies Senior Seminar (URBS400) whose papers are exceptional and show promise for publication will be invited to participate in the spring honors seminar. If they choose to participate, honors seminar participants will revise and refine their research/papers with the goal of their work for publication in an academic journal relevant to the topic. The seminar meets periodically during the semester, structured around a set of assignments geared to facilitate the process of revision. Students will be assigned to read each other’s work and meetings take the form of a workshop with students reporting on progress and providing feedback to improve and develop each other’s papers. In addition to completing the revised paper for a grade, participants in the honors seminar are required to present their work to a wider Urban Studies audience in a special session at the end of the semester and to provide documentation that they have submitted their papers for publication. Students who successfully complete the honors seminar will graduate with distinction in the major, noted on their transcripts and in the graduation materials.
Taught by: Simon
Course usually offered in spring term
Prerequisite: URBS 400
Activity: Seminar
1 Course Unit

URBS 404 Philanthropy and the City
This course will focus on how urban communities are shaped by the nonprofit sector and the billions of philanthropic dollars that fuel their work. By bridging theory and practice, the class explores what dynamics are at play to deliver vital services or programs in healthcare, education, the arts, community development, and other issues. The course will also focus on these important questions: (1) Whose responsibility is the public good? How is that responsibility shared by the public, private, and nonprofit sectors? and (2) Given that responsibility for the public good, which individuals and groups make the decisions about how to serve the public good? How are these decisions made, and who benefits from these decisions? Students will consider these questions in an interdisciplinary context that will bring a historical and philosophical perspective to the examination of the values and institutions that characterize the contemporary philanthropy and the nonprofit sector.
Taught by: Bauer/Goldman
Course usually offered in fall term
Activity: Seminar
1 Course Unit

URBS 405 Religion, Social Justice & Urban Development
Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha'i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.
Taught by: Lamas
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 412 Building Non-Profits: The Business of a Mission-Driven Organization
This course will cover the basic elements of building and growing a non-profit organization, including the development of the mission and the board; needs assessment, program design, development, and management; financial management, contract compliance and understanding an audit; fundraising, public, foundation, corporate, and individual; communication and marketing; organizational administration (including staff and volunteer selection, management and development); public policy, research and advocacy. Students will make site visits and engage role play, in addition to research and writing.
Taught by: Goldman, Greg
Course usually offered summer term only
Activity: Lecture
1 Course Unit
URBS 415 Urban Real Estate Markets
Cities evolve over time, comprised of various inputs of different sizes at different stages of urban evolution. However, as cities continue to densify and navigate real estate market cycles, opportunities to redefine the urban context, while promoting the individual brand, become ever more sensitive. Projects are increasingly complex, often involving multiple partnerships among private developers, public agencies, non-profits, and community groups. Today's development professionals need to be well-versed across a variety of disciplines and property types to effectively execute in an urban environment. As an introductory course in real estate development, this course will provide the underpinnings for critical decision-making in markets that change frequently and often unevenly - whether for financing, investing, development, public policy formulation, or asset management/disposition.
Taught by: Packard
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 417 Cities and Sustainability
A good idea is not enough - developing innovative and sustainable projects in cities requires understanding "how to get things done." Developing projects to promote sustainability in major US cities requires sensitivity to the political and operational context within which cities implement innovative initiatives. Cities and Sustainability uses Philadelphia as a case study to explore the issues confronting modern American metropolises as they look to manage their resources and promote environmentally friendly policies. URBS 417 will introduce students to leading Philadelphia practitioners of sustainability and municipal projects. Students will be given the tools to politically, economically and critically analyze various sustainable policy initiatives across the United States.
Taught by: Ben-Amos
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 419 Transportation & American Society
Transportation affects every aspect of American society; from how we get to work or school, to how we shop and play. Transportation policy at all levels of American government has serious implications for social justice and economic development. Moreover, some of today's most intense political battles center on transportation policy across America and within its cities, be it funding High Speed Rail in California or placing bike lanes in the heart of Manhattan. Transportation and American Society will expose students to the role transportation has played in the development of America and its cities as well as its impact on politics and society.
Taught by: Ben-Amos
Course usually offered in fall term
Activity: Lecture
1 Course Unit

URBS 420 Perspectives on Urban Poverty
This course provides an interdisciplinary introduction to 20th century urban poverty, and 20th century urban poverty knowledge. In addition to providing an historical overview of American poverty, the course is primarily concerned with the ways in which historical, cultural, political, racial, social, spatial/geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing analytic trends in the social sciences and their respective implications in terms of the question of what can be known about urban poverty in the contexts of social policy and practice, academic research, and the broader social imaginary. We will critically analyze a wide body of literature that theorizes and explains urban poverty. Course readings span the disciplines of sociology, anthropology, urban studies, history, and social welfare. Primacy will be granted to critical analysis and deconstruction of course texts, particularly with regard to the ways in which poverty knowledge creates, sustains, and constrains meaningful channels of action in urban poverty policy and practice interventions.
Taught by: Fairbanks
Course usually offered in fall term
Activity: Seminar
1 Course Unit

URBS 428 Undergraduate Urban Research Colloquium
A seminar run in conjunction with the Institute for Urban Research at Penn, students will learn about the range of cutting-edge topics in urbanism that Penn faculty are working on and work closely with a faculty member on current research. Students will learn about new topics and methods in interdisciplinary urban research, and get first hand experience collecting urban data under the close supervision of an experienced researcher. Students and faculty jointly will present their findings for discussion. This course is a good introduction for how to frame and conduct an urban research project.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 431 Mapping Philadelphia
Philadelphia is a city that was mapped before it was built, inhabited before it was developed. Founder William Penn's original concept for the gridded city continues to inform the historical evolution of Philadelphia, even as city planners, architects, artists, and social justice activists work to transform the layers of our built environment. This class will study the city through a variety of archival maps, historical mapping practices, and emergent digital approaches to representing space and time. We will explore public history projects that seek approaches to place-making and place-keeping at neighborhood intersections, share dialogue with social practice artists who produce site-specific works, and visualize civic data through platforms such as OpenDataPhilly. Each student will pursue a final research project resulting in a close study of a particular street or intersection in the city.
Taught by: Paul Farber
Course not offered every year
Activity: Seminar
1 Course Unit
URBS 435 The Political Economy of Urban Development
This course provides an introduction to the economic and political theories that have come to shape, for better or for worse, the spatial characteristics of late 20th century urbanism. It is intended to offer a range of analytical approaches to understanding the complex interplay of forces that have shaped urban development trends in the past century. Part I of the course covers four different theories of modern political economy: Neoclassical, Keynesian, Marxian, and Neoliberal. Our purpose is to provide a framework for political economic analysis and an historical foundation for understanding postwar transformation. Part II of the course grounds the foundational material of Part I by tracing the economic and political forces that have shaped post-war urban development trends in Northeastern and Midwestern cities (especially Chicago, Detroit, Philadelphia and N.Y.). Particular attention will be given to issues such as race, suburbanization, deindustrialization, welfare state retrenchment, gentrification, and public housing transformation. Part III examines a range of contemporary (post-1970) approaches to urban development, focusing on processes of neoliberalization, neo-clientalism, urban informality, sub prime mortgage lending, and microfinance.
Taught by: Fairbanks
Course not offered every year
Activity: Lecture
1 Course Unit

URBS 440 Introduction to City Planning: Past, Present and Future
Orientation to the profession, tracing the evolution of city and regional planning from its late nineteenth century roots to its twentieth century expression. Field trips included.
Taught by: Vitiello or Ammon
Course usually offered in fall term
Activity: Lecture
1 Course Unit

URBS 448 Neighborhood Displacement and Community Power
This course uses the history of black displacement to examine community power and advocacy. It examines the methods of advocacy (e.g. case, class, and legislative) and political action through which community activists can influence social policy development and community and institutional change. The course also analyzes selected strategies and tactics of change and seeks to develop alternative roles in the group advocacy, lobbying, public education and public relations, electoral politics, coalition building, and legal and ethical dilemmas in political action. Case studies of neighborhood displacement serve as central means of examining course topics.
Taught by: Palmer
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 450 Urban Redevelopment
This course will consider urban redevelopment from the early 20th century to the present day, looking at ways the economic, political, and social underpinnings of redevelopment practice have changed over that time. From the City Beautiful movement to Transit Oriented Development, the course will look at why and how the public, private, and non-profit sectors have intervened in urban neighborhoods, and will contemplate consequences - positive and negative - of those interventions. Students will be introduced to some of the technical aspects of redevelopment, including architecture/design, planning, and financing. The class will be in seminar format, mixing lecture, discussion, and guest speakers. The course requirements include a mid-term paper, an in-class charrette, and a final development project.
Taught by: Rachlin, Andrew
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 451 The Politics of Housing and Urban Development
This course offers an exploration of how legislative action, government policymaking, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as consideration of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden’s waterfront and downtown-area neighborhoods.
Taught by: Kromer
Course usually offered in fall term
Activity: Lecture
1 Course Unit

URBS 452 Community Economic Development
Community economic development concerns the revitalization of impoverished communities. As with all things economic, poor and working people may be the subjects or the objects of development. We will utilize case studies from Philadelphia and around the world in an exploration of various models of economic justice and sustainable development.
Taught by: Lamas
Course usually offered in fall term
Activity: Seminar
1 Course Unit

URBS 453 Metropolitan Growth and Poverty
This course analyzes the role of metropolitan regions in the U.S. and global economies, including the sources of metropolitan productivity, the ways that metropolitan structures affect residents, and analyses of public policy in metropolitan areas. The economic, political, and social forces that have shaped World War II urban and regional development are explored, including technology, demography, and government. Special attention is paid to how metropolitan change affects residents by income and race. Topics include: gentrification, schools, suburbanization, sprawl, metropolitan fragmentation, concentration of poverty, race, and various economic revitalization initiatives.
Taught by: Madden
Course not offered every year
Activity: Seminar
1 Course Unit
URBS 454 City Limits: The Impact of Urban Policy
This course assesses the changing role of public policy in American cities. In the past, government often believed that it could direct urban development. New realities - the rise of an informal labor market, global capital and labor flows, the flight of businesses and the middle class to the suburbs - have demonstrated that government must see itself as one - but only one - ‘player’ in a more complete, transactional process of policy making that crosses political boundaries and involves business, organized interest groups, and citizens. This seminar uses a case-study method to study how public policy can make a difference in the revitalization of distressed American cities. The seminar is designed for advanced undergraduates and graduate students. Seminar readings and projects will be organized around three themes: 1) history and vision, 2) data and analysis, and 3) policy and implementation. Students will be divided into project teams assigned to work on current development issues that will be reviewed by both public and private-sector experts. Extensive use will be made of real estate, economic development, and social indicator data to understand the complex forces at work in both large and small cities. Students will learn to access, analyze, and map information; to frame and interpret these data within a regional perspective; and to construct profiles of cities and neighborhoods. Students will study recent urban redevelopment initiatives in the Philadelphia region, including Philadelphia’s Neighborhood Transformations Initiative and New Jersey’s Camden Revitalization plans.
Taught by: Goldstein, Stern
Course usually offered in spring term
Prerequisite: Student must have taken an introduction to research methods course
Activity: Seminar
1 Course Unit

URBS 457 Globalization & The City: Global Urbanization
In 2008, the UN estimated that the world’s population had become primarily urban, for the first time in history. According to the OECD, by the end of the century, close to 85% of the projected population will live in cities. The transition towards an urban planet is likely to have far-reaching economic, environmental, social, political, and cultural impacts on our species, many of which we cannot yet predict. But what is urbanization? Will it lead to more inequality, exploitation, conflict, resource consumption, and exposure to natural disasters and climate change, or is it an opportunity to move the world in a more sustainable and equitable direction? Taught by Chandan Deuskar and Patricio Zambrano Barragan, this course aims to explore these questions. In the first half of the semester, we will discuss various challenges associated with global urbanization and its impacts. In the second half, we will focus on responses to these challenges. The assignments will allow students to explore some of the most salient debates around global urbanization. By the end of the semester, students will be better able to understand the context for any future academic research, professional work, or business activities in the cities of the ‘developing world’. The course will provide a foundation for any students considering graduate studies or professional work in the fields of urban planning or international development.
Taught by: Chandan Deuskar and Patricio Zambrano Barragan
Course not offered every year

1 Course Unit

URBS 473 History & Theory of Community Organizing
Power is the ability to create change. This course will integrate the history and theories of community organizing so that each student will be able to develop a transformational praxis. We will examine social inequality and intersectionality, and explore effective strategies in organizing for social change. This course is inter-disciplinary, involving political economy, sociology, history, social work and leadership theory. Inquiry-based and problem-posing methods will serve as the primary means of formative assessment.
Taught by: Becker
Course not offered every year
Activity: Seminar
1 Course Unit

URBS 476 Urban Housing & Community Development Policy in America
This course examines how public policy influences housing markets and how markets influence public policy. The course reviews the development of housing policy since World War II and how shifts in policy have influenced people’s ability to find suitable shelter. Topics include: poverty and affordability, residential segregation / civil rights in housing, the financial crisis of 2008, mortgage foreclosure, affordable housing, and homelessness. The course focuses on the changing roles of different levels of government in housing policy and how the financial sector, the construction industry, and non-governmental organizations influence Americans housing options.
Taught by: Stern, Goldstein
Course not offered every year
Activity: Seminar
1 Course Unit

URBS 480 Liberation and Ownership
Who is going to own what we all have a part of creating? The history of the Americas, and of all peoples everywhere, is an evolving answer to the question of ownership. Ownership is about: the ties that bind and those that separate; production, participation, and control; the creation of community and the imposition of hierarchies—racial, sexual, and others; dreams of possessing and the burdens of debt and ecological despoliation; dependency and the slave yearning to breathe free. Of all the issues relevant to democracy, oppression, injustice, and inequality, ownership is arguably the most important and least understood. Utilizing a variety of disciplinary perspectives—with a particular emphasis on radical and critical theories of liberation, and by focusing on particular global sites and processes of capitalism, students will assess and refine their views regarding ownership and liberation in light of their own social, political, religious, aesthetic, and ethical commitments.
Taught by: Lamas
Course usually offered in fall term
Activity: Seminar

URBS 501 Community Partnerships in Visual Arts & Education
This course will connect students with artists from the 40th Street Artist-in-Residence (AIR) program, which provides free studio space and in exchange asks residents to share their talents with the local community. This course is designated as an Academic-based Service Learning (ABCS) class, meaning that students will be evaluated partly on their work in the community outreach situation. Course registration is open to advanced undergraduates.
Taught by: Epstein
Activity: Seminar
1 Course Unit
URBS 506 Public Environment of Cities: An Introduction to the Urban Landscape
This course will explore the role of public spaces - streets, boulevards, parks and squares - in cities and their social uses. With the University of Pennsylvania campus and the City of Philadelphia serving as our laboratory, we will critically examine the evolution of the movement of corridors, open space and buildings of the urban landscape and their changing uses. Case studies of social spaces on campus and public open spaces in Center City will help inform our understanding of how public environment serves, well or poorly, the varying needs of diverse users. While graphic skills are not required, graphic means as well as writing will be employed to communicate critical thought, ideas, and conclusions.
Taught by: Nairn
Course not offered every year
Activity: Seminar
1 Course Unit

URBS 513 Urban Ethnography
Using Philadelphia as the site of students' praxis, this course explores the symbolic meanings and social production of urban life and culture in the nation's fifth largest city. This course is structured as a seminar with ethnographic background readings from Philadelphia and other urban settings to introduce students to the study of the city as a site of everyday practice, as well as training in conducting an ethnographic fieldwork project. The urban landscape provides an intensification of macro processes such as globalization. Such processes and how humans experience them are more easily studied and understood in an urban setting. The class will explore social relational and cultural themes such as the ethnic city, the gendered city, the contested city, the sacred city, the global city, and the aesthetic and expressive city. A diverse range of reading assignments, images, and videos will augment our understandings of urban life. Students will design and execute their own ethnographic fieldwork projects on an urban topic that interests them. Through step-by-step instruction throughout the semester, students will learn qualitative research techniques such as field notes, participant-observation, interviewing, and how to interpret their own data, so that they will be able to complete their semester project.
Taught by: Saverino
Course not offered every year
Activity: Seminar
1 Course Unit

URBS 516 Public Interest Workshop
This is a Public Interest Ethnography workshop (originally created by Peggy Reeves Sanday - Department of Anthropology) that incorporates an interdisciplinary approach to exploring social issues. Open to graduate and advanced undergraduate students, the workshop is a response to Amy Gutmann's call for interdisciplinary cooperation across the University and to the Department of Anthropology's commitment to developing public interest research and practice as a disciplinary theme. Rooted in the rubric of public interest science, the course focuses on: 1) merging problem solving with theory and analysis in the interest of change motivated by a commitment to social justice, racial harmony, equality, and human rights; and 2) engaging in public debate on human issues to make the research results accessible to a broad audience. The workshop brings in guest speakers and will incorporate original ethnographic research to merge theory with action. Students are encouraged to apply the framing model to a public interest research and action topic of their choice. This is an academically-based-community-service (ABCS) course that partners directly with Penn's Netter Center Community Partnerships.
Taught by: Suess
Course usually offered in fall term
Activity: Seminar
1 Course Unit

URBS 524 Metro Labor Markets
This course examines contemporary labor markets through two thematic lenses. One is the growing discussion of knowledge industries and "knowledge workers" and their importance to regional innovative capacity and competitive advantage in a global economy. The other is the persistent challenge of unemployment, underemployment and working poverty within metropolitan regions. In exploring these themes, readings for the class synthesize perspectives on work, labor markets and economic growth from economics, sociology, history and political science. Class lecture and discussion, supplemented by the occasional guest practitioner, will focus on translating academic research into knowledge that can be used in local economic and community development practice.
Taught by: Wolf-Powers
Course usually offered in spring term
Activity: Seminar
1 Course Unit

URBS 530 GIS Applications in Social Science
This course will introduce students to the principles behind Geographic Information Science and applications of (GIS) in the social sciences. Examples of GIS applications in social services, public health, criminology, real estate, environmental justice, education, history, and urban studies will be used to illustrate how GIS integrates, displays, and facilitates analysis of spatial data through maps and descriptive statistics. Students will learn to create data sets through primary and secondary data collection, map their own data, and create maps to answer research questions. The course will consist of a combination of lecture and lab.
Taught by: Hillier
Course usually offered in fall term
Activity: Seminar
1 Course Unit
URBS 544 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment. In spring 2018, participants have the opportunity to participate in PPEH’s public engagement projects on urban waters and environmental data. These ongoing projects document the variety of uses that Philadelphians make of federal climate and environmental data, in and beyond city government; they also shine light on climate and environmental challenges our city faces and the kinds of data we need to address them. Working with five community partners across Philadelphia, including the City’s Office of Sustainability, students in this course will develop data use stories and surface the specific environmental questions neighborhoods have and the kinds of data they find useful. The course hosts guest speakers and research partners from related public engagement projects across the planet; community, neighborhood, open data, and open science advocates; and project partners in government in the City of Philadelphia and Commonwealth of Pennsylvania. Course assignments include: * 2 short-form essays (course blog posts); * a 12-hour research stay (conducted over multiple visits) with a community course partner to canvas data uses and desires; * authorship of 3 multimedia data stories; * co-organization and participation in a city-wide data storytelling event on May 2, 2018.
Taught by: Wiggin
Course not offered every year

1 Course Unit

URBS 608 Urban Studies Proseminar
Open to PhD students, this scholar-oriented seminar explores how academic researchers from different disciplines define researchable questions, craft research designs, and contribute to knowledge through an examination of important and/or recently published books and monographs with an urban focus. Required of all doctoral students enrolled in the Urban Studies Graduate Certificate Program. Enrollment is limited to 15 students. Other doctoral students may enroll on a space available basis. Course requirements include completion of a major research paper on a topic selected in consultation with the instructor.
Taught by: Stern
Course usually offered in spring term
Activity: Seminar
1 Course Unit
URBS 614 Weimar Landscapes
This new course is designed for students of literature, landscape architecture and urban planning, and cultural history in general. It will explore the ideas of, and attitudes towards, landscape in selected works by Wolfgang Goethe, and consider his own considerable practical involvement in reshaping the town and gardens of Weimar. The course will provide the larger context of German literature, aesthetics and landscape taste, and politics of the later 18th and early 19th centuries. We will consider the development of new gardens and parks in a "new" style (e.g. Wörlitz); they were regarded to be less formal and more "natural" than their French predecessors. We will study the English models for this movement, and offer and particular attention to the major German theorist, C.C.L. Hirschfeld, who would soon become famous outside Germany as well.
Taught by: Weissberg/Hunt
Course not offered every year
Activity: Seminar
1 Course Unit

URBS 619 Critical Perspectives in Contemporary Urban Education
The focus of this course is the conditions for teaching and learning in urban public schools, current theories of pedagogy in urban education, and perspectives on urban reform efforts.
Taught by: Schultz
One-term course offered either term
Activity: Lecture
1 Course Unit

URBS 706 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Taught by: Hall
One-term course offered either term
Prerequisite: EDUC 547
Activity: Lecture
1 Course Unit
URDU (URDU)

URDU 401 Beginning Urdu-Hindi, Part I
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.
For BA Students: Language Course
Taught by: Pien
Two terms. student must enter first term.
Activity: Lecture
1 Course Unit

URDU 402 Beginning Hindi-Urdu Part II
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.
For BA Students: Language Course
Taught by: Pien
Two terms. student must enter first term.

URDU 421 Intermediate Urdu Part I
This course allows students to continue improving their Urdu proficiency while also gaining a broad foundational understanding of Urdu society and culture throughout South Asia. The course provides students the tools needed to handle a variety of authentic written and spoken Urdu sources including film, music, media reports, folk tales, and simple literature. Students will also continue to increase their speaking and writing proficiency to be able to discuss a broad range of concrete, real-world topics. The course is designed for students with one year of previous Urdu or Hindi study or the equivalent proficiency.
For BA Students: Last Language Course
Taught by: Menai
Two terms. student must enter first term.
Activity: Seminar
1 Course Unit

URDU 422 Intermediate Urdu Part II
This continuing second-year course allows students to continue improving their Urdu proficiency while also gaining a broad foundational understanding of Urdu society and culture throughout South Asia. The course provides students the tools needed to handle a variety of authentic written and spoken Urdu sources including film, music, media reports, folk tales, and simple literature. Students will also continue to increase their speaking and writing proficiency to be able to discuss a broad range of concrete, real-world topics. The course is designed for students with one year of previous Urdu or Hindi study or the equivalent proficiency.
For BA Students: Last Language Course
Taught by: Menai
Two terms. student must enter first term.
Activity: Seminar
1 Course Unit

URDU 431 Advanced Urdu: Language and Literature
This course is designed to give in-depth exposure to some of the finest works of classical and modern Urdu prose and poetry along with the historical and socio-political trends they represent. Figures covered range from Ghalib (b.1797) to Faiz, Fehmida Riaz, and post 9/11 Urdu prose and poetry. The course is open to both undergraduates and graduate students, subject to having intermediate level proficiency. The course is repeatable, and the content changes every semester. Multi-media content such as music, videos, blogs etc. will be actively incorporated. Every effort will be made to accommodate individual interests. Students are encouraged to contact the instructor with any questions, or if they are unsure about eligibility.
For BA Students: Advanced Language Course
Taught by: Menai
Course usually offered in fall term
Prerequisite: Intermediate Urdu or equivalent ascertained through placement test or permission of instructor
Activity: Lecture
1 Course Unit
Notes: Intermediate reading, writing and speaking skills in Urdu are recommended but please contact the instructor if you are unsure of your eligibility and want to discuss further. Topic changes each semester.
URDU 452 Urdu Literature in Translation
This course will look at Urdu-Hindi expressions of resistance to militant fundamentalism trends, as well as literature resisting the influence of liberal progressive thought. Through comparisons of these divergent trends, we will explore the real inersections, comfortable comprises and contradictions that are internalized by people on the ground in developing societies. The historical and linguistic roots of resistance poetry will be studied, contrasting South Asian Urdu-Hindi poetry and prose (original and translated) with resistance movements from other parts of the world. This course provides students with the opportunity to deepen their knowledge of Urdu culture, literature, and society while expanding and refining their Urdu language skills. We will explore various social, political, and cultural issues through authentic sources such as journalism and media, prose literature and poetry, and film and music. The course is designed to be flexible to address students' needs and interests. It targets students with two years of Urdu study or the equivalent proficiency.
Taught by: Menai
Course not offered every year
Prerequisites: Intermediate reading, writing and speaking skills in Urdu are recommended but please contact the instructor if you are unsure of your eligibility and want to discuss further.
Activity: Seminar
1 Course Unit

URDU 462 Urdu Topics Course
Topics vary by semester in advanced level Urdu.
Taught by: Menai
Course not offered every year
Prerequisites: Advanced proficiency in Urdu either through successful completion of URDU 431, Advanced URDU, or proficiency exam, or approval of instructor
Activity: Lecture
1 Course Unit
**VETERINARY & BIOMEDICAL SCIENCES (VBMS)**

**VBMS 601 Gross Anatomy - Structural Adaptations to Function**
This course is an intensive study by dissection of the gross anatomy of the dog, cat, horse, and goat. In addition, there is one laboratory session dedicated to the chicken. Functional and clinical considerations are intercalated throughout the laboratories. The lectures elucidate selected aspects of specific organ systems under study in the laboratory, stressing theoretical, functional or comparative rather than descriptive aspects of anatomy. Radiographic anatomy is also presented in the course with the assistance of the radiology residents. All first-year students will have free access to the Easy Anatomy program, an interactive 3-D anatomy study guide for the complete canine, through the course page on Learn.vet.

Taught by: Drs. Grandstaff, Orsini and Staff
Two terms. student must enter first term.
Activity: Lecture
11 Credit Hours

**VBMS 602 Histological Basis of Pathology**
This course covers microscopic anatomy of tissues and organ systems of mammals important in veterinary medicine, e.g. dog, cat, mouse, rat, horse and cow. The central thread in the course is light microscopic structure as observed in standard stains, but this picture is amplified by electron microscopy, special stains and histochemistry. The material is presented, through lecture and laboratory, from the point of view of experimental biology, cell function, and disease. The course reveals that the structure or histology of the tissues of an animals body is not an arbitrary assemblage of cells but rather the structural expression of the diverse cell types that interact to carry out the functions of the body. Thus, through the microscopic study of the structure of tissues (histology) the functions of the tissues of the body may be inferred.

Taught by: Drs. M. May and O. Jacenko and Staff
Activity: Lecture
5 Credit Hours

**VBMS 603 Developmental Biology**
The course examines classic and modern concepts in embryonic development as they relate to veterinary medicine. The lectures are designed to cover recent advances in the field with special emphasis on stem cells, specification of cell fate, manipulation of the genome and organogenesis. Examples of pathologies associated with aberrant development of major organ systems will be presented and discussed in the context of veterinary medicine.

Taught by: Drs. J. Wang and Staff
Activity: Lecture
3 Credit Hours

**VBMS 604 Introduction to the Neurosciences**
This is an introductory course to the neurosciences and assumes a basic background in anatomy, cell biology, histology and biochemistry. At the cell/molecular level the course covers neurocytology, membrane bioelectrical events and their channel protein basis, neurotransmitters and their actions at the synapse. It also covers aspects of neurochemistry, neuropharmacology and focuses on neuroanatomy and function of neural systems. The latter include the somatic and autonomic components of the peripheral nervous system, the spinal cord and reflexes, primary sensory systems, motor pathways and limbic- visceral systems of the brain.

Taught by: Dr. T. Bale and Staff
Activity: Lecture
5 Credit Hours

**VBMS 605 Cellular and Biochemical Foundation of Disease**
This course teaches the principles of biological chemistry as applied to metabolic relationships underlying cellular and physiological processes and the molecular mechanisms of disease. The first third of the course covers the basic biochemistry of amino acids, proteins (e.g., enzymes), nucleic acids, vitamins and coenzymes, carbohydrates and lipids. Normal as well as disease-related pathways for the processing of these biological materials are discussed. Species differences in metabolic pathways and clinical relevance are pointed out, wherever pertinent. The latter part of the course includes discussions of molecular genetics, and the physiological-biochemical functioning and regulation of cellular structures, tissues and organs: membranes, endocrine glands and hormones, blood, bone and connective tissue, liver, muscle, etc. Diseases specific to these structures are discussed in the context of veterinary medicine. Also included are such topics as prostaglandins, biochemistry of growth regulation, vision, taste, cell cycle and cancer. Laboratories include clinically relevant problem-based and library research projects that relate biochemistry to veterinary medicine, and identification of reproductive and endocrine conditions by diagnostic problem solving using student generated biochemical data.

Taught by: Dr. A. Kashina and Staff
Activity: Lecture
10 Credit Hours

**VBMS 606 Animal Physiology**
A strong training in animal physiology is crucial for veterinary education. Extensive and profound knowledge of normal processes that maintain animal life and enable animals to cope with a changing environment provides the crucial foundation for the understanding of breakdowns in homeostasis and disease states, and of key principles underlying diagnostics and treatment of animal diseases. The course provides a brief review of relevant molecular and cell biology concepts that enhance the comprehension of physiology (including metabolism, cell membrane permeability, bioelectric potentials, active transport, etc.) and a detailed study of the functional processes in the circulatory, respiratory, digestive, endocrine, muscular, renal and reproductive systems. This course primarily focuses on normal physiologic mechanisms in mammals yet includes comparative physiology material pertinent to other vertebrates of veterinary interest. Furthermore, pathophysiological alterations of normal function and physiological principles of diagnostics and therapy are amply illustrated by clinical case examples.

Taught by: Drs. Serge Fuchs, Elizabeth Woodward and Staff
Activity: Lecture
10 Credit Hours
VBMS 607 Pharmacology & Toxicology
The major objective of this course is to help veterinary students learn the principles of pharmacokinetics, the mechanisms of drug action, the sites at which drugs act, and how drugs may interact with, and alter the activity of, various organ systems. The material will also include properties, mechanisms of action, and biological effects of various chemical substances (drugs, environmental pollutants, toxins of plant origin, etc.) that interfere with normal cell and organ function. The course is intended to deal chiefly with basic Pharmacology and Toxicology rather than clinical therapeutics, although some therapeutics and clinical material will be discussed in relevant areas.
Taught by: Dr. F. Luca and Staff
Activity: Lecture
11 Credit Hours
VETERINARY CLINICAL STUDIES - MEDICINE COURSES (VMED)

VMED 600 Introduction to Clinical Veterinary Medicine I
This course provides an introduction to clinical veterinary medicine for first year veterinary students, and includes sessions on management, restraint and physical examination of small animal patients. Laboratory sessions provide the opportunity for practicing physical examination and restraint of animals in supervised small groups. This course will be graded P/F.
Taught by: Dr. L. Waddell and Staff
Two terms, student must enter first term.
Activity: Lecture
2 Credit Hours

VMED 601 Introduction to Clinical Veterinary Medicine II
Using a case-based organ/system approach, this course provides an introduction to the practice of clinical veterinary medicine in companion animals, and provides an introduction to special species companion animal, laboratory animal, and captive and wild animal veterinary practice. The course also introduces the concept of evidence-based medicine. Laboratory sessions provide exposure to auscultation, behavior abnormalities, clinical rounds discussion, grief management, nursing techniques and special species companion animal and laboratory animal examination.
Taught by: Dr. E. Davidson and Staff
Activity: Lecture
4 Credit Hours

VMED 602 Introduction to Clinical Veterinary Medicine III
This course provides an introduction to equine and production animal veterinary medicine for first year veterinary students, and includes sessions on management, restraint and physical examination of large animal patients. Laboratory sessions provide the opportunity for practicing physical examination and diagnostic procedures on horses and production animal species.
Taught by: Dr. E. Davidson and Staff
Activity: Lecture
4 Credit Hours

VMED 603 Introduction to Radiology
This lecture course is designed to provide the fundamental principles of clinical imaging in veterinary medicine as they pertain to physics and instrumentation. The emphasis is on radiography, but principles of ultrasonography, computerized tomography, magnetic resonance imaging and nuclear medicine are also discussed. Topics include production of diagnostic images, radiation safety, differences between the various imaging modalities and some features of normal radiographic anatomy of small animals (thorax and abdomen). The course includes a two-hour mandatory laboratory, focusing on case presentations with emphasis on thoracic and abdominal radiography.
Taught by: Dr. W. Mai and Staff
Activity: Lecture
2 Credit Hours

VMED 604 Veterinary Medical Genetics
The objective of this course is to provide a background for understanding the underlying mechanisms, distribution, and control of genetic disease in domestic animals. Emphasis will be on concepts and information useful on a clinical level. Problem-based learning exercises integrate the concepts presented in the course.
Taught by: Dr. P. Henthorn and Staff
Activity: Lecture
2 Credit Hours

VMED 605 Nutrition
Fundamental principles of nutrition are the background of recommendations for feeding various classes of animals. Types of foodstuffs and their nutrient composition are evaluated in relation to nutrient requirements, voluntary intake and food preferences of domestic species. Feeding programs for nutritional management of animal classes commonly encountered in veterinary medicine are discussed, and examples of clinical nutrition applications are presented.
Taught by: Dr. D. Pitta and Staff
Activity: Lecture
3 Credit Hours

VMED 606 Principles of Epidemiology
The fundamentals of descriptive, analytic, and clinical epidemiology will be covered as they relate to both population and individual animal problems in veterinary medicine. The major aims of the course are to provide an analytic basis for clinical decision making and the ability to interpret the veterinary literature for application in a practice setting. These aims will be accomplished by using examples to illustrate the epidemiologic approach to studying infectious and non-infectious disease, and in clinical decision-making.
Taught by: Dr. Gary Smith and Staff
Activity: Lecture
2 Credit Hours

VMED 607 Veterinary Public Health
This course examines the nature and scope of animal-human interactions with emphasis on the consequences of this relationship from an epidemiologic viewpoint. Included are the zoonotic diseases, those naturally transmitted from animals to man, and the role of pets in society. The traditional involvement of veterinarians in prevention and control of food borne diseases and in public health practice will also be discussed.
Taught by: Dr. Gary Smith and Staff
Activity: Lecture
3 Credit Hours

VMED 608 Introduction to Poultry, Swine, and Dairy Medicine
This course will cover clinical problem solving for disease diagnosis, treatment and control. In addition, current topics of interest in food animal medicine will be discussed. These include food safety, regulatory medicine, environmental impact, welfare issues and opportunities for food animal veterinarians. Class time will be used for both lecture and discussion. All material for quizzes will be presented in class. The grade for the course will be based on weekly quizzes.
Taught by: Dr. S. Davison and Staff
Activity: Lecture
2 Credit Hours
VMED 609 Infectious & Metabolic Diseases
A core course of lectures on infectious and metabolic diseases of domestic animals. The topics in this course include: Rabies, Lymphosarcoma, Blue Tongue, Parturient Paresis, Listeriosis, Anthrax, Botulism, Leptospirosis, Canine Distemper, and many other polysystemic diseases.
Taught by: Dr. R. Sweeney and Staff
Activity: Lecture
7 Credit Hours

VMED 610 Clinical Reproduction
Course covers reproduction in large and small domestic species, and includes the estrous cycle, heat detection, pregnancy, pregnancy loss, obstetrics, parturition, the postpartum period, male and female reproductive physiology, behavior, breeding soundness examination, and fertility problems. A two-hour problem solving session with the class divided into small groups will be held to discuss clinical cases. Grades will be based on a mid-term and a cumulative final examination.
Taught by: Dr. R. Turner and Staff
Activity: Lecture
5 Credit Hours

VMED 611 Veterinary Medicine/Surgery I
Principles of diagnosis, including radiology, and medical and surgical management of infectious and noninfectious diseases of the head, neck and chest, including diseases of the postpartum period, male and female reproductive physiology, behavior, breeding soundness examination, and fertility problems. A two-hour problem solving session with the class divided into small groups will be held to discuss clinical cases. Grades will be based on a mid-term and a cumulative final examination.
Taught by: Dr. V. Thawley and Staff
Activity: Lecture
9 Credit Hours

VMED 612 Veterinary Medicine/Surgery II
This portion of the Medicine/Surgery core course deals with the pathophysiology, clinical features, and medical and surgical treatment of hematologic, endocrine, nephrologic, urogenital and oncologic disorders.
Taught by: Dr. B. Callan and Staff
Activity: Lecture
9 Credit Hours

VMED 613 Veterinary Medicine/Surgery III
This core course covers the important medical and surgical diseases of the gastrointestinal system and the medical aspects of neurological diseases. Specific disease topics will include noninfectious gastrointestinal disorders; hepatobiliary, pancreatic and splenic disorders; and central and peripheral neurological diseases of domestic animals.
Taught by: Dr. M. Rondeau and Staff
Activity: Lecture
8 Credit Hours

VMED 615 Dermatology
A core course of lectures discussing the infectious, ectoparasitic, allergic, autoimmune and metabolic cutaneous disorders of small animals, exotics and horses. Diseases are discussed with particular emphasis on pathogenesis, clinical recognition and treatment. Methods of diagnosis also are stressed so that the student is prepared to recognize and treat the various dermatoses met in the clinical year.
Taught by: Dr. D. Morris and Staff
Activity: Lecture
3 Credit Hours

VMED 616 Clinical Animal Behavior
Behavior problems are among the most frequent reasons for surrender and euthanasia of pets. In this course we will discuss the most common behavior problems of dogs and cats, with an emphasis on diagnosis and treatment using both behavior modification and drug therapy. Prognosis and safety issues will also be discussed. Attention will be paid to the thought process used in working up and/or preventing behavioral disorders.
Taught by: Dr. C. Siracusa and Staff
Activity: Lecture
1 Credit Hour

VMED 617 Veterinary Ethical Issues
The course goal is to enhance students overall ethical literacy. The course involves a combination of lectures on ethical theory and methodology, and group discussions of ethical case studies drawn from various branches of veterinary practice. The course will be graded as Pass/Fail and full attendance by all students is required unless otherwise pre-authorized by the course organizer.
Taught by: Dr. J. Serpell and Staff
Activity: Lecture
1 Credit Hour

VMED 618 Introduction to Clinical Veterinary Medicine IV
This year-long course for second year veterinary students is designed as a reinforcement of the first year introduction to clinical veterinary medicine series (VMED 600, 601, 602) and as a transition to the clinical year rotations. The emphasis is on practical experiences in our hospitals that will increase your clinical and technical skills as you familiarize yourselves with the hospitals facilities, policies and operations. The course will include approximately 11 hours of lecture; 32 hours of small-group practical clinical sessions per student (NBC) and 29 hours of small-group practical clinical sessions per student (MJR-VHUP). This will be a graded course - A, B, C or F.
Taught by: Dr. C. Dougherty, Dr. L. Southwood and Staff
Two terms. student must enter first term.
Activity: Lecture
4 Credit Hours
VMED 619 Emerging and Exotic Diseases
This course will be offered on the internet through the Association of American Veterinary Medical Colleges web site. The Center for Food Security and Public Health at Iowa State University maintains the course and operates the learning management system. The course is part of a larger effort by US Department of Agriculture to improve awareness of and preparedness for foreign animal disease incursions among veterinarians and veterinary students. The ability of a veterinarian to suspect and assist in the diagnosis of a foreign animal disease in livestock or companion animals is crucial to safeguarding Americas animals and agricultural sector and to protecting public health. In addition, the course also aims to convey a more comprehensive understanding of the role of accredited veterinarians in world agriculture. Parts of this course will be required training for subsequent USDA veterinary accreditation of new graduates. There will be a mandatory one hour session to introduce the course site, objectives, materials and requirements. The course site comprises six overview topics; four accreditation modules; nineteen case scenarios and twenty infectious disease inquiries. There are short tests associated with the various sections and students are required to score at least an 80% on each test. Students can take the test multiple times if needed to achieve that score. In addition to the course per se, there are numerous links to supplementary materials.

Taught by: Dr. H. Aceto
Activity: Lecture
3 Credit Hours

VMED 620 Introduction to Clinical Veterinary Medicine V
This course will comprise 8 hours of lecture/classroom exercises and discussion per student in addition to a series of online tutorials. Two of the 8 hours of lecture time will be devoted to orientation and trouble-shooting sessions to help students access and complete the online tutorials. Students are expected to complete the online tutorials outside of the classroom setting. The online tutorials will demonstrate how to navigate the hospital computer systems at both campuses so that students will be familiar with them prior to entering the clinics in their fourth year. The material presented in this course will build upon principles learned in previous ICVM courses, specifically by providing further instruction on and practice of written and verbal communication skills and by building upon the orientation to the teaching hospitals provided in ICVM IV. After completing this course, students should be able to: - Describe and use key aspects of client communication skills that are essential in the veterinary medical setting. - Recognize and interpret common aspects of non verbal communication and understand how their non verbal communication can be used to improve their encounters with clients. - Understand and demonstrate the basic elements of a written discharge summary. - Navigate and utilize the electronic hospital systems on both campuses.

Taught by: Dr. E. Krick and Staff
Course usually offered in fall term
Activity: Lecture
2 Credit Hours
VET ERINARY CLINICAL STUDIES - NEW BOLTON CENTER (VCSN)

VCSN 630 Equine Neonatology & Intensive Care Medicine
The objectives of this course are to: (1) Introduce students to neonatal physiology and behavior as it applies to the foal; (2) Acquaint students with the clinical signs and pathophysiologic mechanisms of diseases in neonates; and (3) Provide students experience in the neonatal intensive care unit learning monitoring techniques (e.g. noninvasive blood pressure measurements, PCV, TP, stall side blood glucose, etc.) Observing normal and abnormal neonatal behavior and neonatal/maternal interactions, learning techniques of neonatal restraint, and assisting with diagnostic and therapeutic procedures as well as general nursing. Lectures will focus on foal diseases, intensive care therapies, periparturient problems, ventilatory support, musculoskeletal disorders, pharmacology and the neonate. Seminars will be used to apply lecture and reading material to clinical case discussions. A set of clinically-oriented problems covering case presentations, blood gas analysis, nutrition formulations, fluid therapy, nursing care protocols and periparturient events will be completed during the fourth quarter. The course grade will be based upon evaluation of clinical case problems, seminar participation, and mastering clinical skills (monitoring techniques, etc.) learned during foal-sitting. Enrollment requires approval of the course organizer and satisfactory academic standing.

Taught by: Dr. M. Linton and Staff
Prerequisites: Prerequisites: Satisfactory acad. performance through Q2/2nd yr.
Activity: Lecture
4 Credit Hours
Notes: Limitations: 70 students max. for foal-sitting nursing shifts. Note: YOU MUST PROVIDE YOUR OWN TRANSPORTATION TO AND FROM NEW BOLTON CENTER

VCSN 631 Ecological Epidemiology
This course is concerned with the epidemiology of infectious diseases of domestic and feral animal species. The techniques of ecological epidemiology will be used to illustrate and explain the population biology of the causative organisms and how this is relevant to the control of infectious disease. The course will consider the dynamics of epidemic and endemic infections, the relevance of herd immunity and other characteristics of the host population, and methods for assessing the likely impact of control strategies. The illustrative examples will be drawn from a wide variety of animal species. All the mathematical techniques required will be taught as an integral part of the material.

Taught by: Dr. Gary Smith and Staff
Activity: Lecture
2 Credit Hours
Notes: NOT OFFERED DURING 2017-2018. Limitations: Maximum of 16 students

VCSN 632 Diseases & Management of Sheep & Goats
This course is an introduction to small ruminant medicine and surgery. Flock and herd health programs involve control of infectious, parasitic, reproductive and metabolic disorders and provision of proper housing, feeding and reproductive management systems. Prevalent diseases and management systems of the Eastern U.S. will receive emphasis.

Taught by: Dr. M. Fecteau
Activity: Lecture
3 Credit Hours

VCSN 633 Animal Health Economics
An introduction to a variety of economic concepts and decision making techniques that relate to the business of an agricultural enterprise and to the impact of veterinary services on that enterprise. Discussion of the role of production medicine in the overall profitability of animal agriculture.

Taught by: Dr. D. Galligan and Staff
Activity: Lecture
2 Credit Hours
Notes: Conflict: Scheduled concurrently with Clinical Exercises in Quarter 1

VCSN 634 Clinical Biostatistics
This course presents a unified approach to the analysis and interpretation of clinical data. We start with a discussion of general linear models and show the types of problems to which they apply, and then move to generalized linear models, to survival models, and finally to general estimating equations. Our goal is to acquaint participants with a fairly comprehensive array of approaches to data analysis and, most particularly, to circumstances to which they apply. The objective is to prepare students for research activities, either as a career, or as a step towards "Board Certification" enabling them to plan studies, analyze data ensuing from studies, and to critically read articles in their area of interest.

Taught by: Dr. D. Stefanovski and Staff
Activity: Lecture
2 Credit Hours
Notes: Limitations: Min: 6 students/Max: 16 students

VCSN 635 Equine & Farm Animal Anesthesia
This course will discuss sedation and intravenous or inhalant anesthesia of equine, food animal and camelid patients. The lectures will review the clinical pharmacology of the commonly used anesthetic drugs and the anatomic and physiologic differences among the species and their relevance to anesthetic management. Patient preparation, drug selection, induction and intubation techniques, intra-operative monitoring and management of cardiovascular and respiratory abnormalities, post-operative analgesia and recovery complications will also be discussed. Three case-based problems with multiple questions related to various aspects of anesthesia care will be distributed during the course. The problems are take-home, open-book and students may work alone or in pairs. Time will be spent discussing the cases after the written answers are turned in.

Taught by: Dr. K. Olson and Staff
Prerequisite: Prerequisites: VSUR 604 Anesthesia
Activity: Lecture
2 Credit Hours
Notes: Note: This course is a prerequisite for VCSN 815 and VCSN 875 Large Animal Anesthesia Rotation - NBC. This course is required for Equine Majors

2018-19 Catalog | Generated 08/30/18
VCSN 636 Clinical Applications of Pharmacology
This course is focused on the clinical pharmacological management of the major problems in veterinary practice. The vast majority of lectures directly apply to companion animals but when necessary, to emphasize a drug group or specific clinical problem, there are also several large animal lectures. This is an extension of core pharmacology and not an expanded version. The lectures will be given by the clinical and basic sciences faculty in their areas of expertise. Emphasis will be on the clinical aspects of drug therapy such as dosage range, duration of therapy, evaluation of therapy, and problems encountered with current drug therapy. Pharmacological therapy in the following areas of medicine and surgery are covered: antibiotics, cardiovascular, neurology, respiratory, urinary, gastrointestinal, endocrine, emergency medicine, ophthalmology, chemotherapeutic agents, fluid therapy, anti-inflammatory, pain medications and other topics as needed for the most comprehensive clinical overview. Emphasis is on case-based approaches to drug therapy. The major objectives of this course are: (1) Provide practical information on rational drug therapy before entering the clinics and the real world of veterinary practice. (2) Provide a sound basis for rationally evaluating the presently available drugs and the drugs of the future. The course grade is based on a weekly quiz and/or mid-term/final. Taught by: Dr. J. Orsini and Staff
Prerequisites: Prerequisites: VBMS 607 Pharmacology and Toxicology, VPTH 605 Microbiology & VPTH 604 Immunology
Activity: Lecture
4 Credit Hours

VCSN 637 Animal Production Systems
This elective course provides an overview of: (i) management and operational basics of food animal production systems (dairy, beef, swine, poultry, and aquaculture), (ii) contemporary issues concerning current practice and sustainable future of animal production systems, e.g., food safety & biosecurity, antibiotics & antimicrobial resistance, nutrient management & environmental regulations, and animal welfare & public concerns. Students will work in teams on debates from pre-arranged topics, and will complete periodic assignments. Course grades will be based on class participation (40%), homework assignments (30%), and team debate performance (30%). Taught by: Dr. Z. Dou and Staff
Activity: Lecture
2 Credit Hours
Notes: Limitations: Capacity of classroom

VCSN 638 Introduction to Animal Welfare
This course will cover the basic principles, history, and application of animal welfare science for multiple species. Over a series of lectures, the complex issue of assessing good versus poor welfare will be addressed. The first few lectures will provide students with the background of this field, as well as key terms which define the assessment methods of animal welfare science. The multifaceted issue of poor versus good welfare will be addressed in a lecture on ethics and sociology. The background lectures will also cover the disparity in the assessment of pain, pleasure, stress, and suffering based on applying physiological versus behavioral measurements. Given the tools provided by the background lectures, the students will then learn about species-specific welfare issues in the subsequent lectures to include swine, poultry, bovine, equine, aquaculture, exotic/zoo animals, lab animals, shelter animals, companion animals and current events. Following each one-hour lecture, the students will engage in an hour of hands-on activities, and debates concerning that week's topic. Students will also participate in one wet lab where they will have the opportunity to apply methods of welfare assessment that they have learned in class. Taught by: Dr. M. Pierdon and Staff
Activity: Lecture
4 Credit Hours
Notes: Limitations: Permission of instructor since class is capped at 25 participants

VCSN 640 Large Animal Medicine - NBC
The course is comprised of advanced lectures and discussions on medical diseases of large domestic animals. Laboratory sessions will include "hands-on" experience in performing the more common diagnostic procedures in large animal medicine, including: urethral catheterization of horses; rectal examination; ophthalmic examinations; epidural anesthesia (bovine); nasolacrimal duct flushing; cardiovascular examinations; use of ultrasound equipment; venipuncture in cattle and horses; intravenous injections in cattle, baling gun procedure for cattle; TB testing in cattle and endoscopy of the horse. Two in-course Progressive examinations and a course Final examination will be given. Taught by: Dr. R. Nolen-Walston and Staff
Prerequisite: Prerequisites: Core Medicine Courses
Activity: Lecture
7 Credit Hours

VCSN 641 Advanced Poultry Medicine - NBC
This lecture/laboratory course is designed to provide students with a working knowledge of the recognition and diagnosis of selected diseases of poultry. Lectures will include discussion of the clinical, post-mortem and technical aspects of the diagnosis of selected avian diseases. The laboratory will provide each student with an opportunity to necropsy birds. Field visits to local poultry farms may be taken. The course grade will be based on weekly quizzes and a group project. Taught by: Dr. S. Davison and Staff
Prerequisites: Prerequisites: VPTH 602 General & Systemic Pathology & VMED 608 Introduction to Poultry, Swine, and Dairy Medicine
Activity: Lecture
2 Credit Hours
Notes: Limitations: Maximum of 40 students. CONFLICT: VCSN 648 Equine Sports Medicine
VCSN 642 Dairy Cattle Nutrition - NBC
The complexity of evaluating and balancing rations requires computer models. CPM-Dairy - developed at Cornell University, The University of Pennsylvania and The William H. Miner Agricultural Research Institute - evaluates and formulates rations according to a modified National Research Council (NRC) model and to The Cornell Net Carbohydrate and Protein System (CNCPs). CPM-Dairy will be used to describe nutrient requirements, supplies and utilization. Environmental effects on nutritional requirements will be demonstrated. The dynamics of ruminal fermentation and microbial growth will be illustrated in terms of how they affect nutrient supply. "Hands on Computer Sessions" will lead participants through ration formulation.
Taught by: Dr. L. Baker and Staff
Prerequisite: Prerequisites: VMED 605 Nutrition
Activity: Lecture
3 Credit Hours
Notes: CONFLICTS: Mon. 8-10 am conflicts with VCSN646 Equine Orthopedics

VCSN 643 Large Animal Reproduction - NBC
This course covers in-depth reproductive management of cattle, horses, swine and small ruminants. Emphasis is placed on the herd or flock as a unit rather than on the individual animal. This course is the same as VCSN644 but with one-half of the laboratory time. The course is intended for those students who intend to pursue a career that will be exclusively or predominantly companion animal. A three-hour canine reproduction laboratory is included. The Laboratories include demonstrations by clinicians and hands-on practical experience for students in evaluating the male and the female reproductive status: PATH F - female pathology, PATH M - male pathology, OB1 - obstetrics, B&R - bull and ram breeding soundness examination, vaginal cytology of the bitch, MARE1 - palpation of the genital tract per rectum of mare, COW1 - physical exam of the bovine genital tract, ULTRA - ultrasonography of the genital tract of animals.
Taught by: Dr. P. Sertich and Staff
Prerequisites: Prerequisites: VMED 610 Clinical Reproduction
Activity: Lecture
3 Credit Hours
Notes: Limitations: No Drop/Add

VCSN 644 Large Animal Reproduction - NBC
The course covers in-depth reproductive management of cattle, horses, swine, sheep and small ruminants. Emphasis is placed on the herd or flock as a unit rather than on the individual animal. Laboratories include demonstrations by clinicians and hands-on practical experience for students in evaluating the male and the female reproductive status of dogs and large domestic animals. Therapeutic information will be covered in problem-based cases that will be solved and formally presented by small student groups. Grades will be based on the therapeutic presentations, laboratory participation, mid-term exam and a comprehensive final examination. In addition to the laboratories listed in VCSN643 are the following eight laboratories: OB2- fetomy, STALL - stallion breeding soundness examination, SWINE - boar semen evaluation, heat detection and AI of sows, MARE2 - mare breeding soundness examination, palpation, MARE3 - using breeding soundness examination to solve infertility case, palpation, COW2 - bovine estrous cycle, palpation, COW3 - pregnancy diagnosis, palpation, COW4 - therapeutics, palpation.
Taught by: Dr. P. Sertich and Staff
Prerequisite: Prerequisites: VMED 610 Clinical Reproduction
Activity: Lecture
4 Credit Hours
Notes: Limitations: No Drop/Add. Note: This course is a prerequisite for Course VCSN 774 Large Animal Clinical Reproduction Rotation

VCSN 645 Large Animal Surgery & Surgical Exercises - NBC
Lectures given in this course will cover common surgical problems of the respiratory, the gastrointestinal, the musculoskeletal, and the urogenital systems of horses and of the gastrointestinal system of domestic ruminants. Lecture material will cover the procedures to be done in each laboratory beforehand so that ample opportunity is allowed for preoperative preparation. Lectures are given on anesthesia with special emphasis on drugs to be used during the laboratory sessions. The surgical exercises and related laboratory procedures are designed to teach surgical techniques and principles, surgical anatomy, and basic surgical procedures in horses and domestic ruminants. Students will administer general anesthetics and apply the principles and techniques of physiologic monitoring of anesthetized large animals. The importance and the application of preoperative and postoperative management will be emphasized and students take full responsibility for their patient’s progress throughout the course. The course grade is derived from performance in the laboratories, quality of patient care, participation in conferences, and one final exam.
Taught by: Dr. E. Parente and Staff
Prerequisite: Prerequisites: Core Surgery Courses
Corequisites: Post-requisite: must sign up for VCSN 870 Large Animal Surgery Clinical Rotation 7 Conference Hrs.
Activity: Lecture
4 Credit Hours
Notes: Limitations: No Drop/Add; Maximum of 30 students

VCSN 646 Equine Lameness - NBC
This course covers the principles of lameness diagnosis and treatment in horses. The course features didactic lectures, actual lameness examinations, video tape viewing, computer aided learning and a diagnostic nerve block laboratory using cadaver specimens.
Taught by: Drs. M. Ross, D. Levine and Staff
Prerequisites: Prerequisites: Core Surgery and Anatomy Courses
Activity: Lecture
4 Credit Hours
Notes: CONFLICT: Mon. 8-10 am conflicts with VCSN 642 Dairy Cattle Nutrition. Notes:This course is a prerequisite for the following clinical rotations: VCSN 812,872 Sports Medicine/-Imaging and VCSN 878 Sports Medicine Clinic
VCSN 647 Equine Orthopedics - NBC
The course reviews specific techniques in equine orthopaedics, and emphasizes understanding orthopaedic principles that are applicable to all species. Topics include more detailed information on internal fixation, relevant first-aid techniques, osteochondrosis and orthopedic sepsis.
Taught by: Dr. D. Richardson and Staff
Activity: Lecture
1 Credit Hour
Notes: CONFLICT: VCSN 642 Dairy Cattle Nutrition

VCSN 648 Equine Sports Medicine - NBC
This seminar course concerns the clinical application of basic physiologic and pathologic principles as they relate to the diagnosis and management of exercise-related diseases in the horse. Material will be presented in light of the demands of specific types of athletic activity. Laboratory demonstrations using the high-speed treadmill will be provided. Hands-on sessions are also provided to demonstrate the collection of arterial blood gas samples and upper airway endoscopy. Paper or oral presentation required.
Taught by: Dr. J. Slack and Staff
Prerequisites: Prerequisites: VBMS 601 Gross Anatomy, VBMS 605 Principles of Biochemistry & VBMS 606 Animal Physiology
Activity: Lecture
3 Credit Hours
Notes: CONFLICT: VCSN 641 Advanced Poultry Medicine

VCSN 649 Large Animal Diagnostic Imaging - NBC
The course consists of a series of lectures, a radiographic positioning laboratory and an ultrasound/anatomy laboratory. Plain film radiography comprises the majority of the lectures but ultrasound, scintigraphy and prepurchase examination are included. A brief introduction to CT & MRI is also presented. Strong emphasis is placed on the equine species but incorporates radiography of other large animals. The course is designed to cover the basic principles of the different imaging techniques, radiographic and sonographic anatomy, and the basic interpretation of the imaging modalities.
Taught by: Dr. V. Reef and Staff
Prerequisites: Prerequisites: Core Medicine, Surgery and Radiology Courses
Activity: Lecture
3 Credit Hours
Notes: This course is a prerequisite for the following clinical rotations: VCSN 812,872 Sports Medicine/Imaging and VCSN 814,874 Large Animal Radiology

VCSN 653 Catastrophic Epidemic Infectious Disease in Animals
Goals: Students who complete this course will: 1) Understand that large scale epidemics in domestic (and wild) animals have serious consequences for human health and well being even if the infection is not zoonotic; 2) appreciate that the consequences of large scale epidemics in domestic (and wild) animals are multiple and pervasive. Students will also: 1) See examples of the way in which large scale epidemics in domestic (and wild) animals adversely affect the economy, government and history of human society; provide opportunities for criminality; bring about changes in science policy and technology; and alter human demography and survivorship. 2) See a very broad range of examples of methodologies for bringing serious epidemics under control. 3) Understand how disease control strategies are devised and why it is necessary to pay attention to the acceptability of these strategies to producers, governments, and society at large. 4) Learn why it is important to have a definition of success. 5) acquire a sound theoretical basis for understanding how infectious diseases move through populations 6) begin to develop some insight into what might be done to defend animal agriculture from deliberate attack. Case Study 1: Rinderpest (directly transmitted disease of cattle and wildlife), Case Study 2: Dourine (sexually transmitted disease of horses), Case Study 3: Foot and Mouth Disease (directly transmitted disease cattle, sheep, swine), Case Study 4: Bovine BSE (a food borne, prion disease of cattle and people), Case Study 5: Avian Influenza (infection of birds transmitted by the fecal oral route), Case Study 6: Canine Distemper (directly transmitted infection of terrestrial and marine wildlife), Case Study 7: Nipah Virus Infections (emerging disease of bats, swine, people) The examples have been chosen to illustrate 1) a wide range of transmission mechanisms, 2) both zoonotic and nonzoonotic infections, 3) and emerging disease problems, Taught by: Dr. Gary Smith and Staff
Activity: Lecture
2 Credit Hours
Notes: NOT OFFERED DURING 2017-2018

VCSN 654 Veterinary Medicine Global Health and Food Security
This elective course focuses on the diversity of needs and expanding horizons for veterinary medicine in the developing world and will serve to introduce the scope and nature of issues in veterinary public health. Students will be evaluated based on attendance, participation, group exercises and required readings. Lectures will be presented by Penn Vet faculty as well as nationally known speakers. Taught by: Drs. D. Galligan, A. Kelly and Staff
Activity: Lecture
4 Credit Hours
Notes: Note: Required for the Certificate in Public Health

VCSN 657 One Health & Global Food Security
By 2050 can the world sustain a population of over 9 billion people in the face of climate change, limited water and other natural resources, pollution, urbanization, political and income inequality, conflict, changing diets and patterns of disease? An interdisciplinary group of faculty will explore this complex question through six broad trends that affect global food sustainability and environmental health; 1) nutritional needs; 2) changing patterns of communicable and non-communicable diseases of humans and all types of animals; 3) natural resource inventory and management; 4) production technologies (intensive/extensive systems); 5) societal changes impacting production and food demand; 6) food distribution systems and access to food. The course is open to graduate and undergraduate students and will involve student participation and research. Taught by: Drs. D. Galligan, A. Kelly and Staff
Activity: Lecture
4 Credit Hours
VCSN 661 Swine Neonatology - NBC
This is an introductory course for students who want to learn more about swine production and swine medicine. It aims to familiarize 2nd and 3rd year veterinary students with several important aspects of swine neonatology/farrowing room management that includes periparturient physiology and behavior of both the sow and the piglet, baby pig processing, and sow dystocia. All students will be required to attend the four hours of lecture, and four laboratory shifts. Each laboratory shift is 7 hours and available nights and weekends. Students will be required to monitor the farrowing house for sows in labor and attend the farrowings as needed to critically assess animal well-being. Students will be expected to provide appropriate sow or piglet interventions when indicated. Students will also assist with any routine management tasks such as piglet processing and vaccination. Students will be graded on their participation and success in meeting the course objectives.
Taught by: Dr. T. Parsons and Staff
Activity: Lecture
1 Credit Hour
Notes: Limitations: Permission of the Instructor; may be repeated once

VCSN 662 Swine Neonatology - NBC
This course is similar to VCSN 661, but provides students with a more intensive experience and the opportunity to pursue a higher level of proficiency in swine neonatology. The course also aims to familiarize 2nd and 3rd year veterinary students with several important aspects of swine neonatology/farrowing room management that includes periparturient physiology and behavior of both the sow and the piglet, baby pig processing, and sow dystocia. All students will be required to attend the four hours of lecture, and eight laboratory shifts. Each laboratory shift is 7 hours and available nights and weekends. Students will be required to monitor the farrowing house for sows in labor and attend the farrowings as needed to critically assess animal well-being. Students will be expected to provide appropriate sow or piglet interventions when indicated. Students will also assist with any routine management tasks such as piglet processing and vaccination. Students will be graded on their participation and success in meeting the course objectives.
Taught by: Dr. T. Parsons and Staff
Activity: Lecture
2 Credit Hours
Notes: Limitations: Permission of the Instructor; cannot be repeated

VCSN 663 Swine Husbandry - NBC
This is the second introductory course for students who want to learn more about swine production and swine medicine. It aims to familiarize 2nd and 3rd year veterinary students with several other aspects of swine husbandry and health management. All students will be required to attend four laboratory shifts, and write a short report on an aspect of mutual interest related to swine management or disease. Each laboratory shift is 7 hours and available nights and weekends. Students will be required to participate in all aspects of swine husbandry with special emphasis given to herd health, reproductive and nutritional management. Students will be graded on their participation and success in meeting the course objectives.
Taught by: Dr. T. Parsons and Staff
Prerequisite: Prerequisites: Swine Neonatology (VCSN 661 twice or VCSN 662 once)
Activity: Lecture
1 Credit Hour
Notes: Limitations: Permission of the Instructor; can be repeated once

VCSN 664 Swine Husbandry - NBC
This course is similar to VCSN 663, but provides students with a more intensive experience and the opportunity to pursue a higher level of proficiency in swine husbandry. This course aims to familiarize 2nd and 3rd year veterinary students with several other aspects of swine husbandry and health management. All students will be required to attend eight laboratory shifts, and write a short report on some aspect of mutual interest related to swine management or disease. Each laboratory shift is 7 hours and available nights and weekends. Students will be required to participate in all aspects of swine husbandry with special emphasis given to herd health, reproductive and nutritional management. Students will be graded on their participation and success in meeting the course objectives.
Taught by: Dr. T. Parsons and Staff
Prerequisite: Prerequisites: Swine Neonatology (VCSN 661 twice or VCSN 662 once)
Activity: Lecture
2 Credit Hours
Notes: Limitations: Permission of the Instructor; can be repeated once

VCSN 700 Large Animal Medicine - Foundation - NBC
Students in this rotation will assist clinicians in history taking, examinations and the medical management of large animal patients presented to the hospital at New Bolton Center. Students will participate in daily ward and Medicine teaching rounds, Radiology rounds and Pathology rounds. All students, whether in core or elective, will be expected to participate in night and weekend duty on a rotating basis. All students will prepare and present one clinical case discussion for Grand Rounds. Time commitment: at least 8 hours per day plus night and weekend duty.
Taught by: Dr. R. Sweeney and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours

VCSN 701 Large Animal Emergency/Critical Care - Foundation Rotation - NBC
This rotation is designed to teach students basic principles of large animal emergency medicine and surgery as well as the daily management of critically ill equine patients. Students will be involved in a variety of large animal emergency admissions including diagnostic procedures and surgery as well as post-operative or post-admission case management of horses with gastrointestinal disease. Students will attend regular 8 am morning rounds (see course description for Large Animal Surgery, VCSN 800), followed by morning case-based discussion rounds. The day will be spent either on emergency admissions or procedures and management of in-house patients. Daily afternoon rounds will be topic-based, and may be selected from the following topics: Laceration Repair, Emergency Stabilization of Fractures, Acute Abdomen (colic), Diarrhea, Fluid Therapy, Respiratory Distress, Acute Blood Loss/Hemorrhagic Shock, Food Animal Emergencies, Blood Gas Interpretation, Acute Neurologic Patient, Monitoring the Critically Ill Patient, Reproductive Emergencies, Management of Rectal Tears, Critical Care Journal Club.
Taught by: Dr. L. Southwood and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
VCSN 712 Food Animal Reproduction - NBC
The course is designed for those students anticipating entering large animal or mixed practice. Students will participate in the diagnosis and treatment of clinical reproductive cases in the hospital. Students will be responsible for the daily treatment and examination of all hospitalized cases at the Hofmann Center. Students will also assist in the management of reproductive problems of Widener Hospital patients. Exposure will vary due to fluctuations in case load. Additional "hands-on" practice of reproductive procedures will occur by the use of teaching animals. Organized laboratories will allow the student to become comfortable with diagnostic techniques of large animal species. On-call, weekend, and night duty are required. Students will be required to give a 15 minute presentation during the rotation and prepare two case letters/discharge instructions on animals they evaluated during the rotation. If student interest and time permit, students may go on field trips to breeding farms.

Taught by: Dr. T. Dobbie and Staff
Prerequisite: Prerequisites: VCSN 644 Large Animal Reproduction
Activity: Clinical Rotation Dental & Vet school
3 Credit Hours
Notes: Satisfies requirement for: EQ, FA, LA. Limitations: 2-6 students/rotation. Priority: FA

VCSN 713 Field Service - NBC
Students in this rotation will assist staff doctors in history taking, physical examinations, and the medical management of patients seen on the Field Service activities of the School’s large animal practice. The student is required to attend the appropriate 8:00 a.m. daily rounds at New Bolton Center. The remainder of the day will be spent on field calls. The student will be required to be on night and weekend duty. Night duty will be divided equally among field service students in the rotation. Students on emergency duty are required to be within 15 minutes from New Bolton Center while on duty. Case presentations will be given by students on the second Wednesday of the rotation. Boots and coveralls are essential for this rotation.

Taught by: Dr. B. Smith and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Required: SALA

VCSN 715 Diagnostic Ultrasound in Large Animals - NBC
This rotation will provide students with experience in the diagnosis and treatment of large animal cardiac diseases and the use of M-mode, 2-dimensional real-time, pulsed wave, color flow and continuous wave Doppler echocardiography and exercising electrophysiology. Students will also gain experience in the use of diagnostic ultrasonography in the evaluation of tendon and ligament injuries, diseases of the thorax and abdomen, and the evaluation of masses, swellings, neonates and high-risk pregnancies. Students will also gain experience in patient preparation; obtaining a quality ultrasonographic or echocardiographic image and cardiac Doppler studies; and in interpretation of these images and studies with staff and faculty supervision. Students will be responsible for patient care of animals presented to the Heart Station/Ultrasound Service during the rotation.

Taught by: Dr. V. Reef and Staff
Prerequisite: Prerequisites: Core Medicine and Surgery
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: 2 students/week in VCSN 776, VCSN 775 combined. Satisfies imaging requirement: SALA. Notes: Not offered during VCSN 812,872 Sports Medicine/Imaging

VCSN 716 Ultrasonography in Large Animals - NBC
For full course description see VCSN 715.
Taught by: Dr. V. Reef and Staff
Prerequisite: Prerequisites: Core Medicine and Surgery
Activity: Clinical Rotation Dental & Vet school
2 Credit Hours
Notes: Limitations: 2 students/week in VCSN 106,776, VCSN 715,775 combined. Satisfies requirement for: EQ, FA, LA. Note: Not offered during VCSN 812,872 Sports Medicine/Imaging

VCSN 770 Large Animal Medicine Clinic - NBC
Students participating in this elective rotation will be assigned with the core students in VCSN700 in the Medicine Section. These elective students will participate in the same manner as core students, although attempts will be made, when possible, to allow them to focus more on some cases or diseases of particular interest to them. They are expected to participate, to the same extent as core students, in all emergency duties including night and weekend on-call duty. At least eight hours per day, plus duty hours.

Taught by: Dr. R. Sweeney and Staff
Prerequisite: Prerequisites: Core Medicine Courses
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSN 772 Food Animal Reproduction - NBC
The course is designed for those students anticipating entering large animal or mixed practice. Students will participate in the diagnosis and treatment of clinical reproductive cases in the hospital. Students will be responsible for the daily treatment and examination of all hospitalized cases at the Hofmann Center. Students will also assist in the management of reproductive problems of Widener Hospital patients. Exposure will vary due to fluctuations in case load. Additional "hands-on" practice of reproductive procedures will occur by the use of teaching animals. Organized laboratories will allow the student to become comfortable with diagnostic techniques of large animal species. On-call, weekend, and night duty are required. Students will be required to give a 15 minute presentation during the rotation and prepare two case letters/discharge instructions on animals they evaluated during the rotation. If student interest and time permit, students may go on field trips to breeding farms.

Taught by: Dr. T. Dobbie and Staff
Prerequisite: Prerequisites: Core Medicine and Surgery
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Required: SALA

VCSN 773 Field Service - NBC
This is an elective rotation equivalent to course VCSN 713. Students participating in this elective rotation will be assigned with the core students in VCSN700 in the Medicine Section. These elective students will participate in the same manner as core students, although attempts will be made, when possible, to allow them to focus more on some cases or diseases of particular interest to them. They are expected to participate, to the same extent as core students, in all emergency duties including night and weekend on-call duty. At least eight hours per day, plus duty hours.

Taught by: Dr. R. Sweeney and Staff
Prerequisite: Prerequisites: Core Medicine Courses
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs
VCSN 774 Large Animal Clinical Reproduction - NBC
The course is designed for those students anticipating entering large animal or mixed practice. Students will participate in the diagnosis and treatment of clinical reproductive cases in the hospital. Students will be responsible for the daily treatment and examination of all hospitalized cases at the Hofmann Center. Students will also assist in the management of reproductive problems of Widener Hospital patients. Exposure may vary due to fluctuations in case load. Additional "hands-on" practice of reproductive procedures will occur by the use of teaching animals. Organized laboratories will allow the student to become comfortable with diagnostic techniques of large animal species. On-call, weekend, and night duty are required. Students will be required to give a 15 minute presentation during the rotation and prepare two case letters/discharge instructions on animals they evaluated during the rotation. If student interest and time permit, students may go on field trips to breeding farms.
Taught by: Dr. P. Sertich and Staff
Prerequisite: VCSN 644 Large Animal Reproduction
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 2-5 students/rotation. Priority: EQ, FA, LA Majors

VCSN 775 Diagnostic Ultrasound in Large Animals - NBC
This is an elective rotation equivalent to course VCSN 715.
Taught by: Dr. V. Reef and Staff
Prerequisites: Prerequisites: Core Medicine and Surgery
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: 2 students/week in VCSN 776,VCSN 775 combined.
Note: Not offered during VCSN 872 Sports Medicine/Imaging

VCSN 776 Ultrasoundography in Large Animals - NBC
For full course description see VCSN 715.
Taught by: Dr. V. Reef and Staff
Prerequisites: Prerequisites: Core Medicine and Surgery
Activity: Clinical Rotation Dental & Vet school
2 Credit Hours
Notes: Limitations: 2 students/week in VCSN 776,VCSN 775 combined.
Note: Not offered during VCSN 872 Sports Medicine/Imaging

VCSN 777 Large Animal Neonatal Intensive Care Rotation - NBC
This elective provides students with experience in the management of critically ill large animal neonates and dams with periparturient complications. Daily rounds emphasize the use of monitoring techniques (e.g. capnography, ECG, BP monitor, fetal and neonatal ultrasonography), and various treatment modalities (e.g. parenteral nutrition, positive pressure ventilation, and fluid therapy) required in the management of critically ill neonatal foals and late-term pregnant mares. Students will have the opportunity to master the following manual and theoretical skills: arterial puncture and arterial blood gas analysis, calculation and application of parenteral and enteral nutrition formulations, catheterization techniques for veins and bladder, principles of fluid therapy as applied to patients with septic shock and patients requiring maintenance fluids, radiographic interpretation of neonatal thoracic and musculoskeletal disease, interpretation of fetal and neonatal sonograms, familiarity with different types of respiratory support and resuscitation protocols, and a working knowledge of a wide variety of pharmacologic agents including antibiotics, anticonvulsives, sedatives, analgesics, pressors and inotropic agents.
Taught by: Dr. J. Palmer and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 4 students min; 8 students maximum

VCSN 780 Ration Evaluation and Formulation - NBC
This course is intended to provide students with practical experience in evaluating dairy feeding programs and formulation of rations. Students will visit dairy farms, inspect feed storage and delivery systems, obtain representative samples of feedstuffs for analysis, examine production records, and assess animal body condition. Students will then evaluate the nutritional and economic adequacy of the whole feeding program, suggest recommendations for its improvement and prepare producer reports for discussion with faculty prior to implementation.
Taught by: Dr. L. Baker and Staff
Prerequisite: Prerequisites: VCSN 642 Dairy Cattle Nutrition
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Minimum of 3 students

VCSN 800 Large Animal Surgery-Foundation - NBC
Students rotating through Large Animal Surgery at NBC will participate in all aspects of examination and diagnosis, including lameness evaluation and endoscopy, medical and surgical treatment and daily patient care of large animals. During one week of the two-week rotation, each student will be assigned to treat cattle, other domestic farm animals and horses, and during the other week, horses only. Night, weekend and holiday assignments, including treatments and emergency service, will be made according to the requirements of the overall hospital operation during a given session. Students usually are exposed to various surgical procedures (general soft tissue, abdominal, orthopedic, etc.) during any one rotation. During the rotation, students may gain experience with horses being examined on the High Speed Treadmill or undergoing imaging in the Nuclear Scintigraphy Unit. Students will also participate in a variety of didactic teaching rounds, barn rounds and teaching laboratories as described: Monday, Tuesday, Wednesday, Thursday 4-5 pm - Surgery Teaching Rounds. Friday 9-10 am - Surgery Teaching Laboratory (Wet labs). Monday 9-10 am - Surgery Rounds (case-based discussion led by surgery faculty). Tuesday 9-10 am - Lameness Rounds (case-based discussion led by Sports Medicine faculty). Wednesday 9-10 am - Radiology Rounds (case-based discussion led by radiology faculty). Thursday 9-10 am - Grand Rounds (Student case presentations). Friday 9-10 am - Medicine Teaching Rounds (case-based discussion with Medicine faculty and house officers).
Taught by: Dr. D. Richardson and Staff
Activity: Clinical Rotation Dental & Vet school
10 Credit Hours
Notes: Limitations: Maximum of 4 students per rotation Notes: Offered Rotations 1-8, possibly 9-10; Individual rotations in Sports Medicine Clinic, LA Radiology, LA Ultrasound and Podology are not offered during this time period. Satisfies imaging requirement: EQ, LA, FA
VCSN 814 Large Animal Radiology - NBC
In this rotation, students will gain experience in making and interpreting large animal radiographic examinations. They will assist the radiology technicians in taking and processing routine radiographs, attend film reading sessions, daily hospital rounds and review large animal radiographs independently and under supervision. Students will be required to write radiology reports.
Taught by: Dr. K. Wulster and Staff
Prerequisite: Prerequisites: VCSN 649 Large Animal Diagnostic Imaging
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: 2 students/rotation. Satisfies imaging requirement: EQ, FA, LA, SALA. Note: Not offered during VCSN 812,872 Sports Medicine/Imaging

VCSN 815 Large Animal Anesthesiology Service - NBC
During the Large Animal Anesthesia Service Rotation, students will gain experience in: (1) anesthetizing equine and other farm animal patients for elective and emergency procedures; (2) alleviating pain in animals; (3) maintaining adequate vital functions during anesthesia and (4) managing fluid, electrolyte and acid-base disturbances in the perioperative period. In addition, the course offers the opportunity to apply the clinical pharmacology of perianesthetic drugs in various farm animal species. Students are requested to attend Anesthesia Service rounds on Mondays and Fridays (8-9:00 am) during their clinical rotation, which will also offer the opportunity to discuss anesthesia cases. Night and weekend emergency duty is mandatory and shared with veterinary technician students. The maximum emergency duty is 4 weekday nights and one 24-hour weekend day. Students are expected to report to the Sports Medicine Conference Room or Anesthesia Office promptly at 8:00 am on the first Monday morning of the 2-week rotation with scrubs, stethoscope and calculator. Students are requested to review the information contained in the class notes of the following courses for appropriate sections prior to entering the rotation: General Pharmacology and Toxicology (VBMS 607), Animal Physiology (VBMS 606), Anesthesia (VSUR 604), and the Equine and Farm Animal Anesthesia Elective (VCSN 635). Students should also be familiar with dosages of commonly used drugs and their clinical pharmacology and technical aspects of the practice of large animal anesthesia.
Taught by: Dr. B. Driessen and Staff
Prerequisite: Prerequisites: VCSN 635 Equine and Farm Animal Anesthesia
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 2 students/rotation, not Early Entry. Required: EQ. Satisfies anesthesia/pain management requirement: FA, LA, SALA

VCSN 816 Food Animal Anesthesiology Service - NBC
In this rotation, students will gain experience in planning and performing sedation and anesthesia in small ruminants, swine and camelids. Specific clinical objectives during the five-day rotation include physical and chemical restraint, regional and general anesthesia techniques in various food and fiber producing animals, and operation and use of various anesthetic monitoring devices. Emphasis is on techniques and drugs commonly used in the field. Students will formulate plans for sedation and/or short term anesthesia in sheep/goats, pigs and camelids and will then carry them out on teaching animals. Techniques for regional anesthesia for flank surgery in the bovine will be performed at Marshak Dairy.
Taught by: Dr. K. Olson and Staff
Activity: Clinical Rotation Dental & Vet school
3 Credit Hours
Notes: Limitations: 2-4 students/rotation, not Early Entry. Priority: Food Animal Majors. Satisfies anesthesia/pain management requirement: FA, LA

VCSN 870 Large Animal Surgery Clinic - NBC
This is an elective clinical rotation equivalent to VCSN 800. Students electing VCSN 645 during Large Animal Block are required to take this rotation in addition to VCSN 800 in their fourth year.
Taught by: Dr. D. Richardson and Staff
Prerequisite: Prerequisites: Core Surgery Courses
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs. Note: This rotation is a postrequirement of VCSN645 Large Animal Surgery and Surgical Exercises

VCSN 871 Equine Surgery Clinic - NBC
This elective is specifically designed to provide students interested in equine practice after graduation with additional exposure to a variety of orthopedic and soft tissue surgical problems of horses. Students will actively participate in all aspects of lameness and soft tissue diagnosis, treatment, surgery and patient care. Teaching rounds will involve daily barn rounds, daily didactic presentations and/or wet labs covering surgical topics. Laboratories include internal fixation of fractures, wound repair, arthroscopy, intestinal surgical techniques, laser surgery, head and neck surgery, video analysis of lameness and field anesthesia. Every effort is made to have students in this course perform field castrations with local veterinarians. Students will be expected to participate in after-hours treatments and surgical emergencies of horses; however, students will not be assigned to food animal patients during this rotation.
Taught by: Dr. D. Richardson and Staff
Prerequisite: Prerequisites: VCSN 800 Large Animal Surgery-Foundation
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 6-10 students. Priority: Equine Majors

VCSN 872 Sports Medicine/Imaging - NBC
This is an elective rotation equivalent to course VCSN 812.
Taught by: Dr. E. Davidson and Staff
Prerequisite: Prerequisites: VCSN 649 Large Animal Diagnostic Imaging and VCSN 646 Equine Lameness
Activity: Clinical Rotation Dental & Vet school
10 Credit Hours
Notes: Limitations: Maximum of 4 students per rotation Notes: Offered Rotations 1-8, possibly 9-10; Individual rotations in Sports Medicine Clinic, LA Radiology, LA Ultrasound and Podology are not offered during this time period
VCSN 873 Large Animal Emergency/Critical Care Service - NBC
This rotation is designed as a supplement to the Foundation Emergency / Critical Care rotation, for students with a specific interest in this field or those desiring more large animal exposure. The format will follow that outlined for the Foundation rotation (VCSN 701), with emphasis on more advanced critical care topics. Elective students will not be required to complete a Grand Rounds presentation.
Taught by: Dr. L. Southwood and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours

VCSN 874 Large Animal Radiology - NBC
This is an elective rotation equivalent to course VCSN 814
Taught by: Dr. K. Wulster and Staff
Prerequisite: Prerequisites: VCSN 649 Large Animal Diagnostic Imaging
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: 2 students/rotation. Note: Not offered during VCSN 812,872 SportsMedicine/Imaging

VCSN 875 Large Animal Anesthesiology Service - NBC
This is an elective rotation equivalent to course VCSN 815
Taught by: Dr. B. Driessen and Staff
Prerequisites: Prerequisites: VCSN 635 Equine and Farm Animal Anesthesia
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 2 students/rotation, not Early Entry

VCSN 876 Food Animal Anesthesiology Service - NBC
This is an elective rotation equivalent to course VCSN 816
Taught by: Dr. K. Olson and Staff
Activity: Clinical Rotation Dental & Vet school
3 Credit Hours
Notes: Limitations: 2-4 students/rotation, not Early Entry. Priority: FA majors

VCSN 877 Food Animal Medicine and Surgery Clinic - NBC
This elective rotation is designed to provide additional experience in food animal medicine and surgery to students who are likely to pursue bovine practice following graduation. Students will participate in the diagnosis and treatment of food animal (primarily dairy cattle) medical and surgical diseases. Teaching rounds will involve daily barn rounds, didactic presentations and wet labs covering medical and surgical topics. The emphasis will be on individual animal (as opposed to herd health) problems. Students will be responsible for after-hours treatments and emergencies of food animals only; students will not work with equine patients during this rotation. Each student will have three weeknights and one 24-hour weekend shift during the rotation (based on 8 students enrolled). Note: students that desire further experience in medical or surgical problems of all large animal species should elect either VCSN 770 or VCSN 870.
Taught by: Dr. R. Sweeney and Staff
Prerequisites: Prerequisites: Large Animal Medicine and Surgery Rotations. Additional prerequisites for non-food animal majors: VCSN 640 Large Animal Medicine, VCSN 645 Large Animal Surgery and Surgical Exercises, and VCSN 644 Large Animal Reproduction
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Maximum of 8 students, not Early Entry. Priority: FA majors. First priority to students who are taking VCSN 810,880 Dairy Production Medicine Clinic

VCSN 878 Sports Medicine Clinic - NBC
The Sports Medicine Clinic provides exposure to many types of problems facing the equine practitioner, concentrating on lameness and performance evaluations. While part of the course stresses traditional lameness evaluation and clinical diagnoses, high-speed treadmill evaluations and nuclear scintigraphy enable the student to participate in more intricate problems affecting sport horses. The course will provide students with the opportunity to develop techniques of examination and diagnosis, and permit direct contact with clients. Students are expected to perform in all areas and participate to the maximum of their ability. Duties may include care and SOAPS of in patients and may include care over a weekend. There is NO emergency duty. In order to participate students are required to have satisfactorily completed the prerequisite courses.
Taught by: Dr. E. Davidson and Staff
Prerequisites: Prerequisites: VCSN 646 Equine Lameness and VCSN 649 Large Animal Diagnostic Imaging
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: 2 students/rotation. Notes: Not offered during VCSN 812,872 Sports Medicine/Imaging

VCSN 879 Equine Podology - NBC
This course covers the principles of both normal and corrective shoeing as well as examining the current theories of hoofcare. The student will: attend surgery rounds beginning in radiology each morning; and work with the resident farrier and equine clinicians on the various lameness problems presented to the clinic. Foot anatomy and physiology will be stressed. While the students will not be required or expected to manually make or nail on a shoe, they will be required to participate in and observe the procedures utilized. Procedures expected of Equine veterinarians such as removing shoes and debriding the sole will be covered in detail. Additional specialties such as the application of extensions to foal hooves can be incorporated into the rotation if requested.
Taught by: P. Reilly and Staff
Activity: Clinical Rotation Dental & Vet school
2 Credit Hours
Notes: Limitations: 2 students/rotation. Note: Not offered during VCSN 812,872 Sports Medicine/Imaging
VCSN 880 Dairy Production Medicine Clinic - NBC
This program is an integrated curriculum sponsored by the Sections of CAHP, Field Service and Reproduction as a part of the Food Animal Majors Program of the School of Veterinary Medicine. Curriculum begins with an overview of the "Economic Reality" of dairy production progressing through "Quantitative Skills" - T test, Chi Square, and Proportions; "Semen Selection" - visit stud, concepts in genetics semen selection and allocation and linear programming approaches; "Heifer Rearing" - systems view of heifer rearing, evaluation of heifer weight gain and evaluation of heifer reproduction; "Dairy Herd" - vaccination programs through body condition scoring; "Milk Quality" - principles of milking machine, procedures evaluation, mastitis control programs, DHIA, SCC monitoring programs, microbiology and quality assurance Reproduction - traditional programs, new programs and evaluation and interpretation of infertility and pregnancy loss; "Monitoring Reproduction" - current measures, heat detection, breeding intervals, developing a heat detection program; "Record Systems" - DHIA records, paper records, DAIRY COMP 305 (down loading data); "Dairy Nutrition" - ration evaluation using Spantan, interaction with reproduction, MUN interpretations; "Culling" - basic economic concepts and sample applications; "Facilities Evaluation" - ventilation and free stalls; "Computer Data Bases" - DairyL, AABPL, Merck Diagnostic Program, Cornell Diagnostic Program and Internet sites; "Laboratories" - obstetrics/fetotomy, special procedures, follow the estrus cycle in a cow (2 students/cow), milk progesterone kits and breeding soundness examination; "Herd visits with private practitioners" Taught by: Dr. D. Galligan, M. Kristula and Staff
Activity: Clinical Rotation Dental & Vet school
24 Credit Hours
Notes: Limitations: 10 students. Priority: FA Majors

VCSN 881 Food Safety and Quality Assurance - NBC
The purpose of this course is to prepare the student to: 1) Identify human health hazards in food of animal origin. 2) Define some of the roles of the veterinarian in preventing/reducing the introduction of biohazards into the food chain. 3) Discuss the principles of safe food practices for both animals and humans. 4) Recognize and describe where laboratory studies (microbiology, toxicology, chemistry) would help define real or potential problems. 5) Define the appropriate times to utilize laboratory evaluations and become familiar with interpretive criteria. 6) Participate in field trips to learn about different practices and processes. Assess sites in terms of HACCP criteria. 7) Interact with representatives from local and federal agencies concerning policies, application of technology and recommendations concerning problem solving issues. 8) Discuss intervention actions that can be initiated during acts of bioagroterrorism and/or naturally-occurring disasters (using recent events as models for discussion). Case studies will be introduced as problem solving activities.
Taught by: Dr. C. Benson and Staff
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: Maximum of 10 Students. NOT OFFERED UNTIL FURTHER NOTICE

VCSN 882 Swine Production Medicine - NBC
On-farm problem solving and client communications will be emphasized in this course. Students will be required to interact with producers. Students will write a follow-up report describing the findings and recommendations from the farm visit. Each student will also be assigned a case that will require collation of careful history taking, judicious performance of diagnostic tests and critical analysis of computerized production records to reach their diagnosis. Students will visit farms and other allied industries to survey production systems and collect data to be analyzed in the course. Various production systems and cycles will be reviewed, performance targets will be explained, and their elasticity and economic prioritization will be discussed. Records and data will be analyzed and students will learn how to identify significant production deficiencies and associate these with disease processes - either non-infectious, management-related, or infectious. Strategies for dealing with specific deficiencies will be outlined and the benefits of intervening to improve productivity will be compared to the costs of disease and used in developing a recommendation for action by the producer.
Taught by: Dr. M. Pierdon and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 2-6 students. Note: Students are required to have no other contact with swine for the duration of the course

VCSN 883 Advanced Swine Production Medicine - NBC
A new role for swine veterinarians is emerging in large scale swine production. So-called "corporate veterinarians" are employed by a single company and have the challenge of overseeing the production and health care concerns of the animals owned or managed by their employer. This course provides students with the opportunity to gain exposure to this emerging discipline in swine veterinary medicine. Principles of epidemiology, economics and health care delivery systems and their application to optimizing swine health and production will be provided. Students will work closely with selected professionals who are in a leading role in defining the veterinarians place in large scale, vertically integrated swine production. This course extends the offerings in VCSN 882 . Students will be expected to complete a small project or investigation during their visit.
Taught by: Dr. G. Althouse and Staff
Prerequisites: Prerequisites: VCSN 882 Swine Production Medicine and permission of instructor.
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Note: Students are required to have no other contact with swine for the duration of the course.
VCSN 884 Swine Production - NBC
Veterinarians today cannot make useful contributions to the swine industry without an intimate understanding of swine production. The successful practice of modern swine production medicine depends on the ability of the veterinarian to interweave their traditional training in medicine with the intricacies of swine husbandry. This course provides students with the opportunity to gain hands-on experience in modern swine production systems and/or swine production medicine practices. Students will learn through immersion the basic management, husbandry and/or production medicine practice by working with a practice or a farm in specific phases of swine production at a few selected, nationally recognized swine companies. Permission of instructors required.
Taught by: Dr. G. Althouse and Staff
Prerequisites: Prerequisites: VCSN 882 Swine Production Medicine and permission of instructor.
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Note: Students are required to have no other contact with swine for the duration of the course

VCSN 885 Equine Ophthalmology - NBC
This course is designed to provide students with ophthalmology experience to supplement what they obtain in the Large Animal Medicine foundation rotation, and, if taken, the Small Animal Ophthalmology elective. It is intended both for students with a special interest in ophthalmology, to broaden their exposure to include equine ophthalmology, and for equine students, to provide them with ophthalmology training that will benefit their equine patients in either general or specialty practice. This latter is particularly important given that most equine students do not take the Small Animal Ophthalmology elective and so graduate without clinical ophthalmology experience. Students will participate in the diagnosis and treatment of clinical ophthalmology cases in the hospital. Students will assist with evaluation of new cases, both inpatient and outpatient, and will be responsible for the daily treatment and examination of all hospitalized ophthalmology cases. Students will handle communication with clients and construct discharge summaries when appropriate. Exposure will vary due to fluctuations in case load. Organized laboratories in slit-lamp biomicroscopy, indirect ophthalmoscopy, and tonometry will allow the student to become comfortable with ophthalmic diagnostic techniques.
Taught by: Dr. N. Scherrer and Staff
Prerequisite: Prerequisites: Completion of Large Animal Medicine rotation
Activity: Lecture
6 Credit Hours
Notes: Limitations: preferred minimum 14 students / rotation

VCSN 890 Large Animal Medicine and Surgery Holiday Emergency Rotation - NBC
Students will assist emergency clinicians and house officers in history taking, examinations, and the medical and surgical management of large animal patients presented on an emergency basis to the hospital at New Bolton Center. Students will also be responsible for the care and treatment of medical and surgical patients hospitalized at New Bolton Center. This rotation will consist of two 12-hour shifts per day including the weekends and any holidays (example Christmas and New Years Day). All students will be expected to participate in night, weekend, and holiday duty on a rotating basis. Students in this rotation will be responsible for five 12-hour shifts each during the one-week rotation. Students are expected to be on the premises during their duty shifts. Rounds to acquaint students with the hospitalized patients will be held daily during each shift with the emergency clinician/house officer/nursing staff on duty, but no formal teaching or Grand Rounds will occur during this rotation.
Taught by: Dr. B. Dallap Schaer and Staff
Activity: Clinical Rotation Dental & Vet school
3 Credit Hours
Notes: Limitations: preferred minimum 14 students / rotation
VETERINARY CLINICAL STUDIES - SURGERY COURSES (VSUR)

VSUR 601 Surgical Principles
This Core lecture/laboratory/computer course emphasizes the basic principles of surgery and the application to surgical diseases of domestic animals. Attendance at laboratories for this course is mandatory. Missed laboratories will result in the grade of Incomplete for the course. Missed laboratories will be made up during the next time the missed laboratory becomes available. Clinical Exercises, Course VSUR 602, in Quarter 1 cannot be taken until all course requirements for Surgical Principles have been completed.
Taught by: Drs. M. Ross, Ortved and Staff
Activity: Lecture
4 Credit Hours

VSUR 602 Clinical Exercises
Taught by: Dr. D. Holt & Dr. G. Gianotti and Staff
Prerequisites: Prerequisites: Passing grades in VSUR 601 Surgical Principles and VSUR 604 Anesthesia
Activity: Lecture
1 Credit Hour

VSUR 603 Clinical Orthopedics
This course presents the basic principles of orthopedic surgery and orthopedic disease. Course material includes small animal orthopedics, large animal orthopedics and orthopedic radiology. Laboratories include two radiograph reading sessions, one splint lab, and a lab pining and wiring plastic bones.
Taught by: Dr. K. Agnello and Staff
Activity: Lecture
4 Credit Hours

VSUR 604 Anesthesia
This course reviews basic physiologic and pharmacologic aspects and their relationship to clinical application of general anesthesia. Uptake of anesthetic agents and distribution to various organ systems are discussed as are the changes in acid-base balance produced by the state of anesthesia. Effects of anesthesia on pulmonary gas exchange and cardiovascular function are emphasized. The clinical aspects of pre-anesthetic medications, the choice of anesthesia, equipment and techniques, cardiopulmonary resuscitation, and the management of specialized cases are discussed. One progressive examination is given, and the final exam is comprehensive.
Taught by: Dr. J. Pavez and Staff
Activity: Lecture
4 Credit Hours
VCSP 630 Hematopoiesis
This course aims to correlate clinical and basic science in comparative hematology. Faculty from the Veterinary and Medical Schools will present recent developments in clinical medicine and basic research of disorders of blood cells, including transfusion medicine, erythrocyte defects, myelodysplasia, transplantation, cytokines, etc. Informal lecture presentations will allow for ample discussions with instructors. Attendance, participation in class and a paper on a suitable topic of hematology submitted at the end of the course will make up part of the grade for this course. The written review and discussion of an original study paper will serve also as one of the clinical competency requirements.
Taught by: Dr. U. Giger and Staff
Prerequisites: Prerequisites: 1st and 2nd year core courses
Activity: Lecture
2 Credit Hours
Notes: NOT OFFERED DURING 2017-2018

VCSP 632 Diagnosis of Common Veterinary Intoxications
The diagnosis of poisoning in small animals has become an important part of Veterinary Medicine. All parts of Veterinary education are used in making diagnoses and formulating treatment of the poisoned animal patient. Thus, the course involves the integration of preclinical and clinical subjects, rather than simply the study of toxicology. The instructors will provide detailed descriptions of cases from the Emergency Service files, integrated with the more typically academic aspects of toxicology. A variety of common toxins will be discussed including ethylene glycol, lead, zinc, organophosphates, rodenticide anticoagulants, cholecalciferol and non-steroidal anti-inflammatory drugs. The format for this course will be creative and include interactive lectures and discussions. The major emphasis of the course will be the clinical diagnosis and clinical management of intoxicated patients utilizing basic physiological and pharmacologic principles.
Taught by: Dr. K. Drobatz and Staff
Activity: Lecture
2 Credit Hours
Notes: Limitations: Minimum of 10 students

VCSP 633 Introduction to Companion Avian Medicine
This course is designed to provide the future veterinarian with the tools to evaluate, diagnose, and treat pet avian species in clinics and beyond. Although the course will mainly focus on common psittacine species kept as pets, information on columbiform and passerine species will be provided as well. Topics covered will include pet parrot taxonomy, husbandry, nutrition, clinical examination, common infectious diseases, and practical diagnostic and surgical techniques. The final grade is based on attendance (students with 3 unexcused absences will receive a penalty to their grade) and completion of an in-class final examination. Submission of a course evaluation at the end of the course is required for a grade.
Taught by: Dr. N. Wyre and Staff
Prerequisites: Prerequisites: 1st and 2nd Year Core Courses
Activity: Lecture
2 Credit Hours

VCSP 634 Introduction to Reptile and Amphibian Medicine
This course is designed to provide the future veterinarian with the tools to evaluate, diagnose, and treat captive reptiles and amphibians in clinics and private practice, zoological institutions, and herpetological collections. This course will focus on the more common species kept as pets. Topics covered will include captive husbandry, basic herpetology, nutrition, clinical examination, common infectious and noninfectious diseases, surgery and anesthesia, diagnostic and treatment techniques. The final grade is based on attendance (students with 3 unexcused absences will receive a penalty to their grade) and completion of an in-class final examination. Submission of a course evaluation at the end of the course is required for a grade.
Taught by: Dr. L. Latney and Staff
Prerequisites: Prerequisites: 1st and 2nd Year Core Courses
Activity: Lecture
2 Credit Hours

VCSP 635 Professional Foundations
Includes: 1) making the transition from student to employed veterinarian (resumes, cover letters/letters of intent, interviews, and job selection); 2) personal finance and investment strategies; 3) negotiation skills; 4) stress management; 5) evaluating disability insurance and understanding basic retirement planning options to know what to ask in an interview as part of your benefit plan; 6) time management & goal planning and 7) workshops on obtaining internship or a residency, and (b) Interview Role-Playing/Communication skills. Students are required to submit detailed personal budgets for their first year after graduation and a typewritten resume or curriculum vitae. To receive an "A" students also must submit a 3-year personal, professional, and financial plan. Course notes will be distributed at the first class session.
Taught by: Dr. M. Bryant and Staff
Activity: Lecture
2 Credit Hours
VCSP 638 Legal Issues for Veterinarians
Course is a broad overview of the legal issues veterinarians face on a daily basis, including legal constraints on practice; overview of laws regulating animals (including laws specific to Pennsylvania); divorce and custody battles; illegal drug compounding; internet pharmacies; lemon laws; pet health insurance; vaccination and liability; negotiating and understanding the employment relationship; veterinary malpractice and state board investigations; responding to client complaints; importance of medical records/informed consents; and, applied professional ethics with clients and colleagues including study of social media. A course hand-out will be provided. Testing of students will be through the use of 2 homework assignments. Attendance mandatory. Taught by: Dr. C. Lacroix and Staff
Activity: Lecture
2 Credit Hours

VCSP 641 Small Animal Pediatrics
The objective of this course is to further familiarize the student with the small animal pediatric patient and the proper approach to clinical diagnosis. Lectures are complemented with case reports which serve as a basis for small group discussions. Emphasis is placed on integration of new and previously acquired knowledge to construct differential diagnoses when presented with appropriate historical data and physical as well as laboratory findings. Diagnostic tests and therapeutic regimes for various conditions are discussed in the context of these cases. Grading is based upon attendance, participation in case discussions and performance at a final take home exam. Taught by: Dr. M. Casal and Staff
Prerequisite: Prerequisites: 1st-3rd Year Core Medicine Courses
Activity: Lecture
2 Credit Hours
Notes: Limitations: 40 Students

VCSP 642 Topics in Neurology
This seminar series will stress broad topics, the majority to be selected by the students, which relate to clinical neurology or neuroscience in general. Seminar topics will be selected and presented by students. The course grade (Pass/Fail) is based on class participation. Taught by: Dr. C. Vite and Staff
Prerequisite: Prerequisites: 1st, 2nd, 3rd Year Core Medicine Courses
Activity: Lecture
2 Credit Hours
Notes: Limitations: Min. 8 students; Max. 20 students. CONFLICT: Possible conflict with VPTH641 Laboratory Animal Medicine

VCSP 643 Small Animal Clinical Nutrition
The first half of the small animal nutrition course will be devoted to: (1) information on feeding normal dogs and cats for maintenance and the prevention of disease and (2) the pet food industry, including labeling, regulation and laboratory on the evaluation of pet foods. The second half of the course will examine the role of dietary manipulation in the management of a wide variety of canine and feline diseases. The course format utilizes a combination of individual and group exercises, discussion, cases, and lectures some of which will require preparation outside of scheduled class time. Grading will be pass/fail and based on attendance, class participation and an individual take-home project. Taught by: Dr. K. Michel and Staff
Prerequisite: Prerequisites: Core Nutrition Course
Activity: Lecture
2 Credit Hours

VCSP 644 Small Animal Surgery
This course will cover selected topics of advanced surgical procedures in dogs and cats. Emphasis will be given to diseases and conditions where treatment usually requires elaborate procedures. Material presented will involve most major organ systems such as the gastrointestinal tract, the respiratory tract and the urogenital tract. Furthermore, the skin, the endocrine system, and the peritoneal and pleural cavities will be given special consideration. Minimally invasive surgery as well as advanced surgical tools and equipment will also be discussed. The course will be restricted to what is generally understood as soft tissue surgery. Taught by: Dr. L. Aronson and Staff
Activity: Lecture
3 Credit Hours

VCSP 647 Small Animal Surgery/Anesthesia Laboratory
The class is divided into two groups. Building on the Core Anesthesia and Surgery laboratory course, this course provides the student with experience as assistant surgeon, surgeon and anesthetist while performing exploratory laparotomy and hysterectomy in cats. The cats are provided by an animal shelter and are returned to the shelter for adoption following surgery. Students enrolled in the course, working in teams of three, are responsible for examination and veterinary care (under supervision) at least daily while the cats are at the Veterinary School. There are two additional laboratory sessions. One is a session during which enterotomy, intestinal anastomosis and other soft-tissue procedures will be performed by each student on tissues. The other is an orthopedic procedure session during which pinning and plating techniques are performed by each student on models. Taught by: Dr. J. Runge and Staff
Prerequisite: Prerequisites: Passing grade in Core Surgery and Anesthesia Courses
Corequisite: Postrequisites: Students taking this course must take Small Animal Orthopedic Surgery Rotation VCSP 811 or VCSP 871
Activity: Lecture
2 Credit Hours
Notes: Limitations: No Add/Drop period; max. of 24 students

VCSP 648 Small Animal Anesthesia
This lecture and discussion course will stress the application of physiology, pharmacology, clinical pharmacology, and economics to the problems encountered during the clinical administration of anesthesia. Taught by: Dr. Juan Pavez and Staff
Prerequisite: Prerequisites: VSUR604 Anesthesia
Activity: Lecture
1 Credit Hour

VCSP 649 Emergency/Critical Care Medicine
Small group case-based discussions pertain to the clinical evaluation and management of small animal emergency and critical care patients. Life-threatening abnormalities of the nervous, cardiovascular, respiratory, endocrine, gastrointestinal, and urinary systems are presented in a problem-oriented manner. Actual clinical case material is used to illustrate principles with emphasis placed on the physiology and pathophysiology of the presenting problem. Monitoring and therapeutic procedures (both conservative and non-conservative) will be presented. The grade will be based on a final examination given to small groups at the end of the course. The examination will be a clinical problem similar to all the other clinical problems presented in the course. Everyone in the same group will receive the same grade. Taught by: Dr. E. Reineke and Staff
Prerequisite: Prerequisites: 1st, 2nd and 3rd Year Core Courses
Activity: Lecture
3 Credit Hours
VCSP 650 Small Animal Dentistry and Oral Surgery
Building on the dentistry and oral surgery information presented in VMED611, Med/Surg I, the lectures cover the spectrum of dental and oral diseases and procedures seen and practiced in small animals. The course is integrated with oral surgery lectures presented in VCSP 648, Small Animal Surgery elective. Although there are normally no laboratory practice sessions included in this course, laboratory practice sessions based on material in this course are included in the Small Animal Dentistry and Oral Surgery clinical rotation (VCSP 817, VCSP 877).
Taught by: Dr. A. Reiter and Staff
Prerequisites: Prerequisites: Core Medicine and Surgery Courses
Activity: Lecture
2 Credit Hours

VCSP 651 Practice Management
Includes establishing a realistic fee schedule; effectively marketing veterinary services; determining how much income a practice owner really makes; the veterinary client’s perception of value; establishing a small or mixed animal practice; medical records as a legal defense and to generate income; understanding the vet-pet-client relationship to develop a bond-centered practice; introduction to personnel management and employment law; understanding the Internal Revenue Code, the payment of taxes, and the need for a schedule C to reduce one’s tax liability; successfully organizing one’s basic business management strategies; and marketing veterinary services. A 300-page notebook and 150 page hard cover book entitled The Art of Veterinary Practice Management will accompany this course and be provided at no charge by a corporate sponsor. The final examination consists of a group project to be completed by 2-4 people using a typical practice management "headache" as the problem to be resolved. Four guest speakers will participate in this course.
Taught by: Dr. D. Eigner and Staff
Activity: Lecture
3 Credit Hours

VCSP 652 Introduction to Shelter Animal Medicine
This course is designed to complement the senior year Shelter Animal Medicine rotation by introducing students to some of the particular problems and issues facing veterinarians who work with animal shelters and animal control facilities. The course will combine lectures and discussion periods, and will involve significant out-of-course reading assignments. Topics covered will include: Husbandry and disease management, pet population dynamics and control, behavior and behavior problems, feral cats, and animal cruelty & neglect. Course grades will be determined by attendance, participation in discussions and a final take home exam.
Taught by: Dr. B. Watson and Staff
Activity: Lecture
2 Credit Hours
Notes: CONFLICT: VPTH 635 Introduction to Fish Diseases

VCSP 654 Small Animal Critical Care Medicine
This course offers a comprehensive overview of several key aspects of critical care medicine. Lectures will primarily use a "case-based" approach with discussion of the physiology of organ function and the pathophysiology of disease, and will highlight state-of-the-art concepts for these exciting patients. The final session will be a "hands-on" laboratory in which the students will work with the monitoring instruments that have been discussed during the course. Evaluation will be based on a take home examination.
Taught by: Dr. D. Silverstein and Staff
Prerequisites: Prerequisites: Core Medicine and Surgery Courses
Activity: Lecture
2 Credit Hours

VCSP 655 Introduction to Wildlife Medicine I
This course is designed to provide an overview of the field of wildlife medicine for first year veterinary students through lectures from veterinarians working in various aspects in wildlife medicine. Wildlife Medicine I will present current issues in environmental monitoring, emerging diseases and public health, disease surveillance and prevention, disease outbreaks and control, captive propagation and species re-introduction, disaster medicine, and wildlife rehabilitation. The format will consist of eight lectures, each approximately one hour in length, and a required two-hour wet lab held at Tri-States facility, the Frink Center for Wildlife, in Newark, DE. Optional lectures may be scheduled during the semester based on student interest and speaker availability. Students are expected to attend all required lectures and participate in the wet lab to receive credit for the course. Grades will be based on attendance (50%) and on three worksheets (50%); a five-page paper may be substituted with the approval of the instructor. Opportunities for clinical experience at the Frink Center for Wildlife will be scheduled during the semester; students are expected to sign up in advance and are responsible for their own transportation.
Taught by: Dr. S. Welte and Staff
Activity: Lecture
1 Credit Hour
Notes: Note: This course is a prerequisite for Course VCSP 656 Introduction to Wildlife Medicine II. This course is graded Pass/Fail

VCSP 656 Introduction to Wildlife Medicine II
This course is designed to provide an introduction to the clinical aspects of wildlife medicine for first year veterinary students through a lecture and wet lab format. Lecture and/or laboratory topics will include zoonotic diseases, diseases of native mammals, marine mammals, reptiles and birds, pathology, physical examination techniques, and introductions to necropsy techniques, fracture immobilization, and emergency care. The format will consist of six lectures, each approximately one hour in length, and three two-hour wet labs. Optional lectures may be scheduled during the semester based on student interest and speaker availability. Students are expected to attend all lectures and participate in the wet labs to receive credit for the course. Grades will be based on attendance (50%) and on three worksheets (50%); a five-page paper may be substituted with approval of the instructor. Opportunities for clinical experience at the Frink Center for Wildlife will be scheduled during the semester; students are expected to sign up in advance and are responsible for their own transportation.
Taught by: Dr. S. Welte and Staff
Prerequisite: Prerequisite: VCSP 655 Introduction to Wildlife I
Activity: Lecture
1 Credit Hour
Notes: Limitations: Maximum of 72 students. This course is graded pass/fail. Note: In case of over enrollment, permission of course organizer is required
VCSP 657 Case Studies in Exotic Companion Animals
This course is designed to allow the student to use what they have learned about special species and put all of the information together to work through a clinical case. The first three weeks will be spent discussing topics in special species medicine. Week one will include ethical dilemmas in special species medicine. The second and third week will be reviewing and critiquing journal articles in special species medicine. Thereafter, each week, a case history will be posted on the courses website and the students will come to class to discuss that case. The course instructor will lead the discussions including how to ask the correct history questions and how to interpret the physical examination findings. The class will decide on rule outs, diagnostic testing, and treatment options. During the second to last class, the students will be divided into groups and will be given an unknown case to work out on their own. At the last class meeting, each group will present their findings. Attendance is mandatory since this is a case-discussion class. Missed classes cannot be made up; for each missed class the grade will be lowered. Grades will be based on attendance and participation in the unknown case presentation.
Taught by: Dr. N. Wyre and Staff
Prerequisites: Prerequisites: 1st and 2nd Year Core Courses
Activity: Lecture
2 Credit Hours
Notes: Limitations: Limited to 20 students

VCSP 658 Pet Small Mammal Med/Surg
This introductory course will mainly cover pet rabbits and ferrets with some discussion of rodents and other small mammals seen in veterinary practice. Husbandry, physical examination, diagnostic testing, and treatment techniques of these animals will be presented. The most common health problems and surgeries will be discussed. After this course, the student should be better prepared to see these patients during their clinical rotations and in practice. Student evaluation will be based on a final exam.
Taught by: Dr. L. Latney and Staff
Prerequisites: Prerequisites: 1st and 2nd Year Core Courses
Activity: Lecture
2 Credit Hours

VCSP 659 Small Animal Advanced Cardiology
This course will build on the core cardiology curriculum by introducing a wider range of topics involving cardiovascular disease, treatment, and research in small animals. In-depth topics include diagnosis and treatment of cardiac arrhythmias, correction of congenital heart defects using minimally invasive catheter-based therapies, echocardiography of feline cardiomyopathy, clinical pathophysiology of degenerative mitral valve disease, and a review of the clinical trial evidence that forms the basis of standard treatment recommendations for congestive heart failure. The course is designed for a relatively small number of students so that discussion and interaction with the instructor(s) is facilitated. The course is suitable for students that might be interested in cardiology specialization or research careers as well as for future general practice veterinarians that wish to provide a high level of cardiac care for their patients.
Taught by: Dr. M. Oyama and Staff
Activity: Lecture
1 Credit Hour
Notes: Notes: Maximum enrollment 20 students

VCSP 660 Advanced Small Animal Electrocardiography and Arrhythmias
This course will build on the core cardiology curriculum by providing practical experience involving electrocardiographic (ECG) interpretation and the diagnosis and treatment of cardiac arrhythmias in small animals. Specific topics include diagnosis of both supraventricular and ventricular arrhythmias as well as proper selection of antiarrhythmic therapy and an introduction to artificial pacemaker implantation. The course is designed for a relatively small number of students so that discussion and interaction with the instructor(s) is facilitated. The course includes 6 hours of laboratory where students will work through ECG cases in a small group setting. The course is suitable for students that might be interested in cardiology specialization as well as for future general practice veterinarians that wish to provide a high level of cardiac care for their patients.
Taught by: Dr. M. Oyama and Staff
Activity: Lecture
2 Credit Hours

VCSP 666 Shelter Surgical Opportunities I
This course is an introduction to High Quality High Volume (HQHV) surgery in the shelter environment and is based on the Association of Shelter Veterinarians veterinary medical care guidelines for spay-neuter programs. Lecture topics and examinations are delivered online and include an overview of HQHV surgery, patient handling, anesthesia and pain management in the shelter environment, partner protocols, patient monitoring, patient pre-surgical preparation, basic surgical principles and sterilization of the male cat. The lab component of this course consists of two hours of knot laboratory and knot certification followed by six hours at a partner shelter participating in the peri-operative activities, organized as stations, which include physical exam, induction, patient preparation and recovery. The final eight hours are devoted to rotation through the stations and performance of cat castrations under direct supervision. This course is designed to prepare students to pursue certification (certification that a student can castrate a male cat without direct supervision, required for Shelter Surgical Opportunities II). This elective can be taken after the Spring semester of first year, including the summer, and grading is pass/fail.
Taught by: Dr. Brittany Watson
Activity: Lecture
1 Credit Hour
Notes: Notes: Ongoing (may be taken after the Spring semester of the 1st year, including summer)
VCSP 667 Shelter Surgical Opportunities II
This course is designed to be a continuation of Shelter Surgical Opportunities I and consists of six hours of online lectures/exam that cover inhalant anesthesia, more advanced knots and suture patterns, sterilization of the female cat, special sterilization cases, emergency procedures in the shelter environment and surgical instruments and pack preparation. Eighteen hours of on-site work at a partner shelter will be devoted to learning to spay and participation in peri-operative activities. Spay participation is designed to incrementally build surgical skills and confidence through the process of students scrubbing into a cat spay and performing one portion of the spay surgery. This permits students to achieve competency with the spay procedure over the course of multiple surgeries, eventually allowing a student to seek spay certification (certification that the student can perform an entire cat spay without direct supervision, required for Shelter Surgical Opportunities III). This course can be taken any time, including the summer, after passing VSUR 601 Surgical Principles (offered as part of the core curriculum in the first quarter of second year), passing Shelter Surgical Opportunities I and achieving castration certification. Grading is pass/fail.
Taught by: Dr. Brittany Watson
Prerequisites: Prerequisites: VSUR 601 Surgical Principles, Shelter Surgical Opportunities I, Castration Certification
Activity: Lecture
1 Credit Hour
Notes: Ongoing (may be taken after the Spring semester of the 1st year, including summer)

VCSP 668 Shelter Surgical Opportunities III
This course is designed to be a continuation of Shelter Surgical Opportunities II and is an advanced elective offered to students who wish to achieve spay certification (if not previously spay certified) and pursue additional surgical opportunities. Four hours of didactic instruction will be offered online covering sterilization surgeries of adult and pediatric dogs as well as specialty surgeries such as enucleation, amputation, wound repair and mass removal. At least six hours of the 20 clinical hours will be spent at a partner shelter that provides opportunities to perform surgery on dogs. It is anticipated that students will perform 15-30 sterilization surgeries in this elective. Every effort will be made to allow students to meaningfully participate in non-sterilization surgeries such as mass removal, enucleation, amputation and wound repair after they are spay certified, although achievement of this goal may require an on-call option depending on caseload and individual student interest. This course can be taken any time, including the Summer, after passing Shelter Surgical Opportunities II and grading is pass/fail.
Taught by: Dr. Brittany Watson
Prerequisite: Prerequisites: Shelter Surgical Opportunities II
Activity: Lecture
1 Credit Hour
Notes: Ongoing (may be taken after the Spring semester of the 1st year, including summer)

VCSP 700 Small Animal Internal Medicine-Foundation
The Internal Medicine rotation involves clinical training in all core medicine disciplines including endocrinology, gastroenterology, hematology, infectious disease, nephrology, oncology and pulmonary medicine. Fourth year students will assist doctors in history taking, physical examinations and the medical management of patients presented to the Matthew J. Ryan Veterinary Hospital of the University of Pennsylvania. Students will also have directed supervision on nutritional aspects of internal medicine cases by a board-certified clinical nutritionist. Emphasis will be placed on problem solving, understanding of pathophysiology and integration and utilization of principles of medicine. As experience is gained, students will assume more responsibility in patient management. Students and staff will participate in daily rounds and conferences.
Taught by: Dr. M. Rondeau and Staff
Activity: Clinical Rotation Dental & Vet school
12 Credit Hours

VCSP 710 Small Animal Internal Medicine
Fourth year students will assist the faculty and house officers in history taking, physical examination, and medical management of patients presented to the Matthew J. Ryan Veterinary Hospital of the University of Pennsylvania. Clinical teaching will emphasize a problem-solving approach to disease associated with the endocrine, gastrointestinal, hematologic, pulmonary and urogenital systems. Interpretation of clinical pathology data will be an integral part of this exercise. As experience is gained, the student will assume more responsibility in patient management. Students, faculty and house officers will participate in medicine rounds and conferences on a daily basis.
Taught by: Dr. M. Rondeau and Staff
Prerequisite: Prerequisites: VCSP 700 Small Animal Internal Medicine-Foundation
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Required: SA

VCSP 712 Small Animal Intensive Care Medicine Service
The ICU rotation provides a good medical approach to the management of critical and often very unstable patients. Since these cases are often very challenging diagnostically, and also very dynamic, they provide an excellent learning experience, with ample opportunity for one-on-one discussion with the clinician, and for background reading. Students have an opportunity to become familiar with use and interpretation of the advanced technical equipment available in the ICU, and are also encouraged to perform and perfect technical skills such as catheterization of blood vessels and urinary bladder, obtaining arterial blood samples, etc. During the rotation, we encourage integration and a team approach among the students, the ICU clinicians, and the nursing staff. Students on the ICU service start daily at or before 7:00 a.m, and stay until their cases are stable and all of the proposed diagnostics have been completed (usually 6-7 p.m.). Students are expected to SOAP the cases daily including weekends, to be closely involved in decision-making, diagnostics and therapeutics, and to present and discuss the cases at daily rounds. Students are internally scheduled to assist in treatments in the Intensive Care Unit; patient care shifts may include evening and overnight responsibilities. Weekend duties are distributed equitably among all assigned students. Cage rounds are held daily at approximately 2 P.M. Student teaching rounds are held most weekdays at approximately 2:30 P.M.
Taught by: Dr. D. Silverstein and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 3-4 students per rotation. Required: SA
VCSP 715 Small Animal Cardiology Service
Students will participate in outpatient and inpatient cardiovascular examinations and treatments. Cardiology Clinic days are currently Wednesday/Thursday/Friday, but are subject to change. Cardiology invasive procedures are performed on Tuesdays. Cardiology also provides consultation to other services and accepts transfer of Cardiology cases for primary care. Student responsibilities include obtaining a complete medical history and performing a thorough physical examination with emphasis on the cardiovascular system. After an orientation period on the first day, students are responsible for recording and interpreting electrocardiograms as well as interpreting thoracic radiographs and pertinent clinical laboratory data. Students assist with recording echocardiograms and are expected to become familiar with echo image recognition and common measurement techniques. Students are also expected to summarize pertinent findings in cases under their care at daily rounds and be able to discuss their significance. Completion of the medical case record for review by the attending cardiologist is required. The group captain will develop a schedule for the daily examination and morning treatments (seven days/week) of all hospitalized cases for which the cardiology service is responsible. A quiz is administered the final day of the rotation and determines 15% of the students grade for the rotation. Students should review notes for VMED 611 and the small animal cardiology computer assisted learning site prior to beginning the rotation.
Taught by: Dr. M. Oyama and Staff
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Note: satisfies requirement: SALA. Required: SA

VCSP 716 Dermatology & Allergy Service
This course exposes the student to case material presented to the Dermatology and Allergy Clinic at the small animal hospital. This course exposes the student to case material presented to the Dermatology and Allergy Clinic at the small animal hospital, and may include case material presented to the large animal hospital at New Bolton Center. Special emphasis is given in the discussion of each patient to the etiopathogenesis, diagnosis, and treatment of disease. Attendance during receiving of large animal cases at NBC may be required on one Wednesday of each block, although volunteers will be sought first.
Taught by: Dr. C. Cain and Staff
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Required: SALA; SA

VCSP 717 Comprehensive Cancer Care Service
This rotation will expose students to a comprehensive approach to clinical oncology in small animals, including cancer diagnosis, staging, treatment, and palliative care. This service is primarily comprised of faculty and staff from Medical Oncology, Surgery, and Radiation Oncology. Other services, such as Interventional Radiology and Dentistry and Oral Surgery, will also be involved. Students are expected to participate in the care of outpatient and hospitalized cases (including pre and post-operative care for Surgical Oncology patients) and in patient care rounds in the morning and afternoon. Weekend duties include morning and afternoon treatments for hospitalized patients. Each student will present and discuss a journal article or relevant tumor topic once during the rotation.
Taught by: Dr. J. Mahoney and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Maximum 5-6 students per rotation

VCSP 721 Primary Care Services
This rotation will offer students the opportunity to evaluate cases scheduled with the Primary Care Service (PCS). The Primary Care Service is designed to give students first-hand experience in dealing with common general practice clinical cases and with client communication. The main objective is for students to have the opportunity to see the vet while working under the guidance and supervision of a PCS veterinarian.
Taught by: Dr. G. Mengel
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: Minimum of 3 and maximum of 5 students per rotation. Required for: SA, SALA

VCSP 722 Small Animal Pediatrics/Genetics/Reproduction
The Small Animal Pediatrics-Genetics-Reproduction Clinic is run under the supervision of two board-certified faculty and two residents and emphasizes the unique care of pediatric patients, the approach and management of hereditary diseases, and reproductive problems. Pediatric and genetics clinics are held on Mondays and Tuesdays, and reproduction appointments are seen any day of the week. In addition to the clinical appointments, there is opportunity to see several unique genetic diseases in dogs and cats and handle the youngest of pediatric patients in the animal colonies, as well as get an appreciation for the specialty diagnostic laboratories. The clinical rotation deals with the initial yet crucial pediatric wellness visits including nutrition, socialization and preventive care and disease issues specific to this age group. The clinic highlights the evaluation of normal development and diagnosis of diseases of puppies and kittens (<1 year). Moreover, kittens and puppies with known or suspected inherited disorders are examined for which genetic counseling or special diagnostic studies are required. It provides experience with routine immunizations, treatment and prevention of parasitism, and nutritional and spay/neuter counseling.
Taught by: Dr. M. Casal and Staff
Activity: Clinical Rotation Dental & Vet school
2 Credit Hours
Notes: Required for: SA; Recommended for SALA

VCSP 770 Small Animal Internal Medicine Clinic
The elective rotation in small animal internal medicine will provide further contact and experience in problems of internal medicine (diseases of the endocrine, gastrointestinal, hematologic, pulmonary, and urogenital systems). Students in the elective rotation will be assigned more complex cases, and they will be expected to assume more responsibility for patient management and decision-making.
Taught by: Dr. M. Rondeau and Staff
Prerequisite: Prerequisites: VCSP 700 Small Animal Internal Medicine-Foundation
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 772 Small Animal Intensive Care Medicine
This is an elective clinical rotation equivalent to VCSP 712.
Taught by: Dr. D. Silverstein and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs; 3-4 students per rotation
VCSP 775 Small Animal Cardiology Service
This is an elective clinical rotation equivalent to VCSP 715 for Equine, Food Animal and Larger Animal Majors or as a second rotation in Cardiology for Small Animal or Small Animal/Large Animal Majors. Unless a student electing a second clinical rotation through the Heart Station makes special arrangements with the cardiology faculty on service, there is no distinction between this elective rotation and VCSP715. However, if a student has objectives for the elective rotation beyond the opportunity to see additional case material, an attempt will be made to accommodate proposals for a more individualized rotation to the extent that the regularly scheduled Heart Station activities are not compromised. A quiz is administered the final day of the rotation and determines 15% of the students grade for the rotation.
Taught by: Dr. M. Oyama and Staff
Prerequisite: Prerequisites: Core Medicine Courses
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 776 Dermatology & Allergy Service
This is an elective clinical rotation equivalent to VCSP 716.
Taught by: Dr. C. Cain and Staff
Prerequisite: Prerequisites: Core Medicine Courses
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 777 Comprehensive Cancer Care Service
Taught by: Dr. J. Mahoney and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours

VCSP 778 SA Neurology
A two week long clinical rotation which will include: 1) Participation in receiving outpatients, 2) Participation in diagnosis, treatment/care and discharge of hospitalized patients, 3) Participation in all aspects of in-hospital patient consultations, 4) Students should anticipate having independent library-research projects for subsequent small group discussion, 5) Students will be expected to participate in all aspects of weekend duty which is typically (but not necessarily) 8:00 am to Noon each Saturday and Sunday. Primary emphasis will be placed on the student learning to perform and interpret the results of the neurologic examination. Reviewing the description of the examination procedures in any standard veterinary neurology textbook will be extremely valuable. The course will provide opportunity for the student to become familiar with various diagnostic methods. The student will be expected to have reviewed and know the contents of classroom notes. Faculty method of evaluation: Students will be judged on their knowledge, commitment, contribution and accomplishment.
Taught by: Dr. E. Galban and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 4 students maximum. Recommended: SA and SALA majors

VCSP 781 Primary Care Services
This is an elective clinical rotation equivalent to VCSP 721.
Taught by: Dr. G. Mengel
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: Minimum of 3 and maximum of 5 students per rotation

VCSP 782 Small Animal Pediatrics/Genetics/Reproduction Clinic
The Peds/Gen/Repro Clinic and their board certified faculty will emphasize aspects of pediatrics such as preventative health care programs, clinical evaluation of normal development, and diagnosis and management of diseases in puppies and kittens. The Clinic will also cover examination and management of animals with known or suspected inherited disorders in young and adult animals for which genetic counseling or special diagnostic studies are required. Reproduction issues such as infertility and semen evaluation will be addressed. Breeding timing with clinical hormonal assays and vaginal cytology, artificial insemination (vaginal, transcervical and surgical), pregnancy diagnosis with ultrasound and radiographs, and the occasional Caesarian section will also be performed. The practical information and hands-on experience provided by the Peds practice. This rotation can be paired with VCSP 876-SA Behavior. Alternatively, students may appreciate the extra time off the rest of the week (no evening, weekend and holiday coverage).
Taught by: Drs. Casal, Giger and Staff
Activity: Clinical Rotation Dental & Vet school
2 Credit Hours
Notes: Limitations: Minimum of 3 and maximum of 4 students per rotation. Required: SA

VCSP 790 Small Animal Medicine Holiday Rotation
The holiday internal medicine rotation will be a “learning on your feet” experience. Students will have similar responsibilities as during the core medicine rotations. Clinic appointments will be scheduled only for the first part of week one. Students will be assigned out patients and ES transfers and will evaluate these patients, formulate problem lists and appropriate diagnostic plans, participate in diagnostic procedures (e.g., bone marrow aspirate, tracheal wash), and perform treatments. Formal teaching rounds may not be held, but students will discuss patients on an individual basis with clinicians. The hours of the rotation shifts will be 6AM to 6PM and 12 noon to 12 midnight. Each student will be assigned to five shifts and will likely cover four 6AM to 6 PM shifts and one noon to midnight shift.
Taught by: Dr. M. Rondeau and Staff
Prerequisite: Prerequisites: Satisfactory completion of VCSP 700 - SA Medicine Foundation rotation
Activity: Clinical Rotation Dental & Vet school
3 Credit Hours
Notes: Limitations: preferred minimum 7 students, preferred maximum 10 students/rotation. (Maximum may vary between H1 and H2)

VCSP 798 Small Animal Neurology Holiday Rotation
Two one-week rotations will be offered during the Holiday period, each for 3 credits. Each rotation will consist of half of the Holiday period. This holiday rotation will have similar responsibilities as during the core neurology rotation. Clinic appointments will be scheduled for the first week only. Students will be assigned out patients, ES transfers, and will participate in neurology consultations for other services. Students will evaluate these patients, formulate problem lists and appropriate diagnostic plans, participate in diagnostic procedures (electrodiagnostic testing, CSF taps, imaging), and perform treatments that may include surgery. Formal teaching rounds may not be held, but students will discuss patients on an individual basis with clinicians.
Taught by: Dr. E. Galban and Staff
Prerequisite: Prerequisites: Satisfactory completion of VCSP 778 -Small Animal Neurology Service
Activity: Clinical Rotation Dental & Vet school
3 Credit Hours
Notes: Limitations: preferred minimum of 2 students; preferred maximum of 3 students per rotation. (Maximum may vary between H1 and H2)
VCSP 800 Small Animal Soft Tissue Surgery-Foundation
Students rotate through the Soft Tissue Surgery Service and are responsible for the diagnosis, pre-operative, operative and post-operative care of animals presented to this service under the supervision of Surgery staff. Night and weekend duties will be scheduled. Ward rounds (informal case discussions) are conducted regularly. A neuter service is scheduled each week. Every effort will be made to provide at least one opportunity for each student during the 2-week rotation to have primary responsibility as surgeon to spay or castrate a dog or a cat. CONFERENCE HOURS: 3 hrs/day of clinics (5) = 15 hours. 2-4 hrs/day of surgery (5) = 10-20 hours. 1 hr/weekend morning (4) = 4 hour. TOTAL 29-39 hours.
Taught by: Dr. M. Mison and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours

VCSP 811 Small Animal Orthopedic Surgery
Students rotate through the Orthopedic Surgery Service and are responsible for the diagnosis, pre-operative, operative and post-operative care of animals presented to this service under the supervision of Surgery staff. Night and weekend duties will be scheduled. Ward rounds (informal case discussions) are conducted regularly. CONFERENCE HOURS: 4-5 hrs/day of clinics (4) = 16-20 hours. 6-8 hrs/day of surgery (6) = 42-48 hours. 2-3 hr/weekend day (4) = 8-12 hours. TOTAL 70-80 hours. Emergency call - varies depending on the number of students and number of emergencies.
Taught by: Dr. M. Mison and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Required: SA

VCSP 813 Small Animal Emergency Service
Students are assigned to a busy 24-hour, 7-day per week emergency service on a shift system. The students are responsible for diagnosis and management of animals presented to the service under the supervision of Emergency Service staff. Emergency Service rounds are held Monday through Thursday inclusive, and include topics related to emergency medicine and surgery centered around case discussion.
Taught by: Dr. K. Drobatz and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Note: Satisfies SA requirement. Required: SALA; SA

VCSP 814 Small Animal Radiology Service
This course primarily offers experience in small animal diagnostic radiology with some exposure to diagnostic ultrasound. Principles of radiographic interpretation teaching rounds are held daily. Students will assist in the positioning of animals and taking of routine and special procedure radiographic examinations and will observe and assist with ultrasonographic examinations of Ryan Hospital clinic cases. Students will also interact with the radiologist or radiology resident during their interpretation of the clinic cases. A 2-hour examination is given on the last day of the rotation. See Learn.vet for information on clinical competencies to be assessed in this rotation and to access additional study materials.
Taught by: Dr. J. Suran and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Required: SA. Satisfies SALA Imaging Requirement

VCSP 815 Small Animal Anesthesiology Service
Students are responsible for anesthetizing animals presented to the anesthesia service under the supervision of the Anesthesia staff. During the day, students will work closely with either the anesthesiologist on duty or a senior technician. Students will be scheduled with a technician for "on-call" night and weekend duty. On-call duties begin the first Tuesday (or second day) of the rotation and continue through to the last Sunday (or last day before the next rotation). The anesthesia service provides on-call services from 8 pm until 8 am during weekdays, and from Friday 8 pm until Monday 8 am over the weekend. In general, students schedule themselves for the on-call duties. Most rotations assign one student on-call per night during weekdays and split the weekend into 8 or 12-hour shifts. Anesthesia student rounds are conducted Mondays, Wednesdays, Thursdays, and Fridays. The first rounds on the first day of the rotation (usually a Monday) will occur at 9 am. Rounds on Wednesdays are at 8 am. Rounds on Thursdays and Fridays are at 7:30 am. Students are expected to attend grand rounds on Tuesdays. It is highly recommended that students prepare for their rotation by reviewing the course notes from the anesthesia core course and student surgery labs. The anesthesia handout will be given to students on the first day of the rotation. The rounds schedule and topics will be presented in more detail then.
Taught by: Dr. G. Gianotti and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Required: SA. Satisfies anesthesia/pain management requirement: SALA

VCSP 817 Small Animal Dentistry and Oral Surgery
Students participate in the client communication (including assessment of medical history), clinical examination, diagnostic testing (including patient restraint for intravenous catheter placement), treatment planning and treatment of animals presented with dental and oral diseases, including periodontal, endodontic, restorative and occlusal problems and oral and maxillofacial inflammation, infection, malformation, trauma and cancer. Mondays and Wednesdays are clinic appointment days, with rounds and a teaching laboratory or treatment procedures in the afternoons. Tuesdays, Thursdays and Fridays are treatment days. Occasionally, cases are hospitalized into Saturdays, and emergency cases may be referred from ES on Saturdays and Sundays. Responsibility for Saturday and Sunday patient care will be one to maximum two weekend days per student during the two-week rotation, and will most often consist of being on-call. Typically, Mondays and Wednesdays run from 8.30am-5.30pm (only rarely are there cases to SOAP on these mornings), and Tuesdays and Thursdays from 7am-6.30pm. One student will be assigned to early-call (7am) on Fridays (other students will have an 8.30am start). Friday responsibilities typically extend to 4pm, except for one late-call student.
Taught by: Dr. A. Reiter and Staff
Prerequisites: Prerequisites: Core surgery lecture courses.
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: 2-4 students/rotation in VCSP 817,VCSP 877 combined. Required: SA

VCSP 870 Small Animal Soft Tissue Surgery
This is an elective clinical rotation equivalent to courses VCSP 800. Taught by: Dr. M. Mison and Staff
Prerequisites: Prerequisites: Core Surgery Courses
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs
VCSP 871 Small Animal Orthopedics
This is an elective rotation equivalent to SA Orthopedic Surgery VCSP 811.
Taught by: Dr. M. Mison and Staff
Prerequisite: Prerequisites: Core Surgery Courses
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 872 Small Animal Ophthalmology
The goals of this clinical rotation are to ensure that students achieve proficiency in performing a complete ophthalmic examination and become familiar with recognizing and treating common problems in small animal ophthalmology practice. All students are required to meet at 7:30 am the first day, and then at 8:00 am on subsequent days of the rotation. Attendance is not required on Friday of each week but the free time is expected to be dedicated to independent study in ophthalmology. An introduction to the service will be given on the first day of the rotation which will include a graded, short quiz. It is recommended that students prepare for the clinical rotation by reviewing their course notes in ophthalmology. Clinical rounds will take place several times weekly. Topic rounds and a cadaver (pig eye), surgery wet lab will be included if time permits. Outpatient service (each day of the rotation): Students are responsible for history taking, clinical examination, treatment planning, preparation of client discharge instructions and some client communication. Surgery patients (each day of the rotation): Students assigned a patient for surgery will be responsible for helping with the patients admission (7:30 am the day of surgery). In preparation for surgery, the student must have reviewed the surgical technique, performed a complete physical examination and reviewed pertinent bloodwork. SOAPs, a surgical report and client communication following the procedure are also expected. There will be an opportunity to assist with some of the surgical procedures.
Taught by: Dr. Elaine Holt and Staff
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitation: maximum 3 students per rotation; minimum two students

VCSP 873 Small Animal Emergency Service
This is an elective clinical rotation equivalent to course VCSP 813.
Taught by: Dr. K. Drobatz and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 874 Small Animal Radiology Service
If this rotation is a first experience in small animal radiology (8721, e.g., equine, large animal or food animal majors), it is identical to course VCSP814 and a two-hour final examination is given. If this represents a repeat experience in the small animal radiology service, and you have satisfied the clinical competencies in your previous radiology rotation, you are exempt from these clinical competency assessments in the elective rotation.
Taught by: Dr. J. Suran and Staff
Prerequisite: Prerequisites: Core Radiology Courses
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 875 Small Animal Anesthesiology Service
Students are responsible for anesthetizing animals presented to the anesthesia service under the supervision of the Anesthesia staff. During the day, students will work closely with either the anesthesiologist on duty or a senior technician. Students will be scheduled with a technician for "on-call" night and weekend duty. On-call duties begin the first Tuesday (or second day) of the rotation and continue through to the last Sunday (or last day of the rotation). The anesthesia service provides on-call services from 8 pm until 8 am during weekdays, and from Friday 8 pm until Monday 8 am over the weekend. In general, students schedule themselves for the on-call duties. Most rotations assign one student on-call per night during weekdays and split the weekend into 8 or 12-hour shifts. Anesthesia student rounds are conducted Mondays, Wednesdays, Thursdays, and Fridays. The first rounds on the first day of the rotation (usually a Monday) will occur at 9 am. Rounds on Wednesdays are at 8 am. Rounds on Thursdays and Fridays are at 7:30 am. Students are expected to attend grand rounds on Tuesdays. It is highly recommended that students prepare for their rotation by reviewing the course notes from the anesthesia core course and student surgery labs. The anesthesia handout will be given to students on the first day of the rotation.
Taught by: Dr. G. Gianotti and staff
Prerequisite: Prerequisites: Core Anesthesia Courses
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 876 Small Animal Behavior Clinic
This is an elective clinical rotation in small animal behavioral medicine. Clinics are Wednesday and Thursday. Appointments are also seen on Fridays, and students are invited, but not required, to join us. Outpatient behavior clinic appointments are scheduled at approximately 3-4 hour intervals. Each student is responsible for reviewing behavior notes from VMED 616 (9005), prior to his/her first scheduled clinic. Students are required to attend all case rounds (twice per day), review records before rounds, and be prepared to present all cases. Students will assist with medical and behavioral history-taking, physical examination and diagnosis, and are responsible for a selecting handouts and writing discharge letter summarizing the recommendations made. Behavioral topics and volunteer training sessions are offered, when possible, between afternoon appointments and rounds.
Taught by: Dr. C. Siracusa and Staff
Prerequisite: Prerequisites: VMED 616 Clinical Animal Behavior
Activity: Clinical Rotation Dental & Vet school
3 Credit Hours
Notes: Limitations: Based on hospital needs. Note: Not offered every rotation

VCSP 877 Small Animal Dentistry and Oral Surgery
This is an elective clinical rotation equivalent to VCSP 817.
Taught by: Dr. A. Reiter and Staff
Prerequisite: Prerequisites: Core surgery lecture courses
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: 2-3 students/rotation in VCSP 817, VCSP 877 combined
VCSP 878 Exotic Companion Animal Medicine/Surgery
The purpose of this rotation is to introduce the student to exotic companion animal medicine and surgery. Students will gain knowledge of these animals by hands-on experience and participation in rounds. The student will be expected to obtain histories, develop a rule-out list and a diagnostic plan on all appointments. Students will participate in patient management and assist with various diagnostic and treatment procedures for all scheduled appointments and exotic animal emergencies transferred from the emergency service. There will be a Monday through Sunday clinic schedule as appointments are seen 7 days a week. Additionally, students are expected to be "on-call" for night and daytime emergencies with a clinician. Students should expect the typical day to run from 8:00 AM - 7:00 PM.
Taught by: Dr. L. Latney and Staff
Activity: Clinical Rotation Dental & Vet school
Recommended - VCSP 635 Introduction to Companion Avian Medicine, VPTH 641 Laboratory Animal Medicine, VCSP 636 Introduction to Reptile and Amphibian Medicine, VCSP 657 CaseStudies in Exotic Companion Animal Medicine/Surgery, VCSP 658 Pet Small Mammal Med/Surg

VCSP 879 Working Dog Medicine
To gain experience with all aspects of working dog medicine: Students will handle working dogs to perform general physical examinations as well as specialized assessments including but not limited to breeding soundness exams to assess dogs value in reproduction, dental examinations, and fitness evaluations. Student ts examinations and handling will be incorporated into behavioral training of dogs to being handled and touched on all areas of their body. Students will participate in routine preventive care and assess and treat injuries or illnesses that occur in the WDC working dogs. Students will gain experience in behavior and sports medicine through participation in impulse control, search work, fitness and conditioning exercises. Students may incorporate other aspects of working dog medicine into their rotations depending on their interests. These areas include sports nutrition, dentistry, and various aspects of research.
Taught by: Dr. C. Otto and Staff
Activity: Clinical Rotation Dental & Vet school
Notes: Limitations: permission of instructor required. Note: Not offered every rotation. Location: Penn Vet Working Dog Center, 3401 Grays Ferry Ave, Philadelphia PA 19146

VCSP 880 Shelter Animal Medicine
This rotation gives a complex overview of the field of shelter medicine and community outreach by partnering via a service-learning model with open and closed admission shelters, HQHV surgical clinics, schools, and outreach organizations like Pets for Life. A typical rotation focuses on authentic hands-on learning including four surgical days, mentored primary case management of medical cases and shelter population rounds, public clinical outreach, herd health management, training and behavioral assessment, and providing veterinary CE for shelter staff. Rounds and tour topics include cruelty investigation and humane law enforcement, behavior, ethics, exotics, and risk analysis. Dentistry, necropsies, consults, special procedures, and outreach to local middle schools can also be included as part of the rotation depending on the week.
Taught by: Dr. B. Watson and Staff
Activity: Clinical Rotation Dental & Vet school
Notes: Limitations: 4 students

VCSP 890 Small Animal Surgery Holiday Rotation
This rotation will be similar to a regular surgery rotation with some modifications dictated by the holiday schedule. Students will assist surgery faculty and house officers in history taking, examinations, and the surgical management of small animal patients presented on an emergency basis to the Veterinary Hospital of the University of Pennsylvania. Students will be responsible for the daily care of surgical patients hospitalized at Ryan Hospital. They will also assist in surgery and perform treatments. All students will be expected to participate in night, weekend, and holiday duty on a rotating basis. Two students will be assigned to On Call duty each nig ht and will perform treatments until midnight and assist with cases needing surgery in the night and evening hours. Assignments will be made the first day of the rotation. Rounds to acquaint students with the hospitalized patients will be held each morning and as time permits with the emergency clinician/house officer/ nursing staff on duty, but formal teaching or rounds will occur as time permits during this rotation.
Taught by: Dr. L. Aronson and Staff
Prerequisite: Prerequisite: Satisfactory completion of the Small Animal Soft Tissue or Orthopedics rotation
Activity: Clinical Rotation Dental & Vet school
Notes: Limitations: preferred minimum 6 students, preferred maximum 10 students / rotation. (Maximum may vary between H1 and H2)

VCSP 891 Small Animal Emergency Service Holiday Rotation
This rotation will be very similar to the Emergency Medicine clinical rotation elective course. Students will be involved in triage, patient stabilization, history and physical examination, diagnostic workup and treatment of patients seen in the emergency room. (We want students who have an interest in learning more about emergency medicine!) Specific time will not be set aside during the rotation for student rounds; however, teaching on a case-to-case basis will be stressed. Rotation shifts will be 8 AM to 8 PM and 8 PM to 8 AM. Each student will be assigned to 5 shifts during the rotation. There will be at least two students assigned to each shift.
Taught by: Dr. Drobatz and Staff
Prerequisite: Prerequisites: Satisfactory completion of the Small Animal Emergency Medicine rotation
Activity: Clinical Rotation Dental & Vet school
Notes: Limitations: preferred minimum 6 students, preferred maximum 9 students / rotation. (Maximum may vary between H1 and H2)

VCSP 894 Small Animal Radiology Service
Taught by: Dr. J. Suran and Staff
Prerequisites: Prerequisite: VCSP 814,841 SA Radiology
Activity: Clinical Rotation Dental & Vet school
Notes: Limitation: 0 - 2 students per 1 week rotation
VETERINARY INDEPENDENT STUDY & RESEARCH (VISR)

VISR 648 Computer-Aided Learning
Independent study working on computer assisted learning (CAL) projects for the summer. Students work with Linda Lewis and various faculty members depending on the projects available. CAL students must be self-motivated and self-disciplined and able stay on task with minimal supervision. Students will need their own laptop and internet access or can work on either campus. Students should be comfortable working with computers, using Microsoft office, and browsing the web. Experience editing images, videos, and websites are helpful. Students may need to travel to NBC occasionally through the summer. Students work individually and as part of a team and typically work 40 hours/week for 10 weeks.
Taught by: L. Lewis
Activity: Lecture
5 Credit Hours

VISR 699 Independent Study and Research
This course enables student to undertake a self-directed study on a topic in Veterinary Medicine, under the supervision of a faculty member. Students are required to submit an Independent Study & Research (ISR) application to the Registrar Manager in the Office for Students. Credit may vary.
Taught by: Instructors Vary
Activity: Seminar
1 Credit Hour
VETERINARY PATHOBIOLOGY (VPTH)

VPTH 550 One Health Study Design Seminar
This course number is cross-listed with VPTH 650 and therefore shares the same schedule and course description. It exists for Penn students who wish to enroll and are not Vet students. Eligible students: Penn students who have completed one year of graduate or professional school and who have an interest in addressing problems related to human, animal, and environmental health. Students from the Med, Dental, Nursing, Social Policy, MPH, MES and Wharton programs are encouraged to apply. This seminar course will introduce students to One Health approaches that address critical local, regional and global health problems. Students will work in interdisciplinary teams to review case studies and analyze past and current literature where One Health approaches have been applied. The course is specifically designed to foster the development skills that allow students to think and communicate across professional disciplines. It will also help students develop transdisciplinary connections that might serve them in their professional futures. Students will be assigned to a transdisciplinary team. Grading will be based on team-led presentations and analysis of literature, participation and discussion, and a final capstone project (One Health in Practice Plan) in the form of both a paper and presentation.
Taught by: Drs. S. Rankin, S. Cole, and J. Punt
Activity: Lecture
1 Course Unit
Notes: Limitations: 15 students. Penn students who have completed one year of graduate or professional school and who have an interest in addressing problems related to human, animal, and environmental health. Students from the Med, Dental, Nursing, Social Policy, MPH, MES, and Wharton programs are encouraged to apply. Please contact the Registrar at the School of Veterinary Medicine at vetreregistrar@vet.upenn.edu if you wish to enroll.

VPTH 602 General and Systemic Pathology
The course includes general pathology and systemic pathology. The general principles and mechanisms of disease are discussed through the basic principles of cell and tissue reactions to injury, including degeneration, necrosis, pathological pigmentation, perturbances of circulation, disturbances of growth, inflammation and neoplasia. This course completes the systemic pathology of domestic animals with emphasis on the etiology, pathogenesis, gross and microscopic lesions, and diagnosis of diseases of the organ systems in the body. Formal classroom lectures are complemented with laboratory classes, gross pathology demonstrations and Moodle-based exercises all aimed at interpretation of gross and microscopic lesions.
Taught by: Dr. A. Durham and Staff
Activity: Lecture
16 Credit Hours

VPTH 603 Parasitology
This core course is concerned with fundamentals of the morphology and developmental cycles of helminth, arthropod and protozoan parasites of animals and those that are transmissible from animals to man. The epidemiology and control of the infections are stressed along with pathogenesis, pathology and immunology. Lectures are supplemented by demonstrations of living and fixed materials and by exercises in identification and diagnosis. Laboratory exercises are supplemented by independent work on case studies of clinical parasitisms.
Taught by: Dr. J. Farrell and Staff
Activity: Lecture
8 Credit Hours

VPTH 604 Immunology
This course aims to educate students in Veterinary Medicine on fundamental aspects of immunology, including functional anatomy of the immune system, mechanisms of innate and adaptive immunity, immunological mechanisms of disease, and principles of vaccination.
Taught by: Dr. C. Lopez and Staff
Activity: Lecture
4 Credit Hours

VPTH 605 Microbiology
This course presents the fundamentals of medical microbiology (bacteriology, mycology, virology) and the applied art of diagnostic bacteriology. Emphasis is placed on the microbial agents of veterinary disease, their biology, mode of pathogenesis, and control with some introductory material concerning treatment and recognition. This course is presented as prerequisite to a later study of infectious disease.
Taught by: Dr. R. Harty and Staff
Activity: Lecture
7 Credit Hours

VPTH 606 Clinical Pathology
Appropriate test selection and interpretation are essential to diagnostic evaluation. This course is an introduction to Clinical Pathology presented via case-based learning. Topics include hematology, serum chemistries, urinalysis, cytopathology, clinical endocrinology and blood banking. Within each topic, discussion will cover indications, limitations and interpretation of specific tests, but the emphasis will focus on integrating this information in the context of laboratory panels. Laboratory exercises provide the opportunity to perform and demonstrate basic competency in urinalysis, blood smear preparation and evaluation, and blood banking, as well as to evaluate clinical cases individually and in groups. A microscope is needed for the laboratories.
Taught by: Dr. N. Weinstein and Staff
Activity: Lecture
6 Credit Hours

VPTH 615 Introduction to Comparative Medical Research
This course will review the broad scope of animal involvement in contemporary biomedical and veterinary research, with specific discussions of unique species (rodents, nonhuman primates) and laboratory animal medicine and science. Goals for the course are to gain a strong appreciation for the role of research in furthering the practice of veterinary and human medicine, as well as for importance of the humane care, welfare and responsible use of laboratory animals. Completion of this course will permit students to readily participate in biomedical research opportunities available at the University. Grades will be determined by attendance, completion of compliance training, an out-of-class writing exercise and a final exam.
Taught by: Dr. J. Marx and Staff
Activity: Lecture
2 Credit Hours
VPTH 633 Ecotoxicology for Veterinarians
The major goal of this course is to provide an introduction to ecotoxicology, the science of assessing the effects of toxic substances on ecosystems with the goal of protecting entire ecosystems. The course will present lectures about various research and career opportunities involving ecotoxicology, such as measuring the effects of pollutants on ecosystems, wildlife serving as monitors of environmental quality, important environmental pollutants such as insecticides, petroleum hydrocarbons and metals, and approaches to rehabilitating damaged ecosystems. Students will research, plan, and present a PowerPoint presentation on a topic relevant to ecotoxicology. The course grade will be based on attendance, the group presentation, and student participation in class discussions.
Taught by: Dr. L. Murphy and Staff
Activity: Lecture
2 Credit Hours

VPTH 634 Microbial Pathogenesis
The goal of this course is to provide the student with a conceptual framework regarding the mechanisms of microbial pathogenesis. A range of host-microbe interactions will be studied to illustrate how different microbes breach host lines of defense and lead to infections. Transmission, etiological diagnosis, as well as prophylactic and therapeutic approaches against infectious agents will be discussed with examples related to viral and bacterial pathogens, including zoonotic and Category A select agents.
Taught by: Dr. D. Schifferli and Staff
Prerequisites: Prerequisites: VPTH 604 Immunology and VPTH 605 Microbiology
Activity: Lecture
2 Credit Hours
Notes: Limitations: Maximum of 20 students

VPTH 635 Introduction to Fish Diseases
This course is intended to introduce veterinary students to the biology and medicine of teleost fish. The first few lectures will provide a foundation in the classification, gross anatomy and immunology of fish, including practical laboratory classes. The remainder of the course will be more clinically oriented, and will present the most prevalent diseases of fish, emphasizing both the pathology and etiology of the diseases. In addition, the course will also focus on health maintenance through the control of water quality and treatment of diseases in fish. This part of the course will include some practical laboratory demonstrations. Grades will be determined on the basis of class participation and a 5-6 page research paper on a topic of the students choice.
Taught by: Dr. O. Sunyer and Staff
Prerequisites: Prerequisites: 1st and 2nd Year Core Courses
Activity: Lecture
2 Credit Hours

VPTH 640 Large Animal Pathology & Toxicology
The first goal of this course is to introduce large animal autopsy techniques for the purposes of identification of common postmortem lesions and review of clinical-oriented anatomy. The second goal is to provide a systems-based approach to domestic and global diseases commonly encountered large animal anatomy, including horses, cattle and small ruminants, swine, camelids and cervids. The course requires students to recognize pertinent gross and microscopic lesions correlated with clinical history in order to formulate appropriate differential diagnoses and promote in-depth knowledge of non-infectious and infectious etiopathogeneses, including zoonoses and domestic and foreign reportable diseases. Components of this course include lecture, gross autopsy demonstration and laboratories that involve inspection of fresh gross specimens, and interactive small group seminars pertaining to toxicology and species-specific lesions. Grades will be determined by two homework assignments, one final exam, and attendance to laboratories and small group seminars.
Taught by: Dr. J. Engiles and Staff
Prerequisites: Prerequisites: VPTH 602 General and Systemic Pathology
Activity: Lecture
3 Credit Hours
Notes: Limitations: Maximum of 75 students

VPTH 641 Laboratory Animal Medicine
Note: This course is encouraged as a prerequisite for VPTH 789 ULAR - Laboratory Animal Medicine Clinical Rotation. This course is designed to provide further information about laboratory animal medicine to those students with a potential interest in the field. Issues of pain and distress, facility design, regulatory issues, and special procedures involving rodents and rabbits are addressed. Students will also be introduced to the mechanism of an Institutional Animal Care and Use Committee and will be primary participants in a "mock" meeting with visiting members of the committee here at Penn and actual research protocols. Grades will be determined by class participation and a short paper on a topic relevant to laboratory animal medicine.
Taught by: Dr. J. Marx and Staff
Activity: Lecture
2 Credit Hours
Notes: Limitations: Allergies to lab animals

VPTH 650 One Health Study Design Seminar
This seminar course will introduce students to One Health approaches that address critical local, regional and global health problems. Students will work in interdisciplinary teams to review case studies and analyze past and current literature where One Health approaches have been applied. The course is specifically designed to foster the development of skills that allow students to think and communicate across professional disciplines. It will also help students develop transdisciplinary connections that might serve them in their professional futures. Students will be assigned a transdisciplinary team. Grading will be based on team-led presentations and analysis of literature, participation in discussion, and a final capstone project (One Health in Practice Plan) in the form of both a paper and presentation.
Taught by: Drs. S. Rankin, S. Cole, and J. Punt
Activity: Lecture
6 Credit Hours
Notes: Limitations: 10 students
VPTH 710 Small Animal Diagnostic Services
The course in the Small Animal Section consists of exposure to the Diagnostic Services of MJR-VHUP, namely clinical pathology, anatomic pathology (necropsy service), parasitology and microbiology. The course is focused on development of clinical pathology and necropsy skills and will include a practicum of necropsy technique. A portion of the rotation is also focused on biopsy, parasitology and microbiology. Furthermore, students will be exposed large animal necropsy by spending time at PADLS at New Bolton Center. The bioanalytical pathology portion, which comprises clinical pathology, parasitology and microbiology, will be divided into microscopy, discussion, and online interactive lesson sections. During the microscopy section, students will work with the supervising clinical pathologist or resident in the evaluation, interpretation, and reporting of cytologic specimens and blood film reviews. Discussions involving parasitology and microbiology will also include treatment options and best practices. Online lessons include work in parasitology, clinical pathology and microbiology. Students are also required to perform necropsies, write necropsy reports and to familiarize themselves with the pathophysiology, histopathology and the clinical manifestations of various disorders encountered. Participation of students in presentation and discussion of cases is required. Students will be evaluated based upon enthusiasm, effort, ambition, and advancement in pathology knowledge as evaluated through the directed group discussions, necropsies, microscopy sessions and clinical competency outcomes assessments. A short paper is required.

Taught by: Dr. C. Bradley and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 4 students/rotation - Required: SA - Satisfies pathology requirement: SALA

VPTH 711 Farm Animal Pathology-NBC
The course will provide students with experience in farm animal and companion animal autopsies and biopsies including interpretation of gross and microscopic lesions in the context of clinical history, and proper collection of samples for histology and ancillary diagnostics (e.g. microbiology, parasitology, cytology and toxicology). Students will participate in the diagnostic services provided by the Pennsylvania Animal Diagnostic Laboratory System (PADLS) at New Bolton Center. Multiple species commonly encountered at our diagnostic laboratory (horses, cattle and small ruminants, swine, camels and cervids, small animals and exotics) will be utilized to illustrate the pathogenesis of infectious and non-infectious disease, and the principles of gross and microscopic description with formulation of morphologic diagnoses. Students will be evaluated based upon enthusiasm, effort, ambition, and advancement in pathology knowledge as evaluated through diagnostic autopsies, directed group discussions, microscopy sessions and clinical competency outcomes assessments. A short paper providing a succinct scientific review of a select topic pertaining to large animal pathology is required. Although gross pathology will be emphasized, exposure to histopathology and occasionally cytology will be included. Although there is no lecture component to this course, there is a web-based introduction to VPTH 711 Diagnostic Services and VPTH 771 Diagnostic Services Elective, which students must review prior to the start of their rotation. Students may find this introduction by logging in to https://learn.vet.upenn.edu with their Penn Key and Vet Domain password. Please note that it will take approximately 2 to 3 hours to review the video and written materials on the website.

Taught by: Dr. J. Engiles and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 4 students/rotation - This is an elective rotation equivalent to VPTH 710

VPTH 718 Poultry Production Medicine-NBC
This course is designed to provide students with a working knowledge of the management and production of poultry from hatchery to processing. The course will involve multiple field trips to a hatchery, grow out pullet house, layer house, breeder house, processing plant and a feed mill. There will also conduct necropsies on cases submitted to the diagnostic laboratory and learn the diagnostic procedures such as serology, virology and PCR testing.

Taught by: Drs. S. Davison and Staff
Prerequisites: Prerequisites: VMED 608 Introduction to Poultry, Swine, and Dairy Medicine
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: 1 student/rotation - Satisfies pathology requirement: FA, LA

VPTH 770 Small Animal Diagnostic Services
There is a web-based introduction to VPTH 710 SA Diagnostic Services and VPTH770 Small Animal Diagnostic Services Elective, which students must review prior to the start of their rotation. Students may find this introduction by logging in to https://learn.vet.upenn.edu with their Penn Key and Vet Domain password. Please note that it will take approximately 2 to 3 hours to review the video and written materials on the website.

Taught by: Dr. C. Bradley and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: 4 students/rotation - This is an elective rotation equivalent to VPTH 710

VPTH 771 Farm Animal Pathology-NBC
There is a web-based introduction to VPTH711 Diagnostic Services and VPTH 771 Diagnostic Services Elective, which students must review prior to the start of their rotation. Students may find this introduction by logging in to https://learn.vet.upenn.edu with their Penn Key and Vet Domain password.

Taught by: Dr. J. Engiles and Staff
Activity: Clinical Rotation Dental & Vet school
6 Credit Hours
Notes: Limitations: Based on Hospital Needs - This is an elective rotation equivalent to VPTH 711

VPTH 780 Poultry Production Medicine-NBC
Taught by: Drs. S. Davison and Staff
Prerequisites: Prerequisites: VMED 608 Introduction to Poultry, Swine, and Dairy Medicine
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: 1 student/rotation - This is an elective rotation equivalent to VPTH 718

2018-19 Catalog | Generated 08/30/18
VPTH 789 ULAR-Laboratory Animal Medicine
This rotation will provide an opportunity to work with the wide variety of animal species used in biomedical research at the University of Pennsylvania, including nonhuman primates, small rodents, guinea pigs, rabbits, dogs, cats, pigs, and sheep. The students will participate in all aspects of the care and treatment of these animals across the facilities at the University of Pennsylvania. Participation may include handling, husbandry, diagnosis, treatment, anesthesia, and assistance with surgery. Students will perform daily rounds with the clinical veterinarians and other staff members. The student may have the opportunity to observe on-going interdisciplinary research programs including cardiopulmonary bypass, organ transplantation, gene therapy, device implantations, and metabolic disease progression. Students will participate in clinical rounds, didactic training classes, and related seminars and journal clubs as scheduled. Participation in necropsies of clinical cases, sentinel animals, and study animals is expected. A brief assignment on aspects of lab animal medicine will be required prior to completion of the rotation. Depending upon scheduling, the students will have an opportunity to attend a meeting of the Institutional Animal Care and Use Committee. A recent (within 6 months) negative skin test against tuberculosis is required by the first day of the rotation.
Taught by: Dr. J. Marx and Staff
Prerequisite: Prerequisites: Successful completion of VPTH 641
Activity: Clinical Rotation Dental & Vet school
5 Credit Hours
Notes: Limitations: Maximum 2 students/rotation - Notes: The focus of this rotation is the humane care and use of animals in biomedical research. Students should have interest in the specialty of Laboratory Animal Medicine

VPTH 790 Small Animal Pathology Holiday Rotation
This is an elective rotation similar to the necropsy component of the Diagnostic Services Rotation, VPTH 710,770. The rotation consists of practicum spent in performing necropsies and interpreting findings. Students are required to perform necropsies, write necropsy reports and to familiarize themselves with the pathophysiology, histopathology and the clinical manifestations of various disorders encountered. There will be two one-week rotations over the Holiday period, each for 2 credits. Each rotation will consist of half of the Holiday period and will not meet on either Christmas Day (week one) or New Years Day (week two). There is no clinical pathology, parasitology or microbiology component to this rotation. No paper is required for this rotation.
Activity: Clinical Rotation Dental & Vet school
2 Credit Hours
Notes: Limitations: 2 students/rotation
VIPER (VIPR)

VIPR 120 Vagelos Integrated Program in Energy Research (VIPER)  
Seminar, Part I  
This is the first part of the two-semester seminar designed to introduce students to the VIPER program and help them prepare for energy-related research. Research articles on various energy-related topics will be discussed, and students will be guided toward their research topic selection. Library research, presentation of data, basic research methods, research ethics, data analysis, advisor identification, and funding options will also be discussed. Sample energy topics discussed will include: Applications of nanostructured materials in solar cells; Solid oxide fuel cells; Global climate modeling: radiant heat transfer; Nanocrystal-based technologies for energy storage; Photo-bioreactor systems for mass production of micro-algae; Advanced rare earths separations chemistry; Modeling of oxides for solar energy applications; and Electronic transport in carbon nanomaterials.  
Taught by: John M. Vohs, Andrew M. Rappe and Kristen L. Hughes  
Course usually offered in spring term  
Prerequisites: Admission to VIPER program.  
Activity: Seminar  
0.5 Course Units

VIPR 121 Vagelos Integrated Program in Energy Research (VIPER)  
Seminar, Part II  
This is the second part of the two-semester seminar designed to introduce students to the VIPER program and help them prepare for energy-related research. In this semester we will continue to discuss research articles on various energy-related topics, best practices for library research, presentation of data, basic research methods, research ethics, data analysis, and funding options. A large focus of the course will also be on presenting (in both written and oral form) the work from the students' summer research internships.  
Taught by: Andrew M. Rappe, John M. Vohs, and Kristen L. Hughes  
Course usually offered in fall term  
Prerequisite: VIPR 120  
Activity: Seminar  
0.5 Course Units
VLST 101 Eye, Mind, and Image
Visual Studies 101 provides an introduction to the collaboration of eye, mind, and image that produces our experience of a visual world. How and what do we see? How do we perceive color, space, and motion? What is an image? Does seeing vary across cultures and time? What can art tell us about vision? Is there a 21st-century form of seeing? This course combines different approaches to the study of vision, drawing from psychology, cognitive science, philosophy, history of art, and fine art. Professors representing two or three disciplines present lectures that demonstrate the methods of their disciplines and draw connections across fields. This course combines different approaches to the study of vision, drawing from psychology, cognitive science, philosophy, history of art, and fine art. Professors representing two or three disciplines present lectures that demonstrate the methods of their disciplines and draw connections across fields.

For BA Students: Hum/Soc Sci or Nat Sci/Math Sector
Taught by: Hatfield/Leja
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Fulfills General Education in Sectors IV (Humanities and Social Sciences) and VII (Natural Science and Mathematics). This course is required of all Visual Studies Majors (stage 1).

VLST 102 Form and Meaning
This course will introduce students to the theory and practice of image making, focusing on the development of observational skills and analytical thinking. We will look at conventions of artistic representation across time and cultures; discuss types of visual information and modes of formal language; explore visual narrative techniques; and seek to expand our understanding of the role images play in our culture. We will look at conventions of pictorial representation across time and cultures; discuss types of visual information and modes of formal language; explore visual narrative techniques; and seek to expand our understanding of the role images play in our culture.

Taught by: Bendtsen/Hyland
One-term course offered either term
Activity: Studio
1 Course Unit
Notes: This course is required of all Visual Studies Majors (stage 1 or 2).

VLST 211 Perception
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Topics for this course vary each semester. Dept permission required. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

VLST 212 Research Experience in Perception
In this research course, students will begin by first replicating earlier experiments to measure human visual memory capacity. After several class discussions to discuss ideas, each student will design and conduct their own experiment to further investigate visual and/or familiarity memory.

Taught by: Rust
One-term course offered either term
Prerequisites: One semester of statistics, and one of the following: PSYC 111, 149, 151, 217, or permission of instructor.
Activity: Seminar
1 Course Unit
Notes: Dept permission required. Undergraduates only. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

VLST 217 Visual Neuroscience
An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.

Taught by: Stocker
Course usually offered in spring term
Prerequisites: PSYC 001, COGS 001, or VLST 101
Activity: Lecture
1 Course Unit
Notes: This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.
VLST 221 Introduction to Philosophy of Mind
In this course, we will explore philosophical questions concerning the nature of minds. In seeking to understand the nature of minds, philosophers and psychologists have often used metaphors drawn from the forms of technology available to them. Leibniz once described the mind as a mill, while Freud compared the mind to a hydrolytic and electromagnetic system. In our own time, many have followed Alan Turing’s proposal and have viewed the mind as a special kind of computer; indeed, this "Computational Theory of Mind" forms the foundation for much work in contemporary cognitive science. In this class, we will explore the extent to which the computational theory of mind can adequately characterize the distinctive capacities involved in representing an external environment and having conscious experiences that is displayed by minds in general and human minds in particular. Although an introductory class in philosophy or logic will aid students understanding, no prior familiarity with the philosophy of mind or cognitive science will be presumed.
Taught by: Hatfield
Also Offered As: PPE 244
Activity: Seminar
1 Course Unit
Notes: This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

VLST 222 Philosophy of Perception
Taking our perceptual experience as a given, what causes it? In a realistic mood, we accept that objects in the environment, or in the "external world," cause us to have the perceptual experiences that we do (as of a table with food, or of a garden with flowers in it). Yet on this realistic view, our perception is the result of a causal chain that leads from object to eye to brain to experiences, and we are only given the last element: the experience. So how do we really know how our experiences are caused, and where do we get the idea that they are caused by an external world of physical objects? The seminar will focus on the problem of the external world as examined by David Hume, Thomas Reid, G. E. Moore, and Bertrand Russell, along with recent authors.
Taught by: Hatfield
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Department Majors Only. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

VLST 223 Philosophy and Visual Perception
Central issues in the philosophy of perception from the modern period, including: what we perceive, the meaningful content of perception, and its relation to a mind-independent external world. Additional topics may include: (1) color perception and color metaphysics; (2) object perception in its interplay between Gestalt organizational factors and background knowledge; (3) the role of ecological regularities in the formation of our visual system and in the ongoing tuning of the system to the environment; (4) the geometry of visual space and the phenomenology of visual appearances of size and shape; (5) the problem of how visual scenes are experienced by means of images. Readings from authors such as Bertrand Russell, R. W. Sellars, Tim Crane, Evan Thompson, Robert Swartz, Wolfgang Metzger, Nelson Goodman, Richard Wollheim, and William Hopp, among others.
Taught by: Hatfield, Connolly
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

VLST 232 Renaissance to Contemporary: Introduction to Western Art, 1400 to the Present
This course is an introduction to the visual arts including painting, sculpture, print culture, and new media such as photography, film, performance and installation art in Europe and the United States from 1400 to the present. It offers a broad historical overview of the key movements and the artists of the period, as well as an investigation into the crucial themes and contexts that mark visual art production after the middle ages. Such themes include the secularization of art; the (gendered) role of the artist in society; the sites of art production and consumption such as the artist’s studio, the royal courts and the art exhibition; the materials of art, the import of technology and science to art’s making, content and distribution; the rise of art criticism; and the socio-political contexts of patronage and audience; among others.
For BA Students: Arts and Letters Sector
Taught by: Dombrowski, Kim, Shaw
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

VLST 233 Art and Civilization in East Asia
Introduction to major artistic traditions of China and Japan and to the methodological practices of art history. Attention given to key cultural concepts and ways of looking, in such topics as: concepts of the afterlife and its representation; Buddhist arts and iconography; painting styles and subjects; and more broadly at the transmission of styles and cultural practices across East Asia. Serves as an introduction to upper level lecture courses in East Asian art history cultures. If size of class permits, certain sessions will be held in the University Museum or the Philadelphia Museum of Art.
For BA Students: Arts and Letters Sector
Taught by: Davis/Steinhardt
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

VLST 234 Introduction to Art in South Asia
This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C. to the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as 'traditional' or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe and diverse. This course introduces the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.
For BA Students: Arts and Letters Sector
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.
VLST 235 Introduction to Visual Culture of the Islamic World
A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.
For BA Students: Humanities and Social Science S
Taught by: Holod
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

VLST 236 Art Now
One of the most striking features of today’s art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.
Taught by: Silverman
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

VLST 250 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student’s capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques.
Course usually offered in spring term
Activity: Studio
1 Course Unit

VLST 251 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room.
One-term course offered either term
Activity: Studio
1 Course Unit

VLST 252 Sculpture Practices
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more.
One-term course offered either term
Activity: Studio
1 Course Unit

VLST 253 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing.
Two terms. student may enter either term.
Activity: Studio
1 Course Unit
**VLST 260 Photography Practices**
This course is an introduction to the basic principles, strategies and processes of photographic practice. It is designed to broaden the student's aesthetic explorations and to help the student develop a visual language based on cross-disciplinary artistic practice. Through a series of projects and exercises students will be exposed to a range of camera formats, techniques and encouraged to experiment with the multiple modes and roles of photography - both analogue and digital. Attention will also be given to developing an understanding of critical aesthetic and historical issues in photography. Students will examine a range of historical and contemporary photowork as an essential part of understanding the possibilities of image making.

One-term course offered either term
Activity: Studio
1 Course Unit

**VLST 261 Video I**
This course provides students with the introductory skills and concepts related to producing short works that explore the language of the moving image. Students will learn the basics of cinematography and editing through a series of assignments designed to facilitate the use of the medium for artistic inquiry, cultural expression and narrative storytelling, through both individual and group projects.

For BA Students: Humanities and Social Science S

**VLST 264 Art, Design and Digital Culture**
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual

**VLST 265 Digital Photography**
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department.

**VLST 301 What is Visual Studies?**
Visual Studies 301 is a seminar-format course that challenges students to develop independent ideas about how the eye, the mind and the image that is created therein, all work together to inform our conception of the world at large. Rather than present a unified viewpoint, the course asks the question, “What is visual studies?” by examining parallel and sometimes antagonistic approaches to the ways that human beings understand sight and the concept of visuality. Over the course of the semester, students will discuss and write about various approaches to vision, examining this contested field through the lenses of several disciplines -- including psychology, philosophy, and art history. By parsing and assimilating diverse ideas, students will decide for themselves what are the most pertinent and relevant approaches to the various avenues of research that present themselves in the emerging interdisciplinary field of Visual Studies.

One-term course offered either term
Prerequisite: VLST 101 or Instructor Permission
Activity: Seminar
1 Course Unit
Notes: This course is required of all Visual Studies Majors (Stage 2).

**VLST 303 The Rise of Image Culture: History and Theories**
Images are ubiquitous in the cultural life of the 21st century, yet only two centuries ago they were rare. When and how did pictures come to permeate daily life? How has ordinary experience--psychological, social, cultural, intellectual--changed as a result? This seminar addresses these questions through close reading of influential historical and theoretical writings about the rise of image culture and its effects, including Benjamin, Debord, McLuhan, Mitchell.
Taught by: Leja
Activity: Seminar
1 Course Unit
Notes: This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.
VLST 305 What is an Image?
The course explores various concepts of images. It considers natural images (as in optics), images as artifacts, virtual images, images as representations, and works of art as images. Themes to include: the image controversy in cognitive science, which asks whether some cognitive representations are irreducibly imagistic; the question of whether some images resemble what they represent; the development of the concept of the virtual image and of three-dimensional images; the notions of pictorial representation and non-representational images in art. Readings from C. S. Peirce, Nelson Goodman, Robert Hopkins, Dominic Lopes, W. J. T. Mitchell, John Kulvicki, and Mark Rollins, among others.
Taught by: Verstegen
Activity: Seminar
1 Course Unit
Notes: This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

VLST 309 Investigative Photography for Scientists and Artists
Artists and scientists are likeminded when they make an image in pursuit of new insights. Pictures can reveal the composition of a specimen, expose a person's character, capture a place's distinctiveness, or produce a new occasion for intimacy. Rosalind Franklin's famous "Photograph 51" of DNA resulted from a desire to see the physical shape of heredity. The artist Shimpei Takeda places film directly on the ground in Fukushima to create a blind measurement of the radioactivity that remains in the earth. This course will introduce photography as an investigative medium for art and science. We will begin with learning the fundamentals of photography while considering ways in which photographs have changed and continue to change the way we perceive space and time. As the class progresses, students from the arts and sciences will work together to learn specialized photographic techniques and complete assignments that explore photography as an investigative medium.
Taught by: Vershbow
Course usually offered in spring term
Prerequisites: Access to a digital camera and a computer with imaging software.
Activity: Seminar

WH 101 Business and You
WH 101 is the first step of the Leadership Journey at Wharton. The course is designed to fuel students’ unique interests in academic, research, and professional pursuits; to raise awareness of the complexity of business; and to increase understanding of the interrelatedness of business disciplines. Students will also acquire greater awareness of their strengths and leadership potential as members of the Wharton community and as future professionals. Students will come to appreciate that leadership is an act and best developed through study, feedback from trusted colleagues and peers, and stretch experiences that stimulate growth and development. Students will also begin to hone skills essential to the pursuit of personal, academic, and professional goals: thinking creatively, analyzing problems, applying what you have learned, and reflecting on learnings. A case-analysis project will engage students with the community through helping local agencies examine business challenges that they face.
Taught by: Rosenkopf; Greenhalgh; Romeika
Course usually offered in fall term
Activity: Recitation
0.5 Course Units

WH 150 Evaluating Evidence
WH 150 provides an introduction to all stages of the research process for business topics. In the first third of the course, we discuss theory building, hypothesis development, and research design choices particularly in casual research. In the second third, we discuss data collection methods (e.g., surveys, experiments, case studies and fieldwork) and the use of archival databases. This part of the course emphasizes the interplay between research design and sampling/data collection methods. In the final third of the course, we introduce data analysis and interpretation, including methods for converting raw data into measurable constructs suited to statistical analysis.

WH 201 Management Communication: Persuasive Speaking and Writing for Business
WH 201 is the second step of the Leadership Journey at Wharton. The objective of the course is to ensure that students become more confident and effective speakers and writers. Students will learn the fundamentals of persuasion and apply those concepts to increasingly challenging business contexts. Students will present in-class speeches and submit writing assignments that are evaluated by instructors. The speaking component of the course will begin with the fundamentals of public speaking and persuasion, and then move to settings in which managers face higher stakes with less time to respond. For the writing component, students will write on various topics for the first few weeks of the course. For the last half of the course, speaking and writing assignments will be integrated, allowing students to offer in-depth analysis through their written recommendations. All assignments will reinforce the overarching theme of clear, concise, persuasive communications.

WH 298 Wharton International Program
This short-term international business course gives undergraduate students an amazing global opportunity featuring business-site visits, lectures at partner schools, cultural excursions, and networking opportunities with undergraduate students and business contacts from the destination countries. In addition to learning about another country’s business environment and culture, students earn 0.5 course units that can be used towards business-breadth or elective credits.
Activity: Seminar
0.5 Course Units

WH 299 Honors Thesis
This seminar takes place over two semesters and provides students with the skills to perform their own research under the guidance of a Wharton faculty member. At the conclusion of the fall semester, students will produce a thesis proposal including literature review, significance of the research, methodology, and exploratory data if relevant. Throughout the fall semester faculty guests from a range of disciplines will present on their research in class, highlighting aspects that are relevant to the work students are engaging in at that point. During the second semester, students will collect and analyze data and write up the results in close collaboration with their faculty mentor. At the end of the spring semester, each student will present their research in a video presentation. Throughout the course, students will work individually, in small groups, and under the mentorship of a Wharton faculty member. The goal is to becomes capable independent researchers who incorporate feedback and critical (self-) analysis to take their research to the next level.
Two terms. student must enter first term.
Also Offered As: WH 399

0.5 Course Units

WH 399 Honors Thesis
This seminar takes place over two semesters and provides students with the skills to perform their own research under the guidance of a Wharton faculty member. At the conclusion of the fall semester, students will produce a thesis proposal including literature review, significance of the research, methodology, and exploratory data if relevant. Throughout the fall semester faculty guests from a range of disciplines will present on their research in class, highlighting aspects that are relevant to the work students are engaging in at that point. During the second semester, students will collect and analyze data and write up the results in close collaboration with their faculty mentor. At the end of the spring semester, each student will present their research in a video presentation. Throughout the course, students will work individually, in small groups, and under the mentorship of a Wharton faculty member. The goal is to becomes capable independent researchers who incorporate feedback and critical (self-) analysis to take their research to the next level.
Two terms. student must enter first term.
Also Offered As: WH 399
Activity: Seminar

YIDDISH (YDSH)

YDSH 101 Beginning Yiddish I
The goal of this course is to help beginning students develop skills in Yiddish conversation, reading and writing. Yiddish is the medium of a millennium of Jewish life. We will frequently have reason to refer to the history and culture of Ashkenazie Jewry in studying the language.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1 Course Unit

YDSH 102 Beginning Yiddish II
In this course, you can continue to develop basic reading, writing and speaking skills. Discover treasures of Yiddish culture: songs, literature, folklore, and films.
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: YDSH 101 or permission of the instructor
Activity: Lecture
1 Course Unit

YDSH 103 Intermediate Yiddish I
The course will continue the first year’s survey of Yiddish grammar with an additional emphasis on reading Yiddish texts. The course will also develop conversational skills in Yiddish.
For BA Students: Language Course
Course not offered every year
Prerequisite: YDSH 102 or permission of the instructor
Activity: Lecture
1 Course Unit

YDSH 104 Intermediate Yiddish II
Continuation of YDSH 103. Emphasis on reading texts and conversation.
For BA Students: Last Language Course
Course not offered every year
Prerequisite: YDSH 103 or permission of the instructor
Activity: Lecture
1 Course Unit

YDSH 108 Readings in Modern Yiddish Literature
This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation. Authors include I.L. Peretz, Isaac Bashevis Singer, Moyshe-Leyb Halpern, and Kadya Molodowsky.
Taught by: Hellerstein
Course not offered every year
Prerequisite: Reading knowledge of Yiddish
Activity: Lecture
1 Course Unit

YDSH 501 Beginning Yiddish I
The goal of this course is to help beginning students develop skills in Yiddish conversation, reading and writing. Yiddish is the medium of a millennium of Jewish life. We will frequently have reason to refer to the history and culture of Ashkenazie Jewry in studying the language.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1 Course Unit

YDSH 502 Beginning Yiddish II
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: YDSH 101 or permission of the instructor
Activity: Lecture
1 Course Unit

YDSH 503 Intermediate Yiddish I
The course will continue the first year’s survey of Yiddish grammar with an additional emphasis on reading Yiddish texts. The course will also develop conversational skills in Yiddish.
For BA Students: Language Course
Course not offered every year
Prerequisite: YDSH 101 or permission of the instructor
Activity: Lecture
1 Course Unit

YDSH 504 Intermediate Yiddish II
Continuation of YDSH 503. Emphasis on reading texts and conversation.
For BA Students: Last Language Course
Course not offered every year
Prerequisite: YDSH 503 or permission of the instructor
Activity: Lecture
1 Course Unit

YDSH 508 Readings in Modern Yiddish Literature
This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation. Authors include I.L. Peretz, Isaac Bashevis Singer, Moyshe-Leyb Halpern, and Kadya Molodowsky.
Taught by: Hellerstein
Course not offered every year
Prerequisite: Reading knowledge of Yiddish
Activity: Lecture
1 Course Unit
YDSH 509 Topics in Yiddish Literature.
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define "Jewish writing," in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define "Jewish modernism" through the prism of poetry, which inevitably, given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and will bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation's process and products.

Taught by: Hellerstein
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: "Jewish Women Writers" is a graduate seminar also be open to advanced undergraduates. Based in the Department of Germanic Languages and Literatures, this course will be cross-listed with Comparative Literature, English, Gender, Sexuality Women's Studies, and Jewish Studies. Topics vary annually.
