CLST 533 Topography and Monuments of Ancient Rome
An intensive exploration of Rome’s urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required.
Course not offered every year
Also Offered As: AAMW 533, CLST 328
Activity: Seminar
1.0 Course Unit

CLST 541 Tpcs Rennaisance Cltr
Course not offered every year
Also Offered As: HIST 540, ITAL 540
Activity: Seminar
1.0 Course Unit
CLST 562 Intro to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracies on larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity in working with the main types of digital archaeological data: structured data (relational databases), 3d models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets. The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.

Taught by: Peter Cobb
Also Offered As: AAMW 562, ANTH 362, ANTH 562, CLST 362, NELC 362
Prerequisite: Prior archaeological classwork and/or experience preferred
Activity: Lecture
1.0 Course Unit

CLST 563 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty.

Taught by: Rose
Activity: Seminar
1.0 Course Unit

CLST 568 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the new Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.

Taught by: Kassabraum, Monge, Moore
Course not offered every year
Also Offered As: ANTH 267, ANTH 567, CLST 268, NELC 286, NELC 586
Activity: Lecture
1.0 Course Unit

CLST 569 Literary Translation
This course is for graduate students and undergraduates with permission of the instructor. All students enrolled must have knowledge of at least one language other than English. We will study the history, theory and practice of literary translation, and participate in it. Readings will include theoretical works in translation studies, using selections from Lawrence Venuti’s Translation Studies Reader and Schulte/Biguenet’s Translation Theory Reader, with some supplemental readings; we will also look at comparative cases of multiple translations of the same original, and analyze how different translators make different interpretative/formal/aesthetic choices. Course assignments will include both a research paper, on the history and/or theory of translation, and an extended practical translation exercise, to be workshoped over the course of the semester, consisting of a literary translation of a text of the student’s choice.

Taught by: Wilson
Also Offered As: CLST 369, COML 369
Activity: Seminar
1.0 Course Unit

CLST 598 Language Pedagogy Workshop
The Workshop is intended to serve as a forum for first-time teachers of Latin or Greek. This will include discussing course-plans and pedagogical theories and strategies, collaborating on course materials, and addressing any concerns in the language courses presently being taught.

Taught by: James Ker
Activity: Seminar
1.0 Course Unit

CLST 600 Graduate Seminar
Topics will vary
One-term course offered either term
Activity: Seminar
1.0 Course Unit

CLST 611 Greek Epigraphy
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his “Ancient Economy” have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

Taught by: Bowes
Course not offered every year
Also Offered As: AAMW 611, ANCH 611, GREK 611
Activity: Seminar
1.0 Course Unit
CLST 616 Ancient Economies
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpin economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his The Ancient Economy have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

Activity: Seminar
1.0 Course Unit

CLST 623 The (Mostly) Latin Epigram
In this seminar we will explore the themes and aesthetics of the Latin epigram, a genre (or is it?) best known for its brevity and wit but one whose precise nature is tantalizingly elusive. After orienting ourselves in the epigrams of Hellenistic Greek epigrammatists and late Republican authors like the so-called Neoterics (Catullus, Cinna, Calvus, Caesar), we will turn our attention to the poetry of Martial, whose accounts of Rome, its inhabitants, and their foibles exerted a profound influence on subsequent epigrammatists. Among the themes we will engage are: epigram as a genre; persona in tessellated textual collections; the interaction of refined and obscene language; and the artistic and intellectual implications of replication, anthology, and remix.
Taught by: Mulligan
Activity: Seminar
1.0 Course Unit

CLST 636 Approaches to Literary Texts
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields. Master classes are taught by Kevin Brownlee, Linda Chance, Eva del Soldato, Huda Fakhreddine, Scott Francis, Nili Gold, Bridget Murnghan, Deven Patel, Kevin Platt, Michael Solomon, Emily Steiner, Julia Verkholyantsev, and Emily Wilson.
Taught by: Verkholyantsev

Also Offered As: COML 616, EALC 715, ENGL 616, REES 616, ROML 616
Activity: Seminar
1.0 Course Unit

CLST 698 Prospectus Workshop
Designed to prepare graduates in any aspect of study in the ancient world to prepare for the dissertation prospectus. Course will be centered around individual presentations and group critique of prospectus’ in process, as well the fundamentals of large-project research design and presentation.
Taught by: Bowes
Course usually offered in spring term
Also Offered As: AAMW 698
Activity: Seminar
1.0 Course Unit
Notes: Graduates only

CLST 700 GEOARCHAEOLOGY
In this course, students will learn the basic concepts of earth systems and explore the ways that archaeologists use various environmental sciences (e.g., geomorphology, limnology, palynology, and dendroclimatology) and paleoecological modeling in their research. The course will include lectures and laboratory activities on the basics of geology, including surficial geology, rock and mineral identification, geomorphology and soils, sedimentation and stratigraphy, as well as a systematic review of depositional environments and their archaeological potential. A series of archaeological case studies will illustrate the application of these concepts in real-world field archaeology.
Taught by: Tartaron & Magee
Also Offered As: AAMW 700
Activity: Seminar
1.0 Course Unit

CLST 702 Greek Sanctuaries
Sanctuaries remain an important focal point for the study of Greek religion. Both as sites for worship, dedication, oracular activity and other cult activity and as sites for the mediation of elite and state competition sanctuaries are, along with the polis, the most essential structuring institutions of Greek life. This seminar takes a selection of larger and smaller extra-urban sanctuaries and examines their growth, articulation and function.
Taught by: McInerney
Course not offered every year
Also Offered As: AAMW 702, ANCH 702
Activity: Seminar
1.0 Course Unit

CLST 705 Ethnoarchaeology Greece
Ethnoarchaeology involves distinctive theoretical and methodological approaches to the study of living societies for the explicit purpose of shedding light on archaeological questions. In this seminar, we will review the intellectual history of ethnoarchaeology in North America and Europe, and explore case studies from Greece, the wider Mediterranean, and beyond. Among the topics will be analogy, cross-cultural comparison, experimental archaeology, oral history research, and archaeologically oriented ethnographic fieldwork. Students will create a proposal for ethnoarchaeological fieldwork in their area of interest in NSF or Wenner-Gren format, to be critiqued by the instructor and their peers.
Taught by: Tartaron
Course not offered every year
Also Offered As: AAMW 705
Activity: Seminar
1.0 Course Unit
CLST 706 Archaeology of the Hellenistic Period in Italy, Greece, and Asia Minor
A survey of the archaeology of the Hellenistic period (331-31 BCE) across the Mediterranean, with a focus on Rome, Magna Graecia, Greece, and western Asia Minor. The course will stress the interactions among cities and kingdoms during the Roman Republic and Greek Hellenistic periods, especially the second century B.C. Students will work with relevant objects in the Penn Museums Mediterranean Section.
Taught by: Brian Rose
Also Offered As: AAMW 706, ARTH 706
Activity: Seminar
1.0 Course Unit

CLST 707 TOPICS IN AEGEAN ARCHAEOLOGY
Topics vary. This course explores current topics in Aegean archaeology. It is designed to inform and prompt debate and discussion on substantive, methodological, and theoretical matters of current interest, within a geographical and/or chronological framework. Spring 2017 topic TBA.
Taught by: Tom Tartaron
Also Offered As: AAMW 707
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates require permission of instructor

CLST 711 The Archaeology of Greece and Asia Minor in the Archaic and Classical Periods
An examination of new discoveries and conflicting interpretations in the archaeology of Greece and Asia Minor between the seventh and fourth centuries B.C.E. Both sides of the Aegean will receive equal attention, and emphasis will be placed on sanctuaries, settlements, and cemeteries.
Taught by: C. Brian Rose
Also Offered As: AAMW 726, ARTH 726
Activity: Seminar
1.0 Course Unit
Notes: Graduates Students Only

CLST 715 Archaeology of Troy
An introduction to the archaeology of Troy, in northwestern Turkey. The course will focus on the results of excavations at the site in 1988, although the earlier excavations of Schliemann, Dorpfeld, and Blegen will also be considered. The course will cover a broad chronological span—from the early Bronze age through the late Roman period, and will include Greek, Roman, and Medieval attitudes toward Troy and the Trojan legend.
Taught by: Rose
Course not offered every year
Also Offered As: AAMW 715
Activity: Seminar
1.0 Course Unit

CLST 720 Topics in Aegean Art
Fall 2018: The choices made by groups of people with regard to the treatment of their dead can be reflective of a society’s beliefs and social structure. In this course, we will examine the burial traditions of the people of the Prehistoric Aegean from the Neolithic through the end of the Bronze Age, circa 7,000-1,100 BCE. We will focus on burial architecture, grave goods, burial rituals, mortuary variability, and the symbolic meaning of death and burial in Prehistoric Greece. Particular attention will be paid to recent discoveries on Crete, the Mainland, and the Cycladic islands. Students will write two papers, and these papers will be presented to the class. The first paper will be circa 15 pages long with footnotes, bibliography, and images (presented via powerpoint) and the second will be a 20-25 page paper with footnotes, bibliography, and images presented via powerpoint.

Climate Change (CLCH)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates).

CLCH 160 Oceanography
This course is designed to provide an overview of geological, chemical, and physical oceanography. It is constructed such that all students (irrespective of their major area of study) can learn about the oceans. Through frequent individual and group assignments, readings, video lectures, and collaborative discussions, students are exposed to the major areas of oceanography including marine geology, physical oceanography, and marine chemistry. This includes the following themes: plate tectonics (particularly as it pertains to the making, shaping, and disruptions of the global ocean), marine provinces, marine sediments, seawater chemistry, air-sea interactions and ocean circulation (particularly as they pertain to climate change), waves and water dynamics, tides, renewable ocean energy, and beaches and shoreline processes.
Activity: Online Course
1.0 Course Unit
CLCH 220 Atmospheric Science
The study of atmospheric science includes the prediction of weather and climate change as well as their impact on society. Designed to provide an understanding of the fundamentals of atmospheric science at the local, regional, and global levels, this course covers the nature, composition, and structure of the atmosphere, its interactions with other parts of the Earth, and the major chemical mechanisms controlling the occurrence and mobility of air pollutants in the atmosphere. Course topics also include global atmospheric composition, ecosystems, living organisms, and environmentally important atmospheric species such as greenhouse gases, stratospheric ozone, acid precipitation, urban smog, and air toxins. Activity: Online Course

Cognitive Science (COGS)

COGS 001 Introduction to Cognitive Science
Cognitive Science is founded on the realization that many problems in the analysis of human and artificial intelligence require an Interdisciplinary approach. The course is intended to introduce undergraduates from many areas to the problems and characteristic concepts of Cognitive Science, drawing on formal and empirical approaches from the parent disciplines of computer science, Linguistics, neuroscience, philosophy and psychology. The topics covered include Perception, Action, Learning, Language, Knowledge Representation, and Inference, and the relations and interactions between them. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Taught by: Brainard/Ungar
Course usually offered in fall term
Also Offered As: CIS 140, LING 105, PHIL 044, PSYC 207
Activity: Lecture
1.0 Course Unit

1.0 Course Unit

COGS 398 Senior Thesis
This course is a directed study intended for cognitive science majors who have been admitted to the cognitive science honors program. Upon admission into the program, students may register for this course under the direction of their thesis supervisor.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

College (COLL)

COLL 135 The Art of Speaking
This course is designed to equip students with the major tenets of rhetorical studies and peer education necessary to work as a CWiC speaking advisor. The course is a practicum that aims to develop students’ abilities as speakers, as critical listeners and as advisors able to help others develop those abilities. In addition to creating and presenting individual presentations, students present workshops and practice advising. During this ABCS course, students will practice their advising skills by coaching and mentoring students at a public school in Philadelphia.
Taught by: Weber
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Students need to apply and are interviewed by the instructor and Associate Director of CWiC

Communications (COMM)

COMM 123 Critical Approaches to Popular Culture
Popular culture has been alternately condemned as too trivial to warrant attention and too powerful to resist. Its consumers have been dubbed fashion victims, couch potatoes, and victims of propaganda. This course considers these critiques, as well as those that suggest that popular culture can be emancipatory, allowing for the creation and renegotiation of meaning. Over the course of the semester, we consider the impacts of various forms of popular culture, and discuss their effects on how we see ourselves and others. We explore the ever-shifting distinctions between high, middlebrow, and low culture and analyze how power and resistance structure the production and consumption of popular texts.
Taught by: Lingel
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 125 Introduction to Communication Behavior
This course introduces students to the theoretical models and research methods used to study communication and behavior, with a focus on mass media processes and effects. Topics examined include: the social construction of meaning through communication, effects of media violence, children's responses to educational television, the political impact of the news, and the influence of social media on relationships, and the role of media in creating and perpetuating gender, racial, and ethnic stereotypes. The aim of the course is to provide students with (1) a general understanding of research on attitudinal and behavioral aspects of mediated and interpersonal communication, and (2) the basic conceptual tools needed to critically evaluate the assumptions, theories, and empirical evidence supporting conclusions about communication behavior and media effects. Toward this end, thought the paradigms of critical and cultural studies will be reviewed briefly, the class will focus on social scientific approaches to understanding communication behavior. Students have the option of producing a multi-media capstone project or writing a term paper on a communication behavior-related topic of their choice. This class meets twice a week (WF) as a lecture and once a week (M) in smaller group seminars.
For BA Students: Society Sector
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
COMM 130 Media Industries and Society
The aim of this course is to prepare you to work in the media business as well as to be an informed citizen by acquainting you with the work and language of media practitioners. The class also investigates the exciting, and to some employed there) scary changes taking place in the news industry, the advertising industry, the movie industry, and several other areas of the media system. In doing that, the course ranges over economic, political, legal, historical, and "cultural" considerations that shape what we see when we go online, use social media, watch TV, read books, play video games, and more. You'll never look at media the same way again.
For BA Students: Society Sector
Taught by: Turow
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 203 Media, Culture & Society in Contemporary China
This course studies contemporary China in the context of globalization. Starting with an analysis of the origins of economic reform and the struggles for political change in the 1970s and 1980s, the course moves on to cover critical issues in the twenty-first century, including migration and work, middle class consumerism, youth, religion, media and communication, environmental degradation, new forms of inequality, civil society and popular protest. Taking a sociological approach, this course introduces methods and theories for analyzing institutions, inequality, and social change.
Taught by: Yang
Course not offered every year
Also Offered As: SOCI 238
Activity: Lecture
1.0 Course Unit

COMM 210 Quantitative Research Methods in Communication
This course is a general overview of the important components of social research. The goal of the course is to understand the logic behind social science research, be able to view research with a critical eye, and to engage in the production of research. It will cover defining research problems, research design, assessing research quality, sampling, measurement, and causal inference. The statistical methods covered will include descriptive and inferential statistics, measures of association for categorical and continuous variables, inferences about means, and the basic language of data analysis. Course activities will include the use of statistical software, lectures, class exercises, reading published scientific articles, and discussing research featured in the news.
Taught by: Jemmott
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

COMM 211 Media Activism Studies
This seminar provides an introduction to the politics and tactics underlying various types of media activism. The class will examine interventions aimed at media representations, labor relations in media production, media policy reform, activists' strategic communications, and "alternative" media making. The course will draw from an overview of the existing scholarship on media activism, as well as close analyses of actual activist practices within both old and new media at local, national, and global levels. We will study how various political groups, past and present, use media to advance their interests and effect social change. Each member of the class will choose one case study of an activist group or campaign to explore throughout the semester.
Taught by: Pickard/Various
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 213 Social Media and Social Life
The irruption of social media as a means of communication has been said to transform many dimensions of social life, from how we interact with significant others to how we engage in public life - but has it, really? Regardless of the specific technology (blogs, micro-blogs, social networking sites, peer-to-peer networks), social media make interdependence more prevalent, and exposure to information more pervasive. But social networks, and the ties that bring us together, have long mediated the way in which we obtain information, engage in public discussion, and are recruited or mobilized for a public cause. So what has social media brought to the table that is new? This course will evaluate the evidence that can help us answer this question, as well as challenge conventional views and discuss questions that remain open. The effects of social media on ideological polarization, social influence and peer pressure, agenda-setting dynamics, and the formation and effects of social capital are examples of the substantive topics and theoretical debates that will be considered.
Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 214 Media and South Asia
This course examines the historical development of media institutions across the Indian subcontinent, and how media texts have helped to shape post-colonial national/cultural/religious/social identities, nationalism, and geopolitical relations. The course looks at how the post-colonial State in South Asia (India, Pakistan, Bangladesh, Nepal, Bhutan, and Sri Lanka) has interacted with media industries, and the implications of this interaction.
Taught by: Balaji
One-term course offered either term
Also Offered As: SAST 110
Activity: Lecture
1.0 Course Unit
COMM 225 Children and Media
This course examines children’s relationships to media in their historic, economic, political, and social contexts. The class explores the ways in which “childhood” is created and understood as a time of life that is qualitatively unique and socially constructed over time. It continues with a review of various theories of child development as they inform children’s relationship with and understanding of media. It reviews public policies designed to empower parents and limit children’s exposure to potentially problematic media content and simultaneously considers the economic forces that shape what children see and buy. The course also provides a critical examination of research on the impact of media on children’s physical, cognitive, social, and emotional development. Students in this course produce a prototype for an educational children’s media product as their final project.
Taught by: Woof
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 226 Introduction to Political Communication
This course is an introduction to the field of political communication, conceptual approaches to analyzing communication in various forms, including advertising, speech making, campaign debates, and candidates’ and office-holders’ uses of social media and efforts to frame news. The focus of this course is on the interplay in the U.S. between media and politics. The course includes a history of campaign practices from the 1952 presidential contest through the election of 2016.
Taught by: Jamieson
Course usually offered in fall term
Also Offered As: PSCI 232
Activity: Lecture
1.0 Course Unit

COMM 230 Advertising and Society
This course explores the historical and contemporary role of the advertising industry in the U.S. media system. The course will cover the social history of advertising; the structure of today’s advertising industry; the workings of advertising in digital media; and critical analyses of advertising’s role in society. In addition to academic writings, the class will read industry reports to understand contemporary strategies and processes.
Taught by: Turow
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 235 Communication and Persuasion
This course examines theory, research, and application in the persuasive effects of communication in social and mass contexts. The primary focus will be on the effects of messages on attitudes, opinions, values, and behaviors. Applications include political, commercial, and public service advertising, propaganda, and communication campaigns (e.g. anti-smoking). Students will develop their own communication campaign over the semester. The campaign will include identifying and analyzing the persuasion problem, the target audience’s characteristics and media habits, and then reating a persuasive message consistent with research and practice targeted to the problem and its solution.
Taught by: Cappella/Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 243 Ethnography and Media for Social Justice
How do qualitative social scientists study urban communities? What kinds of powerful tales can be told about urban lifestyles and social issues in places like Philadelphia? This course will allow students to study various ethnographic treatments of urban communities in the United States, using films, articles, TV serials, and books as guides for the framing of their own independent research on the streets of Philadelphia. Students will also form production teams of two or three people, and these production teams will be responsible for (i) identifying and researching an important urban issue in contemporary Philadelphia and (ii) turning that research into a 15-30 minute video documentary or pod cast. Mixing video/audio journalism with ethnographic methods will enhance their skills at archival and social research, from participant observation and interviewing techniques to sound editing and production. This course is intended to be a rigorous and exciting opportunity for students to tell empirically grounded stories using the voices of their participants and the sounds of the city.
Taught by: Lingel
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 270 Global Digital Activism
This seminar examines the forms, causes, and consequences of global digital activism, defined broadly as activism associated with the use of digital media technologies (e.g., Facebook, Twitter, mobile phones, and the Chinese Weibo). The goal is to provide students with a theoretical tool-kit for analyzing digital activism and to develop a critical understanding of the nature of contemporary activism and its implications for global social change. Major cases to be examined include the "Occupy Wall Street" movement in the US, the Arab Spring, the "indignados" protests in Spain, and internet activism in China. Students are required to conduct primary, hands-on research on a contemporary case (or form) of digital activism and produce a final research paper. This research project may be done individually or in small groups.
Taught by: Yang
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 275 Communication and Persuasion
This course examines the role of the advertising industry in today's U.S. media system. The course will cover the social history of advertising; the structure of today's advertising industry; the workings of advertising in digital media; and critical analyses of advertising's role in society. In addition to academic writings, the class will read industry reports to understand contemporary strategies and processes.
Taught by: Turow
Course not offered every year
Activity: Lecture
1.0 Course Unit
COMM 282 Sick and Satired - The Insanity of Humor and How it Keeps Us Sane
This course will examine how and why humor, as both an instigator and peacemaker, might be considered one of the most influential and profoundly useful forms of communication devised by human beings. The unique ability of jokes and satire to transcend familiar literary and journalistic forms for the purpose of deepening (or cheapening) socio-philosophical arguments and to inspire (or discourage) debate and participation in public conversations about innumerable political and social issues will be explored. The fearlessness analytical nature of both high and lowbrow comedy will be examined, as well as its defective qualities. The course will enable students to consider, through analysis of both contemporary and historical examples, the political and cultural satirist’s unique role in society as a witness, a predictor and, in some circumstances, an instigator of public and private debate. We will examine the role of satire in revealing and mediating differences between disparate social groups based not solely on language differences, but also on political affiliation, cultural identity, ethnicity, gender, religious fellowship, sexual orientation, and socio-economic caste.
Taught by: Booth
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 290 Special Topics in Communication
This is an intermediate level special topics course that covers varying topics in communication. For more information about the course, please see: https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements
Taught by: Various Instructors
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 292 WARNING! Graphic Content - Political Cartoons, Comix and the Uncensored Artistic Mind
This course examines the past, present and future of political cartooning, underground comix, graphic journalism and protest art, exploring the purpose and significance of image-based communication as an unparalleled propagator of both noble and nefarious ideas. The work presented will be chosen for its unique ability to demonstrate the inflammatory effect of weaponized visual jokes, uncensored commentary and critical thinking on a society so often perplexed by artistic free expression and radicalized creative candor.
Taught by: Booth
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 300 Public Space, Public Life
Public space as a mediated system of communication anchored in embodied practice. Historical aspects, public space as a cultural signifier, how the organization and regulation of collective spaces facilitates and enriches or hinders common life, public space as a critical component of democracy.
Taught by: Marvin/Staff
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 301 Introduction to the Political Economy of Media
This course has two aims. First, assuming that communications are central to any society, it situates media systems within larger national and international social relationships and political structures. Second, this course critically examines the structures of the communication systems themselves, including ownership, profit imperatives, support mechanisms such as advertising and public relations, and the ideologies and government policies that sustain these arrangements. Considering case studies ranging from traditional news and entertainment media to new digital and social media, the course provides a comprehensive survey of the major texts in this vibrant sub-field of media studies.
Taught by: Pickard/Various
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 310 The Communication Research Experience
In this hands-on course students will work with active researchers in the Communication Neuroscience lab at Penn to gain experience in how research works. Students will have the opportunity to interact closely with a mentor and will gain experience conceptualizing research questions, designing experiments, and collecting and analyzing data. In fall 2019, the course "field experiment" will examine how to increase voter turn-out among Penn students, but the specific research approaches taken to this topic will be driven by students' interests (e.g. in persuasion, marketing, network science, etc). Prerequisite: COMM 210, an equivalent research methods class, or permission of the instructor.
Taught by: Falk
Course not offered every year
Prerequisites: COMM 210 (Communication Research Methods) or permission of the instructor.
Activity: Seminar
1.0 Course Unit

COMM 311 Peace Communication
When me and you becomes us and them, a suite of psychological processes are amplified or come online. In this course, we will examine the forces that drive people to engage in intergroup conflict through the lenses of evolutionary biology and psychology, and then examine the effectiveness of communications-based interventions at easing conflict. In the first part of the course, we will learn about the theoretical work on intergroup psychology; in the second part, we will examine the specific processes that drive conflict (e.g., stereotypes, prejudice, dehumanization) and how they are measured using both explicit self-report and implicit measures (e.g., physiology, neuroimaging); in the third part, we will explore the interventions that have been demonstrate to work (and fail) to decrease intergroup conflict. No prior experience in psychology or neuroscience is required.
Taught by: Bruneau
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
COMM 313 Computational Text Analysis for Communication Research
In this 'big data' era, presidents and popes tweet daily. Anyone can broadcast their thoughts and experiences through social media. Speeches, debates and events are recorded in online text archives. The resulting explosion of available textual data means that journalists and marketers summarize ideas and events by visualizing the results of textual analysis (the ubiquitous 'word cloud' just scratches the surface of what is possible). Automated text analysis reveals similarities and differences between groups of people and ideological positions. In this hands-on course students will learn how to manage large textual datasets (e.g. Twitter, YouTube, news stories) to investigate research questions. They will work through a series of steps to collect, organize, analyze and present textual data by using automated tools toward a final project of relevant interest. The course will cover linguistic theory and techniques that can be applied to textual data (particularly from the fields of corpus linguistics and natural language processing). No prior programming experience is required. Through this course students will gain skills writing Python programs to handle large amounts of textual data and become familiar with one of the key techniques used by data scientists, which is currently one of the most in-demand jobs.
Taught by: O'Donnell
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 318 Stories From Data: Introduction to Programming for Data Journalism
Today masses of data are available everywhere, capturing information on just about everything and anything. Related but distinct data streams about newsworthy events and issues – including activity from social media and open data sources (eg: The Open Government Initiative) – have given rise to a new source for and style of reporting sometimes called Data Journalism. Increasingly, news sites and information portals present visually engaging, dynamic, and interactive stories linked to the underlying data (e.g. The Guardian DataBlog). This course offers an introduction to Python programming for data analysis and visualization. Students will learn how to collect, analyze, and present various forms of data. Second, because numbers and their visualizations do not speak for themselves but require context, interpretation, and narrative, students will practice making effective stories from data and presenting them in blogs and other formats. No programming experience is required for this class.
Taught by: O'Donnell
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 322 History and Theory of Freedom of Expression
Can Donald Trump be punished for suggesting his followers might beat up journalists at rallies? Why doesn't the law have a way to stop false tweets, especially his as President? Is money really speech so far as the First Amendment goes? Doesn't that tilt the discussion to always favor what the rich say? Is shouting "Heil Hitler! Heil Trump!" at a performance of Fiddler on the Roof the same as crying fire falsely in a crowded theater? Can school authorities punish high schoolers for performing a Nazi salute in their prom photo? Should Alex Jones be banned from Twitter as well as Facebook? Can racist speech be banned on the Penn campus? What are the considerations to be debated in these examples? If we were going to fashion laws about speech limits all over again in our media-saturated world, would they be different from the ones we have? Does the First Amendment - invented for a print community in which most people were non-literate compared to the ultra-connected world we have today, and in which media were wholly different from those we have now - wisely apply to the world we're in? This reading and discussion seminar examines the philosophical fundamentals that framed the First Amendment, its interpretation by the Supreme Court over time, and recurring arguments to limit or extend its protections that are reflected in current and past controversies. It also examines the advantages and problems of civil society censorship, the kind that gets people banned from social media or fired from their jobs for controversial speech, like the NFL's threats to fire players for taking a knee. All societies make laws to limit speech. What are these limits in the United States, and are they the ones we want?
Taught by: Marvin
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

COMM 323 Contemporary Politics, Policy and Journalism
This course explores modern media and their impact on government and politics. It primarily covers the post-Watergate/post-Vietnam era of journalism. Each week focuses on specific topics and areas of post-Watergate journalism, as well as current press coverage of national events over the prior week. This course gives students the opportunity to interact and discuss the intersection of the press, politics, and public policy with some of the leading practitioners in the field.
Taught by: Hunt
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
COMM 327 Critical Explorations in Global Communication
How do our smartphones relate to the housing crisis in San Francisco, labor conditions in China, respiratory diseases in Ghana, and nineteenth-century utopian visions of universal peace? This course explores these and other linkages between globalization and communication by examining how media industries, technologies, and practices impact transnational actors and issues. Course themes include the changing nature of journalism, state and corporate surveillance, the environmental impacts of digital artifacts and activities, and the commodification of the nation. While focusing on the early twenty-first century, the course also historicizes contemporary narratives of digital globalization in order to illuminate their cultural roots. Course materials draw on academic scholarship as well as videos and texts from US and international media. Students will learn to identify the roles played by media and communication in the process of globalization and to analytically employ concepts relating to global communication such as cosmopolitanism, cultural hybridity, free flow of information, neoliberalism, and technological deterministic.
Taught by: Budnitsky
Activity: Seminar
1.0 Course Unit

COMM 330 The Hidden World of Privacy Policies
The US Federal Trade Commission considers privacy policies essential for internet sites and apps. Lawyers for firms with internet sites and/or apps spend much time writing privacy policies. Yet surveys show that most Americans don't read the policies-and in fact cannot understand them because of their legal jargon. Moreover, surveys indicate, most Americans don't even correctly understand what the label privacy policy means. The aim of this course will be to examine this crucial but misunderstood aspect of modern life. You will learn how to read privacy policies, how to understand their strategic business purposes within the internet industry, and how to think about the implications for society when the key rules of surveillance and privacy are hidden from all but a relative few. You will also work with others in the class to create and carry out a survey of college students' understanding of privacy policies. There will be one exam and a paper related to the survey.
Taught by: Turow
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 332 Survey Research and Design
Survey research is a small but rich academic field and discipline, drawing on theory and practice from many diverse fields including political science, communication, sociology, psychology, and statistics. Surveys are perhaps the most ubiquitous tool of measurement in the social sciences today. Successful practitioners develop expertise in the art and science of survey methodology, including sampling theory and practice, questionnaire instrument development and operationalization, and the analysis and reporting of survey data. Survey researchers are scientists of the method itself testing various practices by which surveys can be improved upon, as well as developing a keen understanding of the nature of error in surveys and how to control it. This course offers an overview of survey research and design. It is highly experiential but also based upon introductory statistical theory and analysis.
Taught by: Dutwin
Course not offered every year
Also Offered As: PSCI 332
Activity: Seminar
1.0 Course Unit

COMM 333 Critical Perspectives in Journalism
This course aims to provide students with a critical understanding of journalism. It combines theoretical perspectives on the making of news with primary source material produced by and about journalists. Students will analyze theoretical material on journalism—about how news is made, shaped, and performed—alongside articles and broadcasts appearing in the media, interviews with journalists in the trade press, and professional reviews. Topics include models of journalistic practice, journalistic values and norms, gatekeeping and sourcing practices, storytelling formats in news, and ethical problems related to misrepresentation, plagiarism, and celebrity.
Taught by: Zelizer
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 337 Philosophical Problems of Journalism
This course explores the relationship between journalism and philosophy by examining particular issues in epistemology, political philosophy, ethics, and aesthetics. Topics include: the concept of a "fact", the role of the press in the state; whether journalists (like doctors and lawyers) operate according to specialized "professional" ethics; and the limits of journalism as a literary or visual genre. Course readings will include philosophical texts, breaking print journalism, and blogs that specialize in media issues.
Taught by: Romano
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 338 Ritual Communication
This course explores the significance of rituals as communicative events in contemporary American culture. We will pay particular attention to the ways in which rituals contribute to the making and re-making of social groups, be they ethnic, religious, familial, or institutional. And we will also attend to the obverse: the ways in which rituals create and perpetuate boundaries between "us" and "them" and between "appropriate" and "deviant" social behavior. Issues of race, class, gender, nationality, religion, age and sexuality will be central to our exploration of how rituals function. Over the course of the semester, we will analyze individual rites of passage—e.g. from quinceanera to funerals—as well as rituals that mark transitions on a far larger scale such as presidential inaugurations. We will explore rituals that unfold at the local level as well as those that most of us experience only in mediated forms. Students will get hand's on experience conducting original ethnographic fieldwork and will learn how to develop compelling research proposals.
Taught by: Paxton
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 339 Critical Topics in Communication
This is a special topics course that covers varying topics in communication. For more information about the course, please see: https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements
Taught by: Various Instructors
Course not offered every year
Activity: Lecture
1.0 Course Unit
COMM 393 Political Polling
Political polls are a central feature of elections and are ubiquitously employed to understand voter intentions and public opinion. This course will examine political polling by focusing on four main areas of consideration. First, what is the role of political polls in a functioning democracy? This area will explore the theoretical justifications for polling as a representation of public opinion. Second, the course will explore the business and use of political polling, including media coverage of polls, use by politicians for political strategy and messaging, and the impact polls have on elections specifically and politics more broadly. The third area will focus on the nuts and bolts of election and political polls, specifically with regard to exploring traditional questions and scales used for political measurement; the construction and considerations of likely voter models; measurement of the horserace; and samples and modes used for election polls. The course will additionally cover a fourth area of special topics, which will include exit polling, prediction markets, polling aggregation, and other topics. It is not necessary for students to have any specialized mathematical or statistical background for this course.

Taught by: Dutwin
One-term course offered either term
Also Offered As: PSCI 333
Activity: Seminar
1.0 Course Unit

COMM 395 Communication and the Presidency
This course examines the vital aspect of communication as a tool of the modern Presidency. Reading and class discussions focus on case studies drawn from modern Presidential administrations (beginning with FDR) that demonstrate the elements of successful and unsuccessful Presidential initiatives and the critical factor of communication common to both. This course is also an introduction to primary research methods and to the use of primary research materials in the Presidential Library system.

Taught by: Eisenhower
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

COMM 397 New Media and Politics
This course seeks to trace the evolving relationship between new media technologies and political communication. Major topics will include: the role of social media activism, including its use as a tool for social and political change in the U.S. and around the world; the cultural, economic, and political implications of the rise of digital technologies, including the implications of the 2010-2011 Egyptian revolution for the study of social movements; and the role of political satire and humor in shaping political discourse. This course will also explore the impact of social media on political decision-making, including the role of Twitter and other forms of social media in shaping public opinion and influencing political behavior.

Taught by: Winneg
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 402 Arab Uprisings: Local and Global Representations
This course explores the Arab uprisings as a battleground where multiple narratives battle for visibility across a variety of media platforms. We will examine local and global representations of the popular movements that have swept Arab countries since December 2010, analyzing different media, styles and modalities of representations. We will focus among other things on social media, political humor, graffiti, and the human body as instruments of communication, and focus on various related debates and polemics about the political impact of technology, the effectiveness of political satire, and the role of gender and sexuality in revolutionary politics. The overall approach of the course is critical/theoretical.

Taught by: Kraidy
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 404 Media and Politics
Media and Politics will examine multiple issues specific to the past and present political media environment in the United States. Focus will be primarily, though not exclusively on the contemporary news media (as opposed to political advertising and other marketing-oriented communications). Topics will include the rise of partisan media, selective exposure, news as entertainment, etc. Reading expectations will be relatively heavy, and under the supervision of the professor, students will be expected to write a research paper on a topic not directly a part of the course material.

Taught by: Mutz
Course not offered every year
Also Offered As: PSCI 404
Activity: Seminar
1.0 Course Unit

COMM 407 Understanding Social Networks
Digital technologies have made communication networks ubiquitous: even when we can’t really notice them, they mediate most aspects of our daily activities. Networks, however, have always been the backbone of social life: long before Facebook, Twitter, Snapchat, or other similar platforms, communication created channels for information diffusion that linked people in myriad other ways. Through letters, commerce, or simply face to face interactions, people have always been exposed to the behavior of others. These communicative ties embed us into an invisible web of influence that we can make tangible and analyze. This course will teach you how to map those connections in the form of networks, and how to study those networks so that we can improve our understanding of social life. The goal is to help you grasp the consequences of connectivity, and how small changes in the structure of our ties can lead to big differences in how networks behave.

Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 419 Communication, Culture & Revolution: A Global Approach
This seminar explores revolutionary communication and cultural expression. Looking at revolutionary movements from a global and comparative perspective, we will examine modalities of communication through which revolutionaries—progressive and regressive, from the French Revolution to ISIS—express themselves, describe and attack incumbent regimes and other opponents, call for new ideological solidarities, and construct revolutionary political identities. Revolutionary contexts are considered as battlegrounds where multiple narratives contend for visibility. We will explore relevant debates, historical and contemporary, concerning the political impact of technology, the use of violence, and the role of gender and sexuality in revolutionary politics. We will focus on social media, digital video, political humor, graffiti, and the human body as instruments of communication. The overall approach of the seminar is theoretical, critical and global.
Taught by: Kraidy
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 423 Communication and Social Influence Laboratory
Considerable resources are devoted to constructing mass media campaigns that persuade individuals to change their behavior. In addition, individuals powerfully influence one another without even knowing it. Still, our ability to design and select optimal messages and interventions is far from perfect. This course will review investigations in social and cognitive psychology and communication sciences that attempt to circumvent the limits of introspection by using biological and implicit measures, with particular focus on neuroimaging studies of social influence and media effects.
Taught by: Falk
Course not offered every year
Prerequisites: COMM 275 or a media effects or persuasion course at ASC, psych, or Wharton
Activity: Seminar
1.0 Course Unit

COMM 431 Is Public Opinion the Voice of the People?
Democracy relies on mechanism in which the public communicates with policy makers. This course examines the extent to which public opinion effectively represents this mechanism. We begin with historical conceptions of public opinion tracing back to ancient Athens and 18th century enlightenment thinking. We then consider the extent to which public opinion can be captured by modern day polling, or whether it only emerges after considered deliberation and discussion. We then discuss the ways in which elite rhetoric and the media move public opinion, including through the use of public opinion polls. Finally, we ask whether policymakers are actually sensitive to the voice of the people or only the voice of some of the people.
Taught by: Leukes
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 432 Digital Inequalities
Digital information and communication technologies are intertwined with our everyday lives, from banking, to working, and dating. They're also increasingly crucial parts of our most powerful institutions, from policing, to the welfare state, and education. This course examines the ways that these technologies combine with traditional axes of inequality like race, gender, and class in ways that may deepen social inequality. We'll consider major approaches to understanding digital inequalities and apply them to case studies of both problems and solutions. Students will learn to critically analyze policies and programs from a variety of perspectives, and to evaluate the promise of digital technologies against their potential perils.
Taught by: Ticona
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 439 Media Criticism
Criticism has at its core an assumption of judgment about the target or performance being evaluated. Yet whose judgment is being articulated? On which basis and authority? To which ends? And with which effects? This course examines the shape of contemporary media criticism, focusing on its meaning function in different domains of popular culture (including music, television, news, and film) and the patterns by which it is produced. Students will become acquainted with theories and ongoing debates about contemporary media criticism themselves. The course aims to sensitize students to the nuances of their own consumption of criticism and patterns by which it is typically produced.
Taught by: Zelizer
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 441 The Impact of the Internet, Social Media, & Information Technology on Democracy
At the turn of the 21st century, many claimed that the internet would make the world a more democratic place. Have these prophecies borne out? We examine the effects the internet has had on democracy, looking at research that examines whether, for instance, the internet has increased or decreased inequality, polarization, and political participation. In addition to reading and discussing empirical literature, we will also test many of the theories in this course through hands-on workshops in data analysis.
Taught by: Leukes
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 459 Social Networks and the Spread of Behavior
This course explores the nature of diffusion through social networks, the ways networks are formed and shaped by social structures, and the role they play in health behavior, public policy, and innovation adoption. Topics include: the theory of social networks; the small world model of network structure; constructing models to represent society; the social bases of the adoption of innovations and the spread of new ideas; the role of social networks in controlling changes in public opinion; the emergence of unexpected fashions, fads, and social movements; and the connection between social network models and the design of public policy interventions. Students will learn how to use the agent-based computational modeling tool "NetLogo", and they will work directly with the models to understand how to test scientific theories. We will examine the basic theory of social networks in offline, face-to-face, networks, as well as the role of online networks in spreading new ideas and behaviors through social media. Long standing debates on the effects of social networks on changing beliefs and behaviors, their impact on social change, and ethical concerns regarding their potential manipulation will be given careful consideration throughout. Students will be taught new skills that will enable them to use and develop their own agent-based models.

Taught by: Centola
Prerequisite: COMM 210 Quantitative Research Methods in Communication; SOCI 100 Introduction to Sociological Research; COMM 310 The Communication Research Experience; or Permission from the Instructor
Activity: Seminar
1.0 Course Unit

COMM 485 Globalization and the Music Video
This seminar focuses on the music video genre to explore topical and conceptual issues at the heart of the globalization of the media and cultural industries. After a formative period largely grounded in North America and Western Europe, the music video migrated to other parts of the world in the 1990s as a wave of privatization and liberalization engulfed national media systems worldwide. Based on a variety of scholarly and trade readings about the globalization of media and culture, the changing media and creative industries, and the music video genre itself, questions to be tackled include: What changes when a media form migrates from its original context? What does the content of music videos reveal about socio-economic and cultural change worldwide? How do music videos rearticulate gender and sexuality, and nationalism? What transnational circuits of ideas, images and ideologies are enabled or constrained by music video?

Taught by: Kraidy
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 493 Independent Study
he independent study offers the self-motivated student an opportunity for a tailored, academically rigorous, semester-long investigation into a topic of the student’s choice with faculty supervision. Students must complete and file a designated form, approved and signed by the supervising faculty member and the Associate Dean for Undergraduate Studies. This form must be received by the Undergraduate Office before the end of the first week of classes in the semester in which the independent study will be conducted.

Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

COMM 494 Honors & Capstone Thesis
The senior thesis provides a capstone intellectual experience for Honors students and Communication and Public Service Program (ComPS) participants. Students conduct a primary research study on a communication-related issue over the course of two semesters. Students should consult with and arrange for a faculty supervisor no later than the summer before senior year. Students must also file a designated form and topic statement, approved and signed by the supervising faculty member, no later than the first day of class. Required of all students planning to enroll in COMM 495 or COMM 499 in the Spring. All Honors students must have a 3.5 cumulative GPA at the end of junior year for eligibility. See the Annenberg website for complete eligibility requirements.

Taught by: Ben-Porath/Woolf
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

COMM 495 COMPS Capstone Thesis
Second semester of two semester thesis course. Successful completion of Comm 494 is required for enrollment. The capstone thesis is a requirement for all Communication and Public Service Program participants. Students complete the primary research project started during COMM 444. For students graduating with a 3.5 cumulative GPA after completing COMM 495 with a grade of 3.7 or higher, the capstone thesis may be designated as a senior honors thesis in communication and public service.

Two terms. student may enter either term.
Prerequisites: Written proposal approved by both thesis supervisor and major chair.
Activity: Independent Study
1.0 Course Unit

COMM 491 Communication Internship
This seminar provides a scholarly counterpart for students’ internships in various communication-related organizations. Through individually-selected readings, class discussion, and individual conferences, students develop their own independent research agendas which investigate aspects of their internship experience or industry. In written field notes and a final paper, students combine communication theory and practice in pursuit of their individual questions.

Taught by: Haas
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit
COMM 498 Experimental Design
The main goal of this course is to familiarize students with experiments, quasi-experiments, population-based survey experiments and field experiments as they are widely used in the social sciences. By the end of the course, students will be expected to understand what it is about a study that allows for a strong causal inference. Whether one is reading about studies in a newspaper or reading academic journal articles, it is important to know how to distinguish convincing versus unconvincing evidence of any given claim. As a final project, students will be expected either to develop their own original experimental design or to analyze the evidence pertaining to a causal claim of their choosing based on what they have learned in class. Throughout the course of the semester, we will also consider how to deal with the issue of causality as it occurs in observational studies, and draw parallels between experimental and observational research.
Taught by: Mutz
Course not offered every year
Also Offered As: COMM 615, PSCI 439, PSCI 635
Activity: Seminar
1.0 Course Unit

COMM 499 Senior Honors Thesis
Second semester of two semester thesis course. Completion of COMM 494 with a grade of 3.3 or higher and a 3.5 cumulative GPA at the end of the Fall semester of senior year are required for enrollment. The Senior Honors Thesis provides a capstone intellectual experience for students who have demonstrated academic achievement of a superior level. Students complete the primary research project started during COMM 494.
Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

COMM 500 Proseminar
Introduction to the field of communications study and to the graduate program in communications. Required of all degree candidates. Open only to graduate students in communication.
Course usually offered in fall term
Activity: Lecture
0.0 Course Units

COMM 522 Introduction to Communication Research
The logic of scientific inquiry and the nature of research. Hypothesis development, research design, field and laboratory observation and experimentation, measurement, interviewing and content analysis, sampling, and basic statistical analysis. Required of all degree candidates. Open only to graduate communication students.
Taught by: Deli Carpini/Hornik
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 523 Qualitative Ways of Knowing
How do social scientists create new knowledge? What are the qualitative processes and philosophies of knowing for communication scholars? This course provides students with a range of theories and frameworks for gathering data and developing claims, as well as understanding the limits of social science inquiry. Key areas of focus are identifying research questions, research ethics, understanding evidence, making causal claims and scholarly writing. COMM 523 is required of all degree candidates and open only to graduate communication students.
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 525 Introduction to Political Communication
This course is designed as a PH.D. level introduction to the study of political communication, and is recommended as a foundational course to be taken early in ones course of study for students interested in political communication as a primary or secondary area of research and teaching. As an introduction to the field it is structured to cover a wide-range of topics and approaches, including media institutions and the effects of both mass mediated and deliberative communications. While no single course can provide comprehensive coverage of a subfield with as long and diverse a history as political communication, our hope is that you will leave this course with a strong grasp of the major theories, trends, methods, findings and debates in this area of study, as well as the gaps in our knowledge and promising directions for future research.
Taught by: Moehler
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 530 Advertising and the Digital Age
It is impossible to understand the development of the contemporary digital era without understanding the role played by the advertising industry, broadly the understood. From the launch of first popular web browsers in the mid-1990s, various forms of marketing communication have shaped the most popular activities—from search to social to apps—and redefined the ways companies think about individuals in society. The aim of this course is to study these developments historically and contemporaneously. First we will range across the history of advertising and its related social force, consumerism, through the late 20th century. We will next investigate the forces that guided the rise of the internet as a commercial medium in the face of an earlier ethic that decried that very idea. Then we will dive into the ways marketers attempt to guide the internet and other digital media to their benefit by exploring a range of key contemporary activities: the rise of the smartphone as a marketing device, programmatic advertising, personalization strategies, location and cross-platform targeting and attribution, online retailing, the responses of brick and mortar retailers, advertisers’ roles in the cratering of print media, native advertising/branded content, the rise of “influencers,” and the transformation of “television” as a product, an activity, and an industry. We will read industry documents and other materials to assess how all these activities actually “work” and what drives them. Then we will consider their societal implications through a variety of lenses, including surveillance, privacy, pluralism, and democracy.
Taught by: Turow
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 553 Computational Social Science Research Seminar
This is a graduate research seminar in which top researchers in the field of Computational Social Science will present cutting-edge research. Our focus will be on carefully reading the speaker’s work, and discussing in detail their theoretical models, empirical methods, and overall scientific contribution. Participants will also present in the seminar, which will help to prepare them for professional presentations of their work at conferences and job talks. This seminar will meet weekly.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
COMM 575 Social Psychology of Communication
Contributions of social psychology to understanding communication behavior: message systems; social cognition; persuasive communications; attitude formation and change; face-to-face interactions and small group situations; strategies of attributional and communicative interpretation; mass communication effects; social influence and networks.
Taught by: Cappella
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 594 Intro To Networks
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 615 Experimental Design and Issues in Causality
The main goal of this course is to familiarize students with experiments, quasi-experiments, survey experiments and field experiments as they are widely used in the social sciences. Some introductory level statistics background will be assumed, though this is a research design course, not a statistics course. By the end of the course, students will be expected to develop their own original experimental design that makes some original contribution to knowledge. Throughout the course of the semester, we will also consider how to deal with the issue of causality as it occurs in observational studies, and draw parallels to experimental research.
Taught by: Mutz
One-term course offered either term
Also Offered As: COMM 498, PSCI 439, PSCI 635
Activity: Seminar
1.0 Course Unit

COMM 623 Seminar on Communication, Behavior, and Health
Seminar members will critically review theory and research on communication, behavior, and health, with the goal of suggesting new directions that research might take. Theories of health behavior, methodological issues in health behavior research, and strategies to improve health-related behaviors, including sexual risk behaviors, physical activity, diet, and medication adherence, using a variety of approaches will be studied.
Taught by: Jemmott
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 630 Historical Trends of Mass Communication Research
An introduction into the field of mass communication research covering classic studies from the late 19th century through 1970s. Emphasis is on the societal, organizational, political, and other considerations that shaped the field.
Taught by: Turow
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 637 Public Health Communication
Theories of health behavior change and the potential role for public health communication; international experience with programs addressing behaviors related to cancer, AIDS, obesity, cardiovascular disease, child mortality, drug use and other problems, including evidence about their influence on health behavior; the design of public health communication programs; approaches to research and evaluation for these programs.
Taught by: Hornik
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 639 Communication and Cultural Studies
This course tracks the different theoretical appropriations of "culture" and examines how the meanings we attach to it depend on the perspectives through which we define it. The course first addresses perspectives on culture suggested by anthropology, sociology, communication, and aesthetics, and then considers the tensions across academic disciplines that have produced what is commonly known as "cultural studies." The course is predicated on the importance of becoming cultural critics versed in alternative ways of naming cultural problems, issues, and texts. The course aims not to lend closure to competing notions of culture but to illustrate the diversity suggested by different approaches.
Taught by: Zelizer
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 660 Content Analysis
An introduction to content analysis, the analysis of large bodies of textual matter, also called message systems analysis, quantitative semantics, propaganda analysis, and (computer-aided) text analysis. The course inquires into the theories, methods, and empirical problems common to these analytical efforts: sampling, text retrieval, coding, reliability, analytical constructs, computational techniques, and abductive inference. It illustrates these problems by studies of mass media content, interview or panel data, legal research, and efforts to draw inferences from personal documents typical in psychology and literature. Students design a content analysis and do the preparatory work for an academic or practical research project. They may also use the opportunity of forging available theories into a new analytical technique and test it with available texts, or solve a methodological problem in content analysis research.
Taught by: Krippendorff
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 665 Digital Media and Social Theory
This course explores critical issues in contemporary society through the lens of digital media studies and social theory. The goal is to build constructive dialogues between digital media studies and contemporary social theory. Special attention will be given to how social theory may inform the theorizing and empirical analysis of digital culture, politics, and practices. We will read monographs on globalization, power and control, dissent and protest, self and community, and the public sphere as they relate to digital media technologies. They include works by McLuhan, Castells, Turkle, Papacharissi, Lievrouw, Bimber, W. Chun and more. These monographs will be examined alongside the works of Gramsci, Foucault, Williams, Habermas, Bourdieu, Giddens, and Melucci. Students are required to submit weekly reading reports, make oral presentations, and complete a term paper.
Taught by: Yang
One-term course offered either term
Also Offered As: SOCI 664
Activity: Seminar
1.0 Course Unit

COMM 673 Arts & Propaganda
This course (seminar) deals with examples of controversy or struggles, through public art or exhibition, to define or proclaim, contest or reinforce national identities. Some are internal debates, within national boundaries, some are transnational and exist in a global frame. In most instances, there are sharp disputes- having to do with history and its interpretation and representation, about the role of museum & implications for legitimacy, about the relationship of patronage to power. Some sessions will be rooted in art history and iconography, some in the use of archival material to bring fresh perspectives to bear, some on aspects of law and regulation.
Taught by: Price
Course offered fall; even-numbered years
Activity: Seminar
1.0 Course Unit

COMM 684 Data Visualization for Research
Empirical research employs data to gain insights and build a theoretical understanding of the world. An appropriate visualization of data is key to illuminating hidden patterns and effectively communicate the main findings of research. This course will discuss the visualization strategies of published research, give recommendations of best practice, and discuss tips and techniques for specific research purposes (i.e. hypothesis testing, group comparison) and data structures, including temporal, geographic, and network data. This course will equip you with tools you can use to learn through visualization and to communicate more effectively your own research.
Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 697 Popular Culture and Politics
Not surprisingly, most research regarding the media’s impact on political attitudes, opinions, knowledge and behaviors focuses on news and public affairs genres, ignoring the vast majority of media content labeled “entertainment.” Spurred in part by technological, economic, cultural and political changes that have increasingly blurred the line between news and entertainment, a small but growing body of empirical research is exploring the political influence of popular culture. In this course we will critically review this literature, focusing on issues of theory, methods, findings and implications.
Taught by: Delli Carpini
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 699 Advanced Project in a Medium
Proposal written in specified form and approved by both the student’s project supervisor and academic advisor must be submitted with registration. Open only to graduate degree candidates in communication.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

COMM 701 Introduction to the Political Economy of Media
This course has two aims. First, assuming that communications are central to any society, it situates media systems within larger national and international social relationships and political structures. Second, this course critically examines the structures of the communication systems themselves, including ownership, profit imperatives, support mechanisms such as advertising and public relations, and the ideologies and government policies that sustain these arrangements. Considering case studies ranging from traditional news and entertainment media to new digital and social media, the course provides a comprehensive survey of the major texts in this vibrant sub-field of media studies.
Taught by: Pickard

COMM 703 International Communication: Power and Flow
The tumultuous rise of new media technologies, including the Internet and social media, combine with grinding geopolitical change to create dramatic changes in law and policy regarding speech and society. This course is an examination of current dilemmas in historical context; about strategic communications in contrast or challenge to goals of free expression and to the exercise of power over the flow of information. Taking relevant contexts, including societies in transition, authoritarian societies, states and societies in conflict, we explore the relationship of the state and other entities to the flow of words and images, and how these messages impact public opinion, stability, and democratic growth. We start with a theoretical orientation focused on two competing paradigms: the paradigm of free expression and the paradigm of national identity, conflict management, and sovereignty. The class will then explore several case studies viewed through the lens of narrative theory. Areas of discussion may include case studies such as Ukraine, Russia, Syria, Iran and, as well, the drama of the development of global internet policy.

Also Offered As: LAW 914
Activity: Seminar
1.0 Course Unit

COMM 706 Analysis of Election Data
This course is intended to serve as a workshop for students interested in the empirical analysis of elections, public opinion and political communication more generally. The centerpiece of the course will be an original research paper produced by each student on a topic of his or her own choosing. The requirements for these papers are fairly open, but demanding: the research papers must a) involve empirical analysis of a major election data set, b) be oriented toward answering an original research question selected with the guidance of the instructor, and c) aim to be of publishable quality. There are no formal prerequisites for the course. However, if you have less than two semesters of statistical training, and/or no formal background in the study of elections, public opinion or political communication, then this is probably not the right course for you. In order to be able to formulate an original research question, you need some background in the literature, which is provided by other courses, but is not a formal part of this course.
Taught by: Mutz

COMM 712 Race, Media and Politics
"Race" has and continues to play an important role in American politics. In this course we will critically review the relevant Communication and Political Science literature with an eye towards understanding: (1) the role of the mass media in the construction and dissemination of race as a sociopolitical concept; (2) how race affects political attitudes, opinions and behaviors; (3) the unique methodological problems researchers face in studying racial attitudes and opinions; and (4) shortcomings in the existing scholarship on race, media and politics and how these shortcomings might be addressed.
Taught by: Delli Carpini
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 715 Political Communication
This course examines the role of political communication in influencing political attitudes and behaviors. Because of the broad nature of the topic, course readings and lectures will be interdisciplinary, drawing on research in sociology, history, psychology, political science and communication research. There are two primary goals for the course. One goal is to acquaint graduate students with the wide-ranging literature on political communication. A second major goal is to stimulate ideas for original research in the field of political communication. Toward this end, by the end of the semester students will be expected to be sufficiently familiar with the field to propose original studies on topics of their choosing. The formulation of an original research question and research design will be an important component of the final examination.

COMM 721 Theory and History in Global Communication
For more than a half century, global communication theory has been shaped by interaction between worldwide geopolitical developments on the one hand, and theoretical trends in the social sciences and humanities on the other hand. This course is designed to give you a firm grasp of the historical trajectory of global communication theory and to develop knowledge of the central debates that have animated the field since the mid-20th century. We will discuss how these debates have changed, under what circumstances, and how contemporary scholarship wrestles with them; and how language and jargon in the field has shifted from "international" to "global." We will also explore why some key issues and media have received relatively scant attention in global communication research, while others have arguably been over-emphasized. We will read a mixture of primary sources by luminaries in the different paradigms that have dominated global communication, complemented with secondary texts that are carefully selected to give you a sense of the architecture of the field, an understanding of what sub-areas of global communication scholarship are published and the journals and presses that publish in those sub-areas.
Taught by: Kraidy
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 722 Theories and Methods in Qualitative Research
The objective of this course is to ensure that students have a grasp of the fundamental theories and methods of qualitative research. After spending time immersing ourselves in the metatheories that shape social science research, we will address ethical issues that emerge in all human subjects research (qualitative and otherwise), focusing primarily on responsible treatment of participants and their data. Then we will work through a series of research techniques, including semi-structured interviews, focus groups, ethnography, discourse analysis and participatory mapping. With the goal of providing practical instruction on qualitative methods and a grounding in theoretical issues, this course is meant to prepare studies for conducting a broad range of qualitative research projects in communication and media studies.
Taught by: Lingel
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 727 Evaluation of Communication Campaigns
The various roles of research in campaign work: foundational research, formative research, monitoring research, summative evaluation research, policy research. The place for a theory of campaign effects. The ethics of evaluation research. Alternative designs, measurement, statistical and analytic approaches.

One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 740 Language and Social Constructions of Reality
This seminar explores the principles and processes by which realities come to be socially constructed and discursively maintained. It serves as an introduction to the emerging epistemology of communication, which is concerned less with what communication is than with what it does, constitutes, and actively maintains, including when being studied. The seminar develops analytical tools to understand how realities establish themselves in language and action, how individuals can become entrapped in their own reality constructions, how facts are created and institutions take advantage of denying their constructedness. After reading several exemplary studies, students explore the nature of a construction on their own. The seminar draws on the discourse of critical scholarship and emancipatory pursuits, which are allied with feminist writing, cultural studies, and reflexive sociology. It is committed to dialogical means of inquiry and takes conversation as an ethical premise.
Taught by: Krippendorff
One-term course offered either term

COMM 741 Media Effects Research Design
This course will include three components. Part one will focus on readings and lectures about media effects research design, with some emphasis on exposure measurement, and on constructing out-of-laboratory designs including natural and quasi experiments, longitudinal and time series designs and designs appropriate for evaluating persuasive campaigns. Part two will be case focused, asking for design critiques of current published research studies. Part three will provide an opportunity for development of designs relevant to students' own interests.

COMM 776 Describing your Data
This course is for students who have collected empirical data and will explore ways of describing data for scholarly and translational purposes. For example, students will explore different ways to explore and visualize their data (e.g., a conference abstract vs. a blog post), present their data (e.g., a conference talk vs. a pop talk) and make their findings more reproducible. Students will also read scholarly work (oversampling, though not limited to work on media effects and the science of science communication) and critique their work in relation to what is known about effective communication and reproducibility. Students should come prepared to engage with art, science and computer programming.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 780 Research Seminar on Internet Experiments
In the last decade, new studies have used Web-based experimentation to identify previously unobservable features of communication networks - from processes of cumulative advantage, to the spread of innovations, to the emergence of cooperation. This course offers a deep-dive into the design, creation and execution of Web-based experiments. Students will learn the core principles of Web-based experimental design, which will prepare them to design their own Web-based studies. Students will learn the relationship between theory and methods through a careful analysis of the theoretical implications of past Web-based experiments (both in terms of their value for some scientific problems, and their limitations for others). To this end, students will explore Web-based experiments through the lens of the theories that motivate them. Discussions and assignments will focus on eliciting both the strengths and limitations of this approach with specific emphasis on identifying the scientific potential for new studies. Longstanding debates concerning the value of identification and replication in social science, alongwith the relationship between theoretical models, observational data and experimental data, are given careful consideration throughout. Students will be exposed to new ways of conducting empirical research that will prepare them to design their own Web-based experimental studies.

COMM 801 Filter Bubbles, Long Tails, & Information Cascades: Methodology for a Fragmented Media Environment
Scholars and pundits have made many claims in recent years about the impact that digital technologies, and social media in particular, play in shaping access to political information and the formation of beliefs. However, all these claims rely on specific measurement instruments and research designs that are not always appropriately scrutinized or evaluated. This course will discuss the different analytical approaches that can be used to measure media consumption, selective exposure, bias, opinion formation, and the diffusion of information in the online media environment. Our goal is to assess the strength and weaknesses of different research designs with an eye on how to best triangulate available evidence and advance in a cumulative fashion in this important research domain.
Course not offered every year

COMM 815 Labor, Communication and Technology
Debates about the future of work, automation, and the working conditions of on-demand work have opened up new questions rooted in long intellectual lineages. This course introduces students to key theoretical perspectives and concepts in the study of labor, communication, and technology from the 19th and 20th centuries and examines their relevance to 21st century issues. We will examine the meaning of labor from Marxist, post-industrial, cultural, and sociological perspectives as well as the place of labor in communication scholarship. We will also examine the relationship between digital transformations of the workplace and new forms of surveillance, social stratification and inequality.

**COML 006 Hindu Mythology**
Premodern India produced some of the world’s greatest myths and
stories: tales of gods, goddesses, heroes, princesses, kings and lovers that continue to capture the imaginations of millions of readers and hearers. In this course, we will look closely at some of these stories especially as found in Purana-s, great compendia composed in Sanskrit, including the chief stories of the central gods of Hinduism: Visnu, Siva, and the Goddess. We will also consider the relationship between these texts and the earlier myths of the Vedas and the Indian Epics, the diversity of the narrative and mythic materials within and across different texts, and the re-imagining of these stories in the modern world.

Activity: Lecture
1.0 Course Unit

**COML 012 India’s Literature: Love, War, Wisdom and Humor**
This course introduces students to the extraordinary quality of literary production during the past four millennia of South Asian civilization. We will read texts in translation from all parts of South Asia up to the sixteenth century. We will read selections from hymns, lyric poems, epics, wisdom literature, plays, political works, and religious texts.
For BA Students: Arts and Letters Sector
Taught by: Patel
Course not offered every year
Also Offered As: SAST 004
Activity: Lecture
1.0 Course Unit

**COML 013 Introduction to Modern South Asian Literatures**
This course will provide a wide-ranging introduction to the literatures of South Asia from roughly 1500 to the present, as well as an exploration of their histories and impact on South Asian society today. How are literary movements and individual works - along with the attitudes towards religion, society, and culture associated with them - still influential in literature, film, and popular culture? How have writers across time and language engaged with questions of caste, gender, and identity? We will read from the rich archive of South Asian writing in translation - from languages that include Braj, Urdu, Bangla, and Tamil - to consider how these literatures depict their own society while continuing to resonate across time and space. Topics of discussion include the Bhakti poetries of personal devotion, the literature of Dalits - formerly referred to as the Untouchables - and the ways in which literature addresses contemporary political and social problems. Students will leave this course with a sense of the contours of the literatures of South Asia as well as ways of exploring the role of these literatures in the larger world. No prior knowledge of South Asia is required; this course fulfills the cross-cultural analysis requirement.

Notes: Freshman seminar.

**COML 023 In Praise of the Small**
We can memorize aphorisms and jokes, carry miniature portraits with us, and feel playful in handling small objects. This seminar will ask us to pay attention to smaller texts, art works, and objects that may easily be overlooked. In addition to reading brief texts and looking at images and objects, we will also read texts on the history and theory of short genres and the small.
Taught by: Weissberg
Course not offered every year
Also Offered As: GRMN 023
Activity: Seminar
1.0 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

**COML 031 Introduction to Renaissance Literature and Culture**
This course will survey the cultural history of sixteenth and seventeenth century England. Interdisciplinary in nature and drawing on the latest methodologies and insights of English studies, we will explore how aesthetics, politics, social traditions, impacted literature at this vital and turbulent time of English history. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

**COML 053 Music of Africa**
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwai to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African fuji, and North African rai and hophop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post-colonial era.
Taught by: Muller
Course not offered every year
Also Offered As: AFRC 053, MUSC 051
Activity: Lecture
1.0 Course Unit
COML 056 Seeing/Hearing South Africa: Politics and History through Contemporary Performance
This course begins in the regular semester--students are provided a general introduction to South African history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the two week intensive travel to South Africa (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites. For fall/winter travel: focus is on Cape Town's New Year's Festival performed by those historically called "Cape Coloured" a Festival that makes complicated understandings of race, slavery, and transatlantic translation of borrowed culture. For the Spring/late spring travel, the destination is music festivals in mid-May. Both classes include visits to Robben Island, Kirstenbosch gardens; "Cape Malay" heritage sites; travel to KwaZulu Natal, and to Johannesburg's apartheid museum, Soweto's anti apartheid destinations, the Cradle of Humankind works heritage site, a game park, and the Union Buildings in Pretoria. En route we will stop over to view Khoisan rock art. Taught by: Muller
Also Offered As: AFRC 056, ANTH 056, MUSC 056
Activity: Seminar
1.0 Course Unit
Notes: Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs

COML 059 Modernisms and Modernities
This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts -- including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin. Course not offered every year
Also Offered As: ENGL 059, FREN 258
Activity: Lecture
1.0 Course Unit
Notes: This is a topics course.

COML 061 20th-Century British Literature
This course introduces major works in twentieth-century British literature. We will read across a range of fiction, poetry, plays, and essays, and will consider aesthetic movements such as modernism as well as historical contexts including the Two World Wars, the decline of empire, and racial and sexual conflict. Authors treated might include: Conrad, Yeats, Joyce, Eliot, Lawrence, Forster, Shaw, Woolf, Auden, Orwell, Beckett, Achebe, Rhys, Synge, Naipaul, Rushdie, Heaney, and Walcott. Course not offered every year
Also Offered As: ENGL 061
Activity: Lecture
1.0 Course Unit
Notes: See Comparative Literature website for current offerings at: http://ccat.sas.upenn.edu/Complit/

COML 062 20th-Century Poetry
From abstraction to beat, from socialism to negritude, from expressionism to ecopoetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetries, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course. Course not offered every year
Also Offered As: ENGL 062
Activity: Lecture
1.0 Course Unit

COML 065 20th-Century British Novel
This course traces the development of the novel across the twentieth-century. The course will consider the formal innovations of the modern novel (challenges to realism, stream of consciousness, fragmentation, etc.) in relation to major historical shifts in the period. Authors treated might include: Conrad, Lawrence, Joyce, Forster, Woolf, Cather, Faulkner, Hemingway, Achebe, Greene, Rhys, Baldwin, Naipaul, Pynchon, Rushdie, and Morrison. Course not offered every year
Also Offered As: ENGL 065
Activity: Lecture
1.0 Course Unit

COML 074 Science and Literature
Science fiction has become the mythology of modern technological civilization, providing vivid means for imagining (and proclaiming) the shape of things to come. This interdisciplinary seminar will consider SF in multiple manifestations -- literature, film and TV shows, visual art and architecture. We will debate how the genre has shaped ideas about scientific knowledge, the position of humans in the universe, and our possible futures by examining themes including time travel, robots and androids, alien encounters, extraterrestrial journeys, and the nature of intelligent life. This seminar will consider SF from the perspective of the history of science and technology, critically and comparatively, with a primary focus on social and cultural contexts in addition to literary aspects.

Taught by: Rider
Course not offered every year
Also Offered As: ENGL 075, HIST 117, HSOC 110, STSC 110
Activity: Seminar
1.0 Course Unit
COML 090 Women and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherré Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg.
One-term course offered either term
Also Offered As: ENGL 090, GSWS 090
Activity: Lecture
1.0 Course Unit
Notes: This is a topics course. If the topic is "Gender, Sexuality, and Literature," the following description applies.

COML 093 Introduction to Postcolonial Literature
English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender.
Course not offered every year
Also Offered As: CIMS 093, ENGL 093
Activity: Lecture
1.0 Course Unit
Notes: This is a topics course.

COML 094 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning, appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the "New" Criticism of the 1920's and 30's, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory. See the Comparative Literature website at http://ccat.sas.upenn.edu/complit/ for a description of the current offerings.
Course not offered every year

COML 095 Universal Language: From the Tower of Babel to Artificial Intelligence
"Universal Language" is a course in intellectual history. It explores the historical trajectory, from antiquity to the present day, of the idea that there once was, and again could be, a universal and perfect language among the human race. If recovered, this language can explain the origins and meaning of human experience, and can enable universal understanding and world peace.

COML 096 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire?
This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality -- a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platos Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldua, David Halperin, Cherré Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesey, Chandra Tadpole Mohanty, and Susan Stryker.
Course not offered every year
Also Offered As: ENGL 096, GSWS 096
Activity: Lecture
1.0 Course Unit

COML 100 Introduction to Literary Study
Literature does not exist for your protection. So dangerous is it, that Socrates argued poets ought to be banned from his ideal Republic. And Socrates himself--one of the most subversive of all poetic thinkers--was condemned to death for corrupting the young with his speeches. All great literature is unsettling and alarming. Along with its beauty and delicacy and rhetorical power and ethical force, it can be terrifyingly sublime and even downright ugly: full of contempt and horror and grandiosity and malice. From Socrates' day to our own, countless writers have been jailed, exiled, and murdered, their works censored, banned, burned, for daring to say what others wish would remain unsaid--about religion and the State; sexuality, gender, and the body; art, science, and commerce; freedom and order; love and hate--and for saying it in ways that are aesthetically innovative, surprising, seductive, ravishingly unanticipated. See COML website for current semester's description:

COML 101 Introduction to Folklore

The purpose of the course is to introduce you to the subjects of the discipline of Folklore, their occurrence in social life and the scholarly analysis of their use in culture. As a discipline folklore explores the manifestations of expressive forms in both traditional and modern societies, in small-scale groups where people interface with each face-to-face, and in large-scale, often industrial societies, in which the themes, symbols, and forms that permeate traditional life, occupy new positions, or occur in different occasions in every day life. For some of you the distinction between low and high culture, or artistic and popular art will be helpful in placing folklore forms in modern societies. For others, these distinction will not be helpful. In traditional societies, and within social groups that define themselves ethnically, professionally, or culturally, within modern heterogeneous societies, and traditional societies in the Americas, Africa, Asia, Europe and Australia, folklore plays a more prominent role in society, than it appears to plan in literate cultures on the same continents. Consequently the study of folklore and the analysis of its forms are appropriate in traditional as well as modern societies and any society that is in a transitional phase.

COML 105 Sex and Gender in Ancient Greece and Rome

What is being a man, being a woman, being masculine, being feminine, being neither, being both? Is sex about pleasure, domination, identity, reproduction, or something else? Are sexual orientation and gender identity innate? How can words, myths and stories inform cultural assumptions about sex and gender? Did people in ancient times have a concept of sexuality? How do gendered English terms (like "girly", "effeminate", or "feisty") compare to gendered ancient Greek and Latin terms, like virtues, which connotes both "virtue" and "masculinity"? Why did the Roman and English speaking worlds have to borrow the word "clitoris" from the ancient Greeks? How did people in antiquity understand consent? Can we ever get access to the perspectives of ancient women? In this introductory undergraduate course, we will learn about sex and gender in ancient Greece and Rome. We will discuss similarities and differences between ancient and modern attitudes, and we will consider how ancient texts, ancient art, ancient ideas and ancient history have informed modern western discussions, assumptions and legislation. Our main readings will be of ancient texts, all in English translation; authors studied will include Ovid, Aristophanes, Plato, Euripides, and Sappho. Class requirements will include participation in discussion as well as quizzes, reading responses, and a final exam.

COML 108 Greek & Roman Mythology

Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? Investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

COML 114 Literature of the South Asian City: Space, Culture, Politics

The South Asian city as a way of organizing space and social relations, as a symbol, as a memory of the subject of this course. Through primarily, though by no means exclusively, readings of literature in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary flâneurie. We will see reflections of the city in poetry recited in its homes, detective novels sold in its train stations, stories scribbled in its cafes, plays staged in its theaters, and films produced in its backlots. Readings will attempt to address urban spaces across South Asia, and will include works by writers such as Mirza Ghalib, Rabindranath Tagore, Saadat Hasan Manto, and Vijay Tendulkar. We will examine these works in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.

COML 120 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Ghobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English.
No prior knowledge is required.

1.0 Course Unit

COML 121 Working with Translations
In this class we will study and translate some of the major figures in 20th century poetry, including Rainer Maria Rilke, Claire Malroux, Pablo Neruda, Cesare Pavese, Anna Akhmatova, and Bei Dao. While the curriculum will be tailored to the interests and linguistic backgrounds of the students who enroll, all those curious about world poetry and the formidable, irresistible act of translation are welcome. Students should have at least an intermediate knowledge of a language other than English. We will study multiple translations of seminal poems, render our own versions in response, and have the additional opportunity to work directly from the original. Students may also work in pairs, or groups. A portion of the course will be set up as a creative writing workshop in which to examine the overall effect of each others' translations so that first drafts can become successful revisions. While class discussions will explore the contexts and particularity of (among others) Urdu, Italian, French, and Polish poetry, they might ultimately reveal how notions of national literature have radically shifted in recent years to more polyglottic and globally textured forms. Through guest speakers, essays on translation theory, and our own ongoing experiments, this course will celebrate the ways in which great poetry underscores the fact that language itself is a translation. In addition to the creative work, assignments will include an oral presentation, informal response papers, and a short final essay.

COML 122 Prague: The Making of a European Nation
Even though such "supercities" as New York, Los Angeles, Chicago, Washington, Boston, and San Francisco claim a special place in the minds and hearts of Americans, no American city plays as crucial a role in the formation of national identity among Americans as Prague does among the Czechs. One may even argue that the formation of a national identity associated with a nation's urban center is a European phenomenon. The focus of the proposed course is Prague, the capital of the Czech Republic and the geographical center of Europe. From the 14th century, when it became a seat of the Holy Roman Emperor, to the Hussite Revolution; from the 19th-century national revival and the birth of the independent Czechoslovakia in 1918, to the "Prague Offensive," the last major operation of the Soviet Army in World War II and the re-appearance of the Soviet tanks after the "Prague Spring" in 1968, to the "Velvet" Revolution in 1989, and on to the present day as an EU member, Prague has been the site of major European developments and is where the Czech national identity was forged. Today a popular tourist destination with a uniquely preserved historical center that is part of the UNESCO World Heritage List, Prague combines national character with an increasingly cosmopolitan flavor. Focusing on what makes Prague a national capital, we will note how the "national" negotiates its place with the "global." As a cultural hub and political center, Prague is the repository of a cultural collective memory and of historical and emotional records. It thus presents an excellent case study of how a national identity could be formed around a single urban center. The study of the many layers of Prague's urban landscape allows us to observe how history is built into the physical environment, while the analysis of literary and artistic production reveals how the city has become perceived as a national shrine, embodied in word and image. Students will read the "Prague text" as humanists, anthropologists, and historians. They will learn to apply methods of literary, cultural, and historical analyses, and will ask questions of what it means to be a Czech, a Central European, a European, and even, perhaps, an American. The travel component will further one of the key goals of this seminar: to develop cultural knowledge and sensitivity together with the appreciation of socio-cultural differences.

COML 125 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.

COML 126 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science of technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and Our discussions will be based on a reading of Sigmund Freud’s essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Merimee, Villiers de Isle-Adam, and others. For BA Students: Arts and Letters Sector Taught by: Weissberg
Course usually offered in fall term
Also Offered As: CIMS 125, GSWS 125
Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.

COML 127 Freaks,Creeps & Cheats
The object of this course is to analyze representations of adultery, cheating, and “perverted” or non-normative sexualities in literature and film. We will study how sex and sexual desire is represented, and think critically about the narrative conventions used for describing taboo desires and behaviors, and the social values that inform them. The the themes of desire, transgression, suspicion and discovery lie at the heart of many classic narratives in drama, literature and film, from antiquity to the present. Is there anything special, we will ask, about representing sex, especially “wrong” kinds of sex? What might these stories teach us about the way we read in general? Along the way, the course will also provide an introduction to the study of sexuality and queer studies, as well as training in critical reading and cultural analysis. By supplementing classic literary accounts by authors such as Shakespeare, Pushkin, Flaubert, Chekhov, Bataille, de Sade, Proust with films by such figures as Fellini and Pasolini, we will analyze the possibilities and limitations of the different genres and forms under discussion, including novels, films, short stories, and drama. What can these forms show us (or not show us) about desire, gender, family and social obligation? We will apply a range of critical approaches to place these narratives of “bad” or “kinky” or “sinful” sexuality in a social and literary context, including formal analyses of narrative and style, feminist criticism, Marxist and sociological analyses of the family, and psychoanalytic understandings of desire and family life.

Notes: Critical Speaking

COML 141 Scandalous Arts in Ancient and Modern Communities
What do the ancient Greek comedian Aristophanes, the Roman satirist Juvenal, have in common with Snoop Dogg and Eminem? Many things, in fact, but perhaps the most fundamental is that they are all united by a stance that constantly threatens to offend prevailing social norms, whether through obscenity, violence or misogyny. This course will examine our conceptions of art (including literary, visual and musical media) that are deemed by certain communities to transgress the boundaries of taste and convention. It juxtaposes modern notions of artistic transgression, and the criteria used to evaluate such material, with the production of and discourse about transgressive art in classical antiquity. Students will consider, among other things, why communities feel compelled to repudiate some forms of art, while others into classics. For BA Students: Humanities and Social Science S

COML 150 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional “fog of war” describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war’s traditional dependence on declaration is often warped by language games—“police action,” “military intervention,” “nation-building,” or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terrorist or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation—propaganda, nationalist messaging, memorialization, xenophobic depiction—affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war’s shaping influence? The class will concentrate on literary objects—short stories, and graphic novels—as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literary experience.

COML 151 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we’ll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

COML 153 Is Europe Facing a Spiritual Crisis?
Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective “cultural identities” (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modern) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...). COML 191 World Literature
How do we think the "world" as such? Globalizing economic paradigms encourage one model that, while it connects distant regions with the ease of a finger-tap, also homogenizes the world, manufacturing patterns of sameness behind simulations of diversity. Our current world-political situation encourages another model, in which fundamental differences are held to warrant the consolidation of borders between Us and Them, "our world" and "theirs." This course begins with the proposal that there are other ways to encounter the world, that are politically compelling, ethically important, and personally enriching—and that the study of literature can help tease out these new paths. Through the idea of World Literature, this course introduces students to the appreciation and critical analysis of literary texts, with the aim of navigating calls for universality or particularity (and perhaps both) in fiction and film. "World literature" here refers not merely to the usual definition of "books written in places other than the US and Europe, "but any form of cultural production that explores and pushes at the limits of a particular world, that steps between and beyond worlds, or that heralds the coming of new worlds still within us, waiting to be born. And though, as we read and discuss our texts, we will glide about in space and time from the inner landscape of a private mind to the reaches of the farthest galaxies, knowledge of languages other than English will not be required, and neither will any prior familiarity with the literary humanities. In the company of drunken kings, botanical witches, ambisexual alien lifeforms, and storytellers who've lost their voice, we will reflect on, and collectively navigate, our encounters with the faraway and the familiar—and thus train to think through the challenges of concepts such as translation, narrative, and ideology. Texts include Kazuo Ishiguro, Ursula K. LeGuin, Salman Rushdie, Werner Herzog, Jamaica Kincaid, Russell Hoban, Hiroshi Teshigahara, Arundhati Roy, and Abbas Kiarostami.

COML 193 Great Story Collections
This course is intended for those with no prior background in folklore or knowledge of various cultures. Texts range in age from the first century to the twentieth, and geographically from the Middle East to Europe to the United States. Each collection displays various techniques of collecting folk materials and making them concrete. Each in its own way also raises different issues of genre, legitimacy, canon formation, cultural values and context.

COML 197 Madness and Madmen in Russian Culture
Is "insanity" today the same thing as "madness" of old? Who gets to define what it means to be "sane," and why? Are the causes of madness biological or social? In this course, we will grapple with these and similar questions while exploring Russia's fascinating history of madness as a means to maintain, critique, or subvert the status quo. We will consider the concept of madness in Russian culture beginning with its earliest folkloric roots and trace its depiction and function in the figure of the Russian "holy fool," in classical literature, and in contemporary film. Readings will include works by many Russian greats, such as Pushkin, Gogol, Dostoevsky, Chekhov, Bulgakov and Nabokov.

COML 203 Masterpieces-Italian Literature
This course surveys the history of Italian literature through its major masterpieces. Beginning with Dante's Divine Comedy, Petrarca's love poems, and Boccaccio's Decameron, we will follow the development of Italian literary tradition through the Renaissance (Machiavelli's political theory and Ariosto's epic poem), and then through Romanticism (Leopardi's lyric poetry and Manzoni's historical novel), up to the 20th century (from D'annunzio's sensual poetry to Calvino's post-modern short stories). The course will provide students with the tools needed for analyzing the texts in terms of both form and content, and for framing them in their historical, cultural, and socio-political context. Classes and readings will be in Italian. ITAL 203 is mandatory for Minors in Italian Literature and Majors in Italian Literature. If necessary, ITAL 201 can be taken at the same time as ITAL 203.
Course usually offered in spring term
Also Offered As: ITAL 203

1.0 Course Unit

COML 204 Tolstoy
Few authors have ever been able to combine their moral and artistic visions as closely as Tolstoy. Over the course of the semester, we will plot how Tolstoy's ethical concerns changed over the course of his life and how this was reflected in works, which include some of the greatest prose ever written. We will begin by surveying the majestic and far-reaching world of his novels and end with some of Tolstoy's short later works that correspond with the ascent of "Tolstoyism" as virtually its own religion.

COML 206 Italian History on Screen: How Movies Tell the Story of Italy
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy's rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is both varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy.

COML 208 Sicily on Page and Screen
What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore's Cinema paradiso and Coppola's The Godfather II, and read texts such as Lampedusa's The Leopard and Maraini's Bagheria. This course aims to increase students' understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others', cultural frameworks.

COML 209 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More's fictive island of 1517. The "origins of environmentalism" lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.

COML 211 Literature of Dissent: Art as Protest in 20th-Century Poland and Czechoslovakia
Eastern and Central Europe was the site of monumental political changes in the twentieth century, including the disillusion of monarchical empires in the First World War and the expansion of Soviet-style communism. At every point, artists have taken part in political debates, sometimes advancing radical agendas, sometimes galvanizing movements, sometimes simply "shouting into the void" to register their own dissatisfaction. In this course, we will consider texts - including literature, political philosophy and film - that pushed back against the dominant political norms. In so doing, we will investigate Aesopian language, the mechanics of censorship, the repercussions of dissent, performativity, samizdat and the rise of an alternative culture. We will contextualize our readings of literature with the sociological and historical work of Benedict Anderson, Tony Judt, Jonathan Bolton, Shana Penn, Alexei Yurchak and the series Discourses of Collective Identity in Central and Southeast Europe. As well as becoming familiar with major thinkers and movements in Eastern and Central Europe, students will develop a sense of art as a tool of political protest.

COML 212 Modern Middle Eastern Literature in Translation
The Middle East boasts a rich tapestry of cultures that have developed a vibrant body of modern literature that is often overlooked in media coverage of the region. While each of the modern literary traditions that will be surveyed in this introductory course—Arabic, Hebrew, Persian and Turkish—will be analyzed with an appreciation of the cultural context unique to each body of literature, this course will also attempt to bridge these diverse traditions by analyzing common themes such as modernity, social values, the individual and national identity as reflected in the genres of poetry, the novel and the short story. This course is in seminar format to encourage lively discussion and is team-taught by four professors whose expertise in modern Middle Eastern literature serves to create a deeper understanding and aesthetic appreciation of each literary tradition. In addition to honing students’ literary analysis skills, the course will enable students to become more adept at discussing the social and political forces that are reflected in Middle Eastern literature, explore important themes and actively engage in reading new Middle Eastern works on their own in translation. All readings are in English. For BA Students: Arts and Letters Sector Taught by: Gold Course usually offered in spring term Also Offered As: NELC 201 Activity: Lecture 1.0 Course Unit

COML 213 Saints and Devils in Russian Literature and Tradition
This course is about Russian literary imagination, which is populated with saints and devils, believers and religious rebels, holy men and sinners. In Russia, where people’s frame of mind had been formed by a mix of Eastern Orthodox Christianity and earlier pagan beliefs, the quest for faith, spirituality, and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Is humility the way to salvation? Should one live for God or for the people? Does God even exist? COML 216 CU In India - Topics Course
C.U. in India is a hybrid, domestic/overseas course series which provides students with the opportunity to have an applied learning and cultural experience in India. The 2-CU course requires: 1) 15 classroom hours at Penn in the Fall term 2) A 12-Day trip to India with the instructor during the winter break to visit key sites and conduct original research (sites vary) 3) 15 classroom hours at Penn in the Spring term and 4) A research paper, due at the end of the spring term. Course enrollment is restricted to students admitted to the program. For more information, and the program application, go to http://sites.sas.upenn.edu/cuinid Two terms. student must enter first term. Also Offered As: ARTH 317, GSWS 217, SAST 217, SAST 517 Activity: Seminar 1.0 Course Unit

COML 218 Perspectives in French Literature
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Students are expected to take an active part in class discussion in French. French 231 has as its theme the presentation of love and passion in French literature. Course usually offered in fall term Also Offered As: FREN 231 Activity: Seminar 1.0 Course Unit

COML 219 Perspectives in French Literature: The Individual and Society
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Special emphasis is placed on close reading of texts in order to familiarize students with major authors and their characteristics and with methods of interpretation. Students are expected to take an active part in class discussion in French. French 232 has as its theme the Individual and Society. For BA Students: Arts and Letters Sector Course usually offered in fall term Also Offered As: FREN 232 Activity: Seminar 1.0 Course Unit

COML 220 Russia and the West
This course will explore the representations of the West in eighteenth- and nineteenth-century Russian literature and philosophy. We will consider the Russian visions of various events and aspects of Western political and social life, revolutions, educational system, public executions, resorts, etc., within the context of Russian intellectual history. We will examine how images of the West reflect Russia’s own cultural concerns, anticipations, and biases, as well as aesthetic preoccupations and interests of Russian writers. The discussion will include literary works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy, as well as non-fictional documents, such as travelers’ letters, diaries, and historiographical treatises of Russian Freemasons, Romantic and Positivist thinkers, and Russian social philosophers of the late Nineteenth century. A basic knowledge of nineteenth-century European history is desirable. The class will consist of lectures, discussion, short writing assignments, and two in-class tests. For BA Students: Humanities and Social Science Section One-term course offered either term Also Offered As: HIST 220, REES 220 Activity: Seminar 1.0 Course Unit
COML 221 Creating New Worlds: The Modern Indian Novel
Lonely bureaucrats and love-struck students, Bollywood stars and wayward revolutionaries: this course introduces students to the worlds of the Indian novel. From the moment of its emergence in the 19th century, the novel in India grappled with issues of class and caste, colonialism and its aftermath, gender, and the family. Although the novel has a historical origin in early modern Europe, it developed as a unique form in colonial and post-colonial India, influenced by local literary and folk genres. How did the novel in India—and in its successor states after 1947—transform and shift in order to depict its world? How are novels shaped by the many languages in which they are written, including English? And how do we, as readers, engage with the Indian novel in its diversity? This course surveys works major and minor from the past 200 years of novel-writing in India—with surveys both into predecessors of the Indian novel and parallel forms such as the short story. Readings will include works in translation from languages such as Hindi, Bangla, Urdu, Telugu, and Malayalam, as well as works written originally in English. Students will leave this course with an understanding of the Indian novel, along with the social conditions underlaying it, especially those relating to caste and gender.

COML 230 Words Are Weapons: Protests and Political Activism in South Asian Literature
This course focuses on the key themes of protest and resistance in contemporary South Asian literature. Most South Asian countries have been witnessing an endless wave of protests and resistance from various sections of public life for the last three decades. In India, for example, protest literature emerges not only from traditionally marginalized groups (the poor, religious and ethnic minorities, depressed castes and tribal communities), but also from upper-caste groups, whose protest literature expresses concerns over economic oppression, violence and the denial of fundamental rights. Literature is becoming an immediate tool to articulate acts of resistance and anger, as many writers and poets are also taking on new roles as political activists. In this class, we will read various contemporary works of short fiction, poetry and memoirs to comprehend shifts in public life toward political and social activism in South Asia. We will also watch two or three documentaries that focus on public protests and resistance. No pre-requisites or South Asian language requirements. All literary works will be read in English translations.

COML 236 Napoleonic Era & Tolstoy
In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy's War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the novel and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great novel?

Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.

COML 241 Global Sustainabilities
This research-oriented seminar focuses on the ways in which "sustainability" and "sustainable development" are linguistically and culturally translated into the world's languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn's diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world's languages of sustainability.

COML 247 Free Radicals: Marx, Marxism, and the Culture of Revolution

“A spectre is haunting Europe—the spectre of Communism”: This, the famous opening line of The Communist Manifesto, will guide this course’s exploration of the history, legacy, and potential future of Karl Marx’s most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx’s ideas might still hold in a world vastly different from his own.

COML 253 Freud: The Invention of Psychoanalysis

No other person of the twentieth century has probably influenced scientific thought, humanitarianistic medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud’s life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as the famous opening line of The Communist Manifesto, will guide this course’s exploration of the history, legacy, and potential future of Karl Marx’s most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx’s ideas might still hold in a world vastly different from his own.

COML 256 Contemporary Fiction & Film in Japan

This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

COML 265 Jewish Films and Literature
From the 1922 silent film "Hungry Hearts" through the first "talkie," "The Jazz Singer," produced in 1927, and beyond "Schindler's List," Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Teyve the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.
Taught by: Hellerstein

1.0 Course Unit

COML 266 Introduction to Modern Hebrew Literature: Short Story Reinvented
The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story reinvented, literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.

COML 269 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema "the strongest weapon." This course explores the world of "fascist" cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles.
For BA Students: Arts and Letters Sector
Taught by: MacLeod
Course not offered every year
Also Offered As: CIMS 257, GRMN 257, ITAL 257
Activity: Lecture
1.0 Course Unit
Notes: All discussions and readings in English.

COML 270 German Cinema
An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film's place in its historical and political context, the course will explore the "Golden Age" of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to "Papa's Kino" and the rise of New German Cinema in the late 1960's.

The course explores an aspect of 20th-century poetry intensively; specific course topics will vary from year to year.
Course not offered every year
Also Offered As: ENGL 262
Activity: Seminar
1.0 Course Unit

COML 275  Faces of Love: Gender, Sexuality and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and 'queerness' in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.
Taught by: Shams
Course usually offered in fall term
Also Offered As: COML 574, GSWS 275, GSWS 575, NELC 290, NELC 574
Activity: Lecture
1.0 Course Unit

Notes: No prior knowledge of Persian is required as all literary works will be available in English translation. Students are expected to attend seminars and take part in discussions. Please note that this syllabus is subject to change.

COML 277  Jewish American Literature
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers "immigrate" from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature.

1.0 Course Unit

COML 281  Topics Poetry and Poetics
This course explores an aspect of poetry and poetics intensively; specific course topics will vary from year to year.
Also Offered As: ENGL 269
Activity: Seminar
1.0 Course Unit

COML 282  Modern Hebrew Literature and Film in Translation: Autobiography
This course examines cinematic and literary portrayals of childhood. While Israeli works constitute more than half of the course's material, European film and fiction play comparative roles. Many of the works are placed, and therefore discussed, against a backdrop of national or historical conflicts. Nonetheless, private traumas (such as madness, abuse, or loss) or an adult's longing for an idealized time are often the central foci of the stories. These issues and the nature of individual and collective memory will be discussed from a psychological point of view. Additionally, the course analyzes how film, poetry and prose use their respective languages to reconstruct the image of childhood; it discusses the authors and directors struggle to penetrate the psyche of a child and to retrieve fragments of past events.
For BA Students: Arts and Letters Sector
Taught by: Gold
One-term course offered every term
Also Offered As: CIMS 159, JWST 154, NELC 159
Activity: Lecture
1.0 Course Unit

COML 283  Jewish Folklore
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migration of Jews into different countries and historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms.
Taught by: Ben-Amos
Course not offered every year
Also Offered As: FOLK 280, JWST 260, NELC 258
Activity: Lecture
1.0 Course Unit
COML 287 Ethnic Humor
Humor in ethnic societies has two dimensions: internal and external. The inside humor of an ethnic group is accessible to its members; it draws upon their respective social structures, historical and social experiences, languages, cultural symbols, and social and economic circumstances and aspirations. The external humor of an ethnic group targets members of other ethnic groups, and draws upon their stereotypes, and attributed characteristics by other ethnic groups. The external ethnic humor flourishes in immigrant and ethnically heterogenic societies. In both cases jokes and humor are an integral part of social interaction, and in their performance relate to the social, economic, and political dynamics of traditional and modern societies.
Taught by: Ben-Amos, D.
Course not offered every year
Also Offered As: FOLK 202, NELC 287
Activity: Lecture
1.0 Course Unit

COML 290 Topics In Gender, Sexuality, and Literature
The advanced women's studies course in the department, focusing on a particular aspect of literature by and about women. Topics might include: "Victorian Literary Women"; "Women, Politics, and Literature"; "Feminist Literary Theory"; and similar foci.
Course not offered every year
Also Offered As: AFRC 290, ENGL 290, GSWS 290
Activity: Seminar
1.0 Course Unit

COML 291 Topics In Literary Theory
This course explores an aspect of literary theory intensively; specific course topics vary from year to year.

Course not offered every year
Also Offered As: ARTH 293, CIMS 295, ENGL 295
Activity: Seminar
1.0 Course Unit

COML 299 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as "cinema," to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be a weekly film screening for this course. No knowledge of film theory is presumed.
Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class mid-term; 1 final project.

Activity: Seminar
1.0 Course Unit
COML 321 National Literatures
A course that traces how particular literary texts, very often medieval, are adopted to become foundational for national literatures. Key moments of emphasis will be the early nineteenth century, the 1930s, and (to some extent) the unfolding present. Research subtending this offering has been conducted over the last years, both in my editing of Europe: A Literary History, 1348-1418 (2 vols and 82 chapters, Oxford UP, 2016) and in preparation for "Medieval Studies in Troubled Times: the 1930s," to be offered as Presidential plenary at the Medieval Academy of America convention at Penn on 9 March 2019. I have also travelled and lectured extensively for Penn Alumni Travel over the last decade, crossing national boundaries and also pondering how complex literary issues might be framed for a broad (but exceptionally intelligent) audience. Issues arising in traversing Mediterranean space are explored in an article published (in Italian) in Studi migranti. Some texts immediately suggest themselves for analysis. The Song of Roland, for example, has long been fought over between France and Germany; each new war inspires new editions on both sides. The French colonial education system, highly centralized, long made the Chanson de Roland a key text, with the theme of Islamic attack on the European mainland especially timely, it was thought, during the Algerian war of independence. Germany also sees the Niebelungenlied as a key text, aligning it with the Rhine as an impeccably Germanic: but the Danube, especially as envisioned by Stefan Zweig, offers an alternative, hybridized, highly hyphenated cultural vision in running its Germanic-Judaic-Slavic-Roman course to the Black Sea. The course will not be devoted exclusively to western Europe. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow's great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin's Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called "Hindu epics" can also be a delicate matter. Some "uses of the medieval" have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA?
Taught by: Wallace
One-term course offered either term
Also Offered As: ENGL 321
Activity: Seminar
1.0 Course Unit
Notes: Preference given to Ben Franklin students

COML 322 Advanced Topics in Global Gender and Sexuality Studies
How do sex and gender become sites of cultural production, identity-formation, and contentious politics? This seminar engages these questions in the context of the "Middle East" as a constructed geopolitical space for imperial politics and political intervention. The class is divided into three units. In the first unit, we engage feminist and queer theories to discuss the shifting meanings of "sex" and "gender" in transnational and postcolonial contexts. In the second unit we explore the contextual and shifting notions of "private" and "public" as they have been elaborated in political theory, feminist theory, and media studies. We also consider how different media technologies enable and constrain the performance and expression of gender and sexual identities. In the last unit, we examine the material and symbolic construction of sex and gender in the shadow of Orientalism, the War on Terror, Multiculturalism, and the recent Arab uprisings. In this unit, we consider how geopolitics are refracted in public controversies around issues like gay rights, female genital mutilation, the veil, and honor killing.
Also Offered As: GSWS 322, SOCI 322
Activity: Seminar
1.0 Course Unit

COML 324 Sanskrit Literature in Translation
This course will focus solely on the specific genres, themes, and aesthetics of Sanskrit literature (the hymn, the epic, the lyric, prose, drama, story literature, the sutra, etc.) and a study of the history and specific topics of Sanskrit poetics and dramaturgy. All readings will be in translation.
Taught by: Patel
Course not offered every year
Also Offered As: COML 624, SAST 324, SAST 624
Activity: Seminar
1.0 Course Unit

COML 333 Dante's Divine Comedy
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in the original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required.
Taught by: Brownlee
One-term course offered either term
Also Offered As: ENGL 323, ITAL 333
Activity: Seminar
1.0 Course Unit

COML 334 A Survey of Sanskrit, Pakrit, and Classical Tamil Literature in Translation
This course will cover most of the genres of literature in South Asia's classical languages through close readings of selections of primary texts in English translation. Special focus will be given to epics, drama, lyric poetry, satirical works, and religious literature.
Taught by: Patel
Course not offered every year
Also Offered As: SAST 334, SAST 534
Activity: Seminar
1.0 Course Unit
COML 343 Nineteenth Century European Intellectual History
Starting with the dual challenges of Enlightenment and Revolution at the close of the eighteenth century, this course examines the emergence of modern European thought and culture in the century from Kant to Nietzsche. Themes to be considered include Romanticism, Utopian Socialism, early Feminism, Marxism, Liberalism, and Aestheticism. Readings include Kant, Hegel, Burke, Marx, Mill, Wollstonecraft, Darwin, Schopenhauer, and Nietzsche.
Taught by: Breckman
Course usually offered in fall term
Also Offered As: HIST 343
Activity: Lecture
1.0 Course Unit

COML 344 20th Century European Intellectual History
European intellectual and cultural history from 1870 to 1950. Themes to be considered include aesthetic modernism and the avant-garde, the rebellion against rationalism and positivism, Social Darwinism, Second International Socialism, the impact of World War One on European intellectuals, psychoanalysis, existentialism, and the ideological origins of fascism. Figures to be studied include Nietzsche, Freud, Woolf, Sartre, Camus, and Heidegger.
Taught by: Breckman
Course usually offered in spring term
Also Offered As: COML 344
Activity: Lecture
1.0 Course Unit

COML 353 Arabic Literature and Literary Theory
This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory. This course is taught in translation.
Taught by: Fakhreddine
Course usually offered in fall term
Also Offered As: COML 505, NELC 494
Activity: Lecture
1.0 Course Unit

COML 357 Myth In Society
In this course we will explore the mythologies of selected peoples in the Ancient Near East, Africa, Asia, and Native North and South America and examine how the gods function in the life and belief of each society. The study of mythological texts will be accompanied, as much as possible, by illustrative slides that will show the images of these deities in art and ritual.
Taught by: Ben-Amos
Course not offered every year
Also Offered As: FOLK 229, NELC 249
Activity: Lecture
1.0 Course Unit

COML 359 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern "descendants," autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold
Course usually offered in spring term
Also Offered As: JWST 359, JWST 659, NELC 359, NELC 659
Prerequisites: Hebrew 059 or the equivalent, per instructor's evaluation
Activity: Seminar
1.0 Course Unit

COML 369 Literary Translation
This course is for graduate students and undergraduates with permission of the instructor. All students enrolled must have knowledge of at least one language other than English. We will study the history, theory and practice of literary translation, and participate in it. Readings will include theoretical works in translation studies, using selections from Lawrence Venuti's Translation Studies Reader and Schulte/Biguenet's Translation Theory Reader, with some supplemental readings; we will also look at comparative cases of multiple translations of the same original, and analyze how different translators make different interpretative/formal/aesthetic choices. Course assignments will include both a research paper, on the history and/or theory of translation, and an extended practical translation exercise, to be worked over the course of the semester, consisting of a literary translation of a text of the student's choice.
Taught by: Wilson
Also Offered As: CLST 369, CLST 569
Activity: Seminar
1.0 Course Unit

COML 378 Topics in Literature and Society
This course explores an aspect of Postcolonial literature intensively. Specific course topics vary from year to year.
Course not offered every year
Also Offered As: ENGL 293
Activity: Seminar
1.0 Course Unit

COML 380 The Bible in Translation
This course introduces undergraduates and graduate students to one specific Book of the Hebrew Bible. "The Bible in Translation" involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. No prerequisites are required.
Taught by: Cranz
One-term course offered either term
Also Offered As: JWST 255, NELC 250, NELC 550, RELS 224
Activity: Seminar
1.0 Course Unit
COML 385 Japanese Theater
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theatre in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage, design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. Requirements include short writing assignments, presentations, and one research paper. Reading knowledge of Japanese and/or previous course-work in literature/theatre will be helpful, but not required. The class will be conducted in English, with all English materials.

Course not offered every year
Also Offered As: ENGL 393, SAST 323
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

COML 396 History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. The first half of the course will focus on early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (such as Philip Sidney and Giambattista Vico). In the second half of the course we will turn to modern concerns by looking at the literary (or "art") theories of some major philosophers and theorists: Kant, Hegel, Marx, Nietzsche, Freud, and Walter Benjamin. We end the course in the mid-twentieth century. The purpose driving this course is to consider closely how this tradition generated questions that are still with us, such as: what is the act of interpretation; what is the "aesthetic"; what is "imitation" or mimesis; and how are we to know an author’s intention. During the semester there will be four short writing assignments in the form of analytical essays (3 pages each). Students may use these small essays to build into a long piece of writing on a single text or group of texts at the end of the term. Most of our readings will come from a published anthology of literary criticism and theory; a few readings will be on Canvas.

Activity: Independent Study
1.0 Course Unit

COML 501 History of Literary Theory
Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing and often confrontational dialogues between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the profession study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature. We will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism.
Course usually offered in fall term
Also Offered As: CLST 511, ENGL 601, GRMN 534, REES 500
Activity: Seminar
1.0 Course Unit

COML 504 Electronic Literary Studies Proseminar
This course is designed to introduce advanced undergraduate and graduate students to the range of new opportunities for literary research afforded by recent technological innovation.
Course not offered every year
Also Offered As: ARTH 506, CIMS 505, ENGL 505
Activity: Seminar
1.0 Course Unit

COML 505 Arabic Literature and Literary Theory
This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory. This course is taught in translation.

COML 506 Topics in Twentieth-Century Literature
This course treats some aspect of literary and cultural politics in the 20th-Century with emphasis varying by instructor.
Course not offered every year
Also Offered As: ENGL 461
Activity: Seminar
1.0 Course Unit

COML 509 Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define "Jewish writing," in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products.
Taught by: Hellerstein
One-term course offered either term
Also Offered As: GRMN 509, GSWS 509, JWST 509, YDSH 509
Activity: Seminar
1.0 Course Unit
COML 510 Masters in Liberal Arts Proseminar
Topic varies. Summer 2019: Murals have long seduced the imagination of American artists and viewers. Rendered on a grand scale, murals address groups rather than individuals; cladding the walls and ceilings of courthouses, schools, lobbies, and private homes, they insert fine art into the flows and currents of daily life. This class uses the mural as a means to explore broader questions about nation, history, identity, and public space in American art from the nineteenth century through the present day. What are the politics of making art for display on a city building rather than inside a museum? How have artists used scale and architectural space to craft compelling narratives and monuments? Topics covered will include murals of the American Renaissance, the modern Mexican mural movement, architectural decoration, the New Deal art programs, and today’s community mural movement, among others. We will focus in particular on the rich history of mural making in Philadelphia, known around the world for its contemporary mural scene.
Course not offered every year
Also Offered As: ARTH 505, CIMS 502, GSWS 574
Activity: Seminar
1.0 Course Unit

COML 518 Old Church Slavonic: History, Language, Manuscripts
Taught by: Verkholantsev
Course not offered every year
Also Offered As: REES 518
Activity: Seminar
1.0 Course Unit

COML 519 Translating Literature: Theory and Practice
Taught by: Hellerstein
Also Offered As: GRMN 537, JWST 537
Activity: Seminar
1.0 Course Unit

COML 522 Chaucer
An advanced introduction to Chaucer’s poetry and Chaucer criticism. Reading and discussion of the dream visions, Troilus and Criseyde, and selections from Canterbury Tales, from the viewpoint of Chaucer’s development as a narrative artist.
Taught by: Wallace
Course not offered every year
Also Offered As: ENGL 525, GSWS 524, ITAL 525
Activity: Seminar
1.0 Course Unit

COML 523 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud’s work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud’s work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud’s work, and a humanist one? Where do we locate Freud’s relevance today? The graduate course will concentrate on Freud’s descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture.
Taught by: Weissberg
Course not offered every year
Also Offered As: GRMN 526, GSWS 525
Activity: Seminar
1.0 Course Unit
Notes: Reading and discussions in English.

COML 524 Petrarch
This course will study Petrarch’s lyric poetry with reference to its Italian roots (Sicilian school, dolce stil nuovo) and European posterity. Renaissance and Baroque Petrarchism as well as impingement on the Romantics.
Taught by: Brownlee
Course not offered every year
Also Offered As: ITAL 535
Activity: Seminar
1.0 Course Unit

COML 533 Dante’s Divine Comedy I
“Divine Comedy” in the context of Dante’s medieval worldview and culture.
Taught by Brownlee, K.
Course not offered every year
Also Offered As: ITAL 531
Activity: Seminar
1.0 Course Unit

COML 534 Words are Weapons
This course focuses on the key themes of protest and resistance in contemporary South Asian literature. Most South Asian countries have been witnessing an endless wave of protests and resistance from various sections of public life for the last three decades. In India, for example, protest literature emerges not only from traditionally marginalized groups (the poor, religious and ethnic minorities, depressed castes and tribal communities), but also from upper-caste groups, whose protest literature expresses concerns over economic oppression, violence and the denial of fundamental rights. Literature is becoming an immediate tool to articulate acts of resistance and anger, as many writers and poets are also taking on new roles as political activists. In this class, we will read various contemporary works of short fiction, poetry and memoirs to comprehend shifts in public life toward political and social activism in South Asia. We will also watch two or three documentaries that focus on public protests and resistance. No pre-requisites or South Asian language requirements. All literary works will be read in English translations.
Course not offered every year
Also Offered As: COML 230, SAST 223, SAST 523
Activity: Lecture
1.0 Course Unit

COML 537 Topics in Cultural History
An introduction to the practice and theory of epic in the early modern period. Specific texts vary with instructor.
Course not offered every year
Also Offered As: ARTH 584, ENGL 563, GRMN 541
Activity: Seminar
1.0 Course Unit

COML 542 Topics in Eighteenth-Century British Literature
This course covers topics in eighteenth-century British literature. Its emphases varies with instructor.
Course not offered every year
Also Offered As: GRMN 542
Activity: Seminar
1.0 Course Unit
COML 543 The Elemental Turn
The unfolding effects of climate change—rising sea level, melting ice sheets, subsiding land masses, drought stricken regions, wild fires, air laden with greenhouse gases, and inundated cities—heighen our awareness of the elements: air, earth, fire and water. Within the context of the new materialism, philosophers, eco-critics, and writers are re-turning to the elements and encountering, at the same time, predecessor texts that assume new relevance. This seminar will place current thinking and writing about the elements into dialogue with older traditions ranging from the classical (Empedocles, Plato, Lucretius) to writers and thinkers of the eighteenth, nineteenth and twentieth centuries (e.g., Goethe, Novalis, Tieck, Stifter, Bachelard, Heidegger, Boehme).
Taught by: Richter
Course not offered every year
Also Offered As: GRMN 535
Activity: Seminar
1.0 Course Unit

COML 550 Stalinist Culture
This course will explore the cultural context in which the so-called Romantic Movement prospered, and will pay special attention to the relationship between the most notorious popular genres of the period (Gothic fiction and drama) and the poetic production of both canonical and emerging poets.
Taught by: Platt
Course not offered every year
Also Offered As: REES 549
Activity: Seminar
1.0 Course Unit

COML 552 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance
In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Ficino, Pico della Mirandola Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructors. It counts toward the undergraduate minor in Global Medieval Studies and the graduate certificate in Global and Medieval Renaissance Studies.
Taught by: Soldato
Course not offered every year
Also Offered As: FREN 541, ITAL 541
Prerequisites: Undergraduates must obtain permission of instructors.
Activity: Seminar

COML 554 British Women Writers
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825.
Course not offered every year
Also Offered As: ENGL 553, GSWS 553
Activity: Seminar
1.0 Course Unit

COML 558 Major Renaissance Writers
This course will look at Renaissance images of the Author, both in the visual arts (portraits in manuscripts, cycles of famous men, statuary, medals) and in the literary tradition, especially lives of the poets and defenses of poetry. Focusing on Homer, Virgil, and Ovid; Dante, Petrarch, Boccaccio and Renaissance women poets, it will reconstruct the author as an ideal figure, the inspired sage and prophet. We shall discuss legend and literary canon formation, considering how poets are analogous to saints in their cults and the folkloristic anecdotes that grow up around them. The figure of the poet as constructed by different historical eras will be studied with reference to theories of literature as they developed from the Middle Ages to the early modern period.
Course not offered every year
Also Offered As: ENGL 558
Activity: Seminar
1.0 Course Unit

COML 560 Eighteenth-Century Novel
Please check the Comp Lit website for the course descriptions.
Taught by: DeJean
Course not offered every year
Also Offered As: ENGL 660, FREN 560
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.

COML 562 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.
Taught by: Wiggin
Course not offered every year
Also Offered As: ANTH 543, GRMN 544, URBS 544
Activity: Seminar
1.0 Course Unit

COML 564 Modern British Literature
An introduction to British Literary Modernism. Specific emphasis will depend on instructor.
Course not offered every year
Also Offered As: ENGL 564
Activity: Seminar
1.0 Course Unit
COML 570 Topics in Criticism and Theory  
Taught by: MacLeod  
Course not offered every year  
Also Offered As: ARTH 573, CIMS 515, ENGL 573, GRMN 573, REES 683  
Activity: Seminar  
1.0 Course Unit  
Notes: This course covers topics in literary criticism and theory. It’s specific emphasis varying with instructor.

COML 574 Faces of Love: Gender, Sexuality, and the Erotic in Persian Literature  
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and queerness in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.  
Taught by: Shams  
Course usually offered in fall term  
Also Offered As: COML 275, GSWS 275, GSWS 575, NELC 290, NELC 574  
Activity: Lecture  
1.0 Course Unit  
Notes: No prior knowledge of Persian is required as all literary works will be available in English translation. Students are expected to attend seminars and take part in discussions. Please note that this syllabus is subject to change.

COML 575 Topics in African Literature  
This course is based on a selection of representative texts written in English, as well as a few texts in English translation. It involves, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions established writers in their use of old forms and experiments with new.  
Taught by: Barnard  
Course not offered every year  
Also Offered As: AFRC 572, CIMS 572, ENGL 572  
Activity: Seminar  
1.0 Course Unit

COML 577 20th Century Poetry  
Taught by: Bernstein  
Course not offered every year  
Also Offered As: ENGL 589  
Activity: Seminar  
1.0 Course Unit

COML 579 Slavic Literary Theory in Western Context  
This course will compare selected theoretical concepts advanced by Russian Formalists, Prague Structuralists, and the Bakhtin group (e.g., defamiliarization, aesthetic sign, dialogue) with similar or analogous notions drawn from Western intellectual tradition.  
Taught by: Steiner, P.  
Course not offered every year  
Also Offered As: REES 575  
Activity: Seminar  
1.0 Course Unit

COML 580 Introduction to Bibliography  
This course offers an introduction to the principles of descriptive and analytic bibliography and textual editing. The history of authorship, manuscript production, printing, publishing, and reading will be addressed as they inform an understanding of how a particular text came to be the way it is. Diverse theories of editing will be studied and put into practice with short passages. The course is generally suitable for students working in any historical period, but particular emphases specified in the current offerings on the English website. www.english.upenn.edu  
Course offered fall; even-numbered years  
Also Offered As: ENGL 574, HIST 574  
Activity: Seminar  
1.0 Course Unit

COML 582 Topics in Aesthetics  
This is a topics course. Please see the Comparative Literature website for descriptions.  
Course usually offered in fall term  
Also Offered As: ARTH 560, GRMN 580, JWST 582, PHIL 480  
Activity: Seminar

Notes: This is a topics course.

COML 590 Recent Issues in Critical Theory  
This course is a critical exploration of recent literary and cultural theory, usually focusing on one particular movement or school, such as phenomenology, psychoanalysis, the Frankfurt School, or deconstruction.  
Course not offered every year  
Also Offered As: CIMS 580, ENGL 590, GSWS 589, LALS 590  
Activity: Seminar  
1.0 Course Unit

2019-20 Catalog | Generated 10/18/19
COML 591 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as "foundational." Very often these texts have been epics or romances designated "medieval," that is, associated with the period in which specific vernaculars or "mother tongues" first emerged. France and Germany, for example, have long fought over who "owns" the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time these two countries go to war. In this course we will thus study both a range of "medieval" texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow's great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin's Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called "Hindu epics" can also be a delicate matter. Some "uses of the medieval" have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark, is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory's Morte Darthur was chosen to provide scenes for the queen's new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Itinerary models, which do not observe national boundaries, might be explored, and also the cultural histories of watercourses, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.

Taught by: Wallace
Course not offered every year
Also Offered As: ENGL 594, ITAL 594
Activity: Seminar
1.0 Course Unit

COML 592 Topics in Contemporary Theory
Course not offered every year

1.0 Course Unit

COML 593 Modern/Contemporary Italian Culture
This is a topics course. One topic may be "Futurism, Classicism, Fascism" or "Philology and History." Please see the Comparative Literature website for the description.
One-term course offered either term
Also Offered As: ITAL 581, JWST 581
Activity: Seminar
1.0 Course Unit

COML 596 Introduction to Francophone Studies
An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.
Course not offered every year
Also Offered As: AFRC 591, AFST 560, FREN 590
Activity: Seminar
1.0 Course Unit

COML 602 Historiography and Methodologies
Theories and models of historical investigation. Analysis of historiographic writings and musicological works exemplifying particular approaches, such as transnational, environmental/landscape, gender/sexuality, critical race studies, performance studies, archives, and the digital humanities.
Taught by: Calzagno, Caldwell, Goodman
Course not offered every year
Also Offered As: ITAL 602, MUSC 604
Activity: Seminar
1.0 Course Unit

COML 603 Does Architectural Theory Define Architectural Practice?
Does architectural theory define architectural practice? The present seminar will explore this question in a number of ways. It will look at prominent examples of contemporary architecture and their evaluation by prize committees and architectural critics; recent theoretical work and architectural manifestoes and the practice of architectural firms; and the writings and work by architect-critics such as Robert Venturi and Denise Scott Brown, Daniel Libeskind, Peter Eisenman, and Peter Zumthor. In the course of our seminar, we will also reflect on the question whether architecture, a discipline that deals with an inhabitable environment, may differ in its relationship between theory and practice from other arts, such as painting or literature.
Taught by: Weissberg/Barnett
Course not offered every year
Also Offered As: FREN 603
Activity: Seminar
1.0 Course Unit

COML 605 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in literary theory of the 20th and 21st centuries. We will pay particular attention to the following movements: Structuralism and Deconstruction (Levi-Strauss, Jakobson, Barthes, Derrida), Social Theory (Foucault, Ranciere), Psychoanalysis (Freud, Lacan, Abraham and Torok), Schizoanalysis (Deleuze and Guattari), Feminism and Queer Theory (Irigary, Kristeva, Sedgwick), Spatial Theory (Bachelard, DeCerteau, Lefebvre), and the Frankfurt School (Adorno and Horkheimer, Kracauer). Readings and discussion will be in English.
Taught by: Goulet
One-term course offered either term
Also Offered As: ENGL 605, FREN 605, GRMN 605
Activity: Seminar
1.0 Course Unit
COML 608 Global France
The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The extraordinary innovations of "ethnorealism" in the twenties and thirties by such key figures of the avant-garde as Breton, Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring a renewal of "anthropology as cultural critique in the United States." Besides the authors just indicated, key texts by Durkheim, Mauss and Levi-Strauss will be considered both on their own terms and in relation to their obvious influence. The institutional fate of these intellectual crossovers and their correlative disciplinary conflicts will provide the overarching historical frame for the course, from the turn of the century to the most recent debates.
Taught by: Richman

COML 612 Words in the World
Within the last ten or fifteen years, there has been a flowering of scholarship revealing the diversity of oral verbal art worldwide. The course surveys a selection of recent book-length studies of specific narrative and other verbal art traditions in their cultural contexts. We will move from North Africa through the Middle East, South Asia, Australia, the western Pacific, and native America, examining particular traditions and texts, the ways they intersect with their societies, and the ways different scholars have found to document and interpret them.
Course not offered every year
Also Offered As: GRMN 612, JWST 612
Activity: Seminar
1.0 Course Unit

COML 616 Approaches to Literary Texts
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields. Master classes are taught by Kevin Brownlee, Linda Chance, Eva del Soldato, Huda Fakhreddine, Scott Francis, Nili Gold, Bridget Murnghan, Deven Patel, Kevin Platt, Michael Solomon, Emily Steiner, Julia Verkhomlantsev, and Emily Wilson.
Taught by: Verkhomlantsev

Activity: Seminar
1.0 Course Unit

COML 618 Medieval Poetics
This course may include some of the following fields: studies of medieval stylistic practices, formal innovations, and theories of form; medieval ideas of genre and form; medieval thought about the social, moral, and epistemological roles of poetry; interpretive theory and practice; technologies of interpretation; theories of fiction (fabula) and allegory; sacred and secular hermeneutics; theories of language and the histories of the language arts; vernacular(s) and Latinity; material texts.
Course not offered every year
Also Offered As: CLST 628, ENGL 721
Activity: Seminar
1.0 Course Unit

COML 620 Studies in the Eighteenth Century
This course varies in its emphases, but in recent years has explored the theory of narrative both from the point of view of eighteenth-century novelists and thinkers as well as from the perspective of contemporary theory. Specific attention is paid to issues of class, gender, and ideology. Course usually offered in fall term
Also Offered As: FREN 660
Activity: Seminar
1.0 Course Unit

COML 622 Postmodernism
An advanced seminar on postmodernist culture. Recently offered as a study of relationship between poetry and theory in contemporary culture, with readings in poststructuralist, feminist, marxist, and postcolonial theory and in poets of the Black Mountain and Language groups.
Course not offered every year
Also Offered As: ENGL 774
Activity: Seminar
1.0 Course Unit
COML 623 Literary History and Aesthetics in South Asia
This seminar surveys the multiple components of literary culture in South Asia. Students will engage critically with selected studies of literary history and aesthetics from the past two millennia. In order to introduce students to specific literary cultures (classical, regional, contemporary) and to the scholarly practices that situate literature in broader contexts of culture and society, the course will focus both on the literary theories - especially from the nineteenth and twentieth centuries - that position South Asia’s literary cultures within broader disciplinary frameworks that use literary documents to inform social, historical and cultural research projects. The aim is to open up contexts whereby students can develop their own research projects using literary sources.
Taught by: Patel
Also Offered As: SAST 623
Activity: Seminar
1.0 Course Unit

COML 625 Global Perspectives in French Studies
This course explores the literal and literary landscapes of 19th-century Paris and Philadelphia, paying particular attention to the ways in which the built environment is shaped by and shapes shifting ideologies in the modern age. Although today the luxury and excesses of the "City of Light" may seem worlds apart from the Quaker simplicity of the "City of Brotherly Love," Paris and Philadelphia saw themselves as partners and mutual referents during the 1800s in many areas, from urban planning to politics, prisons to paleontology. This interdisciplinary seminar will include readings from the realms of literature, historical geography, architectural history, and cultural studies as well as site visits to Philadelphia landmarks, with a view to uncovering overlaps and resonances among different ways of reading the City. We will facilitate in-depth research by students on topics relating to both French and American architectural history, literature, and cultural thought.
Taught by: Goulet/Wunsch

Also Offered As: FREN 620
Activity: Seminar
1.0 Course Unit

COML 626 Nineteenth-Century Novels: Representations of Work
A study of the tradition of "serio-comic" literature from ancient times to the present, focusing on works that combine ostensibly incompatible tones, genres, and themes to produce a particular sense of man in history. Readings include: the dialogues of Lucian, Petronius' SATYRICON, extracts from Rabelais and Boccaccio, GULLIVER’S TRAVELS, extracts from Sterne, and Gogol’s DEAD SOULS. Students will be expected to attend a series of undergraduate lectures on these works; an additional hour will be scheduled in which the history and theory of minippean satire will be discussed. Special attention is given to general problems of genre theory that are raised by works that seem to challenge generic norms.
Course not offered every year
Also Offered As: SPAN 630
Activity: Seminar
1.0 Course Unit

COML 627 South Asia Literature as Comparative Literature
The extent to which the narrative reflexes of the novel can accommodate and express the nature of human work are explored primarily in a study of two nineteenth-century writers. Eliot and Hardy. Reading for the course also includes novels and short stories of other nineteenth-century writers (Dickens, Zola, tolstoy, Stowe, Melville), and background reading on the social and philosophic theory of work.

COML 632 Masterpieces of Sanskrit Culture: Literature, Philosophy, and Science
This course, wholly conducted in English translation from the Sanskrit, will identify a history of *masterpieces* from the Sanskrit tradition and carefully read selections or whole works that exemplify the most well-received classical Sanskrit works over the past two millennia. We will focus on the high classics of Sanskrit literature, sutras and commentaries on systematic forms of Indian philosophy, and selections from Sanskrit texts on the social, literary-critical, exact, and medical sciences. Students will be encouraged to engage with these works through the prisms of comparative literary theory, critical translation studies, comparative philosophy, and broader perspectives of social and cultural history.
Taught by Patel

COML 657 Becoming Modern
Yuri Slezkine described the twentieth century as a "Jewish Age"-to be modern would essentially mean to be a Jew. In German historical and cultural studies, this linkage has long been made—only in reference to the last years of the German monarchy and the time of the Weimar Republic. Indeed, what has become known as "modern" German culture—reflected in literature, music, and the visual arts and in a multitude of public media—has been more often than not assigned to Jewish authorship or Jewish subjects. But what do authorship and subject mean in this case? Do we locate the German-Jewish experience as the driving force of this new "modernity," or is our understanding of this experience the result of this new "modern" world?

COML 675 Topics in 19th Century Literature
Edgar Allan Poe was considered a vulgar hack by many of his fellow Americans, but in 19th-century France, he was touted as an ill-fated poetic genius, the original poète maudit. Through the translations and biographical essays of Charles Baudelaire, who found in Poe a kindred spirit in the "gout de l'infini," French intellectuals came to know the American writer as a model of compositional lucidity and morbid mastery. From his inklings of an urban modernity in "The Man in the Crowd" to the nevrotic perversity of "Berenice," Poe's aesthetics have cast an influential shadow on French culture. Beginning with Baudelaire, we will explore in this course the many literary and artistic movements in France that were directly inspired by Poe's uncanny mix of the macabre and the methodical: Symbolist poetry (Valery, Mallarme), the Scientific Fantastic (Maupassant, Villers de l'Isle-Adam), fin-de-siècle Decadence (Huysmanns, Odilon Redon), Science Fiction, (Verne), the detective novel (Gaboriau), and 20th-century Surrealism (Breton, Max Ernst).

Also Offered As: FREN 675
Activity: Seminar
1.0 Course Unit

COML 677 The Life of Forms: Ontogenesis, Morphology, Literature
In recent years, the notions of form, formalism, and morphology have reentered contemporary debates across the humanities. This seminar considers the current resurgence of interest in form by tracing form's evolving concepts throughout modernity. It departs from the observation that experimentation with and debates on form in art and literature are inextricably linked to various notions of life and the living. These debates-this is the provisional thesis of the seminar—are the battlefield where literary and art criticism undermine the major presuppositions of the western metaphysical tradition (e.g., determinations of inside-outside, form-content, living-inorganic). On the one hand, the seminar will explore a selective genealogy of various attempts to dynamize the concept of form through theories of 1) ontogenesis (e.g., Spinoza, Simondon, Malabou), 2) morphology (e.g., Goethe, Propp, Goldstein), and 3) aesthetics (e.g., Baumgarten, Schlegel brothers, Adorno). On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines, including literary studies (literary morphology, Russian Formalism), art history (Focillon, Kubler), On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines ranging from literary studies (e.g., Jolles, Russian Formalism, Jauss), art history (e.g., Panofsky, Focillon, Kubler), philosophy (e.g., Wittgenstein, Blumenberg, Macherey), history of science (e.g., Vygotsky, Varela), and sociology (e.g., Tarde, DeLanda). Finally, the seminar will engage in close reading of exemplary literary and art works, and situate the findings on the conjunction of form and life in current debates on New Formalisms (e.g., Levine, Levinson, Kornbluh) and New Materialisms (e.g., Bennett, Grosz).
Taught by: Biareishyk
Course not offered every year
Also Offered As: GRMN 677
Activity: Seminar
1.0 Course Unit
Notes: Graduate Seminar. Taught in English.

COML 680 Topics: Literature and Film
This is a topics course. Please see the Comparative Literature website for description.
Course not offered every year
Also Offered As: CIMS 682, GSWS 682, ITAL 682
Activity: Seminar
1.0 Course Unit

COML 682 Seminar on Literary Theory
Topics vary from year to year.
Course not offered every year
Also Offered As: ENGL 571, SPAN 682
Activity: Seminar
1.0 Course Unit
COML 685 Literary Criticism and Theory in Japanese Literature
While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan's position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese. This course will be taught in English and all texts will be read in English translation.
Taught by: Kano
Course not offered every year
Also Offered As: EALC 755
Activity: Seminar
1.0 Course Unit

COML 696 Postcolonial Theory in Francophone Contexts
This seminar will introduce students to key texts and influential figures coming from, focusing on, or relevant to Francophone postcolonial contexts. Following a brief review of Anglophone postcolonial criticism, readings for the course will fall under three categories: Authors from the 1940s to present who have focused exclusively on (post)colonial issues pertaining to Africa, the Caribbean and/or postcolonial France; contemporary European, African and North American literary critics; humanities scholars whose work would not necessarily be labeled "postcolonial" but is nevertheless relevant to postcolonial criticism.
Taught by: Moudileno
Course not offered every year
Also Offered As: FREN 696
Activity: Seminar
1.0 Course Unit

COML 700 African Literature and Society
An advanced seminar in anglophone African literature, possibly including a few works in translation.
Course not offered every year
Also Offered As: AFRC 775, ENGL 775
Activity: Seminar
1.0 Course Unit

COML 710 Political Economy and Social History of Africa and the African Diaspora
This course provides the opportunity for students to investigate the relationship between the emergence of African peoples as historical subjects and their location within specific geopolitical and economic circumstances.
Taught by: Hanchard
Course not offered every year
Also Offered As: AFRC 710, LALS 710, PSCI 711
Activity: Seminar
1.0 Course Unit

COML 711 Theory in/and East Asia
"Theory" can be exciting and seductive to some scholars, but intimidating or pretentious to others. Unfortunately, this difference in feeling about theoretical scholarship and discussion has a tendency to produce a divide in academia between those who "do theory" and those who do not. This graduate seminar pursues the question of how theory can be engaged in the context of East Asian cultural studies, with the goal of collectively working through texts to understand how theoretical reflection opens up possibilities for productive conversations across disciplinary boundaries. Many critiques have been made of the way "traveling theory" serves as a Euro-American universal applied to the "raw material" of East Asian texts, or a transdisciplinary common language in the Humanities and Social Sciences. Instead, we will take such critiques as a starting point to pragmatically and creatively explore the intersections and interactions of "theory" and "East Asia," emphasizing the archival, historical, political, and institutional contexts that motivate theorization. In that spirit, special attention will be given to discussing what problems we find in our own work that require theoretical consideration, and how such considerations might contribute to, challenge, or transform but may also include Japanese, Chinese, or Korean depending on student interest and language abilities.
Taught by: Poland
Course not offered every year
Also Offered As: EALC 711
Activity: Seminar
1.0 Course Unit

COML 714 Medieval Literature
Course not offered every year
Also Offered As: CLST 610, ENGL 715
Activity: Seminar
1.0 Course Unit

COML 730 Topics in 16th-Century History and Culture
This is an advanced course treating topics in 16th Century history and culture particular emphasis varying with instructor.
Course not offered every year
Also Offered As: ENGL 730
Activity: Seminar
1.0 Course Unit

COML 734 Renaissance Drama
This is a topics course. For Spring 2015, the topic is Genre and Performative Media.
Taught by: Bushnell
Course not offered every year
Also Offered As: ENGL 734
Activity: Seminar
1.0 Course Unit

COML 736 Renaissance Studies
This is an advanced topics course treating some important issues in contemporary Renaissance studies.
Course not offered every year
Also Offered As: ENGL 736
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.
COML 753 Victorian British Literature
An advanced seminar treating some topics in Victorian British Literature, usually focusing on non-fiction or on poetry. See the Comparative Literature and Literary Theory Program’s website for descriptions of the current offerings at http://ccat.sas.upenn.edu/Complit/
Also Offered As: ENGL 753
Activity: Seminar
1.0 Course Unit

COML 769 Feminist Theory
Specific topic varies. The seminar will bring together the study of early modern English literature and culture with histories and theories of gender, sexuality and race. Contact with 'the East' (Turkey, the Moluccas, North Africa and India) and the West (the Americas and the Caribbean) reshaped attitudes to identity and desire. How does this history allow us to understand, and often interrogate, modern theories of desire and difference? Conversely, how do postcolonial and other contemporary perspectives allow us to re-read this past?
Course not offered every year
Also Offered As: ENGL 769, GSWS 769, NELC 783, SAST 769
Activity: Seminar
1.0 Course Unit

COML 781 Writing Sound--Sounding Literature
Seminar on selected topics in sound studies. Please see department website http://ccat.sas.upenn.edu/Complit/ for current term course descriptions.
Taught by: Waltham-Smith
One-term course offered either term
Also Offered As: MUSC 781
Activity: Seminar
1.0 Course Unit

COML 786 Topics in 20th Century Art
Topics vary from year to year.
Taught by: Poggi
Course not offered every year
Also Offered As: ARTH 786, ITAL 685
Activity: Seminar
1.0 Course Unit

COML 787 Topics in Contemporary Art
Topics vary each semester. Fall 2019: "When industry erupts in the sphere of art," Baudelaire famously wrote in 1859, "it becomes the latter's mortal enemy, and in the resulting confusion of functions none is well carried out...If photography is allowed to deputize for art in some of art's activities, it will not be long before it has supplanted or corrupted art altogether...Photography must, therefore, return to its true duty, which is handmaid of the arts and sciences." History has not been kind to this argument. First, Henry Fox Talbot and many of his contemporaries attributed the photographic image to nature, not industry, and the same is true of a number of contemporary artists. Second, by 1842–three years after the official invention of photography–photographers had already begun hand-coloring their daguerreotypes, and a century and a half later Richter started smearing and spattering paint onto small photographs, and exhibiting them along with his abstract and figurative paintings. By the mid-1850’s, many artists were also painting from photographs, sometimes by projecting them onto their canvases, and treating these projections as preparatory drawings. They called the resulting images photo-paintings. And although it became increasingly "disreputable" to work in this way as the century progressed, Eugene Delacroix, Gustave Courbet, Edouard Manet, Henri Fantin-Latour, Edgar Degas and Edouard Vuillard all made paintings that are in one way or another photographic.
Some of them also saw photography as the gateway to a new kind of figurative painting. Abstraction hardened the distinction between art and photography, and brought these medium-crossings to an end, but photo-painting resurfaced in the 1950s and 1960s, and although it initially seemed ironic, it has outlived the movements that made this reading possible. As we can now see, it is a far more complex and multi-faceted way of making pictures than those generally associated with Pop, Institutional Critique and Appropriation--one in which the world participates, and from which we have much to learn. We will explore work by Gerhard Richter, Richard Hamilton, Corinne Wasmuht, Luc Tuymans, Marlene Dumas, and others.
Taught by: Silverman
One-term course offered either term
Also Offered As: ARTH 794, ENGL 793
Activity: Seminar

COML 790 Recent Issues in Critical Theory
Course varies with instructor.
Course not offered every year
Also Offered As: ENGL 790, GSWS 790
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.

COML 793 Topics in Cinema & Media
Course not offered every year
Activity: Seminar
1.0 Course Unit

COML 981 M.A. Exam Prep
Course open to first-year Comparative Literature graduate students in preparation for required M.A. exam taken in spring of first year.
Course not offered every year
Activity: Seminar
1.0 Course Unit
COML 998 Independent Study and Research
Designed to allow students to pursue a particular research topic under the close supervision of an instructor.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

COML 999 Independent Reading and Research
May be taken for multiple course credit to a maximum of two for the M.A. and four for the Ph.D. Designed to allow students to broaden and deepen their knowledge of literary theory, a national literature, and/or an area of special interest.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Computer and Information Science (CIS)

CIS 099 Undergraduate Research/Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and techniques and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student’s academic level. To register for this course, the student must submit a detailed proposal, signed by the independent study supervisor, to the SEAS Office of Academic Programs (111 Towne) no later than the end of the “add” period.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: A maximum of 2 c.u. of CIS 099 may be applied toward the B.A.S. or B.S.E. degree requirements.

CIS 105 Computational Data Exploration
The primary goal of this course is to introduce computational methods of interacting with data. In this course, students will be introduced to the IPython programming environment. They will learn how to gather data, store it in appropriate data structures and then either write their own functions or use libraries to analyze and then display the salient information in that data. Data will be drawn from a variety of domains, including but not limited to travel, entertainment, politics, economics, information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote and interpret the past? How can modern technologies be applied to do a better job at presenting what is difficult to experience firsthand? This class will focus on case studies, c and methods of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art. Each year, the studio-seminar focuses on a project. In addition to exploring general concepts of archaeology and the media, students will work in teams to produce an interactive, digital media exhibit using the latest modeling visualization programs for presenting the sacred landscape of the Inca capital of Cuzco, Peru. Cuzco is one of the most important UNESCO World Heritage sites and visited by nearly a million tourists a year. Potential class project include fly-throughs of architectural and landscape renderings, simulations of astronomy and cosmology, modeling of human behavior within architectural and landscape settings, and study artifacts in the Penn Museum.
One-term course offered either term
Also Offered As: ANTH 258
Activity: Lecture
1.0 Course Unit

CIS 106 Visualizing the Past.
Most people's information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of "ancient, mysterious, and lost" civilizations, and tours often lead by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the Cuzco is one of the most important UNESCO World Heritage sites and visited by nearly a million tourists a year. Potential class project include fly-throughs of architectural and landscape renderings, simulations of astronomy and cosmology, modeling of human behavior within architectural and landscape settings, and study artifacts in the Penn Museum.
One-term course offered either term
Also Offered As: ANTH 258
Activity: Lecture
1.0 Course Unit

CIS 109 Undergraduate Research/Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and techniques and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student’s academic level. To register for this course, the student must submit a detailed proposal, signed by the independent study supervisor, to the SEAS Office of Academic Programs (111 Towne) no later than the end of the “add” period.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: A maximum of 2 c.u. of CIS 099 may be applied toward the B.A.S. or B.S.E. degree requirements.

CIS 110 Introduction to Computer Programming
Introduction to Computer Programming is the first course in our series introducing students to computer science. In this class you will learn the fundamentals of computer programming in Java, with emphasis on applications in science and engineering. You will also learn about the broader field of computer science and algorithmic thinking, the fundamental approach that computer scientists take to solving problems.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: See the CIS 110 website for information about registration in recitations and permission to register for closed sections of CIS 110. Counts as a Formal Reasoning course for College students.

CIS 120 Programming Languages and Techniques I
A fast-paced introduction to the fundamental concepts of programming and software design. This course assumes some previous programming experience, at the level of a high school computer science class or CIS110. (If you got at least 4 in the AP Computer Science A or AB exam, you will do great.) No specific programming language background is assumed: basic experience with any language (for instance Java, C, C++, VB, Python, Perl, or Scheme) is fine. If you have never programmed before, you should take CIS 110 first.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: This counts as a Formal Reasoning course for College students.
CIS 121 Programming Languages and Techniques II
This is a course about Algorithms and Data Structures using the JAVA programming language. We introduce the basic concepts about complexity of an algorithm and methods on how to compute the running time of algorithms. Then, we describe data structures like stacks, queues, maps, trees, and graphs, and we construct efficient algorithms based on these representations. The course builds upon existing implementations of basic data structures in JAVA and extends them for the structures like trees, studying the performance of operations on such structures, and the efficiency when used in real-world applications. A large project introducing students to the challenges of software engineering concludes the course.
Course usually offered in spring term
Prerequisites: CIS 120, CIS 160
Activity: Lecture
1.0 Course Unit

CIS 125 Technology and Policy
Have you ever wondered why sharing music and video generates such political and legal controversies? Is information on your PC safe and should law enforcement be able to access information you enter on the Web? Will new devices allow tracking of your every move and every purchase? CIS 125 is focused on developing an understanding of emerging and existing technologies, along with the political, societal and economic impacts of those technologies. The technologies are spread across a number of engineering areas and each of them raise issues that are of current concern or are likely to be a future issue.
Activity: Lecture
1.0 Course Unit

CIS 140 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness.
Course usually offered in fall term
Also Offered As: COGS 001, LING 105, PHIL 044, PSYC 207
Activity: Lecture
1.0 Course Unit
Notes: This counts as a Formal Reasoning course for College students.

CIS 160 Mathematical Foundations of Computer Science
What are the basic mathematical concepts and techniques needed in computer science? This course provides an introduction to proof principles and logics, functions and relations, induction principles, combinatorics and graph theory, as well as a rigorous grounding in writing and reading mathematical proofs.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CIS 181 The Quantum and the Computer
This Freshman Seminar is designed to be a very introductory exposition about Quantum Computation and Quantum Information Science. There are no formal physics, mathematics, or computer science prerequisites. It is meant primarily for freshmen in SAS and Wharton, who have an itch to learn about a beautiful subject that intrinsically unites quantum physics, computation, and information science. The structure of the course will be lecture-based using small-team based exercises for evaluation. The enrollment will be limited to 20 students.
One-term course offered either term
Prerequisite: Freshmen Standing
Activity: Seminar
1.0 Course Unit
Notes: No Prior Physics, Mathematics, or Computer Science Experience required.

CIS 190 C++ Programming
This course will provide an introduction to programming in C++ and is intended for students who already have some exposure to programming in another language such as Java, C++ provides the programmer with a greater level of control over machine resources and are commonly used in situations where low level access or performance are important. This course will illuminate the issues associated with programming at this level and will cover issues such as explicit memory management, pointers, the compilation process and debugging. The course will involve several programming projects which will provide students with the experience they need to program effectively in these languages. This course assumes programming experience equivalent to CIS 110, CIS 120 or ESE 112.
One-term course offered either term
Prerequisite: CIS 240
Activity: Lecture
0.5 Course Units

CIS 191 Using and Understanding Unix and Linux
Unix, in its many forms, runs much of the world's computer infrastructure, from cable modems and cell phones to the giant clusters that power Google and Amazon. This half-credit course provides a thorough introduction to Unix and Linux. Topics will range from critical basic skills such as examin and editing files, compiling programs and writing shell scripts, to higher level topics such as the architecture of Unix and its programming model. The material learned is applicable to many classes, including CIS 240, CIS 331, CIS 341, CIS 371, and CIS 380.
One-term course offered either term
Prerequisite: CIS 110 or equivalent
Activity: Lecture
0.5 Course Units

CIS 192 Python Programming
Python is an elegant, concise, and powerful language that is useful for tasks large and small. Python has quickly become a popular language for getting things done efficiently in many in all domains: scripting, systems programming, research tools, and web development. This course will provide an introduction to this modern high-level language using hands-on experience through programming assignments and a collaborative final application development project.
One-term course offered either term
Prerequisite: CIS 120 or ESE 112
Activity: Lecture
0.5 Course Units
CIS 193 C# Programming
C# is the premier programming language for the .NET framework. Over the last decade, the language has evolved to meet the needs of a variety of programming styles while supporting the ever-growing capabilities of the .NET runtime and libraries. This course provides a thorough introduction to the C# language and the .NET framework, building on the skills gained in the introductory programming courses (CIS 110, CIS 120, or ESE 112). In addition to providing the student with a solid background in C#, this course also explores topics that the .NET platform exposes such as object oriented design, .NET runtime internals, and others based on class interest. A series of short, weekly homework assignments reinforces the concepts introduced in class and a group-based final project of the students’ design allows them to apply their C# knowledge toward a substantial problem.
One-term course offered either term
Prerequisite: CIS 110
Activity: Lecture
0.5 Course Units

CIS 194 Haskell
Haskell is a high-level, purely functional programming language with a strong static type system and elegant mathematical underpinnings. It is being increasingly used in industry by organizations such as Facebook, AT&T, and NASA, along with several financial firms. We will explore the joys of function programming, using Haskell as a vehicle. The aim of the course will be to allow you to use Haskell to easily and conveniently write practical programs. All ar welcome, including those with no programming experience. Evaluation will be based on regular homework assignments and class participation.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CIS 195 Mobile App Development
This project-oriented course is centered around application development on current mobile platforms like iOS and Android. The first half of the course will involve fundamentals of mobile app development, where students learn about mobile app lifecycles, event-based programming, efficient resource management, and how to interact with the range of sensors available on modern mobile devices. In the second half of the course, students work in teams to conceptualize and develop a significant mobile application. Creativity and originality are highly encouraged!
One-term course offered either term
Prerequisite: CIS 120 or previous programming experience
Activity: Lecture
0.5 Course Units

CIS 196 Ruby on Rails Web Development
This course will teach the fundamentals of developing web applications using Ruby on Rails, a rapid-development web framework developed by Basecamp, and adopted by companies like Airbnb, GitHub, Bloomberg, CrunchBase, and Shopify. The first part of the course will focus on Ruby, the language that powers Rails. Along the way, students will also pick up essential skills such as git, bash, HTML and CSS. The second part will focus on Rails, the web framework and will include all topics required to develop and deploy production-ready modern web applications with Rails. Throughout the course, students will be working on a web application project of their own choosing. Upon completion of the course, this application will be deployed and made accessible to the public.
Prerequisite: CIS 120
Activity: Lecture
0.5 Course Units

CIS 197 Javascript
This course provides an introduction to modern web development frameworks, techniques, and practices used to deliver robust client side applications on the web. The emphasis will be on developing JavaScript programs that run in the browser. Topics covered include the JavaScript language, web browser internals, the Document Object Model (DOM), HTML5, client-side app architecture and compile-to-JS languages like (CoffeeScript, TypeScript, etc.). This course is most useful for students who have some programming and web development experience and want to develop moderate JavaScript skills to be able to build complex, interactive applications in the browser.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CIS 198 Rust Programming
Rust is a new, practical, community-developed systems programming language that "runs blazingly fast, prevents almost all crashes, and eliminates data ra (rust-lang.org). Rust derives from a rich history of languages to create a multi-paradigm (imperative/functional), low-level language that focuses on high-performance, zero-cost safety guarantee in concurrent programs. It has begun to gain traction in industry even before official 1.0 release in May 2015, showing a recognized need for a new low-level systems language. In this course, we will cover what makes Rust so unique and apply it to practical systems programming problems. Topics covered will include traits and generics; memory safety (move semantics, borrowing, and lifetimes); Rust’s rich macro system; closures; and concurrency. Evaluation is based on regular homework assignments as well as a final project and class participation.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CIS 233 Introduction to Blockchain
Blockchain or Distributed Ledger Technology (DLT) provides a decentralized method of information sharing between parties that do not trust each other. Instead the trust is in the underlying cryptographic algorithms. This practical introductory course provides hands-on experience with the fundamentals of cryptography (codes and ciphers, symmetric and asymmetric encryption, public and private keys, hashes, and zero knowledge proofs) - as it is applied to implementing a blockchain solution. This course covers the basics of a distributed ledger, how it is built, used, and secured at the network and data-structure levels. Methods of ensuring consensus - from proof-of-work to more complex solutions (e.g. proof-of-time, proof-of-space, proof-of-stake) will be explored and analyzed. Students will have both written and practical, Python-based, assignments to build and deploy components of a blockchain solution.
One-term course offered either term
Prerequisite: CIS 120 or equivalent
Activity: Lecture
1.0 Course Unit
CIS 240 Introduction to Computer Systems
You know how to program, but do you know how computers really work? How do millions of transistors come together to form a complete computing system? This bottom-up course begins with transistors and simple computer hardware structures, continues with low-level programming using primitive machine instructions, and finishes with an introduction to the C programming language. This course is a broad introduction to all aspects of computer systems architecture and serves as the foundation for subsequent computer systems courses, such as Digital Systems Organization and Design (CIS 371), Computer Operating Systems (CIS 380), and Compilers and Interpreters (CIS 341).
Course usually offered in fall term
Prerequisite: CIS 110 or equivalent
Activity: Lecture
1.0 Course Unit

CIS 261 Discrete Probability, Stochastic Processes, and Statistical Inference
The purpose of this course is to provide a 1 CU educational experience which tightly integrates the theory and applications of discrete probability, discrete stochastic processes, and discrete statistical inference in the study of computer science. The intended audience for this class is both those students who are CS majors as well as those intending to be CS majors. Specifically, it will be assumed that the students will know: Set Theory, Mathematical Induction, Number Theory, Functions, Equivalence Relations, Partial-Order Relations, Combinatorics, and Graph Theory at the level currently covered in CIS 160. This course could be taken immediately following CIS 160. Computation and Programming will play an essential role in this course. The students will be expected to use the Maple programming environment in homework exercises which will include: numerical and symbolic computations, simulations, and graphical displays.
Course usually offered in fall term
Prerequisite: CIS 160
Activity: Lecture
1.0 Course Unit

CIS 262 Automata, Computability, and Complexity
This course explores questions fundamental to computer science such as which problems cannot be solved by computers, can we formalize computing as a mathematical concept without relying upon the specifics of programming languages and computing platforms, and which problems can be solved efficiently. The topics include finite automata and regular languages, context-free grammars and pushdown automata, Turing machines and undecidability, tractability and NP-completeness. The course emphasizes rigorous mathematical reasoning as well as connections to practical computing problems such as test processing, parsing, XML query languages, and program verification.
Course usually offered in fall term
Prerequisite: CIS 160
Activity: Lecture
1.0 Course Unit

CIS 263 Inference
This course explores questions fundamental to computer science such as which problems cannot be solved by computers, can we formalize computing as a mathematical concept without relying upon the specifics of programming languages and computing platforms, and which problems can be solved efficiently. The topics include finite automata and regular languages, context-free grammars and pushdown automata, Turing machines and undecidability, tractability and NP-completeness. The course emphasizes rigorous mathematical reasoning as well as connections to practical computing problems such as test processing, parsing, XML query languages, and program verification.
Course usually offered in fall term
Prerequisite: CIS 160
Activity: Lecture
1.0 Course Unit

CIS 264 Introduction to Algorithms
How do you optimally encode a text file? How do you find shortest paths in a map? How do you design a communication network? How do you route data in a network? What are the limits of efficient computation? This course gives a comprehensive introduction to design and analysis of algorithms, and answers along the way to these and many other interesting computational questions. You will learn about problem-solving; advanced data structures such as universal hashing and red-black trees; advanced design and analysis techniques such as dynamic programming and amortized analysis; graph algorithms such as minimum spanning trees and network flows; NP-completeness theory; and approximation algorithms.
Course usually offered in spring term
Prerequisites: CIS 120, 121, 160, 262
Activity: Lecture
1.0 Course Unit

CIS 320 Compilers and Interpreters
You know how to program, but do you know how to implement a programming language? In CIS341 you’ll learn how to build a compiler. Topics covered include: lexical analysis, grammars and parsing, intermediate representations, syntax-directed translation, code generation, type checking, simple dataflow and control-flow analyses, and optimizations. Along the way, we study objects and inheritance, first-class functions (closures), data representation and runtime-support issues such as garbage collection. This is a challenging, implementation-oriented course in which students build a full compiler from a simple, typed object-oriented language to fully operational x86 assembly. The course projects are implemented using OCaml, but no knowledge of OCaml is assumed.
Course not offered every year
Prerequisite: CIS 320
Activity: Lecture
1.0 Course Unit

CIS 334 Advanced Topics in Algorithms
Can you check if two large documents are identical by examining a small number of bits? Can you verify that a program has correctly computed a function without ever computing the function? Can students compute the average score on an exam without ever revealing their scores to each other? Can you be convinced of the correctness of an assertion without ever seeing the proof? The answer to all these questions is in the affirmative provided we allow the use of randomization. Over the past few decades, randomization has emerged as a powerful resource in algorithm design. This course would focus on powerful general techniques for designing randomized algorithms as well as specific representative applications in various domains, including approximation algorithms, cryptography and number theory, data structure design, online algorithms, and parallel and distributed computation.
Course not offered every year
Prerequisite: CIS 320
Activity: Lecture
1.0 Course Unit

CIS 341 Compilers and Interpreters
You know how to program, but do you know how to implement a programming language? In CIS341 you’ll learn how to build a compiler. Topics covered include: lexical analysis, grammars and parsing, intermediate representations, syntax-directed translation, code generation, type checking, simple dataflow and control-flow analyses, and optimizations. Along the way, we study objects and inheritance, first-class functions (closures), data representation and runtime-support issues such as garbage collection. This is a challenging, implementation-oriented course in which students build a full compiler from a simple, typed object-oriented language to fully operational x86 assembly. The course projects are implemented using OCaml, but no knowledge of OCaml is assumed.
Course not offered every year
Prerequisites: Two semesters of programming courses, e.g., CIS 120, CIS 121, and CIS 240
Activity: Lecture
1.0 Course Unit
CIS 300 Software Design/Engineering
You know how to write a "program". But how do you create a software "product" as part of a team, with customers that have expectations of functionality and quality? This course introduces students to various tools (source control, automated build systems, programming environments, test automation, etc.) and processes (design, implementation, testing, and maintenance) that are used by professionals in the field of software engineering. Topics will include: software development lifecycle; agile and test-driven development; source control and continuous integration; requirements analysis; object-oriented design and testability; mobile and/or web application development; software testing; refactoring; and software quality metrics.
Course not offered every year
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 371 Computer Organization and Design
This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly programming, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipeling, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization.
Course usually offered in spring term
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit

CIS 380 Computer Operating Systems
This course surveys methods and algorithms used in modern operating systems. Concurrent distributed operation is emphasized. The main topics covered are as follows: process synchronization; interprocess communication; concurrent/distributed programming languages; resource allocation and deadlock; virtual memory; protection and security; distributed operation; distributed data; performance evaluation.
Course usually offered in fall term
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit

CIS 390 Robotics: Planning Perception
This introductory course will present basic principles of robotics with an emphasis to computer science aspects. Algorithms for planning and perception will be studied and implemented on actual robots. While planning is a fundamental problem in artificial intelligence and decision making, robot planning refers to finding a path from A to B in the presence of obstacles and by complying with the kinematic constraints of the robot. Perception involves the estimation of the robots motion and path as well as the shape of the environment from sensors. In this course, algorithms will be implemented in Python on mobile platforms on ground and in the air. No prior experience with Python is needed but we require knowledge of data structures, linear algebra, and basic probability.
Course not offered every year
Prerequisites: CIS 121 and MATH 240 or equivalent
Activity: Lecture
1.0 Course Unit

CIS 398 Quantum Computer and Information Science
The purpose of this course is to introduce undergraduate students in computer computer science and engineering to quantum computers (QC) and quantum information science (QIS). This course is meant primarily for juniors and seniors in Computer Science. No prior knowledge of quantum mechanics (QM) is assumed. Enrollment is by permission of the instructor.
One-term course offered either term
Prerequisites: PHYS 151, MATH 240, MATH 312, MATH 314, CIS 160 and CIS 262
Activity: Lecture
1.0 Course Unit

CIS 400 Senior Project
Design and implementation of a significant piece of work: software, hardware or theory. In addition, emphasis on technical writing and oral communication skills. Students must have an abstract of their Senior Project, which is approved and signed by a Project Adviser, at the end of the second week of Fall classes. The project continues during two semesters; students must enroll in CIS 401 during the second semester. At the end of the first semester, students are required to submit an intermediate report and give a class presentation describing their project and progress. Grades are based on technical writing skills (as per submitted report), oral presentation skills (as per class presentation) and progress on the project. These are evaluated by the Project Adviser and the Course Instructor.
Course usually offered in fall term
Prerequisite: Senior standing or permission of instructor
Activity: Lecture
1.0 Course Unit

CIS 401 Senior Project
Continuation of CIS 400. Design and implementation of a significant piece of work: software, hardware or theory. Students are required to submit a final written report and give a final presentation and demonstration of their project. Grades are based on the report, the presentation and the satisfactory completion of the project. These are evaluated by the Project Adviser and the Course Instructor.
Course usually offered in spring term
Prerequisites: CIS 400, senior standing or permission of instructor
Activity: Lecture
1.0 Course Unit

CIS 419 Applied Machine Learning
Machine learning has been essential to the success of many recent technologies, including autonomous vehicles, search engines, genomics, automated medical diagnosis, image recognition, and social network analysis, among many others. This course will introduce the fundamental concepts and algorithms that enable computers to learn from experience, with an emphasis on their practical application to real problems. This course will introduce supervised learning (decision trees, logistic regression, support vector machines, Bayesian methods, neural networks and deep learning), unsupervised learning (clustering, dimensionality reduction), and reinforcement learning. Additionally, the course will discuss evaluation methodology and recent applications of machine learning, including large scale learning for big data and network analysis.
One-term course offered either term
Also Offered As: CIS 519
Prerequisite: CIS 121 or an equivalent course in data structures
Activity: Lecture
1.0 Course Unit
CIS 421 Artificial Intelligence
This course investigates algorithms to implement resource-limited knowledge-based agents which sense and act in the world. Topics include, search, machine learning, probabilistic reasoning, natural language processing, knowledge representation and logic. After a brief introduction to the language, programming assignments will be in Python.
Also Offered As: CIS 521
Prerequisite: CIS 121; ESE 301 or STAT 430 recommended
Activity: Lecture
1.0 Course Unit

CIS 436 Introduction to Computational Biology & Biological Modeling
The goal of this course is to develop a deeper understanding of techniques and concepts used in Computational Biology. The course will strive to focus on a small set of approaches to gain both theoretical and practical understanding of the methods. We will aim to cover practical issues such as programming and the use of programs, as well as theoretical issues such as algorithm design, statistical data analysis, theory of algorithms and statistics. This course WILL NOT provide a broad survey of the field nor teach specific tools but focus on a deep understanding of a small set of topics. We will discuss string algorithms, hidden Markov models, dimension reduction, and machine learning (or phylogeny estimation) for biomedical problems.
Taught by: Kim
Course usually offered in fall term
Also Offered As: BIOL 437
Prerequisites: Intermediate level biology; MATH 104, BIOL 446 or equivalent. Probability theory and linear algebra are highly recommended
Activity: Lecture
1.0 Course Unit

CIS 441 Embedded Software for Life-Critical Applications
The goal of this course is to give students greater design and implementation experience in embedded software development and to teach them how to model, design, verify, and validate safety critical systems in a principled manner. Students will learn the principles, methods, and techniques for building life-critical embedded systems, ranging from requirements and models to design, analysis, optimization, implementation, and validation. Topics will include modeling and analysis methods and tools, real-time programming paradigms and languages, distributed real-time systems, global time, time-triggered communications, assurance case, software architecture, evidence-based certification, testing, verification, and validation. The course will include a series of projects that implements life-critical embedded systems (e.g., pacemaker, infusion pumps, closed-loop medical devices).
One-term course offered either term
Also Offered As: CIS 541
Prerequisite: CIS 240 or equivalent
Activity: Lecture
1.0 Course Unit

CIS 450 Database and Information Systems
This course provides an introduction to the broad field of database and information systems, covering a variety of topics relating to structured data, ranging from data modeling to logical foundations and popular languages, to system implementations. We will study the theory of relational and XML data design; the basics of query languages; efficient storage of data, execution of queries and query optimization; transactions and updates; web-database development; and "big data" and NoSQL systems. The course assumes mathematical and programming experience equivalent to CIS 160 and CIS 121.
Course usually offered in fall term
Also Offered As: CIS 550
Prerequisites: CIS 121, CIS 160 or equivalent
Activity: Lecture
1.0 Course Unit

CIS 455 Internet and Web Systems
This course focuses on the challenges encountered in building Internet and web systems: scalability, interoperability (of data and code), security and fault tolerance, consistency models, and location of resources, services, and data. We will examine how XML standards enable information exchange; how web services support cross-platform interoperability (and what their limitations are); how to build high-performance application servers; how "cloud computing" services work; how to perform Akamai-like content distribution; and how to provide transaction support in distributed environments. We will study techniques for locating machines, resources, and data (including directory systems, information retrieval indexing, ranking, and web search); and we will investigate how different architectures support scalability (and the issues they face). We will also examine ideas that have been proposed for tomorrow's Web, and we will see some of the challenges, research directions, and potential pitfalls. An important goal of the course is not simply to discuss issues and solutions, but to provide hands-on experience with a substantial implementation project. This semester's project will be a peer-to-peer implementation of a Google-style search engine, including distributed, scalable crawling; indexing with ranking; and even PageRank. As a side-effect of the material of this course you will learn about some aspects of large-scale software development assimilating large APIs.
One-term course offered either term
Also Offered As: CIS 555
Prerequisites: Familiarity with threads and concurrency, strong Java programming skills.
Activity: Lecture
1.0 Course Unit

CIS 460 Interactive Computer Graphics
This course focuses on programming the essential mathematical and geometric concepts underlying modern computer graphics. Using 3D interactive implementations, it covers fundamental topics such as mesh data structures, transformation sequences, rendering algorithms, and curve interpolation for animation. Students are also introduced to two programming languages widely used in the computer graphics industry: C++ and GLSL. The curriculum is heavily project-based, and culminates in a group project focused on building an interactive first-person world exploration application using the various real-time interaction and rendering algorithms learned throughout the semester.
Course usually offered in fall term
Also Offered As: CIS 560
Prerequisites: CIS 120, CIS 121; CIS 240 recommended
Activity: Lecture
1.0 Course Unit
CIS 461 Advanced Rendering
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping.
One-term course offered either term
Also Offered As: CIS 561
Prerequisites: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
Activity: Lecture
1.0 Course Unit

CIS 462 Computer Animation
This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer game virtual reality simulations and high-end animation applications. The course balances theory with practice by "looking under the hood" of current animation systems and authoring tools and examines the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents.
One-term course offered either term
Also Offered As: CIS 562
Prerequisites: Previous exposure to major concepts in linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.
Activity: Lecture
1.0 Course Unit

CIS 497 DMD Senior Project
The goal of this course is to provide an opportunity for seniors to define, design and execute a project of their own choosing that demonstrates the technical skill sets they have acquired during their 4 years as undergraduates. Evaluation is based on selecting an interesting topic, completing appropriate research on the state of the art in that area, communicating your objectives in writing and in presentations, accurately estimating what resources will be required to complete your chosen task, coding necessary functionality, and executing your plan.
One-term course offered either term
Prerequisite: Senior Standing or Permission of the Instructor
Activity: Lecture
1.0 Course Unit

CIS 500 Software Foundations
This course introduces basic concepts and techniques in the foundational study of programming languages. The central theme is the view of programs and programming languages as mathematical objects for which precise claims may be made and proved. Particular topics include operational techniques for formal definition of language features, type systems and type safety properties, polymorphism, constructive logic, and the Coq proof assistant. This course is appropriate as an upper-level undergraduate CIS elective. Undergraduates who have satisfied the prerequisites are welcome to enroll. No permission from the instructor is needed.
One-term course offered either term
Prerequisites: CIS 121, 160, and CIS 262 (or equivalents); plus substantial mathematical maturity (at least two additional undergraduate courses in math or theoretical CS). Undergraduate-level coursework in programming languages, compilers, functional programming, or logic is helpful but not required.
Activity: Lecture
1.0 Course Unit

CIS 501 Computer Architecture
This course is an introductory graduate course on computer architecture with an emphasis on a quantitative approach to cost/performance design tradeoffs. The course covers the fundamentals of classical and modern uniprocessor design: performance and cost issues, instruction sets, pipelining, superscalar, out-of-order, and speculative execution mechanisms, caches, physical memory, virtual memory, and I/O. Other topics include: static scheduling, VLIW and EPIC, software speculation, long (SIMD) and short (multimedia) vector execution, multithreading, and an introduction to shared memory multiprocessors.
One-term course offered either term
Prerequisites: Knowledge of computer organization and basic programming skills
Activity: Lecture
1.0 Course Unit

CIS 502 Analysis of Algorithms
An investigation of paradigms for design and analysis of algorithms. The course will include dynamic programming, flows and combinatorial optimization algorithms, linear programming, randomization and a brief introduction to intractability and approximation algorithms. The course will include other advanced topics, time permitting.
One-term course offered either term
Prerequisites: Data Structures and Algorithms at the undergraduate level. Programming experience (CIT 594 or equivalent) is helpful but not necessary.
Activity: Lecture
1.0 Course Unit

CIS 505 Software Systems
This course provides an introduction to fundamental concepts of distributed systems, and the design principles for building large scale computational systems. Topics covered include communication, concurrency, programming paradigms, naming, managing shared state, caching, synchronization, reaching agreement, fault tolerance, security, middleware, and distributed applications. This course is appropriate as an upper-level undergraduate CIS elective.
One-term course offered either term
Prerequisites: Undergraduate-level knowledge of Operating Systems and Networking, programming experience (CIT 594 or equivalent)
Activity: Lecture
1.0 Course Unit
CIS 511 Theory of Computation
Review of regular and context-free languages and machine models. Turing machines and RAM models, Decidability, Halting problem, Reductions, Recursively enumerable sets, Universal TMs, Church/Turing thesis. Time and space complexity, hierarchy theorems, the complexity classes P, NP, PSPACE, L, NL, and co-NL. Reductions revisited, Cook-Levin Theorem, completeness, NL = co-NL. Advanced topics as time permits: Circuit complexity and parallel computation, randomized complexity, approximability, interaction and cryptography.
One-term course offered either term
Prerequisites: Discrete Mathematics, Automata theory or Algorithms at the undergraduate level.
Activity: Lecture
1.0 Course Unit

CIS 515 Fundamentals of Linear Algebra and Optimization
This course provides firm foundations in linear algebra and basic optimization techniques. Emphasis is placed on teaching methods and tools that are widely used in various areas of computer science. Both theoretical and algorithmic aspects will be discussed.
One-term course offered either term
Prerequisites: Undergraduate course in linear algebra, calculus
Activity: Lecture
1.0 Course Unit

CIS 518 Topics in Logic: Finite Model Theory and Descriptive Complexity
This course will examine the expressive power of various logical languages over the class of finite structures. The course begins with an exposition of some of the fundamental theorems about the behavior of first-order logic in the context of finite structures, in particular, the Ehrenfeucht-Fraisse Theorem and the Trakhtenbrot Theorem. The first of these results is used to show limitations on the expressive power of first-order logic over finite structures while the second result demonstrates that the problem of reasoning about finite structures using first-order logic is surprisingly complex. The course then proceeds to consider various extensions of first-order logic including fixed-point operators, generalized quantifiers, infinitary languages, and higher-order languages.
The expressive power of these extensions will be studied in detail and will be connected to various problems in the theory of computational complexity. This last motif, namely the relation between descriptive and computational complexity, will be one of the main themes of the course.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

CIS 519 Applied Machine Learning
Machine learning has been essential to the success of many recent technologies, including autonomous vehicles, search engines, genomics, automated medical diagnosis, image recognition, and social network analysis, among many others. This course will introduce the fundamental concepts and algorithms that enable computers to learn from experience, with an emphasis on their practical application to real problems. This course will introduce supervised learning (decision trees, logistic regression, support vector machines, Bayesian methods, neural networks and deep learning), unsupervised learning (clustering, dimensionality reduction), and reinforcement learning. Additionally, the course will discuss evaluation methodology and recent applications of machine learning, including large scale learning for big data and network analysis.
One-term course offered either term
Also Offered As: CIS 419
Prerequisite: CIS 121 or an equivalent course in data structures
Activity: Lecture
1.0 Course Unit

CIS 520 Machine Learning
This course covers the foundations of statistical machine learning. The focus is on probabilistic and statistical methods for prediction and clustering in high dimensions. Topics covered include linear and logistic regression, SVMs, PCA and dimensionality reduction, EM and HMMs, and deep learning.
Course usually offered in fall term
Prerequisites: Elementary probability, calculus, and linear algebra. Basic programming experience.
Activity: Lecture
1.0 Course Unit

CIS 521 Artificial Intelligence
This course investigates algorithms to implement resource-limited knowledge-based agents which sense and act in the world. Topics include, search, machine learning, probabilistic reasoning, natural language processing, knowledge representation and logic. After a brief introduction to the language, programming assignments will be in Python.
One-term course offered either term
Also Offered As: CIS 421
Prerequisites: CIS 121, ESE 301 or STAT 430 recommended
Activity: Lecture
1.0 Course Unit

CIS 522 Deep Learning for Data Science
Deep learning techniques now touch on data systems of all varieties. Sometimes, deep learning is a product; sometimes, deep learning optimizes a pipeline; sometimes, deep learning provides critical insights; sometimes, deep learning sheds light on neuroscience or vice versa. The purpose of this course is to deconstruct the hype by teaching deep learning theories, models, skills, and applications that are useful for applications.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 526 Machine Translation
Google translate can instantly translate between any pair of over fifty human languages (for instance, from French to English). How does it do that? Why does it make the errors that it does? And how can you build something better? Modern translation systems like Google Translate and Bing Translator learn how to translate by reading millions of words of already translated text, and this course will show you how they work. The course covers a diverse set of fundamental building blocks from linguistics, machine learning, algorithms, data structures, and formal language theory, along with their application to a real and difficult problem in artificial intelligence.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 530 Computational Linguistics
Computational approaches to the problem of understanding and producing natural language text and speech, including speech processing, syntactic parsing, semantic interpretation, discourse meaning, and the role of pragmatics and world knowledge. The course will examine both rule-based and corpus-based techniques. It is recommended that students have some knowledge of logic, basic linguistics, and/or programming.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CIS 535 Introduction to Bioinformatics
The course covers methods used in computational biology, including the statistical models and algorithms used and the biological problems which they address. Students will learn how tools such as BLAST work, and will use them to address real problems. The course will focus on sequence analysis problems such as exon, motif and gene finding, and on comparative methods but will also cover gene expression and proteomics. Course usually offered in fall term
Also Offered As: GCB 535
Prerequisites: The course will assume a solid knowledge of modern biology. An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as BIOL 527 (Advanced Molecular Biology and Genetics), BIOL 540 (Genetic Systems, or equivalent, is a prerequisite.
Activity: Lecture
1.0 Course Unit

CIS 536 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the "pencil and paper" level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis.
Taught by: Kim
Course usually offered in spring term
Also Offered As: BIOL 536, GCB 536
Prerequisite: College level introductory biology required; undergraduate or graduate level statistics taken previously or concurrently required; molecular biology and/or genetics encouraged; programming experience encouraged
Activity: Lecture
1.0 Course Unit

CIS 537 Biomedical Image Analysis
This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomaterials imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods.
One-term course offered either term
Also Offered As: BE 537
Prerequisites: Mathematics through multivariate calculus (MATH 241), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics.
Activity: Lecture
1.0 Course Unit

CIS 540 Principles of Embedded Computation
This course is focused on principles underlying design and analysis of computational elements that interact with the physical environment. Increasingly, such embedded computers are everywhere, from smart cameras to medical devices to automobiles. While the classical theory of computation focuses on the function that a program computes, to understand embedded computation, we need to focus on the reactive nature of the interaction of a component with its environment via inputs and outputs, the continuous dynamics of the physical world, different ways of communication among components, and requirements concerning safety, timeliness, stability, and performance. Developing tools for approaching design, analysis, and implementation of embedded systems in a principled manner is an active research area. This course will attempt to give students a coherent introduction to this emerging area. This course is appropriate as an upper-level undergraduate CIS elective.
Course usually offered in fall term
Prerequisites: This course assumes mathematical maturity, commensurate with either ESE 210 (Introduction to Dynamical Systems), or CIS 262 (Introduction to Theory of Computation). It is suitable for students who have an undergraduate degree in computer science, or computer engineering, or electrical engineering. It is also suitable for Penn undergraduates in CIS or CE as an upper-level elective.
Activity: Lecture
1.0 Course Unit

CIS 541 Embedded Software for Life-Critical Applications
The goal of this course is to give students greater design and implementation experience in embedded software development and to teach them how to model, design, verify, and validate safety critical systems in a principled manner. Students will learn the principles, methods, and techniques for building life-critical embedded systems, ranging from requirements and models to design, analysis, optimization, implementation, and validation. Topics will include modeling and analysis methods and tools, real-time programming paradigms and languages, distributed real-time systems, global time, time-triggered communications, assurance case, software architecture, evidence-based certification, testing, verification, and validation. The course will include a series of projects that implements life-critical embedded systems (e.g., pacemaker, infusion pumps, closed-loop medical devices).
One-term course offered either term
Also Offered As: CIS 441
Activity: Lecture
1.0 Course Unit

CIS 542 Embedded Systems Programming
This course explores techniques for writing correct and efficient embedded code. Topics include C/C++ idioms, data abstraction, elementary data structures and algorithms, environment modeling, concurrency, hard real time, and modular program reasoning.
One-term course offered either term
Prerequisite: C fluency
Activity: Lecture
1.0 Course Unit

CIS 545 Big Data Analytics
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
CIS 548 Operating Systems Design and Implementation
The purpose of this masters-level course is to teach the design and implementation of operating systems and operating systems concepts that appear in other advanced systems. The course divides into three major sections. The first part of the course discusses concurrency: how to manage multiple tasks that execute at the same time and share resources. Topics in this section include processes and threads, context switching, synchronization, scheduling, and deadlock. The second part of the course addresses the problem of memory management; it will cover topics such as linking, dynamic memory allocation, dynamic address translation, virtual memory, and demand paging. The third major part of the course concerns file systems, including topics such as storage devices, disk management and scheduling, directories, protection, and crash recovery. After these three major topics, the class will conclude with specialized topics such as virtual machines and case studies of different operating systems (e.g. Android, Windows, Linux, etc.).
One-term course offered either term
Prerequisite: Proficient knowledge of C/C++
Activity: Lecture
1.0 Course Unit
Notes: This is considered a faster-paced version of the CIS 380 taken by Penn undergraduates. Due to topic overlaps, undergraduates who have taken CIS 380 will not get credit for taking this course. Undergraduates who have taken CIS 380 should directly proceed to take CIS 505 if they are submatriculating.

CIS 549 Wireless Mobile Communication
This course covers generations of wireless mobile network standards and systems, basic differences and their evolution, charting the development of mobile telecommunications systems from 3G, to today's state-of-the-art wireless technology 4G LTE, and the next generation wireless technology, 5G.
One-term course offered either term
Prerequisites: ESE 407 or CIS 505, 551 or 553 or permission of the instructor
Activity: Lecture
1.0 Course Unit

CIS 550 Database and Information Systems
This course provides an introduction to the broad field of database and information systems, covering a variety of topics relating to structured data, ranging from data modeling to logical foundations and popular languages, to system implementations. We will study the theory of relational and XML data design; the basics of query languages; efficient storage of data, execution of queries and query optimization; transactions and updates; web database development; and "big data" and NoSQL systems. The course assumes mathematical and programming experience equivalent to CIS160 and CIS121.
Course usually offered in fall term
Also Offered As: CIS 450
Prerequisites: CIS 121, 160
Activity: Lecture
1.0 Course Unit

CIS 551 Computer and Network Security
This is an introduction to topics in the security of computer systems and communication on networks of computers. The course covers four major areas: fundamentals of cryptography, security for communication protocols, security for operating systems and mobile programs, and security for electronic commerce. Sample specific topics include: passwords and offline attacks, DES, RSA, DSA, SHA, SSL, CBC, IPSec, SET, DDoS attacks, biometric authentication, PKI, smart cards, S/MIME, privacy on the Web, viruses, security models, wireless security, and sandboxing. Students will be expected to display knowledge of both theory and practice through written examinations and programming assignments.
Course usually offered in spring term
Prerequisites: CIS 553 or equivalent is required; CIS 500 recommended.
Activity: Lecture
1.0 Course Unit

CIS 552 Advanced Programming
The goals of this course are twofold: (1) to take good programmers and turn them into excellent ones, and (2) to introduce them to a range of modern software engineering practices, in particular those embodied in advanced functional programming languages.
One-term course offered either term
Prerequisites: Four courses involving significant programming and a discrete mathematics or modern algebra course. Enrollment by permission of the instructor only.
Activity: Lecture
1.0 Course Unit

CIS 553 Networked Systems
This course provides an introduction to fundamental concepts in the design and implementation of networked systems, their protocols, and applications. Topics to be covered include: Internet architecture, network applications, addressing, routing, transport protocols, network security, and peer-to-peer networks. The course will involve written assignments, examinations, and programming assignments. Students will work in teams to design and implement networked systems in layers, from routing protocols, transport protocols, to peer-to-peer networks.
One-term course offered either term
Prerequisites: CIS 553 or equivalent is required; CIS 500 recommended.
Activity: Lecture
1.0 Course Unit

CIS 554 Programming Paradigms
Achieving mastery in a new programming language requires more than just learning a new syntax; rather, different languages support different ways to think about solving problems. Not all programming languages are inherently procedural or object-oriented. The intent of this course is to provide a basic understanding of a wide variety of programming paradigms, such as logic programming, functional programming, concurrent programming, rule-based programming, and others.
One-term course offered either term
Prerequisite: CIS 121 or CIT 594 or equivalent
Activity: Lecture
1.0 Course Unit
CIS 555 Internet and Web Systems
This course focuses on the challenges encountered in building Internet and web systems: scalability, interoperability (of data and code), security and fault tolerance, consistency models, and location of resources, services, and data. We will examine how XML standards enable information exchange; how web services support cross-platform interoperability (and what their limitations are); how to build high-performance application servers; how “cloud computing” services work; how to perform Akamai-like content distribution; and how to provide transaction support in distributed environments. We will study techniques for locating machines, resources, and data (including directory systems, information retrieval indexing, ranking, and web search); and we will investigate how different architectures support scalability (and the issues they face). We will also examine ideas that have been proposed for tomorrow’s Web, and we will see some of the challenges, research directions, and potential pitfalls. An important goal of the course is not simply to discuss issues and solutions, but to provide hands-on experience with a substantial implementation project. This semester’s project will be a peer-to-peer implementation of a Googles-style search engine, including distributed, scalable crawling; indexing with ranking; and even PageRank. As a side-effect of the material of this course you will learn about some aspects of large-scale software development assimilating large APIs, thinking about modularity, reading other people’s code, managing versions, debugging, etc.
One-term course offered either term
Also Offered As: CIS 455
Prerequisites: Familiarity with threads and concurrency, strong Java programming skills.
Activity: Lecture
1.0 Course Unit

CIS 556 Cryptography
This course is a graduate-level introduction to cryptography, both theory and applications. Topics covered include symmetric cryptography, message authentication, public-key cryptography, digital signatures, cryptanalysis, cryptographic security, and secure channels, as well as a selection of more advanced topics such as zero-knowledge proofs, secure multiparty computation, privacy-enhancing technologies, or lattice-based cryptography.
One-term course offered either term
Prerequisites: CIS 262, 320 or equivalent
Activity: Lecture
1.0 Course Unit

CIS 557 Programming for the Web
This course will focus on web programming. The first half will focus on the basics of the internet and the Web, HTML and CSS, and basic and advanced Ruby. The second half will focus on Rails. Teams (of size 2-3) will build a web application in the second half of the semester as the class project. Through Rails, we’ll explore the “culture” of web programming such as agile methodology, testing, key aspects of software engineering, using web services and APIs, and deploying to the cloud.
Prerequisites: CIS 121, CIT 594, or equivalent, or permission of the instructor
Activity: Lecture
1.0 Course Unit

CIS 559 Programming and Problem Solving
This course develops students problem solving skills using techniques that they have learned during their CS training. Over the course of the semester, students work on group projects in which they use programming techniques to solve open-ended problems, e.g., optimization, simulation, etc. There are no “correct” answers to these problems; rather, the focus is on the four steps of the problem solving process: algorithmic thinking; programming; analysis; and communication.
One-term course offered either term
Prerequisites: Proficiency in Java. CIS 320 or CIS 502, or equivalent
Activity: Lecture
1.0 Course Unit

CIS 560 Interactive Computer Graphics
This course focuses on programming the essential mathematical and geometric concepts underlying modern computer graphics. Using 3D interactive implementations, it covers fundamental topics such as mesh data structures, transformation sequences, rendering algorithms, and curve interpolation for animation. Students are also introduced to two programming languages widely used in the computer graphics industry: C++ and GLSL. The curriculum is heavily project-based, and culminates in a group project focused on building an interactive first-person world exploration application using the various real-time interaction and rendering algorithms learned throughout the semester.
Course usually offered in fall term
Also Offered As: CIS 460
Prerequisites: CIS 120 (CIS 120 and CIS 240 are useful pre- or co- prerequisits)
Activity: Lecture
1.0 Course Unit

CIS 561 Advanced Computer Graphics
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping.
One-term course offered either term
Also Offered As: CIS 461
Prerequisites: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
Activity: Lecture
1.0 Course Unit
CIS 562 Computer Animation
This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer games, virtual reality simulations and high-end animation applications. The course balances theory with practice by "looking under the hood" of current animation systems and authoring tools and examines the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents.
One-term course offered either term
Also Offered As: CIS 462
Prerequisites: Previous exposure to major concepts in linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.
Activity: Lecture
1.0 Course Unit

CIS 563 Physically Based Animation
This course introduces students to common physically based simulation techniques for animation of fluids and gases, rigid and deformable solids, cloth, explosions, fire, smoke, virtual characters, and other systems. Physically based simulation techniques allow for creation of extremely realistic special effects for movies, video games and surgical simulation systems. We will learn state-of-the-art techniques that are commonly used in current special effects and animation studios and in video games community. To gain hands-on experience, students will implement basic simulators for several systems. The topics will include: Particle Systems, Mass spring systems, Deformable Solids & Fracture, Cloth, Explosions & Fire, Smoke, Fluids, Deformable active characters, Simulation and control of rigid bodies, Rigid body dynamics, Collision detection and handling, Simulation of articulated characters, Simulated characters in games. The course is appropriate for both upper level undergraduate and graduate students.
One-term course offered either term
Prerequisites: Students should have a good knowledge of object-oriented programming (C++) and basic familiarity with linear algebra and physics. Background in computer graphics is required (CIS 461 or CIS 561).
Activity: Lecture
1.0 Course Unit

CIS 564 Game Design and Development
The intent of the course is to provide students with a solid theoretical understanding of the core creative principles, concepts, and game play structures/schemas underlying most game designs. The course also will examine game development from an engineering point of view, including: game play mechanics, game engine software and hardware architectures, user interfaces, design documents, playtesting and production methods.
One-term course offered either term
Prerequisites: Basic understanding of 3D graphics and animation principles, prior exposure to scripting and programming languages such as Python, C and C++
Activity: Lecture
1.0 Course Unit

CIS 565 GPU Programming and Architecture
This course examines the architecture and capabilities of modern GPUs. The graphics processing unit (GPU) has grown in power over recent years, to the point where many computations can be performed faster on the GPU than on a traditional CPU. GPUs have also become programmable, allowing them to be used for a diverse set of applications far removed from traditional graphics settings. Topics covered include architectural aspects of modern GPUs, with a special focus on their streaming parallel nature, writing programs on the GPU using high level languages like Cg and BrookGPU, and using the GPU for graphics and general purpose applications in the area of geometry modeling, physical simulation, scientific computing and games. Students are expected to have a basic understanding of computer architecture and graphics, and should be proficient in OpenGL and C/C++. This course is appropriate as an upper-level undergraduate CIS elective.
One-term course offered either term
Prerequisites: CIS 460 or CIS 560, and familiarity with computer hardware/systems. The hardware/systems requirement may be met by CIS 501; or CIT 593 and 595; or CIS 240 (with CIS 371 recommended); or equivalent coursework.
Activity: Lecture
1.0 Course Unit

CIS 566 Procedural Computer Graphics
Sprawling cities, dense vegetation, infinite worlds - procedural graphics empower technical artists to quickly create complex digital assets that would otherwise be unfeasible. This course is intended to introduce the mathematical and algorithmic foundations of procedural modeling and animation techniques, and to offer hands-on experience designing and implementing visual recipes in original graphics projects by applying these methods. Students should have a strong interest in both the creative and technical aspects of computer graphics, as well as a solid programming background.
One-term course offered either term
Prerequisite: CIS 460 or CIS 560
Activity: Lecture
1.0 Course Unit
CIS 580 Machine Perception
An introduction to the problems of computer vision and other forms of machine perception that can be solved using geometrical approaches rather than statistical methods. Emphasis will be placed on both analytical and computational techniques. This course is designed to provide students with an exposure to the fundamental mathematical and algorithmic techniques that are used to tackle challenging image based modeling problems. The subject matter of this course finds application in the fields of Computer Vision, Computer Graphics and Robotics. Some of the topics to be covered include: Projective Geometry, Camera Calibration, Image Formation, Projective, Affine and Euclidean Transformations, Computational Stereopsis, and the recovery of 3D structure from multiple 2D images. This course will also explore various approaches to object recognition that make use of geometric techniques, these would include alignment based methods and techniques that exploit geometric invariants. In the assignments for this course, students will be able to apply the techniques to actual computer vision problems. This course is appropriate as an upper-level undergraduate CIS elective.
Course usually offered in fall term
Prerequisites: A solid grasp of the fundamentals of linear algebra. Some knowledge of programming in C and/or Matlab
Activity: Lecture
1.0 Course Unit

CIS 581 Computer Vision & Computational Photography
This is an introductory course to Computer Vision and Computational Photography. This course will explore three topics: 1) image morphing, 2) image matching and stitching, and 3) image recognition. This course is intended to provide a hands-on experience with interesting things to do on images/videos. The world is becoming image-centric. Cameras are now found everywhere, in our cell phones, automobiles, even in medical surgery tools. Computer vision technology has led to latest innovations in areas such as Hollywood movie production, medical diagnosis, biometrics, and digital library. This course is suited for students from all Engineering backgrounds, who have the basic knowledge of linear algebra and programming, and a lot of imagination.
Course not offered every year
Activity: Lecture
1.0 Course Unit

CIS 582 Game Design Practicum
The objective of the game design practicum is to provide students with hands on experience designing and developing 3D computer games. Working in teams of three or four, students will brainstorm an original game concept, write a formal game design document then develop a fully functional prototype consisting of a playable level of the game. In addition to creation of original art and animation assets for the game, technical features to be designed and implemented include a novel game mechanic and/or user interaction model, game physics (i.e. particle systems and rigid body dynamics), character animation, game AI (i.e. movement control, path planning, decision making, etc.), sound effects and effects and background music, 2D graphical user interface (GUI) design and optional multiplayer networking capabilities. Consistent with standard industry practices, game code and logic will be written using C++ and popular scripting languages such as Python and Lua. State-of-the-art game and physics engine middleware also will be used to expose students to commercial-grade software, production methodologies and art asset pipelines. As a result of their game development efforts, students will learn first hand about the creative process, design documentation, object-oriented software design and engineering, project management (including effective team collaboration and communication techniques), design iteration through user feedback and play-testing, and most importantly, what makes a game fun to play.
One-term course offered either term
Prerequisites: CIS 462/CIS 562, CIS 461/CIS 562, or CIS 460/CIS 560
Corequisite: CIS 564
Activity: Lecture
1.0 Course Unit

CIS 583 Software Engineering
This course covers the theory and practice of software analysis – a body of algorithms and techniques to reason about program behavior with applications to effectively test, debug, and secure large, complex codebases. The course surveys a wide range of applications of software analysis including proving the absence of common programming errors, discovering and preventing security vulnerabilities, systematically testing intricate data structures and libraries, and localizing root causes in complex software failures. Topics covered include dataflow analysis, constraint-based analysis, type systems, program specifications, randomized testing, automated debugging, and symbolic execution.
Course usually offered in fall term
Prerequisites: CIT 594 or CIS 350, or equivalent; proficiency in Java
Activity: Lecture
1.0 Course Unit
CIS 601 Advanced Topics in Computer Architecture
This course will focus on research topics in computer architecture, and include reading and presenting research papers and an optional project. The content will differ with each offering, covering topics such as multicore programmability, datacenter and warehouse-scale computing, security, energy-efficient architectures, etc.
One-term course offered either term
Prerequisite: CIS 501 or strong performance in CIS 371
Activity: Lecture
1.0 Course Unit

CIS 610 Advanced Geometric Methods in Computer Science
The purpose of this course is to present some of the advanced geometric methods used in geometric modeling, computer graphics, computer vision, etc. The topics may vary from year to year, and will be selected among the following subjects (nonexhaustive list): Introduction to projective geometry with applications to rational curves and surfaces, control points for rational curves, rectangular and triangular rational patches, drawing closed rational curves and surfaces; Differential geometry of curves (curvature, torsion, osculating planes, the Frenet frame, osculating circles, osculating spheres); Differential geometry of surfaces (first fundamental form, normal curvature, second fundamental form, geodesic curvature, Christoffel symbols, principal curvatures, Gaussian curvature, mean curvature, the Gauss map and its derivative dN, the Dupin indicatrix, the Theorema Egregium equations of Codazzi-Mainardi, Bonnet's theorem, lines of curvatures, geodesic torsion, asymptotic lines, geodesic lines, local Gauss-Bonnet theorem). The course usually offered in spring term
Prerequisite: CIS 510 or coverage of equivalent material
Activity: Lecture
1.0 Course Unit

CIS 620 Advanced Topics in Machine Learning
This course covers a variety of advanced topics in machine learning, such as the following: statistical learning theory (statistical consistency properties of surrogate loss minimizing algorithms); approximate inference in probabilistic graphical models (variational inference methods and sampling-based inference methods); structured prediction (algorithms and theory for supervised learning problems involving complex/structured labels); and online learning in complex/structured domains. The precise topics covered may vary from year to year based on student interest and developments in the field.
The course usually offered in spring term
Prerequisite: CIS 520 or equivalent
Activity: Seminar
1.0 Course Unit

CIS 625 Computational Learning Theory
This course is an introduction to Computational Learning Theory, a field which attempts to provide algorithmic, complexity-theoretic and statistical foundations to modern machine learning. The focus is on topics in computational learning theory for researchers and students in artificial intelligence, neural networks, theoretical computer science, and statistics.
One-term course offered either term
Prerequisites: Prior courses in algorithms, complexity and statistics would be helpful but are not necessary.
Activity: Seminar
1.0 Course Unit

CIS 630 Advanced Topics in Natural Language Processing
Different topics selected each offering; e.g., NL generation, question-answering, information extraction, machine translation, restricted grammar formalisms, computational lexical semantics, etc.
One-term course offered either term
Prerequisite: CIS 530 or equivalent or permission of instructor
Activity: Seminar
1.0 Course Unit

CIS 650 Advanced Topics in Databases
Advanced topics in databases: distributed databases, integrity constraints, failure, concurrency control, relevant relational theory, semantics of data models, the interface between programming of languages and databases. New topics are discussed each year.
The course usually offered in spring term
Prerequisite: CIS 550
Activity: Seminar
1.0 Course Unit

CIS 660 Advanced Topics in Computer Graphics and Animation
The goal of the course is to review state-of-the-art research in the fields of computer graphics and animation as well as provide students with working knowledge of how to convert theory to practice by developing an associated graphics/animation authoring tool. The course is comprised of primers, lectures, student presentations and the authoring tool group project. Each student will be responsible for presenting one primer and at least two SIGGRAPH papers to the class. Working in teams of two, students will design and develop an authoring tool that facilitates the creation of a new type of user interaction, animation/simulation capability or 3D graphics special effect. Research papers published in the SigGraph Conference proceedings will provide the basis for the features/functionality/special effects that can be selected for implementation in the authoring tool. Each group will analyze the need and user requirements for the tool they plan to develop, prepare a formal software design document, construct a project work plan, develop the authoring tool functionality and user interface, test the design and demonstrate the authoring of associated content. A plug-in to standard authoring tools such as Maya or Houdini must also be developed to enable importing of appropriate assets and/or exporting of results.
The course usually offered in spring term
Prerequisite: CIS 560 or permission of the instructor
Activity: Seminar
1.0 Course Unit

CIS 670 Advanced Topics in Programming Languages
The details of this course change from year to year, but its purpose is to cover theoretical topics related to programming languages. Some central topics include: denotational vs operational semantics, domain theory and category theory, the lambda calculus, type theory (including recursive types, generics, type inference and modules), logics of programs and associated completeness and decidability problems, specification languages, and models of concurrency. The course requires a degree of mathematical sophistication.
One-term course offered either term
Prerequisite: CIS 500
Activity: Seminar
1.0 Course Unit
CIS 673 Computer-Aided Verification
This course introduces the theory and practice of formal methods for the design and analysis of concurrent and embedded systems. The emphasis is on the underlying logical and automata-theoretic concepts, the algorithmic solutions, and heuristics to cope with the high computational complexity. Topics: Models and semantics of reactive systems; Verification algorithms; Verification techniques. Topics may vary depending on instructor.
One-term course offered either term
Prerequisites: Basic knowledge of algorithms, data structures, automata theory, propositional logic, operating systems, communication protocols, and hardware (CIS 262, CIS 380, or permission of the instructor).
Activity: Lecture
1.0 Course Unit

CIS 677 Advanced Topics in Algorithms and Complexity
This course covers various aspects of discrete algorithms. Graph-theoretic algorithms in computational biology, and randomization and computation; literature in dynamic graph algorithms, approximation algorithms, and other areas according to student interests.
Course usually offered in fall term
Prerequisite: Consent of the instructor
Activity: Lecture
1.0 Course Unit

CIS 680 Advanced Topics in Machine Perception
Graduate seminar in advanced work on machine perception as it applies to robots as well as to the modeling of human perception. Topics vary with each offering.
Course usually offered in spring term
Prerequisites: A previous course in machine perception or knowledge of image processing, experience with an operating system and language such as Unix and C, and aptitude for mathematics.
Activity: Seminar
1.0 Course Unit

CIS 682 Friendly Logics
The use of logical formalisms in Computer Science is dominated by a fundamental conflict: expressiveness vs. algorithmic tractability. Database constraint logics, temporal logics and description logics are successful compromises in this conflict: (1) they are expressive enough for practical specifications in certain areas, and (2) there exist interesting algorithms for the automated use of these specifications. Interesting connections can be made between these logics because temporal and description logics are modal logics, which in turn can be seen, as can database constraint logics, as certain fragments of first-order logic. These connections might benefit research in databases, computer-aided verification and AI. Discussion includes other interesting connections, e.g., with SLD-resolution, with constraint satisfaction problems, with finite model theory and with automata theory.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 700 Special Topics
One-time course offerings of special interest. Equivalent to a CIS 5XX level course.
Course not offered every year
Activity: Lecture
1.0 Course Unit

CIS 800 PhD Special Topics
One-time course offerings of special interest. Equivalent to CIS seminar course. Offerings to be determined.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 895 Teaching Practicum
Enrollment for students participating in Teaching Practicum.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 899 Doctoral Independent Study
For doctoral students studying a specific advanced subject area in computer and information science. The Independent Study may involve coursework, presentations, and formally gradable work comparable to that in a CIS 500 or 600 level course. The Independent Study may also be used by doctoral students to explore research options with faculty, prior to determining a thesis topic. Students should discuss with the faculty supervisor the scope of the Independent Study, expectations, work involved, etc. The Independent Study should not be used for ongoing research towards a thesis, for which the CIS 999 designation should be used.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CIS 990 Masters Thesis
For master's students who have taken ten course units and need only to complete the writing of a thesis or finish work for incompletes in order to graduate. CIS 990 carries full time status with zero course units and may be taken only once.
Activity: Masters Thesis
1.0 Course Unit

CIS 995 Dissertation
For Ph.D. candidates working exclusively on their dissertation research, having completed enrollment for a total of ten semesters (fall and spring). There is no credit or grade for CIS 995.
Activity: Dissertation
1.0 Course Unit

CIS 999 Thesis/Dissertation Research
For students pursuing advanced research to fulfill PhD dissertation requirements.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Computer and Information Technology (CIT)

CIT 590 Programming Languages and Techniques
Introduction to fundamental concepts of programming and computer science for students who have little or no experience in these areas. Principles of modern object-oriented programming languages: abstraction, types, polymorphism, encapsulation, and inheritance. Basic algorithmic techniques and informal complexity analysis. Graphical user interfaces. Substantial programming assignments in Python and Java. This course is for students who do not have an academic background in computer science and who are not pursuing the Master’s in Computer Information Technology and who are not graduate students in the CIS Department.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIT 591 Introduction to Software Development
Introduction to fundamental concepts of programming and computer science. Principles of modern object-oriented programming languages: abstraction, types, polymorphism, encapsulation, inheritance, and interfaces. This course will also focus on best practices and aspects of software development such as software design, software testing, pair programming, version control, and using IDEs. Substantial programming assignments.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIT 592 Mathematical Foundations of Computer Science
This course introduces you to math concepts that form the backbone of the majority of computer science. Topics covered include sets, functions, permutations and combinations, discrete probability, expectation, mathematical Induction and graph theory. The goal of the course is to ensure that students are comfortable enough with the math required for most of the CIS electives. CIS 502 and CIT 596 heavily rely on concepts taught in this course.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIT 593 Introduction to Computer Systems
This course provides an introduction to fundamental concepts of computer systems and computer architecture. You will learn the C programming language and an instruction set (machine language) as a basis for understanding how computers represent data, process information, and execute programs. The course also focuses on the Unix environment and includes a weekly hands-on lab session.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIT 594 Data Structures and Software Design
This course will focus on data structures, software design, and advanced Java. The course starts off with an introduction to data structures and basics of the analysis of algorithms. Important data structures covered will include arrays, lists, stacks, queues, trees, hash maps, and graphs. The course will also focus on software design and advanced Java topics such as software architectures, design patterns, networking, multithreading, and graphics. We will use Java for the entire course.
One-term course offered either term
Prerequisite: CIT 591 or consent of the instructor
Activity: Lecture
1.0 Course Unit

CIT 595 Computer Systems Programming
This course builds on your knowledge of C and focuses on systems programming for Linux, specifically the libraries that programmers use for threading and concurrency, synchronization, inter-process communication, and networking. The course also introduces the C++ programming language, and covers important concepts in modern operating systems, including processes, scheduling, caching, and virtual memory. After completing this course, you will have the requisite knowledge and experience for systems-focused CIS graduate-level electives.
One-term course offered either term
Prerequisites: CIT 593 or equivalent.
Activity: Lecture
1.0 Course Unit

CIT 596 Algorithms and Computation
This course focuses primarily on the design and analysis of algorithms. We will begin with sorting and searching algorithms and then spend most of the course on graph algorithms. In order to study graph algorithms, general algorithm design patterns like dynamic programming and greedy algorithms will be introduced. A section of this course is also devoted to understanding NP-Completeness.
One-term course offered either term
Prerequisite: CIT 592 or equivalent
Activity: Lecture
1.0 Course Unit

Creative Writing (CRWR)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates).

CRWR 101 The Craft of Creative Writing
The Craft of Creative Writing is designed for students who are new to creative writing or who would like to return to the fundamentals of craft. Through frequent writing assignments, assigned readings and collaborative discussions, students familiarize themselves with a variety of styles and approaches, exploring a range of literary genres including poetry, fiction, creative nonfiction, memoir and journalistic prose. Students are expected to hone their skills in creative practice, to revise and take risks with their work and to cultivate their habits of close reading and peer workshop.
Activity: Online Course
1.0 Course Unit
CRWR 160 Modern and Contemporary US Poetry
In this fast-paced introductory course, students read and discuss a wide range of modern and contemporary American poets, beginning with Emily Dickinson and Walt Whitman and ending with 21st-century avant-garde poets like Tracie Morris. Questions central to this course include "How does experimental poetry help us understand the transition between modernism and postmodernism?" and "What is the relationship between experimental poetry and experimental teaching?" The poems and poets we study challenge students to read critically and think differently about what a poem is, about what art can be and about what poetry can teach us about reading, writing and learning. Students do not need to have any prior knowledge of poetry or poetics. The course operates primarily as a discussion. Rather than attending lectures, students participate in web-based discussions of the poems, accessible in text, audio and video formats. Requirements include active participation in the online discussion forums, in addition to five short papers, quizzes, creative exercises and a comprehensive final examination.
Activity: Online Course
1.0 Course Unit

CRWR 201 Poetry Workshop
Poetry Workshop is a course for students who are new to poetry or who would like to return to the fundamentals of poetry. This workshop uses frequent writing assignments, assigned readings and collaborative workshop discussions to explore various elements of poetic craft, including imagery, metaphor, line, stanza, music, rhythm, diction, and tone.
Activity: Online Course
1.0 Course Unit

CRWR 260 Fiction Workshop
Fiction Workshop is a course for students who are new to fiction writing or who are new to fiction writing or who would like to return to the fundamentals of fiction. This collaborative workshop uses frequent writing assignments, assigned readings and workshop discussions to explore various elements of the craft of fiction, including character, form, description, dialogue, setting, genre, and plot.
Activity: Online Course
1.0 Course Unit

CRWR 300 Writing About Place
This multi-genre, collaborative workshop is devoted to writing of and about place both literally writing about the city or the landscape, for example and figuratively writing that engages thematically and formally with location, with displacement and with the writing process itself as a form of mapping and belonging.
Activity: Online Course
1.0 Course Unit

CRWR 360 Advanced Nonfiction
Activity: Online Course
1.0 Course Unit

CRWR 370 Journalism
This is a how-to course for talented aspiring writers, drawn from the instructor’s three decades of experience as a full-time working journalist. Learn how to write well in the real world, how to hook the reader and sustain interest, how to mix scenes with exposition, and how to develop the journalistic skills that enable a writer to gather, sift and report information. While reading assignments include famous practitioners of nonfiction writing including Susan Orlean and Gene Weingarten, along with recent Penn alumni Matt Flegenheimer and David Murrell, the emphasis is on writing and reporting nonfiction pieces from personal memoirs to observational features and profiles of interesting people. The course is designed to inspire you to tap into your potential, gain fresh insights, and feel comfortable enough to share written assignments - both short and long pieces - with classmates over the span of the semester. The course also addresses practical and ethical journalistic issues such as selecting and handling interviewees, how to use (and not use) the internet, and when to use (or not use) anonymous sources.
Activity: Online Course
1.0 Course Unit

Criminology (CRIM)

CRIM 100 Criminology
This introductory course examines the multi-disciplinary science of law-making, law-breaking, and law-enforcing. It reviews theories and data predicting where, when, by whom and against whom crimes happen. It also addresses the prevention of different offense types by different kinds of offenders against different kinds of people. Police, courts, prisons, and other institutions are critically examined as both preventing and causing crime. This course meets the general distribution requirement.
For BA Students: Society Sector
Course usually offered in fall term
Also Offered As: SOCI 233
Activity: Lecture
1.0 Course Unit

CRIM 200 Criminal Justice
This course examines how the criminal justice system responds to crime in society. The course reviews the historical development of criminal justice agencies in the United States and Europe and the available scientific evidence on the effect these agencies have on controlling crime. The course places an emphasis on the functional creation of criminal justice agencies and the discretionary role decision makers in these agencies have in deciding how to enforce criminal laws and whom to punish. Evidence on how society measures crime and the role that major criminal justice agency plays in controlling crime is examined from the perspective of crime victims, police, prosecutors, jurors, judges, prison officials, probation officers and parole board members. Using the model of social policy evaluation, the course asks students to consider how the results of criminal justice could be more effectively delivered to reduce the social and economic costs of crime.
For BA Students: Society Sector
Course usually offered in spring term
Also Offered As: SOCI 200
Activity: Lecture
1.0 Course Unit
CRIM 240 Forensic Analysis
This course discusses the need for stronger scientific foundations in the analysis of forensic evidence from a scientific and a policy perspective. Forensic evidence, such as fingerprints, firearms, and hair, has been analyzed for hundreds of years to inform crime investigations and prosecutions. However, recent advances, especially the use of DNA technology, have revealed that a faulty forensic analyses may have contributed to wrongful convictions. These advances have demonstrated the potential danger of information and testimony derived from imperfect analysis, which can result not just in wrongful convictions but also in errors of impunity. In this course, students learn about the history of forensics, as well as about the recent advances that aim to improve current practices. It is an interdisciplinary course, but it focuses mostly on the statistical and scientific aspects of testing in forensics. Students discuss recent solutions that quantify the uncertainty, limitations, and errors associated with human factors, pattern evidence, and digital evidence. No prior statistical or forensic knowledge is expected. The course will be useful for students who wish to become forensic practitioners, law enforcement officers, lawyers, judges, researchers, or simply informed citizens.
Taught by: Cuellar
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CRIM 250 Statistics for the Social Sciences I
Statistical techniques and quantitative reasoning are essential tools for properly examining questions in the social sciences. This course introduces students to the concepts of probability, estimation, confidence intervals, and how to use the statistical concepts and methods to answer social science questions. The course will require the use of R, a free, open source statistical analysis program. This course has been approved for the quantitative data analysis requirement (QDA).
Taught by: Ridgeway
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 251 Statistics for the Social Sciences II
In this course, students learn to conduct quantitative data analyses for social sciences, with an emphasis on identifying causal relationships in data. Many social science analyses aim to answer causal questions: Do longer prison sentences reduce crime? Do tougher gun laws reduce homicides and suicides? Can summer jobs help keep youth safe? Students will learn about research designs and data analysis methods to answer these kinds of questions, and especially to learn to implement them in practice. The goal of this class is to help students conduct their own analyses, and to become critical readers of statistical analyses, both in social science publications and in public discourse. The focus will be on what to compute and how to interpret the results. The emphasis is on the intelligent use of statistics. We will be using R, an open-source programming language.
Course usually offered in spring term
Prerequisite: CRIM 250
Activity: Lecture
1.0 Course Unit

CRIM 260 Crime and Human Development
One of the central research problems in criminology is the relationship between human development and the likelihood of committing crime. This course will examine the tools for measuring the onset of crime, its persistence, intermittency, and desistence. These tools include the study of birth cohorts of everyone born in a certain time and place, life course studies of juvenile delinquents and non-delinquents, trajectory analysis of people studied from pre-school through middle age, and interviews with 70 year old former delinquents who reflect on how their life-course affected the crimes they committed. This course will also examine the research findings that have been produced using these tools. Students will be asked to consider what these findings imply for major theories of crime causation as well as policies for crime prevention.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CRIM 270 Biopsychosocial Criminology
Is there a "natural-born killer"? Why don't psychopaths have a conscience? And is it morally wrong for us to punish those who are biologically-wired for a life of crime? This interdisciplinary biosocial course argues that answers to these inscrutable questions can be found in the fledging field of "neurocriminology". This new sub-discipline brings together the social, clinical, and neurosciences to help us better understand, predict, and prevent future crime. We will explore the biosocial bases to crime and violence, analyze controversial neuroethical, legal and philosophical issues surrounding neurocriminology, and take a field trip to prison. This interdisciplinary course presents perspectives from the fields of psychology, neuroscience, criminology, sociology, law, business, public health, psychiatry, anthropology, neuroimaging, neuroendocrinology, forensics, nutrition, and pediatrics. It is suitable for those without a background in biology or criminology. It is particularly relevant for majors in Criminology, Psychology, Nursing, and Biological Basis of Behavior.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 280 Neighborhood Dynamics of Crime
Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.
Course usually offered in spring term
Also Offered As: URBS 280
Activity: Seminar
1.0 Course Unit
CRIM 290 Wrongful Convictions
This course explores wrongful convictions from an interdisciplinary perspective. Using research from the disciplines of law, criminology, psychology and sociology, this course explores how legal errors occur and how they might be prevented in the future. Connections to quality control research and practice in other industries will also be examined. No prerequisites are required.
Taught by: Loeffler
Activity: Seminar
1.0 Course Unit

CRIM 300 Law and Criminal Justice
This course explores constitutional criminal procedure or the law of the Fourth, Fifth, and Sixth Amendments to the United States Constitution. Topics include the laws and rules associated with search and seizure, arrest, interrogation, the exclusionary rule, and deprivation of counsel. Social science evidence that supports or raises questions about legal doctrine will be examined. No prerequisites are required.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CRIM 315 American Death Penalty in Theory and Practice
Over the past forty years, in response to controversy over the American death penalty, the Supreme Court has created a framework of rules designed to make the death penalty conform to current societal standards. In this course, we will identify the critical issues identified by the courts (and the critics) in light of the practical realities of capital litigation, and we will ask whether the efforts to address these issues have been successful. The class will use specific case examples to identify the critical points in a death penalty case: for example, the decision to designate a prosecution as "capital", the performance of defense counsel, the penalty decision, and the method of execution. These critical stages will provide a platform for discussing critical issues like the proper limits of discretion; bias; cruelty; and the decision to disqualify certain groups of people from capital punishment (the mentally disabled, minors). Students will be assigned readings from different kinds of sources. Cases from the Supreme Court will identify key issues and the efforts to address them under the law. More general death penalty history will provide some context. We will also read pieces by advocates (pro and con). Finally, we will focus on a few specific prosecutions and discuss how abstract theories work in a particular case.
Taught by: Dolgenos
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 402 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is organized around key questions about police shootings, victimization rates, identifying crime hotspots, calculating the cost of crime, and finding out what happens to crime when it rains. On the way to answer these questions, the course will cover topics including data sources, basic programming techniques, SQL, regular expressions, web scraping, and working with geographic data. The course will use R, an open-source, object oriented scripting language with a large set of available add-on packages.
Course usually offered in fall term
Also Offered As: CRIM 602
Activity: Lecture
1.0 Course Unit

CRIM 410 Research Seminar in Experiments in Crime and Justice
This seminar focuses on examining data from experiments in criminology including: randomized controlled trials of criminal justice policies, "natural" experiments in crime, and other quasi-experimental studies. A series of experiments conducted by Penn scholars and elsewhere will be examined. This seminar also guides criminology majors in writing a research proposal for their thesis. Students will learn about how to formulate a research question, develop a review of the literature, and how to apply necessary empirical methods. The final paper for this course will be a research proposal that can serve as the basis for the student's senior thesis and to satisfy the senior capstone requirement. Readings will come from the disciplines of criminology, sociology, psychology, economics, and urban planning.
Course usually offered in fall term
Prerequisites: Any statistics or research methods courses leading to familiarity with Excel, SPSS, R, Stata, SAS, Matlab, or NumPy.
Activity: Seminar
1.0 Course Unit

CRIM 450 Senior Research Thesis
Senior Research Thesis is for senior Criminology majors only. Students are assigned advisors with assistance from the Undergraduate Chair.
Course usually offered in spring term
Activity: Senior Thesis
1.0 Course Unit
Notes: CRIM:410

CRIM 474 Modern Regression for the Social, Behavioral and Biological Sciences
This course covers supervised learning: various forms of nonparametric regression and machine learning. It assumes at least one solid course in conventional linear regression, although that framework is discarded the first week of class. Intuitive explanations for key statistical concepts are provided with little dependence on formal mathematics. Grades are based on research reports in which modern statistical procedures are applied to real and challenging datasets. Some might call these exercises "analytics". All class demonstrations are done with the programming language R, and R is required for the research reports.
Course usually offered in spring term
Also Offered As: STAT 474, STAT 974
Activity: Lecture
1.0 Course Unit

CRIM 535 Introduction to Quantitative Methods for Policy Analysis
This course provides an introduction to applied statistical techniques in the social sciences and is tailored, in particular, to students pursuing the master of science degree in the Department of Criminology. It is taught as a basic course in statistics and presumes minimal mathematical or statistical background. We’ll begin with a brief introduction to the research process. We’ll then cover the computation, interpretation and understanding of basic descriptive statistics, distribution, hypothesis testing, measures of association and finally regression analysis. Depending on how much time we have, we will cover several more advanced topics in regression analysis at the end of the semester.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CRIM 600 Pro-Seminar in Criminology
This course provides an overview of the leading criminological theories of crime. The central focus is on the major theories of crime developed over the past century from the disciplines of economics, psychology, and sociology. The course will focus on the application of social science research as a way to evaluate theories of crime. Special attention is devoted to the issues of measurement of crime and what is known from the available empirical data. In addition, the course will focus on how these theoretical perspectives relate to public policy responses to crime.  
Course usually offered in fall term  
Activity: Seminar  
1.0 Course Unit

CRIM 601 Pro-Seminar in Criminal Justice
This course provides an overview of what we know about the criminal justice system in the United States and other developed nations. The central purpose of the course is to increase your knowledge about how the U.S. criminal justice system works but we will also spend a great deal of time thinking about the quality of the available evidence and how we know what we know. Topics covered will vary from year to year; recent topics have included police use of force, capital punishment, pre-trial detention, the use of predictive algorithms in the criminal justice system and the relationship between immigration and crime in the United States.  
Course usually offered in spring term  
Prerequisite: CRIM 600  
Activity: Seminar  
1.0 Course Unit

CRIM 602 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is organized around key questions about police shootings, victimization rates, identifying crime hotspots, calculating the cost of crime, and finding out what happens to crime when it rains. On the way to answer these questions, the course will cover topics including data sources, basic programming techniques, SQL, regular expressions, web scraping, and working with geographic data. The course will use R, an open-source, object oriented scripting language with a large set of available add-on packages.  
Course usually offered in fall term  
Also Offered As: CRIM 402  
Activity: Lecture  
1.0 Course Unit

CRIM 603 Research Methods/Crime Analysis
This course provides an overview of the application of social science research methods and data analysis to criminology. Students will learn research design principles and statistical techniques for the analysis of social science data, including how to interpret results as part of the rigorous practice of evidence-based criminology. M.S. students will conduct a semester-long, data-intensive crime analysis project using quantitative methods to address a specific research question. Student projects culminate with a poster presentation, an oral defense, and the submission of a written research paper.  
Course usually offered in spring term  
Activity: Seminar  
1.0 Course Unit

CRIM 604 Criminology in Practice
In this capstone course, students will meet weekly with guests who work on or close to the front line of the criminal justice system. Past guests have included police chiefs, forensic scientists, lobbyists for gun rights and lobbyist for gun control, formerly incarcerated individuals, crime analysts, directors of sentencing commissions, prosecutors and defenders, politicians, and researchers at research organizations working closely with criminal justice agencies. Guests share their career paths, the roles of their organizations in the justice system, and key justice system challenges. Students interact with all guest speakers.  
Two terms. student must enter first term.  
Activity: Seminar  
1.0 Course Unit

CRIM 634 Evidence-Based Crime Prevention
This course considers the use of evidence to identify effective crime prevention policies. The course will teach students to think critically about what constitutes convincing evidence, use benefit-cost analysis in comparing policy alternatives, and write effective policy memos that can translate research into practice. We will develop these skills by studying the effects of different policy approaches to crime prevention including incarceration, policing, gun control, drug regulation, and place-based interventions, as well as education, social programs, and labor market policies. Emphasis will be on the methodological challenges to identifying “what works” and the empirical methods to overcome those challenges.  
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit

CRIM 671 Violence: A Clinical Neuroscience Approach
Developed for both Psychology and Criminology graduates in particular, this interdisciplinary course outlines a clinical neuroscience approach to understanding violence in which the tools of neuroscience-nuroanatomy, neurophysiology, neurocognition, neuroendocrinology, neuropharmacology, molecular and behavioral genetics- are used to help inform the etiology and treatment of violence. Clinical components include psychopathy, proactive and reactive aggression, homicide, domestic violence, conduct disorder, oppositional defiant disorder, antisocial personality disorder, crime, and delinquency as well as their comorbid conditions (schizophrenia, drug abuse, hyperactivity). The interaction between social, psychological, and neurobiological processes in predisposing to violence will be highlighted, together with neurodevelopmental perspectives on violence focusing on prospective longitudinal and brain imaging research. Key implications for the criminal justice system, neuroethics, forensics psychology, and intervention will also be outlined.  
Course usually offered in fall term  
Also Offered As: PSYC 671  
Activity: Lecture  
1.0 Course Unit
CRIM 700 Advanced Pro-Seminar in Criminology
This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the unifying perspectives of criminology. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the causes and prevention of crime will report on their developing research ideas.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CRIM 701 Advanced Pro-Seminar in Criminal Justice
This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the behavior and operation of criminal law systems. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published and unpublished research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the behavior of criminal law will report on their developing research ideas.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CRIM 999 Independent Study and Research
Primarily for advanced students who work with individual faculty upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Both terms.

Data Analytics (DATA)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates).

DATA 101 Introduction to Data Analytics
In our digital world, data-driven decision-making is becoming more common and more expected. Effective leadership and communication, therefore, often hinges on the ability to acquire, manage, analyze, and display large, quantitative data sets. Even many entry-level jobs assume or require basic knowledge of data analytics. This course introduces students to important concepts in data analytics across a wide range of applications using the programming language R. Students complete the course with a clear understanding of how to utilize quantitative data in real-time problem identification, decision-making, and problem-solving. No prerequisites in statistics or math are required. This course will have required synchronous sessions and the instructor will offer a choice of times. Only open to Data Analytics certificate students in LPS Online Program.
Also Offered As: LEAD 305
Activity: Online Course
1.0 Course Unit

DATA 201 Introduction to Statistical Methods
Introduction to Statistical Methods exposes students to the process by which quantitative social science and data science research is conducted. The class revolves around three separate, but related tracks. Track one teaches some basic tools necessary to conduct quantitative social science research. Topics covered include descriptive statistics, sampling, probability, and statistical theory. Track two teaches students how to implement these basic tools using R. The third track teaches students the fundamentals of research design. Topics will include independent and dependent variables, generating testable hypotheses, and issues in causality. This course will have required synchronous sessions and the instructor will offer a choice of times. Only open to Data Analytics certificate students in LPS Online Program.
Prerequisites: DATA 101 is the pre-requisite for DATA 201.
Activity: Online Course
1.0 Course Unit

DATA 301 Int Data Analytics
Activity: Online Course
1.0 Course Unit

DATA 401 Adv Data Analytics

Demography (DEMG)

DEMG 535 Quantitative Methods in Sociology I
This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and, with the permission of the instructor, advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory "lab.” Taught by: Allison, Smith, Kohler
Course usually offered in fall term
Also Offered As: SOCI 535
Prerequisite: Basic algebra
Activity: Lecture
1.0 Course Unit

DEMG 536 Quantitative Methods in Sociology II
As the second part of a two-semester sequence, this graduate course focuses on regression analysis as used in social science research. In particular, we discuss features and assumptions of linear regression and logistic regression models. We learn how to apply regression models to real social science data using Stata and how to interpret the results.
Taught by: Allison, Kohler, Park, Schnittker, Smith
Course usually offered in spring term
Also Offered As: SOCI 536
Prerequisite: SOCI 535 or permission of instructor
Activity: Lecture
1.0 Course Unit

DEMG 541 Gender, the Labor Force, and Markets
Course not offered every year
Also Offered As: GSWS 532, SOCI 541
Activity: Seminar
1.0 Course Unit
DEMG 604 Methodology of Social Research
This course will give students familiarity with the common research methods social scientists use to conduct research. Ethnographic, interview, survey, experimental and historical/comparative research methods will be covered. Four themes will be explored: 1) the basics of solid research design, 2) the various advantages and disadvantages of each method, 3) when the use of a method is appropriate or inappropriate for the research question, and 4) how to evaluate researchers’ claims on the basis of the evidence they present. These themes will be explored by reading examples of and conducting exercises designed to give students hands-on experience in each of the methods. Students will conduct the exercises on a topic of their choice, which together will culminate in their final paper. The course is required and restricted to second year students in sociology and demography. Taught by: Smith, Wilde, Zuberi Course usually offered in spring term Also Offered As: SOCI 604 Activity: Lecture 1.0 Course Unit

DEMG 607 Introduction to Demography
A nontechnical introduction to fertility, mortality and migration and the interrelations of population with other social and economic factors. Course usually offered in fall term Also Offered As: SOCI 607 Activity: Lecture 1.0 Course Unit

DEMG 609 Basic Methods of Demography
The course is designed to introduce students to basic concepts of demographic measurement and modeling used to study changes in population size and composition. The course covers basic measures of mortality, fertility and migration; life table construction; multiple decrement life tables; stable populations; population projections; and age patterns of vital events. Students will learn to apply demographic methods through a series of weekly problem sets. Taught by: Elo, Guillot, Smith Course usually offered in fall term Also Offered As: SOCI 609 Activity: Lecture 1.0 Course Unit

DEMG 611 Structural Equation Model
Statistical modeling with multiple equations and latent variables. The first part of the course will focus on linear models that could be estimated with any of the well-known SEM programs (e.g., LISREL, EQS, or Amos). Both Mplus and SAS will be used exclusively in this part of the course. The second part will focus on Mplus models for variables that are categorical, count, or censored. Maximum likelihood methods for missing data will also be covered. Taught by: Allison Course not offered every year Also Offered As: SOCI 611 Activity: Lecture 1.0 Course Unit

DEMG 612 Categorical Data Analysis
This course deals with techniques for analyzing multivariate data which the dependent variable is a set of categories (a dichotomy or polytomy). Topics will include linear probability models, logit (logistic) regression models, probit models, logit analysis of contingency tables, cumulative logit and probit (for ordinal data), multinomial logit, conditional logit (discrete choice), unobserved heterogeneity, log-linear models, square tables, response-based sampling, and repeated measures. Methods will be illustrated using the Stata System. There will be several assignments using Stata to analyze data provided by the instructor. Taught by: Allison Course not offered every year Also Offered As: SOCI 612 Activity: Lecture 1.0 Course Unit

DEMG 613 Event History Analysis
An applications-oriented course on statistical methods for the analysis of longitudinal data on the occurrence of events, also known as survival analysis, failure-time analysis, hazard analysis or duration analysis. Emphasis on regression-like models in which the risk of event occurrence is a function of a set of explanatory variables. Topics include accelerated failure-time models, hazard models, censoring, Cox regression models, time-dependent covariates, competing risks, repeated events, unobserved heterogeneity, discrete-time methods. Taught by: Allison Course not offered every year Also Offered As: SOCI 613 Prerequisite: SOCI 536 or equivalent Activity: Lecture 1.0 Course Unit

DEMG 621 Health, Mortality & Population Aging
The course focuses on the description and explanation of health and mortality in human populations and their variability across several dimensions such as age, time, place, social class, race etc. The course includes general theories of health, mortality and morbidity, investigations of mortality and related processes in developing and developed countries, and discussions of future mortality trends and their implications for individual lives and the society at large. Taught by: Elo Course not offered every year Also Offered As: SOCI 621 Activity: Lecture 1.0 Course Unit

DEMG 622 Fertility
The biological, social and demographic factors explaining the levels, trends and differentials in human fertility. Data, measures, and methods used in the context of the more and the less developed countries, with an emphasis on the historical and current course of the fertility transition. Taught by: Smith, Kohler, H Course not offered every year Also Offered As: SOCI 622 Activity: Seminar 1.0 Course Unit
DEM 630 Advanced Special Topics
Topics vary from semester to semester. Course titles include: Race, Colonialism & Methods; Mistakes, Errors, Accidents & Disasters, Graduate Research Practicum, Sociology of Violence: Gangs & Organized Crime. Course not offered every year
Also Offered As: SOCI 430, SOCI 630
Activity: Seminar
1.0 Course Unit

DEM 634 Population Processes II
Population Processes II is part of a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, and migration) and recent developments in the field. PP II is divided into two parts. The first focuses on family demography and the biological, social and demographic factors explaining levels, trends, and differentials in human fertility transition with an emphasis on the historical and current course of fertility transition in developed and developing countries. The second part of the course provides a comprehensive review of theories and research on international migration. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significant attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.
Taught by: Flippen
Course not offered every year
Also Offered As: SOCI 634
Activity: Seminar
1.0 Course Unit

DEM 643 Social Stratification
This is an advanced level graduate seminar where we will review contemporary research on social stratification and mobility. We will examine empirical and theoretical studies not only in the US but also in other countries to address how the pattern of social stratification varies across societies and over time. The main topics to be discussed are social mobility, occupational attainment, educational inequality, gender and race, and family processes and stratification. We will also examine studies that address how national contexts mediate social stratification. Advanced undergraduate students will be admitted with permission.
Taught by: Jacobs, Park
Course not offered every year
Also Offered As: SOCI 643
Activity: Lecture
1.0 Course Unit

DEM 662 Panel Data Analysis
Course not offered every year
Also Offered As: SOCI 662
Activity: Lecture
1.0 Course Unit

DEM 677 International Migration
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significant attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.
Taught by: Flippen
Course not offered every year
Also Offered As: SOCI 677
Activity: Seminar
1.0 Course Unit

DEM 707 Second-Year Research Seminar I
This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master's papers and second year research papers are written. This is a required course for second year graduate students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in fall term
Also Offered As: SOCI 707
Activity: Seminar
1.0 Course Unit

DEM 708 Second-Year Research Seminar II
Demography 708 is the second part of a two-course sequence designed to introduce and familiarize second year students with current norms for academic research, presentation and publishing in the field of Demography. In DEM 708 students are expected to finalize the analyses and to complete their second year research paper. This is a required course for second year demography students. Others interested in enrolling in the course may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in spring term
Also Offered As: SOCI 708
Activity: Seminar
1.0 Course Unit
DEM 731 Advanced Demographic Methods
This course considers a variety of procedures for measuring and modeling demographic processes. We will consider both deterministic (drawn from classic demographic methods, stable population theory, and the like) and stochastic (drawn from statistics) perspectives and methods, including their integration. Prerequisites: DEM 609 and SOCI 536 (or its equivalent).
Taught by: Smith
Course not offered every year
Also Offered As: SOCI 731
Prerequisites: DEM 609 and SOCI 536 (or its equivalent)
Activity: Seminar
1.0 Course Unit

DEM 796 Demographic, Economic, and Social Interrelations
The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demography change? How does immigration to the US affect the ethnic composition of the population, the earnings of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women's participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development with low income countries? In addition to these topics, the course also covers selected methods not included in DEM 535, DEM 536 or DEM 609.
Taught by: Kohler
Course not offered every year
Also Offered As: SOCI 796
Activity: Lecture
1.0 Course Unit

DEM 999 Independent Study
Primarily for advanced students who work with individual instructors upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Dental - Community Oral Health (DCOH)

DCOH 708 Health Promotion S
Activity: Seminar
0.5 Credit Hours

DCOH 712 Community Oral Health
Activity: Clinic
0.5 Credit Hours

DCOH 785 Practice Management
Practice Management Lectures and seminars provide students with foundation knowledge regarding career planning and policies and procedures related to employment and business management in dental practice.
Activity: Lecture
0.25 Credit Hours

DCOH 808 Health Promotion
Health Promotion Clinical experiences provide students with the opportunity to apply knowledge and develop competencies related to oral health promotion and disease prevention activities with individual patients in the clinics at Penn Dental Medicine.
Activity: Clinic
1.0 Credit Hour

DCOH 812 Community Oral Health
Community Oral Health Experiences in alternate oral health care delivery settings provide students with the opportunity to develop and expand their skills in providing comprehensive oral health care in community based settings under the direct supervision of faculty members. Students are scheduled in the mobile dental vehicle, PennSmiles, and are also scheduled at Community Volunteers in medicine, a community based medical and dental treatment facility in West Chester, PA. Students attend small group seminars to discuss their experiences and theoretical underpinnings of community oral health activities.
Activity: Clinic
1.25 Credit Hour

Dental - Dental Medicine (DENT)

DENT 245 Breakdown Barriers Club
Activity: Seminar
1.0 Credit Hour

DENT 260 Form Inclusive Practice
Activity: Lecture
0.5 Credit Hours

DENT 500 Foundation Sciences I
Foundation Sciences I is aimed at providing students with a thorough understanding of the basic principles of molecular biology and general biochemistry; the biochemical concepts underlying healthy metabolism, nutrition and selected disease states and comprehension at an advanced level of selected topics in cell biology.
Activity: Lecture
4.25 Credit Hours

DENT 502 Foundation Sciences II
The course is structured to provide basic information about the evolutionary relationship, structure, physiology and molecular biology of the prokaryotic cells and viruses, and the basic mechanisms of immunology in relation to oral health. Emphasis will also be placed on how oral microorganisms participate in plaque/biofilm formation, caries and periodontal disease. Primary objectives related to the clinical setting include an understanding of the basis of the selective inhibition of antibiotics and the development of resistance, understanding the basis of seriological tests and immunization and interpretation of radiographic evidence for caries and periodontal disease.
Activity: Lecture
4.75 Credit Hours
DENT 504 Foundation Sciences III
Foundation Sciences III is the first course in the curriculum that focuses on the underlying cellular and molecular basis of disease and is a critical component of a larger subject commonly known as Pathology. In its simplest terms, Pathology is the study of the structural, biochemical and functional abnormalities that develop within cells, tissues and organs resulting in disease. The disease process forms the core of pathology and includes: etiology, pathogenesis, lesions and clinical manifestations. Traditionally, Pathology is divided into general and systemic pathology. FSIII is the first of two courses (the other being FSIV) that collectively comprise the topic of general pathology. Specifically, FSIII will focus on: (1) the reactions of cells and tissues to abnormal stimuli leading to either adaption or cell injury and (2) pathogenic mechanisms responsible for disease development.
Activity: Lecture
3.5 Credit Hours

DENT 506 Foundation Sciences IV
This series of lectures will present relevant and important diseases and their treatments. We will explore the mechanisms used by bacteria to infect cells and present two major classes of bacteria, the Streptococcus and Staphylococcus. We will introduce odontogenic infections important to the oral cavity. Gastrointestinal infections, sexually transmitted diseases, tuberculosis and bacterial endocarditis will also be presented. There will be an introduction to antibiotics. This will be followed by a set of lectures on viruses with oral manifestations. These will include herpes, hepatitis, influenza, rhino, coxsackie, measles, mumps, rubella viruses and treatments using antiviral drugs. Highlighted will be HIV and opportunistic infections of AIDS. Next, fungal infections and treatments will be presented. Finally, infection control in dentistry will be featured.
Activity: Lecture
3.5 Credit Hours

DENT 510 Biological Systems I
Biological Systems I is a multi-disciplinary, module-based course. Module I will provide the student with a basic understanding of the molecular, tissue patterning and functional mechanisms that give rise to the human form. Clinical aberrations, including craniofacial dysmorphisms will be presented to illustrate what happens when normal developmental mechanisms are disrupted. Module 2 will provide the student with a thorough understanding of the development, biology, morphology and function of mucosal epithelium, connective tissue, skin and salivary glands. Module 3 combines perspectives from neurocystology, neurophysiology and pharmacology to help students develop a preclinical understanding of neuronal conduction and coordination as applied to the function and pharmacology of the somatic and autonomic nervous systems. Clinical correlations will be used where appropriate.
Activity: Lecture
4.25 Credit Hours

DENT 512 Biological Systems II
Presented in lectures and seminars, Module 1, will present information on the history of Radiology, in particular Dental Radiology and its implications for diagnosis and patient care. Module 2 will present a detailed survey of osteology of the skull, cervical spine and laryngeal skeleton in a series of interactive lectures and small-group conferences. Appreciation of the three-dimensional anatomy of the cranium, temporomandibular joint and the orofacial skeletal complex will be reinforced with integrative presentations of radiographic anatomy to introduce some clinical correlations. Module 3 will present a basic knowledge of bone based on developmental, anatomical, histological, radiological, molecular and functional perspectives. Teach the fundamental principles of cell-cell interactions, extracellular matrix deposition and mineralization related to bone homeostasis, remodeling and healing. Concepts will be emphasized with radiological presentation of bone diseases using different imaging modalities.
Activity: Lecture
4.0 Credit Hours

DENT 514 Biological Systems III
Biological Systems III combines the study of the general principles of anatomy/physiology of the human vascular, muscular and neuroanatomic systems with an emphasis on the orofacial complex. The goals of the course are to provide students with a sound knowledge of normal biology and organization of those organ systems and to examine and discuss examples of pathophysiological conditions. Students should subsequently be able to recognize the anatomical structures, identify tissue types, and explain the principal physiological functions of the vasculature, muscle and cranial nerves. The third module also includes clinical assessment of cranial nerve function.
Activity: Lecture
4.0 Credit Hours

DENT 516 Biological Systems IV
Cadaveric Anatomy of the Head and Neck is designed to facilitate integration of the gross anatomy learned systemically in the Biological Science track through the meticulous regional dissection of a human cadaver. In addition to enabling visualization of both anatomical structures and their clinically significant relationships in a three-dimensional context, the course provides initiation into the tactile manipulation of the human body.
Activity: Lecture
4.0 Credit Hours

DENT 530 Advanced Simulation
The objective of the Freshman Advanced Simulation Laboratory course is to introduce and develop specific psychomotor and cognitive skills through the use of virtual reality based training that will enhance and augment future skills acquired in the preclinical General Restorative Dentistry, Operative Dentistry course. Technical skills are developed through learning preparations with a high speed handpiece, and dental hand instruments in a virtual reality, advanced simulation environment. Suitable operative skills, knowledge, and ergonomics will be emphasized for the successful transition into the preclinical operative course. Dental terminology and principles of tooth preparation will be applied to the theory of all the basic preparations. Suitable operative skills, knowledge, and ergonomics will be emphasized for the successful transition into the preclinical operative course.
Activity: Laboratory
0.5 Credit Hours
DENT 532 Dental Devel. & Anatomy
The Freshman Dental Development and Anatomy provides foundational knowledge regarding Tooth development, Primary dentition, Permanent dentition, Tooth numbering systems, Tooth classification (Incisors, Canines, Premolars, Molars), Set Traits (traits between Primary and Permanent dentition), Class traits (traits for each kind of tooth), Arch traits (traits of maxillary vs. mandibular), and Type traits (differences between teeth within the Class). Dental morphology relative to Operative dentistry procedures will be discussed. This knowledge will be called upon throughout all four years of the dental curriculum.
Activity: Lecture
2.5 Credit Hours

DENT 534 Intro. To Occlusion
The objective of the Freshmen Dental Occlusion course is to provide foundational knowledge regarding human occlusion and the temporomandibular joint. Dental occlusion relative to Operative dentistry procedures will be discussed. This knowledge will be called upon throughout all four years of the dental curriculum. This course includes lectures and laboratory sessions where waxing of teeth using only concepts related to dental occlusion, selective grinding to achieve an ideal occlusal relationship, alginate impressions and diagnostic model making, facebow transfer, and diagnostic model mounting procedures will be completed to reinforce didactic materials presented.
Activity: Lecture
1.5 Credit Hours

DENT 536 Operative Dent. Lecture
The objective of the Freshmen Operative Dentistry lecture course is to give foundation knowledge of operative instrumentation, operative dentistry, terminology, principles of cavity preparations, and the basics of single tooth restorations.
Activity: Lecture
1.5 Credit Hours

DENT 538 Operative Dent. Lab
The objective of the Freshmen Operative Dentistry Laboratory course is to develop an understanding of the normal, healthy stomatognathic system and to introduce fundamental didactic and psychomotor skills, relative to operative dentistry procedures. The course includes a review of individual tooth anatomy and the study of occlusion to define what is normal and healthy. The study of cariology and the treatment of the pathologic progress continues afterward. Restoration of form and function with basic intracoronal amalgam and composite procedures then follows. More complex intracoronal procedures such as gold inlay and porcelain onlay preparations and restorations are then taught. Throughout the entire course, the study of occlusion as it applies to restorative dentistry procedures is continued.
Activity: Laboratory
3.25 Credit Hours

DENT 539 Dental Materials
The course is divided into two segments. The first segment teaches the principles of materials science. The second segment is designed to present topics in applied dental materials as students use these materials in General Restorative Dentistry (GRD). After successful completion, the student should understand how the basic principles aid in material selection, risk/benefit assessment, restoration design, patient information and evaluation of new materials and manufacturer’s claims.
Activity: Lecture
1.25 Credit Hour

DENT 540 Periodontics I
This course is presented in two parts. The first part presents basic biology concepts applied to the healthy and diseased periodontium. Macroscopic and microscopic changes of the periodontium will be featured and how these are altered by disease. In addition the biological basis for etiology, pathogenesis and epidemiology of periodontal disease is presented. The second part consists of presenting the basic clinic procedures for diagnosis and non-surgical treatment of periodontal diseases through lectures, preclinical labs and clinical rotations. Part 2: consists of lectures, pre-clinical labs and clinical rotations. Those will be dedicated to presenting diagnostic and non-surgical aspects of periodontal therapy.
Activity: Lecture
1.75 Credit Hour

DENT 550 Behav Sci I-Health Promo
Lectures, seminars, clinical sessions and community field experiences are provided so that students gain the necessary knowledge and skills in oral health promotion and disease prevention activities related to caries, periodontal diseases and oral cancer. Focus is placed on assessment, planning, implementation and evaluation of strategies designed to target the individual patient, the community and a population perspective. Course topics include discussion of the philosophy, modalities, rationale and evaluation of health promotion and disease preventive activities related to caries, periodontal diseases and oral cancer. Focus is placed on assessment, planning, implementation and evaluation of strategies designed to target the individual patient, the community and a population perspective. Course includes an introduction to evidence based care and research principles in application to critique of current dental literature.
Activity: Lecture
2.0 Credit Hours

DENT 552 Ethics I
The objective of the PEDM courses (1st, 2nd and 3rd year courses) is to impart a general knowledge of fundamental concepts in principles of professionalism and ethical decision making with emphasis on care-based discussions. The courses utilize lectures, seminars, online discussions, and reflection papers to address issues related to doctor-patient relationships, academic integrity as well as professional communication. These Pass/Fail courses provide a forum for discussing, debating and understanding parameters of professional and ethical behavior, and their impact on the patients, colleagues, the public, and the profession. PEDM I focuses on academic integrity, micro-aggressions and how professional and ethical behavior during pre-clinical years translates into ethical clinical practice.
Activity: Lecture
0.5 Credit Hours
DENT 560 Intro To the Patient
This course will provide foundational knowledge about the doctor patient relationship, present medical history skills and cover the basics of a dental orofacial physical exam. The first part of the course includes lectures outlining the doctor patient relationship, components and applications of the medical history. The second part includes lectures outlining the components and application of the physical exam, including vital signs, cranial nerve exam, head and neck examination, and examination of the heart and lungs. The third and final part of the course includes two practical workshops in small groups where students are required to practice taking medical histories and performing various components of the physical examination. The second rotation occurs in the Oral Diagnosis clinic where students take a medical history and perform a physical examination on a PDM admissions patient.
Activity: Lecture
5.0 Credit Hours

DENT 562 Clinical Pract II - Dau
This course is designed to teach the first-year student a four-handed dental assisting technique which is used to assist third and fourth year students in clinical practice. In addition, skills such as patient communication, team building, and record keeping are taught. Students gain clinical experience and assist in the same procedures that they are encountering in GRD, thus forming a clinical bridge to pre-clinical learning. Lectures, a written exercise, a lab, clinical rotations and completion of a clinical exam make up the didactic portions of the course.
Activity: Clinic
3.75 Credit Hours

DENT 564 Intro To Clinical Dent I
This course provides first-year dental students with a variety of different clinical experiences. The student spends day-long rotations in various predoctoral and specialty PDM clinics. In addition, students gain a unique perspective in practice management by assisting PDM staff with dispensing clinical supplies and in Instrument Management Services.
Activity: Lecture
0.25 Credit Hours

DENT 606 Neuro,Neuroparm,Beh Mg
Activity: Lecture
2.75 Credit Hours

DENT 610 Biological Systems V
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human cardiovascular, pulmonary and renal systems, with an extensive study of the pathology and therapeutics of these systems, with an explicit emphasis on their relationship to dental practice. This course is presented in three modules. We have assembled a diverse and experienced group of lecturers, including experts in oral medicine, oral surgery, anatomy, physiology, pharmacology and pulmonary and renal medicine.
Activity: Lecture
5.75 Credit Hours

DENT 612 Biological Systems Vi
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human gastrointestinal, hepatobiliary, and endocrine systems, with an extensive study of the pathology and therapeutics of these systems, with an explicit emphasis on their relationship to dental practice.
Activity: Lecture
4.0 Credit Hours

DENT 614 Biological Systems VII
Cadaveric Anatomy is designed to facilitate integration of the gross anatomy learned systematically in the Biological Systems curriculum stream through the meticulous regional dissection of a human cadaver. In addition to enabling visualization of both anatomical structures and their clinically significant relationships in a three-dimensional context, the course provides initiative into the tactile manipulation of the human body.
Activity: Laboratory
1.25 Credit Hour

DENT 616 Biological Systems VIII
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human hematopoietic and lymphoid system and neurologic systems with an extensive study of the pathology and therapeutics of these systems, and with an explicit emphasis on their relationship to dental practice.
Activity: Lecture
2.0 Credit Hours

DENT 620 Oral & Maxil Complex I
This is a course that will apply what students have already learned in Foundation Sciences and Biologic Systems courses to the study, interpretation and diagnosis of oral disease. It is an essential link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, genetic disease, neoplasia, immunopathology) and the disease processes that students will encounter during their careers in dentistry. The emphasis will be on oral soft and hard tissue pathology, including oral manifestations of systemic diseases that may impact on the health of the patients.
Activity: Lecture
3.0 Credit Hours

DENT 622 Oral & Maxil Complex II
This course will develop a general knowledge of fundamental concepts in orofacial function and occlusion. The course is presented in two modules, with an exam at the end of each module. The orofacial function module will focus on physiology anatomy and function of the facial structures, including saliva, mastication, speech, swallow, smell and taste. The goal is for the students to have a basic understanding of orofacial function. The occlusion module will discuss the role of occlusion in restorative dentistry with emphasis on the clinical application of fundamental biomechanical principles, techniques and instruments. By focusing on diagnosis, the student will be able to understand and develop the parameters to create successful restorative decisions and well-sequence treatment plans. This module will provide a mandatory hands-on session for feedback transfer, unerocclusal record and articulator set-up.
Activity: Lecture
1.75 Credit Hour

DENT 624 Oral & Maxil Complex III
This course is designed to give the student exposure to all methods of anesthesia and pain control used in dentistry, as well as, various medical emergencies encountered in practice. In addition, the students will learn about the mechanisms and consequences of orofacial pain. All lectures will be presented by faculty members from the departments of Oral and Maxillofacial Surgery & Pharmacology and Oral Medicine.
Activity: Lecture
3.75 Credit Hours
DENT 630 Fixed Prosthodontics Lec
The curriculum of the Fixed Prosthodontics Lecture Course deals with the building of knowledge, thought processes and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable prostheses. Students will learn diagnosis, treatment planning, rehabilitation and maintenance of oral function, comfort, appearance and health of patients with clinical conditions associated with missing or deficient teeth using biocompatible substitutes. These restorations must provide an improved state of oral health, function and esthetics for patients.
Activity: Lecture
3.0 Credit Hours

DENT 631 Fixed Prosthodontics Lab
The curriculum of Fixed Prosthodontics Laboratory deals with the building of knowledge, thought processes, skills and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable prostheses. Student will gain hands-on experience in the clinical and technical aspects of fixed prosthodontics.
Activity: Laboratory
3.75 Credit Hours

DENT 632 Complete Rem Dent Pros L
The goal of this course is to provide students with the foundation of knowledge needed to diagnose and treat edentulous patients. Students should be able to: 1. Recognize and define complete denture terminology deemed relevant in the classroom, course syllabus, and assigned readings. 2. Describe medical, emotional, and oral anatomic factors that aid in formulation of diagnostic considerations in the complete denture therapy. 3. Describe functional anatomy of the edentulous mouth. 4. Understand the clinical procedures performed during the construction of conventional complete dentures and during the maintenance phase of treatment. 5. List the fundamental clinical procedures performed during the construction of immediate complete dentures. 6. Understand the complete denture occlusion. Upon completion of this course, the students should have an in-depth understanding of: 1. The need for therapy in and restoration of the edentulous arch with complete prostheses. 2. The significance of avoiding the edentulous condition in a patient wherever possible. 3. The dental materials that are used at the different stages of complete dentures therapy. 4. The concept and techniques of the clinical steps involved in the treatment of the edentulous patient.
Activity: Lecture
2.25 Credit Hours

DENT 633 Complete Rem Dent Pros B
The goal of this second-year course is to provide the dental students with the technical knowledge and skills needed to perform all the laboratory procedures used in the construction of complete dentures and apply the foundation knowledge learned in the lectures. Students should be knowledgeable and skilled in the following: 1. Describing and performing selected sequential clinical and laboratory procedures required during the construction of complete dentures. 2. Applying the knowledge related to dental materials learned in the lectures. Upon completion of this course, the students should be able to: 1. Perform all the laboratory procedures used in construction of complete dentures. 2. Demonstrate the function and the usage of Hanau face bow and articulator in the construction of complete dentures. 3. Communicate with the laboratory technicians via properly written work authorizations.
Activity: Laboratory
2.75 Credit Hours

DENT 634 Partial Rem Dent Pros Lb
A combination of lectures, seminars and laboratory exercises provide the dental student with a fundamental understanding of the partially edentulous condition. Topics covered include classification, diagnosis, treatment planning and treatment of partially edentulous patients with RPDs. This course is designed to provide students with the terminology, concepts and principles necessary for case selection, design, construction of, and patient therapy with conventional RPDs. Upon completion of this course students will have the necessary didactic knowledge to successfully understand and treat removable partial denture cases in conjunction with the clinical faculty during their third and fourth years.
Activity: Lecture
1.75 Credit Hour

DENT 640 Periodontics II Lec/Lab
This course will be focused on non-surgical periodontal therapy. The macroscopic and microscopic effects of this modality of treatment will be discussed. Different forms of periodontal diseases and non-surgical therapeutic tools will also be presented as well as information on the prognosis of the periodontal therapy and the relevance of maintenance.
Activity: Lecture
2.5 Credit Hours

DENT 650 Local, Public Hlth, Ethic
Lectures, seminars and community experiences provide students with foundation knowledge in general principles of public health and community health, with specific application to the following dental public health concepts: access to care, cost, quality of care and international health. Students complete community experiences that provide foundation experiences in developing and implementing community oral health promotion activities.
Activity: Lecture
1.75 Credit Hour

DENT 652 Ethics II
PEDM II focuses on preparing students to enter the clinical practice of dentistry; building relationships with patients, colleagues, and faculty; and developing a moral framework for clinical decision making.
Activity: Lecture
0.5 Credit Hours

DENT 654 Behavioral Management
This course provides students with the knowledge and skills to communicate with and manage appropriately a diverse group of clinical patients. Eight hours of small group activity, including experiences with standardized patients, as well as twelve hours of large group activities provide the foundational knowledge and skills in patient management with diverse and challenging patients. Motivational interviewing is presented and discussed as a strategy for communication and management with patients.
Activity: Lecture
1.0 Credit Hour
DENT 662 Clinical Prac III-Dau
Dental Auxiliary Utilization for the sophomore class builds on the dental assisting skills the student has mastered in DAU 562. In 662, the student moves on from assisting to Expanded Functions Dental Auxiliary skills that have been taught in the General Restorative Dentistry course. Goals of the course include the goals of DRAUT 562, as well as the development of skills to restore prepared teeth, cement and fabricate temporary crowns, and obtaining, clinical patient records of third and fourth-year student patients. Emphasis is increased on the student's independent completion of patient-centered tasks and preparation for becoming primary providers in the third year.
Activity: Clinic
3.25 Credit Hours

DENT 664 Intro To Clin Dent II
This course is offered by the Department of Preventive and Restorative Sciences at the University of Pennsylvania School of Dental Medicine. It is intended to integrate topics from General Restorative Dentistry courses and DAU courses at the PDM with clinical expectations and procedures of PDM clinics.
Activity: Lecture
2.25 Credit Hours

DENT 670 Endodontics Lecture
The Department of Endodontics trains pre-doctoral students to become competent in basic endodontic procedures. This includes instruction in the foundational core of Endodontics, including pulp biology, primary non-surgical root canal treatment. Clinical Endodontics: The Department of Endodontics furthermore trains pre-doctoral students to understand advanced endodontic procedures. This includes instruction in trauma, resorption, retreatment, endodontic surgery, bleaching, etc. Our ultimate goal is to implement that treatment/education in a caring, respectful, and responsible manner.
Activity: Lecture
3.75 Credit Hours

DENT 672 Endodontics Lab
The pre-clinical endodontic laboratory course is designed to introduce endodontic concepts and techniques to a student under simulated conditions using extracted teeth.
Activity: Laboratory
1.5 Credit Hour

DENT 680 Orthodontics
The purpose of this course is to provide students with the knowledge of growth and development, concentrating on child somatic, craniofacial, and dental growth and development. The students build a solid foundation along the lines of diagnosing problems and understanding the etiology of malocclusion and space maintenance.
Activity: Lecture
2.25 Credit Hours

DENT 682 Adjunctive Ortho Lec/Lab
This course is designed to expose the student to basic orthodontic laboratory and clinical procedures and encourages the development of technical abilities in banding, bonding, wire bending, and removable appliance fabrication.
Activity: Lecture
1.25 Credit Hour

DENT 699 Selectives II
Activity: Lecture
1.0 Credit Hour

DENT 752 Ethics III
PEDM III focuses on responsibility transitioning into the post-graduation world of dentistry and covers a variety of topics such as licensure, residency applications, completing graduation requirements, as well as mentorship and real-world clinical practice dilemmas.
Activity: Seminar
0.25 Credit Hours

DENT 790 Multidisciplinary Seminar
The main objective of this year-long seminar-based course is to ensure that students develop the ability to understand biomedical, behavioral and dental sciences and apply such information in a problem-solving context for the comprehensive treatment planning and management of their patients.
Activity: Seminar
1.25 Credit Hour

DENT 799 Selectives III
Activity: Lecture
2.0 Credit Hours

DENT 996 Intro To Statistics
Activity: Lecture
1.0 Credit Hour

DENT 997 Systematic Reviews
Activity: Lecture
1.0 Credit Hour

Dental - Endodontics (DEND)

DEND 756 Endodontics Clinic
Activity: Clinic
2.75 Credit Hours

DEND 856 The Endodontic Clinic
The Endodontic Clinic trains predoctoral students to become competent in basic endodontic procedures on vital and non-vital teeth. This includes instruction in diagnosis, treatment planning, treatment/obturation, post-endodontic restoration and related entities (bleaching of non-vital teeth, treatment of traumatic injuries, etc.). This instruction is expanded and reinforced in the fourth-year clinic.
Activity: Clinic
2.0 Credit Hours

Dental - Graduate Core Curriculum (DADE)

DADE 910 Clinical Microbiology
The purpose of Microbiology is to provide modern information in five broad categories: 1. Molecular biology of prokaryotic cells as it relates to oral health. 2. Basic principles of immunology as they relate to infection and immunity. 3. Infectious diseases caused by microbial agents. 4. Relationship of microbes to oral health and how microbes cause caries and periodontal disease. 5. Basic aspects of viral infections and how they related to oral health (herpes, hepatitis B and HIV)
Course usually offered in fall term
Activity: Lecture
0.5 Credit Hour
DADE 911 Ethics
The program includes the core basic science courses, designed to encompass the the various disciplines basic to advanced studies in the science and practice of dentistry. They are designed to expose students to modern concepts in the areas covered with the objective of updating and expanding upon their predoctoral knowledge of oral biology. The courses are designed to meet the requirements of the different specialty organizations. All programs are presented on an academic term basis. Course usually offered in fall term
Activity: Lecture
0.25 Credit Hours

DADE 912 Genetics, Embryology
The treatment of patients with cleft lip/palate and other types of craniofacial anomalies in the United States has improved dramatically, many children still receive care that is substantially inferior to what can or should be provided. Inadequate care results from diagnostic errors, failure to recognize and treat the full spectrum of health problems associated with these anomalies, unnecessary and poorly timed treatment, and inappropriate or poorly performed procedures. This course will inform of these persistent problems. Embryology lecture is an overview of the field from its 19th Century with Hegel and "Ontogeny recapitulates Phylogeny" to the 21st century research on "Evo-Devo" and the HOX development genes and their relations to the contemporary understanding of embryological development including stem cells. Course usually offered in fall term
Activity: Lecture
0.01 Credit Hours

DADE 913 Genetics, Biochemistry
This course is intended to supplement the basic science course by radiographically showing dissimilar pathoses that appear similar on x-rays. Course usually offered in fall term
Activity: Lecture
0.25 Credit Hours

DADE 914 Maxillofacial Radiology
This course is intended to supplement the basic science course by radiographically showing dissimilar pathoses that appear similar on x-rays. Course usually offered in fall term
Activity: Lecture
0.25 Credit Hours

DADE 915 Nitrous Oxide Analgesia
This course is designed to provide didactic and clinical instruction in nitrous oxide/oxygen analgesia in accordance with American Dental Association Guidelines. Upon completion of this course, the participant will be eligible for an Anesthesia Restricted Permit II from the Pennsylvania State Board of Dentistry. Participants will have the opportunity to administer (to each other and patients) and undergo nitrous oxide sedation under close supervision. The course is geared to general dentists and dental specialists.
Activity: Lecture
0.8 Credit Hours

DADE 916 Practice Management
Practice Management Lectures and clinical experiences provide students with foundation knowledge regarding the policies and procedure governing practice.
Activity: Lecture
0.25 Credit Hours

DADE 917 Pathology
Pathology is a course that will apply what students have already learned to the study of disease. It is an essential link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, neoplasia, and immunopathology) and the disease processes that students will encounter during their careers in dentistry. While the emphasis will be on oral pathology, one must also be familiar with systemic diseases that may impact on the health of the patients.
Activity: Lecture
0.25 Credit Hours

DADE 918 Pulp/Dentin Biology
Biology of Pulp/Dentin Complex Microcirculation COURSE GOALS/ OBJECTIVES: 1. To give the student an understanding of the normal and abnormal biology of the dentin pulp complex. 2. To provide the student with fundamental information on clinically related subjects such as pain control and pulp capping procedures. 3. To provide the student with a general knowledge of the literature related to pulp biology. 4. To review the various physiological methods of investigating pulpal tissue.
Activity: Lecture
0.25 Credit Hours

DADE 919 Head and Neck Anatomy
The purpose of this lecture series is to review the principal anatomy comprising the stomatognathic system. The lectures build on the knowledge of head and neck anatomy acquired in dental school and integrate clinical relevance to this important subject. Slide presentations are employed to teach the anatomical structures of the major head and neck morphologic systems.
Activity: Lecture
0.75 Credit Hours

DADE 920 Advance Library
Activity: Lecture
0.25 Credit Hours

DADE 921 Cultural Competency
Participants in this workshop will assess their beliefs and awareness around cross cultural communication and diversity and inclusiveness. Through lecture, group participation, skill practice, role-play, case studies, and coaching they learn to advance their skill levels and take communication to the next level. Participants will also be recorded at the opening and conclusion of the to assess skill development.
Activity: Lecture
0.25 Credit Hours

DADE 922 Pharmacology
Pharmacology is both a basic science and a clinical science. It builds on the foundation of anatomy, biochemistry, physiology, and pathology and bridges the gap into clinical dentistry. This course in basic pharmacology will give the students a better understanding of drugs, interpreting complicated drug/medical histories, and understanding drug reactions.
Activity: Lecture
0.5 Credit Hours
DADE 923 Osteoimmunology
This is a web based course with face to face review sessions prior to in class testing over course material. The material for the course will be presented to students via the online interface. This course covers topics from the text book "osteoimmunology" and from supplemental material provided on Canvas. The course directors will be available by phone, appointment or email for a one hour period each week to address questions. In addition, 90 minute review sessions will be held prior to each exam.
Activity: Lecture
2.0 Credit Hours

DADE 924 Oral Medicine
There are numerous conditions that affect the oral and maxillofacial region, including oral mucosal diseases, temporomandibular joint disorders, orofacial pain syndromes and salivary gland dysfunction. Patients presenting with these disorders can be challenging to diagnose and manage. Several techniques are available for evaluation of these conditions and will guide the clinician toward proper diagnosis. Management protocols vary based upon the specific affecting the oral and maxillofacial region. This course will highlight the etiology, clinical presentation, diagnostic techniques, and management protocols of several conditions, including oral mucosal diseases, temporomandibular joint disorders, orofacial pain syndromes, and salivary gland disorders.
Activity: Lecture
0.25 Credit Hours

DADE 925 Nutrition & Oral Health
Activity: Lecture
0.25 Credit Hours

DADE 926 Wound Healing
The course includes information given by experts in the basic and/or clinical sciences. The first seven lectures cover the basic biologic aspects of wound healing. These are followed by a series of five lectures discussing wound healing in a more clinical context covering the topics of fracture repair, osseointegration, orthodontics, endodontics and periodontics.
Activity: Lecture
2.0 Credit Hours

DADE 927 Grand Rounds
This course will be in the form of a monthly Penn conference for all the residents of graduate specialty programs in PDM. Each conference will include residents' presentations of patients' treatment with complex dental needs that require multi-disciplinary approach and then open discussion with all involved specialties as panel. This conference is designed to provide residents with an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis.
Activity: Lecture
0.5 Credit Hours

DADE 928 Biostatistics
This course will provide a summary of the main statistical concepts needed to make decisions based on data. Some of the material that will be covered includes: data displays, summary statistics, probability distributions and expectation, statistical inference procedures for univariate and bivariate data, linear regression models, and analysis of variance. You will learn how to test a hypothesis, which includes phrasing a hypothesis, making a rationale choice of experimental design, choosing the statistics best suited to test the hypothesis, and assessing the results with standard errors, confidence intervals, and p-values.
Activity: Lecture
1.0 Credit Hour

DADE 929 Pulp/Dentin Biology
Activity: Lecture
0.25 Credit Hours

DADE 930 Maxillofacial Trauma
Activity: Seminar
0.25 Credit Hours

DADE 931 Core Curriculum I
Activity: Lecture
5.5 Credit Hours

DADE 932 Core Curriculum II
Activity: Lecture
5.5 Credit Hours

DADE 990 Dscd Research Seminar
Activity: Seminar
1.0 Course Unit

DADE 991 Guest Lecture Series
Activity: Lecture
1.0 Course Unit

DADE 996 Biostatics
Activity: Lecture
1.0 Course Unit

DADE 997 Systematic Review
Activity: Lecture
1.0 Course Unit

Dental - Graduate Endodontics (GEND)

GEND 926 Surgical Endo I
Activity: Lecture
1.5 Credit Hour

GEND 927 Surgical Endo II
Activity: Lecture
1.5 Credit Hour

GEND 928 Guest Lect Series I
Activity: Lecture
2.5 Credit Hours

GEND 929 Guest Lec Series II
Activity: Lecture
2.5 Credit Hours

Dental - Graduate Oral Medicine (GOMD)

GOMD 963 Omfs H & P Exam
This course is designed to cover topics relevant for residents involved in the on-call service, including maxillofacial infections, trauma, and advanced head and neck anatomy.
Activity: Lecture
0.8 Credit Hours

GOMD 964 S. Gary Cohen Conference
This course will allow academic discussion of disease, disease processes and therapeutic management of a wide range of topics related to oral medicine.
Activity: Seminar
1.5 Credit Hour
GOMD 965 V.J. Brightman Conference
This conference provides residents with didactic training in the fundamentals of oral medicine.
Activity: Seminar
0.75 Credit Hours

GOMD 966 Oral & Maxillofacial Path
This course introduces residents to the techniques and principles needed for the histopathologic evaluation of tissue specimens from the oral cavity / perioral region.
Activity: Lecture
0.75 Credit Hours

GOMD 967 Oral Medicine Clinics I
Residents will participate in the clinical care of oral medicine patients with direct supervision by department faculty in a variety of different locations within UPHS and Penn Dental Medicine.
Activity: Clinic
18.75 Credit Hours

GOMD 968 Off-Service Clinical Rot
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
Activity: Recitation
1.0 Credit Hour

GOMD 969 S. Gary Cohen Conf. II
This course will allow academic discussion of disease, disease processes and therapeutic management of a wide range of topics related to oral medicine.
Activity: Seminar
1.5 Credit Hour

GOMD 970 V.J. Brightman Conf. II
This conference provides residents with didactic training in the fundamentals of oral medicine.
Activity: Seminar
0.75 Credit Hours

GOMD 971 Oral Medicine Clinics II
Residents will participate in the clinical care of oral medicine patients with direct supervision by department faculty in a variety of different locations within UPHS and Penn Dental Medicine.
Activity: Clinic
18.75 Credit Hours

GOMD 972 Off-Service Clin Rot II
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
Activity: Recitation
2.75 Credit Hours

GOMD 973 S. Gary Cohen Conf. III
This course will allow academic discussion of disease, disease processes and therapeutic management of a wide range of topics related to oral medicine.
Activity: Seminar
1.5 Credit Hour

GOMD 974 V.J. Brightman Conf. III
This conference provides residents with didactic training in the fundamentals of oral medicine.
Activity: Seminar
1.0 Credit Hour

GOMD 975 Omfs Path II
This course introduces residents to the techniques and principles needed for the histopathologic evaluation of tissue specimens from the oral cavity / perioral region.
Activity: Seminar
0.75 Credit Hours

GOMD 976 Oral Medicine Clin III
Residents will participate in the clinical care of oral medicine patients with direct supervision by department faculty in a variety of different locations within UPHS and Penn Dental Medicine.
Activity: Clinic
17.0 Credit Hours

GOMD 977 Off-Service Clin Rot III
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
Activity: Recitation
1.0 Credit Hour

GOMD 978 S. Gary Cohen Conf. IV
This course will allow academic discussion of disease, disease processes and therapeutic management of a wide range of topics related to oral medicine.
Activity: Seminar
1.5 Credit Hour

GOMD 979 V.J. Brightman Conf. IV
This conference provides residents with didactic training in the fundamentals of oral medicine.
Activity: Seminar
0.75 Credit Hours

GOMD 980 Oral Medicine Clin IV
Residents will participate in the clinical care of oral medicine patients with direct supervision by department faculty in a variety of different locations within UPHS and Penn Dental Medicine.
Activity: Clinic
17.0 Credit Hours

GOMD 981 Off-Service Clin Rot IV
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
Activity: Recitation
1.0 Credit Hour

Dental - Graduate Orthodontics (GORT)

GORT 901 Orientation
Activity: Seminar
0.75 Credit Hours

GORT 902 Research Sem I
Activity: Seminar
0.5 Credit Hours

GORT 903 Adult Orthodontics I
Activity: Seminar
0.25 Credit Hours

GORT 904 Growth & Devel I
Activity: Seminar
1.0 Credit Hour

Dental - Graduate Pediatrics (GPED)

**GPED 901 Intro To Ped Dent**
A comprehensive course to provide an overview of main topics in Pediatric Dentistry including diagnosis, rationale for treatment and description of basic treatment and description of basic treatment techniques.
Activity: Lecture
1.5 Credit Hour

**GPED 902 Review of Ped Dent I**
A comprehensive course to provide an in depth knowledge of all areas of Pediatric Dentistry
Activity: Lecture
2.5 Credit Hours

**GPED 903 First & Second Year I**
Didactic and Clinical Rotations which provide the residents with the didactic knowledge and clinical experiences for the care of infants, children and adolescents including patients with special health care needs.
Activity: Clinic
9.0 Credit Hours

**GPED 904 First Year Rot I**
Grand rounds help doctors and other healthcare professionals keep up to date in important evolving areas which may be outside of their core practice.
Activity: Clinic
9.0 Credit Hours

**GPED 905 Sedation Seminar I**
Sedation Seminar is a series of twenty 1-hour lectures and workshops given to the Periodontal and Pediatric Residents of University of Pennsylvanias School of Dental Medicine. The seminar will be focused on topics and content as advised by the ADA Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students.
Activity: Seminar
3.75 Credit Hours

**GPED 907 Intro To Ped Dent II**
Activity: Lecture
1.5 Credit Hour

**GPED 908 Review of Ped Dent II**
Activity: Lecture
2.5 Credit Hours

**GPED 910 First & Second Year II**

DOMD 760 Oral Medicine L
The purpose of this course is to give students a foundation for common oral lesions, facial pain, and salivary gland disease as well as an understanding of medical conditions which directly affect the oral and maxillofacial structures.
Activity: Lecture
1.25 Credit Hour

DOMD 761 Admissions and Emergency
Activity: Clinic
1.5 Credit Hour

DOMD 764 Od&E Medical Clerkship
This course is designed to give students a foundation for understanding physical diagnosis, medical workups, consultations, and conditions that directly affect management of the dental patient. Students learn the skills of physical diagnosis, how to complete the "History and Physical," how to interpret and evaluate clinical, laboratory, radiographic, and other diagnostic information and procedures. In addition, students learn how to recognize the normal range of clinical findings as well as significant abnormalities requiring medical management of the dental patient.
Activity: Lecture
1.0 Credit Hour

DOMD 861 Admissions and Emergency
Admissions and Emergency The Admissions and Emergency Care Clinic rotation consists of combined rotations in the Emergency Care Clinic, and the Oral Diagnosis Clinic. The Emergency Care Clinic provides emergency care to "walk-in" non-registered patients. Emphasis is placed on efficient and thorough dental care to ensure that the patient receives the highest quality of emergency dental care in a timely manner. The Admissions or Oral Diagnosis Clinic provides an initial evaluation for Penn Dental Medicine patients who register for comprehensive care on an appointment basis. Students that rotate through the Oral Diagnosis Clinic assess the medical and oral health status of the patients. Additionally, the medical status of all patients (except ASA I patients) are reassessed annually in the Oral Diagnosis Clinic.
Activity: Clinic
2.5 Credit Hours

DOMD 887 Hospital Assignment
Students spend four weeks in an extramural program at an affiliated hospital or a non-affiliated hospital program approved by Penn Dental Medicine. During the hospital rotation, students evaluate hospitalized patients to reinforce principles of physical and laboratory diagnosis, participate in dental treatment for patients with severe medical problems, and learn to request and answer consults from other clinical departments such as radiology and otolaryngology.
Activity: Clinic
6.25 Credit Hours

DOSP 770 Oral Surgery L
This lecture-based course provides students exposure to all aspects of the wide and varied scope of oral and maxillofacial surgery. The course promotes the integration of the basic sciences and medicine into the daily practice of oral and maxillofacial surgery and dentistry.
Activity: Lecture
2.25 Credit Hours

DOSP 772 Oral Surgery Clinic
Students perform uncomplicated exodontia and minor pre-prosthetic surgical procedures that are approved by the clinical instructors, assist the instructors in complicated surgical procedures, and observe the administration of intravenous sedation and general anesthesia.
Activity: Clinic
1.0 Credit Hour

DOSP 872 Oral Surgery Clinic
Students perform uncomplicated exodontia and minor pre-prosthetic surgical procedures that are approved by the clinical instructors, assist the instructors in complicated surgical procedures, and observe the administration of intravenous sedation and general anesthesia. The bulk of the students' clinical experience is delivered in a continuous 2-week block. This type of experience enables students to better understand the delivery of surgical care.
Activity: Clinic
2.0 Credit Hours

DORT 753 Orthodontics II
Activity: Lecture
1.75 Credit Hour
DORT 788 P and I Clinic
Through clinical rotation, the student is exposed to patients with malocclusions that arise in a normally developing craniofacial complex. Management of these problems aims at providing an unimpeded eruption and alignment of dentition.
Activity: Clinic
0.75 Credit Hours

DORT 803 Adjunctive Orthodontics
Adjunctive orthodontic intervention involves the management of orthodontic problems prior to restorative treatment. Each student is required to complete the treatment of a clinical case which may involve the following: 1. repositioning teeth that have drifted after extraction or bone loss caused by periodontal disease. 2. forced eruption of broken teeth to expose sound root structure of which to place permanent restorations. 3. correction of crossbites which do not involve a skeletal discrepancy. 4. alignment of anterior teeth for more esthetic restorations.
Activity: Clinic
0.5 Credit Hours

Dental - Pediatrics (DPED)

DPED 704 Pediatric Dentistry L/B
Activity: Lecture
2.75 Credit Hours

DPED 751 Pediatric Dentistry Clin
Activity: Clinic
1.25 Credit Hour

DPED 851 Pediatric Dentistry Clinic
The clinical course attempts to expose the student to many components of pediatric dentistry, including but not limited to diagnosis, prevention, restorative dentistry, pulp therapy, management of the developing occlusion, behavior guidance, and care of special children. Penn Dental Medicine competency statements, as they apply to children, adolescents, and special needs patients are the focus. Competency examinations for this course relate to restorative dental care for the child patient.
Activity: Clinic
1.25 Credit Hour

Dental - Periodontics (DPRD)

DPRD 780 Periodontics L
This course is designed to acquaint the student practitioner with the fundamentals of periodontal surgery necessary for the comprehensive practice of general dentistry. A major emphasis includes understanding the normal periodontium and a correlation of the events in the histopathology of inflammation, trauma and wound healing.
Activity: Lecture
2.0 Credit Hours

DPRD 781 Periodontics Clinic
The Periodontics Clinic provides third- and fourth-year students the opportunity to treat patients with differences of severity in existing periodontal disease.
Activity: Clinic
5.25 Credit Hours

DPRD 881 Periodontics Clinic
The Periodontics Clinic provides fourth-year students the opportunity to treat patients with differences of severity in existing periodontal disease. In most cases, the patients afford the students adequate experiences and impart them comprehensive knowledge of the tissues of the periodontium and the fundamental principles underlying the prevention and treatment of diseases that afflict the periodontal tissues.
Activity: Clinic
5.0 Credit Hours

Dental - Radiology (DRAD)

DRAD 777 Radiology Clinic/Seminar
Students are assigned 12-15 rotations in the Radiology Clinic during their third and fourth years. During these rotations, students take full-mouth x-ray series on newly admitted patients.
Activity: Clinic
0.75 Credit Hours

DRAD 877 Radiology Clinic
Students are assigned 12-15 rotations in the Radiology Clinic during their third and fourth years. During their rotations, they take full-mouth x-ray series on newly admitted patients who are sent to Radiology from the Admissions Clinic.
Activity: Clinic
0.25 Credit Hours

Dental - Restorative Dentistry (DRST)

DRST 740 Restorative Dentistry L
Activity: Lecture
4.75 Credit Hours

DRST 741 Comprehensive Care C Fal
Activity: Clinic
4.0 Credit Hours

DRST 742 Restorative Dentistry SP
Activity: Clinic
4.0 Credit Hours

DRST 789 Clinical Seminar
The seminar is an open forum discussion in which students make case presentations after which the diagnosis, treatment plan, and therapy are analyzed and evaluated. Initially, the PCU leader may present cases in order to establish the proper method of case presentation; thereafter, it is the student's responsibility to present thoroughly documented cases which include photographic slides of pretreatment, a complete dental and medical evaluation, study models, radiographs, and other pertinent data.
Activity: Seminar
1.25 Credit Hour

DRST 841 Comprehensive Care C
Fourth-year students, within their PCU groups, continue to perform examination and diagnostic procedures, comprehensive treatment planning, all restorative dental procedures, fixed and removable prostodontic procedures, including implant supported restorations, non-surgical periodontal procedures, and maintenance therapy. The PCU program goal is to produce a practitioner who can integrate basic scientific knowledge with clinical proficiency in all phases of general dentistry, based on the concept of recognition and treatment of oral disease.
Activity: Clinic
14.0 Credit Hours
Design (DSGN)

DSGN 233 Digital Illustration
Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation storyboard rendering, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and place creatively and skillfully execute finished artwork.
One-term course offered either term
Also Offered As: DSGN 633
Prerequisite: DSGN 264 and FNAR 123
Activity: Studio
1.0 Course Unit

DSGN 234 Art of the web: Interactive Concepts for Art & Design
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web content including navigation, UX design and information architecture. The course will require analytical conceptual skills and foster creative thinking.
One-term course offered either term
Also Offered As: DSGN 634
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 235 3-D Computer Modeling
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanism while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.
One-term course offered either term
Also Offered As: DSGN 635
Prerequisites: FNAR 123 and DSGN 636
Activity: Studio
1.0 Course Unit

DSGN 236 Digital Figure Modeling
This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution rendering, and rapid prototyping.
Course usually offered in spring term
Also Offered As: DSGN 536
Prerequisite: DSGN 235
Activity: Studio
1.0 Course Unit

DSGN 238 Open Book
"Open Book" will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.
Course usually offered in fall term
Also Offered As: DSGN 538
Activity: Seminar
1.0 Course Unit

DSGN 245 Book and Publication Design
Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of books—literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs and textbooks, and serial editions—discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book Collection - and studio time where students will design books with attention to the format's conceptual relationship to the material at hand with a focus on typography and page layout, as well as on understanding production methods of printing and binding. In addition to the conventions of page layout, students will examine paratextual elements (title page, practice of pagination and other internal structuring, content lists and indexes, colophons, notes, and marginalia, and end-leaves binding, etc.).
Taught by: Hyland
Course usually offered in fall term
Also Offered As: DSGN 645
Prerequisite: DSGN 264 or permission from the instructor
Activity: Studio
1.0 Course Unit
DSGN 247 Environmental Animation
This studio-based course examines the disciplinary spaces of landscape, art, and architecture through the medium of 3D animation and storytelling. We immerse ourselves in environments that may be as small as a cell or as large as a planet. From the refiguring of images, models, graphic design, or video to visualization or coding the genesis of whole environments, this course will allow for a variety of entry points for students of different disciplines and skill levels. Projects will range in scope from animated GIFs to animated shorts. This course embraces a spirit of invention, collaborative learning, and interdisciplinary cross-pollination. Experience in landscape architecture, architecture, animation, programming, film, GIS, and/or graphic design is encouraged. We will examine and discuss some standard typologies such as the walk-through, data-visualization, as well as filmic and avant garde strategies as starting points for creative reinterpretation of space. We will primarily be using 3D Studio Max and After Effects with support from Next Engine 3D Scanner, Rhino, and Grasshopper. Scripting will be included in most assignments to enhance artistic control of the software.
Taught by: Landau
Course usually offered in spring term
Also Offered As: DSGN 547
Prerequisites: Experience in landscape architecture, architecture, animation, programming, file, Photoshop, or graphic design is strongly encouraged but not required.
Activity: Studio
1.0 Course Unit

DSGN 264 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over a broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
For BA Students: Humanities and Social Science S

DSGN 266 Graphic Design with Creative Technologies
This aim this course is to introduce students creative ways to use color, typography, and layout across new materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and date-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. Course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects.
One-term course offered either term
Also Offered As: DSGN 566
Prerequisite: DSGN 264/636
Activity: Studio
1.0 Course Unit

DSGN 268 Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century.
One-term course offered either term
Also Offered As: DSGN 568
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 269 Typography
The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collection and analyzing type, designing an orginial typeface, researching type history and experimenting with typographic forms.
One-term course offered either term
Also Offered As: DSGN 569
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 270 Graphic Design Practicum
Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in portfolio-ready finished product. Students will participate in full design experience including design, client interaction, presentations, production and project management. In addition, students will take field trips, meet professionals and go on studio visits.
One-term course offered either term
Also Offered As: DSGN 570
Prerequisite: DSGN 266 OR DSGN 269
Activity: Studio
1.0 Course Unit
DSGN 286 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. Visual Narrative focuses on traditional as well as emerging modes of production and distribution for documentary, visual storytelling, and photojournalism, exploring new aesthetics and the social impact of visual narratives. Visual Narrative immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series and the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers. Students will work within and across disciplines of art, design, and visual journalism, exploring topics including context, cause and effect, time, space, flow, picture-to-picture relationships, sequence, visual hierarchy, and linearity. Study of non-narrative systems - categorical, theoretical, abstract, and associational forms - as well as interactive narratives will also be included.
Course usually offered in fall term
Also Offered As: DSGN 686
Activity: Studio
1.0 Course Unit

DSGN 300 Contemporary Theories of Design
This seminar explores a range of theories, concepts, and thought patterns that shape different disciplines of design. From critical science studies to object-orient ontology and speculative design, it discusses how theoretical frameworks drive innovation, critique, and user experience.
Taught by: Telhan
Activity: Seminar
1.0 Course Unit

DSGN 306 Design 21: Design After the Digital
Last century, the digital revolution transformed every aspect of our lives. It shaped every design discipline and defined the ways we imagine and fabricate anything from images to everyday products to clothing, cars, buildings and and megacities. Today, design is going through other technical and conceptual revolutions. We design with biotechnologies, self-driving cars to painting bots and trading algorithms. This studio will substitute craft, labor, and decision-making with intelligent systems from biochemical fabrication, machine learning and robotics to develop applications that respond to the emergent perceptions of the human for its individual, social, or environmental identity.
Taught by: Orkan Telhan
Also Offered As: DSGN 517
Activity: Studio
1.0 Course Unit

DSGN 317 Cultures of Making
Cultures of Making is an integrative studio that explores new frontiers of design that enable, empower, and interrogate the human in the 21st century. We will take the human body, identity, or image as a site of investigation and design new types of products for it. Through our designs, we will raise questions about the motivations behind quantifying ourselves, desires for being permanently available and connected, complacency with not having privacy or intimacy, and eagerness to substitute craft, labor, and decision-making with intelligent systems from self-driving cars to painting bots and trading algorithms. This studio will pursue a research - and production-oriented format. We will incorporate techniques and technologies from fields as diverse as printed electronics, biochemical fabrication, machine learning and robotics to develop applications that respond to the emergent perceptions of the human for its individual, social, or environmental identity.
Taught by: Orkan Telhan
Also Offered As: DSGN 517
Activity: Studio
1.0 Course Unit

DSGN 328 Functions for Form and Material
This studio course will introduce methods of material selection and fabrication with the goal of developing evocative and effective designs. We will learn parametric modeling techniques that allow visualization to begin before all the requirements of design are known. We will implement techniques that allow us to structurally test and optimize forms to be stronger, lighter, to fail more predictably, or to function efficiently. The class will work identity to materials with properties that introduce new structural or conceptual possibilities for our designs. For each project, we will use a broad range of fabrication techniques for metals, natural and synthetic materials. The goal of this course is to develop a creative approach towards learning to work with unfamiliar tools and materials.
Taught by: Mosely
Also Offered As: DSGN 528
Activity: Studio
1.0 Course Unit

DSGN 337 Information Design and Visualization
Information Design and Visualization is an introductory course that explores the structures of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.
One-term course offered either term
Also Offered As: DSGN 637
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit
DSGN 343 Language of Design
The course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in the decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design - as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics related to their field of study.
Course usually offered in spring term
Also Offered As: DSGN 643
Activity: Seminar
1.0 Course Unit

DSGN 366 Advanced 3-D Modeling
Advanced 3-D Modeling will give students the opportunity to refine skills in modeling, textureing, lighting and rendering with an emphasis on the evolution of ideas through constant revision based class critique. Students will use a variety of industry standard software packages, including but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content within a simulated production environment. One-semester course offered either term
Also Offered As: DSGN 646
Prerequisite: DSGN 235/365 or DSGN 236/536
Activity: Studio
1.0 Course Unit

DSGN 370 Advanced Graphic Design and Typography
This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio.
Course usually offered in fall term
Also Offered As: DSGN 670
Prerequisite: DSGN 266 AND DSGN 269 or Permission of Instructor.
Activity: Studio
1.0 Course Unit

DSGN 378 Interfacing Cultures: Designing for Mobile, Web and Public Media
This course introduces advanced topics related to contemporary media technologies, ranging from social media to mobile phone applications and urban interfaces. Students learn how to use new methods from interaction design, service design, and social media and work towards prototyping their ideas using new platforms and media. The class will cover a range of topics such as online-gaming, viral communication, interface culture, networked environments, internet of things and discuss their artistic, social, and cultural implications to the public domain.
Course usually offered in spring term
Also Offered As: DSGN 678
Prerequisite: DSGN 234

DSGN 506 Design 21: Design After the Digital
Last century, the digital revolution transformed every aspect of our lives. It shaped every design discipline and defined the ways we imagine and fabricate anything from images to everyday products to clothing, cars, buildings, and megacities. Today, design is going through other technical and conceptual revolutions. We design with biotechnologies, fall in love in Virtual Reality with AI bots, rent our cognitive labor through cryptocurrencies. Our creative capabilities, on the other hand, are bound by a polluted, over-crowded, and resource-constrained planet that is suffering major income and educational inequality. Design After the Digital interrogates the role of design for this century. This seminar surveys the conceptual and technical developments in the past decade to develop an interdisciplinary understanding of design, science, and technology. We will study how new design and fabrication methods shape what we eat, what we wear, how we form opinions and express ourselves. The goal will be to develop new literacies of design that will help us acclimate better to realities of the century as creative and critical citizens who can shape its products and values.
Taught by: Telhan

DSGN 686 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. It proposes that studying and making sequential images and visual essays in a wide range of media- comics and graphic novels, propaganda, environments and installations, social media, animation, video, and digital media- are critical to understanding culture. The course immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series an the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. STudents will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers.

Dutch (DTCH)

DTCH 000 Study Abroad
Activity: Lecture
1.0 Course Unit

DTCH 101 Elementary Dutch I
A first semester language course covering the core Dutch grammar and vocabulary with the goal of providing the cornerstone for developing overall linguistic proficiency in Dutch.
For BA Students: Language Course
Taught by: Naborn
Course usually offered in fall term
Also Offered As: DTCH 501
Activity: Lecture
1.0 Course Unit

DTCH 102 Elementary Dutch II
Continuation of DTCH 101.
For BA Students: Language Course
Taught by: Naborn
Course usually offered in spring term
Also Offered As: DTCH 502
Activity: Lecture
1.0 Course Unit

DTCH 103 Intermediate Dutch I
A third semester Dutch language course. The emphasis lies on vocabulary expansion through the use of audio-taped materials and readings. Grammar is expanded beyond the basics and focuses on compound sentences, features of text coherence and idiomatic language usage.
For BA Students: Language Course
Taught by: Naborn
Course usually offered in fall term
Also Offered As: DTCH 503
Prerequisites: Dutch 102 or equivalent.
Activity: Lecture
1.0 Course Unit

DTCH 104 Intermediate Dutch II
A fourth semester Dutch language course.
For BA Students: Last Language Course
Taught by: Naborn
Course usually offered in spring term
Also Offered As: DTCH 504
Prerequisites: Dutch 103 or equivalent.
Activity: Lecture
1.0 Course Unit
DTCH 153 Is Europe Facing a Spiritual Crisis?
Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective "cultural identities" (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modern) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...).

DTCH 574 Politics and Societies in the Early Modern World
In this seminar, we will discuss how early modern globalization affected societies and the ways their members and rulers made politics. Following a historiographical introduction, it is divided in three sections. In the first, we will concentrate on empires and kings in order to detect common features of dynastic power across the globe and to explore how such characteristics influenced each other. Second, we will shift our attention to citizens and the ways they made politics in their city-states. For a long time, research on citizenship has been confined to the post-revolutionary nation states. However, recent research suggests that urban citizenship has far deeper roots in medieval and early modern cities. Up to now most research has focused on urban centers in Western Europe and more precisely on the so-called urban belt stretching from Central and North-Italy, over Switzerland and Southern Germany to the Rhineland and the Low Countries. Comparisons with urban centers in Asia and the colonial Americas will be needed to test that view. In the third section, we will study the people who provided information to societies and decision makers. Often, they held multiple identities or they acted as religious or ethnic outsiders. Therefore, we call them, with a term borrowed from anthropology ‘brokers’. Taken together, the analysis of these aspects will deepen our understanding of politics and societies in the globalizing early modern world. Thus, the seminar will contribute to a more comprehensive, less Europe-centered view on that period.

East Asian Languages & Civilization (EALC)

EALC 001 Introduction to Chinese Civilization
Survey of the civilization of China from prehistoric times to the present.
For BA Students: History and Tradition Sector
Taught by: Goldin, Atwood, Smith, Cheng
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EALC 002 Introduction to Japanese Civilization
Survey of the civilization of Japan from prehistoric times to the present.
For BA Students: History and Tradition Sector
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Fulfills Cross-Cultural Analysis
EALC 008 East Asian Religions
This course will introduce students to the diverse beliefs, ideas, and practices of East Asia's major religious traditions: Buddhism, Confucianism, Daoism, Shinto, Popular Religion, as well as Asian forms of Islam and Christianity. As religious identity in East Asia is often fluid and non-sectarian in nature, there religious traditions will not be investigated in isolation. Instead, the course will adopt a chronological and geographical approach, examining the spread of religious ideas and practices across East Asia and the ensuing results of these encounters. The course will be divided into three units. Unit one will cover the religions of China. We will begin by discussing early Chinese religion and its role in shaping the imperial state before turning to the arrival of Buddhism and its impact in the development of organized Daoism, as well as local religion. In the second unit, we will turn eastward into Korea and Japan. After examining the impact of Confucianism and Buddhism on the religious histories of these two regions, we will proceed to learn about the formation of new schools of Buddhism, as well as the rituals and beliefs associated with Japanese Shinto and Korean Shamanism. The third and final unit will focus on the modern and contemporary periods through an analysis of key themes such as religion and modernity, the global reception and interpretation of East Asian religions, and the relationship between religion and popular culture. The class will be conducted mainly in the form of a lecture, but some sessions will be partially devoted to a discussion of primary sources in translation. The course assignments are designed to evaluate the development of both of these areas. No previous knowledge of East Asian languages is necessary, and all readings will be available in English on the Canvas site in PDF form.
Taught by: Tavor
Course usually offered in fall term
Also Offered As: RELS 172
Activity: Lecture
1.0 Course Unit

EALC 013 Art and Civilization in East Asia
Survey of the major artistic traditions of East Asia from Neolithic times through the 18th century. Will serve as an introduction to upper level lecture courses that deal with the arts and civilizations of China, Korea, and Japan. Students study and handle objects during weekly session in the Museum.
For BA Students: Arts and Letters Sector
Taught by: Davis, Steinhardt
Two terms. Student may enter either term.
Also Offered As: ARTH 103, VLST 233
Activity: Lecture
1.0 Course Unit

EALC 015 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems effect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among lay communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as "Just-War" Women’s Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.
Taught by: McDaniel
One-term course offered either term
Also Offered As: RELS 173, SAST 142
Activity: Lecture
1.0 Course Unit

EALC 034 What is Taoism?
This course introduces a wide variety of ideas and practices that have at one time or another been labeled as Daoist (or "Taoist" in the Wade-Giles Romanization), in order to sort out the different senses of the term, and consider whether these ideas and practices have had any common features. We will begin with the two most famous Daoist works—the Zhuangzi and the Daodejing (or Laozi). We will also survey other bio-spiritual practices, such as the meditational techniques of Inner Alchemy and the self-cultivation regimes known today as Qigong and Tai-chi, as well as the theological and ritual foundations of organized Daoist lineages, many of which are still alive across East Asia. We will conclude with a critical review of the twentieth-century reinvention of "Daoism," the scientization of Inner Alchemy, and the new classification of "religious" versus "philosophical Daoism." While familiarizing ourselves with the key concepts, practices, and organizations developed in the history of Daoism, this course emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the label of "Daoist" (as well as "Confucian" and "Buddhist") in Chinese history and in modern scholarship. We will also question modern demarcations between the fields of philosophy, religion, and science.
Taught by: Cheng
Course not offered every year
Also Offered As: RELS 184
Activity: Lecture
1.0 Course Unit
EALC 041 Late Imperial China
From an Eurasian empire ruled by Mongols to an ethnically defined Han Chinese Ming dynasty, then again to a multi-ethnic empire ruled by a minority group of Manchus, the disruptions and transformations in the very idea of “China” in the past seven centuries defies our modern notion of China as a unitary nation with the world’s longest continuous cultural tradition. How to understand the continuities and discontinuities of the last three imperial dynasties of China will be the central focus of our survey. How did these different ethnic groups adjust to each other’s way of life? Did complicated cultural interaction prompt different visions of empires? How did the meaning of “Chinese change over this time period? How did international politics shape the fate of Chinese empires? With no assumption of prior knowledge, lectures open with an overview of Chinese society before the eve of the Mongolian invasion, and then trace the changing visions of ethnic and social orders in the subsequent regimes ruled by three different ethnic groups (Mongolian, Han Chinese, and Manchurian). We will examine and compare bureaucratic operations, cultural ideals, domestic and international policies from above as well as the daily life experiences from below. The course will conclude with an analysis of the collapse of the imperial order at the beginning of the twentieth century, after it was severely challenged by a semi-Christian Utopian movement from within and global drug trade imperialist attacks from without.

EALC 047 History of Modern China
From an empire to a republic, from communism to socialist-style capitalism, few countries have ever witnessed such massive change in a hundred year period as China during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally, 3) the development and transformation of Chinese modernity. Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao’s China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of “Greater China” that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.

EALC 064 Sushi & Ramen: Making Japanese Food Global
Who defines Japanese food? Is it the chef at a top establishment in Tokyo, a home cook in Osaka, a tea master in Kyoto, the ancient capital? Or is it the midwestern American who thinks sushi means raw fish? Is it the person who scarfs cup noodles, or the devotee of artisan ramen stock? Perhaps it is the Japanese government, which in 2006 sent undercover agents abroad to guard against inferior Japanese food outlets. In this class we will consider how Japanese food came to be defined in distinction to Western and Chinese foods beginning in the nineteenth century, and how Japanese food became a global cuisine. Among our questions: What makes a dish Japanese? How did Portuguese or Spanish frying habits (tempura) and Chinese lamian (ramen) become hallmarks? How traditional is the diet of rice and fish, and in what ways does it interact with the environment? How did Buddhist vegetarians justify sukiyaki? What relationship does food have to the longevity of Japanese today? How does gender affect Japanese food cultures? What are the origins of Iron Chef and bento? We will survey the Philadelphia Japanese food scene and learn to make our own sushi. Some controversies we will discuss include the consumption of whale meat in Japan. We will also investigate Japanese government controls of food to combat obesity and to make food safe. after the Fukushima nuclear catastrophe. Materials include essays, films, novellas, menus, and cookbooks.

EALC 069 Japanese Popular Culture
Today, Japanese manga, anime, J-pop, and film have a global audience. But these exports can only truly be understood in light of longstanding domestic anxieties about sex, violence, gender, and “the kids these days.” More recent concerns about the country’s declining birthrate, weakening geopolitical position, and vulnerability to natural and anthropogenic disaster also deeply influence Japanese media products. This course explores some of these anxieties through critical examinations of manga, anime, video games, television, music, and fashion in Japan. Film screenings include work by directors Kon Satoshi, Otomo Katsuhiro, Takahata Isao, Miyazaki Hayao; Itami Juzo, and Takita Yojiro; manga excerpts include work by Tezuka Osamu, Urasawa Naoki, and Yazawa Ai. Secondary readings include scholarship in anthropology, history, sociology, literature, film studies and religious studies.
For BA Students: Arts and Letters Sector
Course not offered every year
Activity: Lecture
1.0 Course Unit
EALC 071 Modern Japanese History
This course will survey the major political, economic, social and intellectual trends in the making of modern Japan. Special emphasis will be given to the turbulent relationship between state and society from 1800 to the present.

Course usually offered in fall term
Also Offered As: RELS 079
Activity: Lecture
1.0 Course Unit

EALC 086 Korean Popular Culture
"Korean Wave" (Hallyu) is currently raging throughout non-Western parts of the world, especially Asia, and may be making its way to the West. From South Korean tele-dramas and K-pop music to their respective celebrity icons, these popular cultural forms from Korea are increasingly becoming part of the everyday landscape and vocabulary. We will attempt to understand and evaluate this cultural phenomenon--its promises and limitations as well as its popularity and backlash against it. More specifically, this course explores the ways in which television, music, manhwa (comic books), and the internet participate in the transnational production and circulation of culture, modernity, tradition, ideology, and politics. Some of the more specific topics covered may include: Korean emotions and melodramas; imitation versus innovation in K-pop; fictions of history in period dramas; the marketing of new masculinity; revival of folk culture; preservation of traditional values in postmodern times; repatriation of Korean American pop stars to Korea; and youth culture.
Requires outside viewing and listening.

Activity: Lecture
1.0 Course Unit

EALC 105 East Asian Diplomacy
Home to four of the five most populous states and four of the five largest economies, the Asia/Pacific is arguably the most dynamic region in the twenty-first century. At the same time, Cold War remnants (a divided Korea and China) and major geopolitical shifts (the rise of China and India, decline of the US and Japan) contribute significantly to the volatility of our world. This course will examine the political, economic, and geopolitical dynamism of the region through a survey of relations among the great powers in Asia from the sixteenth century to the present. Special emphasis will be given to regional and global developments from the perspective of the three principal East Asian states--China, Japan and Korea. We will explore the many informal, as well as formal, means of intercourse that have made East Asia what it is today. Graduate students (EALC 505) should consult graduate syllabus for graduate reading list, special recitation time and graduate requirements.
Taught by: Dickinson
Course usually offered in fall term
Also Offered As: EALC 505, HIST 395
Activity: Recitation
1.0 Course Unit

EALC 108 Sports in East Asia
This course will examine sports in East Asia from the nineteenth century to the present. Recently, East Asia plays an important role in transforming the global geopolitics of sport. The post-war East Asian Olympic Games-1964 Tokyo Olympics, 1972 Sapporo Winter Olympics, 1988 Seoul Olympics, 1998 Nagano Winter Olympics, and 2008 Beijing Olympics-and the 2002 FIFA World Cup Korea/Japan illustrate the fact that a new global sports order led by East Asia has emerged. East Asia nations will play hosts to other major sporting events, including the 2018 Pyeongchang Winter Olympics, 2020 Tokyo Olympics, and 2022 Beijing Winter Olympics. Chinese, Japanese, and Korean athletes have been highly active in MLB, NBA, English Premier League, and LPGA. The popularity of the various martial arts proves that East Asian sports seem to be everywhere these days. This class will focus on helping students understand how sports have affected and transformed East Asia exploring various issues: imperialism, colonialism, race, class, gender, foreign policy, nationalism, religion, economics, industrialization, tourism, and urbanization. Course contents include lecture, discussions, secondary readings, primary source readings, documentaries, and films.
Course not offered every year

1.0 Course Unit
EALC 111 East Asian Digital Humanities
"Are you interested in cutting-edge digital methods for the humanities in East Asia, but don't know where to start? This course covers a wide range of current and emerging digital projects and topics in East Asian studies. Students will engage with digital projects focused on East Asia (encompassing Japan, China, Korea, and Taiwan) as well as research being done on Digital methodologies for the humanities in those areas. Coursework consists of project and research analysis, active discussion, and learning about the implementation of various digital projects. Example topics include text analysis, APIs, network analysis, digital literary studies, and mapping. No technical expertise is required but students must have reading knowledge of Chinese, Japanese, or Korean at the high-intermediate or advanced level. Class presentations, discussions, and all course readings will be in English, but midterm and final projects involve reading articles and midterm and final projects involve reading articles and/or critiquing projects is." 
Taught by: Des Jardin

EALC 125 Cultural Chinas: 20th Century Chinese Literature and Film
This course serves as a thematic introduction to modern Chinese literature and cinema in China, Hong Kong, Taiwan and other transnational Chinese communities in the twentieth century. By discussing a wide range of key literary and filmic texts, this class looks into major issues and discourses in China’s century of modernization: enlightenment and revolution, politics and aesthetics, sentimental education and nationalism, historical trauma and violence, gender and sexuality, social hygiene and body politics, diaspora and displacement, youth sub-culture and urban imagination.
For BA Students: Arts and Letters Sector
Course usually offered in spring term
Also Offered As: EALC 525
Activity: Lecture
1.0 Course Unit
EALC 126 Seminar in Modern Chinese Literature
Modern Chinese writers are known for their efforts in creating a literary revolution that sought to reformulate the paradigm of Chinese writing. However, these Chinese writers also endeavored to learn from other cultures such as the European and Indian civilizations. For example, Tagore was invited to visit China in 1923 and was considered a cultural model by many Chinese cultural elites. Hu Shi, a leading Chinese intellectual, wrote The Indianization of China: A Case Study in Cultural Borrowing and India Our Great Teacher, to emphasize the Indian elements in Chinese culture. Other Chinese writers also sought to compare the European with Chinese cultures in different contexts in order to find a path for the rise of modern China. This course explores the ways in which foreign cultures were introduced and how they influenced the way Chinese see themselves in their search for a cultural identity free from the constraints of classical tradition. We will read a variety of writers from the People's Republic of China, Hong Kong, Taiwan, and Malaysia, in order to examine how modern Chinese literature thrives on cross-cultural elements. All readings will be in English. No prior knowledge is required. Those who are proficient in Chinese are invited to read some of the texts in Chinese.
Taught by: Lin
Course not offered every year
Also Offered As: EALC 526
Activity: Seminar
1.0 Course Unit

EALC 127 Arts of China
A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China's Bronze Age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting.

EALC 139 Religion in Modern China
This course focuses on the history and role of religion in the Chinese cultural sphere (Mainland China, Taiwan, and the Diaspora) from the mid-19th century to the present day, focusing on the relationship between religious institutions and the state during the imperial, republican, and communist regimes. We will learn about the impact of religious ideas, practices, and organizations on social, political and economic processes and inspect the role of religion in the consolidation of individual, communal, and national identity. Adopting a comparative and interdisciplinary approach, we will attempt to ascertain the impact of the various Chinese religious traditions: Confucianism, Daoism, Buddhism, and popular sects, as well as global religions such as Islam and Christianity, on the internal sociopolitical structure of the Chinese state and their role in shaping power relations on a transregional, national, and local level. Special emphasis will be given to the role and use of the grand narratives of secularism and modernity in the shaping of the Chinese nation-state, as well as the value of using these frameworks in the study of modern China. The class is discussion-based, supplemented by lectures, student presentations, and documentary films. No knowledge of Chinese is presumed. All readings will be in English.

EALC 145 20th Century China: Ideas, Politics, States
Since 1900 four types of states have ruled China: dynastic, elective parliamentary, authoritarian nationalist, and communist. We will trace each from its intellectual origins to conclusion. By doing so we will present a solid and wide-ranging narrative of China’s past century, introducing newly discovered material, some controversial. Above all we will dig into the issues raised by the century's mixture of regimes. Right now China is a dictatorship but once it was an imperfect democracy. Does this prove that Chinese are somehow incapable of creating democracy? That sadly it is just not in their DNA? Or only that blood and iron have been used regularly with harsh effectiveness? You will be given a solid grounding in events, and also in how they are interpreted, right up to the present. Readings will be mostly by Chinese authors (translated), everything from primary sources to narrative to fiction. We will also use wartime documentary films. Two lectures per week, regular mid-term and final exams, and a paper on a topic of your own choice. No prerequisites.
Taught by: Waldron
Course usually offered in fall term
Also Offered As: HIST 393
Activity: Lecture
1.0 Course Unit
Notes: Two lectures per week, regular mid-term and final exams, and a paper on a topic of your choice.
EALC 151 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan's war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujiro, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

Activity: Lecture
1.0 Course Unit
Notes: Fulfills Cross-Cultural Analysis

EALC 152 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words "love" and "loss" imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.
For BA Students: Arts and Letters Sector

Activity: Lecture
1.0 Course Unit

EALC 153 Loyal Warriors in Japanese Literature
From the earliest literature to the latest think piece on Japanese society, the roles of the "warrior" and of "loyalty" in Japanese culture have fascinated those both inside and outside of Japan. In this course we will trace the development of paragons of loyalty and warrior prowess from the earliest literary works, through the epic Tales of the Heike, and on to the "Treasury of Loyal Retainers," theater, and film. We will read in the philosophy of fidelity and samurai codes to track the growing dedication to ideals of loyalty, exploring evidence of behavior less than loyal as we seek the real influence of these notions. Related topics include the extremes of vengeance and fanaticism.
Taught by: Chance
Course not offered every year
Activity: Lecture
1.0 Course Unit

EALC 155 Modern Japanese Literature
This course surveys Japanese literature (novels, short stories, poetry, drama, essays) from 1868 to World War II. The purpose is not only to read some of the most important and interesting literary texts of this period, but also to reflect on the ways we read and study literature, and how we draw connections between literature, self, and society. The reading material will be entirely in English.
Taught by: Kano
Course not offered every year
Also Offered As: EALC 555
Activity: Lecture
1.0 Course Unit

EALC 156 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how "art" and "history" are being defined in the cinematic context. How other directors also took up these issues, and referred to the "big three" is also be discussed.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 290, ARTH 690, CIMS 223, EALC 556
Activity: Lecture
1.0 Course Unit

EALC 157 Arts of Japan
This course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 213, ARTH 613, EALC 557
Activity: Lecture
1.0 Course Unit
Notes: Graduate students may take this course as EALC 557 and should see the instructor to discuss additional requirements for graduate credit.
EALC 162 City & Citizenship: Samurai Politics and Commoner Culture in Early Modern Japan
In the early modern period (1600-1867), Japan underwent a staggering urban transformation. Edo, the shogunal capital, grew in barely a century from a new settlement to a sprawling metropolis of over a million. Indeed, most of Japan’s current urban centers descend directly from the castle towns built by regional warlords in the late sixteenth and early seventeenth centuries in an effort keep the peace after over a hundred years of civil war. As a result, Japanese cities in the early modern period became a central component of what historians have called a “re-feudalization” of society, and retained strong vestiges of their military origins. At the same time the samurai-centered space of the new cities created opportunities for the development of alternative cultural practices and values by urban commoners. The juxtaposition of the regimented, honor-driven society designed and longed for by samurai and the fluid, money-driven society that grew out of the burgeoning cities’ commoner quarters is one of the animating forces of the early modern period. Through study of scholarship and contemporary sources (laws and sumptuary regulations, codes of conducts, but also diaries, novels, plays), this course will explore the many facets of early modern urban society, its medieval antecedents, and its legacies in contemporary Japan.
Taught by: Spafford
One-term course offered either term
Also Offered As: EALC 562
Activity: Lecture
1.0 Course Unit

EALC 165 Environment, Climate, and Culture in Japan
This course explores how Japanese literature, cinema, and popular culture have engaged with questions of environment, ecology, pollution, and climate change from the wake of the dropping of the atomic bomb on Hiroshima in 1945 to the ongoing Fukushima nuclear power plant disaster in the present. Environmental disasters and the slow violence of their aftermath have had an enormous impact on Japanese cultural production, and we examine how these cultural forms seek to negotiate and work through questions of representing the unrepresentable, victimhood and survival, trauma and national memory, uneven development and discrimination, the human and the nonhuman, and climate change’s impact on imagining the future. Special attention is given to the possibilities and limitations of different forms—the novel, poetry, film, manga, anime—that Japanese writers and artists have to think about humans’ relationship with the environment.
Taught by: Poland
Course not offered every year

1.0 Course Unit

EALC 171 Knights with Katanas: Medieval Japan and Europe Compared
This course aims to provide an overview of some of the main themes and problems in the history and historiography of medieval Japan by drawing on comparisons with European counterparts and interpretive models. To this end, each week’s readings on Japan are paired with one or more works on medieval Europe dealing with a similar theme. The primary purpose is not only to draw comparisons between the two civilizations and their development but also to use the great riches of scholarship on the European Middle Ages to shed light on possible new avenues of inquiry and perspectives on Japan.
Taught by: Spafford
Course not offered every year
Also Offered As: HIST 090
Activity: Seminar
1.0 Course Unit

EALC 176 Japan: The Age of the Samurai
Who (or what) were the samurai? What does it mean to say that Japan had an “Age of the Samurai”? In popular imagination, pre-modern Japan has long been associated with its hereditary warrior class. Countless movies have explored the character and martial prowess of these men. Yet warriors constituted but a tiny portion of the societies they inhabited and ruled, and historians researching medieval Japan have turned their attentions to a great range of subjects and to other classes (elite and commoner alike). This class is designed to acquaint students with the complex and diverse centuries that have been called the “Age of the Samurai” roughly, the years between ca. 1110 and 1850. In the course of the semester, we will explore the central themes in the historiography of warrior society, while introducing some of the defining texts that have shaped our imagination of this age (from laws to epic poems, from codes of conduct to autobiographies).
Taught by: Spafford

EALC 183 Readings in Korean History
Topic varies.
One-term course offered either term
Also Offered As: EALC 583
Activity: Seminar
1.0 Course Unit

EALC 184 Two Koreas: The Politics of Division
In today’s world, the inter-Korean border or DMZ (demilitarized zone) is widely regarded as one of the most impermeable and conflictual frontiers. The purpose of this course is to explore the dynamics of its formation between, and impact within, the two Koreas. The course therefore proposes to analyze how the division of the Korean peninsula not only came into being but also how it has shaped the socio-political trajectories of both the North and the South since 1945. The course also aims at introducing students to conceptual frameworks and comparative debates relevant to understanding the Korean case(s) from a social science perspective.
One-term course offered either term
Also Offered As: EALC 584
Activity: Lecture
1.0 Course Unit
EALC 192 Arts of Korea
The goal of this course is understanding the development of visual, performing, and literary arts in Korea and the historical, religious, and social contexts in which they flourished. It serves as an introduction to the arts of Korea, with emphasis on painting, sculpture, ceramics, and architecture and additional consideration of dance, drama, poetry, and culinary arts. Covers the whole history of Korea, from prehistoric times to the twenty-first century.

Activity: Seminar
1.0 Course Unit

EALC 221 First Year Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Taught by: Mair
Course usually offered in fall term
Also Offered As: CHIN 491, EALC 621
Activity: Lecture
1.0 Course Unit

EALC 222 1st Year Classical Chin II
Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Taught by: Mair
Course usually offered in spring term
Also Offered As: CHIN 492, EALC 622
Prerequisite: EALC 221
Activity: Lecture
1.0 Course Unit

EALC 223 Language, Script and Society in China
The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumerianic cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class.
Taught by: Mair
Course not offered every year
Also Offered As: EALC 623
Activity: Seminar
1.0 Course Unit

EALC 226 East Asian Funerary Arts
Study of tombs and tomb decoration of emperors and officials in China, Korea, and Japan from the pre-Buddhist era through the 19th century.
Taught by: Steinhardt
Course not offered every year
Also Offered As: EALC 626
Activity: Seminar
1.0 Course Unit

EALC 227 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting styles are analyzed, but themes such as landscape and narrative are considered with regard to larger social, cultural, and historical issues. The class will pay particular attention to the construction of the concepts of the "artist" and "art criticism" and their impact on the field into the present.
Visits to study paintings at the University of Pennsylvania Museum and Philadelphia Museum of Art.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: ARTH 217, ARTH 617, EALC 627
Activity: Lecture
1.0 Course Unit

EALC 229 Chinese Architecture
Survey of Chinese buildings and building technology from the formative period in the second millennium BCE through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wutai, imperial palaces in Chang’an and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: EALC 629
Activity: Lecture
1.0 Course Unit
Notes: Graduate-level option requires a 20-page paper and permission of the instructor
EALC 230 Gender, Religion, and China
This course examines the interrelationship among "gender," "religion," and "China" as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of "China" as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation.
Taught by: Cheng
Course usually offered in spring term
Also Offered As: EALC 630, GSWS 234, GSWS 630, RELS 237, RELS 630
Activity: Seminar
1.0 Course Unit

EALC 233 Chinese Aesthetics
This seminar investigates classical Chinese conceptions of art and beauty as exemplified in philosophy, literature, music, painting, calligraphy, and architecture. All readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 633
Activity: Lecture
1.0 Course Unit

EALC 234 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.
Taught by: Cheng
Course not offered every year
Also Offered As: EALC 634, RELS 233, RELS 634
Activity: Seminar
1.0 Course Unit

EALC 239 Sex and Society in Ancient China
Ancient Chinese writers considered sexual activity to be an essential component of humanity, and the study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no prerequisites, and no knowledge of Chinese is presumed.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 639
Activity: Seminar
1.0 Course Unit

EALC 240 Early Chinese History
This seminar covers the span of Chinese history from the Bronze Age to the end of the Han dynasty in A.D. 220. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.
Taught by: Goldin
Course usually offered in spring term
Also Offered As: EALC 640
Activity: Seminar
1.0 Course Unit

EALC 241 Law in Pre-Modern China
This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty—an interval of over two millennia—and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 641
Activity: Seminar
1.0 Course Unit

EALC 242 Medicine and Healing in China
This course explores Chinese medicine and healing culture, its diversity, and its change over time. We will discuss topics including the establishment of canonical medicine, Daoist approaches to healing and longevity, diverse views of the body and disease, the emergence of treatments for women, medical construction of sex difference and imagination of female sexuality, the thriving and decline of female healers, the identity of scholar physicians, the transmission of medical knowledge, domestic and cross-regional drug market, healer-patient relations, and new visions of traditional Chinese medicine in modern China.
Taught by: Cheng,H
Course not offered every year
Also Offered As: EALC 642
Activity: Lecture
1.0 Course Unit
EALC 243 Pastoralism & Mobility
"Pastoralism and Mobility" will examine the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class on focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How have Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? What purposes does mobility serve in Inner Asian societies? How have various forms of livestock lease-holding changed and shaped wealth in Inner Asian pastoralist society? How did class differentiation emerge & function in pre-modern pastoralist societies? What happens when pastoralists become farmers? How have modern schemes of social improvement and productivity, especially collectivization and decollectivization, shaped pastoralist lives?

Taught by: Atwood
Course offered fall; odd-numbered years

Activity: Seminar
1.0 Course Unit

EALC 251 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.

For BA Students: Advanced Language Course

Taught by: Chance
Course usually offered in fall term
Also Offered As: EALC 651, JPAN 491
Prerequisite: JPAN 212 or equivalent
Activity: Lecture
1.0 Course Unit

EALC 253 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan’s past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan’s nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an oppressive political ideology linked to the emperor system, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

Taught by: Thomas, J

Activity: Lecture
1.0 Course Unit

EALC 254 War and Literature in Japan: Tales of the Heike
Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan’s first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no prerequisites.

Activity: Seminar
1.0 Course Unit

EALC 256 The Tale of Genji
"Crowning masterpiece of Japanese literature," "the world’s first novel," "fountainhead of Japanese literary and aesthetic culture," "a great soap opera in the vein of Jacqueline Susann." Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu’s work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji’s loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author’s portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adaptors. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale’s many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.

EALC 259 Gender and Sexuality in Japan
If you have ever wondered about the following questions, then this is the right course for you: Is Japan a hyper-feminine nation of smiling geisha and obedient wives? Is it a hyper-masculine nation of samurai and economic warriors? Is it true that Japanese wives control the household? Is it true that Japanese men suffer from over-dependence on their mothers? What do young Japanese women and young men worry about? What does the government think about the future of Japanese women and men? Assuming that expressions of gender and sexuality are deeply influenced by cultural and social factors, and that they also show profound differences regionally and historically, this course examines a variety of texts—historical, biographical, autobiographical, fictional, non-fictional, visual, cinematic, analytical, theoretical—in order to better understand the complexity of any attempts to answer the above questions.

Activity: Lecture
1.0 Course Unit

EALC 260 History of the Book in East Asia
Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we’ll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages.
Hands-on sessions may include paper-making, bookbinding, and printing.
This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.

Course not offered every year
Also Offered As: ARTH 517, EALC 661
Activity: Seminar
1.0 Course Unit

EALC 264 Lawlessness and Violence in Pre-Modern Japan
This course will be an exploration of premodern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for lawbreakers and political losers) and of the non-sanctioned variety (piracy, banditry, warrior and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we shall examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn’t) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.
Taught by: Spafford, D.
Course not offered every year

Activity: Seminar
1.0 Course Unit

EALC 267 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History
This course tackles about a millennium of pre-modern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source’s composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse.

EALC 293 Introduction to Classical Mongolian
In this class students who already know some modern Mongolian in the Cyrillic script will learn how to transfer that knowledge to the reading of first post-classical, and then classical texts written in the vertical or Uyghur-Mongolian script. Topics covered will include the Mongolian alphabetic script, dealing with ambiguous readings, scholarly transcription, vowel harmony and syllable structure, post-classical and classical forms of major declensions, converbs, verbal nouns, and finite verbs, syntax, pronunciation and scribal readings. Readings will be adjusted to interests, but as a rule will include selections from short stories, diaries, chronicles, Buddhist translations, government documents, popular didactic poetry, ritual texts, and traditional narratives. Students will also be introduced to the most important reference works helpful in reading classical and post-classical Mongolian.

1.0 Course Unit

EALC 301 Major Seminar on China
This is a seminar required for all Chinese majors in the Department of East Asian Languages and Civilization. Topic varies year to year.
Taught by: Mair
One-term course offered either term
Prerequisites: EALC001, no language required for undergraduates.
Activity: Seminar
1.0 Course Unit

EALC 302 Major Seminar on Japan
This is a seminar required for all Japanese majors in the Department of East Asian Languages and Civilization. Topic varies year to year.
Course usually offered in fall term
Prerequisites: EALC 002. No language required for undergraduates
Activity: Seminar
1.0 Course Unit

EALC 303 Major Seminar on Korea
This is a seminar required for all Korean majors in the Department of East Asian Languages and Civilization. Topic varies year to year.
Taught by: Park
Course not offered every year
Activity: Seminar
1.0 Course Unit

EALC 442 Topics in World History
One-term course offered either term
Also Offered As: HIST 412
Activity: Seminar
1.0 Course Unit

EALC 501 Chinese History and Civilization
This seminar offers a thematic overview of the academic study of Chinese history from the Neolithic period to the 21st century. Over the course of the semester, students will be introduced to different scholarly approaches to the study of history through a close reading and analysis of the work of leading scholars in the field of Sinology. We will learn about the various subfields in the study of history, such as cultural history, social history, administrative and legal history, intellectual history, history of religion, literary history, history of gender, world history, and historiography, examine their different methodological frameworks and tools, and draw on them in order to problematize and enrich our understanding of Chinese culture. In addition, this seminar will provide incoming students with the relevant tools to produce original graduate-level research on all aspects of Chinese history, society, and culture and present it in a clear and persuasive fashion orally and in written form.
While original-language research for the final project is encouraged, all course materials will be in English.
Course usually offered in fall term
Prerequisites: Course intended for first year MA and PhD students.
Undergraduates need permission.
Activity: Seminar
1.0 Course Unit

EALC 502 Japanese History and Civilization
This seminar introduces students to the graduate-level study of Japan. In addition to getting a broad overview of Japanese culture, students in the course will develop familiarity with major debates in the history of the field of Japanese studies. The course also provides basic training in using primary and secondary sources in Japanese, Japanese bibliographic conventions, and other skills necessary for pursuing advanced research or a teaching career in the field. Open to all graduate students and to undergraduates with permission from the instructor. Familiarity with Japanese language is a plus but is not required.
Taught by: Thomas J
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates need permission from instructor.

EALC 503 Korean History & Civilization
This graduate-level seminar focuses on the political, social, and cultural history of the Korean Peninsula and the vicinity from early times to the contemporary era. Readings will consist of primary and secondary sources, including influential modern studies of Korean history and civilization. All course materials are in English and no knowledge of Korean is presumed.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EALC 504 Introduction to Inner Asian Civilizations
This class is intended for new graduate students and upper-division undergraduates with some prerequisites who wish to get a solid grounding in the study of Inner Asia. The class will introduce Inner Asia as a coherent civilizational network, focusing on: 1) the steppe-imperial tradition; 2) the Tibetan-rite Buddhist commonwealth that developed from the Tibetan and Mongol empires; and 3) the increasing integration of these two Inner Asian civilizational patterns with that of imperial China. There will also be some consideration of the Islamic Turco-Mongolian synthesis that developed in the post-Mongol period. Regionally, the class introduce: 1) core Inner Asia (the Mongolian plateau, the Tarim Basin, the Tibetan plateau, the Manchuria) and 2) the main dynasties of China that formed in the Mongolia and Manchuria (Liao, Jin, Yuan and Qing). There will also be some consideration of historically Inner Asian populations in Hexi (Gansu-Qinghai), and the North China plains and the Shaanxi-Shanxi-Rehe uplands. Chronologically, the class will touch on prehistory and the contemporary period, but will mostly cover the period from the emergence of historical records on the Mongolian plateau and the Tarim basin to roughly 1950. Prehistory and the contemporary period will be give less detailed coverage.
Taught by: Atwood
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Graduate Seminar

EALC 505 East Asian Diplomacy
This course will survey recent scholarship on East Asian diplomacy from the sixteenth century to the present. We will engage several fundamental debates about the relationship between China, Japan, Korea and the outer world and introduce not only orthodox diplomatic analyses but also newer approaches to modern China, Japan and Korea by international and global historians.
Taught by: Dickinson
Course usually offered in fall term
Also Offered As: EALC 105, HIST 395
Activity: Lecture
1.0 Course Unit

EALC 508 SPORTS IN EAST ASIA
This course will examine sports in East Asia from the nineteenth century to the present. Recently, East Asia plays an important role in transforming the global geopolitics of sport. The post-war East Asian Olympic Games-1964 Tokyo Olympics, 1972 Sapporo Winter Olympics, 1988 Seoul Olympics, 1998 Nagano Winter Olympics, and 2008 Beijing Olympics-and the 2002 FIFA World Cup Korea/Japan illustrate the fact that a new global sports order led by East Asia has emerged. East Asia nations will play hosts to other major sporting events, including the 2018 Pyeongchang Winter Olympics, 2020 Tokyo Olympics, and 2022 Beijing Winter Olympics. Chinese, Japanese, and Korean athletes have been highly active in MLB, NBA, English Premier League, and LPGA. The popularity of the various martial arts proves that East Asian sports seem to be everywhere these days. This class will focus on helping students understand how sports have affected and transformed East Asia exploring various issues: imperialism, colonialism, race, class, gender, foreign policy, nationalism, religion, economics, industrialization, tourism, and urbanization. Course contents include lecture, discussions, secondary readings, primary source readings, documentaries, and films.
Course not offered every year
Also Offered As: EALC 108
Activity: Lecture
1.0 Course Unit

EALC 511 East Asian Digital Humanities
"Are you interested in cutting-edge digital methods for the humanities in EastAsia, but don't know where to start? This course covers a wide range of current and emerging digital projects and topics in East Asian studies. Students will engage with digital projects focused on East Asia (encompassing Japan, China, Korea, and Taiwan) as well as research being done on Digital methodologies for the humanities in those areas. Coursework consists of project and research analysis, active discussion, and learning about the implementation of various digital projects. Example topics include text analysis, APIs, network analysis, digital literary studies, and mapping. Note: technical expertise is required but students must have reading knowledge of Chinese, Japanese, or Korean at the high-intermediate or advanced level. Class presentations, discussions, and all course readings will be in English, but midterm and final projects involve reading articles and midterm and final projects involve reading articles and/or critiquing projects ise."
Taught by: Des Jardin
Also Offered As: EALC 111
Prerequisites: Reading knowledge (intermediate or above) of East Asian language required.
Activity: Lecture
1.0 Course Unit

EALC 515 Buddhist Arts of East Asia: Sources, Iconography and Styles
Survey of art and architecture created for Buddhist religious purposes in China, Japan, and to a lesser extent Korea, Tibet, and Central Asia. The course will include a brief overview of Buddhist monuments in South Asia, study of the iconography of Buddhist images in graphic and sculptural media, and analysis of a variety of Buddhist styles in painting, sculpture, and architecture.
Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 115, RELS 175
Prerequisites: Research in an East Asian language required for graduate credit.
Activity: Lecture
1.0 Course Unit

EALC 516 East Asian Gardens
Explore the beauty of gardens (and associated buildings) in Japan, China, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.
Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 116
Activity: Lecture
1.0 Course Unit
EALC 519 East Asian Ceramics
History of ceramic forms, techniques, and aesthetic principles in China, Korea, and Japan from neolithic times to the present century, illustrated by slides and examples, augmented by readings, field trips, and student presentations. Aimed at students with general interest in Japanese and/or ceramics history; particularly but not exclusively those majoring in East Asian Languages & Civs, East Asian Area Studies or History of Art; also art majors interested in ceramics.
Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 131
Activity: Seminar
1.0 Course Unit

EALC 521 Chinese Poetry & Prose: In translation
A wide variety of poetic & prose genres from the earliest times to the 19th century is introduced through English translation. A few selections will also be studied in Chinese characters with romanized transcriptions. There are no prerequisites for this course.
Taught by: Mair
Course usually offered in fall term
Also Offered As: EALC 121
Activity: Lecture
1.0 Course Unit

EALC 522 Chinese Fiction and Drama in Translation
This course explores Romance of Three Kingdoms the most popular classical novel in East Asia and an important source for understanding Chinese culture, politics, history, and military strategy. We propose to read this work not only as a textbook of Chinese literature and culture, but also as a guidebook for career development and risk assessment. Why didn’t Pang Tong have a career as successful as Zhuge Liang? Why did Ma Su volunteer in a project that he is not good at? If Cao Cao, Liu Bei, Sun Quan run for presidency in the U.S., who would you vote for and why? These are some of the questions that we will explore alongside our inquiry into the the historical development of various genres of Chinese fiction. In addition to Romance of Three Kingdoms, this course introduces Sun Tsu’s The Art of War and other classical Chinese novels such as Dream of the Red Chamber and Strange Tales from a Chinese Studio, as well as classical literary criticism such as Cao Pi’s On the Standard of Literature (Dian lun), Lu Ji’s Essays on Literature (Wen lun), and Liu Xie’s The Literary Mind and the Carving of Dragons.
Taught by: Mair
Course usually offered in spring term
Also Offered As: EALC 122
Activity: Lecture
1.0 Course Unit

EALC 526 Seminar in Modern Chinese Literature
Modern Chinese writers are known for their efforts in creating a literary revolution that sought to reformulate the paradigm of Chinese writing. However, these Chinese writers also endeavored to learn from other cultures such as the European and Indian civilizations. For example, Tagore was invited to visit to China in 1923 and was considered a cultural model by many Chinese cultural elites. Hu Shi, a leading Chinese intellectual, wrote The Indianization of China: A Case Study in Cultural Borrowing and India Our Great Teacher, to emphasize the Indian elements in Chinese culture. Other Chinese writers also sought to compare the European with Chinese cultures in different occasions in order to find a path for the rise of modern China. This course explores the ways in which foreign cultures were introduced and how they influence the way Chinese see themselves in their search for a cultural identity free from the constraints of classical tradition. We will read a variety of writers from the Peoples Republic of China, Hong Kong, Taiwan, and Malaysia, in order to examine how modern Chinese literature thrives on cross-cultural elements. All readings will be in English. No prior knowledge is required. Those who are proficient in Chinese are invited to read some of the texts in Chinese.
Taught by: Lin
Course not offered every year
Also Offered As: EALC 126
Activity: Seminar
1.0 Course Unit

EALC 527 Arts of China
A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China’s Bronze Age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting.
One-term course offered either term
Also Offered As: ARTH 214, ARTH 614, EALC 127
Activity: Lecture
1.0 Course Unit

EALC 531 Introduction to Classical Chinese Thought
This course is intended as an introduction to the foundational thinkers of Chinese civilization, who flourished from the fifth to the second centuries B.C. No knowledge of Chinese is presumed, and there are no prerequisites, although EALC 001 (Introduction to Chinese Civilization) is recommended. Graduate students may take this course as EALC 531 and should see the instructor to discuss requirements for graduate credit. (Undergraduates must enroll in the course as EALC 131.)
Taught by: Goldin
Course offered spring; odd-numbered years
Also Offered As: EALC 131
Activity: Lecture
1.0 Course Unit

EALC 525 Cultural Chinas: 20th Century Chinese Literature and Film
This course serves as a thematic introduction to modern Chinese literature and cinema in China, Hong Kong, Taiwan and other transnational Chinese communities in the twentieth century. By discussing a wide range of key literary and filmic texts, this class looks into major issues and discourses in China’s century of modernization: enlightenment and revolution, politics and aesthetics, sentimental education and nationalism, historical trauma and violence, gender and sexuality, social hygiene and body politics, diaspora and displacement, youth sub-culture and urban imagination.
Course usually offered in spring term
Also Offered As: EALC 125
Activity: Lecture
1.0 Course Unit
EALC 536 Chinese Martial Arts
This course offers a thematic introduction to the history of martial arts in China. Throughout the semester, we will explore the social, political, and cultural contexts of martial arts practice, from the classical period to the 21st century. The course will take an interdisciplinary approach to situating martial arts practices in history through an examination of religious, literary, and visual sources, against the backdrop of theoretical approaches from across gender studies, anthropology, and cultural theory. The course will be divided into three units. The first unit will focus on the cultural background that led to the emergence of martial arts practices in the pre-modern period. We will examine classical discourses on the human body and its cultivation and the role of medical practices and religious institutions, such as the Shaolin Temple, in the development of martial arts regimens. In the second unit, we will discuss the spread and popularization of martial arts practices in late imperial and modern Chinese society through a close reading of literary sources, such as wuxia novels and other works of fiction. In addition, we will explore the modernization and re-invention of martial arts in the late 19th and early 20th century, when China attempts to re-establish itself as a modern nation. The third and final unit will be devoted to the global impact of Chinese martial arts in contemporary popular culture. Through a discussion and analysis of Kung Fu films, as well as video games, we will explore the role of martial arts narratives and practices in the construction of gender, cultural, and national identity and the various ways in which they are used by the current Chinese regime to assert its influence in the global arena. No knowledge of Chinese is presumed, and all readings will be available in English on the Canvas website in PDF form. Graduate students may take this course as EALC 536 and should see the instructor to discuss requirements for graduate credit.
Taught by: Tavor
Course not offered every year

Activity: Lecture
1.0 Course Unit

EALC 551 Contemporary Fiction & Film in Japan
Taught by: Kano
Course not offered every year
Also Offered As: CIMS 151, COML 256, EALC 151, GSWS 257
Prerequisites: This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays.
Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujiro, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.
Activity: Lecture
1.0 Course Unit

EALC 552 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words "love" and "loss" imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that divergently in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.
Taught by: Chance
Course usually offered in fall term
Also Offered As: EALC 152, GSWS 152
Prerequisites: Research in an East Asian language required for graduate credit.
Activity: Lecture
1.0 Course Unit

EALC 555 Modern Japanese Literature
This course surveys Japanese literature (novels, short stories, poetry, drama, essays) from 1868 to World War II. The purpose is not only to read some of the most important and interesting literary texts of this period, but also to reflect on the ways we read and study literature, and how we draw connections between literature, self, and society. The reading material will be entirely in English.
Taught by: Kano
Course usually offered in fall term
Also Offered As: EALC 155
Activity: Lecture
1.0 Course Unit

EALC 556 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how "art" and "history" are being defined in the cinematic context. How other directors also took up these issues, and referred to the "big three" is also be discussed.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 290, ARTH 690, CIMS 223, EALC 156
Activity: Lecture
1.0 Course Unit
EALC 557 Arts of Japan
This course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age.
Taught by: Davis
One-term course offered either term
Also Offered As: ARTH 213, ARTH 613, EALC 157
Activity: Lecture
1.0 Course Unit

EALC 559 Topics in Japanese Art
Topic varies. Fall 2018: This course will consider Japanese woodblock prints, illustrated books, and paintings from the seventeenth through the twentieth century. Topics include: the formation of "ukiyo-e" or "the pictures of the floating world" as a genre; the development of the publishing system and its audience; specific artists and their works; the reception of Japanese prints in Europe and America; the modern reinvention of the woodblock print; and others. We will also make extensive use of the collections held in the Kislak Center, the Philadelphia Museum of Art, and in other local collections. Assignments may include: close study of a single work; web page development; research paper; regular participation in discussions.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 515
Activity: Seminar
1.0 Course Unit

EALC 565 Environment, Climate, and Culture in Japan
This course explores how Japanese literature, cinema, and popular culture have engaged with questions of environment, ecology, pollution, and climate change from the wake of the dropping of the atomic bomb on Hiroshima in 1945 to the ongoing Fukushima nuclear power plant disaster in the present. Environmental disasters and the slow violence of their aftermath have had an enormous impact on Japanese culture and the image of the samurai in foreign perceptions of Japan.
Taught by: Poland
Course not offered every year
Also Offered As: EALC 165
Activity: Seminar
1.0 Course Unit

EALC 576 Japan: The Age of the Samurai
This course deals with the samurai in Japanese history and culture and will focus on the period of samurai political dominance from 1185 to 1868, but it will in fact range over the whole of Japanese history from the development of early forms of warfare to the disappearance of the samurai after the Meiji Restoration of the 19th century. The course will conclude with a discussion of the legacy of the samurai in modern Japanese culture and the image of the samurai in foreign perceptions of Japan.
Course not offered every year

EALC 583 Readings in Korean History
Topic varies.
One-term course offered either term
Also Offered As: EALC 183
Activity: Seminar
1.0 Course Unit

EALC 584 Two Koreas: The Politics of Division
In today's world, the inter-Korean border or DMZ (demilitarized zone) is widely regarded as one of the most impermeable and conflictual frontiers. The purpose of this course is to explore the dynamics of its formation between, and impact within, the two Koreas. The course therefore proposes to analyze how the division of the Korean peninsula not only came into being but also how it has shaped the socio-political trajectories of both the North and the South since 1945. The course also aims at introducing students to conceptual frameworks and comparative debates relevant to understanding the Korean case(s) from a social science perspective.
Course not offered every year
Also Offered As: EALC 184
Activity: Lecture
1.0 Course Unit

EALC 592 Arts of Korea
The goal of this course is understanding the development of visual, performing, and literary arts in Korea and the historical, religious, and social contexts in which they flourished. It serves as an introduction to the arts of Korea, with emphasis on painting, sculpture, ceramics, and architecture and additional consideration of dance, drama, poetry, and culinary arts. Covers the whole history of Korea, from prehistoric times to the twenty-first century. Students enrolled in this graduate number are expected to do research in an East Asian language.
Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 192
Activity: Lecture
1.0 Course Unit

EALC 611 Life and Death in Han China
Using wall painting, sculpture, and minor arts as evidence, the course will examine the attitudes toward life and beliefs and death in Han (206 B.C.-A.D.220) China.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: EALC 211
Activity: Seminar
1.0 Course Unit
EALC 616 Chinese Arts Under the Mongols
The Yuan Dynasty (1257-1368), the period of Mongolian rule, was the only time in Chinese history when China was part of a larger empire that spanned the Asian continent. Using architecture, sculpture, painting, and excavated evidence, this course examines the unique results of an international Asian world centered in China.
Taught by: Steinhardt
Course not offered every year
Also Offered As: EALC 216
Activity: Seminar
1.0 Course Unit

EALC 621 First Year Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Taught by: Mair
Course usually offered in fall term
Also Offered As: CHIN 491, EALC 221
Activity: Lecture
1.0 Course Unit

EALC 622 1st Year Classical Chin II
Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Taught by: Mair
Course usually offered in spring term
Also Offered As: CHIN 492, EALC 222
Prerequisite: EALC621
Activity: Lecture
1.0 Course Unit

EALC 623 Language, Script and Society in China
The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumero-Akkadian cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinitic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class.
Taught by: Mair
Course not offered every year
Also Offered As: EALC 223
Activity: Seminar
1.0 Course Unit

EALC 626 East Asian Funerary Arts
Study of tombs and tomb decoration of emperors and officials in China, Korea, and Japan from the pre-Buddhist era through the 19th century.
Taught by: Steinhardt
Course not offered every year
Also Offered As: EALC 226
Activity: Seminar
1.0 Course Unit

EALC 627 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting styles are analyzed, but themes such as landscape and narrative are considered with regard to larger social, cultural, and historical issues. The class will pay particular attention to the construction of the concepts of the "artist" and "art criticism" and their impact on the field into the present.
Visits to study paintings at the University of Pennsylvania Museum and Philadelphia Museum of Art.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: ARTH 217, ARTH 617, EALC 227
Activity: Lecture
1.0 Course Unit

EALC 629 Chinese Architecture
Survey of Chinese buildings and building technology from the formative period in the second millennium BCE through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wutai, imperial palaces in Chang’an and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: EALC 229
Activity: Lecture
1.0 Course Unit

EALC 630 Gender, Religion, and China
This course examines gender in Chinese religious culture from ancient to contemporary times. We will explore topics including the Buddhist accommodation of Chinese family system, Chinese transformation of the bodhisattva Guanyin, female deities in Daoist and popular religious pantheons, writings about religious women, female ghosts and fox spirits in literary imagination and folk tales, and the significance of yin force in Chinese medicine and Daoist alchemy. Through the case of China, we will look at how gender plays critical and constitutive roles in religious traditions, and how religion can be used both to reinforce and to challenge gender norms.
Taught by: Cheng, H
Course not offered every year
Also Offered As: EALC 230, GSWS 234, GSWS 630, RELS 237, RELS 630
Activity: Seminar
1.0 Course Unit
EALC 633 Chinese Aesthetics
This seminar investigates classical Chinese conceptions of art and beauty as exemplified in philosophy, literature, music, painting, calligraphy, and architecture. All readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 233
Activity: Lecture
1.0 Course Unit

EALC 634 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.
Taught by: Wang
Course not offered every year
Also Offered As: EALC 234, RELS 233, RELS 634
Activity: Seminar
1.0 Course Unit

EALC 639 Sex and Society in Ancient China
Ancient Chinese writers considered sexual activity to be an essential component of humanity, and that study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no pre-requisites, and no knowledge of Chinese is presumed.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 239
Activity: Seminar
1.0 Course Unit

EALC 640 Early Chinese History
This seminar covers the span of Chinese history from the Bronze Age to the establishment of the empire in 221 B.C. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.
Taught by: Goldin
Course usually offered in spring term
Also Offered As: EALC 240
Activity: Seminar
1.0 Course Unit

EALC 641 Law in Pre-Modern China
This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty—an interval of over two millennia—and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 241
Activity: Seminar
1.0 Course Unit

EALC 642 Medicine and Healing in China
This course explores Chinese medicine and healing culture, its diversity, and its change over time. We will discuss topics including the establishment of canonical medicine, Daoist approaches to healing and longevity, diverse views of the body and disease, the emergence of treatments for women, medical construction of sex difference and imagination of female sexuality, the thriving and decline of female healers, the identity of scholar physicians, the transmission of medical knowledge, domestic and cross-regional drug market, healer-patient relations, and new visions of traditional Chinese medicine in modern China.

Course not offered every year
Also Offered As: EALC 242
Activity: Lecture
1.0 Course Unit

EALC 643 Pastoralism & Mobility
“Pastoralism and Mobility” will examine the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class on focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How have Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? What purposes does mobility serve in Inner Asian societies? How have various forms of livestock lease-holding changed and shaped wealth in Inner Asian pastoralist society? How did class differentiation emerge & function in pre-modern pastoralist societies? What happens when pastoralists become farmers? How have modern schemes of social improvement and productivity, especially collectivization and decollectivization, shaped pastoralist lives?
Taught by: Atwood
Course offered fall; odd-numbered years
Also Offered As: EALC 243
Activity: Seminar
1.0 Course Unit
EALC 651 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.
For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: EALC 251, JPAN 491
Prerequisite: JPAN 212 or equivalent
Activity: Lecture
1.0 Course Unit

EALC 653 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan's past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan's nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an oppressive political ideology linked to the emperor system, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

Also Offered As: EALC 253, RELS 271
Activity: Lecture
1.0 Course Unit

EALC 654 Tales of the Heike
Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan's first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no prerequisites.
Taught by: Chance, L
Course not offered every year
Also Offered As: EALC 254
Prerequisites: Research in an East Asian language required for graduate credit.
Activity: Seminar
1.0 Course Unit

EALC 655 Japanese Theater
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.
Taught by: Kano
One-term course offered either term
Also Offered As: COML 385, EALC 255, FOLK 485, THAR 485
Activity: Seminar
1.0 Course Unit

EALC 656 The Tale of Genji
"Crowning masterpiece of Japanese literature," "the world's first novel," "fountainhead of Japanese literary and aesthetic culture," "a great soap opera in the vein of Jacqueline Susann." Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu's work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji's loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author's portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adaptors. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale's many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.

Prerequisites: Research in an East Asian language required for graduate credit.
Activity: Seminar
1.0 Course Unit

EALC 657 Asian Religions in the Global Imagination
This seminar critically examines the missionary impulses, colonial exploit, and translation endeavors that contributed to the rise of Asian studies and the emergence of the scholarly notion of "Asian religions." It shows the crucial roles played by Asian agents and their European counterparts in the formation of modern conceptions of "religion"; it also engages reflexive questions regarding theory, method, and the geopolitical underpinnings of both Asian studies and the non-confessional academic study of religion. Students will conduct sustained research projects on the country or region of their choice.

EALC 661 History of the Book in East Asia
Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we'll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language. Taught by: Davis, Chance
Course not offered every year
Also Offered As: ARTH 517, EALC 260
Activity: Seminar
1.0 Course Unit

EALC 664 Lawlessness and Violence in Pre-Modern Japan
This course will be an exploration of premodern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for law-breakers and political losers) and of the non-sanctioned variety (piracy, banditry, warrior and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we will examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn’t) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.
Course not offered every year
Also Offered As: EALC 264
Activity: Seminar
1.0 Course Unit

EALC 670 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History
This course tackles about a millennium of pre-modern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source’s composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse.

Activity: Seminar
1.0 Course Unit

EALC 693 Introduction to Classical Mongolian
In this class students who already know some modern Mongolian in the Cyrillic script will learn how to transfer that knowledge to the reading of first post-classical, and then classical texts written in the vertical or Uyghur-Mongolian script. Topics covered will include the Mongolian alphabetic script, dealing with ambiguous readings, scholarly transcription, vowel harmony and syllable structure, post-classical and classical forms of major declensions, convers, verbal nouns, and finite verbs, syntax, pronunciation and scribal readings. Readings will be adjusted to interests, but as a rule will include selections from short stories, diaries, chronicles, Buddhist translations, government documents, popular didactic poetry, ritual texts, and traditional narratives. Students will also be introduced to the most important reference works helpful in reading classical and post-classical Mongolian.
Taught by: Tseveendulam
Course usually offered in fall term
Also Offered As: EALC 293
Prerequisite: One year of modern Mongolia or equivalent
Activity: Seminar
1.0 Course Unit
EALC 711 Theory and East Asia
"Theory" can be exciting and seductive to some scholars, but intimidating or pretentious to others. Unfortunately, this difference in feeling about theoretical scholarship and discussion has a tendency to produce a divide in academia between those who "do theory" and those who do not. This graduate seminar pursues the question of how theory can be engaged in the context of East Asian cultural studies, with the goal of collectively working through texts to understand how theoretical reflection opens up possibilities for productive conversations across disciplinary boundaries. Many critiques have been made of the way "traveling theory" serves as a Euro-American universal applied to the "raw material" of East Asian texts, or a transdisciplinary common language in the Humanities and Social Sciences. Instead, we will take such critiques as a starting point to pragmatically and creatively explore the intersections and interactions of "theory" and "East Asia," emphasizing the archival, historical, political, and institutional contexts that motivate theorization. In that spirit, special attention will be given to discussing what problems we find in our own work that require theoretical consideration, and how such considerations might contribute to, challenge, or transform theory originating outside of East Asia. Readings will primarily be in English, but may also include Japanese, Chinese, or Korean depending on student interest and language abilities. Taught by: Poland

EALC 725 Topics in East Asian Art
Seminar in East Asian Art: High-level, research-oriented seminar whose subject changes. Students must be fluent readers of at least one East Asian language.
Course not offered every year
Prerequisite: Reading knowledge of Chinese & Japanese
Activity: Seminar
1.0 Course Unit

EALC 731 Tang-Song Religious and Medical Texts
This seminar aims at developing the skill in reading religious and medical texts of a range of different genres from the Tang-Song period, including treatises in medical theory, no sological texts, recipe compilations, material medical, macrobiotic texts, Buddhist and Daoist meditation and ritual instructions, as well as case histories in anecdotal forms. There are a variety of topics we can choose to focus on the studying those texts, and the choice will be made on the students' research interests. Each week we will look at one type of texts, consider its edition, textual history, chapter organization and genre (sometimes with background readings), read line-by-line a sample text assigned in advance, as well as sight-read short samples that students bring to class. At least one year Classical Chinese is required.
Taught by: Cheng, H
Course not offered every year
Prerequisites: At least one year Classical Chinese is required.
Activity: Seminar
1.0 Course Unit

EALC 733 Song Dynasty Texts
The goal of this course is to gain a practical ability in doing research concerning the Song dynasty by utilizing Chinese primary sources. Each session we will take a type of source, look at examples of it in the library, consider indexes and other reference aids, consider historiographical uses and limitations, and do some communal reading of a sample text distributed in advance, as well as sight-reading of short samples students bring to class, prepared to translate for the class. We will cover sources including standard histories (Song shi, Liao shi, Jin shi), narrative history (Xu zizhi tongjian changbian), biographical accounts (epitaphs, index of Song biographies), diaries, letters, inscriptions, anecdotes, regional histories/gazetteers, and government documents (Song hui yao).
Course not offered every year
Prerequisite: One year Classical Chinese
Activity: Seminar
1.0 Course Unit

EALC 738 Religion & Ethnicity in Inner Asia
"Religion and Ethnicity in Inner Asia" will examine these two phenomena and their interaction in Inner Asia from earliest times to the present. The class will cover Mongolia, Tibet, Kazakhstan, and Turkic and Mongolian peoples of Russia and China. Religions addressed primarily include Buddhism, Islam, shamanism, and secularism. Why "ethnicity and religion"? In practice the scholarly research and literature on these two topics in Inner Asia have been closely related. In addition to theoretical works on ethnicity, nationalism, religion and identity, the class will focus on issues such as ethnicity and religious conversions, place-based ethnic and religious identities, ethnicity and the Chinese and Russian states, nationalism, nationality policy, reformist and atheist secularisms, revivalist and apocalyptic movements, and the intersection of ethnicity, race, sexuality, and international networks.
Taught by: Atwood
Activity: Seminar
1.0 Course Unit
EALC 740 Sinological Methods
This seminar is designed to acquaint graduate students with the basic methods and resources of Sino logical research. The course will begin with an overview of essential reference works and aids to study, such as dictionaries and concordances, and continue with a survey of the major primary sources for the study of traditional Chinese history. Students are required to demonstrate the use of the methods learned in the course in a research paper, to be presented to the class in the form of a brief lecture at the end of the semester. Only graduate students may enroll in this course. The prerequisites are reading knowledge of modern Chinese and two years of the classical language. Familiarity with Japanese, though not required, would prove helpful.
Taught by: Goldin
Course not offered every year
Activity: Seminar
1.0 Course Unit

EALC 745 Topics Song Dynasty Hist
"This seminar will introduce graduate students to current scholarship on the Song dynasty (960-1276) by surveying both classic and recent work in the field. Students will gain a foundation in how historians have interpreted the Song period and learn the major debates within the field. Readings will be principally in English, and no background in Chinese studies is required." This seminar will introduce graduate students to current scholarship on the Song dynasty (960-1276) by surveying both classic and recent work in the field. Students will gain a foundation in how historians have interpreted the Song period and learn the major debates within the field. Notes: Requires Japanese Language

EALC 751 Topics in Early Modern Japanese History
Topic varies year to year for this seminar.
Taught by: Spafford
Course not offered every year
Activity: Seminar
1.0 Course Unit

EALC 755 Literary Criticism and Theory in Japanese Literature
While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan's position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese.
Taught by: Kano
Course not offered every year
Also Offered As: COML 685
Activity: Seminar
1.0 Course Unit

EALC 760 Japanese Religions
A broad survey of Japanese religions from ancient times to the present. Topics include kami worship, Buddhism, Shinto, Shugendo, Onmyodo,"new religions", and Japanese variants of Christianity and Islam. Students will make weekly presentations on reading material in class and will have two major written assignments. This course serves as preparation for a comprehensive exam in Japanese religions or for dissertation research on some aspect of Japanese religions.
Taught by: Thomas,J
Course not offered every year
Activity: Seminar

EALC 765 Japanese Language
Prerequisite: Prior permission of instructor. This course is a review of basic elements of the Japanese language, focusing on reading, writing, and speaking skills. Taught by: Goldin
Course not offered every year
Activity: Seminar
1.0 Course Unit
EALC 771 Current Japanology
Major trends in scholarship as reflected in important recent publications, especially formative books and periodical literatures. The trajectory within certain disciplines as well as the interaction among them will be critically evaluated in terms of gains and losses. Implications of these theses in the planning of graduate and postgraduate research.
Course not offered every year
Also Offered As: GSWS 771
Prerequisite: Knowledge of reading Japanese
Activity: Lecture
1.0 Course Unit

EALC 777 Readings in Premodern Japanese History: War & Peace, 1000-1850
This seminar is an introduction to the most recent historiography on premodern Japan, with a special attention to work focused on the medieval and early modern periods (twelfth through nineteenth centuries). The course will range broadly from religious history to social history, from new takes on biography and material culture to new approaches to think of Japan’s relation to the other, within the archipelago and beyond. Each week will feature a monograph published in the last decade or so, alone or (when possible) in conversation with earlier pieces on similar subjects. Students will be expected to take turns presenting on readings, to write three short book reviews during the course of the semester and a longer seminar paper at the end of the semester (to be submitted by 12/15). The short papers should be handed in no more than three weeks after the book was discussed in class.
Taught by: Spafford

East European (EEUR)

EEUR 009 RUSSIA AND EURASIA: HISTORIES, CULTURES, SOCIETIES
This course is designed as a broad introduction to the study of Russia and Eurasia that will offer students a multi-disciplinary overview of the cultures, histories and societies of this large and diverse region of the world. It is organized in units that illustrate the approaches of various disciplines to the study of the region, including history, literary studies, cinema studies, art history, and social scientific inquiry. At the conclusion of the course, students will be acquainted with these various disciplinary frameworks and the differences between them, with the modes of analysis and writing that pertain to them, and with fundamental knowledge of the region.
Taught by: Platt/Staff
Course usually offered in fall term
Also Offered As: RUSS 010
Activity: Lecture
1.0 Course Unit

EEUR 010 Central and Eastern Europe: Cultures, Histories, Societies
The reappearance of the concept of Central and Eastern Europe is one of the most fascinating results of the collapse of the Soviet empire. The course will provide an introduction into the study of this region - its cultures, histories, and societies - from the foundation of the Holy Roman Empire to the enlargement of the European Union. Students are encouraged to delve deeper into particular countries, disciplines, and sub-regions, such as Central Europe, Eastern Europe, and the Balkans, through an individual research paper and class presentations.
Taught by: Ghodsee
Course usually offered in spring term
Also Offered As: COML 010, RUSS 009
Activity: Seminar
1.0 Course Unit
Notes: This course is one of two required core courses for the Russian and East European Studies (REES) Major.

EEUR 026 Behind the Iron Curtain
This first-year seminar provides an introduction to the histories, cultures, and societies of Central and Eastern Europe, including Poland, the Czech Republic, Slovakia, Hungary, Romania, Bulgaria, Albania, and the successor states of Yugoslavia. Through a selection of articles and essays written by anthropologists and sociologists and based on their extended fieldwork in the region, students will explore both the ethnographic method and the experience of everyday life during and after the communist era. Topics will include: popular music under socialism, food and wine, environmental concerns, the status of Muslim minorities, socialist aesthetics, public memory and cultures of commemoration, privatization, advertising, women’s rights, gender and sexuality, emergent nationalisms, and the rise of income inequality and homelessness. All readings and assignments in English.
Taught by: Ghodsee
Course not offered every year
Also Offered As: ANTH 026, RUSS 026
Activity: Seminar
1.0 Course Unit
EEUR 110 Czech Through Film
This course has two separate but related components: a series of Czech films, shown with subtitles and open to the entire University of Pennsylvania community, and a Czech language class which relies on the films for content. Each film screening will be preceded by introductory remarks and followed by a discussion, with optional reading material made available in advance. In this way, the film series can but need not also be offered as a for-credit course, cross-listed through REES and Cinema and Media Studies. The films will be sequenced chronologically through Czech history, as opposed to film history, so that the series will double as a survey of Czech history. For example, we will begin with films set in the medieval period, such as Marketa Lazarova (dir. Frantisek Vlacil, 1967) and Cisaruv pekar-Pekaruv cisar (Emperor's Baker-Baker's Emperor, dir. Martin Fric, 1955). Eventually we will progress to recent films that deal with the current moment. Classic and contemporary films will be intermingled to simultaneously present a variety of important historical eras and cinematic techniques. Concurrently, students enrolled in the language course will learn basic Czech using custom-made materials drawn from the films. As their vocabulary and grasp of grammatical concepts increases, we will be able to work with longer and more complex sections of the film-texts. The films will provide the material for listening and reading exercises, and the students' oral and written work will be anchored by their responses to the films. We will advance from picking out simple statements to analyzing dialogue and identifying irony in film and composition, developing skills of intercultural communication and competence. By the end of the course, students will be able to read about Czech cinema using authentic materials, and discuss the films' aesthetic, historical and political importance.
Taught by: Weil
Activity: Lecture
1.0 Course Unit

EEUR 119 Prague: The Making of a European Nation
Even though such “supercities” as New York, Los Angeles, Chicago, Washington, Boston, and San Francisco claim a special place in the minds and hearts of Americans, no American city plays as crucial a role in the formation of national identity among Americans as Prague does among the Czechs. One may even argue that the formation of a national identity associated with a nation's urban center is an European phenomenon. The focus of the proposed course is Prague, the capital of the Czech Republic and the geographical center of Europe. From the 14th century, when it became a seat of the Holy Roman Emperor, to the Hussite Revolution; from the 19th-century national revival and the birth of the independent Czechoslovakia in 1918, to the “Prague Offensive,” the last major operation of the Soviet Army in World War II and the re-appearance of the Soviet tanks after the “Prague Spring” in 1968, to the “Velvet” Revolution in 1989, and on to the present day as an EU member, Prague has been the site of major European developments and is where the Czech national identity was forged. Today a popular tourist destination with a uniquely preserved historical center that is part of the UNESCO World Heritage List, Prague combines national character with an increasingly cosmopolitan flavor. Focusing on what makes Prague a national capital, we will note how the "national" negotiates its place with the "global." As a cultural hub and political center, Prague is the repository of a cultural collective memory and of historical and emotional records. It thus presents an excellent case study of how a national identity could be formed around a single urban center. The study of the many layers of Prague’s urban landscape allows us to observe how history is built into the physical environment, while the analysis of literary and artistic production reveals how the city has become perceived as a national shrine, embodied in word and image. Students will read the “Prague text” as humanists, anthropologists, and historians. They will learn to apply methods of literary, cultural, and historical analyses, and will ask questions of what it means to be a Czech, a Central European, and even, perhaps, an American. The travel component will further one of the key goals of this seminar: to develop cultural knowledge and sensitivity together with the appreciation of socio-cultural differences.
Taught by: Verkholantsev
Course not offered every year
Also Offered As: COML 122
Activity: Seminar
1.0 Course Unit
Notes: Application required through Penn Global: https://global.upenn.edu/pennabroad/ugs

EEUR 121 Elementary Hungarian I
The elementary Hungarian I course focuses on providing reading, writing, listening and reading-comprehension skills on basic level Hungarian. Interactive class activities and authentic Hungarian material will enable students to develop language skills so they could talk about themselves and their families, discuss every day and weekend routines, express likes and dislikes, converse about school and family activities, and get acquainted with Hungarian holidays and cultural traditions.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.
EEUR 122 Elementary Hungarian II
Continuation of EEUR121. The second semester of elementary Hungarian course continues on providing functional language competency in basic grammar, vocabulary, comprehension, reading, writing and speaking in Hungarian. Students will continue to learn communicating in everyday life situations as well as in organizing a trip to Hungary, staying in a hotel, ordering meals, buying goods, and participating in cultural activities by using authentic Hungarian online resources and interactive class activities.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Prerequisite: EEUR 121 or a placement test
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

EEUR 123 Intermediate Hungarian I
The Intermediate Hungarian I course builds on and continues the course material in Elementary Hungarian I-II. Course activities, authentic audio and video material along with Hungarian online resources will enable students to further develop their reading, writing, listening comprehension and conversational skills. Students will practice their skills by discussing and writing about their interests, student lives, travel and cultural experiences, life on campus as well as learning about Hungarian seasonal traditions, cultural events, and Hungarian student life.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Prerequisite: EEUR 121-122 or a placement test
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

EEUR 124 Intermediate Hungarian II
The intermediate Hungarian II course continues EEUR123. Class documents and activities enable students to develop functional intermediate Hungarian competency by exploring Hungary and its culture, reading authentic online news sources, practicing listening and comprehension skills via video and audio material, researching cultural events and traditions, and exploring Hungarians' everyday lives. At the end of the semester, students will be able to participate and pass their Oral Competency Exit Interview on intermediate level and discuss topics, such as student life, family, friends, academic and student life activities/interests, travel, shopping, and cultural events.
For BA Students: Last Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Prerequisite: EEUR 121-123 or a placement test
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

EEUR 135 Cold War: Global History
The Cold War was more than simply a military confrontation between the United States and the Soviet Union; it was the frame within which the entire world developed (for better or worse) for nearly five decades. This course will examine the cold War as a global phenomenon, covering not only the military and diplomatic history of the period, but also examining the social and cultural impact of the superpower confrontation. We will cover the origins of the conflict, the interplay between periods of tension and detente, the relative significance of disagreements within the opposing blocs, and the relationship between the "center" of the conflict in the North Atlantic/European area and the global "periphery".

EEUR 152 Russia and Eastern Europe in International Affairs
Russia and the European Union (EU) are engaged in a battle for influence in Eastern Europe. EU foreign policy towards its Eastern neighbors is based on economic integration and the carrot of membership. With the application of this powerful incentive, Central and Southeastern European countries such as Poland, Hungary, the Czech Republic, and Croatia have progressed rapidly towards integration with the EU (and NATO). Yet, given Russians opposition to the further enlargement, membership is off the table for the large semi-Western powers such as Russia itself and Turkey and the smaller countries inhabiting an emerging buffer zone between Russia and the EU, such as Georgia, Ukraine, Azerbaijan, Moldova, and Belarus. These in-between countries find themselves subject to intense competition for influence between Eastern and Western powers. In this context, EU countries must balance their energy dependence on Russia and need for new markets and geopolitical stability with concern for human rights, democratic governance, and self-determination. What are the trade-offs implicit in the foreign policies of Russia, EU member states, and Eastern Europe? What are the best policy approaches? What are the main opportunities and obstacles?

Taught by: Orenstein
Course not offered every year
Also Offered As: PSCI 267, RUSS 123
Activity: Lecture
1.0 Course Unit

EEUR 153 Communism
The rise and fall of Communism dominated the history of the short twentieth century from the Russian revolution of 1917 to the collapse of the Soviet Union in 1991. As a system of government, Communism is more or less dead, but its utopian ideals of liberation from exploitation and want live on. Communism remains the one political-economic system that presented, for a time, an alternative to global capitalism. In this course, students will gain an introduction to socialist and Communist political thought and explore Communist political and economic regimes their successes and failures, critics and dissidents, efforts at reform, and causes of collapse. We will learn about the remnants of Communism in China, North Korea, and Cuba and efforts of contemporary theorists to imagine a future for Communism.

EEUR 159 Population and Public Health in Eastern Europe
Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism dismantled welfare states at the exact moment when health services were most needed, leaving charities and nongovernmental organization to try to fill in the gaps. Through a combination of readings from the fields of epidemiology, demography, and medical anthropology, this course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.
Taught by: GHODSEE

Activity: Lecture
1.0 Course Unit

EEUR 160 Sex and Socialism
This seminar examines classic and current scholarship and literature on gender and sexuality in contemporary Eastern Europe, and examines the dialogue and interchange of ideas between East and West. Although the scholarly and creative works will primarily investigate the changing status of women during the last three decades, the course will also look at changing constructions of masculinity and LGBT movements and communities in the former communist bloc. Topics will include: the woman question before 1989; gender and emerging nationalisms; visual representations in television and film; social movements; work; romance and intimacy; spirituality; and investigations into the constructed concepts of "freedom" and "human rights."
Taught by: Ghodsee
Course not offered every year
Also Offered As: ANTH 160, EEUR 560, GSWS 160, RUSS 160
Activity: Lecture

Activity: Seminar
1.0 Course Unit

EEUR 164 Russian and East European Film from the October Revolution to World War II
This course presents the Russian contribution to world cinema before WWII - nationalization of the film industry in post revolutionary Russia, the creation of institutions of higher education in filmmaking, film theory, experimentation with the cinematic language, and the social and political reflex of cinema. Major themes and issues involve: the invention of montage, Kuleshov effect, the means of visual propaganda and the cinematic component to the communist cultural revolutions, party ideology and practices of social-engineering, cinematic response to the emergence of the totalitarian state. Great filmmaker and theorist in discussion include Vertov, Kuleshov, Eisenstein, Pudovkin, Medvedkin and others.
Taught by: Todorov
Also Offered As: CIMS 164, RUSS 164
Activity: Lecture
1.0 Course Unit

EEUR 165 Russian and East European Film after World War II
This course examines the Russian and East European contribution to world cinema after WWII - Stalinist aesthetics and desalination, WWII in film, the installation of totalitarianism in Eastern Europe and the Cold War in film, the fall of the Berlin Wall, the collapse of the Soviet Union and the post-soviet condition, cinematic representations of Yugoslavia’s violent breakup; the new Romanian waive. Major filmmakers in discussion include Kalatozov, Tarkovsky, Wajda, Polanski, Forman, Mentzel, Sabo, Kusturitsa, Konchalovsky, Mikhalkov and others.
Taught by: Todorov
Also Offered As: CIMS 165, RUSS 165
Activity: Lecture
1.0 Course Unit

EEUR 171 The Socialist City
This course will explore the ideology and politics of the socialist city in the Soviet Union, Eastern Europe, and the Second World. We will focus on how design professionals, politicians, and residents realized utopian socialist values in the face of national design traditions, local politics, and limited resources. Beginning with the Soviet case, the course will consider how planners and architects addressed modernization, multi-family housing, and neighborhood units in new city plans. We will consider capitals, like Moscow, as well as less well-known regional centers that had strong local identities, such as Tashkent, Belgrade, and Prague. We will examine the state’s use of public spaces for commemorations and preservationist’s reinterpretation of existing historic sites. In addition, we will consider how everyday residents experienced the socialist city, such as multi-family housing, shopping centers, and subway systems. We will address how citizens circumvented official state channels to obtain state housing and illegally build homes for themselves, sometimes in a folk style. The course will center on Soviet and Eastern European cities, but also address socialist cities in Cuba and Africa whose design was influenced by transnational exchanges. Most broadly, this course explores the question, was the socialist city? How did its planners, architects, and politicians understand it, and what did they intend to construct? And, what resulted? In the past fifteen years, North American scholars have begun to take seriously the study of the socialist city, and this course draws on the emerging scholarship on this exciting, cross-disciplinary topic. How do scholars understand the socialist city today? We will examine the shared legacies that socialist cities across East Europe shared with their Western European counterparts, as well as the particularities of design that have sparked North American scholars’ debates on what distinguished the socialist city from ones that emerged in a capitalist context. In our discussions, we will seek to understand how socialist design professionals understood their work and the emerging cities at the time, as well as how North American scholars view the socialist city today. Disciplinarily, the focus of the call will fall at the intersection of architectural history and politics.

Course not offered every year
Also Offered As: RUSS 171, URBS 171
Activity: Seminar
1.0 Course Unit
**EEUR 211 Literature of Dissent: Art as Protest in 20th-Century Poland and Czechoslovakia**

Eastern and Central Europe was the site of monumental political changes in the twentieth century, including the disillusion of monarchical empires in the First World War and the expansion of Soviet-style communism. At every point, artists have taken part in political debates, sometimes advancing radical agendas, sometimes galvanizing movements, sometimes simply "shouting into the void" to register their own dissatisfaction. In this course, we will consider texts - including literature, political philosophy and film - that pushed back against the dominant political norms. In so doing, we will investigate Aesopian language, the mechanics of censorship, the repercussions of dissent, performativity, samizdat and the rise of an alternative culture. We will contextualize our readings of literature with the sociological and historical work of Benedict Anderson, Tony Judt, Jonathan Bolton, Shana Penn, Alexei Yurchak and the series Discourses of Collective Identity in Central and Southeast Europe. As well as becoming familiar with major thinkers and movements in Eastern and Central Europe, students will develop a sense of art as a tool of political protest.

1.0 Course Unit

**EEUR 250 Europe: From an Idea to the Union**

Employing the methods from the humanities and social sciences this interdisciplinary seminar will explore the variety of factors that contributed to dividing and uniting Europe. The continent will be considered as a geographical and cultural space and the construction of its identity will be examined through several historical periods from the Middle Ages to Modernism—comprising the rich layer of pan-European civilization across the ethnic or national borders. Finally, the structure of the European Union will be scrutinized including its institutions, decision-making mechanism, monetary union, collective security, the Grexit, and Europe’s changing relationship with Russia. Participants will be encouraged to select a particular topic in European studies and research it through assigned readings, film, literature, and other media.  

Taught by: Steiner

**EEUR 265 Yiddish in Eastern Europe**

This course presents the major trends in Yiddish literature and culture in Eastern Europe from the mid-19th century through World War II. Divided into four sections - "The Shtetl," "Religious vs. Secular Jews," "Language and Culture," and "Confronting Destruction" - this course will examine how Jews expressed the central aspects of their experience in Eastern Europe through history, literature (fiction, poetry, drama, memoir), film, and song.  

Taught by: Hellerstein  
Activity: Lecture  
1.0 Course Unit

**EEUR 430 Nationalism and Ethnic Conflict in Film**

This course studies the cinematic representation of civil wars, ethnic conflicts, nationalistic doctrines, and genocidal policies. The focus is on the violent developments that took place in Russia and on the Balkans after the collapse of the Soviet Bloc and were conditioned by the new geopolitical dynamics that the fall of communism had already created. We study media broadcasts, documentaries, feature films representing the Eastern, as well as the Western perspective. The films include masterpieces such as "Time of the Gypsies", "Underground", "Prisoner of the Mountains", "Before the Rain", "Behind Enemy Lines", and others.

**EEUR 616 Approaches to Literary Texts**

Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields. Master classes are taught by Kevin Brownlee, Linda Chance, Eva del Soldato, Huda Fakhreddine, Scott Francis, Nili Gold, Bridget Murnghan, Deven Patel, Kevin Platt, Michael Solomon, Emily Steiner, Julia Verkholantsev, and Emily Wilson.  

Course not offered every year

1.0 Course Unit
Economics (ECON)

ECON 001 Introduction to Micro Economics
Introduction to economic analysis and its application. Theory of supply and demand, costs and revenues of the firm under perfect competition, monopoly and oligopoly, pricing of factors of production, income distribution, and theory of international trade. Econ 1 deals primarily with microeconomics.
For BA Students: Society Sector
One-term course offered either term
Activity: Recitation
1.0 Course Unit

ECON 002 Introductory Economics: Macro
Introduction to economic analysis and its application. An examination of a market economy to provide an understanding of how the size and composition of national output are determined. Elements of monetary and fiscal policy, international trade, economic development, and comparative economic systems.
For BA Students: Society Sector
One-term course offered either term
Prerequisite: ECON 001
Activity: Recitation
1.0 Course Unit

ECON 010 Introduction to Economics for Business
The first part of the course covers basic microeconomic concepts such as opportunity cost, comparative advantage, supply and demand, importance of costs and revenues under perfect competition vs. monopoly, externalities and public goods. The second part of the course introduces macroeconomic data, two models of the labor market, a model of the aggregate household, and the standard AD-AS model. The course concludes with an introduction to fiscal policy, banking, and the role of the Central Bank.
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit
Notes: For Wharton students only

ECON 013 Strategic Reasoning
This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and movies. Some interactive games will be played in class. There will be little formal theory, and the only prerequisites are some high-school algebra and having taken ECON 001.
However, general numeracy (facility interpreting and doing numerical graphs, tables, and arithmetic calculations) is very important. This course will also be accepted by the Economics department as an Econ course, to be counted toward the minor in Economics (or as an Econ elective).
One-term course offered either term
Also Offered As: PPE 311
Prerequisites: ECON 001, some high school algebra
Activity: Lecture
1.0 Course Unit
Notes: This course may NOT be taken concurrently or after ECON 212.

ECON 014 American Capitalism
A broad overview of American economic history will be provided by focusing on the following topics: colonial trade patterns, the growth of the market economy, the political economy of slavery, industrial expansion, segmentation in the labor force and changes in work, technological and organizational innovations, business cycles, the rise of the corporate welfare state, the growth of monopoly capitalism, and current economic problems in historical perspective.
For BA Students: Society Sector
One-term course offered either term
Also Offered As: HIST 161
Prerequisites: ECON 001, 002 or ECON 010
Activity: Recitation
1.0 Course Unit

ECON 024 Development Economics
This course presents an overview of the field of development economics. The general aim is to show how economic analysis has been applied to issues related to developing countries. Among the topics covered are: income distribution, poverty, health, population growth, migration, growth, and the rural economy.
One-term course offered either term
Prerequisite: ECON 001 or ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Students may NOT take ECON 024 and 261

ECON 028 Financial Meltdown, Past and Present
Economic history is increasingly recognized as a crucial source of policy advice and is invoked with growing frequency in public debates. In particular, the subprime crisis in 2008 and after has generated a demand for "historical perspective" that would improve the understanding of the causes of financial turmoil and facilitate the prevention of comparable catastrophes. This course begins with a review of the principal features of the subprime crisis of 2008 and asks, so to speak, "how did we get there?" It answers by providing historical insights that shed light on crucial aspects of financial disasters.
For BA Students: Humanities and Social Science S
Taught by: Flandreau
One-term course offered either term
Also Offered As: HIST 131
Prerequisites: ECON 001, 002, or ECON 010
Activity: Lecture
1.0 Course Unit

ECON 030 Public Policy Analysis
This course provides an introduction to the economic method for analyzing public policy questions. It develops the implications of this method for the role of government in a market economy and for the analysis of specific public projects.
One-term course offered either term
Prerequisites: ECON 001, 002 or ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 030 and 231.
ECON 032 Political Economy
This course examines the effects of strategic behavior on political outcomes and government policies. Topics and applications may include voting behavior, candidate competition, voting systems, social choice and welfare, policy divergence, redistributive policies and theories of political transitions.
One-term course offered either term
Prerequisites: ECON 001, 002, or ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit will NOT be given for ECON 032 and ECON 232.

ECON 033 Labor Economics
The course begins with an extensive discussion of models of labor market demand and supply. The rest of the course addresses a variety of related topics including the school-to-work transition, job training, employee benefits, the role of labor unions, discrimination, workforce diversity, poverty, and public policy.
Course usually offered in spring term
Prerequisite: ECON 001 or ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 033 and ECON 233.

ECON 035 Industrial Organization
Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, moral hazard and adverse selection. These theories are then applied to the study of various industries, antitrust cases, and regulatory issues.
One-term course offered either term
Prerequisite: ECON 001 or ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 035 and ECON 235.

ECON 036 Law and Economics
The relationship of economic principles to law and the use of economic analysis to study legal problems. Topics will include: property rights and intellectual property; analysis of antitrust and economic analysis of legal decision making.
One-term course offered either term
Also Offered As: PPE 036
Prerequisite: ECON 001 or ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 036 and ECON 234.

ECON 039 Economics and Financing of Health Care Delivery
The course provides an application of economic models to demand, supply, and their interaction in the medical economy. Influences on demand, especially health status, insurance coverage, and income will be analyzed. Physician decisions on the pricing and form of their own services, and on the advice they offer about other services, will be considered. Competition in medical care markets, especially for hospital services, will be studied. Special emphasis will be placed on government as demander of medical care services. Changes in Medicare and regulation of managed care are among the public policy issues to be addressed.
Taught by: Candon
One-term course offered either term
Also Offered As: HCMG 202
Prerequisites: ECON 001 or ECON 010 or permission of instructor.
Students who take HCMG 202 may not also take HCMG 352 for further credit.
Activity: Lecture
1.0 Course Unit

ECON 050 International Economics
Introduction to the theory of international trade and international monetary economics. The theoretical background is used as a basis for discussion of policy issues. Patterns of international trade and production; gains from trade; tariffs, and impediments to trade; foreign exchange markets, balance of payments, capital flows, financial crises, coordination of monetary and fiscal policy in a global economy.
One-term course offered either term
Prerequisites: ECON 001, 002, or ECON 010
Activity: Lecture
1.0 Course Unit
Notes: ECON 050 is a one-semester course in international economics. Students wishing to study the subject in greater depth should take instead the two-semester sequence ECON 251, 252.

ECON 101 Intermediate Microeconomics
Theories of consumer behavior, demand, production, costs, the firm in various market contexts, factor employment, factor incomes, elementary general equilibrium, and welfare.
One-term course offered either term
Also Offered As: MATH 104, MATH 114 or MATH 115
Prerequisites: ECON 001, 002, or ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Note: Incoming freshmen with AP or transfer credit for ECON 001 and ECON 002, MUST complete MATH 104, MATH 114 or MATH 115 before enrolling in ECON 101. Upper classmen must have at least a B+ in MATH 104 to take ECON 101 and MATH 114 or MATH 115 concurrently.

ECON 102 Intermediate Macroeconomics
Facts and theories about the determination of per capita income and its differences across countries and across time. The study of economic fluctuations in output and employment. The role of government in influences these aggregate variables: monetary and fiscal policy.
One-term course offered either term
Prerequisites: ECON 001, 002, or ECON 010
Activity: Lecture
1.0 Course Unit
Notes: FNCE 101 does not satisfy any of the Economics department requirements. Therefore, students are required to take ECON 102.
ECON 103 Statistics for Economists
The course focuses on elementary probability and inferential statistical techniques. The course begins with a survey of basic descriptive statistics and data sources and then covers elementary probability theory, sampling, estimation, hypothesis testing, correlation, and regression. The course focuses on practical issues involved in the substantive interpretation of economic data using the techniques of statistical inference. For this reason, empirical case studies that apply the techniques to real-life data are stressed and discussed throughout the course, and students are required to perform several statistical analyses of their own.
One-term course offered either term
Prerequisites: ECON 001, 002, or ECON 010; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit
Notes: Intended primarily for economics majors. ECON 103 cannot be taken by any student who has already completed Statistics at least at the level of STAT 430 (including the sequence STAT 430 and 431). Such students must take an additional 200-level course to satisfy course requirements of the major.

ECON 104 Econometrics
This course is designed to introduce students to econometric techniques and their applications in economic analysis and decision-making. The main objective of the course is to train the student in (i) handling economic data; (ii) quantitative analyses of economic models with probabilistic tools; (iii) econometric techniques, their application as well as their statistical and practical interpretation; (iv) implementing these techniques on a computer. Estimation and inference procedures are formally analyzed for simple econometric models and illustrated by empirical case studies using real-life data. The course covers linear regression models, simultaneous-equations models, discrete choice models and univariate time series models. Estimation and Inference is conducted using least squares and likelihood based techniques. Students are required to perform several econometric analyses of their own.
Course usually offered in spring term
Prerequisites: ECON 101, 103; MATH 104, MATH 114 or MATH 115 or permission from instructor.
Activity: Lecture
1.0 Course Unit

ECON 199 Independent Study
Individual study and research under the direction of a member of the Economics Department faculty. At a minimum, the student must write a major paper summarizing, unifying, and interpreting the results of the study. This is a one semester, one c.u. course.
One-term course offered either term
Prerequisites: ECON 101, 102, 103 or written permission from the Director of Independent Research. Please see the Undergraduate Coordinator in Economics (160 McNeil) for the permission form.
Activity: Independent Study
1.0 Course Unit
Notes: Please see the Undergraduate Coordinator in Economics (160 McNeil) for the appropriate sequence number.

ECON 210 Economics of Family
This course will use economic tools to explore decision making and allocation of resources within the family. The course will use both economic theory and econometric evidence to investigate these issues. The impact of gender roles and differences will be examined and the effect of these differences on economic decisions and outcomes both within and outside the family will be discussed. Student participation will be an integral part of the course. During class, students will be required to evaluate data and relate it to the theoretic model covered. Student participation will also include two in-class oral presentations. Students will be working with CWiC (Communication Within the Curriculum) as they work on these presentations.
Course not offered every year
Prerequisites: ECON 101; MATH 104, MATH 114 or MATH 115.
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 211 Social Choice Theory
This course investigates a topic which lies at the heart of economic, social and political sciences, namely the aggregation of individual preferences. Can a society as a whole exhibit preferences as individuals do? Can these preferences be based on individual ones, and show the same level of coherence? Which process can lead from individual preferences to the preferences of the society? At the end of the 18th century, the pioneers in the field already realized that mathematics is the only language powerful enough to make deep progress in the understanding of these questions. The formalization involves pure logic as well as geometry and combinatorics.
Course not offered every year
Prerequisites: ECON 101; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level LPS course (Section 601), when offered, MAY NOT count for Economics Majors, unless you are officially registered as an LPS student.

ECON 212 Game Theory
An introduction to game theory and its applications to economic analysis. The course will provide a theoretical overview of modern game theory, emphasizing common themes in the analysis of strategic behavior in different social science contexts. The economic applications will be drawn from different areas including trade, corporate strategy and public policy.
One-term course offered either term
Prerequisites: ECON 101; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit
Notes: Any 200-level LPS course when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.
ECON 221 Econometric Forecasting
This course provides a comprehensive introduction to forecasting in economics and business. Topics covered include statistical graphics, trends, seasonality, cycles, forecast construction, forecast evaluation and forecast combination.
One-term course offered either term
Prerequisites: ECON 101, 102, 103, 104; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level CGS course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 222 Advanced Econometric Techniques and Applications
This course introduces students to advanced study in econometrics, with an emphasis on methods used in microeconomic applications and in evaluating the effects of social interventions. The methods covered include methods for handling limited dependent variables (useful, for example, in forecasting the demand for a new good), maximum likelihood estimators, and flexible semiparametric and non parametric estimation methods, and randomized and nonexperimental methods of estimating treatment effects. Applications of econometrics to the field of program evaluation will also be studied.
One-term course offered either term
Prerequisites: ECON 101, 104; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level LPS course, when offered WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 224 Statistical Learning and Causal Inference for Economics
ECON 224 is an applied data analysis course that introduces students to ideas from modern statistical learning and causal inference, and provides hands-on experience applying them to real-world problems using the R statistical programming language. Topics include regression, randomized controlled trials, classification, instrumental variables, shrinkage methods, random forests, regression discontinuity, and differences-in-differences.
Taught by: DiTraglia
Prerequisite: ECON 103
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 033 and 233.

ECON 223 Labor Economics
Labor supply and labor demand, income distribution, labor market contracts and work incentives, human capital, labor market discrimination, job training and unemployment.
One-term course offered either term
Prerequisites: ECON 101; MATH 104, 114 or MATH 115; ECON 103 is recommended.
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 033 and 233.

ECON 225 Industrial Organization
Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, nonlinear pricing and price discrimination. These theories are used to model various industries, antitrust cases, and regulatory issues.
One-term course offered either term
Prerequisites: ECON 101; MATH 104, 114 or MATH 115; ECON 103 is recommended.
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 035 and 235.
ECON 236 Health Economics
In this course we will use the tools of microeconomics to analyze the functioning of the health care system. We will draw from the sub-disciplines of information economics, industrial organization, labor economics, public economics, and behavioral economics. The primary goal is to use these tools to develop a critical analysis of the functioning of the health care system as well as of the policies aimed at improving it. We will learn about US specific institutional details and policies (most notably the Affordable Care Act), and we will compare them to other important international experiences.
One-term course offered either term
Prerequisites: ECON101; MATH 104, 114 or MATH 115. Wharton students can satisfy the ECON 101 prerequisite with BEPP 250 honors. The regular BEPP 250 course does not count as a substitute for ECON 101.
Activity: Lecture
1.0 Course Unit
Notes: For ECON majors only. Intermediate Micro is a prerequisite and this course will use advanced quantitative methods.

ECON 237 Urban Fiscal Policy
The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.
One-term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit

ECON 238 Economics of Education
The course focuses on the educational decisions, including individual choices, institutional strategies and government policies. It is an elective course in economics and it is designed for junior and senior students. During the first part of the course we will go over the mathematical and empirical tools needed to understand and perform quantitative analysis on topics in the economics of education. Students should expect to work on optimization methods, regression analysis and causal inference analysis. We will use Stata (https://www.stata.com/) as statistical software. After we have built a solid foundation of knowledge, we will cover the first "real" topic of the economics of education: the return to schooling. During this phase of the course we seek to address two questions: what are the benefits that an individual acquires (i.e. in terms of earnings in the labor market or career opportunities) by attending more years of school and what are the benefits for society as a whole? While these questions seem to have a simple explanation, we will discover that they are actually quite challenging and require a more complex explanation. Once we have analyzed the benefits of schooling, we will study what motivates some students to further their education for more years, as opposed to others. In particular, we will focus on the differences in the quality of environments that children face throughout childhood (e.g.: family environment and school/classroom environment) and the consequences for observed inequities. Finally, in the remaining portion of the course we will study the evaluations of different policies that have been implemented in the past from previous governments, with the goal of gaining insight for possible future policy recommendations.
Taught by: Agostinelli
Course usually offered in spring term
Prerequisites: ECON 101, ECON 102, ECON 103
Activity: Lecture
1.0 Course Unit

ECON 241 Economic Growth
The process of economic growth and the sources of differences in economic performance across nations are some of the most interesting, important and challenging areas in modern social science. You cannot travel or read the news without wondering why differences in standards of living among countries are so large. The primary purpose of this course is to introduce undergraduate students to these major issues nd to the theoretical tools necessary for studying them. The course therefore strives to provide students with a solid background in dynamic economic analysis, as well as empirical examples and data analysis.
One-term course offered either term
Prerequisites: ECON 101, 102, 103; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit
ECON 242 Topics in Macroeconomics
This course covers topics of interest in macroeconomics. Two sections are offered: Markets with Frictions. This course studies allocations in markets with frictions, as described by the difficulty in finding a trading partner, private information problems, commitment issues, and so on. Applications to labor markets, monetary economics, the marriage market will be discussed. The main technical tool will be search theory, but a liberal amount of calculus and other mathematics will be used. Numerical Methods for Macroeconomists. This course will study some of the numerical methods that are used in modern macroeconomics. This class will learn how to solve nonlinear equations, difference equations, interpolate functions, smooth data, and conduct Monte Carlo simulations on the computer. This will be done while studying economic problems, such as the determination of labor supply, economic growth and business cycle analysis. Calculus is an integral part of the course and some elementary probability theory will be drawn upon. The MATLAB programming language will be used.
One-term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit

ECON 243 Monetary and Fiscal Policies
This is an advanced course in macroeconomics. A relatively simple, but well defined and internally consistent model of the U.S. economy is set up and used to study how output is generated given the initial resources, how output is divided between consumption and addition to capital stock, and how this process accumulates over time. The role of prices including the rate of interest in this process is also reviewed, and monetary and fiscal policies needed to improve the performance of the economy under such circumstances are discussed.
One-term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115. ECON 103 is recommended.
Activity: Lecture
1.0 Course Unit

ECON 244 Macro-Modeling
This is an advanced undergraduate course in models of economic growth. Students will be introduced to the workhorse theoretical models that are used to understand growth by modern macroeconomic researchers and policy makers. The types of questions that we will address include: Why are some countries richer than others? Why do some countries grow quickly while others stagnate? Why did modern economic growth start in Western Europe? What can governments do to accelerate economic growth? How does economic growth interact with demographic and geographic factors? We will build theoretical models that can be used to answer these questions. There will be a strong focus on emphasizing the microeconomic foundations of models, and using the language of mathematics to express the underlying assumptions and assess their implications for policy. Hence, there are strict mathematical prerequisites. We will also compare the predictions of our models with the data. Thus, a fair amount of econometrics will be required. A class in statistics and econometrics is highly recommended.
Course not offered every year
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115. ECON 103 is recommended.
Activity: Lecture
1.0 Course Unit

ECON 246 Money and Banking
Money and Banking. This course studies the role that financial markets, institutions, and money play in resource allocation. Financial intermediation and the role of banks in the economic system are analyzed and the economic rationale behind banking regulation is studies. The course examines how monetary policy influences interest rates and asset markets, such as the bond market and the stock market. Finally, the instruments and goals of monetary policy are discussed, focusing in particular on credibility and commitment for central banks. All of the questions are explored analytically, using the tools of economic theory.
One-term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit

ECON 251 International Trade
Structure of the world economy; theory of international trade; economic growth and international trade; international trade policy: developed countries; developing countries. Direct investment, technology transfers, and the multinational firm.
One-term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit
Notes: In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 252 International Finance
International monetary economics with emphasis on economic policy in an open economy. Topics covered in the course include: balance-of-payments adjustment, theories of exchange rate determinaton, the effects of exchange rate devaluation, macroeconomic policy under fixed and floating exchange rates, the Euro-dollar market, currency and balance of payments crises.
One-term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit
Notes: In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 260 Decision Making Under Uncertainty
This course will show how individuals make decisions in a world full of uncertainties, both normatively and descriptively. This theory will help us build skills in understanding and analyzing a choice problem with uncertainty in a systematic fashion, as well as deepening our understanding of the fundamental concept of a utility function, which plays a critical role in economic modeling. The course requires a substantial ability of abstract thinking. Homework is intended to be thought-provoking rather than skill-sharpening.
Course not offered every year
Prerequisites: ECON 101, 103; MATH 104, 114 or MATH 115
Activity: Lecture
1.0 Course Unit
Notes: All prerequisites MUST be taken prior to enrolling in this course.
**ECON 261 Topics in Development**
This course studies institutions in developing economies. The first section of the course will cover the organization of production in traditional agrarian societies. Topics will include land, labor and credit markets. The second section of the course will focus on the role of the community in facilitating the transition to the modern market economy. Here we will study how the community spreads information, permits the formation of informal networks and organizes collective institutions, allowing individuals to take advantage of new economic opportunities.

Course not offered every year
Prerequisites: ECON 101; MATH 104, 114, or MATH 115. ECON 103 is recommended.
Activity: Lecture
1.0 Course Unit
Notes: Student may not receive credit for ECON 024 and ECON 261. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

**ECON 262 Market Design**
Market design is broadly about designing interventions in economic systems so as to enhance their performance. The power and potential of market design has recently entered a new era of possibility with the rise of Artificial Intelligence. Artificial intelligence is concerned with the design of intelligent autonomous systems. Such systems are rapidly transforming our society and economy and have been enabled by major advances in cloud computing and network telecommunications. Yet underlying the technological surface of many AI-oriented applications are fundamental economic and econometric principles which are central to their design and implementation. In short, to perform well, an AI system must "think like economists" - it must: 1. Make predictions about its environment; 2. Test causal hypotheses about the effect of various actions they can take, and; 3. Make decisions about an optimal plan of action in the face of uncertainty, which is a cycle that repeats and iteratively improves. Many of the established success stories in AI today have largely been focused on achieving (1), the trend is towards AI increasingly encompassing (2) and (3). In this course we aim to isolate these economic principles and understand their role in the modern development of AI, as well as gaining an appreciation for what the proliferation of AI based technologies means for the economy in which we live. Although the course will be principally interested in the former, we won't fully shy away from some discussion of the latter. Topics include human judgment and decision making biases (a light intro to behavioral economics), predictive machine learning and regularization, causal inference as distinct from prediction with application to product pricing, and reinforcement learning for dynamic decisions.

Taught by: Gandhi
One-term course offered either term
Prerequisites: ECON 101, 103; MATH 104, 114 or MATH 115.
Activity: Lecture
1.0 Course Unit
Notes: The LPS 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

**ECON 267 China: Institution & the Economy**
The rise of China since its economic reform starting from 1978 is one of the most important developments the world witnessed in the twenty first century. In this seminar course, we explore topics including the political logic of China’s economic reform, the institutional foundations of the Chinese economic growth miracle, as well as detailed analysis of Chinese financial markets, housing markets, fiscal reform, corruption/ anti-corruption, labor market transitions, China’s integration into the world economy, village democracy and its impact on resource allocation, the impact of population ageing, the impact of China on US economy and politics, among others. The discussions will focus on China, but will relate broadly to emerging and developed economies. The course will be based on reading and discussing research articles and books selected by the instructors.

Also Offered As: PSCI 227
Prerequisites: ECON 101; MATH 104, 114 or MATH 115. ECON 103 recommended. PSCI majors PSCI 110 recommended.
Activity: Lecture
1.0 Course Unit
ECON 273 The Political Economy of Early America
This course will study the political economy of Early America, from the British Settlement to c. 1820. In particular, we will explore the forces behind the economic growth of the British colonies, the economic forces behind the Revolution, the economic consequences of the Revolution, the political economy of the constitutional convention and ratification, the role of SCOTUS in creating a national market, and the opposing Hamilton-Jefferson views of an American economy. Early America is a fascinating and rich historical period, and we will need to skip many issues of interest. Nevertheless, we hope to provide you with a good overview of how a group of small peripheral colonies created an institutional arrangement that allowed them, in less than two centuries, to become the biggest economy in the world.
Taught by: Fernandez-Villaverde
Course usually offered in spring term
Prerequisites: ECON 001, 002, 101 and 102
Activity: Lecture
1.0 Course Unit

ECON 274 History of Economic Thought
This course surveys the history of the development of economic thought, beginning with the Classical school and the works of Smith, Ricardo, J.S. Mill, Marx and others and continuing to the 20th century thought, including Keynes, Hayek, and Arrow.
Taught by: Arteaga
Course offered spring; even-numbered years
Prerequisites: ECON 001, 002, 101, 102, and 103
Activity: Lecture
1.0 Course Unit

ECON 300 Honors Seminar
Students prepare an honors thesis in economics over the academic year, supervised by a faculty member of their choice. In both semesters students present their work in progress to the class. Any student intending to do empirical work in the thesis should have completed ECON 103 and ECON 104.
Two terms. student must enter first term.
Prerequisites: ECON 101, 102, 103, 104, and two 200-level courses; MATH 104, 114. GPA of at least 3.5 in Economics and permission of the instructor.
Activity: Seminar
1.0 Course Unit
Notes: Course meets weekly. Required of all honors majors.

ECON 681 Microeconomic Theory
Basic tools of microeconomic theory: consumer choice, firm behavior, partial and general equilibrium theory. This is a more theoretical treatment of the basic tools of microeconomic analysis than ECON 680.
Course usually offered in fall term
Prerequisites: Equivalent of ECON 101; meeting the department's minimal mathematical requirements; or permission of instructor.
Activity: Lecture
1.0 Course Unit

ECON 682 Game Theory and Applications.
A graduate level introduction to decision making under uncertainty, applied game theory, and information economics.
Course usually offered in spring term
Prerequisites: ECON 680 or 681.
Activity: Lecture
1.0 Course Unit

ECON 701 Microeconomic Theory I
Nonlinear programming, theory of the consumer and producer, general equilibrium.
Course usually offered in fall term
Prerequisites: Meeting the Department's minimal mathematical requirements; ECON 897 Summer Math Program.
Activity: Lecture
1.0 Course Unit

ECON 702 Macroeconomic Theory I
Dynamic programming, search theory, neoclassical growth theory, asset pricing, business cycles.
Course usually offered in fall term
Prerequisites: Meeting the Department's minimal mathematical requirements; 701 and 897 Summer Math Program. Registrants must take both 702-001 and 702-002.
Activity: Lecture
0.5 Course Units

ECON 703 Microeconomic Theory II
Game theory, decision making under uncertainty, information economics.
Course usually offered in spring term
Prerequisites: Meeting the department's minimal mathematical requirements; ECON 897 Summer Math Program
Activity: Lecture
1.0 Course Unit

ECON 704 Macroeconomic Theory II
Course usually offered in spring term
Prerequisites: Meeting the Department's minimal mathematical requirements; ECON 700, 701, 703, 897 Summer Math Program.
Activity: Lecture
1.0 Course Unit

ECON 705 Econometrics I: Fundamentals
Violations of classical linear regression assumptions, nonlinear regression models (including logit, probit, etc.), diagnostic testing, distributed lag models, panel data models, identification, linear simultaneous-equations model.
Course usually offered in fall term
Prerequisites: Meeting the Department's minimal mathematical requirements; ECON 897 Summer Math Program
Activity: Lecture
1.0 Course Unit

ECON 706 Econometrics II: Methods & Models
Analysis in time and frequency domains, state space representations, Kalman filtering, conditional heteroskedasticity, nonlinear and nonparametric methods for time series, integration, co-integration, numerical and simulation techniques.
Course usually offered in spring term
Prerequisites: Meeting the Department's minimal mathematical requirements; ECON 705, 897 Summer Math Program.
Activity: Lecture
1.0 Course Unit
ECON 708 The Economics of Agency, Information, and Incentives
This course studies the economics of adverse selection and moral hazard in strategic settings. The primary focus is on the agency relationship and the structure of agency contracts. Other settings include auctions, bilateral trading, and the internal organization of the firm.
One-term course offered either term
Prerequisites: Meeting the Department's minimal mathematical requirements; ECON 898 or equivalents.
Activity: Lecture
0.5 Course Units

ECON 712 Topics in Advanced Economic Theory and Mathematical Economics
Topics and prerequisites announced each year.
One-term course offered either term
Activity: Lecture
1.0 Course Units

ECON 714 Quantitative Macroeconomic Theory
One-term course offered either term
Prerequisites: ECON 702, 704
Activity: Lecture
0.5 Course Units

ECON 719 Economic Theory
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 712

ECON 721 Econometrics III: Advanced Techniques of Cross-Section Econometrics
Qualitative response models, panel data, censoring, truncation, selection bias, errors in variables, latent variable models, survey design, advanced techniques of semiparametric estimation and inference in cross-sectional environments. Disequilibrium models. Methods of simulated moments.
One-term course offered either term
Prerequisites: ECON 705 and 706.
Activity: Lecture
1.0 Course Unit

ECON 722 Econometrics IV: Advanced Techniques of Time-Series Econometrics
Focuses on macro-econometrics. Topics include comparison of Bayesian and frequentist inference in nonstandard settings (e.g. time series models with persistent roots), Bayesian inference in VARS and DSGE models including modern computational tools such as Gibbs sampling, MCMC, Sequential Monte Carlo, particle filtering, etc., and tools for evaluating DSGE models.
One-term course offered either term
Prerequisites: ECON 705 and 706.
Activity: Lecture
0.5 Course Units

ECON 729 Econometrics
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 721 and 722

ECON 749 Monetary Economics
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 740, 741

ECON 750 Public Economics
Public goods, externalities, uncertainty, and income redistribution as sources of market failures; private market and collective choice models as possible correcting mechanisms. Microeconomic theories of taxation and political models affecting economic variables.
One-term course offered either term
Prerequisites: ECON 701, 703
Activity: Lecture
0.5 Course Units

ECON 751 Public Economics II
Expenditures: Alternative theories of public choice; transfers to the poor; transfers to special interests and rent seeking; social insurance; publicly provided private goods; public production and bureaucracy. Taxation: Tax incidence in partial and general equilibrium; excess burden analysis. Topics on tax incidence and efficiency: lifetime incidence and excess burden, dynamic incidence, the open economy. Normative theories of taxation: Optimal commodity and income taxation. The political economy of income taxation.
One-term course offered either term
Prerequisites: ECON 701, 703
Activity: Lecture
0.5 Course Units

ECON 759 Political Economy
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 750, 751

ECON 779 Comparative Economic Systems
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 770, 771

ECON 781 Empirical Methods for Industrial Organization
The goal of the course is to explore links between theory and data in order to identify and test implications of economic models. Reduced form and structural approaches will be used to study a variety of topics that include: Estimation of multiproduct cost functions; detection of collusion, multimarket contact, and network externalities; asymmetric information: auctions and nonlinear pricing; price competition and product differentiation; and complementarities: innovation and organizational design.
One-term course offered either term
Prerequisite: ECON 780
Activity: Lecture
1.0 Course Unit

ECON 789 Applied Microeconomics Workshop
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 780, 781
ECON 792 Economics of Labor I
Topics include: Theories of the supply and demand for labor, wage determination, wage differentials, labor market discrimination, unemployment, occupational choice and dynamics of specific labor markets, theory of matching, trade unions. The theory and empirics of human capital accumulation, intertemporal labor supply, search, intergenerational mobility of income and wealth, contracts and bargaining, efficiency wage models, principal/agent models, and signaling models.
One-term course offered either term
Prerequisites: ECON 701, 703, 705, 706, 721
Activity: Lecture
1.0 Course Unit
ECON 793 Economics of Labor II
A continuation of ECON 792.
One-term course offered either term
Prerequisites: ECON 721, 792
Activity: Lecture
0.5 Course Units
ECON 799 Empirical Microeconomics
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 791, 792, 793
ECON 999 Independent Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Education (EDUC)
EDUC 202 Urban Education
This course focuses on two main questions: 1) How have US schools and urban ones in particular continued to reproduce inequalities rather than ameliorating them? 2) In the informational age, how do the systems affecting education need to change to create more successful and equitable outcomes? The course is designed to bridge the divide between theory and practice. Each class session looks at issues of equity in relation to an area of practice (e.g. lesson design, curriculum planning, fostering positive student identities, classroom management, school funding, policy planning...), while bringing theoretical frames to bear from the fields of education, sociology, anthropology and psychology.
Course usually offered in fall term
Also Offered As: URBS 202
Activity: Seminar
1.0 Course Unit
EDUC 235 Psychology of Women
Critical analyses of the psychological theories of female development, and introduction to feminist scholarship on gender development and sexuality.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
EDUC 240 Education in American Culture
This course explores the relationships between forms of cultural production and transmission (schooling, family and community socialization, peer group subcultures and media representations) and relations of inequality in American society. Working with a broad definition of "education" as varied forms of social learning, we will concentrate particularly on the cultural processes that produce as well as potentially transform class, race, ethnic and gender differences and identities. From this vantage point, we will then consider the role that schools can and/or should play in challenging inequalities in America.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
EDUC 241 Educational Psychology
Current issues and research, applying psychological theory to educational practice. As such, this course will explore the fundamental themes in behavioral, developmental, and cognitive areas of psychology as they relate to education. Topics include: learning, motivation, growth and development, cognitive processes, intelligence tests, measurements, evaluations, etc.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
EDUC 250 Learning from Children
This course is about looking at elementary school classrooms and understanding children's experiences of school from a variety of perspectives, and from a variety of theoretical and methodological lenses from which the student can interpret children's educational experiences. This course is about developing the skills of observation, reflection, and analysis and to begin to examine some implications for curriculum, teaching and schooling. This course requires you to spend time in an elementary school classroom.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 323 Tutoring School: Theory and Practice
This course represents an opportunity for students to participate in academically-based community service involving tutoring in a West Phila. public school. This course will serve a need for those students who are already tutoring through the West Phila.Tutoring Project or other campus tutoring. It will also be available to individuals who are interested in tutoring for the first time.
Course usually offered in spring term
Also Offered As: URBS 323
Activity: Seminar
1.0 Course Unit
EDUC 326 Tutoring in Urban Public Elementary Schools: A Child Development Perspective
The course provides an opportunity for undergraduate students to participate in academically based community service learning. Student will be studying early childhood development and learning while providing direct, one-to-one tutoring services to young students in Philadelphia public elementary schools. The course will cover foundational dimensions of the cognitive and social development of preschool and elementary school students from a multicultural perspective. The course will place a special emphasis on the multiple contexts that influence children's development and learning and how aspects of classroom environment (i.e., curriculum and classroom management strategies) can impact children's achievement. Also, student will consider a range of larger issues impacting urban education embedded in American society. The course structure has three major components: (1) lecture related directly to readings on early childhood development and key observation and listening skills necessary for effective tutoring, (2) weekly contact with a preschool or elementary school student as a volunteer tutor and active consideration of how to enhance the student learning, and (3) discussion and reflection of personal and societal issues related to being a volunteer tutor in a large urban public school.
Taught by: Fantuzzo
Course usually offered in fall term
Also Offered As: URBS 326
Activity: Seminar
1.0 Course Unit

EDUC 345 Psychology of Personal Growth
Intellectual, emotional and behavioral development in the college years. Illustrative topics: developing intellectual and social competence; developing personal and career goals; managing interpersonal relationships; values and behavior. Recommended for submatriculation in Psychological Services Master's Degree program.
One-term course offered either term
Also Offered As: GSWS 344
Activity: Lecture
1.0 Course Unit

EDUC 360 Human Development in Global Perspective
A life-span (infancy to adulthood) approach to development. Topics include: biological, physical, social and cognitive basis of development. Films and guest speakers are often included.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 414 Children's Literature
Theoretical and practical aspects of the study of literature for children. Students develop both wide familiarity with children's books, and understanding of how children's literature fits into the elementary school curriculum.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 500 Linguistic Anthropology of Education
Linguistic anthropologists study the role of language use in culturally patterned behavior. The course focuses on recent research by linguistic anthropologists in educational settings in the US and Europe marked by increasing linguistic and cultural diversity. The goal of the course is to uncover useful tools that contemporary linguistic anthropology offers to educational research.
Taught by: Moore
Course usually offered in spring term
Prerequisite: EDUC 546
Activity: Lecture
1.0 Course Unit

EDUC 501 Economics of Education in Developing Countries
This is a course on economics of education, a field within the subject of economics that draws upon many areas of economic specialization. The course focuses on developing countries and includes papers and case-studies covering themes such as returns to investment in education, production, costs and financing of education, teacher labor markets, economic growth, education markets, and equity issues.
Taught by: Thapa
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 502 Citizen Sociolinguistics
In this course we will draw on the Internet and daily news (internet circulated, usually) to find "Citizen Sociolinguists" who speak with authority, while juxtaposing these media with the usual scholarly sources.
Taught by: Rymes
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 503 Global Citizenship
This course examines the possibilities and limitations of conceiving of and realizing citizenship on a global scale. Readings, guest lecturers, and discussions will focus on dilemmas associated with addressing issues that transcend national boundaries. In particular, the course compares global/local dynamics that emerge across different types of improvement efforts focusing on distinctive institutions and social domains, including: educational development; human rights; humanitarian aid; free trade; micro-finance initiatives; and the global environmental movement. The course has two objectives: to explore research and theoretical work related to global citizenship, social engagement, and international development; and to discuss ethical and practical issues that emerge in the local contexts where development initiatives are implemented.
Taught by: Hall
Course usually offered in spring term
Also Offered As: ANTH 546, URBS 546
Activity: Seminar
1.0 Course Unit

EDUC 504 Contemporary Issues in Higher Education
An introduction to the central issues and management problems in contemporary American higher education.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
EDUC 505 Globalization & the University
The aim of this course is to help students understand the basic concept of globalization, how it impacts higher education in general, and how it shapes the global market for human capital and fosters private sector and for profit provision and diversifies modes of delivery of higher education. The seminars cover the nature of globalization and the way it affects the movement of people between economies to gain and apply skills and knowledge, the creation of branch campuses, the growth of transnational education and the importance of brands and information in the global higher education market.
Taught by: Ruby
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 506 Migration, Displacement, and Education
This course examines the effects of migration (forced and voluntary) on education in a variety of contexts across the world (including the United States). The course reviews sociological and anthropological theories of immigrant incorporation and inclusion. Such frameworks are then applied to migration through case studies of im/migrants, refugees, and displaced persons in order to consider educational practices, programs and policies that address the effects of migration and displacement on education in diverse contexts.
Taught by: Ghaffar-Kucher
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 507 Teaching & Learning in Student Centered Classrooms
Most teachers have ambitious goals for their classrooms. They strive to make their classrooms spaces where students engage in authentic and meaningful work, where students collaborate on challenging and complex tasks, and where students develop deep disciplinary knowledge and the skills and mindsets that are necessary for their success in college, career, and society. However, many classrooms fall short of this ambitious vision. This course explores the challenges and opportunities teachers face when they attempt to build student-centered learning environments, and offers educators tangible insights and practices to support their work.
Taught by: Herrmann
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 508 MaKer Studio
In this seminar, we will discuss and design projects related to the "maker movement" in education using various materials and technologies as we consider issues of access and diversity around making.
Taught by: Kafai
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 509 Merit and America
What constitutes merit? What should constitute merit? These questions are both philosophical and practical - and are faced by every educator in some form. The notion of meritocracy has long been at the heart of varied discourses about the place of education in American society. Merit is most often understood as inhering in consistent and individual personality traits such as competency, intelligence, and diligence. And yet, every individual is embedded in complex social worlds that are culturally specific and historically contingent. Drawing on a broad array of disciplines and literatures, this seminar-style course challenges students to consider how ideas of merit and its measurement are shaped by American history, culture, and society, and to articulate their own views as they move toward their professional goals.
Taught by: Posecznick
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 511 Education and the Culture Wars: Historical and Contemporary Perspectives
America is wracked by "culture wars," pitting different moral and religious values against each other. But these conflicts are hardly new. Since the founding of the Republic, we have battled over religion, sex, gender, and race. And many of these conflicts have entered our schools, which remain our primary vehicle for deliberating and determining who we are. What languages should we use in school? What should we teach young people about sex? About race? About religion? Most of all, what stories should we tell about the nation itself? This course will probe these issues and also help students write primary-source research papers that examine different culture wars in American education.
Taught by: Zimmerman
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 512 University-Community Partnerships
Ranging from civic engagement to economic development, institutions of higher education in the United States have long been involved in a variety of relationships with their local communities; in recent years, there has been increasing attention paid to the opportunities and challenges implicit in those relationships. In this Academically Based Community Service (ABCS) course, students will study and discuss the history, rationales, and manifestations of the partnerships that have developed. Through readings, faculty-and student-led discussions, guest lecturers, and policy-oriented projects, students will develop better understandings of the many topics surrounding university-community partnership activities. Among other themes we will consider institutional roles and relationships, service learning, community perspectives, policy issues, and evaluation.
Taught by: Grossman
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 513 Development of the Young Child (TLL)
This course will blend an explanatory and descriptive account of behavioral evolution over the yearly years of life. After a review of "grand" developmental theory and the major themes of child change (from images to representation; from dependence to independence; from instinctual to social beings), this course will survey the child's passage from infancy through the early school years. While the emphasis will be on the nature of the child—what she/he sees, feels, thinks, fantasizes, wants and loves—these realities will be understood in terms of developmental theory. At each stage, the course will review the development of cognition, personal identity, socialization, and morality in pluralistic contexts.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 514 Education in Developing Countries
In recent years the construct of "global development" has come under increasing scrutiny, leading some scholars and practitioners to wonder whether development remains a useful concept. In this course, we will actively engage in this debate through a survey of the development literature in the field of education. We will examine theoretical frameworks and historical perspectives that will allow us to develop a better understanding of what is meant by "development" as well as recognize how these concepts relate to basic educational planning and practice in various international contexts. The course will work from primary and secondary materials on theories, research, and applications used to promote global development and basic education. Some programs are carried out by multinational/bilateral agencies such as World Bank, Unicef, UNESCO, and USAID, while others are undertaken by intermediary organizations (such as NGOs and universities) and local organizations or individual specialists. Issues include a range of social, economic and political obstacles to the provision of quality education.
The goal of this course is to improve your understanding of how different theories of education and development influence educational policy, priorities, and programs of international, national, and local institutions.
Taught by: Wagner/Ghaaffer-Kucher
Course usually offered in fall term
Prerequisites: Prior graduate work in related areas recommended.
Activity: Lecture
1.0 Course Unit

EDUC 515 Field Seminar (Elementary & Secondary Education)
This seminar is designed to integrate student teaching fieldwork and university course work through reading, discussion, and reflection. Central to this course will be teacher research, an inquiry stance toward learning how to teach, and a social justice approach to education. Throughout the semester, we will be examining a range of issues through theoretical and practice-oriented lenses that will deepen our understanding of teaching and learning. Offered within the Teacher Education Program.
Course usually offered in fall term
Activity: Lecture
3.0 Course Units

EDUC 516 Teaching Writing in Multilingual Contexts
This course introduces participants to a range of theoretical and practical issues related to second language literacy development, with a particular emphasis on writing instruction. An intensive service-learning project offers course participants the opportunity to work with developing writers in a bilingual community organization. The dual emphasis on theory and pedagogy is intended to create space for critical reflection on the characteristics, production, teaching, and assessment of written texts in bi/multilingual educational settings.
Taught by: Pomerantz
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 517 Classroom Discourse and Interaction
In this course students will read research that investigates the role of classroom interaction in learning and human development. Students will also learn how to "do" discourse analysis using real classroom data. Students will practice and critique methods for analyzing classroom discourse data as teachers, with an aim of developing a critical awareness of our own language use and role in society.
Taught by: Rymes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 519 The Evolution of Assessment: Classroom and Policy Uses
This course explores the evolution and diverse uses of assessment in four major areas: the historical roots of testing and the development of the achievement testing industry; the rising interest and exploration of alternative forms of assessment; how teachers employ a variety of assessments in their classrooms; and how policymakers use assessment for decision-making and accountability purposes.
Taught by: Supovitz
Course not offered every year
Prerequisites: Permission needed from department.
Activity: Lecture
1.0 Course Unit

EDUC 520 Literacy in Elementary/Middle Schools
In this course, the interconnections of language, literacy and culture are explored in order to build a knowledge base and understanding of how children learn to read and write. Emphasis will be on how to teach and develop literacy curriculum in the elementary grades, and on how close listening and observation of children in their classroom contexts, combined with a critical reading of research and theory, can inform teaching practices. A central tenet of this course is that the best teachers of reading and writing are themselves active and engaged readers and writers. An important goal is to combine an inquiry approach to teaching and learning with an inquiry approach to thinking about how we teach. Offered within the Teacher Education Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 521 Science Methods: Project-Based Learning Approaches
The goal of this course is to prepare teachers to facilitate science learning in the elementary and middle school. Special emphasis is placed on striving for a balance between curricular goals; individual needs and interests; and the nature of science. Offered within the Teacher Education Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 522 Psychology of the African-American
Using an Afro-centric philosophical understanding of the world, this course will focus on psychological issues related to African Americans, including the history of African American psychology, its application across the life span, and contemporary community issues.
Taught by: Stevenson
Course usually offered in spring term
Also Offered As: AFRC 522
Activity: Lecture
1.0 Course Unit

EDUC 523 Social Studies in the Elementary and Middle Schools
This course will focus on teaching and learning in the content area of social studies. Curricular and pedagogical theories and practices will be examined for their educational significance, meaningful integration of content areas, respect for students' cultures (past and present), and contribution to social justice issues. Offered within the Teacher Education Program.
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

EDUC 524 Philosophical Aspects of Education Policy
This course, which is unofficially titled 'Justice goes to School' explores the philosophical or normative foundations of educational policy decisions. School choice, standards-based reform, civic education, children's and parents' rights, school finance reform - how do different arguments for these policies view the role of schools in society? What are their concept of the person, and their view of the educated person?
We will consider arguments for and against a variety of contemporary educational policies. Students are encouraged, if they are interested, to bring to class educational policy decision that perplex or intrigue them.
Taught by: Ben-Porath
One-term course offered either term
Activity: Seminar
0.5 Course Units

EDUC 525 Fieldwork in Language in Education
Supervised fieldwork for individuals preparing to work with reading specialist/teachers in school settings.
Taught by: Waff
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 527 Approaches to Teaching English and Other Modern Languages
This course provides students with an introduction to theory and practice in second and foreign language teaching. Students will (a) develop an understanding of the history of language teaching practice and how such a perspective informs current day approaches, (b) explore the relationship between the context in which the language is learned and taught and classroom practice, and (c) develop an awareness of teaching principles central to a personal pedagogical approach and teaching philosophy.
Students should have a field site where they can observe, participate, and collect classroom data.
Taught by: Box/Wagner, S
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 528 TESOL Practice Teaching
Fieldwork course for TESOL students. This course focuses on reflective teaching practice, providing a space for students to combine theory and practice as they apply the theoretical constructs of TESOL coursework to their own language teaching. Students will become accurate and systematic observers of and thinkers about their own teaching methodology, in order to continue to develop into increasingly effective language teachers. The theme of a student-centered language classroom will be explored through scholarly literature, pedagogical techniques, and students’ own classroom teaching. To participate in this course, a student must be teaching a language class for the majority of the semester.
Taught by: Pomerantz/Box
Course usually offered in fall term
Prerequisite: EDUC 527 & EDUC 537
Activity: Lecture
1.0 Course Unit
Notes: Permission needed from the department

EDUC 529 Organizational Learning and Education
This course is an exploration of the theory, research, and practice of how individuals learn within organizational contexts and how organizations themselves may learn, as well as the social, cultural, and organizational forces that influence this process.
Taught by: Supovitz
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 531 Mathematics in the Elementary and Middle Schools
Learning to teach mathematics in ways that foster mathematical understanding and enjoyment for every student requires that teachers draw on different kinds of knowledge, skills, and dispositions. In addition to developing an understanding of central mathematical ideas, learning to teach math involves learning about learners, the understandings and conceptions they hold, and the processes through which they learn. It also involves developing skill in constructing tasks that engage students in mathematical exploration, creating an environment that facilitates reasoning, and finding ways to analyze and learn from one's own teaching. Offered within the Teacher Education Program.
Taught by: Remillard/Ebbey
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 532 Pursuing Institutions of Excellence: Strategies, Choices, Pitfalls & Possibilities
The aim of this course is to help students understand how universities pursue excellence by examining national and institutional strategies to become high performing institutions. The seminar series will look at the basic concepts of organizational culture and the merits and flaws of different conceptions of excellence.
Taught by: Ruby/Hartley
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
EDUC 533 Forming and Reforming the Elementary Reading/Writing/Literacy Curriculum
Students explore the theory and practice of constructivist approaches to teaching reading/writing/talking across the curriculum. They read widely and discuss issues that are informed by theory and research in many fields of inquiry including children's and adolescent literature, educational linguistics, cognitive psychology, curriculum, and anthropology and assessment. They write and share integrative journals; develop, teach and reflect upon holistic lessons; and complete an individual or group project of their own choosing.
Taught by: Campano
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 534 Diversity and Social Justice in American K-12 Education
In this course, students will develop a critical understanding of how various markers of social difference mediate the privileging of some and the marginalization of others within K-12 schools. Additionally, by considering their potential to act as agents of change, students will devise and share strategies for anti-oppressive educational practices.
Taught by: Brockenbrough
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 535 Literature for Children and Adolescents
Theoretical and practical aspects of the study of literature for children and adolescents. Students develop both wide familiarity with children's/adolescents' books and understanding of how literature can be used in elementary/secondary school curricula. Students complete course projects that focus on literature in specific classroom, research, home, or professional contexts.
Taught by: Thomas
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 536 Indigenous Education and Language Revitalization
The course examines Indigenous education and language revitalization from an international perspective, considering questions like: What policies, ideologies, and discourses shape the history of Indigenous education? What roles do pan-Indigenous and international organizations play? What does decolonizing and Indigenousizing schooling look like? How do Indigenous epistemologies, ways of knowing, being and relating influence education? What does culturally relevant schooling mean in Indigenous contexts? What are the roles of Indigenous communities in language revitalization and educational processes?
Taught by: Hornberger
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 537 Educational Linguistics
For students with little or no linguistics background. An introduction to the basic levels of language (phonetics and phonology, morphology and semantics, syntax, pragmatics) with special emphasis on the relevance of linguistic concepts to education. Other topics may include bi/multilingualism, language variation, and language acquisition.
Taught by: Butler/Moore/Matsumoto
Course usually offered in fall term
Prerequisite: Butler/Moore/Matsumoto
Activity: Lecture
1.0 Course Unit

EDUC 539 Teaching Performance Art for Cross-Cultural Education
This class examines issues related to cultural communities and the arts, specifically performance, writing and storytelling as an educational tool for generating cross cultural and intercultural understanding, dialogue and exchange. Assignments will focus on, cross-cultural research and dialogue, and skill building in teaching, writing and performance.
Students will also develop an understanding of how performance can be used to enhance classroom activities in elementary/middle/secondary/post secondary classroom curricula.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 540 Differentiating Instruction for Diverse Learners/Special Education & Bilingual Students
This course engages student teachers working with diverse learners, presenting factual information about specific areas of need situated within a socio-cultural framework. It addresses content related to both special education and English language learners in four areas: (1) Introduction to Special Education; (2) Learning Categories; (3) Issues in Special Education; and (4) Working with English Language Learners. Offered within the Teacher Education Program
Taught by: Watts, Bialka, Kinney Grossman
Two terms. student must enter first term.
Prerequisites: Permission needed from department.
Activity: Seminar
1.0 Course Unit

EDUC 541 Access & Choice in American Higher Education
College enrollment is a complex process that is shaped by the economic, social and policy context, higher education institutions, K-12 schools, families, and students. The course will examine the theoretical perspectives that are used to understand college access and choice processes. The implications of various policies and practices for college access and choice will also be explored, with particular attention to the effects of these policies for underrepresented groups. As an Academically Based Community Service (ABCS) course, this course is also designed to generate tangible recommendations that program administrators and institutional leaders may be used to improve college access and choice.
Taught by: Perna
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 542 TESOL Classroom Fundamentals
This course focuses on the fundamental teaching skills that you need as a language educator. It is designed to help you develop effective ways of doing as much as knowing and thinking about language teaching and learning within a reflective practice framework.
Taught by: Box/Kozlova/Pomerantz/Wagner, S
Course usually offered in spring term
Prerequisites: EDUC527, EDUC537
Activity: Lecture
1.0 Course Unit
EDUC 543 Understanding Minority Serving Institutions

Students taking this course will learn about the historical context of HBCUs in educating African Americans, and how their role has changed since the mid-1800’s. Specific contemporary challenges and successes related to HBCUs will be covered and relate to control, and enrollment, accreditation, funding, degree completion, and outreach/retention programming. Students will become familiar with MBCUs in their own right, as well as in comparison to other postsecondary institutions.

Taught by: Gasman
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 544 School and Society in America

This course reviews the major empirical and theoretical research from the social history, and social theory on the development, organization and governance of American education, and the relationship between schooling and the principal institutions and social structures of American society.

Taught by: Hall or Posecznick
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

EDUC 546 Sociolinguistics in Education

The educational consequences of linguistic and cultural diversity. A broad overview of sociolinguistics, introducing both early foundational work and current issues in the field. Topics include language contact and language prestige, multilingualism and language ecology, regional and stylistic variation, verbal repertoire and communicative competence, language and social identity, codeswitching and diglossia, language socialization and language ideology, as they relate to educational policy and practice in the United States and around the world.

Taught by: Flores/Moore
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 547 Anthropology and Education

An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.

Taught by: Hall or Posecznick
Course offered summer, fall and spring terms
Also Offered As: ANTH 547, URBS 547
Activity: Lecture
1.0 Course Unit

EDUC 548 American Education Reform: History, Policy, Practice

An examination of major trends, central tendencies, and turning points in American education reform, giving particular attention to contemporary developments such as accountability laws and school choice. This historical development of the federal role in American schooling is also considered, as is the history of school desegregation. What is the purpose of "school"? How have schools evolved across time, and how have Americans tried to change them? And what can we learn from this long history of reform?

Taught by: Zimmerman/Puckett
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 550 Educational and Social Entrepreneurship

This course provides an understanding of the nature of entrepreneurship related to public/private/for profit and non-profit educational and social organizations. The course focuses on issues of management, strategies and financing of early stage entrepreneurial ventures, and on entrepreneurship in established educational organizations.

Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 551 Outside the School Box: History, Policy and Alternatives

This course explores historical and contemporary challenges involved in the policy and practice of non-school education agencies and factors that work in service to local school/community settings. Students will explore several historical case studies, conceptual frames, and current policy challenges, culminating in a community-based research project.

Taught by: Johanek
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 552 Video Games and Virtual Worlds as Sites for Learning

Drawing on work from the education, psychology, communication, and the growing field of games studies, we will examine the history of video games, research on game play and players, review how researchers from different disciplines have conceptualized and investigated learning in playing and designing games, and what we know about possible outcomes. We will also address issues of gender, race and violence that have been prominent in discussions about the impact of games.

Taught by: Kafai
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 553 Foundations of Education for Diverse Learners

An introduction to Special Education including the history, the legal regulation of Special Education, and an examination of critical issues. Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 554 Managing Collaborative Learning Environments in Urban Contexts

This course marks the beginnings of your year-long inquiry as preservice teachers, and hopefully your career-long inquiry as committed educational professionals, into the challenges of and opportunities for teaching and learning in urban settings. The theories and practices explored in this course are offered as foundations for instructional approaches that are intentional, reflective, inquiry-based, and learner-centered. As we investigate multiple dimensions of teaching and learning (curriculum design, learning theories, instructional techniques, etc.), you will have opportunities to both clarify and challenge the assumptions, beliefs, hopes, fears, and goals that you bring to your preparation to teach in urban secondary schools. Offered within the Teacher Education Program.

Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
EDUC 555 Advanced Field Seminar (Elementary & Secondary Education)
This course focuses on praxis—the mutually supporting roles of theory and practice that bring rigor and relevance to the work of educational professionals. This course is designed to give student teachers opportunities to develop pedagogical orientations, to learn from “problems of practice” at placement sites, and to enrich student teachers' theoretical and practical knowledge. All of these experiences will inform the master's portfolio and will prepare teachers to continue to see themselves and their practice as continuing sites for research. Offered within the Teacher Education Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 556 Higher Education Finance
Designed for non-financial managers, this course provides students with an introduction to basic concepts related to the finance of higher education. It examines the forces that influence the financing of higher education at both the state and federal levels. It addresses both the macro-economic and micro-economic issues related to higher education finance. In addition, students will be introduced to issues related to institutional finance.
Taught by: Finney
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 557 Developmental Theories: Applications with Adolescents
Focuses on theories of adolescent development and the nature of transactions among adolescents, peers, teachers, specialists, and significant others. Also covers methods of intervening to promote psychological growth.
Taught by: Nakula
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 558 Developmental Theories: Applications with Young Adults
This course is designed as a collaborative inquiry toward constructing and elaborating upon theories of young adult development and interactions with young adults as counselors, teachers, family members, and higher education administrators. Using a seminar or working group format, participants explore the relationships among developmental theory, sociocultural contexts of young adults, practice (e.g., interventions, relationships), and research. Using literature from empirical and popular, mainstream sources, participants will engage in learning of how young adults navigate the transition from adolescence to adulthood. Specific topics to be addressed include, “the quarterlife crisis,” financial needs of young adults, relationships, family, and career exploration and crystallization.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 559 Sociology of Education
This course provides an overview of key theoretical perspectives and topics in the sociology of education, including expansion of formal educational systems; the extent to which educational systems contribute to or inhibit social mobility; inequality of educational inputs and outcomes by race, social class, and gender; and the social organization of educational institutions, including sources of authority, community, and alienation. The course includes both K-12 and higher education topics.
Taught by: Ingersoll
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 560 Human Development
Provides an introduction to physical, social, cognitive, emotional and linguistic development from infancy to adulthood. Major theories related to human development will be discussed along with methods of intervention for individuals in various life stages.
Taught by: Fegley/Frye
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 561 Adolescent Development
An interdisciplinary view will be used to frame biological, psychological, and social development among adolescents. Special emphasis will be placed on how contextual factors influence developmental outcomes. Theories of adolescent development and methods of intervention will also be discussed.
Taught by: Fegley
Activity: Lecture
1.0 Course Unit

EDUC 562 Personality & Social Development
The effects of social processes on human development in the interlocking contexts of parents, family, peers, school, communities and culture are considered during the major developmental periods of infancy, childhood, adolescence and adulthood. The course examines what is unique about social developments, how social relationships can be defined, and what are the social precursors and consequences of specific developmental changes.
Taught by: Chen
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 563 TESOL Seminar
A weekly seminar that seeks to consolidate, broaden, and deepen knowledge of the main themes, trends, issues, and practices in the field of TESOL. Students will demonstrate their ability to observe, analyze, and reflect upon their teaching as they make connections between theory and practice, all critical skills for ongoing professional development which relate to the students' final project, a reflective-analytical or action research paper. The project is based on a thirty-hour teaching internship completed during the semester in which the students are enrolled in EDUC 563. The project is individually designed and subject to the instructor's approval. All students in the M.S.Ed./TESOL and Language & Literacy must submit a proposal for the internship in the semester before they take the Seminar.
Taught by: Wagner,S/Box/Kozlova
One-term course offered either term
Prerequisite: EDUC 528
Activity: Seminar
1.0 Course Unit
Notes: Permission needed from the department

EDUC 564 Ethics & Schools
This course explores the ethical elements of the work of schooling by examining ethical dilemmas faced by teachers, administrators, and policy makers. This course also explores how ethics should be taught in schools (and if it should be taught at all). The course raises and engages with the following questions: How can educators approach ethical dilemmas in their everyday work? How might an educator respond when she believes school-based policies and procedures are not in a student's best interest? How might an educator balance responses to particular events with system's level transformation? Should policy makers pander to upper-middle class parents to attract them to urban districts? How can individual teachers and entire schools teach ethics?
Taught by: BEN-PORATH,S
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 565 Contemporary Issues in Community Psychology
This course focuses on three related issues. The history and evolution of community psychology within the political, economic and scientific contexts is the first issue. Second, students examine the discipline's distinction between community mental health and community psychology. Third, students examine the implications of disease prevention and health promotion for the discipline's current status and future development.
Course not offered every year
Prerequisite: EDUC 686
Activity: Lecture
1.0 Course Unit

EDUC 566 Cross Cultural Awareness
This course provides students experiential and cognitive awareness through affective exercises and readings. It explores issues of living in a diverse society through a variety of educational strategies including workshops, small group process, guest lectures, etc. It represents the seminar portion of P.A.C.E. (Programs for Awareness in Cultural Education): An "Educating the Peer Educator" Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 567 Internship: ICC
All students in the MS/ICC program must complete a supervised internship of at least 160 hours prior to enrolling in this course. The supervised internship is individually designed and is subject to approval; students must submit a Prospectus describing the internship in the Fall or Spring semester prior to beginning the internship. This course offers guidance as students complete the portfolio or reflective paper, which is based on the experience and data collected during the internship. Through this course, students in the M.S.Ed./ICC program will discuss ways to conceptualize the internship experience, situate it meaningfully within the field of intercultural communication, locate and analyze relevant research literature, and prepare the portfolio or reflective paper, with an overall goal of developing the ability to communicate clearly and effectively for an academic and/or professional audience.
Taught by: Pomerantz
Course usually offered in spring term
Prerequisites: Eight or more courses toward M.S.Ed. degree in Intercultural Communication. Permission needed from department.
Activity: Seminar
1.0 Course Unit

EDUC 568 Cognitive Development
This course examines the cognitive development of the child from infancy to adolescence with an emphasis on cultural context. Topics include: origins of thinking, Piaget, Vygotsky, intelligence, development of learning and memory, language development, and moral development.
Taught by: Frye
Course usually offered in fall term
Prerequisite: EDUC 560 or equivalent
Activity: Lecture
1.0 Course Unit

EDUC 569 Administration of Student Life
This course covers a variety of issues in the management of student services on campus. After examining the historical context of student affairs and the theoretical frameworks of student development, students explore ways to most effectively administer the numerous activities that comprise student affairs programs.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 570 Education and the American Metropolis
Education and the American City centers on major trends and factors that have shaped cities and their preK-16 school systems since the Second World War, including racial discrimination, migration and immigration, suburbanization, deindustrialization, U.S. housing policy, social welfare policy, and urban renewal.
Taught by: Puckett
Course not offered every year
Activity: Lecture
1.0 Course Unit
EDUC 571 Collaboration & Conflict
Collaboration & Conflict is an experiential and interdisciplinary exploration of how people work together to solve complex problems. The course explores the deeply intrapersonal and interpersonal demands of exercising leadership within partnerships, teams, and complex organizations. The course seeks to help students understand why effective leadership is a cognitively demanding task, requiring both adept emotional intelligence as well as expert technical skill, and why most of us must develop as individuals in order to develop as leaders. The course draws on relevant research, theoretical frameworks, and best practices from psychology, sociology, business, law, medicine, negotiation, economics, education, and more.
Taught by: Herrmann
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 572 Language and Gender
This course traces the development of research on language and gender, introducing key theoretical issues and methodological concerns in this area. Participants will consider how gender ideologies shape and are shaped by language use, with particular attention to how research findings can be applied to educational and other professional settings.
Taught by: Pomerantz
Course not offered every year
Also Offered As: GSWS 572
Activity: Lecture
1.0 Course Unit

EDUC 573 Higher Education Policy: What Can We Learn from Other Countries?
This course examines the proposition that policy makers, educational leaders and practitioners can learn from what has worked and failed in higher education policy and practice in other nations.
Taught by: Ruby/Eynon
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 574 Race/Ethnicity in Human Development
This interdisciplinary course will employ a critical perspective on minority youth development, analyze the existing literature, and propose alternative explanations for observed phenomena. It will consider pertinent issues and theories of middle childhood, adolescent and young adult development.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 575 Topics of Psychology in Education: Qualitative Studies of Developmental Interventions
This course is designed to introduce students to innovative approaches to the psychology of education, especially with regard to populations from at-risk contexts, sociocultural dimensions of education, and social-emotional learning.
Course not offered every year
Also Offered As: AFRC 575
Activity: Seminar
1.0 Course Unit

EDUC 576 The Social & Political Philosophy of Education
Is the purpose of education to allow individuals to better themselves by pursuing personal tastes and interests, or should education be primarily aimed at creating good citizens or good members of a group? Is there a way of reconciling these two aims? Assuming that adult relations with children are inherently paternalistic, is it possible for children to be educated for future autonomy to pursue major life goals free from such paternalistic control; and if so, how? How much, if any control over education can be allocated to the state, even when this conflicts with the educational goals parents have for their children? Such questions are especially relevant in multicultural or pluralistic societies in which some groups within a liberal state are non-liberal. Should a liberal democratic state intervene in education to ensure the development of children's personal autonomy, or must toleration of non-liberal groups prevail even at the expense of children's autonomy?
Taught by: Detlefsen, K.
Course not offered every year
Also Offered As: GSWS 249, PHIL 249
Activity: Lecture
1.0 Course Unit

EDUC 577 Selected Topics in Educational Linguistics
The focus for each semester will vary to reflect those issues most relevant to current concerns in educational linguistics. One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 578 Teaching Reading and Study in Colleges and Universities
This course is designed for both pre-service and experienced instructors and administrators who are interested in teaching and/or researching the concept of academic literacies and the array of academic skills in postsecondary settings, and/or directing programs in reading, writing and study strategies at the postsecondary level. The course presents theoretical frameworks relevant to the teaching of study strategies, theories of cognitive development, and practical instructional methods. Emphasis is placed on the process and content of such instruction, materials and methods for teaching, and ways to organize postsecondary literacy programs.
Taught by: Cohen, M.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 579 Intercultural Communication and Miscommunication
An introduction to basic issues in intercultural communication, reviewing various perspectives on the nature of culture, communication, "miscommunication" and inter-cultural relations. The course criticizes two commonly held assumptions: 1) that "cultures" are unitary and unchanging and 2) that inter-cultural contact and communication is inherently more troublesome then intra-cultural communication. The course considers ways in which intercultural communication has important consequences in education, medicine, social services, business settings, and international contact situations.
Course not offered every year
Activity: Lecture
1.0 Course Unit
EDUC 580 Developmental Theories & Applications with Children
The purpose of this course is to provide students with an opportunity to consider mandates, models, and methods related to enhancing the learning and development of preschool and early elementary school children. This course emphasizes the application of developmental psychology and multicultural perspectives to the design of effective classroom-based strategies. Students will consider a “whole-child” approach to understanding children’s classroom behavior in context. Major assignments will involve gathering and synthesizing information about children in routine classroom situations. This information will be used to better understand children’s needs and strengths and how they are manifested in transaction with classroom contexts. Students will focus on one or more students to conduct a comprehensive child study of the child in context. This contact must include opportunities to observe children in a natural setting and interact with them on a regular basis throughout the semester. The placement needs to be approved by the professor. If students do not have a regular classroom contact, one will be arranged.
Taught by: Fantuzzo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 581 Advanced Psychology of Women
The course is intended for those who already have a foundation in the study of the psychology of women and want to expand their understanding of the provision of psychological services to include a contextual, feminist, and relational perspective. Theoretical and applied practices regarding women's mental health, issues of diversity, sexuality and relationships for women will be addressed.
Also Offered As: GSWS 581
Prerequisites: Introduction to Psychology and an undergraduate course in the Psychology of Women or approval by professor.
Activity: Lecture
1.0 Course Unit

EDUC 582 Theories and Pedagogies of Teaching Writing
This seminar examines various theories and pedagogies of teaching writing in multilingual, multimodal contexts. It explores the historical and ideological underpinnings of contemporary theories of writing and attends to how writing, and the teaching of writing, is shifting in a mobile, networked, and global age.
Taught by: Stornaiuolo
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 583 Content-Based Instruction
This course offers students opportunities to investigate, observe, design practice, and critically evaluate the integration of content and language teaching - Content Based Instruction. The settings investigated include thematic English Language teaching; co-teaching and peer coaching by ESL and content teacher teams; and sheltered content instruction, among others. Standards, integrations of tasks, and special language requirements in various content areas are reviewed.
Taught by: Box
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDUC 584 Basic Counseling Skills
This course will teach basic counseling skills to students not seeking a license in professional counseling as a way to help them connect with and work well with others. It will predominantly be oriented towards skill building. We will review/discuss a selection of basic counseling skills and use in-class demonstrations to practice these skills. This course is required for the Counseling and Human Development Skills Concentration.
Taught by: Schultz; Kyle
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 585 Advanced Group and Family Counseling
This course focuses on the basics of systems intervention with a specific focus on families and groups. The purpose is to develop more advanced knowledge of practical therapeutic problem-solving skills at the graduate student level using ecological, systemic, and cultural perspectives. Students will be exposed to advanced group therapy strategies with children, youth, and adults, with family interventions across various mental health diagnostic populations, and how to intervene within groups and families in which cultural differences and styles are key themes. Students will also be challenged to develop a preliminary rationale for a systemic theory of behavior change. Given the diversity of clients that counselors see professionally, some advanced and demonstrated knowledge of how cultural differences will be addressed in the counseling session and in the relationships of larger societal institutions will be expected. This course will satisfy the Group work II requirement of the MPE program in Professional Counseling and Psychology. The course also fits within the APHD theme of Applied Psychology: Intervention and Certification.
Taught by: Lappin
Prerequisites: Students must be enrolled in the M.Phil.Ed. in Professional Counseling Program.
Activity: Lecture
1.0 Course Unit

EDUC 586 Ethnographic Filmmaking
This ethnographic methodology course considers filmmaking/videography as a tool in conducting ethnographic research as well as a medium for presenting academic research to scholarly and non-scholarly audiences. The course engages the methodological and theoretical implications of capturing data and crafting social scientific accounts/narratives in images and sounds. Students are required to put theory into practice by conducting ethnographic research and producing an ethnographic film as their final project. In service to that goal, students will read about ethnography (as a social scientific method and representational genre), learn and utilize ethnographic methods in fieldwork, watch non-fiction films (to be analyzed for formal properties and implicit assumptions about culture/sociality), and acquire rigorous training in the skills and craft of digital video production. This is an ABCS course, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. Due to the time needed for ethnographic film production, this is a year-long course, which will meet periodically in both the fall and spring semesters.
Taught by: Hall, Kathleen & Das, Amit
Two terms. student must enter first term.
Also Offered As: ANTH 583
Activity: Seminar
1.0 Course Unit
EDUC 587 Human Sexuality
All persons have moments that elicit reflection on issues related to myriad aspects of sexuality. When working with people in clinical or school settings, these issues are ubiquitous. This course will provide a broad understanding of sexuality and specific ways to address sexuality problems.
Taught by: Schultz, Kyle
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 588 Digital Literacies in a Networked World
This graduate seminar is designed to explore how literacy and learning are changing as people participate with digital technologies across intersecting local and global networks. Participants will collaboratively investigate how young people's digital literacies—their culturally and socially situated meaning making practices mediated by digital tools—emerge in relation to constantly shifting technologies of communication and are constructed, reconstructed, negotiated, and embodied in multiple semiotic systems across everyday contexts. This course highlights how digital literacies are situated, and how these socio-cultural understandings illuminate issues of power and privilege.
Taught by: Stornaio, A
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 589 Teaching and Learning in the Global Era
We are living in an era in which economic, social, cultural, environmental and technological transformations are connecting people across the globe in new and unprecedented ways. Given that our world is increasingly interconnected, it is no longer adequate to prepare students to succeed simply as citizens of a particular nation. Students also must acquire the knowledge, skills, dispositions, understanding and aptitude to engage with people from different regions in the world who may hold varying or conflicting perspectives, forms of knowledge, and ways of knowing that are culturally and historically specific and informed. This course will focus on issues related to teaching and learning in the 21st century, and to preparing young people for global citizenship. We will consider what it means to be a global citizen as well as the various approaches to educating for global citizenship that have emerged in the U.S. and around the world. We will also explore instructional and curricular innovations that aim to enrich how young people learn about world regions and cultural traditions, engage with global issues and come to respect contrasting perspectives.
Taught by: Hall
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 590 Gender & Education
This course is designed to provide an overview of the major discussions and debates in the area of gender and education. While the intersections of gender, race, class, ethnicity, and sexuality are emphasized throughout this course, the focus of the research we will read is on gender and education in English-speaking countries. We will examine theoretical frameworks of gender and use these to read popular literature, examine teaching practices and teachers with respect to gender, using case studies to investigate the topics.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 591 Applied Research Methods to Inform Policy and Practice
The class is designed to provide students with the knowledge and tools to define relevant research questions to guide program design and operations, as well as to guide policy development; to map questions to appropriate methods of research; to judge the quality of research evidence; and to design strong analysis and evaluation strategies for various purposes. The primary, but not exclusive, focus of the course is on education policy concerns.
Taught by: Maynard
Course usually offered in fall term
Prerequisites: Permission needed from department.
Activity: Lecture
1.0 Course Unit

EDUC 592 Professional Development in Higher Education
To prepare for a career in higher education, students are engaged in a 20-hour a week assistantship in the field. This course complements and enhances the graduate assistantship. Emphasizing practical application of theory and skill development, the course does the following: provides students with tools to embark on a successful job search; offers networking opportunities with administrators in higher education; and introduces students to relevant and timely literature and resources in higher education professional development.
Taught by: Aikins
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 593 Experiential Learning Design for Intercultural Communication
Provides new and experienced educators the opportunity to learn and practice training design and facilitation using the principles of experiential and adult learning.
Course usually offered in spring term
Prerequisite: EDUC676 or permission from the instructor
Activity: Lecture
1.0 Course Unit

EDUC 594 Diversity in Higher Education
This course explores issues of diversity as they pertain to higher education, including race, ethnicity, gender, class, religion, sexual orientation, ideology, etc. Rather than focusing on specific populations of people, the course will tackle issues of diversity within the context of concrete higher education functions and problems.
Taught by: Tiao/Staff
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 595 Politics and Education
How is education a form of political action? In this course we look at the governance of schools, the trust in them and their relations to socioeconomic conditions in society, among other topics, using research in education, political science, and political theory.
Taught by: BEN-PORATH
Course usually offered in fall term
Also Offered As: PSCI 545
Activity: Seminar
1.0 Course Unit
EDUC 596 International Early Childhood Policies and Programs
This course focuses on early childhood development research, policies, and practices in low and middle-income countries. The first part of the course reviews the evidence for investing in young children from economic, health, and education perspectives. The second part of the course discusses current issues related to designing, implementing, and evaluating quality, contextually-appropriate early childhood interventions.
Taught by: Neuman
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 597 Policy Planning in International Educational Development: Theory and Practice
This course focuses on education policy in low and middle-income countries. The first part examines global policy frameworks and international institutions/actors that shape education reform efforts. The second part covers the contexts, processes, and tools for national education policy planning. The third part analyzes a series of current cross-national education policy issues.
Taught by: Neuman
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 598 Interfaith Dialogue in Action
This ABCS course explores religious pluralism and interfaith dialogue and action on college campuses. It brings together students with diverse faith commitments (including atheism) to engage with and learn from one another in academic study, dialogue, and service.
Taught by: Hall/Kocher
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 599 History of American Education
This course will examine the growth and development of American schools, from the birth of the republic into the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of "America" itself? In an irreducibly diverse society, the answers were never simple. Americans have always defined their nation in a myriad of contrasting and often contradictory ways. So they have also clashed vehemently over their schools, which remain our central public vehicle for deliberating and disseminating the values that we wish to transmit to our young. Our course will pay close attention to these education-related debates, especially in the realms of race, class, and religion. When immigrants came here from other shores, would they have to relinquish their old cultures and languages? When African-Americans won their freedom from bondage, what status would they assume? And as different religious denominations fanned out across the country, how would they balance the uncompromising demands of faith with the pluralistic imperatives of democracy? All of these questions came into relief at school, where the answers changed dramatically over time. Early American teachers blithely assumed that newcomers would abandon their old-world habits and tongues; today, "multicultural education" seeks to preserve or even to celebrate these distinctive patterns. Post-emancipation white philanthropists designed vocational curricula for freed African-Americans, imagining blacks as loyal serfs; but blacks themselves demanded a more academic education, which would set them on the road to equality. Protestants and Catholics both used the public schools to teach their faith systems until the early 1960s, when the courts barred them from doing so; but religious controversies continue to hound the schools, especially on matters like evolution and sex education. How should our public schools address such dilemmas? How can the schools provide a "common" education, as Horace Mann called it, melding us into an integrated whole while still respecting our inevitable differences?
Taught by: Zimmerman
Course usually offered in spring term
Also Offered As: HIST 463
Activity: Seminar
1.0 Course Unit

EDUC 600 Curriculum Development and Enactment
The purpose of this course is to advance students' understanding of curriculum as a phenomenon and artifact of educational practice. Students will explore curriculum as a social and cultural phenomenon, be introduced to an approach to developing curriculum, and examine factors that influence how curriculum is enacted.
Taught by: Remillard
One-term course offered either term
Activity: Seminar
1.0 Course Unit
EDUC 604 Ethics and Leadership in Higher Education
This course focuses on the ethical dimensions of leadership. Initial classes are devoted to common ethical frameworks from Plato and moving through Kant, Hume and into the present practical application of ethics to leadership. Leadership theory and practice reveal that there is no one approach that is best or that works in all situations. Aspiring leaders must have a variety of lenses through which they can analyze and understand the elements involved in ethical leadership. At the end of the course students will be able to apply essential concepts of ethical decision making and leadership - the role of trust and the ability to build trust, the uses of power, the importance of good decision-making, the conflicting priorities that arise from living out your core values in the workplace.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 607 Faculty and Academic Governance
Introduction to selected issues pertaining to faculty and academic governance, such as: Who governs American colleges and universities? What are the respective roles of the president, the board of trustees, the faculty, and students in institutional decision making? The course will also explore key contemporary governance issues.
Taught by: Hartley/Garland/Eckel
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 608 Organizational Change in Higher Education
Colleges and universities today face tremendous challenges--calls by external constituents for greater accountability, scarcity of resources, greater competition, and pedagogical innovations. The need for change, and for change agents, in our institutions of higher learning has never been greater. This course examines organizational change both theoretically and practically in college and university settings. Students will be introduced to many of the most current, influential, and promising theories about how change occurs at the departmental, institutional and system level. Using case studies, we will apply these frameworks in order to diagnose and develop constructive strategies for meaningful change.
Taught by: Hartley
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 610 Cultural Perspectives on Human Development
This course focuses on children's and adolescents' development from cultural and cross-cultural perspectives. Topics include traditional and recent theories of cultural influence on development, research strategies, socialization values and practices, and socioemotional and cognitive functions such as aggression and conflict, shyness, and academic achievement in cultural context. Issues involving ethnicity and social and cultural changes are also discussed.
Taught by: Chen
Activity: Lecture
1.0 Course Unit

EDUC 612 LGBT Counseling & Development
In the past quarter century, the awareness of the unique issues facing lesbian, gay, bisexual and transgender (LGBT) individuals has expanded and become essential knowledge in our work as educators, providers of psychological services, and other service provision fields. This course provides a contextual and applied understanding the interactional processes facing LGBT individuals.
Course not offered every year
Also Offered As: GSWS 612
Activity: Lecture
1.0 Course Unit

EDUC 613 Group Counseling
Through didactic and experimental learning activities, students will explore various theoretical approaches to groups, learn and apply principles of group dynamics, develop familiarity with ethical, legal and professional standards relative to group leadership, learn member roles and functions in group, examine group counseling in a multicultural context, and relate these issues to the leader's interpersonal style and behavior. Applications to specific developmental stages and contexts will be explored.
Activity: Lecture
1.0 Course Unit
EDUC 614 Child Development and Social Policy
The purpose of this course is to focus on major US social policies impacting our most vulnerable subpopulations of children living in poverty. The class will explore how developmental science can provide a broad conceptual framework to inform the construction of social policies for children and evaluate their effectiveness. Since much of the social policy issues for children in the US public square are currently hotly debated, the class format will incorporate debate and require students to actively research and defend positions on existing policies. Class size will be set at a level to maximize interaction and involvement.

Taught by: Fantuzzo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 615 Parenting and Children's Educational Development
Theory and research on family influences on achievement development, models of the home-learning environment; parental involvement in schools.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 616 Master's Foundations of Teaching and Learning
The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing, and learning? A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international.

Taught by: Baker
Course usually offered in fall term
Prerequisites: Permission needed from department.
Activity: Lecture
1.0 Course Unit

EDUC 617 Counseling for School to Career Transitions
This psychology course will focus on the developmental and emotional changes that coincide with adolescents' conceptions of work and work-related activities. As a course in career psychology, students will be exposed to readings from multiple disciplinary perspectives and will be expected to learn how to work with youth as they struggle through decisions on career and moving beyond the safety of childhood and adolescence. In addition, students will learn about the family-youth and school-student relational dynamics and that occur simultaneous to the adolescent's development of a work ethic.

Taught by: Nakkula
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 618 Leadership in Educational Institutions
In this course class members will simultaneously engage in an academic study of educational leadership focusing on Pre-K-12 schools and school districts, and in a continuing leadership development laboratory experience designed to increase one's personal efficacy as leader. A basic assumption for the course is that leadership is a central component of schooling; teaching is considered as foremost a leadership activity, whether with five year olds or high school seniors, and successful schools and districts are assumed to have capable leaders. The course will give particular attention to the recent shift in role expectations for school leaders - from competent manager to accountable instructional leader - and what this shift means in relation to the day-to-day work of educational leaders.

Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 619 College Student Health
College Student Health explores postsecondary student health issues from historical and research perspectives, including stress, sleep, sexual health and safety, alcohol and other drugs, and mental health and wellness, among other topics. This course surveys the roles, responsibilities, and best practices of campus health professionals.

Taught by: Aikins
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 620 Enrollment Management
Enrollment management is an organizational concept of strategies for achieving institutional goals. The course provides an overview of multiple enrollment management models, the evolution and maturation of these models, the related implications of these organizational structures and strategies, and the benefits and drawbacks on institutions and their markets. This course is designed primarily for masters-level students.

Taught by: Kaplan/Staff
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 621 Proseminar in Professional Education
An integrative seminar that will provide an opportunity to reflect, orally and in writing, on the issues of quality, stability, and change in teaching, curriculum and school organization, toward the aim of fundamental reform in educational practice.

Taught by: Quinn
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
EDUC 622 International Educational Development Program (IEDP) 
International Field Experience/Internship
Conceptual background on the role and utility of non-profit organizations in international educational development, combined with 6-8 weeks of field experience working in a developing country, or with an international organization that has programs in developing countries. The pre-fieldwork phase of the course seeks to acquaint students with the stages of a project cycle and will introduce students to tools and techniques employed by a variety of international development organizations. Students will work in small groups on a technical proposal throughout the semester. For the fieldwork phase, students are required to write multiple reports from the field.
Taught by: Ghaffer-Kucher
Course usually offered summer term only
Prerequisites: Required of (and limited to) IEDP students in order to complete their Master's Degree.
Activity: Full Time Internship
1.0 Course Unit

EDUC 623 Big Data, Education, and Society
This class discusses the potential and risks of big data-based learning analytics. We will discuss the uses, applications, and benefits of analytics, the relationship between validity and risk, and potential ways to mitigate and reduce risks. We will discuss these issues in the context of existing and emerging educational systems.
Taught by: Baker
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 624 Gender in College
Examined in this course are theories and interdisciplinary perspectives pertaining to gender on college and university campuses. Emphasis is placed on the social construction of gender, gendered institutional norms and practices, gender disparities on college campuses, and the unique experiential realities of women, men, and transgender persons in a variety of roles and postsecondary educational contexts.
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 625 Data Processing and Analysis
Use of Statistical Software including Statistical Analysis (SAS) to effectively build a wide variety of datasets for use to address a range of empirical research questions. Evaluate conventional methods for dealing with missing data and apply contemporary methods using SAS.
Taught by: Rovine
Course usually offered in fall term
Prerequisite: Educ 667 or equivalent
Activity: Lecture
1.0 Course Unit

EDUC 626 Literacy, Discourse, and Interaction
This course draws on varying pedagogical and personal perspectives to explore conceptions of reading comprehension and how it can be taught to children and adolescents. Focus will be given to how certain ways of structuring dialogue about a text profoundly change how readers think about and do reading.
Taught by: Thomas
Activity: Lecture
1.0 Course Unit

EDUC 627 Teaching in the Middle and Secondary Schools
Content-specific sections of this course (math, social studies, science) will examine approaches in planning, implementing and evaluating methods for teaching science, mathematics and social studies in middle and secondary schools. This course is grounded in the belief that teaching and learning require educators to question our teaching purposes and practices through a process of self-reflection, collegial and student-teacher interactions as well as personal and professional growth. Using a variety of learning theories and perspectives as the foundation for interactive teaching strategies, the stories, questions and contradictions of each content area are examined from a variety of perspectives. Offered within the Teacher Education Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 628 Education Finance Policy
This course examines the legal, political and economic issues surrounding how public schools are funded, including equity, productivity and the interaction of finance and school reform. Through readings, discussion and written assignments, students will develop and apply policy analysis skills to the area of education finance.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 629 Teaching English/Language and Literacy in Middle and Secondary Schools
This course is a collaborative inquiry into the dynamic concept of adolescent literacy and its potential as an organizing construct for improving teaching and learning. It provides opportunities to investigate a variety of resources including our own histories as well as a range of print, digital and visual texts and to conduct fieldwork in various middle and secondary school classrooms where youth are being positioned (and positioning themselves) as literacy learners and literacy is being defined, performed, practiced, interrogated, and interpreted, within and beyond the school curricula. By engaging with youth, in various texts and contexts and for a range of purposes, participants will try to make sense of how adolescents negotiate their worlds, in school and out. The approach to literacy is interdisciplinary, drawing from the domains of literature, composition, linguistics, curriculum theory, anthropology and psychology and from theory, research and practice of both university-based and school-based teachers, writers and researchers. The intent is to pose and refine questions about what it means to teach literacy in ways that take seriously what youth bring to school as their own knowledge and passions, cultural and linguistic resources.
Taught by: Stornoiuolo
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 630 Introduction to Mixed-Methods Research
This course introduces students to the theory, history, and practice of mixed methods research. Students will build skills in design and implementation of studies that incorporate both qualitative and quantitative methods. Theoretical framing, research questions, design and selection of methods, sampling, instrumentation and data collection, and analysis are addressed.
Taught by: Gray
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EDUC 631 Research Topics
This seminar offers students a collaborative setting in which to explore a topical area, craft a literature review and refine their research questions. The course will be of special interest to doctoral candidates who are drawn to an area of inquiry (e.g., presidential leadership, diversity, access, organizational change) but now wish to elicit from it a discrete "researchable" question.
Course not offered every year
Prerequisites: Permission needed from department.
Activity: Lecture
1.0 Course Unit

EDUC 633 Selected Topics in Reading/Writing
Examines a topic of current interest to theory, research, and practice in writing.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDUC 634 Language Assessment
This course concerns a basic theoretical and practical foundation in language assessment, with particular emphasis on assessments used in second and foreign language education. The course covers various kinds of testing (both formal testing and performance-based assessment), theoretical and technical issues associated with test development, administration, the social influences of testing, and future directions in language assessment.
Taught by: Butler
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 635 Assessing Language and Learning Differences
This course exposes students to a wide variety of assessments used to look closely at growth in reading/writing/literacy. Students critique both formal and informal approaches to assessment as well as complete structured observations of learners within diverse instructional contexts. Emphases include contextual and affective components of reading/language difficulties, innovative assessment procedures, observational strategies and collaborative inquiry.
Taught by: Gadsden/Campano
Course usually offered in spring term
Prerequisite: EDUC 533
Activity: Lecture
1.0 Course Unit
Notes: Auditors not permitted

EDUC 636 Young Adult Literature, Media & Culture
This course acquaints students with the ever-expanding body of literature written for young adults, considering the theoretical and pedagogical issues it raises. Readings include many young adult novels; empirical research on adolescent response to literature; and literary theory.
Taught by: Thomas
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 637 Contemporary Issues in Science and Technology Education Research
This course focuses on topics that represent some of the most salient and contemporary issues in science education research today. The syllabus moves through four sections that address: 1) Curriculum and Content (What and Why); 2) Learning Processes (How); 3) Contexts (When and Where); and 4) Teaching and Teacher Education (Who).
Taught by: Yoon
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 638 Principles of Monitoring & Evaluation in International Education Development
This course covers theories, methods, and applications of monitoring and evaluation for educational and social programs, with special emphasis on international education development. Topics include basic statistical concepts, program theory, process and outcome assessment, concepts in survey methods, introduction to causal inference, introductory regression analysis, and an overview of impact assessments and cost-benefit/cost-effectiveness analysis.
Taught by: Thapa
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 639 Design of Learning Environments
This course examines different theoretical frames and strategies related to the study and design of learning environments in school, community and online contexts. Physical, social and cognitive aspects of learning situations are considered as students evaluate research and applications in a variety of existing educational learning environments.
Taught by: Yoon/Staff
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 640 History of American Higher Education
This interactive course focuses on the history of American higher education from the Colonial period through the current day. An emphasis is placed on underrepresented institutions and individuals. Students will have the opportunity to make connections between historical trends and movements and current issues.
Taught by: Gasman
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 645 Issues in Education and Health: Disparities and Prevention in Schools and Communities
Drawing upon research and scholarship in health and education, this course aims to deepen our knowledge, understanding, and ability to effect positive change in the health and health practices of students and families in urban settings, using schools and community agencies as sites of engagement.
Taught by: Gadsden
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
EDUC 646 Examining the School to Prison Pipeline: Implications of History, Policy, and Race
The term school-to-prison pipeline typically refers to a disturbing trend in which punitive policies have led to children being funneled out of schools and into the criminal justice system at an alarming rate. This course: 1. Examines the historical context and policies that have contributed to the school-to-prison pipeline. 2. Explores the workings of contemporary racism, in particular, colorblind racism and its relationship to education and corrections policies. Discusses the outcomes of such policies and explores interventions for an alternate approach to such policies.
Taught by: Harper
One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 647 Global Perspectives on School Climate
This course provides an international and comparative perspective on school climate using available case studies, examples and relevant articles from developed as well as developing countries. Topics include definitions and models of school climate, trends in the field, assessment mechanisms, policy discussions, challenges in the field, etc.
Taught by: Thapa
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 650 Communication and Culture in Context
This course brings together scholarship in pragmatics, interactional sociolinguistics, and critical discourse analysis to help language teachers and intercultural educators foster pedagogies that respond to the complexities of living in a multilingual/multicultural society. Through a series of readings, small research projects, and activities, participants will develop a collection of educational practices that focus on 1) raising metalinguistic awareness, 2) developing resources and strategies for communicating across perceived social and cultural boundaries, and 3) assessing intercultural interactional competence.
Taught by: Pomerantz
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 655 Ethnography for Intercultural Communication
This course is for practitioners and researchers engaging in and thinking about mentoring, supervision, and fieldwork in teacher education and counseling as well as in social work and other applied development fields. Taught by: Moore
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 656 College and University Teaching
In this class, students will learn how to systematically plan for a university course, develop a teaching philosophy, create a course syllabus relevant to their discipline and expertise, design and implement evaluation instruments to assess teaching and learning, experiment with a range of technologies to advance teaching, and participate in a teaching simulation. This course also incorporates issues of diversity with regard to teaching.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 657 Advanced Methods in Middle & Secondary Education
Formal teaching and learning are on-going processes that require an examination of our practice and purpose through self-reflection, self-evaluation, collegial and student/teacher interaction, and personal and professional growth. This course is the second half of a content-specific secondary methods sequence that is geared toward teaching middle and high school English, math, science and social studies in an urban setting. Special focus will be on content, pedagogical strategies as well as specific skills and Pennsylvania and national standards. We will work together as teacher-researchers to combine theory with practice to increase our understanding and utilization of an inquiry based, multiple perspective, constructivist approach to teaching. Offered within the Teacher Education Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 658 Diagnosis and Psychopathology
In this course, students will explore the etiology, course, and prevalence of psychological disorders of childhood and adolescence. Particular focus is on the role of these issues in the developing person within the context of family, school, and culture. Major clinical and empirical classification systems (DSMIV and the new DSM5) are examined, as well as some of the diagnostic and assessment strategies used to aid the conceptualization and treatment of these disorders.
Taught by: Richardson
Activity: Lecture
1.0 Course Unit

EDUC 660 Museum Education
Since the nineteenth century, museums have played a key role in the collection and dissemination of knowledge, and today their educational programs play a vital role for an array of communities. This seminar provides an introduction into museum education, the fields that influence it, pedagogical approaches used, and contemporary challenges.
Taught by: Aplenc
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 661 Language Diversity and Education
Exploration of issues affecting educational policy and classroom practice in multilingual, multicultural settings, with an emphasis on ethnographic research. Selected U.S. and international cases illustrate concerns relating to learners’ bilingual/bicultural/biliterate development in formal educational settings. Topics include policy contexts, program structures, teaching and learning in the multilingual classroom, discourses and identities in multilingual education policy and practice, and the role of teachers, researchers, and communities in implementing change in schools.
Taught by: Hornberger/Flores
Course usually offered in fall term
Also Offered As: LALS 661
Activity: Lecture
1.0 Course Unit
Notes: Permission needed from the department
EDUC 662 Picturebooks and the Practice of Literacy
This course examines the formal properties of picture books and their use in enabling literacy development. The course uses aesthetic theory, theories of text-picture relationships, theories of literacy and theories of literary understanding, and also exposes students to empirical research on children's responses to this literary form.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 663 Sociocultural Foundations in Counseling
The course provides an understanding of sociocultural concepts essential to the work of counselors and providers of psychological services. This course provides a contextual and applied understanding of working with socioculturally diverse clients. The purpose of this course is to expand one's understanding of the impact of sociocultural and contextual factors, social-psychological influences, the role of values, and the interaction of identities in counseling and psychological services.
Both intervention and prevention strategies will be addressed. The student will be required to demonstrate a working knowledge of key concepts in sociocultural psychology and the topical areas addressed in the course.
Taught by: Warren/Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 664 Participatory Educational Research in Global Perspective: Theory and Practice
This course examines participatory models and frameworks in relation to international applied educational development research. Through a critical examination of approaches to international applied development research, the course examines real-world models of development research in order to examine questions regarding the nature of knowledge, post-colonial histories, researcher positionalities, and the relationships between concepts, theory, methodology, community, and identity. Course focuses on participatory methodologies as cross-sector strategy frameworks for sustainable, equitable, locally driven educational development efforts.
Taught by: Ravitch
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 665 Research on Teaching
This course is designed to explore the research literature on classroom teaching processes as well as the contrasting conceptual and methodological approaches upon which this literature is based. The course introduces students to the major substantive areas in the field, develops a critical perspective on contrasting paradigms, and raises questions about the implication of research on teaching for curriculum, instruction, evaluation, and teacher education.
Taught by: Remillard
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 666 Introductory Statistics for Educational Research
Scales of measurement; indices of central tendency and variability; product-movement correlation; introduction to the chi-squared; Z, T, and F distributions.
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

EDUC 667 Master’s Paper Seminar
This seminar explores key foundational questions for graduate-level work: How is academic knowledge formed and reproduced? How do we engage with and interrogate the scholarly research? And, how do we participate in the academic conversation around a topic? The Master’s Paper Seminar introduces students to academic discourse, disciplinary writing conventions, and research practices. As part of this course, students are guided through preparing a literature review of a topic of their choice. This review, in turn, forms the foundation of their Master’s Paper that is required for the completion of the M.S.Ed degree.
Taught by: Aplenc/Posecznick
Two terms. student must enter first term.
Activity: Lecture
0.5 Course Units

EDUC 668 Seminar in Practitioner Inquiry
This course is designed as a collaborative investigation into practitioner inquiry and the work of inquiry communities in K-16 and graduate/professional school settings, professional networks and community-based organizations. The focus is on conceptual and methodological frameworks and methods of practitioner inquiry and the contexts, purposes and practices of differently situated inquiry communities.
Participants will explore a range of practitioner inquiry traditions and texts that go by terms such as action, collaborative, critical, community-based, participatory, autobiographical, emancipatory, narrative and pedagogical. They will also conduct an inquiry based on their particular interests and contexts. The course will emphasize practitioner inquiry that intentionally engages issues of equity, access and culture in educational settings.
Taught by: Campano
Course offered spring; even-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 669 Second Language Development
This course provides an introduction to theory and research on second/multilingual language development. Linguistic, cognitive, social, political, and educational perspectives are considered through readings, lectures, activities, and assignments. Students gain an understanding of research design, methodology, and documentation through guided analysis of published studies and an opportunity to design research projects.
Taught by: Butler/Matsumoto
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 671 Adult Literacy
Teaching reading/writing/literacy to adults for whom English is a first or second language. Topics include contrasting conceptions of literacy and learning; participatory literacy programs; instruction and curriculum for adults with diverse cultural and linguistic backgrounds and nationalities; alternative/performance-based assessment; and practitioner research in adult literacy education.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 673 Curriculum & Pedagogy in International Contexts
This course explores the problems, issues, and approaches to teacher preparation and the development of curricula and instructional materials, particularly (though not exclusively) in developing country contexts through a seminar styled class and a hands-on semester long project.
Taught by: Ghaffar-Kucher, Ameena
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 674 Curriculum and Materials Development for English Language Teaching
This course is designed for those who are ready to develop skills in curriculum, course and materials design. The objectives of the course include learning how (a) to become able to analytically respond to readings on curriculum, course and materials development; (b) to analyze the sociocultural, economic, linguistic and occupational contexts of language teaching programs; (c) to design an original semester-long ESL/EFL course; (d) to design original pedagogical tasks and supplementary materials; and (e) to design in a group. EDUC 527 & EDUC 537 provide essential background for this advanced course.
Taught by: Wagner
Course usually offered in fall term
Prerequisite: EDUC 527 & EDUC 537 or permission from instructor
Activity: Lecture
1.0 Course Unit

EDUC 675 Structure of English
The goal of this course is to increase students' explicit knowledge of selected isolatable parts of the English language and to identify their pedagogical applications with respect to the needs of learners of English as a foreign/second language. This goal is realized through an investigation of: 1) frequently occurring linguistic forms and the rules and principles that govern the way that these forms can be combined and ordered; 2) the meanings that can attach to these forms; and 3) the social functions associated with these forms.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 676 Discursive Approaches in Intercultural Communication
This course offers a discourse-based approach and hands-on introduction to the field of intercultural communication, from the micro-level of interpersonal interaction to the macro-level of institutional practice. Through a series of readings and service learning projects in multicultural settings, students will hone their observational and analytic abilities, while gaining an appreciation of and facility for participating in the communicative diversity around them. Topics will include a repertoire approach to examining language in use, interpretation and metacommunication, and the possibility of intervention to facilitate new communicative patterns.
Taught by: Rymes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 677 Information and Communications Technologies for Education and Development in Global Perspective
The importance of the relationship between education, technology, and social-economic development is increasing in the U.S. and around the world. What are new information and communications technologies (ICTs), how are they being deployed, and for what reasons? Are new ICTs a means for delivering skill-based or distance education information, and in what ways are they becoming a part of societies today? What constitute, then, ICTs for Development (ICT4D), and what role do they play in societies that are 'industrialized' and 'developing'.
Taught by: Wagner
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 678 Gender and Sexuality in Education
This seminar gives an overview of the intersections and interplay among gender, sexuality, and education through theory, practice, current discussions, and analysis of varied contexts in English speaking countries (e.g. the United States, Canada, Great Britain, and Australia). After examining the theoretical foundations of genders and sexualities, we will look at their histories and effects in K-12 schools and colleges and universities as well as explore special topics.
Taught by: Cross
Course usually offered in fall term
Also Offered As: GSWS 678
Activity: Seminar
1.0 Course Unit

EDUC 679 Reading, Writing, and Critical Thinking for Applied Linguistics
This course offers international students a hands-on introduction to the practices that constitute academic language use in the fields of TESOL/ICC through a variety of scholarly readings that also serve as an introduction to multilingual writing research. Participants will focus on developing skills and strategies that will strengthen their existing expertise in the following areas: locating, reading, and critiquing academic articles; producing graduate-level written work across a variety of genres; and participating in oral activities.
Taught by: Pomerantz/Box/Kozlova
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 680 Evaluation of Policies, Programs and Projects
Basic evaluation policy and methods for determining nature and severity of problems, implementation of programs relative effects and cost-effectiveness of interventions to reduce problems, design and conduct of evaluation studies in education, social services, crime and delinquency, in the U.S. and other countries.
Taught by: Boruch
Course usually offered in fall term
Prerequisite: EDUC 667 or equivalent
Activity: Lecture
1.0 Course Unit
EDUC 681 Literacy and Illustrated Texts: Picturebooks, Comics and Graphic Novels
Students develop familiarity with illustrated materials - including picture books, comics, and graphic novels - while cultivating understanding of how illustrated texts like these can be used in 21st century elementary/middle/secondary literacy curricula. Students complete individualized and group course projects that focus on illustrated texts in specific classroom, research, critical, theoretical, home, community, and/or professional contexts.
Taught by: Thomas
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 682 Qualitative Modes of Inquiry
This course surveys the field of qualitative research and focuses on foundational philosophies of and approaches to qualitative research. The course focuses on the stages of qualitative research including the development of researchable questions, research designs, conceptual frameworks, methodological stances, data collection and analysis and instrument design and implementation.
Taught by: Ravitch/Strong/Staff
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

EDUC 683 Survey Methods & Design
This course covers the methods and design of field surveys in the U.S. and other countries in education, the social sciences, criminal justice research, and other areas. It covers methods of eliciting information through household, mail, telephone surveys, methods of assuring privacy, enhancing cooperation rates and related matters. Finally, the fundamentals of statistical sampling and sample design are handled. Much of the course is based on contemporary surveys sponsored by the National Center for Education Statistics and other federal, state and local agencies.
Taught by: Boruch
Course usually offered in spring term
Prerequisites: Educ 667 or equivalent. Undergraduate statistics or tests and measurement.
Activity: Lecture
1.0 Course Unit

EDUC 684 Measurement & Assessment
Analysis of primary assessment concepts including basic theoretical principles, types and purposes of assessment devices, levels of measurement, standardization and norming, and methods to support reliability and validity; special focus on appropriate test interpretation, fairness, measurement of change, and incremental validity; application of standards for test development, usage, and critique in education, health care, public policy, and scientific inquiry.
Taught by: Victor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 685 Career Counseling and Development
Career development is studied as an aspect of general development theories of educational and vocational choice and adjustment; psychological aspects of occupations.
Course usually offered summer term only
Prerequisites: Permission needed from instructor.
Activity: Lecture
1.0 Course Unit

EDUC 686 Counseling Interventions
This course will provide an overview of the approaches to various psychological interventions with a focus on theory, key concepts, and therapeutic processes. The purpose of this course is to develop a knowledge base of the underlying principles and approaches of psychological interventions. Students will be required to demonstrate a working knowledge of the key concepts of the psychotherapeutic approaches presented, distinguish between different approaches, and make a preliminary rationale for the use of a particular approach. Students also are expected to develop a critical perspective and demonstrate the ability to analyze theories and interventions.
Course usually offered in fall term
Prerequisites: Admission to Counseling and Mental Health Services.
Activity: Lecture
1.0 Course Unit

EDUC 687 Counseling Ethics & Professional Principles
This course will provide the student with an opportunity to learn and incorporate the multifaceted roles of the professional counselor and assist the student in developing a sense of their professional identity. In this process, the course will focus on the professional role of the counselor; ethics and their application across situations and professional settings; and gaining strong professional communication abilities. The primary goals of the course are to develop the student’s awareness of their roles and responsibilities as a professional, incorporating ethical standards as a counselor, increasing professional communication skills, and understanding the roles of counselor across professional settings.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 688 Counseling Practicum
Seminar and lab to accompany supervised practicum or apprenticeship experiences in schools, colleges, or community agencies. Placement to be arranged by instructor.
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

EDUC 689 Contemporary Issues in Mathematics Curriculum
Educational leaders and policy makers in the U.S. have long used curriculum reform to drive change in K-12 teaching and schooling practices. This course examines the assumptions underlying this approach and examines the related research evidence.
Taught by: Remillard
Course offered spring; odd-numbered years
Activity: Seminar
1.0 Course Unit

EDUC 691 Core Methods in Educational Data Mining
Students will learn how to execute core educational data mining methods in standard software packages, the limitations of existing implementations of these methods, and when and why to use these methods. The course will also cover how EDM differs from more traditional statistical and psychometric approaches.
Taught by: Baker
Course usually offered in spring term
Prerequisite: Prior experience with either statistics or computer science recommended
Activity: Lecture
1.0 Course Unit
EDUC 692 Education Policy Issues
This course is an introduction to the process of conducting educational research. Its purpose is to help students learn to approach problems like researchers by examining and critiquing existing research and developing coherent “researchable” questions. Students will carry out a substantial independent project where they will develop elements of a research proposal.
Taught by: Maynard
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 693 Student Development in College Environments
An overview of college student development theory is offered in this course. Specifically, three families of theory are explored: 1) Psychosocial and identity, 2) cognitive-structural, and 3) environmental. The theories are discussed in terms of their foundations, constructs, and applicability to work in various functional areas of higher education.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 694 Organization and Administration of Intercollegiate Athletics
Athletics play a critical role at colleges and universities. This course examines the role of intercollegiate athletics, how they are structured, what educational purposes they serve and how such programs influence the social and academic development of students.
Taught by: Weaver/Staff
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 695 Proseminar in International Educational Development
The IEDP Proseminar covers the broad arena of international educational development. The course is designed to provide an analytical perspective on applied research and policy as undertaken by UN, donor and non-profit agencies, with a focus on developing countries. Several invited specialists will participate in the course. This Proseminar is a required course for IEDP Masters students.
Taught by: Wagner
Two terms, student must enter first term.
Activity: Seminar
0.5 Course Units

EDUC 696 In/formal Learning Experience Internship
The In/-formal Learning Experiences Internship is a two-semester course that meets throughout the academic year to cover theory, research, and practice of informal learning. The internship is undertaken from October to March each academic year in one of our partnership institutions and includes about 120 hours field work. The course is designed to provide background readings, a discussion forum of central issues in informal learning, and a place to share and exchange internship experiences. This course will be required for all LST MSEd and TLL MSEd students as part of the required Internship Program.
Two terms, student must enter first term.
Activity: Lecture
0.5 Course Units

EDUC 697 Politics of School Reform
In this seminar we’ll explore the political causes and consequences of school reform in the post-Brown era. Coverage will be eclectic so as to give participants a broad, interdisciplinary background in the field. We’ll draw primarily from the politics of education literature, but we’ll reach beyond and examine work from political science, sociology and history. Rather than the standard categories organizing this scholarship—by level (local, state, federal), decision-making body (school board, legislature, judiciary), or issue area (standards, decentralization, funding)—we’ll structure our exploration by considering fundamental conclusions about the politics of school reform: (1) School reform as contained politics, (2) School reform as transgressive politics, (3) School reform as collaborative politics, and (4) Institutions, ideas, & interests as constraints on the politics of school reform.
Taught by: Quinn
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 700 Craft of Ethnography
This course is designed to follow after Ethnographic Research Methods (EDUC 721). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project.
Taught by: Hall
Course not offered every year
Also Offered As: ANTH 707
Prerequisites: Must have completed EDUC 721 or equivalent introductory qualitative methods course.
Activity: Lecture
1.0 Course Unit

EDUC 702 Conceptual Models of School Leadership & Organization
This graduate seminar has three components. One, we will explore contemporary theories of organization as frameworks for understanding how classrooms, schools, and districts function. Two, we will employ a case method approach on several real-world cases developed by Harvard Business School and the Public Education Leadership Project at Harvard University. Three, we will learn from and interact directly with local education leaders and their communities through a series of school leadership study tours.
Taught by: Quinn
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 703 Advanced Qualitative and Case Study Research
This course explores epistemological and methodological choices and stances in qualitative research as well as advanced research methods including qualitative research design and concept mapping, sampling/participant selection, interviewing, coding and data analysis, instrument development and triangulation techniques.
Taught by: Ravitch
Course usually offered in spring term
Prerequisite: EDUC 682 Qualitative Modes of Inquiry
Activity: Lecture
1.0 Course Unit
EDUC 704 Economics of Higher Education
Covers selected topics in the economics of higher education, including investment and consumption theories, cost functions, university investment practices and principles, and academic labor markets.
Taught by: Presley
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 705 Proseminar in Research & Analysis
This course is designed to provide students with the skills, information, and resources that are necessary to develop a research proposal. This course will also examine strategies for completing proposals and dissertations. A variety of research designs and approaches to educational research will be explored. Through this course, students will become both informed consumers of research and effective designers of research.
Taught by: Perna/Hartley
Course usually offered in fall term
Prerequisites: Permission needed from department.
Activity: Lecture
1.0 Course Unit

EDUC 706 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Taught by: Hall
Course not offered every year
Also Offered As: ANTH 704, URBS 706
Prerequisite: EDUC 547
Activity: Lecture
1.0 Course Unit

EDUC 707 Schools as Organizations
Schools are places of learning - but they are also workplaces, teachers are employees and teaching is a job. This in-depth doctoral-level course focuses on theory and research concerned with the organizational and occupational side to schools and teaching. It draws from multiple fields and perspectives, including: organizational theory; the sociology of organizations; occupations and work; educational administration; and school leadership. The objective is to have students understand and evaluate a series of different perspectives from theory, research and policy concerned with the character of the teaching occupation and the organization of schools.
Taught by: Ingersoll
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 708 Peer Relationships in Childhood and Adolescence.
This course focuses on various aspects of children's peer relationships, especially with regard to their significance for human development. The roles of family, community, and socio-cultural contexts in the development of interpersonal competence and relationships are discussed. The course explores possible intervention strategies to help children with peer relationship difficulties.
Taught by: Chen
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 709 Methods of Discourse Analysis
This course introduces several methodological approaches that have been developed to do discourse analysis. The course intends primarily to provide students with various methodological tools for studying naturally-occurring speech. Assignments include both reading and weekly data analysis exercises.
Taught by: Rymes
Course not offered every year
Prerequisites: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 682) and as such it is suggested that students have some background in qualitative methods before enrolling.
Activity: Lecture
1.0 Course Unit

EDUC 710 Economics of Higher Education
Covers selected topics in the economics of higher education, including investment and consumption theories, cost functions, university investment practices and principles, and academic labor markets.
Taught by: Presley
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 711 Education Policy Research Practicum
This course will partner students with educational leaders to conduct client-based, applied education research projects. Students will engage in original empirical analysis, learning how to use empirical evidence to support the work of policymakers and practitioners, and will complete written policy reports and present their findings to clients.
Course usually offered in spring term
Prerequisites: EDUC 591 and EDUC 751 or EDUC 667 (or equivalent)
Activity: Seminar
1.0 Course Unit

EDUC 712 Responding to Literature: An Interdisciplinary Perspective
This course deals with the ways in which readers respond to and transact with literary texts, and aims at helping students understand the nature of the variety of ways in which literature interfaces with our lives. Three different types of discourse are read: literary criticism; empirical research on response to literature; and literary texts themselves. Various types of literary criticism are considered, including (but certainly not limited to) what is commonly called "reader response criticism"; text-based criticism; and criticism that contextualizes literature socially and historically. The empirical research on response deals with ways in which readers of various ages interact with literature, mostly in school settings; some attention is given to instructional design and critique of methodology. The literary texts range from picturebooks to literature for young adults.
Taught by: Thomas
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 713 Law and Higher Education
An examination of the most important state and federal laws governing U.S. colleges and universities, with an emphasis on current legal problems.
Taught by: Roth
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 715 Case Studies in Higher Education Administration
This course is designed to enhance understanding of decision making in higher education administration. Based on case studies, students will analyze, propose policies, generate action plans and implementation procedures, and assess the potential consequences of their administrative decisions.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 716 Public Policy Issues in Higher Education
A study of the most influential federal and state policies, legislation and practices affecting colleges and universities.
Taught by: Finney
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 717 Professional Internship in Counseling I
The course will consist of experiential and small group learning, with a focus on practicing and refining skills related to advanced work in psychological services, including the application of various techniques of counseling, ethical considerations, and critiques of live and simulated counseling sessions through role-playing, audio and visual taping.
Taught by: Watts
Course usually offered in fall term
Prerequisites: Formal admission into Professional Counseling and Psychology M.Phil.Program.
Activity: Lecture
1.0 Course Unit

EDUC 718 Professional Internship in Counseling II
Lab seminar group with a seminar group leader is the second component of the Professional Counseling Internship course. Lab will provide students with exposure to others' experiences in different types of internships, working with a variety of different client populations. A primary goal of this course is to help each student refine his/her evolving knowledge of self as a provider of psychological services to others. Students will also evaluate contexts of practice and the professional skills, ethics and practices inherent in effective provision of counseling and psychological services. This course consists of two components: CLASS MEETINGS, during which the full group will meet to address issues related to work in various internships, as well as discuss the development of advanced counseling skills and issues; and, LAB SEMINAR GROUP which consists of 7-8 masters students with a seminar group lab leader.
Taught by: Watts
Course usually offered in spring term
Prerequisites: Students must be enrolled in the M.Phil.Ed in Professional Counseling Program.
Activity: Lecture
1.0 Course Unit

EDUC 719 Research on Teacher Education and Learning to Teach
This course focuses on issues of research, practice, and policy related to teacher education at the preservice, induction, and continuing education levels in the United States and internationally. The course is designed as a seminar to engage participants in the study of teacher education through interaction with researchers and policy-makers, through in-depth study of critical issues in the field, and through engagement with teacher education programs. It is anticipated that each course participant will develop a literature review focusing on one or more topics related to critical issues in teacher education.
Taught by: Reisman/Staff
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 720 Teachers and Teaching Policy
Explores research, policies, and practices that promote a high-quality teacher workforce, and effective instruction. Topics include recruitment, retention, mentoring, induction, professional development, certification, value-added, merit pay, etc. Appropriate for students from different programs, including education, social/public policy, psychology, political science, sociology, business, and current and future teachers and school leaders.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 721 Ethnographic Research Methods
A course in ethnographic participant observational research; its substantive orientation, literature, and methods. Emphasis is on the interpretive study of social organization and culture in educational settings, formal and informal. Methods of data collection and analysis, critical review of examples of ethnographic research reports, and research design and proposal preparation are among the topics and activities included in this course.
Taught by: Hall/Strong
Course not offered every year
Prerequisites: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 682) and as such it is suggested that students have some background in qualitative methods before enrolling.
Activity: Lecture
1.0 Course Unit

EDUC 723 Multicultural Issues in Education
This course examines critical issues, problems, and perspectives in multicultural education. Intended to focus on access to literacy and educational opportunity, the course will engage class members in discussions around a variety of topics in educational practice, research, and policy. Specifically, the course will (1) review theoretical frameworks in multicultural education, (2) analyze the issues of race, racism, and culture in historical and contemporary perspective, and (3) identify obstacles to participation in the educational process by diverse cultural and ethnic groups. Students will be required to complete field experiences and classroom activities that enable them to reflect on their own belief systems, practices, and educational experiences.
Taught by: Gadsden
Course usually offered in fall term
Also offered as: AFRC 723
Activity: Lecture
1.0 Course Unit
EDUC 724 Literacy: Social and Historical Perspectives
A review of the cross-cultural and historical literature on writing and reading with emphasis on the identification of norms and practices which affect the teaching and learning of reading and literacy today. Special attention to the social functions of literacy in work, home, and school settings and to myths regarding the consequences of literacy for cognition, socio-economic mobility, and predictability, and the predictability of citizen behaviors.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 725 Advanced Professional Practice in Communities, Agencies and Organizations
The purpose of this course is to expand the student's awareness of the multifaceted responsibilities and roles of school counselors in primary and secondary school settings. Through readings, class discussions and guest lectures, it is intended that students will acquire additional competencies and a broader appreciation for professional issues confronted by school counselors and varied responsibilities they have in helping students focus on academic, personal, social and career development in an effort to achieve success in school and lead fulfilling lives. An important emphasis of this course will be on school counseling from an ecological and multicultural perspective.
Course usually offered in spring term
Prerequisites: Students must be enrolled in the M.Phil.Ed. in Professional Counseling Program.
Activity: Lecture
1.0 Course Unit

EDUC 726 Doctoral Foundations of Teaching and Learning
The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing and learning? A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international.
Taught by: Kafai/Remillard/Yoon/Reisman/Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 727 Education, Culture and Society
This course surveys basic issues in the philosophical and social foundations of education, addressing basic questions about the purpose of education, mostly through reading primary texts. Intended for incoming doctoral students.
Taught by: Ben-Porath
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 729 International Educational Development Doctoral Proseminar
The IEDP Doctoral Proseminar covers the broad arena of international educational development. Drawing on the research experiences of the faculty and of the enrolled doctoral students, the course allows for the analysis of intellectual and technical challenges of working in international education and development, especially around issues of social and public policy.
Taught by: Ghaffar-Kucher,Ameena & Wagner,Dan
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 731 Risk, Resilience, and Prevention Science
Examines the definition and measurement of risk and resilience from the perspectives of developmental psychology and ecological theories of development; introduces students to the conceptual and practical integration of intervention and prevention sciences to address social, emotional, educational, and health problems across childhood.
Taught by: Wolf
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 735 Tutorial Work in Reading/Writing/Literacy
Tutorial in Reading Writing and Literacy, is designed for participants to gain knowledge and insight into the major challenges facing learners in their quest for proficiency in literacy. The course participants investigate and develop instructional plans for the literacy needs of learners in pre-K to 12th grade settings. Course participants will investigate the roles and responsibilities of the literacy specialist as related to identifying the needs of learners and planning appropriate instruction to meet those needs.
Taught by: Gross
Course usually offered in spring term
Prerequisites: Permission needed from instructor.
Activity: Seminar
1.0 Course Unit

EDUC 736 Quasi-Experimental Design
Quasi-experimental design is the set of statistical procedures designed to reduce bias inherent to the analysis of observational data. This course covers the most pressing quasi-experimental techniques employed in the social sciences, with an especial emphasis on education issues. The class combines lecture and lab exercises complemented with real-life examples.
Taught by: Gonzalez Canche
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
EDUC 737 Research in Teaching Writing
This doctoral seminar explores theories and research on writing, investigating current and traditional areas of inquiry in the field of writing studies. As class participants review and analyze theoretical and empirical literature on writing and teaching writing, the seminar will offer students opportunities to compose texts and reflect on their roles as writers in the academy through collaborative inquiry. Participants will think together about the purposes, functions, and consequences of writing in diverse communities and across school and out-of-school settings. The course will pay particular attention to how writing is shifting in a mobile, networked, global age, and how multimodality, interactivity, and hybridity characterize our composing lives.
Taught by: Stornaiuolo, A
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 738 Advanced Topics in Monitoring & Evaluation in International Education Development
This is a sequel to the Principles of M&E course offered in the fall. The course will review both theories as well as methods of program evaluation in a deeper way using papers and technical reports as case studies, with special emphasis on international education development.
Taught by: Thapa
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 739 Poverty and Child Development
The goal of this course is to help students develop a coherent understanding of the ways in which poverty affects families and children, the different needs of families and children across different developmental stages of childhood, and the intersection between poverty and education.
Taught by: Wolf
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 744 Building Inclusive Communities in Higher Education
This course provides students an opportunity to apply their knowledge related to the practice of higher education administration. The goal of the course is to advance students' understanding of climate on today's campuses and to utilize diverse methods to create inclusive spaces on campus for all institutional stakeholders.
Taught by: Tiao
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 747 Social and Statistical Network Analysis
Network analysis aims to find structure among a variety of connections/settings. This course highlights the inferential/statistical aspect of network analysis which overcomes its main limitation of being depicted as a descriptive tool. Since applications of network analysis to education research are emerging, course participants will gain a competitive job-market advantage.
Taught by: Gonzalez Canche
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 751 Introduction to Applied Quantitative Methods for Education Research: Pre-K to 20
An introduction to the interpretation and use of data about education policy issues through the use of computer-assisted methods of statistical analysis. Emphasis is on the implications for educational policy and research design.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 764 Cognitive Processes
Basic concepts, theory, and research in cognitive science, problem-solving, psycholinguistics, memory, perception and social cognition. Special topics may include reading, bilingualism, computer modeling, and cognitive theory applied to education and non-education settings.
Taught by: Frye
Prerequisite: EDUC 568 or equivalent
Activity: Lecture
1.0 Course Unit

EDUC 765 Introduction to Causal Inference for Educational Research
Offers applied introduction to methods of causal inference for evaluation research; introduces students to statistical models for causal inference based on randomized controlled trials and observational studies; includes discussion of special topics such as replication and generalizability that touch upon issues related to implementation and implications of experimental/quasi-experimental research.
Taught by: Chan
Course usually offered in spring term
Prerequisite: EDUC 667 or equivalent (graduate level introductory statistics course); knowledge of multiple regression preferred
Activity: Seminar
1.0 Course Unit

EDUC 766 Advanced Professional Counseling Interventions
This course will focus on advanced issues in the clinical practice of professional psychology with children, adolescents and adults where students will practice clinical skills in role-played therapeutic situations. Students will be using this class as preparation for the formal clinical examination required by all Master of Philosophy in Education students prior to graduation from the Professional Psychology and Counseling program.
Taught by: Morris/Stevenson
Course usually offered in fall term
Prerequisites: Admission into Professional Counseling M.Phil.Ed. Program
Activity: Lecture
1.0 Course Unit

EDUC 767 Regression and Analysis of Variance
This course covers design of controlled randomized experiments, analysis of survey data and controlled field experiments, including statistical models, regression, hypothesis testing, relevant data analysis and reporting.
Taught by: Rovine/Victor
One-term course offered either term
Prerequisite: EDUC 667 or equivalent
Activity: Lecture
1.0 Course Unit
EDUC 768 Measurement Theory and Test Construction
Design of ability, achievement, and performance measures such as those applied for high-stakes decision making in large-scale assessment and for diagnosis and classification of individuals; advanced true-score and item response theory; item formatting, analysis, selection, calibration, linking, and scaling; analysis of reliability for continuous, ordinal, nominal, and composite scales; analysis of differential item functioning; unidimensionality, and local independence; model contrasting, test equating, and scaling for longitudinal assessment; standards and cut-point setting.
Taught by: McDermott
Course not offered every year
Prerequisite: EDUC 684 or equivalent
Activity: Lecture
1.0 Course Unit

EDUC 770 New Models for Postsecondary Education
Taught by: Pritchett
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 771 Factor Analysis and Scale Development
Advanced measurement theory; exploratory and confirmatory item factoring and clustering for self-report, observational, rating, performance, and personality instruments; factoring of dichotomous and ordered categorical data, full-information factoring; scaling procedures, hierarchical structure, full-information bifactor structure, invariance, generality, reliability, validity, interpretation, and scientific reporting.
Taught by: McDermott
Course usually offered in fall term
Prerequisites: EDUC 684 or equivalent.
Activity: Lecture
1.0 Course Unit

EDUC 777 Structural Equations Modeling
Theory and application of means modeling and longitudinal analysis through structural equations, including observed variable regression with multiple equations simultaneously estimated, confirmatory factor analysis measurement models using multiple observed indicators to define sets of latent variables, and regression relationships among multiple latent variables; advanced applications for repeated measures and multilevel growth modeling in educational and social science research.
Taught by: Rovine
Course usually offered in spring term
Prerequisite: Introductory Statistics
Activity: Lecture
1.0 Course Unit

EDUC 782 Assessment for Counselors I
A critical analysis of tests and clinical methods in assessment as related to theories of intelligence, and includes: 1) factors influencing assessments; 2) assessment theory; 3) assessment practices; 4) interpretations of assessments.
Prerequisites: Admission to Professional Counseling M.Phil.Program
Activity: Lecture
1.0 Course Unit

EDUC 783 Assessment for Counselors II
Review and administration of assessment instruments in the areas of adaptive behavior, perceptual abilities, neurological functioning, diagnostic and achievement measures, vocational interests, and objective personality measures. Integration and interpretation of results and intervention.
Course usually offered in spring term
Prerequisites: Admission to Counseling and Mental Health Services or Professional Counseling M.Phil.Program
Activity: Lecture
1.0 Course Unit

EDUC 784 Psychological Consultation
Study of theories of consultation and their applications at the professional level. Methods and procedures in applied behavior analysis are introduced as skills for successful consultation.
Course not offered every year
Prerequisites: Admission to Counseling & Mental Health Services or Professional Counseling M. Phil. Program
Activity: Lecture
0.5 Course Units

EDUC 785 Selected Topics in Professional Psychology
Consideration of research and theory, on selected advanced topics.
Course not offered every year
Prerequisites: Admission to Counseling & Mental Health Services or Professional Counseling M. Phil. Program
Activity: Lecture
1.0 Course Unit

EDUC 806 Narrating the Self
This seminar explores, in some linguistic detail, how narrators can partly construct their selves while telling autobiographical stories. The seminar addresses three questions: What is the structure of narrative discourse? How might we construct ourselves by telling stories about ourselves? If narrative is central to self-constructions, what is "the self"?
Taught by: Rymes
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 829 Policy Research
Study of the roles of scientific inquiry in development and assessment of contemporary educational and social policy. Analysis and application of foundational research, statistical and psychometric methods to inform a variety of policy topics and related issues and problems encountered in policy formation and evaluation.
Taught by: Rovine
Course not offered every year
Activity: Lecture
1.0 Course Unit
EDUC 834 Theories of Reading
This course is designed as a collaborative inquiry toward constructing and elaborating theories of practice as teachers and/or researchers of reading. Using a seminar or working group format, participants explore the relationships among theory, reading, practice, pedagogy and research. The course's conceptualization is informed primarily by (1) frameworks from critical, feminist and culturally-centered literatures which foreground issues of equity, representation, and ethics; and (2) current conversations in the field of literacy where the definitions, purposes, and practices of reading have been made problematic. It also invites participants to engage the notion that knowledge for teaching and research comes from inquiry into the questions, issues, and contradictions that arise from everyday life. The course provides historical lenses for comparative analyses of theoretical frameworks and research paradigms as well as opportunities to investigate participants' individual histories as well as teaching and research interests.
Taught by: Campano
Course offered fall; even-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 836 Issues in Instructional Leadership in Reading and Writing
Participants will consider current critical issues in Reading, Writing, and Literacy, such as: improving accountability and assessment; approaches to professional development and curriculum development; and the use of scientifically "valid" research to advance literacy learning.
Taught by: Waff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 838 Applied Research & Reporting
Hands-on experience conducting applied research. Students will be guided through a research project of relevance to education or social policy chosen by the student, with assistance from the instructor. The research entails analysis of one or more public or quasi-public use data sets, such as the National Longitudinal Survey of Youth; the National Longitudinal Survey of Youth Child Supplement; The Teenage Parent Demonstration Data Base; the National Profile of Child Care Settings Data Base; or the National Post Secondary Student Aid Survey. The students will prepare journal-length papers based on their research and respond to the reviews of classmates and the instructor.
Course usually offered in fall term
Prerequisites: Competence in basic statistics and computer literacy.
Activity: Lecture
1.0 Course Unit

EDUC 845 Seminar in Microethnography
This course provides an introduction to theory and method in the unified analysis of verbal and nonverbal behavior as it is culturally patterned, socially organized, and socially organizing in face-to-face interaction, in an approach that integrates participant observation with the detailed analysis of audiovisual records. Students read relevant literature in linguistic anthropology, interactional sociolinguistics, conversation analysis, and embodiment in social interaction. Class requirements include in-class reading presentations, a small microethnographic research project, and several short data analysis reports drawing on differing levels of analysis and differing theoretical orientations. Students review and apply methods of audiovisual data collection, transcription, processing, archiving, and presentation.
Taught by: Rymes
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 860 ISHD Proseminar
This course gives students the opportunity to better understand their own psychological development and how this interacts with their scholarship and professional development. Required course for ISHD students.
Taught by: Stevenson
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 871 Randomized Trials and Experiments
This course will cover three alternatives to conventional modeling in the social sciences: (1) design and execution of field trials in education and other social sectors including criminology, (2) quasi-experiments especially contemporary research comparing results of randomized and non-randomized trials, and (3) analysis for descriptive and exploratory purposes. The course themes include causal inference, vulnerability of models applied to observational data, recent developments computer-intensive inductive approaches to data, and related matters. Although some methodological background papers will be discussed, the seminar is case study oriented with readings from contemporary research on the topics from peer reviewed journals and well-vetted reports issued by governmental and nongovernment agencies. Cases will include work supported by IES on effects of Odyssey Math, for example, and work in the crime and justice arena. We will study the work of scholars affiliated with Penn who are actively involved in randomized and non-randomized trials, for instance, and the work of colleagues at other universities (Berkeley, Northwestern, Wisconsin, Princeton, others) and colleagues in non-profit and for profit research organizations such as Analytica, AIR, Mathematica and others that contribute to learning in this arena. Colleagues who have contributed notably to contemporary trials and related topics, and whose work we study, will be invited to present guest lectures. Seminar participants are required to read relevant papers prior to the presentations. The course is open to graduate students who have had basic statistics courses at the graduate level, and have a strong interest in evidence based policy and in studies that transcend discipline boundaries.
Taught by: Boruch
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 880 Complex, Multilevel, and Longitudinal Research Models
Strategy, application, interpretation, and reporting for simple and complex factorial, repeated measures, time series, higher-order growth, unbalanced, and multiple constant and inconstant covariates designs; error covariance structure modeling, hierarchical linear modeling, multilevel cross-classification modeling, multilevel individual growth-curve modeling, multigroup multilevel modeling, multilevel generalized linear modeling for discrete outcomes (multilevel multiple logistic regression); Receiver Operating Characteristic curve analysis; latent growth mixture modeling.
Taught by: McDermott
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: EDUC 767 or equivalent

EDUC 881 Applied Multivariate Statistics
Multivariate strategies for hypothesis testing, prediction, and classification including multiple regression, multivariate multiple regression, canonical regression, multiple logistic regression, multiple discriminant functions, factor analysis of scaled variables, hierarchical cluster analysis, and multivariate classification analysis; computer processing, interpretation, and reporting.
Taught by: McDermott
Course usually offered in spring term
Prerequisites: EDUC 767 or equivalent and permission of instructor.
Activity: Lecture
1.0 Course Unit

EDUC 900 Research Seminar in Applied Research Synthesis Methods
Issues in research design, development of a literature review, and dissertation proposal.
Taught by: Maynard
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 911 Issues in Second Language Acquisition
This course is designed for students to be able to analyze, synthesize and discuss second language acquisition theory and research on the basis of intensive reading of work that reflects perennial and current issues in the field. Comparisons and connections are drawn from theoretical and empirical literature on second language acquisition processes, constraints, and interventions. Relevant research methods are also addressed. Topics, issues, and readings are updated each time the course is offered.
Taught by: Butler
Course not offered every year
Prerequisite: EDUC 670
Activity: Lecture
1.0 Course Unit
Notes: Permission needed from instructor

EDUC 917 Research Seminar: Language and Power
The course examines the relationship between language, meaning and power in their social context. The course is organized around a number of core themes; Language studies rooted in Critical Discourse analysis; The application of Bourdieus concepts to this field; multi modality, the growing concern with 'Superdiversity' that links Local/ Global; academic literacies, with particular reference to the writing required in students' own contexts; and methodological issues in researching language and power; and we then bring all of this to bear on our own context under the heading 'language in education'.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 920 Research Seminar in Reading and Writing
For doctoral candidates and others engaged in research and advanced professional study in the field of literacy.
Taught by: Campano
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 927 Research Seminar: Language Policy and Education
Seminar participants are introduced to concepts, theories, and methods in the field of language planning and policy, which they then apply in developing their own library-based research on specific language planning cases from around the world. Cases may include: official language decisions, instructional medium choices, literacy initiatives, gender-neutral language reforms, foreign/heritage/second language pedagogy and policy, indigenous language revitalization efforts, or other language-related decisions and policies at international, national or local levels.
Taught by: Hornberger
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Permission needed from instructor

EDUC 960 Advanced Research in Human Learning and Development
Selected topics from human learning, human development, cognitive processes, social psychology, and personality.
Taught by: Frye
Activity: Lecture
1.0 Course Unit

EDUC 980 Mixed Methods Research: Counseling & Development
This course is designed to position students to acquire a more sophisticated understanding of research methods in order to conduct and critically evaluate empirical research in applied and clinical settings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

Education - Education Entrepreneurship (EDEN)
These courses are only for students enrolled in the Education Entrepreneurship program.
EDEN 501 Entrepreneurship in Education
Entrepreneurship in Education provides an understanding of the nature of entrepreneurship related to public/private/for profit and non-profit educational and social organizations. The course focuses on issues of management, strategies and financing of early stage entrepreneurial ventures, and on entrepreneurship in established educational organizations. Students will learn the fundamentals of business plan design and development. This course is only available to students in the Education Entrepreneurship program. Course is only for students enrolled in the Education Entrepreneurship program. Course usually offered summer term only
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
1.0 Course Unit

EDEN 502 Foundations of Education
Foundations of Education surveys basic issues in the philosophical and social foundations of education. The course addresses basic questions about the purpose of education, the appropriate treatment for children from different cultural and economic groups and the relationship between rigor and relevance. Intended for advanced Masters and doctoral students. This course is only available to students in the Education Entrepreneurship program.
Course usually offered summer term only
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units

EDEN 503 Management in Education
Management in Education introduces the critical management skills involved in planning, structuring, controlling and leading an organization. The course provides a framework for understanding issues involved in both managing and being managed. The class develops a systems view of organizations, examining organizations as part of a context, including but not limited to environment, strategy, structure, culture, tasks, people and outputs. Students consider how managerial decisions made in any one of these domains affect decisions in each of the others. This course is only available to students in the Education Entrepreneurship program.
Course usually offered summer term only
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
1.0 Course Unit

EDEN 504 Capstone (Part 1)
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. The Capstone Experience concludes with the presentation of a new Venture Pitch and the submission of a pro forma Business Plan suitable for presenting to prospective customers, end users, investors, funders, business partners, staff and other ecosystem stakeholders. The process equips an entrepreneur or an intrapreneur to tackle the next steps of launching their venture - whether that is building a minimally viable product, testing with customers, bringing on team members or seeking funding. This course is only available to students in the Education Entrepreneurship program.
Course usually offered in fall term
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units

EDEN 505 Foundations of Teaching, Learning & Curriculum
Teaching, Learning & Curriculum explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing, and learning? A central goal of the course is to encourage students to consider these questions and their interconnections, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international. This course is only available to students in the Education Entrepreneurship program.
Course usually offered in fall term
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
1.0 Course Unit

EDEN 506 Economics of Education: Intro
This is a survey course at the introductory level designed to provide an overview of selected theoretical, conceptual and empirical perspectives on topics in the economics of education. We will apply economic principles to analyze a wide range of educational issues. This course assumes that students have no background in economics. Many of the readings will contain technical economic material, but the focus will be on the conceptual, theoretical and empirical findings of economic research within education. It is expected that you reflect on the findings we cover and how these findings may inform and relate to your educational and professional experiences, and how economic theory and empirical evidence might inform your business plan ideas. As we move through the course, you should gain a solid understanding of how economists think about and study education-related issues. This course is only available to students in the Education Entrepreneurship program.
Course usually offered in fall term
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units
**EDEN 507 Design of Learning Environments**
Design of Learning Environments examines different theoretical frames and strategies related to the study and design of learning environments in school, community, and online contexts. Physical, social, and cognitive aspects of learning situations are considered as students evaluate current research and applications in a variety of existing educational learning environments. This course is only available to students in the Education Entrepreneurship program.

Course usually offered in spring term
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units

**EDEN 508 Technology Strategy**
Technology Strategy is designed to meet the needs of future managers, entrepreneurs, consultants, and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using technology to improve business processes and offerings. The class will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. This course is only available to students in the Education Entrepreneurship program.

Course usually offered in spring term
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units

**EDEN 509 Marketing for Entrepreneurs**
Marketing for Entrepreneurs addresses how to design and implement the best combination of marketing efforts to carry out a firm’s strategy in its target markets. Specifically, this course seeks to develop the student’s (1) understanding of how the enterprise can benefit by creating and delivering value to its customers and stakeholders, and (2) skills in applying the analytical concepts and tools of marketing to such decisions as segmentation and targeting, branding, pricing, distribution, and promotion. This course is only available to students in the Education Entrepreneurship program.

Course usually offered in fall term
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units

**EDEN 510 Evaluation for Education Innovation**
Evaluation for Education Innovation explores the use of exploratory, dynamic and adaptive frameworks for the evaluation of social sector programs, services, and products. The course draws upon core principles and methodologies from business, design, entrepreneurship, engineering and the social sciences to help build, assess and scale education innovations. Students will learn how to assess effectiveness, quality, and value through real-world education cases, and how to use evaluation tools to drive the development of their education ventures. This course is only available to students in the Education Entrepreneurship program.

Course usually offered in spring term
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units

**EDEN 511 Economics of Education: Entrepreneurial Finance**
Entrepreneurial Finance provides a step-by-step introduction to core finance concepts in the context of new venture design and innovation implementation planning. Main areas of course focus are solution pricing, creation of a sustainable business model, and development of a robust financial model. In this course, students will learn to use financial analytical tools and frameworks to enable a venture/innovation launch. Students will build a financial model for the venture one that will assist in making critical choices and assessing the attractiveness of an enterprise to potential stakeholders. Closing the course, we will address issues of funding and fundraising strategy. The emphasis of the course is on assisting students to apply knowledge and concepts towards their personal professional and career aspirations. This course is only available to students in the Education Entrepreneurship program.

Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
1.0 Course Unit

**EDEN 513 Design of Learning Environments 2- Design Thinking**
This course is structured for students to learn design thinking principles and methodologies experientially. Design thinking is a critical tool and problem-solving methodology that is human-centered; values qualitative research merged with quantitative metrics; and applies prototyping to services, processes, and experiences. Students will apply design thinking methods to conduct basic qualitative research and work to develop a new model for transformation on a real and relevant education challenge. This course is ideal for working professionals in the education, non-profit, and social entrepreneurship sectors, wanting to apply a robust methodology that yields innovative insights and actionable results. This course is only available to students in the Education Entrepreneurship program.

Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units

**EDEN 514 Foundations of Education - Ecosystem**
Through this course, students will examine global trends impacting education and learning; analyze their own enterprise idea in the context of the global EdTech Market Landscape; evaluate one possible scenario for the future of education and generated critical questions about the implications of different scenarios; and assessed the role of different data for decision making at the education market level. This course is only available to students in the Education Entrepreneurship program.

Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units
EDEN 515 Capstone (Part 2)
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. The Capstone Experience concludes with the presentation of a new Venture Pitch and the submission of a pro forma Business Plan suitable for presenting to prospective customers, end users, investors, funders, business partners, staff and other ecosystem stakeholders. The process equips an entrepreneur or an intrapreneur to tackle the next steps of launching their venture whether that is building a minimally viable product, testing with customers, bringing on team members or seeking funding. This course is only available to students in the Education Entrepreneurship program.
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units

EDEN 601 Schools as Organizations
Schools as Organizations focuses on the theory and research concerned with the organizational and occupational side to schools and teaching. The course draws from multiple fields and perspectives, including: organizational theory; the sociology of organizations, occupations and work; educational administration; and school leadership. The objective is to have students understand and evaluate a series of different perspectives from theory, research and policy concerned with the character of the teaching occupation and the organization of schools. This course is only available to students in the Education Entrepreneurship program.
Course usually offered summer term only
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units

EDEN 602 Technology Strategy (Part 2)
Technology Strategy is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using technology to improve business processes and offerings. The class will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. This course is only for students enrolled in the Education Entrepreneurship program.
Course usually offered summer term only
Prerequisite: Enrollment in Education Entrepreneurship program
Activity: Lecture
0.5 Course Units

EDHE 501 Introduction to Doctoral Studies
Introduction to Doctoral Studies provides an introduction and orientation to the Executive Doctorate in Higher Education Management. This course highlights resources, strategies, and expectations for earning the Doctor of Education degree at Penn through GSE’s Executive Doctorate program. Discussions center on students’ background and goals, program curriculum and milestones, library resources and academic writing. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered summer term only
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.5 Course Units

EDHE 502 Contemporary Issues
By introducing the key issues confronting (primarily American) higher education, this course will encourage students to develop the capacity to identify, summarize and critique arguments and perspectives on these issues. Students will think concretely about the key research questions that need to be asked and answered to move these issues forward, and will begin to develop an appreciation for the kinds of data that are available to describe and analyze these issues. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered summer term only
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
1.0 Course Unit

EDHE 503 Why History Matters
How an institution remembers its history, what use it makes of its important historical moments, and how the interpretation of those events divide or coalesce an institutions stakeholders shape our understanding of the past and, often quite powerfully, shape the present. The task in Why History Matters is to use contemporary writing and original documents to sort through historical events as historians understand them and simultaneously to ask how those events shape our current views of higher education. The module argues that historical moments are rarely simply events that once happened. They matter because interpretations of the events - some of which occurred over long periods of time- are both controversial and become part of the institutional culture at an institution. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

Education - Higher Education Management (EDHE)

These courses are only for students enrolled in the Higher Education Management executive program.
**EDHE 504 Proseminar I**
The purpose of Proseminar is to introduce students to the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered summer term only
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.5 Course Units

**EDHE 505 Proseminar II**
This module builds upon Proseminar I and continues to explore the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered summer term only
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.67 Course Units

**EDHE 506 Strategic Management Research I**
Through exploring key issues related to strategic management, students will come to an understanding of the types of possible research questions that might be pursued to enhance decision-making. This module will cover a set of topics at the heart of strategic management including management, governance, leadership, and strategic planning while maintaining focus on how the changing context of higher education influences these topics. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
1.0 Course Unit

**EDHE 507 Quantitative Methods I**
This course provides an overview of basic quantitative methods applicable to applied research in higher education. Students will develop the ability to recognize good data and good evidence, including the distinctions between data and evidence within the context of institutional decision-making. The course includes attention to basic approaches to quantitative research, methods of collecting and analyzing data, and usefulness of data and analyses for decision-making, and will draw on the real problems students in the class are facing in their current jobs. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.67 Course Units

**EDHE 508 Qualitative Methods I**
Intended to provide a survey of the field of qualitative research, this course focuses on foundational philosophies of qualitative inquiry and develops tools needed to conduct qualitative research. The course is designed to support students in developing a critical understanding of the various stages of qualitative research including the development of researchable questions, theoretical and conceptual frameworks, methodological stances and approaches, data collection and analysis plans as well as instrument design and implementation. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.67 Course Units

**EDHE 509 Public Policy**
This module is designed to help students embrace a better understanding of the broad economic/political pressures facing colleges/universities today, the role of the state and federal governments and how these roles have changed over time, the public institutional tradeoffs related changing policy environments at the state/federal level, and the political context of higher education and emerging issues related to public accountability. Through coursework, students examining one or more states in-depth, in terms of demographic, economic, and policy contexts as it relates to higher education. Course meets in Boulder, CO. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
1.0 Course Unit
EDHE 510 Leadership and Change
The module on Leadership explores how executives and senior managers in higher education can think strategically and communicate persuasively, act decisively, and build leadership and teamwork in their organizations. Students apply theory and models to real world cases, both contemporary and historical, from multiple industries. Students focus on building leadership and teamwork to anticipate challenges ahead of serving long-term organizational interests, executing decisions and policies with integrity, and identifying an mentoring those whose leadership will be needed in the future. This course is only for students enrolled in the Higher Education Management executive program.
One-term course offered either term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 511 Leading Small Colleges
This module focuses on strategies for the sustainability and growth of small colleges, asking what is required to improve competitive standing, particularly among top colleges. Students analyze real data from an institution to develop an action plan to address this question, with the assumptions made and questions asked to arrive at this plan carefully scrutinized during class discussion. This course is only for students enrolled in the Higher Education Management executive program.
One-term course offered either term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 512 Proseminar III
This module builds upon Proseminar II and continues to explore the fundamentals of doctoral study, how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
1.0 Course Unit

EDHE 513 Strategic Management Research II
The purpose of this module is to build on and explore additional topics presented in Strategic Management Research I. Through exploring key issues related to strategic management, students will come to an understanding of the types of possible research questions that might be pursued to enhance decision-making. This module will cover a set of topics at the heart of strategic management including management, governance, leadership, and strategic planning while maintaining focus on how the changing context of higher education influences these topics. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
1.0 Course Unit

EDHE 514 Quantitative Methods II
The purpose of this module is to build on and explore additional topics presented in Quantitative Methods I. This course provides an overview of basic quantitative methods applicable to applied research in higher education. Students will develop the ability to recognize good data and good evidence, including the distinctions between data and evidence within the context of institutional decision-making. The course includes attention to basic approaches to quantitative research, methods of collecting and analyzing data, and usefulness of data and analyses for decision-making, and will draw on the real problems students in the class are facing in their current jobs. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.67 Course Units

EDHE 515 Qualitative Methods II
The purpose of this module is to build on and explore additional topics presented in Qualitative Methods I. Intended to provide a survey of the field of qualitative research, this course focuses on foundational philosophies of qualitative inquiry and develops tools needed to conduct qualitative research. The course is designed to support students in developing a critical understanding of the various stages of qualitative research including the development of researchable questions, theoretical and conceptual frameworks, methodological stances and approaches, data collection and analysis plans as well as instrument design and implementation. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units
EDHE 516 Higher Education Finance
This module focuses on strategies for the sustainability and growth of small colleges, asking what is required to improve competitive standing, particularly among top colleges. Students analyze real data from an institution to develop an action plan to address this question, with the assumptions made and questions asked to arrive at this plan carefully scrutinized during class discussion. This course is only for students enrolled in the Higher Education Management executive program. Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.5 Course Units

EDHE 517 Equity and Diversity
The goal for this course is to provide students with a critical understanding of issues of diversity in American higher education. The module is designed around functions of higher education and its success is dependent on open and mature conversations about sometimes difficult and sensitive issues that ultimately inform students' research and practice. This course is only for students enrolled in the Higher Education Management executive program. Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
1.0 Course Unit

EDHE 518 Managing Intercollegiate Athletics
Students will review a number of issues that resonate in higher education such as athletic department right-sizing (dropping or adding sports), leading through a PR crisis involving athletics, and strategizing whether the investment a campus is making in athletics is appropriate. Students will also clarify their understanding of the philosophical arguments surrounding an institutions organizational and Divisional classification, the roles and responsibilities of the governing bodies, the expectations and challenges that confront today's student athletes, and the market forces that drive big time college sports. This course is only for students enrolled in the Higher Education Management executive program. Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.5 Course Units

EDHE 519 University and Its Community
This course will focus on the past, present, and likely future of university-community relationships. It will provide an overview of university-community conflict, cooperation and collaboration from the colonial college to the present. Particular emphasis will be placed on developments since the early 1990s and the birth of what might be termed the engaged, democratic, civic university responsibility movement. Various approaches to university-community partnerships in the US and abroad will be discussed. Through readings, discussion, and written assignments students will develop strategies for developing effective democratic partnerships that would positively impact the community and the university and powerfully contribute to student learning and development. This course is only for students enrolled in the Higher Education Management executive program. Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 520 Managing Human Resources
This module addresses the most important tasks in managing people, from hiring to supervising to development. Our focus is first on what research tells us about the factors that drive success in these areas and second on the practice of using those principles to enhance individual and organizational performance. This course is only for students enrolled in the Higher Education Management executive program. One-term course offered either term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 521 Leadership, Governance, and Change
The purpose of this module is to explore key issues related to these topics and the types of possible research questions and methods that might be pursued to understand these topics more deeply. The content is intended to link practice and theory. The course has a strong tilt toward non-profit four-year colleges and universities in the U.S. This course is only for students enrolled in the Higher Education Management executive program. Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
1.0 Course Unit

EDHE 522 Higher Education Finance II
The purpose of this module is to build on and explore additional topics in higher education finance presented earlier. This course is only for students enrolled in the Higher Education Management executive program. One-term course offered either term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.5 Course Units
EDHE 523 Globalization
Following a field research project outside the United States, students reflect on the continuing globalization of higher education and institutional implications. By exploring current issues higher education faces outside the United States, students develop a more informed understanding of domestic challenges and how these challenges might be addressed. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 524 Innovation
Globally, higher education institutions are struggling with the effects of an increasingly digital world. This course provides an overview of how digitization impacts the economics, administration, teaching and learning, and research practices of universities and colleges. This course is only for students enrolled in the Higher Education Management executive program.
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 601 International Context
The Higher Education in International Contexts course provides students with exposure to issues facing international higher education and uses this exposure to reflect on higher education in the United States. The course will be centered on an experiential field research project. Students will travel to another country to meet and collaborate with higher education leaders there to learn firsthand about the challenges and opportunities associated with developing and transforming higher education. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered summer term only
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 602 Student and Campus Services
A scan of most any American college or university will reveal a wide variety of services, functions and activities offered in support of student learning, student expectations and student life. Such functions include robust athletic and recreation programs, comprehensive health care and comprehensive arts, culture, diversity and community service programs. Many argue the essential nature of these functions; other decry the excessive hand-holding of students and the substantial expense of these services and functions. In this module, students will review the complex landscape of campus services intended predominantly for student support and engagement. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 603 Technology
In this module we will discuss a range of Information Technology goals (and challenges) shared by most colleges and universities, and they may be pursued through local IT infrastructure or services contracted with external entities. We will discuss IT challenges and opportunities especially relevant to the higher education sector, making the practice of IT at a college or university different from IT in most small and large corporations. This course is only for students enrolled in the Higher Education Management executive program.
One-term course offered either term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 604 Higher Education Law
This module explores topics such as contract law, employment law, Constitutional law (freedom of speech, due process, equal protection), tort law (liability for negligence), anti-discrimination laws, and administrative law. The premise of this module is that a successful higher education executive has an understanding of the legal environment in which colleges and universities must function today. The objective of the module is to provide this understanding. From a pragmatic perspective, this knowledge enables a higher education administrator to employ preventive legal strategies in institutional decision-making. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity Lecture
0.33 Course Units

EDHE 605 Enrollment Management
Enrollment management is an organizational concept with a varying set of associated strategies for achieving institutional goals. Based on institutional type and mission, these goals can range from increasing and diversifying enrollment to optimizing tuition revenue. The impact of enrollment management over the last several decades has caused institutional leaders and the public to recast their strategic foci and reexamine their values regarding higher education. This course will provide an overview of multiple enrollment management models. Students will be asked to consider the evolution and maturation of these models, the related implications of these organizational structures and strategies, and the benefits and drawbacks of enrollment management on institutions and the marketplace. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units
EDHE 606 Dissertation Workshop I
Designed to support students through the dissertation process, this course will cover topics such as: submitting to the IRB; selecting an analytic strategy; data collection and management; coding and data analysis; and structuring dissertation chapters. Students will use a structured timeline in order to successfully defend their dissertations in the spring of their second year of the program. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 607 Higher Ed Entrepreneurship
The purpose of this module is to focus on an emerging future in light of today's demands, particularly balancing entrepreneurial demands with public purpose objectives. This module asks, 1) what is the future going to hold? and 2) how must college and university leaders respond? This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.5 Course Units

EDHE 608 New Models for Post-Secondary Education
This course will create a foundation to understand the push for reform in higher education, examine in depth several new approaches to post-secondary education in the United States, and develop frameworks for assessing new models of post-secondary education. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 609 Capstone Seminar
The Capstone module offers a culminating experience for students to share and discuss their intellectual and professional experiences in the program and how this has prepared them for the future. It is also an opportunity for students to provide feedback on the curriculum, pedagogy, and other program elements. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 610 Advancement
In this course, students will develop an in-depth understanding of institutional advancement and an ability to relate it to the broader management of colleges and universities. The course focuses primarily on how colleges and universities attract voluntary support, and will begin with an overview of advancement and external relations before moving on to fundraising specific issues. The history of fundraising, fundraising theory, fundraising ethics, fundraising tactics and other related topics will be discussed. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 611 Teaching and Learning
Through this course, students will be able to articulate the importance of student learning from a variety of perspectives; explain the role of organizational culture and how it interfaces with student learning; understand how issues of diversity and inclusive excellence support student learning; clarify what responsibilities administrators have as campus leaders to ensure student learning; identify existing barriers to student learning; and develop strategies to overcome those barriers. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 612 Negotiating & Bargaining
Through role-plays and exercises in class, the module addresses conflict management and negotiations through focusing on behavioral skills rather than substantive knowledge, putting relatively straightforward conceptual material to use in the context of real situations. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 613 Dissertation Workshop II
The purpose of this module is to build on and explore additional topics presented in Dissertation Workshop I. Designed to support students through the dissertation process, this course will cover topics such as: submitting to the IRB; selecting an analytic strategy; data collection and management; coding and data analysis; and structuring dissertation chapters. Students will use a structured timeline in order to successfully defend their dissertations in the spring of their second year of the program. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.5 Course Units
EDHE 614 Ethics and Leadership
This module introduces some models of organizational and leadership ethics and uses case discussions and personal experiences to explore and better understand the ethical dilemmas that face leaders in higher education. This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 615 Leadership and Change for Higher Education's Future
Most discussions of higher education's future focus on key and familiar trends: demographics, technology, funding, new organizational models, etc. While each trend will affect higher education, the reality is that leaders will face a multitude of challenges simultaneously and those trends will interact with each other. How can higher education leaders explore those trends and issues sufficiently and begin to prepare for how, as a set, they may impact higher education? This course is only for students enrolled in the Higher Education Management executive program.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 616 Advanced Topics in Higher Education Management III: Faculty Roundtable
Seminar on special topics on higher education. This course is only for students enrolled in the Higher Education Management executive program.
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 617 Community Colleges
This module examines the historical origins, evolving mission, programmatic similarities and differences, demographics, performance, finances, governance, and presidential leadership of U.S. community colleges. This course is only for students enrolled in the Higher Education Management executive program.
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 618 Virtual Distance Learning
In this course, you will experience Virtual Distance Analytics by participating in the Virtual Distance Index Assessment, receive your own Virtual Distance Management Report, detailing where Virtual Distance is most likely impacting you and your organization as well as content to master Virtual Distance in order to reduce and manage it over time for better educational outcomes. You will learn new leadership skills and core competencies to enhance your effectiveness in the Digital Age and help your students maximize their educational potential during this process of digital transformation. This course is only for students enrolled in the Higher Education Management executive program.
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 619 QUALITY/FACT-BASED MANAGEMENT
This module will focus on what leaders can do to induce a culture of quality within an academic environment. This course is only for students enrolled in the Higher Education Management executive program.
One-term course offered either term
Prerequisites: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

Education - Medical Education (EDME)
These courses are only available to students in the Medical Education program.

EDME 501 Applied Learning and Technology in Medical Education
This course is embedded in a block of three courses focusing on learning and technology in medical education. This course focuses on historical and current learning methods and practices, as well as learning technologies in medical education. Topics include the fundamentals of learning theories, effectively applying emerging technologies in medical education, adult learning and development, diversity, inclusion and medical education, and the challenges of teaching/learning in modern academic medicine and within the healthcare context. This course is only available to students in the Medical Education program.
Course usually offered summer term only
Prerequisites: Enrollment in Medical Education program.
Activity: Lecture
1.0 Course Unit

EDME 502 Learning & Instructional Design in Medical Education
This course is embedded in a block of three courses focusing on learning and technology in medical education. This course focuses on the design and delivery of medical education programs and interventions. Topics include current trends in medical education, pedagogy, curriculum and instructional design, assessment of learning and educational initiatives, and implementation of learning interventions in an uncertain environment. This course is only available to students in the Medical Education program.
Course usually offered in fall term
Prerequisites: Enrollment in Medical Education program.
Activity: Lecture
1.0 Course Unit

EDME 503 Managing Technology in Curriculum in Medical Education
This course is embedded in a block of three courses focusing on learning and technology in medical education. This course focuses on selecting, embedding and managing technology in the medical education curriculum. Topics include the role of experiential learning in medical education, simulation, the virtual learning environment and emerging technologies, group dynamics, and the instructor-learner relationship. This course is only available to students in the Medical Education program.
Course usually offered in fall term
Prerequisites: Enrollment in Medical Education program.
Activity: Lecture
1.0 Course Unit
EDME 504 Evidence Based Medical Education
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on research and research methods in medical education. Topics include quantitative, qualitative, and mixed methods research design in medical education. Specifically, students will explore the philosophical foundation of research, conducting the literature review, introduction to quantitative and qualitative data collection and analysis, the role of language in research, and developing research questions. This course is only available to students in the Medical Education program.
Course usually offered in spring term
Prerequisites: Enrollment in Medical Education program.
Activity: Lecture
1.0 Course Unit

EDME 505 Assessing Medical Instruction
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on research and research methods to measure the effectiveness of medical education practices. Topics include assessment of learning outcomes, how to critically evaluate medical education research, evaluating the impact of learning interventions, and evidence-based decision making. This course is only available to students in the Medical Education program.
Course usually offered in spring term
Prerequisites: Enrollment in Medical Education program.
Activity: Lecture
1.0 Course Unit

EDME 506 Evidence Based Medical Education II
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on advanced topics in research and research methods in medical education, as well as the development of medical educator skills. Specific topics include advanced quantitative, qualitative, and mixed methods research skills, and medical educator skills (e.g., story development, coaching, remediation and feedback, and presentation skills). This course is only available to students in the Medical Education program.
Course usually offered summer term only
Prerequisites: Enrollment in Medical Education program.
Activity: Lecture
1.0 Course Unit

EDME 601 Leadership Skills in Education
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on leadership theories, models, and skills. Topics include a historical review of leadership theories and models, as well as an exploration of current research on leading education in organizations. Students will explore the competency-based approach to understanding effective leadership, emotional intelligence, employee engagement and happiness at work, and team dynamics as they relate to the medical education context. This course is only available to students in the Medical Education program.
Course usually offered summer term only
Prerequisites: Enrollment in Medical Education program.
Activity: Lecture
1.0 Course Unit

EDME 602 Leadership Effectiveness in Medical Education
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on individual leadership development and will provide students with experiences, perspectives, and theories that will enable them to better understand themselves in the context of a diverse, changing world and a rapidly changing industry. Topics covered include adult development, adult learning, perception, bias, diversity and inclusion, emotional and social intelligence, and the role of values and ethics in leadership. This course is only available to students in the Medical Education program.
Course usually offered in fall term
Prerequisites: Enrollment in Medical Education program.
Activity: Lecture
1.0 Course Unit

EDME 603 Directing Education Programs
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on how to lead medical education in a complex organization embedded in a complex and changing industry. Students will explore a systems perspective of organizational effectiveness, focusing on current research and practices in the areas of organizational culture, organizational change, organizational effectiveness, and organizational diagnosis. This course is only available to students in the Medical Education program.
Course usually offered in fall term
Prerequisites: Enrollment in Medical Education program.
Activity: Lecture
1.0 Course Unit

EDME 604 Capstone: Leadership in Medical Education I
This course focuses on academic and practical skills needed to prepare students for the final Capstone assignment, inclusive of all elements of the masters thesis portfolio. Specific topics include influencing across cultural boundaries in organizations, building teams to create sustainable change, and advanced medical educator skills (e.g., story development, coaching, remediation and feedback, and presentation skills). This course is only available to students in the Medical Education program.
Course usually offered in spring term
Prerequisites: Enrollment in Medical Education program.
Activity: Lecture
1.0 Course Unit

Education - Mid-Career Educational & Organizational Leadership (EDMC)
These courses are only for students enrolled in the Mid-Career Doctoral Program in Educational & Organizational Leadership.
EDMC 601 Leading Teams and Fostering Learning Communities
This module is designed to help students learn what is known about teams and team leadership. It will be both research and case based. Drawing on the research literature, it will help students understand the nature of the different kinds of work teams are asked to do and how teams may be structured for effectiveness, depending on their objectives. Students will be asked to examine two cases that reflect different objectives and different designs. Through a field-based assignment, particular emphasis will be given to the various kinds of teams and groups principals, heads of schools, superintendents and others associated with the educational enterprise must work with and lead. As they work on their projects in this module, in other modules and in particular, in the Practitioner Research Module this fall, participants will also learn how to collect and make meaning of data on teams they choose to study. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 602 Social Foundations of Education
This module provides the basis for more rigorously and thoroughly understanding the key, big picture, foundational issues of education, such as defining education, exploring common goals of education, and moral and political challenges in education. This module will introduce students to a handful of standard intellectual frameworks and provide guided challenging of prevalent assumptions about education. A handful of humanistic and scientific approaches will be used, but the principle disciplinary lens will be sociocultural anthropology, which investigates shared norms, values, and activities within and across groups. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 604 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 605 Frameworks for Understanding Literacy, Teaching & Learning
Designed as a collaborative inquiry, this module will provide a range of contexts for exploring the nature and purposes of literacy education in the 21st century. Individually and collectively, we will unpack the conceptual frameworks -the images, practices, assumptions, and beliefs- that structure our understanding of what it means to teach and learn literacy in various settings. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 606 Exploring Frameworks for Learners and Learning
This module will use a contextual approach to examine individual developmental issues across the life-course, specifically learner’s identities and pathways to learning. In addition to investigating how children learn at school, home, and in their communities, students in the course will become their own units of analyses. It is sometimes advantageous in fields of education and social science to regard oneself and life experiences as a point of departure in order to make sense of larger social forces. To that end, we will reflect on our own learning at different points throughout our lives and within a variety of social and educational contexts. This approach assumes that educational leaders might better understand and respond to developmental issues and identity formation of teachers and students by (re)examining our own biographies as learners and professionals and the interconnectedness of these roles and the expectations associated with them. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 607 Qualitative Research Methods I
This year-long course will introduce students to the foundations, theories, methods, and practices of qualitative inquiry broadly and practitioner research specifically. This course is intended to teach students, who are educational leaders, what research is, both historically and currently, and in terms of its promise for guiding informed, inquiry-based practices, including the practices of change and reform. Further, this course is designed to help students learn what is known about qualitative research in their own educational or community-based settings. Students will be guided through a systematic and self-reflective process of learning to become reflective, ethical, and critical researchers. Students will be supported as they develop a theoretically strong practice of qualitative research that is directly informed by their own professional experiences, questions, and contexts. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 608 Analytical Methods for Local Research & Evaluation I
This module focuses on the use of statistics for analyzing numerical data from educational contexts. The course materials and assignments are designed to help you gain the skills and knowledge required to plan and conduct high quality quantitative research. As such, the curriculum for this course focuses on the statistical methods most frequently used in education research and provides examples of the application of these methods using real data. This is an applied methods course, so the content will not be highly technical. While we will discuss some of the details of the mathematics behind statistics, we will place much more emphasis on understanding the concepts behind the statistics. What does each method do? How does it work? How do we interpret the results? This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units
EDMC 609 Leadership and Literature
Running a school is about understanding yourself and the perspectives of others to include your administration and staff, your students, their parents, alumni, and the larger school community. Good literature deepens your self-awareness and provides a wider appreciation of the experiences of others. Literature lets you experience what leaders are thinking and feeling and see how their decisions affect the lives of others. Reading literature opens insight into the most complex human issues, provides access to multiple human perspectives, and develops in school leaders empathy for the human condition and the complexity of the leadership challenges they face. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 610 Public Leadership: Philosophy
In this module we will examine how education prepares students for citizenship and citizenship as a key aim of education. The tensions around this and other aims of education, the accommodation of difference, and the role of patriotism in education will be explored in relation to the preparation of the next generation of citizens. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 611 Understanding Race and Politics
Using a culturally responsive philosophical world view and a racial socialization framework, this course will cover theoretical frames for shifting educational leaders' assessment, engagement, and processing, and problem-solving of racial tension within educational contexts. The course will follow a self-development, emotions processing and interactive role-playing format where participants will offer experience from their own schooling and employment challenges where racial politics are at play. This course fits within the Understanding Context, Self, Others, Vision & Direction theme of the Mid-Career program. The objectives of this course include helping students to develop useful knowledge on racial literacy and practice of racial negotiation skills in urban schooling, identifying the impact of racial microaggressions on psychological adjustment, applying problem-solving strategies to address racial tensions in relationships, policies, and curricula. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 612 Introduction to Education Research
This course is designed to introduce students to the cycle of inquiry used in the on-going process of school reform and improvement. In this process, methods of gathering and analyzing various types of quantitative and qualitative data are central to posing questions, testing hypothesis, and evaluating new programs and initiatives—all of which are components of the inquiry cycle. This course will provide students with a hands-on opportunity to experience using the inquiry cycle to guide the exploration of the causes and effects student performance and possible means of improving poor performance through the analysis of internal data from a case study of a school district with twenty elementary schools. Analysis of both quantitative and qualitative data will be a particular focus of this guided inquiry, with the goal of helping students to begin developing fluency in these methods. Students will be asked to take on the responsibility of the superintendent of this school district and in this role, lead a team in the investigation of the problems underlying the schools' performance on the statewide assessment of fourth grade writing skills. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 613 Analytical Methods for Local Research & Evaluation II
This module focuses on the use of statistics for analyzing numerical data from educational contexts. The course materials and assignments are designed to help you gain the skills and knowledge required to plan and conduct high quality quantitative research. As such, the curriculum for this course focuses on the statistical methods most frequently used in education research and provides examples of the application of these methods using real data. This is an applied methods course, so the content will not be highly technical. While we will discuss some of the details of the mathematics behind statistics, we will place much more emphasis on understanding the concepts behind the statistics. We will investigate what each method does, how it works, and how we interpret the results. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units
EDMC 614 Qualitative Research Methods II
This year-long course will introduce students to the foundations, theories, methods, and practices of qualitative inquiry broadly and practitioner research specifically. This course is intended to teach students, who are educational leaders, what research is, both historically and currently, and in terms of its promise for guiding informed, inquiry-based practices, including the practices of change and reform. Further, this course is designed to prepare students to conduct qualitative research in their own educational or community-based settings. Students will be guided through a systematic and self-reflective process of learning to become reflective, ethical, and critical researchers. Students will be supported as they develop a theoretically strong practice of qualitative research that is directly informed by their own professional experiences, questions, and contexts. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 615 Public Leadership: History
This module will examine how Americans have used their public schools to make citizens, from the birth of the republic into the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of America itself? This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 616 Leadership Seminar: Theory & Cases
Central to enhancing the leadership practice is the deepening of competency to frame and reframe challenges. Through a series of guest instructors, this seminar will address intentionally distinctive perspectives on leadership practice, toward the development of increased reframing skills. Conceptual frames will include change management theories, entrepreneurship, recent leadership theory, and equity/social justice. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 617 Exploring/Enacting Leadership for STEM
Our approach to the STEM module embraces all three of these meanings of STEM. Our aims are to 1. introduce you to the critical competencies and practices that are at the heart of STEM learning and activity regardless, 2. ensure that you understand the key components of the four content domains brought together by STEM, and 3. provide opportunities for you to imagine and design STEM learning opportunities in your educational site. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 701 Proseminar I (Research Methods)
The goal of this course is to support you in your first steps toward forming your dissertation proposal. Beginning this process can be daunting for many doctoral students, but the clearer you are in articulating your research questions and the more knowledgeable you are about the research literature informing your questions, the more successful you will be in efficiently completing a strong proposal. To this end, we will focus on the relationship between reviewing the research literature, developing a conceptual framework, asking researchable questions, and choosing appropriate methods for addressing such questions. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 702 Leadership and Emotional Intelligence
The Leadership and Emotional Intelligence Module will focus on concepts and practices that will enable you to become a great leader. Through the study of social and emotional intelligence, you will become familiar with competencies that actually work in the real world of organizations and institutions. You will learn how these concepts have been identified, how they can be applied, and how to develop them in yourself and others. As part of the course, you will engage in reflective exercises that enable you to focus specifically on your own leadership - your strengths, your weaknesses, your vision for yourself as a person and as a professional, and how you plan to realize this vision and your goals. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units
EDMC 703 Public Poliy Workshop I
This workshop provides a survey of key policy debates and the various ways in which issues can be assessed and contested. The course explores democratic governance, education policymaking, and the way policy shapes education practice. Four topics will frame the class: the nature of public policy, the question and politics of accountability, the topics of teacher quality and school choice, and how science, research, and innovation interact with policy. Specific topics that the class will touch upon will include No Child Left Behind, Teach For America, charter schooling, scientifically based research, and parent trigger laws. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 704 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 705 Public Leadership: Social Contexts
This module will focus on conceptual, pedagogical, and practical issues typically studied under the headings, social context and social capital. It will examine families as a particular cultural and social context in which learning takes place and in which learners are engaged and engage others. Class meetings will be designed around three questions that will serve as themes for our reflections and discussions over the course of the module. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
1.0 Course Unit

EDMC 707 Educational Brand Management
This class experience is designed to provide experienced educational leaders with the requisite skills and knowledge necessary to design, implement and manage a brand identity for educational organizations, primarily schools or school districts. Successful branding is a comprehensive management issue. In schools, proactive and successful brand management builds financial and emotional value that enables success for the school or school district. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 708 Research Proposal & Instrument Design I
In the first module, students will receive structured assistance as they develop a solid research plan that includes refining their research questions’ theoretical framework, identify and marshal literature in support of the planned study, devise a research design, identify and/or construct instruments to collect data, and produce a plan for analysis. Ideally, the first module will culminate in the completion of the dissertation proposal. The second module will focus on data collection and analysis as well as study implications. The two modules in this course are designed to provide structured support to students as they proceed with their dissertation work. While there will be didactic instruction on selected topics, significant time will be spent in small groups iteratively and collaboratively working through common challenges that students face in developing an empirical piece of research that emerges from their practice. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity Lecture
0.5 Course Units

EDMC 709 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 710 Organizational Diagnostics
Leaders in education are constantly presented with organizational challenges and opportunities for innovation. Each system has its own characteristic strengths and dynamics. Organizational Diagnosis is a process by which school leaders can learn to systematically see a system and decide what to do. This course will teach a sound framework for understanding and enhancing a system. The process focuses on identifying and defining an organizational issue, collecting and analyzing data on the system to create a narrative for what is and a roadmap for what ought to be, and determining the measure and method of feedback to both promote increased understanding of the situation and energize the school to take action. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units
EDMC 711 Engaging the Polis and Public of U.S. School Reform I
In recent decades, significant institutional changes to the education policy landscape have made local public engagement more difficult. Among these changes are increased centralization of policymaking in the federal government and in state governments, the rise of charter schools and portfolio management models, and mayoral and state takeovers of urban school districts. In this part of the module, we examine scholarship addressing the new landscape and the challenges it poses to community-based groups and to democratic decision-making. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 713 Research Proposal & Instrument Design II (Continued)
In the first module, students will receive structured assistance as they develop a solid research plan that includes refining their research questions’ theoretical framework, identify and marshal literature in support of the planned study, devise a research design, identify and/or construct instruments to collect data, and produce a plan for analysis. Ideally, the first module will culminate in the completion of the dissertation proposal. The second module will focus on data collection and analysis as well as study implications. The two modules in this course are designed to provide structured support to students as they proceed with their dissertation work. While there will be didactic instruction on selected topics, significant time will be spent in small groups iteratively and collaboratively working through common challenges that students face in developing an empirical piece of research that emerges from their practice. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 714 Creating Contexts for Teacher Learning and Leadership
This module will be a collaborative inquiry into the nature and relationships of teaching, teacher learning, and teacher leadership and their implications for leading learning in a school, district, or other educational organization. It will build on your work in other strands of the program, especially the Instructional Strand in which you have been taking up current perspectives on teaching and learning in various subjects and promising ways to provide leadership at the level of the department, school, and district, as well as in other educational organizations. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 716 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
1.0 Course Unit

EDMC 717 Organizational Theory
This module examines schools as organizations and leadership within these organizations to address fundamental questions regarding how organizations come to be, persist, and/or change. Over the semester, we will grapple with questions regarding when and under what conditions do leaders effect meaningful organizational change. Students will be asked to reflect on their own leadership experiences inside organizations as well as potential changes to their approaches. In this way, students will gain knowledge and skills regarding the structures of educational organizations and the enabling and constraining conditions for leadership. This course is only for students enrolled in the Mid-Career Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 718 Instructional Technology
This module involves exploration and analysis of historical and contemporary ideas about instructional technology, as well as the development of practical applications for such theories. Our focus will be on K-12 contexts; however, we will also consider how relevant experiences and practices with technologies outside of schools are related to what happens within. This course is only for students enrolled in the Mid-Career Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 719 Leadership for Humanities
This course builds on previous learning in the Frameworks for Understanding Literacy Teaching and Learning module. After having encountered a range of perspectives about the nature of literacy (with an emphasis on literacy as critical social practice), we will examine the links between educational leadership and literacy teaching and learning. Seeing leadership as a shared enterprise, we will explore the core elements of a distributed perspective on literacy leadership at every level with a district/school community. This course is only for students in the Mid-Career program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units
EDMC 801 Proseminar II: Data Analysis and Reporting
The goals of this module are twofold. First, it aims to provide students with a set of practical skills for making sense of qualitative and mixed data. Students will practice organizing and coding qualitative data, use various techniques to develop hypotheses and draw conclusions based on data, and apply these skills to their own dissertation research. Second, this module seeks to enable each student to make significant progress on his/her research over the course of the week. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 803 Dissertation/Research
Dedicated dissertation research hours in year three of the program. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
2.5 Course Units

EDMC 805 Inquiry Seminar
The purpose of the Inquiry Community session is two-fold: to provide students with assistance with problems that occur in the process of doing qualitative or quantitative data analysis and to develop reflective processes for examining data that students can use in their settings of practice. The sessions should serve the practical purpose of providing students with support as they solve problems associated with issues of interpretation, and work toward the completion of their dissertations. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 806 Advanced Issues in Educational Leadership I
As a capstone integrative experience, this module features a series of day-long workshop-style sessions on Saturdays of the third program year. These Saturday Experiences will allow students to revisit core themes raised in various modules during the program and provide an opportunity to extend prior module work in new synthetic ways. Sessions will revisit each student’s leadership philosophy, engage constructs of decision-making and judgment, continue discussions around diversity and privilege, engage alumni leadership challenges, re-engage data analysis, take a further view into the global field of educational leadership, and reprise the three-year program experience. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 807 Dissertation/Research
Dedicated dissertation research hours in year three of the program. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
1.0 Course Unit

EDMC 808 Leading Instructional and Curricular Change
This course is the Capstone Module for the Instructional Leadership strand of the Mid-Career Doctorate Program. A first emphasis of the module will be on several topics that have not yet been directly addressed during the program. The module is designed to provide opportunity to deal more intensively with topics and others that are identified through our initial discussions. A second focus of this course is on the process of collaborative problem-posing and problem-solving around issues in instructional leadership you are currently facing. To engage these topics and issues, we will draw on your experience as well as what has been addressed so far in the Instructional Leadership modules. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 809 Advanced Issues in Educational Leadership II (Continued)
As a capstone integrative experience, this module features a series of day-long workshop-style sessions on Saturdays of the third program year. These Saturday Experiences will allow students to revisit core themes raised in various modules during the program and provide an opportunity to extend prior module work in new synthetic ways. Sessions will revisit each student’s leadership philosophy, engage constructs of decision-making and judgment, continue discussions around diversity and privilege, engage alumni leadership challenges, re-engage data analysis, take a further view into the global field of educational leadership, and reprise the three-year program experience. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 810 Dissertation/Research
Dedicated dissertation research hours in year three of the program. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
2.0 Course Units
EDMC 811 EBL Captstone
The goal of this module is to learn to apply the concept of data informed improvement into our daily practice. The field of educational improvement shares a set of goals, frameworks, and methods with other fields like organizational learning in sociology, continuous improvement in business and evidence-informed improvements in medicine. Each of these fields has its own set of frameworks and language to describe the improvement process, but they are all based on the notion of using data to inform continuous learning and improvement. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

EDMC 812 Engaging the Polis and Public of U.S. School Reform II
In recent decades, significant institutional changes to the education policy landscape have made local public engagement more difficult. Among these changes are increased centralization of policymaking in the federal government and in state governments, the rise of charter schools and portfolio management models, and mayoral and state takeovers of urban school districts. In this part of the module, we examine scholarship addressing the new landscape and the challenges it poses to community-based groups and to democratic decision-making. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Prerequisites: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Activity: Lecture
0.5 Course Units

Education - Penn Chief Learning Officer (EDCL)
These courses are only available to students in the Penn Chief Learning Officer program.

EDCL 701 Learning Technology in the Workplace
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on the evolution of technology in organizations and a review of the most current technologies in use in organizational learning today. Topics include the history of and new directions in learning technologies, emerging learning technologies, security and privacy in a high-tech world, evaluating technological solutions for organizational learning needs, and evaluating learning technologies in light of organizational goals. This course is only available to students in the Penn Chief Learning Officer program.
Prerequisite: Enrollment in Penn Chief Learning Officer program
Activity: Lecture
1.0 Course Unit

EDCL 702 Technology Strategies for Corporate Learners
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on the role of technology in advancing learning in organizations. Topics include designing technology-enabled learning environments, using simulations, games, and apps, choosing and evaluating e-tools, educational entrepreneurship, evaluating technology-enabled learning interventions. This course is only available to students in the Penn Chief Learning Officer program.
Prerequisite: Enrollment in Penn Chief Learning Officer program
Activity: Lecture
1.0 Course Unit

EDCL 703 Managing Technology in the Workplace
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on managing learning technologies in the modern organization. Topics include identification and selection of learning technologies, managing change, communication skills to influence decisions about technology change/adoption/implementation, and implementation of learning technologies. This course is only available to students in the Penn Chief Learning Officer program.
Prerequisite: Enrollment in Penn Chief Learning Officer program
Activity: Lecture
1.0 Course Unit

EDCL 704 Individual Effectiveness
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on individual leadership development and will provide students with experiences, perspectives, and theories that will enable them to better understand themselves in the context of a diverse and changing world. Topics covered include adult development, adult learning, perception, bias, diversity and inclusion, emotional and social intelligence, and the role of values and ethics in leadership. This course is only available to students in the Penn Chief Learning Officer program.
Prerequisite: Enrollment in Penn Chief Learning Officer program
Activity: Lecture
1.0 Course Unit

EDCL 705 Organizational Leadership
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on leadership in the context of the modern organization. Students will review the history of management science as well as current research and practices in the areas of organizational culture, organizational change, organizational effectiveness, organizational diagnosis, engagement and happiness at work, and coping with stress in leadership roles. This course is only available to students in the Penn Chief Learning Officer program.
Prerequisite: Enrollment in Penn Chief Learning Officer program
Activity: Lecture
1.0 Course Unit
EDCL 706 Functional Leadership
This course is embedded in a block of four courses focusing on leadership in organizations. This course focuses on managing teams within and across all functions of the organization, as well as functions in the organization that are responsible for talent management, leadership development, and human resources. Topics covered include team dynamics, organizational structure, talent management, and the impact of historical models and theories as well as globalization and demographic shifts that impact organizations. This course is only available to students in the Penn Chief Learning Officer program. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 707 Learning Leader as Performance Consultant
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on research and current practices in leadership development and organizational effectiveness. Topics covered include the models of individual change and development, the relationships among and between individual, team and organizational effectiveness, individual and large-scale leadership development, executive coaching, aligning and integrating learning and performance with organizational goals, and evaluation of learning interventions. This course is only available to students in the Penn Chief Learning Officer program. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 708 Organizational Effectiveness
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on research and current practices in leadership development and organizational effectiveness. Topics covered include current learning practices in organizations, historical and current research on the efficacy of learning interventions in organizations, and designing learning interventions for individuals and groups in organizations. This course is only available to students in the Penn Chief Learning Officer program. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 709 Organizational Learning
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on theories and models of learning in organizations. Topics include learning theories, pedagogy and curriculum in adult learning, implications of the diverse global workforce for learning and development in organizations, organizational success and learning in an uncertain environment, and assessment of learning in organizations. This course is only available to students in the Penn Chief Learning Officer program. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 710 Individual and Social Learning
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on the role of cognition in learning as well as the impact of the social context on individual learning and change. Topics covered include the cultural foundations of learning, action learning, informal learning, and the impact of organizational culture on individual learning and organizational change. This course is only available to students in the Penn Chief Learning Officer program. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 711 Marketing for Executives
This course is embedded in a block of three courses focusing on business acumen. This course focuses on strategic marketing. Topics covered include research and practices related to branding, managing innovation, customer contact and customer service, communication in business, crisis communication, the interaction of marketing and strategy, and the impact of marketing on organizational effectiveness. This course is only available to students in the Penn Chief Learning Officer program. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 712 Finance for Executives
This course is embedded in a block of three courses focusing on business acumen. This course focuses on business and corporate finance. Topics include basic financial tools, and practices, global finance, micro- and macroeconomics in the context of business finance, strategy and decision making, the relationship between strategy and finance, strategy execution, mergers and acquisition, and governance. This course is only available to students in the Penn Chief Learning Officer program. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 713 Management for Executives
This course is embedded block of three courses focusing on business acumen. This course focuses on topics impacting the modern business world, as well as topics impacting not-for-profit, government and non-governmental organizations. Specific topics include global trends and strategy, people analytics, talent management, employee engagement, entrepreneurship, and social entrepreneurship. This course is only available to students in the Penn Chief Learning Officer program. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 714 Masters Thesis (CLO)
This online course guides students through a process of identifying a topic, reviewing historical and current literature, forming an argument for a research study, and writing the masters thesis. This course is only available to students in the Penn Chief Learning Officer program. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Masters Thesis
1.0 Course Unit
EDCL 715 Qualitative Data Analysis
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on qualitative research in organizations. Topics include researcher positionality, theoretical and conceptual frameworks, the role of research questions in instrument development, common qualitative research data collection methods (e.g., interviews and focus groups), qualitative data analysis methods (e.g., coding, thematic analysis), and research ethics. This course is only available to students in the Penn Chief Learning Officer program.
Prerequisite: Enrollment in Penn Chief Learning Officer program
Activity: Lecture
1.0 Course Unit

EDCL 716 Quantitative Data Analysis
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on quantitative research in organizations. Topics include hypothesis design and testing, variables, descriptive and analytic statistics, and critically evaluating quantitative and mixed methods research. This course is only available to students in the Penn Chief Learning Officer program.
Prerequisite: Enrollment in Penn Chief Learning Officer program
Activity: Lecture
1.0 Course Unit

EDCL 717 Research Design & Delivery
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on qualitative, quantitative, and mixed methods research design. Topics include designing conceptual frameworks, designing research questions, conducting a literature review, designing qualitative and quantitative data collection and analysis methods (e.g., designing interview protocols and surveys), and research ethics. This course is only available to students in the Penn Chief Learning Officer program.
Prerequisite: Enrollment in Penn Chief Learning Officer program
Activity: Lecture
1.0 Course Unit

EDCL 802 Practicum (CLO)
Practical application of academic program content. This course is only available to students in the Penn Chief Learning Officer program.
Prerequisite: Enrollment in Penn Chief Learning Officer program
Activity: Field Work
0.0 Course Units

EDCL 995 Advanced Dissertation Research Methods
This course provides students with further development of research and writing skills, guidance on the formation of a research question, literature review, and research design for the doctoral dissertation. The course also provides guidance on conducting doctoral research and writing the dissertation. Under guidance of the chair of the dissertation committee, students will write a dissertation to be evaluated by the committee chair and committee members. This course is only available to students in the Penn Chief Learning Officer program.
Prerequisite: Enrollment in Penn Chief Learning Officer program
Activity: Dissertation
1.0 Course Unit

EDPR 501 Social Foundations of Independent Schools I
This course examines the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. The course focuses on the role of school mission and examines how different stakeholders in the school experience the mission. In this course the student perspective is examined. This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered summer term only
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 502 Introduction to Teaching as Inquiry
This course explores foundations of learning theory and pedagogy, covering classic theories of learning through the latest research in brain science. These theories are put into action around building the teachers’ capacity to provide effective feedback, construct effective learning environments, plan instruction, and implement instructional strategies. This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered summer term only
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 503 Learning Theory and Instructional Design I
Building off what was learned in EDPR 502, this course continues an exploration on curricular planning and instructional practice by focusing on Understanding by Design as a planning framework and builds the teachers’ capacity to observe classroom activity to analyze the effectiveness of learning in that classroom. The course continues to build the teacher’s capacity to improve instructional practice with a focus on the implementation of instructional activities. This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 504 Field Seminar I
This course carries credit for the weekly school-based course for the fall of the 1st year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

These courses are only for students enrolled in the Independent School Teaching Residency Program.
EDPR 506 Reflective Practice in Schools I
This course carries the credit for online theory to practice sessions in the fall of the 1st year of instruction. During these sessions, students follow a protocol in which they engage in a process of instructional rounds that involve 1) readings about the focal topic 2) sharing video of classroom practice 3) observing video of other teachers in their cohort and 4) meeting with other fellows in the program to discuss their analysis of the videos shared with one another. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 507 Social Foundations of Independent Schools II
This course is a continuation of EDPR 501, examining the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. The course focuses on the role of school mission and examines how different stakeholders in the school experience the mission. In this course the faculty and administrator perspectives are examined. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 508 Adolescent Development and Classroom Applications
This course builds the teacher's understanding of adolescent risk development dealing with topics such as identity development, risk taking, sexuality, relationships, and racial and ethnic identity development. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 509 Field Seminar II
This course carries credit for the weekly school-based course for the spring of the 1st year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 510 Methods I - Modern Language
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 511 Methods I - Math
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 512 Methods I - Social Studies
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 513 Methods I - Science
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units
EDPR 514 Methods I - English
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 515 Methods I - Independent Study
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 516 Reflective Practice in Schools II
Though this course is listed in the fall, the course carries the credit for online theory to practice sessions in the spring of the 1st year of instruction. During these sessions, students follow a protocol in which they engage in a process of instructional rounds that involve 1) readings about the focal topic 2) sharing video of classroom practice 3) observing video of other teachers in their cohort and 4) meeting with other fellows in the program to discuss their analysis of the videos shared with one another. This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 601 Advanced Methods of Inquiry I
This course develops students’ capacity to reflect on their practice and growth as practitioners over the course of the program, examining their own development through the use of rubrics and reflective analysis to build a portfolio that outlines this growth and identifies a plan for continued growth in the future. This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered in summer term only
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 602 Advanced Methods of Inquiry II
This course develops student’s capacity to articulate and investigate an inquiry question about their own practice. The course builds the capacity of the teacher to use qualitative research strategies to systematically investigate and improve elements of their practice that are important to student learning. The course focuses on qualitative modes of inquiry, building researchable questions, and collecting data. This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered summer term only
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 603 Social Foundations of Independent Schools: Advanced I
This course examines the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. The course focuses on the role of school mission and examines how different stakeholders in the school experience the mission. In this course, the parent perspective is examined. This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 604 Advanced Learning Theory I
This course continues a focus on applying learning theory to educational practice, building on EDPR 505. The course supports students to build capacity to: understand the latest research on teaching and learning, provide effective feedback, lead instruction that supports active learning, develop effective classroom learning environments, and plan instruction using the Understanding by Design framework. This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 605 Advanced Field Seminar I
This course carries credit for the weekly school-based course for the fall of the 2nd year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. This course is only for students enrolled in the Independent School Teaching Residency Program.
Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units
EDPR 606 Social Foundations of Independent Schools: Advanced II
This course examines the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. In this course, the outsider/societal perspective is examined; in particular, the course engages with the historical and contemporary context of public schooling in the United States. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 607 Advanced Learning Theory II
This course is a continuation of EDPR 604, with a focus on applying learning theory to educational practice. The course supports students to build capacity to: understand the latest research on teaching and learning, provide effective feedback, lead instruction that supports active learning, develop effective classroom learning environments, and plan instruction using the Understanding by Design framework. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 608 Advanced Field Seminar II
This course carries credit for the weekly school-based course for the spring of the 2nd year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 609 Masters Seminar
This course supports the students construction of their final portfolio, with a focus on supporting data collection and analysis around the students inquiry project and analysis of program competencies. These two components form a portfolio that serves as the final assessment for the program. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in spring term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 610 Methods II- Modern Language
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 611 Methods II- Math
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 612 Methods II- Social Studies
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 613 Methods II- Science
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

EDPR 614 Methods II- English
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units
EDPR 615 Methods II- Independent Study
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. This course is only for students enrolled in the Independent School Teaching Residency Program. Course usually offered in fall term
Prerequisites: Enrollment in Independent School Teaching Residency Program.
Activity: Lecture
0.5 Course Units

Education - School & Mental Health Counseling (EDSC)

These courses are only available to students in the Executive Program in School and Mental Health Counseling.

EDSC 501 Ethics & Professional Principles in School & Mental Health Counseling
This course is designed to fulfill the Professional Orientation requirement of state licensure, as well as the Ethics and Professional Orientation requirement of the Planned Program of Study. It provides an opportunity for students to learn clinical skills and to refine skill application with clients. Students are also able to integrate theory and the other components of the program (Human Growth & Development, Social & Cultural Foundations, Helping Relationships) into practical application in this course. This course will assist students in the development of their knowledge and skills in ethical decision-making, ethical standards related to the field of school and mental counseling. In addition, a primary goal of this course is to help each student increase his/her knowledge of self as a provider of counseling services to others. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Prerequisites: Enrollment in Executive Program in School and Mental Health Counseling.
Activity: Lecture
1.0 Course Unit

EDSC 502 Counseling Interventions: Theory & Practice
This course will provide an overview of several of the primary theories of counseling, along with the key concepts and therapeutic processes related to those theories. Students will be guided to demonstrate a working knowledge of the theories presented, to be able to distinguish between different approaches, and develop a preliminary rationale for the use of a particular approach. The main objectives of the course are for the student to develop a working knowledge of the theories of counseling and the practical counseling interventions derived from those theoretical perspectives, and to begin practicing the applications of this knowledge. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Prerequisites: Enrollment in Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit

EDSC 503 School & Mental Health Counseling: Practicum I
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as through structured supervised learning opportunities in schools and clinical settings. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Prerequisites: Enrollment in Executive Program in School and Mental Health Counseling.
Activity: Lecture
1.0 Course Unit

EDSC 504 Assessment for Counselors in School & Mental Health Counseling
This course seeks to help students understand the assessment process including the theoretical and historical basis as well as legal and ethical concerns. Students will develop knowledge of concepts of measurement including descriptive statistics, central tendency, norms, reliability, validity, etc. This course will also review assessment as it relates to educational law, entitlement decisions, and high stakes accountability, in addition to teaching students how to implement assessment techniques through observation, interview and ecological and environmental methods. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered in fall term
Prerequisites: Enrollment in Executive Program in School and Mental Health Counseling.
Activity: Lecture
1.0 Course Unit

EDSC 505 Sociocultural Foundations in Counseling
Understanding sociocultural and individual differences is essential to the work of counselors. This course provides a contextual and applied understanding of working with clients who are culturally diverse. The purpose of this course is to expand one's understanding of the impact of sociocultural and contextual factors, the interaction of identities, and the application of this knowledge to working with underserved and under-addressed individuals in counseling. Both intervention and prevention strategies will be addressed. The student will be required to demonstrate a working knowledge of key concepts in sociocultural counseling and the topical areas addressed in the course. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Prerequisites: Enrollment in Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit
EDSC 506 School & Mental Health Counseling: Practicum I (Continued)
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as through structured, supervised learning opportunities in schools and clinical settings. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling.
Activity: Lecture
0.0 Course Units

EDSC 507 Human Development
This course explores the characteristics of developmental change over time - from infancy through late adulthood - and the processes or mechanisms underlying these changes. Students will gain an understanding of the fundamental theories and research traditions of the field, how variations in context influence development, and how theory and research can be applied to real world issues. Using a cultural ecological framework, we will examine theoretical approaches to the study of human development emphasizing the importance of contextual factors (e.g., race, ethnicity, culture, gender, socioeconomic status, historical moment, etc.) and individual perceptions in understanding growth and change. Students will be encouraged to explore developmental change and growth as they occur across different developmental periods of life and within a wide variety of settings and cultural contexts in order to help them begin to crystallize their own world-views and conceptual frameworks of human development. Throughout the semester we will search for new ideas, challenge old ones, and wrestle with paradoxical issues. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling.
Activity: Lecture
1.0 Course Unit

EDSC 508 Applied Quantitative Methods
This course is designed for counselors in training. To that end, this course will cover topics related to statistics and research methodology using instructional strategies intended to build the capacity of counselors-in-training to understand, interpret and use statistics and research methods to support their work with students, school staff, and school administrators. The majority of the course will involve a balance of lecture, discussion, and interactive practice activities, linking statistics and research methods to counseling and the real-world responsibilities of counselors-in-training. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit

EDSC 509 Career Counseling & Development
This course addresses career development throughout the life span. It includes the nature of work, career assessment measures, classification systems, and theory related to vocational planning. Student self-assessment, career guidance programs, and unique needs of special populations are covered. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Prerequisites: Enrollment in Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit

EDSC 510 Group Counseling
This course is designed as an introduction to the use of groups in counseling practice. Its chief purpose is to provide students with an overview of basic elements of group process, with a focus on stages of group development; guidelines for multicultural practice; ethical and professional issues in group practice; and group leadership. The course is a combination of didactic and experiential elements, including demonstrations, short lectures, discussions of group process concerns, and questions and answers. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit

EDSC 511 School & Mental Health Counseling: Practicum II
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as, through structured supervised learning opportunities in schools and clinical settings. The Practicum is the initial opportunity for students to synthesize and integrate theoretical information from course work into their individual counseling and small group work. These objectives are met at the clinical site, through individual recorded client sessions, and in class. An additional aim of this course is to help students increase and explore their own self-knowledge as providers of counseling services to others. The course promotes an awareness and better understanding of oneself, how individual understanding may impact professional practice; appreciation of others, reinforcing the importance of empathic attention to the needs of others differing from ones own (cultural, educational, and socioeconomic background); and professional development, emphasizing skill building, ethics, and providing counseling services. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit
EDSC 512 School & Mental Health Counseling: Practicum III
This course is a continuation of Practicum II for students who need to complete their field placements. This course is only available to students enrolled in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
0.0 Course Units

EDSC 601 School and Mental Health Counseling: Internship I
This course provides the experience necessary to develop the skills to implement a comprehensive, developmental, and collaborative school counseling or mental health program. The course also translates knowledge, skills, attitudes to practice, and competencies that foster professionalism in school and community settings. Students will also complete supervised field experiences that provide actual on-the-job experience for a minimum of 420 clock hours of instructional experience for school counselor certification and/or 600 clock hours of supervised internship and a minimum of 240 hours of direct service to individuals and groups for Licensed Professional Counselor (LPC) eligibility. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit

EDSC 602 Advanced Group & Family Systems Counseling
This course will focus on the basics of systems intervention with a specific focus on families and groups, and a second focus on diversity and racial stress and literacy in systems. The purpose is to develop more advanced knowledge of practical therapeutic problem-solving skills at the graduate student level using ecological, systemic, and cultural perspectives. Students will be exposed to basic group therapy strategies with children and youth, with family interventions across various school-based emotional health diagnostic populations, and how to intervene within groups and families in which cultural differences and styles are key themes. The student will be required to demonstrate a working knowledge of the key concepts in systems intervention, to make preliminary judgments about how to apply various strategies to specific problems in a variety of naturalized and formal therapeutic contexts including schools, homes, and community centers, and evaluated on the ability to react spontaneously to moment-by-moment shifts in group and family therapy processes. Students will also be challenged to develop a preliminary rationale for a systemic theory of behavior change. Given the diversity of clients that counselors see professionally, some demonstrated knowledge of how cultural differences will be addressed in the counseling session and in the relationships of larger societal institutions will be expected. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit

EDSC 603 Advanced Professional Development: Utilizing & Building Resources within Community Agencies & Orgs
This course is structured to create an intellectual and practice-driven inquiry community in which you as students have the opportunity to deepen and expand your understanding of the multifaceted professional roles and responsibilities of school and mental health counselors, as well as the complex systems in which these roles are formed and enacted. The primary goal of the course is to support you in developing an inquiry stance on your practice (Cochran-Smith & Lytle, 2009) as a means of enhancing the quality and meaning of your work and professional identity. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Two terms. student must enter first term.
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
0.5 Course Units

EDSC 604 Foundations in Education for Diverse Learners
This course is intended to engage you in thoughtful discussion about working with diverse learners while presenting factual information about specific areas of need. Our work will be situated within a socio-cultural framework that sees our students as resources that enrich our counseling work and their communities. In this class, we will address content related to both Special Education/Students with Disabilities and English Language Learners. As such, we use three major themes as central to school counseling work and professionalism: Supporting students with disabilities and English language learners; development of inclusive and empowering student practices and environments; and supporting positive school, community and life goals which affirm diversity and ensure equitable outcomes for all students. Over the course of the semester, you will have an opportunity to clarify and challenge your beliefs about working with students with diverse learning needs in your role as a school counselor, in urban and diverse environments. In particular, through course readings, discussion, and projects students will be challenged to think deeply and thoroughly about educating diverse students in schools, through the following core elements: a) taking an inquiry stance; b) urban contexts of schools, c) supporting social justice & equity, d) integrating theory with practice. In doing so, students will critically examine their own role in providing services to students which will support equitable, positive, student- and family-centered school and life outcomes. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered in fall term
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit
EDSC 605 School & Mental Health Counseling: Internship I (Continued)
This course provides the experience needed to develop the skills to implement a comprehensive, developmental and collaborative school counseling or mental health program. The course also translates knowledge, skills, attitudes to practice and competencies that foster professionalism in school and community settings. Students will also complete supervised field experiences that provide actual on-the-job experiences for a minimum of 420 clock hours of instructional experience for school counselor certification and/or 600 clock hours of supervised internship and a minimum of 240 hours of direct service to individuals and groups for Licensed Professional Counselor (LPC) eligibility. This course is only available to students in the Executive Program in School and Mental Health Counseling. Course usually offered in fall term
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
0.0 Course Units

EDSC 606 Advanced Counseling Skills & Human Sexuality
This course will be a hybrid course combining advanced counseling skills and counseling related to human sexuality issues. The advanced counseling skills portion of the class will be understood as an elaboration of the basic understanding of theoretical interventions learned in the first year of the program by presenting students with information about case conceptualization and more advanced intervention from three major theoretical orientations (cognitive behavioral, psychoanalytic, and emotion-focused therapy). There will also be a brief consideration of what it means to integrate and combine different theoretical approaches, if they really are as different as we think. Topics in human sexuality that commonly present in school and mental health settings will be used as the context for applying advanced skills. This course aims to present students with factual information about advanced skills and human sexuality while also providing an atmosphere in which self-reflection and affective learning can facilitate counselor development in the areas of advanced skills and human sexuality. This course is only available to students enrolled in the Executive Program in School and Mental Health Counseling. Course usually offered summer term only
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit

EDSC 607 Healthy Development & Psychopathology
This course will familiarize counseling students with the major mental disorders, as well as with conceptions of mental health, mental health promotion, resilience and recovery. It is important that counselors, regardless of concentration or specialization, be acquainted with the language, taxonomy, conceptualizations, and developments in the study of psychopathology, as well as a sense of the lived experience of people with mental disorders. This course is only available to students in the Executive Program in School and Mental Health Counseling. Course usually offered in fall term
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit

EDSC 608 Research and Evaluation Seminar in Counseling and Education
This course focuses on the application of research concepts and use of data in comprehensive school counseling programs. The course materials, exercises and assignments are designed to help students gain and use practical skills required to make data-based decisions. Specifically, students will learn to use data to: identify needs within the school; identify possible interventions and programs to address the needs; implement interventions and programs; monitor and evaluate the interventions to demonstrate the results of the interventions; and use data to advocate for the profession, the work, and for students. This course is only available to students in the Executive Program in School and Mental Health Counseling. Two terms. student must enter first term.
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
0.5 Course Units

EDSC 610 School & Mental Health Counseling: Internship II
Internship II, a continuation of internship I, continues to provide the experience needed to develop the skills to implement a comprehensive, developmental and collaborative school counseling or mental health program. Students will continue to work on translating their knowledge, skills and attitudes to practice. The course also uses knowledge of the following areas to provide students with an understanding of the hand-on experiences of a school counselor K-12 and a mental health counseling professional: individual and group counseling, classroom guidance activities and academic, personal/social and career interventions; consultation, coordination, and referral; school/agencies policies and procedures; community-based agencies and referrals; working with students with disabilities and English language learners; professional, ethical, and legal considerations; assessment and evaluation techniques; supervision and professional development through Seminar Group. This course is only available to students in the Executive Program in School and Mental Health Counseling. Course usually offered in spring term
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit

EDSC 611 Wellness & Addiction Counseling
This course will provide an overview of the foundations of addictions from a theoretical, practical and applicable standpoint. The basics of understanding the process of screening, assessing and treating addictions will be discussed as well as a focus on the strengths and wellness perspective of persons with addictions. In addition, students will gain an understanding of the effects and treatment of co-occurring disorders (e.g., addiction and depression). Addiction lingo, positive psychology and the various types of addictions will be addressed along with etiological models and current approaches for treatment. This course is only available to students in the Executive Program in School and Mental Health Counseling. Course usually offered in spring term
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit
EDSC 612 Trauma in School & Mental Health Counseling
Due to the overwhelming incidence of trauma, adversity, and toxic stress among consumers of mental health services and the potential profound and pervasive impact of trauma on development, it is essential that mental health professionals gain the necessary knowledge, competencies, and skills to foster resilience and healing. This course explores how trauma impacts not only cognitive and emotional processing, but also dysregulates neurophysiology, and discusses evidence-based assessments and interventions that counselors can use to help alleviate the negative impact of trauma with their clients. This course is designed to provide foundational trauma education for mental health professionals working within schools and community settings to promote their ability to recognize trauma responses, to create trauma-sensitive educational and clinical environments to foster learning, growth and health and to develop trauma-responsive counseling skills. This course is only available to students in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
1.0 Course Unit

EDSC 701 School and Mental Health Counseling: Advanced Internship in Professional Counseling
This course is a continuation of Internship II for students who need to complete their field placements. This course is only available to students enrolled in the Executive Program in School and Mental Health Counseling.
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
0.5 Course Units

EDSC 702 School and Mental Health Counseling: Advanced Internship in Professional Counseling
This course is a continuation of Internship II for students who need to complete their field placements. This course is only available to students enrolled in the Executive Program in School and Mental Health Counseling.
Prerequisites: Enrollment in the Executive Program in School and Mental Health Counseling
Activity: Lecture
0.0 Course Units

Education - School Leadership (EDSL)
These courses are only available to students in the School Leadership Program.

EDSL 501 Sustainability in Schools
Addresses an issue of great relevance to schools in the 21st century. As the leadership program comes to a close, students in this course will look at the issue of sustainability across the financial, environmental, and programmatic dimensions of school life. This course is only available to students in the School Leadership Program.
Course usually offered in spring term
Prerequisite: Enrollment in School Leadership Program
Activity: Lecture
1.0 Course Unit

EDSL 502 Leadership in Public, Independent & Parochial Schools
Encourage students to consider the challenges of leadership in public, independent, and parochial schools as part of the broader discussion of educational leadership in elementary and secondary education. The course will seek to identify themes that have implications for independent, parochial, and public schools and will seek to establish interconnections. This course is only available to students in the School Leadership Program.
Course usually offered in spring term
Prerequisite: Enrollment in School Leadership Program
Activity: Lecture
1.0 Course Unit

EDSL 503 Developing Instructional Leadership in Practice
Emphasizes how to connect organizational systems with schools’ instructional missions. This course is only available to students in the School Leadership Program.
Course usually offered in spring term
Prerequisite: Enrollment in School Leadership Program
Activity: Lecture
1.0 Course Unit

EDSL 504 Field Internship Seminar: Inquiring Into Organizational and Legal Dimensions of Principal Leadership
Provides the systems-thinking lens through which students inquire into how an individual’s organizational leadership can support continuous school improvement through attention to school climate, program coherence, and effectiveness of instruction. This course is only available to students in the School Leadership Program.
Course usually offered in spring term
Prerequisite: Enrollment in School Leadership Program
Activity: Lecture
1.0 Course Unit

EDSL 505 Aligning Fiscal, Human, and Community Resources in Support of the School’s Instructional Mission
Emphasizes the connections between the school’s mission and daily decision-making (including managing budgets and funding streams, use of space, use of time, and scheduling and assignments of staff and students). This course is only available to students in the School Leadership Program.
Course usually offered in spring term
Prerequisite: Enrollment in School Leadership Program
Activity: Lecture
1.0 Course Unit

EDSL 506 Instructional Leadership to Promote Learning
The first course of the program, Instructional Leadership to Promote Learning begins with an exploration of values and beliefs underlying leadership in schools. This course is only available to students in the School Leadership Program.
Course usually offered in fall term
Prerequisite: Enrollment in School Leadership Program
Activity: Lecture
1.0 Course Unit
EDSL 507 Practitioner Research
Addresses an important goal of the program: developing school leaders who are skilled practitioner researchers. As an outgrowth of this course, students will engage in a practitioner research project that is the culminating experience of the program. This course is only available to students in the School Leadership Program.
Course usually offered in fall term
Prerequisite: Enrollment in School Leadership Program
Activity: Lecture
1.0 Course Unit

EDSL 508 Teaming and Collaborative Leadership in Schools
Presents two conceptual models for examining organizational practice in schools: working in groups and applying moral/ethical decision-making in schools. This course is only for students enrolled in the School Leadership Program.
Course usually offered in fall term
Prerequisites: Enrollment in School Leadership Program.
Activity: Lecture
1.0 Course Unit

EDSL 509 Field Internship Seminar: Leadership for School Improvement
Supports each student in becoming a reflective practitioner. Students develop the inquiry, communication, and interpersonal skills needed to build purposeful learning communities for adults and students. This course is only available to students in the School Leadership Program.
Course usually offered in fall term
Prerequisite: Enrollment in School Leadership Program.
Activity: Lecture
1.0 Course Unit

EDSL 510 Critical Issues in Education
Engages the leadership cohort in analysis of three important issues of relevance to contemporary school leadership: technology, globalization, and equity and access. This course is only available to students in the School Leadership Program.
Course usually offered in fall term
Prerequisite: Enrollment in School Leadership Program.
Activity: Lecture
1.0 Course Unit

Education - Urban Teaching Residency Certificate (EDTC)
These courses are only available to students in the Urban Teaching Residency program.

EDTC 503 Methods: Elementary A
This course is designed to enhance literacy and mathematics instruction that engages all students as readers, thinkers and sense makers. In this course, we will explore the interrelationship of language, literacy, numeracy, and culture, and will co-construct a knowledge base for understanding how children learn. We will also develop and practice new routines for teaching literacy and mathematics that build on students interests, curiosities, and informal knowledge. Throughout the course, you will be encouraged to critically reflect on continually develop your teaching practice. Course readings, discussions, and assignments will offer opportunities to think in both theoretical terms and practical terms about your teaching. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTF 503
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 504 Methods: Middle Years A
This course focuses on you as both a learner and a teacher of mathematics and science. Its development is premised on the notion that in order for you to foster understanding and engagement for all your students, you have to develop and draw on different kinds of knowledge, skills, and dispositions. As a result, the course is designed to help you hone your practice as a teacher of mathematics and science and involves you learning about learners (yourself included), the understandings and conceptions they hold, and the developmental processes through which they learn. It also involves developing skills in teaching practices that engage students in mathematical and scientific exploration, creating an environment that facilitates reasoning and promotes inquiry, and finding ways to analyze and learn from your own teaching. Good teaching is essentially a decision laden process, and the decisions you make are contextually based. Consequently, the aim of the course is not to provide you with a bag of tricks that are applicable or generalizable to all situations, but rather to help you develop necessary tools for thinking and working as a teacher. These tools include ways to explore scientific and mathematical content, assess your students understanding on an ongoing basis, and help all your students develop as learners of mathematics and science. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTF 504
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit
EDTC 505 Methods: 7-12 English A
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course is to provide a foundation in theory and then explores how that theory works within and against existing practices in schools. We will be reflecting on practice and designing and redesigning lessons and units based on theory and best practices for adolescent literacy. This course is an overview of the theory and pedagogy needed for effective English language arts instruction. This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term
Also Offered As: EDTF 505
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 506 Methods: 7-12 General Science/Biology A
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term
Also Offered As: EDTF 506
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 508 Methods: 7-12 World Languages A
The objectives of this course are for teachers to be able to: Align the four domains of professional practice with world languages pedagogy, recognize and demonstrate how pedagogical theories inform effective methodologies, incorporate a variety of standards-driven instructional practices using communicative techniques that engage students, research, identify and use resources that encourage student-centered learning practices, investigate and utilize a variety of assessments that effectively measure student performance and enhance proficiency, participate in local, state and national professional World Languages organizational activities including workshops and/or conferences. This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term
Also Offered As: EDTF 508
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 512 Methods: 7-12 Science (Chemistry)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). This course is only available to students in the Urban Teaching Residency program. One-term course offered either term
Also Offered As: EDTF 512
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 513 Methods: 7-12 Science (Physics)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). This course is only available to students in the Urban Teaching Residency program. One-term course offered either term
Also Offered As: EDTF 513
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 515 Child Development
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term
Also Offered As: EDTF 515
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 520 Methods: 7-12 Mathematics A
The goal of this course is to enhance the teaching and learning of mathematics through a focus on the practical application of pedagogical theory. Each week we will engage in discussions and activities centered on different pedagogical approaches, using lessons covering specific mathematical concepts as demonstration tools. We will also use class time to reflect on experiences from our current teaching positions, and we will work together to develop solutions to problems that arise within our daily classroom experience. I aim to provide you with lesson and curricular development experience, multiple teaching techniques, and an engaging and supportive classroom environment to help us all develop as teachers and learners. This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term
Also Offered As: EDTF 520
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 520 Methods: 7-12 Mathematics A
The goal of this course is to enhance the teaching and learning of mathematics through a focus on the practical application of pedagogical theory. Each week we will engage in discussions and activities centered on different pedagogical approaches, using lessons covering specific mathematical concepts as demonstration tools. We will also use class time to reflect on experiences from our current teaching positions, and we will work together to develop solutions to problems that arise within our daily classroom experience. I aim to provide you with lesson and curricular development experience, multiple teaching techniques, and an engaging and supportive classroom environment to help us all develop as teachers and learners. This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term
Also Offered As: EDTF 520
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit
EDTC 521 Foundations of Special Education
This course strives to teach students who are working towards certification in general education problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible for Individualized Education Programming (IEPs) under the Individuals with Disabilities Act (IDEA). We will learn what constitutes disabilities in this population and issues surrounding providing this populations with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with implementing and IEP in the general education, or inclusive, environment. Students will discuss the appropriateness of various academic environments as children with disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. In addition, time will be spent in this course discussing the education of students who are English Language Learners from the standpoint of sheltered instruction and the use of WIDA lesson planning. A holistic approach to educating all students, with an emphasis on academic, social, emotional, behavioral, and transition skills area focus. Content will be presented through online lecture, hands on projects, and reading. It is expected that students will work within their current teaching placement and with actual students to complete some, if not all, of the 7 projects. This course is only available to students in the Urban Teaching Residency program. Course usually offered in spring term Also Offered As: EDTF 521
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Online Course
0.0 Course Units

EDTC 524 School & Society Seminar
This course is designed to provide students with an opportunity to investigate the philosophical underpinnings, social context, and current discourse of education and schooling in the United States. By historically linking the development of educational initiatives to notions of power, nation building, and citizenship, this class furthers an understanding of the assumptions about the purpose of education within this democratic nation, and its role(s) within our current social and political climate. Discussions of differential access to power and resources will be central to this class, thereby providing a forum for critically exploring educational policy, teaching practices, and the aims and purposes of education that are intimately connected to the social stratification and reproduction. We will draw on students experiential knowledge of schools and teaching to imagine how urban educators can transform the socially reproductive practices of schools. This course is only available to students in the Urban Teaching Residency program.
One-term course offered either term Also Offered As: EDTF 524
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 527 Social, Emotional, and Behavioral Interventions
This course is designed to provide students with a comprehensive understanding of students who present with social, emotional, and behavioral difficulties. The course will focus on the definitions, characteristics, prevalence, causes, and assessment of emotional and behavioral disorders. Effective teaching practices will be integrated in the course, including education service placements, functional behavior assessment, ABA, positive behavior supports and social skills instruction. Current issues in the field will also be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students’ teaching experiences will inform discussion and learning. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTF 527
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Online Course
1.0 Course Unit

EDTC 529 Language and Literacy Acquisition
This course addresses research-based instructional strategies for teaching literacy (including language development, reading, writing, and speaking) to learners in grade levels PreK-12 as well as practical and effective modifications for diverse learners (including struggling readers, English language learners, and students with learning disabilities in reading, as well as students with a wide range of disabilities requiring accommodations (cognitive, linguistic, physical, and social)). Formative and summative assessments of emergent and content literacy, including components of literacy (phonological awareness, word analysis, comprehension, vocabulary, fluency) will also be addressed. Also included are factors which influence literacy acquisition (including, but not limited to: English Language Learners), social and cultural implications for language and literacy development, as well as life-long literacy for children and adolescents who struggle in literacy. This course is only available to students in the Urban Teaching Residency program.
Also Offered As: EDTF 529
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Online Course
1.0 Course Unit

EDTC 530 Contemporary Issues in Urban Education
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTF 530
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit
EDTC 531 Methods: Elementary B
In this course we will be examining many aspects of the teaching of science and social studies in elementary schools today. The importance of the National Science and Social Studies Education Standards, the Next Generation of Science Standards, and the Pennsylvania State Standards in curriculum development and reform will be explored in depth. Among the topics covered will be planning science and social studies instruction to include inquiry and integrated concepts, developing authentic assessments involving a variety of tools, creating and maintaining a safe laboratory and learning environment that meets the needs of diverse learners, and the integration of technology into science and social studies education. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTF 531
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 532 Methods: Middle Years B
Middle school teachers are involved in the constant process of increasing students' active reading and writing about content area texts within the high-pressure environment of state accountability. Middle Years Methods offers practical strategies and applications that help establish a literate classroom environment in support of learning across all subject areas. Teachers learn approaches to help them establish literate classroom environments that are rich in problem-solving, critical thinking, logical reasoning concepts focused on state and national standards, and practical techniques that investigate and connect content in all subject areas to the real world. Middle Years Methods is structured to allow participants the opportunity to explore strategies and concepts for increasing student reading and writing proficiency. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTF 532
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 533 Methods: 7-12 English B
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course builds from Secondary ELA Methods I. We will begin the semester by exploring the self, culturally relevant pedagogy, and how these things impact our practice. Then we will explore a variety of practices for teaching reading, writing, listening, and speaking. The practices for teaching reading, writing, listening, and speaking align to Special Education Competencies IV. Pedagogy. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTF 533
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 534 Methods: 7-12 General Science/Biology B
This course is the second course in the three-course series that addresses teaching and learning in secondary science classrooms. The methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education: Assessing misconceptions, teaching through multiple intelligences, expanding instructional practices, teaching science in urban schools, culturally relevant pedagogies, gender, professional learning communities and workforce development, problem-based learning, current STEM fields of research, citizenship science, and ethical decision making. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTF 534
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 535 Methods: 7-12 World Languages B
This course includes theoretical and practical applications for the teaching of world languages based on the five “C” goal areas: Communication, Cultures, Comparisons, Connections, and Communities of the World-Readiness Standards for Learning Languages. Approaches and techniques will be explored to equip world language teachers with the knowledge and tools necessary to create a student-centered, standards-driven classroom. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTF 535
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 536 Methods: 7-12 Mathematics B
Mathematics Methods B is enhancing student learning through knowing the content, planning around our knowledge and reflecting on our practice and our practice and our students thinking. Each week we will think about mathematics through talking about mathematics, doing mathematics, and presenting mathematics, as we will learn to expect our students to do. Each week we will spend time both learning concepts behind the mathematics taught and learned in middle and high school, with a couple of topics from elementary school that have bearing on middle and high school mathematics. We will learn about these concepts in ways that you will be able to use in the classroom, giving you experiences with different methods. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTF 536
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit
EDTC 601 Methods: Advanced Elementary
This course has been designed for first and second year teachers who are currently teaching in elementary classrooms. Our work together will build upon the course work you completed this year, your past experiences as a student and a teacher, and your current classroom practices. In this course, we explore the interrelationship of language, literacy, numeracy and culture in order to co-construct a knowledge base for understanding how children learn. We will interrogate our own teaching practices in an effort to make our classrooms more content-rich and child-centered. Our work will span content areas - math, literacy, social studies, and science - emphasizing both their interconnectedness and their particularity. The course will offer opportunity to think in both theoretical terms and practical terms about implications of our teaching. This course is only available to students in the Urban Teaching Residency program.
Also Offered As: EDTF 601
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 604 Methods: 7-12 Advanced English
This course is designed to give working teachers intensive, hands-on practice with research-based pedagogy that they need to address the immediate challenges of teaching English in urban public schools. Students will develop plans for a full course, several conceptual units, and eight weeks of daily lesson plans. In addition, students will develop and present various instructional routines, which the class will critique. Finally, students will share resources with each other and engage in problem-solving of their real-world classroom issues. This course is only available to those in the Urban Teaching Residency Program.
Also Offered As: EDTF 604
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 605 Methods: 7-12 Advanced Science
This course teaches instruction and learning in secondary science classrooms. The advanced methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education. Skills: topics investigated under this theme include: assessing misconceptions, teaching through multiple intelligences, expanding instructional practices. Teaching Science in Urban Schools: topics investigated under this theme include: culturally relevant pedagogies, gender, professional learning communities and workforce development. 21st Century Learning: topics investigated under this theme include: problem-based learning, information technologies, educational technologies, current STEM fields of research, citizenship science, and ethical decision making. This course is only available to students in the Urban Teaching Residency program.
Also Offered As: EDTF 605
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 606 Methods: 7-12 Advanced World Languages
As a sequel to your introductory world language teaching and learning course, this course introduces students to a level of familiarity with theoretical and practical approaches to world language teaching and learning such as: communicative language teaching, task-based instruction, student centered instruction, and national and state standards. Building on this background, we will examine and analyze the use of emerging key concepts in world language education as well as consider critical perspectives to more traditional pedagogical approaches. Our exploration of world language learning and teaching methods will be grounded in praxis; that is, we will consider how theoretical and research-based approaches inform classroom practices, experiences, and beliefs, and vice versa. Accordingly, the course will provide opportunities for you to bridge theory and practice through an ongoing cycle of discussion, in-class application, and learning experiences such as collaborative activities, peer feedback, self-reflection, brief presentations, and the design of instruction materials. This course is only available to students in the Urban Teaching Residency program.
Also Offered As: EDTF 606
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 618 Methods: 7-12 Advanced Mathematics
This course will focus on gaining a deeper understanding of the methods of mathematics teaching practice. This course will provide students the opportunity to put theory into practice through in class demonstrations of mathematical pedagogical practices. Through in class and online discussions, students will reflect on current teaching practices and the impact that these practices have on learning. It is my goal to support each student in further creating effective student-centered rational behind all teaching decisions. This course is only available to students in the Urban Teaching Residency program.
Also Offered As: EDTF 618
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTC 625 Culturally Responsive Pedagogy
What is culturally responsive (or relevant) pedagogy? What does it look like, what does it consist of, how is it done, who can do it, when and where can it enter? Is it effective, and for whom? What are the impediments and limitations? What are its roots? What can its future look like, and what can it mean for urban education, student success, and community empowerment? This course will explore these questions and more, providing a theoretical grounding to push this field further, and practical tools to incorporate into current and future teaching and learning activities. The course will also look closely at various intersections (critical race theory, critical pedagogy, gender studies, social justice, multiculturalism, diversity/equity), sociopolitical landscapes, and educational reform efforts, to understand how culturally responsive pedagogy fits within the broader narratives. The class is intentionally designed as a seminar/workshop. Class activities will include full group discussions, small group breakouts, video clips, informal presentations, and possible guest speakers. Students are expected to actively engage both with the readings and in class activities. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTF 625
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit
EDTC 701 Educating Students with Disabilities - Part II
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who have disabilities related to specific learning disabilities. We will learn what constitutes disabilities in this population and issues surrounding providing this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. Instructional techniques and assessments strategies will be a focus. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTF 701
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Online Course
1.0 Course Unit

EDTC 702 Special Education Law & Processes
This course is designed to provide students with an understanding of special education processes, including the evaluation processes, exceptionalities and eligibility, the development and delivery of Individual Education Plans, as well as theories and best educational practices in the field and profession of special education. Students will become familiar with the Individuals with Disabilities in Education Act (IDEA), the cornerstone of special education law, Section 504 of the Americans with Disabilities Act, and Pennsylvania statutes and regulations governing special education law. Issues related to an understanding of the evaluation and determination of exceptionalities in a cultural context will be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students teaching experiences will inform discussion and learning. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTF 702
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Online Course
1.0 Course Unit

EDTC 703 Educating Students with Disabilities - Part I
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible to take alternative state testing. We will learn what constitutes disabilities in this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. Students will discuss the appropriateness of various academic environments as children with more encompassing disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. A holistic approach to educating this population, with an emphasis on social, emotional, behavioral, transition and life skills are a focus. Students will receive a grade of a pass or fail at the conclusion of the fall term. 40 mandatory hours of fieldwork will take place in the spring semester. This will allow students to demonstrate learning acquired in the course work in a realistic setting. At the conclusion of the spring semester, a grade will be issued. Content will be presented through on line lecture, hands on projects, reading and fieldwork experience. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTF 703
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Online Course
1.0 Course Unit

Education - Urban Teaching Residency Master's (EDTF)
These courses are only available to students in the Urban Teaching Residency program.

EDTF 503 Methods: Elementary A
This course is designed to enhance literacy and mathematics instruction that engages all students as readers, thinkers and sense makers. In this course, we will explore the interrelationship of language, literacy, numeracy, and culture, and will co-construct a knowledge base for understanding how children learn. We will also develop and practice new routines for teaching literacy and mathematics that build on students interests, curiosities, and informal knowledge. Throughout the course, you will be encouraged to critically reflect on continually develop your teaching practice. Course readings, discussions, and assignments will offer opportunities to think in both theoretical terms and practical terms about your teaching. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTC 503
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit
EDTF 504 Methods: Middle Years A
This course focuses on you as both a learner and a teacher of mathematics and science. Its development is premised on the notion that in order for you to foster understanding and engagement for all your students, you have to develop and draw on different kinds of knowledge, skills, and dispositions. As a result, the course is designed to help you hone your practice as a teacher of mathematics and science and involves you learning about learners (yourself included), the understandings and conceptions they hold, and the developmental processes through which they learn. It also involves developing skills in teaching practices that engage students in mathematical and scientific exploration, creating an environment that facilitates reasoning and promotes inquiry, and finding ways to analyze and learn from your own teaching. Good teaching is essentially a decision laden process, and the decisions you make are contextually based. Consequently, the aim of the course is not to provide you with a bag of tricks that are applicable or generalizable to all situations, but rather to help you develop necessary tools for thinking and working as a teacher. These tools include ways to explore scientific and mathematical content, assess your students understanding on an ongoing basis, and help all your students develop as learners of mathematics and science. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTC 504
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 505 Methods: 7-12 English A
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course is to provide a foundation in theory and then explores how that theory works within and against existing practices in schools. We will be reflecting on practice and designing and redesigning lessons and units based on theory and best practices for adolescent literacy. This course is an overview of the theory and pedagogy needed for effective English language arts instruction. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTF 505
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 506 Methods: 7-12 General Science/Biology A
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three- pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTF 506
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 508 Methods: 7-12 World Languages A
The objectives of this course are for teachers to be able to: Align the four domains of professional practice with world languages pedagogy, recognize and demonstrate how pedagogical theories inform effective methodologies, incorporate a variety of standards-driven instructional practices using communicative techniques that engage students, research, identify and use resources that encourage student-centered learning practices, investigate and utilize a variety of assessments that effectively measure student performance and enhance proficiency, participate in local, state and national professional World Languages organizational activities including workshops and/or conferences. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTF 508
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 512 Methods: 7-12 Science (Chemistry)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three- pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). This course is only available to students in the Urban Teaching Residency program.
One-term course offered either term
Also Offered As: EDTF 512
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 513 Methods: 7-12 Science (Physics)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three- pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). This course is only available to students in the Urban Teaching Residency program.
One-term course offered either term
Also Offered As: EDTF 513
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 515 Child Development
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTF 515
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit
EDTF 520 Methods: 7-12 Mathematics A
The goal of this course is to enhance the teaching and learning of mathematics through a focus on the practical application of pedagogical theory. Each week we will engage in discussions and activities centered on different pedagogical approaches, using lessons covering specific mathematical concepts as demonstration tools. We will also use class time to reflect on experiences from our current teaching positions, and we will work together to develop solutions to problems that arise within our daily classroom experience. I aim to provide you with lesson and curricular development experience, multiple teaching techniques, and an engaging and supportive classroom environment to help us all develop as teachers and learners. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTC 520
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 521 Foundations of Special Education
This course strives to teach students who are working towards certification in general education problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible for Individualized Education Programming (IEPs) under the Individuals with Disabilities Act (IDEA). We will learn what constitutes disabilities in this population and issues surrounding providing this populations with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with implementing and IEP in the general education, or inclusive, environment. Students will discuss the appropriateness of various academic environments as children with disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. In addition, time will be spent in this course discussing the education of students who are English Language Learners from the standpoint of sheltered instruction and the use of WIDA lesson planning. A holistic approach to educating all students, with an emphasis on academic, social, emotional, behavioral, and transition skills area focus. Content will be presented through online lecture, hands on projects, and reading. It is expected that students will work with their current teaching placement and with actual students to complete some, if not all, of the 7 projects. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTC 521
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Online Course
0.0 Course Units

EDTF 524 School & Society Seminar
This course is designed to provide students with an opportunity to investigate the philosophical underpinnings, social context, and current discourse of education and schooling in the United States. By historically linking the development of educational initiatives to notions of power, nation building, and citizenship, this class furthers an understanding of the assumptions about the purpose of education within this democratic nation, and its role(s) within our current social and political climate. Discussions of differential access to power and resources will be central to this class, thereby providing a forum for critically exploring educational policy, teaching practices, and the aims and purposes of education that are intimately connected to the social stratification and reproduction. We will draw on students experiential knowledge of schools and teaching to imagine how urban educators can transform the socially reproductive practices of schools. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTC 524
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 527 Social, Emotional, and Behavioral Interventions
This course is designed to provide students with a comprehensive understanding of students who present with social, emotional, and behavioral difficulties. The course will focus on the definitions, characteristics, prevalence, causes, and assessment of emotional and behavioral disorders. Effective teaching practices will be integrated in the course, including education service placements, functional behavior assessment, ABA, positive behavior supports and social skills instruction. Current issues in the field will also be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students’ teaching experiences will inform discussion and learning. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTC 527
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Online Course
1.0 Course Unit

EDTF 529 Language and Literacy Acquisition
This course addresses research-based instructional strategies for teaching literacy (including language development, reading, writing, and speaking) to learners in grade levels PreK-12 as well as practical and effective modifications for diverse learners (including struggling readers, English language learners, and students with learning disabilities in reading, as well as students with a wide range of disabilities requiring accommodations (cognitive, linguistic, physical, and social)). Formative and summative assessments of emergent and content literacy, including components of literacy (phonological awareness, word analysis, comprehension, vocabulary, fluency) will also be addressed. Also included are factors which influence literacy acquisition (including, but not limited to: English Language Learners), social and cultural implications for language and literacy development, as well as life-long literacy for children and adolescents who struggle in literacy. This course is only available to students in the Urban Teaching Residency program.
Also Offered As: EDTC 529
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Online Course
1.0 Course Unit
EDTF 530 Contemporary Issues in Urban Education
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in fall term
Also Offered As: EDTC 530
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 531 Methods: Elementary B
In this course we will be examining many aspects of the teaching of science and social studies in elementary schools today. The importance of the National Science and Social Studies Education Standards, the Next Generation of Science Standards, and the Pennsylvania State Standards in curriculum development and reform will be explored in depth. Among the topics covered will be planning science and social studies instruction to include inquiry and integrated concepts, developing authentic assessments involving a variety of tools, creating and maintaining a safe laboratory and learning environment that meets the needs of diverse learners, and the integration of technology into science and social studies education. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTC 531
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 532 Methods: Middle Years B
Middle school teachers are involved in the constant process of increasing students’ active reading and writing about content area texts within the high-pressure environment of state accountability. Middle Years Methods offers practical strategies and applications that help establish a literate classroom environment in support of learning across all subject areas. Teachers learn approaches to help them establish literate classroom environments that are rich in problem-solving, critical thinking, logical reasoning concepts focused on state and national standards, and practical techniques that investigate and connect content in all subject areas to the real world. Middle Years Methods is structured to allow participants the opportunity to explore strategies and concepts for increasing student reading and writing proficiency. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTC 532
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 533 Methods: 7-12 English B
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course builds from Secondary ELA Methods I. We will begin the semester by exploring the self, culturally relevant pedagogy, and how these things impact our practice. Then we will explore a variety of practices for teaching reading, writing, listening, and speaking. The practices for teaching reading, writing, listening, and speaking align to Special Education Competencies IV. Pedagogy. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTC 533
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 534 Methods: 7-12 General Science/Biology B
This course is the second course in the three-course series that addresses teaching and learning in secondary science classrooms. The methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education: Assessing misconceptions, teaching through multiple intelligences, expanding instructional practices, teaching science in urban schools, culturally relevant pedagogies, gender, professional learning communities and workforce development, problem-based learning, current STEM fields of research, citizenship science, and ethical decision making. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTC 534
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 535 Methods: 7-12 World Languages B
This course includes theoretical and practical applications for the teaching of world languages based on the five “C” goal areas: Communication, Cultures, Comparisons, Connections, and Communities of the World-Readiness Standards for Learning Languages. Approaches and techniques will be explored to equip world language teachers with the knowledge and tools necessary to create a student-centered, standards-driven classroom. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTC 535
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit
EDTF 536 Methods: 7-12 Mathematics B
Mathematics Methods B is enhancing student learning through knowing the content, planning around our knowledge and reflecting on our practice and our practice and our students thinking. Each week we will think about mathematics through talking about mathematics, doing mathematics, and presenting mathematics, as we will learn to expect our students to do. Each week we will spend time both learning concepts behind the mathematics taught and learned in middle and high school, with a couple of topics from elementary school that have bearing on middle and high school mathematics. We will learn about these concepts in ways that you will be able to use in the classroom, giving you experiences with different methods. This course is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Also Offered As: EDTC 536
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 601 Methods: Advanced Elementary
This course has been designed for first and second year teachers who are currently teaching in elementary classrooms. Our work together will build upon the course work you completed this year, your past experiences as a student and a teacher, and your current classroom practices. In this course, we explore the interrelationship of language, literacy, numeracy and culture in order to co-construct a knowledge base for understanding how children learn. We will interrogate our own teaching practices in an effort to make our classrooms more content-rich and child-centered. Our work will span content areas - math, literacy, social studies, and science - emphasizing both their interconnectedness and their particularity.
The course will offer opportunity to think in both theoretical terms and practical terms about implications of our teaching. This course is only available to students in the Urban Teaching Residency program.
Also Offered As: EDTC 601
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 604 Methods: 7-12 Advanced English
This course is designed to give working teachers intensive, hands-on practice with research-based pedagogy that they need to address the immediate challenges of teaching English in urban public schools.
Students will develop plans for a full course, several conceptual units, and eight weeks of daily lesson plans. In addition, students will develop and present various instructional routines, which the class will critique.
Finally, students will share resources with each other and engage in problem-solving of their real-world classroom issues. This course is only available to those in the Urban Teaching Residency Program.
Also Offered As: EDTC 604
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 605 Methods: 7-12 Advanced Science
This course addresses teaching and learning in secondary science classrooms. The advanced methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education. Skills: topics investigated under this theme include: assessing misconceptions, teaching through multiple intelligences, expanding instructional practices. Teaching Science in Urban Schools: topics investigated under this theme include: culturally relevant pedagogies, gender, professional learning communities and workforce development. 21st Century Learning: topics investigated under this theme include: problem-based learning, information technologies, educational technologies, current STEM fields of research, citizenship science, and ethical decision making. This course is only available to students in the Urban Teaching Residency program.
Also Offered As: EDTC 605
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 606 Methods: 7-12 Advanced World Languages
As a sequel to your introductory world language teaching and learning course, this course assumes a level of familiarity with theoretical and practical approaches to world language teaching and learning such as: communicative language teaching, task-based instruction, student centered instruction, and national and state standards. Building on this background, we will examine and analyze the use of emerging key concepts in world language education as well as consider critical perspectives to more traditional pedagogical approaches. Our exploration of world language learning and teaching methods will be grounded in praxis; that is, we will consider how theoretical and research-based approaches inform classroom practices, experiences, and beliefs, and vice versa. Accordingly, the course will provide opportunities for you to bridge theory and practice through an ongoing cycle of discussion, in-class application, and learning experiences such as collaborative activities, peer feedback, self-reflection, brief presentations, and the design of instruction materials. This course is only available to students in the Urban Teaching Residency program.
Also Offered As: EDTC 606
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit

EDTF 613 Education Law
The practice of pushing students out of the education system and into the legal system has become known more concisely as the “school-to-prison pipeline.” This course will examine the policies and procedures of school discipline grounded in the rhetoric of law and order and the criminalization of young people. We will address the historical, social, political, economic, and ethical dimensions of the relationship between education and the carceral state, with justice as our primary focus. We will engage with philosophical, theoretical, and empirical readings from a wide variety of disciplines toward the development of meaningful research questions and a proposal for the capstone. This course is only available to students in the Urban Teaching Residency Program.
Course usually offered in fall term
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
1.0 Course Unit
EDTF 616 Politics of School Reform
In this course we will explore the implications of US school reform in the post-Brown era. Interdisciplinary in nature, Politics of School Reform takes on the causes and consequences of reform by considering historical, sociological, and legal concepts related to major reform issues and initiatives. This course is only available to students in the Urban Teaching Residency program. One-term course offered either term
Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Lecture
1.0 Course Unit

EDTF 618 Methods: 7-12 Advanced Mathematics
This course will focus on gaining a deeper understanding of the methods of mathematics teaching practice. This course will provide students the opportunity to put theory into practice through in class demonstrations of mathematical pedagogical practices. Through in class and online discussions, students will reflect on current teaching practices and the impact that these practices have on learning. It is my goal to support each student in further creating effective student-centered rational behind all teaching decisions. This course is only available to students in the Urban Teaching Residency program. Also Offered As: EDTC 618
Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Lecture
1.0 Course Unit

EDTF 619 Research Seminar
Research plays a critical role in education. Discipline-specific studies are used to evaluate new curricula and educational programming, and to better understand classroom and school environments. The ability to both use and to be a critical consumer of this literature is essential for educators. In this course, we examine multiple research and evaluation methodologies, their applicability to issues in education, and the use of research findings to develop educational policy. The course provides an overview of research design and qualitative and quantitative data collection and analysis. A key goal is to equip students with the knowledge they need to become critical consumers and strategic users of educational research. This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term
Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Lecture
1.0 Course Unit

EDTF 625 Culturally Responsive Pedagogy
What is culturally responsive (or relevant) pedagogy? What does it look like, what does it consist of, how is it done, who can do it, when and where can it enter? Is it effective, and for whom? What are the impediments and limitations? What are its roots? What can its future look like, and what can it mean for urban education, student success, and community empowerment? This course will explore these questions and more, providing a theoretical grounding to push this field further, and practical tools to incorporate into current and future teaching and learning activities. The course will also look closely at various intersections (critical race theory, critical pedagogy, gender studies, social justice, multiculturalism, diversity/equity), sociopolitical landscapes, and educational reform efforts, to understand how culturally responsive pedagogy fits within the broader narratives. The class is intentionally designed as a seminar/workshop. Class activities will include full group discussions, small group breakouts, video clips, informal presentations, and possible guest speakers. Students are expected to actively engage both with the readings and in class activities. This course is only available to students in the Urban Teaching Residency program. Course usually offered in spring term Also Offered As: EDTC 625
Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Lecture
1.0 Course Unit

EDTF 627 Outside of the School Box
This course explores education broadly, focusing on the interconnections between individuals, families, and policy as each relates to urban public schools. Drawing from a critical sociocultural lens, Outside the School Box also engages with ongoing discussions of school quality and public policy. Major topics include the impact of housing selection on the makeup of urban public schools; teacher training, recruitment and retention; and causes and effects of market-driven educational systems. This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term
Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Lecture
1.0 Course Unit

EDTF 628 Racial Literacy
This course will provide you with opportunities to explore the experiences, perspectives, and contributions of various cultures, groups, and individuals while exposing you to the knowledge, skills, and tools that are necessary to become a racially competent and highly effective educator. We will learn how racial literacy is defined, practiced, acquired, and used to demonstrate that understanding different viewpoints can improve one's ability to respond accordingly. Through storytelling, journaling, stress management practice, role-playing, and open exchange and dialogue you will see how racial literacy is established by reflecting on in-the-moment stress reactions. We will support you as you learn how to address diversity related topics in ways that create teaching and learning environments where mutual respect and trust form the basis of the relationships between you and the communities you serve. This course is only available to students in the Urban Teaching Residency program. One-term course offered either term
Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Lecture
1.0 Course Unit
EDTF 701 Educating Students with Disabilities - Part II
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who have disabilities related to specific learning disabilities. We will learn what constitutes disabilities in this population and issues surrounding this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. Instructional techniques and assessments strategies will be a focus. This course is only available to students in the Urban Teaching Residency program. Course usually offered in spring term Also Offered As: EDTC 701
Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Online Course 1.0 Course Unit

EDTF 702 Special Education Law & Processes
This course is designed to provide students with an understanding of special education processes, including the evaluation processes, exceptionalities and eligibility, the development and delivery of Individual Education Plans, as well as theories and best educational practices in the field and profession of special education. Students will become familiar with the Individuals with Disabilities in Education Act (IDEA), the cornerstone of special education law, Section 504 of the Americans with Disabilities Act, and Pennsylvania statutes and regulations governing special education law. Issues related to an understanding of the evaluation and determination of exceptionalities in a cultural context will be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students teaching experiences will inform discussion and learning. This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term Also Offered As: EDTC 702
Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Online Course 1.0 Course Unit

EDTF 703 Educating Students with Disabilities - Part I
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible to take alternative state testing. We will learn what constitutes disabilities in this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. Students will discuss the appropriateness of various academic environments as children with more encompassing disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. A holistic approach to educating this population, with an emphasis on social, emotional, behavioral, transition and life skills are a focus. Students will receive a grade of a pass or fail at the conclusion of the fall term. 40 mandatory hours of fieldwork will take place in the spring semester. This will allow students to demonstrate learning acquired in the course work in a realistic setting. At the conclusion of the spring semester, a grade will be issued. Content will be presented through online lecture, hands on projects, reading and fieldwork experience. This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term Also Offered As: EDTC 703
Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Online Course 1.0 Course Unit

EDTF 704 Special Education Capstone - Part I
In this course, students who are working towards their Masters of Education in the Urban Teaching Residency Program will be involved in the process of designing and utilizing research in education. Students will learn the components of an educational research project including hypothesis development, literature review techniques, and various research methodologies including action research, data collection and analysis. Significant topics in education will be discussed. Students will be required to complete a preliminary literature review, Capstone Project Proposal and completed literature review in the fall term; followed by methodology, data analysis and discussion in the spring term. Both semesters will include whole group and individual instruction that will support the completion of a comprehensive Capstone Project that addresses a notable issue in education. This course is only available to students in the Urban Teaching Residency program. Course usually offered in fall term Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Lecture 0.0 Course Units

EDTF 705 Urban Education Capstone Writing Seminar
This course is designed as a writing seminar in order to complete a thesis for a master’s degree. Students are required to develop a research question and methods for data collection, analyze existing literature related to the research question, collect data, analyze the data, and draw conclusions from the data. There will be four whole class sessions and at least three individual writing conferences. During the whole class sessions, students will learn how to plan, execute, and analyze research. Since this class is a writing seminar, be prepared to spend time in class drafting, conferencing, and/or researching. This course is only available to students in the Urban Teaching Residency program. Course usually offered in spring term Prerequisites: Enrollment in Urban Teaching Residency Program. Activity: Seminar 1.0 Course Unit
EDTF 706 Special Education Capstone - Part II
In the second session of the Special Education Capstone students will continue the writing process with finalizing edited Literature Review sections from session I, and learning how to write and develop research based methodology appropriate for each student’s project. The course will then break apart the components of data analysis and discussion with students moving through the research process to compose each. The semester is comprised of face to face sessions in whole group and individual conferences. This is only available to students in the Urban Teaching Residency program.
Course usually offered in spring term
Prerequisites: Enrollment in Urban Teaching Residency Program.
Activity: Lecture
0.0 Course Units

Electrical & Systems Engineering (ESE)

ESE 099 Undergraduate Research and/or Independent Study
An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student’s academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: A maximum of 2 c.u. of ESE 099 may be applied toward the B.A.S. or B.S.E. degree requirements

ESE 111 Atoms, Bits, Circuits and Systems
Introduction to the principles underlying electrical and systems engineering. Concepts used in designing circuits, processing signals on analog and digital devices, implementing computation on embedded systems, analyzing communication networks, and understanding complex systems will be discussed in lectures and illustrated in the laboratory. This course provides an overview of the challenges and tools that Electrical Engineers and Systems Engineers address and some of the necessary foundations for students interested in more advanced courses in ESE.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: FOR FRESHMEN ONLY

ESE 112 Engineering Electromagnetics
This course covers basic topics in engineering electromagnetics, namely, electric charge, electric field, electric energy, conductors, insulators, dielectric materials, capacitors, electric current, magnetic field, inductors, Faraday’s law of induction, alternating current (AC), impedance, Maxwell’s equations, electromagnetic and optical wave propagation, with emphasis on engineering issues. Relevant engineering topics are emphasized in our lectures in order to prepare students for other courses in ESE that rely on the contents on this course. Several laboratory experiments accompany the course to provide hands-on experience on some of the topics in the lecture and prepare students for the capstone project.
Course usually offered in spring term
Activity: Lecture
1.5 Course Unit

ESE 150 Digital Audio Basics
Primer on digital audio. Overview of signal processing, sampling, compression, human psychoacoustics, MP3, intellectual property, hardware and software platform components, and networking (i.e., the basic technical underpinnings of modern MP3 players and cell phones).
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: FOR FRESHMEN ONLY

ESE 190 Silicon Garage: Introduction to Open Source Hardware and Software Platforms
Project-centric learning course for non-ESE majors on microprocessor control of physical systems using open-source hardware and software platforms. Students will work in teams to develop software controlled systems based on the Arduino and Raspberry-Pi that interface with the real world (sensors, actuators, motors) and each other (networking).
Course usually offered in spring term
Prerequisites: High School Physics and Math
Activity: Lecture
0.5 Course Units

ESE 204 Decision Models
This first course in decision models will introduce students to quantitative models for decision making, using optimization and monte-carlo simulation. Examples will be drawn from manufacturing, finance, logistics and supply chain management. Students will use EXCEL and @Risk to build and analyze models.
Course usually offered in fall term
Prerequisite: MATH 104
Activity: Lecture
1.0 Course Unit

ESE 210 Introduction to Dynamic Systems
This first course in systems modelling covers linear and nonlinear systems in both continuous and discrete time. Topics covered include linearization and stability analysis, elementary bifurcations, and an introduction to chaotic dynamics. Extensive applications to mechanical, electrical, biological, social, and economic/financial systems are included. The course will use both analytical and numerical/symbolic tools.
Course usually offered in fall term
Corequisite: MATH 240
Activity: Lecture
1.0 Course Unit
ESE 215 Electrical Circuits and Systems
This course gives an introduction of modern electric and electronic circuits and systems. Designing, building and experimenting with electrical and electronic circuits are challenging and fun. It starts with basic electric circuit analysis techniques of linear circuits. Today mathematical analysis is used to gain insight that supports design; and more detailed and accurate representations of circuit performance are obtained using computer simulation. It continues with 1st order and 2nd order circuits in both the time and frequency domains. It discusses the frequency behavior of circuits and the use of transfer functions. It continues with introduction of non-linear elements such as diodes and MOSFET (MOS) transistors. Applications include analog and digital circuits, such as single stage amplifiers and simple logic gates. A weekly lab accompanies the course where concepts discussed in class will be illustrated by hands-on projects; students will be exposed to state-of-the-art test equipment and software tools (LabView, Spice).
Course usually offered in fall term
Prerequisites: PHYS 150, PHYS 151
Corequisite: MATH 240
Activity: Lecture
1.5 Course Unit

ESE 218 Electronic, Photonic, and Electromechanical Devices
This first course in electronic, photonic and electromechanical devices introduces students to the design, physics and operation of physical devices found in today's applications. The course describes semiconductor electronic and optoelectronic devices, including light-emitting diodes, photodetectors, photovoltaics, transistors and memory; optical and electromagnetic devices, such as waveguides, fibers, transmission lines, antennas, gratings, and imaging devices; and electromechanical actuators, sensors, transducers, machines and systems.
Course usually offered in fall term
Prerequisites: PHYS 150, PHYS 151
Corequisite: MATH 240
Activity: Lecture
1.5 Course Unit

ESE 224 Signal and Information Processing
Introduction to signal and information processing (SIP). In SIP we discern patterns in data and extract the patterns from noise. Foundations of deterministic SIP in the form of frequency domain analysis, sampling, and linear filtering. Random signals and the modifications of deterministic tools that are necessary to deal with them. Multidimensional SIP where the goal is to analyze signals that are indexed by more than one parameter. Includes a hands-on lab component that implements SIP as standalone applications on modern mobile platforms.
Course usually offered in spring term
Prerequisite: MATH 104
Corequisite: MATH 240
Activity: Lecture
1.5 Course Unit

ESE 290 Introduction to Electrical and Systems Engineering Research Methodology
Introduction to the nature and process of engineering research as represented by ongoing ESE faculty (and collaborating colleagues’ and industrial partners’) research projects. Joint class exercises in how to pursue effective background technical reading, pitch a proposal, and aim for the discovery of new human knowledge to complement the individually mentored topic specific project work.
Course usually offered in spring term
Prerequisites: MATH 240, PHYS 150, ESE 215 and ESE 218, or ESE 204 and 210, or ESE 215 and CIS 240
Corequisite: ESE 291
Activity: Lecture
0.5 Course Units

ESE 291 Introduction to Electrical and Systems Engineering Research and Design
Students contract with a faculty mentor to conduct scaffolded original research in a topic of mutual interest. Prepare project report on research findings.
Course usually offered in spring term
Corequisite: ESE 290
Activity: Laboratory
1.0 Course Unit

ESE 292 Introduction to Electromechanical Prototyping
This is a project-centric course for ESE majors to engage in circuit layout and prototype design skills. Students will work in teams to develop printed circuit boards using industry standard tools like Altium and learn mechanical prototyping skills using Solidworks. Emphasis will be on developing sound printed circuit board layout practices using circuitry knowledge that they acquire in ESE 215 and ESE 370. A module on using Cypress PSoC will introduce students to recent developments in analog/digital co-design.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

ESE 296 Study Abroad
Activity: Lecture
1.0 Course Unit
ESE 301 Engineering Probability
This course introduces students to the mathematical foundations of the theory of probability and its rich applications. The course begins with an exploration of combinatorial probabilities in the classical setting of games of chance, proceeds to the development of an axiomatic, fully mathematical theory of probability, and concludes with the discovery of the remarkable limit laws and the eminence grise of the classical theory, the central limit theorem. The topics covered include: discrete and continuous probability spaces, distributions, mass functions, densities; conditional probability; independence; the Bernoulli schema: the binomial, Poisson, and waiting time distributions; uniform, exponential, normal, and related densities; expectation, variance, moments; conditional expectation; generating functions, characteristic functions; inequalities, tail bounds, and limit laws. But a bald listing of topics does not do justice to the subject: the material is presented in its lush and glorious historical context, the mathematical theory buttressed and made vivid by rich and beautiful applications drawn from the world around us. The student will see surprises in election-day counting of ballots, a historical wager the sun will rise tomorrow, the folly of gambling, the sad news about lethal genes, the curiously persistent illusion of the hot hand in sports, the unreasonable efficacy of polls and its implications to medical testing, and a host of other beguiling settings.
Course usually offered in spring term
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit

ESE 303 Stochastic Systems Analysis and Simulation
Stochastic systems analysis and simulation (ESE 303) is a class that explores stochastic systems which we could loosely define as anything random that changes in time. Stochastic systems are at the core of a number of disciplines in engineering, for example communication systems and machine learning. They also find application elsewhere, including social systems, markets, molecular biology and epidemiology. The goal of the class is to learn how to model, analyze and simulate stochastic systems. With respect to analysis we distinguish between what we could call theoretical and experimental analysis. By theoretical analysis we refer to a set of tools which let us discover and understand properties of the system. These analysis can only take us so far and is usually complemented with numerical analysis of experimental outcomes. Although we use the word experiment more often than not we simulate the stochastic system in a computer and analyze the outcomes of these virtual experiments. The class's material is divided in four blocks respectively dealing with Markov chains, continuous time Markov chains, Gaussian processes and stationary processes. Emphasis is placed in the development of toolboxes to analyze these different classes of processes and on describing their applications to complex stochastic systems in different disciplines. Particular examples include: (i) the problem of ranking web pages by a search engine; (ii) the study of reputation and trust in social networks; (iii) modeling and analysis of communication networks; (iv) the use of queues in the modeling of transportation networks; (v) stochastic modeling and simulation of biochemical reactions and gene networks; (vi) arbitrage, pricing of stocks, and pricing of options through Black-Scholes formula; and (vii) linear filtering of stochastic processes to separate signals of interest from background noise. For more information visit the class's web page at http://alliance.seas.upenn.edu/~ese303/wiki/.
Course usually offered in fall term
Prerequisites: ESE 301 or equivalent and one computer language
Activity: Lecture
1.0 Course Unit

ESE 305 Foundations of Data Science
Introduction to a broad range of tools to analyze large volumes of data in order to transform them into actionable decisions. Using case studies and hands-on exercises, the student will have the opportunity to practice and increase their data analysis skills.
Course usually offered in fall term
Prerequisite: EAS 205 or MATH 312; CIS 120; ESE 301
Activity: Lecture
1.0 Course Unit

ESE 310 Electric and Magnetic Fields I
This course examines concepts of electromagnetism, vector analysis, electrostatic fields, Coulomb's Law, Gauss's Law, magnetostatic fields, Biot-Savart Law, Ampere's Law, electromagnetic induction, Faraday's Law, transformers, Maxwell equations and time-varying fields, wave equations, wave propagation, dipole antenna, polarization, energy flow, and applications.
Course not offered every year
Prerequisites: PHYS 151 and MATH 114
Activity: Lecture
1.0 Course Unit

ESE 319 Fundamentals of Solid-State Circuits
Analysis and design of basic active circuits involving semiconductor devices including diodes and bipolar transistors. Single stage, differential, multi-stage, and operational amplifiers will be discussed including their high frequency response. Wave shaping circuits, filters, feedback, stability, and power amplifiers will also be covered. A weekly three-hour laboratory will illustrate concepts and circuits discussed in the class.
Course usually offered in spring term
Prerequisite: ESE 215
Activity: Lecture
1.5 Course Unit

ESE 321 Physics and Models of Semiconductor Devices
Semiconductor materials form the basis of modern electronic technology. This course develops the physics of semiconductor devices, the evolution of modern semiconductor technology, device engineering considerations, and introduces emerging technologies. The course stresses intuitive understanding of the physics through interactive exercises, instructional videos, in-class examples and a research project. Topics covered include an introduction to quantum mechanics and band theory of solids; physics governing charge carriers in semiconductors; fundamental operating mechanisms for p-n junctions, bipolar and field-effect transistors, and optoelectronic devices; and an introduction to nanoscale devices and the limits of transistor scaling.
Course not offered every year
Prerequisite: ESE 218 or by permission of the instructor
Activity: Lecture
1.0 Course Unit
ESE 325 Fourier Analysis and Applications in Engineering, Mathematics, and the Sciences
This course focuses on the mathematics behind Fourier theory and a wide variety of its applications in diverse problems in mathematics, engineering, and the sciences. The course is very mathematical in content and students signing up for it should have junior or senior standing. The topics covered are chosen from: functions and signals; systems of differential equations; superposition, memory, and non-linearity; resonance, eigenfunctions; the Fourier series and transform, spectra; convergence theorems; inner product spaces; mean-square approximation; interpolation and prediction, sampling; random processes, stationarity; wavelets, Brownian motion; stability and control, Laplace transforms. The applications of the mathematical theory that will be presented vary from year to year but a representative sample include: polynomial approximation, Weierstrass's theorem; efficient computation via Monte Carlo; linear and non-linear oscillators; the isoperimetric problem; the heat equation, underwater communication; the wave equation, tides; testing for randomness, fraud; nowhere differentiable continuous functions; does Brownian motion exist?; error-correction; phase conjugate optics and four-wave mixing; cryptography and secure communications; how fast can we compute?: X-ray crystallography; cosmology; and what the diffusion equation has to say about mathematical finance and arbitrage opportunities.
Course usually offered in fall term
Prerequisites: MATH 240, Junior or Senior Standing
Activity: Lecture
1.0 Course Unit

ESE 330 Principles of Optics and Photonics
This course introduces the fundamental principles of optics, photonics, and antennas alongside a range of applications. Specific topics include: Maxwell's equations and the wave equation; light propagation and interaction with materials; geometric/ray optics and polarization; wave optics, diffraction and gratings; waveguides and fiber optics; optical cavities; lasers and light sources; antennas and applications to wireless communication.
Prerequisites: ESE 215 and ESE 218 or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 336 Nanofabrication of Electrical Devices
This course is an intermediate undergraduate course in the understanding, fabrication, and characterization of electrical, optical, electromagnetic, and/or electromechanical nanodevices; i.e., micro- and nanoscale devices which have significant relevance to electrical engineering. Example devices of interest include transistors, microelectromechanical systems (MEMS), and optical and optoelectronic devices (including photovoltaic devices). Weekly laboratory sessions will enable the fabrication and characterization of a subset of electrical nanodevices. Students will learn basic physics and modeling of electrical nanodevices as well as acquire hands-on skill in their fabrication and characterization.
Course usually offered in spring term
Prerequisite: ESE 218 or permission of the instructor
Activity: Lecture
1.5 Course Unit

ESE 350 Embedded Systems/Microcontroller Laboratory
An introduction to interfacing real-world sensors and actuators to embedded microprocessor systems. Concepts needed for building electronic systems for real-time operation and user interaction, such as digital input/outputs, interrupt service routines, serial communications, and analog-to-digital conversion will be covered. The course will conclude with a final project where student-designed projects are featured in presentations and demonstrations.
Course usually offered in spring term
Prerequisite: Knowledge of C programming or permission of the instructor
Activity: Lecture
1.5 Course Unit

ESE 370 Circuit-Level Modeling, Design, and Optimization for Digital Systems
Circuit-level design and modeling of gates, storage, and interconnect. Emphasis on understanding physical aspects which drive energy, delay, area, and noise in digital circuits. Impact of physical effects on design and achievable performance.
Course usually offered in fall term
Prerequisites: ESE 150, ESE 215
Activity: Lecture
1.0 Course Unit

ESE 400 Engineering Economics
This course investigates methods of economic analysis for decision making among alternative courses of action in engineering applications. Topics include: cost-driven design economics, break-even analysis, money-time relationships, rates of return, cost estimation, depreciation and taxes, foreign exchange rates, life cycle analysis, benefit-cost ratios, risk analysis, capital financing and allocation, and financial statement analysis. Case studies apply these topics to actual engineering problems.
Course usually offered in fall term
Also Offered As: ESE 540
Prerequisite: Knowledge of Differential Calculus
Activity: Lecture
1.0 Course Unit

ESE 402 Statistics for Data Science
The course covers the methodological foundations of data science, emphasizing basic concepts in statistics and learning theory, but also modern methodologies. Learning of distributions and their parameters. Testing of multiple hypotheses. Linear and nonlinear regression and prediction. Classification. Uncertainty quantification. Model validation. Clustering. Dimensionality reduction. Probably approximately correct (PAC) learning. Such theoretical concepts are further complemented by example applications, case studies (datasets), and programming exercises (in Python) drawn from electrical engineering, computer science, the life sciences, finance, and social networks.
Course usually offered in fall term
Also Offered As: ESE 542
Prerequisites: ESE 301 or equivalent, CIS 110 or CIS 120
Activity: Lecture
1.0 Course Unit
### ESE 407 Introduction to Networks and Protocols
This is an introductory course on packet networks and associated protocols, with a particular emphasis on IP-based networks such as the Internet. The course introduces design and implementation choices that underlie the development of modern networks, and emphasizes basic analytical understanding of the concepts. Topics are covered in a mostly "bottom-up" approach starting with a brief review of physical layer issues such as digital transmission, error correction and error recovery strategies. This is followed by a discussion of link layer aspects, including multiple access strategies, local area networks (Ethernet and 802.11 wireless LANs), and general store-and-forward packet switching. Network layer solutions, including IP addressing, naming, and routing are covered next, before exploring transport layer and congestion control protocols (UDP and TCP). Finally, basic approaches for quality-of-service and network security are examined. Specific applications and aspects of data compression and streaming may also be covered.
Course usually offered in fall term
Also Offered As: ESE 507
Prerequisite: ESE 301 or equivalent
Activity: Lecture
1.0 Course Unit
Notes: Course open to Seniors in SEAS and Wharton

### ESE 419 Analog Integrated Circuits
Design of analog circuits and subsystems using primarily MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor and class AB output stages. The Cadence Design System will be used to capture schematics and run simulations using Spectre for some homework problems and for the course project. Topics of stability, noise, device matching through good layout practice will also be covered. Students who take ESE419 will not be able to take ESE572 later. More will be expected of ESE572 students in the design project.
Course usually offered in fall term
Also Offered As: ESE 572
Prerequisite: ESE 319 or permission of the instructor
Activity: Lecture
1.0 Course Unit

### ESE 421 Control For Autonomous Robots
This course introduces the hardware, software and control technology used in autonomous ground vehicles, commonly called "self-driving cars." The weekly laboratory sessions focus on development of a small-scale autonomous car, incrementally enhancing the sensors, software, and control algorithms to culminate in a demonstration in a realistic outdoor operating environment. Students will learn basic physics and modeling; controls design and analysis in Matlab and Simulink; software implementation in C and Python; sensor systems and filtering methods for IMUs, GPS, and computer vision systems; and path planning from fixed map data.
Course usually offered in fall term
Also Offered As: MEAM 421
Prerequisite: CIS 110 or CIS 120 or ENGR 105; ESE 210 or ESE 215 or MEA 211 or permission of the instructor
Activity: Lecture
1.5 Course Unit

### ESE 423 Quantum Engineering
Quantum engineering - the design, fabrication, and control of quantum coherent devices - has emerged as a multidisciplinary field spanning physics, electrical engineering, materials science, chemistry, and biology, with the potential for transformational advances in computation, secure communication, and nanoscale sensing. This course surveys the state of the art in quantum hardware, beginning with an overview of the physical implementation requirements for a quantum computer and proceeding to a synopsis of the leading contenders for quantum building blocks, including spins in semiconductors, superconducting circuits, photons, and atoms. The course combines background material on the fundamental physics and engineering principles required to build and control these devices with readings drawn from the current literature, including promising architectures for scaling physical qubits into larger devices and secure communication networks, and for nanoscale sensing applications impacting biology, chemistry, and materials
Course usually offered in spring term
Also Offered As: ESE 523
Prerequisite: PHYS 411 or permission of the instructor
Activity: Lecture
1.0 Course Unit

### ESE 444 Project Management
The course emphasizes a systems engineering approach to project management including the cycle costing and analysis, project scheduling, project organization and control, contract management, project monitoring and negotiations. In addition, the course will also examine management issues in large infrastructure projects like non-recourse or limited recourse project financing. Examples from the logistics planning process and global software project management will be used to highlight the course topics.
Two terms. student may enter either term.
Also Offered As: ESE 544
Prerequisite: ESE 304 or equivalent
Activity: Lecture
1.0 Course Unit
ESE 450 Senior Design Project I - EE and SSE
This is the first of a two-semester sequence in electrical and systems engineering senior design. Student work will focus on project/team definition, systems analysis, identification alternative design strategies and determination (experimental or by simulation) or specifications necessary for a detailed design. Project definition is focused on defining a product prototype that provides specific value to a least one identified user group. Students will receive guidance on preparing professional written and oral presentations. Each project team will submit a project proposal and two written project reports that include coherent technical presentations, block diagrams and other illustrations appropriate to the project. Each student will deliver two formal Powerpoint presentations to an audience comprised of peers, instructors and project advisors. During the semester there will be periodic individual-team project reviews.
Course usually offered in fall term
Prerequisite: Senior Standing or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 451 Senior Design Project II - EE and SSE
This is the second of a two term sequence in electrical and systems engineering senior design. Student work will focus on completing the product prototype design undertaken in ESE 450 and successfully implementing the said product prototype. Success will be verified using experimental and/or simulation methods appropriate to the project that test the degree to which the project objectives are achieved. Each project team will prepare a poster to support a final project presentation and demonstration to peers, faculty and external judges. The course will conclude with the submission of a final project written team report. During the semester there will be periodic project reviews with individual teams.
Course usually offered in spring term
Prerequisite: ESE 450
Activity: Lecture
1.0 Course Unit

ESE 460 Principles of Microfabrication Technology
A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).
Course not offered every year
Also Offered As: ESE 574, MEAM 564
Prerequisites: Any of the following: ESE 218, MEAM 333, CBE 351, PHYS 250 or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 500 Linear Systems Theory
This graduate-level course focuses on continuous and discrete n-dimensional linear systems with m inputs and p outputs in a time domain based on linear operators. The course covers general discussions of linear systems such as, linearization of non-linear systems, existence and uniqueness of state-equation solutions, transition matrices and their properties, methods for computing functions of matrices and transition matrices and state-variable changes. It also includes z-transform and Laplace transform methods for time-invariant systems and Floquet decomposition methods for periodic systems. The course then moves to stability analysis, including: uniform stability, uniform exponential stability, asymptotic stability, uniform asymptotic stability, Lyapunov transformations, Lyapunov stability criteria, eigenvalues conditions and input-output stability analysis. Applications involving the topics of controllability, observability, realizability, minimal realization, controller and observer forms, linear feedback, and state feedback stabilization are included, as time permits.
Course usually offered in fall term
Prerequisites: Open to graduates and undergraduates who have taken undergraduate courses in linear algebra and differential equations.
Activity: Lecture
1.0 Course Unit

ESE 501 Networking - Theory and Fundamentals
Networks constitute an important component of modern technology and society. Networks have traditionally dominated communication technology in form of communication networks, distribution of energy in form of power grid networks, and have more recently emerged as a tool for social connectivity in form of social networks. In this course, we will study mathematical techniques that are key to the design and analysis of different kinds of networks. First, we will investigate techniques for modeling evolution of networks. Specifically, we will consider random graphs (all or none connectivity, size of components, diameters under random connectivity), small world problem, network formation and the role of topology in the evolution of networks. Next, we will investigate different kinds of stochastic processes that model the flow of information in networks. Specifically, we will develop the theory of markov processes, renewal processes, and basic queueing, diffusion models, epidemics and rumor spreading in networks.
Course usually offered in spring term
Prerequisite: ESE 530 or equivalent
Activity: Lecture
1.0 Course Unit

ESE 502 Introduction to Spatial Analysis
The course is designed to introduce students to modern statistical methods for analyzing spatial data. These methods include nearest-neighbor analyses of spatial point patterns, variogram and kriging analyses of continuous spatial data, and autoregression analyses of area data. The underlying statistical theory of each method is developed and illustrated in terms of selected GIS applications. Students are also given some experience with ARCMAP, JMPIN, and MATLAB software.
Course usually offered in fall term
Prerequisite: ESE 302 or equivalent
Activity: Lecture
1.0 Course Unit
ESE 503 Simulation Modeling and Analysis
This course provides a study of discrete-event systems simulation in the areas of queuing, inventory and reliability systems as well as Markov Chains, Random-Walks and Monte-Carlo systems. The course examines many probability distributions used in simulation studies as well as the Poisson process. Fundamental to most simulation studies is the ability to generate reliable random numbers and so the course investigates the basic properties of random numbers and techniques used for the generation and testing of pseudo-random numbers. Random numbers are then used to generate other random variable using the methods of inverse-transform, convolution, composition and acceptance/rejection. Finally, since most inputs to simulation are probabilistic instead of deterministic in nature, the course examines some techniques used for identifying the probabilistic nature of input data. These include identifying distributional families with sample data, using maximum-likelihood methods for parameter estimating within a given family and testing the final choice of distribution using chi-squared goodness-of-fit.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ESE 504 Intro to Linear, Nonlinear and Integer Optimization
The course provides a detailed introduction to linear and nonlinear optimization analysis as well as integer optimization analysis. It discusses methods for the mathematical formulation of linear programming (LP) integer programming (IP) and nonlinear programming (NLP) problems, as well as methods of computational tools used for their solutions. In discussions surrounding the solutions to LP problems, the Simplex method and the Revised Simplex methods are covered in a fairly rigorous fashion along with the LINDO computational computer package. Sensitivity analysis associated with the optimal solutions to LP problems is also discussed in detail using both geometric and algebraic methods. In discussions surrounding the solutions to IP problems, the course covers: (a) branch and bound, (b) enumeration and (c) cutting-plane methods, and these are applied to numerous classic problems in IP. In discussions surrounding the solutions to NLP problems, the course covers methods involving: (a) differential Calculus, (b) steepest ascent and decent and (c) Lagrange Multipliers. The Kuhn-Tucker Conditions are also presented and applied to problems in Quadratic Programming. Many examples are selected from a broad range of engineering and business problems.
Course usually offered in fall term
Also Offered As: OIDD 910
Prerequisites: Math courses in linear algebra and calculus
Activity: Lecture
1.0 Course Unit

ESE 505 Feedback Control Design and Analysis
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach.
Course usually offered in spring term
Also Offered As: MEAM 513
Prerequisites: MEAM 321 or ESE 210, Juniors and Seniors encouraged to enroll
Activity: Lecture
1.0 Course Unit

ESE 507 Introduction to Networks and Protocols
This is an introductory course on packet networks and associated protocols, with a particular emphasis on IP-based networks such as the Internet. The course introduces design and implementation choices that underlie the development of modern networks, and emphasizes basic analytical understanding of the concepts. Topics are covered in a mostly "bottom-up" approach starting with a brief review of physical layer issues such as digital transmission, error correction and error recovery strategies. This is followed by a discussion of link layer aspects, including multiple access strategies, local area networks (Ethernet and 802.11 wireless LANs), and general store-and-forward packet switching. Network layer solutions, including IP addressing, naming, and routing are covered next, before exploring transport layer and congestion control protocols (UDP and TCP). Finally, basic approaches for quality-of-service and network security are examined. Specific applications and aspects of data compression and streaming may also be covered.
Course usually offered in fall term
Also Offered As: ESE 407
Activity: Lecture
1.0 Course Unit
Notes: Course open to Graduate Students in SEAS and Wharton

ESE 510 Electromagnetic and Optics
This course reviews electrostatics, magnetostatics, electric and magnetic materials, induction, Maxwell's equations, potentials and boundary-value problems. Topics selected from the areas of wave propagation, wave guidance, antennas, and diffraction will be explored with the goal of equipping students to read current research literature in electromagnetics, microwaves, and optics.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 512 Dynamical Systems for Engineering and Biological Applications
This midlevel course in nonlinear dynamics focuses on the analysis of low dimensional, continuous time models for describing and understanding complex behavior in physical, biological and engineered systems. We assume some background knowledge of ordinary differential equations, and develop at an engineering applications level the concepts and tools of qualitative dynamical systems theory with major focus on analysis and some on synthesis.
Course usually offered in fall term
Prerequisites: MATH 240, PHYS 150, ESE 210 and a sound background in computational modeling
Activity: Lecture
1.0 Course Unit

ESE 513 Prin of Quantum Tech
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
ESE 516 IoT Edge Computing
This course was developed to bring lessons learned from the product design industry into the classroom - specifically focusing on Internet of Things (IoT) device development and deployment. To achieve the highest level of knowledge transfer, the course will incorporate design theory with discussions of real-world product failures and successes - as well as a heavy hands-on component to build a device from end to end. Students will learn to use industry standard tools, such as Altium, Atmel Studio, and IBM Watson - allowing them the same level of power and customization at the disposable of startups and Fortune 500 companies alike.
Course usually offered in spring term
Prerequisite: ESE 519 or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 518 Battery and Super-Capacitor Systems
This is a senior / graduate course on scientific and technological fundamentals as they apply to electrochemical batteries and super-capacitors. The perspective utilized will be a combination of materials and systems science. The course will introduce the student to the different categories of electrochemical cells and batteries, and their related chemistry, kinds of super-capacitors, charging and discharging profiles, equivalent series resistance (ESR), power capacities, and lifetimes. For super-capacitors, the student will be introduced to double layer capacitance (DLC) and pseudo-capacitance types of energy storage, super-capacitor fundamentals through Faradaic and non-Faradaic processes, pseudo-capacitance of metal oxides and electro-active polymers (EAPs), non-ideal polarizable electrodes, energetics and kinetics of electrode processes, theories of dielectric polarization, inorganic and organic electro-carbonaceous materials, effective surface area (ESA) and functionalizations, as well as the AC impedance behavior of batteries and super-capacitors including the self-discharge characteristics of both. The fundamental electrochemical relations will be discussed, as well as battery / super-caps system modeling, and batteries management systems.
Course not offered every year
Prerequisites: CHEM 101 (General Chemistry) and MATH 104 (Calculus 1)
Activity: Lecture
1.0 Course Unit

ESE 519 Real-Time Embedded Systems
The use of distributed wireless sensor networks has surged in popularity in recent years with applications ranging from environmental monitoring, to people- and object-tracking in both cooperative and hostile environments. This course is targeted at understanding and obtaining hands-on experience with the state-of-the-art in such wireless sensor networks which are often composed using relatively inexpensive sensor nodes that have low power consumption, low processing power and bandwidth. The course will span a variety of topics ranging from radio communications, network stack, systems infrastructure including QoS support and energy management, programming paradigms, distributed algorithms and example applications. Some guest lectures may be given.
Course usually offered in fall term
Also Offered As: IPD 519
Prerequisites: CIS 120 , ESE 350 or equivalent, one course in computer networks and Senior or Graduate standing
Activity: Lecture
1.0 Course Unit

ESE 520 Agent-Based Modeling and Simulation
Agents are a new technique for trying to model, simulate, and understand systems that are ill-structured and whose mathematics is initially unknown and possibly unknowable. This approach allows the analyst to assemble models of agents and components where micro-decision rules may be understood; to bring the agents and components together as a system where macro-behavior then emerges; and to use that to empirically probe and improve understanding of the whole, the interrelations of the components, and synergies. This approach helps one explore parametrics, causality, and what-ifs about socio-technical systems (technologies that must support people, groups, crowds, organizations, and societies). It is applicable when trying to model and understand human behavior - consumers, investors, passengers, plant operators, patients, voters, political leaders, terrorists, and so on. This course will allow students to investigate and compare increasingly complex agent based paradigms along three lines - math foundations, heuristic algorithms/knowledge representations, and empirical science. The student will gain a toolbox and methodology for attempting to represent and study complex socio-technical systems. Students taking this for graduate credit will also learn how to design agent-based tools.
Course usually offered in fall term
Also Offered As: ESE 420
Activity: Lecture
1.0 Course Unit

ESE 521 The Physics of Solid State Energy Devices
An advanced undergraduate course or graduate level course on the fundamental physical principles underlying the operation of traditional semiconducting electronic and optoelectronic devices and extends these concepts to novel nanoscale electronic and optoelectronic devices. The course assumes an undergraduate level understanding of semiconductors physics, as found in ESE 218 or PHYS 240. The course builds on the physics of solid state semiconductor devices to develop the operation and application of semiconductors and their devices in energy conversion devices such as solar photovoltaics, thermophotovoltaics, and thermoelectrics, to supply energy. The course also considers the importance of the design of modern semiconductor transistor technology to operate at low-power in CMOS.
Course usually offered in spring term
Prerequisites: ESE 218 or PHYS 240 or equivalent, or by permission of the instructor.
Activity: Lecture
1.0 Course Unit
ESE 523 Quantum Engineering
Quantum engineering - the design, fabrication, and control of quantum coherent devices - has emerged as a multidisciplinary field spanning physics, electrical engineering, materials science, chemistry, and biology, with the potential for transformational advances in computation, secure communication, and nanoscience sensing. This course surveys the state of the art in quantum hardware, beginning with an overview of the physical implementation requirements for a quantum computer and proceeding to a synopsis of the leading contenders for quantum building blocks, including spins in semiconductors, superconducting circuits, photons, and atoms. The course combines background material on the fundamental physics and engineering principles required to build and control these devices with readings drawn from the current literature, including promising architectures for scaling physical qubits into larger devices and secure communication networks, and for nanoscale sensing applications impacting biology, chemistry, and materials science.
Course usually offered in spring term
Also Offered As: ESE 423
Prerequisite: PHYS 411 or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 525 Nanoscale Science and Engineering
Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustention of current approaches, and for the development of revolutionary designs and applications.
Course usually offered in fall term
Also Offered As: MSE 525
Prerequisites: ESE 218 or PHYS 240 or MSE 220 or equivalent, or by permission.
Activity: Lecture
1.0 Course Unit

ESE 526 Photovoltaic Systems Engineering
This course will present the engineering basis for photovoltaic (PV) system design. The overall aim is for engineering students to understand the what, why, and how associated with the electrical, mechanical, economic, and aesthetic aspects of PV system. The course will introduce additional practical design considerations, added to the theoretical background, associated with pertinent electro-mechanical design.
Course not offered every year
Prerequisite: Permission of the Instructor
Activity: Lecture
1.0 Course Unit

ESE 527 Design of Smart Systems
Smart systems are materials, structures, devices and/or networks that seek to autonomously emulate human capabilities (sensing, nervous system, deliberating, acting) for adapting and continued functioning in potentially adverse conditions. Smart systems are a highly trans-disciplinary field that utilize microsystems technology with other disciplines like biology, information science, nanoscience, or cognitive science to control networks of components. Smart systems are causing a sea-change in hybrid cyber-physical-social systems leading to such breakthroughs as: the internet of Everything, smart cars, smart cities, the next industrial revolution, solutions to reduce global warming, and personalized e-healthcare, among many others. In this course students explore state-of-the-art smart system components, learn a design methodology to integrate the components, and apply the methodology to design and simulate a smart system prototype. The course will also cover life-long coping skills for human-centered design and for modeling the security, privacy and reliability hazards of the smart systems approach.
Course not offered every year
Prerequisites: Junior or Senior standing, course or experience in a course with high level language
Activity: Lecture
1.0 Course Unit

ESE 528 Estimation and Detection Theory
Statistical decision making constitutes the core of multiple engineering systems like communication, networking, signal processing, control, market dynamics, biological systems, data processing, etc. We strive to introduce mathematical theories that formulate statistical decision and obtain decision making algorithms with application to one or more of the above domains. This course will be offered every other year.
One-term course offered either term
Prerequisite: ESE 530 or equivalent
Activity: Lecture
1.0 Course Unit

ESE 529 Introduction to Micro- and Nano-electromechanical Technologies
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
ESE 530 Elements of Probability Theory
This rapidly moving course provides a rigorous development of fundamental ideas in probability theory and random processes. The course is suitable for students seeking a rigorous graduate level exposure to probabilistic ideas and principles with applications in diverse settings. The topics covered are drawn from: abstract probability spaces; combinatorial probabilities; conditional probability; Bayes’s rule and the theorem of total probability; independence; connections with the theory of numbers, Borel’s normal law; rare events, Poisson laws, and the Lovasz local lemma; arithmetic and lattice distributions arising from the Bernoulli scheme; limit laws and characterizations of the binomial and Poisson distributions; continuous distributions in one and more dimensions; the uniform, exponential, normal, and related distributions; random variables, distribution functions; orthogonal and stationary random processes; the Gaussian process, Brownian motion; random number generation and statistical tests of randomness; mathematical expectation and the Lebesgue theory; expectations of functions, moments, convolutions; operator methods and distributional convergence, the central limit theorem, selection principles; conditional expectation; tail inequalities, concentration convergence in probability and almost surely, the law of large numbers, the law of the iterated logarithm; Poisson approximation, Janson’s inequality, the Stein-Chen method; moment generating functions, renewal theory; characteristic functions.
Course usually offered in fall term
Prerequisites: A solid foundation in undergraduate probability at the level of ESE 301 or STAT 430 at Penn. Students are expected to have a sound calculus background in the first two years of a typical undergraduate engineering curriculum. Undergraduates are warned that the course is very mathematical in nature with an emphasis on rigor; upperclassmen who wish to take the course will need to see the instructor for permission to register.
Activity: Lecture
1.0 Course Unit

ESE 531 Digital Signal Processing
This course covers the fundamentals of discrete-time signals and systems and digital filters. Specific topics covered include: review of discrete-time signal and linear system representations in the time and frequency domain, and convolution; discrete-time Fourier transform (DTFT); Z-transforms; frequency response of linear discrete-time systems; sampling of continuous-time signals, analog to digital conversion, sampling-rate conversion; basic discrete-time filter structures and types; finite impulse response (FIR) and infinite impulse response (IIR) filters; design of FIR and IIR filters; discrete Fourier transform (DFT), the fast Fourier transform (FFT) algorithm and its applications in filtering and spectrum estimation.
Course usually offered in fall term
Prerequisites: ESE 224, ESE 325 or equivalent
Activity: Lecture
1.0 Course Unit

ESE 532 System-on-a-Chip Architecture
Motivation, design, programming, optimization, and use of modern System-on-a-Chip (SoC) architectures. Hands-on coverage of the breadth of computer engineering within the context of SoC platforms from gates to application software, including on-chip memories and communication networks, I/O interfacing, RTL design of accelerators, processors, concurrency, firmware and OS/infrastructure software. Formulating parallel decompositions, hardware/software tradeoffs, and hardware/software codesign. Attention to real-time requirements.
Course usually offered in fall term
Prerequisites: Undergraduates: CIS 240, ESE 350; Graduate: Working knowledge of C
Activity: Lecture
1.0 Course Unit

ESE 533 Electronic Design Automation
Formulation, automation, and analysis of design mapping problems with emphasis on VLSI and computational realizations. Major themes include: formulating and abstracting problems, figures of merit (e.g. Energy, Delay, Throughput, Area, Mapping Time), representation, traditional decomposition of flow (logic optimization, covering, scheduling, retiming, assignment, partitioning, placement, routing), and techniques for solving problems (e.g., greedy, dynamic programming, search, (integer) linear programming, graph algorithms, randomization, satisfiability).
Course not offered every year
Prerequisites: Digital logic, Programming (need to be comfortable writing ~1-3K lines of code and working with a large, existing base code).
Activity: Lecture
1.0 Course Unit

ESE 534 Nanofabrication and Nanocharacterization
This course is intended for first year graduate students interested in the experimental practice of nanotechnology. In the context of a hands-on laboratory experience, students will gain familiarity with both top-down and bottom-up fabrication and characterization technologies. This will be achieved through the realization of a variety of micro- and nanoscale structures and devices that can exhibit either classical or quantum effects at the small scale. Although concepts relevant to the laboratories will be emphasized in lecture, it is expected that students will already have been exposed to many of the underlying theoretical concepts of nanotechnology in previous courses.
Course usually offered in spring term
Prerequisite: ESE 525 or MSE 525 or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 535 Engineering Economics
This course is cross-listed with an advanced-level undergraduate course (ESE 400). Topics include: money-time relationships, discrete and continuous compounding, equivalence of cash flows, internal and external rate of return, design and production economics, life cycle cost analysis, depreciation, after-tax cash flow analysis, cost of capital, capital financing and allocation, parametric cost estimating models, pricing, foreign exchange rates, stochastic risk analysis, replacement analysis, benefit-cost analysis, and analysis of financial statements. Case studies apply these topics to engineering systems. Students are not required to do additional work compared to ESE 400 students. The work-load is identical.
Course usually offered in fall term
Also Offered As: ESE 400
Activity: Lecture
1.0 Course Unit
ESE 542 Statistics for Data Science
The course covers the methodological foundations of data science, emphasizing basic concepts in statistics and learning theory, but also modern methodologies. Learning of distributions and their parameters. Testing of multiple hypotheses. Linear and nonlinear regression and prediction. Classification. Uncertainty quantification. Model validation. Clustering. Dimensionality reduction. Probably approximately correct (PAC) learning. Such theoretical concepts are further complemented by examples from applications, case studies (datasets), and programming exercises (in Python) drawn from electrical engineering, computer science, the life sciences, finance, and social networks.
Course usually offered in spring term
Also Offered As: ESE 402
Prerequisites: ESE 301 or equivalent, CIS 110 or 120
Activity: Lecture
1.0 Course Unit

ESE 543 Human Systems Engineering
This course is an introduction to human systems engineering, examining the various human factors that influence the spectrum of human performance and human systems integration. We will examine both theoretical and practical applications, emphasizing fundamental human cognitive and performance issues. Specific topics include: human performance characteristics related to perception, attention, comprehension, memory, decision making, and the role of automation in human systems integration.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ESE 544 Project Management
The course emphasizes a systems engineering approach to project management including the cycle costing and analysis, project scheduling, project organization and control, contract management, project monitoring and negotiations. In addition, the course will also examine management issues in large infrastructure projects like non-recourse or limited recourse project financing. Examples from the logistics planning process and global software project management will be used to highlight the course topics.
One-term course offered either term
Also Offered As: ESE 444
Prerequisite: ESE 304 or equivalent
Activity: Lecture
1.0 Course Unit

ESE 545 Data Mining: Learning from Massive Datasets
Many scientific and commercial applications require us to obtain insights from massive, high-dimensional data sets. In this graduate-level course, students will learn to apply, analyze and evaluate principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course both covers theoretical foundations and practical applications.
Course usually offered in spring term
Prerequisites: ESE 530, ENM 503, or equivalent
Activity: Lecture
1.0 Course Unit

ESE 546 Principles of Deep Learning
Course usually offered in fall term
Prerequisites: Introductory class in machine learning and optimization. CIS 519, CIS 520, ESE 545, ESE 304, ESE 504, ESE 605 recommended or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 548 Transportation Planning Methods
This course introduces students to the development and uses of the 4-step urban transportation model (trip generation-trip distribution-mode choice-traffic assignment) for community and metropolitan mobility planning. Using the VISUM transportation desktop planning package, students will learn how to build and test their own models, apply them to real projects, and critique the results.
One-term course offered either term
Also Offered As: CPLN 650
Prerequisite: CPLN 505 or another planning statistics course
Activity: Lecture
1.0 Course Unit

ESE 550 Advance Transportation Seminar, Air Transportation Planning
Air transportation is a fascinating multi-disciplinary area of transportation bringing together business, planning, engineering, and policy. In this course, we explore the air transportation system from multiple perspectives through a series of lessons and case studies. Topics will include airport and intercity multimodal environmental planning, network design and reliability, air traffic management and recovery from irregular operations, airline operations, economics, and fuel, air transportation sustainability, and land use issues related to air transportation systems. This course will introduce concepts in economics and behavioral modeling, operations research, statistics, environmental planning, and human factors that are used in aviation and are applicable to other transportation systems. The course will emphasize learning through lessons, guest lecturers, case studies of airport development and an individual group and research project.
Course usually offered in spring term
Also Offered As: CPLN 750
Prerequisite: CPLN 550 or equivalent
Activity: Seminar
1.0 Course Unit

ESE 566 Networked Neuroscience
The human brain produces complex functions using a range of system components over varying temporal and spatial scales. These components are couples together by heterogeneous interactions, forming an intricate information-processing network. In this course, we will cover the use of network science in understanding such large-scale and neuronal-level brain circuitry.
One-term course offered either term
Also Offered As: BE 566
Prerequisites: Graduate standing or permission of the instructor. Experience with Linear Algebra and MATLAB.
Activity: Lecture
1.0 Course Unit
ESE 567 Risk Analysis and Environmental Management
This course is designed to introduce students to the complexities of making decisions about threats to human health and the environment when people’s perceptions of risks and their decision-making processes differ from expert views. Recognizing the limitations of individuals in processing information the course explores the role of techniques such as decision analysis, cost-benefit analysis, risk assessment and risk perception in structuring risk-management decisions. We will also examine policy tools such as risk communication, incentive systems, third party inspection, insurance and regulation in different problem contexts. The problem contexts for studying the interactions between analysis, perceptions, and communication will include risk-induced stigmatization of products (e.g. alar, British beef), places (e.g. Love Canal), and technologies (e.g. nuclear power); the siting of noxious facilities, radon, managing catastrophic risks including those from terrorism. A course project will enable students to apply the concepts discussed in the course to a concrete problem.
Course usually offered in spring term
Also Offered As: BEPP 261, BEPP 761, BEPP 961, OIDD 261, OIDD 761
Activity: Lecture
1.0 Course Unit

ESE 568 Mixed Signal Circuit Design and Modeling
This course will introduce design and analysis of mixed-signal integrated circuits. Topics include: Sampling and quantization, Sampling circuits, Switched capacitor circuits and filters, Comparators, Offset compensation, DACs/ADCs (flash, delta-sigma, pipeline, SAR), Oversampling, INL/DNL, FOM. The course will end with a final design project using analysis and design techniques learned in the course. Students must provide a written report with explanations to their design choices either with equations or simulation analysis/insight along with performance results.
Course usually offered in fall term
Prerequisites: ESE 319, 419 or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 570 Digital Integrated Circuits and VLSI-Fundamentals
Explores the design aspects involved in the realization of an integrated circuit from device up to the register/subsystem level. It addresses major design methodologies with emphasis placed on the structured design. The course includes the study of MOS device characteristics, the critical interconnect and gate characteristics which determine the performance of VLSI circuits, and NMOS and CMOS logic design. Students will use state-of-the-art CAD tools to verify designs and develop efficient circuit layouts.
Course usually offered in spring term
Prerequisite: ESE 319 (for undergraduates) or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 572 Analog Integrated Circuits
Design of analog circuits and subsystems using bipolar and MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor arrays, and class AB output stages. The course will include a design project of an analog circuit. The course will use the Cadence Design System for schematic capture and simulation with Spectre circuit simulator. This course is similar to ESE 570, except that it will not require the use of the physical layout tools associated with VLSI design and implementation.
Course usually offered in fall term
Also Offered As: ESE 419
Prerequisite: ESE 319 (for undergraduates) or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 574 The Principles and Practice of Microfabrication Technology
A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).
Course not offered every year
Also Offered As: ESE 460, MEAM 564
Prerequisites: Any of the following courses: ESE 218, MSE 321, MEAM 333, CBE 351, PHYS 250 or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 578 RFIC (Radio Frequency Integrated Circuit) Design
Introduction to RF (Radio Frequency) and Microwave Theory, Components, and Systems. The course aims at providing knowledge in RF transceiver design at both microwave and millimeter-wave frequencies. Both system and circuit level perspective will be addressed, supported by modeling and simulation using professional tools (including Agilent ADS, Sonnet, and Cadence Design Systems). Topics include: Transmission Line Theory, S-parameters, Smith Chart for matching network design, stability, noise, and mixed signal design. RF devices covered will include: hybrid/Wilkinson/Lange 3dB couplers, Small Signal Amplifiers (SSA), Low Noise Amps (LNA), and Power Amps (PA). CMOS technology will be largely used to design the devices mentioned.
Course usually offered in spring term
Prerequisite: ESE 572
Activity: Lecture
1.0 Course Unit
**ESE 590 Systems Methodology**
This course covers the methodologies and techniques important to designing large complex, purposeful systems and to discovering policies that influence them throughout the stages of their lifecycle. The course focuses on hands-on synthetic thinking, where students assemble the big picture from modeling the individual actors, organizations, and artifacts in a socio-technical system of interest. This is the study of emergence of macro-behavior from the micro-decision making of the actors involved - to inquire into the design of a purposeful system, and to examine alternative futures that are ideal, yet affordable, sustainable, and workable. Specifically, the student learns systems theory, systems methodologies (design inquiry/learning systems, idealized design/interactive planning, and soft systems methodology/knowledge management), bottom up modeling (decision science, multi-attribute utility theory, affective reasoning, agent based modeling, simulated societies), and how to further research and apply the synthetic paradigm.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**ESE 597 Master's Thesis**
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

**ESE 599 Independent Study for Master's credit**
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**ESE 605 Modern Convex Optimization**
This course concentrates on recognizing and solving convex optimization problems that arise in engineering. Topics include: convex sets, functions, and optimization problems. Basis of convex analysis. Linear, quadratic, geometric, and semidefinite programming. Optimality conditions, duality theory, theorems of alternative, and applications. Interior-point methods, ellipsoid algorithm and barrier methods, self-concordance. Applications to signal processing, control, digital and analog circuit design, computation geometry, statistics, and mechanical engineering.
Course usually offered in spring term
Prerequisites: Knowledge of linear algebra and willingness to do programming. Exposure to numerical computing, optimization, and application fields is helpful but not required.
Activity: Lecture
1.0 Course Unit

**ESE 611 Nanophotonics: Light at the Nanoscale**
This course is intended for first and second year graduate students interested in nanoscale optics and photonics. Building on prior coursework in electromagnetism, this course provides a theoretical foundation and up-to-date survey of the key principles and phenomena relevant to the field of nanophotonics. Topics discussed include light-matter interaction through Maxwell's equations, photonic band theory and photonic crystals, plasmonic structures and devices, metamaterials and metasurfaces, PT-symmetric & topological photonic systems. Applications of nanophotonic devices and principles to a wide range of scenarios will also be explored in depth, including for renewable energy, information processing, imaging and sensing. Experimental techniques used in nanophotonics will be concurrently introduced and discussed.
One-term course offered either term
Prerequisite: ESE 510 recommended or permission of the instructor
Activity: Lecture
1.0 Course Unit

**ESE 617 Non-Linear Control Theory**
The course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility, and observability, for nonlinear systems; Forbenius' theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations.
Course not offered every year
Also Offered As: MEAM 613
Prerequisite: ESE 500 or equivalent
Activity: Lecture
1.0 Course Unit

**ESE 619 Model Predictive Control**
Increased system complexity and more demanding performance requirements have rendered traditional control laws inadequate regardless if simple PID loops are considered or robust feedback controllers designed according to some H2/Infinity criterion.
Applications ranging from the process industries to the automotive and the communications sector are making increased use of Model Predictive Control (MPC) where a fixed control law is replaced by on-line optimization performed over a receding horizon. The advantage is that MPC can deal with almost any time-varying process and specifications, limited only by the availability of real-time computer power. In the last few years we have seen tremendous progress in this interdisciplinary area where fundamentals of systems theory, computation and optimization interact. For example, methods have emerged to handle hybrid systems, i.e. systems comprising both continuous and discrete components. Also, it is now possible to perform most of the computations off-line thus reducing the control law to a simple look-up table.
Course usually offered in spring term
Prerequisites: Linear Algebra (ESE 500), Optimization (ESE 504 or ESE 605)
Activity: Lecture
1.0 Course Unit
ESE 621 Nanoelectronics
This is a graduate level course on fundamental operating principles and physics of semiconductor devices in reduced or highly scaled dimensions. The course will include topics and concepts covering basic quantum mechanics and solid state physics of nanostructures as well as device transport and characterization, materials and fabrication. A basic knowledge of semiconductor physics and devices is assumed. The course will build upon basic quantum mechanics and solid state physics concepts to understand the operation of nanoscale semiconductor devices and physics of electrons in confined dimensions. The course will also provide a historical perspective on micro and nanoelectronics, discuss the future of semiconductor computing technologies, cutting edge research in nanomaterials, device fabrication as well as provide a perspective on materials and technology challenges.
Course usually offered in spring term
Prerequisite: ESE 521 or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 635 Distributed Systems
This research seminar deals with tools, methods, and algorithms for analysis and design of distributed dynamical systems. These are large collections of dynamical systems that are spatially interconnected to form a collective task or achieve a global behavior using local interactions. Over the past decade such systems have been studied in disciplines as diverse as statistical physics, computer graphics, robotics, and control theory. The purpose of this course is to build a mathematical foundation for study of such systems by exploring the interplay of control theory, distributed optimization, dynamical systems, graph theory, and algebraic topology. Assignments will consist of reading and researching the recent literature in this area. Topics covered in distributed coordination and consensus algorithms over networks, coverage problems, effects of delay in large scale networks. Power law graphs, gossip and consensus algorithms, synchronization phenomena in natural and engineered systems, etc.
Course not offered every year
Prerequisites: Basic knowledge of linear systems (ESE 500), linear algebra (MATH 312 or equivalent), and optimization (ESE 504 or equivalent) and some familiarity with basics of nonlinear systems (ESE 617 or equivalent). Students without this background should consult with the instructor before registering.
Activity: Lecture
1.0 Course Unit

ESE 650 Learning in Robotics
This course will cover the mathematical fundamentals and applications of machine learning algorithms to mobile robotics. Possible topics that will be discussed include probabilistic generative models for sensory feature learning, Bayesian filtering for localization and mapping, dimensionality reduction techniques for motor control, and reinforcement learning of behaviors. Students are expected to have a solid mathematical background in machine learning and signal processing, and will be expected to implement algorithms on a mobile robot platform for their course projects. Grading will be based upon course project assignments as well as class participation.
Course usually offered in spring term
Prerequisites: Students will need permission from the instructor. They will be expected to have a good mathematical background with knowledge of machine learning techniques at the level of CIS 520, signal processing techniques at the level of ESE 531, as well as have some robotics experience
Activity: Lecture
1.0 Course Unit

ESE 672 Integrated Communication Systems
This is an advanced radio frequency (RF) circuit design course that includes analysis and design of high-frequency and high-speed integrated communication circuits at both transistor and system levels. Students gradually design and simulate different blocks of an RF receiver and combine these blocks to form the receiver as their final project. We assume some background knowledge of device physics, electromagnetics, circuit theory, control theory, and stochastic processes.
One-term course offered either term
Prerequisite: ESE 419 or ESE 572
Activity: Lecture
1.0 Course Unit

ESE 673 Integrated Photonic Systems
Analysis and design of photonic integrated systems at both device and system levels including architectures, photonic integrated circuit technologies, passive components (nano-waveguides, resonators, couplers, and Y-junctions) and active components (lasers, modulators, and photodiodes) are studied. The emphasis is on silicon photonics.
Course usually offered in spring term
Prerequisite: ESE 510 or permission of the instructor
Activity: Lecture
1.0 Course Unit

ESE 674 Information Theory
Deterministic and probabilistic information. The pigeon-hole principle. Entropy, relative entropy, and mutual information. Random processes and entropy rate. The asymptotic equipartition property. Optimal codes and data compression. Channel capacity. Source channel coding. The ubiquitous nature of the theory will be illustrated with a selection of applications drawn from among: universal source coding, vector quantization, network communication, the stock market, hypothesis testing, algorithmic computation and kolmogorov complexity, and thermodynamics.
Course not offered every year
Prerequisite: ESE 530 or equivalent exposure to probability theory
Activity: Lecture
1.0 Course Unit

ESE 676 Coding Theory
Coding theory for telecommunications with emphasis on the algebraic theory of cyclic codes using finite field arithmetic, decoding of BCH and Reed-Solomon codes, finite field Fourier transform and algebraic geometry codes, convolutional codes and trellis decoding algorithms, graph based codes, Berrou codes and Gallager codes, turbo decoding, iterative decoding. And belief propagation.
Course not offered every year
Prerequisite: ESE 224, MATH 240, PHYS 150, Mathematical aptitude.
Activity: Lecture
1.0 Course Unit

ESE 680 Special Topics in Electrical and Systems Engineering
Advanced and specialized topics in both theory and application areas. Students should check Graduate Group office for offerings during each registration period.
Course not offered every year
Activity: Lecture
1.0 Course Unit
ESE 895 Teaching Practicum
Participation of graduate students in the teaching mission of the department will help to develop teaching, presentation, leadership, and interpersonal skills while assisting the department in discharging its teaching responsibilities. All doctoral students are required to participate under faculty guidance in the teaching mission of the department. This requirement will be satisfied by completing two 0.5 course units of teaching practicum (ESE 895). Each 0.5 course unit of teaching practicum will consist of the equivalent of 10 hours of effort per week for one semester. As a part of the preparation for and fulfillment of the teaching practicum requirement, the student will attend seminars emphasizing teaching and communication skills, lead recitations, lead tutorials, supervise laboratory experiments, develop instructional laboratories, develop instructional materials and grade homeworks, laboratory reports, and exams. A teacher training seminar will be conducted the day before the first day of classes of the Fall semester. Attendance is mandatory for all second-year students. As much as possible, the grading aspect of the teaching practicum course will be such as not to exceed 50% of the usual teaching assistant commitment time. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty member responsible for the course. At the completion of every 0.5 course unit of teach, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation signed by the faculty member responsible for the course. The evaluation will be comments of the students taking the course and the impressions of the faculty.

One-term course offered either term
Activity: Lecture
0.5 Course Units

ESE 899 Independent Study for PhD credit
For students who are studying a specific advanced subject area in electrical engineering. Students must submit a proposal outlining and detailing the study area, along with the faculty supervisor’s consent, to the graduate group chair for approval. A maximum of 1 c.u. of ESE 899 may be applied toward the MSE degree requirements. A maximum of 2 c.u.’s of ESE 899 may be applied toward the Ph.D. degree requirements.

One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ESE 995 Dissertation
Register for this after completing four years of full-time study including two course units each Summer Session (and usually equal to 40 course units).

One-term course offered either term
Activity: Dissertation
1.0 Course Unit

ESE 999 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master’s thesis or Ph.D. dissertation requirements.

One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Energy Management and Policy (ENMG)

ENMG 502 Introduction to Energy Policy
Energy, especially in the context of economic development and environmental sustainability, presents a career-defining challenge to many disciplines and professions. This course, therefore, is intended to provide an organizing foundation for courses across the University in Law, Wharton, Design, SAS, and SEAS. This course provides an advanced introduction to the design and delivery of energy policy at various levels of government in the U.S. and elsewhere. We will take a deep look at policies that regulate oil and gas industry, nuclear, green energy, and electricity markets. This will involve looking at past, present, and proposed policy mechanisms with a special consideration of how issues of climate change and sustainability affect those policies and policy proposals.

Taught by: Hughes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Special Information: Please note that this is a 1 cu graduate level course offered by the Department of City and Regional Planning in the School of Design, not by the undergraduate program in the College of Arts and Sciences. All undergraduates seeking a permit should contact Corinna Colijn for permission: ccolijn@upenn.edu.

ENMG 503 Topics in Energy Policy
This seminar will explore a collection of ideas influencing energy policy development in the U.S. and around the world. Our platform for this exploration will be seven recent books to be discussed during the semester. These books each contribute important insights to seven ideas that influence energy policy: Narrative, Transition, Measurement, Systems, Subsidiarity, Disruption, Attachment. Books for 2018 will be chosen over the summer; the 2017 books are listed here as examples: Policy Paradox (2011) by Stone, Climate Shock (2015) by Wagner and Weitzman, Power Density (2015) by Smil, Connectography (2016) by Khanna, Climate of Hope (2017) by Bloomberg and Pope, Utility of the Future (2016) by MIT Energy Initiative, Retreat from a Rising Sea (2016) by Pilkey, Pilkey-Jarvis, Pilkey.

Course usually offered in spring term
Also Offered As: CPLN 535
Activity: Seminar
1.0 Course Unit

ENMG 507 Ideas in Energy Policy
This seminar will explore a collection of ideas influencing energy policy development in the U.S. and around the world. Our platform for this exploration will be seven recent books to be discussed during the semester. These books each contribute important insights to seven ideas that influence energy policy: Narrative, Transition, Measurement, Systems, Subsidiarity, Disruption, Attachment.

Taught by: Mark Alan Hughes
Activity: Seminar
1.0 Course Unit

Engineering & Applied Science (EAS)

EAS 091 Chemistry Advanced Placement/International Baccalaureate Credit (Engineering Students Only)
One-term course offered either term
Activity: Lecture
1.0 Course Unit
EAS 097 Embed Controlled Gardening
A service course intended to integrate concepts of basic physics, biology and electronics and systems engineering for the benefit of Penn engineering students, teachers and students from two minority centered community public schools. The course will engage the participants in the design and implementation of indoors cultivating systems using photo-voltaic (PV) technology to energize LED emulating the needed solar radiation for plant growth, a liquid nutrient distribution system, sensors / actuators capable of selecting the harvestable plants and keeping track of overall system parameters.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EAS 203 Engineering Ethics
In this course, students will study the social, political, environmental and economic context of engineering practice. Students will develop an analytical toolkit to identify and address ethical challenges and opportunities in the engineering profession, including studies of risk and safety, professional responsibility, and global perspectives. The course will begin with a foundation in the history of engineering practice and major Western ethical and philosophical theories. Students will then apply this material to both historical case studies, such as Bhopal, the NASA Shuttle Program, and Three Mile Island, as well as contemporary issues in big data, artificial intelligence, and diversity within the profession. Students will consider how engineers, as well as governments, the media, and other stakeholders, address such issues.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EAS 205 Applications of Scientific Computing.
This course will discuss a number of canonical problems and show how numerical methods are used to solve them. Lectures will introduce the underlying theory and the relevant numerical methods. Students will be expected to implement solutions to the problems using MATLAB.
The course will use the visualization capabilities of MATLAB to provide students with a geometric interpretation of the key ideas underlying the numerical methods. Topics to be covered will include: The solution of systems of linear systems equations with application to problems such as force balance analysis and global illumination computation. Representing and computing coordinate transformations with applications to problems in graphics, vision and robotics. Transform Coding with applications to the analysis of audio signals and image compression. Analysis of variance and the search for low dimensional representations for high dimensional data sets e.g. Google’s PageRank algorithm. Least Squares model fitting with applications to data analysis. Analysis of linear dynamical systems with applications to understanding the modes of vibration of mechanical systems. The analysis of stochastic systems governed by state transition matrices.
One-term course offered either term
Prerequisites: Prior exposure to computing via courses such as EAS 105, CIS 110, or ESE 112. MATH 114, Sophomore standing.
Activity: Lecture

EAS 244 Curiosity: Ancient and Modern Thinking about Thinking
Course not offered every year
Also Offered As: CLST 344, INTG 344
Activity: Seminar
1.0 Course Unit
EAS 401 Energy and Its Impacts: Technology, Environment, Economics, Sustainability
The objective is to introduce students to one of the most dominating and compelling areas of human existence and endeavor: energy, with its foundations in technology, association to economics, and impacts on ecology and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field, with emphasis on explaining the technological foundation. The course spans from basic principles to applications. A review of energy consumption, use, and resources; environmental impacts, sustainability and design of sustainable energy systems; introductory aspects of energy economics and carbon trading; methods of energy analysis; forecasting; energy storage; electricity generation and distribution systems (steam and gas turbine based power plans, fuel cells), fossil fuel energy (gas, oil, coal) including nonconventional types (shale gas and oil, oil sands, coalbed and tight-sand gas), nuclear energy wastes: brief introduction to renewable energy use: brief introduction to solar, wind, hydroelectric, geothermal, biomass; energy for buildings, energy for transportation (cars, aircraft, and ships); prospects for future energy systems: fusion power, power generation in space. Students interested in specializing in one or two energy topics can do so by choosing them as their course project assignments.
Course usually offered in fall term
Also Offered As: EAS 501
Activity: Lecture
1.0 Course Unit
Notes: Any University student interested in energy and its impacts, who is a Junior or Senior. Students taking the course as EAS 501 will be given assignments commensurate with graduate standing.

The objective is to introduce students to the major aspects of renewable energy, with its foundations in technology, association to economics, and impacts on ecology and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field. The course spans from basic principles to applications. A review of solar, wind, biomass, hydroelectric, geothermal energy, and prospects for future energy systems such as renewable power generation in space.
Course not offered every year
Also Offered As: EAS 502
Prerequisite: Junior Standing
Activity: Lecture
1.0 Course Unit

EAS 403 Energy Systems and Policy
This is a survey course that will examine the current U.S. energy industry, from production to consumption, and its impacts on local, regional, and the global environment. The course will seek to provide a fuller understanding of existing energy systems, ranging from technical overviews of each, a review of industry organization, and an exploration of the well-established policy framework each operates within. Near-term demands upon each energy supply system will be discussed, with particular focus on environmental constraints. Policy options facing each energy industry will be reviewed.
One-term course offered either term
Also Offered As: EAS 503
Activity: Lecture

EAS 499 Senior Capstone Project
The Senior Capstone Project is required for all BAS degree students, in lieu of the senior design course. The Capstone Project provides an opportunity for the student to apply the theoretical ideas and tools learned from other courses. The project is usually applied, rather than theoretical, exercise, and should focus on a real world problem related to the career goals of the student. The one-semester project may be completed in either the fall or spring term of the senior year, and must be done under the supervision of a sponsoring faculty member. To register for this course, the student must submit a detailed proposal, signed by the supervising professor, and the student's faculty advisor, to the Office of Academic Programs two weeks prior to the start of the term.
One-term course offered either term
Activity: Independent Study

EAS 505 Climate Policy and Technology
The course will exam Pacala and Socolow’s hypothesis that “Humanity already possesses the fundamental scientific, technical and industrial know-how t solve the carbon and climate problem for the next half-century.” Fifteen "climate stabilization wedges" i.e., strategies that each have the potential to reduce carbon emissions by 1 billion tons per year by 2054, will be examined in detail. Technology and economics will be reviewed. Socio-political barriers to mass-scale implementation will be discussed. Pacala and Socolow note “Every element in this portfolio has passed beyond the laboratory bench and demonstration project; many are already implemented somewhere at full industrial scale”.
One-term course offered either term
Also Offered As: EAS 301
Activity: Lecture

EAS 506 Electricity and Systems Markets
The course discusses the existing electricity system from technical, economic, and policy perspectives. Basic power system engineering will be reviewed early in the course. Generation, transmission, distribution, and end-use technologies and economics will be discussed. Additional topics will include system operation, industry organization, government regulation, the evolution of power markets, environmental policy, and emerging technologies.
Course usually offered in spring term
Also Offered As: EAS 306
Activity: Lecture
1.0 Course Unit

EAS 507 Intellectual Property and Business Law for Engineers
Engineers are often on the front line of innovation. The goal of this course is to introduce engineering students to the basics of Intellectual property (IP) and business laws that they will encounter throughout their careers. Understanding these laws is critical for the protection of IP and for the creation and success of high-tech start-up ventures. Market advantage in large part springs from a company’s IP. Without legal protection and correct business formation, proprietary designs, processes, and inventions could be freely used by competitors, ruining market advantage. A basic understanding of IP laws, contractual transactions, employment agreements, business structures, and debt-equity financing will help engineering students to become effective employees or entrepreneurs, to acquire investors, and to achieve success. Though open to students of all disciplines, the course will use case studies particular relevance to students of engineering and applied science.

Activity: Lecture
1.0 Course Unit

EAS 510 Technical Communication and Academic Writing for Non-native Speakers of English
Students will improve the grammar, word choice and organization of their professional writing by completing weekly writing assignments and a full-length research paper. Students will also give short oral presentations and receive feedback on pronunciation, wording, grammar and organization.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Graduate students whose native language is English, but who would benefit from a course in Technical Communication, should take EAS 500.

EAS 512 Engineering Negotiation
The goal of this course is to teach students of engineering and applied science to be effective negotiators. It aims to improve the way these students communicate i virtually any human interaction. The course intends to improve the ability of engineers and other technology disciplines to gain more support more quickly for projects, research product and services development, and marketing. For those wanting to be entrepreneurs or intrapreneurs, the course is designed essentially to find the most value possible in starting up and running companies. Based on Professor Diamond’s innovative and renowned model of negotiation, it is intended to assist those for whom technical expertise is not enough to persuade others, internally and externally, to provide resources, promotions and project approvals; or to resolve disputes, solve problems and gain more opportunities. Rejecting the 40-year-old notions of power, leverage and logic, the course focuses on persuasion by making better human connections, uncovering perceptions and emotions, and structuring agreements to be both collaborative and fair.
This course is entrepreneurial in nature and can provide many times more value than traditional persuasion. The Getting More book has sold more than 1 million copies around the world and is also used by universities, corporations (Google), and U.S. Special Operations (SEALs, Green Berets, Special Forces, Marines) to save lives and reduce conflict. From the first day, students will do interactive cases based their own engineering-related problems and based on current problems in the news. There will be diagnostics enabling every student to assess his/her skill and improvements.

EAS 545 Engineering Entrepreneurship I

Engineers and scientists create and lead great companies, hiring managers when and where needed to help execute their vision. Designed expressly for students having a keen interest in technological innovation, this course investigates the roles of inventors and founders in successful technology ventures. Through case studies and guest speakers, we introduce the knowledge and skills needed to recognize and seize a high-tech entrepreneurial opportunity - be it a product or service - and then successfully launch a startup or spin-off company. The course studies key areas of intellectual property, its protection and strategic value; opportunity analysis and concept testing; shaping technology driven inventions into customer-driven products; constructing defensible competitive strategies; acquiring resources in the form of capital, people and strategic partners; and the founder’s leadership role in an emerging high-tech company. Throughout the course emphasis is placed on decisions faced by founders, and on the sequential risks and determinants of success in the early growth phase of a technology venture. The course is designed for, but not restricted to, students of engineering and applied science and assumes no prior business education.

One-term course offered either term
Also Offered As: IPD 545
Prerequisite: Third or Fourth year or Graduate standing
Activity: Lecture
1.0 Course Unit

EAS 546 Engineering Entrepreneurship II

This course is the sequel to EAS 545 and focuses on the planning process for a new technology venture. Like its prerequisite, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Whereas EAS 545 investigates the sequential stages of engineering entrepreneurship from the initial idea through the early growth phase of a startup company, EAS 546 provides hands-on experience in developing a business plan for such a venture. Working in teams, students prepare and present a comprehensive business plan for a high-tech opportunity. The course expands on topics from EAS 545 with more in-depth attention to: industry and marketplace analysis; competitive strategies related to high-tech product/service positioning, marketing, development and operations; and preparation of sound financial plans. Effective written and verbal presentation skills are emphasized throughout the course. Ultimately, each team presents its plan to a distinguished panel of recognized entrepreneurs, investors and advisors from the high-tech industry.

One-term course offered either term
Prerequisite: EAS 545
Activity: Lecture
1.0 Course Unit

EAS 549 Engineering Entrepreneurship Lab

Engineering Entrepreneurship Lab applies the principles of engineering and engineering entrepreneurship to a real-world problem of your specific field of study or professional interest. You will develop a venture based on a high-tech concept of your choosing (the one that you submitted as part of your application to the course). Like its prerequisite, EAS545 Engineering Entrepreneurship I, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Throughout the course you will formulate and test hypotheses using Lean Startup methodologies to develop key aspects of the venture including product development, customer and market development, team building and operations, and financial modeling and planning. The primary objective of the course is to develop a venture characterized by market-driven, high-tech product-service offering with a clear and validated product-market fit, an operational plan to bring your offering to market, and a plan to secure the resources required for execution of your plan. As discussed in EAS545, primary market research is essential to achieving product-market fit and validating all aspects of your business model. The success of your venture and your grade in the course will depend on the results of this research and testing process. Ideally, your work in this course results in pursuit of your high-tech venture outside of class and beyond the hallowed halls of Penn!

EAS 590 Commercializing Information Technology

EAS 590 provides real world, hands-on learning on what it's like to actually start a high-tech company. We do that by using the Lean LaunchPad framework for Web start-ups. This class is not about how to write a business plan. Instead you will be getting your hands dirty talking to customers, partners, competitors, as you encounter the chaos and uncertainty of how a start-up actually works. EAS 591 Leading Technology Teams

Engineers routinely work in teams collaborating with experts from multiple fields to address increasingly large complex problems/opportunities. EAS 591, Leading Technology Teams, focuses on the dynamics of innovative, interdisciplinary, cross-functional teams. We examine ways to improve team performance by exploring technology leadership issues from multiple perspectives (i.e., the individual, the team, and the organization). Developing skills to be an effective technology team member, leader, and/or sponsor will provide you with a competitive advantage, not only for getting your first job but also for success throughout your career.

Activity: Lecture
0.5 Course Units
EAS 595 Foundations of Leadership
The goal of EAS 595 is to increase your capacity to effectively lead throughout your career and wherever you find yourself in an organization. This involves understanding and learning about yourself and about working effectively with others. The course starts with an identification of values, strengths, preferences and passions. It then proceeds with the personal and interpersonal and moves through the strategic aspects of leadership by bringing together aspects of management science, social psychology, psychology of personality and behavioral economics. Topics include teamwork and team dynamics, identifying life’s goals and dreams, decision making, valuing differences, understanding the dynamics of influence, using power with integrity, giving and receiving feedback, leading change, and discovering where we can make our contribution.

EAS 896 Professional Master's Career Development
This class on professional career development broadly exposes students to organized workshops and seminar talks related to career development and research development. In career development, workshops will be held by career services staff related to identifying career interests, interview strategies, and career fair preparation. The research seminar talks are geared toward giving students exposure to research activities at Penn. The research seminar talks will be offered by individual departments and research programs, and include invited talks by external or internal faculty members. Students will receive a S/U grade and submit a final report at the end of the semester.
Activity: Lecture
1.0 Course Unit
Notes: This class is restricted to SEAS Master’s students only. Master’s students can take the class at any time. However, the recommended time to take this course is Fall semester of the second year.

Engineering (ENGR)

ENGR 101 Introduction to Engineering
This course is intended to introduce students to the field of engineering. It will expose students to the engineering disciplines through hands-on laboratory experiences. In addition, the course will provide tutorials on how to use important software packages as well as a "Professional Preparation" module through studies of communication (writing and speaking skills), ethics, leadership and teamwork. This course is ideal for any freshman interested in exploring the possibility of studying engineering at Penn. The course counts as an engineering requirement in SEAS.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENGR 105 Introduction to Scientific Computing
This course will provide an introduction to computation and data analysis using MATLAB - an industry standard programming and visualization environment. The course will cover the fundamentals of computing including: variables, functions, decisions, iteration, and recursion. These concepts will be illustrated through examples and assignments which show how computing is applied to various scientific and engineering problems. Examples will be drawn from the simulation of physical and chemical systems, the analysis of experimental data, Monte Carlo numerical experiments, image processing, and the creation of graphical user interfaces. This course does not assume any prior programming experience but will make use of basic concepts from calculus and Newtonian physics.
Activity: Lecture
1.0 Course Unit

ENGR 140 Penn Global Seminar: Robotics and Rehabilitation
This course focuses on understanding the design of intelligent technologies for rehabilitation diagnostics and intervention, which include using biomechanics, computer science, robotics and mechatronics design principles. Beyond technology, this course explores the design process in which medical technology is developed for foreign economies, cultures, and healthcare systems. Student projects focus on understanding stake-holders needs and developing technology able to address a Jamaican client rehabilitation needs.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ENGR 212 Concepts in Micro- and Nanotechnology
Seminar/Lecture course on micro- and nanotechnology intended for nonspecialists. This course will discuss how very small structures and devices, as well as systems comprising these devices, are fabricated and characterized, with application examples from microelectronics, microelectromechanical systems, and quantum devices and systems. Current societal and ethical implications of micro- and nanotechnology, as well as creation and exploitation of commercial opportunities, will be discussed.
One-term course offered either term
Prerequisites: Math 104 and Physics 93/140 (or higher), or permission of the instructor
Activity: Lecture
1.0 Course Unit

ENGR 250 Energy Systems, Resources and Technology
The course will present a comprehensive overview of the global demand for energy, and the resource availability and technology used in its current and future supply. Through a personal energy audit, students will be made aware of the extensive role that energy plays in modern life, both directly, through electricity and transportation fuel, and indirectly in the manufacturing of goods they use. The course will cover how that energy is supplied, the anticipated global growth in energy demand, the resource availability and the role of science and technology in meeting that demand in a world concerned about climate change. The roles of conservation, improved efficiency and renewable energy in meeting future demand in a sustainable, environmentally benign way will be covered.
Course usually offered in fall term
Prerequisites: Basic understanding of chemistry and physics
Activity: Lecture
1.0 Course Unit
ENGR 503 Engineering in Oil, Gas and Coal, from Production to End Use
While conventional wisdom is that the world is running out of fossil fuels, technical advances such as deep water production, directional drilling, hydrofracturing, and the refining of non-conventional crude oil sources has increased the resource base significantly and there are well over 100 years of reserves of oil, natural gas and coal. The effect of technology advances has been most profound in the United States, where net energy imports are projected to fall to 12% of consumption by 2020. Excellent, highly technical careers are available in these industries, with opportunities to reduce their impact on the environment and in particular on climate change. The course will cover engineering technology in oil, natural gas and coal from production through end use. It will equip graduating students with the knowledge to contribute in these industries and to participate in informed debate about them.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENGR 504 Fundamental Concepts in Nanotechnology
This is a Master’s level course that seeks to teach the physics needed to begin a study of engineering and science at the nanometer scale. Since the nanometer scale is so close to the quantum scale, much of the course deals with an introduction to quantum mechanics but the course also includes discussions in solid-state physics, electricity and magnetism and mechanics. The objective of the course is to teach the physics that an engineering student would need to have in order to do experimental work at the nanometer scale. In addition, this course will prepare the student to take more advanced courses in the Nanotechnology Program.
One-term course offered either term
Prerequisites: Some Differential Equations, Senior or Master’s standing in Engineering or permission of the instructor
Activity: Lecture
1.0 Course Unit

ENGR 991 Visiting Student Regist
Activity: Visiting Student Tuition
1.0 Course Unit

Engineering Mathematics (ENM)

ENM 240 Differential Equations and Linear Algebra
This course discusses the theory and application of linear algebra and differential equations. Emphasis is placed on building intuition for the underlying concepts and their applications in engineering practice along with tools for solving problems. We will also use computer simulations in MATLAB to augment this intuition.
One-term course offered either term
Prerequisite: Math 114 or equivalent
Activity: Lecture
1.0 Course Unit

ENM 251 Analytical Methods for Engineering
This course introduces students to physical models and mathematical methods that are widely encountered in various branches of engineering. Illustrative examples are used to motivate mathematical topics including ordinary and partial differential equations, Fourier analysis, eigenvalue problems, and stability analysis. Analytical techniques that yield exact solutions to problems are developed when possible, but in many cases, numerical calculations are employed using programs such as Matlab and Maple. Students will learn the importance of mathematics in engineering.
Course usually offered in spring term
Prerequisites: MATH 240 or equivalent along with sophomore standing in SEAS, or permission of the instructor(s)
Activity: Lecture
1.0 Course Unit

ENM 321 Engineering Statistics
This is a first course in applied statistics and probability for students in engineering. The course covers basic concepts of probability, discrete and continuous random variables, probability distributions, data description techniques, random samples, estimations, hypothesis testing, regression, and statistical quality control.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENM 360 Introduction to Data-driven Modeling
From recognizing voice, text or images to designing more efficient airplane wings and discovering new drugs, machine learning is introducing a transformative set of tools in data analysis with increasing impact across engineering, sciences, and commercial applications. In this course, you will learn about principles and algorithms for extracting patterns from data and making effective automated predictions. We will cover concepts such as regression, classification, density estimation, feature extraction, sampling and probabilistic modeling, and provide a formal understanding of how, why, and when these methods work in the context of analyzing physical, biological, and engineering systems.
Course usually offered in fall term
Prerequisites: ENGR 105, MATH 240, basic programming
Activity: Lecture
1.0 Course Unit

ENM 375 Biological Data Science I - Fundamentals of Biostatistics
The goal of this course is to equip bioengineering undergraduates with fundamental concepts in applied probability, exploratory data analysis and statistical inference. Students will learn statistical principles in the context of solving biomedical research problems.
Course usually offered in spring term
Prerequisites: Sophomores and Juniors only.
Activity: Lecture
1.0 Course Unit
ENM 502 Numerical Methods and Modeling
This course provides an advanced introduction to various numerical methods for solving systems of algebraic equations (linear and nonlinear) and differential equations (ordinary and partial). Techniques covered include Newton's method, implicit and explicit time stepping, and the finite difference and finite element methods. The MATLAB software package will be used to implement the various methods and execute representative calculations.
Course usually offered in spring term
Prerequisites: Basic knowledge of a computer programming language; MATH 240, 241 and/or ENM 510 (or their equivalents) are highly recommended
Activity: Lecture
1.0 Course Unit

ENM 503 Introduction to Probability and Statistics
Course usually offered in fall term
Prerequisite: MATH 240 or equivalent
Activity: Lecture
1.0 Course Unit

ENM 510 Foundations of Engineering Mathematics - I
This is the first course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green’s Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis. The fall course emphasizes the study of Hilbert spaces, ordinary and partial differential equations, the initial-value, boundary-value problem, and related topics.
Course usually offered in fall term
Prerequisites: MATH 240, MATH 241 or equivalent
Activity: Lecture
1.0 Course Unit

ENM 511 Foundations of Engineering Mathematics - II
This is the second course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green’s Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis. The spring course emphasizes the study of Vector Analysis: space curves, Frenet-Serret formulae, vector theorems, reciprocal systems, co- and contra-variant components, orthogonal curvilinear systems. Matrix theory: Gauss-Jordan elimination, eigenvalues and eigenvectors, quadratic and canonical forms. Variational calculus: Euler-Lagrange equation. Tensor Analysis: Einstein summation, tensors of arbitrary order, dyads and polyads, outer and inner products, quotient law, metric tensor, Euclidean and Riemannian spaces, physical components, covariant differentiation, detailed evaluation of Christoffel symbols, Ricci’s theorem, intrinsic differentiation, generalized acceleration, Geodesics. The spring course emphasizes the study of Vector Analysis: space curves, Frenet-Serret formulae, vector theorems, reciprocal systems, co- and contra-variant components, orthogonal curvilinear systems. Matrix theory: Gauss-Jordan elimination, eigenvalues and eigenvectors, quadratic and canonical forms. Variational calculus: Euler-Lagrange equation. Tensor Analysis: Einstein summation, tensors of arbitrary order, dyads and polyads, outer and inner products, quotient law, metric tensor, Euclidean and Riemannian spaces, physical components, covariant differentiation, detailed evaluation of Christoffel symbols, Ricci’s theorem, intrinsic differentiation, generalized acceleration, Geodesics. The spring course emphasizes the study of Vector Analysis: space curves, Frenet-Serret formulae, vector theorems, reciprocal systems, co- and contra-variant components, orthogonal curvilinear systems.
Course usually offered in spring term
Prerequisite: ENM 510 or equivalent
Activity: Lecture
1.0 Course Unit

ENM 512 Nonlinear Dynamics and Chaos
Prerequisites: Some Differential Equations and Senior or Master’s standing in Engineering or permission of the instructor
Activity: Lecture
1.0 Course Unit
ENM 520 Principles and Techniques of Applied Math I
This course is targeted to engineering PhD students in all areas. It will focus on the study of linear spaces (both finite and infinite dimensional) and of operators defined on such spaces. This course will also show students how powerful methods developed by the study of linear spaces can be used to systematically solve problems in engineering. The emphasis in this course will not be on abstract theory and proofs but on techniques that can be used to solve problems. Some examples of techniques that will be studied include Fourier series, Green's functions for ordinary and partial differential operators, eigenvalue problems for ordinary differential equations, singular value decomposition of matrices, etc.
Course usually offered in fall term
Prerequisites: Basic theory of ordinary and partial differential equations
Activity: Lecture
1.0 Course Unit

ENM 521 Principles and Techniques of Applied Math II
This course is a continuation of ENM 520 (or equivalent) and deals with classical methods in applied mathematics. The topics to be covered include: Functions of a Complex Variable, Partial Differential Equations, Asymptotic and Perturbation Methods, and Convex Analysis and Variational Methods.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENM 531 Data-driven Modeling and Probabilistic Scientific Computing
We will revisit classical scientific computing from a statistical learning viewpoint. In this new computing paradigm, differential equations, conservation laws, and data act as complementary agents in a predictive modeling pipeline. This course aims explore the potential of modern machine learning as a unifying computational tool that enables learning models from experimental data, inferring solutions to differential equations, blending information from a hierarchy of models, quantifying uncertainty in computations, and efficiently optimizing complex engineering systems.
Course not offered every year
Prerequisites: MATH 240 or MATH 513 or ENM 240, MATH 430 or ENM 503, programming in Python and MATLAB
Activity: Lecture
1.0 Course Unit

ENM 540 Topics In Computational Science and Engineering
This course is focused on techniques for numerical solutions of ordinary and partial differential equations. The content will include: algorithms and their analysis for ODEs; finite element analysis for elliptic, parabolic and hyperbolic PDEs; approximation theory and error estimates for FEM.
Course not offered every year
Prerequisites: Background in ordinary and partial differential equations; proficiency in a programming language such as MATLAB, C, or Fortran
Activity: Lecture
1.0 Course Unit

English (ENGL)

ENGL 001 Approaches to Genre
Usually housed in the Program for Comparative Literature, this seminar engages questions of literary genre, including its function as a mediating presence for thinking about audience, literary history, and the marketplace. The theme of the seminar will change with the instructor. Customarily this course will be affiliated with Communication within the Curriculum (CWIC), and so will have a speaking and presentation component to it. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also Offered As: COML 001
Activity: Seminar
1.0 Course Unit

ENGL 002 Approaches to Literary Studies
Usually housed in the program for Comparative Literature, this seminar engages questions of method and interdisciplinarity. It will therefore cover not only a range of approaches to literary texts, but also explore how the methodologies of other disciplines might be brought efficaciously to bear on the objects of literary study. The theme of the seminar will change with the instructor. Customarily this course will be affiliated with Communication within the Curriculum (CWIC), and so will have a speaking and presentation component to it. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also Offered As: AFRC 003, COML 002
Activity: Seminar
1.0 Course Unit

ENGL 003 Introduction to Queer Theory
This course provides an introduction to the field of queer studies. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: GSWS 003
Activity: Lecture
1.0 Course Unit

ENGL 009 Introduction to Digital Humanities
This course provides an introduction to foundational skills common in digital humanities (DH). It covers a range of new technologies and methods and will empower scholars in literary studies and across humanities disciplines to take advantage of established and emerging digital research tools. Students will learn basic coding techniques that will enable them to work with a range data including literary texts and utilize techniques such as text mining, network analysis, and other computational approaches. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: COML 009, HIST 009
Activity: Lecture
1.0 Course Unit
ENGL 010 Introduction to Creative Writing
A course designed to introduce students to many of the elements of creative writing, including fiction, poetry, journalism, creative nonfiction, and memoir. Students can expect to read from a variety of assigned texts, respond to regular writing prompts, and workshop their own creative work in a collaborative setting. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: This course does not satisfy the writing requirement.

ENGL 015 Topics in Literature
An introduction to Writing about Literature, with emphasis on a particular theme, genre, or period. See the English Department's website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also Offered As: CIMS 015, CLST 019, GSWS 017, LALS 016
Activity: Seminar
1.0 Course Unit
Notes: For additional information, please see our website at: https://www.english.upenn.edu

ENGL 016 Topics in Literature
Freshman Seminars under the title "Topics in Literature" will afford entering students who are considering literary study as their major the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Topics may range from the lyric poems of Shakespeare's period to the ethnic fiction of contemporary America. Small class-size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. One of them may be counted toward the English major and may be applied to a period, genre, or thematic requirement within the major.
See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: AFRC 017, COML 016
Activity: Seminar
1.0 Course Unit
Notes: Freshman Seminar

ENGL 017 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small sitting devoted to a significant intellectual endeavor. Specific topics will be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings https://www.college.upenn.edu/node/403
One-term course offered either term
Also Offered As: ARTH 100, CIMS 016, URBS 106
Activity: Seminar
1.0 Course Unit
Notes: For Freshmen Only

ENGL 018 Old English
This course introduces students to the powerful and influential corpus of Old English literature. We will read a wide variety of texts: short poems such as The Wonderer, The Seafarer, The Wife's Lament and the passionate religious poem The Dream of The Rood; chronicles such as The Battle Of Maldon Against The Vikings, The Old Testament, Exodus and Bede's Conversion Of The English; and selections from the greatest of all English epics, Beowulf. Readings will be in Old English, and the first few weeks of the course will be devoted to mastering Old English prosody, vocabulary, and grammar (as well as a crash course on the early history of the English language). During the last few weeks we may read modern criticism of Old English poetry, or we will consider the modern poetic reception of Old English literature and explore theories and problems of translation, reading translations of Old English poems by Yeats, Auden, Tolkien, and Heaney. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 020 Literature Before 1660
This course will introduce students to key works of English literature written before 1660. It will explore the major literary genres of this period, as well as the social and cultural contexts in which they were produced. The course will examine how literature texts articulate changes in language and form, as well as in concepts of family, nation, and community during the medieval and early modern periods. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 021 Medieval Literature and Culture
This course introduces students to four hundred years of English literary culture, from approximately 1100 to 1500. This period was marked by major transformations, not only with respect to government, law, religious practice, intellectual life, England's relation to the Continent (during the 100 Years War), the organization of society (especially after the Black Death), the circulation of literary texts, and the status of authors. Topics may include medieval women writers, manuscript production, literatures of revolt, courtly culture, Crusades, cross-Channel influences, and religious controversy. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 022 Romance
This course will focus on what is arguably the most extravagant, adventuresome, and fantastical of the literary genres: the Romance. We will read a number of medieval and renaissance romance narratives, in verse and prose, beginning with the Arthurian romances (Malory's Morte D'Arthur, Sir Gawain And The Green Knight) and continuing with as many (and as much) of the great renaissance romances as time will allow. Sir Philip Sidney's Arcadia, Edmund Spenser's The Faerie Queen, and Lady Mary Wroth's Urania. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit
ENGL 024 Introduction to American and British Film and Media
This is a course on the history of Hollywood. It seeks to unravel Hollywood's complex workings and explain how the business and politics of the film industry translate into the art of film. We will trace the American film industry from Edison to the internet, asking questions such as: What is the relationship between Hollywood and independent film? How has the global spread of Hollywood since the 1920s changed the film industry? How has Hollywood responded to crises in American politics (e.g., world wars, the cold war, terrorism)? And how have new technologies such as synchronized sound and color cinematography, television and the VCR, and new digital technologies changed film and the film industry? We will look closely at representative studios (Paramount, Disney, and others), representative filmmakers (Mary Pickford, Frank Capra, and George Lucas, among many others), and we will examine the impact of industrial changes on the screen. See the English Department's website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Also Offered As: CIMS 024
Activity: Lecture
1.0 Course Unit

ENGL 025 The Age of Chaucer
In this class we come to speak as people spoke in England some six centuries ago: in medieval or 'Middle' English. We do this by reading the poetry of Geoffrey Chaucer, a great poet who has influenced everyone from William Shakespeare to Sylvia Plath. Since Middle English takes some getting used to, class assignments are not heavy: usually about 800 lines per class. A typical class might begin by looking at a few of the easier passages in the Canterbury Tales, proceed to reading the greatest poem of love in the English language (Chaucer's Troilus And Criseyde), before moving on to other contemporary writers in medieval culture. We will likely compare representations of medieval Christianity, Judaism, and Islam, as well as aspects of film adaptation by Italian filmmaker Pasolini (and perhaps by Chaucer scholar Terry Jones). We will consider what it might have been like to live secure in an age of faith; yet to live insecure, as a dizzying new profusion of trades and occupations sprang up in unprecedented "divisions of labor." We will imagine being a medieval woman, and may visit and handle medieval manuscripts. Above all, we will enjoy the poetry. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 026 Early Drama
Early drama in English had its roots as much in Christianity as in Classical antiquity. What grew into the theater of Shakespeare began as networks of strolling players and church authoritaries in market towns sponsoring cycles of "miracle" and "mystery" plays. This course will introduce students to major dramatic works of the medieval and early modern periods, including plays written for the public stage, closet dramas, masques, mayoral pageants and other kinds of performances. The course will also pay attention to the development of different dramatic genres during these periods, as well as the social and cultural contexts in which they were produced. Students thus will explore the history of drama in English through the renaissance to the closing of the theaters in 1641 and their eventual reopening in 1660. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 029 Classical Antiquity and English Literature
This course will examine the relationship between English literature and that of ancient Greece and Rome. At times we will discuss how classical theories of genre and aesthetics were appropriate and reinvented in medieval, renaissance, and seventeenth-century texts. What does it mean to call Hamlet and Oedipus The King tragedies, or The Frogs and The Way Of The World comedies? Should we consider the development of English drama and poetry as an extension of an imposing classical tradition or as a sustained and resistant response to it? See the English Department's website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: CLST 102
Activity: Lecture
1.0 Course Unit
Notes: Formerly ENGL 096

ENGL 031 Introduction to Renaissance Literature and Culture
This course will survey the cultural history of sixteenth and seventeenth century England. Interdisciplinary in nature and drawing on the latest methodologies and insights of English studies, we will explore how aesthetics, politics, social traditions, impacted literature at this vital and turbulent time of English history. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Taught by: Loomba
Course not offered every year
Also Offered As: COML 031
Activity: Lecture
1.0 Course Unit

ENGL 033 The Bible As Literature
Successive generations have found the Bible to be a text which requires - even demands - extensive interpretation. This course explores the Bible as literature, considering such matters as the artistic arrangement and stylistic qualities of individual episodes as well as the larger thematic patterns of both the Old and New Testaments and the Apocrypha. A good part of the course is spent looking at the place of the Bible in cultural and literary history and the influence of such biblical figures as Adam and Eve, David, and Susanna on writers of poetry, drama, and fiction in the English and American literary traditions. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 034 Cultures of The Book
The impact of various technologies (from writing to various forms of manuscript to print to electronics) on the way the written word gives shape to a culture. The emphasis is on western cultures from Plato to the present, but participation by students with interest or expertise in non-western cultures will be of great value to the group as a whole. The course offers an ideal perspective from which students can consider meta-issues surrounding their own special interests in a wide variety of fields, as well as learn to think about the way in which traditional fields of study are linked by common inherited cultural practices and constructions. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Humanities and Social Science Sector
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Formerly ENGL 071
ENGL 038 The Age of Milton
The seventeenth century was a time of revolution and upheaval, of excesses both puritanical and cavalier. It saw the execution of one kind and the restoration of another, and survived the English Civil War and the Great Fire and Great Plague of London. This course explores the literature of this century through the works of John Milton’s major works (selected sonnets, Comus, Areopagitica, Paradise Lost, Paradise Regained, and Samson Agonistes), and his contemporaries. We will concentrate on a number of issues that governed writing in the period, particularly the tension between individual interiority and historical, social and political activity. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 040 British Poetry 1660 - 1914
This course provides students with a survey of British poetry and poetics from the Restoration to the Modern period, and usually will include writers ranging from Aphra Behn and Alexander Pope to Thomas Hardy. The course may be offered in various forms, some covering less, and some more historical background. Most will provide a sampling of eighteenth-century, Romantic, and Victorian poetry. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 041 18th-Century British Literature
An introduction to British literary and cultural history in the eighteenth century. Typically, this course will contain materials from the later seventeenth to the early nineteenth centuries—from the Restoration and Glorious Revolution through the Enlightenmenment, the American and French Revolutions, and the Napoleonic Wars—though it need not cover the entire period. We will read plays, poetry and prose in order to understand the aesthetic, intellectual, social and political issues of literary production and achievement in this period. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 045 18th-Century Novel
This survey of the novel addresses key questions about the novel’s “rise” in the eighteenth century on both sides of the Atlantic, as well as attending to the cultural conditions that attended this new literary form. How did the concurrent “rise” of the middle classes and the emergence of an increasingly female reading public affect the form and preoccupations of early novels? What role did institutions like literary reviews, libraries, and the church play in the novel’s early reception? While reading will vary from course to course, students should expect to read such authors as Austen, Behn, Brockden Brown, Burney, Defoe, Fielding, Richardson, Rowlandson, Rowson, Scott, and Smollett. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 046 Drama from 1660 - 1840
This course surveys drama from the Restoration through the Romantic period, and in so doing explores arguably the most tumultuous period of British and American theater history. These years saw the reopening of the theaters in London in 1660 after their having been closed through two decades of Civil War and Puritan rule. They witnessed the introduction of actresses to the stage, the development of scenery and the modern drop-apron stage, the establishment of theatrical monopolies in 1660 and stringent censorship in 1737, and the gradual introduction, acceptance, and eventual celebration of the stage in America. Perhaps most importantly, they oversaw some of the best comedies and farces in the English language, the introduction of pantomime and the two-show evening, sustained experimentation with music and spectacle on stage, and the transformation of tragedy into a star vehicle for actors and actresses like David Garrick, Sarah Siddons, John Philip Kemble, and Edmund Kean. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 050 The Romantic Period
This course offers an introduction to the literature of the Romantic period (ca. 1770-1830). Some versions of this course will incorporate European romantic writers, while others will focus exclusively on Anglo-American romanticism, and survey authors such as Austen, Blake, Brockden Brown, Byron, Coleridge, Emerson, Irving, Keats, Radcliffe, Scott, Shelley, and Wordsworth. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: GSWS 050
Activity: Lecture
1.0 Course Unit

ENGL 051 19th-Century British Literature
In 1815 in the wake of the battle of Waterloo, Great Britain controlled a staggering quarter of the world’s landmass and half of its gross national product. This course will begin with the Napoleonic Wars and this Regency aftermath to survey a century of British literature—from Romanticism through the revolutions of 1848 and the Victorian and Edwardian periods to the beginning of the first World War. Most versions of this course will read both novels and poetry, often focusing on the relation between the two and their function within nineteenth century culture. Others may incorporate drama and non-fiction prose. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 053 19th-Century American Literature
A consideration of outstanding literary treatments of American culture from the early Federalist period to the beginnings of the First World War. We will traverse literary genres, reading autobiographies and travel accounts as well as fiction and poetry. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Formerly ENGL 083
ENGL 054 Sounding Poetry: Music and Literature
Never before has poetry been so inescapable. Hip hop, the soundtrack of our times, has made rhyme, meter, and word-play part of our daily lives. How did this happen? This course begins not on the page, but in the bardic traditions of Homer’s Iliad, which encoded many of the values of its time in oral formulas. Poetry was, however, no mere encyclopedia, but also a source of risk, as we will read in Plato’s warning against its hypnotic powers, and in the excesses of the Bacchae. We continue through 19th and 20th century attempts to recover these classic traditions (Wordsworth, Longfellow, Pound). Yet Europe was not the only center of poetic production. How does the Homeric tradition relate to living traditions of West African singing poets (griots) and Southern African praise songs? And what traces of these traditions can we hear in the blues? We will listen to early blues recordings and discuss the politics of collecting folklore, and the genius of African American modernists (Langston Hughes, Claude McKay, Georgia Douglas Johnson) who bought vernacular speech onto the page. We will read and listen to a number of 20th century poets inspired when page meets stage in jazz poetry, dub poetry, spoken word, and hip hop. Assignments will include 2 papers, 2 small-group performances, memorization exercises, and a creative adaptation of one poem. See the English Department’s website at www.english.upenn.edu for a description of current offerings. For BA Students: Arts and Letters Sector Taught by: TBD Course usually offered in fall term Also Offered As: AFRC 054, COML 054 Activity: Lecture 1.0 Course Unit

ENGL 055 19th-Century Novel
During the nineteenth century the novel became the dominant literary form of its day, supplanting poetry and drama on both sides of the Atlantic. In this introduction to the novelists of the period, we will read the writers who secured the novel’s cultural respectability and economic prominence. Likely authors will include Austen, the Brontes, Collins, Dickens, Eliot, Hardy, Hawthorne, Melville, Poe, Thackeray, Scott, and Stowe. The course will explore the themes, techniques, and styles of the nineteenth-century novel. It will focus not only on the large structural and thematic patterns and problems within each novel but also on the act of reading as a historically specific cultural ritual in itself. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year Activity: Lecture 1.0 Course Unit

ENGL 056 Modern Drama
This course will explore the major dramatic and theatrical movements that constitute the “modern,” from the successive rises of melodrama and “realism” in the nineteenth century, to those theatrical aesthetics that positioned themselves beyond or against realism at the turn of the twentieth century, to the present day. We’ll explore political theatre, the invention of the avant-garde, the rise of the auteur-director, performance art, feminist and queer theatres, and the integration of non-western theatre into shared theatre practice in the colonial and post-colonial world. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year Also Offered As: THAR 125 Activity: Lecture 1.0 Course Unit

ENGL 057 Literature of the Americas to 1900
This course examines U.S. literature and culture in the context of the global history of the Americas. Historical moments informing the course will range from the origins of the Caribbean slave-and-sugar trade at the beginning of the nineteenth century, to the Monroe Doctrine of 1823 and the U.S. Mexico and Spanish-American wars. Readings will include works by authors such as Frances Calderon de la Barca, Frederick Douglass, Helen Hunt Jackson, Henry Wadsworth Longfellow, Jose Marti, Herman Melville, John Rollin Ridge, Maria Amparo Ruiz de Burton, and Felix Varela. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year Activity: Lecture 1.0 Course Unit Notes: Formerly ENGL 080

ENGL 058 Irish Literature
This course will provide an introduction to modern Irish literature, focusing on the tension between Ireland’s violent history and its heroic mythology. This tension leaves its mark not only on the ravaged landscape, but also on the English language, which displays its “foreignness” most strongly in the hands of Irish writers. Readings will span the genres of poetry, drama, fiction, and history, and will include works by Sommerville and Ross, Yeats, George Moore, Joyce, Synge, O’Casey, Beckett, Edna O’Brien, and Brian Friel. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year Activity: Lecture 1.0 Course Unit Notes: Formerly ENGL 063

ENGL 059 Modernisms and Modernities
This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts -- including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year Also Offered As: COML 059, FREN 258 Activity: Lecture 1.0 Course Unit
ENGL 060 Rise of the Novel
This course explores the history of the British novel and the diverse strategies of style, structure, characterization, and narrative techniques it has deployed since the late seventeenth century. While works from the eighteenth and nineteenth centuries will form the core of the reading, some versions of this course will include twentieth-century works. All will provide students with the opportunity to test the advantages and limitations of a variety of critical approaches to the novel as a genre. Readings may include works by Behn, Swift, Defoe, Richardson, Fielding, Lennox, Smollett, Burney, Scott, Austen, the Brontes, Dickens, Eliot, Hardy, Conrad, Joyce, Lawrence, Woolf, Rhys, Greene, Naipaul, Carter, Rushdie, and Coetzee. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 061 20th-Century British Literature
This course introduces major works in twentieth-century British literature. We will read across a range of fiction, poetry, plays, and essays, and will consider aesthetic movements such as modernism as well as historical contexts including the two World Wars, the decline of empire, and racial and sexual conflict. Authors treated might include: Conrad, Yeats, Joyce, Eliot, Lawrence, Forster, Shaw, Woolf, Auden, Orwell, Beckett, Achebe, Rhys, Synge, Naipaul, Rushdie, Heaney, and Walcott. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year
Also Offered As: COML 061
Activity: Lecture
1.0 Course Unit

ENGL 062 20th-Century Poetry
From abstraction to beat, from socialism to negritude, from expressionism to ecopoetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poiesis, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year
Also Offered As: COML 062
Activity: Lecture
1.0 Course Unit

ENGL 063 20th-Century American Literature
This course surveys American literature across the twentieth-century, considering its formal innovations in the wake of modernism, the two World Wars, the Cold War and postmodernity. Authors treated might include: James, Wharton, Eliot, Pound, Faulkner, Hemingway, Rhys, Baldwin, Ginsberg, Plath, Pynchon, Walcott, and Morrison. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course usually offered in spring term
Also Offered As: ARTH 294, ARTH 694, GSWS 294, VLST 236
Activity: Lecture
1.0 Course Unit
Notes: ?Formerly ENGL 058?

ENGL 064 Modern America
This course is concerned with American literature and cultural life from the turn of the century until about 1950. The course emphasizes the period between the two World Wars and emphasizes as well the intellectual and cultural milieu in which the writers found themselves. Works by the following writers are usually included: James, Eliot, Frost, Fitzgerald, Faulkner, West, Stevens, DuBois, Williams, Wharton, Stein, West, Moore, and Hemingway. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Formerly ENGL 084

ENGL 065 20th-Century British Novel
This course traces the development of the novel across the twentieth-century. The course will consider the formal innovations of the modern novel (challenges to realism, stream of consciousness, fragmentation, etc.) in relation to major historical shifts in the period. Authors treated might include: Conrad, Lawrence, Joyce, Forster, Woolf, Cather, Faulkner, Hemingway, Achebe, Greene, Rhys, Baldwin, Naipaul, Pynchon, Rushdie, and Morrison. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year
Also Offered As: COML 065
Activity: Lecture
1.0 Course Unit

ENGL 066 African American Drama: From the 1920's to the present
This course will introduce students to Pulitzer-prize winning plays such as Lynn Nottage’s Sweat, groundbreaking plays such as Ntozake Shange’s For Colored Girls, as well as less known plays that show the wide range of form and themes in 20th and 21st century African American drama. We will focus on performance as a mode of interpreting a script and performance as a way of understanding the intersections of race, class, and gender. In-class viewings of selected scenes in recorded productions of the plays will energize our analysis of the scripts. Short creative, performance-oriented writing assignments will produce the questions explored in the two critical essays. In addition to Sweat and For Colored Girls, our line-up may include Zora Neale Hurston’s Color Struck, Anna Deavere Smith’s Twilight: Los Angeles, 1992, Suzan-Lori Parks’ 100 Plays for the First Hundred Days, August Wilson’s Radio Golf, Lydia Diamond’s Harriet Jacobs, Amiri Baraka’s The Slave, and Claudia Rankine’s The White Card.
Taught by: Crawford
One-term course offered either term
Also Offered As: AFRC 066, THAR 066
Activity: Lecture
1.0 Course Unit
ENGL 067 American Theatre and Performance
This course examines the development of the modern American theatre from the turn of the century to the present day. Progressing decade by decade the course investigates the work of playwrights such as Eugene O’Neil, Tennessee Williams, Edward Albee, David Mamet, August Wilson and Tony Kushner, theatre companies such as the Provincetown Players and the Group Theatre, directors, actors, and designers. Some focus will also be given to major theatrical movements such as the Federal Theatre Project, Off-Broadway, regional theatre, experimental theatre of the Sixties, and feminist theatre.
Course not offered every year
Also Offered As: CIMS 273, THAR 272
Activity: Lecture
1.0 Course Unit

ENGL 069 Poetry and Poetics
What is poetry and what place does it have among literary forms? What is its relation to culture, history, and our sense of speakers and audiences? This course will focus on various problems in poetic practice and theory, ranging from ancient theories of poetry of Plato and Aristotle to contemporary problems in poetics. In some semesters a particular school of poets may be the focus; in others a historical issue of literary transmission, or a problem of poetic genres, such as lyric, narrative, and dramatic poetry, may be emphasized. The course will provide a basic knowledge of scansion in English with some sense of the historical development of metrics. This course is a good foundation for those who want to continue to study poetry in literary history and for creative writers concentrating on poetry. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 070 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs' experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.
Taught by: Sternad Ponce de Leon
Course not offered every year
Also Offered As: ARTH 070, COML 070, GSWS 060, LALS 060
Activity: Lecture
1.0 Course Unit

ENGL 072 Asian American Literature
An overview of Asian American literature from its beginnings at the turn of the twentieth century to the present. This course covers a wide range of Asian American novels, plays, and poems, situating them in the contexts of American history and minority communities and considering the variety of formal strategies these different texts take. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector

Activity: Lecture
1.0 Course Unit

ENGL 074 Contemporary American Literature
The readings for this course expose the student to a wide range of American fiction and poetry since World War II, giving considerable attention to recent work. Works may include All The King’s Men by Robert Penn Warren, Herzog by Saul Bellow, On The Road by Jack Kerouac, V by Thomas Pynchon, Of Love and Dust by Ernest J. Gaines, A Flag For Sunrise by Robert Stone, The Killing Ground by Mary Lee Settle, and selected poem by Ginsberg, Plath, and Walcott. Readings vary from term to term. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1.0 Course Unit
Notes: Formerly ENGL 085

ENGL 075 Science and Literature
Science fiction has become the mythology of modern technological civilization, providing vivid means for imagining (and proclaiming) the shape of things to come. This interdisciplinary seminar will consider SF in multiple manifestations – literature, film and TV shows, visual art and architecture. We will debate how the genre has shaped ideas about scientific knowledge, the position of humans in the universe, and our possible futures by examining themes including time travel, robots and androids, alien encounters, extraterrestrial journeys, and the nature of intelligent life. This seminar will consider SF from the perspective of the history of science and technology, critically and comparatively, with a primary focus on social and cultural contexts in addition to literary aspects.

Activity: Seminar
1.0 Course Unit
ENGL 078 Television and New Media
As a complex cultural product, television lends itself to a variety of critical approaches that build-on, parallel, or depart from film studies. This introductory course in television studies begins with an overview of the medium's history and explores how technical and industrial changes correspond to developing conventions of genre, programming, and aesthetics. Along the way, we analyze key concepts and theoretical debates that shaped the field. In particular, we will focus on approaches to textual analysis in combination with industry research, and critical engagements with the political, social and cultural dimensions of television as popular culture. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term

Activity: Lecture
1.0 Course Unit

ENGL 080 Literatures of Jazz
That modernism is steeped as much in the rituals of race as of innovation is most evident in the emergence of the music we have come to know as jazz, which results from collaborations and confrontations taking place both across and within the color line. In this course we will look at jazz and the literary representations it engendered in order to understand modern American culture. We will explore a dizzying variety of forms, including autobiography and album liner notes, biography, poetry, fiction, and cinema. We'll examine how race, gender, and class influenced the development of jazz music, and then will use jazz music to develop critical approaches to literary form. Students are not required to have a critical understanding of music. Class will involve visits from musicians and critics, as well as field trips to some of Philadelphia's most vibrant jazz venues. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

ENGL 083 Sicily on Page and Screen
What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore's Cinema paradiso and Coppola’s The Godfather II, and read texts such as Lampedusa’s The Leopard and Maraini's Bagheria. This course aims to increase students' understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others', cultural frameworks.

Notes: Course taught in English. Course Materials in English. There are no prerequisites for this course.
ENGL 085 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional "fog of war" describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war’s traditional dependence on declaration is often warped by language games—"police action," "military intervention," "nation-building," or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terrorist or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation—propaganda, nationalist messaging, memorialization, xenophobic depiction—affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war’s shaping influence? The class will concentrate on literary objects—short stories, and graphic novels—as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literary experience. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 087 Theatre, History and Culture I, Classical Athens to Elizabethan London
This course will explore the forms of public performance, most specifically theatre, as they emerge from and give dramatic shape to the dynamic life of communal, civic and social bodies, from their antropological origins in ritual and religious ceremonies, to the rise of great urban centers, to the closing of the theaters in London in 1642. This course will focus on development of theatre practice in both Western and non-Western cultures intersects with the history of cities, the rise of market economies, and the emerging forces of national identity. In addition to examining the history of performance practices, theatre architecture, scenic conventions and acting methods, this course will investigate, where appropriate, social and political history, the arts, civic ceremonies and the dramaticuric structures of urban living. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 090 Gender, Sexuality, and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontës, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherrie Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg. ENGL 091 World Film History to 1945
This course is an introduction to the history of cinema from the 1890s to the present. In demonstrating how history energizes and complicates the movies, we will examine numerous film cultures and historical periods, including Hollywood silent cinema, Italian neo-realism, the French New Wave, recent films from Iran, and a variety of other film movements from different historical epochs and cultures. Screenings will feature movies such as Sergei Eisenstein’s THE BATTLESHIP POTEMKIN (1925), Jean Renoir’s THE GRAND ILLUSION (1937), Nicholas Ray’s REBEL WITHOUT A CAUSE (1955), Jean-Luc Godard’s CONTEMPT (1963), Spike Lee’s DO THE RIGHT THING (1989), Sally Potter’s ORLANDO (1992), and Pedro Almodovar’s TALK TO HER (2003). Our aim is to establish a broad historical and global foundation for the understanding of film as a complex exchange between art, technology, politics, and economics. Screenings will be mandatory. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1.0 Course Unit

ENGL 092 World Film History 1945-Present
This course is an introduction to the analysis of film as both a textual practice and a cultural practice. We will examine a variety of films—from Fritz Lang’s M (1931) to Julia Dash’s DAUGHTERS OF THE DUST (1991)—in order to demonstrate the tools and skills of “close reading.” We will concentrate on those specifically filmic features of the movies, such as mise-en-scène, cinematography, editing and sound strategies, as well as those larger organizational forms, such as narrative and non-narrative structures and movie genres. Because our responses to the movies always extend beyond the film frame, we will additionally look closely at the complex business of film distribution, promotion, and exhibition to show how the less visible machinery of the movie business also shapes our understanding and enjoyment of particular films. Along the way, we will discuss some of the most influential and productive critical schools of thought informing film analysis today, including realism, auteurism, feminism, postmodernism, and others. Screenings are mandatory.

ENGL 093 Introduction to Postcolonial Literature
English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 094 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory, and provides an excellent foundation for the English major or minor. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning, appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the "New" Criticism of the 1920’s and 30’s, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 096 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality – a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes’ speech in Plato’s Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldúa, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesy, Chandra Tadpole Mohanty, and Susan Stryker. ENGL 097 Theatre, History and Culture II
This course examines theatre and performance in the context of the border urban, artistic and political cultures housing them from the Renaissance to the mid-19th century. Encompassing multiple cultures and traditions, it will draw on a variety of readings and viewings designed to locate the play, playwright, trend or concept under discussion within a specific socio-historical context. The evolution of written and performed drama, theatre architecture, and scenography will be examined in tandem with the evolution of various nationalisms, population shifts, and other commercial and material forces on theatrical entertainment. Readings consequently will be drawn not only from plays and other contemporary documents, but also from selected works on the history, theory, design technology, art, politics or society of the period under discussion. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 100 Introduction to Literary Study
Literature does not exist for your protection. So dangerous is it, that Socrates argued poets ought to be banned from his ideal Republic. And Socrates himself— one of the most subversive of all poetic thinkers— was condemned to death for corrupting the young with his speeches. All great literature is unsettling and alarming. Along with its beauty and delicacy and rhetorical power and ethical force, it can be terrifyingly sublime and even downright ugly: full of contempt and horror and grandiosity and malice. From Socrates’ day to our own, countless writers have been jailed, exiled, and murdered, their works censored, banned, burned, for daring to say what others wish would remain unsaid— about religion and the State; sexuality, gender, and the body; art, science, and commerce; freedom and order; love and hate— and for saying it in ways that are aesthetically innovative, surprising, seductive, ravishingly unanticipated. This course will introduce you to fundamentals of literary style, form, and history, and to approaches to reading and interpretation. It will also mean paying close attention to your own writing, in a series of brief essays and blog contributions in which you’ll learn better how to meet the demands of college-level writing while striving always to be a dangerous writer yourself. See the English Department’s website at www.english.upenn.edu for a description of current offerings.

Notes: This course is intended to serve as a foundation for students interested in going on to become English majors.

ENGL 101 Study of an Author
This course introduces students to literary study through the works of a single author— often Shakespeare, but other versions will feature writers like Jane Austen, Geoffrey Chaucer, Herman Melville, and August Wilson. Readings an individual author across his or her entire career offers students the rare opportunity to examine works from several critical perspectives in a single course. What is the author’s relation to his or her time? How do our author’s works help us to understand literary history more generally? And how might be understand our author’s legacy through performance, tributes, adaptations, or sequels? Exposing students to a range of approaches and assignments, this course is an ideal introduction to literary study for those students wishing to take an English course but not necessarily intending to major. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 111 Experimental Writing
A creative writing workshop committed to experimentation. The workshop will be structured around writing experiments, collaborations, intensive readings, and new and innovative approaches to composition and form. See English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 112 Workshop for Fiction Writers
This course emphasizes the study and practice of basic techniques of short fiction, with assignments divided between readings and discussion of student-written material. See English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with different instructor.

ENGL 113 Poetry Writing Workshop
This is a workshop for students who are interested in exploring a variety of approaches to poetry. Students will encounter a diverse series of readings, in-class writing activities, weekly writing assignments, and creative methods for heightening your abilities as a reader and writer. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with different instructor.

ENGL 114 Playwriting Workshop
The expressive possibilities and limitations of the stage medium through close reading of plays of various styles and period, study of the various resources of various types of theater, and original exercise in dramatic writing. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: THAR 114
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with different instructor.
ENGL 115 Workshop for Advanced Fiction Writers
An advanced workshop in the writing of fiction, with reading assignments and discussion of student works in progress. Topics may include the short story or the art of the novel. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Prerequisites: ENGL 112 or the equivalent.
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshmen. May be repeated for credit with a different instructor. Permission needed from instructor; writing sample required.

ENGL 116 Screenwriting Workshop
This course will look at the screenplay as both a literary text and a blue print for production. Several classic screenplay texts will be critically analyzed (REBEL WITHOUT A CAUSE, DOCTOR STRANGELOVE, PSYCHO, etc.) Students will then embark on writing their own scripts. We will intensively focus on: character enhancement, creating “believable” cinematic dialogue, plot development and story structure, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext and visual story-telling. Class attendance is mandatory. Students will submit their works-in-progress to the workshop for discussion. See English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: CIMS 116
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 117 The Arts and Popular Culture
A creative writing workshop that concentrates on various aspects of writing about artistic endeavor, including criticism, reviews, profiles, interviews and essays. For the purposes of this class, the arts will be interpreted broadly, and students are able – and, in fact, encouraged – to write about both the fine arts and popular culture, including music, theater, film, fashion, photography and television. Students will write on a weekly basis, and many assignments will be tailored to each student’s individual interests and are likely to include reporting and research. Writing subjects can range from a local band to a museum, from a theater group to a comedian. Course offerings may inclue Writing about Music, Writing about Popular Culture, or other topics and themes. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Students who have previously taken ENGL 117 should also be able to take this course in the spring term file.

ENGL 118 Advanced Poetry Writing Workshop
This workshop is especially valuable for creative writing concentrators in poetry within the English Major, for those who are working on longer works, or for those who wish to work on a series of poems connected by style and subject matter. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: This workshop is designed for those students who have taken the introductory workshop ENGL 113 or its equivalent and desire advance study. May be repeated for credit with a different instructor.

ENGL 120 Working with Translations
In this class we will study and translate some of the major figures in 20th century poetry, including Rainer Maria Rilke, Claire Malroux, Pablo Neruda, Cesare Pavese, Anna Akhmatova, and Bei Dao. While the curriculum will be tailored to the interests and linguistic backgrounds of the students who enroll, all those curious about world poetry and the formidable, irresistible act of translation are welcome. Students should have at least an intermediate knowledge of a language other than English. We will study multiple translations of seminal poems, render our own versions in response, and have the additional opportunity to work directly from the original. Students may also work in pairs, or groups. A portion of the course will be set up as a creative writing workshop in which to examine the overall effect of each others’ translations so that first drafts can become successful revisions. While class discussions will explore the contexts and particularity of (among others) Urdu, Italian, French, and Polish poetry, they might ultimately reveal how notions of national literature have radically shifted in recent years to more polyglottic and globally textured forms. Through guest speakers, essays on translation theory, and our own ongoing experiments, this course will celebrate the ways in which great poetry underscores the fact that language itself is a translation. In addition to the creative work, assignments will include an oral presentation, informal response papers, and a short final essay. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Also Offered As: COML 121
Activity: Seminar
1.0 Course Unit

ENGL 122 Grotesque Forms
An introduction to letterpress printing and bookmaking and writing for the artist book, focusing on the history of the artist book, competence in letterpress technique, print composition and design skills, and alternative book binding. Course readings will focus on the work of Joanna Drucker and Jerome Rothenberg, and the examination of multi-media works. Field trips to local artist book collections will supplement course reading, projects, and the final project. The entire class will be taught, and practiced, through the lens of "the grotesque" in art and literature. As a final project, each student will make their own limited-edition artist book that considers the course theme of "the grotesque" through writing, image, printing and binding. See the English Department’s website at www.english.upenn.edu for a description of current offerings.

1.0 Course Unit
ENGL 130 Advanced Screenwriting
This is a workshop-style course for students who have completed a screenwriting class, or have drafted a screenplay they wish to improve. Classes will consist of discussing student's work, as well as discussing relevant themes of the movie business and examining classic films and why they work as well as they do. See English Department website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also Offered As: CIMS 130
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshman.

ENGL 135 Creative Non-Fiction Writing
A workshop course in the writing of creative nonfiction. Topics may include memoir, family history, travel writing, documentary, and other genres in which literary structures are brought to bear on the writing of nonfiction prose. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: AFRC 134, GSWS 135, URBS 135
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshman.

Also Offered As: AFRC 134, GSWS 135, URBS 135
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshman.

ENGL 138 Peer Tutor Training
This course is by nomination and invitation only. It is intended for capable writers who possess the maturity, temperament, and skills to work successfully as peer tutors at Penn. The course emphasizes the development of tutors' own writing through the process of collaborative peer-criticism, individual conferences, and intensive sessions on writing, from mechanics to style; it also focuses on writing pedagogy, research, and tutoring strategies. The class meets twice weekly; tutors also work two hours weekly in the Writing Center or elsewhere, and confer regularly in small groups or one-on-one meetings with the instructor. Tutors are required to write five short papers, eight one-page peer reviews, and two responses to readings. Additionally, students keep a journal and give two class presentations.
Also Offered As: WRIT 138
Activity: Seminar
1.0 Course Unit

ENGL 144 Speculative Fiction
A creative writing course devoted to speculative fiction. Topics may include science fiction, fantasy, horror, or other related genres. Students will study the literary origins of these genres and create their own original work. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Activity: Seminar
1.0 Course Unit

ENGL 145 Advanced Non-Fiction Writing
An advanced writing course devoted to creative nonfiction. Topics may include writing for literary magazines; writing for journals of opinion; memoir; family history; travel writing; documentary; or other topics and genres in which literary structures inform the writing of nonfiction prose. Offerings may address writing as a public act, questions of ethics and policy, methods of research and fact-checking, marketing, and how to understand and enter the world of publishing. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: GSWS 145
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 155 Writing in the Documentary Tradition
This course will function as a workshop, with a select group of students. It's a course that will honor the spirit and tradition of "documentary" writing. The word "documentary" has meant many things over time. Here, it means a kind of nose-close observation and reportage. It means a level of being with one's subject matter in a way that other creative writing courses do not allow because of their format and structure. In English 155, a student writer at Penn will dare to "hang" with a topic--a girl's high-school basketball team; a medical intern in a HUP emergency room; a janitor doing the graveyard shift in a classroom building; a food-truck operator crowding the noontime avenues; a client-patient in the Ronald McDonald House near campus; a parish priest making a solitary and dreary and yet redemptive rounds of the sick and the dying in the hospital--for the entire term. At the term's end, each writer in the course will have produced one extended prose work: a documentary piece of high creative caliber. This is our goal and inspiration. The piece will be 35 to 40 pages long, at minimum. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 156 Photographs and Stories
A creative writing course built entirely around the use of photographs, and the crafting of compelling nonfiction narratives from them. The essential concept will be to employ photographs as storytelling vehicles. So we will be using curling, drugstore printed Kodak shots from our own family albums. We will be using searing and famous images from history books. We will be taking things from yesterday's newspaper. We will even be using pictures that were just made by the workshop participants outside the campus gates. In all of this, there will be one overriding aim to achieve memorable, full-bodied stories. To locate the strange, evocative, storytelling universes that are sealed inside the four rectangular walls of photograph. They are always there, if you know how to look. It's about the quality of your noticing, the intensity of your seeing. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
ENGL 157 Introduction to Journalistic Writing
This workshop is designed as an introduction to journalistic writing. Topics may include Writing about Food, Journalism and the Environment, Digital Newswriting, and other themes. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 158 Advanced Journalistic Writing
A workshop in creative writing devoted to original student work in journalism. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: STSC 118
Activity: Seminar
1.0 Course Unit

ENGL 159 Political Writing in the Digital Age
A primer on writing about U.S. politics, in an era of major technological upheaval and serious voter polarization. Today’s 24/7, wi-fi’d, blogging environment along with the rise of new conservative media are changing the ways that writers cover politics and deliver the information. See English Department website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 160 Long-form Journalism
This course in long-form journalism is required of all journalistic writing minors. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 161 The Art of the Profile
One of the toughest challenges for any journalist is to master the art of the profile-writing. In this course, students will read and critique some of the classic profile articles of the past 40 years and, most importantly, write profile articles of their own. Writing about people is often very rewarding, but rarely easy. In this course, students will debate the questions that have plagued and energized journalists for generations: How do you persuade someone that theirs is a worthy topic for a profile? How do you ask sensitive questions? If the person is a celebrity, how do you avoid being manipulated into writing a “puff piece”? Do you tape the interviews or just take notes? How do you structure a profile in order to keep the reader’s attention? Is it even possible to capture the essence of a person on the written page? Are you a friend to the profile subject—or a manipulator? A journalist at The New Yorker once said that a writer’s relationship with the profile subject is “a kind of love affair.” On the other hand, a famous author once said that a profile writer is typically “gaining their trust and betraying without remorse.” Which is closer to the truth? Students, in addition to writing their own profiles, will kick around these questions while reading some of the best contemporary profile writers, including Susan Orlean, Gay Talese, David Remnick, Mark Bowden, and Judy Bachrach. The instructor will also offer several of his own. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 162 Covering Political Elections
In this course, students with a passion for both writing and politics will have the unique opportunity to track the news as it unfolds week by week, to critique it in class, and, most importantly, to write about it in a variety of formats, ranging from “straight” news to informed opinion. Students can expect spirited class debate about the elusive nature of “objectivity,” the often thin line between truth and rumor, the challenges of fact-checking a candidate’s “spin,” the challenges of writing responsibility in an era when even facts seem to be polarized, the challenges of analyzing election results and writing effectively, the growing pressure on journalists to reveal their political beliefs, and much more. Some of the writing will happen in class; students will view excerpts from election debates and broadcasts, and will file their reports “on deadline.” And students will also have a chance, in class, to critique some of the nation’s best political writers—reporters, feature writers, columnists, and bloggers. Topics for this course may include reporting on Congressional midterms and reporting on the Presidential election. See English Department website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshmen.
ENGL 165 Writing through Culture and Art
This is a year-long creative writing class, given as a collaboration between the Center for Programs in Contemporary Writing and the Philadelphia Museum of Art. Students will be encouraged to develop correspondent methods of responding to the PMA’s exhibitions. The class will involve regular trips to attend concerts, museums and lectures. The students will have access to the most cutting-edge artists today via class visits and studio visits. English 165 will culminate in a publication of student work. See English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 199 Independent Study in Writing
Supervised study in writing.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Interested students must receive permission by the professor and the English Department.

ENGL 200 Junior Research Seminar
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address debates within the field/period/topic of the course, research methods, and advanced writing and critical thinking issues. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: This course is required of most English Majors.

ENGL 210 Critical-Creative Approaches to Literature
These courses enable students to think and write creatively as a means to the critical understanding of literary texts. This course will vary from semester to semester, but the course will always seek to advance students understanding of literature, its formal elements, and its relationship to culture and history through the use of creative projects instead of or alongside more traditional critical writing. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors.

ENGL 212 Walt Whitman and the People’s Press
Walt Whitman and the People's Press: A Course to Design and Program a Mobile Printing Space as a Public Art Project. Inspired by Whitman at 200, a region-wide celebration of Walt Whitman, this hands-on and collaborative course will engage students with artists, writers, community leaders and the public to design and program a mobile poetry printing facility that recognizes the complicated legacy of Walt Whitman in the 21st Century. To do this students and instructors will consider Whitman’s poetry as well as his historical period and his place in Philadelphia and Camden. At the same time students will learn to use a press, design materials and create their own multimedia responses to Whitman. Students in this course should expect to read a great deal of poetry but also to be ready to work with their classmates to create responses to Whitman and to see and experience Philadelphia and Camden in new ways.
Taught by Turner and Comberg
Course not offered every year
Also Offered As: FNAR 212
Activity: Seminar
1.0 Course Unit

ENGL 218 Topics In Old English
This seminar explores an aspect of Anglo-Saxon culture intensively; specific course topics will vary from year to year. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar

This course explores an aspect of the literature of Africa and the African Diaspora intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors
ENGL 272 Topics In Asian American Literature
This seminar is an advanced-level topics-based version of ENGL 072, Introduction to Asian American Literature. The intended audience is junior and senior English majors and advanced students in Asian studies, Asian American studies, contemporary U.S. and world history, ethnic studies, urban studies, etc. Typical versions of this seminar will include representations and images of Asians in contemporary U.S. novels and films; Asian American literature by women; Asian American film narrative and film aesthetics; studies in Asian American literature and visual art; Asian American literature and immigration; Asian American literature in the context of the literature of exile and journey; Asian American literature 1929-1945; Asian American literature, 1945 to the present; Anglophone/ South Asian literature in England, 1970 to the present; Southeast Asia, Vietnam, and American literature, 1970-1990; etc. Students will typically present research projects and write several long essays. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ASAM 202, CIMS 272
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 274 Topics In Contemporary American Literature
This course explores an aspect of contemporary American literature intensively; specific course topics will vary from year to year but have included "The Literary History of The Cold War, 1947-1957" and the "Kelly House Fellows Seminar." See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Formerly ENGL 285, Spaces will be reserved for English majors

ENGL 276 Advanced Topics in Theatre History
The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event—acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.—relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: CIMS 225, THAR 275, URBS 274
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 278 Topics in Digital and New Media
This course explores a particular topic in the study of digital and new media in an intensive and in-depth manner. See the English Department's website at: www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ARTH 292, CIMS 278, COML 066, REES 066
Activity: Seminar
1.0 Course Unit

This course explores an aspect of Jewish and/or Jewish-American literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: COML 265, GRMN 261
Activity: Lecture
1.0 Course Unit
Notes: Formerly ENGL 287, Spaces will be reserved for English Majors

ENGL 280 Arts and Research Studio: Queer Archives, Aesthetics, and Performance
This course focuses on questions of how to represent the queer past, which it approaches from several angles: through training in archival methods and in scholarly debates about historiographical ethics (or, in the words of David Halperin, "how to do the history of homosexuality"); through engagement with the work of artists who make archives central to their practice; and through lab-based training that aims to represent encounters with queer history through embodied performance. Expectations: This course meeting weekly for 3 hours. But as you will see listed below (these activities and dates are not confirmed for this draft syllabus) the course includes and require that you attend a series of off-campus trips both in Philadelphia and to NYC that occur outside of the class schedule. Below is a list of archives we will visit, performances we will attend, and artists’ studios we will visit for in-depth conversation with artist about their practice. The course will address both practical and theoretical issues raised by research in LGBT archives. We will take advantage of local resources in Philadelphia, including the John J. Wilcox Archives at the William Way Center (http://www.waygay.org/archives/). But we will also visit the Lesbian Herstory Archives (http://www.lesbianherstoryarchives.org/) and The Downtown Collection at the Fales Library at NYU (https://guides.nyu.edu/downtown-collection) and the Franklin Furnace Performance Archives (http://www.franklinfurnace.org), all in New York City. We will also bring artists to campus to work directly with students, and will meet with artists in New York. We will take advantage of the staging of Kiljoy Kastle in Philadelphia in Fall 2019. This site-specific art installation, the work of Toronto artists Allyson Mitchell and Dierdre Logue, is a haunted house that addresses the difficult history of lesbian feminism, as well as its potential for contemporary LGBT politics. Since the Haunted House will include materials related to the history of feminist and LGBT activism in Philadelphia, students in the course can actively contribute to the research for this project.
Taught by Love
Course offered fall; odd-numbered years
Also Offered As: THAR 281
Activity: Studio
1.0 Course Unit
ENGL 281 Topics In African-American Literature
In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included "African American Autobiography," "Backgrounds of African American Literature," "The Black Narrative" (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year

ENGL 285 American Musical Theatre
The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alter and reshape them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.
Taught by: Fox

ENGL 299 Independent Study in Language and Literature
Supervised reading and research.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Interested students must receive permission by the professor and the English Department

ENGL 303 Women in Theatre and Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignant—and always provocative. Our focus will be on English-language works from the late 20th century to the present (#metoo moment). We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are "women in comedy," trans performance, drag kings, feminist directing, etc.).

Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 321 National Literatures
A course that traces how particular literary texts, very often medieval, are adopted to become foundational for national literatures. Key moments of emphasis will be the early nineteenth century, the 1930s, and (to some extent) the unfolding present. Research subgiding this offering has been conducted over the last years, both in my editing of Europe: A Literary History, 1348-1418 (2 vols and 82 chapters, Oxford UP, 2016) and in preparation for "Medieval Studies in Troubled Times: the 1930s," to be offered as Presidential plenary at the Medieval Academy of America convention at Penn on 9 March 2019. I have also travelled and lectured extensively for Penn Alumni Travel over the last decade, crossing national boundaries and also pondering how complex literary issues might be framed for a broad (but exceptionally intelligent) audience. Issues arising in traversing Mediterranean space are explored in an article published (in Italian) in Studi migranti. Some texts immediately suggest themselves for analysis. The Song of Roland, for example, has long been fought over between France and Germany; each new war inspires new editions on both sides. The French colonial education system, highly centralzied, long made the Chanson de Roland a key text, with the theme of Islamic attack on the European mainland especially timely, it was thought, during the Algerian war of independence. Germany also sees the Niebelungenlied as a key text, aligning it with the Rhine as an impeccably Germanic: but the Danube, especially as envisioned by Stefan Zweig, offers an alternative, hybridized, highly hyphenated cultural vision in running its Germanic-Judaic-Slavic-Roman course to the Black Sea. The course will not be devoted exclusively to western Europe. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow's great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin's Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called "Hindu epics" can also be a delicate matter. Some "uses of the medieval" have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA?
Taught by: Wallace

Activity: Seminar
1.0 Course Unit
Notes: ?Formerly ENGL 370?. Benjamin Franklin Seminar

ENGL 378 Global Media
This course explores a broad media landscape through new critical and conceptual approaches. It is designated as a Benjamin Franklin Seminar. This course maps the footprints of television at a global scale. Adopting comparative approaches, we will be studying TV's formation of national and global discourses, and thereby recognizing not only television's impact on processes of globalization, but also the ability of television to matter globally. Working through concepts of "broadcasting," "flow," "circulation," and "circumvention," the course examines the movement of (and blocks encountered by) television programs and signals across national borders and cultures. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services? Navigating from United States and Cuba to India and Egypt, the readings in the course illuminate how particular televisual genres, institutions, and reception practices emerged in various countries during specific historical periods. We shall be addressing a range of questions: what kind of global phenomenon is television? Can we study television in countries where we do not know the existing local languages? In what different ways (through what platforms, interfaces, and screens) do people in different continents access televisual content? What explains the growing transnational exports of Turkish and Korean TV dramas? What is the need to historically trace the infrastructural systems like satellites (and optical fiber cables) that made (and continue to make) transmission of television programming possible across the world? How do fans circumvent geo-blocking to watch live sporting events? Assignments include submitting weekly discussion questions and a final paper. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Also Offered As: COML 392, SAST 323
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 396 History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. The first half of the course will focus on early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (such as Philip Sidney and Giambattista Vico). In the second half of the course we will turn to modern concerns by looking at the literary (or "art") theories of some major philosophers and theorists: Kant, Hegel, Marx, Nietzsche, Freud, and Walter Benjamin. We end the course in the mid-twentieth century. The purpose driving this course is to consider closely how this tradition generated questions that are still with us, such as: what is the act of interpretation; what is the "aesthetic"; what is "imitation" or mimesis; and how are we to know an author's intention. During the semester there will be four short writing assignments in the form of analytical essays (3 pages each). Students may use these small essays to build into a long piece of writing on a single text or group of texts at the end of the term. Most of our readings will come from a published anthology of literary criticism and theory; a few readings will be on Canvas.

ENGL 505 Electronic Literary Studies Proseminar
This course is designed to introduce advanced undergraduate and graduate students to the range of new opportunities for literary research afforded by recent technological innovation. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: ARTH 506, CIMS 505, COML 504
Activity: Seminar
1.0 Course Unit

ENGL 518 King Arthur: Medieval to Modern
From the Middle Ages to the present, stories about King Arthur, the brave deeds of the nights of the Round Table, and Merlin's mysterious prophecies have mesmerized readers and audiences. In this course, we will study nearly 1000 years of literature about King Arthur, beginning with Geoffrey of Monmouth's twelfth-century History of the Kings of Britain and Sir Gawain and the Green Knight, and ending with Mark Twain, Alfred Lord Tennyson, and the fantasy fiction classic, T. H. White's Once and Future King. We will also be reading authors who repurposed Arthurian literature to think about gender relations (for example, Elizabeth Phelps' critique of domesticity), colonialism and nationalism (Wales and India), and religious cultures (for example, the medieval Hebrew version of King Arthur). Throughout the course, we will think about what Arthurian legends mean to the way we write history and the ways in which we view our collective pasts (and futures). Assignments will include response papers, an oral presentation, and a final paper.
Taught by: Steiner
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 524 Topics Medieval Studies
This course covers topics in Medieval literature. Its emphasis varies with instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
ENGL 525 Chaucer
An advanced introduction to Chaucer's poetry and Chaucer criticism. Reading and discussion of the dream visions, Troilus and Criseyde, and selections from Canterbury Tales, from the viewpoint of Chaucer's development as a narrative artist. See the English Department's website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Also Offered As: COML 522, GSWS 524, ITAL 525
Activity: Seminar
1.0 Course Unit

ENGL 537 Renaissance Epic
An introduction to the practice and theory of epic in the early modern period. Specific texts vary with instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year

1.0 Course Unit

ENGL 540 Topics in 18th Century British Literature
This course covers topics in 18th Century British literature. Its emphasis varies with instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 545 Eighteenth-Century Novel
A survey of the major novelists of the period, often beginning with Defoe and a few of the writers of amatory fiction in the early decades of the century and then moving on to representative examples of the celebrated novels by Richardson, Fielding, and others of the mid-century and after. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 548 English Literature and Culture, 1650-1725
English 548, with its companion, English 549, studies the literature of this period in the context of the artistic and cultural milieu of the later seventeenth and early eighteenth centuries. Texts usually include works by Dryden, Rochester, Swift, Pope, and Defoe. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 549 Eighteenth-Century Prose
A study of eighteenth-century prose, particularly essays and treatises, often beginning with Defoe and concluding with Boswell. Specific texts vary with instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 549, FREN 550
Activity: Seminar
1.0 Course Unit

ENGL 550 Topics in Romanticism
This class explores the cultural context in which the so-called Romantic Movement prospered, paying special attention to the relationship between the most notorious popular genres of the period (gothic fiction and drama) and the poetic production of both canonical and emerging poets. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 553 British Women Writers
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 554, GSWS 553
Activity: Seminar
1.0 Course Unit

ENGL 556 Topics in 19th-Century British Literature
This course covers topics in nineteenth-century British literature, its specific emphasis varying with the instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 560 The Novel
This course will provide an intensive introduction to the study of the novel, approaching the genre from a range of theoretical, critical, and historical perspectives. It may examine conflicting versions of the novel's history (including debates about its relationship to the making of the individual, the nation-state, empire, capital, racial and class formations, secularism, the history of sexuality, democracy, print and other media, etc.), or it may focus on theories of the novel, narratology, or a particular problem in novel criticism. It may attend to a specific form or subgenre of fiction, or it may comprise a survey of genres and texts. See the English Department's website at: www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 563
Activity: Seminar
1.0 Course Unit

ENGL 563 Topics in 20th-Century British Literature
This course focuses on British modernism and/or postmodernism, with specific emphases determined by the instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 584, COML 537, GRMN 541
Activity: Seminar
1.0 Course Unit
ENGL 564 British Modernism
An introduction to British Literary Modernism. Specific emphasis will depend on instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 564
Activity: Seminar
1.0 Course Unit

ENGL 569 Topics in 20th-Century American Literature
This course covers topics in 20th-century literature, its emphasis varying with instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 572, CIMS 572, COML 575
Activity: Seminar
1.0 Course Unit

ENGL 570 African-American Literature
This course treats some important aspect of African-American literature and culture. Some recent versions of the course have focused on the emergence of African-American women writers, on the relation between African-American literature and cultural studies, and on the Harlem Renaissance. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 570, GSWS 570
Activity: Seminar
1.0 Course Unit

ENGL 572 Topics in African Literature
This course is based on a selection of representative texts written in English, as well as a few texts in English translation. It involves, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions of established writers in their use of old forms and experiments with new. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 572, CIMS 572, COML 575
Activity: Seminar
1.0 Course Unit

ENGL 573 Topics in Criticism and Theory
This course covers topics in literary criticism and theory. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 573, CIMS 515, COML 570, GRMN 573, REES 683
Activity: Seminar
1.0 Course Unit

ENGL 574 Introduction to Bibliography
This course offers an introduction to the principles of descriptive and analytic bibliography and textual editing. The history of authorship, manuscript production, printing, publishing, and reading will be addressed as they inform an understanding of how a particular text came to be the way it is. Diverse theories of editing will be studied and put into practice with short passages. The course is generally suitable for students working in any historical period, but particular emphases specified in the current offerings on the English website. www.english.upenn.edu
Course not offered every year
Also Offered As: COML 580, HIST 574
Activity: Seminar
1.0 Course Unit

ENGL 578 African-American Literature to 1810
In this course we shall examine the ways various voices—Puritan, Indian, Black, Female, Enlightened, Democratic—intersect with each other and with the landscape of America to produce the early literature(s) of America. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 584 Environmental Imaginaries
Drawing on theories of worldmaking and ethnographic works on culture and environment, this seminar will examine the production of Cartesian-based environmental imaginaries and their alternatives across a range of genres and practices. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 782, COML 615, GRMN 614, URBS 614
Activity: Seminar
1.0 Course Unit

ENGL 587 Twentieth-Century American Poetry
See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 580, HIST 574
Activity: Seminar
1.0 Course Unit

ENGL 590 Recent issues in Critical Theory
This course is a critical exploration of recent literary and cultural theory, usually focusing on one particular movement or school, such as phenomenology, psychoanalysis, the Frankfurt School, or deconstruction. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CIMS 580, COML 590, GSWS 589, LALS 590
Activity: Seminar
1.0 Course Unit

ENGL 591 Topics in Russian and Soviet Cultural History
This course treats some aspect of literary and cultural politics in the 20th-Century with an emphasis on comparative literature and culture. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 653, REES 653
Activity: Seminar
1.0 Course Unit
ENGL 592 20th-Century Literature and Theory
This course treats some aspect of literary and cultural politics in the 20th-Century with emphasis varying by instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CIMS 592, COML 592
Activity: Seminar
1.0 Course Unit

ENGL 593 Topics in Literature and Society
See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 593, CIMS 590, COML 599
Activity: Seminar
1.0 Course Unit

ENGL 594 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as "foundational." Very often these texts have been epics or romances designated "medieval," that is, associated with the period in which specific vernaculars or "mother tongues" first emerged. France and Germany, for example, have long fought over who "owns" the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time these two countries go to war. In this course we will thus study both a range of "medieval" texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow's great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin's Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called "Hindu epics" can also be a delicate matter. Some "uses of the medieval" have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark, is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory's Morte Darthur was chosen to provide scenes for the queen's new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Itinerary models, which do not observe national boundaries, might be explored, and also the cultural history of watercourses, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.
Taught by: Wallace
Course not offered every year
Also Offered As: COML 591, ITAL 594
Activity: Seminar
1.0 Course Unit

ENGL 595 Post-Colonial Literature
This course covers topics in Post-Colonial literature with emphasis determined by the instructor. The primary focus will be on novels that have been adapted to film. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 594, CIMS 595
Activity: Seminar
1.0 Course Unit
ENGL 596 Topics in Contemporary Art
Topics varies. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 596, CIMS 596, FNAR 605, GSWS 596
Activity: Seminar
1.0 Course Unit

ENGL 597 Modern Drama
This course will survey several basic approaches to analyzing dramatic literature and the theatre. The dramatic event will be broken into each of its Aristotelian components for separate attention and analysis: Action (plot), Character, Language, Thought, Music and Spectacle. Several approaches to analyzing the dramatic text will be studied: phenomenological, social-psychological, semiotic, and others. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 600 Proseminar
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 605 Modern Literary Theory and Criticism
An overview of critical theory in the 20th and 21st centuries, with a focus on French and German thinkers. Readings and discussions will be in English. Please check the department's website for a course description at: www.english.upenn.edu
Taught by: Goulet
One-term course offered either term
Also Offered As: COML 605, FREN 605, GRMN 605
Activity: Seminar
1.0 Course Unit

ENGL 616 Approaches to Literary Texts
Course not offered every year
Also Offered As: CLST 636, COML 616, EALC 715, REES 616, ROML 616
Activity: Seminar
1.0 Course Unit

ENGL 707 Orality and Literacy
Major lines of study of the subject of literacy are traceable in at least three disciplines: history of Western literature (especially classical and medieval studies), anthropology, and ethnography of education, including education development in the Third World and psychological and developmental education theory and practice. The linkages between oral and literary communicative modes in different cultures are studied, from a folklorist’s viewpoint. The overall task of the course is not to isolate topics of narrowly defined folkloric interest in the broad field of literacy, but to integrate and critique the diverse approaches to literacy as a communicative mode or modes, from the point of view of folklore as a discipline. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CLST 530, COML 530
Activity: Seminar
1.0 Course Unit

ENGL 715 Middle English Literature
This seminar will study a number of selected Middle English texts in depth. Attention will be paid to the textual transmission, sources, language, genre, and structure of the works. Larger issues, such as the influence of literary coventions (for example, “courtly love”), medieval rhetoric, or medieval allegory will be explored as the chosen texts may require. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CLST 610, COML 714
Activity: Seminar
1.0 Course Unit

ENGL 721 Medieval Poetics
This course may include some of the following fields: studies of medieval stylistic practices, formal innovations, and theories of form; medieval ideas of genre and form; medieval thought about the social, moral, and epistemological roles of poetry; interpretive theory and practice; technologies of interpretation; theories of fiction (fabula) and allegory; sacred and secular hermeneutics; theories of language and the histories of the language arts; vernacular(s) and Latinity; material texts. See the English Department's website at www.english.upenn.edu for a complete description of the current's offerings.
Course not offered every year
Also Offered As: CLST 628, COML 618
Activity: Seminar
1.0 Course Unit

ENGL 731 Renaissance Poetry
An advanced seminar in English poetry of the early modern period. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
1.0 Course Unit
Activity: Seminar

ENGL 753 Victorian British Literature
An advanced seminar treating some topics in Victorian British Literature, usually focusing on non-fiction or on poetry. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 753
Activity: Seminar
1.0 Course Unit

ENGL 754 Renaissance Drama
This is an advanced course in Renaissance drama which will include plays by non-Shakespearean dramatists such as Marlowe, Jonson, and Middleton. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 734
Activity: Seminar
1.0 Course Unit

ENGL 756 Renaissance Studies
This is an advanced topics course treating some important issue in contemporary Renaissance studies. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 736
Activity: Seminar
1.0 Course Unit

ENGL 758 Genres of Writing
Please check the department's website for the course description: https://www.english.upenn.edu. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 759 Milton
An examination of Milton’s major poetry and prose with some emphasis on the social and political context of his work. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 760 Afro-American Literature
An advanced seminar in African-American literature and culture. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 770, GSWS 769, NELC 783, SAST 769
Activity: Seminar
1.0 Course Unit

ENGL 761 British Modernism
This course treats one or more of the strains of British modernism in fiction, poetry, or the arts. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 762 Modernism
This is an interdisciplinary and international examination of modernism, usually treating European as well as British and American modernists. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 764 Studies in the Eighteenth Century
This course varies in its emphases, but in recent years has explored the theory of narrative both from the point of view of eighteenth-century novelists and thinkers as well as from the perspective of contemporary theory. Specific attention is paid to issues of class, gender, and ideology. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 765 Restoration and 18th-Century Fiction
This is an advanced course in the fiction of the Restoration and the 18th-Century, the period of "The rise of the novel". See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 766 Genres of Writing
Please check the department’s website for the course description: https://www.english.upenn.edu. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 767 Genres of Writing
Please check the department’s website for the course description: https://www.english.upenn.edu. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 768 Genres of Writing
Please check the department’s website for the course description: https://www.english.upenn.edu. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 769 Feminist Theory
Specific topic varies. The seminar will bring together the study of early modern English literature and culture with histories and theories of gender, sexuality and race. Contact with 'the East' (Turkey, the Moluccas, North Africa and India) and the West (the Americas and the Caribbean) reshaped attitudes to identity and desire. How does this history allow us to understand, and often interrogate, modern theories of desire and difference? Conversely, how do postcolonial and other contemporary perspectives allow us to re-read this past? See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 770
Activity: Seminar
1.0 Course Unit

ENGL 770 Afro-American Literature
An advanced seminar in African-American literature and culture. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 770
Activity: Seminar
1.0 Course Unit

ENGL 771 Textual Production
This course is based on library work and is intended as a practical introduction to graduate research. It addresses questions of the history of the book, of print culture, and of such categories as "work," "character," and "author," as well as of gender and sexuality, through a detailed study of the (re)production of Shakespearean texts from the seventeenth to the twentieth century. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 772 Modernism
An interdisciplinary and international examination of modernism, usually treating European as well as British and American modernists. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
ENGL 774 Postmodernism
An advanced seminar on postmodernist culture. Recently offered as a study of relationship between poetry and theory in contemporary culture, with readings in poststructuralist, feminist, marxist, and postcolonial theory and in poets of the Black Mountain and Language groups. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 622
Activity: Seminar
1.0 Course Unit

ENGL 775 African Literature
An advanced seminar in anglophone African literature, possibly including a few works in translation. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 775, COML 700
Activity: Seminar
1.0 Course Unit

ENGL 778 20th-Century Aesthetics
This course explores notions that have conditioned 20th century attitudes toward beauty among them ornament, form, fetish, the artifact "women", the moves to 20th century fiction, art manifestos, theory, and such phenomena as beauty contests and art adjudications. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 797
Activity: Seminar
1.0 Course Unit

ENGL 783 Major American Author
A seminar treating any one of the major American Writers. Past versions have focused on Melville, Whitman, Twain, James, Pound, Eliot, and others. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 790 Recent Issues in Critical Theory
See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 790, GSWS 790
Activity: Seminar
1.0 Course Unit

ENGL 794 Postcolonial Literature
An advanced seminar treating a specific topic or issue in Postcolonial Literature. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 794
Activity: Seminar
1.0 Course Unit

ENGL 795 Topics in Poetics
Topics in poetics will vary in its emphasis depending on the instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 799 Topics in American Literature
An advanced topics course in American literature, with the curriculum fixed by the instructor. Recently offered with a focus on American Literature of Social Action and Social Vision. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 799
Activity: Seminar
1.0 Course Unit

ENGL 800 Teaching of Literature and Composition
A course combining literary study with training in teaching. These courses will normally be taken by students in their first semester of teaching.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ENGL 850 Field List
Students work with an adviser to focus the area of their dissertation research. They take an examination on the field in the Spring and develop a dissertation proposal.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 851 Dissertation Proposal
A continuation of ENGL 850.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 859 Independent Study
Open to students who apply to the graduate chair with a written study proposal approved by the advisor. The minimum requirement is a long paper. Limited to 1 CU.
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit
Notes: Limited to 1 CU

ENGL 998 Independent Study
Open to students who apply to the graduate chair with a written study proposal approved by the advisor. The minimum requirement is a long paper. Limited to 1 CU.
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit

ENGL 999 Independent Reading
Open only to candidates who have completed two semesters of graduate work.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
## Environmental Studies (ENVS)

### ENVS 100 Introduction to Environmental Science
This course will explore the physical science of the Earth's environment and human interactions with it. Coverage will include the Earth's various environmental systems, various environmental problems, and the direct and indirect causes of these environmental problems. Freshman seminar will mirror the ENVS100 recitation, and have additional discussions and social media projects.
For BA Students: Physical World Sector
Taught by: Plante
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

### ENVS 150 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we’re accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we’ll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?
For BA Students: Arts and Letters Sector
Taught by: Richter, Simon
Course not offered every year
Also Offered As: CIMS 150, COML 151, GRMN 150
Activity: Lecture
1.0 Course Unit

### ENVS 152 Liquid Histories
Also Offered As: ANTH 154, COML 152, ENGL 052, GRMN 152, HIST 152
Activity: Lecture
1.0 Course Unit

### ENVS 154 Liquid Histories
Also Offered As: ANTH 154, COML 152, ENGL 052, GRMN 152, HIST 152
Activity: Lecture
1.0 Course Unit

### ENVS 155 Liquid Histories
Also Offered As: ANTH 154, COML 152, ENGL 052, GRMN 152, HIST 152
Activity: Lecture
1.0 Course Unit

### ENVS 180 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands.
Taught by: Simon Richter
Course usually offered summer term only
Also Offered As: ANTH 211, RELS 211
Activity: Lecture
1.0 Course Unit

### ENVS 211 Religion and Ecology
Also Offered As: ANTH 211, RELS 211
Activity: Lecture
1.0 Course Unit

### ENVS 212 Animals & Religion
Religion is full of animals—lions and lambs, monkeys and elephants, buffalo and snakes, even mythical beasts. The identity of the human being is explained, in many traditions, by contrast with the identity of other species. We know who we are because we know who they are, or do we? This course interrogates—through an exploration of sacred texts, art, film, and museum artifacts—the tension present in many traditions between an anthropocentric prioritization of the human being and religious resources that encourage a valuing of other animal species. We’ll explore the way animals function both as religious objects and as religious subjects across diverse traditions, asking how human-animal relationships have shaped religion and how religion has shaped the way we think about and interact with other animals. We’ll ask how religion has engaged with animals over time and across global cultures, understanding them as symbols, messengers, and manifestations of the divine; as material for ritual and sacrifice; as kin and subordinates; as food and as filth; as helpers and as tempters. How have these perspectives shaped animal ethics, influencing the treatment, use, and consumption of animals and their bodies? Finally, we’ll ask what it means that we ourselves are evolved animals. How does our own animality factor into the practice of human religion? Is our religious capacity part of what sets us apart from other animals or is religiosity a trait we might expect to find in other species? To what extent is religion a function of the animal?
Taught by: Covey
Course not offered every year
Also Offered As: ANTH 212, RELS 212
Activity: Seminar
1.0 Course Unit
ENVS 246 Spirituality in the Age of Global Warming: How Can Science & the Humanities Work Together?
We are living in the midst of one of the most severe crisis in the Earth's history. Science confirms the glaciers are melting, hurricanes are growing more intense, and the oceans are rising. But there is also a deeply spiritual dimension to global warming that does not factor into the scientific explanations. This part of the problem has been more powerfully expressed in film, literature, and art. We will be looking at films like Lee's "When the Levees Broke," about how the people of New Orleans turned to music and storytelling to rebuild their communities in the wake of Hurricane Katrina and Linda Hogan's novel, "Solar Storm" which explores how Native American women draw upon spirituality to heal their community after a dam flooded their ancestral homeland.
The class will also work on an ongoing research project in partnership with the Canadian government and Ojibwe First Nations who submitted a successful UNESCO World Heritage Site application to document the boreal forest and the Native people's traditional knowledge about their land. The class will be working on an interactive map to document how photographs, oral histories, and artwork helped convince UNESCO to preserve the land and the Traditional Ecological Knowledge (TEK) of the people who have lived on that land for thousands of years.
Taught by: Timothy Powell
Course not offered every year
Also Offered As: ENGL 246, RELS 246
Activity: Seminar
1.0 Course Unit

ENVS 279 Nature’s Nation: Americans and Their Environment
The United States has been described as “nature’s nation. The presence of enormous, resource-rich and sparsely settled continent has been a component of American identity, prosperity and pride—it has even been described as the source of the democratic political system. From the beginning, Americans transformed their natural environment, even as, over time, they grew to value environmental preservation and protection. This course traces the interaction of Americans and the natural world in, studying how Americans changes the natural environment over time, in order to understand why environmental change occurred and occurred in the manner it did. What have Americans believed about the nature of the nation’s nature, and what attitudes and policies have followed from these ideas? After surveying American environmental history from the 17th to the 20th century, we will examine specific topics and problems in the long relationship between Americans and their environment. (Possible topics: national parks and wilderness preservation, environmental politics, chemical pollution, invasive species.) This seminar fulfills the research requirement for the History major because students will complete a 20-page paper of original research.
Taught by: Greene
Course not offered every year
Also Offered As: HIST 320, HSOC 279, STSC 279
Activity: Seminar
1.0 Course Unit

ENVS 295 Maritime Science and Technology: Woods Hole Sea Semester
A rigorous semester-length academic and practical experience leading to an understanding of the oceans. The Sea Semester is composed of two intensive six-week components taken off-campus. The Shore Component is six weeks at Woods Hole, Massachusetts, with formal study in: Oceanography, Maritime Studies, and Nautical Science. This is followed by six weeks aboard a sailing research vessel, during which students conduct oceanographic research projects as part of the courses, Practical Oceanography I and II. Maritime Studies. A multidisciplinary study of the history, literature, and art of our maritime heritage, and the political and economic problems of contemporary maritime affairs. Nautical Science. The technologies of operation at sea. Concepts of navigation, naval architecture, ship construction, marine engineering systems, and ship management are taught from their bases in physics, mathematics, and astronomy. Practical Oceanography I. Taken aboard SSV Westward or SSV Corwith Cramer. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During two lectures daily and while standing watch, students learn the operation of basic oceanographic equipment, the methodologies involved in the collection, reduction, and analysis of oceanographic data, and the attendant operations of a sailing oceanographic research vessel. Practical Oceanography II. Taken aboard SSV Westward or SSV Corwith Cramer. Students assume increasing responsibility for conducting oceanographic research and the attendant operations of the vessel. The individual student is responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operation of the vessel.
Each student completes an individual oceanographic research project designed during the shore component.
Taught by: Andrews
One-term course offered either term
Prerequisites: Laboratory course in physical or biological science or its equivalent; college algebra or its equivalent.
Activity: Independent Study
1.0 Course Unit
Notes: This set of courses requires special application procedures. Contact Maria Andrews for information and an application. Only the "SEA semester: Ocean Exploration" and "SEA Semester: Oceans and Climates" can be taken for Penn credit without taking a leave, and all students must have permission from Maria Andrews before registering at SEA.

ENVS 299 Independent Study
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Prerequisite: Permission of department
Activity: Independent Study
1.0 Course Unit
Notes: May be repeated for credit

ENVS 301 Environmental Case Studies
A detailed, comprehensive investigation of selected environmental problems. Guest speakers from the government and industry will give their accounts of various environmental cases. Students will then present information on a case study of their choosing.
Taught by: Dmochowski
Course usually offered in fall term
Prerequisite: ENVS 200
Activity: Lecture
1.0 Course Unit
ENVS 302 Case Studies in Environmental Sustainability
A detailed, comprehensive investigation of selected environmental sustainability problems specific to a selected region. This course aims to introduce students to myriad Earth and environmental issues (understanding how humans interact, affect and are influenced by our environment) through the analysis of several environmental case studies, as well as giving students an introduction to how complex cases are analyzed and what goes into decision-making at the individual, group, state, federal and global levels. The course includes an intensive field trip at the end of the semester - locations will vary by offering.
Taught by: Plante
Course offered spring; odd-numbered years
Prerequisites: ENVS 100, GEOL 100, GEOL 103, GEOL 125 or GEOL 130
Activity: Seminar
1.0 Course Unit
Notes: Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs

ENVS 312 Ocean-Atmosphere Dynamics and Implications for Future Climate Change
This course covers the fundamentals of atmosphere and ocean dynamics, and aims to put these in the context of climate change in the 21st century. Large-scale atmospheric and oceanic circulation, the global energy balance, and the global energy balance, and the global hydrological cycle. We will introduce concepts of fluid dynamics and we will apply these to the vertical and horizontal motions in the atmosphere and ocean. Concepts covered include: hydrostatic law, buoyancy and convection, basic equations of fluid motions, Hadley and Ferrel cells in the atmosphere, thermohaline circulation, Sverdrup ocean flow, modes of climate variability (El-Nino, North Atlantic Oscillation, Southern Annular Mode). The course will incorporate student led discussions based on readings of the 2007 Intergovernmental Panel on Climate Change (IPCC) report and recent literature on climate change. Aimed at undergraduate or graduate students who have no prior knowledge of meteorology or oceanography or training in fluid mechanics. Previous background in calculus and/or introductory physics is helpful. This is a general course which spans many subdisciplines (fluid mechanics, atmospheric science, oceanography, hydrology).
Taught by: Marinov
Course usually offered in spring term
Also Offered As: ENVS 640, PHYS 314
Prerequisites: MATH 114 or permission of the instructor.
Activity: Lecture
1.0 Course Unit

ENVS 325 Sustainable Goods
The study of sustainability—the long term viability of humans in harmony with the environment—has been identified as a critical issue for society and industry and is evolving to examine how society should conduct itself in order to survive. This issue impacts the consumer goods that we use in our lives, the processes that are designed to make these goods, and the raw materials that we obtain to create these goods. The questions that we will examine will be: can these goods be obtained, made, and consumed in a fashion that allows the current quality of life to be maintained (or enhanced) for future generations? Can these processes be sustainable? A review of consumer goods is necessary as the starting point in order to understand the basic needs of people in society and why people consume goods as they do. Subsequently, each student will choose a product to examine in detail and will research the product for its impact with respect to natural resource selection, production, use, and disposal/reuse.
Taught by: Hagan
Activity: Lecture
1.0 Course Unit

ENVS 326 GIS: Mapping Places & Analyzing Spaces
This course is a hands-on introduction to the concepts and capabilities of geographic information systems (GIS). Students will develop the skills necessary for carrying out basic GIS projects and for advanced GIS coursework. The class will focus on a broad range of functional and practical applications, ranging from environmental science and planning to land use history, social demography, and public health. By the end of the course, students will be able to find, organize, map, and analyze data using both vector (i.e. drawing-based) and raster (i.e. image-based) GIS tools, while developing an appreciation for basic cartographic principles relating to map presentation. This course fulfills the spatial analysis requirement for ENVS and EASC Majors. Previous experience in the use of GIS is not required.
Taught by: Heinlen
Activity: Lecture
1.0 Course Unit

ENVS 327 Principles of Sustainability
What is sustainability? Can any fundamental concepts, principles or framework be constructed that adequately describes the search for sustainability? Is there a meaningful methodology? Sustainability science is a trans-disciplinary approach in which the quantitative and qualitative, natural and social, and theory and practice are reconciled and creatively combined. The objective of this course is to provide an in-depth analysis of the foundational concepts, principles, processes and practices of sustainability science. The course will explore three foundational laws governing sustainability: the law of limits to growth, the second law of thermodynamics, and the law of self-organization. Students will examine how these laws operate in biological, ecological, and physical systems, and then apply them to social, economic and political systems.
Taught by: Alain Plante
Activity: Lecture
1.0 Course Unit
ENVS 399 Environmental Studies Research Seminar for Juniors
This seminar is designed to help Juniors prepare for the Senior Thesis research. Topic selection, advisor identification, funding options, and basic research methods will be discussed.
Taught by: Andrews
Course usually offered in spring term
Also Offered As: GEOL 399
Prerequisite: ENVS 100
Activity: Seminar
1.0 Course Unit

ENVS 400 Environmental Studies Seminar
Application of student and faculty expertise to a specific environmental problem, chosen expressly for the seminar.
Taught by: Plante, Jerolmack, Kulik
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

ENVS 404 Urban Environments: Speaking About Lead in West Philadelphia
Lead poisoning can cause learning disabilities, impaired hearing, behavioral problems, and at very high levels, seizures, coma and even death. Children up to the age of six are especially at risk because of their developing systems; they often ingest lead chips and dust while playing in their home and yards. In ENVS 404, Penn undergraduates learn about the epidemiology of lead poisoning, the pathways of exposure, and methods for community outreach and education. Penn students collaborate with middle school and high school teachers in West Philadelphia to engage middle school children in exercises that apply environmental research relating to lead poisoning to their homes and neighborhoods.
For BA Students: Natural Science and Math Sector
Taught by: Pepino
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.

ENVS 406 Community Based Environmental Health
From the fall of the Roman Empire to Love Canal to the epidemics of asthma, childhood obesity and lead poisoning in West Philadelphia, the impact of the environment on health has been a continuous challenge to society. The environment can affect people’s health more strongly than biological factors, medical care and lifestyle. The water we drink, the food we eat, the air we breathe, and the neighborhood we live in are all components of the environment that impact our health. Some estimates, based on morbidity and mortality statistics, indicate that the impact of the environment on health is as high as 80%. These impacts are particularly significant in urban areas like West Philadelphia. Over the last 20 years, the field of environmental health has matured and expanded to become one of the most comprehensive and humanly relevant disciplines in science. This course will examine not only the toxicity of physical agents, but also the effects on human health of lifestyle, social and economic factors, and the built environment. Topics include cancer clusters, water borne diseases, radon and lung cancer, lead poisoning, environmental tobacco smoke, respiratory diseases and obesity. Students will research the health impacts of classic industrial pollution case studies in the US. Class discussions will also include risk communication, community outreach and education, access to health care and impact on vulnerable populations. Each student will have the opportunity to focus on Public Health, Environmental Protection, Public Policy, and Environmental Education issues as they discuss approaches to mitigating environmental health risks. This honors seminar will consist of lectures, guest speakers, readings, student presentations, discussions, research, and community service. The students will have two small research assignments including an Environmental and Health Policy Analysis and an Industrial Pollution Case Study Analysis. Both assignments will include class presentations. The major research assignment for the course will be a problem-oriented research paper and presentation on a topic related to community-based environmental health selected by the student. In this paper, the student must also devise practical recommendations for the problem based on their research.
For BA Students: Natural Science and Math Sector
Taught by: Kulik
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.
ENVS 407 Urban Environments: Prevention of Tobacco Smoking in Adolescents

Cigarette smoking is a major public health problem. The Centers for Disease Control and Prevention Control reports that more than 80% of current adult tobacco users started smoking before age 18. The National Youth Tobacco Survey indicated that 12.8% of middle school students and 34.8% of high school students in their study used some form of tobacco products. In ENVS 407, Penn undergraduates learn about the short and long term physiological consequences of smoking, social influences and peer norms regarding tobacco use, the effectiveness of cessation programs, tobacco advocacy and the impact of the tobacco settlement. Penn students will collaborate with teachers in West Philadelphia to prepare and deliver lessons to middle school students. The undergraduates will survey and evaluate middle school and Penn student smoking. One of the course goals is to raise awareness of the middle school children to prevent addiction to tobacco smoke during adolescence. Collaboration with the middle schools gives Penn students the opportunity to apply their study of the prevention of tobacco smoking to real world situations.

Taught by: Pepino
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.

ENVS 408 Urban Environments: The Urban Asthma Epidemic

Asthma as a pediatric chronic disease is undergoing a dramatic and unexplained increase. It has become the number one cause of public school absenteeism and now accounts for a significant number of childhood deaths each year in the USA. The Surgeon General of the United States has characterized childhood asthma as an epidemic. In ENVS 408, Penn undergraduates learn about the epidemiology of urban asthma, the debate about the probable causes of the current asthma crisis, and the nature and distribution of environmental factors that modern medicine describes as potential triggers of asthma episodes. Penn students will co-teach asthma classes offered in public schools in West Philadelphia and survey asthma caregivers, providing them with the opportunity to apply theoretical knowledge to real-world situations, promote community education and awareness about asthma, and use problem-solving learning to enhance student education in environmental health.

Taught by: Kulik
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.

ENVS 410 The Role of Water in Urban Sustainability and Resiliency

This course will provide an overview of the cross-disciplinary fields of civil engineering, environmental sciences, urban hydrology, landscape architecture, green building, public outreach and politics. Students will be expected to conduct field investigations, review scientific data and create indicator reports, working with stakeholders and presenting the results at an annual symposium. There is no metaphor like water itself to describe the cumulative effects of our practices, with every upstream action having an impact downstream. In our urban environment, too often we find degraded streams filled with trash, silt, weeds and dilapidated structures. The water may look clean, but is it? We blame others, but the condition of the creeks is directly related to how we manage our water resources and our land. In cities, these resources are often our homes, our streets and our communities. This course will define the current issues of the urban ecosystem and how we move toward managing this system in a sustainable manner. We will gain an understanding of the dynamic, reciprocal relationship between practices in an watershed and its waterfront. Topics discussed include: drinking water quality and protection, green infrastructure, urban impacts of climate change, watershed monitoring, public education, creating strategies and more.

Taught by: Neukrug
Course not offered every year
Prerequisites: ENVS 100, GEOL 100 or equivalent
Activity: Seminar
1.0 Course Unit
Notes: An academically-based curriculum service learning approach to using water, science and politics to create a sustainable Philadelphia.

ENVS 411 Air Pollution: Sources & Effects in Urban Environments

This is an ABCS course designed to provide the student with an understanding of air pollution at the local, regional and global levels. The nature, composition, and properties of air pollutants in the atmosphere will also be studied. The course will focus on Philadelphia’s air quality and how air pollutants have an adverse effect on the health of the residents. The recent designation by IARC of Air Pollution as a known carcinogen will be explored. How the community is exposed to air pollutants with consideration of vulnerable populations will be considered. Through a partnership with Philadelphia Air Management Service (AMS) agency the science of air monitoring and trends over time will be explored. Philadelphia’s current non-attainment status for PM2.5 and ozone will be studied. Philadelphia’s current initiatives to improve the air quality of the city will be discussed. Students will learn to measure PM2.5 in outdoor and indoor settings and develop community-based outreach tools to effectively inform the community of Philadelphia regarding air pollution. The outreach tools developed by students may be presentations, written materials, apps, websites or other strategies for enhancing environmental health literacy of the community. A project based approach will be used to include student monitoring of area schools, school bus routes, and the community at large. The data collected will be presented to students in the partner elementary school in West Philadelphia. Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with the sources, fate, and the environmental impacts and health effects of air pollutants.

For BA Students: Natural Science and Math Sector
Taught by: Andrews and Howarth
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
ENVS 416 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted.
Taught by: Bott
Course not offered every year
Also Offered As: BIOL 415
Prerequisites: BIOL 101 or 121 and one semester of college chemistry
Activity: Lecture
1.0 Course Unit

ENVS 417 The anthropocene: Human-dominated Earth
How much have humans altered the planet they live on? Beyond climate change, humans have altered the Earth’s land, oceans and biosphere to such an extent that the concept of a new geologic epoch defined by the action of humans is seriously debated. This seminar will examine the origins of the Anthropocene, the ways in which humans have altered Earth systems, whether or not these alterations warrant a new geologic designation, and what the future potentially holds for both humans and the planet.
Taught by: Alain Plante
Activity: Seminar
1.0 Course Unit

ENVS 451 Sustainable Landscapes
Sustainable Landscapes
Taught by: Jerolmack
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENVS 460 Environmental Policy
Environmental policy
Taught by: Kulik
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENVS 498 Senior Thesis
The culmination of the Environmental Studies major. Students, while working with an advisor in their concentration, conduct research and write a thesis.
Taught by: Dmochowski
Two terms. student may enter either term.
Prerequisites: ENVS 400-level course and declaration of the ENVS major
Activity: Senior Thesis
0.5 Course Units
Notes: The Environmental Studies major, as of the fall of 2008, requires 1 semester of ENVS399 and two semesters of ENVS498.

ENVS 507 Wetlands
The course focuses on the natural history of different wetland types including climate, geology, and hydrological factors that influence wetland development. Associated soil, vegetation, and wildlife characteristics and key ecological processes will be covered as well. Lectures will be supplemented with weekend wetland types, ranging from tidal salt marshes to non-tidal marshes, swamps, and glacial bogs in order to provide field experience in wetland identification, characterization, and functional assessment. Outside speakers will discuss issues in wetland seed bank ecology, federal regulation, and mitigation. Students will present a short paper on the ecology of a wetland animal and a longer term paper on a selected wetland topic. Readings from the text, assorted journal papers, government technical documents, and book excerpts will provide a broad overview of the multifaceted field of wetland study.
Taught by: Willig
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENVS 541 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with both image and drawing based geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Its major objectives are to provide the training necessary to make productive use of at least two well known software packages, and to establish the conceptual foundation on which to build further skills and knowledge in later practice.
Taught by: Tomlin
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENVS 601 Proseminar: Contemporary Issues in Environmental Studies
A detailed, comprehensive investigation of selected environmental problems. This is the first course taken by students entering the Master of Environmental Studies Program.
Taught by: Bordeaux/Colijn
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENVS 604 Conservation and Land Management
Using protected lands in the Delaware Valley, this field-based course will explore various strategies for open-space conservation and protection. In addition, students will be introduced to land management techniques used on such sites to restore or preserve land trust properties in accordance with goals set for their use or protection. Sustainable land uses such as community supported agriculture, ecovillages, and permaculture design will be covered. Emphasis will be placed on developing skills in “Reading the Landscape” to determine conservation and restoration priorities.
Students will produce a site assessment report on sites that they visit.
Taught by: Brightman
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
Notes: Some Saturday field trips will be required.
ENVS 605 Bioremediation
This course is an introduction to current and developing techniques for analyzing environmental contamination and for remediation of damaged environments. Knowledge of these options is important for students interested in public/law applications and environmental/landscape design as a starting point for those pursuing a more science-oriented understanding. The first portion of this course will address bioindicators—the use of living systems to assess environmental contamination. These include systems ranging from biochemical assays to monitoring of whole organisms or ecosystems, as well as techniques ranging from laboratory to field and satellite surveys. The second portion of the course will introduce technologies for bioremediation—the use of living systems to restore contaminated environments. The technologies scale from single-species systems to complex ecosystems such as constructed wetlands; case studies will be examined. Students will be expected to participate in field trips, as well as prepare a final paper examining a particular technology in detail.

Taught by: Vann
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENVS 606 Avifaunal Ecology: Studying ornithological principles & behaviors to indicate ecosystem health
This class will explore the foundations of avifaunal biology and ecology using a combination of hands-on classroom and in-the-field experiences. Classroom content includes physiology, anatomy, and morphology of birds. The fall migration of birds in North America is an epic and often tragic event. Sampling birds in migration has resulted in foundational understandings about stopover habitats, species-specific energy budgets and has helped realize the complete life cycle of hundreds of species. We will enter the field and participate in actual ornithological research, explore avifaunal ecology through birdwatching, and meet with regional leaders in the ornithological field.

Taught by: McGraw
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ENVS 610 Regional Field Ecology
Over the course of six Sunday field trips, we will travel from the barrier islands along the Atlantic Ocean in southern New Jersey to the Pocono Mountains in northeastern Pennsylvania, visiting representative sites of the diverse landscapes in the region along the way. At each site we will study and consider interactions between geology, topography, hydrology, soils, vegetation, wildlife, and disturbance. Students will summarize field trip data in a weekly site report. Evening class meetings will provide the opportunity to review field trips and reports and preview upcoming trips.

Taught by: Willig
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

Notes: Some Sunday field trips required.

ENVS 616 Risk Assessment: Science & Policy Challenges
How do government policy-makers make decisions about potential threats to human health and the environment in the face of scientific uncertainty? The course develops the concept of Risk Assessment from the publication of the 1983 National Research Council (NRC) report commonly known as the "Red Book" which was used to rank the initial hazardous waste sites under the Superfund program. Using a variety of teaching tools, including lectures, panel discussions, and case studies, the course examines how public policy decisions regarding environmental risk are made and how effective those decisions are at reducing risks to affected populations. The course focuses on the complex interaction of science, economics, politics, laws, and regulations in dealing with environmental and public health risks. The course will begin with a review of the policy process and methods used in evaluating human health and environmental risks, including the traditional steps in the risk assessment process, including quantitative and qualitative aspects of hazard identification, dose-response assessment, exposure assessment, and risk characterization. The course will then focus on how scientific uncertainty, risk perceptions, socio-economic disparities, risk communication, and politics influence environmental risk-based decision-making. Issues such as special populations (e.g., children, elderly, immune-compromised, woman of pregnancy age, etc.) must be considered when developing risk reduction strategies. The use of the "precautionary principle" will be discussed in the context of different types of environmental stressors (e.g., pesticides, chemicals, climate change, air pollution, water quality, and land use) and how this important controversial principle is applied differently in contrasting national and European risk management policies.

Taught by: Pepino
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
ENVS 617 Sustainable Estuaries: An Investigation of Resources & Recovery
This course will evaluate the multiple factors that must function to ensure the sustainability of estuaries of national significance. Since the beginning of the environmental movement in the 1960s, we have attempted to protect and improve our watersheds and estuaries through a series of environmental laws, but we learned over the last three decades that regulatory-based "command & control" approaches may have achieved their limits of success, and we now need to think more holistically in order to achieve the Clean Water Act goal of "fishable and swimmable" waters. In this course we will explore the new collaborative strategies and partnerships, which are available, and how social, economic and cultural factors are equally important as regulation to achieve estuary restoration. The National Estuary Program (NEP) was established in 1987 by amendments to the Clean Water Act (Section 320) to identify, restore and protect estuaries along the coasts of the U.S. Unlike traditional regulatory approaches to environmental protection, the NEP targets a broad range of issues and engages local communities in the process. The program focuses not just on improving water quality in an estuary, but on maintaining the integrity of the whole system - its chemical, physical, and biological properties, as well as its economic, recreational, and aesthetic. This course will examine the twenty estuaries of national significance, including the Chesapeake and the Delaware Bays, in an effort to define the condition of estuaries in the US and what strategies can be utilized to attain water quality and habitat goals while achieving important socioeconomic needs of the estuary's diverse stakeholders. You will examine the history of estuary management, the factors that stress water quality and habitat, and what strategies are commonly used to reduce risks while safeguarding the environment and public health.
Taught by: Pepino
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

ENVS 620 Developing Environmental Policy
When we think of environmental policies in the USA, we may think of one or more laws geared to improve our nation's air, water, ecosystems, and biodiversity. However, environmental policies and policy-making comprise more than just specific laws and regulations. Making and implementing environmental policy is a process influenced by multiple political, cultural, and economic factors in addition to scientific factors, all of which impact the ability of policies to be effective, that is, to actually improve the environment. In this course, we develop a framework to analyze the effectiveness of the social actors, process and outcomes of environmental policy-making. We ask questions such as: How do policy makers define environmental problems and solutions? Who are the social actors involved in the process? How are policies created and negotiated? What underlying assumptions and realities about the roles of government and society shape policy instruments and design? Are science and risk accurate or distorted? How are social and environmental justice intertwined? To answer these complex questions, we contextualize and critically analyze policies to determine how both government and society impact on regulatory approaches. We study the institutions involved and examine social and ecological outcomes of environmental policies. We also discuss contemporary issues and policy situations that arise throughout the course of the semester, and comment on them in a class blog. Finally, students will select an environmental issue and formulate a policy proposal to recommend to decisionmakers.
Taught by: Kulik
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ENVS 622 Environmental Enforcement
The goal of the course is to provide students with an introduction to the role of enforcement in federal, state and local environmental regulatory programs. Emphasis will be placed on federal enforcement actions initiated by the U.S. Environmental Protection Agency and U.S. Department of Justice. The course will provide students with an introduction to the American Legal System and legal concepts, like standing, jurisdiction, and burden of proof. A number of case studies and classroom exercises will be utilized as part of the discussion of civil and criminal enforcement actions. For example, a detailed case study will be presented concerning a successful prosecution by the federal government of a wastewater treatment plant operator (from the receipt of the initial tip through the sentencing of the defendant). A theme of all classes, presentations and assignments will be the role of the environmental professional in the enforcement context (e.g., the environmental professional who testifies as an expert in a judicial proceeding, or performs an audit that becomes the subject of a self-disclosure to EPA).
Taught by: Lisa
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
ENVS 629 The US Water Industry in the 21st Century
The course will explore all 4 sectors of the water business in the United States: The Drinking Water Industry, The Stormwater Utility, Water Resources (rivers, streams, reservoirs) Management and the Water Pollution Control Industry. The course will have 2 primary foci: 1. The influences on the industry from new technologies and infrastructure, acceptable levels of risk, public and private sector competition, climate change, the bottled water industry, resource recovery, rates and affordability and other influences will be investigated. 2. The management of a 21st century utility will be explored, including topics of organization and leadership, the role of environmentalism, infrastructure financing, water / wastewater treatment facility operations, public affairs and media, and designing a capital improvement program are examples of topic areas.
Taught by: Neukrug
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ENVS 634 Topics in Water Policy
This course will explore various themes such as the UN Millennium Development Goals, EPA regulatory practices, and global water policy and governance.
Taught by: Laskowski
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ENVS 642 Global Water Conference in Stockholm, Sweden
The global water and sanitation crisis kills over 4,000 children each day and represents one of the biggest health problems in the world. At the University of Pennsylvania school year 2010-2011 was declared the "Year of Water" in recognition of the many challenges that lie ahead as global increases in population and affluence and the influences of climate change will stress limited water resources. Each year the Stockholm International Water Institute convenes a Conference with experts from around the globe to exchange the latest water research findings and develop new networks. Students will attend the Conference, present research by presentations/posters, document a key issue, interview experts, and meet colleagues with common interests. They will also help other organizations at the Conference.
Taught by: Laskowski
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

ENVS 643 From Brownfield Remediation to Land Revitalization: US Strategies for Reducing Soil Contamination
This course is intended to give students an overview of the genesis of the so-called "Brownfield" problem and of the various efforts our society is taking to solve or, at least, ameliorate it. The course will place the "Brownfield" problem in the broader context of the growth and decline of the industrial base of cities like Philadelphia. Students will study the general constitutional and statutory framework within which we approach the problems of orphan, polluted sites and the disposal of contemporary solid wastes. They will also analyze the principal actions that have been taken by Federal and state government to address remediation and redevelopment of abandoned industrial sites. The course will also explore environmental equity issues. The students will collaborate with high school students at the West Philadelphia High School to identify sites in their neighborhoods and to learn how to determine the sites ownership and land use history. The students will study ways of determining environmental risk and the various options that are available for remediation in light of community ideas about re-use. Students will be expected to participate actively in the seminar and the sessions with high school students. Students in the course are required to prepare and present a term paper on a topic in the general area of "Brownfield" analysis and remediation.
Taught by: Keene
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENVS 644 Energy, Waste and the Environment
The aim of this course is to provide an incentive to use geochemical and mineralogical principles to address and solve major environmental problems. The students identify the problems that are associated with different types of waste. This course covers a wide range of problems associated with the waste arising from the generation of electricity. The main topics will be the uranium cycle, characterization of nuclear waste, and the containment and disposal of nuclear waste. Based on insights from the nuclear fuel cycle, solutions are presented that diminish the environmental impacts of coal and biomass combustion products, incineration of municipal solid waste, toxic waste due to refuse incineration, and landfills and landfill gases.
Taught by: Giere
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
ENVS 669 Corporate Sustainability Strategies
Before the year 2000, "environmental management" for a business was typically driven by the need to respond to restrictions imposed by environmental regulation. But, at the dawn of the new millennium, leading businesses began to change their concept of environmental management to look beyond simply meeting governmental dictates. These organizations began to evolve and utilize "environmental strategy" to create new ways of growing their businesses by bringing sustainability to the core of their business strategies. This seismic shift in view was accompanied by a bottom-line emphasis that, in some cases, turned sustainability efforts into profit centers. Sustainability increasingly is not hidden within the silo of environmental, health, and safety departments but has become much more seamlessly integrated into the operations of corporate functional disciplines. Today, to effectively work in senior management, an executive needs to be knowledgeable not only about his or her specific business function but also how his or her business will be impacted by governmental regulations, policies, corporate sustainability initiatives, green marketing regulations, industry guidelines or 'best practices', new sustainable technologies, energy planning, environmental performance metrics, and required reporting on the environmental impact of their business unit.
Taught by: Survis
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ENVS 673 The Future of Water
From Wall Street to rural Sub-Saharan Africa, technology innovation to aging infrastructure—this course will explore the impact of water and consider what future leaders need to know about the dynamics of the industry, investment and business opportunities, and water-related risk; Opportunities for water are booming around the world, in large part because of existing or looming shortages and decades of underinvestment, population growth, rapid industrialization and urbanization, pollution, and climate change. Water is the only irreplaceable natural resource on the planet. Its critical role in every aspect of the global economy, could, in fact, lead it to be the next gold or the next oil. This course will address the fundamentals of the water sector from an international perspective. The future of water will be critical to our global economic, social and political development and will likely become one of the most influential factors in business decisions for the future. Furthermore, it is essential for leaders across all sectors—from pharmaceuticals to financials, energy to agriculture—to understand how to sustainably manage and account for water resources, capitalize on new technologies, mitigate water-related risks and navigate through complex and dynamic policy and regulation. The course will engage students in high-level discussion and strategy formation, challenging them to develop creative and sustainable solutions to some of the greatest challenges facing environmental, business and water industry leaders today. Interactive sessions and projects will provide an introduction to appropriately managing, valuing and investing in water assets to create sustainable and compelling business opportunities.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ENVS 674 Life Cycle Assessment
In order to make sensible decisions on products or projects, people need to understand the environmental impacts of these actions. Life cycle assessment (LCA) is a process to assess environmental impacts throughout the different stages of a product or project's life. This seminar is intended to be comprehensive and covers material extraction, processing, manufacture, distribution, use and end of life reuse, recovery or disposal. The objective of conducting an LCA is to compare the full range of environmental impacts that emanate from the provision of these products or services and then use that information to improve the situation to minimize or eliminate harm. The focus of this class will be to understand the phases of an LCA as well as conduct LCAs that compare the impacts of two related options. This course will enable the student to conduct LCAs and examine the use of software that could be used in this regard. The classic examples are cloth vs. disposable diapers, paper vs. ceramic cups, and so on. This course will enable the student to conduct LCAs and examine the use of software that could be used in this regard.
Taught by: Hagan/English
Course usually offered in fall term
Prerequisites: ENVS 667 Introduction to Sustainability or the approval of the instructors.
Activity: Seminar
1.0 Course Unit

ENVS 681 Modeling Geographical Space
This course explores the nature and use of raster-based geographic information systems (GIS) for the analysis and synthesis of spatial patterns and processes through "cartographic modeling". Cartographic modeling is a general but well defined methodology that can be used to address a wide variety of analytical mapping applications in a clear and consistent manner. It does so by decomposing both data and data-processing tasks into elemental components that can then be recomposed with relative ease and with great flexibility.
Taught by: Tomlin
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENVS 689 Masters of Environmental Studies Capstone Seminar
This course is designed to help students successfully complete their MES Capstone. A set of milestones will be set and regular meetings will be held in groups and individually to aid the student as they complete the research portion of their degree. We will be working together to complete a series of steps towards the final project. These steps fall into five major areas: 1) Reviewing the literature; 2) Finding a model; 3) Framing your research; 4) Managing data; and 5) Writing your results. Throughout the semester, we will also discuss career goals and the job search.
Taught by: Bordeaux
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: Project proposal and Online Application required for course registration. See MES Office and "Guide to the Capstone" for more information.

ENVS 999 Independent Study
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Permission of instructor required
Epidemiology (EPID)

EPID 510 Introductory Epidemiology
This course provides an introduction to the fundamentals of research in clinical epidemiology. It covers definitions of epidemiology; measures of disease frequency; measures of effect and association; epidemiologic study designs, including randomized clinical trials, cohort and case-control studies, cross-sectional surveys, meta-analysis and decision analysis; and an overview of the conduct and analysis of epidemiologic studies. The course is composed of a series of lectures and discussion sessions designed to reinforce concepts introduced in the preceding lecture.
Taught by: Bewtra
Course usually offered summer term only
Prerequisite: Permission of Instructor
Activity: Lecture
1.0 Course Unit

EPID 516 Mathematical Models for the Control of Infectious Diseases
As infectious diseases are transmitted from one host to another, the dynamics of transmission in the population of hosts follow certain basic rules. If one knows and understands these rules, one can plan rational strategies to prevent or control infections. One of the principal tools of those interested in public health interventions to control or ameliorate infectious diseases is the mathematical model. A model is just a means of representing and manipulating something that would not otherwise be accessible. This course provides students with the opportunity to construct models of the transmission of infectious diseases and to use these models to plan or compare disease control strategies. The course is predicated upon the notion that the act of building a mathematical model of disease transmission is often the very best way of understanding what is going on. This understanding will be further refined by the examination of more complicated and sophisticated model structures as they appear in the recent published literature. A disproportionate number of emerging infectious diseases and recent disease outbreaks in the United States and elsewhere have shared a common characteristic: they affect veterinary as well as human populations. Many are also vector-borne, passing between different species of hosts through insects and other invertebrates. In some cases humans are only 'spillover hosts' whose infection is incidental to the transmission cycle. Interdisciplinary approaches are especially important to control such diseases. As a particular focus of the course, students will learn the tools needed for successful collaborations to address the growing problem of zoonotic and vector-borne diseases.
Taught by: Levy,Smith
Course usually offered in fall term
Also Offered As: PUBH 610
Prerequisite: Permission of Instructor
Activity: Lecture
1.0 Course Unit

EPID 518 Geography & Public Health
Taught by: Wiebe
Course usually offered in spring term
Also Offered As: PUBH 517
Activity: Lecture
1.0 Course Unit

EPID 526 Biostatistics for Epidemiologic Methods I
The first half of this will cover graphical methods, probability, discrete and continuous distributions, estimation, confidence intervals, and one sample hypothesis testing. Emphasis is placed on understanding the proper application and interpretation of the methods. The second half of this course will cover two sample hypothesis testing, nonparametric techniques, sample size determination, correlation, regression, analysis of variance, and analysis of covariance. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of the STATA statistical package and applications to clinical data.
Taught by: Cucchiara, Yang
Prerequisite: Permission of Instructor
Activity: Lecture
1.0 Course Unit
Notes: This course runs from mid Summer to mid Fall term. There is a corresponding lab.

EPID 527 Biostatistics for Epidemiologic Methods II
The first half of this covers concepts in biostatistics as applied to epidemiology, primarily categorical data analysis, analysis of case-control, cross-sectional, cohort studies, and clinical trials. Topics include simple analysis of epidemiologic measures of effect, stratified analysis; confounding; interaction, the use of matching, and sample size determination. The second half of this course covers concepts in biostatistics as applied to epidemiology, primarily multivariable models in epidemiology for analyzing case-control, cross-sectional, cohort studies, and clinical trials. Topics include logistic, conditional logistics, and Poisson regression methods; simple survival analyses including Cox regression. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of the STATA statistical package and applications to clinical data.
Taught by: Landis, Shaw
Prerequisite: EPID 526 or equivalent
Activity: Lecture
1.0 Course Unit
Notes: This course runs from mid Fall to mid Spring term. There is a corresponding lab.

EPID 532 Database Management for Clinical Epidemiology
This course provides students with an introduction to the techniques of database management as they apply to clinical research. Students learn how to design and implement computerized databases, perform basic query and reporting operations, migrate data between various file formats, prepare databases for statistical analysis, and perform quality assurance procedures. This course focuses on the practical issues of database management and is intended to support each student's planned research enterprise. Each class session will be preceded by a one-hour online lecture and brief self-assessment quiz to be completed prior to attending class. This lecture is intended to prepare students for the class for the week, which will be dedicated to practical experience in a laboratory setting.
Taught by: Harhay
Course usually offered in spring term
Prerequisite: Permission of Instructor
Activity: Lecture
0.5 Course Units
Notes: Restricted to MSCE degree students
EPID 534 Qualitative Methods in the Study of Health, Disease and Medical Systems
This course combines informal lecture and discussion with practical exercises to build specific skills for conducting qualitative research on healthcare, broadly defined. Readings include books and papers about research methodology and articles that provide exemplars and pitfalls of qualitative research. Specific topics covered include: the role of theory in qualitative research, method-research question fit, collecting different types of qualitative data (observation, interview, focus group, text, video), ethical issues in qualitative research, establishing rigor in qualitative research, introduction to qualitative data analysis using software, mixing methods/approaches for obtaining grant funding for qualitative research and writing up qualitative research studies for publication. The objectives of this course are: To introduce the student to the epistemological underpinning of qualitative methodology; To review how to select the best qualitative approach for different research questions; To introduce the student to different qualitative data collection techniques; To review standards of methodological rigor in qualitative research; To introduce the basic principles of qualitative data analysis using NVivo software; To provide practical advice about planning, getting funding for and implementing a qualitative study.
Taught by: Szmyczak
Course usually offered in spring term
Prerequisite: Previous course work in research methods or permission of course director
Activity: Lecture
1.0 Course Unit

EPID 542 Measurement of Health in Epidemiology
This course addresses the measurement of epidemiological variables, which broadly encompasses the tasks involved in obtaining data, without which analyses cannot proceed. Course topics to be discussed include: defining the concepts of exposure, disease, and health; approaches to measuring exposures, which may be personal (i.e., psychological, behavioral, biological, or genetic) or environmental (i.e., physical, chemical, social, or organizational); approaches to measuring disease and health status; assessing the validity and reliability of measurement instruments; problems of misclassification of exposure status, missing data, instrument (e.g., questionnaire) development, and qualitative methods.
Taught by: Farrar
Course usually offered in fall term
Prerequisites: Permission of course director. Introductory Epidemiology (EPID 510) and Biostatistics for Epidemiologic Methods I (EPID 526) previously or concurrently.
Activity: Lecture
0.5 Course Unit

EPID 546 Clinical Database Research Methodology
This course will discuss appropriate selection of automated databases for research questions of interest, assessment of drug exposures; validation of health outcomes of interest; and addressing biases, confounding, and missing data in databases. We will also review key aspects of protocol development for for database studies and discuss research grant applications related to these studies.
Taught by: Lo Re
Prerequisites: Permission of course director. Introductory Epidemiology (EPID 510) and Biostatistics for Epidemiologic Methods I (EPID 526) previously or concurrently.
Activity: Lecture
0.5 Course Unit

EPID 549 Methods in Epidemiology
This course is designed to broaden students' understanding of a number of important procedures including: measuring and obtaining data about exposure, disease, and health; problems of data quality including misclassification of exposure status and disease status and problems of missing data; and the application of data for decision making and health economics. The primary goal is to expose students to a variety of commonly used epidemiologic methods to prepare them to explore these in more depth if they are applicable to the students' research interests.
Course usually offered in fall term
Prerequisites: Permission of course director. Introductory Epidemiology (EPID 510) and Biostatistics for Epidemiologic Methods I (EPID 526) previously or concurrently.
Activity: Lecture
0.5 Course Units

EPID 550 Clinical Economics and Clinical Decision Making
This course focuses on the application of decision analysis and economic analysis to clinical and policy research. The course begins with material about the selection, use, and analysis of diagnostic tests using two by two tables, likelihood ratios, and ROC curves. The course continues with the introduction of more general tools for decision analysis, including decision trees and other mathematical models. Special emphasis is placed on the assessment and use of utilities in these models. A major focus of the course is the application of economic principles to the evaluation of health outcomes. During seminars, students will carry out practical exercises that include problem solving, critically analyzing published articles, and learning to use computer software that facilitates decision and economic analyses.
Taught by: Glick, Williams
Course usually offered in spring term
Also Offered As: HPR 550
Prerequisite: Permission of Instructor
Activity: Lecture
1.0 Course Unit

EPID 560 Issues in Research Protocol Development
This course focuses on major issues in research protocol development, including methodological issues regarding different research designs, development of research questions, and plans for analysis. Each student will present his or her research proposal for open discussion during one of the sessions.
Course usually offered in spring term
Activity: Seminar
0.25 Course Units
Notes: Restricted to MSCE degree students

EPID 570 Critical Appraisal of the Medical Literature
This course focuses on techniques for critical appraisal of the medical literature. Each student will be responsible for at least one critical appraisal session covering different epidemiologic topics.
Course usually offered in spring term
Activity: Lecture
0.25 Course Units
Notes: Restricted to MSCE degree students.
EPID 575 Introduction to Genetic Epidemiology
There is an increasing need for researchers to understand the genetic basis of incorporate the collection and analysis of genetic information into studies of The objectives of this course are to provide students with an understanding of used by molecular and genetic epidemiologists. This course consists of a series-discussions focused on the critical appraisal of genetic/molecular epidemiology. After completing this course, students will be able to read and interpret the mendelian literature, and understand data collection and analysis approaches molecular and genetic epidemiological studies.
Taught by: Devoto, Saleheen
Course usually offered in spring term
Prerequisites: Permission of course director. Students enrolling in this class are expected to have a working knowledge of epidemiology, biostatistics, and human genetics. Students who do not meet these requirements may be allowed to enroll in the class, but may be required to undertake supplemental readings and/or tutorials to obtain the necessary background.
Activity: Lecture
1.0 Course Unit

EPID 580 Outcomes Research
This course is divided into two main parts. The first part addresses issues related to the measurement of quality in health care. Included is a review of the classical structure-process-outcome quality paradigm. The paradigm's strengths and limitations are addressed. This part especially focuses on outcome measure of quality and examines the validity of alternative measures. The second part deals with observational, or quasi-experimental, research studies. It addresses the advantages and limitations of alternative designs, and covers the role of clinical risk adjustment in observational studies of medical interventions. It focuses on the problem of selection bias, and reviews recent methods for dealing with this bias, such as instrumental variables.
Taught by: Silber
Course usually offered in fall term
Also Offered As: HPR 580
Prerequisites: Introductory course in statistics including regression methods. Permission of instructor.
Activity: Lecture
1.0 Course Unit

EPID 582 Systematic Review and Meta-Analysis
This course will provide an introduction to the fundamentals of systematic reviews and meta-analysis. It will cover introductory principles of meta-analysis, protocol development, search strategies, data abstraction methods, quality assessment, meta-analytic methods, and applications of meta-analysis.
Taught by: Umscheid, Chen
Course offered fall, odd-numbered years
Prerequisites: EPID 510, EPID 526 (may be taken concurrently)
Activity: Lecture
1.0 Course Unit

EPID 584 Health Disparities Research
This course will provide an overview of research in health disparities. It will cover the historical aspects, concepts, policy, economic, genomic and social perspectives of health disparities. It will provide students with methodological tools for health disparities research and introduce students to ongoing health disparities research by current Penn and affiliated faculty members. The course is composed of a series of weekly small group lectures and discussion, including critical appraisal of published papers, guest faculty presentations, and student presentations. Students will be expected to attend weekly meetings and participate in class discussions, prepare and lead discussions of assigned papers, review assigned readings, and draft and present a scientific protocol of their choosing related to health disparities.
Taught by: Guevara, Takeshita
Course usually offered in spring term
Prerequisite: EPID 510 or equivalent course; EPID 526 or equivalent course
Activity: Lecture
1.0 Course Unit

EPID 600 Data Science for Biomedical Informatics
Data science refers broadly to using statistics and informatics techniques to gain insights from large datasets. Biomedical informatics refers to a range of disciplines that use computational approaches to analyze biomedical data to answer pre-specified questions as well as to discover novel hypotheses. In this course, we will use R and other freely available software to learn fundamental data science applied to a range of biomedical informatics topics, including those making use of health and genomic data. After completing this course, students will be able to retrieve and clean data, perform exploratory analyses, build models to answer scientific questions, and present visually appealing results to accompany data analyses, be familiar with various biomedical data types and resources related to them, and know how to create reproducible and easily shareable results with R and github.
Taught by: Himes
Course usually offered in fall term
Also Offered As: BMIN 503
Prerequisites: Familiarity with basic statistical (e.g., EPID 526/7 or other first-year graduate level stats course) concepts is expected, as this course will not cover basic concepts in depth. Background in biology and computing would be helpful, but no formal requirements will be enforced.
Activity: Lecture
1.0 Course Unit

EPID 602 Topics in Biom/Hlth Info
Also Offered As: BMIN 504
Activity: Lecture
1.0 Course Unit

EPID 610 Tutorial in Epidemiologic Research
This is a tutorial given by each student's advisor. Advisor and student meet weekly. Topics include: discussion and review of epidemiologic concepts and principles, guided readings in the epidemiology of a specific health area, and the development of the research protocol.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
**EPID 621 Longitudinal and Clustered Data in Epidemiologic Research**

An introduction to the principles and methods for longitudinal and clustered data analysis with special emphasis on clinical, epidemiologic, and public health applications. Designed for advanced MS and PhD-level students in epidemiology and related fields. Marginal and conditional methods for continuous and binary outcomes. Mixed effects and hierarchical models. Simulations for power calculations. Software will include Stata and R.

Taught by: Shults

Course usually offered in fall term

Prerequisites: Completion of EPID 526, 527 or equivalent preparation in biostatistics, including generalized linear models. Completion of semester course in principles of epidemiology or equivalent. Good working knowledge of Stata and SAS and familiarity with principles of first-year calculus and matrix algebra. Permission of course director.

Activity: Lecture

1.0 Course Unit

---

**EPID 622 Applied Regression Models for Categorical Data**

This course will provide in-depth treatment of several topics in categorical data analysis. After a brief review of methods for contingency tables, we will introduce the idea of generalized linear models, and focus on two special cases: multiple logistic regression and loglinear models. Each topic will be presented in detail by stating the model and covering parameter estimation and interpretation, inference, model building, regression diagnostics and assessment of model fit. Finally, we will cover extensions to both models, including models for multinomial data, analysis of matched-pair data, and random effects models. Topics will be illustrated in class with examples, and we will discuss the use of STATA to conduct the analyses.

Taught by: Xiao

Course usually offered in fall term

Prerequisites: EPID 510, EPID 526, EPID 527

Activity: Lecture

0.5 Course Units

Notes: Offered first half of fall term

---

**EPID 623 Applied Survival Analysis**

This course will focus on statistical methods for survival or time-to-event data. Topics covered will include: the concepts of survival data and censoring; estimation of survival functions, comparison of groups; regression analysis; sample size and power considerations; and methods for competing risks. All methods will be illustrated by in class examples and homework sets.

Taught by: Li

Course usually offered in fall term

Prerequisites: EPID 510, EPID 526, EPID 527. Additionally, students should be comfortable with basis calculus concepts (e.g., derivatives, integrals, etc.).

Activity: Lecture

0.5 Course Units

Notes: Offered second half of fall term

---

**EPID 624 Methods in PCOR**

The goal of this course is to provide a broad overview of methods used in patient centered outcomes research (PCOR). Expert faculty will lecture on topics such as standards for research questions, patient centeredness, systematic reviews, causal inference, heterogeneity of treatment effect handling missing data, data networks, Bayesian designs, data registries, and diagnostic tests. Topics may also include advanced observational study design, statistical methods for observational studies, health status/quality of life as applied to PCOR and case studies of patient engagement.

Taught by: Gelfand

Course usually offered in spring term

Prerequisite: Permission of instructor

Activity: Lecture

1.0 Course Unit

---

**EPID 625 Advanced Biostatistical Methods for Multivariable Prediction Models**

This course is an introduction to statistical methods that can be used to evaluate biomarker prognostic studies and multivariate prediction models. It is designed for advanced MS and PhD-level students in epidemiology and related fields (nursing, health policy, social work, demography). Topics will include biostatistical evaluation of biomarkers, predictive models based on various regression modeling strategies and classification trees, assessing the predictive ability of a model; internal and external validation of models; and updating prognostic models with new variables or for use in different populations. Students will learn about the statistical methods that are required by current reporting guidelines for biomarker prognostic studies or the reporting guidelines for multivariable prediction models.

Taught by: Gimotty

Course usually offered in spring term

Prerequisites: Completion of EPID 526, 527 and either EPID 622 or 623 or equivalent preparation in either categorical analysis or survival analysis. Working knowledge of either Stata, SAS or R to fit regression, logistic regression and/or Cox regression models. Permission of course director for students outside of School of Medicine graduate programs.

Activity: Lecture

1.0 Course Unit

---

**EPID 630 Clinical Trials**

This course is to serve as a general introduction to clinical trials, with emphasis on trial design issues. This is not a course on the biostatistics of clinical trials. It is expected that at the conclusion of the course, a student will be able to plan a clinical trial. Each class will consist of a two-hour lecture followed by a one hour discussion.

Taught by: Farrar

Course usually offered in spring term

Also Offered As: REG 630

Prerequisite: EPID 510 or equivalent; EPID 526 or equivalent; permission of instructor

Activity: Lecture

1.0 Course Unit

---
EPID 632 Introduction to Biomedical and Health Informatics
This course is designed to provide an overview of the major topic areas in biomedical informatics, especially as they apply to clinical research, and more specifically to clinical epidemiology. Through a series of lectures and demonstrations, students will learn about topics such as databases, natural language, clinical information systems, networks, artificial intelligence and machine learning applications, decision support, imaging and graphics, and the use of computers in medical education.
Taught by: Holmes
Course not offered every year
Also Offered As: BMIN 501
Prerequisite: Permission of Instructor
Activity: Lecture
1.0 Course Unit

EPID 634 Clinical Trial Outcomes: Measurement, Analysis and Interpretation
This course is intended to teach students the skills necessary to select and/or design appropriate outcomes for a clinical trial. Students will focus on recent changes in our understanding of clinical trial outcome measurements, analyses, and interpretation for both subjective and objective phenomenon, such as adherence, use of multiple outcomes, and clinical importance. While design issues for clinical trials are the main focus, other types of clinical studies will be considered as appropriate. Student will be expected to learn about the problems inherent in the design of outcome measures of health and how to apply different epidemiologic and biostatistical concepts toward a solution. It is expected that at the conclusion of the course, students will be able to plan a clinical trial with a valid, responsive, and interpretable outcome.
Taught by: Farrar
Course usually offered in fall term
Prerequisite: EPID 510 or equivalent; permission of instructor
Activity: Lecture
1.0 Course Unit

EPID 635 Database Theory and Applications for Biomedical Research
This course is intended to provide in-depth, practical exposure to the design, implementation, and use of databases in biomedical research. This course is intended to provide students with the skills needed to design and conduct a research project using primary and secondary data. Topics to be covered include: database architectures, data modeling approaches, data normalization, database implementation, client-server databases, concurrency, validation, Structured-Query Language (SQL) programming, reporting, maintenance, and security. All examples will use problems or data from biomedical domains. MySQL will be used as the database platform for the course, although the principles apply generally to biomedical research and other relational databases.
Taught by: Holmes
Course usually offered in spring term
Also Offered As: BMIN 502
Prerequisites: There are no pre-requisites for this course. However, we will be working exclusively with biomedical data and research problems. It is expected that all students will have some knowledge and/or experience in working in biomedical research.
Activity: Lecture
1.0 Course Unit

EPID 636 Epidemiological Methods in Acute Care
This is an advanced seminar that will cover nuanced methodological considerations and logistical challenges of research in acute care settings (e.g. prehospital, emergency department, hospital, and intensive care units). Topics to be covered with regards to primary data collection include: recruitment and consent, outcomes measurement, survey and qualitative research, clinical trials, quality improvement, decision making and cognitive biases, end-of-life issues, and acute care research networks. Topics to be covered with regards to secondary data analysis include: data sources, risk adjustment, missing data, causal inference, predictive modeling, decision rules, variability in care, organizational factors, and economic analysis. The course will finish with a discussion of the landscape for obtaining funding for acute care research. Weekly sessions will include expert guest lectures, review of landmark papers, and round-table discussion of the students’ ongoing research projects as they pertain to issues covered in the course.
Taught by: Delgado, Holena
Course not offered every year
Prerequisites: EPID 510, EPID 526; Permission of Instructor
Activity: Lecture
1.0 Course Unit

EPID 638 Topics in Clinical Trial Design and Analysis
This course is intended to follow, and be complementary to EPID 630: Clinical Trials. It will build on the basic principles of design, conduct, and analysis introduced in that course and will go into more detail on particular approaches. Topics covered will include noninferiority trials, phase 1 designs, multi-stage and other adaptive designs, graphical data presentations and current ethical controversies in clinical trials.
Taught by: Ellenberg
Course usually offered in fall term
Prerequisite: EPID 630 or equivalent
Activity: Lecture
1.0 Course Unit

EPID 640 Advanced Topics in Epidemiology
This course is designed to introduce students to advanced epidemiologic methods through a series of readings and discussions. The course aims to deepen the students’ understanding of important concepts and controversies in contemporary epidemiology and to enhance their ability to think critically about empirical epidemiologic research. The course is intended for students who are already familiar with the fundamentals of epidemiology and biostatistics, and who wish to gain an understanding of the complex issues underlying epidemiologic study design and interpretation.
Taught by: Naj
Course usually offered in spring term
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, EPID 527 or equivalent; permission of instructor
Activity: Lecture
1.0 Course Unit
EPID 644 Cardiopulmonary Epidemiology
This is an advanced course that addresses epidemiological research issues as they apply to important clinical topics in cardiovascular and pulmonary medicine. Lectures and workshops are designed to acquaint students with the classic literature in the fields of cardiovascular and pulmonary epidemiology. To use a body of literature to demonstrate the strengths and weaknesses of epidemiological research designs as they have been applied to cardiovascular and pulmonary medicine to expose students to the range of topics studied to teach advanced epidemiological principles using a problem-based approach, and to stimulate students to develop independent research questions.
Taught by: Barnhart
Course usually offered summer term only
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, EPID 527 or equivalent, and permission of instructor
Activity: Lecture
1.0 Course Unit

EPID 645 Research Methods in Cancer Epidemiology
Research in cancer etiology, prevention, treatment, and control includes a wide range of subject matter science, from the initial molecular changes which precede the development of cancer to issues of primary guidelines for cancer survivors. The course reviews the possible study designs applied to cancer etiology, prevention, treatment, and control. These include randomized controlled trials and multiple types of observational studies (cohort, case-control, cross-sectional). Other topics will include causal inference, bias, and effect modification.
Taught by: Aplenc, Getz
Course usually offered summer term only
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, EPID 527 or equivalent, and permission of instructor
Activity: Lecture
1.0 Course Unit

EPID 646 Reproductive Epidemiology
This is an advanced course that addresses epidemiological research issues as they apply to important clinical topics in obstetrics and gynecology and related clinical disciplines. Lectures and workshops are designed to acquaint students with seminal issues in the field of reproductive epidemiology, to use a body of literature to demonstrate the strengths and weaknesses of epidemiological research designs as they have been applied to obstetrics and gynecology and related clinical disciplines, to expose students to the range of topics studied, to teach advanced epidemiologic principles using a problem-based approach, and to stimulate students interested in reproductive epidemiology to develop independent research questions.
Taught by: Barnhart
Course offered spring; even-numbered years
Activity: Lecture
1.0 Course Unit

EPID 652 Renal and Urologic Epidemiology
The objective of this course is to prepare students to function as effective, independent researchers in the fields of renal and urologic epidemiology by providing the students an understanding of how epidemiologic research can and has advanced the knowledge of diseases in treatments of renal and urologic medicine. The structure of the course consists of a lecture series, workshops, and student presentations.
Taught by: Feldman
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, EPID 527 or equivalent, and permission of instructor
Activity: Lecture
1.0 Course Unit

EPID 656 Research Methods in Infectious Diseases Epidemiology
This is an advanced course addressing epidemiological issues as they apply to important clinical topics in infectious diseases. Lectures and discussions will serve two primary goals: 1) to explore epidemiologic methods specific to infectious diseases (e.g. adherence to therapy) or which have important applications to infectious diseases (e.g. molecular epidemiology); and 2) to explore the epidemiology of particular infectious diseases or syndromes (e.g. HIV). This course will acquaint students with the classic literature in the field of infectious diseases epidemiology, teach advanced epidemiological principles using a problem-based approach, and demonstrate the strengths and weaknesses of research methodologies as they have been applied to infectious diseases.
Taught by: Gross, Han
Course usually offered summer term only
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, a course that covers logistical regression such as EPID 527 or equivalent, and permission of instructor(s)
Activity: Lecture
1.0 Course Unit

EPID 658 Gastroenterology Epidemiology
This course provides an in-depth presentation of advanced methodological issues in conducting clinical epidemiological research in the field of gastroenterology.
Taught by: Yang
Course offered spring; odd-numbered years
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, EPID 527 or equivalent, and permission of instructor
Activity: Lecture
1.0 Course Unit

EPID 664 Methods in Neurologic Clinical Epidemiology
This course will introduce students to methods and study design principles that are specific or unique to clinical research and trials in neurology, child neurology, neuro-ophthalmology, neurosurgery, and related fields.
Taught by: Farrar, Waldman
Course offered spring; even-numbered years
Prerequisite: Permission of Instructor
Activity: Lecture
0.5 Course Units
**EPID 666 Pharmacoepidemiology Research Methods**
The purpose of this course is to explore and integrate concepts and considerations that are key to the conduct of pharmacoepidemiologic research. The format will be a mixture of seminar, instructor-led discussion, student-led discussion, and student presentations. Papers from the applied and methods literature will be used to illustrate concepts and as springboards for discussion. Topics covered include use of automated databases, pharmacogenomics, and approaches to addressing confounding.

Taught by: Hennessy
Course usually offered in spring term
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, a course that covers logistical regression such as EPID 527 or equivalent, and permission of instructor(s)
Activity: Lecture
1.0 Course Unit

**EPID 672 Biostatistical Methods for Addressing Confounding**
This course is designed to teach epidemiology students the statistical principles of analysis specific to pharmacoepidemiology study designs including the use of propensity scores, inverse probability weighting, time varying confounding analyses, disease risk scores, and instrumental variables. Each session includes both a lecture component and laboratory component. Students will learn the statistical principles and then apply them to example study datasets. Laboratory sessions will be conducted on the students laptops using STATA software.

Taught by: Ogdie-Beatty, Stephens-Shields
Course usually offered summer term only
Prerequisites: EPID 526 and EPID 527; permission of the instructor(s)
Activity: Lecture
1.0 Course Unit

**EPID 674 Measuring the Microbiome: Methods and Tools**
This is an advanced course addressing the methods and tools used to analyze microbiome data as well as their implications for clinical study design. The course will include: (1) lectures focused on how the microbiome is measured, approaches to the analysis of highly multivariate microbiome data, and the bioinformatic tools used to execute these analyses; (2) hands-on R and command-line coding to build familiarity with commonly used tools and analytic methods; and (3) short, practical assignments to reinforce the lectures and classwork.

The course will acquaint students with classic literature in the field of microbiome research and prepare students to integrate microbiome data collection and analysis with epidemiologic research methodologies.

Taught by: Kelly, Bittinger
Course not offered every year
Prerequisites: EPID 510, EPID 526, EPID 527, EPID 549 and permission of instructors
Activity: Lecture
1.0 Course Unit

**EPID 675 Advanced Methods for Analysis of Complex Genetic Traits**
The advent of high-throughput genotyping has created unprecedented opportunities to characterize in detail information related to genome, epigenome and transcriptome. Such technological advancements have offered exciting opportunities for biological discovery as well as translation of biological data for targeted therapies. However, investigation of genetic polymorphisms, epigenetic signatures, gene transcription, biomarkers and their relationship with environmental factors and disease outcomes requires a thorough understanding of a wide range of experimental methods and statistical approaches. Through critical review of the current literature, this course will provide understanding on various “OMICs” approaches for the study of complex disorders and traits. Students will also understand and present advanced statistical methods and how such concepts can be applied.

Taught by: Saleheen
Course not offered every year
Prerequisites: Introduction to Genetic Epidemiology or equivalent; training in study design and statistical analysis related to statistical genetics and molecular epidemiology, and permission of course directors
Activity: Lecture
1.0 Course Unit

**EPID 699 Lab Rotation**
Activity: Laboratory
0.33 Course Units

**EPID 700 Doctoral Seminar in Epidemiology**
The course is intended to meet the needs of PhD students over the entire program from the coursework phase through the dissertation defense, and is intended to optimize cross-fertilization between the students at all phases of their program.

Taught by: Levy
Prerequisite: Permission of Instructor
Activity: Seminar
1.0 Course Unit

Notes: Restricted to Epidemiology Doctoral Students

**EPID 701 Introduction to Epidemiologic Research**
This course is intended to provide in-depth, exposure to the theory and methods of epidemiologic research. Topics to be covered include causal inference, measures of disease frequency and association, study design, bias and confounding, validity, and epidemiologic analysis.

Prerequisites: Quantitative proficiency. Knowledge and/or experience in working in biomedical research. Permission of instructor.
Activity: Lecture
1.0 Course Unit
EPID 714 Grant Writing/Review
This course will assist students in the design of an NIH grant (F-32, K, R21 orR01) for submission by enhancing their appreciation of the specifics of the grant writing process and in understanding the grant review process. This course is designed to provide background, training, and practice with the writing and submitting of NIH style grants. As a minimum all students who enroll will be expected to write and submit a reasonable draft of a full NIH style grant proposal by the end of the term. During the process, the portions of each proposal will be reviewed as a group by the other students in the course. In response to each review, students are expected to revise their grant sections.
Taught by: Farrar/Gerber
Course usually offered summer term only
Also Offered As: HPR 714
Prerequisites: EPID510, EPID526, EPID560, and EPID570 or Permission of Instructor
Activity: Seminar
0.5 Course Units

EPID 899 Pre-dissertation Research
Activity: Laboratory
0.5 Course Units

EPID 900 Master’s Thesis
These are a series of tutorial sessions conducted by the student’s advisor, which are to support the student’s efforts in developing a research protocol, designing a research project, and completing the study.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

EPID 995 Dissertation
Activity: Dissertation
0.5 Course Units

Finance (FNCE)

FNCE 101 Monetary Economics and the Global Economy
FNCE 101 is an intermediate-level course in macroeconomics and the global economy, including topics in monetary and international economics. The goal is to provide a unified framework for understanding macroeconomic events and policy, which govern the global economic environment of business. The course analyzes the determinants and behavior of employment, production, demand and profits; inflation, interest rates, asset prices, and wages; exchange rates and international flows of goods and assets; including the interaction of the real economy with monetary policy and the financial system. The analysis is applied to current events, both in the US and abroad. HONORS FNCE 101 is only offered in the Fall semester. Registration for this class is through an application process. Please go to: https://fnce.wharton.upenn.edu/programs-course-applications, This course presents the analysis of macroeconomic theory with a current events perspective. The material in the class concentrates on lecture notes, which are the primary learning source, and readings from a course packet of articles drawn from journals, magazines, newspapers, and other economic publications. The material covered will include: (1) Economic Statistics, GDP Price Indices, Productivity and the nature of the business cycle, (2) The government budget and Social Security, (3) Monetary policy, The Fed and other Central Banks, (4) Interest rates - indexed bonds and term structure (5) Aggregate Demand and the determination of income and interest rate, (6) Money and Inflation - the Velocity Approach, (7) Reaction of Financial Markets to economic data, (8) Inflation, inflationary expectations and the Phillips Curve, (9) Supply-side shocks and macro-dynamics, (10) International Balance of Payments, the current account and capital flows, (11) Determination of Exchange Rates, exchange rate systems, purchasing power and interest rate parity.
One-term course offered either term
Also Offered As: FNCE 613
Prerequisites: ECON 010 or ECON 001 and ECON 002 and MATH 104 or MATH 110. Students cannot receive credit for both FNCE 101 and ECON 102. WHARTON STUDENTS ARE REQUIRED TO TAKE FNCE 101 Activity: Lecture
1.0 Course Unit

FNCE 203 Advanced Corporate Finance
The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as an extension of FNCE 100 (FNCE 611). Some are as of financial management not covered in FNCE 100 are covered in FNCE 203. These may include leasing, mergers and acquisitions, corporate reorganizations, financial planning and working capital management, and some other selected topics. Other areas that are covered in FNCE 100 are covered more in depth and more rigorously in FNCE 203. These include investment decision making under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and corporate liabilities, and dividend policy. During the Spring semester, Professor Opp does not allow students to take this course pass fail.
One-term course offered either term
Also Offered As: FNCE 726
Prerequisites: FNCE 100, (FNCE 611), STAT 101, and STAT 102.
Activity: Lecture
1.0 Course Unit
Notes: Professor Opp’s sections may not be taken Pass Fail.
FNCE 205 Investment Management
This course studies the concepts and evidence relevant to the management of investment portfolios. Topics include diversification, asset allocation, portfolio optimization, factor models, the relation between risk and return, trading, passive (e.g., index fund) and active (e.g., hedge-fund, long-short) strategies, mutual funds, performance evaluation, long-horizon investing and simulation. The course deals very little with individual security valuation and discretionary investing (i.e., "equity research" or "stock picking").
Prerequisites: The prequisites for Undergraduates are FNCE 100, and STAT 101, 102 (STAT 102 may be taken concurrently with this course. Given that investment management requires one to analyze and deal effectively with uncertainty, a good grounding in statistics is essential, and familiarity with statistics should extend through multiple regression, covariance, and correlation.
Activity: Lecture
1.0 Course Unit

FNCE 206 Financial Derivatives
This course covers one of the most exciting yet fundamental areas in finance: derivative securities. In the modern financial architecture, financial derivatives can be the most challenging and exotic securities traded by institutional specialists, while at the same time, they can also be the basic securities commonly traded by retail investors such as S&P Index Options. Beyond trading, the basic ideas of financial derivatives serve as building blocks to understand a much broader class of financial problems, such as complex asset portfolios, strategic corporate decisions, and stages in venture capital investing. The global derivatives market is one of the most fast-growing markets, with over $600 trillion notional value in total. It is important as ever to understand both the strategic opportunities offered by these derivative instruments and risks they imply. The main objective of this course is to help students gain the intuition and skills on (1) pricing and hedging of derivative securities, and (2) using them for investment and risk management. In terms of methodologies, we apply the non-arbitrage principle and the law of one price to dynamic models through three different approaches: the binomial tree model, the Black-Scholes-Merton option pricing model, and the simulation-based risk neutral pricing approach. We discuss a wide range of applications, including the use of derivatives in asset management, the valuation of corporate securities such as stocks and corporate bonds with embedded options, interest rate derivatives, credit derivatives, as well as crude oil derivatives. In addition to theoretical discussions, we also emphasize practical considerations of implementing strategies using derivatives as tools, especially when no-arbitrage conditions do not hold.
Prerequisites: The following introductory Finance and Statistics courses are recommended but not required. FNCE 101 and STAT 102 are recommended and can be taken concurrently.
Activity: Lecture
1.0 Course Unit

FNCE 207 Corporate Valuation
The focus of this course is on the valuation of companies. The course covers current conceptual and theoretical valuation frameworks and translates those frameworks into practical approaches for valuing companies. The relevant accounting topics and the appropriate finance theory are integrated to show how to implement the valuation frameworks discussed on a step-by-step basis. The course teaches how to develop the required information for valuing companies from financial statements and other information sources in a real-world setting. Topics covered in depth include discounted cash flow techniques and price multiples. In addition, the course covers other valuation techniques such as leveraged buyout analysis. During the spring semester students cannot take Professor Glode’s FNCE 207 course pass fail, this class must be taken for a grade.
Prerequisites: FNCE 100, (FNCE 611) ACCT 101, AND STAT 101, 111 OR EQUIVALENT ACCT 201 RECOMMENDED
Activity: Lecture
1.0 Course Unit
Notes: Professor Glode’s sections may not be taken Pass/Fail.

FNCE 208 International Corporate Finance
Analyzes financial problems corporations face that result from operating in an international environment. Major topics include managing exchange risk through hedging and financing, measuring exchange rate exposure, calculating the cost of capital for foreign operations, assessment of sovereign risks, capital budgeting from a project and parent perspective, and international taxation.
Prerequisites: A thorough knowledge of FNCE 100 (FNCE 611) is assumed.
Activity: Lecture
1.0 Course Unit

FNCE 209 Real Estate Investment: Analysis and Financing
This course provides a broad introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital market tools used in real estate. There are case studies and two midterms, depending on instructor.
Prerequisites: The following introductory Finance and Statistics courses are recommended but not required. FNCE 101 and STAT 102 are recommended and can be taken concurrently.
Activity: Lecture
1.0 Course Unit
FNCE 219 International Financial Markets

FNCE 219 is a course on international financial markets. Major topics include foreign exchange rates, international money markets, currency and interest rate derivatives (forwards, options, and swaps), international stock and bond portfolios, and cryptocurrencies. Students learn about the features of financial instruments and the motivations of market participants. The class focuses on risk management, investing, and arbitrage relations in these markets.

One-term course offered either term
Prerequisites: The following introductory courses are recommended but not required. FNCE 100, FNCE 101, STAT 101.
Activity: Lecture
1.0 Course Unit

FNCE 220 International Banking

This course focuses on international financial institutions, especially the activities of global, systemically important banks. We will examine how current and historical events are reshaping the industry and highlight the basic analytics of managing a bank's exposure to liquidity, credit, market and reputational risk. Most classes will begin with discussion of a current event related to course topics. Three project teams will be assigned that will give you deeper exposure to analytic techniques related to the course. Throughout the semester, we will discuss public policy issues facing the international financial system.

Taught by: Professor Richard Herring
Course usually offered in spring term
Prerequisites: FNCE 100, FNCE 101, one of which may be taken concurrently.
Activity: Lecture
1.0 Course Unit

FNCE 230 Urban Fiscal Policy

This course will examine the provision of services through cities and local governments. Why cities exist, whether urban public finance matters, investments in infrastructure, realities of local governments such as inequality, poverty, crime, corruption, high cost of living and gentrification, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, and subsidies of businesses, the role of technology, and real estate policies that promote affordability and sustainable city development.

Taught by: Professor Ferreira, Real Estate Department
Course usually offered in fall term
Also Offered As: BEPP 230, REAL 230
Activity: Lecture
1.0 Course Unit

FNCE 235 Fixed Income Securities

This course covers fixed income securities (including fixed income derivatives) and provides an introduction to the markets in which they are traded, as well as to the tools that are used to value these securities and to assess and manage their risk. Quantitative models play a key role in the valuation and risk management of these securities. As a result, although every effort will be made to introduce the various pricing models and techniques as intuitively as possible and the technical requirements are limited to basic calculus and statistics, the class is by its nature quantitative and will require a steady amount of work. In addition, some computer proficiency will be required for the assignments, although familiarity with a spreadsheet program (such as Microsoft Excel) will suffice.

One-term course offered either term
Prerequisites: FNCE 100 and STAT 101 or STAT 102 or STAT 111
Activity: Lecture
1.0 Course Unit

FNCE 238 Capital Markets

The objective of this course is to give you a broad understanding of the framework and evolution of U.S. capital markets, the instruments that are traded, the mechanisms that facilitate their trading and issuance, and the motivations of issuers and investors across different asset classes. The course will highlight the problems that capital market participants are seeking to solve, which you can use in your post-Wharton careers to evaluate future market innovations. We will consider design, issuance, and pricing of financial instruments, the arbitrage strategies which keep their prices in-line with one another, and the associated economic and financial stability issues. We will draw from events in the aftermath of the recent financial crisis, which illustrate financing innovations and associated risks, as well as policy responses that can change the nature of these markets.

One-term course offered either term
Prerequisites: FNCE 100, (FNCE 611)
Activity: Lecture
1.0 Course Unit

FNCE 239 Behavioral Finance

There is an abundance of evidence suggesting that the standard economic paradigm - rational agents in an efficient market - does not adequately describe behavior in financial markets. In this course, we will survey the evidence and use psychology to guide alternative theories of financial markets. Along the way, we will address the standard argument that smart, profit-seeing agents can correct any distortions caused by irrational investors. Further, we will examine more closely the preferences and trading decisions of individual investors. We will argue that their systematic biases can aggregate into observed market inefficiencies. The second half of the course extends the analysis to corporate decision making. We then explore the evidence for both views in the context of capital structure, investment, dividend, and merger decisions.

Course usually offered in spring term
Also Offered As: FNCE 739
Prerequisites: FNCE 100, FNCE 101. Recommended: FNCE 205 and FNCE 203
Activity: Lecture
1.0 Course Unit

FNCE 250 Venture Capital and the Finance of Innovation

This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the "venture capital method," comparables analysis, discounted cash flow analysis, contingent-claims analysis. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology.

Course usually offered in fall term
Prerequisites: FNCE 100 (FNCE 611) and FNCE 101 (FNCE 613); (FNCE 101 and FNCE 613 may be taken concurrently)
Activity: Lecture
1.0 Course Unit
FNCE 251 The Finance of Buyouts and Acquisitions
The course focuses on financial tools, techniques, and best practices used in buyouts (financial buyers) and acquisitions (strategic buyers). While it will touch upon various strategic, organizational, and general management issues, the main lens for studying these transactions will be a financial one. It will explore how different buyers approach the process of finding, evaluating, and analyzing opportunities in the corporate-control market; how they structure deals and how deal structure affects both value creation and value division; how they add value after transaction completion; and how they realize their ultimate objectives (such as enhanced market position or a profitable exit). The course is divided into two broad modules. The first module covers mergers and acquisitions, and the second one studies buyouts by private equity partnerships. During the spring semester this course cannot be taken pass/fail. Prerequisites: FNCE 100 (FNCE 611), FNCE 101 (FNCE 613), Co-Requisite FNCE 203 (FNCE 726) Advanced Corporate Finance or FNCE 207 (FNCE 728) Corporate Valuation.
Activity: Lecture
1.0 Course Unit
Notes: Lectures, cases, and guest speakers. Grading: Class participation, two students projects, two exams.

FNCE 254 Impact Investing
This course explores Impact Investing, a discipline that seeks to generate social benefits as well as financial returns. From tiny beginnings, the Impact Investment space has expanded and now commands significant attention from policymakers, wealthy and public-spirited individuals, academia and, not least, the world’s largest asset managers and philanthropic foundations. Evangelists believe it may be the key to freeing the world from poverty. Skeptics think it will remain confined to the boutique. Regardless, Impact Investing is becoming a distinct career specialization for finance professionals despite the diverse skillset each must have and the uncertainty of the new field’s growth. Prerequisites: Prerequisites: This course has no specific prerequisites, but given its wide-ranging subject matter, students will benefit from completion of any of the following Wharton courses: FNCE 101 Monetary Economics and the Global Economy; FNCE 205 Investment Management; FNCE 238 Capital Markets; and FNCE 395 Private Equity. Coursework or practical experience in microeconomics, development economics, international philanthropy, Non-Governmental Organizations, financial risk management and political risk analysis will also be useful.
Activity: Lecture
1.0 Course Unit

FNCE 256 Finance Energy
The objective of this course is to provide students with detailed knowledge of corporate structures, valuation methods, project finance, risk management practices, corporate governance issues, and geopolitical risks in the energy industry. In general, this course seeks to provide students with an overall context for understanding energy issues and risks, and how these might affect financing and investment decisions for both providers of energy and end-users of energy. Taught by: Professor Erik Gilje
Course usually offered in spring term Prerequisites: FNCE 203, Advanced Corporate Finance or FNCE 207, Corporate Valuation. Students that receive permission to enroll without the prerequisites are expected to review the relevant topics as necessary to meet the requirements of the class.
Activity: Lecture
1.0 Course Unit

FNCE 283 Strategic Equity Finance
This course combines lectures and cases, and will go through actual situations where companies need to make strategic decisions on raising equity capital. We will address different phases of a company’s life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues such as investor activism, governance and regulatory and valuation impact. FNCE 283 is a half semester course offered in Q3 during the spring semester.
Taught by: Professor David Musto and Professor David Erickson
Course usually offered in spring term
Prerequisite: FNCE 100
Activity: Lecture
0.5 Course Units

FNCE 291 Corporate Restructuring
This course will explore the highly active and sophisticated deal making environment that is the hallmark of modern distress corporate restructuring. The course is primarily comprised of two key components. The first is groundwork-laying lectures by three of the top practitioners in the restructuring field. In particular, the lectures will focus on fundamental rights and obligations of debtors, creditors, and other parties in interest in the various types of major chapter 11 cases, providing critical insights into the motivations, strategies, and available tools for chapter 11 participants (which also serve as the foundation for out-of-court deals). The course also will provide a valuation framework for distressed assets. The second element of the course is a series of case study panels. The professors survey the market trends from the previous year bring together key participants from recent deals, including the CEO or chairman of the company, the judge, the lead banker and lead lawyer, and the lead investors to give their insight and perspectives to the class. These panels will provide students real-world insights into the most current issues in the field. Taught by: Professor Bilge Yilmaz will co-teach with James Spayregen, Edward Sassower, Stephen Hessler from the Kirkland Law Firm. Also Offered As: FNCE 791, LAW 908
Prerequisites: The prerequisites for this course are FNCE 203 Advanced Corporate Finance and FNCE 207 Corporate Valuation. The purpose of the prerequisites is to ensure that students have a basic understanding of capital structure, and valuation methods, so that we spend more time on the nuances of distressed situations and less time on reviewing background material.
Activity: Lecture
1.0 Course Unit
Notes: The course’s content will be presented using a mixture of lectures, case studies, and guest speakers. The speakers will be Wharton alumni with leadership roles in the restructuring industry as managers, advisors, and investors.
FNCE 311 Infrastructure Investing
The world economy runs on the infrastructure which has been built over the past 10,000 years. Each year, this infrastructure requires updating and new additions, from roads and bridges (the original infrastructure), to railroads, airports (the more recent infrastructure), to telecommunications and solar and wind power installations (modern infrastructure). There is a vast amount of public (i.e., taxpayer money directed by government officials) and private (i.e., individuals’ money typically managed on their behalf and directed by private equity or banks into infrastructure investments). In this course, we will cover Infrastructure Financing and investing from various angles. We will provide descriptions of types of infrastructure, examine the financing needs of infrastructure projects, consider the historic role of government and non-government funding, and assess the changing needs of consumers and role of technology and the increasing demands posed by a globalizing economy. As private equity firms continue to build infrastructure funds, the need for, and role for, private money continues to evolve, so we will also examine infrastructure investing as an alternative asset class from the investors’ perspective.
Taught by: Professor Kevin Kaiser
Prerequisites: FNCE 100 Corporate Finance; FNCE 207 Corporate Valuation is recommended but not required.
Activity: Lecture
1.0 Course Unit

FNCE 341 Distressed Investing and Value Creation
This course familiarizes students with financial, strategic and legal issues associated with the restructuring of financially distressed firms and investment in distressed securities. The objective is to give students the concepts and tools necessary to assess the often-complex situation facing a firm facing financial distress. The course will cover the various options available for distressed firms, such as out-of-court workouts, exchange offers, prepackaged and pre-negotiated bankruptcies, distressed asset sales, 363 auctions, and Chapter 11 reorganization. We will consider distressed debt as an asset class and develop techniques for investing in distressed securities. We will assess investment opportunities using the concepts of value investing, in which we distinguish the value of asset from price. Students will sharpen their conceptual knowledge of finance and valuation in order to properly estimate the value of a distressed firm, and its securities. We will also address the importance of value creation and how to manage for value creation to resolve distress, or avoid it in the first place.
Prerequisites: FNCE 100, FNCE 203, Recommended FNCE 207. Students who have taken 291/391 cannot receive credit for FNCE 341.
Activity: Lecture
1.0 Course Unit
Notes: The course is lecture and case based, providing ample opportunity to practice valuation of distressed companies, and hosts various guest speakers from the restructuring industry. It should be of interest for a range of careers, including private equity, investment banking, and turnaround management. Please Note: Students who have taken 291/391 cannot receive credit for FNCE 341.

FNCE 383 Strategic Equity Finance
Strategic Equity Finance has a new course number effective 19A. This course is listed as FNCE283 going forward.
Taught by: Professor David Musto and Professor David Erickson
Course usually offered in spring term
Prerequisite: FNCE 100 - Corporate Finance
Activity: Seminar
0.5 Course Units
Notes: Strategic Equity Finance was assigned a new course number effective 19A. This course is listed as FNCE283 going forward.

FNCE 384 Advanced Topics in Private Equity
This course will address a variety of applied topics in private equity (PE), with a focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course), and a primarily U.S.-centric view that should be largely applicable in other markets. In addition, the course will focus on the transaction stage of PE investing i.e., the art of the deal and mostly leave aside deal sourcing, portfolio management and investor relations. The goal of this course is to educate students about the substance, process and mechanics of PE investing, through the lens of the investment professionals, counterparties and advisors that drive transactions to completion. Course topics will address the entire deal process, and will include the following: Commercial Diligence (incl. financial modeling); Debt Financing; Accounting Diligence; Sales & Purchase Agreements; Comps Analysis; and Other Advisory Work. Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently apply those learnings to a real-time mock deal, and preparing dealmaterials that mirror a real private equity transaction. The in-class lectures will cover both conceptual frameworks and real-world examples.
Taught by: Bilge Yilmaz and Burcu Esmer
Prerequisites: Successful completion of core finance requirements, FNCE 100, and FNCE 101 as well as FNCE 203 or FNCE 251. Special permission can also be requested based on relevant professional experience.
Activity: Lecture
1.0 Course Unit

FNCE 385 ASP - Fin-Tech
The course exposes students to this fast-growing and exciting intersection between finance (Fin) and technology (Tech) while emphasizing the role data and analytics play. The course is structured around three main FinTech areas: (i) Lending/Banking services, (ii) Clearing (iii) Trading. It provides specific coverage and examples of developments from (1) market-place lending, (2) blockchain and distributed ledgers, (3) quantitative trading and its use of non-standard inputs. In each of these areas, we start by analyzing the marketplace, the incumbents, and then proceed to analyze the impact of the most relevant technologies have on the business. The course is built around data/code examples, cases, guest lectures, and group projects. Student are thus expected to work in teams and demonstrate a high level of independent learning and initiative.
Also Offered As: FNCE 885
Prerequisites: A thorough knowledge of FNCE 100 is assumed.
Activity: Lecture
0.5 Course Units
FNCE 386 ASP - Hedge Funds
This course will cover critical aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the U.S. and abroad that are most relevant for hedge funds. It will also present the major hedge fund strategies, describe operation, control, administration, due diligence and valuation issues. Performance evaluation and investing in hedge funds from the investor’s perspective will be discussed as will be issues of potential changes in regulation, risk management, and the use of leverage. The format of the course will mix lectures with presentations from industry participants, hedge fund managers, those who invest in hedge funds, those who advise them and provide services to them, and those who regulate them. Those who want to launch a hedge fund, join an existing one, invest in one, or provide services to one will want to register for this course.
Taught by: Professor Scott Richard
Course usually offered in fall term
Prerequisite: FNCE 100
Activity: Lecture
0.5 Course Units

FNCE 387 ASP - Shareholder Activism
The aim of the course is to provide an introduction to shareholder activism. The course makes use of lectures and case studies. The lectures expose the students to the institutional and empirical facts as well as approaches followed by leading shareholder activists. The case studies are designed to provide students an experience on identifying potential opportunity for value creation through active engagement. Assignments require students to develop/practice skills on fundamental analysis.
Taught by: Professor Bilge Yilmaz and Kevin Kaiser
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

FNCE 389 Supervised Study in Finance
Integrates the work of the various courses and familiarizes the student with the tools and techniques of research.
Prerequisites: Senior standing, 3.4 grade point average. Must be supervised by a Standing Faculty member in the Finance Department.
Activity: Independent Study
1.0 Course Unit
FNCE 401 Advanced Topics in Pe
Activity: Lecture
1.0 Course Unit

FNCE 402 Shareholder Activism
Activity: Lecture

FNCE 611 Corporate Finance
This course serves as an introduction to business finance (corporate financial management and investments) for both non-majors and majors preparing for upper-level course work. The primary objective is to provide the framework, concepts, and tools for analyzing financial decisions based on fundamental principles of modern financial theory. The approach is rigorous and analytical. Topics covered include discounted cash flow techniques; corporate capital budgeting and valuation; investment decisions under uncertainty; capital asset pricing; options; and market efficiency. The course will also analyze corporate financial policy, including capital structure, cost of capital, dividend policy, and related issues. Additional topics will differ according to individual instructors. 
Also Offered As: FNCE 100
Prerequisites: ACCT 611, 612, 613; MGEC 612, 611; STAT 613, 621 prerequisite or concurrent.
Activity: Lecture
1.0 Course Unit

FNCE 612 Accelerated Corp Finance
This course is intended for students with prior knowledge of finance or with strong analytical backgrounds. Together with the pre-term preparation course (FNCE604) the foundation for subsequent courses in corporate finance, corporate valuation, investments, and financial derivatives. Its purpose is to develop a framework for analyzing a firm's investment and financial decisions. This course will start where FNCE604 ends. More precisely, it will provide an introduction to capital budgeting techniques under uncertainty, asset valuation, the operation and efficiency of capital markets, the optimal capital structure and dividend policy of the firm and options. In short, it will cover all the topics of a typical semester-long finance introductory class in six weeks. This course assumes that students are familiar with the material covered in FNCE 604. As a result, it is only available to those students who successfully passed the Finance Placement Exam at the end of the pre-term. This course is not suitable for students new to finance and with limited analytical backgrounds. This course is hard. The pace is fast and it requires a major investment of time and effort outside class. Only first year students can enroll in this class after Fall 2019.
Activity: Lecture
0.5 Course Units
Notes: Q-1 Half Semester course

FNCE 613 Macroeconomics and the Global Economic Environment
This course is required for all students except those who, having prior training in macroeconomics, money and banking, and stabilization policy at an intermediate or advanced level, can obtain a waiver by passing an examination. The purpose of FNCE 613 is to train the student to think systematically about the current state of the economy and macroeconomic policy, and to be able to evaluate the economic environment within which business and financial decisions are made. The course emphasizes the use of economic theory to understand the workings of financial markets and the operation and impact of government policies. Specifically, the course studies the determinants of the level of national income, employment, investment, interest rates, the supply of money, inflation, exchange rates, and the formulation and operation of stabilization policies.
Also Offered As: FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 614 Corporate Finance (Half CU)
This course serves as an introduction to corporate investments for non-majors. The primary objective is to provide a framework, concepts, and tools for analyzing financial decisions based on fundamental principles of modern financial theory. The approach is rigorous and analytical.
Topics covered include discounted cash flow techniques, corporate capital budgeting and valuation, investment decisions under uncertainty, and capital asset pricing. This course will not cover the following topics included in FNCE 611, the full semester Corporate Finance course: market efficiency, corporate financial policy (including capital structure, cost of capital, dividend policy, and related issues), and options. Please Note: This course will not count towards the Finance Major. Format: Primarily lecture. Grading based on problem sets, one or two cases, and a final exam.
Prerequisites: ACCT 611, 612, 613; MGEC 612, 611; STAT 613, 621; prerequisite or concurrent.
Activity: Lecture
0.5 Course Units

FNCE 615 Macroeconomics and The Global Economic Environment (Half CU)
FNCE 615 Introduction To Macroeconomics and The Global Economic Environment (Half Cu) is intended for non-finance majors. It is a half-semester course in macroeconomics, with an emphasis on current events and policy applications. The goal of this course is to provide the foundation needed to recognize and understand broad economic and financial movements in the global economy. Key topics include national income accounting, production and economic growth, employment, business cycles, monetary and fiscal policy, and international finance. By the end of this course, students will be able to evaluate and discuss the global economic environment in which business and financial decisions are made. PLEASE NOTE: This course will not count towards a Finance Major
Prerequisite: FNCE 611 or FNCE 612
Activity: Lecture
0.5 Course Units
FNCE 717 Financial Derivatives
This course covers one of the most exciting yet fundamental areas in finance: derivative securities. In the modern financial architecture, financial derivatives can be the most challenging and exotic securities traded by institutional specialists, while at the same time, they can also be the basic securities commonly traded by retail investors such as S&P Index Options. Beyond trading, the basic ideas of financial derivatives serve as building blocks to understand a much broader class of financial problems, such as complex asset portfolios, strategic corporate decisions, and stages in venture capital investing. The global derivatives market is one of the most fast-growing markets, with over $600 trillion notional value in total. It is important as ever to understand both the strategic opportunities offered by these derivative instruments and risks they imply. The main objective of this course is to help students gain the intuition and skills on (1) pricing and hedging of derivative securities, and (2) using them for investment and risk management. In terms of methodologies, we apply the non-arbitrage principle and the law of one price to dynamic models through three different approaches: the binomial tree model, the Black-Scholes-Merton option pricing model, and the simulation-based risk neutral pricing approach. We discuss a wide range of applications, including the use of derivatives in asset management, the valuation of corporate securities such as stocks and corporate bonds with embedded options, interest rate derivatives, credit derivatives, as well as crude oil derivatives. In addition to theoretical discussions, we also emphasize practical considerations of implementing strategies using derivatives as tools, especially when no-arbitrage conditions do not hold.
One-term course offered either term
Also Offered As: FNCE 206
Prerequisites: The following introductory Finance and Statistics courses are recommended but not required. FNCE 611 or FNCE 612; STAT 613, or STAT 621 may be taken concurrently.
Activity: Lecture
1.0 Course Unit

FNCE 719 International Financial Markets
FNCE 719 is a course on international financial markets. Major topics include foreign exchange rates, international money markets, currency and interest rate derivatives (forwards, options, and swaps), international stock and bond portfolios, and cryptocurrencies. Students learn about the features of financial instruments and the motivations of market participants. The class focuses on risk management, investing, and arbitrage relations in these markets.
One-term course offered either term
Prerequisites: The following introductory courses are recommended but not required. FNCE 611 (or FNCE 612), FNCE 613.
Activity: Lecture
1.0 Course Unit

FNCE 720 Investment Management
This course studies the concepts and evidence relevant to the management of investment portfolios. Topics include diversification, asset allocation, portfolio optimization, factor models, the relation between risk and return, trading, passive (e.g., index-fund) and active (e.g., hedge-fund, long-short) strategies, mutual funds, performance evaluation, long-horizon investing and simulation. The course deals very little with individual security valuation and discretionary investing (i.e., "equity research" or "stock picking").
One-term course offered either term
Prerequisites: The prerequisites for MBA students are FNCE 611 or FNCE 612; and STAT 613 or STAT 621 Given that investment management requires one to analyze and deal effectively with uncertainty, a good grounding in statistics is essential, and familiarity with statistics should extend through multiple regression, covariance, and correlation.
Activity: Lecture
1.0 Course Unit

FNCE 721 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two mid-terms, (depending on instructor). Cross-listed with REAL 721.
Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong
One-term course offered either term
Also Offered As: REAL 721
Prerequisites: FNCE 611 or FNCE 612.
Activity: Lecture
0.5 Course Units
Notes: Lecture with discussion required

FNCE 725 Fixed Income Securities
This course covers fixed income securities (including fixed income derivatives) and provides an introduction to the markets in which they are traded, as well as to the tools that are used to value these securities and to assess and manage their risk. Quantitative models play a key role in the valuation and risk management of these securities. As a result, although every effort will be made to introduce the various pricing models and techniques as intuitively as possible and the technical requirements are limited to basic calculus and statistics, the class is by its nature quantitative and will require a steady amount of work. In addition, some computer proficiency will be required for the assignments, although familiarity with a spreadsheet program (such as Microsoft Excel) will suffice.
Course usually offered in fall term
Prerequisites: FNCE 611 or FNCE 612 and STAT 613 or STAT 621
Activity: Lecture
1.0 Course Unit
FNCE 726 Advanced Corporate Finance
The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as an extension of FNCE 611. Some areas of financial management not covered in FNCE 611 are covered in FNCE 726. These may include leasing, mergers and acquisitions, corporate reorganizations, financial planning, and working capital management, and some other selected topics. Other areas that are covered in FNCE 611 are covered more in depth and more rigorously in FNCE 726. These include investment decision making under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and corporate liabilities, and dividend policy.
One-term course offered either term
Also Offered As: FNCE 203
Prerequisites: FNCE 611 or FNCE 612; and FNCE 613.
Activity: Lecture
1.0 Course Unit
Notes: Professor Opp's sections cannot be taken Pass/Fail

FNCE 728 Corporate Valuation
The focus of this course is on the valuation of companies. The course covers current conceptual and theoretical valuation frameworks and translates those frameworks into practical approaches for valuing companies. The relevant accounting topics and the appropriate finance theory are integrated to show how to implement the valuation frameworks discussed on a step-by-step basis. The course teaches how to develop the required information for valuing companies from financial statements and other information sources in a real-world setting. Topics covered in depth include discounted cash flow techniques and price multiples. In addition, the course covers other valuation techniques such as leveraged buyout analysis.
Taught by: Professor Glode in the spring semester
One-term course offered either term
Prerequisites: Minimum of normal first-year courses in accounting, economics, statistics, and FNCE 611 or 612; FNCE 613 (further coursework in financial accounting such as ACCT 742 is very useful).
Activity: Lecture
1.0 Course Unit
Notes: Professor Glode's sections may not be taken Pass/Fail

FNCE 730 Urban Fiscal Policy
This course will examine the provision of services through cities and local governments. Why cities exist, whether urban public finance matters, investments in infrastructure, realities of local governments such as inequality, poverty, crime, corruption, high cost of living and gentrification, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, and subsidies of businesses, the role of technology, and real estate policies that promote affordability and sustainable city development.
Taught by: Professor Ferreira, Real Estate Department
Course usually offered in fall term
Also Offered As: BEPP 773, REAL 730
Activity: Lecture
1.0 Course Unit

FNCE 731 International Corporate Finance
This course analyzes financial problems corporations face that result from operating in an international environment. Major topics covered are corporate strategy and the decision to invest abroad, international portfolio diversification, managing exchange risk, taxation issues, cost of capital and financial structure in the multinational firm, and sources of financing. Departmental Website: https://fnce.wharton.upenn.edu/Registration: Registration for MBA electives is handled through the MBA Course Auction. For questions about core courses or MBA electives that don't appear in the course auction please contact the MBA Program Office. Non-MBAs interested in graduate classes must work through the academic department and the MBA Program Office.
Also Offered As: FNCE 208
Prerequisite: FNCE 611 or 612 - A thorough knowledge of Corporate Finance is assumed
Activity: Lecture
1.0 Course Unit

FNCE 732 International Banking
This course focuses on international financial institutions, especially the activities of global, systematically important banks. We will examine how current and historical events are reshaping the industry and highlight the basic analytics of managing a bank's exposure to liquidity, credit, market and reputational risk. Most classes will begin with discussion of a current event related to course topics. Three team projects will be assigned that will give you deeper exposure to analytic techniques related to the course. Throughout the semester, we will discuss public policy issues facing the international financial system.
Taught by: Professor Richard Herring
Course usually offered in spring term
Prerequisites: FNCE 611 or 612; FNCE 613. One, but not both, can be taken concurrently.
Activity: Lecture
1.0 Course Unit

FNCE 738 Capital Markets
The objective of this course is to give you a broad understanding of the instruments traded in modern financial markets, the mechanisms that facilitate their trading and issuance, as well as, the motivations of issuers and investors across different asset classes. The course will balance functional and institutional perspectives by highlighting the problems capital markets participants are seeking to solve, as well as, the existing assets and markets which have arisen to accomplish these goals. We will consider design, issuance, and pricing of financial instruments, the arbitrage strategies which keep their prices in-line with one another, and the associated economic and financial stability issues. The course is taught in lecture format, and illustrates key concepts by drawing on a collection of case studies and visits from industry experts.
One-term course offered either term
Prerequisites: FNCE 611 or 612; and FNCE 613
Activity: Lecture
1.0 Course Unit
FNCE 739 Behavioral Finance
There is an abundance of evidence suggesting that the standard economic paradigm - rational agents in an efficient market - does not adequately describe behavior in financial markets. In this course, we will survey the evidence and use psychology to guide alternative theories of financial markets. Along the way, we will address the standard argument that smart, profit-seeing agents can correct any distortions caused by irrational investors. Further, we will examine more closely the preferences and trading decisions of individual investors. We will argue that their systematic biases can aggregate into observed market inefficiencies. The second half of the course extends the analysis to corporate decision making. We then explore the evidence for both views in the context of capital structure, investment, dividend, and merger decisions.
Course usually offered in spring term
Also Offered As: FNCE 239
Prerequisites: FNCE 611 or 612; and FNCE 613. Recommended:
FNCE 720 and FNCE 726.
Activity: Lecture
1.0 Course Unit

FNCE 750 Venture Capital and the Finance of Innovation
This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the "venture capital method," comparables analysis, discounted cash flow analysis, contingent-claims analysis. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology.
Course usually offered in spring term
Prerequisites: FNCE 611 and FNCE 613 - FNCE 613 may be taken concurrently
Activity: Lecture
1.0 Course Unit

FNCE 751 The Finance of Buyouts and Acquisitions
The focus of this course is on buying (or acquiring controlling stakes in) firms. The main topics to be covered are mergers and friendly acquisitions, hostile takeovers and buyouts. Using case studies, the course surveys the drivers of success in the transactions. While issues regarding motive and strategy will be discussed, financial theory would be the main lens used to view these control acquiring transactions. This will allow students to (1) evaluate transactions through valuation approaches and (2) structure deals employing financial innovation as a response to legal framework and economic frictions. This course should be of interest to students interested in pursuing careers as private equity investors, advisors in investment banking and corporate managers that deal with these issues. This course assumes familiarity with valuation analysis. During the spring semester students are not permitted to take this course pass fail.
Prerequisites: Pre-Requisites FNCE 611 and FNCE 613 (Or 612) - CO-Requisites FNCE 726 or FNCE 728 may be taken concurrently.
Activity: Lecture
1.0 Course Unit

FNCE 754 Impact Investing
This course explores Impact Investing, a discipline that seeks to generate social benefits as well as financial returns. From tiny beginnings, the Impact Investment space has expanded and now commands significant attention from policymakers, wealthy and public-spirited individuals, academia and, not least, the world’s largest asset managers and philanthropic foundations. Evangelists believe it may be the key to freeing the world from poverty. Skeptics think it will remain confined to the boutique. Regardless, Impact Investing is becoming a distinct career specialization for finance professionals despite the diverse skillset each must have and the uncertainty of the new field’s growth.
Taught by: Christopher Geczy, Ph.D.
Prerequisites: Prerequisites This course has no specific prerequisites, but given its wide-ranging subject matter, students will benefit from completion of any of the following Wharton courses:
FNCE 613 Macroeconomics and the Global Economic Environment;
FNCE 720 Investment Management; FNCE 738 Capital Markets;
and FNCE 895 Private Equity. Coursework or practical experience in microeconomics, development economics, international philanthropy, Non-Governmental Organizations, financial risk management and political risk analysis will also be useful.
Activity: Lecture
1.0 Course Unit

FNCE 756 Energy Finance
The objective of this course is to provide students with detailed knowledge of corporate structures, valuation methods, project finance, risk management practices, corporate governance issues, and geopolitical risks in the energy industry. In general, this course seeks to provide students with an overall context for understanding energy issues and risks, and how these might affect financing and investment decisions for both providers of energy and end-users of energy.
Taught by: Professor Erik Giljie
One-term course offered either term
Prerequisites: The prerequisites for the course are FNCE 726 Advanced Corporate Finance or FNCE 728 Corporate Valuation. Students who receive permission to enroll without the prerequisites are expected to review the relevant topics as necessary to meet the requirements of the class.
Activity: Lecture
1.0 Course Unit

FNCE 754 Strategic Equity Finance
This course combines lectures and cases, and will go through actual situatio where companies need to make strategic decisions on raising equity capital. We will address different phases of a company’s life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues such as investor activism, governance and regulatory and valuation impact.
FNCE 783 is a half semester course offered in Q3 of the spring semester. Taught by: Professor David Musto and Professor David Erickson
Course usually offered in spring term
Prerequisite: FNCE 611/612
Activity: Lecture
0.5 Course Units
FNCE 785 Business Strategy & Corp
This course explores strategic, business and legal decision making in a fluid real world corporate context. Classes will cover a series of timely financial and legal subjects as well as case studies that deal with topical problems in corporate governance, investment strategy, executive compensation and potential corporate and criminal behavior. Press, public market reaction and governmental/political considerations will be integrated into the discussion. All students will be required to participate in one major team project. An equal number of graduate law and business students will participate. The instructor, a 26 year veteran and retired partner of the private equity firm KKR, is also an attorney and CPA.
Taught by: Perry Golkin
Also Offered As: LAW 542, LGST 785
Prerequisite: No Pre-Requisites
Activity: Lecture
1.0 Course Unit

FNCE 791 Corporate Restructuring
This course will explore the highly active and sophisticated deal making environment that is the hallmark of modern distress corporate restructuring. The course is primarily comprised of two key components. The first is groundwork-laying lectures by three of the top practitioners in the restructuring field. In particular, the lectures will focus on fundamental rights and obligations of debtors, creditors, and other parties in interest in the various types of major chapter 11 cases, providing critical insight into understanding the motivations, strategies, and available tools for chapter 11 participants (which also serve as the foundation for out-of-court deals). The course also will provide a valuation framework for distressed assets. The second element of the course is a series of case study panels. The professors survey the market trends from the previous year bring together key participants from recent deals, including the CEO or chairman of the company, the judge, the lead banker and lead lawyer, and the lead investors to give their insight and perspectives to the class. These panels will provide students real-world insights into the most current issues in the field. By Video application only, send a short 30 second to 1 minute video why you want to take this course. The video must go to Kyle.Ferrier@Kirkland.com by 8-1-19
Taught by: Professor Bilge Yilmaz will co-teach with James Spayregen, Edward Sassower, Stephen Hessler from the Kirkland Law Firm.
Also Offered As: FNCE 291, LAW 908
Prerequisites: FNCE 611 or FNCE 612; FNCE 613, FNCE 726 and FNCE 728 or permission of the professor. Send a short 30 second to 1 minute video as to why you want to takethis class. The video must go to Kyle.Ferrier@Kirkland.com. The deadline to submit your video is August 1, 2019.
Activity: Lecture
1.0 Course Unit
Notes: This year the application process is a short 30 second to 1 minute video on why the student wants to do the course. The video should be sent to Kyle.Ferrier@Kirkland.com. The deadline to submit the video is August 1, 2019. The course's content will be presented using a mixture of lectures, case studies, and guest speakers. The speakers will be Wharton alumni with leadership roles in the restructuring industry as managers, advisors, and investors.

FNCE 811 Infrastructure Investing
The world economy runs on the infrastructure which has been built over the past 10,000 years. Each year, this infrastructure requires updating and new additions, from roads and bridges (the original infrastructure), to railroads, airports (the more recent infrastructure), to telecommunications and solar and wind power installations (modern infrastructure). There is a vast amount of public (i.e., taxpayer money directed by government officials) and private (i.e., individuals' money typically managed on their behalf and directed by private equity or banks into infrastructure investments). In this course, we will cover Infrastructure Financing and investing from various angles. We will provide descriptions of types of infrastructure, examine the financing needs of infrastructure projects, consider the historic role of government and non-government funding, and assess the changing needs of consumers and role of technology and the increasing demands posed by a globalizing economy. As private equity firms continue to build infrastructure funds, the need for, and role for, private money continues to evolve, so we will also examine infrastructure investing as an alternative asset class from the investors’ perspective.
Taught by: Professor Kevin Kaiser
Prerequisites: FNCE 611 Corporate Finance; FNCE 728 is recommended but not required.
Activity: Lecture
1.0 Course Unit

FNCE 841 Distressed Investing and Value Creation
This course familiarizes students with financial, strategic and legal issues associated with the restructuring of financially distressed firms and investment in distressed securities. The objective is to give students the concepts and tools necessary to assess the often-complex situation facing a firm facing financial distress. The participants will gain a basic understanding of the various options available for distressed firms, such as out-of-court workouts, exchange offers, prepackaged and pre-negotiated, bankruptcies, distressed asset sales, 363 auctions, and Chapter 11 reorganization. We will explore the difference between economic and financial distress, and the implications for the restructuring process. Finally, we will consider distressed debt as an asset class and develop techniques for investing in distressed securities. We will approach the investment opportunities using the concepts of value investing, in which we sharply distinguish the value of an asset from its price (as Warren Buffet explains, "Price is what you pay, value is what you get") Students will sharpen their conceptual knowledge of finance and valuation in order to properly estimate the value of a distressed firm, and then supplement that with the complexities of valuing specific securities with the capital structure.
Taught by: Professor Kevin Kaiser
Activity: Lecture
1.0 Course Unit
Notes: The course is lecture and case based, providing ample opportunity to prac valuation of distressed companies, and hosts various guest speakers from restructuring industry. It should be of interest for a range of careers, including private equity, investment banking, and turnaround management.
FNCE 883 Strategic Equity Finance
Strategic Equity Finance has a new course number effective 19A This course is listed as FNCE783 going forward
Taught by: Professor David Musto and Professor David Erickson
Course usually offered in spring term
Prerequisite: FNCE 611 Corporate Finance
Activity: Lecture
0.5 Course Units
Notes: Strategic Equity Finance was assigned a new course number effective 19A This course is listed as FNCE783 going forward

FNCE 884 ASP - Advanced Topics in Private Equity
This course will address a variety of applied topics in private equity (PE), with a focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course), and a primarily U.S.-centric view that should be largely applicable in other markets. In addition, the course will focus on the transaction stage of PE investing i.e., the art of the deal and mostly leave aside deal sourcing, portfolio management and investor relations. The goal of this course is to educate students about the substance, process and mechanics of PE investing, through the lens of the investment professionals, counterparts and advisors that drive transactions to completion. Course topics will address the entire deal process, and will include the following: Commercial Diligence (incl. financial modeling); Debt Financing; Accounting Diligence; Sales & Purchase Agreements; Comps Analysis; and Other Advisory Work. Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently apply those learnings to a real-time mock deal, and preparing dealmaterials that mirror a real private equity transaction. The in-class lectures will cover both conceptual frameworks and real-world examples. FNCE 884-001 will be taught by Professor Bilge Yilmaz. Section 001 will contain six hours of material on how to execute the value creation plan post acquisition through an operational partner's perspective. In balance, section 002 will be taught by Professor Bilge Yilmaz and David Bard, Senior Fellow and Lecture will spend more time on all other topics.
Taught by: Professor Bilge Yilmaz (yilmaz@wharton.upenn.edu) and Fellow David Bard
Prerequisites: Successful completion of core finance requirements, FNCE 611 and FNCE 613, as well as FNCE 726 or FNCE 751; special permission can also be requested based on relevant professional experience.
Activity: Lecture
1.0 Course Unit

FNCE 885 Fin-Tech
The course exposes students to this fast-growing and exciting intersection between finance (Fin) and technology (Tech) while emphasizing the role data and analytics play. The course is structured around three main FinTech areas: (i) Lending/Banking services, (ii) Clearing (iii) Trading. It provides specific coverage and examples of developments from (1) market-place lending, (2) blockchain and distributed ledgers, (3) quantitative trading and its use of non-standard inputs. In each of these areas, we start by analyzing the marketplace, the incumbents, and then proceed to analyze the impact of the most relevant technologies have on the business. The course is built around data/code examples, cases, guest lectures, and group projects. Student are thus expected to work in teams and demonstrate a high level of independent learning and initiative.
Also Offered As: FNCE 385
Prerequisite: A thorough knowledge of FNCE 611 is assumed
Activity: Lecture
0.5 Course Units

FNCE 886 ASP - Hedge Funds
This course will cover critical aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the U.S. and abroad that are most relevant for hedge funds. It will also present the major hedge fund strategies, describe operation, control, administration, due diligence and valuation issues. Performance evaluation and investing in hedge funds from the investor’s perspective will be discussed as will be issues of potential changes in regulation, risk management, and the use of leverage. The format of the course will mix lectures with presentations from industry participants, hedge fund managers, those who invest in hedge funds, those who advise them and provide services to them, and those who regulate them. Those who want to launch a hedge fund, join an existing one, invest in one, or provide services to one will want to register for this course.
Taught by: Professor Scott Richard
Prerequisite: FNCE 611 or FNCE 612
Activity: Lecture
0.5 Course Units

FNCE 887 ASP - Shareholder Activism
The aim of the course is to provide an introduction to shareholder activism. The course makes use of lectures and case studies. The lectures expose the students to the institutional and empirical facts as well as approaches followed by leading shareholder activists. The case studies are designed to provide students an experience on identifying potential opportunity for value creation through active engagement. Assignments require students to develop/practice skills on fundamental analysis.
Taught by: Professor Bilge Yilmaz and Kevin Kaiser
One-term course offered either term
Activity: Lecture
0.5 Course Units

FNCE 888 Adv PE-Fundraising, Sourcing and Value Creation.
This course is for second year MBA students. Please Note: Students cannot receive credit for both FNCE 884 and FNCE 888. This course will address a variety of topics in private equity (PE) leveraging a highly practical and real-world approach. It will focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course), and a primarily U.S.-centric view that should be largely applicable in other markets. The course will focus on several key areas outside the private equity transaction: fundraising, sourcing investment opportunities, and creating value under PE ownership. The goal of this course is to educate students about these aspects of PE investing through the lens of the investment professionals, consultants, counterparts and advisors that live them each day. Students will be expected to actively engage in classroom discussions, challenging one another and the lecturers about how to think through these issues in an ever-evolving investment world. In addition, throughout the course, students will be expected participate actively with their teams as they proceed with at home assignments.
Taught by: Professor Bilge Yilmaz
Prerequisite: FNCE 751 is Strongly recommended
Activity: Lecture
1.0 Course Unit
Notes: This course is for second year MBA students. Please Note: Students cannot receive credit for both FNCE 884 and FNCE 888.
FNCE 893 Policy Decisions by Central Banks: The Fed, the ECB and the BOI
This course aims to provide the future global manager and financial analyst with the knowledge on policies set by central banks, regulators and governments to reach the goals of price and financial stability as well as support of growth and employment. The core of the course connects between the formal and actual goals that central banks follow and the related economic analysis on which the goals and the policies are set. We will explain the economic rationale for the policy prescriptions to reach the goals and how these are implemented using institutional framework in the US, the European Central Bank (ECB), Israel and remarks on other countries. We use data, current events and events of the 2007-2013 financial crisis as a basis for discussion and assignments. All these are aimed at understanding how and why the Federal Reserve of the US (the Fed), The bank of Israel (BOI) and the European Central Bank (ECB) set their policies and how that is related to academic research on these issues.
Taught by: Professor Zvi Eckstein; Dean and Professor, Th Arison School of Business And the Tiomkin School of Economics. Herzliya, Israel
Also Offered As: FNCE 393
Prerequisites: FNCE 611 or 612; FNCE 613; STAT 613.
Activity: Lecture
0.5 Course Units
Notes: Requirements; Final examinations (55%-passing grade is required); two out of three assignments (cases) done by teams of 3-4 students (20%); one group participation (10%); active participation in class discussion (15%)

FNCE 895 Advanced Seminar in Private Equity
This course will be a survey of the private equity asset class. Its objective is to provide an understanding of the concepts, agents, and institutions involved in the late stage corporate private equity market in the U.S. and around the globe. It will examine the buyout market and the activities of buyout funds from the differing perspectives of private equity investors, private equity fund sponsors, and managers of the portfolio companies. The course will be taught almost entirely with cases. Distinguished Wharton alumni in the private equity industry will be our guest speakers for many of the cases based on transactions they concluded. While this course is primarily intended for graduate students, admission may be granted to a limited number of interested undergraduate students.
PLEASE NOTE: this course may be recorded for live or subsequent distribution, display, broadcast, or commercialization in any media, including video, audio, or electronic media. For additional information, see the course syllabus or contact the department. This is a Pass/Fail course and will not count towards your concentration.
Also Offered As: FNCE 395
Prerequisites: FNCE 726 and FNCE 751 or permission from the instructor.
Activity: Lecture
0.5 Course Units

FNCE 896 Finance in Europe
null This is a short seminar on finance in Europe. Its objective is to bring students, academics and several industry experts together to study financial markets, practice, and institutions in Europe. The course will primarily examine the following areas: 1. Current challenges in European markets and Euro Zone 2. Political economy of European Union 3. Alternative Investments 4. Investment Banking & Cross Border Mergers and Acquisitions. We will cover the above topics by studying the practice and transactions in Europe with a comparison to USA and rest of the world. This is a half unit course and it is designed for Wharton MBAs.
Exceptionally motivated undergraduate students are also welcome to take the course.
Also Offered As: WH 215
Activity: Lecture
0.5 Course Units

FNCE 897 Finance In The Middle East & North Africa
This is a Wharton Global Modular Course on finance in the Middle East and North Africa. Its objective is to bring students, academics and industry experts together to study financial markets, practice, and institutions in this region.
Taught by: Professor Bulent Gultekin, Finance Department and Professor Michael J.T. McMillen, Penn Law School
Also Offered As: WH 214
Activity: Lecture
0.5 Course Units
Notes: Course Format - This course will be taught through cases and lectures. Guest Lecturers - Distinguished practitioners will lecture and conduct case discussions. Our guest lecturers will bring their experience and insights to the classroom.

FNCE 899 Independent Study Project in Finance
Independent Study Projects require extensive independent work and a considerable amount of writing. ISP in Finance are intended to give students the opportunity to study a particular topic in Finance in greater depth than is covered in the curriculum. The application for ISP's should outline a plan of study that requires at least as much work as a typical course in the Finance Department that meets twice a week. At a minimum, we need a description of the methodology you intend to employ, a bibliography and description of the data that you will use as well as a list of interim deliverables and dates to ensure that you complete the project within the semester. Applications for FNCE 899 ISP's will not be accepted after the THIRD WEEK OF THE SEMESTER. You must submit your Finance ISP request using the Finance Department's ISP form located at https://fnce.wharton.upenn.edu under the Course ISP section.
Prerequisites: FNCE 899, ISP's must be supervised by a Standing Faculty member of the Finance Department.
Activity: Independent Study
1.0 Course Unit
FNCE 911 Financial Economics
The objective of this course is to undertake a rigorous study of the theoretical foundations of modern financial economics. The course will cover the central themes of modern finance including individual investment decisions under uncertainty, stochastic dominance, mean variance theory, capital market equilibrium and asset valuation, arbitrage pricing theory, option pricing, and incomplete markets, and the potential application of these themes. Upon completion of this course, students should acquire a clear understanding of the major theoretical results concerning individuals’ consumption and portfolio decisions under uncertainty and their implications for the valuation of securities.
Course usually offered in fall term
Prerequisites: ECON 681 or ECON 701, Matrix Algebra, and Calculus
Activity: Lecture
1.0 Course Unit

FNCE 912 Corporate Finance and Financial Institutions
This course provides students with an overview of the basic contributions in the modern theory of corporate finance and financial institutions. The course is methodology oriented in that students are required to master necessary technical tools for each topic. The topics covered may include capital structure, distribution policy, financial intermediation, incomplete financial contracting, initial and seasoned public offerings, market for corporate control, product market corporate finance interactions, corporate reorganization and bankruptcy, financing in imperfect markets, security design under adverse selection and moral hazard, and some selected topics.
Course usually offered in spring term
Prerequisite: ECON 681 or ECON 701
Activity: Lecture
1.0 Course Unit

FNCE 920 Review of Financial Theory
This course is a review of the central theoretical foundations of finance. The course will cover a variety of recent developments in the theory of financial economics, including the rational expectations framework. We will then investigate where this framework has succeeded and where it has not. Recently documented deviations from the framework in the literature are discussed and placed in context. The course will also focus on hypothesis development, recent research methods, and research writing. The ultimate objective is for students to develop their own hypotheses and research ideas, resulting in a paper.
Course not offered every year
Prerequisites: ECON 681 or ECON 701 and Calculus. FNCE 911 is recommended.
Activity: Lecture
1.0 Course Unit

FNCE 921 Introduction to Empirical Methods in Finance
This course is an introduction to empirical methods commonly employed in finance. It provides the background for FNCE 934, Empirical Research in Finance. The course is organized around empirical papers with an emphasis on econometric methods. A heavy reliance will be placed on analysis of financial data.
Course usually offered in spring term
Prerequisites: FNCE 911 (can be taken concurrently), STAT 510 and 511 or equivalent.
Activity: Lecture
1.0 Course Unit

FNCE 922 Continuous-Time Financial Economics
This course covers some advanced material on the theory of financial markets developed over the last two decades. The emphasis is on dynamic asset pricing and consumption choices in a continuous time setting. The articles discussed include many classical papers in the field as well as some of the most recent developments. The lectures will emphasize the concepts and technical tools needed to understand the articles.
Course usually offered in fall term
Prerequisites: FNCE 911, ECON 701, ECON 703. (Graduate level knowledge of analysis and statistics is highly recommended but not required)
Activity: Lecture
1.0 Course Unit

FNCE 923 Financial Economics Under Imperfect Information
This course covers General equilibrium and rational expectations, foundations of the theory of information; learning from prices in rational expectations equilibrium models, moral hazard, adverse selection, and signalling Bidding theories.
Course not offered every year
Prerequisite: FNCE 922
Activity: Lecture
1.0 Course Unit

FNCE 924 Intertemporal Macroeconomics and Finance
This is a doctoral level course on macroeconomics, with special emphasis on intertemporal choice under uncertainty and topics related to finance. Topics include: optimal consumption and saving, the stochastic growth model, q-theory of investment, (incomplete) risk sharing and asset pricing. The course will cover and apply techniques, including dynamic programming, to solve dynamic optimization problems under uncertainty. Numerical solution methods are also discussed.
Course usually offered in spring term
Prerequisite: FNCE 911
Activity: Lecture
1.0 Course Unit

FNCE 925 Topics In Asset Pricing
This course exposes student to recent development in the asset pricing literature. The starting point for the course is the standard neo-classical rational expectations framework. We will then investigate where this framework has succeeded and where it has not. Recently documented deviations from the framework in the literature are discussed and placed in context. The course will also focus on hypothesis development, recent research methods, and research writing. The ultimate objective is for students to develop their own hypotheses and research ideas, resulting in a paper.
Course not offered every year
Prerequisites: ECON 681 or ECON 701 and Calculus. FNCE 911 is recommended.
Activity: Lecture
1.0 Course Unit

FNCE 926 Empirical Methods in Corporate Finance
The course will cover a variety of microeconomic models and methods including panel data models, program evaluation methods e.g. difference in differences, matching techniques, regression discontinuity design? instrumental variables, duration models, structural estimation e.g. simulated methods of moments?. The structure of the course consists of lectures, student presentations, and empirical exercises. I will utilize published studies in a variety of fields such as corporate finance, labor economics, and industrial organization to illustrate the various techniques. The goal of the course is to provide students with a working knowledge of various econometric techniques that they can apply in their own research. As such, the emphasis of the course is on applications, not theory.
Course usually offered in fall term
Prerequisites: STAT 521 - Students are required to have taken a graduate sequence in Econometrics, you should be comfortable with econometrics at the level of William Green's "Econometric Analysis of Cross-Section and Panel Data".
Activity: Lecture
1.0 Course Unit
FNCE 928 Methods In Finance Theory
This doctoral level course introduces students to game theory and continuous-time methods. Both techniques represent fundamental approaches to organizing, modeling and understanding complex financial phenomena. The game theory half will cover equilibrium concepts, moral hazard, signaling and screening. Highlights include rigorous formulations and analyses of the perfect Bayesian equilibrium concept and the principal-agent relationship. Both ideas are central to theories of corporate finance and financial markets - subjects that the students will be exposed to in the spring. The continuous-time methods half will cover basic stochastic calculus and applications to capital structure, Merton's consumption-portfolio, and problem and optimal contracts.
Taught by: PROFESSOR YIRAN JOHN ZHU
Course usually offered in spring term
Prerequisites: Some mathematical sophistication. A familiarity with the basic principles of microeconomics is useful but not required.
Activity: Lecture
1.0 Course Unit

FNCE 932 Topics In Corporate Finance
This course covers Advanced theory and empirical investigations; financial desisions of the firm, dividends, capital structure, mergers, and takeovers.
Course not offered every year
Prerequisites: FNCE 911, FNCE 921, or permission of instructor.
Activity: Lecture
1.0 Course Unit

FNCE 934 Empirical Methods In Asset Pricing
This course has three main objectives: The first object is to introduce students to the fundamental works and the frontier of research in dynamic asset pricing. We will cover recent models that have been proposed to shed light on intriguing and important empirical patterns in the cross section and in the time series. Topics include non-separable utilities, market incompleteness, learning, uncertainty, differences of opinions, ex-ante and ex-post asymmetric information, ambiguity and Knightian uncertainty. The second objective is to teach students how to think of asset pricing research under a bigger or richer framework. We shall focus on the interactions between asset pricing and other fields such as macroeconomics, corporate finance, financial institutions, and international finance. The goal of investigating the joint dynamics is not only to better understand how asset prices are determined, but also (maybe more importantly) how would asset pricing dynamics affect other important economic variables such as investment, corporate payout, unemployment, risk sharing, and international capital flows. Students will learn production-based asset pricing models, particularly the asset pricing models with investment-specific technology shocks, risk shocks, financial friction, searching frictions and information frictions. Of course, the advanced solution methods will focus too. The third objective is to introduce advanced empirical methods to analyze the data and the quantitative dynamic models. It includes how to estimate structural dynamic models, how evaluate structural models beyond goodness-of-fit tests, how confront the models predictions with empirical data by simulation and re-sampling techniques, and how to efficiently test models and explore new patterns using asset pricing and macro data.
Course usually offered in fall term
Prerequisites: FNCE 911 and FNCE 921
Activity: Lecture
1.0 Course Unit

FNCE 937 Topics in Macro Finance
This is an advanced course in quantitative theory applied to macro and finance models. It is intended for doctoral students in finance, economics and related fields. The course focuses on four broad theoretical literatures: (i) firm investment and growth; (ii) corporate, household and sovereign debt; (iii) asset pricing in general equilibrium; and (iv) equilibrium macro models with a financial sector. My approach is to develop and discuss in detail a unified framework that is suited to address most topics, usually covering a few central topics and the core papers. We then discuss the more recent literature, highlighting how authors combine and expand upon the core ideas. This part of the course usually relies on regular student presentations.
Course usually offered in fall term
Prerequisite: FNCE 911
Activity: Lecture
1.0 Course Unit

Fine Arts (FNAR)

FNAR 061 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
For BA Students: Humanities and Social Science S
One-term course offered either term
Also Offered As: CIMS 061, FNAR 661, VLST 261
Activity: Seminar
1.0 Course Unit

FNAR 062 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
One-term course offered either term
Also Offered As: CIMS 062, FNAR 662
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit
FNAR 063 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.
Course usually offered in fall term
Also Offered As: CIMS 063, FNAR 663
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

FNAR 065 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.
Course usually offered in fall term
Also Offered As: CIMS 065, FNAR 665
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

FNAR 067 Advanced Video Projects
This course is structured to create a focused environment and support for individual inquiries and projects. Students will present and discuss their work in one to one meetings with the instructor and in group critiques. Readings, screenings, and technical demonstrations will vary depending on students’ past history as well as technical, theoretical, and aesthetic interests.
Course not offered every year
Also Offered As: FNAR 667
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

FNAR 070 Film Sound: History, Aesthetics and Subversion
Sound and Image as experienced in the cinema, are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio’s gradual and triumphant march towards fidelity, stereo and surround sound. This lecture course, through an historical and pedagogical romp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies.
Taught by: Novack
One-term course offered either term
Also Offered As: FNAR 671
Activity: Seminar
1.0 Course Unit

FNAR 073 Machine for Seeing: Architecture and the Moving Image
Architecture's relationship with cinema was established with the very first motion picture. In Sortie de l’usine Lumiere de Lyon by Auguste and Louis Lumiere we see a didactic presentation of film titles as workers from the Lumiere brother’s factory stream forth from its interior at days end. In many ways the context of the film is its subject as well. The title of the class plays on Le Corbusier’s maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture's relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on the nature of and use of public space and urban development to documentarians researching the pathologies of neo-liberalism and its effect on the privatization of space. We will also look at the work of artists who engage with the poetics of space and who unpack the conflicted legacies of the built environment.
Taught by: Hartt
Course usually offered in spring term
Also Offered As: FNAR 673
Prerequisite: FNAR 061
Activity: Studio
1.0 Course Unit

FNAR 074 A Virus in the Culture: Social Critique in Media Arts
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media we’ll think through and develop responses to some of the most pressing issues facing us today. We’ll look at historical models from the agitprop design work of Gee Vaucher for Anarcho-punk band Crass to Chris Marker’s film Le Fond de L’Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We’ll also look at experimental contemporary design firms like Metahaven who question the role of designers and filmmakers today - Bypassing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we’ll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with studio time. While the focus of this course is not technical, prior knowledge of design programs, camera functions, and post-production techniques is expected.
Taught by: David Hartt and Marks Owens
Course usually offered in fall term
Also Offered As: FNAR 674
Prerequisite: FNAR 061 or permission from instructor
Activity: Studio
1.0 Course Unit
FNAR 075 Image and Sound Editing
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, foleys, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.
Course usually offered in spring term
Also Offered As: CIMS 075, FNAR 675
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

FNAR 076 Advanced Lens Based Projects
Advanced Lens Based Projects (ALBP) is structured to create an open environment for students to develop a series of self-determined projects using any variety of image capture technologies. Mobile devices and DSLRs have blended the function of moving and still image capture while computers have become ubiquitous as instruments of display and dissemination. This has consequently led to the increasingly collapsed boundaries of artistic mediums. ALBP is a studio class where students will explore different modes of production and address the expanding field of exhibition strategies. Additionally the class will foster a transdisciplinary approach to critiquing work and emphasize the shared context of the works reception. Readings, screenings, discussions and critiques make up the curriculum along with dedicated studio time. Each student is required to complete 3 self-determined projects using still or moving image capture technologies. Grades will be determined through participation, completion of assignments and the students’ formal and critical engagement with the technology. While the focus of this course is not technical, prior knowledge of camera functions and post-production techniques is expected
Taught by: Hartt
Also Offered As: FNAR 676
Prerequisites: Any of the following: FNAR 061 Video I, FNAR 150
Photography Practices, FNAR 271 Introduction to Photography, FNAR 340 Digital Photography
Activity: Studio
1.0 Course Unit

FNAR 083 Performance/Camera: Performance and-with-through-for Cameras
This intermediate course will explore the wide and expansive territories of art-making that exist between live performance and mediated image making—both still and moving. For much of the 21st century, the mediums of performance, video and photography have been weaving in and out of contact. Performance is known and understood largely through its documentation: sometimes voluminous and sometimes little more than a single photograph. On the other side, video, film and photography each developed through widespread explorations that were deeply entwined with the ”capturing” of bodies on film. Using photography, video and performance in equal parts, the course is a hands-on exploration of this capacious terrain. The course will be structured by a series of bi-weekly assignments that allow for individual and collective production. The course will also include a regular schedule of short readings and presentations/screenings of existing works.
Taught by: Hayes, Sharon
Course usually offered in fall term
Also Offered As: FNAR 583
Prerequisites: FNAR 061, FNAR 340 or Permission of Instructor
Activity: Studio
1.0 Course Unit

FNAR 085 Performance Studio
This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities, practices and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.
Taught by: Hayes
Course usually offered in spring term
Also Offered As: FNAR 585
Prerequisites: One previous studio course (such as FNAR 123, FNAR 145, FNAR 150, or FNAR 061) or permission from instructor.
Activity: Studio
1.0 Course Unit

FNAR 123 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 523, VLST 253
Activity: Studio
1.0 Course Unit
FNAR 124 Drawing Investigations
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problem-solving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing I, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of image construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.
One-term course offered either term
Also Offered As: FNAR 524
Prerequisite: FNAR 123
Activity: Studio
1.0 Course Unit

FNAR 125 Contemporary Art Studio
This course offers an introduction to studio-based practices aimed at synthesizing the expansive potentialities of art through exposure to a diverse set of approaches, their histories, and contemporary applications. A wide range of multi-disciplinary projects will provide students with skills to conceptualize and visualize material investigations. Lectures, readings, films, visiting lectures, field trips, and critiques, will provide a historic and theoretical foundation for critical inquiry.
Taught by: Neff
Activity: Studio
1.0 Course Unit

FNAR 127 Space/Form
In this studio-based course, students are introduced to a wide range of approaches and techniques explore surface, space, and time (2D,3D,4D). Traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work, discover new directions in contemporary art, and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Taught by: Neff
Activity: Studio
1.0 Course Unit

FNAR 145 Sculpture Practices
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 545, VLST 252
Activity: Studio
1.0 Course Unit

FNAR 147 Advanced Sculpture: Installation & Interventions
In this course students will create sculptural installations and spatial interventions that explore site specificity and architectural environments. A range of traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Also Offered As: FNAR 607
Prerequisite: FNAR 145 Sculpture Practices
Activity: Studio
1.0 Course Unit

FNAR 148 Clay Practices
This course introduces clay as a sculptural medium through fundamental clay-building techniques, mold making, model making, and casting. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastilime, paper pulp, and cardboard will be explored. Students will explore the full range of clay’s capabilities and its role in contemporary art through lectures, readings, demonstrations, and assignments that incorporate conceptual and technical issues.
Also Offered As: FNAR 508
Activity: Studio
1.0 Course Unit

FNAR 150 Photography Practices
This course is an introduction to the basic principles, strategies and processes of photographic practice. It is designed to broaden the student’s aesthetic explorations and to help the student develop a visual language based on cross-disciplinary artistic practice. Through a series of projects and exercises students will be exposed to a range of camera formats, techniques and encouraged to experiment with the multiple modes and roles of photography - both analogue and digital. Attention will also be given to developing an understanding of critical aesthetic and historical issues in photography. Students will examine a range of historical and contemporary photowork as an essential part of understanding the possibilities of image making. This course is primarily for freshman and sophomores. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: VLST 260
Activity: Studio
1.0 Course Unit
FNAR 177 On Thoughts Occasioned By
The Essay Film is an important tradition within the various genres that constitute the field of Film and Video Art. Through the element of time it differentiates itself from its literary and photographic antecedents. It borrows selectively from both narrative fiction and documentary - highly subjective and occasionally poetic but without perhaps the burden of truth. The Essay Film is an attempt to dimensionalize our experience of the world and our place in it. It represents an argument, a meditation, a critical engagement with a place, a time or a subject. This is a combination seminar/studio course. Through readings, screenings and discussion students will gain an historical perspective on the genre. The core assignment is for each student to complete a short film (20 minutes max.) in the tradition of the Essay Film.

Taught by: Hartt/Corrigan
Also Offered As: ENGL 257, FNAR 677
Activity: Seminar
1.0 Course Unit

FNAR 212 Walt Whitman and the People’s Press
Walt Whitman and the People’s Press: A Course to Design and Program a Mobile Printing Space as a Public Art Project. Inspired by Whitman at 200, a region-wide celebration of Walt Whitman, this hands-on and collaborative course will engage students with artists, writers, community leaders and the public to design and program a mobile poetry printing facility that recognizes the complicated legacy of Walt Whitman in the 21st Century. To do this students and instructors will consider Whitman’s poetry as well as in his historical period and his place in Philadelphia and Camden. At the same time students will learn to use a press, design materials and create their own multimedia responses to Whitman. Students in this course should expect to read a great deal of poetry but also to be ready to work with their classmates to create responses to Whitman and to see and experience Philadelphia and Camden in new ways.

Taught by: Turner and Comberg
Course not offered every year
Also Offered As: ENGL 212
Activity: Seminar
1.0 Course Unit

FNAR 220 Producing Ephemera: Letterpress, Risopgraph, Inkjet, Xerox
This studio course introduces students to the world of printmaking and circulation through techniques in letterpress and Risograph (a high-speed digital printing system developed in Japan in the 1980s), in addition to Xerox, laser, inkjet, and offset-printing, focusing particularly on the format of prints, artists’ ephemera, and the role of ephemera in understanding culture. Students will create their own broadsides, flyers, announcement cards, and independent publications throughout the course, exploring ways in which artists, designers, musicians, and activists make or have made use of the print to disseminate information; initiate happenings; advertise events; or format change. Students will learn about some of the most significant producers working within this realm - from Conceptualists to punk bands - and develop skills in page layout, typography, and design; mechanized and hand-pulled press operations; and digital to analog pre-press and post-print production methods. This course is designed for highly motivated students and requires out-of-class time commitment. However, no prior coursework is required. Students from all levels and backgrounds are encouraged to register. The course employs combined collaborative / self-directed approaches to learning to enhance students’ understandings of ways in which print media and multiples serve as vital conduits for disseminating ideas involving visual art, popular culture, literature, politics, performance and many other topics students will wish to explore.

Taught by: Romberger
Course usually offered in fall term
Also Offered As: FNAR 620
Activity: Studio
1.0 Course Unit

FNAR 222 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.

One-term course offered either term
Also Offered As: FNAR 622, URBS 322
Activity: Seminar
1.0 Course Unit

FNAR 231 Painting Practices
Painting practices is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student’s ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.

One-term course offered either term
Also Offered As: FNAR 531
Activity: Studio
1.0 Course Unit
FNAR 232 Painting Studio
Painting Studio presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.
One-term course offered either term
Also Offered As: FNAR 532
Prerequisite: FNAR 231
Activity: Studio
1.0 Course Unit
Notes: This course can be continued by registering for FNAR 333 Painting Studio (III), and FNAR 334 Painting Studio (IV).

FNAR 233 Digital Illustration
Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation, storyboard rendering, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and plan creatively and skillfully execute finished artwork.
One-term course offered either term
Also Offered As: FNAR 633
Prerequisites: FNAR 264 and FNAR 123
Activity: Studio
1.0 Course Unit

FNAR 234 Art of the Web: Interactive Concepts for Art & Design
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives to us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical and conceptual skills and foster creative thinking.
One-term course offered either term
Also Offered As: FNAR 634
Prerequisite: FNAR 264
Activity: Studio
1.0 Course Unit

FNAR 235 3-D Computer Modeling
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanisms while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.
One-term course offered either term
Also Offered As: FNAR 635
Prerequisites: FNAR 123 and FNAR 264
Activity: Studio
1.0 Course Unit

FNAR 236 Digital Figure Modeling
This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution renderings, and rapid prototyping.
Course usually offered in spring term
Also Offered As: FNAR 536
Prerequisite: FNAR 235
Activity: Studio
1.0 Course Unit

FNAR 238 Open Book
"Open Book" will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.
Course usually offered in fall term
Also Offered As: FNAR 538
Activity: Seminar
1.0 Course Unit

FNAR 239 Photographic Thinking
This course will explore the vitality and range of photography as a discursive practice by analyzing the way images are structured and deployed in contemporary art and wider media culture. Students will be introduced to the key issues surrounding photography now-led through these questions by lectures, readings, group discussion and project-based work. A series of photo-assignments challenge the students to integrate critical thought with practice, exploring a range of formal strategies and thematic frameworks that affect the meaning of their images. Students should have a strong interest in philosophy and art histories (especially the history of photography.) They should be motivated to work independently & experiment creatively. There are no prerequisites for this course. It is intended for all different levels of technical experience, but the minimum requirements are a digital camera, a basic familiarity with Photoshop and access to a computer with imaging software.
Activity: Seminar
1.0 Course Unit
FNAR 240 Mystics & Visionaries: Arts and Other Ways of Knowing
As a pioneer of abstraction in the early 1900’s, Hilma Af Klint channeled a complex and highly original body of abstract symbolic work in secrecy. Using the upcoming Hilma Af Klint exhibition at the Guggenheim as a focus and departure point, this course will explore the ways in which artists have accessed alternative ways of seeing, knowing, and embodying non-visible realities as a source for their work. Accessing spiritual realms has been the subject of early European Modernisms investigations into Theosophy and Anthroposophy, as well as the primary intention of Tibetan Thangkas and Indian Tantra paintings. Postmodernism’s crisis of belief and skepticism generated a cultural situation wherein the subject of spirituality was marginalized, ridiculed as anti-intellectual, and in disgrace. The Hilma Af Klint exhibition and surge of interest in her work signifies a new moment, where questions about consciousness and the nature of reality are being addressed with renewed vigor. How do we create space in a technology driven world for experiences that attempt to align the viewer/maker with the contemplative realm, heightened states of consciousness, or transcendence? We will examine a wide field of artists in an attempt to understand the possibilities of the “spiritual” in art and contemporary culture. This seminar will engage in readings, lectures, discussions, projects, and field trips. This course is appropriate for both grad and undergrad, art majors and non-majors alike.
Taught by: Jackie Tileston
Course usually offered in fall term
Also Offered As: FNAR 540
Activity: Seminar
1.0 Course Unit

FNAR 241 Hand-Drawn Computer Animation
Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling.
Course not offered every year
Also Offered As: FNAR 541
Prerequisite: FNAR 264
Activity: Studio
1.0 Course Unit

FNAR 245 Book and Publication Design
Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of books—literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs and textbooks, and serial editions—discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book Collection and studio time where students will design books with attention to the format’s conceptual relationship to the material at hand with a focus on typography and page layout, as well as on understanding production methods of printing and binding. In addition to the conventions of page layout students will examine paratextual elements (title page, practices of pagination and other internal structuring, content lists and indexes, colophons, notes and marginalia, end-leaves, binding, etc.).
Taught by: Hyland
Course usually offered in fall term
Also Offered As: FNAR 645
Prerequisites: FNAR 264 or permission from the instructor.
Activity: Studio
1.0 Course Unit

FNAR 247 Environmental Animation
This studio-based course examines the disciplinary spaces of landscape, art, and architecture through the medium of 3D animation and storytelling. We immerse ourselves in environments that may be as small as a cell or as large as a planet. From the refiguring of images, models, graphic design, or video to visualization or coding the genesis of whole environments, this course will allow for a variety of entry point for students of different disciplines and skill levels. Projects will range in scope from animated GIFs to animated shorts. This course embraces a spirit of invention, collaborative learning, and interdisciplinary cross-pollination. Experience in landscape architecture, architecture, animation, programming, film, GIS, and/or graphic design is encouraged. We will examine and discuss some standard typologies such as the walk-through, data-visualization, as well as filmic and avant garde strategies as starting points for creative reinterpretation of space. We will primarily be using 3D Studio Max and After Effects with support from Next Engine 3D Scanner, Rhino, and Grasshopper. Scripting will be included in most assignments to enhance artistic control of the software.
Taught by: Landau
Course usually offered in spring term
Also Offered As: FNAR 547
Prerequisites: Experience in landscape architecture, architecture, animation, programming, film, Photoshop, or graphic design is strongly encouraged but not required.
Activity: Studio
1.0 Course Unit
FNAR 250 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student’s capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
Course usually offered in fall term
Also Offered As: FNAR 550, VLST 250
Activity: Studio
1.0 Course Unit

FNAR 251 Printmaking: Etching
The class will challenge the possibilities of experimental drawing and ways of creating incisions and textures using copper plates as the matrix, which then will be printed on paper and other materials. The class offers full technical and historical description of each individual process: Dry Point, Etching, Hard ground, Soft Ground, Aquatint, Shine Cole', Spit-Biting, Sugar Lift, Color Printing and Viscosity printing.
One-term course offered either term
Also Offered As: FNAR 551
Activity: Studio
1.0 Course Unit

FNAR 252 Printmaking: Screen Printing
This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silkscreen and relief printmaking including techniques in multi-color printing, photo-based silk screening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.
Course usually offered in fall term
Also Offered As: FNAR 552
Activity: Studio
1.0 Course Unit

FNAR 254 Printmaking & Publications: Intro to Independent Publishing and Artists’ Publications
This course introduces students to independent publishing and artists’ publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class. The course commences with a field trip to New York City’s Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists’ books, where students will be encouraged to submit a publication by semester’s end.
Taught by: Romberger
Course usually offered in spring term
Also Offered As: FNAR 654
Activity: Studio
1.0 Course Unit

FNAR 255 Introduction to Clay: The Potter’s Wheel and Beyond
In this introductory clay class, students will learn all the fundamental skills needed to create three-dimensional forms in clay using a variety of methods: wheel throwing, handbuilding (such as coil building and slab construction), and press molding. Whether creating utilitarian forms or creating sculpture, projects are designed to strengthen both craftsmanship and individual creativity. In addition to developing a working knowledge of the ceramic process, including surface treatments and glazing, students will also be introduced to design issues as well as contemporary art/ceramics topics that influence our aesthetic sensibilities. No prerequisites.
Taught by: FNAR Faculty
One-term course offered either term
Also Offered As: FNAR 558
Activity: Studio
1.0 Course Unit

FNAR 259 Beginning Clay: Handbuilding and Casting Techniques
Modeling and casting are fundamental methods of object-making. Students will learn basic handbuilding techniques such as coil building, slab construction, and mold making through assignments that incorporate conceptual and technical issues. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts, and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastiline, paper pulp, cardboard, and tar paper will be explored. No prerequisites.
Taught by: FNAR Faculty
One-term course offered either term
Also Offered As: FNAR 559
Activity: Studio
1.0 Course Unit
FNAR 263 Advanced Wheel Studio
This course teaches students more advanced wheel throwing techniques while helping to develop their critical skills in other areas of ceramic work. Students will learn to throw, employing larger masses of clay, and to increase the complexity of their work by combining and altering thrown parts. There will be an emphasis on experimentation in surface treatment and design, the goal of which is to expand a student's ability to create more complicated and personalized clay works. In addition to learning the technical knowledge, there will be critical discussions of contemporary ceramics issues through image presentations, reading materials and field trips.
One-term course offered either term
Also Offered As: FNAR 563
Prerequisite: FNAR 261
Activity: Studio
1.0 Course Unit

FNAR 264 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
For BA Students: Humanities and Social Science S
One-term course offered either term

Activity: Studio
1.0 Course Unit

FNAR 265 Nonhuman Photography
Our culture is increasingly made up of nonhuman actors. Facial recognition algorithms spend more hours "seeing" in a day than humans; drones equipped with visual sensors conduct our warfare; voice chat bots call businesses and make appointments for us. Meanwhile, humans conduct labor that we view as the work of bots: posting disinformation for political gain, or mass-producing children's YouTube videos for ad revenue. As objects begin to see and think, how can we understand the role of human agency and the possibilities (or lack thereof) for artistic expression in this space? What does the future of art look like when more photographs are taken as surveillance than by individuals, or when important cultural producers are nonhuman intelligences? In Nonhuman Photography, we will attempt to interrogate these ideas from an artist's perspective, approaching nonhuman agents and the various components that comprise them both as tools for studio work and as generative entities in their own right. Over the course of the semester we will read and discuss these issues extensively, while engaging in studio projects in a variety of media. While the course bears the title "photography", we will find that many of these tools will be non-photographic or para-photographic, and as a result many of our studio projects will be interdisciplinary. This course takes its name from Joanna Zylinska's Nonhuman Photography, parts of which we will examine over the course of the semester.
Taught by: Vierkant
Course usually offered in spring term
Also Offered As: FNAR 565
Prerequisites: FNAR 061, FNAR 271, FNAR 340, or permission from the instructor.
Activity: Seminar
1.0 Course Unit

FNAR 266 Graphic Design with Creative Technologies
The aim of this course is to introduce students creative ways to use color, typography, and layout across new materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and data-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects.
One-term course offered either term
Also Offered As: FNAR 566
Prerequisite: FNAR 264/636
Activity: Studio
1.0 Course Unit

FNAR 267 Computer Animation
Through a series of studio projects this course introduces techniques of 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling through animation performance and montage. Students will develop new sensitivities to movement, composition, cinematography, editing, sound, color and lighting.
One-term course offered either term
Also Offered As: CIMS 267, FNAR 567
Prerequisite: FNAR 264
Activity: Studio
1.0 Course Unit
FNAR 268 Integrative Design Studio: Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century. The course will be a pilot study of the first biodesign challenge organized by CUT/PASTE/GROW. The final projects will be submitted to a competition and the winning entry will be featured at Biofabricate in Summer 2019.
One-term course offered either term
Also Offered As: FNAR 568, IPD 568
Prerequisite: FNAR 264
Activity: Studio
1.0 Course Unit

FNAR 269 Typography
The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collecting and analyzing type, designing an original typeface, researching type history and experimenting with typographic forms.
One-term course offered either term
Also Offered As: FNAR 569
Prerequisite: FNAR 264
Activity: Studio
1.0 Course Unit

FNAR 270 Graphic Design Practicum
Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in a portfolio-ready finished product. Students will participate in a full design experience including design, client interaction, presentations, production, and project management. In addition, students will take field trips, meet professionals and go on studio visits.
One-term course offered either term
Also Offered As: FNAR 568
Prerequisite: FNAR 266 or FNAR 269
Activity: Studio
1.0 Course Unit

FNAR 271 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room. If you need assistance registering for a closed section, please email the department at fnaru@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 571, VLST 251
Prerequisite: None
Activity: Studio
1.0 Course Unit

FNAR 274 Reconfiguring Portraiture
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time. Course usually offered in spring term
Also Offered As: FNAR 574
Prerequisite: FNAR 271 or FNAR 340 or Permission of Instructor
Activity: Seminar
1.0 Course Unit

FNAR 278 Documentary Strategies
This course offers a context for photographers to develop a documentary project - either within a traditional photojournalistic framework or one that challenges these traditions. The aim is to understand documentary as an evolving practice and to develop an artistic response when depicting our social reality- from everyday experience to the events that shape the world. An important aspect of the class will be examining the diversity of ways that journalists and artists have used the camera to extend and question the power of photography as document. The class will address key questions of media and mediation, the nature and status of documentary in the context of globalizing media and how traditional documentary work has been affected by video, performance, conceptual art and activism.
One-term course offered either term
Also Offered As: FNAR 578
Prerequisite: FNAR 271 or FNAR 340 or Permission from Instructor
Activity: Seminar
1.0 Course Unit
FNAR 279 Studio Lighting
The necessity of light and how light is rendered in relationship to what is seen and understood, is often a key ingredient in the portrayal of a subject. The origin of the still life can be found in images as far back as antiquity and has dealt with notions of death, science, class, social customs and even sex. Photography picked up on the tradition in 1827 and has not only made use of the form, but has expanded the topic into very unique territories. Contemporary artists have re-invented and re-invigorated the still life, formalism & abstract photography. As a framework for exploring 'hands-on' lighting techniques, students will creatively grapple with the photography of objects in the studio. Working with the physical, symbolic, and conceptual ramifications of depicting specific forms in an image, teamed with the discussion of key texts, critiques, and studio lighting seminars, each student will create a considered and unique portfolio of images.
Taught by: Wahl
Course usually offered in spring term
Also Offered As: FNAR 679
Prerequisite: FNAR 271 or Permission of Instructor
Activity: Studio
1.0 Course Unit

FNAR 280 Figure Drawing I
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.
One-term course offered either term
Also Offered As: FNAR 580
Prerequisite: FNAR 123
Activity: Studio
1.0 Course Unit

FNAR 284 Photography and Fashion
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocation. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/ make up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.
Also Offered As: FNAR 684
Prerequisite: FNAR 271 or FNAR 340 or Permission from Instructor
Activity: Studio
1.0 Course Unit

FNAR 285 Photography and Fiction
In spite of photography's traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques.
Taught by: Diamond
Course usually offered in spring term
Also Offered As: FNAR 685
Prerequisite: FNAR 271 or FNAR 340 or Permission from the Instructor
Activity: Studio
1.0 Course Unit

FNAR 286 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. Visual Narrative focuses on traditional as well as emerging modes of production and distribution for documentary, visual storytelling, and photojournalism, exploring new aesthetics and the social impact of visual narratives. Visual Narrative immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series and the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers. Students will work within and across disciplines of art, design, and visual journalism, exploring topics including context, cause and effect, time, space, flow, picture-to-picture relationships, sequence, visual hierarchy, and linearity. Study of non-narrative systems - categorical, rhetorical, abstract, and associational forms - as well as interactive narratives will also be included.
Taught by: Comberg and Diamond
Course usually offered in fall term
Also Offered As: FNAR 686
Activity: Studio
1.0 Course Unit

FNAR 289 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to compose two or more of these methods with matte painting, computer animation or video.
One-term course offered either term
Also Offered As: CIMS 289, FNAR 589
Prerequisites: FNAR 123 and FNAR 264
Activity: Studio
1.0 Course Unit
FNAR 300 Civic Studio
Civic Studio is an engaged research course that explores significant theories, methods, and practices of public and socially-engaged artwork. Students draw from arts- and place-based modes of inquiry toward collaborative projects with fellow classmates, artists, and organizations in Philadelphia and beyond, while pursuing semester-long individual projects that build on their own independent interests and pursuits. Each semester, students work with and as embedded practitioners in exhibitions, installations, research projects, and other artistic platforms throughout the city. In turn, through readings, site visits, and site-specific work, students gain creative and critical capacity for producing their own final projects. Through Civic Studio students are able to reflect upon and practice public work with artistic, scholarly, and civic aims.
Taught by: Farber
Also Offered As: FNAR 604
Activity: Seminar
1.0 Course Unit

FNAR 305 Monument Lab: Public Art & Civic Research Praxis
What is an appropriate monument for the current city of Philadelphia? This question is the central prompt for Fall 2017 citywide public art and history project, as well as a specifically designed community-based and engaged research course in Fine Arts. Students in Monument Lab: Public Art & Civic Research Praxis will participate as members of specialized research teams, in partnership with local high school research fellows, embedded in iconic public squares, West Philadelphia sites, and neighborhood parks around the city, serve as trained art guides to facilitate learning around over twenty temporary monument installations by internationally and locally-based artists; craft research proposals as a form of creative datasets managed by Penn's PriceLab and Library; and engage civic partners and public audiences around key issues of the project, including issues of race, gender, sexuality, class, social justice, and civic belonging. The class is structured as a socially-engaged art praxis experience: students will meet weekly for group facilitations, civic dialogues, and special guest lectures by participating artists. In lieu of midterms and a final exam, students will work at research "labs" throughout the city for a set amount of hours per week, write reflection papers, and produce final site specific research portfolio. The course is ideal for students invested in issues of socially-engaged public art, history, and civic engagement.
Taught by: Neff & Farber
Also Offered As: FNAR 604
Activity: Studio
1.0 Course Unit

FNAR 306 Design 21: Design After the Digital
Last century, the digital revolution transformed every aspect of our lives. It shaped every design discipline and defined the ways we imagine and fabricate anything from images to everyday products to clothing, cars, buildings and megacities. Today, design is going through other technical and conceptual revolutions. We design with biotechnologies, fall in love in Virtual Reality with AI bots, rent our cognitive labor through cryptocurrencies. Our creative capabilities, on the other hand, are bounded by a polluted, over-crowded, and resource-constrained planet that is suffering major income and educational inequality. Design After the Digital interrogates the role of design for this century. The seminar surveys the conceptual and technical developments in the past decade to develop an interdisciplinary understanding of design, science and technology. We will study how new design and fabrication methods shape what we eat, what we wear, how we form opinions and express ourselves. The goal will be to develop new literacies of design that will help us acclimate better to the realities of the century as creative and critical citizens who can shape its products and values.
Taught by: Telhan
Course usually offered in fall term
Also Offered As: FNAR 506
Activity: Seminar
1.0 Course Unit

FNAR 307 Converging Landscapes: Art, Ecology and History
Studies of landscape are at the core of multiple fields of fine art making, historical inquiry, and environmental research. Christopher Tilley defines "landscape" as "a holistic term" that frames relationships between living beings and locales, "forming both the medium for, and outcome of, movement and memory." For interdisciplinary arts practitioners in Philadelphia, the landscape may conjure such relationships at points of convergence: when the physical and symbolic layers of the city lay bare social dynamics and truths. Such a range of landmarks - including rivers, neighborhoods, the viewshed, the skyline - are impacted by the deep histories of the region itself, as well as the human-activity that traffics upon it. To produce work about and from Philadelphia is to inherit long-standing questions of civic belonging, make sense of shifting demographics and ecological conditions, and to balance aims for innovation and coexistence. Converging Landscapes - Art, Ecology, and History is a civic studio and structured as a socially-engaged art praxis experience: students will meet weekly for group facilitations, civic dialogues, and special guest lectures. In lieu of midterms and a final exam, students in the course will participate as members of specialized research teams, working a set number of hours per week, write reflection papers, and produce a final site-specific research portfolio. Together, they will explore and produce work at and about sites of convergence. Students will pursue group projects and cross-disciplinary independent work, around selected arts and municipal contribute toward a class wide exhibition, as well as collaborations with artists, archives, and organizations. The course is ideal for students invested in issues of socially-engaged public art, environmental humanities, history, and civic engagement.
Taught by: Paul Farber
Course usually offered in fall term
Also Offered As: FNAR 507
Activity: Seminar
1.0 Course Unit
FNAR 310 Critical Issues in Art
Perspectives on Critical Issues aims to engage students in an ongoing and informed study of both historical and contemporary issues in a spirit of curiosity and critique. We will investigate how these concepts can clarify and complicate our creative practice and our understanding of the contemporary art world. This seminar will explore the shifts in artistic production, theory and criticism and topics will range from traditional investigations of aesthetics, Modernism, Post-Modernism and contemporary themes. Through discussions of assigned readings, class presentations, films, lectures, and field trips, this seminar will help establish a critical and theoretical foundation where your own beliefs and doubts about art and culture will be called into question and will provoke an ongoing inquiry into how you understand art, your own creative process, and the relationship of art and artists to society and creative culture.

FNAR 313 The Chinese Body and Spatial Consumption in Chinatown
This is a primarily an art and planning course that centers on the representation of the oriental, specifically the Chinese, in both its historical and present contexts. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imagining that were negotiated through the lens of civic planning. This course will study the often fraught negotiation between representation and planning. The hyper-urbanization of China over the past several decades has radically altered traditional conceptions of public space in China. Mass migration from rural to urban areas has meant very high population densities in Chinese cities. Traditional courtyards surrounded by housing and other modestly scaled buildings are rapidly disappearing, incongruent with the demands of heated property development. Moreover, Chinese cities have comparatively little public green space per resident compared to equivalents in the West. Zoning in Chinese cities is also much more varied for any given area than what one would find in cities such as New York, Paris, and London. Intensifying density of urban areas precludes the construction of large public squares. Furthermore, large public squares tend to be either intensively congested and overcrowded or underused due to their oversight by government that render such places somewhat opprobrious in terms of use. Historically, the urban courtyards of temples, native place associations, and provincial guilds served as public spaces of gathering. They were also sites of festivals and the conducting of neighbourhood and civic business. These spaces have become increasingly privatized or commodified with entrance fees. The air-conditioned concourses of enclosed shopping malls or busy outdoor market streets have become de facto public spaces in China where collective window shopping or promenading is the primary activity rather than bodily repose as one might find in a public space in a large Western city. The seminar/studio will investigate the meaning of the term public in the composition of Chinese space, audience and critical voice through firstly the enclave of Chinatown and secondly through examples from China. The course will look into the changing conceptualization of public space in Chinatown as it has declined in its traditional form and become reinvigorated in the form of high-end shopping center districts. This flux has its roots in post 1979 China as well as the post 1997 reversion of Hong Kong to China. As such, the course will examine the situation of rapid urbanization in China and the concomitant relationship to new Chinese (and Asian) districts in the North American urban and suburban landscape ie Vancouver, Toronto, Arlington (Virginia), Oakland, Los Angeles valley and Queens (Flushing), New York. In what ways can artists and designers respond to and challenge these conceptualizations of the old and the new within the context of urban change? What of the changing formations of the Chinese subject through the experiences of embodiment? How is public space produced through an ethnically bracketed bodily presence. Findings will be translated by the student as tools for design and public art imagining. This course will include a week's trip to San Francisco to study how intense growth in the city has all but usurped old Chinatown while new and more vibrant Chinese centers have emerged in multiple other districts within the city and the suburbs.

Tiananmen Square: A Case Study for Fine Arts and Landscape Architecture

This course takes as its subject the systems of representation and design that have historically and presently operate in Tiananmen Square in Beijing. There have been several incarnations of Tiananmen Square since its original form in 1651. During Imperial times and through the period of foreign legations, the square was once surrounded by walls and gates, creating a city within a city. With the advent of the Republic of China established on January 1, 1912, much of the enclosures were removed, opening up for public use previously restricted imperial areas. After the Communist Revolution in 1949, planning was afoot to enlarge the square. With its enlargement completed in 1958, the square expanded its footprint by four-fold, making it one of the largest public squares in the world. The enlarged and remodeled square coincided with the completion of the massive Monument to the People's Heroes. In 1976, a large mausoleum containing the preserved body of Mao Zedong was built near the site of the former Gate of China, further increasing the size of the square. In the 1990s, the building of the National Grand Theatre and expansion of the National Museum on grounds contiguous to the square necessitated further alterations to both the Eastern and Western skirts of the square. In recent years, there have been a widening debate regarding the transformation of the concrete heavy and by and large featureless square into a green space. Today, Tiananmen Square holds sacrosanct status to the Communist revolution of 1949, designed more for military parades and massive public rallies than public space repose. In a city that has few green spaces, such a verdant transformation in the heart of the Chinese capital would signal a radical symbolic deviation to China's development-first guiding principles. The square fronts Tiananmen Gate and the Forbidden City and is situated at the intersection of the historical east-west and north-south axes. Chang'An Avenue, important for military processions, separates the square from Tiananmen Gate and is considered the most important thoroughfare in the Capital and the path of the east-west number one subway line. The entirety of the Tiananmen Square area is marked by ideology and political prominence, often confusingly. Tiananmen Tower, functions as a conflation of monumental facade with political embodiment. This course will focus on imagined interventions through public art and landscape design within Tiananmen Square and its contiguous areas. It is a studio practice course with a significant seminar component that will include lectures and readings relating to issues of public space and urban design in contemporary China. The course will also study the development of contemporary art in China. The tragic events of Tiananmen Square in 1989 represented a turning point in terms of a generation of Western exiled Chinese artists and curators including Hou Hanru, Chen Zhen, Xu Min, Huang Yong Ping and Yan Pei Ming among many others. The class will study the strategies deployed by these so-called First Generation of Chinese artists. Making use of their double identity as traditionally taught Chinese artist residing in the West, their art offered a pointed critique of both China and the West. The course will include a trip to Beijing.

Across Forms: Art and Writing

What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn't just like a dance, but was a dance-or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.

FNAR 317 Integrative Design Studio: I, Design
I, design is an integrative studio that explores new frontiers of design that enable, empower, and interrogate the human in 21st century. We will take the human body, identity, or image as a site of investigation and design new types of products for it. Through our designs, we will raise questions about the motivations behind quantifying ourselves, desires for being permanently available and connected, complacency with not having privacy or intimacy, and eagerness to substitute craft, labor, and decision-making with intelligent systems, from self-driving cars to painting bots and trading algorithms. But can I, design and seek a different future? This studio will pursue a research- and production-oriented format. We will incorporate techniques and technologies from fields as diverse as printed electronics, biochemical fabrication, machine learning and robotics to develop applications that respond to the emergent perceptions of the human for its individual, social, or environmental identity. Students are not required to have any technical skills, but expected to complete one FNAR design studio before enrolling this course.

FNAR 318 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the “snail” pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a “spiral city,” and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann’s destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its physical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.

FNAR 320 Topics in Animation
This course will look at animation as an art form, a technology and an industry. We will explore the way in which artistic, technical, historical, and cultural conditions shape the development of animation and in turn, how animation impacts viewers. Topics will include trends in animation and their relation to contemporary popular culture, issues of art versus commerce in the creation of cartoons, the intersection of animation and politics, and shifts in style and technique throughout the years. We will look at the figures who have shaped the art forms and continue to influence it, the rise in animation’s popularity, and current day applications of animate imagery.

FNAR 328 Functions for Form and Material
This studio course will introduce methods of material selection and fabrication with the goal of developing evocative and effective designs. We will learn parametric modeling techniques that allow visualization to begin before all of the requirements of a design are known. We will implement techniques that allow us to structurally test and optimize forms to be stronger, lighter, to fail more predictably, or to function efficiently. The class will work identify to materials with properties that introduce new structural or conceptual possibilities for our designs. For each project, we will use a broad range of fabrication techniques for metals, natural and synthetic materials. The goal of the course is to develop a creative approach towards learning to work with unfamiliar tools and materials.

FNAR 330 Making Space and Public Art
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geophysical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.

FNAR 331 Interdisciplinary Studio: Sites of Convergence and Hybridity
This course takes an experimental multimedia approach to investigating some of the boundaries in contemporary art making practices. Painting, photography, video, design and sculpture intersect, overlap, and converge in complicated ways. Projects will be designed to explore hybrid forms, collage, space/installation, and color through a variety of strategic and conceptual proposals as students work towards unique ways of expanding their own work. Weekly readings, critiques, and presentations will be integrated with studio projects. This studio/seminar is appropriate for students at all levels and from all areas of Fine Arts and Design.
Taught by: Tileston
Course usually offered in spring term
Also Offered As: FNAR 631
Prerequisites: One previous studio course (such as FNAR 123, FNAR 145, FNAR 150, FNAR 231 or FNAR 264) or permission from the instructor.
Activity: Studio
1.0 Course Unit

FNAR 334 Painting Studio
Painting Studio IV focuses on continuing the student's exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting II/III students may be involved in), the emphasis is on the investigation of the student's own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions.
One-term course offered either term
Also Offered As: FNAR 534
Prerequisites: FNAR 123 and FNAR 333
Activity: Studio
1.0 Course Unit

FNAR 337 Information Design and Visualization
Information Design and Visualization is an introductory course that explores the structures of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.
One-term course offered either term
Also Offered As: FNAR 637
Prerequisite: FNAR 264
Activity: Studio
1.0 Course Unit

FNAR 340 Digital Photography
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 640, VLST 265
Activity: Studio
1.0 Course Unit

FNAR 342 Digital Photography II
In this course students will continue to develop conceptual, technical, aesthetic and formal strategies in digital photography, expanding their artistic process while refining their critical approach to researched subject matter. The class will be driven initially by a series of assignments formulated to further expose students to broad possibilities related to the medium and then they will be guided towards the evolution of a personalized body of work that is culturally, theoretically and historically informed. We will be examining key issues surrounding the digital image in contemporary society, led through a combination of class lectures, readings, group discussions, film screenings, gallery visits and class critiques. Students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end camera and lighting equipment and develop professional printing skills. In addition to learning these advanced imaging practices, this course will also emphasize an investigation of critical thought surrounding contemporary visual culture and the role of digital media in the creation of art.
Taught by: Jamie Diamond
Course offered summer, fall and spring terms
Also Offered As: FNAR 642
Prerequisite: FNAR 340 Digital Photography I
Activity: Studio
1.0 Course Unit

FNAR 343 Digital Photography III
FNAR 343 Language of Design
The course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in the decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design-as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal visual language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics related to their field of study.
Course usually offered in spring term
Also Offered As: FNAR 643
Activity: Seminar
1.0 Course Unit

FNAR 348 Counter the Land: Photography and the Landscape
Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition. Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.
Taught by: Wahl
Course usually offered in fall term
Also Offered As: FNAR 648
Prerequisites: FNAR 271 or FNAR 340 or with permission from the instructor.
Activity: Studio
1.0 Course Unit

FNAR 352 Dispersive Lends
This studio course will explore the nexus between photography, sculpture, installation, drawing, painting, and the moving image. The course is informed by the printed image, as students will explore how photography can encourage thinking in other mediums, in addition to how other mediums can influence the making of photography. When does an abstract painting appear more like a photograph? How can a photograph suggest ways to make a video? Can a sculpture exist as a photograph? A variety of assignments will expose students to interdisciplinary approaches addressing these questions and more. Class projects will be supported by regular slide lectures, group critiques, and readings examining modern and contemporary artists and practices.
Taught by: Oliver
Course usually offered in spring term
Also Offered As: FNAR 652
Prerequisite: FNAR 271 or FNAR 340 or FNAR 061 or permission of instructor
Activity: Studio
1.0 Course Unit

FNAR 366 Advanced 3-D Modeling
Advanced 3-D Modeling will give students the opportunity to refine skills in modeling, texturing, lighting and rendering with an emphasis on the evolution of ideas through constant revision based on class critique. Students will use a variety of industry standard software packages, including, but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content within a simulated production environment.
One-term course offered either term
Also Offered As: FNAR 646

Notes: A minimum three-page proposal must be submitted and approved by both the Instructor and the Undergraduate Director.

FNAR 410 Urban Communities and the Arts
Urban Communities and the Arts concerns itself with Arts, Music and Activism in Philadelphia. We investigate the social, economic and cultural fabric from which activism in the arts arises. To do so, we will investigate the histories and artistic reactions to oppression in Philadelphia by drawing on specific examples from various sections of the city and through the media of music, visual art, theater, and dance. The long history of systemic and individual oppression in the US manifests itself in different ways in various urban neighborhoods in Philly and artists of various genres and inclinations participate in activism in many different ways. Examples of artistic and musical responses to the various forms of oppression will be offered and class participants will be asked to bring their own examples to share and analyze. By visiting significant arts practitioners and organizations that provide access to arts education and justice work, participants will have a hands-on experience to unpack the dynamics of artistic production in city life. In addition to art as an outlet for exposing oppression, we will also consider the ways that art and music become markers of the uniqueness of a neighborhood or city, which further complicates the idea of art as a tool for activism. Participants in Urban Communities and the Arts will unpack the role of music and art in defining city or neighborhood cultures by considering a few key sectors that reveal the ways in which cities fail to provide equal access to resources or participate in outright discrimination. At the same time, cities continue to cultivate creative spaces and socio-economic opportunities for economic gain and social understanding through art and music. It is the contradictions that this course will concern itself with and out of our study we will invite course participants to respond creatively. Participants will create either an original work of art, music or intellectual response like a visually interesting research poster as part of a final art/music show. Ultimately students will be asked to reflect back on the role of art in social and political activism to better understand the successes and failures of such movements as they come to define the ethos of city life and its limits.
Taught by: McGlone
Course not offered every year
Also Offered As: URBS 410
Prerequisites: Students should have some knowledge of music and art communities in urban settings. Urban Studies and Fine Arts majors are particularly encouraged.
Activity: Seminar

FNAR 488 Senior Seminar Project (Fall)
This rigorous pair of courses, one offered in the Fall and one offered in the Spring semester, are designed as the capstone of the Fine Arts major and are required for all graduating fine arts seniors. They can only be taken in the senior year. Students work in individual studio spaces provided by the department and then meet with faculty for seminar, critique, and professional practice exercises. Through individual and group critiques, students begin to conceptualize their final thesis exhibition or project. The senior seminar allows students to create lasting professional relationships with the fine arts faculty and visiting lecturers. The fall semester culminates in a group exhibition of senior student work paired with final semester critiques.
Course usually offered in fall term
Prerequisites: Fine Arts Majors in Senior Year only.
Activity: Seminar
1.0 Course Unit

FNAR 489 Senior Seminar Project (Spring)
The Spring semester seminar culminates in a senior thesis exhibition for each graduating student. These exhibitions have traditionally been held as a small group exhibition featuring a few students in one group, or as a larger end of semester exhibition with each student installing a series of works. The format of the exhibition will be determined during the fall semester by the senior faculty. The process of preparing, installing, and promoting the thesis exhibition is covered in detail throughout the semester. Students will work in their on-campus studio spaces to produce dynamic, thoughtful and well-crafted work that will serve as their final portfolio. They will present their portfolio of work during a final critique before graduation.
Course usually offered in spring term
Prerequisites: FNAR 488; Fine Arts Majors in Senior Year only.
Activity: Seminar
1.0 Course Unit

FNAR 500 Civic Studio
Civic Studio is an engaged research course that explores significant theories, methods, and practices of public and socially-engaged artwork. Students draw from arts- and place-based modes of inquiry toward collaborative projects with fellow classmates, artists, and organizations in Philadelphia and beyond, while pursuing semester-long individual projects that build on their own independent interests and pursuits. Each semester, students work with and as embedded practitioners in exhibitions, installations, research projects, and other artistic platforms throughout the city. In turn, through readings, site visits, and site-specific work, students gain creative and critical capacity for producing their own final projects. Through Civic Studio students are able to reflect upon and practice public work with artistic, scholarly, and civic aims.

**FNAR 503 Sachs Research: Imaginary Modernisms**  
Over the course of the 2017-2018 school year, but officially as Spring 2018, credited course, I am inviting a group of 6-8 MFA students to participate as a group in a project focused on research, dialogue and the essential “possibilities” available to any artist to participate in the constant rewriting and redefining of art history. Students will participate in a body of research and readings leading to my upcoming participation in Rice University’s Campbell Lecture Series in March 2018 and an associated publication with the University of Chicago Press. The lectures are divided into three distinct parts over three nights, all of which focus on alternate approaches to modernism. Part I investigates the “Literary” theory of architecture by Bruno Taut and Paul Scheerbart. Part II is concerned with the painting practices of Hilma af Klint and Blinky Palermo. And Part III discusses the music of Sun Ra and Pauline Oliveros. Students participating in Imaginary Modernisms will meet and work with me in a series of scheduled and structured activities. beginning with a visit to Philadelphia in November for personal studio visits with each of the 6-8 students, not as a critique but to get to know you and your work a bit. Participation includes three trips to New York, each for two days. These 2-day trips will each involve one day at my studio in Brooklyn, to discuss the readings and research, as well as to observe the development of ongoing sculptural artworks being created in my studio, and a second day of self-guided visits to exhibitions and performances that I will suggest, with an optional meeting together for lunch or dinner. Readings for these meetings will be sent to you in advance of trip. Participating students should be prepared to read various texts along with me for the 5 month project duration. This is an essential part of the project and this should be a pleasurable process, so those do not have time to add a medium amount of reading to their schedules, followed by group discussion, should probably not apply. The only other requirement will be preparing for an exchange with undergraduate students at Rice University in March. For our trip to Houston in March, there will be three nights of lectures, one participatory performance, one exhibition opening reception, plus visits and interaction with curators at the Menil Collection, the Museum of Fine Arts Houston, the Contemporary Arts Museum Houston and the Core Program (an important option for MFA students post graduation.)

**FNAR 506 Design 21: Design After the Digital**  
Last century, the digital revolution transformed every aspect of our lives. It shaped every design discipline and defined the ways we imagine and fabricate anything from images to everyday products to clothing, cars, buildings and megacities. Today, design is going through other technical and conceptual revolutions. We design with biotechnologies, fall in love in Virtual Reality with AI bots, rent our cognitive labor through cryptocurrencies. Our creative capabilities, on the other hand, are bounded by a polluted, over-crowded, and resource-constrained planet that is suffering major income and educational inequality. Design After the Digital interrogates the role of design for this century. The seminar surveys the conceptual and technical developments in the past decade to develop an interdisciplinary understanding of design, science and technology. We will study how new design and fabrication methods shape what eat, what we wear, how we form opinions and express ourselves. The goal will be to develop new literacies of design that will help us acclimate better to the realities of the century as creative and critical citizens who can shape its products and values.

**FNAR 507 Converging Landscapes: Art, Ecology and History**  
Studies of landscape are at the core of multiple fields of fine art making, historical inquiry, and environmental research. Christopher Tilley defines "landscape" as "a holistic term" that frames relationships between living beings and locales, "forming both the medium for, and outcome of, movement and memory." For interdisciplinary arts practitioners in Philadelphia, the landscape may conjure such relationships at points of convergence: when the physical and symbolic layers of the city lay bare social dynamics and truths. Such a range of landmarks - including rivers, neighborhoods, the viewed sky, the skyline - are impacted by the deep histories of the region itself, as well as the human-activity that traffics upon it. To produce work about and from Philadelphia is to inherit long-standing questions of civic belonging, make sense of shifting demographics and ecological conditions, and to balance aims for innovation and coexistence. Converging Landscapes - Art, Ecology, and History is a civic studio and structured as a socially-engaged art praxis experience: students will meet weekly for group facilitations, civic dialogues, and special guest lectures. In lieu of midterms and a final exam, students in the course will participate as members of specialized research teams, working a set number of hours per week, write reflection papers, and produce a final site-specific research portfolio. Together, they will explore and produce work at and about sites of convergence. Students will pursue group projects and cross-disciplinary independent work, around selected arts and municipal contribute toward a class wide exhibition, as well as collaborations with artists, archives, and organizations. The course is ideal for students invested in issues of socially-engaged public art, environmental humanities, history, and civic engagement.  
Taught by: Paul Farber  
Course usually offered in fall term  
Also Offered As: FNAR 307  
Activity: Seminar  
1.0 Course Unit
FNAR 508 Clay Practices
This course introduces clay as a sculptural medium through fundamental clay-building techniques, mold making, model making, and casting. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastilines, paper pulp, and cardboard will be explored. Students will explore the full range of clay’s capabilities and its role in contemporary art through lectures, readings, demonstrations, and assignments that incorporate conceptual and technical issues.
Also Offered As: FNAR 148
Activity: Studio
1.0 Course Unit

FNAR 515 Photography Studio Abroad
This Traveling Studio is offered every other spring term to upper level photography & related media students. It is a cross-cultural visual investigation, exploring the contradictions and significance of the chosen city. This course incorporates multi-disciplinary research in preparation for the trip; exploring various fields of knowledge production such as art, history, social sciences, markets and governance. Class discussion, readings and individual research will be focused towards the development of each student’s photo/media project, which will be realized while abroad. After returning to Philadelphia, students will develop and refine their work; the remaining classes will emphasize critique, editing, printing and presentation options. The final projects will be included in a group exhibition at the end of the semester. Admission to the course is on a competitive basis.
Course offered spring; odd-numbered years
Prerequisite: Permission of Instructor Required - Competitive Application Process Only
Activity: Studio
1.0 Course Unit

FNAR 517 Integrative Design Studio: I, design
I, design is an integrative studio that explores new frontiers of design that enable, empower, and interrogate the human in 21st century. We will take the human body, identity, or image as a site of investigation and design new types of products for it. Through our designs, we will raise questions about the motivations behind quantifying ourselves, desires for being permanently available and connected, complacency with not having privacy or intimacy, and eagerness to substitute craft, labor, and decision-making with intelligent systems, from self-driving cars to painting bots and trading algorithms. But can I, design and seek a different future? This studio will pursue a research- and production-oriented format. We will incorporate techniques and technologies from fields as diverse as printed electronics, biochemical fabrication, machine learning and robotics to develop applications that respond to the emergent perceptions of the human for its individual, social, or environmental identity. Students are not required to have any technical skills, but expected to complete one FNAR design studio before enrolling this course.
Taught by: Telhan
Course usually offered in spring term
Also Offered As: FNAR 317
Activity: Studio
1.0 Course Unit

FNAR 518 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the "snail" pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a "spiral city," and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann's destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail’s shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.
Taught by: Ken Lum and Jean-Michel Rabate
Also Offered As: ENGL 211, FNAR 318
Activity: Seminar
1.0 Course Unit

FNAR 523 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 123, VLST 253
Activity: Studio
1.0 Course Unit
FNAR 524 Drawing Investigations
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problem solving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing I, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of image construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.
One-term course offered either term
Also Offered As: FNAR 124
Prerequisite: FNAR 523
Activity: Studio
1.0 Course Unit

FNAR 525 Figure Painting: Then and Now
Beyond the introduction to technique and materials this course will emphasize the figure in historical & contemporary painting. This course will be based in perception, working from the model and move through modernism and toward varying approaches to the figure. Further investigation about the language of color through color theory will be covered. Drawing 1 pre-requisite, Painting 1 pre-requisite recommended but not mandatory.
Taught by: MURPHY
Course usually offered summer term only
Also Offered As: FNAR 225
Prerequisite: FNAR 523
Activity: Studio
1.0 Course Unit

FNAR 528 Functions for Form and Material
This studio course will introduce methods of material selection and fabrication with the goal of developing evocative and effective designs. We will learn parametric modeling techniques that allow visualization to begin before all of the requirements of a design are known. We will implement techniques that allow us to structurally test and optimize forms to be stronger, lighter, to fail more predictably, or to function efficiently. The class will work identify to materials with properties that introduce new structural or conceptual possibilities for our designs. For each project, we will use a broad range of fabrication techniques for metals, natural and synthetic materials. The goal of the course is to develop a creative approach towards learning to work with unfamiliar tools and materials.
Taught by: Mosley
Course usually offered in spring term
Also Offered As: FNAR 328
Activity: Studio
1.0 Course Unit

FNAR 530 Making Space and Public Art
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geophysical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.
Taught by: Lum
Course usually offered in fall term
Also Offered As: FNAR 330
Activity: Seminar
1.0 Course Unit

FNAR 531 Painting Practices
Painting practices is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student's ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.
One-term course offered either term
Also Offered As: FNAR 231
Prerequisite: FNAR 523
Activity: Studio
1.0 Course Unit

FNAR 532 Painting Studio
Painting Studio presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.
One-term course offered either term
Also Offered As: FNAR 232
Prerequisite: FNAR 531
Activity: Studio
1.0 Course Unit
Notes: This course can be continued by registering for FNAR 533 Painting Studio (III), and FNAR 534 Painting Studio (IV).
FNAR 534 Painting Studio
Painting Studio IV focuses on continuing the student's exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting II/III students may be involved in), the emphasis is on the investigation of the student's own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions.
One-term course offered either term
Also Offered As: FNAR 334
Prerequisites: FNAR 523 and FNAR 533
Activity: Studio
1.0 Course Unit

FNAR 536 Digital Figure Modeling
This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution renderings, and rapid prototyping.
Course usually offered in spring term
Also Offered As: FNAR 635; Recommended FNAR 543 or FNAR 580
Activity: Studio
1.0 Course Unit

FNAR 538 Open Book
"Open Book" will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.
Course usually offered in fall term
Also Offered As: FNAR 238
Activity: Seminar
1.0 Course Unit

FNAR 540 Mystics & Visionaries: Arts and Other Ways of Knowing
As a pioneer of abstraction in the early 1900's, Hilma Af Klint channeled a complex and highly original body of abstract symbolic work in secrecy. Using the upcoming Hilma Af Klint exhibition at the Guggenheim as a focus and departure point, this course will explore the ways in which artists have accessed alternative ways of seeing, knowing, and embodying non-visible realities as a source for their work. Accessing spiritual realms has been the subject of early European Modernisms investigations into Theosophy and Anthroposophy, as well as the primary intention of Tibetan Thangkas and Indian Tantra paintings. Postmodernism's crisis of belief and skepticism generated a cultural situation wherein the subject of spirituality was marginalized, ridiculed as anti-intellectual, and in disgrace. The Hilma Af Klint exhibition and surge of interest in her work signifies a new moment, where questions about consciousness and the nature of reality are being addressed with renewed vigor. How do we create space in a technology driven world for experiences that attempt to align the viewer/ maker with the contemplative realm, heightened states of consciousness, or transcendence? We will examine a wide field of artists in an attempt to understand the possibilities of the "spiritual" in art and contemporary culture. This seminar will engage in readings, lectures, discussions, projects, and field trips. This course is appropriate for both grad and undergrad, art majors and non-majors alike.
Taught by Jackie Tileston
Course usually offered in fall term
Also Offered As: FNAR 240
Activity: Seminar
1.0 Course Unit

FNAR 541 Hand-Drawn Computer Animation
Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling.
Course not offered every year
Also Offered As: FNAR 241
Prerequisite: FNAR 636
Activity: Studio
1.0 Course Unit

FNAR 545 Sculpture Practices
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 145, VLST 252
Activity: Studio
1.0 Course Unit
FNAR 547 Environmental Animation
This studio-based course examines the disciplinary spaces of landscape, art, and architecture through the medium of 3D animation and storytelling. We immerse ourselves in environments that may be as small as a cell or as large as a planet. From the refiguring of images, models, graphic design, or video to visualization or coding the genesis of whole environments, this course will allow for a variety of entry point for students of different disciplines and skill levels. Projects will range in scope from animated GIFs to animated shorts. This course embraces a spirit of invention, collaborative learning, and interdisciplinary cross-pollination. Experience in landscape architecture, architecture, animation, programming, film, GIS, and/or graphic design is encouraged. We will examine and discuss some standard typologies such as the walk-through, data-visualization, as well as filmic and avant garde strategies as starting points for creative reinterpretation of space. We will primarily be using 3D Studio Max and After Effects with support from Next Engine 3D Scanner, Rhino, and Grasshopper. Scripting will be included in most assignments to enhance artistic control of the software.
Taught by: Landau
Course usually offered in spring term
Also Offered As: FNAR 247
Prerequisites: Experience in landscape architecture, architecture, animation, programming, film, Photoshop, or graphic design is strongly encouraged but not required.
Activity: Studio
1.0 Course Unit

FNAR 550 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student’s capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques. Technical and conceptual skills are developed through discussions and critiques.
Course usually offered in spring term
Also Offered As: FNAR 250, VLST 250
Activity: Studio
1.0 Course Unit

FNAR 551 Printmaking: Etching
The class will challenge the possibilities of experimental drawing and ways of creating incisions and textures using copper plates as the matrix, which then will be printed on paper and other materials. The class offers full technical and historical description of each individual process: Dry Point, Etching, Hard ground, Soft Ground, Aquatint, Shine Cole', Spit-Biting, Sugar Lift, Color Printing and Viscosity printing.
One-term course offered either term
Also Offered As: FNAR 251
Activity: Studio
1.0 Course Unit

FNAR 552 Printmaking: Screen Printing
This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silkscreen and relief printmaking including techniques in multi-color printing, photo-based silkscreening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.
Course usually offered in fall term
Also Offered As: FNAR 252
Activity: Studio
1.0 Course Unit

FNAR 558 Introduction to Clay: the Potter’s Wheel and Beyond
In this introductory clay class, students will learn all the fundamental skills needed to create three-dimensional forms in clay using a variety of methods: wheel throwing, handbuilding (such as coil building and slab construction), and press molding. Whether creating utilitarian forms or creating sculpture, projects are designed to strengthen both craftsmanship and individual creativity. In addition to developing a working knowledge of the ceramic process, including surface treatments and glazing, students will also be introduced to design issues as well as contemporary art/ceramics topics that influence our aesthetic sensibilities. No prerequisites.
Taught by: FNAR Faculty
One-term course offered either term
Also Offered As: FNAR 258
Activity: Studio
1.0 Course Unit

FNAR 559 Beginning Clay: Handbuilding and Casting Techniques
Modeling and casting are fundamental methods of object-making. Students will learn basic handbuilding techniques such as coil building, slab construction, and mold making through assignments that incorporate conceptual and technical issues. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts, and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastilene, paper pulp, cardboard, and tar paper will be explored. No prerequisites.
Taught by: FNAR Faculty
One-term course offered either term
Also Offered As: FNAR 259
Activity: Studio
1.0 Course Unit
FNAR 563 Advanced Wheel Studio
This course teaches students more advanced wheel throwing techniques while helping to develop their critical skills in other areas of ceramic work. Students will learn to throw, employing larger masses of clay, and to increase the complexity of their work by combining and altering thrown parts. There will be an emphasis on experimentation in surface treatment and design, the goal of which is to expand a student’s ability to create more complicated and personalized clay works. In addition to learning the technical knowledge, there will be critical discussions of contemporary ceramics issues through image presentations, reading materials and field trips.
One-term course offered either term
Also Offered As: FNAR 263
Prerequisite: FNAR 561
Activity: Studio
1.0 Course Unit

FNAR 565 Nonhuman Photography
Our culture is increasingly made up of nonhuman actors. Facial recognition algorithms spend more hours “seeing” in a day than humans; drones equipped with visual sensors conduct our warfare; voice chat bots call businesses and make appointments for us. Meanwhile, humans conduct labor that we view as the work of bots: posting disinformation for political gain, or mass-producing children’s YouTube videos for ad revenue. As objects begin to see and think, how can we understand the role of human agency and the possibilities (or lack thereof) for artistic expression in this space? What does the future of art look like when more photographs are taken as surveillance than by individuals, or when important cultural producers are nonhuman intelligences? In Nonhuman Photography, we will attempt to interrogate these ideas from an artist’s perspective, approaching nonhuman agents and the various components that comprise them both as tools for studio work and as generative entities in their own right. Over the course of the semester we will read and discuss these issues extensively, while engaging in studio projects in a variety of media. While the course bears the title “photography”, we will find that many of these tools will be non-photographic or para-photographic, and as a result many of our studio projects will be interdisciplinary. This course takes its name from Joanna Zylinska’s Nonhuman Photophty, parts of which we will examine over the course of the semester.
Taught by: Vierkant
Course usually offered in spring term
Also Offered As: FNAR 265
Prerequisite: FNAR 661, FNAR 571, FNAR 640, or permission from the instructor.
Activity: Seminar
1.0 Course Unit

FNAR 566 Graphic Design with Creative Technologies
The aim of this course is to introduce students creative ways to use color, typography, and layout across new materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and data-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects.
One-term course offered either term
Also Offered As: FNAR 266
Prerequisite: FNAR 636
Activity: Studio
1.0 Course Unit

FNAR 567 Computer Animation
Through a series of studio projects this course introduces techniques of 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling through animation performance and montage. Students will develop new sensitivities to movement, composition, cinematography, editing, sound, color and lighting.
One-term course offered either term
Also Offered As: CIMS 267, FNAR 267
Activity: Studio
1.0 Course Unit

FNAR 568 Integrative Design Studio: Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century. The course will be a pilot study of the first biodesign challenge organized by CUT/PASTE/GROW. The final projects will be submitted to a competition and the winning entry will be featured at Biofabricate in Summer 2019.
One-term course offered either term
Also Offered As: FNAR 268, IPD 568
Activity: Studio
1.0 Course Unit

FNAR 569 Typography
The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collecting and analyzing type, designing an original typeface, researching type history and experimenting with typographic forms.
Course usually offered in spring term
Also Offered As: FNAR 269
Prerequisite: FNAR 636
Activity: Studio
1.0 Course Unit
FNAR 570 Graphic Design Practicum
Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in a portfolio-ready finished product. Students will participate in a full design experience including design, client interaction, presentations, production, and project management. In addition, students will take field trips, meet professionals and go on studio visits.
One-term course offered either term
Also Offered As: FNAR 270
Prerequisite: FNAR 566 or FNAR 569
Activity: Studio
1.0 Course Unit

FNAR 571 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 271, VLST 251
Activity: Studio
1.0 Course Unit

FNAR 574 Reconfiguring Portraiture
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time
Course usually offered in spring term
Also Offered As: FNAR 274
Prerequisite: FNAR 571 or FNAR 640 or Instructor Permission
Activity: Seminar
1.0 Course Unit

FNAR 575 Graduate Drawing Seminar
This seminar examines the essential nature drawing has in an artist’s process. Direct visual perception, self-referential mark making, the viability of space and understanding it, and drawing from one’s own work are some of the drawing experiences encountered in the course. There are regular critiques and discussions based on the work and readings. Taught by: Tileston/Freedman
Activity: Seminar
1.0 Course Unit

FNAR 576 Critical Issues Seminar
This seminar investigates issues concerning visual artists. Part one begins with Plato and Kant and progresses through a history of ideas in art, exploring the questions which concern artists today, including Modernism, post-modernism, abstraction and representation, appropriation, context, art and politics, identity, and the artist’s relationship to these subjects. Part two of the course will focus on current texts in contemporary art, the current dialogue(s), and issues specific to our time and place as artists. The seminar engages contemporary issues in a spirit of curiosity and critique, and relates them to our studio practice.
Taufed by: Tileston
One-term course offered either term
Activity: Seminar
1.0 Course Unit

FNAR 578 Documentary Strategies
This course offers a context for photographers to develop a documentary project - either within a traditional photojournalistic framework or one that challenges these traditions. The aim is to understand documentary as an evolving practice and to develop an artistic response when depicting our social reality- from everyday experience to the events that shape the world. An important aspect of the class will be examining the diversity of ways that journalists and artists have used the camera to extend and question the power of photography as document. The class will address key questions of media and mediation, the nature and status of documentary in the context of globalizing media and how traditional documentary work has been affected by video, performance, conceptual art and activism.
One-term course offered either term
Also Offered As: FNAR 278
Prerequisite: FNAR 571 or FNAR 640 or Permission from Instructor
Activity: Seminar
1.0 Course Unit

FNAR 580 Figure Drawing I
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.
One-term course offered either term
Also Offered As: FNAR 280
Prerequisite: FNAR 523
Activity: Studio
1.0 Course Unit
FNAR 583 Performance/Camera: Performance and-with-through-for Cameras
This intermediate course will explore the wide and expansive territories of art-making that exist between live performance and mediated image making—both still and moving. For much of the 21st century, the mediums of performance, video and photography have been weaving in and out of contact. Performance is known and understood largely through its documentation: sometimes voluminous and sometimes little more than a single photograph. On the other side, video, film and photography each developed through widespread explorations that were deeply entwined with the “capturing” of bodies on film. Using photography, video and performance in equal parts, the course is a hands-on exploration of this capacious terrain. The course will be structured by a series of bi-weekly assignments that allow for individual and collective production. The course will also include a regular schedule of short readings and presentations/screenings of existing works.
Taught by: Hayes, Sharon
Course usually offered in fall term
Also Offered As: FNAR 083
Prerequisites: FNAR 661, FNAR 640 or Permission of Instructor
Activity: Studio
1.0 Course Unit

FNAR 585 Performance Studio
This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities, practices and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.
Taught by: Hayes
Course usually offered in spring term
Also Offered As: FNAR 085
Prerequisites: One previous studio course (such as FNAR523, FNAR545, FNAR640, OR FNAR661) or permission from the instructor.
Activity: Studio
1.0 Course Unit

FNAR 589 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.
Course usually offered in spring term
Also Offered As: CIMS 289, FNAR 289
Prerequisites: FNAR 523 and FNAR 636
Activity: Studio
1.0 Course Unit

FNAR 591 The Body and Photography
The last few decades have introduced dramatic changes in the way we interact with each other, the way we communicate, the way we date, watch porn, etc. Ethical concerns have arisen with scientific advances such as stem cell research, fertility drugs, Botox, cloning and erectile dysfunction. This studio course will investigate the myriad ways in which the corporeal is addressed and manipulated in contemporary art, science, religion, pop culture and media. Students will develop photographic projects related to updated questions concerning gender, sexuality and social issues. Lectures, readings and class discussion will focus and inform their individual work.
Course usually offered in spring term
Prerequisites: FNAR 271 or FNAR 340 and Instructor Permission Required
Activity: Seminar
1.0 Course Unit

FNAR 594 Graduate Photography Seminar
This seminar will examine contemporary issues in photography from the point of view of the practicing artist. Students will meet with visiting critics during the semester, the course will also include student presentations, weekly discussions and group critiques, visits to artists’ studios and gallery and museum exhibitions. Texts for the seminar will be drawn from contemporary critical theory in art, philosophy, history and popular culture. Required for all graduate photographers.
Taught by: Davenport
Activity: Seminar
1.0 Course Unit

FNAR 598 Grad Sculpture Seminar
Sculpture instructor (to be announced) will lead this studio course based on improvisational approaches to developing individually made sculptural works, as well as works that are made in collaboration with others. As in Music or Theater, these works involve the collaboration of others, yet they are equally initiated by small thoughts, and carry those thoughts into a more public and interactive format of installation.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FNAR 601 Graduate Studio III
First year studio for MFA students’ core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.
Taught by: Lum/Freedman/Mosley/Telhan/Tileston/Hartt/Hayes/Lopez
Course usually offered in fall term
Also Offered As: FNAR 501
Activity: Studio
2.0 Course Units

FNAR 602 Graduate Studio IV
Second year studio for MFA students’ core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.
Taught by: Adkins/Davenport/Freedman/Mosley/Telhan/Tileston
Course usually offered in spring term
Also Offered As: FNAR 502
Activity: Studio
2.0 Course Units
FNAR 604 Graduate Sculpture Studio
Second-year studio for MFA students exploring advanced discipline in sculpture.
Taught by: Adkins
One-term course offered either term
Also Offered As: FNAR 305
Activity: Studio
1.0 Course Unit

FNAR 605 Topics in Contemporary Art
An experimental class for artists and scholars. Organized around a series of case studies of artists, collectives, infrastructures, and curatorial projects, the course includes: in-class discussion and viewing; workshops with class visitors; site visits; participation in small reading groups. In the first half of the class, students will complete some short assignments. In addition, students will complete a final project that is intentionally open in terms of form. The project, which can be collective or individual in nature, will enable an in-depth material investigation of one of the threads of the class.
Taught by: Hayes and Redrobe
Course not offered every year
Also Offered As: ARTH 596, CIMS 596, ENGL 596, GSWS 596
Activity: Seminar
1.0 Course Unit

FNAR 607 Advanced Sculpture: Installation & Intervention
In this course students will create sculptural installations and spatial interventions that explore site specificity and architectural environments. A range of traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Also Offered As: FNAR 147
Activity: Studio
1.0 Course Unit

FNAR 613 The Chinese Body and Spatial Consumption in Chinatown
This is a primarily an art and planning course that centers on the representation of the oriental, specifically the Chinese, in both its historical and present contexts. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning. This course will study the often fraught negotiation between representation and planning. The hyper-urbanization of China over the past several decades has radically altered traditional conceptions of public space in China. Mass migration from rural to urban areas has meant very high population densities in Chinese cities. Traditional courtyards surrounded by housing and other modestly scaled buildings are rapidly disappearing, incongruent with the demands of heated property development. Moreover, Chinese cities have comparatively little public green space per resident compared to equivalents in the West. Zoning in Chinese cities is also much more varied for any given area than what one would find in cities such as New York, Paris, and London. Intensiﬁng density of urban areas precludes the construction of large public squares. Furthermore, large public squares tend to be either intensively congested and overcrowded or underused due to their oversight by government that render such spaces somewhat opprobrious in terms of use. Historically, the urban courtyards of temples, native place associations, and provincial guilds served as public spaces of gathering. They were also sites of festivals and the conducting of neighbourhood and civic business. These spaces have become increasingly privatized or commodiﬁed with entrance fees. The air-conditioned concourses of enclosed shopping malls or busy outdoor market streets have become de facto public spaces in China where collective window shopping or promenading is the primary activity rather than bodily repose as one might ﬁnd in a public space in a large Western city. The seminar/studio will investigate the meaning of the term public in the constitution of Chinese space, audience and critical voice through firstly the enclave of Chinatown and secondly through examples from China. The course will look into the changing conceptualization of public space in Chinatown as it has declined in its traditional form and become reinvented in the form of high-end shopping centered districts. This flux has its roots in post 1979 China as well as the post 1997 reversion of Hong Kong to China. As such, the course will examine the situation of rapid urbanization in China and the concomitant relationship to new Chinese (and Asian) districts in the North American urban and suburban landscape ie Vancouver, Toronto, Arlington (Virginia), Oakland, Los Angeles valley and Queens (Flushing), New York. In what ways can artists and designers respond to and challenge these conceptualizations of the old and the new within the context of urban change? What of the changing formations of the Chinese subject through the experiences of embodiment? How is public space produced through an ethnically bracketed bodily presence. Findings will be translated by the student as tools for design and public art imaginings. This course will include a week’s trip to San Francisco to study how intense growth in the city has all but usurped old Chinatown while new and more vibrant Chinese centers have emerged in multiple other districts within the city and the suburbs.
Also Offered As: FNAR 313
Activity: Seminar
1.0 Course Unit
FNAR 614 Tiananmen Square: A Case Study for Fine Arts and Landscape Architecture
This course takes as its subject the systems of representation and design that have historically and presently operate in Tiananmen Square in Beijing. There have been several incarnations of Tiananmen Square since its original form in 1651. During Imperial times and through the period of foreign legations, the square was once surrounded by walls and gates, creating a city within a city. With the advent of the Republic of China established on January 1, 1912, much of the enclosures were removed, opening up for public use previously restricted imperial areas. After the Communist Revolution in 1949, planning was afoot to enlarge the square. With its enlargement completed in 1958, the square expanded its footprint by four-fold, making it one of the largest public squares in the world. The enlarged and remodeled square coincided with the completion of the massive Monument to the People's Heroes. In 1976, a large mausoleum containing the preserved body of Mao Zedong was built near the site of the former Gate of China, further increasing the size of the square. In the 1990s, the building of the National Grand Theatre and expansion of the National Museum on grounds contiguous to the square necessitated further alterations to both the Eastern and Western skirts of the square. In recent years, there have been a widening debate regarding the transformation of the concrete heavy and by and large featureless square into a green space. Today, Tiananmen Square holds sacrosanct status to the Communist revolution of 1949, designed more for military parades and massive public rallies than public space repose. In a city that has few green spaces, such a verdant transformation in the heart of the Chinese capital would signal a radical symbolic deviation to China's development-first guiding principles. The square fronts Tiananmen Gate and the Forbidden City and is situated at the intersection of the historical east-west and north-south axes. Chang'An Avenue, important for military processions, separates the square from Tiananmen Gate and is considered the most important thoroughfare in the Capital and the path of the east west number one subway line. The entirety of the Tiananmen Square area is marked by ideology and political prominence, often confusingly. Tiananmen Tower, functions as a conflation of monumental facade with political embodiment. This course will focus on imagined interventions through public art and landscape design within Tiananmen Square and its contiguous areas. It is a studio practice course with a significant seminar component that will include lectures and readings relating to issues of public space and urban design in contemporary China. The course will also study the development of contemporary art in China. The tragic events of Tiananmen Square in 1989 represented a turning point in terms of a generation of Western exiled Chinese artists and curators including Hou Hanru, Chen Zhen, Xu Min, Huang Yong Ping and Yan Pei Ming among many others. The class will study the strategies deployed by these so-called First Generation of Chinese artists. Making use of their double identity as traditionally taught Chinese artist residing in the West, their art offered a pointed critique of both China and the West. The course will include a trip to Beijing.

Taught by: Ken Lum
Course usually offered in spring term
Also Offered As: FNAR 314
Activity: Seminar
1.0 Course Unit

FNAR 615 Across Forms: Art and Writing
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn't just like a dance, but was a dance—or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.

Taught by: Hayes and Zolf
Course usually offered in fall term
Also Offered As: ENGL 129, FNAR 315
Prerequisites: Permission to enroll is required; please submit a short description of your interest in the class to zolfr@writing.upenn.edu.
Activity: Seminar
1.0 Course Unit

FNAR 616 Art and Social Work: Art and the Ecology of Justice
How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories of their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.

Taught by: Neff, Levy and Ghose
Course usually offered in spring term
Also Offered As: FNAR 316, SWRK 717
Activity: Seminar
1.0 Course Unit
FNAR 620 Producing Ephemera: Letterpress, Risopgraph, Inkjet, Xerox
This studio course introduces students to the world of printmaking and circulation through techniques in letterpress and Risograph (a high-speed digital printing system developed in Japan in the 1980s), in addition to Xerox, laser, inkjet, and off-set printing, focusing particularly on the format of prints, artists' ephemera, and the role of ephemera in understanding culture. Students will create their own broadsides, flyers, announcement cards, and independent publications throughout the course, exploring ways in which artists, designers, musicians, and activists make or have made use of the print to disseminate information; initiate happenings; advertise events; or format change. Students will learn about some of the most significant producers working within this realm - from Conceptualists to punk bands - and develop skills in page layout, typography, and design; mechanized and hand-pulled press operations; and digital to analog pre-press and post-print production methods. This course is designed for highly motivated students and requires out-of-class time commitment. However, no prior coursework is required. Students from all levels and backgrounds are encouraged to register. The course employs combined collaborative / self-directed approaches to learning to enhance students' understandings of ways in which print media and multiples serve as vital conduits for disseminating ideas involving visual art, popular culture, literature, politics, performance and many other topics students will wish to explore.

Taught by: Romberger
Course usually offered in fall term
Also Offered As: FNAR 220
Activity: Studio
1.0 Course Unit

FNAR 622 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement coupled step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shirah Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.

One-term course offered either term
Also Offered As: FNAR 222, URBS 322
Activity: Seminar
1.0 Course Unit

FNAR 631 Interdisciplinary Studio: Sites of Convergence and Hybridity
This course takes an experimental multimedia approach to investigating some of the boundaries in contemporary art making practices. Painting, photography, video, design and sculpture intersect, overlap, and converge in complicated ways. Projects will be designed to explore hybrid forms, collage, space/ installation, and color through a variety of strategic and conceptual proposals as students work towards unique ways of expanding their own work. Weekly readings, critiques, and presentations will be integrated with studio projects. This studio/seminar is appropriate for students at all levels and from all areas of Fine Arts and Design.

Taught by: Tileston
Course usually offered in spring term
Also Offered As: FNAR 331
Prerequisites: One previous studio course (such as FNAR 523, FNAR 545, FNAR 640, FNAR 531 or FNAR 636 or Penn Design course) or permission from the instructor.

Activity: Studio
1.0 Course Unit

FNAR 633 Digital Illustration
Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation storyboard rendering, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and plan creatively and skillfully execute finished artwork.

One-term course offered either term
Also Offered As: FNAR 233
Prerequisites: FNAR 636 and FNAR 523
Activity: Studio
1.0 Course Unit

FNAR 634 Art of the Web: Interactive Concepts for Art & Design
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives to us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical and conceptual skills and foster creative thinking.

One-term course offered either term
Also Offered As: FNAR 234
Prerequisite: FNAR 636
Activity: Studio
1.0 Course Unit

FNAR 635 3-D Computer Modeling
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanisms while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.

One-term course offered either term
Also Offered As: FNAR 235
Prerequisites: FNAR 523 and FNAR 636
Activity: Studio
1.0 Course Unit
FNAR 636 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 264, VLST 264
Activity: Studio
1.0 Course Unit

FNAR 637 Information Design and Visualization
Information design and visualization is an introductory course that explores the structure of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.
One-term course offered either term
Also Offered As: FNAR 337
Prerequisite: FNAR 636
Activity: Studio
1.0 Course Unit

FNAR 638 Creative Research
This seminar explores what it means to do research in creative and critical practices. Students learn about different research methods from design, engineering, humanities and sciences; utilize them for developing and evaluating their individual creative work as cultural producers. This is an interdisciplinary course that encourages students to observe, measure, analyze, test, study, experiment, diagram, prototype, speculate, generate and criticize; apply multiple modes of inquiry; be conceptual, analytical, propositional and critical at the same time to develop their work from different perspectives.
Taught by: Telhan
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

FNAR 640 Digital Photography I
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 340, VLST 265
Activity: Studio
1.0 Course Unit

FNAR 642 Digital Photography II
In this course students will continue to develop conceptual, technical, aesthetic and formal strategies in digital photography, expanding their artistic process while refining their critical approach to researched subject matter. The class will be driven initially by a series of assignments formulated to further expose students to broad possibilities related to the medium and then they will be guided towards the evolution of a personalized body of work that is culturally, theoretically and historically informed. We will be examining key issues surrounding the digital image in contemporary society, led through a combination of class lectures, readings, group discussions, film screenings, gallery visits and class critiques. Students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end camera and lighting equipment and develop professional printing skills. In addition to learning these advanced imaging practices, this course will also emphasize an investigation of critical thought surrounding contemporary visual culture and the role of digital media in the creation of art.
Taught by: Jamie Diamond
Course usually offered in fall term
Also Offered As: FNAR 342
Prerequisite: FNAR 640 Digital Photography I
Activity: Studio
1.0 Course Unit
FNAR 643 LANGUAGE OF DESIGN
The course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in the decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design-as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal visual language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics related to their field of study.
Course usually offered in spring term
Also Offered As: FNAR 343
Activity: Seminar
1.0 Course Unit

FNAR 645 Book and Publication Design
Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of books-literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs and textbooks, and serial editions-discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book Collection-and studio time where students will design books with attention to the format's conceptual relationship to the material at hand with a focus on typography and page layout, as well as on understanding production methods of printing and binding. In addition to the conventions of page layout students will examine paratextual elements (title page, practices of pagination and other internal structuring, content lists and indexes, colophons, notes and marginalia, end-leaves, binding, etc.).
Taught by: Hyland
Course usually offered in fall term
Also Offered As: FNAR 245
Prerequisites: FNAR 636 is strongly suggested but not required.
Activity: Studio
1.0 Course Unit

FNAR 646 Advanced 3D Modeling
Advanced 3D Modeling will give students the opportunity to refine skills in modeling, texturing, lighting, and rendering with an emphasis on the evolution of ideas through constant revision based on class critique. Students will use a variety of industry standard software packages, including, but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content within a simulated production environment.
One-term course offered either term
Also Offered As: FNAR 366
Prerequisite: FNAR 235/635 or FNAR 236/536
Activity: Studio
1.0 Course Unit

FNAR 648 Counter the Land: Photography and the Landscape
Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition. Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.
Taught by: Wahl
Course usually offered in fall term
Also Offered As: FNAR 348
Prerequisites: FNAR 571 or FNAR 640 or with permission of the instructor.
Activity: Studio
1.0 Course Unit

FNAR 652 Dispersive Lens
This studio course will explore the nexus between photography, sculpture, installation, drawing, painting, and the moving image. The course is informed by the printed image, as students will explore how photography can encourage thinking in other mediums, in addition to how other mediums can influence the making of photography. When does an abstract painting appear more like a photograph? How can a photograph suggest ways to make a video? Can a sculpture exist as a photograph? A variety of assignments will expose students to interdisciplinary approaches addressing these questions and more. Class projects will be supported by regular slide lectures, group critiques, and readings examining modern and contemporary artists and practices.
Taught by: Oliver
Course usually offered in spring term
Also Offered As: FNAR 348
Prerequisite: FNAR 571 or FNAR 640 or permission of the instructor
Activity: Studio
1.0 Course Unit
FNAR 654 Printmaking & Publications: Intro to Independent Publishing and Artists' Publications
This course introduces students to independent publishing and artists’ publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class. The course commences with a field trip to New York City’s Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists’ books, where students will be encouraged to submit a publication by semester’s end.
Taught by: Romberger
Course usually offered in fall term
Also Offered As: FNAR 254
Activity: Studio
1.0 Course Unit

FNAR 661 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 061, VLST 261
Activity: Seminar
1.0 Course Unit

FNAR 662 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
One-term course offered either term
Also Offered As: CIMS 062, FNAR 062
Prerequisite: FNAR 661
Activity: Seminar
1.0 Course Unit

FNAR 663 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.
Course usually offered in fall term
Also Offered As: CIMS 063, FNAR 063
Prerequisite: FNAR 661
Activity: Seminar
1.0 Course Unit

FNAR 665 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.
Course usually offered in fall term
Also Offered As: CIMS 065, FNAR 065
Prerequisite: FNAR 661
Activity: Seminar
1.0 Course Unit

FNAR 667 Advanced Video Projects
This course is structured to create a focused environment and support for individual inquiries and projects. Students will present and discuss their work in one on one meetings with the instructor and in group critiques. Readings, screenings, and technical demonstrations will vary depending on students’ past history as well as technical, theoretical, and aesthetic interests.
Course not offered every year
Also Offered As: FNAR 067
Prerequisite: FNAR 662
Activity: Seminar
1.0 Course Unit

FNAR 669 Graduate Video Studio
Through a series of studio projects, this course focuses on the conceptualization and production of time-based works of art. A seminar component of the course reviews contemporary examples of media based art and film. A studio component of the course introduces production techniques including lighting, cinematography, audio, editing, mastering projects, and installing audio-visual works in site-specific locations or gallery spaces.
Taught by: Mosley
Course usually offered in fall term
Activity: Studio
1.0 Course Unit
FNAR 670 Advanced Graphic Design and Typography
This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio.
Course usually offered in fall term
Also Offered As: FNAR 370
Prerequisite: FNAR 566 AND FNAR 569 or Permission of Instructor.
Activity: Studio
1.0 Course Unit

FNAR 671 Film Sound: History, Aesthetics and Subversion
Sound and image as experienced in the cinema, are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio's gradual and triumphant march towards fidelity, stereo and surround sound. This lecture course, through an historical and pedagogical romp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies.

1.0 Course Unit

FNAR 673 Machine for Seeing: Architecture and the Moving Image
Architecture's relationship with cinema was established with the very first motion picture. In Sortie de l'usine Lumiere de Lyon by Auguste and Louis Lumiere we see a didactic presentation of film titles as workers from the Lumiere brother's factory stream forth from its interior at days end. In many ways the context of the film is its subject as well. The title of the class plays on Le Corbusier's maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture's relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on the nature of and use of public space and urban development to documentarians researching the pathologies of neo-liberalism and its effect on the privatization of space. We will also look at the work of artists who engage with the poetics of space and who unpack the conflicted legacies of the built environment.

FNAR 674 A Virus in the Culture: Social Critique in Media Arts
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media we'll think through and develop responses to some of the most pressing issues facing us today. We'll look at historical models from the agitprop design work of Gee Vaucher for Anarcho-punk band Crass to Chris Marker's film Le Fond de L'Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We'll also look at experimental contemporary design firms like Metahaven who question the role of designers and filmmakers today - Bypassing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we'll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with studio time. While the focus of this course is not technical, prior knowledge of design programs, camera functions, and post-production techniques is expected.
Taught by: David Hartt and Mark Owens

FNAR 675 Image and Sound Editing
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, foleys, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.
Course usually offered in spring term
Also Offered As: CIMS 075, FNAR 075
Prerequisite: FNAR 661
Activity: Seminar
1.0 Course Unit
FNAR 676 Advanced Lens Based Projects
Advanced Lens Based Projects (ALBP) is structured to create an open environment for students to develop a series of self-determined projects using any variety of image capture technologies. Mobile devices and DSLRs have blended the function of moving and still image capture while computers have become ubiquitous as instruments of display and dissemination. This has consequently led to the increasingly collapsed boundaries of artistic mediums. ALBP is a studio class where students will explore different modes of production and address the expanding field of exhibition strategies. Additionally, the class will foster a transdisciplinary approach to critiquing work and emphasize the shared context of the works reception. Readings, screenings, discussions, and critiques make up the curriculum along with dedicated studio time. Each student is required to complete three self-determined projects using still or moving image capture technologies. Grades will be determined through participation, completion of assignments, and the students’ formal and critical engagement with the technology. While the focus of this course is not technical, prior knowledge of camera functions and post-production techniques is expected.
Taught by: Hartt

FNAR 678 Interfacing Culture: Designing for Mobile, Web and Public Media
This course introduces advanced topics related to contemporary media technologies, ranging from social media to mobile phones applications and urban interfaces. Students learn how to use new methods from interaction design, service design, and social media and work towards prototyping their ideas using new platforms and media. The class will cover a range of topics such as such as online-gaming, viral communication, interface culture, networked environments, internet of things and discuss their artistic, social, and cultural implications to the public domain.
Course usually offered in spring term
Also Offered As: FNAR 378
Prerequisite: FNAR 634
Activity: Studio
1.0 Course Unit

FNAR 679 Studio Lighting
The necessity of light and how light is rendered in relationship to what is seen and understood, is often a key ingredient in the portrayal of a subject. The origin of the still life can be found in images as far back as antiquity and has dealt with notions of death, science, class, social customs and even sex. Photography picked up on the tradition in 1827 and has not only made use of the form, but has expanded the topic into very unique territories. Contemporary artists have re-invented and re-invigorated the still life, formalism & abstract photography. As a framework for exploring ‘hands-on’ lighting techniques, students will creatively grapple with the photography of objects in the studio. Working with the physical, symbolic, and conceptual ramifications of depicting specific forms in an image, teams with the discussion of key texts, critiques, and studio lighting seminars, each student will create a considered and unique portfolio of images.
Taught by: Wahl
Course usually offered in spring term
Also Offered As: FNAR 279
Prerequisite: FNAR 571 or Permission of Instructor
Activity: Studio
1.0 Course Unit

FNAR 684 PHOTOGRAPHY AND FASHION
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocation. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/make up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.
Also Offered As: FNAR 284
Prerequisite: FNAR 571 or FNAR 640 or Permission from Instructor
Activity: Studio
1.0 Course Unit

FNAR 685 Photography and Fiction
In spite of photography's traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques.
Taught by: Diamond
Course usually offered in spring term
Also Offered As: FNAR 285
Prerequisite: FNAR 271 or FNAR 640 or Permission of the Instructor
Activity: Studio
1.0 Course Unit
FNAR 686 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. It proposes that studying and making sequential images and visual essays in a wide range of media - comics and graphic novels, propaganda, environments and installations, social media, animation, video, and digital media—are critical to understanding culture. The course immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series and the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers.

FNAR 710 Visual Epistemologies for Creative Practices
In this joint seminar between Architecture and Fine Arts, we investigate the alternative modes of diagrammatic thinking that are influencing art and design disciplines. The course provides a historical perspective on the evolution of visual epistemologies from late 1950s and reviews its current state from the lens of contemporary representation theory, computation, fabrication and information technologies. The goal is to gain both theoretical and hands-on experience with the contemporary diagramming techniques in order to advance both designs and the thinking behind them.

Folklore (FOLK)

FOLK 022 World Musics and Cultures
This course examines how we as consumers in the "Western" world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways-- particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of "World Music" by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process. For BA Students: Arts and Letters Sector Taught by: Muller Course usually offered in fall term Also Offered As: AFRC 050, ANTH 022, MUSC 050 Activity: Lecture 1.0 Course Unit

FOLK 029 Gender, Sexuality, & Religion
What does it mean to be a gendered individual in a Muslim, Hindu, Jewish, Christian, Buddhist, or Sikh religious tradition? How important are gender differences in deciding social roles, ritual activities, and spiritual vocations? This course tackles these questions, showing how gender - how it is taught, performed, and regulated - is central to understanding religion. In this course we will learn about gendered rituals, social roles, and mythologies in a range of religious traditions. We will also look at the central significance of gender to the field of religious studies generally. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of gender in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will also read religion through feminist and queer lenses - we will explore the key characteristics of diverse feminist and queer studies approaches to religion, as well as limits of those approaches.
For BA Students: Humanities and Social Science S Taught by: Robb Course usually offered in fall term Also Offered As: GSWS 109, RELS 005 Activity: Lecture 1.0 Course Unit

FOLK 101 Introduction to Folklore
The purpose of the course is to introduce you to the subjects of the discipline of Folklore, their occurrence in social life and the scholarly analysis of their use in culture. As a discipline folklore explores the manifestations of expressive forms in both traditional and modern societies, in small-scale groups where people interact with each face-to-face, and in large-scale, often industrial societies, in which the themes, symbols, and forms that permeate traditional life, occupy new positions, or occur in different occasions in everyday life. For some of you the distinction between low and high culture, or artistic and popular art will be helpful in placing folklore forms in modern societies. For others, these distinction will not be helpful. In traditional societies, and within social groups that define themselves ethnically, professionally, or culturally, within modern heterogeneous societies, and traditional societies in the Americas, Africa, Asia, Europe and Australia, folklore plays a more prominent role in society, than it appears to plan in literate cultures on the same continents. Consequently the study of folklore and the analysis of its forms are appropriate in traditional as well as modern societies and any society that is in a transitional phase.
For BA Students: Humanities and Social Science S Taught by: Ben-Amos One-term course offered either term Also Offered As: COML 101, NELC 181, RELS 108 Activity: Lecture 1.0 Course Unit
FOLK 201 American Folklore
This course will examine American expressive culture, including everyday speech, narrative, music, foodways, religion, public celebrations, and material culture through an exploration of the multiple and changing avenues of diversity in the United States. Folklore can be considered the unofficial culture that exists beneath and between the institutions of power that we read about in our history books, and that is what we will be studying—the 99% of American life that goes unseen and unnoticed in other college courses. Some of the topics we will examine are: campus folklore; body art and adornment; contemporary (urban) legends and beliefs; public celebrations and rituals; and the adaptation and commodification of folk culture in popular media.
One-term course offered either term
Also Offered As: ANTH 205
Activity: Lecture
1.0 Course Unit

FOLK 229 Myth in Society
In this course we will explore the mythologies of selected peoples in the Ancient Near East, Africa, Asia, and Native North and South America and examine how the gods function in the life and belief of each society. The study of mythological texts will be accompanied, as much as possible, by illustrative slides that will show the images of these deities in art and ritual.

FOLK 252 Themes Jewish Tradition: Iberian Conversos: Jew-Christian?
Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the “open” and “closed” in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.
For BA Students: History and Tradition Sector
One-term course offered either term
Also Offered As: JWST 100, NELC 252, NELC 552, RELS 129
Activity: Seminar
1.0 Course Unit

FOLK 270 Folklore and Sexuality
Sexuality is usually thought of as being biological or social, divided into categories of natural and unnatural. Often missed are its creative and communicative aspects. Examining the constructed social elements of sexuality requires attention be paid to folklore in groups, between individuals and on the larger platform of popular technological media. The most interesting locations for exploration are those places where borderlands or margins occur between genders, orientations and other cultural categories. A field-based paper will be required that must include documentary research.
Taught by: Azzolina
Course not offered every year
Also Offered As: GSWS 270
Activity: Lecture
1.0 Course Unit

FOLK 280 Jewish Folklore
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms. A basic book of Hasidic legends from the 18th century will serve as a key text to explore problems in Jewish folklore relating to both earlier and later periods.
Taught by: Ben-Amos
One-term course offered either term
Also Offered As: COML 283, JWST 260, NELC 258
Activity: Lecture
1.0 Course Unit
FOLK 406 Folklore and the Supernatural
Beliefs in the supernatural have not diminished appreciably in modern cultures, despite many predictions that they would. Recent public opinion surveys indicate many Americans hold supernatural beliefs or have had experiences they believe to be supernatural. This course will introduce key concepts in the study of culture and the supernatural. We will examine traditional beliefs about supernatural beings, supernatural realms, and humans who interact with these, as well as the historical development of Western ideas of “the supernatural” itself. Students will enhance their understanding of human diversity through cross-cultural examples of supernatural folklore, consider the relationship between the supernatural and place, and examine how various folklore genres have expressed human relationships to the supernatural. Topics may include witchcraft, ghosts, vampires, fairies, UFOs, supernatural assault, vodou, Neopaganism, saints, healing, legend tripping, and dark tourism. There will also be opportunity for students to explore related topics of interest to them.
Course not offered every year
Activity: Lecture
1.0 Course Unit

FOLK 440 Fairy Tales
In this seminar we review and evaluate critical approaches to understanding manhood and masculinity as they have been used to examine the individual and collective lives of men in communities around the world. Through a perspective that emphasizes how masculinity is performed and narrated, we seek to integrate concepts of: (1) the self—the experiencing and embodiment of personhood, subjectivity, and emotion; (2) spatiality and power—public and sporting events, leisure spaces; and (3) the state—relations between gender ideology, governmentality and power in political theatre, media control, warfare and military memorials.
Taught by: Lee, L.
Course not offered every year
Activity: Seminar
1.0 Course Unit

FOLK 459 Prose Narrative
Historical, literary, comparative, and ethnographic methods contribute to study of prose narratives which were told in oral societies in antiquity and in modern times and were documented in literary societies for different purposes. Oral storytellers, both professional and amateurs, performed them in private and public spaces. Their recording from antiquity to modern times became an integral element of modern life in general and in education and arts in particular. The storytellers, their performances in oral and literary cultures, their genres, and their symbolic meanings are the subjects of the course, together with the analytical methods that help mapping their distribution worldwide.
Taught by: Ben-Amos

French (FREN)

FREN 110 Elementary French I
French 110 is the first semester of the elementary-level sequence designed to develop functional proficiency in the four skills and gain familiarity with French and Francophone culture. The primary emphasis is on the development of the oral-aural skills, speaking and listening. Readings on topics in French culture as well as frequent writing practice are also included in the course. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class which will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will be given frequent opportunity to practice your newly acquired vocabulary and grammatical structures in small group and pair work which simulate real-life situations. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos and taped conversations between native speakers. Out-of-class homework will require practice with the online component of the textbook (MyFrenchLab) as well as regular writing practice. The course will also invite you to explore the Francophone world on the Internet.
For BA Students: Language Course
One-term course offered either term
Activity: Seminar
1.0 Course Unit
FREN 112 Accelerated Elementary French
French 112 is an intensive elementary language course for students who have not studied French, but who have met the language requirement in another foreign language. This course will provide an introduction of the basic structures of French, with intensive work on speaking and listening designed to prepare students to take Intermediate French. Due to the nature of the course, the first half will progress rapidly with the more difficult material presented after the midterm period. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class that will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will have frequent opportunities to practice your newly acquired vocabulary and grammatical structures in small group and pair work that simulate real-life situations, so please prepare each day's lesson attentively. See "Preparation for each class" below for additional details. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos, and conversations between native speakers. Homework will consist of aural comprehension exercises in the online SAM as well as regular writing practice. The course will also invite you to explore the Francophone world by completing an engaging, interactive project in the final stage of the semester. By the end of this course, you should be able to meet a variety of day-to-day needs in a French-speaking setting and to handle a range of basic travel transactions. You will be able to engage in simple conversations on familiar topics such as family, lodging, daily routines, leisure activities, etc. You will begin to be able to speak and write in the past, present and the future, make comparisons, and describe people and things in increasing detail. You will develop reading skills that should allow you to get the gist of simple articles and you will more readily discern information when you hear native speakers talking in a simple fashion about topics familiar to you.

1.0 Course Unit
FREN 130 Intermediate French I
French 130 is the first half of a two-semester intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. You are expected to have already learned the most basic grammatical structures in elementary French and you will review these on your own in the course workbook. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. As in other French courses at Penn, class will be conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as role-plays, problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Through the study of authentic materials such as articles, poems, songs, films, videos, you will deepen your knowledge of the French-speaking world. Daily homework will require listening practice with audio and video material, in addition to regular written exercises in the workbook and frequent composition practice. Students who have completed French 120, or with an SATII score of 450-540 or a placement score between 30 and 35 should enroll in this course.
For BA Students: Language Course
One-term course offered either term
Prerequisites: Completion of FREN 120 or 121, or placement into third-semester French.
Activity: Seminar
1.0 Course Unit

FREN 134 Accelerated Intermediate French
An intensive two-credit course covering the first and second semester of the intermediate year. See descriptions of French 130 and 140. Students must have a departmental permit to register. Also offered in the summer Penn-in-Tours program in France.
For BA Students: Last Language Course
Course usually offered in spring term
Activity: Seminar
2.0 Course Units

FREN 130 Intermediate French II
French 140 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. You are expected to have already learned the most basic grammatical structures in elementary French and you will review these on your own in the course workbook. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. This course focuses on the culture of French-speaking countries beyond the borders of France. Along with your classmates, you will explore the cities of Dakar, Fort-de-France and Marrakesh, investigating the diversity of the Francophone world through film, literature and music. As in other French courses at Penn, class is conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Daily homework will require researching in the library and on the Internet, listening practice with video clips, in addition to regular written exercises in the workbook.
For BA Students: Last Language Course
One-term course offered either term
Prerequisites: Completion of French 130 or placement into fourth-semester French.
Activity: Seminar
1.0 Course Unit

FREN 180 Advanced French in Residence
Open only to residents in La Maison Francaise. Participants earn 1/2 c.u. per semester.
Two terms. student may enter either term.
Corequisite: Residence in Modern Language House
Activity: Seminar
0.5 Course Units

FREN 202 Advanced French
French 202 is a third-year level course aimed at better understanding contemporary French society, language and culture, with a special focus on today's young generation. What defines a generation in the first place, and how do the lives of young people in France compare to those of their American counterparts? To answer these questions, students in 202 will delve into numerous aspects of French youth experience from the school system to family life, and from the workplace to the political arena, with the aid of resources including contemporary films, news articles, songs, literary texts, and the recent sociological project "Generation Quoi." In addition, they will forge connections with the French community on Penn's campus, as they embark on a journey of cultural exploration and reflexive self-discovery. While 202 is not a grammar-focused course, particular attention will be given to recognizing and employing the different registers of spoken and written French. The course constitutes excellent preparation for study abroad in a French-speaking region.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisites: Open to students who have completed the language requirement. Students who are continuing from French 134 or 140 should take French 202 before moving on to more advanced French courses.
Activity: Seminar
1.0 Course Unit
FREN 211 French for Business I
This content-based language course, taught in French, introduces economic, business, and professional terminology through the study of the following topics: financial institutions (banking, stock market and insurance); business practices (business letters and resumes); trade and advertising; the internal structure and legal forms of French companies. The course also emphasizes verbal communication through three components: 1) In-class activities such as problem-solving tasks, discussions, and debates. 2) The study of authentic materials such as newspapers and magazines’ articles, video clips, and radio shows. 3) A series of students’ presentations. Finally, in order to use and practice the new economic and business terminology studied in this course, and to also further explore the structure, the management, and the operations of the French companies, students will work in pairs on a research project about a major French company of their choice. One of the other goals of this course is to also prepare the students to take one of the exams offered by the Paris Chamber of Commerce and Industry: the Diplome de Francais Professionnel, Affaires, C1. This exam will be held on campus in April.
One-term course offered either term
Prerequisites: Advanced level of French (French 202 highly recommended). No business background necessary.
Activity: Seminar
1.0 Course Unit

FREN 212 Advanced French Grammar and Composition
Intensive review of grammar integrated into writing practice. A good knowledge of basic French grammar is a prerequisite (French 202 or equivalent is recommended). Conducted entirely in French, the course will study selected grammatical difficulties of the French verbal and nominal systems including colloquial usage. Frequent oral and written assignments with opportunity for rewrites. Articles from French newspapers and magazines, literary excerpts, and a novel or short stories will be used as supplementary materials in order to prepare students to take content courses in French in disciplines other than French.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisites: Advanced level of French (French 202 or equivalent highly recommended).
Activity: Seminar
1.0 Course Unit

FREN 214 Advanced French Composition and Conversation
Entitled "Contemporary French Society through its Media," this course is intended to improve communicative skills through extensive practice in a variety of styles and forms. It aims to enhance student understanding of contemporary French culture, thought, and modes of expression by promoting both cross-cultural understanding and critical thinking and developing students' communicative abilities (in the presentational, interpretive, and interpersonal modes). The specific language functions we will focus on are: narration; description; offering and soliciting advice and opinions; expressing feelings; critique and analysis; argumentation. It is organized around the themes of current events, identity, and art. Activities include the study, analysis, and emulation of model texts as well as discussion and debates about events and social issues as covered by the French news media (television, print, Internet sources). The oral work include video blogs and group presentations on selected topics and current events. Written practice will comprise reflective journals, essays, and collaborative work on Web projects. On completing this course, students will feel more confident and be able to speak and write effectively on a range of contemporary issues. Recommended for students who are planning to study abroad in France.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisites: Advanced Language Course
Prerequisites: Advanced level of French (French 202 or equivalent highly recommended).
Activity: Seminar
1.0 Course Unit

FREN 217 French Phonetics
This course is designed to provide students with a solid foundation in French phonetics and phonology. Part of the course will be devoted to learning how to produce discourse with native-like pronunciation and intonation. The course will also focus on improving aural comprehension by examining stylistic and regional differences in spoken French.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisites: Advanced level of French (French 202 or equivalent highly recommended).
Activity: Seminar
1.0 Course Unit
**FREN 225 History, Memory, Culture**

This course explores the history of the dark years of the French collaboration with Nazi Germany during WWII. In the first part, it examines the rise of the myths of an "eternal France" and the "true French" promoted by Marshal Petain's National Revolution, as well as the myth of the resistance fighters that arose after the Liberation. The Holocaust adn the holes left in national memory will hold a pivotal place in our reading of the national narrative. The second part of the course is dedicated to the study of literary works written by post-memory writers or survivors of the Holocaust who tried to fill in the blanks and confronted the linguistic challenge posed by Auschwitz. Paris will play a connecting role, as both witness to history and as tangible trace of the forgotten. This study of French history, its silences and (non-) memory will shed light on the legacy of the Occupation for contemporary France. Assessment consists of a semester-long creative writing project and a final oral exam. Reading assignments include works by Pierre Assouline, Marceline Loridan-Ivens, Patrick Modiano, Georges Perec.

Taught by: Melanie Peron

Course not offered every year

Prerequisites: Two 200-level French courses taken at Penn or equivalent.

Activity: Lecture

1.0 Course Unit

Notes: Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs. Permission Needed From Instructor. Penn Global Seminar.

**FREN 226 French History and Culture until 1789**

This civilization course presents the fabric/fabrication of the so-called national memory through its places of memory (lieux de memoire), as well as its places of non-memory (lieux de non-memoire), going from the Gauls to the Enlightenment. As the course tells the story of the rise and fall of the French monarchy, one is encouraged to envision it as a palimpsest and to become aware of the roles played by myths and legends. It helps see how French history has been manipulated by the collective memory, how retrospection often redefines, fabricates events and people depending on the needs of the moment. This course is taught in French.

For BA Students: History and Tradition Sector

Course usually offered in fall term

Prerequisites: Two 200-level French courses taken at Penn or equivalent.

Activity: Seminar

1.0 Course Unit

**FREN 227 French History and Culture 1789-1945**

This civilization course presents the creation of modern France from 1789 to 1945 through the omnipresence of the myth of Perseus and Medusa in the historical narrative. The objective of the course is to introduce students to a period in France's history that begins with the French Revolution and ends with Marshal Petain's National Revolution. It also helps them discover the intricacies of the slow construction of modern France. In this course, students are led to reflect on the contemporary French culture and society that are the result and the remnants of the Revolution, and to make connections with the American history. This course is taught in French.

For BA Students: Humanities and Social Science Sector

Course usually offered in spring term

Prerequisites: Two 200-level French courses taken at Penn or equivalent.

Activity: Seminar

1.0 Course Unit

**FREN 228 Contemporary France**

In this course we will be exploring the transformations of French society since the Second World War and into the Millennium. From the legacy of decolonization to the multicultural fervor of the 1998 Soccer World Cup, from the May 1968 civil protests to the Republican marches of 2015, we'll be delving into the major historical and cultural movements that have marked the contemporary period. How did France recover from German occupation and cope with further wars in its colonial territories? How did unprecedented rates of urbanization and immigration change the face of the country over the ensuing decades? Who have been the major players on the historical stage? And what are the political, cultural, and socioeconomic challenges facing France at the outset of the 21st century? These are some of the questions that will guide our investigation into the past 70 years of French history, a period as turbulent as it is rich in cultural production, and as complex as it is fascinating. Throughout the semester we will be especially attentive to images, in every sense of the word: the images of national identity that France projects to the world and to itself, but also pictorial representations of the country, its people and its territory. These images, and the stories they tell, will help us envision the kaleidoscopic portrait of a nation. The course will be conducted entirely in French.

Course usually offered in fall term

Prerequisites: Two 200-level French courses taken at Penn or equivalent.

Activity: Seminar

1.0 Course Unit

**FREN 229 French in the World**

Where and how is French spoken in the world? Which variety (or varieties) of French represents "good" or standard language use? What does it mean to have an accent or to experience linguistic insecurity? To what extent have political forces and movements historically affected the evolution of French? How do language attitudes differ among French- and English-speaking regions of the world and what is the status of French in an era of globalization? In what ways does language shape our identities? Le Francais dans le monde/French in the World examines these questions by providing a survey of the sociolinguistics of the French language in the contemporary world. We will explore how societal changes influence the manner and the contexts in which the French language is spoken. Case studies focus on various parts of the Francophone world, including Europe (Belgium, Switzerland), New World (Quebec, Caribbean, Louisiana), Africa (North Africa, Sub-Saharan Africa), etc. Readings and class discussions are in French.

Course usually offered in spring term

Prerequisites: Two 200-level French courses taken at Penn or equivalent.

Activity: Seminar

1.0 Course Unit
FREN 230 Masterpieces of French Cinema
This course will introduce students to key films of the French film canon, selected over a period ranging from the origins of French cinema to the present. Students will also be introduced to the key critical concepts (such as the notion of the “auteur” film genre) informing the discussion of films in France. The films will be studied in both a historical and theoretical context, related to their period styles (e.g. “le réalisme poétique,” “la Nouvelle Vague,” etc.), their “auteurs,” the nature of the French star system, the role of the other arts, as well to the critical debates they have sparked among critics and historians. Students will acquire the analytical tools in French to discuss films as artistic and as cultural texts. Please note: This course follows a Lecture/Recitation format. The Lecture (FREN 230-401/CIMS 245-401) is taught in English. For French credit: please register for both FREN 230-401 (lecture) and FREN 230-402 (recitation); the FREN 230-402 recitation is conducted in French. For Cinema Studies credit: please register for CIMS 245-401 (lecture) and CIMS 245-403 (recitation), both are taught in English.
For BA Students: Arts and Letters Sector
Course usually offered in fall term

FREN 231 Perspectives in French Literature: Love and Passion
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Students are expected to take an active part in class discussion in French. French 231 has as its theme the presentation of love and passion in French literature. This course was previously offered as French 221.
For BA Students: Arts and Letters Sector
Course usually offered in fall term
Also Offered As: COML 218
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1.0 Course Unit

FREN 232 Perspectives in French Literature: The Individual and Society
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Special emphasis is placed on close reading of texts in order to familiarize students with major authors and their characteristics and with methods of interpretation. Students are expected to take an active part in class discussion in French. French 232 has as its theme the Individual and Society.
For BA Students: Arts and Letters Sector
Course usually offered in spring term
Also Offered As: COML 219
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1.0 Course Unit

FREN 233 Francophone Literature and Film
French 233 is designed to give students a basic historical and theoretical groundwork in Francophone and postcolonial studies, and to help them develop their skills in literary and filmic analysis. It will provide an introductory survey of the richly diverse literature and film of the French-speaking world, from the 1950s through to the 21st century. Beginning with the gradual breakup of the French colonial empire, we will investigate the construction of individual and collective Francophone identities in such regions as the Caribbean, Africa, and the Maghreb, while exploring an equally wide range of literary and cinematic genres. Other histories and regions such as Quebec and Lebanon will also be discussed. Throughout the course we will remain especially attentive to questions of space--public and private spheres, urban and rural topographies, borders and migrations, as well as the complex dynamics between the Francophone regions and France itself--and to the ways in which these tensions are mapped onto the textual and visual surfaces of the works studied.
For BA Students: Arts and Letters Sector
Course usually offered in spring term
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1.0 Course Unit

FREN 250 French Literature in Translation
The content of the course will vary from semester to semester. All works read in English. Please check the department’s website for a description. https://www.sas.upenn.edu/french/pc
Course not offered every year
Also Offered As: COML 272, ENGL 360, HIST 251
Prerequisites: Two 200-level French courses taken at Penn or equivalent.

Activity: Lecture
1.0 Course Unit

FREN 259 Topics In Modernism
This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ARTH 385, COML 140, ENGL 259, GRMN 249
Prerequisites: Pre-requisites some knowledge of 20th-century poetry.
Activity: Seminar
1.0 Course Unit
FREN 300 The Making of Modern Paris
Paris, Ville-Lumiere, has long been renowned for its urbanity, architecture, and city design. This course will trace the people, ideas, and projects that contributed to this reputation, through an exploration of the city's built environment as expressed in literature and urban planning projects of the 19th and 20th centuries. The class will analyze literary readings, including texts by Hugo, Baudelaire, Zola, and Breton, in conjunction with historical and visual materials covering works from Viollet-le-Duc to Napoleon III and Haussmann to Mitterand and Sarkozy. This seminar has four goals: (1) To engage students in an interdisciplinary conversation about the development of a modern global city as experienced by a range of observers: writers, photographers, designers and inhabitants. (2) To introduce students to some of the major literature written as Paris moved from a pre-industrial to a post-industrial state, while attending critically to the ideological and rhetorical strategies at work in representations of a modernity and urban space. (3) To expand students' knowledge of how to "read" a city over time. (4) To guide students in the preparation of an in-depth research project. This interdisciplinary course, which brings together the humanities and the design professions, has been designated a Penn Global Seminar. With the support of the Provost's Office, the class will include a week-long seminar in Paris during Spring Break. The required on-site seminar will have several objectives including visiting the sites recorded in the literature and tracing the city's physical development over time, as reflected in the extant built environment. The overall goal is to understand how this place has enduringly responded to the needs of various generations and how artistic and literary representations have interacted with planning decisions to create and real. We will query the role of public and private decision-makers in making the adaptations that have allowed Paris to remain a global city in the 21st century.

FREN 311 French Thought After 1968
In American academia, French thought after May '68 is often referred to as "French Theory," a heterogeneous corpus of philosophical and critical texts compacted into a set of poststructuralist premises, first introduced by and grew within humanities departments, then identified as a luxury by-product of the "literary" people. This course proposes to unpack the notion of "French Theory" and re-anchor it into its original social/historical background. We will read some of the most influential texts of its key figures, study how a post May 68 revolutionary energy is transformed into various innovative but also destabilizing ways of rethinking power relations, gender, language and subjectivity, and finally, consider in what capacities and limits these diverse critical approaches go beyond the simple label of "post-structuralism" and relate to our own epoch and personal experiences. The readings and discussions will be divided into four axes: 1. Philosophy of Desire (Lacan, Deleuze/Guattari); 2. Sexual Revolt and Body Politics (Foucault, Hocquenghem, Barthes); 3. Deconstruction and Its Impact on Feminism (Derrida, Cixous, Irigaray); 4. Consumer Society and Society of the Spectacle (Lipovetsky, Baudrillard, Debrard). Several documentaries and feature films will be shown outside class time. Taught in English. Reading knowledge of French is welcome but not required.
One-term course offered either term
Also Offered As: COML 309
Activity: Seminar
1.0 Course Unit

FREN 313 French for Business II
The course, conducted entirely in French, emphasizes verbal communication in business professional situations through three components. First, a series of student presentations, in-class activities (using newspapers’ articles, technical readings, radio shows and films), and debates on the following topics (list not exhaustive) related to France’s economy and society. The role of the State in France’s economy; the French fiscal system; Labor (impact of the 35-hour work week; “conges,” women in the workplace, etc.); Regions of France (production); major French industries/companies/brands; France’s major imports/exports; “Green business”; Business of pop culture. Second, as effective communication is based not only on linguistic proficiency but also on cultural proficiency, cultural differences mostly between Americans and French will be explored. Finally, throughout the semester, students will work in groups on the creation of their own business, association, or other organization and will be invited to present their project to the class at the end of the semester. On completion of the course, students will also have the opportunity to take the Diplome de Francais Professionnel-DUP Affaires (C1) administered by the Paris Chamber of Commerce and Industry.
Course usually offered in spring term
Prerequisites: Advanced level of French. French for Business I (211) highly advisable.
Activity: Seminar
1.0 Course Unit
FREN 322 France and the European Union
This course aims to provide an understanding of the European Union as a complex entity: its history, institutions, challenges and future. After reviewing the history of European integration and learning about the Community’s institutions, common programs and market, we will consider a wide variety of themes important to Europe: economics, education, immigration, the environment, social issues, national and European identities, the debate over a Federal Europe vs. a Europe of nations, European social/cultural models vs. American liberalism, relations between the EU and the rest of the world. Considering the acute and ongoing challenges facing the European community, we will focus on current events and discuss issues that are critical to the EU in general and to France in particular. Students will be responsible for pursuing substantive research on these and other topics and participating actively in debates. This class will be conducted entirely in French and is designed to improve cross-cultural understanding and communicative skills in the presentational, interpretive and interpersonal modes. Course usually offered in spring term
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1.0 Course Unit

FREN 325 Advanced French Translation
This course provides an introduction to the theory and practice of translation and is designed to help foster a critical understanding of differences between French and English syntactical and lexical patterns. It will introduce students to theoretical concepts and problems of translation, with the ultimate goal being to improve their ability to communicate in more authentic-sounding French. Students will have the opportunity to practice translation individually and to work with their peers on a variety of projects (advertising, journalistic and literary texts, movie and broadcast news subtitling) and to engage in critique and discussion of others’ translations. This course will help students refine their language skills and navigate more proficiently between these cultures and language systems. (Designed for students who already have a solid foundation in French and English grammar)
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
French 212 or equivalent highly recommended.
Activity: Seminar
1.0 Course Unit

FREN 330 Medieval Literature
An introductory course to the literature of the French Middle Ages. French literature began in the 11th and 12th centuries. This course examines the extraordinary period during which the French literary tradition was first established by looking at a number of key generative themes: Identity, Heroism, Love, Gender. All readings and discussions in French.

Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1.0 Course Unit

FREN 371 Poe's French Legacies
Edgar Allan Poe was considered a vulgar hack by many of his fellow Americans, but in 19th-century France, he was touted as a misunderstood poetic genius, the original poete maudit. Through the translations of Charles Baudelaire, who found in Poe a kindred spirit in the "gout de l’infini," French intellectuals came to know the American writer as a fount of aesthetic wisdom, diabolical sensibility, and mystic mastery. In this course, we will study Baudelaire’s poetry as well as the many literary and artistic movements in France that were directly inspired by Poe’s uncanny mix of the macabre and the methodical: Symbolist poetry (Valery, Mallarme), the Scientific Fantastic (Maupassant, Villiers de l’Isle-Adam), fin-de-siecle Decadence (Huysmans, Odilon Redon), Science Fiction (Verne), the detective novel (Gaboriau), and 20th-century Surrealism (Breton, Max Ernst).
Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1.0 Course Unit

FREN 380 Literature of the Twentieth Century
This course, the theme of which changes from semester to semester, provides an introduction to important trends in twentieth-century literature. Please check the department’s website for the course description: https://www.sas.upenn.edu/french/pc
Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1.0 Course Unit

FREN 382 Horror Cinema
The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionist masterworks of the silent era, the Universal classics of the 30’s and the low-budget horror films produced by Val Lewton in the 40’s for RKO in the US, the 1950’s color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60’s, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre’s main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics...).
Taught by: Met

FREN 385 Modern French Theater
A study of major movements and major dramatists from Giraudoux and Sartre to the theater of the absurd and its aftermath.
Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1.0 Course Unit

FREN 386 Paris in Film
Latter-day examples like Christophe Honore’s Dans Paris, Cedric Klapisch’s Paris or the international omnibus Paris, je t’aime (with each director paying homage to a distinctive “arrondissement” of the capital), not to mention American blockbusters like The Da Vinci Code and Inception or Woody Allen’s Midnight in Paris, are there to remind us that there is something special – indeed, a special kind of magic – about Paris in and on film. Despite the extreme polarization between Paris and provincial France in both cultural and socio-economic terms, cultural historians have argued that Paris is a symbol of France (as a centralized nation), more than Rome is of Italy and much more than Madrid is of Spain or Berlin of Germany, for example. The prevalence of the City of Lights on our screens, Gallic and otherwise, should therefore come as no surprise, be it as a mere backdrop or as a character in its own right. But how exactly are the French capital and its variegated people captured on celluloid? Can we find significant differences between French and non-French approaches, or between films shot on location that have the ring of “authenticity” and studio-bound productions using reconstructed sets? Do these representations vary through time and perhaps reflect specific historical periods or zeitgeists? Do they conform to genre-based formulas and perpetuate age-old stereotypes, or do they provide new, original insights while revisiting cinematic conventions? Do some (sub)urban areas and/or segments of the Parisian population (in terms of gender, race, or class, for example) receive special attention or treatment? These are some of the many questions that we will seek to address...with a view to offering the next best thing to catching the next non-stop flight to Paris! For French credit. Please register for both FREN 386-401 (lecture) and FREN 386-402 (recitation). The FREN 386-402 recitation is conducted in French. For Cinema and Media Studies credit: Please register for CIMS 386-401 (lecture) and CIMS 386-403 (recitation). Both lecture and recitation are taught in English.
Taught by: Professor Philippe Met
Course usually offered in spring term
Also Offered As: CIMS 386
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Lecture
1.0 Course Unit

FREN 389 France and Its Others
A historical appreciation of the impact of the exploration, colonization, and immigration of other peoples on French national consciousness, from the 16th century to the present. Emphasis is on the role of the Other in fostering critiques of French culture and society. Readings include travel literature, anthropological treatises, novels, and historical documents. Oral presentations and several short papers are included in the course.
Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1.0 Course Unit

FREN 390 Francophone Postcolonial Cultures
A brief introduction about the stages of French colonialism and its continuing political and cultural consequences, and then reading in various major works – novels, plays, poems – in French by authors from Quebec, the Caribbean, Africa (including the Maghreb), etc. Of interest to majors in International Relations, Anthropology and African Studies, as well as majors in French. Taught in French.
Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1.0 Course Unit

FREN 541 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance

In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Ficino, Pico della Mirandola Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructors. It counts toward the undergraduate minor in Global Medieval Studies and the graduate certificate in Global and Medieval Renaissance Studies.

Taught by: Soldato
Course not offered every year
Also Offered As: COML 552, ITAL 541
Prerequisites: Undergraduates must obtain permission of instructors.

FREN 582 Fantastic Literature 19th/20th Centuries

This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches – thematic, psychoanalytic, cultural, narratological – will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the "real," making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include "recits fantastiques" by Merimee, Gautier, Nerval, Maupassant, Breton, Pierre de Mandiargues, Jean Ray and others.
Course not offered every year
Activity: Seminar
1.0 Course Unit

FREN 590 Introduction to Francophone Studies

An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.

FREN 595 Travel Literature

Within the context of the ill-defined, heterogeneous genre of the travelogue and of today's age of globalization, CNN and the Internet, this seminar will examine the poetics of travel writing based largely albeit not exclusively on travel notebooks, or journaux/carnets de voyage, spanning the 20th century from beginning to end. One of the principal specificities of the texts studied is that they all evince to a lesser or greater degree a paradoxical resistance both to the very idea of travel(ing) as such and to the mimetic rhetoric of traditional travel narratives. We will therefore look at how modern or postmodern texts question, revisit, subvert or reject such key notions of travel literature as exoticism, nostalgia, exile, nomadism, otherness or foreignness vs. selfhood, ethnology and autobiography, etc. Authors considered will include Segalen, Morand, Michaux, Leiris, Levi-Strauss, Butor, Le Clezio, Baudrillard, Bouvier, Jouanard, Leuwers.

FREN 605 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in literary theory of the 20th and 21st centuries. We will pay particular attention to the following movements: Structuralism and Deconstruction (Levi-Strauss, Jakobson, Barthes, Derrida), Social Theory (Foucault, Ranciere), Psychoanalysis (Freud, Lacan, Abraham and Torok), Schizoanalysis (Deleuze and Guattari), Feminism and Queer Theory (Irigary, Kristeva, Sedgwick), Spatial Theory (Bachelard, DeCerteau, Lefebvre), and the Frankfurt School (Adorno and Horkheimer, Kracauer). Readings and discussion will be in English.
Taught by: Goulet
One-term course offered either term
Also Offered As: COML 605, ENGL 605, GRMN 605
Activity: Seminar
1.0 Course Unit

FREN 609 Global France
The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The extraordinary innovations of "ethnosurrealism" in the twenties and thirties by such key figures of the avant-garde as Breton, Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring a renewal of "anthropology as cultural critique in the United States."
Besides the authors just indicated, key texts by Durkheim, Mauss and Levi-Strauss will be considered both on their own terms and in relation to their obvious influence. The institutional fate of these intellectual crossovers and their correlative disciplinary conflicts will provide the overarching historical frame for the course, from the turn of the century to the most recent debates.

FREN 620 Paris and Philadelphia: Landscapes and Literature of the 19th Century
This course explores the literal and literary landscapes of 19th-century Paris and Philadelphia, paying particular attention to the ways in which the built environment is shaped by and shapes shifting ideologies in the modern age. Although today the luxury and excesses of the "City of Light" may seem worlds apart from the Quaker simplicity of the "City of Brotherly Love," Paris and Philadelphia saw themselves as partners and mutual referents during the 1800s in many areas, from urban planning to politics, prisons to paleontology. This interdisciplinary seminar will include readings from the realms of literature, historical geography, architectural history, and cultural studies as well as site visits to Philadelphia landmarks, with a view to uncovering overlaps and resonances among different ways of reading the City. We will facilitate in-depth research by students on topics relating to both French and American architectural history, literature, and cultural thought.
Taught by: Professors Andrea Goulet and Aaron Wunsch (Design)
Course usually offered in fall term
Also Offered As: COML 625

Activity: Seminar
1.0 Course Unit
FREN 650 Studies in the 17th Century
Topics of discussion will vary from semester to semester. One possible topic is "The Royal Machine: Louis XIV and the Versailles Era." We will examine certain key texts of what is known as the Golden Age of French literature in tandem with a number of recent theoretical texts that could be described as historical. Our goal will be to explore the basis of "the new historicism," a term that is designed to cover a variety of critical systems that try to account for the historical specificity and referentiality of literary texts. Please see department's website for current course description: https://www.sas.upenn.edu/french(pc
Course not offered every year
Activity: Seminar
1.0 Course Unit

FREN 660 Studies in the Eighteenth Century
Topics of discussion will vary from semester to semester. One possible topic is "Masterpieces of the Enlightenment." We will read the most influential texts of the Enlightenment, texts that shaped the social and political consciousness characteristic of the Enlightenment—for example, the meditations on freedom of religious expression that Voltaire contributed to "affaires" such as the "affaire Calas." We will also discuss different monuments of the spirit of the age—its corruption (Les Liaisons dangereuses), its libertine excesses and philosophy (La Philosophie dans le boudoir). We will define the specificity of 18th-century prose (fiction), guided by a central question: What was the Enlightenment? Please see department's website for current course description: https://www.sas.upenn.edu/french(pc
Course not offered every year

FREN 681 Studies in Modern French Poetry
How does one approach the modern poetic text which ever since the Mallarmean "crise de vers" appears to have cut loose from all referential anchoring and traditional markers (prosody, versification, etc.)? This course will present an array of possible methodological answers to this question, focusing on poetic forms and manifestations of brevity and fragmentation. In addition to being submitted to precise formal and textual inquiries, each text or work will be the point of departure for the analysis of a specific theoretical issue and/or an original practice—e.g., genetic criticism, translation theory, the poetic "diary", aphoristic modes of writing, quoting and rewriting practices, etc. Texts by key modern poets (Ponge, Chazal, Du Bouchet, Jourdan, Jabes, Michaux).

Freshman Seminar (FRSM)
FRSM 002 Research: From Curiosity to Knowledge
How does one act on curiosity about the physical and living world and the human cultures in it? This seminar will use case-study and brainstorming approaches to visit how people define good questions and practice research in a range of disciplines, from the humanities and social sciences to natural sciences and engineering. We are especially interested in common components (e.g., “evidence”) and how it differs among a broad spectrum of phenomena and human behavior, and how might we observe and trace patterns in it, to find new ideas and answers. Our sessions, will also highlight field-specific approaches for translating evidence into knowledge. For example, we examine and interpret genomes and paintings in different ways by employing experiments and historical methods, respectively. In a comparative approach, we will explore what analysis and interpretation of primary evidence looks like, from statistical patterning or materials testing to visualization and narrative. The class will include some field trips to active research sites, like labs, archives and museums. Students will play an active role in the sessions, and try out various kinds of response, written and oral. Our goal is to enable students to participate in and appreciate how research is performed in a range of areas, as a stimulus to using the arts of observation and questioning for whatever might be their own objects of curiosity.
Taught by: Guild
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

Genetic Counseling (GENC)
GENC 500 First Year Internship
In addition to course-based degree requirements, students participate in internships related to the field of genetic counseling. These internships begin in the student’s first term. Internships give students the opportunity to learn in varying practice-based environments.
Activity: Clinic
0.0 Course Units

GENC 510 Clinical Internship
In addition to course-based degree requirements, students participate in internships related to the field of genetic counseling. These internships begin in the student’s first term. The clinical internships begin in the summer after the first year of coursework is completed. Clinical internships continue through the spring of the second year. Internships give students the opportunity to learn in varying practice-based environments.
Activity: Clinic
0.0 Course Units

GENC 601 Advanced Genetics and Genomics
This course will provide an extensive survey of molecular genetics including molecular biology and the regulation of gene expression. Applications to human clinical genetics through discussion of relevant case studies will be incorporated. The content of this course will facilitate an understanding of the application of molecular techniques in genetic testing and diagnosis and provide the necessary background knowledge to understand topics covered in Foundations in Clinical Genetics and other courses in the genetic counseling master’s program including Cancer Genetics, Reproductive Genetics, and Medical Genetics.
Activity: Lecture
1.0 Course Unit

GENC 602 Mechanisms of Disease
The material covered in this course introduces the fundamental principles of normal and abnormal physiology in all systems. The focus of the course will be on understanding the pathophysiology of human genetic diseases. The coursework serves as the background for understanding specific diseases as they present in clinical genetics and research that has led to improved therapy and treatment for patients. The class will be primarily lecture-based using case-based learning.
Activity: Lecture
1.0 Course Unit

GENC 603 Introduction to Genetic Counseling
Genetic counseling students will be oriented to the profession through a review of the history of genetic counseling. Topics covered include medical terminology, the structure of genetic counseling sessions, discussion of the scope of practice and disability rights, instruction in obtaining family pedigrees, review of genetic testing practices, and the National Society of Genetic Counselors Code of Ethics and Scope of Practice. Students will gain an appreciation for the lived experience of individuals with genetic diseases by reading novels and memoirs, reviewing online support groups, watching videos and performing role plays. The course will provide experiential learning about advocacy groups for patients and their families through first-hand interviews and a tour of the CHOP NICU.
Activity: Lecture
1.0 Course Unit

GENC 604 Reproductive and Developmental Genetics
A variety of topics to prepare students to practice genetic counseling in reproductive genetics will be covered in this course. Topics include a review of human development from gametogenesis and fertilization to organogenesis, emphasizing the genetic basis of these complex events and how teratogenic factors lead to abnormal development. The common indications for prenatal genetic counseling, including advanced maternal age, first-trimester screening, NIPS, ultrasound anomalies, diagnostic procedures, and prenatal complications, will be reviewed. Through the completion of assignments and role plays, students will demonstrate their abilities to critically think through cases, assess risk, and provide patient-centered care. The course will discuss psychosocial issues surrounding fertility counseling.
Activity: Lecture
1.0 Course Unit
GENC 611 Cancer Genetics
In this course, students will gain an understanding of cancer genetics. Topics covered include an overview of cancer biology and clinical oncology; diagnostics and predictive testing in cancer, including familial mutations in BRCA 1 and 2, and panel testing; cancer risk assessment; psychosocial aspects of cancer genetic testing and counseling. Students will gain an understanding of specific inherited disorders predisposing individuals to malignancies and of counseling for familial cancers. In this class, students will learn how to conduct a genetic counseling session for inherited cancer syndromes such as HBOC and Lynch syndrome and to identify when genetic testing panels are indicated. In addition, the course will cover somatic cancer NGS technology and its relevance in cancer genetic counseling.
Activity: Lecture
1.0 Course Unit

GENC 612 Genetic Counseling Theory I
Students will learn the basic organization of a genetic counseling session including contracting, building rapport and eliciting patient goals in a patient encounter. Through lectures and various activities such as role play, students will demonstrate their abilities to organize a genetic counseling session. Students will learn to write chart notes, patient and physician letters, and letters of medical necessity. Each student will be responsible for reviewing a Genetic Counseling Practice Guideline and sharing its content with the class. Students will gain an appreciation of appropriate professional interactions and expand their understanding of the impact of genetic disease on families. At the end of the semester, students will complete a genetic counseling session with a standardized patient.
Activity: Lecture
1.0 Course Unit

GENC 613 Foundations of Clinical Genetics and Genomic Technologies
In this course, students learn to apply knowledge of genetic principles and understand how they contribute to the etiology, clinical features, and expression of genetic conditions. They will appreciate the natural history and variable expressivity of a variety of genetic diagnoses including differential diagnoses, dysmorphology, genetic testing, and test report interpretation. Students will understand the importance of conveying to families the pathophysiology, inheritance pattern, recurrence risk, and management of genetic disorders. In this class, students will learn the principles of Pedigree Review and Bayesian Analysis. The concepts and tools used to analyze and interpret data from next-generation sequencing (NGS) will be discussed. The nature of mutations, variant analysis, and database analysis will be explored. This class will provide students with hands-on opportunities to utilize databases to systemically review and classify variants. Clinical case variant interpretation and clinical relevance will be discussed in terms of its importance in genetic counseling. Case-based learning will help students understand the complexities of genetic diseases and the importance of obtaining an accurate medical history.
Activity: Lecture
1.0 Course Unit

GENC 614 Introduction to Genetic Counseling Research
This course is designed to allow students to become familiar with research methodologies in clinical genetics. Students will gain an appreciation for the importance of well-designed research in advancing our understanding of diseases. They will learn how to formulate testable hypotheses, design appropriate studies, and develop their thesis proposals. This course will introduce students to scientific writing. Topics covered include the IRB process, research ethics, and informed consent, which prepares students to conduct their own research projects. They will be required to obtain CITI training and to work with their thesis committees as they develop their proposals. Students will develop and refine their own IRB proposals before submitting an application to the IRB committee.
Activity: Lecture
1.0 Course Unit

GENC 620 Medical Genetics I
This year-long course presents a broad overview of concepts in medical genetics including natural history, management and counseling strategies for major pediatric and adult genetics diagnoses and syndromes. Topics covered include chromosomal conditions, hemoglobinopathies, biochemical genetics, cardiovascular genetics, psychiatric genetics, neuro/developmental genetics conditions, skeletal dysplasias, and ophthalmological disorders, as well as classic genetic conditions identified by the organ system involved, such as cystic fibrosis. Students will learn the methods available for genetic testing, diagnosis, and treatment of genetic conditions. They will be provided with a broad overview of metabolic and mitochondrial disorders as well as detailed reviews of specific conditions. Newborn screening will be covered in depth. Students will be exposed to future directions of clinical genetics and genetic counseling and its impact on the management and treatment of common conditions. Course directors will attend each class, and guest lecturers with relevant clinical expertise will be invited to share their clinical knowledge.
Activity: Lecture
1.0 Course Unit

GENC 621 Genetic Counseling Techniques II
In this class, students are taught the basic tenets of counseling theory and how they can be applied to genetic counseling sessions. Theories covered include person-centered counseling with its emphasis on genuineness, empathy and positive regard. Students will also explore other counseling theories such as solution-focused brief therapy, cognitive behavioral therapy, and family systems models. Narrative Medicine will be covered in detail and students will be required to digitally record a narrative medicine interview with an individual or parent of a patient with a genetic disease. The recordings are then analyzed and critiqued. Standardized patient assessments will be performed to monitor students acquisition of more advanced counseling skills. Students will learn the integration of process in the genetic counseling session and to address sensitive patient issues. They will learn to use active listening and value-free communication to manage a genetic counseling session in a culturally responsive manner.
Activity: Lecture
1.0 Course Unit
GENC 623 Ethical Issues in Genetic Counseling
In this introductory course on bioethics, the content will be tailored to issues that emerge in the context of clinical genetics and genetics research. The parallel histories of bioethics and genetic counseling will be reviewed. Students will learn the ways in which bioethics is typically taught in order to adopt a critical approach to bioethics that helps us identify and navigate the ethics of daily genetic counseling practice. The main goal of the class is to think critically and speak openly about readings and cases. Topics to be covered include basic bioethical principles and theories, conflicts of interest and individual biases, informed consent, direct-to-consumer testing, genetic testing of minors, non-directiveness, the ethical nuances of communication, the ethics of how we represent diseases and risks, incidental findings, and genetics research. Readings will vary from classic ethical casebook selections to topical articles, patient education materials, and short excerpts from social science studies of genetic counseling to provide different perspectives. The class will consist of short lectures, individual and group exercises, periodic short videos, and extensive discussion.
Activity: Lecture
1.0 Course Unit

GENC 630 Medical Genetics II
This year-long course presents a broad overview of concepts in medical genetics including natural history, management and counseling strategies for major pediatric and adult genetics diagnoses and syndromes. Topics covered include chromosomal conditions, hemoglobinopathies, biochemical genetics, cardiovascular genetics, psychiatric genetics, neurodevelopmental genetics conditions, skeletal dysplasias, and ophthalmological disorders, as well as classic genetic conditions identified by the organ system involved, such as cystic fibrosis. Students will learn the methods available for genetic testing, diagnosis, and treatment of genetic conditions. They will be provided with a broad overview of metabolic and mitochondrial disorders as well as detailed reviews of specific conditions. Newborn screening will be covered in depth. Students will be exposed to future directions of clinical genetics and genetic counseling and its impact on the management and treatment of common conditions. Course directors will attend each class, and guest lecturers with relevant clinical expertise will be invited to share their clinical knowledge.
Activity: Lecture
1.0 Course Unit

GENC 631 Genetic Counseling Theory and Practice III
This course provides students with advanced counseling skills such as advanced empathy and confrontation. Discussions regarding counselor issues such as self-disclosure and countertransference will be explored in detail. Additional skills and techniques from the counseling literature will be practiced in role plays to illustrate the usefulness of various counseling techniques in clinical genetics. This course includes an experiential component for the practice of techniques utilizing standardized patients. Students will analyze their standardized patient recordings and identify missed opportunities and areas in which they need to work on their counseling skills. Each student will analyze a case that they were involved with utilizing at least two theories discussed in class.
Activity: Lecture
1.0 Course Unit

GENC 990 Thesis
Activity: Independent Study
1.0 Course Unit

Genomics & Comp. Biology (GCB)

GCB 493 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from a historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Taught by: S Berger
Course usually offered in spring term
Also Offered As: BIOL 493, CAMB 493
Activity: Seminar
1.0 Course Unit

GCB 533 Statistics for Genomics and Biomedical Informatics
GCB 533 is an introductory course in probability theory and statistical inference for graduate students in Genomics and Computational Biology. The goal of the course is to provide foundation of basic concepts and tools as well as hands-on practice in their application to problems in genomics. At the completion of the course, students should have an intuitive understanding of basic probability and statistical inference and be prepared to select and execute appropriate statistical approaches in their future research.
Activity: Lecture
1.0 Course Unit

GCB 534 Experimental Genome Science
This course will survey methods and questions in experimental genomics, including next generation sequencing methods, genomic sequencing in humans and model organisms, functional genomics, proteomics, and applications of genomics methods. Students will be expected to review and discuss current literature and to propose new experiments based on material learned in the course.
Taught by: C Brown, J Murray
Also Offered As: PHRM 534
Prerequisites: Undergraduates and Masters students need BIOL431 or equivalent
Activity: Lecture
1.0 Course Unit
GCB 535 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python, R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing, RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 437/GCB 536 and GCB/CIS/BIOL537 are more appropriate.
Taught by: B Voight, C Greene
Course usually offered in spring term
Also Offered As: MTR 535, PHRM 535
Prerequisites: The course will assume a solid knowledge of modern biology. An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as BIOL 526 (Experimental Principles in Cell and Molecular Biology), BIOL527 (Advanced Molecular Biology and Genetics), BIOL 528 (Advanced Molecular Genetics), BIOL 540 (Genetic Systems, or equivalent, is a prerequisite.
Activity: Lecture
1.0 Course Unit
Notes: All students are required to bring a laptop to the lab sessions (Fridays). TAs will provide help with the material, but students should be computer-capable with their own laptop, and should be willing/capable to download and install free software from the internet.

GCB 536 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the “pencil and paper” level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis.
Taught by: Kim
Course usually offered in spring term
Also Offered As: BIOL 536, CIS 536
Prerequisite: College level introductory biology required; undergraduate or graduate level statistics taken previously or concurrently required; molecular biology and/or genetics encouraged; programming experience encouraged
Activity: Lecture
1.0 Course Unit

GCB 537 Advanced Computational Biology
1. Learn important concepts/methods from statistical data analysis and machine learning as they are applied to computational biology. 2. Learn about current topics in genomics and computational biology through an in depth discussion of both classic and recent papers. 3. Gain hands on experience in data analysis, coding and evaluating tools/algorithms as they apply to topics covered in class. 4. Learn to evaluate, criticize, summarize, and present research papers in genomics and computational biology.
Taught by: Y Barash
Course usually offered in spring term
Also Offered As: BIOL 537
Prerequisite: GCB536 or equivalent
Activity: Seminar
1.0 Course Unit
Notes: This is not a bioinformatics lab. Non-GCB students need to be approved by instructors

GCB 567 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB.
Taught by: A Raj
One-term course offered either term
Also Offered As: AMCS 567, BE 567
Activity: Lecture
1.0 Course Unit

GCB 585 Wistar Inst Cancer Biol
This course is intended to provide foundational information about the molecular basis of cancer. When necessary the significance of this information for clinical aspects of cancer is also discussed. The main theme centers around cell cycle checkpoints with specific emphasis on the biochemistry and genetics of DNA damage signaling pathways, DNA damage checkpoints, mitotic checkpoints and their relevance to human cancer. The course is taught by the organizers and guest lecturers from universities and research institutions in the Northeast. Following every lecture, students present a research paper related to the topic of that lecture. The course is intended for first and second year graduate students, but all graduate students are welcome to attend.
Taught by: Skordalakes and Murphy
Also Offered As: BMB 585
Activity: Lecture
1.0 Course Unit

GCB 699 Lab Rotation
Activity: Laboratory
1.0 Course Unit
GCB 752 Genomics
Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete genomic sequence and set of cellular instructions encoded in the DNA of specific organisms, including homo sapiens, dozens of bacterial species, the yeast Saccharomyces cerevisiae, the nematode C. elegans, and the fruit fly Drosophila melanogaster. The goals of the course include the following: 1. introduce the basic principles involved in sequencing genomes, 2. familiarize the students with new instrumentation, informative tools, and laboratory automation technologies related to genomics, 3. teach the students how to access the information and biological materials that are being developed in genomics and 4. examine how these new tools and resources are being applied to basic and translational research. This will be accomplished through in depth discussion of classic and recent papers.

Taught by: S Diskin
Course usually offered in spring term
Also Offered As: CAMB 752
Prerequisites: GCB 534 or equivalent, or permission from instructor
Activity: Seminar
1.0 Course Unit

GCB 899 Pre-Dissertation Research
Activity: Laboratory
1.0 Course Unit

GCB 995 Dissertation
One-term course offered either term
Activity: Dissertation
1.0 Course Unit

Geology (GEOL)

GEOL 100 Introduction to Geology
An introduction to processes and forces that form the surface and the interior of the Earth. Topics include, changes in climate, the history of life, as well as earth resources and their uses.
For BA Students: Physical World Sector
Taught by: Omar
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Field trips required.

GEOL 103 Natural Disturbances and Human Disasters
Natural disturbances play a fundamental role in sculpturing landscapes and structuring natural and human-based ecosystems. This course explores the natural and social science of disturbances by analyzing their geologic causes, their ecological and social consequences, and the role of human behavior in disaster reduction and mitigation. Volcanoes, earthquakes, floods, droughts, fires, and extraterrestrial impacts are analyzed and compared.
For BA Students: Physical World Sector
Taught by: Phipps
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 109 Introduction to Geotechnical Science
Open to architectural and engineering majors as well as Ben Franklin Scholars. Field trips. Relations of rocks, rock structures, soils, ground water, and geologic agents to architectural, engineering, and land-use problems.
For BA Students: Physical World Sector
Taught by: Omar
Course usually offered in fall term
Activity: Lecture
1.5 Course Unit

GEOL 111 Geology Laboratory
Taught by: Omar
One-term course offered either term
Prerequisite: GEOL 100 preferably taken concurrently
Activity: Laboratory
1.0 Course Unit
Notes: Field trips required.

GEOL 125 Earth and Life Through Time
Origin of Earth, continents, and life. Continental movements, changing climates, and evolving life.
For BA Students: Physical World Sector
Taught by: Perez-Rodriguez
One-term course offered either term
Activity: Lecture
1.0 Course Unit

GEOL 130 Oceanography
The oceans cover over 2/3 of the Earth's surface. This course introduces basic oceanographic concepts such as plate tectonics, marine sediments, physical and chemical properties of seawater, ocean circulation, air-sea interactions, waves, tides, nutrient cycles in the ocean, biology of the oceans, and environmental issues related to the marine environment.
For BA Students: Physical World Sector
Taught by: Dmochowski
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 201 Mineralogy
Crystallography, representative minerals, their chemical and physical properties. Use of petrographic microscope in identifying common rock-forming minerals in thin section.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 531
Prerequisites: GEOL 100 and CHEM 001 or 101
Activity: Lecture
1.0 Course Unit
GEOL 204 Global Climate Change
Public perceptions and attitudes concerning the causes and importance of global warming have changed. Global Climate Change provides a sound theoretical understanding of global warming through an appreciation of the Earth's climate system and how and why this has changed through time. We will describe progress in understanding of the human and natural drivers of climate change, climate processes and attribution, and estimates of projected future climate change. We will assess scientific, technical, and socio-economic information relevant for the understanding of climate change, its potential impacts and options for adaptation and mitigation.
For BA Students: Physical World Sector
Taught by: Marinov
Course usually offered in fall term
Prerequisite: Any of the following courses: ENVS 100 or GEOL 100 or GEOL 130 or GEOL 125 or GEOL 103 or Instructor Permission
Activity: Lecture
1.0 Course Unit

GEOL 205 Paleontology
Geologic history of invertebrates and their inferred life habits, paleoecology, and evolution. Introduction to paleobotany and vertebrate paleontology.
For BA Students: Living World Sector
Taught by: Sallan
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Two field trips required.

GEOL 206 Stratigraphy
Introductory sedimentary concepts, stratigraphic principles, depositional environments, and interpretation of the rock record in a paleoecological setting.
Taught by: Jerolmack
Course usually offered in fall term
Also Offered As: GEOL 506
Prerequisite: GEOL 100 or permission of instructor
Activity: Lecture
1.0 Course Unit
Notes: Two field trips, field project

GEOL 208 Structural Geology
Introduction to deformation as a fundamental geologic process. Stress and strain; rock mechanics. Definition, measurement, geometrical and statistical analysis, and interpretation of structural features. Structural problems in the field. Maps, cross-sections, and three-dimensional visualization; regional structural geology.
Taught by: Phipps
Course usually offered in spring term
Prerequisites: GEOL 100 and 111; PHYS 150 strongly recommended
Activity: Lecture
1.0 Course Unit
Notes: Three field trips required

GEOL 299 Independent Study
Directed study for individuals or small groups under close supervision of a faculty member.
One-term course offered either term
Prerequisite: Permission of department
Activity: Independent Study
1.0 Course Unit
Notes: May be repeated for credit

GEOL 307 Petrology and Petrography
Occurrences and origins of igneous and metamorphic rocks; phase equilibria in heterogeneous systems. Laboratory study of rocks and thin sections as a tool in interpretation of petrogenesis.
Taught by: Omar
Course usually offered in spring term
Also Offered As: GEOL 417
Prerequisite: GEOL 201
Activity: Lecture
1.0 Course Unit
Notes: Two field trips

GEOL 318 Glaciers, Ice & Climate
All forms of frozen water at Earth's surface define the cryosphere. These icy environments are an integral part of the global climate system, with important linkages and feedbacks resulting from their influences on surface energy and moisture fluxes, clouds, precipitation, hydrology, and circulation in the atmosphere and oceans. This course will survey the various components of the cryosphere and their interactions with climate, with a strong emphasis on the dynamics of glaciers and ice sheets. Broad topics to be covered are 1) the rudimentary mechanics of glacier and ice sheet flow, 2) fast-flowing ice streams and factors limiting their motion, 3) ice-quakes and their origins, 4) the nature of climate data recorded in natural ice bodies, 5) the influence of climate on the stability of ice sheets and glaciers, and 6) glacier-like flow on other planetary bodies. This will be a lecture-based course with written assignments and problems sets.
Taught by: Goldsby
Prerequisites: Students should have basic knowledge of Calculus. MATH 114 or equivalent.
Activity: Lecture
1.0 Course Unit

GEOL 319 Geology Research Seminar for Juniors
This seminar is designed to help Juniors prepare for the Senior Thesis research. Topic selection, advisor identification, funding options, and basic research methods will be discussed.
Taught by: Andrews
Course usually offered in spring term
Also Offered As: ENVS 399
Activity: Seminar
1.0 Course Unit

GEOL 400 Topics in Earth Science
In depth examination of special topics in Earth Science. Topics will change with instructor and course offerings.
Taught by: TBA
Activity: Seminar
1.0 Course Unit

GEOL 405 Advanced Paleontology
Relationship of fossil assemblages to life assemblages; structure of ancient communities, and interaction of organisms with each other and with the physical environment; evolution of communities.
Taught by: Sallan
Course usually offered in fall term
Prerequisite: Permission of instructor
Activity: Lecture
1.0 Course Unit

For BA Students: Physical World Sector

For BA Students: Living World Sector
GEOL 409 Intro to Remote Sensing
This course will introduce students to the principles of remote sensing, characteristics of remote sensors, and remote sensing applications. Image acquisition, data collection in the electromagnetic spectrum, and data set manipulations for earth and environmental science applications will be emphasized. We will cover fundamental knowledge of the physics of remote sensing; aerial photographic techniques; multispectral, hyperspectral, thermal, and other image analysis. Students will pursue an independent research project using remote sensing tools, and at the end of the semester should have a good understanding and the basic skills of remote sensing.
Taught by: Dmochowski
Also Offered As: GEOL 509
Prerequisites: PHYS151 and MATH114 or equivalent are preferable, but not required. See instructor.
Activity: Seminar
1.0 Course Unit

GEOL 411 Intro Soil Science
Soil is considered the "skin of the Earth", with interfaces between the lithosphere, hydrosphere, atmosphere, and biosphere. It is a mixture of minerals, organic matter, gases, liquids and a myriad of organisms that can support plant life. As such, soil is a natural body that exists as part of the environment. This course will examine the nature, properties, formation and environmental functions of soil.
Taught by: Plante
Prerequisite: GEOL 100 or equivalent
Activity: Lecture
1.0 Course Unit

GEOL 417 Advanced Petrology
Chemistry, physics, phase equilibria, microscope study in igneous and metamorphic petrology.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 317
Prerequisite: GEOL 317
Activity: Lecture
1.0 Course Unit

GEOL 418 Geochemistry
This course provides a comprehensive introduction to theory and applications of chemistry in the earth and environmental sciences. Theory covered will include atomic structure, chemical bonding, cosmic abundances, nucleosynthesis, radioactive decay, dating of geological materials, stable isotopes, acid-base equilibria, salts and solutions, and oxidation-reduction reactions. Applications will emphasize oceanography, atmospheric sciences and environmental chemistry, as well as other topics depending on the interests of the class. Although we will review the basics, this course is intended to supplement, rather than to replace, courses offered in the Department of Chemistry. It is appropriate for advanced undergraduate as well as graduate students in Geology, Environmental Science, Chemistry and other sciences, who wish to have a better understanding of these important chemical processes.
Taught by: Giere
Course not offered every year
Activity: Lecture
1.0 Course Unit

GEOL 420 Introduction to Geophysics
This course will cover the application of geophysical investigation techniques to problems of the earth's planetary structure, local subsurface structure and mineral prospecting. The topics will include principles of geophysical measurements and interpretation with emphasis on gravity measurement, isostasy, geomagnetism, seismic refraction and reflection, electrical prospecting, electromagnetics and ground radar.
Taught by: Goldsby
Course not offered every year
Prerequisites: GEOL 100 or 109, two semesters Math and Physics, and/or instructor's permission
Activity: Lecture
1.0 Course Unit

GEOL 421 Biogeochemistry
Humans have an enormous impact on the global movement of chemical materials. Biogeochemistry has grown to be the principal scientific discipline to examine the flow of elements through the global earth systems and to examine human impacts on the global environment. This course will introduce and investigate processes and factor controlling the biogeochemical cycles of elements with and between the hydrosphere, lithosphere, atmosphere and biosphere. Students will apply principles learned in lectures by building simple computer-based biogeochemical models.
Taught by: Plante
Course usually offered in spring term
Also Offered As: GEOL 541
Prerequisites: ENVS 200, GEOL 100, or permission of the instructor
Activity: Lecture
1.0 Course Unit

GEOL 424 Geomicrobiology
Taught by: Perez-Rodriguez
Prerequisites: Biol 101, or Chem 101 or permission by instructor
Activity: Lecture
1.0 Course Unit
Notes: Microorganisms inhabit almost every conceivable environment on the planet's surface, and extend the biosphere to depths of several kilometers into the crust. Significantly, the chemical reactivity and metabolic diversity displayed by microbial communities make them integral components of global elemental cycles, from mineral dissolution and precipitation reactions, to aqueous reduction-oxidation processes. In that regard, microorganisms have helped shape our planet over the last 4 billion years and made it habitable for higher forms of life. In this course we will evaluate the geological consequences of microbial activities, by taking an interdisciplinary and "global" view of microbe-environment interactions.

GEOL 430 Atmospheric Chemistry
An introduction to the chemistry of the earth's atmosphere. Covers evolution of the earth's atmosphere, its physical and chemical structure, its natural chemical composition and oxidative properties, and human impacts, including photochemistry, and aerosols; stratospheric ozone loss, tropospheric pollution; climate change, and acidic deposition. Chemistry in the atmosphere of other planets in our solar system will be covered.
Taught by: Francisco
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
GEOL 477 Introduction to Vertebrate Paleontology
Taught by: Dodson
Course not offered every year
Prerequisites: GEOL 100, BIOL101, GEOL205 or similar course.
Activity: Lecture
1.0 Course Unit

GEOL 479 Macroevolution
Macroevolution, or evolution above the population level and on long
timescales, as a field addresses fundamental questions about the
origins of life, past and present. These include but are not limited to:
How are highly dissimilar species related? Why are animals on distant
continents so similar? How and when did major groups, like birds or
mammals, originate? What drives evolutionary arms races? Why are
there so many more species of beetle than crocodile? Why are there
more species in the tropics than the arctic? Did dinosaurs prevent
the diversification of mammals? Why do some animals survive mass
extinction? How can invasive species spread so rapidly? Students
will learn important concepts underlying our understanding of modern
biodiversity and the fossil record, as well as how to use different methods
and lines of evidence, including evolutionary trees (phylogeny), fossil
databases, past climate and global events, mathematical modeling, and
even modern genomics, to answer fundamental questions about the
evolution of life.
Taught by: Lauren Sallan
Activity: Lecture
1.0 Course Unit

GEOL 498 Senior Thesis
The culmination of the Earth Science major. Students, while working with
an advisor in their concentration, conduct research and write a thesis.
Taught by: Dmochowski
Two terms. Students may enter either term.
Prerequisites: GEOL400-level and declaration of the EASC major
Activity: Senior Thesis
0.5 Course Units
Notes: The Earth Science major, as of the fall of 2008, requires 1 semester
of GEOL399 and two semesters of GEOL498.

GEOL 508 The Geology and Geography of Energy Resources
This course will survey the way geology controls the formation and
location of energy resources. Questions we'll address include, "How are
oil and gas fields formed?", "Why does the Middle East have so much
oil?", "What are the best locations in the US for wind and solar energy
generation, and why?". We will discuss hydrocarbon, nuclear, solar, wind,
and tidal energy sources.
Taught by: Phipps
Course not offered every year
Prerequisite: Geo100 or equivalent is preferred
Activity: Seminar
1.0 Course Unit
Notes: Possible field trips.

GEOL 509 Intro to Remote Sensing
This course will introduce graduate students to the principles of
remote sensing, characteristics of remote sensors, and remote sensing
applications. Image acquisition, data collection in the electromagnetic
spectrum, and data set manipulations for earth and environmental
science applications will be emphasized. We will cover fundamental
knowledge of the physics of remote sensing; aerial photographic
techniques; multispectral, hyperspectral, thermal, and other image
analysis. Students will pursue an independent research project using
remote sensing tools, and at the end of the semester should have a good
understanding and the basic skills of remote sensing. Expectations
for the graduate student independent research projects will be at the
graduate level and can relate to their capstone or Ph.D. thesis research
topics.
Taught by: Dmochowski
Also Offered As: GEOL 409
Prerequisites: PHYS151 and MATH114 or equivalent are preferable, but
not required. See instructor.
Activity: Seminar
1.0 Course Unit

GEOL 510 Geophysical Fluid Dynamics
This class will discuss physical principles fundamental to the
theoretical, observational, and experimental study of geophysical
fluids, the equations of motion for rotating fluids; hydrostatic and
Boussinesq approximations; circulation theorem; conservation of
potential vorticity; scale analysis, geostrophic wind, quasigeostrophic
system; wave theory and applications, flow instabilities, geophysical
boundary layers. Depending on student interest, the class will be adapted
to include applications from Oceanography, Meteorology, Geophysics or
Engineering.
Taught by: Nathan Paldor
Prerequisites: Math 114 or equivalent or permission by the instructor.
Activity: Lecture
1.0 Course Unit

GEOL 515 Evolution/Revolution of Land Ecosystems
Origin and diversification of land ecosystems. Interaction between
plants and animals. Effects of past climatic change and other external
factors. The importance of past changes in land ecosystems to our
understanding of current global change.
Taught by: Sallan
Course not offered every year
Activity: Seminar
1.0 Course Unit

GEOL 516 Paleoecology Discovering Lost Ecosystems
Paleoecology, or ecology in the fossil record, is the study of how
interactions between species have developed over time and how
ecosystems and environmental change have shaped the evolution of
life and biodiversity. It also involves rebuilding lost communities from
fossil evidence to provide context for the origins of modern life and
modern ecosystems. This seminar course will survey major topics in
Paleoecology, including of ecosystems, the long-term connections
between habitat, life mode and biodiversity as well as the distribution
of life (e.g. paleobiogeography), escalation between predators and prey,
competition between invasive and resident species, and how we can
infer the ecology and behavior of long-dead organisms. Students will lead
discussions on select concepts and choose one topic to investigate in
depth.
Course not offered every year
Activity: Seminar
1.0 Course Unit
GEOL 528 Aqueous Geochemistry
This course is designed to provide the graduate student with an understanding of the fundamentals of aqueous geochemistry. The chemistry of water, air and soil will be studied from an environmental perspective. The nature, composition, structure, and properties of pollutants coupled with the major chemical mechanisms controlling the occurrence and mobility of chemicals in the environment will also be studied. Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with aqueous geochemistry concepts applicable to the environmental field. Environmental issues that will be covered include acid deposition, toxic metal contamination, deforestation, and anthropogenic perturbed aspects of the earth’s hydrosphere.
Taught by: Andrews
Course not offered every year
Prerequisites: GEOL 100 Intro to Geology or permission of instructor.
Activity: Lecture
1.0 Course Unit

GEOL 531 Advanced Mineralogy
Advanced crystallography, representative minerals, their chemical and physical properties. Use of petrographic microscope in identifying common rock-forming minerals in thin section.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 201
Activity: Lecture
1.0 Course Unit

GEOL 540 Geotectonics
Bulk structure of the Earth. Plate tectonics and plate boundaries. Plumes, rifting, and intraplate tectonics. Geotectonics and seismicity.
Taught by: Phipps
Course not offered every year
Prerequisites: GEOL 205, 206, 208, 317 and 420, or permission of instructor
Activity: Lecture
1.0 Course Unit
Notes: Field trip

GEOL 541 Advanced Geochemistry
Taught by: Plante
Course usually offered in spring term
Also Offered As: GEOL 421
Activity: Lecture
1.0 Course Unit

GEOL 599 Independent Study
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

GEOL 604 Geostatistical Analysis
Univariate and multivariate approaches to the analysis of spatial correlation and variability. Many disciplines, including geology, ecology and the environmental sciences regularly need to analyze and make predictions from data that is spatially autocorrelated. Mine reserve estimation, pollutant dispersal and the use of randomization tests in ecology are examples of where spatial statistics may be applied.
Taught by: Vann
Course usually offered in fall term
Prerequisites: STAT 101 or equivalent statistics course; BioL 556 suggested or other Inferential Statistics courses, covering uni- and multivariate techniques
Activity: Lecture
1.0 Course Unit

GEOL 611 Field Study of Soils
Processes of soil development in a variety of temperate environments. Effects of lithology and climate on soil properties.
Taught by: Plante
Course usually offered in spring term
Prerequisite: GEOL 511 or permission of instructor
Activity: Seminar
1.0 Course Unit
Notes: All day field trips

GEOL 615 Advanced Vertebrate Paleontology Seminar
Topics in vertebrate paleontology and paleoecology.
Taught by: Dodson
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

GEOL 618 Fundamentals of Air Pollution
This course will cover various topics related to Air Quality. Initial lectures will cover the history of air pollution, discussions of the Clean Air Act and composition of the atmosphere. We will then progress to discussion of atmospheric pollutants and sources of those pollutants. Additional topics will include: fate of atmospheric pollutants (transport and dispersion mechanisms will include: fate of atmospheric pollutants (transport and mechanisms), effects of air pollution (health and environmental effects), urban smog, acid rain, climate change, ozone depletion in the stratosphere, air quality criteria, and engineering controls.
Taught by: Andrews
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

GEOL 619 Instrumentation for the Geosciences
An introduction to the theory, operation and application of modern analytical instrumentation used in geo- and environmental sciences. Primarily focused on laboratory instrumentation such as mass spectroscopy, elemental analyses and x-ray techniques. Some field instruments will be introduced as well. Students will be expected to develop projects utilizing the various instruments.
Taught by: Vann
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
GEOL 620 Applied and Environmental Geophysics
The application of geophysical investigation techniques to problems of the local and shallow subsurface structure of the earth. The application of geophysical measurements and interpretation for environmental site characterizations, locating buried structures, groundwater investigations, and identifying geotechnical hazards with emphasis on gravity methods, seismic refraction and reflection, electrical resistivity, electromagnetic methods, ground penetrating radar, and borehole nuclear logging.
Taught by: Sauder
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: MSAG Required Course

GEOL 621 Field Methods in Biogeochemistry
This field- and lab-based course will examine a set of methods for the study and quantification of biochemical processes in terrestrial and aquatic systems. We will focus on field-based measurements, as well as sample collection and laboratory analyses of fluxes of carbon and nutrient elements, including photosynthesis, respiration, dissolved and suspended nutrient fluxes in streams.
Taught by: Plante
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

GEOL 650 Environmental Due Diligence
Evaluation of environmental contamination and liability is an important tool during acquisition of real estate property, and a standard work product in the environmental consulting field. This course will cover the purpose and history of the Superfund law, the various classifications of Superfund liable parties, and protections against Superfund liability, specifically with regard to bona fide prospective purchasers (BFPP). In the context of the BFPP liability defense the course will focus on the performance of "All Appropriate Inquiry" for the presence of environmental contamination (e.g. Phase I environmental site assessment). Our study of "All Appropriate Inquiry" will include evaluation of historical maps and other resources, aerial photography, chain-of-title documentation, and governmental database information pertaining to known contaminated sites in the area of select properties on or near campus. Site visits will be performed to gain experience and knowledge for the identification of recognized environmental conditions. Students will prepare environmental reports for select properties and will have an opportunity to hone technical writing skills.
Taught by: Cron
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

GEOL 651 Geocomputations
Review and applications of selected methods from differential equations, advanced engineering mathematics and geostatistics to problems encountered in geology, engineering geology, geophysics and hydrology.
Taught by: Mastropaolo
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 653 Introduction to Hydrology
Introduction to the basic principles of the hydrologic cycle and water budgets, precipitation and infiltration, evaporation and transpiration, stream flow, hydrograph analysis (floods), subsurface and groundwater flow, well hydraulics, water quality, and frequency analysis.
Taught by: Sauder
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 654 Geomechanics: Solids
Mechanical properties of solid and fluid earth materials, stress and strain, earth pressures in soil and rock, tunnels, piles, and piers; flow through gates, wiers, spillways and culverts, hydraulics, seepage and Darcy’s law as applied to the hydrologic sciences.
Taught by: Duda
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

GEOL 656 Fate and Transport of Pollutants
This course covers basic groundwater flow and solute transport modeling in one-, two- and three-dimensions. After first reviewing the principles of modeling, the student will gain hands-on experience by conducting simulations on the computer. The modeling programs used in the course are MODFLOW (USGS), MT3D, and the US Army Corps of Engineers GMS (Groundwater Modeling System).
Taught by: Mastropaolo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 658 Environmental Statistical Analysis
Statistical analysis of data from geological, geotechnical, and geohydrologic sources.
Taught by: Mastropaolo
One-term course offered either term
Activity: Seminar
1.0 Course Unit

GEOL 661 Environmental Groundwater Hydrology
This course is designed to introduce the major definitions and concepts regarding groundwater flow and contaminant transport. The theory and underlying concepts, including mathematical derivations of governing equations used to model groundwater flow and contaminant transport, will be discussed and applications to environmental problems addressed. Upon completion of this course, students should expect to have acquired the skills necessary to pursue course work in flow and transport numerical and analytical modeling.
Taught by: Mastropaolo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
GEOL 663 Geochemical Modeling
This course is designed to introduce the major concepts regarding geochemistry and geochemical modeling. The course introduces two United States Geological Survey (USGS) computer models, PHREEQC, a geochemical speciation model, and PHAST, a transport module which is coupled with PHREEQC output. These are highly respected, world-renowned models that are free-ware via the USGS, complete with documentation. Once familiar with the models, the student can continue to work with them beyond the course experience. PHREEQC is designed to perform a wide variety of aqueous geochemical calculations and can be used to simulate chemical reactions and transport processes in natural or polluted waters. PHREEQC is capable of modeling both equilibrium and kinetic reactions. Some of the simulations pursued during the course include: Speciation of precipitation water; Iron speciation; Zinc sorption onto hydrous ferric oxide; Oxidation of organic carbon and the sequence of electron donors in natural waters; Benzene advective transport in groundwater; TCE transport and degradation.
Taught by: Mastropaolo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 666 Geology Field Work
Directed independent field work.
Taught by: Giegengack
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: 4-8 weeks during the summer.

GEOL 668 Geomechanics: Fluids
Static and Dynamic mechanical properties of fluid in earth materials, as applied to the Hydrologic Sciences; Principles of Fluid Mechanics and Hydraulics applied to open channel flow in earth materials; flow through gates, weirs, spillways, and culverts; Applications of Darcy’s Law to subsurface flow and seepage.
Taught by: Duda
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 670 Engineering Geology: Rock Mechanics
This course focuses on the rock mechanics aspects of Engineering Geology. The theme is characterization of the geologic environment for engineering and environmental investigations. Covered are the various exploration tools and methods, including: Collection and analysis of existing engineering data; Interpretation of remotely sensed imagery; Field and laboratory measurements of material properties; Measurement and characterization of rock discontinuities; Rock slope stability analysis; Stress, strain and failure of rocks and the importance of scale; Rock core logging; Rock mass rating; Rock support and reinforcement; Rock excavation, blasting and blast monitoring and control.
Taught by: Freed
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 671 Engineering Geology: Surficial Materials & Processes
As the human population continues to grow, the environment and earth's resources become more important. This course will concentrate on the occurrence and distribution of earth's surficial materials and their engineering and environmental properties. The engineering classification, testing, and use of the earth materials will be emphasized. The geohazards of surficial processes will also be studied in the context of geologic history and the planning and use of the geologic environment.
Taught by: Freed
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 680 Interpretation of Near-surface Geologic Structure for Engineering and Environment
The course introduces the basic principles of structural geology and their applications to engineering and environmental site characterization. Includes the mechanisms for the deformation and failure of the earth's crust, folded and faulted structures, and the orthogonal and stereographic solutions to characterize near-surface geologic structure. It also includes the construction and interpretation of geologic maps, geologic cross sections and block diagrams. Emphasis is placed on the graphical representation of subsurface data, including the use of selected computer programs, and the integration of the data to solve problems encountered in engineering and environmental projects.
Taught by: Freed
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 699 Project Design
This course is designed to prepare Master of Science in Applied Geosciences students to undertake their Project Design exercise. In this course, we discuss how to identify an appropriate research project, how to design a research plan, and how to prepare a detailed proposal. By the end of the course, each student is expected to have completed a Project Design proposal.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

GEOL 750 Topics in earth Science
This course will use the weekly EES seminar series to survey historic breakthrough papers or topics in the earth sciences, as well as modern papers - written by the seminar speakers - that often put the classics in perspective. Graduate students (Ph.D. only) in the Department of Earth and Environmental Science will engage in the material through reading, presentation, and discussion. The course has several goals. (1.) To engender an understanding and appreciation of major breakthroughs in our field. (2.) To develop skills in presenting and discussing scientific results. And (3.) to refine students’ understanding of what constitutes great science.
Taught by: Sallan
Activity: Seminar
1.0 Course Unit
Notes: Open only to PhD students
GEOL 999 Independent Study and Research
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Prerequisite: Permission of departmental committee
Activity: Independent Study
1.0 Course Unit
Notes: Hours and credits to be arranged.

Germanic Languages (GRMN)

GRMN 011 Bad Taste
"Beauty is not a quality inherent to things: it only exists in the mind of the beholder." (David Hume) " Most of us can recognize bad taste as soon as we see it: Harlequin romances, Elvis on black velvet, lawn ornaments. But bad taste also has a history, and kitsch has been identified as a peculiarly modern invention related to capitalism and consumerism. Beginning with a discussion of taste in the eighteenth century, we will investigate under what conditions good taste can go bad, for example when it is the object of mass reproduction, and, on the other hand, why bad taste in recent times has increasingly been viewed in positive terms. Categories such as the cute, the sentimental, the popular, the miniature, kitsch, and camp will be explored. We will also ask what forms of ideological work have been done by this brand of aesthetics, for example in the connection between politics and kitsch, femininity and the low-brow, or camp and queer identity. Writers and film-makers to be discussed include: Hume, Kant, Goethe, Flaubert, Bourdieu, Sacher-Masoch, Thomas Mann, Nabokov, Benjamin, Greenberg, Sontag, John Waters.
Taught by: MacLeod
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

GRMN 023 In Praise of the Small in Literature and the Arts
We can memorize aphorisms and jokes, carry miniature portraits with us, and feel playful in handling small objects. This seminar will ask us to pay attention to smaller texts, art works, and objects that may easily be overlooked. In addition to reading brief texts and looking at images and objects, we will also read texts on the history and theory of short genres and the small.
Taught by: Weissberg
Course not offered every year
Also Offered As: COML 023
Activity: Seminar
1.0 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

GRMN 026 Jews and China: Views from Two Perspectives
Jews in China??? Who knew???. The history of the Jews in China, both modern and medieval, is an unexpected and fascinating case of cultural exchange. Even earlier than the 10th century. Jewish trader from India or Persia on the Silk Road, settled in Kaifeng, the capital of the Northern Song Dynasty, and established a Jewish community that lasted through the nineteenth century. In the mid-nineteenth century. Jewish merchants, mainly from Iraq, often via India, arrived in China and played a major role in the building of modern Shanghai. After 1898, Jews from Russia settled in the northern Chinese city of Harbin, first as traders and later as refugees from the Bolshevik Revolution and Russian Civil War. In the first decades of the twentieth century, a few Jews from Poland and Russia visited China as tourists, drawn by a combination of curiosity about the cultural exoticism of a truly foreign culture and an affinity that Polish Jewish socialists and communists felt as these political movements began to emerge in China. During World War II, Shanghai served as a port of refuge for Jews from Central Europe. In this freshman seminar, we will explore how these Jewish traders, travelers, and refugees responded to and represented China in their writings. We will also read works by their Chinese contemporaries and others to see the responses and perceptions of these Jews. We will ask questions about cultural translation: How do exchanges between languages, religions, and cultures affect the identities of individuals and communities? What commonalities and differences between these people emerge?

GRMN 027 Euro Zone Crisis - The EU in a Currency War for Survival?
"Let me put it simply...there may be a contradiction between the interests of the financial world and the interests of the political world...We cannot keep constantly explaining to our voters and our citizens why the taxpayer should bear the cost of certain risks and not those people who have earned a lot of money from taking those risks." Angela Merkel, Chancellor of Germany, at the G20 Summit, November 2010. In January 1999, a single monetary system united Germany, a core nation, with 10 other European states. Amidst the optimism of the euro's first days, most observers forecast that Europe would progress toward an ever closer union. Indeed, in the ensuing decade, the European Union became the world's largest trading area, the euro area expanded to include 17 member states, and the Lisbon Treaty enhanced the efficiency and democratic legitimacy of the Union. In 2009, Greece's debt crisis exposed deep rifts within the European Union and developed into a euro zone crisis - arguably the most difficult test Europe has faced in the past 60 years. After two years of a more benign EURO debt situation, the risk of recession, EU sanctions against Russia, and a possible collision of a newly-elected Greek government with its creditors, the euro crisis returned with a vengeance in 2015. In addition, the pressure mounts for European leaders to find a solution to the refugee crisis which reached a peak in the fall of 2015. In 2016 the Brexit delivered the latest blow to the European Union, and the future of the European project without the UK looks bleak. The Economic and Monetary Union (EMU) is still fragile, and economic and political developments in 2017 could determine the future of the euro. Does the EU have what it takes to emerge from these crises? Will the European nations find a collective constructive solution that will lead to a fiscal union that implies further integration?

Activity: Seminar
1.0 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

GRMN 101 Elementary German I
Designed for the beginning student with no previous knowledge of German. German 101, as the first course in the first-year series, focuses on the development of language competence in listening, speaking, reading, and writing. By the end of the semester, students will be able to engage in simple conversations about familiar things, know greetings and everyday expressions, they will be able to count and tell time, and negate sentences in day-to-day contexts. Furthermore, students will be able to speak about events that happened in the immediate past and express plans for the future. In addition, students will have developed reading strategies that allow them to glean information from simple newspaper and magazine articles and short literary texts. Because cultural knowledge is one of the foci of German 101, students will learn much about practical life in Germany and will explore German-speaking cultures on the Internet.

For BA Students: Language Course
One-term course offered either term
Also Offered As: GRMN 501
Activity: Lecture
1.0 Course Unit

GRMN 102 Elementary German II
This course is a continuation of GRMN 101 and is designed to strengthen and expand students' listening, speaking, reading, and writing competence and to deepen an understanding of German-speaking cultures. By the end of the course, students will be able to handle a variety of day-to-day needs in a German-speaking setting and engage in simple conversations about personally significant topics. Students can expect to be able to order food and beverages, purchase things, and to be familiar with the German university system, the arts, and current social topics. Students will begin to be able to talk about the past and the future, make comparisons, describe people and things in increasing detail, make travel plans that include other European countries, and make reservations in hotels and youth hostels. By the end of the course students will be able to talk about their studies and about their dreams for the future. In addition, students will develop reading strategies that should allow them to understand the general meaning of articles, and short literary texts. Furthermore, students will feel more able to understand information when hearing German speakers talking about familiar topics. Cultural knowledge remains among one of the foci of German 102, and students will continue to be exposed to authentic materials.

For BA Students: Language Course
One-term course offered either term
Also Offered As: GRMN 502
Prerequisites: GRMN 101 or equivalent.
Activity: Lecture
1.0 Course Unit

GRMN 103 Intermediate German I
This course is designed to improve students writing and speaking competence, to increase vocabulary, to deepen grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules and prepares students well for GRMN 104 and a minor or major in German.

For BA Students: Language Course
One-term course offered either term
Also Offered As: GRMN 503
Prerequisites: GRMN 102 or equivalent.
Activity: Lecture
1.0 Course Unit

GRMN 104 Intermediate German II
A continuation of GRMN 103. Expands students writing and speaking competence in German, increases vocabulary and helps students practice effective reading and listening strategies. Our in-class discussions are based on weekly readings of literary and non-literary texts to facilitate exchange of information, ideas, reactions, and opinions. In addition, the readings provide cultural and historical background information. The review of grammar will not be the primary focus of the course. Students will, however, expand and deepen their knowledge of grammar through specific grammar exercises. Students will conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.

For BA Students: Last Language Course
One-term course offered either term
Also Offered As: GRMN 504
Prerequisites: GRMN 103 or equivalent.
Activity: Lecture
1.0 Course Unit
GRMN 106 Accelerated Elementary German
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. An intensive two credit course in which two semesters of elementary German (GRMN 101 & 102) are completed in one. Introduction to the basic elements of spoken and written German, with emphasis placed on the acquisition of communication skills. Readings and discussions focus on cultural differences. Expression and comprehension are then expanded through the study of literature and social themes.
For BA Students: Language Course
Course usually offered in fall term
Also Offered As: GRMN 505
Activity: Lecture
2.0 Course Units

GRMN 107 Accelerated Intermediate German
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. This accelerated course is designed to improve students writing and speaking competencies, to increase vocabulary, to deepen grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules. Students conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.
For BA Students: Last Language Course
Course usually offered in spring term

Prerequisite: 102 or 106 or equivalent
Activity: Lecture
2.0 Course Units

GRMN 134 Origins of Nazism: From Democracy to Race War and Genocide
Where did the Nazis come from? Was the Weimar Republic bound to fail? Did the Treaty of Versailles or the Great Depression catapult the Nazis into power? What was the role of racism, of Anti-Semitism? How did the regime consolidate itself? What was the role of ordinary people? How do we explain the Holocaust and what kind of a war was the Second World War? Grappling with these and more questions, the first half of the course focuses on Germany's first democracy, the Weimar Republic and its vibrant political culture. In the second half, we study on the Nazi regime, how it consolidated its power and remade society based on the concepts of race and struggle. Discussions of race and race-making are crucial throughout the course. In the name of the "racial purity," the Nazi state moved ruthlessly against Germany’s Jewish population and cleansed German society of all "undesirable" elements. These ideas and practices didn’t originate with the Nazis and they didn’t operate in a geopolitical vacuum. Thinking about Nazi racism and genocide in both its particular specifics and in a larger global historical context is the main goal of this course.

Activity: Recitation
1.0 Course Unit

GRMN 150 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we'll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

GRMN 152 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth’s systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students projects take them into the archives at the Independence Seaport Museum and at Bartram’s Garden. Field trips by boat on the Schuykill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region’s vast tidal marshlands wetlands. Excursions also help document how extreme rain events, storms, and rising waters are re-making the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?

GRMN 153 Is Europe Facing a Spiritual Crisis?
Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective “cultural identities” (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modern) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...).

GRMN 181 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands. This hybrid course combines online instruction with a short-term study abroad experience in Berlin and Rotterdam. During the pre-tip online portion of the course, students will become acquainted with the cultural histories of German and Dutch attitudes toward sustainability and the environment through a combination of recorded lectures by the instructor, reading assignments, viewing assignments (documentary and feature films), threaded discussions, and short written assignments. The goal of the pre-trip instruction are to help students develop tools for analyzing and interpreting cultural difference, construct working models of German and Dutch concepts of sustainability and formulate hypotheses about the relation between culture and policy in Germany and the Netherlands. The class will spend a total of ten days in Europe: five days in Berlin and five days in the area of Rotterdam. The days will be jam-packed with visits to important sites of sustainable practice; discussion with policy makers, activists, and scientists; and immersion in the cultures of the Netherlands and Germany. Upon our return from Europe, the class will debrief and students will present online projects. There are no prerequisites or language requirements.

Course usually offered summer term only
Also Offered As: ENVS 181
Prerequisites: There are no prerequisites or language requirements.
Activity: Lecture
1.0 Course Unit
Notes: Summer abroad course.

GRMN 203 Texts and Contexts
In this course, you will explore themes of cultural and historical significance in contemporary German-speaking countries through literature and nonfiction, through film and current event media coverage. Whether you wish to dive deeply into historical or political contexts, explore untranslatable cultural phenomena or the aesthetic rhythm and semantic complexity of the German language, GRMN 203 Texts and Contexts will inspire your imagination and deepen your understanding of German language, culture and literature. This is a required course for all courses taught in German at or above the 200 level. For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: GRMN 104 or the equivalent.
Activity: Lecture
1.0 Course Unit
GRMN 219 Business German: A Macro Perspective
This course offers you insights into the dynamics of Business German, while taking a macro approach. Examples of various course topics include: economic geography and its diversity, the changing role of the European Union, and the economic importance of international transportation and tourism. In addition, the course emphasizes the development of students' discourse competencies, Business German vocabulary and grammar. Course assignments include oral presentations on current events, class discussions, role-play, and collaborative group work. Class time will be utilized to practice speaking, answering questions, reviewing exercises and holding group discussions on various topics. Class participation is a key component of this course.
For BA Students: Advanced Language Course
Taught by: James
Course usually offered in fall term
Prerequisite: GRMN 203 or equivalent.
Activity: Lecture
1.0 Course Unit
Notes: No previous knowledge of economics or business required. Course taught in German.

GRMN 220 Business German: A Micro Perspective
This course is designed to enhance your speaking, reading and writing skills, in addition to helping you build a strong foundation in business vocabulary. Course objectives include acquiring skills in cross cultural communication, teamwork, business management, and creating a business plan. German grammar will be covered on a need be basis. This course will prepare you to perform and contribute while in a German-speaking business environment.
For BA Students: Advanced Language Course
Taught by: James
Course usually offered in spring term
Prerequisite: GRMN 203 or equivalent.
Activity: Lecture
1.0 Course Unit
Notes: Course taught in German.

GRMN 230 Topics in Dutch Studies
This course explores how the novel as a genre functioned in 19th Century Europe, in a period when newborn nations (e.g. Belgium and the Netherlands) and newborn classes (bourgeoisie, hired labour classes) had to find or construct new identities in the wake of recent developments on the political plane and other recent revolutions (in particular the French and the Industrial one), which had led to large upheavals in traditional society.
Course not offered every year
Also Offered As: DTCH 230
Activity: Lecture
1.0 Course Unit
Notes: Taught in English.

GRMN 232 Topics in European History
The title for Fall 2017 is: The Nazi Revolution: Power and Ideology.
Taught by: Steinberg
Course not offered every year
Also Offered As: CLST 230, COML 248, HIST 230, ITAL 230, JWST 230
Activity: Seminar
1.0 Course Unit
Notes: Topics vary annually.

GRMN 237 Berlin: History, Politics, Culture
What do you know about Berlin’s history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

Activity: Seminar
1.0 Course Unit
Notes: All readings and lectures in English.

GRMN 239 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The "origins of environmentalism" lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.

Also Offered As: COML 209, ENGL 275, ENVS 239
Activity: Seminar
1.0 Course Unit
Notes: Taught in English.
GRMN 240 Global Sustainabilities
This research-oriented seminar focuses on the ways in which "sustainability" and "sustainable development" are linguistically and culturally translated into the world's languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn's diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world's languages of sustainability.
Taught by: Richter
Course not offered every year
Also Offered As: COML 241
Activity: Seminar
1.0 Course Unit

GRMN 242 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science of technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and life. Our discussions will be based on a reading of Sigmund Freud's essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Merimee, Villiers de Isle-Adam, and others.
For BA Students: Arts and Letters Sector
Taught by: Weissberg
Course not offered every year
Also Offered As: COML 126, GSWS 243
Activity: Lecture

Notes: All readings and lectures in English

GRMN 244 Metropolis: Culture of the City
An exploration of modern discourses on and of the city. Topics include: the city as site of avant-garde experimentation; technology and culture; the city as embodiment of social order and disorder; traffic and speed; ways of seeing the city; the crowd; city figures such as the detective, the criminal, the flaneur, the dandy; film as the new medium of the city. Special emphasis on Berlin. Readings by, among others, Dickens, Poe, Baudelaire, Rilke, Doeblin, Marx, Engels, Benjamin, Kracauer. Films include Fritz Lang's Metropolis and Tom Tykwer's Run Lola Run.

Activity: Lecture
1.0 Course Unit
Notes: All lectures and readings in English.

GRMN 247 Free Radicals: Marx, Marxism, and the Culture of Revolution
"A spectre is haunting Europe--the spectre of Communism": This, the famous opening line of The Communist Manifesto, will guide this course's exploration of the history, legacy, and potential future of Karl Marx's most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx's ideas might still hold in a world vastly different from his own.

GRMN 248 Nietzsche's Modernity and the Death of God
"God is dead." This famous, all too famous death sentence, issued by the 19th-century German philosopher Friedrich Nietzsche, also signaled the genesis of a radical challenge to traditional notions of morality, cultural life, and the structure of society as a whole. In this course we will examine both the "modernity" of Nietzsche's thought and the ways in which his ideas have helped to define the very concept of Modernity (and, arguably, Postmodernity) itself. In exploring the origin and evolution of Nietzsche's key concepts, we will trace the ways in which his work has been variously revered or refuted, championed or co-opted, for more than a century. We will survey his broad influence on everything from philosophy and literature to music and art, theater and psychology, history and cultural theory, politics and popular culture. Further, we will ask how his ideas continue to challenge us today, though perhaps in unexpected ways. As we will see, Nietzsche wanted to teach us "how to philosophize with a hammer."
Course not offered every year
Also Offered As: COML 268, PHIL 067
Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.

GRMN 249 Topics In Modernism
This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ARTH 385, COML 140, ENGL 259, FREN 259
Prerequisites: Pre-requisites some knowledge of 20th-century poetry.
Activity: Seminar
1.0 Course Unit
Notes: Topics vary annually.
GRMN 253 Freud: The Invention of Psychoanalysis
No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud’s life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud’s work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud’s work, and its consequences for various fields of study and therapy.

For BA Students: Humanities and Social Science Sector
Taught by: Weissberg
Course not offered every year
Also Offered As: COML 253, GSWS 252, HIST 253
Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.

GRMN 257 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema “the strongest weapon.” This course explores the world of “fascist” cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles.

For BA Students: Arts and Letters Sector
Taught by: MacLeod
Course not offered every year
Also Offered As: CIMS 257, COML 269, ITAL 257
Activity: Lecture
1.0 Course Unit
Notes: All readings and discussions in English.

GRMN 258 German Cinema
An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film’s place in its historical and political context, the course will explore the “Golden Age” of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to “Papa’s Kino” and the rise of New German Cinema in the 1960s.

Taught by: Fleishman
Course not offered every year
Also Offered As: CIMS 258, COML 270
Activity: Lecture
1.0 Course Unit
Notes: All readings and discussions in English.

GRMN 259 Topics German Cinema
This topic course explores aspects of Film History intensively. Specific course topics vary from year to year. See the Cinema Studies website at http://cinemastudies.sas.upenn.edu for a description of the current offerings.

Taught by: Katz, Corrigan, Decherney, Beckman, Fleishman
Course not offered every year
Also Offered As: CIMS 259, COML 261, GRMN 550
Activity: Lecture
1.0 Course Unit

GRMN 261 Jewish Films and Literature
From the 1922 silent film “Hungry Hearts” through the first “talkie,” “The Jazz Singer,” produced in 1927, and beyond “Schindler’s List,” Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare’s “King Lear” to Sholom Aleichem’s “Tseyve the Dairyman,” primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we “read” literature and film, b) the various ways that the media of fiction, drama, and film “translate” Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

For BA Students: Arts and Letters Sector
Taught by: Hellerstein
Course not offered every year
Also Offered As: COML 265, ENGL 279
Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.
GRMN 262 Women in Jewish Literature
“Jewish woman, who knows your life? In darkness you have come, in darkness do you go.” J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres – devotional literature, memoir, fiction, and poetry – we will study women’s roles and selves, the relations of women and men, and the interaction between Jewish texts and women’s lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah’s daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English.
For BA Students: Arts and Letters Sector
Taught by: Hellerstein
Course not offered every year
Also Offered As: GSWS 162, JWST 268, NELC 154
Activity: Seminar
1.0 Course Unit
Notes: All readings and lectures in English.

GRMN 263 Jewish American Literature
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers "immigrate" from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature.
For BA Students: Arts and Letters Sector
Taught by: Hellerstein
Course not offered every year
Also Offered As: COML 277, JWST 277
Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.

GRMN 264 Translating Cultures: Literature on and in Translation
"Languages are not strangers to one another," writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn’t know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depend upon translation between people, between cultures, between texts. With a diverse group of readings--autobiography, fiction, poetry, anthropology, and literary theory--this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are different kinds of literary and cultural translation? what are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?
For BA Students: Arts and Letters Sector
Taught by: Hellerstein
Course not offered every year
Also Offered As: COML 260, JWST 264
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar. All readings and lectures in English.

GRMN 279 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory.
Course not offered every year
Also Offered As: COML 094, ENGL 094
Activity: Lecture
1.0 Course Unit

GRMN 301 Handschrift-Hypertext: Deutsche Medien
This course will provide an introduction to German-language literary studies through exemplary readings of short forms: fables, fairy tales, aphorisms, stories, novellas, feuilletons, poems, songs, radio plays, film clips, web projects and others. Paying particular attention to how emergent technology influences genre, we will trace an evolution from Minnesang to rock songs, from early print culture to the internet age and from Handschrift to hypertext. Students will have ample opportunity to improve their spoken and written German through class discussion and a series of internet-based assignments. Readings and discussions in German.
For BA Students: Arts and Letters Sector
Course usually offered in spring term
Prerequisites: GRMN 203 is a prerequisite.
Activity: Lecture
1.0 Course Unit
Notes: This course will be offered every spring semester. Taught in German.
GRMN 302 Places of Memory. Lieux de memoire. Erinnerungsorte.
What is culture? What is German? Where are the borders between German, Austrian and Swiss culture? What is part of the "cultural canon"? Who decides and what role does memory play? Relying on the theory of collective memory (Halbwachs) and the concept of "places of memory" (Erinnerungsorte; Nora, Francois/Schulze) and with reference to exemplary scholarly and literary texts, debates, songs, films, documents, and paintings from high and pop culture, this course will weave a mosaic of that which (also) constitutes German or German-language culture. Course usually offered in fall term
Prerequisites: GRMN 203 is a prerequisite.
Activity: Lecture
1.0 Course Unit
Notes: This course will be offered every fall semester. Taught in German.

GRMN 311 Krautrock und die Folgen
Taught by: Hahmann, Lewis
Course not offered every year
Prerequisites: GRMN 203 or equivalent.
Activity: Lecture
1.0 Course Unit
Notes: Taught in German.

GRMN 323 Writing in Dark Times: German Literature
The rise of Hitler and the Nazis in 1933 radically disrupted the literary marketplace in Germany. Public book burnings were the most visible sign of a complete reorganization of the literary world. What was it like to be a writer in the Third Reich? How did censorship work? What kind of choices were writers forced to make? What political roles did writers adopt? Under what conditions could they publish? Who read their books and how did they read them? These are some of the questions we will ask as we become acquainted with German writers in ideological adherence or alliance, in exile throughout Europe and the Americas, in "inner emigration," even in concentration camps, and in hiding. By focusing on their writing, we will shed light on the value of literature in dark times.
Taught by: Richter
Course not offered every year
Also Offered As: GRMN 547
Activity: Lecture
1.0 Course Unit

GRMN 356 Crime and Detection - Dark Deeds
The detective story and the crime drama are time-honored genres of literature and popular culture. We are drawn to morbid scenes of violence and crime, and satisfied by the apprehension of criminals and their punishment. At the same time, the process of detection, of deciphering clues, is much like the process of reading and interpretation. In this course we will read a variety of detective and crime stories, some by famous authors (e.g., Droste-Huelshoff, Fontane, Handke), others by contemporary authors that address interesting aspects of German culture (e.g., Turkish-Germans, gay and lesbian subcultures, DDR and Wende). We will also look at episodes from popular West, East, and post-reunification German TV crime shows (e.g., Tatort).
Taught by: Frei
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Taught in German.

GRMN 361 Staging the 20th Century
Course not offered every year
Prerequisites: GRMN 203 or equivalent.
Activity: Seminar
1.0 Course Unit
Notes: Topics vary annually. Course taught in German. Topic for Spring 2014: "Staging the Middle Ages".

GRMN 363 Kant's Critical Project
This seminar is dedicated to Kant's critical philosophy. In particular, the Critique of pure Reason, which is the first of three Critiques, ranks amongst the most important texts of modern philosophy. Even in contemporary debates, Kantian claims still play a crucial role and basic knowledge of Kant's critical philosophy is often assumed. In this seminar we will deal with central passages from different works which, taken together, give a good picture of Kant's critical revision of classical metaphysics. We shall discuss important conceptions and ideas of Kant's mature philosophy, such as the nature of transcendent al aesthetics and the resulting distinction between a thing-in-itself and appearance, the meaning and application of the categories, the justification and determination of human freedom, and the role of the moral law for Kant's so-called practical metaphysics.
Taught by: Hahmann
Course not offered every year
Also Offered As: PHIL 362, PHIL 565
Activity: Seminar
1.0 Course Unit

GRMN 364 Topics vary annually. The topic for Spring 2015 is: Unhuman Encounters
Topics vary annually. The course description for Spring 2015 is as follows: Typically "the Other" stands for a person or a group of people from another cultural background. But there have always been other encounters that forced people to distinguish themselves from an "other". Foremost, in order to define what is "human", the "unhuman" needed to be described. Initially, this meant distinguishing the human from the rest of nature. With the industrial revolution, the technological became a concern--machines as monsters. On a figurative level, we have the supernatural, ghosts, aliens, and cyborgs. In this course we will explore the ways in which real and imagined encounters with these "other Others" are depicted in German language literature and culture.
Taught by: Dayioglu-Yucel
Course not offered every year
Prerequisite: GRMN 203 or equivalent
Activity: Seminar
1.0 Course Unit
Notes: Taught in German.

GRMN 375 German Literature after 1945
Focus on the continuity of the literary tradition, innovation, and prominent themes related to coming-of-age in today's society, and specific stylistic experiments. Topics include: the changing literary perspective on German history and World War II; the representation of such prominent issues as individual reponsibility, German reunification, and human relations in modern society.
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Taught in German.
GRMN 379 Decadence
The period of the late nineteenth and turn to the twentieth century has often been described as a time of decadence—a decline in the “standards” of morals and virtue. While Freud explored the nature of sexual desire, writers like Schnitzler or Wedekind made this exploration central for their stories or plays. The course will focus on the literature and culture of fin-de-siècle Vienna and Berlin, and consider a variety of texts as well as their later reception and translation into film. Lectures and discussion in German.
Taught by: Weissberg
Course not offered every year
Prerequisite: GRMN 203 or equivalent.
Activity: Lecture
1.0 Course Unit
Notes: Lectures and discussions in German.

GRMN 381 Topics in German Culture
Fall 2017 description: Deutschland steht aktuell vor einer Vielzahl von Herausforderungen, die teils wesentlich gesellschaftliche Bereiche betreffen. Man muss davon ausgehen, dass die heute getroffenen Entscheidungen die deutsche, aber auch europäische Zukunft miteinander verwoben und erfordern zur Bewältigung gesamtgesellschaftlich u. a. die kulturellen und ökonomischen Veränderungen. Das Seminar will einige der dringenden Fragestellungen thematisieren und somit versuchen, ein aktuelles Bild der bestehenden deutschen Verhälttnisse zu vermitteln. Das eröffnet den Blick auf eine mögliche Zukunft Deutschlands, aber auch Europas.
Taught by: Hahmann
Course not offered every year
Prerequisite: GRMN 203 or equivalent
Activity: Seminar
1.0 Course Unit
Notes: Taught in German.

GRMN 401 Trans(l)its
Drawing on Goethe’s musings on “world literature”, the course focuses on authors who have arrived at their German words via global, worldly itineraries. The course considers movements between languages, including those of the students themselves and encourages students to develop their own voice as authors via a series of critical and creative writing exercises. At the same time, students develop strategies to reflect on their own language learning. This course provides an important space for German-learners at Penn to draw on one another’s experiences in the program and to build a sense of community. The course is required for all German majors in the Fall semester of their senior year.
Taught by: Wiggin, MacLeod
Course usually offered in Fall term
Prerequisites: GRMN 203.
Activity: Lecture
1.0 Course Unit
Notes: This course will be offered every Fall semester.

GRMN 402 Independent Study-Senior.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

GRMN 403 Senior Colloquium.
Taught by: Wiggin, MacLeod
Course usually offered in Spring term
Activity: Seminar
0.5 Course Units

GRMN 507 Elementary Middle High German
Designed to familiarize the student with the principal elements of Middle High German grammar and to develop skills in reading and translating a major work of the twelfth century. Limited text interpretation.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Middle High German for Reading Knowledge will be taught in English.

GRMN 509 Topics in Yiddish Literature - Modernist Jewish Poetry.
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define “Jewish writing,” in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation’s process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define “Jewish modernism” through the prism of poetry, which inevitably, given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and will bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation’s process and products.
Taught by: Hellerstein
Course not offered every year
Also Offered As: COML 509, GSWS 509, JWST 509, YDSH 509
Activity: Seminar
1.0 Course Unit
Notes: Topics vary annually.

GRMN 511 Stylistics
Textual analysis based on communication theory. Texts selected from literature and other disciplines. Emphasis placed on the development of the student’s own compositional and stylistic skills.
Course not offered every year
Prerequisite: GRMN 221 or the equivalent language preparation
Activity: Seminar
1.0 Course Unit
Notes: Graduate seminar
GRMN 516 Teaching Methods
This course examines major foreign language methodologies, introduces resources available to foreign language teachers, and addresses current issues and concerns of foreign language teaching and learning, such as second language acquisition theory and application of technology. Taught by: Frei
One-term course offered either term
Activity: Lecture
1.0 Course Unit

Although the starting point for the Anthropocene is still under discussion, there is broad agreement that the industrial revolution and the turn to fossil fuels mark an intensification of humanity's impact on the Earth. It may not be a coincidence that Kant's proclamation of the Copernican revolution in philosophy, according to which human reason replaces the natural light of traditional metaphysics, falls roughly in the same period. Human finite cognition became the measure for God and his creation. The dawn of the era of human freedom and the ramped up exploitation of resources coincide. It is against this background that the Naturphilosophie of F. W. J. Schelling can become particularly interesting. The genesis of German idealism is closely related with the opposition between freedom and necessity that lies at the heart of Kant's critical project. Schelling associated the former with man and the latter with nature. In trying to bridge the gap between them, Schelling reinstates nature as an autonomous actor in its own right. Schelling's thinking about nature chimed with the literary and empirical-scientific work of his contemporary Johann Wolfgang von Goethe. In the productive interplay of poetry, science, religion, and philosophical thought, Goethe and Schelling offer a critical alternative to philosophy in the aftermath of the Copernican revolution that may be viable or useful today as humanity tries to come to terms with anthropogenically induced climate change. This co-taught interdisciplinary seminar will focus on works by Schelling (Ideas for a Philosophy of Nature, First Outline of a System of the Philosophy of Nature, On the World Soul) and Goethe (scientific writings, Faust I & II), in addition to engaging recent scholarship of Schelling and Goethe in relation to environmental humanities. Taught by: Richter/Hahmann
Course not offered every year
Also Offered As: COML 547, PHIL 567
Activity: Seminar
1.0 Course Unit

GRMN 526 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud's work is often regarded as outdated, if not problematic, because of its non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud's work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud's work, and a humanist one? Where do we locate Freud's relevance today? The graduate course will concentrate on Freud's descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture. Taught by: Weissberg
Course not offered every year
Also Offered As: COML 523, GSWS 525
Activity: Seminar
1.0 Course Unit
Notes: Readings and discussions in English.

GRMN 527 Philosophy of Psychology
An investigation of issues that arise from scientific psychology and are investigated philosophically or have implications for philosophy. Specific topics vary by semester. In Spring 2019 the seminar will examine various instances of appealing to appearances in analyzing perception and its relation to an external world. Authors to be studied include Descartes, Hume, Russell, Sellars, and Chisholm. Taught by: Hatfield
Course not offered every year
Also Offered As: PHIL 526
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission

GRMN 534 History of Literary Theory
Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing-and-often confrontational-dialogues between theoretical and political positions as varied as Deconstruction. New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the/professional/study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewritings of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature. We will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism. There will be no examinations. Students will make one class presentation, which will then be reworked into a paper (1200-1500 words) to be submitted one week after the presentation. A second paper will be an annotated bibliography on a theoretical issue or issues that a student wishes to explore further. The bibliography will be developed in consultation with the instructor; it will typically include three or four books and six to eight articles or their equivalent. The annotated bibliography will be prefaced by a five or six page introduction; the whole will add up to between 5000 and 6000 words of prose. Students will prepare "position notes" each week, which will either be posted on a weblog or circulated in class. Course not offered every year
Also Offered As: CLST 511, COML 501, ENGL 601, REES 500
Activity: Seminar
1.0 Course Unit
Notes: Topics vary annually.
GRMN 535 The Elemental Turn
The unfolding effects of climate change—rising sea level, melting ice sheets, subsiding land masses, drought stricken regions, wild fires, air laden with greenhouse gases, and inundated cities—heighten our awareness of the elements: air, earth, fire and water. Within the context of the new materialism, philosophers, eco-critics, and writers are re-turning to the elements and encountering, at the same time, predecessor texts that assume new relevance. This seminar will place current thinking and writing about the elements into dialogue with older traditions ranging from the classical (Empedocles, Plato, Lucretius) to writers and thinkers of the eighteenth, nineteenth and twentieth centuries (e.g., Goethe, Novalis, Tieck, Stifter, Bachelard, Heidegger, Boehme).

Also Offered As: COML 519, JWST 537
Activity: Seminar
1.0 Course Unit

GRMN 541 Topics in Cultural History
Topic for Spring 2016: Making and Marking Time. What is time? In the late 19th century, the questions of how to define time, how to slow down time, and, above all, how to accelerate movement have become focus of the work by many European philosophers who have tried to come to terms with what is now termed as the Industrial Revolution, and the idea of “progress.” And can time be understood as something continuous, or is it fragmented, proceeding in fits and bursts? Such contemplations on time have deeply influenced writers. Marcel Proust was a reader of Henri Bergson and translated his theories of time into a concept of memory. Thomas Mann has tried to navigate timelessness in a novel set on a “Magic Mountain.” Virginia Woolf and James Joyce have pictured an entire universe in a single day (Mrs. Dalloway, Ulysses) while early 20th century Italian Futurists made the contemplation of time part of their manifestos. With them, and with expressionist writers in Germany or writers from the DADA movement there elsewhere in Europe, a reckoning with time would also influence their choice of genre and form, writerly practice, and technique. Parallel to these literary experimentations, pictures were set into motion in scholarly studies by Eadweard Muybridge and finally in the new medium film; Impressionist painters insisted on picturing fleeting moments, and composers experimented with temporal sequences. We may be able to understand a reconsideration of time as driving force for the modern movement, or simply “modernity.” In this seminar, we will study a selection of literary texts of the late 19th century and the modernist movement, consider the philosophical background and changes in historiography, and integrate a consideration of the visual arts and music.
Taught by: Weissberg
Course not offered every year

GRMN 543 Environmental Humanities: Theory, Method, Practice
Environmental Humanities: Theory, Methods, Practice is a seminar-style course designed to introduce students to the trans- and interdisciplinary field of environmental humanities. Weekly readings and discussions will be complemented by guest speakers from a range of disciplines including ecology, atmospheric science, computing, history of science, medicine, anthropology, literature, and the visual arts. Participants will develop their own research questions and a final project, with special consideration given to building the multi-disciplinary collaborative teams research in the environmental humanities often requires.

Course not offered every year
Also Offered As: COML 544, ENGL 643, ENVS 543, SPAN 543
Activity: Seminar
1.0 Course Unit

GRMN 544 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment. In spring 2018, participants have the opportunity to participate in PPEH’s public engagement projects on urban waters and environmental data. These ongoing projects document the variety of uses that Philadelphians make of federal climate and environmental data, in and beyond city government; they also shine light on climate and environmental challenges our city faces and the kinds of data we need to address them. Working with five community partners across Philadelphia, including the City’s Office of Sustainability, students in this course will develop data use stories and surface the specific environmental questions neighborhoods have and the kinds of data they find useful. The course hosts guest speakers and research partners from related public engagement projects across the planet; community, neighborhood, open data, and open science advocates; and project partners in government in the City of Philadelphia and Commonwealth of Pennsylvania. Course assignments include: * 2 short-form essays (course blog posts); * a 12-hour research stay (conducted over multiple visits) with a community course partner to canvas data uses and desires; * authorship of 3 multi-media data stories; * co-organization and participation in a city-wide data storytelling event on May 2, 2018.

GRMN 547 Writing in Dark Times: German Literature in the Nazi Era
The rise of Hitler and the Nazis in 1933 radically disrupted the literary marketplace in Germany. Public book burnings were the most visible sign of a complete reorganization of the literary world. What was it like to be a writer in the Third Reich? How did censorship work? What kind of choices were writers forced to make? What political roles did writers adopt? Under what conditions could they publish? Who read their books and how did they read them? These are some of the questions we will ask as we become acquainted with German writers in ideological adherence or alliance, in exile throughout Europe and the Americas, in “inner emigration,” even in concentration camps, and in hiding. By focusing on their writing, we will shed light on the value of literature in dark times.

Notes: Topics vary annually.

GRMN 556 What is Enlightenment?
The question “What is the Enlightenment?” was posed for an essay competition in a journal, the Berlin Monatsschrift in 1784. At that point, French and English philosophers had already considered new ways of thinking, inventing the modern individual and the modern citizen (in contrast to a state’s subject). German responses to this question were written by an established philosopher (Immanuel Kant), a Jewish resident of Berlin (Moses Mendelssohn), as well as concerned readers of recent philosophical treatises. In our course, we will consider this question by exploring this early discussion and the formation of Enlightenment thought in Europe and specifically Germany, including the German-Jewish Enlightenment (Haskalah), but also trace the historical transformation of this discussion, including Theodor W. Adorno’s and Max Horkheimer’s Dialectics of Enlightenment (1944/1947) and more recent criticism.

GRMN 561 The Long Eighteenth Century
The aim of this anchor course is to acquaint students with the literary, philosophical, and cultural complexity of the "long eighteenth century," roughly 1648-1806. Often associated with the enlightenment and the revolutions it inspired, the eighteenth century is a prolonged period in which institutions of power and knowledge come under pressure and are reconfigured. Old institutions are submitted to the critique of reason, while new institutions of governance, sociability, gender, race and class create new spaces for cultural production. Students will analyze representative works in context and in combination with current scholarship.

Notes: Graduate course. Topics vary annually.

GRMN 567 Topics in History of Philosophy
Topics change annually. Topic title for Spring 2016 is: Schiller’s Philosophical Writings. Today Friedrich Schiller is primarily known for his dramas and poems. However, during a period of several years (after he was appointed professor of History in Jena) he was also concerned with philosophical issues. The focus was mainly on questions of aesthetics and philosophy of history. With regard to both, it was Kant who was extremely influential for the development of Schiller’s philosophical position. But Schiller did not simply copy or rearrange Kantian ideas, in fact, he evolved Kantian philosophy significantly in numerous respects. And even though Schiller later gave up with his philosophical ambitions—in a letter he even dismissed his philosophical efforts altogether as immature—his specific understanding of Kantian philosophy became extremely influential for the genesis of German idealism in general, but in particular shaped the reception of Kantian ideas by Hegel. In this seminar we will look at Schiller’s most important philosophical writings and address both his conception of aesthetics and his approach to philosophy of history.

GRMN 569 New German Fiction
Our seminar will deal with contemporary German culture. What do German readers read? We will read nine novels that were published recently. While considering newspaper accounts of these books and their authors, we will try to come to our own judgments regarding the quality of these works, and their lasting impact. Instead of term papers, we will write book reviews and all members of the seminar will be asked to review all the books in question.

Activity: Seminar
1.0 Course Unit
Notes: Course taught in German.

GRMN 573 Topics in Criticism & Theory: Object Theory
Topic for Fall 2017: "Object Theory". This seminar will investigate the rise of and ongoing scholarly concern with "objects" and "things," which has emerged from fields such as anthropology and art history as a category of renewed interest for literary scholars, too. We will investigate key contributions to theories of the object by thinkers such as: Mauss, Barthes, Heidegger, Latour, Benjamin, Bill Brown, Jane Bennett, among others. Literary readings will accompany these theoretical texts.

GRMN 574 Politics and Societies in the Early Modern World
In this seminar, we will discuss how early modern globalization affected societies and the ways their members and rulers made politics. Following a historiographical introduction, it is divided in three sections. In the first, we will concentrate on empires and kings in order to detect common features of dynastic power across the globe and to explore how such characteristics influenced each other. Second, we will shift our attention to citizens and the ways they made politics in their city-states. For a long time, research on citizenship has been confined to the post-revolutionary nation states. However, recent research suggests that urban citizenship has far deeper roots in medieval and early modern cities. Up to now most research has focused on urban centers in Western Europe and more precisely on the so-called urban belt stretching from Central and North Italy, over Switzerland and Southern Germany to the Rhineland and the Low Countries. Comparisons with urban centers in Asia and the colonial Americas will be needed to test that view. In the third section, we will study the people who provided information to societies and decision makers. Often, they held multiple identities or they acted as religious or ethnic outsiders. Therefore, we call them, with a term borrowed from anthropology ‘brokers’. Taken together, the analysis of these aspects will deepen our understanding of politics and societies in the globalizing early modern world. Thus, the seminar will contribute to a more comprehensive, less Europe-centered view on that period.

GRMN 578 Topics in Art History
Topics vary. Fall 2016: 16 C. North Paint/Graphic. 16th Century Northern Paintings and Graphics. Focusing primarily on Germany and the Netherlands during the period of the nascent Reformation, this course will use both paintings and prints to investigate a host of social and cultural changes: to the religious image and its use (including Iconoclasm), to political structures (the Holy Roman Empire and developing nation-states, such as Spain and England), and to innovative artistic themes, particularly the rise of specialized pictorial genres and secular subjects. Major artists will include Hieronymus Bosch, Albrecht Durer and his circle, Lucas Cranach, Hans Holbein (and England), Lucas van Leyden, and Pieter Bruegel. Students will be expected to write a research paper of their choosing after completing a shorter analysis paper on a single work. Open to qualified undergraduates as well as graduate students.

GRMN 580 Topics In Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.

GRMN 581 Topics in Jewish History
Reading and discussion course on selected topics in Jewish history. The instructors are visiting scholars at the Center for Advanced Judaic Studies. Topic and seminar title for Spring 2015: Topics in Jewish Studies: The Origins of Jewish Studies. Course description for Spring 2015: This is a reading course that grants seminar participants access to Katz Center fellows, some of the best scholars in Judaic studies from around the world. The aim of the course is to expose students to these scholars and their work, to get to know them as people, learn from them at high level, and understand their approach to the field. Over the course of the spring semester there will be four 3-session modules. Students will meet with 4 different fellows for 3 sessions each. The weekly 90-minute classes will be held at the Katz Center on Wednesdays from 10:30 am to 12 pm, and participants will be encouraged to then stay for lunch and the fellows’ seminar which runs from 12:30 to 2:30 pm.

Notes: Graduate seminar.

GRMN 614 Weimar Landscapes
This new course is designed for students of literature, landscape architecture and urban planning, and cultural history in general. It will explore the ideas of, and attitudes towards, landscape in selected works by Johann Wolfgang Goethe, and consider his own considerable practical involvement in reshaping the town and gardens of Weimar. The course will provide the larger context of German literature, aesthetics and landscape taste, and politics of the later 18th and early 19th centuries. We will consider the development of new gardens and parks in a “new” style (e.g. Woerlitz); they were regarded to be less formal and more "natural" than their French predecessors. We will study the English models for this movement, and offer a particular attention to the major German theorist, C.C.L. Hirschfeld, who would soon become famous outside Germany as well. Students will be expected (but not required) to read in German. Translations of key works by Goethe, as well as of commentaries on German gardening history, are available to ensure that non-German speakers can readily follow the course. In final papers there will be the freedom to select topics that focus upon literary or landscape architecture, though it is anticipated that a comparativist perspective will be adopted in either approach.

GRMN 628 Topics 18th Century, vary annually.
Topic for Fall 2014 is: Wolfgang's Lehrjahre (1765-1774) The decade before the publication of Goethe's Die Leiden des jungen Werthers is full of literary ferment. The goal of this course is to gain a sense of the multiplicity of projects and perspectives in this crucial decade in order to break down any teleology that might see Werther as its crowning triumph. In other words, this is a course in the "politics" of literature and literary aesthetics. Works to be read, discussed, and reported on include: Kant, Beobachtungen ueber das Gefuehl des Schoenen und Erhabenen; Klopstock, Salomo, ein Trauerspiel; Gleim, Lieder nach dem Anakreon; Herder, Fragmente ueber di neuere deutsche Literatur; Lessing, Laokoon oder ueber die Grenzen der Mahlierey und Poesie; Wieland, Geschichte des Agathon; Lessing, Minna von Barnhelm; Mendelssohn, Phaedon oder ueber die Unsterblichkeit der Seele; von Gerstenberg, Ugolino; Wieland, Musarion; Klopstock, Oden und Elegien; La Roche, Geschichte des Fraeuleins von Sternheim; Herder, Abhandlung ueber den Ursprung der Sprache; Lavater, Von der Physiognomik; Lessing, Emilia Galotti; Goethe, Gotz von Berlichingen mit der eiseren Hand; Herder, Von deutscher Art und Kunst; Nicolai, Sebaldus Nothanker; Wieland, Alceste; Zimmerman, Von der Einsamkeit; Blankenburg, Versuch ueber den Roman, and, of course, Werther.

GRMN 657 Becoming Modern: The German-Jewish Experience
Yuri Slezkine described the twentieth century as a "Jewish Age"-to be modern would essentially mean to be a Jew. In German historical and cultural studies, this linkage has long been made--only in reference to the last years of the German monarchy and the time of the Weimar Republic. Indeed, what has become known as "modern" German culture-reflected in literature, music, and the visual arts and in a multitude of public media--has been more often than not assigned to Jewish authorship or Jewish subjects. But what do authorship and subject mean in this case? Do we locate the German-Jewish experience as the driving force of this new "modernity" or is our understanding of this experience the result of this new "modern" world?

GRMN 677 The Life of Forms: Ontogenesis, Morphology, Literature
In recent years, the notions of form, formalism, and morphology have reentered contemporary debates across the humanities. This seminar considers the current resurgence of interest in form by tracing form's evolving concepts throughout modernity. It departs from the observation that experimentation with and debates on form in art and literature are inextricably linked to various notions of life and the living. These debates-this is the provisional thesis of the seminar-are the battlefield where literary and art criticism undermine the major presuppositions of the western metaphysical tradition (e.g., determinations of inside-outside, form-content, living-inorganic). On the one hand, the seminar will explore a selective genealogy of various attempts to dynamize the concept of form through theories of 1) ontogenesis (e.g., Spinoza, Simondon, Malabou), 2) morphology (e.g., Goethe, Propp, Goldstein), and 3) aesthetics (e.g., Baumgarten, Schlegel brothers, Adorno). On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines, including literary studies (literary morphology, Russian Formalism), art history (Focillon, Kubler), philosophy (Wittgenstein, Macherey), On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines ranging from literary studies (e.g., Jolles, Russian Formalism, Jauss), art history (e.g., Panofsky, Focillon, Kubler), philosophy (e.g., Wittgenstein, Blumenberg, Macherey), history of science (e.g., Vygotsky, Varela), and sociology (e.g., Tarde, DeLanda). Finally, the seminar will engage in close reading of exemplary literary and art works, and situate the findings on the conjunction of form and life in current debates on New Formalisms (e.g., Levine, Levinson, Kornbluh) and New Materialisms (e.g., Bennett, Grosz).

Government Administration (GAFL)

GAFL 500 Half-Term Electives

--- GAFL 500 - 025: Empowering Communities through Real Estate Development --- This course introduces students to residential and commercial real estate development and its inherent risks and benefits. By understanding the development process, students will be better able to enact public policy that promotes the advantages brought by development while slowing the gentrification process. Using the successful Jumpstart Germantown model, students will learn the 7 JumpSteps of real estate development beginning with creating a development strategy and ending with leasing or selling the property. JumpStart is a successful alternative to the boom and bust cycle of real estate development. It encourages slow growth, scattered site development, and a mix of price points - all of which act to slow gentrification and encourage healthy development that sustains and attracts real economic diversity. This course will include presentations by experts in the real estate industry, in-class discussions and projects, and a visit to a local construction site. Students interested in becoming real estate developers or wanting to learn the ins and outs of the development process will benefit from this course. The 7 JumpSteps of real estate development: 1. Create a Development Strategy & Identify Your Team; 2. Source a Property; 3. Do Your Due Diligence; 4. Find Your Financing; 5. Develop Design & Procure Permits; 6. Customize Construction; 7. Lease/Sell Your Property. --- GAFL 500 - 026: Economic Development, Equity and Inclusion --- Virtually every US city experienced a great decline in the second half of the twentieth century. As the manufacturing base of the industrial city deteriorated, as factories moved to the suburbs in search of cheaper land, a vicious cycle ensued. Following the jobs and taking advantage of racial preferences in the suburbs, working and middle class residents fled; as the tax base shrunk, cities were forced to raise taxes to support city services, leading to more job and residential flight. The "inner city" became synonymous with blight and decline, with ominous racial undertones, as urban and suburban political priorities and sentiments began to diverge sharply. Yet by the turn of the 21st century, this process had bottomed out and in many so-called "post-industrial" cities, some of these trends were beginning to reverse. In the 1990s and early 2000s in particular, civic and political leaders had to make tough decisions about prioritizing scarce public resources. Should they focus on revitalizing the downtown core to create jobs, create amenities to induce people with higher incomes to choose their city, grow a tourism economy? Or on rebuilding the most distressed and disinvested inner city neighborhoods? Or on shoring up the so-called "middle neighborhoods" that were able to maintain some stability during the great decline? Layered on top of these issues were (and are) critical questions about who does and should benefit from economic development. Should we prefer "trickle down" policies that focus on high-end development and presume that they will eventually lead to benefit for the less advantaged in the form of service sector or indirect jobs? Or should cities be more proactive and ensure that public and publicly-enabled investments leverage increases in human capital development, in public goods like parks and schools? This course will focus on case studies from several cities to explore the policy options available to leaders, to assess their decisions, and to consider whether it is possible to promote economic development that is robust and sustainable at the same time as it is equitable and inclusive. This is a half-credit course (0.5 CU) that meets in the first half of the semester. The first class session will meet on January 23, and the last class session will meet on March 13. One-term course offered either term Activity: Seminar 0.5 Course Units Notes: This is a half-credit (0.5 CU), half-term course, meaning that it will

GAFL 502 Public Communications

Successful leaders must be able to convey their integrity and their ideas, their vision and their values clearly and convincingly in public settings. By analyzing great political speeches and affording students the opportunity to prepare and deliver different types of speeches, this course teaches the fundamentals of persuasive public speaking while encouraging students to develop their own voice. This is a performance course. Students will gain skill and confidence in their speech writing and public speaking skills through practice, peer feedback, and extensive professional coaching. Class lectures and discussions will focus on persuasive strategies and techniques for handling community meetings, Q and A sessions, and interactions with the media. This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Fall 2019 on-campus meetings will be held on the following four(4) Saturdays all day from 9:30 AM - 5:30 PM (break for lunch from 1 - 2 PM): September 7, October 5, November 2, and December 7. Class will meet weekly online for one hour each week on Monday evenings from 6:30 - 7:30 PM. Spring 2020 on-campus meetings will be held on the following Fridays from 9:30 - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2): January 17, February 21, March 27, April 24. Class will meet online on Monday evenings from 7:45-8:45pm Course offered summer, fall and spring terms Activity: Hybrid Course 1.0 Course Unit Notes: This course has seats reserved for Fels' students and gives priority to grad students. Post-bacc students, contact Vincent George (vigeorge@upenn.edu) for a permit. Undergraduates, contact Vincent George 2 weeks before the start of the pertinent term to request a seat. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 506 The Problem of Jobs: The Philadelphia Story

Once the "workshop of the world" with a diverse manufacturing economy, the City of Philadelphia has lost a huge proportion of its historical economic base in the past 60 years. Today, Philadelphia struggles to find its competitive advantage. Yet, it has tremendous assets that can be leveraged. This course will explore the rise and fall of Philadelphia's manufacturing economy, efforts to forestall its decline in the 1960s and 70s, the racial and gender dynamics of its employment ecosystem, and contemporary strategies to create a sustainable local economy. We will focus on the emerging national recognition of place-based economic development strategies, including the revival of downtown residential living, tourism, and hospitality, and the role of institutions, such as universities and hospitals, in the revitalization of urban America. The course will combine readings in economic and social history and urban economics with case study analyses of local policies aimed at stimulating growth. Course not offered every year Activity: Seminar 1.0 Course Unit
GAFL 509 Who Gets Elected and Why? The Science of Politics
What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century? This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for political office and will discuss the various influences on getting elected, including: campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization. Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania. Taught by: Rendell
One-term course offered either term
Also Offered As: PSCI 320, URBS 320
Activity: Lecture
1.0 Course Unit

GAFL 511 Reinventing Nonprofits
Three nonprofit leaders walk into a bar. What's the conversation? cross fields, focus, size, and target audiences, nonprofits often face similar challenges: public policy changes, evolving stakeholder expectations, new modalities to service requiring investment, rising competition, fickle funders and demographic shifts, all in a world where culture eats strategy for breakfast. Against this backdrop, nonprofits need to re-assess their mission, approach, position, organizational structure and revenue model. Why are some organizations able to pivot and reinvent themselves while others languish? Through readings to frame the issues, speakers offering firsthand accounts of successes and disappointments, projects with others languish? Through readings to frame the issues, speakers offering firsthand accounts of successes and disappointments, projects with practitioners wrestling with real-ime issues, and group discussions to tie it all together, this course is intended to provide students with an intellectual construct, ideas, and experience to be better prepared to enter and advance in the field, and be part of the conversation.
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

GAFL 514 Public Finance and Public Policy
This course deals with how governments tax and spend. Students become familiar with the theoretical, empirical, and practical tools and methods used to create and analyze government budgets, as well as the flow of public resources. The course examines public revenues and expenditures within the context of fiscal federalism, in addition to budgeting and resource management and the social, economic, and political forces that shape the fiscal environment within which governments (particularly state and local governments) operate. Significant attention is paid to tax policy analysis and the fiscal crises confronting many large cities and states. Additional special topics covered include health care & social security, public education finance, public finance and the environment, bond markets & municipal finance, and public pensions.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GAFL 515 Public Finance Leadership in the New Fiscal Reality
Several factors are intersecting upon U.S. local governments including: muted economic growth, demographics, technological change, ineffective monetary & fiscal policy, and political shenanigans. These are having a profound impact on local government financial health. Many local governments are struggling to structurally balance their budgets, even now several years into one of the longest U.S. post-WWII economic recoveries. Expenditure demand, especially because of rising employee pension and OPEB benefits, is rising faster than expected. Revenues are not rising as quickly as they have historically. This New Fiscal Reality is redefining the concept of municipal distress. Further, the options local governments have to respond to distress may be changing. It might be necessary for local governments to move away from typical solutions like distressed municipality programs and other state level aid. If the current financial trajectory continues, some local governments will not be able to deliver the same service-level they have in the past. New solutions are required. This class will 1) define the New Fiscal Reality; 2) review essential public finance concepts and relationships; 3) study past and recent examples of financial distress and prescribed solutions; 4) survey the current local government financial landscape; and 5) identify solutions public finance leaders can institute for the future. Several local government finance, political and policy experts will speak during the semester. A heavy amount of student engagement is expected to be completed in the form of research, group work, writing, and the critiquing of other students/ work.
Taught by: Kozlik
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GAFL 517 Quantitative Tools for Consulting
The purpose of the course is to study the theory and application of certain, key quantitative methods utilized in financial and fiscal decision-making in state and local governments: defining and measuring efficiency and equity; statistical analysis, multivariate analysis, linear and multiple regression; inter-temporal decision-making; and cost-benefit analysis. Primary emphasis will be on understanding the context and quantitative basics of these methods to prepare students for effective careers in state and local governments. Each student should have a basic understanding of market economics, the roles of government in our market economy, accounting/budgeting basics, and the Philadelphia metro area economy and government.
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Summer 2019 on-campus meetings will be held all day from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2) on the following 3 Saturdays: May 25 (Memorial Day weekend), June 22, and July 27. Class will also meet online weekly on Monday evenings from 7:45 - 8:45 PM.****************************************** Fall 2019 on-campus meetings will be held on the following four (4) Fridays all day from 9:30 AM - 5:30 PM (break for lunch from 1 - 2 PM): September 6, October 4, November 1, and December 6. Class will also meet online weekly on Monday evenings from 7:45 - 8:45 PM.********* For permissions into this course students should email Vincent George at vigeorge@sas.upenn.edu
GAFL 520 Marketing & Fundraising for Non-Profit Organizations
Fundraising and marketing are complementary tools for building revenue streams and fulfilling the program objectives of nearly every nonprofit organization. This course develops students' ability to market a nonprofit to mission recipients and prospective donors and to solicit funds from individuals and organizations. Through lectures, readings, discussions, and assignments, students are actively engaged in learning how to help an organization achieve its mission and objectives. This includes but is not limited to assessing an organization's marketing and fundraising capabilities; identifying and creating relationships with target markets and donors; building infrastructure to properly seek and steward gifts; using technology to fulfill marketing and fundraising objectives; and focusing on fundraising and marketing methods such as social media, direct response, events, major gifts, planned giving, and others. This course emphasizes applications. Each student will complete a fundraising and/or marketing plan for a specific organization of their choosing, the structure of which will be derived from the term's assignments. This course will meet in-person from 2:00-5:30pm on the following Fridays and Saturdays: September 9-10, October 14-15, November 18-19, December 2-3. This course will meet virtually Wednesdays 9:00-10:00pm.

Course usually offered in fall term
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

GAFL 521 Advanced Public Management
A wait list will be kept for this course. To be added to the wait list, please email Josh Power at joshuarp@upenn.edu. This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings. Synchronous online meetings will be held on Mondays 6:30-7:30pm. On-campus meetings for Spring 2018 will be held on the following Friday afternoons (2-5:30pm) and Saturday mornings (9:30am-1pm): January 12-13, February 9-10, March 16-17, April 20-21. This course is designed to provide students with a scientific foundation of management and leadership theory to inform their actions as current and aspiring public leaders. We will draw from diverse disciplines within applied social science, including management science, positive psychology, organizational psychology, system thinking, and change management. Students will learn these theoretical frameworks and management strategies by applying these theoretical frameworks to their specific professional interests.
Taught by: Lim
Course usually offered in spring term
Activity: Hybrid Course
1.0 Course Unit

GAFL 526 Municipal Bonds
The course provides a comprehensive overview of the $3.7 trillion municipal bond market, with a focus on public finance investment banking; capital project financing for state and local governments including water, sewer, mass transit and road projects, and non-profit financing for educational and healthcare institutions; the legal and regulatory framework governing the municipal bonds market; rating agency analysis; quantitative modeling; and investor perspectives.
Taught by: Steven Genyk
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GAFL 527 Community Development and Qualitative Methods
Urban planning and community development involve attempting to understand (and then propose methods for solving) complex problems arising from our shared experience of living together in communities. These wicked problems (Rittel & Weber, 1973) often arise from multiple co-occurring influences: economic, socio-cultural, political, geographic/geological, psychological, etc. The fluid and multi-dimensional nature of these problems, therefore, calls for a fluid and multi-dimensional approach to understanding them. Nonetheless, for the better part of the last half a century the majority of efforts to approach such dilemmas has relied largely on quantitative research methods. While quantitative approaches to understanding community dynamics certainly have a demonstrated value, an over-reliance on such methods can come at the expense of the more nuanced understanding available through qualitative research approaches. Qualitative methods are useful in exploring questions such as where, when, who and how many. They are less effective, however, in answering questions of why and how. For answers to these sorts of questions we must turn to qualitative research methods. This course will introduce students to qualitative research approaches currently used in urban planning/community development, along with methods NOT currently in use, but that hold the potential to yield insights into community dynamics. In addition, this course will teach students how to apply these research techniques in the service of producing a professional-quality outcome, as opposed to producing a purely academic end result. To this end, attention will be given to the process by which these research methods are applied, or would be applied, in the professional consulting world and the language and concepts that would be used in that process and setting. Each student will leave the course with a firm understanding of terms and concepts such as: project scope, sub-deliverable(s); final deliverable(s); benchmarks; Notice to Proceed (NTP); project kick-off; out of scope services, front-end and best practices research; and other related professional concepts/terms.

2019-20 Catalog | Generated 10/18/19
GAFL 528 Critical Issues in Public Finance
The Course, Critical Issues in Public Finance will consider contemporary issues affecting the fiscal state of local governments. Covered will be issues that have distressed municipalities; the policies/initiatives that seek to rectify such including privatization/public private partnerships; reformation of municipal pensions; sustainable education funding alternatives; and tax policies aimed at promoting economic growth. Students will be assigned to a team, which will identify and provide a solution for an issue or issues plaguing a fictional government. Each team will prepare a written report and make a presentation all of which will constitute the final project. Assignments will serve as the building blocks for the final written work product and presentation developed by each team. The class is divided into four modules. The first module will take a historical look at events behind fiscal distress in municipalities and then explore current day drivers that are causing the same today. Modules two, three and four will examine some of the tools that have been used successfully or otherwise to remediate the drivers of fiscal distress. In each module case studies will be used to further analyze the particular fiscal challenge of a municipality. Written assignments will be based on case studies. Spring 2020 on-campus meetings will be held all day from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2) on the following Saturdays: January 18, February 22, March 28, and April 25. Class will also meet online weekly on Monday evenings from 6:30-7:30 PM.
Course usually offered summer term only
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a “hybrid” course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. On-campus meetings vary by term. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 529 Nonprofit Financial Management
The course is designed to provide the student with an understanding of the primary financial management issues and decisions that confront senior management in nonprofits and government. Students will examine financial analysis techniques from both a practical and strategic perspective as they examine operating and capital decisions. The objective of the course is to allow the student to understand how managers integrate the various discrete financial decisions within a broader framework that allows them to analyze, develop and execute a coherent overall financial strategy.

GAFL 530 Evidence Based Policies of Economic and Political Development
This class provides a "hands-on" introduction to the promises and limitations of using Randomized Control Trials (RCTs) to inform policy makers, practitioners, and academics of the conditions under which policies likely would have a positive effect on economic and political outcomes, in the context of international development. This course has three parts: the first is devoted to understanding the "nuts and bolts" of running field experiments / RCTs in developing countries. In part, we will be reading Glennester and Takavarasha’s Running Randomized Evaluations: A Practical Guide. In addition, we will discuss core behavioral concepts from both behavioral economics and social psychology (prospect theory). The second part of the course will be devoted to demonstrating how schools have used RCTs to inform core policy debates (e.g. What are some effective ways to reduce corruption? How can we improve the performance of frontline service providers? How can politicians be more responsive to their constituents?) In the third part, students will be presenting their own research proposals, explicitly designed to address either a core policy question in the developing world or--for those interested--in the USA. Here students will have an opportunity to partner with the Social and Behavioral Sciences Team (https://sbst.gov), which is under the National Science and Technology Council.

GAFL 531 Data Science for Public Policy
In the 21st century, Big Data surround us. Data are being collected about all aspects of our daily lives. To improve transparency and accountability an increasing number of public organizations are sharing their data with the public. But data are not information. You need good information to make sound decisions. To be an effective public leader, you will need to learn how to harness information from available data. This course will introduce you to key elements of data science, including data transformation, analysis, visualization, and presentation. An emphasis is placed on manipulating data to create informative and compelling analyses that provide valuable evidence in public policy debates. We will teach you how to present information using interactive apps that feature software packages. As in all courses at Fels, we will concentrate on more practical skills than theoretical concepts behind the techniques. This course is designed to expand upon core concepts in data management and analysis that you learned in GAFL 640: Program Evaluation and Data Analysis. This is a graduate level course and while GAFL 640 is not a pre-requisite, students are expected to have a foundation of data management and analysis before beginning this course.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
GAFL 534 Infrastructure Investment and Economic Growth: Why, How, and When
Infrastructure is widely acknowledged to be critical for economic success, and infrastructure investments are promoted as leading to economic growth, either at the local or national level. Yet, investments in telecommunications, transportation, energy, or other infrastructure do not always yield the hoped public benefit. This course will help answer the question: Under what circumstances does infrastructure investment contribute to economic growth, and how do we know? Because government resources are limited, advocates often must be creative to find sufficient funding to get desirable projects completed. This course will also help answer the question: How do we pay for the infrastructure projects we want to build? The course will illustrate approaches to answering these questions using case studies of past and proposed investments.

GAFL 538 Human Rights, Access To Justice, and Public Policy
Law is central to effective and legitimate governance at all levels (local, national, regional, global). Law not only serves as a basis and frames governance and policy-making processes; it also offers tools and opportunities for public policy, as well as accountability mechanisms. Familiarity and understanding of legal frameworks, mechanisms and dynamics is thus essential for public and private actors involved in policy-making. This course combines theoretical insights as well as practical components. During the first portion of each class students will examine a wide spectrum of international legal frameworks and instruments which set standards for good governance on a variety of themes: eg. Children, women, refugees. This comparative perspective lays the context for US policies. During the second major portion of each class, students will explore how statutes, regulations and case law serve as tools for social change. Students will gain familiarity with relevant US legal frameworks at the Federal, State and Municipal level and at all three branches of government: legislative, executive and judicial. The third portion of every class will explore the role of the non government sector in public policy. Students will learn about core competencies needed to non profits effective such as: Boards, management leadership, and program planning, assessment of project results, and the responsibilities of the foundation grant program officer. From the grant seeker side, it will include identifying the appropriate foundations, making the connection to the foundation, grant writing, and relationship management.

GAFL 546 Social Enterprise Models and Social Impact Locally and Globally
If you believe in finding innovative ways to make a difference and solve social issues locally and globally, you will benefit from the Social Enterprise and Impact Locally and Globally Course (Social Enterprise). Social Enterprise is designed for those who have a practitioner’s interest in the development, leadership, and management of the evolving nonprofit sector and their intersection with the socially conscious private sector and government. The course takes the student through the process of developing a mock social enterprise including idea exploration, testing and plan execution and provides the student with essential strategies and tools to conduct in-depth analysis of a social enterprise leading to their application to a regional social enterprise. This course fulfills an elective for the MPA and the Certificate in Nonprofit Administration.

GAFL 548 Grant Writing
This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Spring 2019 on-campus meetings will be held on the following Fridays and Saturdays from 9:30 AM - 1:00 PM: January 18 & 19, February 15 & 16, March 15 & 16, and April 26 & 27. Class will meet online on Monday evenings from 7:45 PM - 8:45 PM. This course will provide students with the role of the foundation in philanthropy, what it does, how it does it, and what you need to know to be both an effective foundation manager and foundation grant seeker. From the foundation side, the course will include strategic planning, assessment of project results, and the responsibilities of the foundation grant program officer. From the grant seeker side, it will include identifying the appropriate foundations, making the connection to the foundation, grant writing, and relationship management.

GAFL 549 Leading Nonprofits
Leading Nonprofit Organizations is designed for those interested in leading and managing a nonprofit organization. It takes a practitioners perspective on strategic realities of modern practice. Each section will seek to rapidly orient a new manager to the complexities, strategic issues, & politics. The course is taught through a combination of theory and practice using selected readings, lectures, guest presentations, group activities (Mock senior staff discussions) and field assignments (pairing with area nonprofit leader and attendance at one of the organizations board meetings.) This course has seats reserved for Fels’ students and gives priority to grad students. Undergraduate students, contact Vincent George at vigeorge@sas.upenn. to request a permit. Seats are not guaranteed to post-bacc or undergraduate students

Course usually offered summer term only
Activity: Hybrid Course
1.0 Course Unit

Notes: Spring 2020 on-campus meetings will be held on the following Fridays from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2): January 17, February 21, March 27, and April 24. Class will meet online on Monday evenings from 7:45 PM - 8:45 PM.
GAFL 550 Organizational Diagnosis
This course will help participants learn the skills involved in conducting a systemic, organizational diagnosis. Applying organizational diagnosis skills can help organizations make more effective, evidence-based decisions; increase an organization’s ability to learn and to apply these learnings; increase organizational effectiveness; and, often, save organizations from flawed and detrimental actions. The course places an emphasis on systems thinking, psychodynamic organizational theory, and appreciative inquiry as ways into understanding organizational issues and problems. Frequently, when organizations find themselves in trouble, e.g. problems in the system about such things as lack of leadership, poor communication, diminished productivity, low morale, etc., there is a tendency to frame the problem(s) simplistically and/or locate blame on a few difficult individuals or groups. However, upon closer examination, problematic issues are often found to be symptomatic and/or symbolic of multiple issues within the organization. This course will help participants to understand how problems, which appear, at one level of the system, (e.g. at the personal or interpersonal level) often represent problems at other levels of the system (e.g. at the group and/or institutional level), or signify a range of inter-related issues. Emphasis will be placed on the diagnostic skills needed to examine government agencies, non-profits, and bureaucracies. It will provide participants with the theoretical constructs and application skills necessary for identifying and framing problem areas, collecting data, and organizing feedback to client systems. Real-time examples will inform our discussions as we consider the relationship between diagnosis, organizational reflection, and appropriate action. Summer 2017 On-Campus Meetings: 9:00am-1:00pm Fridays June 23, July 21 and Saturdays May 20, June 24, and July 22.
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. Weekends vary by term. There is a $150 online course fee.

GAFL 551 Government Relations
In a system of representative government, organizations and individuals with interests at stake often seek the support of a government relations professional. This course addresses government relations from the varying perspectives of the current or aspiring professional, the client, and the government official.
Course not offered every year
Activity: Lecture

GAFL 555 Using the Political Process to Effect Organizational Change
Course usually offered in spring term
Also Offered As: DYNM 655
Prerequisites: Course permits must be requested at https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Activity: Seminar
1.0 Course Unit
Notes: For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu

GAFL 559 Social Enterprise
With an increasing competitive market, the landscape for private, not-for-profits and government organizations nationally and globally is become more complex and diverse. Leaders across government, private, and non-for-profits are being challenged to lead differently given the diversity and complexity of organizations that cross and blend the traditional organizations that cross and blend the traditional organizational legal structures. The course includes providing students with the essential competencies and tools to create, lead, and influence system and policy change utilizing Social Enterprise, Social Finance, and Collective Impact strategies and tools. The knowledge accumulated through this course will be translated to a working level knowledge of a Critical Thinking that hat is important for any leader or manager in government, private, or the non-profit sectors. Critical thinking involves making judgments based on reasoning: leaders consider options; analyze these using specific criteria; and draw conclusions and make judgments. Critical thinking competency encompasses a set of abilities that leaders use to examine their own thinking, and that of others, about information that they receive through observation, experience, and various forms of communication.
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Spring 2020 on-campus meetings will be held on the following Saturdays from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2): January 18, February 22, March 28, April 25. Class will meet online on Monday evenings from 6:30 PM - 7:30 PM

GAFL 561 Media Relations
This course is designed to help you better understand the role and practice of media relations and messaging in corporate, non-profit, and government organizations in this new media era. You will learn how to research media and reporters, develop messages, build strategic media plans, generate media coverage, serve as spokespeople, handle crisis situations, and use new media strategies. You will hear from public relations professionals on such topics as working with reporters, developing PR campaigns, and creating effective web outreach programs. Class discussions, reading assignments, research and writing projects, group projects, and case studies offer an engaging and interactive learning environment to expand and apply your knowledge of media relations and messaging. Summer 2017 On-Campus Meetings are 9:30am-1:00pm on Fridays--May 19, June 23, and July 21 and Saturdays--May 20, June 24, and July 22

GAFL 569 The Politics of Housing and Urban Development
This course offers an exploration of how legislative action, government policymaking, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as consideration of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden’s waterfront and downtown-area neighborhoods.
