This course familiarizes students with financial, strategic and legal issues associated with the restructuring of financially distressed firms and investment in distressed securities. The objective is to give students the concepts and tools necessary to assess the often-complex situation facing a firm facing financial distress. The participants will gain a basic understanding of the various options available for distressed firms, such as out-of-court workouts, exchange offers, prepackaged and pre-negotiated bankruptcies, distressed asset sales, 363 auctions, and Chapter 11 reorganization. We will explore the difference between economic and financial distress, and the implications for the restructuring process. Finally, we will consider distressed debt as an asset class and develop techniques for investing in distressed securities. We will approach the investment opportunities using the concepts of value investing, in which we sharply distinguish the value of an asset from its price (as Warren Buffet explains, 'Price is what you pay, value is what you get'). Students will sharpen their conceptual knowledge of finance and valuation in order to properly estimate the value of a distressed firm, and then supplement that with the complexities of valuing specific securities with the capital structure.
Taught by: Professor Kevin Kaiser
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 883 Strategic Equity Finance
Strategic Equity Finance has a new course number effective 19A This course is listed as FNCE783 going forward
Taught by: Professor David Musto and Professor David Erickson
Course usually offered in spring term
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 885 Fin-Tech
The course exposes students to this fast-growing and exciting intersection between finance (Fin) and technology (Tech) while emphasizing the role data and analytics play. The course is structured around three main FinTech areas: (i) Lending/Banking services, (ii) clearing (iii) Trading. It provides specific coverage and examples of developments from (1) market-place lending, (2) blockchain and distributed ledgers, (3) quantitative trading and its use of non-standard inputs. In each of these areas, we start by analyzing the marketplace, the incumbents, and then proceed to analyze the impact of the most relevant technologies have on the business. The course is built around data/code examples, cases, guest lectures, and group projects. Students are thus expected to work in teams and demonstrate a high level of independent learning and initiative.
Taught by: Professor Kogan
Also Offered As: FNCE 385
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 886 ASP - Hedge Funds
This course will cover critical aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the U.S. and abroad that are most relevant for hedge funds. It will also present the major hedge fund strategies, describe operation, control, administration, due diligence and valuation issues. Performance evaluation and investing in hedge funds from the investor's perspective will be discussed as will be issues of potential changes in regulation, risk management, and the use of leverage. The format of the course will mix lectures with presentations from industry participants, hedge fund managers, those who invest in hedge funds, those who advise them and provide services to them, and those who regulate them. Those who want to launch a hedge fund, join an existing one, invest in one, or provide services to one will want to register for this course.
Taught by: Professor Scott Richard
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 887 ASP - Shareholder Activism
The aim of the course is to provide an introduction to shareholder activism. The course makes use of lectures and case studies. The lectures expose the students to the institutional and empirical facts as well as approaches followed by leading shareholder activists. The case studies are designed to provide students an experience on identifying potential opportunity for value creation through active engagement. Assignments require students to develop/practice skills on fundamental analysis.
Taught by: Professor Bilge Yilmaz and Kevin Kaiser
One-term course offered either term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 888 Adv PE-Fundraising, Sourcing and Value Creation.
This course is for second year MBA students. Please Note: Students cannot receive credit for both FNCE 884 and FNCE 888....This course will address a variety of topics in private equity (PE) leveraging a highly practical and real-world approach. It will focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course) and a primarily U.S.-centric view that should be largely applicable in other markets. The course will focus on several key areas outside the private equity transaction: fundraising, sourcing investment opportunities, and creating value under PE ownership. The goal of this course is to educate students about these aspects of PE investing through the lens of the investment professionals, consultants, counterparties and advisors that live them each day. Students will be expected to actively engage in classroom discussions, challenging one another and the lecturers about how to think through these issues in an ever-evolving investment world. In addition, throughout the course, students will be expected participate actively with their teams as they proceed with at home assignments.
Taught by: Professor Bilge Yilmaz
Prerequisite: FNCE 751
Activity: Lecture
1.0 Course Unit
FNCE 893 ASP - Central Banks, Macroeconomic Policy and Financial Markets
This course aims to provide the future global manager and financial analyst with the knowledge on policies set by central banks, regulators and governments to reach the goals of price and financial stability as well as support of growth and employment. The core of the course connects between the formal and actual goals that central banks follow and the related economic analysis on which the goals and the policies are set. We will explain the economic rationale for the policy prescriptions to reach the goals and how these are implemented using institutional framework in the US, the European Central Bank (ECB), Israel and remarks on other countries. We use data, current events and events of the 2007-2018 financial crisis as a basis for discussion and assignments. All these are aimed at understanding how and why the Federal Reserve of the US (the Fed), The Bank of Israel (BOI) and the European Central Bank (ECB) set their policies and how that is related to academic research on these issues.
Taught by: Zvi Eckstein and Joao Gomes
One-term course offered either term
Also Offered As: FNCE 393
Prerequisite: FNCE 613 AND STAT 613
Activity: Lecture
1.0 Course Unit

FNCE 895 Advanced Seminar in Private Equity
This course will be a survey of the private equity asset class. Its objective is to provide an understanding of the concepts, agents, and institutions involved in the late stage corporate private equity market in the U.S. and around the globe. It will examine the buyout market and the activities of buyout funds from the differing perspectives of private equity investors, private equity fund sponsors, and managers of the portfolio companies. The course will be taught almost entirely with cases. Distinguished Wharton alumni in the private equity industry will be our guest speakers for many of the cases based on transactions they concluded. While this course is primarily intended for graduate students, admission may be granted to a limited number of interested undergraduate students. PLEASE NOTE: this course may be recorded for live or subsequent distribution, display, broadcast, or commercialization in any media, including video, audio, or electronic media. For additional information, see the course syllabus or contact the department. This is a Pass/Fail course and will not count towards your concentration.
Also Offered As: FNCE 395
Prerequisite: FNCE 726 OR FNCE 751
Activity: Lecture
0.5 Course Units

FNCE 896 Global Modular Course
Open to MBA, Executive MBA and Undergraduate students, these modular courses are intended to provide unique educational experiences to students in a regional context that has particular resonance with the topic. Taught around the globe, the modular courses help us enrich the curriculum and research on our own campuses in Philadelphia and San Francisco.
Taught by: Bulent Gultekin and Bilge Yilmaz
Course not offered every year
Also Offered As: WH 215
Activity: Lecture
0.5 Course Units

FNCE 897 Finance In The Middle East & North Africa
This is a Wharton Global Modular Course on finance in the Middle East and North Africa. Its objective is to bring students, academics and industry experts together to study financial markets, practice, and institutions in this region.
Taught by: Professor Bulent Gultekin, Finance Department and Professor Michael J.T. McMillen, Penn Law School
Also Offered As: WH 214
Activity: Lecture
0.5 Course Units

FNCE 899 Independent Study Project in Finance
Independent Study Projects require extensive independent work and a considerable amount of writing. ISP in Finance are intended to give students the opportunity to study a particular topic in Finance in greater depth than is covered in the curriculum. The application for ISP's should outline a plan of study that requires at least as much work as a typical course in the Finance Department that meets twice a week. Applications for FNCE 899 ISP's will not be accepted after the THIRD WEEK OF THE SEMESTER. ISP's must be supervised by a Standing Faculty member of the Finance Department.
Taught by: Varies by Project
Prerequisite: FNCE 611 AND FNCE 613
Activity: Independent Study
1.0 Course Unit

FNCE 911 Financial Economics
The objective of this course is to undertake a rigorous study of the theoretical foundations of modern financial economics. The course will cover the central themes of modern finance including individual investment decisions under uncertainty, stochastic dominance, mean variance theory, capital market equilibrium and asset valuation, arbitrage pricing theory, option pricing, and incomplete markets, and the potential application of these themes. Upon completion of this course, students should acquire a clear understanding of the major theoretical results concerning individuals’ consumption and portfolio decisions under uncertainty and their implications for the valuation of securities.
Course usually offered in fall term
Prerequisite: ECON 681 OR ECON 701
Activity: Lecture
1.0 Course Unit

FNCE 912 Corporate Finance and Financial Institutions
This course provides students with an overview of the basic contributions in the modern theory of corporate finance and financial institutions. The course is methodology oriented in that students are required to master necessary technical tools for each topic. The topics covered may include capital structure, distribution policy, financial intermediation, incomplete financial contracting, initial and seasoned public offerings, market for corporate control, product market corporate finance interactions, corporate reorganization and bankruptcy, financing in imperfect markets, security design under adverse selection and moral hazard, and some selected topics.
Course usually offered in spring term
Prerequisite: ECON 681 OR ECON 701
Activity: Lecture
1.0 Course Unit
FNCE 921 Introduction to Empirical Methods in Finance
This course is an introduction to empirical methods commonly employed in finance. It provides the background for FNCE 934, Empirical Research in Finance. The course is organized around empirical papers with an emphasis on econometric methods. A heavy reliance will be placed on analysis of financial data.
Course usually offered in spring term
Prerequisite: FNCE 911 AND STAT 510 AND STAT 511
Activity: Lecture
1.0 Course Unit

FNCE 922 Continuous-Time Financial Economics
This course covers some advanced material on the theory of financial markets developed over the last two decades. The emphasis is on dynamic asset pricing and consumption choices in a continuous time setting. The articles discussed include many classical papers in the field as well as some of the most recent developments. The lectures will emphasize the concepts and technical tools needed to understand the articles.
Course usually offered in fall term
Prerequisite: FNCE 911 AND ECON 701 AND ECON 703
Activity: Lecture
1.0 Course Unit

FNCE 923 Financial Economics Under Imperfect Information
This course covers General equilibrium and rational expectations, foundations of the theory of information; learning from prices in rational expectations equilibrium models, moral hazard, adverse selection, and signalling Bidding theories.
Course not offered every year
Prerequisite: FNCE 922
Activity: Lecture
1.0 Course Unit

FNCE 924 Intertemporal Macroeconomics and Finance
This is a doctoral level course on macroeconomics, with special emphasis on intertemporal choice under uncertainty and topics related to finance. Topics include: optimal consumption and saving, the stochastic growth model, q-theory of investment, (incomplete) risk sharing and asset pricing. The course will cover and apply techniques, including dynamic programming, to solve dynamic optimization problems under uncertainty. Numerical solution methods are also discussed.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

FNCE 925 Topics In Asset Pricing
This course exposes student to recent development in the asset pricing literature. The starting point for the course is the standard neo-classical rational expectations framework. We will then investigate where this framework has succeeded and where it has not. Recently documented deviations from the framework in the literature are discussed and placed in context. The course will also focus on hypothesis development, recent research methods, and research writing. The ultimate objective is for students to develop their own hypotheses and research ideas, resulting in a paper.
Course not offered every year
Prerequisite: ECON 681 OR ECON 701
Activity: Lecture
1.0 Course Unit

FNCE 926 Empirical Methods in Corporate Finance
The course will cover a variety of microeconometric models and methods including panel data models, program evaluation methods ?e.g. difference in differences, matching techniques, regression discontinuity design? instrumental variables, duration models, structural estimation ? e.g. simulated methods of moments?. The structure of the course consists of lectures, student presentations, and empirical exercises. I will utilize published studies in a variety of fields such as corporate finance, labor economics, and industrial organization to illustrate the various techniques. The goal of the course is to provide students with a working knowledge of various econometric techniques that they can apply in their own research. As such, the emphasis of the course is on applications, not theory. Students are required to have taken a graduate sequence in Econometrics, you should be comfortable with econometrics at the level of William Green's 'Econometric Analysis of Cross-Section and Panel Data'.
Course usually offered in fall term
Prerequisite: STAT 521
Activity: Lecture
1.0 Course Unit

FNCE 932 Topics In Corporate Finance
This course covers Advanced theory and empirical investigations; financial decisions of the firm, dividends, capital structure, mergers, and takeovers.
Course not offered every year
Prerequisite: FNCE 922
Activity: Lecture
1.0 Course Unit

FNCE 933 International Finance
To provide an understanding of selected topics of current academic research in the areas of international finance and its intersection with international macroeconomics; to teach interested students the tools for conducting research in this field. Each topic will be developed beginning with early classic papers and then updated through the current status of the profession. The typical target audience comprises students in their second year or later. Prerequisite: Completion of first year course requirements
Taught by: Karen Lewis
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
FNCE 934 Empirical Methods In Asset Pricing
This course has three main objectives: The first object is to introduce students to the fundamental works and the frontier of research in dynamic asset pricing. We will cover recent models that have been proposed to shed light on intriguing and important empirical patterns in the cross section and in the time series. Topics include non-separable utilities, market incompleteness, learning, uncertainty, differences of opinions, ex-ante and ex-post asymmetric information, ambiguity and Knightian uncertainty. The second objective is to teach students how to think of asset pricing research under a bigger or richer framework. We shall focus on the interactions between asset pricing and other fields such as macroeconomics, corporate finance, financial institutions, and international finance. The goal of investigating the joint dynamics is not only to better understand how asset prices are determined, but also (maybe more importantly) how would asset pricing dynamics affect other important economic variables such as investment, corporate payout and financing, unemployment, risk sharing, and international capital flows. Students will learn production-based asset pricing models, particularly the asset pricing models with investment-specific technology shocks, risk shocks, financial friction, searching frictions and information frictions. Of course, the advanced solution methods will focus too. The third objective is to introduce advanced empirical methods to analyze the data and the quantitative dynamic models. It includes how to estimate structural dynamic models, how evaluate structural models beyond goodness-of-fit tests, how confront the models predictions with empirical data by simulation and re-sampling techniques, and how to efficiently test models and explore new patterns using asset pricing and macro data.
Course usually offered in fall term
Prerequisite: FNCE 911 AND FNCE 921
Activity: Lecture
1.0 Course Unit

FNCE 937 Topics in Macro Finance
This is an advanced course in quantitative theory applied to macro and finance models. It is intended for doctoral students in finance, economics and related fields. The course focuses on four broad theoretical literatures: (i) firm investment and growth; (ii) corporate, household and sovereign debt; (iii) asset pricing in general equilibrium; and (iv) equilibrium macro models with a financial sector. My approach is to develop and discuss in detail a unified framework that is suited to address most topics, usually covering a few central topics and the core papers. We then discuss the more recent literature, highlighting how authors combine and expand upon the core ideas. This part of the course usually relies on regular student presentations.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

FNCE 950 Research Seminar in Finance
This course may be offered (and taken by a student) several times a year with varying topics.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

Fine Arts (FNAR)

FNAR 061 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
For BA Students: Humanities and Social Science S
One-term course offered either term
Also Offered As: CIMS 061, FNAR 661, VLST 261
Activity: Seminar
1.0 Course Unit

FNAR 062 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
One-term course offered either term
Also Offered As: CIMS 062, FNAR 662
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

FNAR 063 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.
Course usually offered in fall term
Also Offered As: CIMS 063, FNAR 663
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit
FNAR 065 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.
Course usually offered in fall term
Also Offered As: CIMS 065, FNAR 665
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

FNAR 067 Advanced Video Projects
This course is structured to create a focused environment and support for individual inquiries and projects. Students will present and discuss their work in one to one meetings with the instructor and in group critiques. Readings, screenings, and technical demonstrations will vary depending on students’ past history as well as technical, theoretical, and aesthetic interests.
Course not offered every year
Also Offered As: FNAR 667
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

FNAR 070 Film Sound: History, Aesthetics and Subversion
Sound and Image as experienced in the cinema, are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio’s gradual and triumphant march towards fidelity, stereo and surround sound. This lecture course, through an historical and pedagogical romp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies.
Taught by: Novack
One-term course offered either term
Also Offered As: FNAR 671
Activity: Seminar
1.0 Course Unit

FNAR 073 Machine for Seeing: Architecture and the Moving Image
Architecture's relationship with cinema was established with the very first motion picture. In Sortie de l'usine Lumiere de Lyon by Auguste and Louis Lumiere we see a didactic presentation of film titles as workers from the Lumiere brother’s factory stream forth from its interior at days end. In many ways the context of the film is its subject as well. The title of the class plays on Le Corbusier's maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture's relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on the nature of and use of public space and urban development to documentarians researching the pathologies of neo-liberalism and its effect on the privatization of space. We will also look at the work of artists who engage with the poetics of space and who unpack the conflicted legacies of the built environment.
Taught by: Hartt
Course usually offered in spring term
Also Offered As: FNAR 673
Prerequisite: FNAR 061
Activity: Studio
1.0 Course Unit

FNAR 074 A Virus in the Culture: Social Critique in Media Arts
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media we'll think through and develop responses to some of the most pressing issues facing us today. We'll look at historical models from the agitprop design work of Gee Vaucher for Anarcho-punk band Crass to Chris Marker's film Le Fond de L'Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We'll also look at experimental contemporary design firms like Metahaven who question the role of designers and filmmakers today - Bypassing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we’ll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication design and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with studio time. While the focus of this course is not technical, prior knowledge of design programs, camera functions, and post-production techniques is expected.
Taught by: David Hartt and Marks Owens
Course usually offered in fall term
Also Offered As: FNAR 674
Prerequisite: FNAR 061
Activity: Studio
1.0 Course Unit
FNAR 075 Image and Sound Editing
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, foleys, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.
Course usually offered in spring term
Also Offered As: CIMS 075, FNAR 675
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

FNAR 076 Advanced Lens Based Projects
Advanced Lens Based Projects (ALBP) is structured to create an open environment for students to develop a series of self-determined projects using any variety of image capture technologies. Mobile devices and DSLRs have blended the function of moving and still image capture while computers have become ubiquitous as instruments of display and dissemination. This has consequently led to the increasingly collapsed boundaries of artistic mediums. ALBP is a studio class where students will explore different modes of production and address the expanding field of exhibition strategies. Additionally the class will foster a transdisciplinary approach to critiquing work and emphasize the shared context of the works reception. Readings, screenings, discussions and critiques make up the curriculum along with dedicated studio time. Each student is required to complete 3 self-determined projects using still or moving image capture technologies. Grades will be determined through participation, completion of assignments and the students’ formal and critical engagement with the technology. While the focus of this course is not technical, prior knowledge of camera functions and post-production techniques is expected.
Taught by: Hartt
Also Offered As: FNAR 676
Prerequisite: FNAR 061 OR FNAR 150 OR FNAR 271 OR FNAR 340
Activity: Studio
1.0 Course Unit

FNAR 083 Performance/Camera: Performance and-with-through-for Cameras
This intermediate course will explore the wide and expansive territories of art-making that exist between live performance and mediated image-making both still and moving. For much of the 21st century, the mediums of performance, video and photography have been weaving in and out of contact. Performance is known and understood largely through its documentation: sometimes voluminous and sometimes little more than a single photograph. On the other side, video, film and photography each developed through widespread explorations that were deeply entwined with the ‘capturing’ of bodies on film. Using photography, video and performance in equal parts, the course is a hands-on exploration of this capacious terrain. The course will be structured by a series of bi-weekly assignments that allow for individual and collective production. The course will also include a regular schedule of short readings and presentations/screenings of existing works.
Taught by: Hayes, Sharon
Course usually offered in fall term
Also Offered As: FNAR 583
Prerequisite: FNAR 061 AND FNAR 340
Activity: Studio
1.0 Course Unit

FNAR 085 Performance Studio
This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities, practices and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.
Taught by: Hayes
Course usually offered in spring term
Also Offered As: FNAR 123 OR FNAR 145 OR FNAR 150 OR FNAR 061
Activity: Studio
1.0 Course Unit

FNAR 123 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 523, VLST 253
Activity: Studio
1.0 Course Unit

FNAR 124 Drawing Investigations
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problem-solving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing I, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of image construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.
One-term course offered either term
Also Offered As: FNAR 524
Prerequisite: FNAR 123
Activity: Studio
1.0 Course Unit
FNAR 125 Contemporary Art Studio
This course offers an introduction to studio-based practices aimed at synthesizing the expansive potentialities of art through exposure to a diverse set of approaches, their histories, and contemporary applications. A wide range of multi-disciplinary projects will provide students with skills to conceptualize and visualize material investigations. Lectures, readings, films, visiting lectures, field trips, and critiques, will provide a historic and theoretical foundation for critical inquiry.
Taught by: Neff
Also Offered As: FNAR 625
Activity: Studio
1.0 Course Unit

FNAR 127 Space/Form
In this studio-based course, students are introduced to a wide range of approaches and techniques explore surface, space, and time (2D, 3D, 4D). Traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work, discover new directions in contemporary art, and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Taught by: Neff
Activity: Studio
1.0 Course Unit

FNAR 145 Sculpture Practices
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu One-term course offered either term
Also Offered As: FNAR 545, VLST 252
Activity: Studio
1.0 Course Unit

FNAR 147 Advanced Sculpture: Installation & Interventions
In this course students will create sculptural installations and spatial interventions that explore site specificity and architectural environments. A range of traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Also Offered As: FNAR 607
Prerequisite: FNAR 145
Activity: Studio
1.0 Course Unit

FNAR 148 Clay Practices
This course introduces clay as a sculptural medium through fundamental clay-building techniques, mold making, model making, and casting. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastiline, paper pulp, and cardboard will be explored. Students will explore the full range of clay's capabilities and its role in contemporary art through lectures, readings, demonstrations, and assignments that incorporate conceptual and technical issues.
Also Offered As: FNAR 508
Activity: Studio
1.0 Course Unit

FNAR 150 Photography Practices
This course is an introduction to the basic principles, strategies and processes of photographic practice. It is designed to broaden the student's aesthetic explorations and to help the student develop a visual language based on cross-disciplinary artistic practice. Through a series of projects and exercises students will be exposed to a range of camera formats, techniques and encouraged to experiment with the multiple modes and roles of photography - both analogue and digital. Attention will also be given to developing an understanding of critical aesthetic and historical issues in photography. Students will examine a range of historical and contemporary photowork as an essential part of understanding the possibilities of image making. This course is primarily for freshman and sophomores. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu One-term course offered either term
Also Offered As: VLST 260
Activity: Studio

FNAR 177 On Thoughts Occasioned By
The Essay Film is an important tradition within the various genres that constitute the field of Film and Video Art. Through the element of time it differentiates itself from its literary and photographic antecedents. It borrows selectively from both narrative fiction and documentary - highly subjective and occasionally poetic but without perhaps the burden of truth. The Essay Film is an attempt to dimensionalize our experience of the world and our place in it. It represents an argument, a meditation, a critical engagement with a place, a time or a subject. This is a combination seminar/studio course. Through readings, screenings and discussion students will gain an historical perspective on the genre. The core assignment is for each student to complete a short film (20 minutes max.) in the tradition of the Essay Film.
Taught by: Hartt/Corrigan
Also Offered As: ENGL 257, FNAR 677
Activity: Seminar
1.0 Course Unit
FNAR 212 Walt Whitman and the People’s Press
Walt Whitman and the People’s Press: A Course to Design and Program a Mobile Printing Space as a Public Art Project. Inspired by Whitman at 200, a region-wide celebration of Walt Whitman, this hands-on and collaborative course will engage students with artists, writers, community leaders and the public to design and program a mobile poetry printing facility that recognizes the complicated legacy of Walt Whitman in the 21st Century. To do this students and instructors will consider Whitman’s poetry as well as in his historical period and his place in Philadelphia and Camden. At the same time students will learn to use a press, design materials and create their own multimedia responses to Whitman. Students in this course should expect to read a great deal of poetry but also to be ready to work with their classmates to create responses to Whitman and to see and experience Philadelphia and Camden in new ways.
Taught by: Turner and Comberg
Course not offered every year
Also Offered As: ENGL 212
Activity: Seminar
1.0 Course Unit

FNAR 222 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.
One-term course offered either term
Also Offered As: FNAR 622, URBS 322
Activity: Seminar
1.0 Course Unit

FNAR 231 Painting Practices
Painting practices is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student’s ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.
One-term course offered either term
Also Offered As: FNAR 531
Activity: Studio
1.0 Course Unit

FNAR 232 Painting Studio
Painting Studio presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.
One-term course offered either term
Also Offered As: FNAR 532
Prerequisite: FNAR 231
Activity: Studio
1.0 Course Unit
Notes: This course can be continued by registering for FNAR 333 Painting Studio (III), and FNAR 334 Painting Studio (IV).

FNAR 239 Photographic Thinking
This course will explore the vitality and range of photography as a discursive practice by analyzing the way images are structured and deployed in contemporary art and wider media culture. Students will be introduced to the key issues surrounding photography now-led through these questions by lectures, readings, group discussion and project-based work. A series of photo-assignments challenge the students to integrate critical thought with practice, exploring a range of formal strategies and thematic frameworks that affect the meaning of their images. Students should have a strong interest in philosophy and art histories (especially the history of photography.) They should be motivated to work independently & experiment creatively. There are no prerequisites for this course. It is intended for all different levels of technical experience, but the minimum requirements are a digital camera, a basic familiarity with Photoshop and access to a computer with imaging software.
Activity: Seminar
1.0 Course Unit
FNAR 240 Mystics & Visionaries: Arts and Other Ways of Knowing  
As a pioneer of abstraction in the early 1900’s, Hilma Af Klint channeled a complex and highly original body of abstract symbolic work in secrecy. Using the upcoming Hilma Af Klint exhibition at the Guggenheim as a focus and departure point, this course will explore the ways in which artists have accessed alternative ways of seeing, knowing, and embodying non-visible realities as a source for their work. Accessing spiritual realms has been the subject of early European Modernisms investigations into Theosophy and Anthroposophy, as well as the primary intention of Tibetan Thangkas and Indian Tantra paintings. Postmodernism's crisis of belief and skepticism generated a cultural situation wherein the subject of spirituality was marginalized, ridiculed as anti-intellectual, and in disgrace. The Hilma Af Klint exhibition and surge of interest in her work signifies a new moment, where questions about consciousness and the nature of reality are being addressed with renewed vigor. How do we create space in a technology driven world for experiences that attempt to align the viewer/maker with the contemplative realm, heightened states of consciousness, or transcendence? We will examine a wide field of artists in an attempt to understand the possibilities of the 'spiritual' in art and contemporary culture. This seminar will engage in readings, lectures, discussions, projects, and field trips. This course is appropriate for both grad and undergrad, art majors and non-majors alike.

Taught by: Jackie Tileston  
Also Offered As: FNAR 540  
Activity: Seminar  
1.0 Course Unit

FNAR 241 Hand-Drawn Computer Animation  
Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling.

Course not offered every year  
Also Offered As: FNAR 541

Activity: Studio  
1.0 Course Unit

FNAR 250 Introduction to Printmaking  
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student's capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

Course usually offered in spring term  
Also Offered As: FNAR 550, VLST 250  
Activity: Studio  
1.0 Course Unit

FNAR 251 Printmaking: Etching  
The class will challenge the possibilities of experimental drawing and ways of creating incisions and textures using copper plates as the matrix, which then will be printed on paper and other materials. The class offers full technical and historical description of each individual process: Dry Point, Etching, Hard ground, Soft Ground, Aquatint, Shine Cole', Spit-Biting, Sugar Lift, Color Printing and Viscosity printing.

One-term course offered either term  
Also Offered As: FNAR 551  
Activity: Studio  
1.0 Course Unit

FNAR 252 Printmaking: Screen Printing  
This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silkscreen and relief printmaking including techniques in multi-color printing, photo-based silkscreening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.

Course usually offered in fall term  
Also Offered As: FNAR 552

1.0 Course Unit

FNAR 254 Printmaking & Publications: Intro to Independent Publishing and Artists’ Publications  
This course introduces students to independent publishing and artists’ publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproduceable format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class.

The course commences with a field trip to New York City’s Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists’ books, where students will be encouraged to submit a publication by semester’s end.

FNAR 265 Nonhuman Photography
Our culture is increasingly made up of nonhuman actors. Facial recognition algorithms spend more hours ‘seeing’ in a day than humans; drones equipped with visual sensors conduct our warfare; voice chat bots call businesses and make appointments for us. Meanwhile, humans conduct labor that we view as the work of bots: posting disinformation for political gain, or mass-producing children’s YouTube videos for ad revenue. As objects begin to see and think, how can we understand the role of human agency and the possibilities (or lack thereof) for artistic expression in this space? What does the future of art look like when more photographs are taken as surveillance than by individuals, or when important cultural producers are nonhuman intelligences? In Nonhuman Photography, we will attempt to interrogate these ideas from an artist’s perspective, approaching nonhuman agents and the various components that comprise them both as tools for studio work and as generative entities in their own right. Over the course of the semester we will read and discuss these issues extensively, while engaging in studio projects in a variety of media. While the course bears the title ‘photography’, we will find that many of these tools will be non-photographic or para-photographic, and as a result many of our studio projects will be interdisciplinary. This course takes its name from Joanna Zylinska’s Nonhuman Photography, parts of which we will examine over the course of the semester.
Taught by: Vierkant
Course usually offered in spring term

Activity: Studio
1.0 Course Unit

FNAR 271 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

FNAR 274 Reconfiguring Portraiture
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time.
Course usually offered in spring term
Also Offered As: FNAR 574
Prerequisite: FNAR 271 OR FNAR 340
Activity: Seminar
1.0 Course Unit

FNAR 280 Figure Drawing I
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.
One-term course offered either term
Also Offered As: FNAR 580
Prerequisite: FNAR 123
Activity: Studio
1.0 Course Unit

FNAR 284 Photography and Fashion
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocation. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/ make up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.
Also Offered As: FNAR 684
Prerequisite: FNAR 271 OR FNAR 340
Activity: Studio
1.0 Course Unit
FNAR 285 Photography and Fiction
In spite of photography’s traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image.
There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques.
Taught by: Diamond

Also Offered As: FNAR 271 OR FNAR 340
Activity: Studio
1.0 Course Unit

FNAR 289 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.
One-term course offered either term
Also Offered As: CIMS 289, FNAR 589
Prerequisite: FNAR 123 AND FNAR 264
Activity: Studio
1.0 Course Unit

FNAR 300 Civic Studio
Civic Studio is an engaged research course that explores significant theories, methods, and practices of public and socially-engaged artwork. Students draw from arts- and place-based modes of inquiry toward collaborative projects with fellow classmates, artists, and organizations in Philadelphia and beyond, while pursuing semester-long individual projects that build on their own independent interests and pursuits.
Each semester, students work with and as embedded practitioners in exhibitions, installations, research projects, and other artistic platforms throughout the city. In turn, through readings, site visits, and site-specific work, students gain creative and critical capacity for producing their own final projects. Through Civic Studio students are able to reflect upon and practice public work with artistic, scholarly, and civic aims.
Taught by: Farber
Also Offered As: FNAR 500
Activity: Seminar
1.0 Course Unit

FNAR 310 Critical Issues in Art
Perspectives on Critical Issues aims to engage students in an ongoing and informed study of both historical and contemporary issues in a spirit of curiosity and critique. We will investigate how these concepts can clarify and complicate our creative practice and our understanding of the contemporary art world. This seminar will explore the shifts in artistic production, theory and criticism and topics will range from traditional investigations of aesthetics, Modernism, Post-Modernism and contemporary themes. Through discussions of assigned readings, class presentations, films, lectures, and field trips, this seminar will help establish a critical and theoretical foundation where your own beliefs and doubts about art and culture will be called into question and will provoke an ongoing inquiry into how you understand art, you own creative process, and the relationship of art and artists to society and creative culture.
Taught by: Spector
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FNAR 313 The Chinese Body and Spatial Consumption in Chinatown
This course looks at representations of the Chinese (and Asian body) since the Limehouse district in East London and the advent of Chinese contract laborers to the Americas in the 19th century. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning, literature and later in cinema. Chinatowns are ultimately a product of racism. They were created as a political and social support system for newly arrived Chinese immigrants. While Chinese laborers arrived into the United States in 1840 and in significant numbers into Canada about 1860, Chinese contract workers were encouraged to immigrate to the Americas as an inexpensive source of labor, especially after the end of the American Civil War. Industrial leaders in America, Canada and elsewhere in the Americas (Mexico, Cuba, Peru, etc) saw the arrival of Chinese workers as a victory for commercial interests. However, the celebration was short-lived, as anti-Chinese sentiment quickly transformed into anti-Chinese hysteria. Rather than attacking the vested interests that exploit foreign labor as embodied by the Chinese worker, racist unions with the cooperation of civic leaders and the police deemed it safer to burn Chinatowns than capitalist property. Deeply under-studied to this day is the number of mass murders of Chinese workers in the 19th century by anti-Chinese thugs. This seminar will focus in on how the body of the Chinese (and Asian) was imagined and reimagined multiple times from the middle of the 19th century to today.
Taught by: Lum/Yang
Also Offered As: ASAM 313, ENGL 273, FNAR 613
Activity: Seminar
1.0 Course Unit
FNAR 314 Tiananmen Square: A Case Study for Fine Arts and Landscape Architecture
This course takes as its subject the systems of representation and design that have historically and presently operate in Tiananmen Square in Beijing. There have been several incarnations of Tiananmen Square since its original form in 1651. During Imperial times and through the period of foreign legations, the square was once surrounded by walls and gates, creating a city within a city. With the advent of the Republic of China established on January 1, 1912, much of the enclosures were removed, opening up for public use previously restricted imperial areas. After the Communist Revolution in 1949, planning was afoot to enlarge the square. With its enlargement completed in 1958, the square expanded its footprint by four-fold, making it one of the largest public squares in the world. The enlarged and remodeled square coincided with the completion of the massive Monument to the People's Heroes. In 1976, a large mausoleum containing the preserved body of Mao Zedong was built near the site of the former Gate of China, further increasing the size of the square. In the 1990s, the building of the National Grand Theatre and expansion of the National Museum on grounds contiguous to the square necessitated further alterations to both the Eastern and Western skirts of the square. In recent years, there have been a widening debate regarding the transformation of the concrete heavy and by and large featureless square into a green space. Today, Tiananmen Square holds sacrosanct status to the Communist revolution of 1949, designed more for military parades and massive public rallies than public space repose. In a city that has few green spaces, such a verdant transformation in the heart of the Chinese capital would signal a radical symbolic deviation to China's development-first guiding principles. The square fronts Tiananmen Gate and the Forbidden City and is situated at the intersection of the historical east-west and north- south axes. Chang’An Avenue, important for military processions, separates the square from Tiananmen Gate and is considered the most important thoroughfare in the Capital and the path of the east west number one subway line. The entirety of the Tiananmen Square area is marked by ideology and political prominence, often confusingly. Tiananmen Tower, functions as a conflation of monumental facade with political embodiment. This course will focus on imagined interventions through public art and landscape design within Tiananmen Square and its contiguous areas. It is a studio practice course with a significant seminar component that will include lectures and readings relating to issues of public space and urban design in contemporary China. The course will also study the development of contemporary art in China. The tragic events of Tiananmen Square in 1989 represented a turning point in terms of a generation of Western exiled Chinese artists and curators including Hou Hanru, Chen Zhen, Xu Min, Huang Yong Ping and Yan Pei Ming among many others. The class will study the strategies deployed by these so-called First Generation of Chinese artists. Making use of their double identity as traditionally taught Chinese artist residing in the West, their art offered a pointed critique of both China and the West. The course will include a trip to Beijing.
Taught by: Ken Lum
Course usually offered in spring term
Also Offered As: FNAR 614
Activity: Seminar
1.0 Course Unit

FNAR 315 Across Forms: Art and Writing
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn't just like a dance, but was a dance-or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing. Prerequisite: Permission to enroll is required; please submit a short description of your interest in the class to zolfr@writing.upenn.edu. Taught by: Hayes and Zolf
Course usually offered in fall term
Also Offered As: ENGL 129, FNAR 615
Activity: Seminar
1.0 Course Unit

FNAR 316 Art and Social Work: Art and the Ecology of Justice
How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.

Activity: Seminar
1.0 Course Unit
FNAR 318 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the 'snail' pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a 'spiral city', and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann's destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail’s shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.
Taught by: Ken Lum and Jean-Michel Rabate

FNAR 320 Topics in Animation
This course will look at animation as an art form, a technology and an industry. We will explore the way in which artistic, technical, historical, and cultural conditions shape the development of animation and in turn, how animation impacts viewers. Topics will include trends in animation and their relation to contemporary popular culture, issues of art versus commerce in the creation of cartoons, the intersection of animation and politics, and shifts in style and technique throughout the years. We will look at the figures who have shaped the art forms and continue to influence it, the rise in animation’s popularity, and current day applications of animate imagery. Course usually offered in fall term
Also Offered As: ARTH 387, CIMS 320, ENGL 302
Activity: Seminar
1.0 Course Unit

FNAR 330 Public Art and Issues of Spatial Production
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geophysical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.

Also Offered As: FNAR 534
Prerequisite: FNAR 123 AND FNAR 333
Activity: Studio
1.0 Course Unit
FNAR 336 Monument Lab: Praxis Approaches to Socially-Engaged Public Art
What makes an exceptional socially-engaged public artwork or project? For those who practice in the field, the question invites careful consideration of aesthetics, process, participation, staging, and interpretation. Across the better part of the last decade, this line of inquiry has fueled the work of Monument Lab, a public art and history studio based in Philadelphia. With deep roots and close ties to the Department of Fine Arts’s Center for Public Art and Space, and methods interating contemporary art and pedagogy, Monument Lab works with artists, students, activists, municipal agencies, and cultural institutions on exploratory approaches to public engagement and collective memory. The Monument Lab course in Fine Arts explores the theoretical study and practical applications of public art. The course operates as a socially-engaged 'civic studio' to engage case studies, debate key issues in the field, meet with artists and practitioners, conduct site and studio visits, and practice direct methods for producing individual and collaborative public projects. Focusing on the intersection of theory and practice, the praxis course highlights engaged methods piloted by Monument Lab in citywide exhibitions and special projects, especially to focus on themes and models for participation, public engagement, co-creation, curation, temporary installation, and socially engaged art-making. Each student will embark on a semester-long independent project, as well as participate in a group initiative centered on a current Monument Lab project in Philadelphia to gain experience in the field of socially-engaged public art.
Taught by: Paul Farber
Also Offered As: FNAR 656
Activity: Seminar

FNAR 340 Digital Photography
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 640, VLST 265
Activity: Studio
1.0 Course Unit

FNAR 342 Digital Photography II
In this course students will continue to develop conceptual, technical, aesthetic and formal strategies in digital photography, expanding their artistic process while refining their critical approach to researched subject matter. The class will be driven initially by a series of assignments formulated to further expose students to broad possibilites related to the medium and then they will be guided towards the evolution of a personalized body of work that is culturally, theoretically and historically informed. We will be examining key issues surrounding the digital image in contemporary society, led through a combination of class lectures, readings, group discussions, film screenings, gallery visits and class critiques. Students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end camera and lighting equipment and develop professional printing skills. In addition to learning these advanced imaging practices, this course will also emphasize an investigation of critical thought surrounding contemporary visual culture and the role of digital media in the creation of art.
Taught by: Jamie Diamond
Course offered summer, fall and spring terms
Also Offered As: FNAR 642
Prerequisite: FNAR 340
Activity: Studio
1.0 Course Unit

FNAR 348 Counter the Land: Photography and the Landscape
Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition. Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.
Taught by: Wahl
Course usually offered in fall term
Also Offered As: FNAR 648
Prerequisite: FNAR 271 OR FNAR 340
Activity: Studio
1.0 Course Unit
FNAR 352 Dispersive Lends
This studio course will explore the nexus between photography, sculpture, installation, drawing, painting, and the moving image. The course is informed by the printed image, as students will explore how photography can encourage thinking in other mediums, in addition to how other mediums can influence the making of photography. When does an abstract painting appear more like a photograph? How can a photograph suggest ways to make a video? Can a sculpture exist as a photograph? A variety of assignments will expose students to interdisciplinary approaches addressing these questions and more. Class projects will be supported by regular slide lectures, group critiques, and readings examining modern and contemporary artists and practices.
Taught by: Oliver
Course usually offered in spring term

Activity: Studio
1.0 Course Unit

FNAR 368 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).

Also Offered As: AFRC 368, ANTH 368, ANTH 668, COMM 368
Activity: Seminar
1.0 Course Unit

FNAR 377 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar’s exploration of how black artists, theorists, and activists imagine different futures, often in the service of criticizing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

Notes: A minimum three-page proposal must be submitted and approved by both the Instructor and the Undergraduate Director.

FNAR 410 Urban Communities and the Arts
Urban Communities and the Arts concerns itself with Arts, Music and Activism in Philadelphia. We investigate the social, economic and cultural fabric from which activism in the arts arises. To do so, we will investigate the histories and artistic reactions to oppression in Philadelphia by drawing on specific examples from various sections of the city and through the media of music, visual art, theater, and dance. The long history of systemic and individual oppression in the US manifests itself in different ways in various urban neighborhoods in Philly and artists of various genres and inclinations participate in activism in many different ways. Examples of artistic and musical responses to the various forms of oppression will be offered and class participants will be asked to bring their own examples to share and analyze. By visiting significant arts practitioners and organizations that provide access to arts education and justice work, participants will have a hands-on experience to unpack the dynamics of artistic production in city life. In addition to art as an outlet for exposing oppression, we will also consider the ways that art and music become markers of the uniqueness of a neighborhood or city, which further complicates the idea of art as a tool for activism. Participants in Urban Communities and the Arts will unpack the role of music and art in defining city or neighborhood cultures by considering a few key sectors that reveal the ways in which cities fail to provide equal access to resources or participate in outright discrimination. At the same time, cities continue to cultivate creative spaces and socio-economic opportunities for economic gain and social understanding through art and music. It is the contradictions that this course will concern itself with and out of our study we will invite course participants to respond creatively. Participants will create either an original work of art, music or intellectual response like a visually interesting research poster as part of a final art/music show. Ultimately students will be asked to reflect back on the role of art in social and political activism to better understand the successes and failures of such movements as they come to define the ethos of city life and its limits.

FNAR 488 Senior Seminar Project (Fall)
This rigorous pair of courses, one offered in the Fall and one offered in the Spring semester, are designed as the capstone of the Fine Arts major and are required for all graduating fine arts seniors. They can only be taken in the senior year. Students work in individual studio spaces provided by the department and then meet with faculty for seminar, critique, and professional practice exercises. Through individual and group critiques, students begin to conceptualize their final thesis exhibition or project. The senior seminar allows students to create lasting professional relationships with the fine arts faculty and visiting lecturers. The fall semester culminates in a group exhibition of senior student work paired with final semester critiques.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
FNAR 489 Senior Seminar Project (Spring)
The Spring semester seminar culminates in a senior thesis exhibition for each graduating student. These exhibitions have traditionally been held as a small group exhibition featuring a few students in one group, or as a larger end of semester exhibition with each student installing a series of works. The format of the exhibition will be determined during the fall semester by the senior faculty. The process of preparing, installing, and promoting the thesis exhibition is covered in detail throughout the semester. Students will work in their on-campus studio spaces to produce dynamic, thoughtful and well-crafted work that will serve as their final portfolio. They will present their portfolio of work during a final critique before graduation.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FNAR 500 Civic Studio
Civic Studio is an engaged research course that explores significant theories, methods, and practices of public and socially-engaged artwork. Students draw from arts- and place-based modes of inquiry toward collaborative projects with fellow classmates, artists, and organizations in Philadelphia and beyond, while pursuing semester-long individual projects that build on their own independent interests and pursuits. Each semester, students work with and as embedded practitioners in exhibitions, installations, research projects, and other artistic platforms throughout the city. In turn, through readings, site visits, and site-specific work, students gain creative and critical capacity for producing their own final projects. Through Civic Studio students are able to reflect upon and practice public work with artistic, scholarly, and civic aims.

FNAR 503 Sachs Research: Imaginary Modernisms
Over the course of the 2017-2018 school year, but officially as Spring 2018, credited course, I am inviting a group of 6-8 MFA students to participate as a group in a project focused on research, dialogue and the essential 'possibilities' available to any artist to participate in the constant rewriting and redefining of art history. Students will participate in a body of research and readings leading to my upcoming participation in Rice University's Campbell Lecture Series in March 2018 and an associated publication with the University of Chicago Press. The lectures are divided into three distinct parts over three nights, all of which focus on alternate approaches to modernism. Part I investigates the 'Literary' theory of architecture by Bruno Taut and Paul Scheerbart. Part II is concerned with the painting practices of Hilma af Klint and Blinky Palermo. And Part III discusses the music of Sun Ra and Pauline Oliveros. Students participating in Imaginary Modernisms will meet and work with me in a series of scheduled and structured activities. beginning with a visit to Philadelphia in November for personal studio visits with each of the 6-8 students, not as a critique but to get to know you and your work a bit. Participation includes three trips to New York,each for two days. These 2-day trips will each involve one day at my studio in Brooklyn, to discuss the readings and research, as well as to observe the development of ongoing sculptural artworks being created in my studio, and a second day of self-guided visits to exhibitions and performances that I will suggest, with an optional meeting together for lunch or dinner. Readings for these meetings will be sent to you in advance of trip. Participating students should be prepared to read various texts along with me for the 5 month project duration. This is an essential part of the project and this should be a pleasurable process, so those do not have time to add a medium amount of reading to their schedules, followed by group discussion, should probably not apply. The only other requirement will be preparing for an exchange with undergraduate students at Rice University in March. For our trip to Houston in March, there will be three nights of lectures, one participatory performance, one exhibition opening reception, plus visits and interaction with curators at the Menil Collection, the Museum of Fine Arts Houston, the Contemporary Arts Museum Houston and the Core Program (an important option for MFA students post graduation.)
Taught by: Josiah McElheny
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FNAR 508 Clay Practices
This course introduces clay as a sculptural medium through fundamental clay-building techniques, mold making, model making, and casting. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastiline, paper pulp, and cardboard will be explored. Students will explore the full range of clay's capabilities and its role in contemporary art through lectures, readings, demonstrations, and assignments that incorporate conceptual and technical issues.
Also Offered As: FNAR 148
Activity: Studio
1.0 Course Unit
FNAR 515 Photography Studio Abroad
This Traveling Studio is offered every other spring term to upper level photography & related media students. It is a cross-cultural visual investigation, exploring the contradictions and significance of the chosen city. This course incorporates multi-disciplinary research in preparation for the trip; exploring various fields of knowledge production such as art, history, social sciences, markets and governance. Class discussion, readings and individual research will be focused towards the development of each student's photo/media project, which will be realized while abroad. After returning to Philadelphia, students will develop and refine their work; the remaining classes will emphasize critique, editing, printing and presentation options. The final projects will be included in a group exhibition at the end of the semester. Admission to the course is on a competitive basis.
Course offered spring; odd-numbered years
Activity: Studio
1.0 Course Unit

FNAR 518 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the 'snail' pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a 'spiral city', and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann’s destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its 19th-century transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann’s destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail’s shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.

FNAR 523 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing. If you need assistance registering for a closed section, please email the department at fnaru@design.upenn.edu
One-term course offered either term

Activity: Studio
1.0 Course Unit

FNAR 524 Drawing Investigations
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problem solving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways to express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing I, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of imagemage construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.

FNAR 530 Public Art and Issues of Spatial Production
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geo-physical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.

Activity: Seminar
1.0 Course Unit

FNAR 531 Painting Practices
Painting practices is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student's ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.
One-term course offered either term
Also Offered As: FNAR 231
Prerequisite: FNAR 523
Activity: Studio
1.0 Course Unit

FNAR 532 Painting Studio
Painting Studio presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.

Activity: Studio
1.0 Course Unit
Notes: This course can be continued by registering for FNAR 533 Painting Studio (III), and FNAR 534 Painting Studio (IV).

FNAR 533 Painting Studio
Painting Studio IV focuses on continuing the student's exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting II/III students may be involved in), the emphasis is on the investigation of the student's own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions.

Prerequisite: FNAR 523 AND FNAR 533
Activity: Studio
1.0 Course Unit

FNAR 540 Mystics & Visionaries: Arts and Other Ways of Knowing
As a pioneer of abstraction in the early 1900's, Hilma Af Klint channeled a complex and highly original body of abstract symbolic work in secrecy. Using the upcoming Hilma Af Klint exhibition at the Guggenheim as a focus and departure point, this course will explore the ways in which artists have accessed alternative ways of seeing, knowing, and embodying non-visible realities as a source for their work. Accessing spiritual realms has been the subject of early European Modernisms investigations into Theosophy and Anthroposophy, as well as the primary intention of Tibetan Thangkas and Indian Tantra paintings. Postmodernism's crisis of belief and skepticism generated a cultural situation wherein the subject of spirituality was marginalized, ridiculed as anti-intellectual, and in disgrace. The Hilma Af Klint exhibition and surge of interest in her work signifies a new moment, where questions about consciousness and the nature of reality are being addressed with renewed vigor. How do we create space in a technology driven world for experiences that attempt to align the viewer/maker with the contemplative realm, heightened states of consciousness, or transcendence? We will examine a wide field of artists in an attempt to understand the possibilities of the 'spiritual' in art and contemporary culture. This seminar will engage in readings, lectures, discussions, projects, and field trips. This course is appropriate for both grad and undergrad, art majors and non-majors alike.

FNAR 545 Sculpture Practices
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

FNAR 555 Nonhuman Photography
Our culture is increasingly made up of nonhuman actors. Facial recognition algorithms spend more hours ‘seeing’ in a day than humans; drones equipped with visual sensors conduct our warfare; voice chat bots call businesses and make appointments for us. Meanwhile, humans conduct labor that we view as the work of bots: posting disinformation for political gain, or mass-producing children’s YouTube videos for ad revenue. As objects begin to see and think, how can we understand the role of human agency and the possibilities (or lack thereof) for artistic expression in this space? What does the future of art look like when more photographs are taken as surveillance than by individuals, or when important cultural producers are nonhuman intelligences? In Nonhuman Photography, we will attempt to interrogate these ideas from an artist’s perspective, approaching nonhuman agents and the various components that comprise them both as tools for studio work and as generative entities in their own right. Over the course of the semester we will read and discuss these issues extensively, while engaging in studio projects in a variety of media. While the course bears the title ‘photography’, we will find that many of these tools will be non-photographic or para-photographic, and as a result many of our studio projects will be interdisciplinary. This course takes its name from Joanna Zylinska’s Nonhuman Photography, parts of which we will examine over the course of the semester.
Taught by: Vierkant

FNAR 571 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

FNAR 574 Reconfiguring Portraiture  
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time.  
Course usually offered in spring term

FNAR 575 Graduate Drawing Seminar  
This seminar examines the essential nature drawing has in an artist's process. Direct visual perception, self-referential mark making, the viability of space and understanding it, and drawing from one's own work are some of the drawing experiences encountered in the course. There are regular critiques and discussions based on the work and readings.  
Taught by: Tileston/Freedman  
Course usually offered in spring term  
Activity: Seminar  
1.0 Course Unit

FNAR 576 Critical Issues Seminar  
This seminar investigates issues concerning visual artists. Part one begins with Plato and Kant and progresses through a history of ideas in art, exploring the questions which concern artists today, including Modernism, post-modernism, abstraction and representation, appropriation, context, art and politics, identity, and the artist's relationship to these subjects. Part two of the course will focus on current texts in contemporary art, the current dialogue(s), and issues specific to our time and place as artists. The seminar engages contemporary issues in a spirit of curiosity and critique, and relates them to our studio practice.  
Taught by: Tileston  
One-term course offered either term  
Activity: Seminar  
1.0 Course Unit

FNAR 580 Figure Drawing I  
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.  
One-term course offered either term  
Also Offered As: FNAR 280  
Prerequisite: FNAR 523  
Activity: Studio  
1.0 Course Unit

FNAR 583 Performance/Camera: Performance and-with-through-for Cameras  
This intermediate course will explore the wide and expansive territories of art-making that exist between live performance and mediated image making - both still and moving. For much of the 21st century, the mediums of performance, video and photography have been weaving in and out of contact. Performance is known and understood largely through its documentation: sometimes voluminous and sometimes little more than a single photograph. On the other side, video, film and photography each developed through widespread explorations that were deeply entwined with the 'capturing' of bodies on film. Using photography, video and performance in equal parts, the course is a hands-on exploration of this capacious terrain. The course will be structured by a series of bi-weekly assignments that allow for individual and collective production. The course will also include a regular schedule of short readings and presentations/screenings of existing works.  
Taught by: Hayes, Sharon  
Course usually offered in fall term  
Also Offered As: FNAR 083  
Prerequisite: FNAR 661 OR FNAR 640  
Activity: Studio  
1.0 Course Unit

FNAR 585 Performance Studio  
This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities, practices and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.  
Taught by: Hayes  
Course usually offered in spring term  
Also Offered As: FNAR 085  
Prerequisite: FNAR 523 OR FNAR 545 OR FNAR 640 OR FNAR 661  
Activity: Studio  
1.0 Course Unit

FNAR 589 Mixed Media Animation  
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.  
Course usually offered in spring term  
Also Offered As: CIMS 289, FNAR 289  
Prerequisite: FNAR 523 AND FNAR 636  
Activity: Studio  
1.0 Course Unit
FNAR 591 The Body and Photography
The last few decades have introduced dramatic changes in the way we interact with each other, the way we communicate, the way we date, watch porn, etc. Ethical concerns have arisen with scientific advances such as stem cell research, fertility drugs, Botox, cloning and erectile dysfunction. This studio course will investigate the myriad ways in which the corporeal is addressed and manipulated in contemporary art, science, religion, pop culture and media. Students will develop photographic projects related to updated questions concerning gender, sexuality and social issues. Lectures, readings and class discussion will focus and inform their individual work.
Course usually offered in spring term
Prerequisite: FNAR 271 OR FNAR 340
Activity: Seminar
1.0 Course Unit

FNAR 594 Graduate Photography Seminar
This seminar will examine contemporary issues in photography from the point of view of the practicing artist. Students will meet with visiting critics during the semester; the course will also include student presentations, weekly discussions and group critiques, visits to artists' studios and gallery and museum exhibitions. Texts for the seminar will be drawn from contemporary critical theory in art, philosophy, history and popular culture. Required for all graduate photographers.
Taught by: Davenport
Activity: Seminar
1.0 Course Unit

FNAR 598 Grad Sculpture Seminar
Sculpture instructor (to be announced) will lead this studio course based on improvisational approaches to developing individually made sculptural works, as well as works that are made in collaboration with others. As in Music or Theater, these works involve the collaboration of others, yet they are equally initiated by small thoughts, and carry those thoughts into a more public and interactive format of installation.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FNAR 601 Graduate Studio I
First year studio for MFA students' core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual arts disciplines.
Taught by: MFA Core Faculty
Course usually offered in fall term
Also Offered As: FNAR 501
Activity: Studio
2.0 Course Units

FNAR 602 Graduate Studio II
Second year studio for MFA students' core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.
Taught by: Adkins/Davenport/Freedman/Mosley/Telhan/Tileston
Course usually offered in spring term
Also Offered As: FNAR 502
Activity: Studio
2.0 Course Units

FNAR 605 Topics in Contemporary Art
An experimental class for artists and scholars. Organized around a series of case studies of artists, collectives, infrastructures, and curatorial projects, the course includes: in-class discussion and viewing; workshops with class visitors; site visits; participation in small reading groups. In the first half of the class, students will complete some short assignments. In addition, students will complete a final project that is intentionally open in terms of form. The project, which can be collective or individual in nature, will enable an in-depth material investigation of one of the threads of the class.
Taught by: Hayes and Redrobe
Course not offered every year
Also Offered As: ARTH 596, CIMS 596, ENGL 596, GSWS 596
Activity: Seminar
1.0 Course Unit

FNAR 607 Advanced Sculpture: Installation & Intervention
In this course students will create sculptural installations and spatial interventions that explore site specificity and architectural environments. A range of traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Also Offered As: FNAR 147
Activity: Studio
1.0 Course Unit

FNAR 613 The Chinese Body and Spatial Consumption in Chinatown
This course looks at representations of the Chinese (and Asian body) since the Limehouse district in East London and the advent of Chinese contract laborers to the Americas in the 19th century. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning, literature and later in cinema. Chinatowns are ultimately a product of racism. They were created as a political and social support system for newly arrived Chinese immigrants. While Chinese laborers arrived into the United States in 1840 and in significant numbers into Canada about 1860, Chinese contract workers were encouraged to immigrate to the Americas as an inexpensive source of labor, especially after the end of the American Civil War. Industrial leaders in America, Canada and elsewhere in the Americas (Mexico, Cuba, Peru, etc) saw the arrival of Chinese workers as a victory for commercial interests. However, the celebration was short-lived, as anti-Chinese sentiment quickly transformed into anti-Chinese hysteria. Rather than attacking the vested interests that exploit foreign labor as embodied by the Chinese worker, racist unions with the cooperation of civic leaders and the police deemed it safer to burn Chinatowns than capitalist property. Deeply under-studied to this day is the number of mass murders of Chinese workers in the 19th century by anti-Chinese thugs. This seminar will focus in on how the body of the Chinese (and Asian) was imagined and reimagined multiple times from the middle of the 19th century to today.
Taught by: Lum/Yang
Also Offered As: ASAM 313, ENGL 273, FNAR 313
Activity: Seminar
1.0 Course Unit
FNAR 614 Tiananmen Square: A Case Study for Fine Arts and Landscape Architecture

This course takes as its subject the systems of representation and design that have historically and presently operate in Tiananmen Square in Beijing. There have been several incarnations of Tiananmen Square since its original form in 1651. During imperial times and through the period of foreign legations, the square was once surrounded by walls and gates, creating a city within a city. With the advent of the Republic of China established on January 1, 1912, much of the enclosures were removed, opening up for public use previously restricted imperial areas. After the Communist Revolution in 1949, planning was afoot to enlarge the square. With its enlargement completed in 1958, the square expanded its footprint by four-fold, making it one of the largest public squares in the world. The enlarged and remodeled square coincided with the completion of the massive Monument to the People’s Heroes. In 1976, a large mausoleum containing the preserved body of Mao Zedong was built near the site of the former Gate of China, further increasing the size of the square. In the 1990s, the building of the National Grand Theatre and expansion of the National Museum on grounds contiguous to the square necessitated further alterations to both the Eastern and Western skirts of the square. In recent years, there have been a widening debate regarding the transformation of the concrete heavy and by and large featureless square into a green space. Today, Tiananmen Square holds sacrosanct status to the Communist revolution of 1949, designed more for military parades and massive public rallies than public space repose. In a city that has few green spaces, such a verdant transformation in the heart of the Chinese capital would signal a radical symbolic deviation to China’s development-first guiding principles. The square fronts Tiananmen Gate and the Forbidden City and is situated at the intersection of the historical east-west and north- south axes. Chang’an Avenue, important for military processions, separates the square from Tiananmen Gate and considered the most important thoroughfare in the Capital and the path of the east west number one subway line. The entirety of the Tiananmen Square area is marked by ideology and political prominence, often confusingly. Tiananmen Tower, functions as a confinement of monumental facade with political embodiment. This course will focus on imagined interventions through public art and landscape design within Tiananmen Square and its contiguous areas. It is a studio practice course with a significant seminar component that will include lectures and readings relating to issues of public space and urban design in contemporary China. The course will also study the development of contemporary art in China. The tragic events of Tiananmen Square in 1989 represented a turning point in terms of a generation of Western exiled Chinese artists and curators including Hou Hanru, Chen Zhen, Xu Min, Huang Yong Ping and Yan Pei Ming among many others. The class will study the strategies deployed by these so-called First Generation of Chinese artists. Making use of their double identity as traditionally taught Chinese artist residing in the West, their art offered a pointed critique of both China and the West. The course will include a trip to Beijing.

Taught by: Ken Lum
Course usually offered in spring term
Also Offered As: FNAR 314
Activity: Seminar
1.0 Course Unit

FNAR 615 Across Forms: Art and Writing

What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn’t just like a dance, but was a dance or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.

Taught by: Hayes and Zolf
Course usually offered in fall term
Also Offered As: ENGL 129, FNAR 315
Activity: Seminar
1.0 Course Unit

FNAR 616 Art and Social Work: Art and the Ecology of Justice

How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.

Taught by: Neff, Levy and Ghose
Course usually offered in spring term
Also Offered As: FNAR 316, SWRK 717
Activity: Seminar
1.0 Course Unit

FNAR 622 The Big Picture: Mural Arts in Philadelphia

The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.

One-term course offered either term
Also Offered As: FNAR 222, URBS 322
Activity: Seminar
1.0 Course Unit
FNAR 625 Contemporary Art Studio
This course offers an introduction to studio-based practices aimed at synthesizing the expansive potentialities of art through exposure to a diverse set of approaches, their histories, and contemporary applications. A wide range of multi-disciplinary projects will provide students with skills to conceptualize and visualize material investigations. Lectures, readings, films, visiting lectures, field trips, and critiques, will provide a historic and theoretical foundation for critical inquiry.
Taught by: Neff
Also Offered As: FNAR 125
Activity: Studio
1.0 Course Unit

FNAR 631 Interdisciplinary Studio: Sites of Convergence and Hybridity
This course takes an experimental multimedia approach to investigating some of the boundaries in contemporary art making practices. Painting, photography, video, design and sculpture intersect, overlap, and converge in complicated ways. Projects will be designed to explore hybrid forms, collage, space/ installation, and color through a variety of strategic and conceptual proposals as students work towards unique ways of expanding their own work. Weekly readings, critiques, and presentations will be integrated with studio projects. This studio/seminar is appropriate for students at all levels and from all areas of Fine Arts and Design.
Taught by: Tileston
Course usually offered in spring term
Also Offered As: FNAR 331
Prerequisite: FNAR 523 OR FNAR 545 OR FNAR 640 OR FNAR 531 OR FNAR 636
Activity: Studio
1.0 Course Unit

FNAR 640 Digital Photography
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 340, VLST 265
Activity: Studio
1.0 Course Unit

FNAR 642 Digital Photography II
In this course students will continue to develop conceptual, technical, aesthetic and formal strategies in digital photography, expanding their artistic process while refining their critical approach to researched subject matter. The class will be driven initially by a series of assignments formulated to further expose students to broad possibilities related to the medium and then they will be guided towards the evolution of a personalized body of work that is culturally, theoretically and historically informed. We will be examining key issues surrounding the digital image in contemporary society, led through a combination of class lectures, readings, group discussions, film screenings, gallery visits and class critiques. Students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end camera and lighting equipment and develop professional printing skills. In addition to learning these advanced imaging practices, this course will also emphasize an investigation of critical thought surrounding contemporary visual culture and the role of digital media in the creation of art.
Taught by: Jamie Diamond
Course usually offered in fall term
Also Offered As: FNAR 342
Prerequisite: FNAR 640
Activity: Studio
1.0 Course Unit

FNAR 648 Counter the Land: Photography and the Landscape
Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition. Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.
Taught by: Wahl
Course usually offered in fall term
Also Offered As: FNAR 348
Prerequisite: FNAR 571 OR FNAR 640
Activity: Studio
1.0 Course Unit
FNAR 652 Dispersive Lens
This studio course will explore the nexus between photography, sculpture, installation, drawing, painting, and the moving image. The course is informed by the printed image, as students will explore how photography can encourage thinking in other mediums, in addition to how other mediums can influence the making of photography. When does an abstract painting appear more like a photograph? How can a photograph suggest ways to make a video? Can a sculpture exist as a photograph? A variety of assignments will expose students to interdisciplinary approaches addressing these questions and more. Class projects will be supported by regular slide lectures, group critiques, and readings examining modern and contemporary artists and practices.
Taught by: Oliver
Course usually offered in spring term
Also Offered As: FNAR 571 OR FNAR 640 OR FNAR 661
Activity: Studio
1.0 Course Unit

FNAR 654 Printmaking & Publications: Intro to Independent Publishing and Artists' Publications
This course introduces students to independent publishing and artists' publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class. The course commences with a field trip to New York City's Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists' books, where students will be encouraged to submit a publication by semester's end.

Course usually offered in fall term
Also Offered As: FNAR 254
Activity: Studio
1.0 Course Unit

FNAR 656 Monument Lab: Praxis Approaches to Socially-Engaged Public Art
What makes an exceptional socially-engaged public artwork or project? For those who practice in the field, the question invites careful consideration of aesthetics, process, participation, staging, and interpretation. Across the better part of the last decade, this line of inquiry has fueled the work of Monument Lab, a public art and history studio based in Philadelphia. With deep roots and close ties to the Department of Fine Arts’s Center for Public Art and Space, and methods interanimating contemporary art and pedagogy, Monument Lab works with artists, students, activists, municipal agencies, and cultural institutions on exploratory approaches to public engagement and collective memory. The Monument Lab course in Fine Arts explores the theoretical study and practical applications of public art. The course operates as a socially-engaged ‘civic studio’ to engage case studies, debate key issues in the field, meet with artists and practitioners, conduct site and studio visits, and practice direct methods for producing individual and collaborative public projects. Focusing on the intersection of theory and practice, the praxis course highlights engaged methods piloted by Monument Lab in citywide exhibitions and special projects, especially to focus on themes and models for participation, public engagement, co-creation, curation, temporary installation, and socially engaged art-making. Each student will embark on a semester-long independent project, as well as participate in a group initiative centered on a current Monument Lab project in Philadelphia to gain experience in the field of socially-engaged public art.
Taught by: Paul Farber
Also Offered As: FNAR 336
Activity: Seminar
1.0 Course Unit

FNAR 661 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: CIMS 061, FNAR 061, VLST 261
Activity: Seminar
1.0 Course Unit
FNAR 662 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
One-term course offered either term
Also Offered As: CIMS 062, FNAR 062
Prerequisite: FNAR 661
Activity: Seminar
1.0 Course Unit

FNAR 663 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.
Course usually offered in fall term
Also Offered As: CIMS 063, FNAR 063
Prerequisite: FNAR 661
Activity: Seminar
1.0 Course Unit

FNAR 665 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.
Course usually offered in fall term
Also Offered As: CIMS 065, FNAR 065
Prerequisite: FNAR 661
Activity: Seminar
1.0 Course Unit

FNAR 667 Advanced Video Projects
This course is structured to create a focused environment and support for individual inquiries and projects. Students will present and discuss their work in one on one meetings with the instructor and in group critiques. Readings, screenings, and technical demonstrations will vary depending on students’ past history as well as technical, theoretical, and aesthetic interests.
Course not offered every year
Also Offered As: FNAR 067
Prerequisite: FNAR 662
Activity: Seminar
1.0 Course Unit

FNAR 669 Graduate Video Studio
Through a series of studio projects, this course focuses on the conceptualization and production of time-based works of art. A seminar component of the course reviews contemporary examples of media based art and film. A studio component of the course introduces production techniques including lighting, cinematography, audio, editing, mastering projects, and installing audio-visual works in site-specific locations or gallery spaces.
Taught by: Mosley
Course usually offered in fall term
Activity: Studio
1.0 Course Unit

FNAR 671 Film Sound: History, Aesthetics and Subversion
Sound and Image as experienced in the cinema, are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio’s gradual and triumphant march towards fidelity, stereo and surround sound. This lecture course, through an historical and Pedagogical romp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies.
Taught by: Novack
Course usually offered in fall term
Also Offered As: FNAR 070
Activity: Seminar
1.0 Course Unit

FNAR 673 Machine for Seeing: Architecture and the Moving Image
Architecture's relationship with cinema was established with the very first motion picture. In Sortie de l'usine Lumiere de Lyon by Auguste and Louis Lumiere we see a didactic presentation of film titles as workers from the Lumiere brother’s factory stream forth from its interior at days end. In many ways the context of the film is its subject as well. The title of the class plays on Le Corbusier's maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture's relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on the nature of and use of public space and urban development to documentarians researching the pathologies of neo-liberalism and its effect on the privatization of space. We will also look at the work of artists who engage with the poetics of space and who unpack the conflicted legacies of the built environment.
Taught by: Hartt
Course usually offered in spring term
Also Offered As: FNAR 073
Prerequisite: FNAR 661
Activity: Seminar
1.0 Course Unit
FNAR 674 A Virus in the Culture: Social Critique in Media Arts
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media we'll think through and develop responses to some of the most pressing issues facing us today. We'll look at historical models from the agitprop design work of Gee Vaucher for Anarcho-punk band Crass to Chris Marker's film Le Fond de L'Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We'll also look at experimental contemporary design firms like Metahaven who question the role of designers and filmmakers today - Bypassing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we'll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with dedicated studio time. While the focus of this course is not technical, prior knowledge of camera functions and post-production techniques is expected.

Taught by: David Hartt and Mark Owens
Course usually offered in fall term
Also Offered As: FNAR 074
Prerequisite: FNAR 661
Activity: Studio
1.0 Course Unit

FNAR 675 Image and Sound Editing
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, foleys, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.

Course usually offered in spring term
Also Offered As: CIMS 075, FNAR 075
Prerequisite: FNAR 661
Activity: Seminar
1.0 Course Unit

FNAR 676 Advanced Lens Based Projects
Advanced Lens Based Projects (ALBP) is structured to create an open environment for students to develop a series of self-determined projects using any variety of image capture technologies. Mobile devices and DSLRs have blended the function of moving and still image capture while computers have become ubiquitous as instruments of display and dissemination. This has consequently led to the increasingly collapsed boundaries of artistic mediums. ALBP is a studio class where students will explore different modes of production and address the expanding field of exhibition strategies. Additionally, the class will foster a transdisciplinary approach to critiquing work and emphasize the shared context of the works reception. Readings, screenings, discussions, and critiques make up the curriculum along with dedicated studio time. Each student is required to complete three self-determined projects using still or moving image capture technologies. Grades will be determined through participation, completion of assignments, and the students' formal and critical engagement with the technology. While the focus of this course is not technical, prior knowledge of camera functions and post-production techniques is expected.

FNAR 684 PHOTOGRAPHY AND FASHION
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocation. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/ make up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.

Also Offered As: FNAR 284
Prerequisite: FNAR 571 OR FNAR 640
Activity: Studio
1.0 Course Unit
FNAR 685 Photography and Fiction
In spite of photography’s traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques.

FNAR 712 Visual Epistemologies for Creative Practices
In this joint seminar between Architecture and Fine Arts, we investigate the alternative modes of diagrammatic thinking that are influencing art and design disciplines. The course provides a historical perspective on the evolution of visual epistemologies from late 1950s and reviews its current state from the lens of contemporary representation theory, computation, fabrication and information technologies. The goal is to gain both theoretical and hands-on experience with the contemporary diagramming techniques in order to advance both designs and the thinking behind them.

**Folklore (FOLK)**

**FOLK 022 World Musics and Cultures**
This course examines how we as consumers in the 'Western' world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways—particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of 'World Music' by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

**FOLK 029 Gender, Sexuality, & Religion**
What does it mean to be a gendered individual in a Muslim, Hindu, Jewish, Christian, Buddhist, or Sikh religious tradition? How important are gender differences in deciding social roles, ritual activities, and spiritual vocations? This course tackles these questions, showing how gender - how it is taught, performed, and regulated - is central to understanding religion. In this course we will learn about gendered rituals, social roles, and mythologies in a range of religious traditions. We will also look at the central significance of gender to the field of religious studies generally. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of gender in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will also read religion through feminist and queer lenses - we will explore the key characteristics of diverse feminist and queer studies approaches to religion, as well as limits of those approaches.

1.0 Course Unit

**FOLK 201 American Folklore**
This course will examine American expressive culture, including everyday speech, narrative, music, foodways, religion, public celebrations, and material culture through an exploration of the multiple and changing avenues of diversity in the United States. Folklore can be considered the unofficial culture that exists beneath and between the institutions of power that we read about in our history books, and that is what we will be studying—the 99% of American life that goes unseen and unnoticed in other college courses. Some of the topics we will examine are: campus folklore; body art and adornment; contemporary (urban) legends and beliefs; public celebrations and rituals; and the adaptation and commodification of folk culture in popular media.
One-term course offered either term
Also Offered As: ANTH 205
Activity: Lecture
1.0 Course Unit

**FOLK 229 Myth in Society**
In this course we will explore the mythologies of selected peoples in the Ancient Near East, Africa, Asia, and Native North and South America and examine how the gods function in the life and belief of each society. The study of mythological texts will be accompanied, as much as possible, by illustrative slides that will show the images of these deities in art and ritual.

FOLK 252 Themes Jewish Tradition: Iberian Conversos: Jew-Christian?
Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the 'open' and 'closed' in theological knowledge, as presented in central texts of the rabbinc tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.

FOLK 280 Jewish Folklore
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms. A basic book of Hasidic legends from the 18th century will serve as a key text to explore problems in Jewish folklore relating to both earlier and later periods.

FOLK 406 Folklore and the Supernatural
Beliefs in the supernatural have not diminished appreciably in modern cultures, despite many predictions that they would. Recent public opinion surveys indicate many Americans hold supernatural beliefs or have had experiences they believe to be supernatural. This course will introduce key concepts in the study of culture and the supernatural. We will examine traditional beliefs about supernatural beings, supernatural realms, and humans who interact with these, as well as the historical development of Western ideas of 'the supernatural' itself. Students will enhance their understanding of human diversity through cross-cultural examples of supernatural folklore, consider the relationship between the supernatural and place, and examine how various folklore genres have expressed human relationships to the supernatural. Topics may include witchcraft, ghosts, vampires, fairies, UFOs, supernatural assault, vodou, Neopaganism, saints, healing, legend tripping, and dark tourism. There will also be opportunity for students to explore related topics of interest to them.
Course not offered every year
Activity: Lecture

FOLK 440 Fairy Tales
In this seminar we review and evaluate critical approaches to understanding manhood and masculinity as they have been used to examine the individual and collective lives of men in communities around the world. Through a perspective that emphasizes how masculinity is performed and narrated, we seek to integrate concepts of: (1) the self—the experiencing and embodiment of personhood, subjectivity, and emotion; (2) spatiality and power—public and sporting events, leisure spaces; and (3) the state–relations between gender ideology, governmentality and power in political theatre, media control, warfare and military memorials.

FOLK 459 Prose Narrative
Historical, literary, comparative, and ethnographic methods contribute to study of prose narratives which were told in oral societies in antiquity and in modern times and were documented in literary societies for different purposes. Oral storytellers, both professional and amateurs, performed them in private and public spaces. Their recording from antiquity to modern times became an integral element of modern life in general and in education and arts in particular. The storytellers, their performances in oral and literary cultures, their genres, and their symbolic meanings are the subjects of the course, together with the analytical methods that help mapping their distribution worldwide.

FREN (FREN)

FREN 110 Elementary French I  
French 110 is the first semester of the elementary-level sequence designed to develop functional proficiency in the four skills and gain familiarity with French and Francophone culture. The primary emphasis is on the development of the oral-aural skills, speaking and listening. Readings on topics in French culture as well as frequent writing practice are also included in the course. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class which simulate real-life situations, so practice your newly acquired vocabulary and grammatical structures in small group and pair work that simulate real-life situations. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos, and conversations between native speakers. Homework will consist of aural comprehension exercises in the online SAM as well as regular writing practice. The course will also invite you to explore the Francophone world by completing an engaging, interactive project in the final stage of the semester. By the end of this course, you should be able to meet a variety of day-to-day needs in a French-speaking setting and to handle a range of basic travel transactions. You will be able to engage in simple conversations on familiar topics such as family, lodging, daily routines, leisure activities, etc. You will begin to be able to speak and write in the past, present and the future, make comparisons, and describe people and things in increasing detail. You will develop reading skills that should allow you to get the gist of simple articles and you will more readily discern information when you hear native speakers talking in a simple fashion about topics familiar to you.

FREN 112 Accelerated Elementary French  
French 112 is an intensive elementary language course for students who have not studied French, but who have met the language requirement in another foreign language. This course will provide an introduction of the basic structures of French, with intensive work on speaking and listening designed to prepare students to take Intermediate French. Due to the nature of the course, the first half will progress rapidly with the more difficult material presented after the midterm period. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class that will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will have frequent opportunities to practice your newly acquired vocabulary and grammatical structures in small group and pair work that simulate real-life situations, so please prepare each day’s lesson attentively. See ‘Preparation for each class’ below for additional details. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos, and conversations between native speakers. FREN 130 Intermediate French I
In French 130, you will be 'parachuted' to Paris where you will choose where you want to live and explore your chosen neighborhood in depth. Every week we will discuss a different theme of Parisian life and French culture. As you discover your arrondissement, you will share information about it with your classmates and develop a collective knowledge of the French capital. You will tell your imagined experiences through your journal and therefore as a class, we will 'raconter Paris'. French 130 is the first half of the intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak, and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. As in other French courses at Penn, class will be conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as role-plays, problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Through the study of authentic materials such as articles, literary texts, songs, films, videos, you will deepen your knowledge of the French language and culture.

FREN 140 Intermediate French II
French 140 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. You are expected to have already learned the most basic grammatical structures in elementary French and you will review these on your own in the course workbook. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. This course focuses on the culture of French-speaking countries beyond the borders of France. Along with your classmates, you will explore the cities of Dakar, Fort-de-France and Marrakesh, investigating the diversity of the Francophone world through film, literature and music. As in other French courses at Penn, class is conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Daily homework will require researching in the library and on the Internet, listening practice with video clips, in addition to regular written exercises in the workbook.

Two terms. student may enter either term.
Activity: Seminar
0.5 Course Units

FREN 202 Advanced French
French 202 is a third-year level course aimed at better understanding contemporary French society, language and culture, with a special focus on today's young generation. What defines a generation in the first place, and how do the lives of young people in France compare to those of their American counterparts? To answer these questions, students in 202 will delve into numerous aspects of French youth experience from the school system to family life, and from the workplace to the political arena, with the aid of resources including contemporary films, news articles, songs, literary texts, and the recent sociological project 'Generation Quoi.' In addition, they will forge connections with the French community on Penn's campus, as they embark on a journey of cultural exploration and reflexive self-discovery. Prerequisite: Open to students who have completed the language requirement. Students who are continuing from French 134 or 140 should take French 202 before moving on to more advanced French courses. While 202 is not a grammar-focused course, particular attention will be given to recognizing and employing the different registers of spoken and written French. The course constitutes excellent preparation for study abroad in a French-speaking region. Prerequisite: Open to students who have completed the language requirement. Students who are continuing from French 134 or 140 should take French 202 before moving on to more advanced French courses.

FREN 211 French for Business I
This content-based language course, taught in French, introduces economic, business and professional terminology through the study of the following topics: financial institutions (banking, stock market and insurance); business practices (business letters and resumes); trade and advertising; the internal structure and legal forms of French companies. The course also emphasizes verbal communication through three components: 1) In-class activities such as problem-solving tasks, discussions and debates. 2) The study of authentic materials such as newspapers and magazines' articles, video clips, and radio shows. 3) A series of students' presentations. Finally, in order to use and practice the new economic and business terminology studied in this course, and to also further explore the structure, the management, and the operations of the French companies, students will work in pairs on a research project about a major French company of their choice. One of the other goals of this course is to also prepare the students to take one of the exams offered by the Paris Chamber of Commerce and Industry: the Diplome de Francais Professionnel, Affaires, C1. This exam will be held on campus in April.
One-term course offered either term

FREN 212 Advanced French Grammar and Composition
Intensive review of grammar integrated into writing practice. A good knowledge of basic French grammar is a prerequisite (French 202 or equivalent is recommended). Conducted entirely in French, the course will study selected grammatical difficulties of the French verbal and nominal systems including colloquial usage. Frequent oral and written assignments with opportunity for rewrites. Articles from French newspapers and magazines, literary excerpts, and a novel or short stories will be used as supplementary materials in order to prepare students to take content courses in French in disciplines other than French.
For BA Students: Advanced Language Course

1.0 Course Unit
FREN 214 Advanced French Composition and Conversation
Entitled 'Contemporary French Society through its Media,' this course is intended to improve communicative skills through extensive practice in a variety of styles and forms. It aims to enhance student understanding of contemporary French culture, thought and modes of expression by promoting both cross-cultural understanding and critical thinking and developing students' communicative abilities (in the presentational, interpretive, and interpersonal modes). The specific language functions we will focus on are: narration; description; offering and soliciting advice and opinions; expressing feelings; critique and analysis; argumentation. It is organized around the themes of current events, identity and art. Activities include the study, analysis and emulation of model texts as well as discussion and debates about events and social issues as covered by the French news media (television, print, Internet sources). The oral work include video blogs and group presentations on selected topics and current events. Written practice will comprise reflective journals, essays and collaborative work on Web projects. On completing this course, students will feel more confident and be able to speak and write effectively on a range of contemporary issues. Recommended for students who are planning to study abroad in France. For BA Students: Advanced Language Course

FREN 217 French Phonetics
This course is designed to provide students with a solid foundation in French phonetics and phonology. Part of the course will be devoted to learning how to produce discourse with native-like pronunciation and intonation. The course will also focus on improving aural comprehension by examining stylistic and regional differences in spoken French. For BA Students: Advanced Language Course
One-term course offered either term
Prerequisite: FREN 202
Activity: Seminar
1.0 Course Unit

FREN 225 History, Memory, Culture
This course explores the history of the dark years of the French collaboration with Nazi Germany during WWII. In the first part, it examines the rise of the myths of an 'eternal France' and the 'true French' promoted by Marechal Petain's National Revolution, as well as the myth of the resistance fighters that arose after the Liberation. The Holocaust adn the holes left in national memory will hold a pivotal place in our reading of the national narrative. The second part of the course is dedicated to the study of literary works written by post-memory writers or survivors of the Holocaust who tried to fill in the blanks and confronted the linguistic challenge posed by Auschwitz. Paris will play a connecting role, as both witness to history and as tangible trace of the forgotten. This study of French history, its silences and (non-) memory will shed light on the legacy of the Occupation for contemporary France. Assessment consists of a semester-long creative writing project and a final oral exam. Reading assignments include works by Pierre Assouline, Marcel Cohen, Georges Didi-Huberman, David Foenkinos, Sarah Kofman, Marceline Loridan-Ivens, Patrick Modiano, Georges Perec. Prerequisite: Two 200-level French courses taken at Penn or equivalent. Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs. Permission needed from instructor. Penn Global Seminar.
Taught by: Melanie Peron

FREN 226 French History and Culture until 1789
This civilization course presents the fabric/fabrication of the so-called national memory through its places of memory (lieux de memoire), as well as its places of non-memory (lieux de non-memoire), going from the Gauls to the Enlightenment. As the course tells the story of the rise and fall of the French monarchy, one is encouraged to envision it as a palimpsest and to become aware of the roles played by myths and legends. It helps see how French history has been manipulated by the collective memory, how retrospection often redefines, fabricates events and people depending on the needs of the moment. This course is taught in French. Prerequisite: Two-level French courses taken at Penn or equivalent.
For BA Students: History and Tradition Sector
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
FREN 227 French History and Culture 1789-1945
This civilization course presents the creation of modern France from
1789 to 1945 through the omnipresence of the myth of Perseus and
Medusa in the historical narrative. The objective of the course is to
introduce students to a period in France's history that begins with the
French Revolution and ends with Marechal Petain's National Revolution.
It also helps them discover the intricacies of the slow construction
of a nation. The course will be conducted entirely in French. Prerequisite:
Two 200-level French courses taken at Penn or equivalent. This course is taught in French. Prerequisite: Two 200-level French courses taken at Penn or equivalent. For BA Students: Humanities and Social Science S
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FREN 228 Contemporary France
In this course we will be exploring the transformations of French
society since the Second World War and into the Millennium. From
the legacy of decolonization to the multicultural fervor of the 1998
Soccer World Cup, from the May 1968 civil protests to the Republican
marches of 2015, we'll be delving into the major historical and cultural
movements that have marked the contemporary period. How did France
recover from German occupation and cope with further wars in its
colonial territories? How did unprecedented rates of urbanization and
immigration change the face of the country over the ensuing decades?
Who have been the major players on the historical stage? And what are
the political, cultural, and socioeconomic challenges facing France at
the outset of the 21st century? These are some of the questions that
will guide our investigation into the past 70 years of French history, a
period as turbulent as it is rich in cultural production, and as complex
as it is fascinating. Throughout the semester we will be especially
attentive to images, in every sense of the word: the images of national
identity that France projects to the world and to itself, but also pictorial
representations of the country, its people and its territory. These images,
and the stories they tell, will help us envision the kaleidoscopic portrait
of a nation. The course will be conducted entirely in French. Prerequisite:
Two 200-level courses taken at Penn or equivalent.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

FREN 229 French in the World
Where and how is French spoken in the world? Which variety (or varieties)
of French represents 'good' or standard language use? What does it mean
to have an accent or to experience linguistic insecurity? To what extent
have political forces and movements historically affected the evolution
of French? How do language attitudes differ among French- and English-
speaking regions of the world and what is the status of French in an era
of globalization? In what ways does language shape our identities? Le
Francais dans le monde/French in the World examines these questions
by providing a survey of the sociolinguistics of the French language in
the contemporary world. We will explore how societal changes influence
the manner and the contexts in which the French language is spoken.
Case studies focus on various parts of the Francophone world, including
Europe (Belgium, Switzerland), New World (Quebec, Caribbean, Louisiana),
Africa (North Africa, Sub-Saharan Africa), etc. Readings and class
discussions are in French. Prerequisite: Two 200-level French courses
taken at Penn or equivalent.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FREN 230 Masterpieces of French Cinema
This course will introduce students to key films of the French film canon,
selected over a period ranging from the origins of French cinema to the
present. Students will also be introduced to the key critical concepts
(such as the notion of the 'auteur' film genre) informing the discussion
of films in France. The films will be studied in both a historical and
theoretical context, related to their period styles (e.g. 'le realisme
poetique,' 'la Nouvelle Vague,' etc.), their 'auteurs,' the nature of the French
star system, the role of the other arts, as well to the critical debates
they have sparked among critics and historians. Students will acquire
the analytical tools in French to discuss films as artistic and as cultural
texts. Please note: This course follows a Lecture/Recitation format. The Lecture (FREN 230-401/CIMS 245-401) is taught in English. For French
credit: please register for both FREN 230-401 (lecture) and FREN 230-402
(recitation); the FREN 230-402 recitation is conducted in French. For
Cinema Studies credit: please register for CIMS 245-401 (lecture) and
CIMS 245-403 (recitation); both are taught in English. Prerequisite: Two-
level courses taken at Penn or equivalent.
For BA Students: Arts and Letters Sector
Course usually offered in fall term
Also Offered As: CIMS 245
Activity: Lecture

FREN 231 Perspectives in French Literature: Love and Passion
This basic course in literature provides an overview of French literature
and acquaints students with major literary trends through the study of
representative works from each period. Students are expected to take an
active part in class discussion in French. French 231 has as its theme
the presentation of love and passion in French literature. This course was
previously offered as French 221. Prerequisite: Two-200-level courses
taken at Penn or equivalent.
For BA Students: Arts and Letters Sector
Course usually offered in fall term
Also Offered As: COML 218
Activity: Seminar
1.0 Course Unit
FREN 232 Perspectives in French Literature: The Individual and Society
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Special emphasis is placed on close reading of texts in order to familiarize students with major authors and their characteristics and with methods of interpretation. Students are expected to take an active part in class discussion in French. French 232 has as its theme the Individual and Society. Prerequisite: Two 200-level courses taken at Penn or equivalent. For BA Students: Arts and Letters Sector
Course usually offered in spring term
Also Offered As: COML 219
Activity: Seminar
1.0 Course Unit

FREN 233 Francophone Literature and Film
French 233 is designed to give students a basic historical and theoretical groundwork in Francophone and postcolonial studies, and to help them develop their skills in literary and filmic analysis. It will provide an introductory survey of the richly diverse literature and film of the French-speaking world, from the 1950s through to the 21st century. Beginning with the gradual breakup of the French colonial empire, we will investigate the construction of individual and collective Francophone identities in such regions as the Caribbean, Africa, and the Maghreb, while exploring an equally wide range of literary and cinematic genres. Other histories and regions such as Quebec and Lebanon will also be discussed. Throughout the course we will remain especially attentive to questions of space–public and private spheres, urban and rural topographies, borders and migrations, as well as the complex dynamics between the Francophone regions and France itself—and to the ways in which these tensions are mapped onto the textual and visual surfaces of the works studied. Prerequisite: Two 200-level French courses taken at Penn or equivalent.
For BA Students: Arts and Letters Sector
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FREN 250 French Literature in Translation
The content of the course will vary from semester to semester. All works read in English. Please check the department's website for a description.

FREN 311 French Thought After 1968
In American academia, French thought after May '68 is often referred to as 'French Theory,' a heterogeneous corpus of philosophical and critical texts compacted into a set of poststructuralist premises, first introduced by and grew within humanities departments, then identified as a luxury by-product of the 'literary' people. This course proposes to unpack the notion of 'French Theory' and re-anchor it into its original social/historical background. We will read some of the most influential texts of its key figures, study how a post May 68 revolutionary energy is transformed into various innovative but also destabilizing ways of rethinking power relations, gender, language and subjectivity, and finally, consider in what capacities and limits these diverse critical approaches go beyond the simple label of 'post-structuralism' and relate to our own epoch and personal experiences. The readings and discussions will be divided into four axes: 1. Philosophy of Desire (Lacan, Deleuze/Guattari); 2. Sexual Revolt and Body Politics (Foucault, Hocquenghem, Barthes); 3. Deconstruction and Its Impact on Feminism (Derrida, Cixous, Irigaray); 4. Consumer Society and Society of the Spectacle (Lipovetsky, Baudrillard, Debord). Several documentaries and feature films will be shown outside class time. Taught in English. Reading knowledge of French is welcome but not required.
One-term course offered either term
Also Offered As: COML 309
Activity: Seminar
1.0 Course Unit
FREN 313 French for Business II
The course, conducted entirely in French, emphasizes verbal communication in business professional situations through three components. First, a series of student's presentations, in-class activities (using newspapers' articles, technical readings, radio shows and films), and debates on the following topics (list not exhaustive) related to France's economy and society: The role of the State in France's economy; the French fiscal system; Labor (impact of the 35-hour work week, 'conges'; women in the workplace, etc.); Regions of France (production); major French industries/companies/brands; France's major imports/exports; 'Green business'; Business of pop culture. Second, as effective communication is based not only on linguistic proficiency but also on cultural proficiency, cultural differences mostly between Americans and French will be explored. Finally, throughout the semester, students will work in groups on the creation of their own business, association, or other organization and will be invited to present their project to the class at the end of the semester. On completion of the course, students will also have the opportunity to take the Diplome de Francais Professionnel-DFP Affaires (C1) administered by the Paris Chamber of Commerce and Industry.
Course usually offered in spring term
Prerequisite: FREN 211
Activity: Seminar
1.0 Course Unit

FREN 322 France and the European Union
This course aims to provide an understanding of the European Union as a complex entity: its history, institutions, challenges and future. After reviewing the history of European integration and learning about the Community's institutions, common programs and market, we will consider a wide variety of themes important to Europe: economics, education, immigration, the environment, social issues, national and European identities, the debate over a Federal Europe vs. a Europe of nations, European social/cultural models vs. American liberalism, relations between the EU and the rest of the world. Considering the acute and ongoing challenges facing the European community, we will focus on current events and discuss issues that are critical to the EU in general and to France in particular. Students will be responsible for pursuing substantive research on these topics and participating actively in debates. This class will be conducted entirely in French and is designed to improve cross-cultural understanding and communicative skills in the presentational, interpretive and interpersonal modes.
Prerequisite: Two 200-level French courses taken at Penn or equivalent.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FREN 325 Advanced French Translation
This course provides an introduction to the theory and practice of translation and is designed to help foster a critical understanding of differences between French and English syntactical and lexical patterns. It will introduce students to theoretical concepts and problems of translation, with the ultimate goal being to improve their ability to communicate in more authentic-sounding French. Students will have the opportunity to practice translation individually and to work with their peers on a variety of projects (advertising, journalistic and literary texts, movie and broadcast news subtitling) and to engage in critique and discussion of others' translations. This course will help students refine their language skills and navigate more proficiently between these cultures and language systems. Prerequisite: Two 200-level French courses taken at Penn or equivalent. French 212 or equivalent highly recommended. (Designed for students who already have a solid foundation in French and English grammar)
For BA Students: Advanced Language Course
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FREN 330 Medieval Literature
An introductory course to the literature of the French Middle Ages. French literature began in the 11th and 12th centuries. This course examines the extraordinary period during which the French literary tradition was first established by looking at a number of key generative themes: Identity, Heroism, Love, Gender. All readings and discussions in French.
Prerequisite: Two 200-level French courses taken at Penn or equivalent.

**FREN 371 Poe's French Legacies**
Edgar Allan Poe was considered a vulgar hack by many of his fellow Americans, but in 19th-century France, he was touted as a misunderstood poetic genius, the original poète maudit. Through the translations of Charles Baudelaire, who found in Poe a kindred spirit in the ‘gout de l’infini,’ French intellectuals came to know the American writer as a fount of aesthetic wisdom, diabolical sensibility, and mystic mastery. In this course, we will study Baudelaire’s poetry as well as the many literary and artistic movements in France that were directly inspired by Poe’s uncanny mix of the macabre and the methodical: Symbolist poetry (Valery, Mallarme), the Scientific Fantastic (Maupassant, Villiers de l’Isle-Adam), fin-de-siecle Decadence (Huysmanns, Odilon Redon), Science Fiction (Verne), the detective novel (Gaboriau), and 20th-century Surrealism (Breton, Max Ernst). Prerequisite: Two 200-level French courses taken at Penn equivalent. 
Course not offered every year 
Activity: Seminar 
1.0 Course Unit 

**FREN 380 Literature of the Twentieth Century**
This course, the theme of which changes from semester to semester, provides an introduction to important trends in twentieth-century literature. Course not offered every year 
Activity: Seminar 
1.0 Course Unit 

**FREN 382 Horror Cinema**
The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionist masterworks of the silent era, the Universal classics of the 30’s and the low-budget horror films produced by Val Lewton in the 40’s for RKO in the US, the 1950’s color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60’s, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre’s main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics...). Prerequisite: Two 200-level French courses taken at Penn or equivalent are required for FREN 382. There are no pre-requisites for CIMS 382. This course will be taught in English.

A study of major movements and major dramatists from Giraudoux and Sartre to the theater of the absurd and its aftermath. Prerequisite: Two 200-level French courses taken at Penn or equivalent. 
Course not offered every year 
Activity: Seminar 
1.0 Course Unit 

**FREN 386 Paris in Film**
Latter-day examples like Christophe Honore’s Dans Paris, Cedric Klapisch’s Paris or the international omnibus Paris, je t’aime (with each director paying homage to a distinctive ‘arondissement’ of the capital), not to mention American blockbusters like The Da Vinci Code and Inception or Woody Allen’s Midnight in Paris, are there to remind us that there is something special – indeed, a special kind of magic – about Paris in and on film. Despite the extreme polarization between Paris and provincial France in both cultural and socio-economic terms, cultural historians have argued that Paris is a symbol of France (as a centralized nation), more than Rome is of Italy and much more than Madrid is of Spain or Berlin of Germany, for example. The prevalence of the City of Lights on our screens, Gallic and otherwise, should therefore come as no surprise, be it as a mere backdrop or as a character in its own right. But how exactly are the French capital and its variegated people captured on celluloid? Can we find significant differences between French and non-French approaches, or between films shot on location that have the ring of ‘authenticity’ and studio-bound productions using reconstructed sets? Do these representations vary through time and perhaps reflect specific historical periods or zeitgeists? Do they conform to genre-based formulas and perpetuate age-old stereotypes, or do they provide new, original insights while revisiting cinematic conventions? Do some (sub)urban areas and/or segments of the Parisian population (in terms of gender, race, or class, for example) receive special attention or treatment? These are some of the many questions that we will seek to address...with a view to offering the next best thing to catching the next non-stop flight to Paris! Prerequisite: Two 200-level French course taken at Penn or equivalent. 
For French credit: Please register for both FREN 386-401 (lecture) and FREN 386-402 (recitation). The FREN 386-402 recitation is conducted in French. For Cinema and Media Studies credit: Please register for CIMS 386-401 (lecture) and CIMS 386-403 (recitation). The FREN 386-402 recitation is conducted in French.

FREN 392 Queering North African Subjectivities
This seminar will explore the ways in which literary and visual representations of sexual difference and gender roles disrupt the cultural imagination of everyday life in North Africa and its Diasporas. Special attention will be given to representations of Arab women and queer subjectivities as sites of resistance against dominant masculinity. We will analyze the ways in which representations of gender have allowed for a redeployment of power, a reconfiguration of politics of resistance, and the redrawing of longstanding images of Islam in France. Finally, we will question how creations that straddle competing cultural traditions, memories and material conditions can queer citizenship. Course taught in English.

FREN 541 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance
In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Ficino, Pico della Mirandola Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructors. It counts toward the undergraduate minor in Global Medieval Studies and the graduate certificate in Global and Medieval Renaissance Studies. Undergraduates must obtain permission from instructor to enroll.

FREN 582 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches - thematic, psychoanalytic, cultural, narratological - will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the ‘real’, making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include ‘recits fantastiques’ by Merimee, Gautier, Nerval, Maupassant, Breton, Pieyre de Mandiargues, Jean Ray and others.

FREN 595 Travel Literature
Within the context of the ill-defined, heterogeneous genre of the travelogue and of today's age of globalization, CNN and the Internet, this seminar will examine the poetics of travel writing based largely albeit not exclusively on travel notebooks, or journaux/carnets de voyage, spanning the 20th century from beginning to end. One of the principal specificities of the texts studied is that they all evince to a lesser or greater degree a paradoxical resistance both to the very idea of travel(ing) as such and to the mimetic rhetoric of traditional travel narratives. We will therefore look at how modern or postmodern texts question, revisit, subvert or reject such key notions of travel literature as exoticism, nostalgia, exile, nomadism, otherness or foreignness vs. selfhood, ethnology and autobiography, etc. Authors considered will include Segalen, Morand, Michaux, Leiris, Levi-Strauss, Butor, Le Clezio, Baudrillard, Bouvier, Jouanard, Leuwers.

FREN 605 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in critical theory of the 20th and 21st centuries. We will pay particular attention to critical currents that originated in Eastern European avant-garde and early socialist contexts and their legacies and successors. Topics covered will include: Russian Formalism and its successors in Structuralism and Deconstruction (Shklovsky, Levi-Strauss, Jakobson, Derrida); Bakhtin and his circle, dialogism and its later western reception; debates over aesthetics and politics of the 1930s (Lukacs, Brecht, Adorno, Benjamin, Radek, Clement Greenberg); the October group; Marxism, new Left criticism, and later lefts (Althusser, Williams, Eagleton, Jameson, Zizek).

FREN 609 Global France
The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The extraordinary innovations of ‘ethnosurrealism’ in the twenties and thirties by such key figures of the avant-garde as Breton, Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring a renewal of ‘anthropology as cultural critique in the United States.’ Besides the authors just indicated, key texts by Durkheim, Mauss and Levi-Strauss will be considered both on their own terms and in relation to their obvious influence. The institutional fate of these intellectual crossovers and their correlate disciplinary conflicts will provide the overarching historical frame for the course, from the turn of the century to the most recent debates.

FREN 620 Paris and Philadelphia: Landscapes and Literature of the 19th Century
This course explores the literal and literary landscapes of 19th-century Paris and Philadelphia, paying particular attention to the ways in which the built environment is shaped by and shapes shifting ideologies in the modern age. Although today the luxury and excesses of the 'City of Light' may seem worlds apart from the Quaker simplicity of the 'City of Brotherly Love,' Paris and Philadelphia saw themselves as partners and mutual referents during the 1800s in many areas, from urban planning to politics, prisons to paleontology. This interdisciplinary seminar will include readings from the realms of literature, historical geography, architectural history, and cultural studies as well as site visits to Philadelphia landmarks, with a view to uncovering overlaps and resonances among different ways of reading the City. We will facilitate in-depth research by students on topics relating to both French and American architectural history, literature, and cultural thought.

Activity: Seminar
1.0 Course Unit

FREN 660 Studies in the Eighteenth Century
Topics of discussion will vary from semester to semester. One possible topic is 'Masterpieces of the Enlightenment.' We will read the most influential texts of the Enlightenment, texts that shaped the social and political consciousness characteristic of the Enlightenment—for example, the meditations on freedom of religious expression that Voltaire contributed to 'affaires' such as the 'affaire Calas.' We will also discuss different monuments of the spirit of the age—its corruption (Les Liaisons dangereuses), its libertine excesses and philosophy (La Philosophie dans le boudoir). We will define the specificity of 18th-century prose (fiction), guided by a central question: What was the Enlightenment? FREN 681 Studies in Modern French Poetry
How does one approach the modern poetic text which ever since the Mallarmean 'crise de vers' appears to have cut loose from all referential anchoring and traditional markers (prosody, versification, etc.)? This course will present an array of possible methodological answers to this question, focusing on poetic forms and manifestations of brevity and fragmentation. In addition to being submitted to precise formal and textual inquiries, each text or work will be the point of departure for the analysis of a specific theoretical issue and/or an original practice - e.g., genetic criticism, translation theory, the poetic 'diary', aphoristic modes of writing, quoting and rewriting practices, etc. Texts by key modern poets (Ponge, Chazal, Du Bouchet, Jourdan, Jabes, Michaux).

Freshman Seminar (FRSM)
FRSM 002 Research: From Curiosity to Knowledge
How does one act on curiosity about the physical and living world and the human cultures in it? This seminar will use case-study and brainstorming approaches to explore how people generate and define good questions, pitting curiosity against ignorance, and practice research to answer these questions in a wide range of disciplines, from the humanities and social sciences to natural sciences and engineering. We identify common components (e.g., evidence, method) and how they differ among a broad spectrum of phenomena and human behavior, and how we might observe and trace patterns in them to find new ideas and answers. We will also highlight field-specific approaches for translating evidence into knowledge. The seminar will be structured around readings, discussions, active learning activities and field trips to active research sites on campus (e.g., labs, archives and museums). Our goal is to enable students to participate in and appreciate how research is performed in a range of areas, as a stimulus to using the arts of observation and questioning for whatever might be their own objects of curiosity.

Gender, Sexuality & Women's Studies (GSWS)
GSWS 002 Gender and Society
This course will introduce students to the ways in which sex, gender, and sexuality mark our bodies, influence our perceptions of self and others, organize families and institutions, delimit opportunities for individuals and groups of people, as well as impact the terms of local and transnational economic exchange. We will explore the ways in which sex, gender, and sexuality work with other markers of difference and social status such as race, age, nationality, and ability to further demarcate possibilities, freedoms, choices, and opportunities available to people.
Prerequisite: Requirement for Gender, Sexuality and Women's Studies major and minor
For BA Students: Society Sector
Taught by: Beetham
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Requirement for Gender, Sexuality and Women's Studies major
GSWS 003 Introduction to Sexuality Studies and Queer Theory
This course will introduce students to the historical and intellectual forces that led to the emergence of queer theory as a distinct field, as well as to recent and ongoing debates about gender, sexuality, embodiment, race, privacy, global power, and social norms. We will begin by tracing queer theory's conceptual heritage and prehistory in psychoanalysis, deconstruction and poststructuralism, the history of sexuality, gay and lesbian studies, woman-of-color feminism, the feminist sex wars, and the AIDS crisis. We will then study the key terms and concepts of the foundational queer work of the 1990s and early 2000s. Finally, we will turn to the new questions and issues that queer theory has addressed in roughly the past decade. Students will write several short papers.
Course usually offered in fall term
Also Offered As: ENGL 003
Activity: Lecture
1.0 Course Unit

GSWS 004 The Family
Family life is deeply personal but at the same time is dramatically impacted by social forces outside of the family. In this course we will examine how families are organized along the lines of gender, sexuality, social class, and race and how these affect family life. We will consider how family life is continually changing while at the same time traditional gender roles persist. For example, how ‘greedy’ workplaces, which require long work hours, create work-family conflicts for mothers and fathers. We will also examine diverse family forms including single-parent families, blended families, families headed by same-gender parents, and families headed by gender non-conforming parents. The lectures will also examine how economic inequality shapes family life. Students will have the opportunity to apply key concepts to daily life.
For BA Students: Society Sector
Taught by: Lareau
One-term course offered either term
Also Offered As: SOCI 004, SOCI 524
Activity: Seminar
1.0 Course Unit

GSWS 007 Population and Society
The course serves as an introduction to the study of population and demography, including issues pertaining to fertility, mortality, migration, and family formation and structure. Within these broad areas we consider the social, economic, and political implications of current trends, including: population explosion, baby bust, the impact of international migration on receiving societies, population aging, racial classification, growing diversity in household composition and family structure, population and environmental degradation, and the link between population and development/poverty.
For BA Students: Society Sector

One-term course offered either term
Also Offered As: SOCI 007
Activity: Lecture
1.0 Course Unit

GSWS 008 Critical Speaking Seminar
American political discourse, especially since September 11th, has often depicted Islam as an oppressive force from which both Muslims and non-Muslims, particularly women and gender/sexual minorities, must be saved. In this CWIC critical speaking seminar, we will investigate how oral and written narratives—such as political rhetoric, apologetics and historical sources—claim to establish unassailable ‘facts’ about Islam, Muslims and the Middle East. We will also investigate how the notion of empire—both in its traditionally understood form in Islamic and European history, as well as in its iterations as US Military and soft power—privileges certain voices over others, and how we can reclaim the voices of the marginalized in both contemporary discourse as well as historical oral traditions.
Taught by: Rafii
One-term course offered either term
Also Offered As: COML 014, NELC 008

Activity: Seminar
1.0 Course Unit

GSWS 028 Introduction to Feminist Philosophy
This course is an introduction to feminist thought, both in theory and in practice. We will consider how feminist thought emerged and evolved, as well as how feminist theories respond to various intellectual, social and political challenges. Questions we will address include: What exactly is feminism? How does one's gender identity impact one's lived experiences? How should we revise, reformulate, or rethink traditional answers to political and ethical issues in light of feminist theories? How can feminist analyses contribute to the development of better science, and our conceptions of knowledge? Prerequisite: Offered through the College of General Studies.
Taught by: M. Meyer
Course not offered every year
Also Offered As: PHIL 028
Activity: Seminar
1.0 Course Unit

GSWS 040 Womanism and Identity Politics in the Realm of Hip-Hop
This course centers on the intersections of womanism, woman of color identity development, and agency within hip-hop culture. We will touch on several topics that uncover the condition of minoritized women in hip-hop media, including creating/owning space, lyrical assault, defining womanhood, sexuality, and fetishes. In exploring music, literature, advertisements, film, and television, we will discuss the ways women of color construct understandings of self, while navigating and reimagining reality within hip-hop contexts.
Taught by: Patterson
Also Offered As: URBS 050
Activity: Seminar
1.0 Course Unit
GSWS 050 The Romantic Period
This course offers an introduction to the literature of the Romantic period (ca. 1770-1830). Some versions of this course will incorporate European romantic writers, while others will focus exclusively on Anglo-American romanticism, and survey authors such as Austen, Blake, Brockden Brown, Byron, Coleridge, Emerson, Irving, Keats, Radcliffe, Scott, Shelley, and Wordsworth. The primary for this course is ENGL-050. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 050
Activity: Lecture
1.0 Course Unit

GSWS 060 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs' experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinxidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.
Taught by: Sternad Ponce de Leon
Course not offered every year
Also Offered As: ARTH 070, COML 070, ENGL 070, LALS 060
Activity: Lecture
1.0 Course Unit

GSWS 081 African-American Literature
An introduction to African-American literature, typically ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some versions of the course will concentrate only on the modern period. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 081, ENGL 081
Activity: Lecture
1.0 Course Unit

GSWS 090 Gender, Sexuality, and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherrie Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

Also Offered As: COML 090, ENGL 090
Activity: Lecture
1.0 Course Unit

GSWS 096 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality – a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platos Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldua, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesy, Chandra Tadpole Mohanty, and Susan Stryker. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

GSWS 101 Study of an Author
This is an introduction to literary study through the works of a single author—often Shakespeare, but some versions of this course will feature other writers. (For offerings in a given semester, please see the on-line course descriptions on the English Department website.) We will read several works and approach them—both in discussion and in writing—from a range of critical perspectives. The author's relation to his or her time, to literary history generally, and to the problems of performance, are likely to be emphasized. This course is designed for the General Requirement; it is also intended to serve as a first or second course for prospective English majors. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

1.0 Course Unit

GSWS 103 Sex and Human Nature
This course is an introduction to the scientific study of sex in humans. Within an evolutionary framework, the course examines genetic, physiological, ecological, social and behavioral aspects of sex in humans. After providing the basic principles of evolutionary biology, the course delves into the development of sexual anatomy and physiology. Among the subjects to be explored are sex determination, the nature of orgasms, and the sexual development of females and males from birth to adulthood. The role of ecology and social life in shaping human mating patterns is also evaluated using ethnographic and cross-cultural materials from a variety of human cultures. In particular, the course examines why humans marry or pair bond, whether there is a biological basis of love, which biological and psychological factors produce jealousy. Finally, the course explores topics relevant to human sexuality today, such as the ‘hook-up culture’, contraception and abortion, sex work, sexual transmitted diseases, and the ethical and legal dimensions of human sexuality.
For BA Students: Living World Sector

GSWS 104 Sex and Gender in Ancient Greece and Rome
What is being a man, being a woman, being masculine, being feminine, being neither, being both? Is sex about pleasure, domination, identity, reproduction, or something else? Are sexual orientation and gender identity innate? How can words, myths and stories inform cultural assumptions about sex and gender? Did people in ancient times have a concept of sexuality? How do gendered English terms (like ‘girly’, ‘effeminate’, or ‘feisty’) compare to gendered ancient Greek and Latin terms, like virtus, which connotes both ‘virtue’ and ‘masculinity’? Why did the Roman and English speaking worlds have to borrow the word ‘clitoris’ from the ancient Greeks? How did people in antiquity understand consent? Can we ever get access to the perspectives of ancient women? Are there gender differences in deciding social roles, ritual activities, and spiritual vocations? This course tackles these questions, showing how gender - how it is taught, performed, and regulated - is central to understanding religion. In this course we will learn about gendered rituals, social roles, and mythologies in a range of religious traditions. We will also look at the central significance of gender to the field of religious studies generally. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of gender in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will also read religion through feminist and queer lenses - we will explore the key characteristics of diverse feminist and queer studies approaches to religion, as well as limits of those approaches.

GSWS 111 Gender and Elections in America and Beyond
This course tackles four theoretical and empirical challenges related to gender and political equality: the extension of citizenship rights and voting rights to women; the problem of women's persistent under-representation in politics; the nature of the gender gap in preferences across time and space; and the possibilities for substantive representation. We will focus about half the class on the US (contrasting the experiences of white and black women and men in politics) and the other half on other countries, detailing how different party systems, variation in electoral rules (like proportional representation), and institutional innovations such as gender quotas, enable or constrain gender equality in politics.
Taught by: Teele
One-term course offered either term
Also Offered As: PSCI 111
Activity: Lecture
1.0 Course Unit
GSWS 114 Discrimination: Sexual and Racial Conflict
This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual government policies and alternatives policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.

GSWS 118 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Ghobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.

Activity: Seminar
1.0 Course Unit

GSWS 119 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft— including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

Activity: Recitation
1.0 Course Unit

GSWS 122 The Sociology of Gender
Gender is an organizing principle of society, shaping social structures, cultural understandings, processes of interaction, and identities in ways that have profound consequences. It affects every aspect of people's lives, from their intimate relationships to their participation in work, family, government, and other social institutions and their place in the stratification system. Yet gender is such a taken for granted basis for differences among people that it can be hard to see the underlying social structures and cultural forces that reinforce or weaken the social boundaries that define gender. Differences in behavior, power, and experience are often seen as the result of biological imperatives or of individual choice. A sociological view of gender, in contrast, emphasizes how gender is socially constructed and how structural constraints limit choice. This course examines how differences based on gender are created and sustained, with particular attention to how other important bases of personal identity and social inequality—race and class—interact with patterns of gender relations. We will also seek to understand how social change happens and how gender inequality might be reduced.
For BA Students: Society Sector

1.0 Course Unit

GSWS 125 Sex and Representation
This course explores literature that resists normative categories of gender and sexuality. By focusing on figures writing from the margins, we will explore how radical approaches to narrative form and subject-matter invite us to think in new ways about desire and identity. We will read texts that blur the boundaries between fact and fiction, hybridizing the genres of poetry, drama, and autobiography to produce new forms of expression, such as the graphic novel, auto-fiction, and prose poetry. From Virginia Woolf's gender-bending epic, Orlando, to Tony Kushner's Angels in America, this course traces how non-normative desire is produced and policed by social and literary contexts - and how those contexts can be re-imagined and transformed.
Taught by: Halstead
One-term course offered either term

Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.
GSWS 145 Advanced Non-Fiction Writing
An advanced writing course devoted to creative nonfiction. Topics may include writing for literary magazines; writing for journals of opinion; memoir; family history; travel writing; documentary; or other topics and genres in which literary structures inform the writing of nonfiction prose. Offerings may address writing as a public act, questions of ethics and policy, methods of research and fact-checking, marketing, and how to understand and enter the world of publishing. May be repeated for credit with a different instructor. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

One-term course offered either term
Also Offered As: ENGL 145
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshmen. Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor.

GSWS 149 Law and Social Policy on Sexuality and Reproduction
This course will examine how statutory law, court decisions and other forms of social policy encourage or discourage various forms of sexuality, reproduction and parenting. Such issues as contraception, abortion, gay and lesbian rights, reproductive technology, family violence, and welfare and family policies will be covered.

Taught by: Tracy

GSWS 152 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words 'love' and 'loss' imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.

GSWS 156 Queer German Cinema
Taught in English. This course offers an introduction into the history of German-language cinema with an emphasis on depictions of lesbian, gay, bisexual, trans and queer themes. The course provides a chronological survey of Queer German Cinema from its beginnings in the Weimar Republic to its most recent and current representatives, accompanied throughout by a discussion of the cultural-political history of gay rights in the German-speaking world. Over the course of the semester, students will learn not only cinematic history but how to write about and close-read film. No knowledge of German or previous knowledge required.

Activity: Lecture
1.0 Course Unit

GSWS 160 Sex and Socialism
This seminar examines classic and current scholarship and literature on gender and sexuality in contemporary Eastern Europe, and examines the dialogue and interchange of ideas between East and West. Although the scholarly and creative works will primarily investigate the changing status of women during the last three decades, the course will also look at changing constructions of masculinity and LGBT movements and communities in the former communist bloc. Topics will include: the woman question before 1989; gender and emerging nationalisms; visual representations in television and film; social movements; work; romance and intimacy; spirituality; and investigations into the constructed concepts of ‘freedom’ and ‘human rights’.

GSWS 162 Women in Jewish Literature
‘Jewish woman, who knows your life? In darkness you have come, in darkness do you go.’ J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres – devotional literature, memoir, fiction, and poetry – we will study women’s roles and selves, the relations of women and men, and the interaction between Jewish texts and women’s lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinc commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah’s daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English. All readings and lectures in English.

**GSWS 165 The Asian Caribbean**
This course complicates prevailing understandings of the Caribbean and extends the boundaries of Asian America by exploring the histories, experiences, and contributions of Asians in the Caribbean. In particular, we will focus on the migrations of Chinese and Indian individuals to Cuba, Trinidad, and Guyana as well as how their descendants are immigrating to the United States. We will examine the legal and social debates surrounding their labor in the 19th century, how they participated in the decolonization of the region, and how their migration to the United States complicates our understandings of ethnicity and race. Ultimately, through our comparative race approach, we will appreciate that the Caribbean is more than the Black Caribbean, it is also the Asian Caribbean.

**GSWS 201 Divinities, Diviners and Divinations: Religions of the African Diaspora**
This undergraduate course is designed to provide students with a broad introduction to major themes within African Diasporic Religions. This is an interdisciplinary course. We will be drawing upon various theoretical methods, i.e. historical, ethnographical, and autobiographical. Additionally, we will be examining visual media to understand the presence and value of African Diasporic Religions in the 20th/21st century. Special attention will be given to Vodou, Santeria, and Candomble in the Americas. Thematically, we will work through concepts of memory, authenticity, ritual and material practices; borders, migration, gender and sexuality, religious commodities and exchange. As we traverse through these various religious traditions, it is through the readings, lectures, invited speakers, films and class discussions that we will develop a complex understanding of integrative religious worldviews that shape communities' religious and social lives.
Taught by: Nwokocha

**GSWS 214 Introduction to Persian Poetic Tradition**
This course introduces some of the major genres and themes of the millennium-old Persian poetic tradition from ancient to modern Iran. Epic and romance, love and mysticism, wine and drunkenness, wisdom and madness, body and mind, sin and temptation are some of the key themes that will be explored through a close reading of poems in this course. The course suits undergraduate students of all disciplines, as it requires no prior knowledge of or familiarity with the Persian language or the canon of Persian literature. All teaching materials are available in English translation. Students are expected to attend seminars and take part in discussions.

GSWS 216 Gender and Health
Women's health is a constant refrain of modern life, prompting impassioned debates that speak to the fundamental nature of our society. Women's bodies are the tableaux across which politicians, physicians, healthcare professionals, activists, and women themselves dispute issues as wide-ranging as individual versus collective rights, the legitimacy of scientific and medical knowledge, the role of the government in healthcare, inequalities of care, and the value of experiential knowledge, among many others. Understanding the history of these questions is crucial for informed engagement with contemporary issues.

GSWS 220 Asian American Women: Nation, Self and Identity
This course examines the literary constructions of Asian American Women's identity in relation to the U.S. nation state. How have the figures of the tiger mother, the Asian nerd, the rice queen, the trafficked woman, the geisha, the war bride, emerged to represent Asian American women, and how have Asian American feminists responded to these problematic racial stereotypes? How does the scholarship on such racialized representations illuminate historical and contemporary configurations of gender, sexuality, race, class, nation, citizenship, migration, empire, war, neoliberalism and globalization as they relate to the lives of Asian American women? In exploring these questions, this course examines Asian American histories, bodies, identities, diasporic communities, representations, and politics through multi- and interdisciplinary approaches, including social science research, literature, popular representations, film, poetry and art.

GSWS 222 African Women's Lives: Past and Present
Restoring women to African history is a worthy goal, but easier said than done. The course examines scholarship over the past forty years that brings to light previously overlooked contributions African women have made to political struggle, religious change, culture preservation, and economic development from pre-colonial times to present. The course addresses basic questions about changing women's roles and human rights controversies associated with African women within the wider cultural and historical contexts in which their lives are lived. It also raises fundamental questions about sources, methodology, and representation, including the value of African women's oral and written narrative and cinema production as avenues to insider perspectives on African women's lives.

GSWS 227 Sex and Power
Gender has been a primary way of organizing power relations throughout history. This class asks how transformations in the global economy, technological change, new patterns of household formation, and social movements, have influenced women's access to economic and political positions over the past two centuries. We will examine how women's mobilization contributed to the abolition of slavery, reform of property and franchise laws, and to the formation of the welfare state. Next, we turn to thinking about how women's increasing labor force participation was hindered by institutions like marriage bars and union policy. Third, we look at cross-national patterns of women's political participation and descriptive representation including whether and how the adoption of electoral quotas influences gender equality more generally. Finally we study how institutional norms and gender stereotypes affect political representation. This class will draw on examples from around the world, and will look at experiences of women from all economic, social, and aspirative backgrounds.

GSWS 228 Topics in Classicism and Literature
Ancient epic and mythology had a curious and rich afterlife in the Middle Ages. Virgil and Ovid were taught in medieval schools, read for their moral content, and revered as fiction that concealed great philosophical value. Their influence also gave rise to the great literary form of the Middle Ages, romance: narratives that place a premium on erotic love, individual quests, the unpredictability of adventure, and imaginary or exotic settings. Yet despite what may appear to be merely gratifying entertainment, medieval romance and medieval receptions of classical myth did tremendous cultural work, enabling profound explorations of history, political values, gender and sexual identity, and social power. We will spend some weeks reading Virgil's Aeneid and Ovid's Heroides and Metamorphoses. Then we will turn to medieval reimaginings of classical myth and metamorphosis, including poetry by Marie de France, Chretien de Troyes, and Chaucer, and anonymous works such as Sir Gawain and the Green Knight. The course requirements will be: one very short oral presentation on a research topic of your choice related to the reading, together with a short write-up of your research; one short critical paper; and one longer research paper (which can develop the subject of your oral presentation).

GSWS 234 Gender, Religion, and China
This course examines the interrelationship among 'gender,' 'religion,' and 'China' as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of 'China' as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation.

1.0 Course Unit

GSWS 242 Science of Sex & Sexuality
While sexual and gender diversity have been consistent features in most cultures throughout history, how such gender and sexual based discussion have been articulated, understood, condoned, or condemned has varied. If medical historians and queer theorists have paid most obsessive attention to these subjects, bioethicists have intervened to a lesser degree and on only a handful of relevant subjects. Bearing in mind the social and medical legacies related to sexual and gender identities, this course will consider a range of historical and contemporary topics which speak to the intersection of bioethical dilemmas on medicine, sexuality and gender identity, including: the gay adolescent, the intersex person, gay-conversion therapies, the prospect of gay gene studies, sex addiction, queer blood/organ donation policies, and the wake of the global HIV/AIDS pandemic. Specifically, we will focus on literature sources (memoirs, diaries, and films) as well as non-literary accounts (medical texts, bioethical scholarship, and historical records) that explore the emotional and somatic aspects of matters related to sexuality, gender identity, and bioethics.

GSWS 243 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science and technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and life. Our discussions will be based on a reading of Sigmund Freud's essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Merimee, Villiers de l'Isle-Adam, and others. All readings and lectures in English.

Notes: All readings and lectures in English

GSWS 244 American Feminist and LGBT Movements, 1960s-1980s
This seminar explores the history of the feminist and LGBT movements from the mid-1960s to mid-1980s in Philadelphia. Although there will be some attention to national organizations, we will focus on social and political activism as it was made in local groups and spaces. We will explore the social and cultural web that fostered activism, for example, in gay and lesbian coffee houses, campus women's centers, bookstores, and radio shows. We will also pay attention to groups and actions that may not have been self-consciously defined as 'feminist' or 'gay liberationist,' but had important effects on social change related to gender and sexuality; these include African American, Latino/a, and working-class organizations. This is a hands-on research seminar, with students exploring local archives and special collections to document and analyze these complex movements. Each student will conduct an oral history, analyze a set of published and printed sources, and write a paper based on archival research.

GSWS 248 High School Ethics Bowl
In this course, teams of undergraduate students, each joined by a graduate student in philosophy, will coach teams of high school students for participation in the National High School Ethics Bowl, an annual competitive yet collaborative event in which teams analyze and discuss complex ethical dilemmas. Cases for the 2019-20 Ethics Bowl will be released in September 2019, and these will serve as a foundational starting point for the undergraduate students' investigations into ethical theory and the study of the ethics bowl itself, to develop the capacities to provide coaching and mentorship to the teams of high school students from schools in West Philadelphia and across the city. Undergraduates will travel to these school as part of the course, and there will be one or two Saturday sessions when all high school convene on Penn's campus for practice scrimmages. This course will introduce the ethics bowl to many new Philadelphia School District schools and students, and it will provide Penn students with the opportunity to develop their teaching and communication skills, build collaborative relationships with community schools, and solidify their knowledge of ethical theory through coaching.

GSWS 249 Philosophy of Education
The philosophy of education asks questions about the foundational assumptions of our formal institutions for the reproduction of culture. It ranges therefore, from epistemology and philosophy of mind to ethics and political philosophy. For instance: What is the nature of learning and teaching? How is it possible to come to know something we did not know already—and how can we aid others in doing that? How, if at all, should formal institutions of education be concerned with shaping students' moral and civic character? What is the proper relation between educational institutions and the state? We also ask questions more specific to our own time and context. For example: how, in a multicultural state, should we educate students of varied social identities, like race, gender, and religion? What is the relationship between education and justice.

GSWS 252 Freud: The Invention of Psychoanalysis
No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud’s life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud’s work. Guest lectureres from the medical field, history of science, psychology, and culture in general will offer insights into the reception of Freud’s work, and its consequences for various fields of study and therapy.

GSWS 255 Thinking about Capitalism
Throughout the world today, economists are influential policymakers and pub intellectuals, and non-economists understand many aspects of their lives in economic terms. But as recently as 1945 in some regions of the world and a distantly as 1776 in others, the concept of the economy, the field of economics, and economists as a professional community did not exist. This class explores non-economic ways of understanding material life that have preceded, challenged, or undergirded economic thinking; the emergence of the economy and economics as naturalized, globally recognized concepts; the formation of economists as an authoritative professional group; and the rise of economic reasoning in daily life. The class takes a global approach, exploring these developments in societies from eighteenth-century Britain to twentieth-century Egypt in order to understand the local variations, international relationships, and transnational processes at work. It simultaneously takes a social approach to intellectual history, considering how popular and professional ideas developed in relation to one another, an how knowledge related to lived experience.

GSWS 257 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, mangazines, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

GSWS 270 Folklore and Sexuality
Sexuality is usually thought of as being biological or social, divided into categories of natural and unnatural. Often missed are its creative and communicative aspects. Examining the constructed social elements of sexuality requires attention be paid to folklore in groups, between individuals and on the larger platform of popular technological media. The most interesting locations for exploration are those places where borderlands or margins, occur between genders, orientations and other cultural categories. A field-based paper will be required that must include documentary research.

GSWS 275 Faces of Love: Gender, Sexuality and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and ‘queerness’ in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.

Notes: No prior knowledge of Persian is required as all literary works will be available in English translation. Students are expected to attend seminars and take part in discussions. Please note that this syllabus is subject to change.

GSWS 277 Gender, Sex & Urban Life
Is urban space gendered? Do we change how it is gendered as we move through it? Does it change us? This course explores gender and sexuality in the contemporary global city through the study of urban spaces. We will consider feminist, queer, and transgender theories of the city, as we investigate how practices of using and making space are gendered and sexualized. Each week of the course will be organized around a type of space, including subway, school, and birthing center, nightclub, suburb, and park. Assignments will include an auto-ethnography, a short critical essay, and a final assignment that asks you to propose an additional type of space in which to study the intersections of sex, gender, and the urban built environment. In each space, we will conduct an interdisciplinary exploration, drawing from sociology, anthropology, geography, city planning history, feminist and queer theory, as well as from fiction, poetry, music videos, photography, and documentary film.

GSWS 279 Women in Theatre and Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignant—and always provocative. Our focus will be on English-language works from the late 20th century to the present (#metoo) moment. We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are 'women in comedy,' trans performance, drag kings, feminist directing, etc.).

GSWS 280 Feminist Political Thought
This course is designed to provide an overview of the variety of ideas, approaches, and subfields within feminist political thought. Readings and divided into three sections: contemporary theorizing about the meaning of ‘feminism’; women in the history of Western political thought; and feminist theoretical approaches to practical political problems and issues, such as abortion and sexual assault.
For BA Students: Society Sector

Notes: This course is not open to freshman.
GSWS 294 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present. Taught by: Silverman
Course offered in spring term
Also Offered As: ARTH 294, ARTH 694, ENGL 063, VLST 236
Activity: Lecture
1.0 Course Unit

GSWS 295 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as 'cinema,' to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be a weekly film screening for this course. No knowledge of film theory is presumed. Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class mid-term; 1 final project.
Taught by: Redrobe

One-term course offered every term
Also Offered As: CIMS 301, FREN 301
Activity: Seminar
1.0 Course Unit

GSWS 302 Queer Cinema
Queerness has often been understood as a threat to society whether social institutions like marriage or monogamy or familial practices have been characterized by increasing acceptance of gays and lesbians into mainstream society, this process has no doubt reproduced new inequalities and asymmetries - in terms of race, class and access to institutional spaces. Does 'queer' still pose a threat to the mainstream or is it now part of the 'normal'? Should one welcome the progressive acceptance of queer lives within the mainstream or should one reject it in the name of an indissoluble difference? In this course we will range across movies and theories that engage with these questions, particularly focusing on negative reactions to processes of assimilation. Topics will include sex and death, queerness and neoliberalism, intersections of race and sexuality. Some of the films we will watch and discuss are Paolini's Pigsty, Fassbiner's In a Year of 13 Moons, Jennie Livingstone's Paris is Burning, Cheryl Dunye's Watermelon Woman, Kimberly Peirce's Boys Don't Cry.
Also Offered As: CIMS 303, COML 303
Activity: Seminar
1.0 Course Unit

GSWS 307 Love, Lust and Violence in the Middle Ages
Medieval Europe was undoubtedly gruff and violent but it also gave birth to courtly culture - raw worries transformed into knights who performed heroic deeds, troubadours wrote epics in their honor and love songs about their ladies, women of the elite carved out a place in public discourse as patrons of the arts, and princely courts were increasingly defined by pageantry from jousting tournaments to royal coronations. This course will trace the development of this courtly culture from the eleventh to the sixteenth century, from its roots in Southern France to its spread to Northern France and then to various kingdoms in Europe. Central themes will include the transformation of the warrior into the knight, the relationship between violence and courtliness, courtly love, cultural production and the patronage, and the development of court pageantry and ceremonial. This is a class cultural history and, as such, will rely on the interpretation of objects of art and material culture, literature as well as historical accounts.

Activity: Lecture
1.0 Course Unit
GSWS 310 Politics of Political Writing: From 'We, the People' to 'Power to the People'
The Politics of Political Writing: From 'We, the People' to 'Power to the People' is a literary study and research course charting the development of liberatory politics, aesthetics and subjectivities in response to colony, capital and empire. Students will read anthropology, collected essays, a novel, reportage, oral history, interviews, travel writing and memoir. We will look at works in which the authors articulate political stances that impact the public sphere and their literary craft as well as works in which they examine, often self-critically, the politics of writing as practice, career, advocacy, trickery, solace and pleasure. The works, including ones by June Jordan, Jean Genet, Patricia Galvao, and Claribel Alegria worry the divide between art and politics, and some trouble the notion that writing encapsulates an author's politics and activism. Using the texts as models we will examine in lecture, discussion, and research projects the effect and impact of aesthetic acts on making trouble for state, social and financial structures as such trouble-making urged many of these works into inception, making difficult their production and reception. The Marxist theory of the dialectic and M. Jacqui Alexander's configuration of palimpsestic time in the neo/post/anti-colonial Americas will serve as our theory touchstones. While some of the works are from the recent past and others far older, they touch on, and in many instances, speak to the histories of regions and countries currently in the news and in crisis (Central America, the Caribbean, the Middle East, France, the US and Brazil) contemporary movements (Black Lives Matter, international solidarity, undocuqueers) and problematics (migration, US financial intervention, imperialism).

One-term course offered either term
Activity: Seminar
1.0 Course Unit

GSWS 315 Queer Modernisms
This course tracks the development of Modernism in America, Western Europe, and specific other locations around the globe, with particular emphasis as to how and why dissident sexualities so often found expression in and as aesthetic dissent. Creating new expressive forms and theories that often seem far removed from any traditional definition of sexuality, queer modernist artists often replaced dangerous forms of social dissent with more prudent forms of formal dissonance. In pursuing these questions, we will place art in its broader social context, seeking to answer such significant problems as how and why forms of artistic representation that were once transparent, eminently legible to all strata of society, increasingly became, under the avant garde, designed to speak only to an elect, to a select few in our culture. We will ask what happens when art deliberately narrows its audience, and how that narrowing is related to questions of sexual difference. What is the relationship between queerness and cultural elitism, a connection generally presumed in popular culture, but rarely examined academically? And finally we will ask about the utility of forms of queer political dissent if those forms remain illegible as queer to a wider audience. Throughout, new methods informed by queer, gender, and critical race theory will be utilized.

Also Offered As: ARTH 383
Activity: Seminar
1.0 Course Unit

GSWS 317 Early Modern Women Writers
This course explores the history of women’s writing in the early modern period, tracing the trajectories of women from the sixteenth to the eighteenth centuries. The course begins with an examination of the historical conditions that shaped women’s access to education and to the literary marketplace. It then considers the ways in which women used their writing to contest, or to play on, traditional gender roles and cultural norms. Finally, the course looks at how the very notion of what constituted women’s writing evolved over time. The course will provide an introduction to different genres of early modern women’s writing, including narrative fiction, verse and lyric poetry, and historical and scientific treatises.
Taught by: Sharkey
Course offered spring; even-numbered years

GSWS 331 Women Making History: The Penn Museum and the Centennial 2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote 'shall not be denied or abridged by the United States or by any State on account of sex.' To mark this centennial - both to celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women’s and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women's History; or Museum Studies recommended.
Taught by: Sharkey
Course offered spring; even-numbered years
Also Offered As: ANTH 351, ANTH 531, GSWS 331, NELC 331, NELC 531
Activity: Seminar
1.0 Course Unit
GSWS 334 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to 'write women’s worlds', but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline's epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world. Prerequisite: Should have some functional knowledge of Cultural Anthropology.
Taught by: Thomas
Course not offered every year
Also Offered As: AFRC 334, ANTH 334, ANTH 634, GSWS 634
Activity: Seminar
1.0 Course Unit

GSWS 340 Money, Power, Respect: Funding Social Change
This course is about how to apply a race, gender and LGBTQ lens to support contemporary social justice movements in the U.S. and globally, including Black Lives Matter, #MeToo, transgender equality, and disability justice. We will explore intersectionality as a theoretical framework, and how it is practically applied to support social justice organizations and leaders, and fund social change. Over the course of the semester, Professor of Practice Roz Lee, a black lesbian feminist and lifelong racial, gender, LGBTQ and economic justice advocate, and who currently serves as Vice President of Strategy and Programs at the Ms. Foundation for Women, will be joined by movement leaders and philanthropy colleagues to discuss and analyze what’s happening on the frontlines of movements for equity, justice and freedom.

Activity: Seminar
1.0 Course Unit

GSWS 344 Psychology of Personal Growth
Intellectual, emotional and behavioral development in the college years. Illustrative topics: developing intellectual and social competence; developing personal and career goals; managing interpersonal relationships; values and behavior. Recommended for submatriculation in Psychological Services Master’s Degree program.
One-term course offered either term
Also Offered As: EDUC 345
Activity: Lecture
1.0 Course Unit

GSWS 345 Sinners, Sex and Slaves: Race and Sex in Early America
This course explores the lost worlds of sinners, witches, sexual offenders, rebellious slaves, and Native American prophets from the seventeenth to nineteenth centuries. Using the life stories of unusual individuals from the past, we try to make sense of their contentious relationships with their societies. By following the careers of the trouble-makers, the criminals, and the rebels, we also learn about the foundations of social order and the impulse to reform that rocked American society during the nineteenth century.
Taught by: Brown
Course usually offered in fall term
Also Offered As: AFRC 345, HIST 345
Activity: Recitation
1.0 Course Unit

GSWS 346 Bodies, Race and Rights: Sex and Citizenship in Modern American History
What did it mean to be a man or woman in the post-Civil War United States? Was being a man the same as being a citizen? If African-American men were to be fully embraced as both men and citizens in the aftermath of slavery, where did that leave women, white and black? Why did a nation built on immigration become so hostile to certain groups of immigrants during this period? In this course, we consider how the meanings and experiences of womanhood, manhood, citizenship, and equality before the law changed from the period immediately after the Civil War until the present day. We look at political battles over the meaning of citizenship, the use of terror to subdue African Americans politically and economically, and the fears of white Americans that they would lose their political and economic dominance to immigrant groups they deemed irreconcilably different from themselves. We also consider the repercussions of these conflicts for medical, legal, and economic efforts to regulate the bodies of women, children, poor people, immigrants, working class laborers, military men, and African Americans. Throughout the course, we will follow the state’s changing use of racial, sexual, and economic categories to assess the bodily and intellectual capacities of different groups of citizens. We will also note some of the popular cultural expressions of manhood, womanhood, and citizenship. The lectures and reading assignments are organized around a series of historical problems, dynamic leaders, and controversies that illuminate these issues.
Taught by: Brown
Course usually offered in spring term
Also Offered As: AFRC 346, HIST 346
Activity: Seminar
1.0 Course Unit

GSWS 347 Gender History and American Film
More than any other medium, the motion pictures fostered new ideals and images of modern womanhood and manhood in the United States. Throughout the twentieth century, gender representations on the screen bore a complex relationship to the social, economic, and political transformations marking the lives and consciousness of American men and women. This course explores the history of American gender through film. It treats the motion pictures as a primary source that, juxtaposed with other kinds of historical evidence, opens a window onto gendered work, leisure, sexuality, family life, and politics. We will view a wide range of Hollywood motion pictures since 1900, as well as films by blacklisted artists, feminists, and independent producers.
Taught by: Peiss
Course usually offered in spring term
Also Offered As: CIMS 347, HIST 347
Activity: Seminar
1.0 Course Unit
GSWS 349 History of Sexuality in the U.S.
This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identities and communities; the politics of sexuality; and the relationship between sexual and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.
Taught by: Peiss
One-term course offered either term
Also Offered As: HIST 349
Activity: Lecture
1.0 Course Unit

GSWS 350 Trans Method
What are the subjects of trans studies? What are the disciplinary and theoretical tools necessary to do trans studies? What does 'trans' as a category afford us in looking at texts, people, systems, objects? To what extent is trans an identity? What might it mean to think of it as a methodology? This course aims to introduce students to 'trans' as an analytic by drawing from queer studies, feminism, critical race theory, disability studies, environmental humanities, literary studies, and postcolonial critique, centering trans ways of thinking on scales from the body to the nation. As a relatively 'new' field, trans studies contributes to feminist and queer theory but is uniquely engaged with social and health sciences, trans activist movements, and trans cultural production. In particular, Trans Method aims to extend trans beyond self-identified trans bodies and beyond the United States to consider the affordances of a global, polyscalar trans politics.
Taught by: Knittle, Kim
Prerequisite: GSWS 002 OR GSWS 003 OR GSWS 096
Activity: Seminar
1.0 Course Unit
Notes: Permission of the instructor is required for this course. Interested students must submit a Statement of Interest using the URL in the 'Additional Course Information' above.

GSWS 353 Topics In 19th-Century American Literature
This course explores an aspect of 19th-Century American literature intensively; specific course topics will vary from year to year. GSWS 372 Queering North African Subjectivities
This seminar will explore the ways in which literary and visual representations of sexual difference and gender roles disrupt the cultural imagination of everyday life in North Africa and its Diasporas. Special attention will be given to representations of Arab women and queer subjectivities as sites of resistance against dominant masculinity. We will analyze the ways in which representations of gender have allowed for a redeployment of power, a reconfiguration of politics of resistance, and the drawing of longstanding images of Islam in France. Finally, we will question how creations that straddle competing cultural traditions, memories and material conditions can queer citizenship. Course taught in English.

1.0 Course Unit
GSWS 394 Topics in Contemporary Art  
Topic varies. Spring 2017: This course will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and strategies of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative. GSWS 400 GSWS Honors Thesis Seminar  
This course is for senior undergraduate GSWS majors who will be completing an honors thesis. The seminar helps students decide on the most appropriate methodologies to use and topics to include in their thesis. Other topics include thesis organization and drawing conclusions from primary and secondary sources of data. Taught by: Beetham  
Two terms. student must enter first term.  
Activity: Senior Thesis  
1.0 Course Unit

GSWS 436 Africana Studies Undergraduate Seminar  
On the stage of modern world history, Haiti plays the unique role as both exceptionally victorious and tragic character. This course interrogates archival documents, oral histories, historical texts, and prose created wi the nation and her diaspora in order to establish a nuanced image of the projection of Haiti’s modern history. Using two classic Haitian texts, Ma Vieux-Chauvet’s Love, Anger, Madness (1968) and Michel-Rolph Trouillot’s Silencing the Past: Power and the Production of History (1995), this course examines how, why, and to what end Haiti’s history and popular narratives have served to construct and dismantle global movements, pop culture, and meanings of race, gender, and citizenship in the Americas. In our historical examination, we will question some of the iconic representations of Haiti through literature that deepen the affective historical profile of Haiti with interrogations of culture, sexuality, political, and media performance. Students will become familiar with the -colonial history of Haiti and the region, meanings of race, and the production of history. The course is a research and historical methods seminar. Taught by: Johnson

GSWS 488 Topics: Culture, Sexuality and Global Health  
What does it mean to claim that ‘Homosexuality is un-African’? This course explores the linked histories of race, nation, gender and sexuality in Africa that such an ideological claim invokes, yet effaces. The polemics that produce statements like this play out through the disciplinary tensions that exist between African and sexuality/queer studies. These tensions have as much to do with the role played by the relation between sexuality and race within cultures of European colonization, as they have with the role of gender and sexuality within postcolonial power relations in Africa. Such antagonisms are sustained through the marginalization of gender and sexuality perspectives within postcolonial scholarship on Africa, as well as the bracketing of African perspectives in queer and feminist studies. This course will deconstruct these impasses by exploring scholarship at the margins of each area of study. Students will be encouraged to ask questions about how issues of race, ethnicity, nation, gender and sexuality are produced as suppressed presences in a range of texts, films and other materials. The course will include readings from postcolonial, gender, sexuality and African studies, anthropology, history, literary studies and Marxism, giving students a grounding in historical and contemporary perspectives at the intersection of African, queer and feminist studies.

GSWS 509 Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define ‘Jewish writing,’ in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products.

GSWS 510 Inner Outer Space Travel Writing: A Creative Writing Workshop
Inner Outer Space Travel Writing is a creative writing workshop focused on writing work within the science fiction/speculative fiction/alternative futurities, science/land/travel writing, and creative-critical nonfiction traditions. Students will work within a variety of genres, with an emphasis on the essay, the short story, screen/tele-play, play, blog and performance. Students will read recommended texts from within their particular interests, and the course will culminate in both a public performance and dissemination/publication via another media platform (zine, website, podcast, etc). All levels of experience, from none/first-time writer to published writers, are encouraged to register for the course.

GSWS 516 Public Interest Workshop
This is a Public Interest Ethnography workshop (originally created by Peggy Reeves Sanday - Department of Anthropology) that incorporates an interdisciplinary approach to exploring social issues. Open to graduate and advanced undergraduate students, the workshop is a response to Amy Gutmann’s call for interdisciplinary cooperation across the University and to the Department of Anthropology’s commitment to developing public interest research and practice as a disciplinary theme. Rooted in the rubric of public interest social science, the course focuses on: 1) merging problem solving with theory and analysis in the interest of change motivated by a commitment to social justice, racial harmony, equality, and human rights; and 2) engaging in public debate on human issues to make research results accessible to a broader audience. The workshop brings in guest speakers and will incorporate original ethnographic research to merge theory with action. Students are encouraged to apply the framing model to a public interest research and action topic of their choice. This is an academically-based-community-service (ABCS) course that partners directly with Penn’s Netter Center Community Partnerships.

GSWS 517 Sociology of Work
The thinkers whose work formed the foundations of sociological theory considered the nature of the relationship between work and identity key to understanding social solidarity, power, and historical change. In recent years, the division of labor, structures of work, and employment relations have all been undergoing rapid change, necessarily affecting the possibilities for constructing identity through work. This seminar examines how changes in the nature and organization of work have reshaped the relationship between work and identity.

GSWS 518 Nursing and the Gendering of Health Care in the United States and Internationally, 1860-2000
This course examines changing ideas about the nature of health and illness; changing forms of health care delivery; changing experiences of women as providers and patients; changing role expectations and realities for nurses; changing midwifery practice; and changing segmentation of the health care labor market by gender, class and race. It takes a gender perspective on all topics considered in the course. A comparative approach is used as national and international literature is considered. This focus is presented as one way of understanding the complex interrelationships among gender, class, and race in health care systems of the United States and countries abroad.

Course usually offered in spring term
Also Offered As: NURS 518
Activity: Lecture
1.0 Course Unit
GSWS 520 Art, Sex and the Sixties
With a distinct emphasis on post World War II performance, film, sculpture and painting, this course explores the conjunction of the period’s systematic revamping of our social/sexual schema with the equally revolutionary ascendency of an artistic postmodernity. And it seeks to explore this dynamic not only within the familiar confines of North America and Europe but towards Latin America and Asia, too, in what was a nearly simultaneous emergence of the erotic as a political force in the 60s. Reading a range of key voices from Brazilian theorist and poet Oswald de Andrade to Frankfurt School philosopher Herbert Marcuse, performance artists Carolee Schneemann, and Yoko Ono, Neo-Freudian theorist Norman O. Brown and lesbian feminist author Monique Wittig, we will examine how and why sex became a privileged form of politics at this historical juncture in a range of different contexts across the globe. Students interested in feminist, gender or queer theory, social revolution, performance studies, post war art and Frankfurt School thought should find the course particularly appealing, but it assumes no background in any of these fields.

GSWS 525 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud’s work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud's work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud's work, and a humanist one? Where do we locate Freud’s relevance today? The graduate course will concentrate on Freud's descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture. Prerequisite: Readings and discussions in English.

GSWS 527 Race, Gender and Auto/Biography
PRING 2017: Market Women, Madames, Mistresses & Mother Superior studies ender, labor, sexuality, and race in the Caribbean. In our historical examination of primary source documents alongside literature, and popular edia, we will question some of the iconic representations of Caribbean and Latin American women in order to understand the meaning, purpose and usages these women’s bodies as objects of praise, possession, obsession and/or ridicule by communities, governments and religions within and outside of the region. Beginning in the late-18th century and ending with contemporary migration narratives, this course considers the relationship between slave society and colonial pasts on gender performance in the modern Caribbean, Latin America, and their diasporas. In our interrogation of gender meanings, we will consider the ways Caribbean women and men define themselves and each other, while considering the intersections of color, class, religion and culture on the political and social realities of the Caribbean and the region. The geographic scope of the course will extend to Haiti, the Dominican Republic, Jamaica, Cuba, Puerto Rico, Costa Rica and Trinidad & Tobago. The following interrelated questions will anchor our exploration of each text: How have representations of Caribbean and Latin American women informed historical constructions and rhetoric of the region and national identity? What political and social strategies have Caribbean women and men used to define themselves in their countries and throughout the region? How do the history and contemporary conditions of a post-colonial nation impact the gender construction of Caribbean identities? What is the relationship between modern Caribbean gender identities and the regional racial and economic politics?

1.0 Course Unit
GSWS 528 Witchcraft and Gender in the Early Modern World
From the 15th century through the 18th century, social tensions erupted in Europe and the Atlantic colonies in the witch craze, a period when intense cultural concern over witchcraft was expressed through religious treatises and sermons, popular literature such as pamphlets and broadsides, legal accusations, trials, and, in some cases, executions. Although the number of people executed during the witch-hunts is a matter of scholarly debate, their importance in understanding early modern beliefs and responses to social tensions is clear. In this class, we will explore historians’ understandings of the causes underlying this cultural phenomenon. With special attention to gender, social position, and religious belief, we will join academic debates about the causes of these persecutions. We will also read some primary sources from the medieval through the early modern periods, including trial transcripts, sermons, and pamphlets. Were women the main target of witchcraft accusations and executions, and if so, was misogyny their most important cause? What role did sexual norms and beliefs have in the way that accusations were framed? Were there different patterns of accusations and executions across time and region, and if so, what social and cultural factors might explain them? In what ways were witchcraft accusations an effort to control marginal people in local communities, particularly in regard to gender, socio-economic position, and age? How might religious developments and conflicts have influenced elite and popular ideas about witchcraft? What challenges do historians face in analyzing primary sources about witchcraft and witchcraft trials? Through in class discussions and threaded discussion forums on primary sources, students will learn about the challenges involved in interpreting sources including treatises, trial transcripts, pamphlets, and images.

GSWS 529 History of Sexuality
In this online course, we will consider the impact of social, economic, and political conditions on social constructions of sexuality, from the classical world of Greece and Rome, to the early modern West, to the streets of Victorian London and 1920s New York. Topics of interest include: the prostitutes of New Orleans’ Storyville district; Jack the Ripper and sensational media accounts of crimes of passion; the taverns and bawdy houses of colonial Philadelphia; cases of sexual misconduct in premodern Europe, Latin America; and colonial America; the history of sexual harassment in the American workplace; the history of hermaphrodites and transgendered people; JFK and representations of 20th-century masculinity. We will pay special attention to the ways that race, class, religion, and gender come together to shape power dynamics through the development, change, and continuity in sexual roles, norms, and relationships.

GSWS 531 Gendered Constructions of Other Cultures in Western Travel Literature
Descriptions of peoples from foreign lands and faraway places have captured the imaginations of Europeans for centuries. Pilgrims and merchants, explorers and conquistadores, Victorians taking their Grand Tour and 21st-century travelers have preserved their observations, both in written form, in ethnographies and diaries, novels and travel narratives, and in visual form, in maps, illuminated manuscripts, engravings, and photographs. Through these media, these travelers have not simply captured their memories, but have also helped to shape Western representations of the people they encountered, often justifying Western political, economic, cultural, and social dominance as a result, although some travelers have critiqued the West instead. And in all these depictions, gender and sexuality have played central roles in the creation of these identities and relationships. In this online course, we will explore this topic by studying a variety of primary and secondary sources focusing on medieval Ireland and Wales; English, Spanish, and Portuguese texts representing the New World and indigenous Americans; orientalism through the lens of imperial representations of the Middle East, India, and Africa; and 20th- and 21st-century representations of a globalized world, focusing on political, economic and cultural tensions between the West and other regions of the world. Primary texts will include travel diaries and narratives, ethnographies and novels, as well as visual images. We will also examine how scholars from fields including anthropology, art history, cultural studies, history, and literary studies have analyzed these works, with attention to theories on colonialism and post-colonialism, gendered and queer readings, orientalism and othering, and globalization. Finally, we will also look at how some of the people who were described by the Western writers described Westerners themselves. Assignments will include weekly blogs in response to readings, primary source threaded discussions, live discussions every week in our online classroom, leading class discussion for two weeks, writing two response papers, and completing a final essay in several stages.

GSWS 533 Women Making History: The Penn Museum and the Centennial 2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote ‘shall not be denied or abridged by the United States or by any State on account of sex’. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Prosokouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women's and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women's History; or Museum Studies recommended.
Taught by: Sharkey
Also Offered As: ANTH 351, ANTH 531, GSWS 331, NELC 331, NELC 531

GSWS 554 Affect Theory and Power
This seminar will examine contemporary affect theory and its relationship with Michel Foucault’s theory of power. We will begin by mapping out Foucault’s ‘analytics of power,’ from his early work on power knowledge to his late work on embodiment, desire, and the care of the self. We will then turn to affect theory, an approach which centralizes the non-rational, emotive force of power. No previous knowledge of theory is required.
Taught by: Schaefer
Also Offered As: COML 555, RELS 552
Activity: Seminar
1.0 Course Unit

GSWS 555 Health Education for Incarcerated Women
This elective course will afford students the opportunity to develop and implement health education workshops for incarcerated women in the Philadelphia jail system. Students will explore the social and historical framework and trends in the incarceration of women, as well as the needs of this population, and will identify specific areas that need to be addressed by particular disciplines or professions. Students will have direct contact with the jail system, its staff, and female inmates.
Taught by: Brown, K.
Course usually offered in fall term
Also Offered As: NURS 555
Activity: Lecture
1.0 Course Unit

GSWS 556 More Human Than Human
In early 2017, animal rights lawyer Steve Wise argued that two of his clients should be afforded the rights of ‘personhood.’ The clients in question were chimpanzees. This case suggests that ‘speciesism’ might soon be met with the same degree of suspicion as sexism and racism. This course will explore how such a shift could come about and what it might signal. We will begin by examining the western foundations of binaries such as human-animal, male-female, and self-other. From here we will explore recent attempts to dismantle these constructs by ecofeminists and post-humanists. We will also look at how such categories have manifested in social movements and cultural artifacts. Finally, we will investigate how our beliefs about who ‘we’ are and what ‘we’ are not can affect everything from the foods we eat to where and how we vacation.

GSWS 575 Faces of Love: Gender, Sexuality, and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and queerness in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.
Taught by: Shams
Course usually offered in fall term
Also Offered As: COML 275, COML 574, GSWS 275, NELC 290, NELC 574

Course not offered every year
Also Offered As: AFRC 577
Activity: Seminar
1.0 Course Unit

GSWS 578 The Sexuality of Postmodern Art
This course is fundamentally concerned with why so many of the defining artists of the postwar generation were queer, indeed such that one could plausibly claim that postmodernism in American art was a queer innovation. Centrally, most of these artists raise the problem, as the above quotes underscore, of authoriality and its discontents. Deploying a combination of social-historical and theoretical texts, we will approach the problem of the disclaiming of authoriality in post war American art, focusing on the works of John Cage, Robert Rauschenberg, Jasper Johns, Cy Twombly, Robert Indiana, Louise Nevelson, Ellsworth Kelly, Agnes Martin, Leon Polk Smith and not least Andy Warhol. Central to this course will be the continuing salience of the ‘death of the author’ discourse, pioneered in literature by Barthes and Foucault, and in art by every one of the artists we will be examining. What, in short, is the relationship between the rise of an anti-biographical, anti-authorial theoretical framework, and the lived histories of so many queer authors? In asking this question, we are of course self-consiously violating the very premise of one key strand of postmodernist critique—and in so doing attempting to historicize a theoretical frame that is strikingly resistant to historical analysis. (Undergraduates interested in the course should contact Professor Katz.)
Taught by: Katz
Course not offered every year

Activity: Seminar
1.0 Course Unit

GSWS 580 Learning from James Baldwin (1924-1987)
James Baldwin, one of the greatest writers of the twentieth century, spoke to the issues of his times as well as to our own. This class will examine the intellectual legacy that Baldwin left to present-day writers such as Toni Morrison, Charles Johnson, Ta-Nehisi Coates, Thulani Davis, Caryl Phillips and others. We will spend time reading and discussing Baldwin's novels, short stories, plays and essays. In doing so, we will be considering the complex assumptions and negotiations that we make in our day-to-day lives around our identities and experiences built upon gender, sexual preference, the social-constructs called 'race,' and more. James Baldwin's life and work will be the touchstone that grounds our discussions. We will read Go Tell It on the Mountain, Another Country, The Fire Next Time, and Giovanni's Room and see films I Am Not Your Negro, The Price of the Ticket and The Murder of Emmett Till. Students will research subjects of their own choosing about Baldwin's life and art. For example, they may focus on the shaping influences of Pentecostalism; segregation; racism; homophobia; exile in Paris; the Civil Rights Movement; Black Power, Baldwin's faith, or his return to America.
Taught by: Watterson
Also Offered As: AFRC 581, ENGL 581
Activity: Seminar
1.0 Course Unit
GSWS 581 Advanced Psychology of Women
The course is intended for those who already have a foundation in the study of the psychology of women and want to expand their understanding of the provision of psychological services to include a contextual, feminist, and relational perspective. Theoretical and applied practices regarding women’s mental health, issues of diversity, sexuality and relationships for women will be addressed. Prerequisite: Introduction to Psychology and an undergraduate course in the Psychology of Women or approval by professor.
Also Offered As: PSCI 584
Activity: Lecture
1.0 Course Unit

GSWS 582 Gender, Power & Fem Theory
This seminar will examine the theme of power as it engages questions of sex and gender. Subsidiary themes that will be developed over the course of the semester include: the modernism/postmodernism debate as it particularly relates to feminism; the intersectionality of race, gender, sexuality and class and how feminists can and do talk about ‘women’; the relevance of feminist theory to policy issues, and which theoretical approaches are the most appropriate or have the most powerful potential. The readings will start with ‘foundational’ texts in feminist theory—texts that anyone who wants to work in or teach feminist theory needs to have in their repertoire, they set out the background and history of contemporary feminist theory, and they operate from a variety of disciplinary frameworks. We then will move onto some newer scholarship and some more specific political issues and topics, depending on what students in the course are interested in studying. This course is open to undergraduates who have had some prior course work in feminist theory, gender and sexuality studies, and/or political theory, in consultation with the professor.
Taught by: Hirschmann
Course not offered every year
Also Offered As: PSCI 582
Activity: Seminar
1.0 Course Unit

GSWS 584 Political Philosophy
An examination of basic theoretical problems of political science divided into three parts. First, specific features of social sciences will be examined and three most important general orientations of social sciences (analytical, interpretative and critical) will be compared and analyzed. Second, basic concepts of social and political sciences will be studied: social determination, rationality, social change, politics, power, state, democracy. Third, the problem of value judgments will be considered: Is there a rational, objective method for the resolution of conflicts in value judgments? Is morality compatible with politics?
Taught by: Hirschmann
Course not offered every year
Also Offered As: PSCI 584
Activity: Seminar
1.0 Course Unit

GSWS 585 Fashioning Gender
In 1901 the average American family spent 14% of their annual income on clothing. By 1929, the average middle-class woman owned a total of nine outfits. Fast forward to the early twenty-first century, where the relative price of clothing has dropped, clothing has become virtually disposable, and individuals post videos of their shopping hauls online. This course will examine how we got here, why fashion matters, and the far-reaching implications of our love affair with clothes. Readings and topics will include foundational theory about fashion; how clothes shape class, gender, and identity; the significance of revolutionary designers such as Vivienne Westwood and Rei Kawakubo; and the evolution of the clothing industry and its place in the global economy.
Taught by: Sadashige
Course usually offered in fall term
Activity: Online Course
1.0 Course Unit

GSWS 587 Race, Nation, Empire
This graduate seminar examines the dynamic relationships among empires, nations and states; colonial and post-colonial policies; and anti-colonial strategies within a changing global context. Using the rubrics of anthropology, history, cultural studies, and social theory, we will explore the intimacies of subject formation within imperial contexts—past and present—especially in relation to ideas about race and belonging. We will focus on how belonging and participation have been defined in particular locales, as well as how these notions have been socialized through a variety of institutional contexts. Finally, we will consider the relationships between popular culture and state formation, examining these as dialectical struggles for hegemony.

Course not offered every year
Also Offered As: AFRC 587, ANTH 587, LALS 588
Activity: Seminar
1.0 Course Unit

GSWS 588 The Politics of Women’s Health Care
This course will utilize a multidisciplinary approach to address the field of women’s health care. The constructs of women’s health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women’s health care from an obstetrical/gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity of women’s health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women’s equality/inequality status and state of health. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Lessner
Course usually offered in fall term

GSWS 598 The Political Economy of Gender
Over the past two hundred years, with the rise industrial production, growing educational attainment, and availability of contraception, women have entered the formal labor market in vast numbers. Yet despite advances, there are still important disparities between the sexes, often exacerbated by class and racial politics. This course unpacks the elements of the transition in the political economy of gender and examines its limits. We set out to understand women's labor in emerging industrial and post-industrial economies; the causes and consequences of women's political inclusion; gendered opportunities in the labor force including the persistence of pay gaps; and the formation of economic and political preferences across the genders. Theoretically, we will engage with Marxian political economy, and new institutionalist approaches to understand how political and economic institutions reproduce or remedy contemporary problems including the gender gap in wages, in political representation, and in women's economic opportunities. Throughout the course we will pay special attention to challenges faced by minority groups and by women in developing countries.

GSWS 655 Topics in Black Political Thought: Difference And Community
This course is designed to familiarize graduate students with some of the key texts and debates in Africana Studies concerning the relationship between racial slavery, modernity and politics. Beginning with the Haitian Revolution, much of black political thought (thinking and doing politics) has advocated group solidarity and cohesion in the face of often overwhelming conditions of servitude, enslavement and coercion within the political economy of slavery and the moral economy of white supremacy. Ideas and practices of freedom however, articulated by political actors and intellectuals alike, have been as varied as the routes to freedom itself. Thus, ideas and practices of liberty, citizenship and political community within many African and Afro-descendant communities have revealed multiple, often competing forms of political imagination. The multiple and varied forms of political imagination, represented in the writings of thinkers like Eric Williams, Richard Wright, Carole Boyce Davies and others, complicates any understanding of black political thought as having a single origin, genealogy or objective. Students will engage these and other authors in an effort to track black political thought's consonance and dissonance with Western feminisms, Marxism, nationalism and related phenomena and ideologies of the 20th and now 21st century.
Taught by: Hanchard
Also Offered As: AFRC 655, LALS 656, PSCI 612
Activity: Seminar
1.0 Course Unit
GSWS 678 Gender and Sexuality in Education
This seminar gives an overview of the intersections and interplay among gender, sexuality, and education through theory, practice, current discussions, and analysis of varied contexts in English speaking countries (e.g. the United States, Canada, Great Britain, and Australia). After examining the theoretical foundations of genders and sexualities, we will look at their histories and effects in K-12 schools and colleges and universities as well as explore special topics.
Taught by: Cross
Course usually offered in fall term
Also Offered As: EDUC 678
Activity: Seminar
1.0 Course Unit

GSWS 682 Topics: Literature and Film
Course not offered every year
Also Offered As: CIMS 682, COML 680, ITAL 682
Activity: Seminar
1.0 Course Unit

GSWS 769 Feminist Theory
See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Taught by: Loomba
Course not offered every year
Also Offered As: COML 769, ENGL 769, NELC 783, SAST 769
Activity: Seminar
1.0 Course Unit

GSWS 771 Current Japanology
Major trends in scholarship as reflected in important recent publications, especially formative books and periodical literatures. The trajectory within certain disciplines as well as the interaction among them will be critically evaluated in terms of gains and losses. Implications of these theses in the planning of graduate and postgraduate research.
Prerequisite: Knowledge of reading Japanese.
Course not offered every year
Also Offered As: EALC 771
Activity: Lecture
1.0 Course Unit

GSWS 790 Recent Issues in Critical Theory
The primary for this course is the English Department. When the course content includes gender, sexuality and women’s studies it will be cross-listed with GSWS. See additional information and description on the English Department’s website: https://www.english.upenn.edu See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 790, ENGL 790
Activity: Seminar
1.0 Course Unit

GSWS 830 Conducting Research in Global Women's Health
An introduction to theoretical and methodological issues as they relate to conducting research in global women’s health. Advanced analysis of historical, social, cultural, economic, political, technological and geographical contexts as they influence the health of girls and women across the lifespan and their relation to health care systems as both clients and providers. This includes contextual issues that constrain the provision & receipt of adequate healthcare. Prerequisites: Completion of course in Global Health (this may include a reputable online course eg: Coursera), or equivalent background (eg. global health field experience). Permission of Instructor. For graduate and professional students from any field with an interest in global women’s health; Master students by permission of instructor. A critical examination of theoretical and methodological issues pertaining to research on women and girls conducted around the world across disciplines. A focused and intensive exploration of place as it pertains to women and girls formal and informal structures of health care delivery as those needing and/or seeking health care, and as those providing health care to others. Students will examine the multiple dimensions and qualities of these endeavors (e.g. activity, power, control, visibility, value, and remuneration) and the intersection of gender and health - locally, globally and across borders. Students will focus thier examination on the implications of seeking and providing health care for women’s and girls’ health and well-being. By examining issues in local and global contexts and across geographical boundaries, students will have the opportunity to challenge gendered, class, political, and cultural assumptions related to women’s health.
Course usually offered in fall term
Also Offered As: NURS 830
Activity: Seminar
1.0 Course Unit

Genetic Counseling (GENC)

GENC 510 Clinical Internship
In addition to course-based degree requirements, students participate in internships related to the field of genetic counseling. The clinical internships begin in the summer after the first year of coursework is completed, and continue through the spring of the second year. Internships give students the opportunity to learn in varying practice-based environments.
Taught by: Lisa Kessler, MS
Activity: Clinic
0.0 Course Units

GENC 601 Advanced Genetics and Genomics
This course will provide an extensive survey of molecular genetics including molecular and cellular biology and the regulation of gene expression. Applications to human clinical genetics through discussion of relevant case studies will be incorporated. The content of this course will facilitate an understanding of the application of concepts in molecular biology to genetic testing and diagnosis. Students will develop the necessary background knowledge to understand topics covered in additional courses in the genetic counseling master’s program including Foundations in Clinical Genetics, Cancer Genetics, Reproductive Genetics, and Medical Genetics.
Taught by: Laura Conway, PhD
Activity: Lecture
1.0 Course Unit
GENC 602 Mechanisms of Disease
Primary concepts in this course introduce the fundamental principles of developmental genetics, normal and abnormal embryological development. Development is covered by major organ system. Normal as well as abnormal physiology in all systems will be reviewed. The focus of the course will be on understanding the pathophysiology of human genetic diseases. The coursework serves as the background for understanding specific diseases as they present in clinical genetics and research that has led to improved therapy and treatment for patients. The class will be primarily lecture-based using case-based learning.
Taught by: Lewis Waber, MD, PhD
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GENC 603 Introduction to Genetic Counseling
Genetic counseling students will be oriented to the profession through a review of the history of genetic counseling. Topics covered include medical terminology, the structure of genetic counseling sessions, discussion of the scope of practice and disability rights, instruction in obtaining family pedigrees, review of genetic testing practices, and the National Society of Genetic Counselors’ Code of Ethics and Scope of Practice. Students will gain an appreciation for the lived experience of individuals with genetic diseases by reading novels and memoirs, reviewing online support groups, watching videos and performing role plays. The course will provide experiential learning about advocacy groups for patients and their families through first-hand interviews. Students will engage in role play scenarios throughout the course.
Taught by: Kathleen Valverde, MS
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GENC 604 Reproductive and Developmental Genetics
A variety of topics in reproductive genetics will be covered in this course. Topics include a review of human development from gametogenesis and fertilization to organogenesis, emphasizing the genetic basis of these complex events and how teratogenic factors lead to abnormal development. The common indications for prenatal genetic counseling, including advanced maternal age, first-trimester screening, NIPS, ultrasound anomalies, diagnostic procedures, and prenatal complications, will be reviewed. Through the completion of assignments and role plays, students will demonstrate their abilities to critically think through cases, assess risk, and provide patient-centered care. The course will discuss psychosocial issues surrounding fertility counseling as well as perinatal bereavement and palliative care.
Taught by: Rose Giardine, MS, and Erica Schindewolf Bobenchik, MS
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GENC 611 Cancer Genetics
In this course, students will gain an understanding of cancer genetics. Topics covered include an overview of cancer biology and clinical oncology; diagnostics and predictive testing in cancer, including familial mutations in BRCA 1 and 2, and panel testing; cancer risk assessment; psychosocial aspects of cancer genetic testing and counseling. Students will examine specific inherited disorders predisposing individuals to malignancies and of counseling for familial cancers. Students will learn how to conduct a genetic counseling session for inherited cancer syndromes such as HBOC and Lynch syndrome and to identify when genetic testing panels are indicated. In addition, the course will cover somatic cancer NGS technology and its relevance in cancer genetic counseling.
Taught by: Dana Farengo Clark, MS; Danielle McKenna, MS, and Jacqueline Powers, MS
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GENC 612 Genetic Counseling Theory and Practice I
Students will learn the basic organization of a genetic counseling session including contracting, building rapport and eliciting patient goals in a patient encounter. Active listening and interviewing skills will be taught to allow students to respond empathically to patient concerns. Through lectures and various activities such as role play, students will demonstrate their abilities to organize a genetic counseling session. Students will learn to write encounter notes, patient and physician letters, and letters of medical necessity. Instruction to adapt genetic counseling service delivery using telephone genetic counseling and telegenetics models will be provided. Each student will be responsible for reviewing a Genetic Counseling Practice Guideline and sharing its content with the class. Students will gain an appreciation of appropriate professional interactions and expand their understanding of the impact of genetic disease on families. At the end of the semester, all students have the opportunity to complete a genetic counseling session with a standardized patient. Students work with the Experiential Learning and Assessment Center at the Perelman School of Medicine. The highly skilled staff ensures safe, measurable, and authentic learning with qualified standardized patients.
Taught by: Lisa Kessler, M.S.
Activity: Lecture
1.0 Course Unit
GENC 613 Foundations of Clinical Genetics and Genomic Technologies
In this course, students learn how genetic and molecular principles contribute to the etiology, clinical features, and expression of genetic conditions. They will appreciate how the natural history and variable expressivity of a variety of genetic diagnoses influence differential diagnoses, interpretation of dysmorphology, choices of genetic testing, and test report interpretation. Students will understand the importance of conveying to families the pathophysiology, inheritance pattern, recurrence risk, and management of genetic disorders. In this class, students will learn the principles of pedigree review and Bayesian analysis. The concepts and tools used to analyze and interpret data from next-generation sequencing (NGS) will be discussed, including the nature of mutations and variant analysis. This class will provide students with hands-on opportunities to utilize databases to systemically review and classify variants. Clinical case variant interpretation and clinical relevance will be discussed in terms of its importance in genetic counseling. Case-based learning will help students understand the complexities of genetic diseases and the importance of obtaining an accurate medical history.
Taught by: Cara Skraban, MD, Laura Conway, PhD, Elizabeth DeChene, MS, Livija Medne, MS, and Matthew Dulik, PhD
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GENC 614 Introduction to Genetic Counseling Research
This course will familiarize students with research methodologies in clinical genetics. Students will gain an appreciation for the importance of well-designed research in advancing our understanding of diseases and how best to practice in genetic counseling. Topics include how to formulate testable hypotheses, design appropriate studies, and carry out an appropriate literature review. This course will introduce students to scientific writing and interpretation of the literature. Other topics covered include the IRB process, research ethics, and informed consent, which prepare students to conduct their own research projects. They will be required to obtain CITI training and to work with their thesis committees as they develop their proposals. Students will develop and refine their own IRB proposals before submitting an application to the IRB committee.
Taught by: Laura Conway, PhD
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GENC 620 Medical Genetics I
This year-long course presents a broad overview of concepts in medical genetics including natural history, management and counseling strategies for major pediatric and adult genetics diagnoses and syndromes. Topics covered include chromosomal conditions, hemoglobinopathies, biochemical genetics, cardiovascular genetics, psychiatric genetics, neurogenetics conditions, skeletal dysplasias, and ophthalmological disorders, as well as classic genetic conditions identified by the organ system involved, such as cystic fibrosis. Students will learn the methods available for genetic testing, diagnosis, and treatment of genetic conditions. They will be provided with a broad overview of metabolic and mitochondrial disorders as well as detailed reviews of specific conditions. Newborn screening will be covered in depth. Students will be exposed to future directions of clinical genetics and genetic counseling and its impact on the management and treatment of common conditions. Course directors will attend each class, and guest lecturers with relevant clinical expertise will be invited to share their clinical knowledge.
Taught by: Ian Krantz, MD; Sarah Raible, MS; Holly Dubbs, MS; Colleen Muraresku, MS; Elizabeth McCormick, MS
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GENC 621 Genetic Counseling Theory and Practice II
In this class, students are taught the basic tenets of counseling theory and how they can be applied to genetic counseling sessions. Theories covered include person-centered counseling with its emphasis on genuineness, empathy and positive regard. Narrative Medicine will be covered in detail and students will be required to digitally record a narrative medicine interview with an individual or parent of a patient with a genetic disease. The recordings are then analyzed and critiqued. Standardized patient assessments will be performed to monitor students’ acquisition of more advanced counseling skills. Students will learn the integration of process in the genetic counseling session and to address sensitive patient issues. They will learn to use active listening and value-free communication to manage a genetic counseling session in a culturally responsive manner.
Taught by: Kathleen Valverde, MS
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
GENC 623 Ethical Issues in Genetic Counseling
In this introductory course on bioethics, the content will be tailored to issues that emerge in the context of clinical genetics and genetic research. Though hospital ethics boards advise on the most challenging ethical cases, they often play the simple but crucial role of slowing the conversation down, asking questions of team members, and facilitating calm, reasoned communication regarding the ethical quandaries that staff members pose. Accordingly, this course is taught from the perspective of narrative ethics, which represents moral choice within the detailed context of specific scenarios comprised of characters, motivations, and circumstances. This course will establish and maintain a space where students can develop clinical reasoning skills to consider the major bioethical principles as they relate to specific ethics cases. Class time will be devoted to short lectures and selected video excerpts, individual and group presentations and debates, and extensive discussion guided by a compendium of ethics cases and associated reading assignments that represent the diverse perspectives of different authors.

Taught by: Rebecca Mueller, MS
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GENC 630 Medical Genetics II
This year-long course presents a broad overview of concepts in medical genetics including natural history, management and counseling strategies for major pediatric and adult genetics diagnoses and syndromes. Topics covered include chromosomal conditions, hemoglobinopathies, biochemical genetics, cardiovascular genetics, psychiatric genetics, neurogenetics conditions, skeletal dysplasias, and ophthalmological disorders, as well as classic genetic conditions identified by the organ system involved, such as cystic fibrosis. Students will learn the methods available for genetic testing, diagnosis, and treatment of genetic conditions. They will be provided with a broad overview of metabolic and mitochondrial disorders as well as detailed reviews of specific conditions. Newborn screening will be covered in depth. Students will be exposed to future directions of clinical genetics and genetic counseling and its impact on the management and treatment of common conditions. Course directors will attend each class, and guest lecturers with relevant clinical expertise will be invited to share their clinical knowledge.

Taught by: Ian Krantz, MD, and Sarah Raible, MS
Course usually offered in spring term
Prerequisite: GENC 620
Activity: Lecture
1.0 Course Unit

GENC 631 Genetic Counseling Theory and Practice III
This course provides students with advanced counseling skills such as advanced empathy and confrontation. Students will also explore counseling theories such as solution-focused brief therapy, cognitive behavioral therapy, and family systems models. Discussions regarding counselor issues such as self-disclosure and countertransference will be explored in detail. Additional skills and techniques from the counseling literature will be practiced in role plays to illustrate the usefulness of various counseling techniques in clinical genetics. This course includes an experiential component for the practice of techniques utilizing standardized patients. Students will analyze their standardized patient recordings and identify missed opportunities and areas in which they need to work on their counseling skills. Each student will analyze a case that they were involved with utilizing at least two theories discussed in class.

Taught by: Kathleen Valverde, MS
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GENC 640 Professional Development I
The goals of this seminar are to increase awareness of the many facets of genetic counseling as a career. The genetic counseling profession is rapidly evolving as new diagnostic technologies and treatments are developed. Skills learned by genetic counselors are applicable to many different job situations. Knowledge of these alternative ways in which counselors may work increases a student’s ability to successfully pursue a career. Members of the genetics community from Philadelphia and the surrounding area provide lectures describing the current state of the profession. Selected topics include genetic counseling in a laboratory setting, new treatment options for genetic disease, and how to manage a clinical genetic counseling practice with issues surrounding billing reimbursement and credentialing. This seminar also helps prepare students for the demands of the genetic counseling profession by focusing on emotional well-being through a process group facilitated by a professional counselor. Students prepare essays reflecting on the essential components of an ‘ideal job,’ develop a curriculum vitae and cover letters.

Taught by: Laura Conway
Course usually offered in fall term

GENC 650 Genetic Counseling Rounds I
Once a week, students participate in discussion of clinical cases and recent journal literature. Through their participation, students gain familiarity with the process of reviewing clinical material and providing clinical supervision for their classmates. Presenting clinical and scientific information for group discussion in clinic conferences and patient rounds is an important role for genetic counselors. This seminar provides these experiences in a supportive environment and thus permits skill building in this area. This activity introduces the students to a broad range of diagnoses and methods of managing a case. Discussions of case organization and tailoring a presentation to a specific patient is another aspect of this seminar.
Taught by: Lisa Kessler, M.S.
Activity: Lecture
0.0 Course Units

GENC 655 Genetic Counseling Rounds II
In this continuation of GENC 650, students participate in weekly discussions of clinical cases and recent journal literature. Through their participation, students gain familiarity with the process of reviewing clinical material and providing clinical supervision for their classmates. Presenting clinical and scientific information for group discussion in clinic conferences and patient rounds is an important role for genetic counselors. This seminar provides these experiences in a supportive environment and thus permits skill building in this area. This activity introduces the students to a broad range of diagnoses and methods of managing a case. Discussions of case organization and tailoring a presentation to a specific patient is another aspect of this seminar.
Taught by: Lisa Kessler, M.S.
Course usually offered in spring term
Prerequisite: GENC 650
Activity: Lecture
0.0 Course Units

GENC 670 Internship
In addition to course-based degree requirements, students participate in internships related to the field of genetic counseling. These internships begin in the student’s first term. Internships give students the opportunity to learn in varying practice-based environments including observations with genetic counselors in clinical practice, rotations in a laboratory setting, and placements in a research and/or advocacy capacity with a specific organization or research protocol. Students document their experiences online daily and provide written summaries of their experiences for the Assistant Director to review. Students attend their internships once a week. Genetic counseling supervisors evaluate the students in each of the placements.
Taught by: Lisa Kessler
Activity: Clinic
0.0 Course Units

GENC 680 Clinical Internship
This experiential course will expose genetic counseling students to the genetic counselors’ role in different clinical settings. Clinical supervision is provided in a supportive environment that permits skill building. The courses will introduce students to a broad range of diagnoses and methods of effectively managing patient care. The course is required for all second year students. The clinical internships during the second year consists of four clinical placements in genetics clinics. Students will have a minimum of 20 days in each specialty. They will have exposure to cases representing a wide range of diagnoses and indications seen in a clinical genetics practice and collect at least 50 participatory encounters to satisfy the ACGC requirement. All cases will be supervised by certified genetic counselors to be acceptable for the core case log book. Students will log each case seen for program review including self-reflection about their performance. All students will be evaluated by their clinical supervisor and will prepare case analyses for the assistant director to review.

GENC 990 Thesis
Activity: Independent Study
1.0 Course Unit

Genomics & Comp. Biology (GCB)

GCB 493 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from a historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Prerequisite: BIOL 483 recommended
Taught by: S Berger
Course offered spring; odd-numbered years
Also Offered As: BIOL 493, CAMB 493
Prerequisite: BIOL 221
Activity: Seminar
1.0 Course Unit
GCB 533 Statistics for Genomics and Biomedical Informatics
GCB 533 is an introductory course in probability theory and statistical inference for graduate students in Genomics and Computational Biology. The goal of the course is to provide foundation of basic concepts and tools as well as hands-on practice in their application to problems in genomics. At the completion of the course, students should have an intuitive understanding of basic probability and statistical inference and be prepared to select and execute appropriate statistical approaches in their future research.
Activity: Lecture
1.0 Course Unit

GCB 534 Experimental Genome Science
This course will survey methods and questions in experimental genomics, including next generation sequencing methods, genomic sequencing in humans and model organisms, functional genomics, proteomics, and applications of genomics methods. Students will be expected to review and discuss current literature and to propose new experiments based on material learned in the course. Prerequisite: Undergraduates and Masters students need BIOL 431.
Taught by: C. Brown, J. Murray
Also Offered As: PHRM 534
Prerequisite: BIOL 431
Activity: Lecture
1.0 Course Unit

GCB 535 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 437/GCB 536 and GCB/CIS/BIOL537 are more appropriate. Prerequisites: An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as Biol 526 (Experimental Principles in Cell and Molecular Biology), BIOL 527 (Advanced Molecular Genetics), BIOL 540 (Genetic Systems), or equivalent, is a prerequisite.
Taught by: B Voight, C Greene
Course usually offered in spring term
Also Offered As: CIS 535, MTR 535, PHRM 535
Prerequisite: BIOL 421 OR BIOL 526 OR BIOL 527 OR BIOL 528 OR BIOL 540
Activity: Lecture
1.0 Course Unit

GCB 536 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the ‘pencil and paper’ level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis. Prerequisite: College level introductory biology required; undergraduate or graduate level statistics taken previously or concurrently required; molecular biology and/or genetics encouraged; programming experience encouraged
Taught by: Kim
Course usually offered in fall term
Also Offered As: BIOL 536, CIS 536
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121) AND STAT 111 AND STAT 112
Activity: Lecture
1.0 Course Unit

GCB 536 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB. Prerequisite: Graduate standing or permission of the instructor.
One-term course offered either term
Also Offered As: AMCS 567, BE 567
Activity: Lecture
1.0 Course Unit

GCB 577 Advanced Epigenetics Technology
Second year students in GCB, CAMB (G&E), or IGG programs using genomics methods to measure transcriptomics and epigenomics changes in their experimental systems. The goal is to familiarize students with the latest cutting-edge genomics tools and cover solutions to major experimental and computational challenges in the investigation of genome-wide epigenetic data sets. Students will develop competence in (i) variations of experimental techniques improving resolution and throughput, (ii) issues related to the computational analyses closely related to the various genome-wide assays used to probe epigenetic processes and signals, (iii) computational approaches useful to overcome pitfalls associated to the analysis of a given epigenetic data modality, (iv) methods, techniques and studies on the integration of multi-layer epigenetic data sets.
Taught by: Golnaz Vahedi
Course usually offered in spring term
Also Offered As: CAMB 577, IMUN 577
Prerequisite: (BIOL 483 OR BIOL 493) AND GCB 534 AND (GCB 535 OR GCB 536)
Activity: Lecture
1.0 Course Unit
GCB 585 Wistar Institute Cancer Biology Course: Signaling Pathways in Cancer

This course is intended to provide foundational information about the molecular basis of cancer. When necessary, the significance of this information for clinical aspects of cancer is also discussed. The main theme centers around cell cycle checkpoints with specific emphasis on the biochemistry and genetics of DNA damage signaling pathways, DNA damage checkpoints, mitotic checkpoints, and their relevance to human cancer. The course is taught by the organizers and guest lecturers from universities and research institutions in the Northeast. Following every lecture, students present a research paper related to the topic of that lecture. The course is intended for first and second-year graduate students but all graduate students are welcome to attend. Prerequisite: Undergraduates and Master's degree candidates require permission from the course directors.

Taught by: Skordalakes and Murphy
Course usually offered in fall term
Also Offered As: BMB 585
Activity: Lecture
1.0 Course Unit

GCB 699 Lab Rotation

Activity: Laboratory
1.0 Course Unit

GCB 752 Genomics

Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete genomic sequence and set of cellular instructions encoded in the DNA of specific organisms, including homo sapiens, dozens of bacterial species, the yeast Saccharomyces cerevisiae, the nematode C. elegans, and the fruit fly Drosophila melanogaster. The goals of the course include the following: 1. introduce the basic principles involved in sequencing genomes, 2. familiarize the students with new instrumentation, informative tools, and laboratory automation technologies related to genomics, 3. teach the students how to access the information and biological materials that are being developed in genomics and 4. examine how these new tools and resources are being applied to basic and translational research. This will be accomplished through in depth discussion of classic and recent papers. Prerequisite: Permission of Instructor.

Geology (GEOL)

GEOL 100 Introduction to Geology

An introduction to processes and forces that form the surface and the interior of the Earth. Topics include, changes in climate, the history of life, as well as earth resources and their uses. Field trips required.
For BA Students: Physical World Sector
Taught by: Omar
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Field trips required.

GEOL 103 Natural Disturbances and Human Disasters

Natural disturbances play a fundamental role in sculpturing landscapes and structuring natural and human-based ecosystems. This course explores the natural and social science of disturbances by analyzing their geologic causes, their ecological and social consequences, and the role of human behavior in disaster reduction and mitigation. Volcanoes, earthquakes, floods, droughts, fires, and extraterrestrial impacts are analyzed and compared.
For BA Students: Physical World Sector
Taught by: Phipps
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 109 Introduction to Geotechnical Science

Open to architectural and engineering majors as well as Ben Franklin Scholars. Field trips. Relations of rocks, rock structures, soils, ground water, and geologic agents to architectural, engineering, and land-use problems.
For BA Students: Physical World Sector
Taught by: Omar
Course usually offered in fall term
Activity: Lecture
1.5 Course Unit

GEOL 111 Geology Laboratory

Prerequisite: GEOL 100 preferably taken concurrently.
Taught by: Omar
One-term course offered either term
Prerequisite: GEOL 100
Activity: Laboratory
1.0 Course Unit
Notes: Field trips required.

GEOL 111 Geology Laboratory

Prerequisite: GEOL 100
One-term course offered either term
Prerequisite: GEOL 100
Activity: Laboratory
1.0 Course Unit
Notes: Field trips required.

GEOL 125 Earth and Life Through Time

Origin of Earth, continents, and life. Continental movements, changing climates, and evolving life.
For BA Students: Physical World Sector
Taught by: Perez-Rodriguez
One-term course offered either term
Activity: Lecture
1.0 Course Unit
GEOL 130 Oceanography
The oceans cover over 2/3 of the Earth's surface. This course introduces basic oceanographic concepts such as plate tectonics, marine sediments, physical and chemical properties of seawater, ocean circulation, air-sea interactions, waves, tides, nutrient cycles in the ocean, biology of the oceans, and environmental issues related to the marine environment.
For BA Students: Physical World Sector
Taught by: Dmochowski
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 201 Mineralogy
Crystallography, representative minerals, their chemical and physical properties. Use of petrographic microscope in identifying common rock-forming minerals in thin section.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 531
Prerequisite: CHEM 101 AND GEOL 100
Activity: Lecture
1.0 Course Unit

GEOL 204 Global Climate Change
Public perceptions and attitudes concerning the causes and importance of global warming have changed. Global Climate Change provides a sound theoretical understanding of global warming through an appreciation of the Earth's climate system and how and why this has changed through time. We will describe progress in understanding of the human and natural drivers of climate change, climate processes and attribution, and estimates of projected future climate change. We will assess scientific, technical, and socio-economic information relevant for the understanding of climate change, its potential impacts and options for adaptation and mitigation.
Taught by: Marinov
Course usually offered in fall term
Prerequisite: ENVS 100 OR GEOL 100 OR GEOL 103 OR GEOL 125 OR GEOL 130
Activity: Lecture
1.0 Course Unit

GEOL 205 Paleontology
Geologic history of invertebrates and their inferred life habits, paleoecology, and evolution. Introduction to paleobotany and vertebrate paleontology. Two field trips required.
For BA Students: Living World Sector
Taught by: Sallan
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Two field trips required.

GEOL 206 Stratigraphy
Introductory sedimentary concepts, stratigraphic principles, depositional environments, and interpretation of the rock record in a paleoecological setting. Two field trips, field project.
Taught by: Jerolmack
Course usually offered in fall term
Also Offered As: GEOL 506
Prerequisite: GEOL 100
Activity: Lecture
1.0 Course Unit
Notes: Two field trips, field project

GEOL 208 Structural Geology
Introduction to deformation as a fundamental geologic process. Stress and strain; rock mechanics. Definition, measurement, geometrical and statistical analysis, and interpretation of structural features. Structural problems in the field. Maps, cross-sections, and three-dimensional visualization; regional structural geology. Three field trips required.
Prerequisite: PHYS 150 strongly recommended.
Taught by: Phipps
Course usually offered in spring term
Prerequisite: GEOL 100 AND GEOL 111
Activity: Lecture
1.0 Course Unit
Notes: Three field trips required

GEOL 299 Independent Study
Directed study for individuals or small groups under close supervision of a faculty member. May be repeated for credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be repeated for credit

GEOL 305 Earth Surface Processes
Patterns on the Earth's surface arise due to the transport of sediment by water and wind, with energy that is supplied by climate and tectonic deformation of the solid Earth. This course presents a treatment of the processes of erosion and deposition that shape landscapes. Emphasis will be placed on using simple physical principles as a tool for (a) understanding landscape patterns including drainage networks, river channels and deltas, desert dunes, and submarine channels, (b) reconstructing past environmental conditions using the sedimentary record, and (c) the management of rivers and landscapes under present and future climate scenarios. The course will conclude with a critical assessment of landscape evolution on other planets, including Mars.
Course usually offered in spring term
Also Offered As: GEOL 545
Activity: Lecture
1.0 Course Unit
Notes: This course includes two required weekend field trips, and a hands-on laboratory.

GEOL 317 Petrology and Petrography
Occurrences and origins of igneous and metamorphic rocks; phase equilibria in heterogeneous systems. Laboratory study of rocks and thin sections as a tool in interpretation of petrogenesis. Two field trips.
Taught by: Omar
Course usually offered in spring term
Also Offered As: GEOL 417
Prerequisite: GEOL 201
Activity: Lecture
1.0 Course Unit
Notes: Two field trips
GEOL 318 Glaciers, Ice & Climate
All forms of frozen water at Earth's surface define the cryosphere. These icy environments are an integral part of the global climate system, with important linkages and feedbacks resulting from their influences on surface energy and moisture fluxes, clouds, precipitation, hydrology, and circulation in the atmosphere and oceans. This course will survey the various components of the cryosphere and their interactions with climate, with a strong emphasis on the dynamics of glaciers and ice sheets. Broad topics to be covered are 1) the rudimentary mechanics of glacier and ice sheet flow, 2) fast-flowing ice streams and factors limiting their motion, 3) ice-quakes and their origins, 4) the nature of climate data recorded in natural ice bodies, 5) the influence of climate on the stability of ice sheets and glaciers, and 6) glacier-like flow on other planetary bodies. This will be a lecture-based course with written assignments and problems sets.
Prerequisite: Students should have basic knowledge of Calculus.
Taught by: Goldsby
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit

GEOL 399 Environmental Studies Research Seminar for Juniors
This seminar is designed to help Juniors prepare for the Senior Thesis research. Topic selection, advisor identification, funding options, and basic research methods will be discussed.
Taught by: Andrews
Course usually offered in spring term
Also Offered As: ENVS 399
Prerequisite: ENVS 100
Activity: Seminar
1.0 Course Unit

GEOL 400 Topics in Earth Science
In depth examination of special topics in Earth Science. Topics will change with instructor and course offerings.
Taught by: TBA
Activity: Seminar
1.0 Course Unit

GEOL 409 Intro to Remote Sensing
This course will introduce students to the principles of remote sensing, characteristics of remote sensors, and remote sensing applications. Image acquisition, data collection in the electromagnetic spectrum, and data set manipulations for earth and environmental science applications will be emphasized. We will cover fundamental knowledge of the physics of remote sensing; aerial photographic techniques; multispectral, hyperspectral, thermal, and other image analysis. Students will pursue an independent research project using remote sensing tools, and at the end of the semester should have a good understanding and the basic skills of remote sensing.
Taught by: Dmochowski
Also Offered As: GEOL 509
Prerequisite: MATH 114 AND PHYS 151
Activity: Seminar
1.0 Course Unit

GEOL 411 Intro Soil Science
Soil is considered the 'skin of the Earth', with interfaces between the lithosphere, hydrosphere, atmosphere, and biosphere. It is a mixture of minerals, organic matter, gases, liquids and a myriad of organisms that can support plant life. As such, soil is a natural body that exists as part of the environment. This course will examine the nature, properties, formation and environmental functions of soil.
Taught by: Plante
Prerequisite: GEOL 100
Activity: Lecture
1.0 Course Unit

GEOL 417 Advanced Petrology
Occurrences and origins of igneous and metamorphic rocks; phase equilibria in heterogeneous systems. Laboratory study of rocks and thin sections as a tool in interpretation of petrogenesis. Two field trips.
Taught by: Omar
Course usually offered in spring term
Also Offered As: GEOL 317
Prerequisite: GEOL 201
Activity: Lecture
1.0 Course Unit

GEOL 418 Geochemistry
This course provides a comprehensive introduction to theory and applications of chemistry in the earth and environmental sciences. Theory covered will include atomic structure, chemical bonding, cosmic abundances, nucleosynthesis, radioactive decay, dating of geological materials, stable isotopes, acid-base equilibria, salts and solutions, and oxidation-reduction reactions. Applications will emphasize oceanography, atmospheric sciences and environmental chemistry, as well as other topics depending on the interests of the class. Although we will review the basics, this course is intended to supplement, rather than to replace, courses offered in the Department of Chemistry. It is appropriate for advanced undergraduate as well as graduate students in Geology, Environmental Science, Chemistry and other sciences, who wish to have a better understanding of these important chemical processes.
Taught by: Giere
Course not offered every year
Activity: Lecture
1.0 Course Unit

GEOL 420 Introduction to Geophysics
This course will cover the application of geophysical investigation techniques to problems of the earth's planetary structure, local subsurface structure and mineral prospecting. The topics will include principles of geophysical measurements and interpretation with emphasis on gravity measurement, isostasy, geomagnetism, seismic refraction and reflection, electrical prospecting, electromagnetics and ground radar.
Prerequisite: If course requirement no met, request permission.
Taught by: Goldsby
Course not offered every year
Prerequisite: GEOL 100 OR GEOL 109
Activity: Lecture
1.0 Course Unit
GEOL 421 Biogeochemistry
Humans have an enormous impact on the global movement of chemical materials. Biogeochemistry has grown to be the principal scientific discipline to examine the flow of elements through the global earth systems and to examine human impacts on the global environment. This course will introduce and investigate processes and factor controlling the biogeochemical cycles of elements with and between the hydrosphere, lithosphere, atmosphere and biosphere. Students will apply principles learned in lectures by building simple computer-based biogeochemical models.
Taught by: Plante
Course usually offered in spring term
Also Offered As: GEOL 541
Prerequisite: ENVS 100 OR GEOL 100
Activity: Lecture
1.0 Course Unit

GEOL 424 Geomicrobiology
Microorganisms inhabit almost every conceivable environment on the planet’s surface, and extend the biosphere to depths of several kilometers into the crust. Significantly, the chemical reactivity and metabolic diversity displayed by microbial communities make them integral components of global elemental cycles, from mineral dissolution and precipitation reactions, to aqueous reduction-oxidation processes. In that regard, microorganisms have helped shape our planet over the past 4 billion years and make it habitable for higher forms of life. In this course we will evaluate the geological consequences of microbial activities, taking an interdisciplinary and ‘global’ view of microbe-environment interactions.
Taught by: Perez-Rodriguez
Prerequisite: BIOL 101 OR CHEM 101
Activity: Lecture
1.0 Course Unit

GEOL 430 Atmospheric Chemistry
An introduction to the chemistry of the earth’s atmosphere. Covers evolution of the earth’s atmosphere, its physical and chemical structure, its natural chemical composition and oxidative properties, and human impacts, including photochemistry, and aerosols; stratospheric ozone loss, tropospheric pollution; climate change, and acidic deposition. Chemistry in the atmosphere of other planets in our solar system will be covered.
Taught by: Francisco
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 477 Introduction to Vertebrate Paleontology
Taught by: Dodson
Course not offered every year
Prerequisite: GEOL 100 OR GEOL 205 OR BIOL 101
Activity: Lecture
1.0 Course Unit

GEOL 479 Macroevolution
Macroevolution, or evolution above the population level and on long timescales, as a field addresses fundamental questions about the origins of life, past and present. These include but are not limited to: How are highly dissimilar species related? Why are animals on distant continents so similar? How and when did major groups, like birds or mammals, originate? What drives evolutionary arms races? Why are there so many more species of beetle than crocodile? Why are there more species in the tropics than the arctic? Did dinosaurs prevent the diversification of mammals? Why do some animals survive mass extinction? How can invasive species spread so rapidly? Students will learn important concepts underlying our understanding of modern biodiversity and the fossil record, as well as how to use different methods and lines of evidence, including evolutionary trees (phylogeny), fossil databases, past climate and global events, mathematical modeling, and even modern genomics, to answer fundamental questions about the evolution of life.
Taught by: Lauren Sallan
Activity: Lecture
1.0 Course Unit

GEOL 498 Senior Thesis
The culmination of the Earth Science major. Students, while working with an advisor in their concentration, conduct research and write a thesis. Prerequisite: GEOL 400-level and declaration of the EASC major. The Earth Science major, as of the fall of 2008, requires 1 semester of GEOL 399 and two semesters of GEOL 498.
Taught by: Dmochowski
Two terms. student may enter either term.
Activity: Senior Thesis
0.5 Course Units
Notes: The Earth Science major, as of the fall of 2008, requires 1 semester of GEOL 399 and two semesters of GEOL 498.

GEOL 508 The Geology and Geography of Energy Resources
This course will survey the way geology controls the formation and location of energy resources. Questions we'll address include, 'How are oil and gas fields formed?', 'Why does the Middle East have so much oil?', 'What are the best locations in the US for wind and solar energy generation, and why?'. We will discuss hydrocarbon, nuclear, solar, wind, and tidal energy sources. Prerequisite: Possible field trips.
Taught by: Phipps
Course not offered every year
Prerequisite: GEOL 100
Activity: Seminar
1.0 Course Unit
Notes: Possible field trips.
GEOL 509 Intro to Remote Sensing
This course will introduce graduate students to the principles of remote sensing, characteristics of remote sensors, and remote sensing applications. Image acquisition, data collection in the electromagnetic spectrum, and data set manipulations for earth and environmental science applications will be emphasized. We will cover fundamental knowledge of the physics of remote sensing; aerial photographic techniques; multispectral, hyperspectral, thermal, and other image analysis. Students will pursue an independent research project using remote sensing tools, and at the end of the semester should have a good understanding and the basic skills of remote sensing. Expectations for the graduate student independent research projects will be at the graduate level and can relate to their capstone or Ph.D. thesis research topics.
Taught by: Dmochowski
Also Offered As: GEOL 409
Prerequisite: MATH 114 AND PHYS 151
Activity: Seminar
1.0 Course Unit

GEOL 510 Geophysical Fluid Dynamics
This class will discuss physical principles fundamental to the theoretical, observational, and experimental study of geophysical fluids, the equations of motion for rotating fluids; hydrostatic and Boussinesq approximations; circulation theorem; conservation of potential vorticity; scale analysis, geostrophic wind, quasigeostrophic system; wave theory and applications, flow instabilities, geophysical boundary layers. Depending on student interest, the class will be adapted to include applications from Oceanography, Meteorology, Geophysics or Engineering.
Taught by: Nathan Paldor
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit

GEOL 515 Evolution/Revolution of Land Ecosystems
Origin and diversification of land ecosystems. Interaction between plants and animals. Effects of past climatic change and other external factors. The importance of past changes in land ecosystems to our understanding of current global change.
Taught by: Sallan
Course not offered every year
Activity: Seminar
1.0 Course Unit

GEOL 516 Paleocology Discovering Lost Ecosystems
Paleocology, or ecology in the fossil record,is the study of how interactions between species have developed over time and how ecosystems and environmental change have shaped the evolution of life and biodiversity.It also involves rebuilding lost communities from fossil evidence to provide context for the origins of modern life and modern ecosystems.This seminar course will survey major topics in Paleocology, including of ecosystems,the long-term connections between habitat, life mode and biodiversity as well as the distribution of life (e.g. paleobiogeography), escalation between predators and prey, competition between invasive and resident species, and how we can infer the ecology and behavior of long-dead organisms. Students will lead discussions on select concepts and choose one topic to investigate in depth.
Course not offered every year
Activity: Seminar
1.0 Course Unit

GEOL 528 Aqueous Geochemistry
This course is designed to provide the graduate student with an understanding of the fundamentals of aqueous geochemistry.The chemistry of water,air and soil will be studied from an environmental perspective.The nature, composition, structure, and properties of pollutants coupled with the major chemical mechanisms controlling the occurrence and mobility of chemicals in the environment will also be studied.Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with aqueous geochemistry concepts applicable to the environmental field. Environmental issues that will be covered include acid deposition, toxic metal contamination, deforestation,and anthropogenic perturbed aspects of the earth’s hydrosphere.
Taught by: Andrews
Course not offered every year
Prerequisite: GEOL 100
Activity: Lecture
1.0 Course Unit

GEOL 531 Advanced Mineralogy
Advanced crystallography, representative minerals, their chemical and physical properties. Use of petrographic microscope in identifying common rock-forming minerals in thin section.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 201
Prerequisite: GEOL 100 AND (CHEM 001 OR CHEM 101)
Activity: Lecture
1.0 Course Unit

GEOL 540 Geotectonics
Bulk structure of the Earth. Plate tectonics and plate boundaries. Plumes, rifting, and intraplate tectonics. Geotectonics and seismicity.
Taught by: Phipps
Course not offered every year
Prerequisite: (GEOL 205 OR GEOL 206 OR GEOL 208 OR GEOL 317) AND GEOL 420
Activity: Lecture
1.0 Course Unit
Notes: Field trip

GEOL 541 Advanced Geochemistry
Taught by: Plante
Course usually offered in spring term
Also Offered As: GEOL 421
Activity: Lecture
1.0 Course Unit
GEOL 545 Advanced Earth Surface Processes
Pattern on the Earth's surface arise due to the transport of sediment by water and wind, with energy that is supplied by climate and tectonic deformation of the solid Earth. This course presents a treatment of the processes of erosion and deposition that shape landscapes. Emphasis will be placed on using simple physical principles as a tool for (a) understanding landscape patterns including drainage networks, river channels and deltas, desert dunes, and submarine channels, (b) reconstructing past environmental conditions using the sedimentary record, and (c) the management of rivers and landscapes under present and future climate scenarios. The course will conclude with a critical assessment of landscape evolution on other planets, including Mars.
Course usually offered in spring term
Also Offered As: GEOL 305
Activity: Lecture
1.0 Course Unit

GEOL 599 Independent Study
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

GEOL 604 Geostatistical Analysis
Univariate and multivariate approaches to the analysis of spatial correlation and variability. Many disciplines, including geology, ecology and the environmental sciences regularly need to analyze and make predictions from data that is spatially autocorrelated. Mine reserve estimation, pollutant dispersal and the use of randomization tests in ecology are examples of where spatial statistics may be applied.
Prerequisite: BIOL 556 suggested or other Inferential Statistics course, covering uni- and ulti-variate techniques.
Taught by: Vann
Course usually offered in fall term
Prerequisite: STAT 101
Activity: Lecture
1.0 Course Unit

GEOL 615 Advanced Vertebrate Paleontology Seminar
Topics in vertebrate paleontology and paleoecology. May be repeated for credit.
Taught by: Dodson
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

GEOL 618 Fundamentals of Air Pollution
This course will cover various topics related to Air Quality. Initial lectures will cover the history of air pollution, discussions of the Clean Air Act and composition of the atmosphere. We will then progress to discussion of atmospheric pollutants and sources of those pollutants. Additional topics will include: fate of atmospheric pollutants (transport and dispersion mechanisms), effects of air pollution (health and environmental effects), urban smog, acid rain, climate change, ozone depletion in the stratosphere, air quality criteria, and engineering controls.
Taught by: Andrews
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

GEOL 619 Instrumentation for the Geosciences
An introduction to the theory, operation and application of modern analytical instrumentation used in geo- and environmental sciences. Primarily focused on laboratory instrumentation such as mass spectroscopy, elemental analyses and x-ray techniques. Some field instruments will be introduced as well. Students will be expected to develop projects utilizing the various instruments.
Taught by: Vann
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

GEOL 620 Applied and Environmental Geophysics
The application of geophysical investigation techniques to problems of the local and shallow subsurface structure of the earth. The application of geophysical measurements and interpretation for environmental site characterizations, locating buried structures, groundwater investigations, and identifying geotechnical hazards with emphasis on gravity methods, seismic refraction and reflection, electrical resistivity, electromagnetic methods, ground penetrating radar, and borehole nuclear logging.
Prerequisite: MSAG Required Course
Taught by: Sauder
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: MSAG Required Course

GEOL 621 Field Methods in Biogeochemistry
This field- and lab-based course will examine a set of methods for the study and quantification of biochemical processes in terrestrial and aquatic systems. We will focus on field-based measurements, as well as sample collection and laboratory analyses of fluxes of carbon and nutrient elements, including photosynthesis, respiration, dissolved and suspended nutrient fluxes in streams.
Taught by: Plante
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
GEOL 650 Environmental Due Diligence
Evaluation of environmental contamination and liability is an important tool during acquisition of real estate property, and a standard work product in the environmental consulting field. This course will cover the purpose and history of the Superfund law, the various classifications of Superfund liable parties, and protections against Superfund liability, specifically with regard to bona fide prospective purchasers (BFPP). In the context of the BFPP liability defense the course will focus on the performance of 'All Appropriate Inquiry' for the presence of environmental contamination (e.g. Phase I environmental site assessment). Our study of 'All Appropriate Inquiry' will include evaluation of historical maps and other resources, aerial photography, chain-of-title documentation, and governmental database information pertaining to known contaminated sites in the area of select properties on or near campus. Site visits will be performed to gain experience and knowledge for the identification of recognized environmental conditions. Students will prepare environmental reports for select properties and will have an opportunity to hone technical writing skills.
Taught by: Cron
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

GEOL 651 Geocomputations
Review and applications of selected methods from differential equations, advanced engineering mathematics and geostatistics to problems encountered in geology, engineering geology, geophysics and hydrology.
Taught by: Mastropaolo
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 653 Introduction to Hydrology
Introductcion to the basic principles of the hydrologic cycle and water budgets, precipitation and infiltration, evaporation and transpiration, stream flow, hydrograph analysis (floods), subsurface and groundwater flow, well hydraulics, water quality, and frequency analysis.
Taught by: Sauder
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 654 Geomechanics: Solids
Mechanical properties of solid and fluid earth materials, stress and strain, earth pressures in soil and rock, tunnels, piles, and piers; flow through gates, weirs, spillways and culverts, hydraulics, seepage and Darcy's law as applied to the hydrologic sciences.
Taught by: Duda
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

GEOL 656 Fate and Transport of Pollutants
This course covers basic groundwater flow and solute transport modeling in one-, two- and three-dimensions. After first reviewing the principles of modeling, the student will gain hands-on experience by conducting simulations on the computer. The modeling programs used in the course are MODFLOW (USGS), MT3D, and the US Army Corps of Engineers GMS (Groundwater Modeling System).
Taught by: Mastropaolo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 658 Environmental Statistical Analysis
Statistical analysis of data from geological, geotechnical, and geohydrologic sources.
Taught by: Mastropaolo
One-term course offered either term
Activity: Seminar
1.0 Course Unit

GEOL 661 Environmental Groundwater Hydrology
This course is designed to introduce the major definitions and concepts regarding groundwater flow and contaminant transport. The theory and understanding of groundwater, including mathematical derivations of governing equations used to model groundwater flow and contaminant transport, will be discussed and applications to environmental problems addressed. Upon completion of this course, students should expect to have acquired the skills necessary to pursue course work in flow and transport numerical and analytical modeling.
Taught by: Mastropaolo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 663 Geochemical Modeling
This course is designed to introduce the major concepts regarding geochemistry and geochemical modeling. The course introduces two United States Geological Survey (USGS) computer models, PHREEQC, a geochemical speciation model, and PHAST, a transport module which is coupled with PHREEQC output. These models are highly respected, well-renowned models that are free-ware via the USGS, complete with documentation. Once familiar with the models, the student can continue to work with them beyond the course experience. PHREEQC is designed to perform a variety of aqueous geochemical calculations and can be used to simulate chemical reactions and transport processes in natural or polluted waters. PHREEQC is capable of modeling both equilibrium and kinetic reactions. Some of the simulations pursued during the course include: Speciation of precipitation water; Iron speciation; Zinc sorption onto hydrous ferric oxide; Oxidation of organic carbon and the sequence of electron donors in natural waters; Benzene advective transport in groundwater; TCE transport and degradation.
Taught by: Mastropaolo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 666 Geology Field Work
Directed independent field work. Prerequisite: 4-8 weeks during the summer.
Taught by: Giegengack
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: 4-8 weeks during the summer.

GEOL 668 Geomechanics: Fluids
Static and Dynamic mechanical properties of fluid in earth materials, as applied to the Hydrologic Sciences; Principles of Fluid Mechanics and Hydraulics applied to open channel flow in earth materials; flow through gates, weirs, spillways, and culverts; Applications of Darcy's Law to subsurface flow and seepage.
Taught by: Duda
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
GEOL 670 Engineering Geology: Rock Mechanics
This course focuses on the rock mechanics aspects of Engineering Geology. The theme is characterization of the geologic environment for engineering and environmental investigations. Covered are the various exploration tools and methods, including: Collection and analysis of existing engineering data; Interpretation of remotely sensed imagery; Field and laboratory measurements of material properties; Measurement and characterization of rock discontinuities; Rock slope stability analysis; Stress, strain and failure of rocks and the importance of scale; Rock core logging; Rock mass rating; Rock support and reinforcement; Rock excavation, blasting and blast monitoring and control.
Taught by: Freed
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 671 Engineering Geology: Surficial Materials & Processes
As the human population continues to grow, the environment and earth's resources become more important. This course will concentrate on the occurrence and distribution of earth's surficial materials and their engineering and environmental properties. The engineering classification, testing, and use of the earth materials will be emphasized. The geohazards of surficial processes will also be studied in the context of geologic history and the planning and use of the geologic environment.
Taught by: Freed
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 672 Landslides
Landslides are important geomorphic agents in mountainous terrain, mobilizing sediment and playing a key role in controlling relief and elevation. The work of landslides is often characterized by their magnitude-frequency, which also has direct implications for people, property, and infrastructure in mountainous terrain, and for the approaches taken to minimize the risk from landslides. This course will introduce students to a conceptual understanding of landslides at a range of spatial scales, including the mechanics of the processes governing landslides from trigger to deposition. Methods of slope monitoring and the varied approaches to landslide risk mitigation and management will be explored, with a range of geotechnical and environmental applications. This course includes lab-based sessions to demonstrate simple techniques to understand fundamental landslide processes, and applications of GIS technology to explore slope monitoring and failure prediction.
Taught by: Siobhan Whadcoat
Activity: Lecture
1.0 Course Unit

GEOL 680 Interpretation of Near-surface Geologic Structure for Engineering and Environment
The course introduces the basic principles of structural geology and their applications to engineering and environmental site characterization. Includes the mechanisms for the deformation and failure of the earth's crust, folded and faulted structures, and the orthogonal and stereographic solutions to characterize near-surface geologic structure. It also includes the construction and interpretation of geologic maps, geologic cross sections and block diagrams. Emphasis is placed on the graphical representation of subsurface data, including the use of selected computer programs, and the integration of the data to solve problems encountered in engineering and environmental projects.
Taught by: Freed
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 699 Project Design
This course is designed to prepare Master of Science in Applied Geosciences students to undertake their Project Design exercise. In this course, we discuss how to identify an appropriate research project, how to design a research plan, and how to prepare a detailed proposal. By the end of the course, each student is expected to have completed a Project Design proposal.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

GEOL 750 Topics in earth Science
This course will use the weekly EES seminar series to survey historic breakthrough papers or topics in the earth sciences, as well as modern papers - written by the seminar speakers - that often put the classics in perspective. Graduate students (Ph.D. only) in the Department of Earth and Environmental Science will engage in the material through reading, presentation, and discussion. The course has several goals. (1.) To engender an understanding and appreciation of major breakthroughs in our field. (2.) To develop skills in presenting and discussing scientific results. And (3.) to refine students’ understanding of what constitutes great science.
Taught by: Sallan
Activity: Seminar
1.0 Course Unit
Notes: Open only to PhD students

GEOL 999 Independent Study and Research
Directed study for individuals or small groups under supervision of a faculty member. One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Hours and credits to be arranged.
**Germanic Languages (GRMN)**

**GRMN 011 Bad Taste**

‘Beauty is not a quality inherent to things: it only exists in the mind of the beholder.’ (David Hume) Most of us can recognize bad taste as soon as we see it: Harlequin romances, Elvis on black velvet, lawn ornaments. But bad taste also has a history, and kitsch has been identified as a peculiarly modern invention related to capitalism and consumerism. Beginning with a discussion of taste in the eighteenth century, we will investigate under what conditions good taste can go bad, for example when it is the object of mass reproduction, and, on the other hand, why bad taste in recent times has increasingly been viewed in positive terms. Categories such as the cute, the sentimental, the popular, the miniature, kitsch, and camp will be explored. We will also ask what forms of ideological work have been done by this brand of aesthetics, for example in the connection between politics and kitsch, femininity and the low-brow, or camp and queer identity. Writers and film-makers to be discussed include: Hume, Kant, Goethe, Flaubert, Bourdieu, Sacher-Masoch, Thomas Mann, Nabokov, Benjamin, Greenberg, Sontag, John Waters.

Taught by: MacLeod

Course not offered every year

Activity: Seminar

1.0 Course Unit

Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

**GRMN 016 Babylon Berlin: German Crime Books**

Why are crime books and crime shows so popular? 2017 marked a moment in time when a serialized domestic TV show took off in Germany like wild fire. The first three episodes of 'Babylon Berlin' were seen by an average 7.8 million viewers on ARD last year, achieving a 24.5% share and reaching a peak of 8.5 million. On Sky, it boasted the best ratings ever for a non-English series and was only beaten overall by the seventh season of 'Game of Thrones.' Babylon Berlin is based on Volker Kutscher's crime books. Thus, this course will trace the success of German crime books as a best-selling genre by analyzing the appeal of the whodunit format and by questioning the transnational appeal of this genre. 'Babylon Berlin' exemplifies the success of German crime books because the treatment of historical events combined with a critical eye toward the Zeitgeist of cultural products sheds light on the representation of culture and its co-construction of a transnational identity.

Taught by: Frei

Course not offered every year

Activity: Seminar

1.0 Course Unit

**GRMN 023 In Praise of the Small in Literature and the Arts**

We can memorize aphorisms and jokes, carry miniature portraits with us, and feel playful in handling small objects. This seminar will ask us to pay attention to smaller texts, art works, and objects that may easily be overlooked. In addition to reading brief texts and looking at images and objects, we will also read texts on the history and theory of short genres and the small.

Taught by: Weissberg

Course not offered every year

Also Offered As: COML 023

Activity: Seminar

1.0 Course Unit

Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

**GRMN 026 Jews and China: Views from Two Perspectives**

Jews in China??? Who knew??? The history of the Jews in China, both modern and medieval, is an unexpected and fascinating case of cultural exchange. Even earlier than the 10th century, Jewish trader from India or Persia on the Silk Road, settled in Kaileng, the capital of the Northern Song Dynasty, and established a Jewish community that lasted through the nineteenth century. In the mid-nineteenth century, Jewish merchants, mainly from Iraq, arrived in China and played a major role in the building of modern Shanghai. After 1898, Jews from Russia settled in the northern Chinese city of Harbin, first as traders and later as refugees from the Bolshevik Revolution and Russian Civil War. In the first decades of the twentieth century, a few Jews from Poland and Russia visited China as tourists, drawn by a combination of curiosity about the cultural exoticism of a truly foreign culture and an affinity that Polish Jewish socialists and communists felt as these political movements began to emerge in China. During World War II, Shanghai served as a port of refuge for Jews from Central Europe. In this freshman seminar, we will explore how these Jewish traders, travelers, and refugees responded to and represented China in their writings. We will also read works by their Chinese contemporaries and others to see the responses to and perceptions of these Jews. We will ask questions about cultural translation: How do exchanges between languages, religions, and cultures affect the identities of individuals and communities? What commonalities and differences between these people emerge?

GRMN 027 Euro Zone Crisis - The EU in a Currency War for Survival?

‘Let me put it simply...there may be a contradiction between the interests of the financial world and the interests of the political world...We cannot keep constantly explaining to our voters and our citizens why the taxpayer should bear the cost of certain risks and not those people who have earned a lot of money from taking those risks.’ Angela Merkel, Chancellor of Germany, at the G20 Summit, November 2010. In January 1999, a single monetary system united Germany, a core nation, with 10 other European states. Amidst the optimism of the euro’s first days, most observers forecast that Europe would progress toward an even closer union. Indeed, in the ensuing decade, the European Union became the world’s largest trading area, the euro area expanded to include 17 member states, and the Lisbon Treaty enhanced the efficiency and democratic legitimacy of the Union. In 2009, Greece’s debt crisis exposed deep rifts within the European Union and developed into a euro zone crisis - arguably the most difficult test Europe has faced in the past 60 years. After two years of a more benign EURO debt situation, the risk of recession, EU sanctions against Russia, and a possible collision of a newly-elected Greek government with its creditors, the euro crisis returned with a vengeance in 2015. In addition, the pressure mounts for European leaders to find a solution to the refugee crisis which reached a peak in the fall of 2015. In 2016 the Brexit delivered the latest blow to the European Union, and the future of the European project without the UK looks bleak. The Economic and Monetary Union (EMU) is still fragile, and economic and political developments in 2017 could determine the future of the euro. Does the EU have what it takes to emerge from these crises? Will the European nations find a collective constructive solution that will lead to a fiscal union that implies further integration?

1.0 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

GRMN 101 Elementary German I

Designed for the beginning student with no previous knowledge of German. German 101, as the first course in the first-year series, focuses on the development of language competence in listening, speaking, reading, and writing. By the end of the semester, students will be able to engage in simple conversations about familiar things, know greetings and everyday expressions, they will be able to count and tell time, and negate sentences in day-to-day contexts. Furthermore, students will be able to speak about events that happened in the immediate past and express plans for the future. In addition, students will have developed reading strategies that allow them to glean information from simple newspaper and magazine articles and short literary texts. Because cultural knowledge is one of the foci of German 101, students will learn much about practical life in Germany and will explore German-speaking cultures on the Internet.

For BA Students: Language Course
One-term course offered either term
Also Offered As: GRMN 501
Activity: Lecture
1.0 Course Unit

GRMN 102 Elementary German II

This course is a continuation of GRMN 101 and is designed to strengthen and expand students’ listening, speaking, reading, and writing competence and to deepen an understanding of German-speaking cultures. By the end of the course, students will be able to handle a variety of day-to-day needs in a German-speaking setting and engage in simple conversations about personally significant topics. Students can expect to be able to order food and beverages, purchase things, and to be familiar with the German university system, the arts, and current social topics. Students will begin to be able to talk about the past and the future, make comparisons, describe people and things in increasing detail, make travel plans that include other European countries, and make reservations in hotels and youth hostels. By the end of the course students will be able to talk about their studies and about their dreams for the future. In addition, students will develop reading strategies that should allow them to understand the general meaning of articles, and short literary texts. Furthermore, students will feel more able to understand information when hearing German speakers talking about familiar topics. Cultural knowledge remains among one of the foci of German 102, and students will continue to be exposed to authentic materials.

1.0 Course Unit

GRMN 103 Intermediate German I

This course is designed to improve students writing and speaking competence, to increase vocabulary, to deepen grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules and prepares students well for GRMN 104 and a minor or major in German.

For BA Students: Language Course

1.0 Course Unit

GRMN 104 Intermediate German II

A continuation of GRMN 103. Expands students writing and speaking competence in German, increases vocabulary and helps students practice effective reading and listening strategies. Our in-class discussions are based on weekly readings of literary and non-literary texts to facilitate exchange of information, ideas, reactions, and opinions. In addition, the readings provide cultural and historical background information. The review of grammar will not be the primary focus of the course. Students will, however, expand and deepen their knowledge of grammar through specific grammar exercises. Students will conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.

For BA Students: Last Language Course
One-term course offered either term

GRMN 106 Accelerated Elementary German
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. An intensive two credit course in which two semesters of elementary German (GRMN 101 & 102) are completed in one. Introduction to the basic elements of spoken and written German, with emphasis placed on the acquisition of communication skills. Readings and discussions focus on cultural differences. Expression and comprehension are then expanded through the study of literature and social themes.
For BA Students: Language Course
Course usually offered in fall term
Also Offered As: GRMN 505
Activity: Lecture
2.0 Course Units

GRMN 107 Accelerated Intermediate German
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. This accelerated course is designed to improve students writing and speaking competencies, to increase vocabulary, to deepen grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules. Students conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.
For BA Students: Last Language Course

GRMN 134 Origins of Nazism: From Democracy to Race War and Genocide
Where did the Nazis come from? Was the Weimar Republic bound to fail? Did the Treaty of Versailles or the Great Depression catapult the Nazis into power? What was the role of racism, of Anti-Semitism? How did the regime consolidate itself? What was the role of ordinary people? How do we explain the Holocaust and what kind of a war was the Second World War? Grappling with these and more questions, the first half of the course focuses on Germany’s first democracy, the Weimar Republic and its vibrant political culture. In the second half, we study on the Nazi regime, how it consolidated its power and remade society based on the concepts of race and struggle. Discussions of race and race-making are crucial throughout the course. In the name of the ‘racial purity,’ the Nazi state moved ruthlessly against Germany’s Jewish population and cleansed German society of all ‘undesirable’ elements. These ideas and practices didn’t originate with the Nazis and they didn’t operate in a geopolitical vacuum. Thinking about Nazi racism and genocide in both its particular specifics and in a larger global historical context is the main goal of this course.

Activity: Recitation
1.0 Course Unit

GRMN 145 The Vikings
The Vikings were the terror of Europe from the late eight to the eleventh century. Norwegians, Danes and Swedes left their homeland to trade, raid and pillage; leaving survivors praying ‘Oh Lord, deliver us from the fury of the Norsemen!’ While commonly associated with violent barbarism, the Norse were also farmers, craftsmen, and merchants. As their dragon ships sailed the waterways of Europe and beyond, they also transformed from raiders to explorers, discoverers and settlers of found and conquered lands. This course will introduce students to various facets of the culture and society of the Viking world ranging from honor culture, gender roles, political culture, mythology, and burial practices. We will also explore the range of Viking activity abroad from Kiev and Constantinople to Greenland and Vineland, the Viking settlement in North America. We will use material and archeological sources as well as literary and historical ones in order to think about how we know history and what questions we can ask from different sorts of sources. Notably, we will be reading Icelandic sagas that relate oral histories of heroes, outlaws, raiders and sailors that will lead us to question the lines between fact and fiction, and myth and history.

Also Offered As: HIST 303
Activity: Lecture
1.0 Course Unit

GRMN 150 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we’re accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we’ll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

GRMN 151 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
Can the humanities help us think differently about the forest? What happens if we imagine forests as the agents of their stories? At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and the forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. The course places a wide range of literature and film in which forests are strongly featured in relation to environmental history and current environmental issues.

GRMN 152 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth’s systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students projects take them into the archives at the Independence Seaport Museum and at Bartram’s Garden. Field trips by boat on the Schuylkill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region’s vast tidal marshlands wetlands. Excursions also help document how extreme rain events, storms, and rising waters are re-making the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?

GRMN 153 Is Europe Facing a Spiritual Crisis?
Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective ‘cultural identities’ (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modern) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...).

GRMN 156 Queer German Cinema
Taught in English. This course offers an introduction into the history of German-language cinema with an emphasis on depictions of lesbian, gay, bisexual, trans and queer themes. The course provides a chronological survey of Queer German Cinema from its beginnings in the Weimar Republic to its most recent and current representatives, accompanied throughout by a discussion of the cultural-political history of gay rights in the German-speaking world. Over the course of the semester, students will learn not only cinematic history but how to write about and close-read film. No knowledge of German or previous knowledge required.

GRMN 181 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands. Summer abroad course. This hybrid course combines online instruction with a short-term study abroad experience in Berlin and Rotterdam. During the pre-tip online portion of the course, students will become acquainted with the cultural histories of German and Dutch attitudes toward sustainability and the environment through a combination of recorded lectures by the instructor, reading assignments, viewing assignments (documentary and feature films), threaded discussions, and short written assignments. The goal of the pre-trip instruction are to help students develop tools for analyzing and interpreting cultural difference, construct working models of German and Dutch concepts of sustainability, and formulate hypotheses about the relation between culture and policy in Germany and the Netherlands. The class will spend a total of ten days in Europe: five days in Berlin and five days in the area of Rotterdam. The days will be jam-packed with visits to important sites of sustainable practice; discussion with policy makers, activists, and scientists; and immersion in the cultures of the Netherlands and Germany. Upon our return from Europe, the class will debrief and students will present online projects. There are no prerequisites or language requirements.

GRMN 219 Business German: A Macro Perspective
This course offers you insights into the dynamics of Business German, while taking a macro approach. Examples of various course topics include: economic geography and its diversity, the changing role of the European Union, and the economic importance of national transportation and tourism. In addition, the course emphasizes the development of students’ discourse competencies, Business German vocabulary and grammar. Course assignments include oral presentations on current events, class discussions, role-play, and collaborative group work. Class time will be utilized to practice speaking, answering questions, reviewing exercises and holding group discussions on various topics. Class participation is a key component of this course. Prerequisite: No previous knowledge of economics or business required. Course taught in German.

GRMN 237 Berlin: History, Politics, Culture
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koeltn to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin. All readings and lectures in English.

GRMN 239 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More's fictive island of 1517. The 'origins of environmentalism' lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others. Taught in English.

Activity: Seminar
1.0 Course Unit
Notes: Taught in English.

GRMN 240 Global Sustainabilities
This research-oriented seminar focuses on the ways in which 'sustainability' and 'sustainable development' are linguistically and culturally translated into the world's languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn's diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world's languages of sustainability.

GRMN 242 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science of technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and life. Our discussions will be based on a reading of Sigmund Freud's essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Merimee, Villiers de l'Isle-Adam, and others. All readings and lectures in English.
For BA Students: Arts and Letters Sector

Notes: All readings and lectures in English.
GRMN 247 Free Radicals: Marx, Marxism, and the Culture of Revolution

'A spectre is haunting Europe—the spectre of Communism'. This, the famous opening line of The Communist Manifesto, will guide this course's exploration of the history, legacy, and potential future of Karl Marx's most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx's ideas might still hold in a world vastly different from his own. All readings and lectures in English.

Notes: All readings and lectures in English.

GRMN 248 Nietzsche's Modernity and the Death of God

'God is dead.' This famous, all too famous death sentence, issued by the 19th-century German philosopher Friedrich Nietzsche, also signaled the genesis of a radical challenge to traditional notions of morality, cultural life, and the structure of society as a whole. In this course we will examine both the 'modernity' of Nietzsche's thought and the ways in which his ideas have helped to define the very concept of Modernity (and, arguably, Postmodernity) itself. In exploring the origin and evolution of Nietzsche's key concepts, we will trace the ways in which his work has variously revered or refuted, championed or co-opted, for more than a century. We will survey his broad influence on everything from philosophy and literature to music and art, theater and psychology, history and cultural theory, politics and popular culture. Further, we will ask how his ideas continue to challenge us today, though perhaps in unexpected ways. As we will see, Nietzsche wanted to teach us 'how to philosophize with a hammer.' All readings and lectures in English.

GRMN 249 Topics In Modernism

This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Prerequisite: Some knowledge of 20th-century poetry.
Spaces will be reserved for English majors
Course not offered every year
Also Offered As: ARTH 385, COML 140, ENGL 259, FREN 259
Activity: Seminar
1.0 Course Unit
Notes: Topics vary annually.

GRMN 253 Freud: The Invention of Psychoanalysis

No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

1.0 Course Unit
Notes: All readings and lectures in English.

GRMN 257 Fascist Cinemas

Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema 'the strongest weapon.' This course explores the world of 'fascist' cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as The Birth of a Nation. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized Others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles. All readings and discussions in English.

For BA Students: Arts and Letters Sector
Taught by: MacLeod
Course not offered every year
Also Offered As: CIMS 257, COML 269, ITAL 257
Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.
GRMN 258 German Cinema
An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film's place in its historical and political context, the course will explore the 'Golden Age' of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to 'Papa's Kino' and the rise of New German Cinema in the 1960's. All readings and discussions in English.
For BA Students: Arts and Letters Sector
Taught by: Fleishman
Course not offered every year
Also Offered As: CIMS 258, COML 270
Activity: Lecture
1.0 Course Unit
Notes: All readings and discussions in English.

GRMN 259 Topics German Cinema
This topic course explores aspects of Film History intensively. Specific course topics vary from year to year. See the Cinema Studies website at http://cinemastudies.sas.upenn.edu for a description of the current offerings.
Taught by: Katz, Corrigan, Decherney, Beckman, Fleishman
Course not offered every year
Also Offered As: CIMS 259, COML 261, GRMN 550
Activity: Lecture
1.0 Course Unit

GRMN 261 Jewish Films and Literature
From the 1922 silent film 'Hungry Hearts' through the first 'talkie,' 'The JazzSinger,' produced in 1927, and beyond 'Schindler's List,' Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's 'King Lear' to Sholom Aleichem's 'Teyve the Dairyman,' primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we 'read' literature and film, b) the various ways that the media of fiction, drama, and film 'translate' Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience. All readings and lectures in English.

Activity: Lecture
1.0 Course Unit

GRMN 262 Women in Jewish Literature
'Jewish woman, who knows your life? In darkness you have come, in darkness do you go.' J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres – devotional literature, memoir, fiction, and poetry – we will study women's roles and selves, the relations of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English. All readings and lectures in English.
For BA Students: Arts and Letters Sector

Activity: Seminar
1.0 Course Unit
Notes: All readings and lectures in English.

GRMN 263 Jewish American Literature
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers 'immigrate' from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature. All readings and lectures in English.

1.0 Course Unit
Notes: All readings and lectures in English.
GRMN 264 Translating Cultures: Literature on and in Translation

‘Languages are not strangers to one another,’ writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn’t know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depend upon translation between people, between cultures, between texts. With a diverse group of readings—autobiography, fiction, poetry, anthropology, and literary theory—this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are different kinds of literary and cultural translation? What are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?

GRMN 279 Introduction to Literary Theory

This course introduces students to major issues in the history of literary theory.

Course not offered every year
Also Offered As: COML 094, ENGL 094
Activity: Lecture
1.0 Course Unit

GRMN 301 Handschrift-Hypertext: Deutsche Medien

This course will provide an introduction to German-language literary studies through exemplary readings of short forms: fables, fairy tales, aphorisms, stories, novellas, feuilletons, poems, songs, radio plays, film clips, web projects and others. Paying particular attention to how emergent technology influences genre, we will trace an evolution from Minnesang to rock songs, from early print culture to the internet age and from Handschrift to hypertext. Students will have ample opportunity to improve their spoken and written German through class discussion and a series of internet-based assignments. Readings and discussions in German. Prerequisite: This course will be offered every spring semester.

Taught in German.
For BA Students: Arts and Letters Sector
Course usually offered in spring term
Prerequisite: GRMN 203
Activity: Lecture
1.0 Course Unit
Notes: This course will be offered every spring semester. Taught in German.

GRMN 302 Places of Memory. Lieux de memoire. Erinnerungsorte.

What is culture? What is German? Where are the borders between German, Austrian and Swiss culture? What is part of the ‘cultural canon’? Who decides and what role does memory play? Relying on the theory of collective memory (Halbwachs) and the concept of ‘places of memory’ (Erinnerungsorte; Nora, Francois/Schulze) and with reference to exemplary scholarly and literary texts, debates, songs, films, documents, and paintings from high and pop culture, this course will weave a mosaic of that which (also) constitutes German or German-language culture. Prerequisite: This course will be offered every fall semester. Taught in German.

Course usually offered in fall term
Prerequisite: GRMN 203
Activity: Lecture
1.0 Course Unit
Notes: This course will be offered every fall semester. Taught in German.

GRMN 311 Krautrock und die Folgen

Prerequisite: Taught in German.
Taught by: Hahmann, Lewis
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Lecture
1.0 Course Unit
Notes: Taught in German.

GRMN 323 Writing in Dark Times: German Literature

The rise of Hitler and the Nazis in 1933 radically disrupted the literary marketplace in Germany. Public book burnings were the most visible sign of a complete reorganization of the literary world. What was it like to be a writer in the Third Reich? How did censorship work? What kind of choices were writers forced to make? What political roles did writers adopt? Under what conditions could they publish? Who read their books and how did they read them? These are some of the questions we will ask as we become acquainted with German writers in ideological adherence or alliance, in exile throughout Europe and the Americas, in ‘inner emigration,’ even in concentration camps, and in hiding. By focusing on their writing, we will shed light on the value of literature in dark times.

Taught by: Richter
Course not offered every year
Also Offered As: GRMN 547
Activity: Lecture
1.0 Course Unit

Notes: Taught in German.
GRMN 324 German Ideas and Nazi Ideology
Right-wing movements are often considered to be a reservoir of those who are left behind and economic losers. This seems to apply as much today as it did to the fascist movements of the first half of the 20th century. Admittedly, the economic situation has had a considerable influence on the development and success of these movements and most intellectuals have obviously reacted with open rejection to the aggressive and racist policies, which has led to mass emigration, especially to the United States. It must be noted, however, that the movement itself was supported by a prominent conservative worldview from which it emerged and through which it is best understood. The notion of the 'Downfall of the West' (Oswald Spengler) or the prevailing view among the intellectual elite that 'Germany's soul is the place where Europe's spiritual oppositions are carried out' (Thomas Mann) and the resulting disdain for political business, are all expressions of the idea of a special historical responsibility of the Germans. Even though this intellectual elite was opposed to the National Socialist movement, it must be said that the most renowned thinkers not only arranged themselves with the regime, but even supported it at times. Three particularly important examples are Martin Heidegger, Carl Schmitt and Gottfried Benn. Today they are counted among the intellectual giants of the 20th century and their works are studied worldwide, including the University of Pennsylvania. In this seminar, the spirit of National Socialism will be explored. To this end, we will look at the intellectual background in Europe at the beginning of the 20th century, but especially at the period between the two wars, before we will then intensively deal with the National Socialist involvement of the three thinkers Heidegger, Schmitt, and Benn.
Taught by: Hahmann
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Lecture
1.0 Course Unit

GRMN 356 Crime and Detection - Dark Deeds
The detective story and the crime drama are time-honored genres of literature and popular culture. We are drawn to morbid scenes of violence and crime, and satisfied by the apprehension of criminals and their punishment. At the same time, the process of detection, of deciphering clues, is much like the process of reading and interpretation. Prerequisite: Taught in German. In this course we will read a variety of detective and crime stories, some by famous authors (e.g., Droste-Huelshoff, Fontane, Handke), others by contemporary authors that address interesting aspects of German culture (e.g., Turkish-Germans, gay and lesbian subcultures, DDR and Wende). We will also look at episodes from popular West, East, and post-reunification German TV crime shows (e.g., Tatort).
Taught by: Frei
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Taught in German.

GRMN 361 Staging the 20th Century
Prerequisite: Topics vary annually. Course taught in German. Topic for Spring 2014: 'Staging the Middle Ages'.
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Seminar
1.0 Course Unit
Notes: Topics vary annually. Course taught in German. Topic for Spring 2014: 'Staging the Middle Ages'.

GRMN 363 Kant's Critical Project
This seminar is dedicated to Kant's critical philosophy. In particular, the Critique of pure Reason, which is the first of three Critiques, ranks amongst the most important texts of modern philosophy. Even in contemporary debates, Kantian claims still play a crucial role and basic knowledge of Kant's critical philosophy is often assumed. In this seminar we will deal with central passages from different works which, taken together, give a good picture of Kant's critical revision of classical metaphysics. We shall discuss important conceptions and ideas of Kant's mature philosophy, such as the nature of transcendental aesthetics and the resulting distinction between a thing-in-itself and appearance, the meaning and application of the categories, the justification and determination of human freedom, and the role of the moral law for Kant's so-called practical metaphysics.
Taught by: Hahmann
Course not offered every year
Also Offered As: PHIL 362, PHIL 565
Activity: Seminar
1.0 Course Unit

GRMN 364 Topics vary annually. The topic for Spring 2015 is: Unhuman Encounters
Topics vary annually. The course description for Spring 2015 is as follows: Typically 'the Other' stands for a person or a group of people from another cultural background. But there have always been other encounters that forced people to distinguish themselves from an 'other'. Foremost, in order to define what is 'human', the 'unhuman' needed to be described. Initially, this meant distinguishing the human from the rest of nature. With the industrial revolution, the technological became a concern--machines as monsters. On a figurative level, we have the supernatural, ghosts, aliens, and cyborgs. In this course we will explore the ways in which real and imagined encounters with these 'other Others' are depicted in German language literature and culture. Prerequisite: Taught in German.
Taught by: Dayioglu-Yucel
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Seminar
1.0 Course Unit
Notes: Taught in German.

GRMN 373 Critical Theory of Christa Wolf: What remains?
Understood as one of the most prominent writers of the GDR, Christa Wolf's literary contributions shape cultural production of former East Germany and beyond. Nevertheless, her critical engagement with the writing process and the role that memory plays for identity formation and a collective historical process remain less known. This course will shed light on Wolf's iconographic text Die Dimension des Autors, in which she develops the notion of fossilization--medallions of memory--to unpack cultural and historical productions. Indeed, the course traces her most influential texts such as Storfall, Kassandra, Kindheitsmuster and Was bleibt? within her theoretical framework, thereby offering students an opportunity to connect East German literary production with critical theory. The course seeks to illuminate the intrinsic connections between cultural products, practices and perspectives. The course will be taught in German and could fulfill Cross-Cultural Analysis.
Taught by: Frei
Course not offered every year
Prerequisite: GRMN 301
Activity: Seminar
1.0 Course Unit
GRMN 375 German Literature after 1945
Focus on the continuity of the literary tradition, innovation, and prominent themes related to coming-of-age in today's society, and specific stylistic experiments. Topics include: the changing literary perspective on German history and World War II, the representation of such prominent issues as individual responsibility, German reunification, and human relations in modern society. Prerequisite: Taught in German.
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Taught in German.

GRMN 379 Decadence
The period of the late nineteenth and turn to the twentieth century has often been described as a time of decadence—a decline in the ‘standards’ of morals and virtue. While Freud explored the nature of sexual desire, writers like Schnitzler or Wedekind made this exploration central for their stories or plays. The course will focus on the literature and culture of fin-de-siecle Vienna and Berlin, and consider a variety of texts as well as their later reception and translation into film. Prerequisite: Lectures and discussion in German.
Taught by: Weissberg
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Lecture
1.0 Course Unit
Notes: Lectures and discussions in German.

GRMN 381 Topics in German Culture
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Notes: This course will be offered every fall semester.

GRMN 401 Trans(l)its
Drawing on Goethe's musings on 'world literature', the course focuses on authors who have arrived at their German words via global, worldly itineraries. The course considers movements between languages, including those of the students themselves and encourages students to develop their own voice as authors via a series of critical and creative writing exercise. At the same time, students develop strategies to reflect on their own language learning. This course provides an important space for German-learners at Penn to draw on one another's experiences in the program and to build a sense of community. The course is required for all German majors in the Fall semester of their senior year. Prerequisite: This course will be offered every fall semester.
Taught by: Wiggin, MacLeod
Course usually offered in fall term
Prerequisite: GRMN 301 OR GRMN 302
Activity: Lecture
1.0 Course Unit
Notes: Taught in German.

GRMN 507 Elementary Middle High German
Designed to familiarize the student with the principal elements of Middle High German grammar and to develop skills in reading and translating a major work of the twelfth century. Limited text interpretation. Prerequisite: Middle High German for Reading Knowledge will be taught in English.
Course not offered every year
Activity: Independent Study
1.0 Course Unit
Notes: Notes: Middle High German for Reading Knowledge will be taught in English.
GRMN 509 Topics in Yiddish Literature - Modernist Jewish Poetry.
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define ‘Jewish writing,’ in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation’s process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define ‘Jewish modernism’ through the prism of poetry, which inevitably, given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and will bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation’s process and products.

Taught by: Hellerstein
Course not offered every year
Also Offered As: COML 509, GSWS 509, JWST 509, YDISH 509
Activity: Seminar
Notes: Topics vary annually.

GRMN 511 Stylistics
Textual analysis based on communication theory. Texts selected from literature and other disciplines. Emphasis placed on the development of the student's own compositional and stylistic skills.
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Seminar
1.0 Course Unit
Notes: Graduate Seminar

GRMN 516 Teaching Methods
This course examines major foreign language methodologies, introduces resources available to foreign language teachers, and addresses current issues and concerns of foreign language teaching and learning, such as second language acquisition theory and application of technology.
Taught by: Frei
One-term course offered either term
Activity: Lecture
1.0 Course Unit

Although the starting point for the Anthropocene is still under discussion, there is broad agreement that the industrial revolution and the turn to fossil fuels mark an intensification of humanity’s impact on the Earth. It may not be a coincidence that Kant’s proclamation of the Copernican revolution in philosophy, according to which human reason replaces the natural light of traditional metaphysics, falls roughly in the same period. Human finite cognition became the measure for God and his creation. The dawn of the era of human freedom and the ramped up exploitation of resources coincide. It is against this background that the Naturphilosophie of F. W. J. Schelling can become particularly interesting. The genesis of German idealism is closely related with the opposition between freedom and necessity that lies at the heart of Kant’s critical project. Kant associated the former with man and the latter with nature. In trying to bridge the gap between them, Schelling reinstates nature as an autonomous actor in its own right. Schelling’s thinking about nature chimed with the literary and empirical-scientific work of his contemporary Johann Wolfgang von Goethe. In the productive interplay of poetry, science, religion, and philosophical thought, Goethe and Schelling offer a critical alternative to philosophy in the aftermath of the Copernican revolution that may be viable or useful today as humanity tries to come to terms with anthropogenically induced climate change. This co-taught interdisciplinary seminar will focus on works by Schelling (Ideas for a Philosophy of Nature, First Outline of a System of the Philosophy of Nature, On the World Soul) and Goethe (scientific writings, Faust I & II), in addition to engaging recent scholarship of Schelling and Goethe in relation to environmental humanities.

Taught by: Richter/Hahmann
Course not offered every year
Also Offered As: COML 547, PHIL 567
Activity: Seminar
1.0 Course Unit

GRMN 526 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud’s work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud’s work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud’s work, and a humanist one? Where do we locate Freud’s relevance today? The graduate course will concentrate on Freud’s descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture. Prerequisite: Readings and discussions in English.

Taught by: Weissberg
Course not offered every year
Also Offered As: COML 523, GSWS 525
Activity: Seminar
1.0 Course Unit
Notes: Readings and discussions in English.
GRMN 527 Philosophy of Psychology
An investigation of issues that arise from scientific psychology and are investigated philosophically or have implications for philosophy. Specific topics vary by semester. In Spring 2019 the seminar will examine various instances of appealing to appearances in analyzing perception and its relation to an external world. Authors to be studied include Descartes, Hume, Russell, Sellars, and Chisholm.
Taught by: Hatfield
Course not offered every year
Also Offered As: PHIL 526
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission

GRMN 534 History of Literary Theory
Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing-and-often confrontational-dialogues between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the professional / study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature. We will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism. There will be no examinations. Students will make one class presentation, which will then be reworked into a paper (1200-1500 words) to be submitted one week after the presentation. A second paper will be an annotated bibliography on a theoretical issue or issues that a student wishes to explore further. The bibliography will be developed in consultation with the instructor; it will typically include three or four books and six to eight articles or their equivalent. The annotated bibliography will be prefaced by a five or six page introduction; the whole will add up to between 5000 and 6000 words of prose. Students will prepare ‘position notes’ each week, which will either be posted on a weblog or circulated in class.
Course not offered every year

1.0 Course Unit
Notes: Topics vary annually.

GRMN 535 The Elemental Turn
The unfolding effects of climate change—rising sea level, melting ice sheets, subsiding land masses, drought stricken regions, wild fires, air laden with greenhouse gases, and inundated cities—heighen our awareness of the elements: air, earth, fire and water. Within the context of the new materialism, philosophers, eco-critics, and writers are re-turning to the elements and encountering, at the same time, predecessor texts that assume new relevance. This seminar will place current thinking and writing about the elements into dialogue with older traditions ranging from the classical (Empedocles, Plato, Lucretius) to writers and thinkers of the eighteenth, nineteenth and twentieth centuries (e.g., Goethe, Novalis, Tieck, Stifter, Bachelard, Heidegger, Boehme).

Also Offered As: COML 519, JWST 537
Activity: Seminar
1.0 Course Unit

GRMN 541 Topics in Cultural History
Topic for Spring 2016: Making and Marking Time. What is time? In the late 19th century, the questions of how to define time, how to slow down time, and, above all, how to accelerate movement have become focus of the work by many European philosophers who have tried to come to terms with what is now termed as the Industrial Revolution, and the idea of ‘progress.’ And can time be understood as something continuous, or is it fragmented, proceeding in fits and bursts? Such contemplations on time have deeply influenced writers. Marcel Proust was a reader of Henri Bergson and translated his theories of time into a concept of memory. Thomas Mann has tried to navigate timelessness in a novel set on a ‘Magic Mountain’: Virginia Woolf and James Joyce have pictured an entire universe in a single day (Mrs. Dalloway, Ulysses) while early 20th century Italian Futurists made the contemplation of time part of their manifestos. With them, and with expressionist writers in Germany or writers from the DADA movement there elsewhere in Europe, a reckoning with time would also influence their choice of genre and form, writerly practice, and technique. Parallel to these literary experimentation, pictures were set into motion in scholarly studies by Eadweard Muybridge and finally in the new medium film; Impressionist painters insisted on picturing fleeting moments, and composers experimented with temporal sequences. We may be able to understand a reconsideration of time as driving force for the modern movement, or simply ‘modernity.’ In this seminar, we will study a selection of literary texts of the late 19th century and the modernist movement, consider the philosophical background and changes in historiography, and integrate a consideration of the visual arts and music.

GRMN 543 Environmental Humanities: Theory, Method, Practice
Environmental Humanities: Theory, Methods, Practice is a seminar-style course designed to introduce students to the trans- and interdisciplinary field of environmental humanities. Weekly readings and discussions will be complemented by guest speakers from a range of disciplines including ecology, atmospheric science, computing, history of science, medicine, anthropology, literature, and the visual arts. Participants will develop their own research questions and a final project, with special consideration given to building the multi-disciplinary collaborative teams research in the environmental humanities often requires.

Activity: Seminar
1.0 Course Unit

GRMN 544 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.
Taught by: Wiggin
Course not offered every year

Activity: Seminar
1.0 Course Unit

GRMN 545 Reading Benjamin Reading Kafka
Readings and discussions in English. Walter Benjamin's study of the works of Franz Kafka is as enlightening as it can be bewildering. Moving from philology to Marxism, metaphysics to messianism, Daoism to Talmud, this densely argued piece elliptically touches on almost all of Kafka's published works in just four short sections. This seminar proposes a line-by-line reading Benjamin's 1934 'Franz Kafka on the Tenth Anniversary of His Death' with an eye to its literary, philosophical and religious contexts as well as to the rich history of its intellectual reception. Reading Kafka's works as the essay evokes them, we will situate this piece with regard to Benjamin's other writings, the essay's interlocutors (Brod, Scholem, Lukacs, Brecht) and its most illustrious interpreters (Adorno, Arendt, Celan, Hamacher).
Taught by: Fleishman
Course not offered every year

1.0 Course Unit

GRMN 547 Writing in Dark Times: German Literature in the Nazi Era
The rise of Hitler and the Nazis in 1933 radically disrupted the literary marketplace in Germany. Public book burnings were the most visible sign of a complete reorganization of the literary world. What was it like to be a writer in the Third Reich? How did censorship work? What kind of choices were writers forced to make? What political roles did writers adopt? Under what conditions could they publish? Who read their books and how did they read them? These are some of the questions we will ask as we become acquainted with German writers in ideological adherence or alliance, in exile throughout Europe and the Americas, in 'inner emigration,' even in concentration camps, and in hiding. By focusing on their writing, we will shed light on the value of literature in dark times.

GRMN 551 Kant I
The course will concentrate on the Critique of Pure Reason and discuss in detail Kant's conception of knowledge and experience, his criticism of traditional metaphysics and the resulting project of a system of transcendental philosophy.
Taught by: Horstmann
Course not offered every year
Also Offered As: PHIL 465
Prerequisite: PHIL 004
Activity: Seminar
1.0 Course Unit

GRMN 552 Kant II
A study of Kant's moral philosophy, political philosophy, and aesthetics, focusing on his Groundwork for the Metaphysics of Morals, Critique of Practical Reason, Metaphysics of Morals, and Critique of Judgement.
Course not offered every year
Also Offered As: PHIL 466
Activity: Seminar
1.0 Course Unit

GRMN 555 Topics in Dutch Studies
A study of the works of Dutch philosophy, literature, and art, with an eye to the intellectual and cultural contexts of the period.
Course not offered every year
Also Offered As: COML 532, DTCH 530
Activity: Seminar
1.0 Course Unit
Notes: Topics vary annually.
GRMN 556 What is Enlightenment?
The question 'What is the Enlightenment?' was posed for an essay competition in a journal, the Berlin Monatsschrift in 1784. At that point, French and English philosophers had already considered new ways of thinking, inventing the modern individual and the modern citizen (in contrast to a state's subject). German responses to this question were written by an established philosopher (Immanuel Kant), a Jewish resident of Berlin (Moses Mendelssohn), as well as concerned readers of recent philosophical treatises. In our course, we will consider this question by exploring this early discussion and the formation of Enlightenment thought in Europe and specifically Germany, including the German-Jewish Enlightenment (Haskalah), but also trace the historical transformation of this discussion, including Theodor W. Adorno's and Max Horkheimer's Dialectics of Enlightenment (1944/1947) and more recent criticism.

GRMN 558 The Long Nineteenth Century: Literature, Philosophy, Culture
The present course will discuss German literature and thought from the period of the French Revolution to the turn of the twentieth century, and put it into a European context. In regard to German literature, this is the period that leads from the Storm and Stress and Romanticism to the political period of the Vormarz, Realism, and finally Expressionism; in philosophy, it moves from German Idealism to the philosophy of Schopenhauer, Nietzsche, and neo-Kantian thought. It is also the period that saw the rise of the novel, and new forms of dramatic works. Painting moved out of the studio into plein air; the invention of photography made an imprint on all arts, and the rise of the newspaper led to new literary genres such as the feuilleton. Economically, Germany experienced the industrial revolution; politically, it was striving for a unification that was finally achieved in 1871. The nineteenth century saw the establishment of the bourgeoisie, the emergence of the German working class, and the idea of the nation state; it also saw Jewish emancipation, and the call for women's rights. Readings will focus on a variety of literary, political, and philosophical texts; and consider a selection of art works.

GRMN 559 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as 'myth' entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.

Notes: Topics vary. The title for Fall 2017 is: Kant's Philosophy of Religion

GRMN 561 The Long Eighteenth Century
The aim of this anchor course is to acquaint students with the literary, philosophical, and cultural complexity of the 'long eighteenth century,' roughly 1648-1806. Often associated with the enlightenment and the revolutions it inspired, the eighteenth century is a prolonged period in which institutions of power and knowledge come under pressure and are reconfigured. Old institutions are submitted to the critique of reason, while new institutions of governance, sociability, gender, race and class create new spaces for cultural production. Students will analyze representative works in context and in combination with current scholarship.

Activity: Seminar
1.0 Course Unit
Notes: Graduate course. Topics vary annually.
GRMN 567 Topics in History of Philosophy
Topics change annually. Topic title for Spring 2016 is: Schiller’s Philosophical Writings. Today Friedrich Schiller is primarily known for his dramas and poems. However, during a period of several years (after he was appointed professor of History in Jena) he was also concerned with philosophical issues. The focus was mainly on questions of aesthetics and philosophy of history. With regard to both, it was Kant who was extremely influential for the development of Schiller’s philosophical position. But Schiller did not simply copy or rearrange Kantian ideas, in fact, he evolved Kantian philosophy significantly in numerous respects. And even though Schiller later gave up with his philosophical ambitions—his specific understanding of Kantian ideas became increasingly influential for the genesis of German idealism in general, but in particular shaped the reception of Kantian ideas by Hegel. In this seminar we will look at Schiller’s most important philosophical writings and address both his conception of aesthetics and his approach to philosophy of history.

GRMN 569 New German Fiction
Our seminar will deal with contemporary German culture. What do German readers read? We will read nine novels that were published recently. While considering newspaper accounts of these books and their authors, we will try to come to our own judgments regarding the quality of these works, and their lasting impact. Instead of term papers, we will write book reviews: all members of the seminar will be asked to review all the books in question. Prerequisite: Course taught in German.
Taught by: Weissberg
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Seminar
1.0 Course Unit
Notes: Course taught in German.

GRMN 572 Materialism
How do we recognize materialism? This seminar poses this question by acknowledging ‘materialism’ as a contested category with disparate and contradictory historical meanings: as a synonym for dogmatism, as the arch-enemy of reason and morality, as the scientific philosophy of the revolutionary workers’ movement, as an alternative to (idealistic) metaphysics, as a poetic practice, or as a central concern for material nature and environment, among others. Less concerned with enumerating philosophical systems, we will search out ‘family resemblances’ and materialist tendencies among a wide range of texts.
To this end, we will not only read the major historical texts of the so-called materialists (from Lucretius to Spinoza, from La Mettrie to Lenin), but also engage with materialism’s supposed critics and antagonists (from Plato to Kant and Hegel). A special emphasis will be placed on the attempts to recuperate materialism as a positive category in recent critical theory and continental philosophy, for example, in the reinventions of Marxist and Spinozist traditions. We will also survey the attempts that found new traditions, such as aleatory materialism or various new materialisms. By reading exemplary literary texts that engage with the problem of materialism the seminar will also ask: can one speak of materialist poetics?

GRMN 573 Topics in Criticism & Theory
Topic for Spring 2021: Cultures of Reading in Imperial Russia What did it mean to be a reader in imperial Russia? What did people read, and to what ends? How was literacy cultivated, and what were the social implications? In this course, students will read several canonical works of nineteenth-century Russian literature that thematize and foreground the act of reading: as a pursuit undertaken for the betterment of self, society, nation, and world; as a light pastime for the bored or underemployed; but also as an enterprise fraught with potential for moral or civic ruin. In addition to closely investigating allusions to the specific texts and authors read by literary characters, we will also examine the reading habits of our own authors as both consumers and producers of literary culture. We will consider these dynamics against a backdrop of constant fluctuations in educational policies, the book market, and the circulation of texts within and beyond Russia as we work together to develop an understanding of the imperial Russian reading public(s).

GRMN 574 Politics and Societies in the Early Modern World
In this seminar, we will discuss how early modern globalization affected societies and the ways their members and rulers made politics. Following a historiographical introduction, it is divided in three sections. In the first, we will concentrate on empires and kings in order to detect common features of dynastic power across the globe and to explore how such characteristics influenced each other. Second, we will shift our attention to citizens and the ways they made politics in their city-states. For a long time, research on citizenship has been confined to the post-revolutionary nation states. However, recent research suggests that urban citizenship has far deeper roots in medieval and early modern cities. Up to now most research has focused on urban centers in Western Europe and more precisely on the so-called urban belt stretching from Central and North-Italy, over Switzerland and Southern Germany to the Rhineland and the Low Countries. Comparisons with urban centers in Asia and the colonial Americas will be needed to test that view. In the third section, we will study the people who provided information to societies and decision makers. Often, they held multiple identities or they acted as religious or ethnic outsiders. Therefore, we call them, with a term borrowed from anthropology ‘brokers’. Taken together, the analysis of these aspects will deepen our understanding of politics and societies in the globalizing early modern world. Thus, the seminar will contribute to a more comprehensive, less Europe-centered view on that period.

GRMN 578 Topics in Northern Renaissance
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: Privacy and Society. Dutch Painting in the Seventeenth Century. How do paintings offer occasions for personal reflection, and how do they construct social bonds? This course will promote new critical approaches to interrogate three areas of Dutch ‘Golden Age’ painting: the development of landscape tradition; the pictorialization of interior domestic spaces; the concept of group portraiture. The burgeoning art market of the seventeenth offered both new forms of intimacy—inviting the beholder into domestic interiors to observe the events of everyday life—and public statements about leadership, social structures, and national identity. Freed from the patronage of churches and courts, Dutch artists produced pictures that could be purchased for the home—landscapes, moralizing genre scenes, still lifes, and portraits. They also made paintings for public spaces such as guild halls and charitable organizations, which map the relationships between members of civic organizations. The aim of this course is to develop a set of critical skills for analyzing the different ways in which seventeenth-century Dutch paintings drew upon shared social values, national identity and economic pride, how they appealed to individual buyer tastes, and how they established ideologies of land rights and concepts of gendered space that may today be critiqued as exclusionary. We will use our current circumstance of ‘social distancing’ as a way to look anew at the question of how paintings of this period used art to construct social bonds. Online in format, this course will address these matters by pairing recent interventions in art history with foundational texts. Part of our ongoing collective work will be the construction of a checklist of paintings, drawings, and prints in the Philadelphia area and its environs in the hopes that we may eventually view these works together or have a shared plan of which works to observe in person as time and access permits. In writing assignments, we will attend to the representation of space, considering domestic interiors, urban settings, church architecture, imperial arenas, and the politicization of landscapes both real and imagined.

GRMN 580 Topics In Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.

GRMN 581 Topics in Jewish History
Reading and discussion course on selected topics in Jewish history. The instructors are visiting scholars at the Center for Advanced Judaic Studies. Topic and seminar title for Spring 2015: Topics in Jewish Studies: The Origins of Jewish Studies. Course description for Spring 2015: This is a reading course that grants seminar participants access to Katz Center fellows, some of the best scholars in Judaic studies from around the world. The aim of the course is to expose students to these scholars and their work, to get to know them as people, learn from them at high level, and understand their approach to the field. Over the course of the spring semester there will be four 3-session modules. Students will meet with 4 different fellows for 3 sessions each. The weekly 90-minute classes will be held at the Katz Center on Wednesdays from 10:30 am - 12 pm, and participants will be encouraged to then stay for lunch and the fellows’ seminar which runs from 12:30 - 2:30 pm. GRMN 605 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in critical theory of the 20th and 21st centuries. We will pay particular attention to critical currents that originated in Eastern European avant-garde and early socialist contexts and their legacies and successors. Topics covered will include: Russian Formalism and its successors in Structuralism and Deconstruction (Shklovsky, Levi-Strauss, Jakobson, Derrida); Bakhtin and his circle, dialogism and its later western reception; debates over aesthetics and politics of the 1930s (Lukacs, Brecht, Adorno, Benjamin, Radek, Clement Greenberg); the October group; Marxism, new Left criticism, and later lefts (Althusser, Williams, Eagleton, Jameson, Zizek). Notes: Graduate seminar.

GRMN 614 Weimar Landscapes
This new course is designed for students of literature, landscape architecture and urban planning, and cultural history in general. It will explore the ideas of, and attitudes towards, landscape in selected works by Johann Wolfgang Goethe, and consider his own considerable practical involvement in reshaping the town and gardens of Weimar. The course will provide the larger context of German literature, aesthetics and landscape taste, and politics of the later 18th and early 19th centuries. We will consider the development of new gardens and parks in a ‘new’ style (e.g. Woerlitz); they were regarded to be less formal and more ‘natural’ than their French predecessors. We will study the English models for this movement, and offer a particular attention to the major German theorist, C.C.L. Hirschfeld, who would soon become famous outside Germany as well. Students will be expected (but not required) to read in German. Translations of key works by Goethe, as well as of commentaries on German gardening history, are available to ensure that non-German speakers can readily follow the course. In final papers there will be the freedom to select topics that focus upon literary or landscape architecture, though it is anticipated that a comparativist perspective will be adopted in either approach. GRMN 628 Topics 18th Century, vary annually.
Topic for Fall 2014 is: Wolfgangs Lehrjahre (1765-1774) The decade before the publication of Goethe’s Die Leiden des jungen Werthers is full of literary ferment. The goal of this course is to gain a sense of the multiplicity of projects and perspectives in this crucial decade in order to break down any teleology that might see Werther as its crowning triumph. In other words, this is a course in the ‘politics’ of literature and literary aesthetics. Works to be read, discussed, and reported on include: Kant, Beobachtungen ueber das Gefuehl des Schoenen und Erhabenen; Klopstock, Salomo, ein Trauerspiel; Gleim, Lieder nach dem Anakreon; Herder, Fragmente ueber di neuere deutsche Literatur; Lessing, Laokoon oder ueber die Grenzen der Mahlierey und Poesie; Wieland, Geschichte des Agathon; Lessing, Minna von Barnhelm; Mendelssohn, Phaedon oder ueber die Unsterblichkeit der Seele; von Gerstenberg, Ugolino; Wieland, Musarion; Klopstock, Oden und Elegien; La Roche, Geschichte des Frauleins von Sternheim; Herder, Abhandlung ueber den Ursprung der Sprache; Lavater, Von der Physiognomik; Lessing, Emilia Galotti; Goethe, Goetz von Berlichingen mit der eisernen Hand; Herder, Von deutscher Art und Kunst; Nicolai, Sebalduis Nothancker; Wieland, Alceste; Zimmerman, Von der Einsamkeit; Blankenburg, Versuch ueber den Roman, and, of course, Werther.

GRMN 657 Becoming Modern: The German-Jewish Experience
Yuri Slezkine described the twentieth century as a ‘Jewish Age’-to be modern would essentially mean to be a Jew. In German historical and cultural studies, this linkage has long been made-only in reference to the last years of the German monarchy and the time of the Weimar Republic. Indeed, what has become known as ‘modern’ German culture-reflected in literature, music, and the visual arts and in a multitude of public media-has been more often than not assigned to Jewish authorship or Jewish subjects. But what do authorship and subject mean in this case? Do we locate the German-Jewish experience as the driving force of this new ‘modernity’ or is our understanding of this experience the result of this new ‘modern’ world?

GRMN 677 The Life of Forms: Ontogenesis, Morphology, Literature
In recent years, the notions of form, formalism, and morphology have reentered contemporary debates across the humanities. This seminar considers the current resurgence of interest in form by tracing form’s evolving concepts throughout modernity. It departs from the observation that experimentation with and debates on form in art and literature are inextricably linked to various notions of life and the living. These debates-this is the provisional thesis of the seminar-are the battlefield where literary and art criticism undermine the major presuppositions of the western metaphysical tradition (e.g., determinations of inside-outside, form-content, living-inorganic). On the one hand, the seminar will explore a selective genealogy of various attempts to dynamize the concept of form through theories of 1) ontogenesis (e.g., Spinoza, Simondon, Malabou), 2) morphology (e.g., Goethe, Propp, Goldstein), and 3) aesthetics (e.g., Baumgarten, Schlegel brothers, Adorno). On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines, including literary studies (literary morphology, Russian Formalism), art history (Focillon, Kubler), philosophy (Wittgenstein, Macherey). On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines ranging from literary studies (e.g., Jolles, Russian Formalism, Jauss), art history (e.g., Panofsky, Focillon, Kubler), philosophy (e.g., Wittgenstein, Blumenberg, Macherey), history of science (e.g., Vygotsky, Varela), and sociology (e.g., Tarde, DeLanda). Finally, the seminar will engage in close reading of exemplary literary and art works, and situate the findings on the conjunction of form and life in current debates on New Formalisms (e.g., Levine, Levinson, Kornbluh) and New Materialisms (e.g., Bennett, Grosz).

GRMN 678 Realism: Literature and Theory
What is ‘realism’? What does it mean to depict the world as a ‘realist’ writer or artist? This seminar will consider these questions and concentrate on German literature and art of the second half of the nineteenth century. It will focus on writers such as Stifter, Storm, Raabe, and Fontane; but also on Stifter’s drawings and paintings, visual artists such as Menzel, and the vogue of historical painting. Finally, the seminar will consider the role of early photography in the development of the notion of ‘realism.’ Secondary literature will include studies by Michael Fried, Linda Nochlin, and others.

GRMN 684 Topics in Philosophy.
This seminar explores political thought in Germany from the Imperial state of the early 20th century through its fragmentation and division and into the reunification of east and west Germany in 1992. Much of this period was ‘after idealism’ philosophically and politically, the preface to pessimism and ‘the passing of political philosophy’ as articulated in the Enlightenment (Shklar), but fascinating period of thought and argument. Among our texts are Habermas (philosophy), Weber (sociology), Schmitt (law), Juenger (literature) & their contemporaries. Students are not expected to read texts in the original, although having German will greatly expand your range and the depth of your reading.

GAFL 500 Half-Term Electives

GAFL 500 - 025: Empowering Communities through Real Estate Development—This course introduces students to residential and commercial real estate development and its inherent risks and benefits. By understanding the development process, students will be better able to enact public policy that promotes the advantages brought by development while slowing the gentrification process. Using the successful Jumpstart Germantown model, students will learn the 7 JumpSteps of real estate development beginning with creating a development strategy and ending with leasing or selling the property. JumpStart is a successful alternative to the boom and bust cycle of real estate development. It encourages slow growth, scattered site development, and a mix of price points—all of which act to slow gentrification and encourage healthy development that sustains and attracts local economic diversity. This course will include presentations by experts in the real estate industry, in-class discussions and projects, and a visit to a local construction site. Students interested in becoming real estate developers or wanting to learn the ins and outs of the development process will benefit from this course. The 7 JumpSteps of real estate development: 1. Create a Development Strategy & Identify Your Team; 2. Source a Property; 3. Do Your Due Diligence; 4. Find Your Financing; 5. Develop Design & Procure Permits; 6. Customize Construction; 7. Lease/Sell Your Property—GAFL 500 - 026: Economic Development, Equity and Inclusion—Virtually every US city experienced a great decline in the second half of the twentieth century. As the manufacturing base of the industrial city deteriorated, as factories moved to the suburbs in search of cheaper land, a vicious cycle ensued. Following the jobs and taking advantage of racial preferences in the suburbs, working and middle class residents fled; as the tax base shrank, cities were forced to raise taxes to support city services, leading to more joband residential flight. The ‘inner city’ became synonymous with blight and decline, with ominous racial undertones, as urban and suburban political priorities and sentiments began to diverge sharply. Yet by the turn of the 21st century, this process had bottomed out and in many so-called ‘post-industrial’ cities, some of these trends were beginning to reverse. In the 1990s and early 2000s in particular, civic and political leaders had to make tough decisions about prioritizing scarce public resources. Should they focus on revitalizing the downtown core to create jobs, create amenities to induce people with higher incomes to choose their city, grow a tourism economy? Or on rebuilding the most distressed and disinvested inner city neighborhoods? Or on shoring up the so-called ‘middle neighborhoods’ that were able to maintain some stability during the great decline? Layered on top of these issues were (and are) critical questions about who does and should benefit from economic development. Should we prefer ‘trickle down’ policies that focus on high-end development and presume that they will eventually lead to benefit for the less advantaged in the form of service sector or indirect jobs? Or should cities be more proactive and ensure that public and publicly-enabled investments leverage increases in human capital development, in public goods like parks and schools? This course will focus on case studies from several cities to explore the policy options available to leaders, to assess their decisions, and to consider whether it is possible to promote economic development that is robust and sustainable at the same time as it is equitable and inclusive. This is a half-credit course (0.5 CU) that meets in the first half of the semester. The first class session will meet on January 23, and the last class session will meet on March 13.

GAFL 502 Public Communications

Successful leaders must be able to convey their integrity and their ideas, their vision and their values clearly and convincingly in public settings. By analyzing great political speeches and affording students the opportunity to prepare and deliver different types of speeches, this course teaches the fundamentals of persuasive public speaking while encouraging students to develop their own voice. This is a performance course. Students will gain skill and confidence in their speech writing and public speaking skills through practice, peer feedback, and extensive professional coaching. Class lectures and discussions will focus on persuasive strategies and techniques for handling community meetings, Q and A sessions, and interactions with the media. Taught by: Sarah Besnoff

Course offered summer, fall and spring terms

Activity: Hybrid Course

1.0 Course Unit

Notes: GAFL 502 001 UPDATED: This class will meet online for Fall 2020. This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit. GAFL 502 002 UPDATED: This class will meet online for Fall 2020. Class will meet synchronously from 6:30-7:30pm on Mondays, and from 9am-1pm on four Saturdays: 9/12, 10/10, 11/14, 12/12. This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit.

GAFL 506 The Problem of Jobs: The Philadelphia Story

Once the ‘workshop of the world’ with a diverse manufacturing economy, the City of Philadelphia has lost a huge proportion of its historical economic base in the past 60 years. Today, Philadelphia struggles to find its competitive advantage. Yet, it has tremendous assets that can be leveraged. This course will explore the rise and fall of Philadelphia’s manufacturing economy, efforts to forestall its decline in the 1960s and 70s, the racial and gender dynamics of its employment ecosystem, and contemporary strategies to create a sustainable local economy. We will focus on the emerging national recognition of place-based economic development strategies, including the revival of downtown residential living, tourism, and hospitality, and the role of institutions, such as universities and hospitals, in the revitalization of urban America. The course will combine readings in economic and social history and urban economics with case study analyses of local policies aimed at stimulating growth.

Course not offered every year

Activity: Seminar

1.0 Course Unit

Notes: This is a half-credit (0.5 CU), half-term course, meaning that it will
GAFL 509 Who Gets Elected and Why? The Science of Politics
What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century? This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for political office and will discuss the various influences on getting elected, including: campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization. Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania. Taught by: Rendell
One-term course offered either term
Also Offered As: PSCI 320, URBS 320
Activity: Lecture
1.0 Course Unit

GAFL 511 Reinventing Nonprofits
Three nonprofit leaders walk into a bar. What’s the conversation? cross fields, focus, size, and target audiences, nonprofits often face similar challenges: public policy changes, evolving stakeholder expectations, new modalities to service requiring investment, rising competition, fickle funders and demographic shifts, all in a world where culture eats strategy for breakfast. Against this backdrop, nonprofits need to re-assess their mission, approach, position, organizational structure and revenue model. Why are some organizations able to pivot and reinvent themselves while others languish? Through readings to frame the issues, speakers offering firsthand accounts of successes and disappointments, projects with practitioners wrestling with real-ime issues, and group discussions to tie it all together, this course is intended to provide students with an understanding of the challenges nonprofits face and the tools and strategies they need to succeed in a rapidly changing landscape. Taught by: Kozlik
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GAFL 514 Public Finance and Public Policy
This course deals with how governments tax and spend. Students become familiar with the theoretical, empirical, and practical tools and methods used to create and analyze government budgets, as well as the flow of public resources. The course examines public revenues and expenditures within the context of fiscal federalism, in addition to budgeting and resource management and the social, economic, and political forces that shape the fiscal environment within which governments (particularly state and local governments) operate. Significant attention is paid to tax policy analysis and the fiscal crises confronting many large cities and states. Additional special topics covered include health care & social security, public education finance, public finance and the environment, bond markets & municipal finance, and public pensions. Taught by: Taei Park
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GAFL 515 Public Finance Leadership in the New Fiscal Reality
Several factors are intersecting upon U.S. local governments including: muted economic growth, demographics, technological change, ineffective monetary & fiscal policy, and political shenanigans. These are having a profound impact on local government financial health. Many local governments are struggling to structurally balance their budgets, even now several years into one of the longest U.S. post-WWII economic recoveries. Expenditure demand, especially because of rising employee pension and OPEB benefits, is rising faster than expected. Revenues are not rising as quickly as they have historically. This New Fiscal Reality is redefining the concept of municipal distress. Further, the options local governments have to respond to distress may be changing. It might be necessary for local governments to move away from typical solutions like distressed municipality programs and other state level aid. If the current financial trajectory continues, some local governments will not be able to deliver the same service-level they have in the past. New solutions are required. This class will 1) define the New Fiscal Reality; 2) review essential public finance concepts and relationships; 3) study past and recent examples of financial distress and prescribed solutions; 4) survey the current local government financial landscape; and 5) identify solutions public finance leaders can institute for the future. Several local government finance, political and policy experts will speak during the semester. A heavy amount of student engagement is expected to be completed in the form of research, group work, writing, and the critiquing of other students’ work. Taught by: Kozli
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GAFL 517 Quantitative Tools for Consulting
The purpose of the course is to study the theory and application of certain, key quantitative methods utilized in financial and fiscal decision-making in state and local governments: defining and measuring efficiency and equity; statistical analysis, multivariate analysis, linear and multiple regression; inter-temporal decision-making; and cost-benefit analysis. Primary emphasis will be on understanding the context and quantitative basics of these methods to prepare students for effective careers in state and local governments. Each student should have a basic understanding of market economics, the roles of government in our market economy, accounting/budgeting basics, and the Philadelphia metro area economy and government. Taught by: Taei Park
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Summer 2019 on-campus meetings will be held all day from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2) on the following 3 Saturdays: May 25 (Memorial Day weekend), June 22, and July 27. Class will also meet online weekly on Monday evenings from 7:45 - 8:45 PM.************** Fall 2019 on-campus meetings will be held on the following four (4) Fridays all day from 9:30 AM - 5:30 PM (break for lunch from 1 - 2 PM): September 6, October 4, November 1, and December 6. Class will also meet online weekly on Monday evenings from 7:45 - 8:45 PM.******** For permits into this course students should email Vincent George at vigeorge@sas.upenn.edu
GAFL 520 Marketing & Fundraising for Non-Profit Organizations
Fundraising and marketing are complementary tools for building revenue streams and fulfilling the program objectives of nearly every nonprofit organization. This course develops students' ability to market a nonprofit to mission recipients and prospective donors and to solicit funds from individuals and organizations. Through lectures, readings, discussions, and assignments, students are actively engaged in learning how to help an organization achieve its mission and objectives. This includes but is not limited to the assessing an organization's marketing and fundraising capabilities; identifying, segmenting, and creating relationships with target markets and donors; building infrastructure to properly seek and steward gifts; using technology to fulfill marketing and fundraising objectives; and focusing on fundraising and marketing methods such as social media, direct response, events, major gifts, planned giving, and others. This course emphasizes applications. Each student will complete a fundraising and/or marketing plan for a specific organization of their choosing, the structure of which will be derived from the term's assignments. This course will meet in-person from 2:00-5:30pm on the following Fridays and Saturdays: September 9-10, October 14-15, November 18-19, December 2-3. This course will meet virtually Wednesdays 9:00-10:00pm.

Taught by: Hugg
Course usually offered in fall term
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

GAFL 521 Advanced Public Management
A wait list will be kept for this course. To be added to the wait list, please email Josh Power at joshuarp@upenn.edu. This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings. Synchronous online meetings will be held on Mondays 6:30-7:30pm. On-campus meetings for Spring 2018 will be held on the following Friday afternoons (2-5:30pm) and Saturday mornings (9:30am-1pm): January 12-13, February 9-10, March 16-17, April 20-21. This course is designed to provide students with a scientific foundation of management and leadership theory to inform their actions as current and aspiring public leaders. We will draw from diverse disciplines within applied social science, including management science, positive psychology, organizational psychology, system thinking, and change management. Students will learn these theoretical frameworks and management strategies by applying these theoretical frameworks to their specific professional interests.

1.0 Course Unit

GAFL 526 Municipal Bonds
The course provides a comprehensive overview of the $3.7 trillion municipal bond market, with a focus on public finance investment banking; capital project financing for state and local governments including water, sewer, mass transit and road projects, and non-profit financing for educational and healthcare institutions; the legal and regulatory framework governing the municipal bonds market; rating agency analysis; quantitative modeling; and investor perspectives.

Taught by: Steven Genyk
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GAFL 527 Community Development and Qualitative Methods
Urban planning and community development involve attempting to understand (and then propose methods for solving) complex problems arising from our shared experience of living together in communities. These wicked problems (Rittel & Weber, 1973) often arise from multiple co-occurring influences; economic, socio-cultural, political, geographic/geological, psychological, etc. The fluid and multi-dimensional nature of these problems, therefore, calls for a fluid and multi-dimensional approach to understanding them. Nonetheless, for the better part of the last half a century the majority of efforts to approach such dilemmas has relied largely on quantitative research methods. While quantitative approaches to understanding community dynamics certainly have a demonstrated value, an over-reliance on such methods can come at the expense of the more nuanced understanding available through qualitative research approaches. Quantitative methods are useful in exploring questions such as where, when, who and how many. They are less effective, however, in answering questions of why and how. For answers to these sorts of questions we must turn to qualitative research methods. This course will introduce students to qualitative research approaches currently used in urban planning/community development, along with methods NOT currently in use, but that hold the potential to yield insights into community dynamics. In addition, this course will teach students how to apply these research techniques in the service of producing a professional-quality outcome, as opposed to producing a purely academic end result. To this end, attention will be given to the process by which these research methods are applied, or would be applied, in the professional consulting world and the language and concepts that would be used in that process and setting. Each student will leave the course with a firm understanding of terms and concepts such as: project scope; sub-deliverable(s); final deliverable(s); benchmarks; Notice to Proceed (NTP); project kick-off; out of scope services, front-end and best practices research; and other related professional concepts/terms.

Taught by: Terence Milstead
Activity: Seminar
1.0 Course Unit
GAFL 528 Critical Issues in Public Finance
The Course, Critical Issues in Public Finance will consider contemporary issues affecting the fiscal state of local governments. Covered will be issues that have distressed municipalities; the policies/initiatives that seek to rectify such including privatization/public private partnerships; reformation of municipal pensions; sustainable education funding alternatives; and tax policies aimed at promoting economic growth. Students will be assigned to a team, which will identify and provide a solution for an issue or issues plaguing a fictional government. Each team will prepare a written report and make a presentation all of which will constitute the final project. Assignments will serve as the building blocks for the final written work product and presentation developed by each team. The class is divided into four modules. The first module will take a historical look at events behind fiscal distress in municipalities and then explore current day drivers that are causing the same today. Modules two, three and four will examine some of the tools that have been used successfully or otherwise to remediate the drivers of fiscal distress. In each module case studies will be used to further analyze the particular fiscal challenge of a municipality. Written assignments will be based on case studies. Spring 2020 on-campus meetings will be held all day from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2) on the following Saturdays: January 18, February 22, March 28, and April 25. Class will also meet online weekly on Monday evenings from 6:30-7:30 PM. This course has seats reserved for Fels' students and gives priority to grad students. Non-Fels students should contact Vincent George at vigeorge@sas.upenn to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 529 Nonprofit Financial Management
The course is designed to provide the student with an understanding of the primary financial management issues and decisions that confront senior management in nonprofits and government. Students will examine financial analysis techniques from both a practical and strategic perspective as they examine operating and capital decisions. The objective of the course is to allow the student to understand how managers integrate the various discrete financial decisions within a broader framework that allows them to analyze, develop and execute a coherent overall financial strategy.

GAFL 530 Evidence Based Policies of Economic and Political Development
This class provides a 'hands-on' introduction to the promises and limitations of using Randomized Control Trials (RCTs) to inform policy makers, practitioners, and academics of the conditions under which policies likely would have a positive effect on economic and political outcomes, in the context of international development. This course has three parts: the first is devoted to understanding the 'nuts and bolts' of running field experiments / RCTs in developing countries. In part, we will be reading Glennester and Takavarasha's Running Randomized Evaluations: A Practical Guide. In addition, we will discuss core behavioral concepts from both behavioral economics and social psychology (prospect theory). The second part of the course will be devoted to demonstrating how schools have used RCTs to inform core policy debates (e.g. What are some effective ways to reduce corruption? How can we improve the performance of frontline service providers? How can politicians be more responsive to their constituents?) In the third part, students will be presenting their own research proposals, explicitly designed to address either a core policy question in the developing world or--for those interested--in the USA. Here students will have an opportunity to partner with the Social and Behavioral Sciences Team (https://sbst.gov), which is under the National Science and Technology Council.

GAFL 531 Data Science for Public Policy
In the 21st century, Big Data surround us. Data are being collected about all aspects of our daily lives. To improve transparency and accountability an increasing number of public organizations are sharing their data with the public. But data are not information. You need good information to make sound decisions. To be an effective public leader, you will need to learn how to harness information from available data. This course will introduce you to key elements of data science, including data transformation, analysis, visualization, and presentation. An emphasis is placed on manipulating data to create informative and compelling analyses that provide valuable evidence in public policy debates. We will teach you how to present information using interactive apps that feature software packages. As in all courses at Fels, we will concentrate on more practical skills than theoretical concepts behind the techniques. This course is designed to expand upon core concepts in data management and analysis that you are learning in GAFL 640: Program Evaluation and Data Analysis. This is a graduate level course and while GAFL 640 is not a pre-requisite, students are expected to have a foundation of data management and analysis before beginning this course. Students should have taken a course with R. Fels and other graduate students receive registration preference, though undergraduate students may request registration via email: vigeorge@sas.upenn.edu.

GAFL 534 Infrastructure Investment and Economic Growth: Why, How, and When
Infrastructure is widely acknowledged to be critical for economic success, and infrastructure investments are promoted as leading to economic growth, either at the local or national level. Yet, investments in telecommunications, transportation, energy, or other infrastructure do not always yield the hoped public benefit. This course will help answer the question: Under what circumstances does infrastructure investment contribute to economic growth, and how do we know? Because government resources are limited, advocates often must be creative to find sufficient funding to get desirable projects completed. This course will also help answer the question: How do we pay for the infrastructure projects we want to build? The course will illustrate approaches to answering these questions using case studies of past and proposed investments.
Taught by: Angelides

Activity: Lecture
1.0 Course Unit

GAFL 538 Human Rights, Access To Justice, and Public Policy
Law is central to effective and legitimate governance at all levels (local, national, regional, global). Law not only serves as a basis and frames governance and policy-making processes; it also offers tools and opportunities for public policy, as well as accountability mechanisms. Familiarity and understanding of legal frameworks, mechanisms and dynamics is thus essential for public and private actors involved in policy-making. This course combines theoretical insights as well as practical components. During the first portion of each class students will examine a wide spectrum of international legal frameworks and instruments which set standards for good governance on a variety of themes: eg. Children, women, refugees. This comparative perspective lays the context for US policies. During the second major portion of each class, students will explore how statutes, regulations and case law serve as tools for social change. Students will gain familiarity with relevant US legal frameworks at the Federal, State and Municipal level and at all three branches of government: legislative, executive and judicial. The third portion of every class will explore the role of the non government sector in public policy. Students will learn about core competencies needed to non profits effective such as: Boards, management leadership, and program development, leading and managing a nonprofit organization. It takes a practitioners perspective on strategic realities of modern practice. Each section will seek to rapidly orient a new manager to the complexities, strategic issues, & politics. The course is taught through a combination of theory and practice using selected readings, lectures, guest presentations, group activities (Mock senior staff discussions) and field assignments (pairing with area nonprofit leader and attendance at one of the organizations board meetings). This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should contact Vincent George at vigeorge@sas.upenn to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 546 Social Enterprise Models and Social Impact Locally and Globally
If you believe in finding innovative ways to make a difference and solve social issues locally and globally, you will benefit from the Social Enterprise and Impact Locally and Globally Course (Social Enterprise). Social Enterprise is designed for those who have a practitioner’s interest in the development, leadership, and management of the evolving nonprofit sector and their intersection with the socially conscious private sector and government. The course takes the student through the process of developing a mock social enterprise including idea exploration, testing and plan execution and provides the student with essential strategies and tools to conduct in-depth analysis of a social enterprise leading to their application to a regional social enterprise. This course fulfills an elective for the MPA and the Certificate in Nonprofit Administration.

Notes: Spring 2020 on-campus meetings will be held on the following Fridays from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2): January 17, February 21, March 27, and April 24. Class will meet online on Monday evenings from 7:45 PM - 8:45 PM.
GAFL 550 Organizational Diagnosis
This course will help participants learn the skills involved in conducting a systemic, organizational diagnosis. Applying organizational diagnosis skills can help organizations make more effective, evidence-based decisions; increase an organization’s ability to learn and to apply these learnings; increase organizational effectiveness; and, often, save organizations from flawed and detrimental actions. The course places an emphasis on systems thinking, psychodynamic organizational theory, and appreciative inquiry as ways into understanding organizational issues and problems. Frequently, when organizations find themselves in trouble, e.g. problems in the system about such things as lack of leadership, poor communication, diminished productivity, low morale, etc., there is a tendency to frame the problem(s) simplistically and/or locate blame on a few difficult individuals or groups. However, upon closer examination, problematic issues are often found to be symptomatic and/or symbolic of multiple issues within the organization. This course will help participants to understand how problems, which appear, at one level of the system, (e.g. at the personal or interpersonal level) often represent problems at other levels of the system (e.g. at the group and/or institutional level), or signify a range of inter-related issues. Emphasis will be placed on the diagnostic skills needed to examine government agencies, non-profits, and bureaucracies. It will provide participants with the theoretical constructs and application skills necessary for identifying and framing problem areas, collecting data, and organizing feedback to client systems. Real-time examples will inform our discussions as we consider the relationship between diagnosis, organizational reflection, and appropriate action. Summer 2017 On-Campus Meetings: 9:00am-1:00pm Fridays June 23, July 21 and Saturdays May 20, June 24, and July 22.
Activity: Hybrid Course
1.0 Course Unit

GAFL 555 Using the Political Process to Effect Organizational Change
At one time or another, each of us has said something like, ‘I know what to do to make some really effective—and possibly even profitable—changes in this organization, but the politics make it almost impossible to get anything done.’ The sense is that, although there are changes that should be made to improve organizational performance, politics (internal, external, governmental) simply obstruct our ability to make a difference. Frustrations notwithstanding, depending on how it is employed, politics can be either an impediment or, more importantly, a source of opportunities for improving organizations. Politics is the art and science of coordinating individuals, departments, management, markets—the entire organizational environment—to effect a balance between the organization’s objectives and the methods used to achieve them. As with the other factors that are employed to affect organizational performance—the methods used to improve manufacturing, marketing, sales, finance, and so on—the politics of a means that organizations can use to initiate and maintain critical personal and institutional relationships. One of the seminar readings—Latimer’s ‘Why Do They Call It Business If It’s Mostly Politics?’ is used to provide illustrations of the ambiguous nature of much of what is regarded as organizational politics. What is critical to understand and appreciate from the outset, however, is that politics is not an external factor that is imposed on organizations. Politics is not only a means for achieving personal or institutional power; it is also a method for developing and maintaining personal and institutional relationships within and among individuals and organizations of all types. This seminar will discuss organizational politics and the ways that it is used to identify, characterize, and effect change—both within and among organizations. After reviewing several perspectives on organizations and the roles that political processes play in decision-making, a series of cases is presented that illustrate the contexts and conditions for effective political communication and coordination. Prerequisite: Course Permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit

GAFL 559 Social Enterprise
With an increasing competitive market, the landscape for private, not-for-profits and government organizations nationally and globally is become more complex and diverse. Leaders across government, private, and not-for-profits are being challenged to lead differently given the diversity and complexity of organizations that cross and blend the traditional organizations that cross and blend the traditional organizational legal structures. The course includes providing students with the essential competencies and tools to create, lead, and influence system and policy change utilizing Social Enterprise, Social Finance, and Collective Impact strategies and tools. The knowledge accumulated through this course will be translated to a working level knowledge of a Critical Thinking that hat is important for any leader or manager in government, private, or the non-profit sectors. Critical thinking involves making judgments based on reasoning: leaders consider options; analyze these using specific criteria; and draw conclusions and make judgments. Critical thinking competency encompasses a set of abilities that leaders use to examine their own thinking, and that of others, about information that they receive through observation, experience, and various forms of communication. This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should contact Vincent George at vigorge@sas.upenn to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 569 The Politics of Housing and Community Development
This course offers an exploration of how legislative action, government policymaking, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as considerations of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden’s waterfront and downtown-area neighborhoods.

GAFL 578 Law, Religion, and Politics
This course addresses the contemporary interplay between government, religion, and politics with focus on issues during the COVID-19 pandemic and the 2020 presidential election. Due to the rise in statutory religious liberty statutes at the federal and state levels over the last 20 years—which have placed constraints on government beyond the First Amendment—adjustments between the government’s interest and religious liberty have become complicated. Public administrators need to anticipate challenges to government action, including the limits imposed by the First Amendment and these relatively new statutory constraints. This course will teach future public policy administrators how to assess the myriad of instances where policy determinations must take into account the likely impact of politically powerful and connected religious leaders and organizations on the public interest. This knowledge has never been more important than it is now with the COVID-19 pandemic and the 2020 presidential election occurring at the same time, both of which entail fascinating questions related to religious liberty and public safety.

Notes: UPDATED: This class will meet online for Fall 2020. Class will meet synchronously from 7:45-8:45pm on Mondays, from 9am-1pm on four Fridays: 9/11, 10/9, 11/13, 12/11 (12/11 will be 9-5pm meeting). This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit.

GAFL 599 Independent Study
Activity: Independent Study
1.0 Course Unit
GAFL 611 Statistics for Public Policy
This course is GAFL 611, the required course in statistical analysis for students in the Fels school. This is the required course in statistical analysis for public policy/public administration. Increasingly, this is a quantitative field. Even if you think you'll someday just be (say) a city manager, and not likely to use quantitative analysis yourself, you will likely find yourself working with quantitative data. For example, 'policy evaluation' has become a buzzword in recent years in public management and examples involving Fels graduates or their equivalents abound. Did giving low-income children after-school tutoring improve their academic performance? Does expanding a free-lunch program reduce the number of student outbursts in classrooms? Did Philadelphia's 'big belly' trash cans actually reduce the amount of litter on our streets? Answering any of these questions requires statistical analysis. This course aims to lay the groundwork for you to answer these (and many more!) questions. The point here is not to convince you to adopt a quantitative design for your own work, or that quantitative designs are the 'best' designs for answering all questions. Rather, the goal is to give you a set of tools that will enable you to read, critique and eventually produce your own quantitative research. The course will introduce you to the logic of social scientific inquiry, and the basic statistical tools used to analyze politics and public policy.
Taught by: Claire Robertson Kraft
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: This course has seats reserved for Fels' students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 612 Quantitative Methods for Policy Analysis
This course will help students learn how to make evidence-based decisions in a public sector context. The course will introduce important data analysis skills and help students evaluate the quality of studies undertaken to measure the impact of public policies and programs.
Taught by: Claire Robertson Kraft
Course usually offered in spring term
Activity: Hybrid Course
1.0 Course Unit
Notes: UPDATED: This class will meet online and in person for Fall 2020. Class will meet online (synchronously) from 9:30-4pm on Saturdays 9/12, 10/10, 11/14, 12/12 and Mondays from 6:30-7:30pm. The class will have in-person meetings which can be joined remotely on Mondays 9/14, 10/12 and 11/16 from 6:30-7:30pm. This course has seats reserved for Fels' students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit.

GAFL 621 Public Economics
This course provides students with the knowledge required to understand government operations in relation to the market economy. In theory of supply and demand, students explore the pricing mechanism, price elasticity, and the effects of price controls on markets. Efficiency is examined in connection with competition and again in connection with equity, and market failure is considered as a reason for government intervention. Cost-benefit analysis is examined in the context of selecting among public investment alternatives. The course also assists students in addressing issues connected with local public goods and economic development.
Taught by: Lauren Russell
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: This course has seats reserved for Fels' students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 622 Economic Principles of Public Policy
This course will introduce students to key economic concepts such as scarcity, efficiency, monopolies and cost-benefit. Students will practice applying these principles to the range of decisions that public sector executives have to make in order to understand the trade-offs inherent in any public policy or program.
Course not offered every year
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee.

GAFL 623 Leading People
Leading Diverse Organizations focuses on Strategic Human Resource Management (SHRM), the combination of human resource management (HRM) and the strategic direction of the organization, whether public or non-profit. This course will introduce students to a range of human resource management practices and principles as they relate to job analysis, recruitment and selection, compensation, benefits, training and career development, performance management, and labor-management relations. Learning to deal with the daily HR challenges makes leaders and managers more effective and more valuable to the organization. This course has seats reserved for Fels' students and gives priority to grad students. Post-bacc students, contact Vincent George at vigeorge@sas.upenn.edu for a permit. Undergraduate students, contact Vincent George 2 weeks before the start of the pertinent term to request a seat. Seats are not guaranteed to post-bacc or undergraduate students.
Course usually offered summer term only
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Spring 2019 on-campus meetings will be held on the following Fridays 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2): January 18, February 15, March 15 and April 12. Class will meet online on Monday evenings from 7:45 PM - 8:45 PM.

2020-21 Catalog | Generated 09/18/20
GAFL 631 Policy Making & Public Institutions
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to participants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government. The class will be a mix of lecture and cases. Cases are on a diverse set of policy topics, with a goal of illustrating broad themes about the policy-making process rather than the specifics of certain policy areas.
Activity: Lecture
1.0 Course Unit
Notes: This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 640 Program Evaluations and Data Analysis
One of the trademarks of the 21st century public management is the usage of data and analysis in the decision-making process. A successful public leader will use empirical evidence to guide her decisions. She knows what types of data and analysis she should ask her analysts to collect and conduct, how to consume the results they generate, and how to transform the analytical results into effective communication with stakeholders. This class will help you become that 21st century public leader. At the end of this course, you will understand key principals of performance measures and program evaluation. In addition, you will be able to process, manage, and analyze quantitative data using R, a modern programming language optimized for statistical analysis. I picked R for many reasons: it is free, has many open-source visualization techniques and statistical models, and many statistical and quantitative method courses on campus use it as the language of choice. More importantly, knowing how to use R can be a unique and attractive skill for your employer.
Taught by: Russell, Lauren
Course usually offered in spring term
Prerequisite: GAFL 611
Activity: Lecture
1.0 Course Unit
Notes: This course is a requirement for MPA full-time students who started in Fall 2015 or later. It is an elective for MPA full-time students who started Fall 2014 or earlier.

GAFL 651 Public Finance and Public Policy
This course deals with how governments tax and spend. Students become familiar with the theoretical, empirical, and practical tools and methods used to create and analyze government budgets, as well as the flow of public resources. The course examines public revenues and expenditures within the context of fiscal federalism, in addition to budgeting and resource management and the social, economic, and political forces that shape the fiscal environment within which governments (particularly state and local governments) operate. Significant attention is paid to tax policy analysis and the fiscal crises confronting many large cities and states. Additional special topics covered include health care & social security, public education finance, public finance and the environment, bond markets & municipal finance, and public pensions.
Taught by: Gershberg
Course usually offered in spring term
Also Offered As: CPLN 502
Activity: Lecture
1.0 Course Unit
Notes: This course satisfies a core requirement in the Master of Public Administration and the Certificate of Public Finance.
GAFL 652 Financial Management of Public and Nonprofit Organizations
This course provides an introduction to financial management principles for public and nonprofit organizations. The primary objective of this course is to demystify financial information and improve students' ability to effectively engage in financial discussions, regardless of their role in the organization. This course will be focused on the vocabulary and tools necessary to interpret, analyze, and properly communicate financial information in order to develop and execute an appropriate financial strategy. This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Summer 2020 on-campus meetings will be held the following 3 Saturdays (9:30am - 5:30pm, with a break for lunch 1-2pm): May 30, June 27, August 1. Class will also meet online weekly on Monday evenings from 6:30 - 7:30 PM. This course has seats reserved for Fels students and gives priority to grad students. Please contact Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students. NOTE: For Summer 2020, this class will meet remotely. The specific meeting times for this class may be updated to accommodate the new format.
Taught by: Melissa Neuman
Course usually offered in spring term
Activity: Hybrid Course
1.0 Course Unit

GAFL 710 Negotiations
To influence public policy you need analytical skills to discover optimal solutions to problems, and good negotiation skills to tailor implementable solutions that address the needs and priorities of multiple stakeholders. What resources you want to invest, whom you engage in discussions, and what you expect to receive in return are open to explicit and implicit negotiations. This course will provide a working understanding of key negotiations concepts, including: Strategic elements of negotiations - interests, goals, positions, rights, power, value creation, high stakes, disputes; Preparation for and the details of negotiation processes; Ethical encounters and conundrums; Leveraging your strengths/understanding your negotiating personality. You will learn cooperative and competitive strategies, have a solid grasp of the decision-making science of negotiation, and better understand cognitive processes and emotional dynamics that affect the ways people negotiate.
Taught by: Naomi Wyatt
Course usually offered in fall term
Activity: Hybrid Course
1.0 Course Unit
Notes: UPDATED: This class will meet online for Fall 2020. Class will meet synchronously from 7-8:30pm on Wednesdays, and from 9am-3pm on four Fridays: 9/11, 10/9, 11/13, 12/11. This course has seats reserved for Fels' students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit.

GAFL 719 Advanced Budgeting
The course will build on the fundamentals taught in the introductory budgeting unit to help build students' competence in budgetary analysis. Using detailed data from a major city as a course-long case study, and incorporating excel skill-building exercises, students will develop hands-on understanding of budgets by working through such factors as economic drivers of fiscal performance, revenue analysis and forecasting, including tax policy considerations; expenditure analysis and projection, with an emphasis on workforce costs; and capital budgeting and financing. Students will also be introduced to key fiscal policies, budget monitoring and performance measurement, and the development of effective budget communications for various audiences.
Taught by: Nadol and Westerman
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

GAFL 732 Public Management
This core MPA course is intended to help each student to learn more than he or she already knows about public management both as a profession and as a field of academic study and to enjoy the company of supportive peers, instructors, and special guests as he or she contemplates a post-MPA career in governance. This course satisfies a core requirement in the Master of Public Administration full-time program.
Taught by: DiIulio/Mulhern
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit
GAFL 733 Public Management (MPA Executive Section)
This is a required course for the Executive MPA students in the Fels Institute of Government. The purpose of this course is to provide aspiring public managers with the tools necessary to work with and within organizations. Students will be introduced to public management concepts and gain the competencies required to address the unique challenges in the public sector. Public managers must have technical expertise in planning, staffing, and budgeting; however, technical skills alone are not sufficient to become an effective public manager. Effective public managers must learn to lead inclusive organizations that leverage diversity and diffuse tensions among heterogeneous constituents and stakeholders. You must understand the socio-political context of your organization and your success will be dependent on your ability to analyze policy options and persuade stakeholders and supervisors, through effective communications, to pursue the policy options you recommend. Students will explore big questions related to managing and leading public sector organizations, such as: (1) What makes for an effective public manager? (2) Who does a public organization serve? (3) What is the internal and external operating environment of public organizations? (4) How do we know if public organizations are effective? This is accomplished through exploration of theory, concepts, and applications. We will use multiple learning methods including lectures, case studies, and group exercises, to provide students with a robust understanding of public management.
Taught by: Michael DiBerardinis
Course usually offered in fall term
Activity: Hybrid Course
1.0 Course Unit
Notes: UPDATED: This class will meet online and in person for Fall 2020. Class will meet online (synchronously) from 9:30-4pm on Fridays 9/11, 10/9, 11/13, 12/11 and Mondays from 7:45-8:45pm. The class will have in-person meetings which can be joined remotely on Mondays 9/14, 10/12 and 11/16 from 6:30-7:30pm or 8:00-9:00pm. This course has seats reserved for Fels' students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit.

GAFL 735 The Performance Imperative
This course will examine the role of performance management within public organizations (government and nonprofit), including why measuring and managing performance is critically valuable to high-functioning organizations’ success. With the increasing pressures on nonprofit and government organizations to continue to produce more with less, performance management systems are becoming a staple within organizations looking to drive better outcomes for their constituents. The goal of a highly functioning performance management system within a public organization is to establish a system of continuous monitoring designed to routinely measure specific quantitative and qualitative indicators in real-time. Key Performance Indicators (KPIs) - in order to improve the organization’s ability to achieve specific outcomes through continuous improvement and timely, data-based decision-making. This course will use a diversity of course materials, including real-life examples and case studies to: (a) demonstrate how organizations have successfully implemented performance management systems, (b) indicate the importance of using real-time, valid and reliable data, and linking performance results with effective budget resource allocation (e.g., program and outcome-based budgeting) and constituent satisfaction, and (c) explore practices on how to best protect valuable aspects of performance management systems despite changes in leadership. This is a ‘hybrid’ course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Summer 2020 on-campus meetings will be held the following 3 Fridays (9:30am - 5:30pm, with a break for lunch 1-2pm): May 29, June 26, July 31. Class will also meet online weekly on Monday evenings from 7:45-8:45 pm. This course has seats reserved for Fels students and gives priority to grad students. Please contact Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students. NOTE: For Summer 2020, this class will meet remotely. The specific meeting times for this class may be updated to accommodate the new format.
Taught by: Rachel Meadows, Matthew Stitt
One-term course offered either term
Activity: Hybrid Course
1.0 Course Unit
Notes: This course has seats reserved for Fels’ students and gives priority to grad students. Please contact Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 798 MPA Capstone I
This required non-credit class is the first part of the MPA Capstone. Executive MPA students take this class in their second Fall semester. Full-time MPA students take this class in their Spring semester. Deadlines and deliverables are noted in the syllabus.
Taught by: Claire Robertson Kraft or Kasey Meehan
Activity: Seminar
0.0 Course Units
GAFL 799 MPA Capstone II
Successful completion of a Capstone project is one of the academic requirements for the Master of Public Administration (MPA) at the University of Pennsylvanias Fels Institute of Government. This core course is designed to give students direct guidance as they apply and consolidate knowledge and skills gained across the curriculum through the completion of a rigorous Capstone project. Capstone students are responsible for designing and completing a public policy or public administration-related project and presenting a deliverable (described below) to the Fels community and other stakeholders.
Taught by: Claire Robertson-Kraft or Kasey Meehan
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Summer 2019 on-campus meetings will be held all day from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2) on the following 3 Saturdays: May 25 (Memorial Day weekend), June 22, and July 27. Class will also meet online weekly on Monday evenings from 7:45 - 8:45 PM.

Graduate Arts & Sciences (GAS)

GAS 600 English Language Skills
For prospective International Teaching Assistants seeking English fluency certification, this course emphasizes the development of oral academic discourse skills and practices prominent features of spoken English that promote successful communication in academic settings, including intelligibility, active listening skills, grammar.
Taught by: Potter
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GAS 601 Proseminar in Graduate Studies
An introduction to the methods of graduate study and research. To be conducted by individual graduate group faculty.
Taught by: Faculty
Activity: Seminar
1.0 Course Unit

Greek (GREK)

GREK 015 Elementary Modern Greek I
This course is designed for students with no prior knowledge of the modern Greek Language. Instructions are theme based and is supported by a Textbook as well as other written or audiovisual material. It provides the framework for development of all communicative skills (reading, writing, comprehension and speaking) at a basic level. The course also introduces students to aspects of Modern Greek culture that are close to students' own horizon, while it exposes them to academic presentations of Greek history, arts, and current affairs. Quizzes, finals and short individual work with presentation are the testing tools. The completion of this unit does NOT satisfy the language requirement. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Tsekoura
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

GREK 016 Elementary Modern Greek II
Continuation of Elementary Modern Greek I, with increased emphasis on reading and writing. Prerequisite: Offered through Penn Language Center. This section is reserved for heritage learners or by permission of instructor.
For BA Students: Language Course
Taught by: Tsekoura
Course not offered every year
Prerequisite: GREK 015
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center . this section is reserved for heritage learners or by permission of instructor.

GREK 017 Intermediate Modern Greek I
This course is designed for students with an elementary knowledge of Demotic Modern Greek, and aims mainly at developing oral expression, reading and writing skills. Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Tsekoura
Course not offered every year
Prerequisite: GREK 015 AND 016
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

GREK 018 Intermediate Modern Greek II
Further attention to developing oral expression, reading, and writing skills for students with knowledge of Demotic Modern Greek. Offered through Penn Language Center.
For BA Students: Last Language Course
Taught by: Tsekoura
Course not offered every year
Prerequisite: (GREK 015 OR GREK 016) AND GREK 017
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

GREK 101 Elementary Classical Greek I
Intensive introduction to Classical Greek morphology and syntax. This course includes exercises in grammar, Greek composition, and translation from Greek to English. Emphasis is placed upon developing the ability to read Greek with facility.
For BA Students: Language Course
Taught by: Nishimura-Jensen
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

GREK 102 Elementary Classical Greek II
Students complete their study of the morphology and syntax of Classical Greek. We begin the semester with continuing exercises in grammar and translation, then gradually shift emphasis to reading unadapted Greek texts.
For BA Students: Language Course
Taught by: Nishimura-Jensen
Course usually offered in spring term
Prerequisite: GREK 101
Activity: Seminar
1.0 Course Unit
GREK 112 Intensive Elementary Classical Greek
An introduction to the ancient Greek language for beginners, with explanation of basic grammatical concepts and intensive exercises in reading and writing. Ideal for undergraduates or graduate students from Penn or elsewhere with some background in learning other languages, or who need to learn Greek rapidly. The course covers the first year of college-level Greek, equivalent to GREK 101 + GREK 102 at more than twice the normal pace. For further information on Penn's Greek curriculum, visit the Classical Studies department website.
Course usually offered summer term only
Activity: Seminar
2.0 Course Units

GREK 115 Greek/Heritage Speakers I
This course is intended to help Heritage Speakers or student with prior knowledge of conversational modern Greek (or even Ancient Greek) to refresh or enrich their knowledge of modern Greek and who would not be a good fit for the elementary or intermediate classes. A theme based textbook and instructions along with a comprehensive overview of grammar as a whole is presented while original text, songs, video and other media are used in order to augment vocabulary and increase fluency in modern Greek. Students are expected to properly use the language, do theme-based research on the themes examined and provide written work on various subjects and make conversation in class. Presentations on researched topics account for final exam.
For BA Students: Language Course
Taught by: Tsekoura
One-term course offered either term
Activity: Lecture
1.0 Course Unit

GREK 116 Greek/Heritage Speakers II
It is the continuation of GREK 115 with completing Grammar (passive voice as well as unusual nouns and adjectives etc.) and adding more challenging reading and writing material. The completion of this course satisfies the language requirement. ALL students completing the HSI GREK 115 are eligible to enroll. ALL OTHERS will have to take a placement test.
For BA Students: Last Language Course
Taught by: Tsekoura
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GREK 181 Elementary Biblical Greek: The Language of Early Christianity
This course provides a one-semester introduction to koine, the version of ancient Greek that was shared by many communities around the Mediterranean and was used in the composition of the Greek New Testament and much early Christian literature. Coursework will focus on grammar, vocabulary, and basic readings. The course prepares students for more extensive readings in biblical Greek literature, in the sequel course GREK 182 Readings in Biblical Greek. Students aiming to learn classical Greek should take instead GREK 101 Elementary Classical Greek I. This course does not prepare students for reading classical (Attic) Greek. Students aiming to read classical Greek should take instead GREK 101.
Taught by: Ker
Activity: Seminar
1.0 Course Unit
Notes: This course does not prepare students for reading classical (Attic) Greek. Students aiming to read classical Greek should take instead GREK 101.

GREK 203 Intermediate Classical Greek: Prose
This course is for those who have completed Ancient Greek 102, Greek 112 or equivalent. You are now ready to begin reading real Greek! We will read a selection of passages from Greek prose authors, focusing on language and style.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: GREK 102 OR GREK 112
Activity: Seminar
1.0 Course Unit

GREK 204 Intermediate Classical Greek: Poetry
An introduction to the reading, interpretation, and translation of Greek poetry and Homeric Greek through close attention to sections of Homer's Iliad.
For BA Students: Last Language Course
Taught by: Sheila Murnaghan
Course usually offered in spring term
Prerequisite: GREK 203
Activity: Seminar
1.0 Course Unit

GREK 212 Intensive Intermediate Greek
An introduction to the basic history and conventions of Greek prose and poetry, with continuous readings from classical authors accompanied by grammar review and exercises. Ideal for undergraduates or graduate students from Penn or elsewhere who have completed the equivalent of one year of Greek (e.g., GREK 112). The course covers the second year of college-level Greek, equivalent to GREK 203 + 204 at more than twice the normal pace. This is an online course. 2 c.u. Students are not required to be in Philadelphia. Course activities will involve a series of intensive online exercises completed each day according the students own schedule, plus one daily video-linked session 5.30-7.00pm EST (Monday thru Thursday). The instructor for summer 2020 is Maria Kovalchuk, a Ph.D. student in Classical Studies. For further information about the course, please contact Prof. James Ker (jker@sas.upenn.edu).
For BA Students: Last Language Course
Course usually offered summer term only
Activity: Seminar
2.0 Course Units

GREK 308 The Myth of Prometheus
In Greek mythology, human beings are indebted for their survival and their way of life to Prometheus, the powerful Titan and clever trickster who defies Zeus to give them the gift of fire and the various arts and technologies of civilization. We will trace the development of the Prometheus myth through a series of works in different genres by Hesiod, Aeschylus, and Plato.
Taught by: Murnaghan
Activity: Seminar
1.0 Course Unit

GREK 309 Hymnic Poetry
In this course, we will read the four major Homeric hymns and five Callimachean hymns, with briefer examinations of the minor Homeric hymns and Orphic hymns. Some of the questions that will arise from our readings include the contexts for which they were composed, the literary and religious relationship of humans and gods, mythopoetics, and the differences in dialect and language between the works.
Taught by: Nishimura-Jensen
Course not offered every year
Prerequisite: GREK 204
Activity: Seminar
1.0 Course Unit
GREK 310 Thucydides
In this class we will read excerpts from the Greek historian, Thucydides, whose account of the Peloponnesian War is one of the most influential and compelling examples of history writing from any culture. Thucydides is generally thought of as one of the more difficult Greek prose authors. We will read some basic narrative passages in order to become familiar with Thucydidean style, before moving to the more difficult speeches and editorial passages in which Thucydides expounds upon the goals and difficulties of writing history.
Taught by: McInerney
One-term course offered either term
Also Offered As: GREK 610
Activity: Seminar
1.0 Course Unit

GREK 312 Discovering the Family: Sophocles' Oedipus Tyrannos and Euripides' Ion
We will read in Greek two great Athenian tragedies focused on the workings of the god Apollo, and the shocking, gradual revelation of hidden family relationships: Sophocles' Oedipus Tyrannos, and Euripides' Ion.
Taught by: Wilson
Course not offered every year
Also Offered As: GREK 612
Activity: Seminar
1.0 Course Unit

GREK 313 Alcibiades and the Athenian Imagination
Political superstar, demagogue, desperate lover, brilliant general, and traitor, Alcibiades captured the imaginations of his fellow Athenians as well as thinkers and artists for centuries to come. This course offers students an opportunity to study democracy, sexuality, ethics, and youth through the perspectives on Alcibiades presented in comedy, historiography, philosophy, and oratory. In addition to preparing weekly translations, students will write individual papers presenting original close readings or research and will additionally collaborate on a digital project.
Taught by: Brassel
Also Offered As: GREK 613
Activity: Seminar
1.0 Course Unit

GREK 314 Greek Dialogue
In this course we will examine the various manifestations of dialogue in ancient Greek literature. We will read some whole dialogues (such as those by Plato and Lucian; some dialogues in drama and dialogue episodes in historiography). We will also study, and experiment with, the linguistic and discursive phenomena associated with dialogue. (Prior completion of intermediate 200-level Greek sequence or high-school equivalent is required.)
Taught by: Ker
Course not offered every year
Also Offered As: GREK 614
Activity: Seminar
1.0 Course Unit

GREK 310 Thucydides

1.0 Course Unit

GREK 540 The Greek Text: Language and Style
What do we need to read texts in ancient Greek? In this course we read just one prose text and one poetic text, or a very limited number of texts and passages, with a focus on language and formal analysis (such as diction, grammar, stylistics, metrics, rhetoric, textual criticism). A range of exercises will be used to develop these skills, including composition, lexical studies, recitation, memorization, exegesis, written close-readings, and sight-translation.
Course not offered every year
Activity: Seminar
1.0 Course Unit

GREK 541 Greek Literary History
Through selected readings from both poetry and prose, we will survey the range and evolution of ancient Greek literary practice.
Taught by: Rosen
Course not offered every year
Activity: Seminar
1.0 Course Unit

GREK 600 Aristophanes & Lucian
This seminar will explore the comic drama of Aristophanes and its influence on the comic prose of Lucian in the Imperial period. Aristophanes was an important literary model for Lucian, but Lucian read Aristophanes in his own way and for his own literary agenda. We will consider each author both in their own historical contexts, and comparatively, as parodists, satirists and cultural critics within a long and varied literary tradition.
Taught by: Rosen
One-term course offered either term
Activity: Seminar
1.0 Course Unit

GREK 601 Plato and Aristotle on Human Nature
The place of humans in the order of things was a perennial question for ancient philosophers. The puzzle typically begins with questions of humans' place within a hierarchy, setting them between inanimate things and non-human living things on the one side, and the divine on other. These categories, along with others like metabolism, growth and decay, death, sentience, cognition, and knowledge, will form the background against which we look closely at Plato's and Aristotle's views. We will read sections of Phaedo, Republic, and Timaeus, along with On the Soul, On the Motion of Animals, and On Divination During Sleep. The course will invite both broad synthetic thinking, and focused textual analysis. Students will be responsible for a class presentation, a stint as lead questioner, a presentation of work toward a research paper, and a final research paper.
Taught by: Struck
Course not offered every year
Also Offered As: PHIL 611
Activity: Seminar
1.0 Course Unit

2020-21 Catalog | Generated 09/18/20
GREK 604 Troy and Homer
An interdisciplinary seminar focusing on the city of Troy both as an archaeological site and as the setting of the legendary Trojan War. We will consider Homer's Iliad (with selected sections read in Greek) together with the topography and archaeology of the site of Troy in order to address a series of interrelated questions: What are the points of continuity and discontinuity between the stories told by the literary tradition and the material record? How do both types of evidence contribute to our understanding of political relations and cultural interactions between Greece and Anatolia in the Bronze Age? How do Hittite sources bear on our reconstruction of the events behind the Troy legend? How have the site and the poem contributed to each other's interpretation in the context of scholarly discovery and debate? We will give some attention to modern receptions of the Troy legend that deliberately combine material and textual elements, such as Cy Twombly's 'Fifty Days at Iliam' and Alice Oswald's 'Memorial: An Excavation of Homer's Iliad.' The seminar will include a visit to the site of Troy during the Spring Break.
Taught by: Murnaghan
Also Offered As: AAMW 604, CLST 604
Activity: Seminar
1.0 Course Unit

GREK 605 Herodotus
An overview of Herodotus' Histories with attention both to its place in Greek literary history and to its uses and limitations as an historical source. We will consider the Histories in relation to questions of ethnic identity, cultural contact, and the construction of East and West. In their individual projects, students will explore the relevance of this protean, polyvocal text to their particular interests and scholarly perspectives.
Taught by: Murnaghan
Course not offered every year
Activity: Seminar
1.0 Course Unit

GREK 610 Thucydides
In this class we will read excerpts from the Greek historian, Thucydides, whose account of the Peloponnesian War is one of the most influential and compelling examples of history writing from any culture. Thucydides is generally thought of as one of the more difficult Greek prose authors. We will read some basic narrative passages in order to become familiar with Thucydidean style, before moving to the more difficult speeches and editorial passages in which Thucydides expounds upon the goals and difficulties of writing history.
Taught by: McInerney
One-term course offered either term
Also Offered As: GREK 310
Activity: Seminar
1.0 Course Unit

GREK 611 Greek Epigraphy
An introduction to the principles and practices of Greek Epigraphy. Study of selected Greek inscriptions.
Taught by: McInerney
Course not offered every year
Also Offered As: AAMW 611, ANCH 611, CLST 611
Activity: Seminar
1.0 Course Unit

GREK 612 Discovering the Family: Sophocles' Oedipus Tyrannos and Euripides' Ion
We will read in Greek two great Athenian tragedies focused on the workings of the god Apollo, and the shocking, gradual revelation of hidden family relationships: Sophocles' Oedipus Tyrannos, and Euripides' Ion.
Taught by: Wilson
Course not offered every year
Also Offered As: GREK 312
Activity: Seminar
1.0 Course Unit

GREK 613 Alcibiades and the Athenian Imagination
Political superstar, demagogue, desperate lover, brilliant general, and traitor, Alcibiades captured the imaginations of his fellow Athenians as well as thinkers and artists for centuries to come. This course offers students an opportunity to study democracy, sexuality, ethics, and youth through the perspectives on Alcibiades presented in comedy, historiography, philosophy, and oratory. In addition to preparing weekly translations, students will write individual papers presenting original close readings or research and will additionally collaborate on a digital project.
Taught by: Brassel
Also Offered As: GREK 313
Activity: Seminar

Gujarati (GUJR)

GUJR 402 Beginning Gujarati Part I
During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
GUJR 403 Beginning Gujarati Part II
During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: GUJR 402
Activity: Seminar
1.0 Course Unit

GUJR 422 Intermediate Gujarati Part I
This course is designed as a continuation of beginning Gujarati. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar and comprehension exercises. A special emphasis will be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of spoken and written language. During the second year of Gujarati, students are introduced to progressively more difficult reading selections, along with additional instructions in the formal grammar of the language. To maintain and develop oral and aural command of the language, readings are discussed in Gujarati. To develop their writing abilities, students are also expected to compose short essays on their readings.
For BA Students: Language Course
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

GUJR 423 Intermediate Gujarati Part II
This course is designed as a continuation of intermediate Gujarati I. Course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar and comprehension exercises. A special emphasis will be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of spoken and written language. During the second year of Gujarati, students are introduced to progressively more difficult reading selections, along with additional instructions in the formal grammar of the language. To maintain and develop oral and aural command of the language, readings are discussed in Gujarati. To develop their writing abilities, students are also expected to compose short essays on their readings.
For BA Students: Last Language Course
Taught by: Desai, R
Course usually offered in spring term
Prerequisite: GUJR 422
Activity: Lecture
1.0 Course Unit

GUJR 442 Advanced Gujarati
A follow up semester to Advanced Gujarati I, focused on the comprehensive study in reading, writing, speaking, and comprehension to gain advanced knowledge of Gujarati. Instructor may use poetry and/or prose as tools to engage students while having them create their own written works. Contact instructor for details. Prerequisite: Proficiency in Gujarati. Contact instructor if you have questions about your proficiency level.

HSOC 001 Emergence of Modern Science
During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific world view from the Renaissance through the end of the 20th century. By focusing on the life, work, and cultural contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they relate to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a 'Western Civ' course with a difference, open to students at all levels.
For BA Students: Hum/Soc Sci or Nat Sci/Math Sector
Taught by: Kucuk
Course usually offered in fall term
Also Offered As: STSC 001
Activity: Lecture
1.0 Course Unit
HSOC 002 Medicine in History
This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2) to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole—recognizing that medicine has always aspired to 'treat' healthy people as well as the sick and infirm. Rather than history 'from the top down' or 'from the bottom up,' this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.
For BA Students: History and Tradition Sector
Taught by: Barnes
Course usually offered in fall term
Also Offered As: HIST 036, STSC 002
Activity: Lecture
1.0 Course Unit

HSOC 003 Technology & Society
Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technologies affect social relations, and conversely how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism and communism? Can specific technologies promote democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we'll consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet.
For BA Students: Society Sector
Taught by: Benson
Course usually offered in spring term
Also Offered As: SOCI 033, STSC 003
Activity: Lecture
1.0 Course Unit

HSOC 010 Health and Societies
'Two fundamental questions structure this course: (1) What kinds of factors shape population health in various parts of the world in the twenty-first century? and (2) What kinds of intellectual tools are necessary in order to study global health? Grasping the deeper 'socialness' of health and health care in a variety of cultures and time periods requires a sustained interdisciplinary approach. 'Health and Societies: Global Perspectives' blends the methods of history, sociology, anthropology and related disciplines in order to expose the layers of causation and meaning beneath what we often see as straightforward, common-sense responses to biological phenomena. Assignments throughout the semester provide a hands-on introduction to research strategies in these core disciplines. The course culminates with pragmatic, student-led assessments of global health policies designed to identify creative and cost effective solutions to the most persistent health problems in the world today.' Also fulfills General Requirement in Science Studies for Class of 2009 and prior.
For BA Students: Humanities and Social Science Sector
Taught by: McKay
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Also fulfills General Requirement in Science Studies for Class of 2009 and prior

HSOC 028 Medicine, Magic and Miracles
This course explores the nature of disease and the history of medical practice and healing in the medieval period, using methods from intellectual, cultural, and social history, as well as the life sciences, and incorporating material from Indonesia to England. The themes of this course include: 1) the diversity of healing practices and beliefs in this period; 2) specific rationalities of different methods of healing; 3) views of the human body and disease; 4) the wide array of practitioners that people turned to for medical care, including physicians, midwives, family members, herbalists, snake handlers, saints, and surgeons; 5) institutions of medicine, such as the hospital. Students will have their minds blown as they learn to question everything they thought they knew about how science and medicine work.
Taught by: Truitt
Course usually offered in fall term
Also Offered As: STSC 028
Activity: Seminar
1.0 Course Unit

HSOC 031 Addiction: Understanding How We Get Hooked and How We Recover
We will investigate the evolution of scientific theories and popular beliefs regarding the causes of addiction in the 20th and 21st centuries, and how they have shaped treatment approaches to these disorders. We will examine the crack cocaine epidemic of the 1980s and the current opioid epidemic, and consider sociocultural and political factors that contributed to the onset of and reaction to these crises. Finally, we will discuss research into the neurobiological, psychological, familial, social, and political factors that initiate and sustain addiction, and the efficacy of various treatment approaches.
Taught by: McKay
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
HSOC 041 Cane and Able: Disability in America
Disability is a near universal experience, and yet it remains on the margins of most discussions concerning identity, politics, and popular culture. Using the latest works in historical scholarship, this seminar focuses on how disability has been experienced and defined in the past. We will explore various disabilities including those acquired at birth and those sustained by war, those visible to others and those that are invisible. For our purposes, disability will be treated as a cultural and historical phenomenon that has shaped American constructions of race, class, and gender, attitudes toward reproduction and immigration, ideals of technological progress, and notions of the natural and the normal.
Taught by: Linker
Course usually offered in fall term
Also Offered As: STSC 041
Activity: Seminar
1.0 Course Unit

HSOC 048 Epidemics in History
The twenty-first century has seen a proliferation of new pandemic threats, including SARS, MERS, Ebola, Zika, and most recently the novel coronavirus called COVID-19. Our responses to these diseases are conditioned by historical experience. From the Black Death to cholera to AIDS, epidemics have wrought profound demographic, social, political, and cultural change all over the world. Through a detailed analysis of selected historical outbreaks, this seminar examines the ways in which different societies in different eras have responded in times of crisis. The class also analyzes present-day pandemic preparedness policy and responses to health threats ranging from influenza to bioterrorism.
Taught by: Barnes
Course usually offered in fall term
Also Offered As: STSC 048
Activity: Seminar
1.0 Course Unit

HSOC 052 Autism Epidemic
The CDC estimates that 1 in 150 children have autism. Three decades ago, this number was 1 in 5,000. The communities in which these children are identified in ever increasing numbers are ill prepared to meet their needs. Scientists have struggled to understand the causes of this disorder, its treatment, and why it appears to be rapidly increasing. Families, policy makers, schools and the healthcare system have argued bitterly in the press and in the courts about the best way to care for these children and the best ways to pay for this care. In this class, we will use autism as a case study to understand how psychiatric and developmental disorders of childhood come to be defined over time, their biological and environmental causes identified, and treatments developed. We will also discuss the identification and care of these children in the broader context of the American education and healthcare systems.
Taught by: Mandell
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSOC 059 Medical Missionaries and Partners
Global health is an increasingly popular goal for many modern leaders. Yet critics see evidence of a new imperialism in various aid programs. We will examine the evolution over time and place of programs designed to improve the health of underserved populations. Traditionally categorized as public health programs or efforts to achieve a just society, these programs often produce results that are inconsistent with these goals. We will examine the benefits and risks of past programs and conceptualize future partnerships on both a local and global stage. Students should expect to question broadly held beliefs about the common good and service. Ultimately we will examine the concept of partnership and the notion of community health, in which ownership, control, and goals are shared between outside expert and inside community member.
Taught by: Bream
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSOC 082 Sport Science in the World
This seminar is designed for first-year students who are interested in some big questions related to the topic of 'sport science.' Sport science may seem to be just a niche field where teams of physiologists, psychologists, geneticists, engineers and others work to make already very athletic people go 'faster, higher, stronger.' On the other hand, the work of sport scientists intersects everyday with far-reaching questions about how categories of sex, age, race, disability, and nationality are defined, measured, challenged, or maintained. Sport scientists weigh in on debates over what kinds of physical activity or bodies are 'clean,' what kinds of performance are 'natural' or even human, and what kinds of sporting spaces or equipment are fair. In this class we'll read and discuss historical and contemporary accounts of sport science in the world. My hope is that students will enter the class interested in sports and leave interested in sports and in gendered science, objectivity and standardization, the politics of big data and more.
Taught by: Johnson
Course usually offered in fall term
Also Offered As: STSC 082
Activity: Seminar
1.0 Course Unit

HSOC 100 Sociological Research Methods
One of the defining characteristics of all the social sciences, including sociology, is a commitment to empirical research as the basis for knowledge. This course is designed to provide you with a basic understanding of research in the social sciences and to enable you to think like a social scientist. Through this course students will learn both the logic of sociological inquiry and the nuts and bolts of doing empirical research. We will focus on such issues as the relationship between theory and research, the logic of research design, issues of conceptualization and measurement, basic methods of data collection, and what social scientists do with data once they have collected them. By the end of the course, students will have completed sociological research projects utilizing different empirical methods, be able to evaluate the strengths and weaknesses of various research strategies, and read (with understanding) published accounts of social science research.
Taught by: Wilde, Baker, Roth
One-term course offered either term
Also Offered As: SOCI 100
Activity: Lecture
1.0 Course Unit
HSOC 102 Bioethics
This course is intended to introduce students to the fundamental principles of bioethics and the many ethical issues that arise in the rapidly changing fields of biomedicine and the life sciences. The first half of the course will provide an overview of the standard philosophical principles of bioethics, using clinical case studies to help illustrate and work through these principles. In the second half of the course we will focus on recent biomedical topics that have engendered much public controversy including diagnostic genetics, reproductive technologies and prenatal screening, abortion, physician assisted suicide, human experiments, and end of life decision making. We will use the principles learned in the first half of the course to systematically think through these bioethical issues, many of which affect our everyday lives.
Taught by: Crnic,M
Course not offered every year
Also Offered As: SOCI 101
Activity: Lecture
1.0 Course Unit

HSOC 111 Health of Populations.
This course develops some of the major measures used to assess the health of populations and uses those measures to consider the major factors that determine levels of health in large aggregates. These factors include disease environment, medical technology, public health initiatives, and personal behaviors. The approach is comparative and historical and includes attention to differences in health levels among major social groups.
Taught by: Kohler
One-term course offered either term
Also Offered As: SOCI 111
Activity: Lecture
1.0 Course Unit

HSOC 112 The Peoples Health
While the scary threats of the moment in recent years, Ebola, MERS, swine flu, bioterrorism dominate media coverage of public health, most human suffering and death are driven by more mundane causes. This course critically addresses twenty-first-century public health science and policy by examining the long history (beginning with the plague epidemics of Renaissance Italy) that brought us to where we are today. Topics include responses to epidemics; socioeconomic, racial, and other disparities in health; occupational health; the rise of public health as a field of scientific inquiry; sanitary reform; the Bacteriological Revolution; the shift from disease causes to risk factors; and the social determinants of health.
Taught by: Barnes,D
One-term course offered either term
Activity: Lecture
1.0 Course Unit

HSOC 131 Sustainability and Public Health
We know that wild animal populations are only as healthy as their habitats, but what about humans? This course explores how the health of ecosystems is intertwined with health of human populations. It asks the question, ‘To what extent is sustainability the most important public health issue of our time?’ We will examine issues related to climate change, environmental toxins, ecosystem destruction, species extinction, water availability, and food production through the lens of how these affect human health. On a more positive note, we will learn about how applications of whole systems thinking are transforming our culture, creating a more sustainable and healthier society, and how these cultural trends will transform health policy in the future. Throughout the course, we will engage in contemplative and reflective practice with regard to our own beliefs and behaviors. What prevents us, collectively, from creating a more sustainable society? We will critically explore questions surrounding the concept of ‘sustainability.’ What makes a system sustainable, in ecological terms? Are there guiding principles that we can follow? Is a sustainable system by definition a healthy system? In what ways do these concepts differ? Why do we create unsustainable systems, human-made processes that undermine the ecosystems we depend upon? What is the relationship between academic environmental studies and environmental activism? What is the relationship between industrial culture and indigenous culture? What are the differences, philosophically speaking? We will draw on a wide variety of sources, including medical journals such as JAMA, on-line publications, academic books, general audience books, and articles in the popular press. We will also have the opportunity to engage in active learning experiences that ground the concepts in real world activity.
Taught by: MacKenzie
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

HSOC 135 The Politics of Food
In this ABCS and Fox Leadership Program course students will use course readings and their community service to analyze the institutions, ideas, interests, social movements, and leadership that shape the politics of food in different arenas. Service sites include: the Agatston Urban Nutrition Initiative; the Greater Philadelphia Coalition Against Hunger; the West Philadelphia Recess Initiative; the Vetri Foundation’s Etiquette Program; and Bon Appetit at Penn. Academic course work will include weekly readings, Canvas blog posts, several papers, and group projects. Service work will include a group presentation (related to your placement) as well as reflective writing during the semester. Typically one half of each class will be devoted to a discussion of the readings and the other either to group work and discussion of service projects, or to a course speaker. This course is affiliated with the Communication within the Curriculum (CWIC) program, and student groups are required to meet twice with speaking advisors prior to giving presentation.
Taught by: Summers
Course not offered every year
Also Offered As: PSCI 135
Activity: Lecture
1.0 Course Unit
HSOC 140 History of Bioethics
This course is an introduction to the historical development of medical ethics and to the birth of bioethics in the twentieth-century United States. We will examine how and why medical ethical issues arose in American society at this time. Themes will include human experimentation, organ donation, the rise of medical technology and euthanasia. Finally, this course will examine the contention that the current discipline of bioethics is a purely American phenomenon that has been exported to Great Britain, Canada and Continental Europe.
Taught by: Linker
One-term course offered either term
Activity: Seminar
1.0 Course Unit

HSOC 145 Comparative Medicine
This course explores the medical consequences of the interaction between Europe and the 'non-West! It focuses on three parts of the world Europeans colonized: Africa, South Asia, and Latin America. Today’s healing practices in these regions grew out of the interaction between the medical traditions of the colonized and those of the European colonizers. We therefore explore the nature of the interactions. What was the history of therapeutic practices that originated in Africa or South Asia? How did European medical practices change in the colonies? What were the effects of colonial racial and gender hierarchies on medical practice? How did practitioners of 'non-Western' medicine carve out places for themselves? How did they redefine ancient traditions? How did patients find their way among multiple therapeutic traditions? How does biomedicine take a different shape when it is practiced under conditions of poverty, or of inequalities in power? How do today’s medical problems grow out of this history? This is a fascinating history of race and gender, of pathogens and conquerors, of science and the body. It tells about the historical and regional roots of today’s problems in international medicine.
For BA Students: History and Tradition Sector
Taught by: Mukharji
Course usually offered in fall term
Also Offered As: HIST 146, STSC 145
Activity: Lecture
1.0 Course Unit

HSOC 150 American Health Policy
'American Health Policy' places the success or failure of specific pieces of U.S. health care legislation into social and political context. The course covers the time period from the U.S. Civil War to the 2010 Affordable Care Act (ACA), addressing two central questions: 1) Why was the United States one of the only industrialized nations to, until recently, have a private, non-nationalized, non-federalized health care system? 2) Why has U.S. health insurance historically been a benefit given through places of employment? Some topics addressed include: private health insurance, industrial health and workmen’s compensation, the welfare state (in Europe, Canada, and the U.S.), maternal and infant care programs, Medicare and Medicaid. One of the main take-home messages of the course is that 20th-century U.S. health care policies both reflected and shaped American social relations based on race, class, gender, and age. This course is a combination lecture and 'SAIL' class. SAIL stands for 'Structured, Active, In-Class Learning.' During many class periods, students will work in small groups on a specific exercise, followed by a large group discussion and/or brief lecture. Students who choose to take this course, therefore, must be fully committed to adequately preparing for class and to working collaboratively in class. (Note: the 2015 format will be somewhat different from the 2014 format).
Taught by: Johnson
One-term course offered either term
Also Offered As: SOCI 152
Activity: Lecture
1.0 Course Unit

HSOC 152 Technology and Medicine in Modern America
Medicine as it exists in contemporary America is profoundly technological; we regard it as perfectly normal to be examined with instruments, to expose our bodies to many different machines; and to have knowledge produced by those machines mechanically/electronically processed, interpreted and stored. We are billed technologically, prompted to attend appointments technologically, and often buy technologies to protect, diagnose, or improve our health: consider, for example, HEPA-filtering vacuum cleaners; air-purifiers; fat-reducing grills; bathroom scales; blood pressure cuffs; pregnancy testing kits; blood-sugar monitoring tests; and thermometers. Yet even at the beginning of the twentieth century, medical technologies were scarce and infrequently used by physicians and medical consumers alike. Over the course of this semester, we will examine how technology came to medicine's center-stage, and what impact this change has had on medical practice, medical institutions and medical consumers - on all of us!
Taught by: Johnson
Course usually offered summer term only
Also Offered As: STSC 162
Activity: Seminar
1.0 Course Unit
HSOC 179 Environmental History
This course provides an introduction to environmental history—the history of the interrelationship between humans and the rest of nature. In the words of historian J.R. McNeill, ‘Human history has always and will always unfold within a larger biological and physical context, and that context has co-evolved with humankind.’ In this course we will study this co-evolution between human actors and non-human actors in global history, analyzing political, social, cultural and economic factors that affect ideas about nature and material effects on nature. We will consider the concept of the Anthropocene and study current environmental changes and challenges.
Taught by: Greene, A
Course not offered every year
Also Offered As: STSC 179
Activity: Lecture
1.0 Course Unit

HSOC 202 Scientific Revolution
During the 16th and 17th centuries, something that resembled modern science emerged from something that did not. Though the nature and cause of that transition are contested, there were unquestionably many pivotal developments in the content and conduct of science, and it is in this period that many of the ‘founding’ figures of science, from Copernicus to Galileo to Newton, are identified. This course will examine the many elements that went into the transition, including the revolution in cosmology, the revolt against ancient natural philosophy, the rise of experimentalism, the new philosophies of inquiry, new social structures for natural inquiry and the conceptual foundations of classical physics.
Taught by: VOELKEL
Course not offered every year
Also Offered As: STSC 202

HSOC 205 Doing Good?: Humanitarianism and Global Health
This course will explore the current context of health policy, health reform, and health service delivery in the developing world. After examining global economic and political context of health care, students will analyze the role that economic development plays in promoting or undermining health. Students will examine key disease challenges such as tuberculosis, malnutrition, and HIV/AIDS.
Taught by: McKay
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSOC 209 Race and Gender in Global Science
This course critically examines the creation of scientific conceptions of ‘race’ and ‘sex’ in the modern era and their global impact. How did ‘race’ and ‘sex’ come to be the primary categories through which human variation has been classified in the modern West? What concepts of ‘race’ and ‘sex’ did colonial scientists, doctors, naturalists, and other experts invent, and how and why did they do this? How have scientific conceptions of ‘race’ and ‘sex’ been adapted to fit the sociopolitical projects of formerly colonized regions? And how have recent developments in genomic science sought to reinvent these categories? With these questions in mind, this course challenges us to think critically about the political contexts in which conceptions of ‘race’ and ‘sex’ have been crafted as well as how they have been contested and re-defined.
Taught by: Gil-Riano
Course usually offered in spring term
Also Offered As: STSC 209
Activity: Seminar

HSOC 212 Science Technology and War
In this survey we explore the relationships between technical knowledge and war in the nineteenth and twentieth centuries. We attend particularly to the centrality of bodily injury in the history of war. Topics include changing interpretations of the machine gun as inhumane or acceptable; the cult of the battleship; banned weaponry; submarines and masculinity; industrialized war and total war; trench warfare and mental breakdown; the atomic bomb and Cold War; chemical warfare in Viet Nam; and ‘television war’ in the 1990s.

HSOC 216 Gender and Health
Women’s health is a constant refrain of modern life, prompting impassioned debates that speak to the fundamental nature of our society. Women’s bodies are the tableaux across which politicians, physicians, healthcare professional, activists, and women themselves dispute issues as wide-ranging as individual versus collective rights, the legitimacy of scientific and medical knowledge, the role of the government in healthcare, inequalities of care, and the value of experiential knowledge, among many others. Understanding the history of these questions is crucial for informed engagement with contemporary issues.
Taught by: Linker
Course not offered every year

HSOC 219 Race, Science, and Globalization
This course examines how the practice of sorting humans into distinct races is connected to the rise of modern science and to the economic globalization sparked by Columbus’ arrival in the Americas in 1492. By examining the trajectory of race in science from the Iberian conquest of the Americas until the present, we will examine the ways in which colonial logics and structures persist into the present and the ways they’ve been disrupted by various revolutionary, anti-colonial, and anti-racist movements. Along the way, we will observe how cultural ideas about race have been woven into the conceptual fabric of modern scientific disciplines such as anthropology, biology, psychology, and sociology and how these disciplines have sought to redeem themselves from their racist pasts.

1.0 Course Unit

HSOC 230 Fundamentals of Epidemiology
This course introduces students to the basic tenets of epidemiology and how to quantitatively study health at the population level. Students learn about measures used to describe populations with respect to health outcomes and the inherent limitations in these measures and their underlying sources of data. Analytic methods used to test scientific questions about health outcomes in populations then are covered, again paying particular attention to the strength and weaknesses of the various approaches. Multiple large epidemiologic research and field studies are used as in-class exemplars.
Course usually offered in spring term

1.0 Course Unit

HSOC 231 Insect Epidemiology Pests, Pollinators and Disease Vectors
Malaria, Chagas disease, the Plague—some of the most deadly and widespread infectious diseases are carried by insects. The insects are also pernicious pests; bed bugs have returned from obscurity to wreak havoc on communities, invasive species decimate agricultural production and threaten forests across the United States. At the same time declines among the insects on which we depend—the honeybees and other pollinators—threaten our food security, while general declines of insects threaten ecosystems. We will study the areas where the insects and humans cross paths and explore how our interactions with insects can be cause, consequence or symptom of much broader issues. This course is not an entomology course but will cover a lot about insects. It is not a traditional epidemiology course but will explore the approaches and study designs that epidemiologists use to uncover associations and evaluate interventions. It is not a history course but will cover past epidemics and infestations that have changed the course of the history and reversed advancing armies.

HSOC 238 Introduction to Medical Anthropology
Introduction to medical anthropology takes central concepts in anthropology—culture, adaptation, human variation, belief, political economy, the body—and applies them to human health and illness. Students explore key elements of healing systems including healing technologies and healer-patient relationships. Modern day applications for medical anthropology are stressed.

HSOC 239 Global Health: Anthropological Perspectives
In some parts of the world spending on pharmaceuticals is astronomical. In others, people struggle for survival amid new and reemerging epidemics and have little or no access to basic or life-saving therapies. Treatments for infectious diseases that disproportionately affect the world’s poor remain under-researched and global health disparities are increasing. This interdisciplinary seminar integrates perspectives from the social sciences and the biomedical sciences to explore 1) the development and global flows of medical technologies; 2) how the health of individuals and groups is affected by medical technologies, public policy, and the forces of globalization as each of these impacts local worlds. The seminar is structured to allow us to examine specific case material from around the world (Haiti, South Africa, Brazil, Russia, China, India, for example), and to address the ways in which social, political-economic, and technological factors—which are increasingly global in nature—influence basic biological mechanisms and disease outcomes and distribution. As we analyze each case and gain familiarity with ethnographic methods, we will ask how more effective interventions can be formulated. The course draws from historical and ethnographic accounts, medical journals, ethical analyses, and films, and familiarizes students with critical debates on globalization and with local responses to globalizing processes.

HSOC 240 Devices, Pills, People: American Medicine in the 20th and 21st Centuries
In this course, we approach some of the most pressing questions in the modern American medical marketplace, attempting to understand why it looks the way it does, how it developed, and what it offers (and takes) from patients. By the end of the course, we will also try to look forward and consider where current trends in American medicine might lead. The course is organized around six topics: 1) demography (changing patterns of health, disease, and death); 2) the growing and changing role of institutions, like hospitals and universities, in medical education and patient care; 3) the development and increasing role of technology in medicine; 4) changes in medical and pharmaceutical research and regulation; 5) patient experiences of health, illness, and patient-practitioner relations; 6) the construction of disease, or the broader social context and cultural representation of health and illness, both in culture and particular groups of patients. You will examine these issues through a mixture of readings, lectures, class discussion, short essays and a research project.

HSOC 248 Health, Politics, and Social Movements
What is the relationship between health and social movements for race, gender, or political justice? How do political, economic, and social struggles intersect with, impede, or give rise to new demands for health, changing medical practice, or intensified or ameliorated experiences of disease? Recently, such questions have animated news headlines and popular media as responses to COVID have occurred simultaneously with popular protest, social mobilizations, and heated debates regarding race, police violence, and social policy. Moreover, convergences of popular protest, health crises, and health action can be observed in historical accounts and in widely disparate geographical examples. This course asks what such instances have to offer our understandings of health politics today. It explores this through two questions: how have questions of health and medicine been taken up or influenced by political and social movements in diverse historical and geographical spaces? And, how have scholars thought about the relationship between social and political mobilizations and health access and practice? Drawing from examples from around the globe, the course will ask students to master conceptual tools and core questions used to analyze the relationship between health, political mobilizations, and social movements. Course materials will include scholarly readings, news media accounts, films, and popular and fictional writing.

HSOC 241 Foundations of Public Health
Many factors have shaped, and continue to shape, population health and public health policy. This course will explore the concept, mission, and core functions of public health. Students will have a chance to learn about its key methodological (epidemiology, biostatistics) and content (environmental health, social and behavioral sciences, health policy) areas. In addition, we will focus on topics of particular relevance to the current health of the public; topics likely will include the basics of life (food, water, and shelter) and topics of current interest (e.g., motor vehicle crashes, mental health, violence).

HSOC 251 Foundations of Public Health
Digital tools and data-driven technologies increasingly permeate twenty-first century life. But how have they affected death? Do we conceive of death differently in a digitally mediated world? How do we mourn in the age of Facebook? How is "big data" put to work in the medical world that seeks to diagnose and treat fatal illness? What new forms of death and violence have been imagined or developed with digital technologies in hand? And what of those who believe that they could live forever, defying death, by uploading 'themselves' into some new digital form? This course offers a historical exploration of these questions, looking at different intersections between data and death. We will work with a range of different sources ranging from science fiction to medical journals to the often-controversial death counts that follow natural and political disasters. Our goal will be to map the many contours of death in a digital world, but also to recognize the longer histories of counting, mourning, diagnosing, dreaming, and dying that have shaped them.

HSOC 260 Social Determinants of Health
Over the last century, we have witnessed dramatic historical change in population health, e.g. rising numbers of obese Americans and dramatic declines in death from stomach cancer. There has also been highly visible social patterning of health and disease, such as socio-economic disparities in AIDS, substance abuse, and asthma in the U.S. to day or the association of breast cancer with affluence around the world. This course will explore the way researchers and others in past and present have tried to make sense of these patterns and do something about them. The course is historical and sociological. We will examine evidence and theories about how poverty, affluence and other social factors influence health AND we will examine how social and historical forces shape the ways in which health and disease are understood.
Taught by: Johnson,A
Course not offered every year
Also Offered As: SOCI 259
Activity: Seminar
1.0 Course Unit

HSOC 262 Environments and Public Health
This course explores the relationship between local environmental conditions and health. Using historical case studies, we will consider a variety of questions: What factors (employment, pollution, local flora and fauna, racism, etc.) influence citizens’ environment and health? How have insects, landscapes, and diseases shaped cultures or events in history? Was eighteenth-and nineteenth-century Philadelphia actually a good place to live? What was going on with all those basements and cobblestone streets in Old City? Would you rather work in a coal mine or a uranium mine? You will examine these issues through a mixture of readings, lectures, class discussion, short essays and a research project.
Taught by: Womack
Course usually offered in fall term

1.0 Course Unit

HSOC 271 Greek & Roman Medicine
This course will examine the ways in which the Greeks, and then the Romans, conceptualized the body, disease, and healing, and will compare these to medical culture of our time. We will consider sources from Hippocrates, Plato, and Aristotle to Galen and Soranus, and will juxtapose these writings with modern discourse about similar topics. We will also pay some attention to ancient pharmacology and religious healing, and will visit the Penn Museum to see their collection of ancient medical instruments. All readings will be in English and no previous background in Classical Studies is required. This course will be especially appealing (and useful) to Pre-med and Nursing students, and to students interested in the History of Science, Ancient Philosophy, and Classics.

HSOC 275 Medical Sociology
This course is designed to give the student a general introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. While we will not cover everything, we will attempt to cover as much of the field as possible through four central thematic units: (1) the organization of development of the profession of medicine, (2) the delivery of health-care, (3) social cultural factors in defining health, and (4) the social causes of illness. Throughout the course, our discussions will be designed to understand the sociological perspective and encourage the application of such a perspective to a variety of contemporary medical issues.

HSOC 279 Nature's Nation: Americans and Their Environment
The United States is 'nature's nation.' Blessed with an enormous, resource-rich geographically diverse and sparsely settled territory, Americans have long seen 'nature' as central to their identity, prosperity, politics and power, and have transformed their natural environment accordingly. But what does it mean to be 'nature's nation'? This course describes and explores how American 'nature' has changed over time. How and why has American nature changed over the last four centuries? What have Americans believed about the nation's nature, what have they known about the environment, how did they know it and how have they acted on beliefs and knowledge? What didn't or don't they know? How have political institutions, economic arrangements, social groups and cultural values shaped attitudes and policies? How have natural actors (such landscape features, weather events, plants, animals, microorganisms) played roles in national history? In addition to exploring the history of American nature, we will look for the nature in American history. Where is 'nature' in some of the key events of American history that may not, on the surface, appear to be 'environmental?'

HSOC 329 CSI Global: History of Forensic Science
Genetics may have transformed criminal detection, but it has built upon a long history of many different types of forensic science. The use of science in the pursuit of criminals has a long, complex and global history, involving diverse forms of knowledge and types of professionals. A range of skills and techniques ranging from trackers who followed traces in the mud to recover stolen cattle to criminal physiognomists who sought to read bodily signs of criminals, from Sherlock Holmes’ analysis of types of cigar ash in Victorian Britain to Charles Hardless’ chemical analysis of different types of ink in colonial India, have informed and influenced the development of our contemporary forensic modernity. This course will explore a range of different forensic techniques and their histories along with the rich cultural history, in the form of detective fiction and films from across the world.

HSOC 331 Reproductive Medicine: Societal Impact of New Technologies
Reproduction is essential for the survival of species. Adverse events during embryogenesis or pregnancy can not only have an immediate impact on the well-being of the developing embryo but also later in life as adolescents or adults. Startlingly, we are learning that environmental influences on the molecular mechanisms in germ cells over the reproductive lifespan of adults that regulate gene expression in eggs, sperm and embryos can have serious consequences on progeny and their progeny’s progeny - over generations. We have long sought to control our fertility, for example, from the timing of a pregnancy in our lives; of overcoming infertility; and of ensuring the health and well-being of our progeny from the very beginning of development. Assisted Reproductive Technologies (ART) are now having a significant impact on fertility and embryo viability and well-being. However, they are not without controversy and society must be involved in important policy issues. For example, embryo selection is being used eliminate or reduce genetic-based diseases, but now genome editing, a powerful tool for effectively and safely modifying our genome in perpetuity presents a viable alternative. Should we do it and for which conditions? Since the lifestyles of parents and even grandparents can affect the future health of offspring, how do we ensure that individuals are aware of lifestyle effects and make the right choices for future generations? We are in an era of many groundbreaking discoveries in reproductive medicine that will lead to more technologies that will continue to raise ethical concerns that affect some of society’s most basic social covenants and that will require major societal adjustments. How will society deal with innovations that enable many facing infertility to have genetic offspring; that improve the quality of life or permit life itself for a developing embryo; that ensure successful outcomes of pregnancy by identifying and addressing risk factors in the environment that adversely affect the developing fetus, potentially even the future offspring of a person exposed as a fetus to an adverse environment; and that will enable women to have children at what used to be grandparental ages? Society will also be faced with the possibility of germline interventions and altering our own evolution. How can we manage these technologies to make sure that patients can benefit while also allowing us to be comfortable in our humanity? This course will present the latest in reproductive technologies (and those on the horizon) so as to appreciate their importance for individuals and then focus on how we as a society should manage their use.

1.0 Course Unit
HSOC 334 Birth Culture and Medical Technology
How we are born and give birth can vary more than most people realize. Until the rise of medical technology, women gave birth at home surrounded by other women. Now, the majority of Americans are born in hospitals, and a large percentage of those birth are the result of surgical interventions. This course will explore the medicalization of birth, as well as the movements dedicated to promoting home birth, natural birth, and midwifery. Many of the readings will examine birth from an unapologetically feminist and/or holistic perspective, and we will discuss the psychological, political, cultural and spiritual dimensions of birth practices. We will also consider the impact of increasingly sophisticated medical technology on conception and pregnancy, including in vitro fertilization, surrogate mothers, and extending the childbearing years well into late life. An important theme throughout will be the concept of ‘appropriate technology’ – which technologies are appropriate and who decides? Readings will be drawn from a number of sources, principally midwifery, nursing, and medical journals.

HSOC 335 Healthy Schools
This academically based community service research seminar will develop a pilot program to test the efficacy of using service-learning teams of undergraduates and graduate students to facilitate the development of School Health Councils (SHCs) and the Center for Disease Control's School Health Index (SHI) school self-assessment and planning tool in two elementary schools in West Philadelphia. This process is intended to result in a realistic and meaningful school health implementation plan and an ongoing action project to put this plan into practice. Penn students will involve member of the school administration, teachers, staff, parents and community member in the SHC and SHI process with a special focus on encouraging participation from the schools’ students. In this model for the use of Penn service-learning teams is successful, it will form the basis of an ongoing partnership with the School District's Office of Health, Safety & Physical Education to expand such efforts to more schools.

HSOC 337 Race and Medicine in the Global South
Racialized medical provisions under Apartheid in South Africa, theories of racial immunity to malaria in the Philippines and contemporary investigations of caste-based disease risks in India are some of the topics to be covered in this course. From the more straightforward issues of racial discrimination in medicine, to more complex issues of racial immunity or racial susceptibility to disease, medicine and race have been entangled together in multiple ways. More importantly these issues are far from being matters of the past. Genomic medicine and risk society have combined to make race and medicine one of the most potent contemporary issues. Outside the Western World, in the Global South, these issues are further refracted through local cultural, historical and political concerns. This course will take a long-term view of these contemporary issues.

HSOC 338 Hybrid Science: Nature, health, and society in Latin America
What role did science and medicine play in the creation and growth of the Spanish and Portuguese empires? And why was the creation of science and health institutions crucial to the revolutionary movements for independence in Latin America? This course examines science and medicine in Latin America by attending to the ways that knowledge of nature and health has been central to the political struggles of the countries in this region. A crucial dynamic shaping the history and culture of this region is the interplay between the healing practices and cosmologies of European settlers, indigenous Americans, and the descendants of African slaves. Bearing this interplay in mind, this course explores how Latin America has been a fertile site of scientific creativity. It also examines the ways in which Latin American scientists and medical experts have refashioned concepts and practices from Europe and North America to fit local circumstances.

HSOC 339 Women in Medicine
Today in the US almost half of all medical students are women and female physicians comprise roughly one-third of the workforce. However, some statistics are still troubling, including the number of African American women who pursue advanced medical degrees. This course will trace the evolution of women practicing medicine over several centuries, exploring how various cultural, societal, and intellectual norms differed over time while challenging the assumption of linear progress towards equality. While the focus will be on American medicine, including field trips to archives and historical landmarks within Philadelphia, the coursework also includes international case studies and cultural comparisons to help position local issues within a wider and more complicated narrative. Considering both the historical and contemporary contexts for interconnected issues such as bias, motherhood, and burnout, we will analyze challenges and strategize potential solutions for the next generation of women seeking careers in medicine.

HSOC 344 The Future of Disability and the Afterlives of Epidemics
It has been less than a year since the emergence of a new and deadly virus, Sars-CoV-2, but already this novel disease has upended our lives and all indicators suggest that things may never be the same. Mired in the middle of this ongoing crisis, the stories we write, read, tell, and hear about the present and the future are rife with grief, uncertainty, and fear as illness and death seem to permeate the very air we breathe. From this standpoint, it is difficult to see beyond the powerful dichotomies of health/illness, sick/better, and life/death that frame our perspectives of the ongoing crisis. In this course, we will learn instead to examine stories of epidemics past and present through the lens of disability. In doing so, we will ask how epidemics in the past have shaped our ideas and experiences of disability, muddied our binary thinking about illness and wellness, and challenged the beliefs, epistemologies, and institutions that drive our approaches to the body, the mind, and the spirit. Through an exploration of primary and secondary source readings, we will interrogate how these eras of crisis, and their aftermaths, have historically influenced the ways we think about and experience disability and its relationship to identity, family, culture, religion, society, and citizenship in the days, weeks, months, years, and decades that follow in their wake. Ultimately, we will draw upon the insights of the past to develop better questions about our current situation and to think in novel and critical ways about how our ideas about wellness, disability, and society have already begun to shift as a result of COVID-19.

HSOC 348 Current Issues in Global Health
This course examines current world events through the lens of public health. The course will focus on six key questions: 1) What does health infrastructure look like in different parts of the world, and how is it working or failing different groups of people? 2) What public health opportunities and challenges are created by the rise of megacities? 3) What unique public health challenges are created by modern-day proxy wars and refugee flows, and what is the role of health professionals in responding to human disasters? 4) How are fertility patterns and changes in life expectancy impacting different societies? 5) How is climate change altering the global health landscape? 6) What might the next global pandemic look like? We will discuss these questions in class using a mixture of scholarly and popular texts, and you will conduct and present your own secondary research into one of these topics.

Taught by: Womack

Activity: Seminar
1.0 Course Unit

HSOC 352 Medical Mestizaje: Health and Development in Contemporary Latin America
Latin American nations as we know them today emerged in the nineteenth century after violent independence struggles against the Spanish Empire. Since independence, mestizaje has been an influential ideology that seeks to portray the identity of Latin American nations as comprised of a unique cultural and racial fusion between Amerindian, European, and African peoples. Through historical, anthropological, and STS approaches this course examines how concerns with racial fusion and purity have shaped the design and implementation of public health programmes in Latin America after independence and into the 20th century. Topics include: tropical medicine and race; public health and urbanization; toxicity and exposure in industrialized settings; biomedicine and social control; indigenous health; genomics and health; food and nutrition.

Taught by: GIL-RIANO
One-term course offered either term
Activity: Seminar
1.0 Course Unit

HSOC 358 The Human Subject
In this course, we will consider health and society from the perspective of the human subject. Because medicine is uniquely concerned with human bodies and minds, humans occupy a strange place in the medical landscape as both objects of care, but also of experimentation, and curiosity, and frustration, and agents, acting in a variety of roles (patient, researcher, doctor) and tasked with decision making in a complex technical and moral landscape. This course will explore the difficult ethical, practical, and technical questions that arise at that agent/object boundary by examining case studies from the nineteenth, twentieth, and twenty-first centuries. You will examine these issues through a mixture of readings, lectures, class discussion, short essays and a research project.

Taught by: Womack
Activity: Seminar
1.0 Course Unit
HSOC 370 The Many Lives of Data: Population, Environment, and Planning in the United States
This is a class about the live(s) and afterlives of information from 1850 to the present. Not only can information be reproduced (in a variety of material conditions); it can be repurposed and funneled through a variety of different applications, some of them serving radically different purposes than the first purpose of gathering it. Thoreau’s journals of plant flowering, for instance, have become important indicators of climate change. More controversial is the sale of biomedical information by personal genomics services for drug discovery, or the construction of forensic databases consisting of the DNA of suspects arrested as a result of racial profiling. We will study the ways in which data has become a way for us to understand and define change, stability, place, and time, beginning in the mid-nineteenth century, a period of accelerated and increasingly systematic gathering of data, particularly medical, forensic, and environmental data. The class will proceed both chronologically and thematically in three units, from the gathering and use of biomedical data as a way to make patient populations ‘legible’ (to borrow from James Scott), to data as a way to make the environment understandable, and finally to data as a tool for producing and reproducing social relations. As a final project, students will trace a particular data set from its original gathering to its latest usage. Students will also have an opportunity to create their own course content in the final three weeks of class.

HSOC 379 Animals in Science Medicine Technology
This course explores human-animal relationships: the wide range of these relationships, why they originated and how they have changed over time. How have humans classified, valued, utilized, consumed, behaved toward and understood animals? Where is the boundary between humans and other animals, and how do we know, since humans are also animals? How is that boundary been maintained and redefined? Are humans part of the ‘natural’ world or apart from it? How are humans similar to and different from other kinds of animals? How do we know about animals and what is it we know? To what extent are questions about animals really questions about humans? How has the meaning of animal changed over time? The course focuses in particular to the roles and relationships of animals within science and medicine, and as biotechnologies.

One-term course offered either term
Also Offered As: STSC 379
Activity: Seminar
1.0 Course Unit

HSOC 381 Toxicity in Context
We live amidst a constant stream of messages, practices, and regulations about things, behaviors, or relationships deemed ‘toxic.’ Within environmental health in particular, all sorts of actors grapple with complex decisions about what it means to live with materials and anticipate the ways they can interact with human health and the environment - at present through the distant future. What exactly do we mean when we categorize some substances as toxic, and by extension others as safe? Are there other ways of managing uncertainty or conceptualizing harm? How are these concepts built into broader social structures, economics, and regulations? What other work are they used to do? In this course, we will explore major social science approaches to toxicity and apply these theories to our own analysis of examples from the contemporary United States, and in particular, to a robust oral history collection with residents, developers, and government scientists grappling with these questions just outside of Philadelphia. This course grows out of scholarship in the history and anthropology of environmental risk, and health, as well as direct ethnographic, historical, and oral history research at a site outside of Philadelphia grappling with the meaning of materials that remain on site after past industrial manufacturing. In this course, students will gain an introduction to oral history and analysis of in-depth interviews, and introduction to key approaches in theorizing toxicity. By connecting life experiences of residents, government scientists and others, at an actual site, with the literatures we read in class, students will think critically about the ways the literatures we engage do and do not fully encompass the experiences and concerns that are intertwined with toxicity for actual people grappling with making sense of uncertain harms amidst urban planning.
Taught by: Dahlberg
Also Offered As: STSC 381
Activity: Seminar
1.0 Course Unit

HSOC 382 Public Health & Violence
This course will address two health concerns of long-standing controversy: the role of guns in population health and violence in relationships. We will adopt a healthy skepticism about the assumptions and ideologies that currently dominate formal and informal discourse about these topics. A life span perspective - guns from design through use, and abuse from childhood through late life - will be grounded in a public health injury prevention framework. As a function of this approach, we will examine key aspects of the social context in which guns and abuse exist and within which related policies are formulated. Students are encouraged to examine their perceptions about these issues so that they can become more effective members of a society that appears to maintain a deep ambivalence about guns and about violence in relationships.
Taught by: Sorenson

HSOC 391 Bioethics and National Security
At least since Augustine proposed a theory of ‘just war,’ armed conflict has been recognized as raising ethical issues. These issues have intensified along with the power and sophistication of weapons of war, and especially with increasing engineering capabilities and basic knowledge of the physical world. The life sciences have had their place in these developments as well, perhaps most vividly with the revelations of horrific experiments conducted by the Nazi and Imperial Japanese militaries, but with much greater intensity due to developments in fields like genetics, neuroscience and information science, and the widely recognized convergence of physics, chemistry, biology, and engineering.

The fields of bioethics and national security studies both developed in the decades following World War II. During the cold war little thought was given to the fact that many national security issues entail bioethical questions, but this intersection has been increasingly evident over the past two decades. In spite of the overlapping domains of bioethics and national security, there has been remarkable little systematic, institutional response to the challenges presented by these kinds of questions: - What rules should govern the conduct of human experiments when national security is threatened? - Is it permissible to study ways that viruses may be genetically modified in order to defeat available vaccines, even for defensive purposes? - What role may physicians or other healthcare professionals play in interrogation of suspected terrorists? - Must warfighters accept any and all drugs or devices that are believed to render them more fit for combat, including those that may alter cognition or personality? - What responsibilities does the scientific community have to anticipate possible ‘dual purpose’ uses or other unintended consequences of its work? Deploying the resources of ethics, philosophy, history, sociology and theory, this course will address these and other problems.

Taught by: Moreno

Also Offered As: STSC 391
Activity: Seminar
1.0 Course Unit

HSOC 409 Science and Disability
How have ideas about ability and disability shaped the questions we ask about the world and the methods we use to answer them? How do assumptions about who can and ought to be a scientist, engineer, or physician intersect with constructions of disability and difference? How might studying the lived experiences of people with disabilities in the context of STEM(Medicine) help us begin to answer these questions? This course explores the exciting intersection between disability studies and the history and sociology of science and medicine through weekly readings, discussions, and original research. Using materials ranging from archival and online sources to oral history interviews and museum collections, students in this course will learn how scientific ideas and institutions have helped shape 20th- and 21st-century categories and experiences of disability as an embodied and socio-political identity.

At the same time, students will learn how to use disability as a critical theoretical lens for investigating the cultures, tools, and institutions behind the creation and application of modern scientific and medical knowledge. Collaborative and analytical writing work throughout the course will build towards the completion of a final original research project.

One-term course offered either term
Also Offered As: STSC 409
Activity: Seminar
1.0 Course Unit

HSOC 411 Sports Science Medicine Technology
Why did Lance Armstrong get caught? Why do Kenyans win marathons? Does Gatorade really work? In this course, we won’t answer these questions ourselves but will rely upon the methods of history, sociology, and anthropology to explore the world of the sport scientists who do. Sport scientists produce knowledge about how human bodies work and the intricacies of human performance. They bring elite (world-class) athletes to their laboratories or their labs to the athletes. Through readings, discussions, and original research, we will find out how these scientists determine the boundary between ‘natural’ and ‘performance-enhanced,’ work to conquer the problem of fatigue, and establish the limits and potential of human beings. Course themes include: technology in science and sport, the lab vs. the field, genetics and race, the politics of the body, and doping. Course goals include: 1) reading scientific and medical texts critically, and assessing their social, cultural, and political origins and ramifications; 2) pursuing an in-depth The course fulfills the Capstone requirement for the HSOC/STSC majors. Semester-long research projects will focus on ‘un-black-boxing’ the metrics sport scientists and physicians use to categorize athletes’ bodies as ‘normal’ or ‘abnormal.’ For example, you may investigate the test(s) used to define whether an athlete is male or female, establish whether an athlete’s blood is ‘too’ oxygenated, or assess whether an athlete is ‘too’ fast (false start).

Requirements therefore include: weekly readings and participation in online and in-class discussions; sequenced research assignments; peer review; and a final 20+ page original research paper and presentation.

Activity: Seminar
1.0 Course Unit

HSOC 418 Sound in Science, Medicine and Technology
How do listening and knowing relate? This capstone will analyze sound as an object, an instrument, a product and a process of research in science, technology, and medicine. From anthropological field recordings to experiments in acoustics, readings will address the ways in which researchers have isolated and investigated sonic phenomena during the modern period. We will consider sound as a tool for knowing about other phenomena as well: bodily functions, seismic events, animal communication, and the like. Technologies of sound production, reproduction, storage, manipulation, and analysis will be front and center in this course. What can you do with magnetic tape that phonomography does not allow? How might the hospital soundscape inform clinical decision-making? Why is Amazon’s Alexa female? How has scientific communication changed over time? In addition to wrestling with questions like these, the course will provide undergraduate majors with the opportunity to research and execute an original paper of significant length in the humanistic social sciences. Students must be in their last three semesters for it to fulfill the capstone requirement, but any student may enroll.

Course usually offered in fall term
Also Offered As: STSC 418
Activity: Seminar
1.0 Course Unit
HSOC 420 Research Seminar Health and Society
This course is designed to provide HSOC students with the tools necessary to undertake original research, guiding them through the research and writing process. Students will produce either a polished proposal for a senior thesis project, or, if there is room in the course, a completed research paper by the end of term. Students work individually, in small groups and under the close supervision of a faculty member to establish feasible research topics, develop effective research and writing strategies, analyze primary and secondary sources, and provide critiques of classmates’ drafts. Students must apply for this course by December 1.
Taught by: Cnric
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSOC 421 Medicine and Development
This course is devoted to readings and research about medicine and development in resource-poor countries. The focus is on medical institutions and practices as seen within the broader context of development. We try to understand changing interpretations of how development takes place as its relationship to technical knowledge, power and inequality. The course gives students the opportunity to do intensive original research.
Taught by: McKay

Activity: Seminar
1.0 Course Unit

HSOC 430 Disease & Society
What is disease? In this seminar students will ask and answer this question by analyzing historical documents, scientific reports, and historical scholarship (primarily 19th and 20th century U.S. and European). We will look at disease from multiple perspectives—as a biological process, clinical entity, population phenomenon, historical actor and personal experience. We will pay special attention to how diseases have been recognized, diagnosed, named and classified in different eras, cultures and professional settings.
Taught by: Aronowitz
One-term course offered either term
Activity: Seminar
1.0 Course Unit

HSOC 432 Medical Activism and the Politics of Health
During the second half of the twentieth century, overlapping waves of social reform movements agitating for civil rights, women’s rights, peace, environmentalism, and gay rights reshaped the U.S. political and cultural landscape. Physicians, other health care professionals, and organized patient groups played important roles in all of these movements. This seminar investigates the history of this medical activism, making special use of the Walter Lear Collection in Penn Libraries’ Kislak Center. Readings, discussions, and student research projects analyze the relationships between this history and the political dimensions of individual and population health in the late twentieth century.
Taught by: Barnes

1.0 Course Unit

HSOC 436 Biopiracy: Medicinal Plants and Global Power
Biopiracy has emerged as the name of conflict between multinational pharmaceutical companies attempting to get genetic patents on medicinal plants and indigenous communities in the Global South who have long known and used these plants for medicinal purposes. Today the story of Biopiracy is an unfolding story of plants, patents and power. The extraction and commercial exploitation of plants and knowledge about them from the Global South however is not new. It has been happening at increasing pace for at least the last two centuries. Both the anti-malarial drug quinine and the cancer drug vincristine for instance have their plant-origins in the Global South where local communities used them medicinally long before their discovery by biomedicine. This course will put the current debates around Biopiracy in context and explore how the entanglements of plants and power have changed or not changed.
Taught by: Mukharji
Course not offered every year
Also Offered As: STSC 436
Activity: Seminar
1.0 Course Unit

HSOC 448 Bodies, Gender, Science, and Medicine
Americans' ideas about gender and sex have changed dramatically since the 19th century—But what roles have science and medicine played in these changes? How have shifting biological, psychological, cultural and political ideas about femininity and masculinity shaped our experiences of health, illness, sex and reproduction? How have these ideas about gender and sexuality influenced the creation of, participation in, institutions, technologies and experiences of our modern healthcare system? Drawing from the history of science, medicine and technology as well as gender studies, bioethics and disability studies, students in this class will examine a wide array of topics that address these questions, exploring how deeply rooted historical, political and social forces have shaped the relationship between gender and medicine.
Taught by: Martucci
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSOC 452 Race and Medicine in America
Race has been, and remains, a central issue to the delivery and experience of healthcare in America. This course will examine a variety of issues and cases studies to examine how the patient-doctor has been negotiated, defined, and contested upon the basis of race. This course is designed to further develop students’ research, analytical and writing skills in a collaborative atmosphere. Students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project. By the end of the course, students will have honed skills in primary and secondary source research, and the construction of an academic, analytical argument and paper. Students will build an argument based on their analysis of primary sources, and appropriately situate their argument within the literature of the core HSOC disciplines (anthropology, sociology, and history). In addition, student will continue to develop skills in critical analysis through weekly reading assignments.
Taught by: Cnric
Course usually offered in fall term

1.0 Course Unit
HSOC 458 Environments and Health
Do classrooms’ fluorescent lights give you headaches? Have you ever felt invigorated by a mountain’s breeze? Have you ever sought to get a ‘healthy’ tan at the beach? Throughout history people have attributed their health -- good and bad-- to their physical surroundings. In this class we will explore how medical professionals, scientists and the general population have historically understood the ways in which the environment impacts different people, in different places, in different ways. We will interrogate medical theories that underpinned popular practices, like health tourism, public health campaigns, and colonial medical programs. We will also consider how people constructed and understood the physical environment, including farms and factories, cemeteries and cities, to be healthy or not. This course is designed to foster a collaborative atmosphere in which students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project.
Taught by: Crnic
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSOC 459 Defining Disability
Live long enough, and you are almost certain to experience some kind of disability if you haven’t already. What, then, does it mean to be ‘disabled?’ This capstone takes as its premis the idea that disability has meant different things to different stakeholders (e.g. activists, physicians, politicians, families, employers, artists, clergy, engineers) across cultures and over time. We will historicize and analyze these various definitions in order to better understand the complex socio-cultural construct of disability while simultaneously cultivating the research skills necessary for advanced work in the humanistic social sciences. Assignments will be scaffolded to help students write an original research paper of significant length by the end of the semester.
Taught by: Kaplan
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSOC 462 Seeking Health: Tourism, Medicine in America 1800-2000
Summer camps, spring break, and trips to the beach, mountains, and national parks: vacations are an integral part of American culture. Often we talk and think about traveling for its ability to rejuvenate our tired bodies and spirits. Although tourism only developed over the past 100 years, the tradition of traveling for health has a much deeper history. This course will examine how different people in different times have understood the connections between travel and health, and how technologies have and continue to mediate those experiences. Over the course of the semester students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project. By the end of the semester, students will have honed their skills in primary and secondary source research, the construction of an academic argument and paper, and will continue to develop skills in critical analysis through weekly reading assignments.
Taught by: Crnic
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSOC 482 Invisible Labor in the Human Sciences
This course looks at those disciplines that take people as their subjects of research--including biology and biomedicine as well as anthropology, linguistics, and sociology--to explore the contributions of a wide range of research participants. We will focus on the sciences of human behavior, information, and medicine to analyze the labors of behind-the-scenes actors including tissue donors, survey respondents, student subjects, patients, translators, activists, ethics review boards, data curators, and archivists. Our job will be to analyze the experiences of these technoscientific laborers with a view to systems of knowledge and power in the production and maintenance of knowledge about humans and their bodies.

Health Care Innovation (HCIN)

HCIN 600 The American Health Care System
This course surveys the historical development of the American health care system from the turn of the Twentieth Century to the present. We examine the logic, economics, and implementation of the system’s basic structural components from insurance, to hospitals, to models for compensating physicians and nurses. We review many attempts at reform, and discuss why they failed. We analyze in detail the passage of the Affordable Care Act, the Supreme Court’s rulings, and its provisions on access, cost control, quality, workforce, and financing. And we begin to consider some of the directions in which the American health care system may evolve next.
Course usually offered in fall term
Activity: Online Course
1.0 Course Unit
HCIN 601 Health Care Operations
The word 'operations' derives from the Latin 'opus,' and opus means work. So by definition, operations is about work. This course offers an introduction to operations management: after completing the course, you will be able to use a systematic approach for analyzing and improving your work in health care settings. This will benefit patients, teams of care providers, and staff. The course includes an examination of inefficiencies resulting from the three system inhibitors: waste, variability, and inflexibility. And it provides strategies for engaging in the ongoing process of reducing these negative impacts without sacrificing quality of care. This course offers an introduction to operations management, examining inefficiencies from waste, variability, and inflexibility and providing strategies for engaging in the ongoing process of reducing these negative impacts without sacrificing quality of care. After completing the course, learners will be able to use a systematic approach for analyzing and improving their work in health care settings. Activity: Online Course
1.0 Course Unit

HCIN 602 Behavioral Economics and Decision Making
Behavioral economics is a relatively new field at the intersection of economics and psychology. This course offers an introduction to behavioral economics and its applications to health and health care. In it, we will examine the key conceptual underpinnings of the field. We will discuss in detail the structure of the choice environment and the ways that people are influenced by how choices are structured. We will consider the design of incentives and various approaches used to 'supercharge' incentive programs using behavioral economics principles. We will consider the use of social incentives and social comparisons as a way of achieving better physician performance. We will conclude with a description of how behavioral economics is used in public policy, as well as the interesting question of when a 'nudge' becomes a shove. Activity: Online Course
1.0 Course Unit

HCIN 603 Evaluating Health Policy and Programs
This course serves as an overview of fundamental concepts and empirical methods in the analysis of health policies and programs. It offers a pragmatic, applied approach to the subject, focusing on how the learner can use evaluation methods in practice. This course surveys key concepts in evaluation, such as confounding, selection bias, non-random assignment, the counterfactual, and matching. It examines the notions of internal versus external validity, and their influence on methodological choice. And it covers empirical methods including randomized controlled trials, regression discontinuity design, difference-in-differences or interrupted time series methods, matching, and instrumental variables. Real-world policies and evaluation examples illustrate concepts and applications of methods. Taught by: Amol Navathe Activity: Online Course
1.0 Course Unit

HCIN 604 Health Economics
Health economics applies economic principles to the health care sector. By recognizing the importance of scarcity and incentives, it focuses on the critical economic issues in producing, delivering, and financing health care. It analyzes determinants of demand for medical care, the unique role of physicians in resource allocation, the role of health insurance, and competition in medical care markets. Activity: Online Course
1.0 Course Unit

HCIN 605 Applying Behavioral Economics
Analyze a case, define a behavioral economics intervention, sketch a behavioral roadmap, and write a proposal for the intervention. Activity: Online Course
0.5 Course Units

HCIN 606 Applying Operations Management
Analyze 2 health care cases; through the process of forecasting, build a KPI tree; and recommend process improvements. Activity: Online Course
0.5 Course Units

HCIN 607 Translating Ideas into Outcomes
This course applies state-of-the-art innovation methodologies to improve health care delivery for providers, and outcomes and experience for patients. It begins with an extended discussion of how we might apply principles of analytical and scientific thinking including rhetorical analysis and behavioral economics to operational problems in health care. And it examines strategies for identifying and solving those problems; including ethnographic research to reveal what others have missed; problem reframing to enable high-impact solution directions; intentional divergence to unlock teams from initial, less productive concepts; rapid hypothesis validation to learn quickly at low cost whether and how best to invest in scaling; and designing delightful experiences, which drive word-of-mouth and catalyze the spread of desirable behaviors. Activity: Online Course
1.0 Course Unit

HCIN 608 Driving Value in the System & Health Insurance and Benefit Design
This is a pairing of two 3-week course topics. In 'Driving Value in the System,' you will engage in understanding the current goals of improving value—defined by quality over costs—in the health care system and drivers of improved value. After hearing from experts in the field about their experiences, you will be able to understand the different payor drivers to increase value, measure quality and cost, deliver an elevator speech for resources, and select tools to implement a value-improvement project. In 'Health Insurance and Benefit Design,' you will discuss some of the main challenges facing health insurers, efforts to reduce growth in entitlement spending, and research that muses on the effectiveness of different strategies to modify behavior through the use of incentives embedded within health insurance design. Taught by: Lee Fleisher, Kevin Volpp Activity: Online Course
1.0 Course Unit
HCIN 610 Connected Health Care
Technology has allowed firms to fundamentally change how they connect with their customers. Rather than having occasional, episodic interactions—where customers realize they have an unmet need and then look for ways to fill it—firms are striving to be continuously connected to their customers, providing services and products as the needs arise, even before customers become aware of them. There is probably no other industry for which this development will be as transformative as in health care delivery. Wearable devices, smart pill bottles, and digestible sensors—all of these technologies, and many more, are associated with the promise of improving the quality of care while also making efficient use of resources. This course explores the impact of connected strategies in general, and in particular the opportunities associated with them in health care delivery.

Taught by: Terwiesch
Course usually offered summer term only
Activity: Online Course
1.0 Course Unit

HCIN 611 Driving Value in the System
Engage in understanding the current goals of improving value—defined by quality over costs—in the health care system and drivers of improved value. Most policy experts agree that by focusing on value then we will be able to unite the different groups within the health care delivery system to help fix our current issues. Students who successfully complete this course will be able to discuss the payer drivers to increase value, measure quality, measure cost, deliver an elevator speech for resources to improve value, and select tools to implement a project to improve value.

Activity: Online Course
0.5 Course Units

HCIN 612 Health Law Fundamentals & Ethics in Health Care Innovation and Research
This is a pairing of two 3-week course topics. In 'Health Law Fundamentals,' you will examine the legal and regulatory aspects of the United States health care delivery and financing systems. After examining Supreme Court rulings and casebook readings, you will be able to describe the laws, regulations, common law, and market forces that shape the US health care system; explain the malpractice system and how it influences medical practice; and analyze legal aspects of the ACA. The course also includes extensive additional readings on the Patient Protection and Affordable Care Act. Students who successfully complete this course will be able to describe the laws, regulations, common law, and market forces that shape our health care system and identify areas where ideas and innovation are needed; explain the malpractice system and how it influences medical practice; and analyze legal aspects of the ACA.

Activity: Online Course
0.5 Course Units

HCIN 614 Health Law Fundamentals
Examine the legal and regulatory aspects of the United States health care delivery and financing systems. This course explores how statutes, regulations, common law, and market forces help or hinder three major goals of policymakers: increasing access, reducing cost, and improving quality. We will examine the Supreme Court's rulings on the ACA and other legal aspects of modern health care reform. Casebook readings are supplemented by government publications, academic articles, and policy materials. The course also includes extensive additional readings on the Patient Protection and Affordable Care Act. Students who successfully complete this course will be able to describe the laws, regulations, common law, and market forces that shape our health care system and identify areas where ideas and innovation are needed; explain the malpractice system and how it influences medical practice; and analyze legal aspects of the ACA.

Activity: Online Course
0.5 Course Units

HCIN 615 Policymaking in Health Care
How is health policy developed, decided, and executed? We are cognizant of legislation in its final, enacted form—but what precedes it, and how is it shaped? This course will take students from the offices of policymakers to the floor of the House and Senate, to the offices of physicians and providers. The course will examine what foundational elements are necessary to pass any piece of legislation and the process through which a law comes to fruition. Key health care legislation—Medicare, ‘Clinton Care,’ CHIP, and the ACA—will all be examined through the lens of policy development. Upon completing the course, students will be able to define the specific decisions, actions, and agendas in order to, ultimately, propel health care policymaking.

Activity: Online Course
0.5 Course Units

HCIN 616 Health Disparities to Equity & Health Care Leadership
This is a pairing of two 3-week course topics. In 'From Health Disparities to Health Equity: Policy Implications,' you will review the causes of and policy approaches for health disparities, and relate them to the specific discipline and interest of each student. We will explore health equity within the context of population health while examining some strategies for improving health equity through case studies and policy analysis. Understanding the role social determinants of health play in improving health status for populations is critical for health equity policies and will be examined in the course. Upon completion of this course, you will be able to identify health disparities and social determinants of health that adversely affect populations' health due to their social, economic, and environmental conditions, and apply strategies for improving health equity and creating opportunities for all populations to live up to their full health potential. In 'Health Care Leadership in an Era of Patient Empowerment,' you will focus on concepts, experience, and skills for leading organizational development and change in hospitals, health centers, medical practices, and other health care groups, administrations, and agencies. It draws on writings, cases, exercises, and your own experience to explore the foundations and techniques for organizational leadership. Upon completion of the course, you will be better able to exercise leadership in your work and community, apply leadership concepts in building teams and teams of teams, lead through crisis, design reward systems for motivating individuals and teams, and develop a high-performance architecture and culture.

Activity: Online Course
1.0 Course Unit
HCIN 617 Leading Change in Health Care
There has been no shortage of recommendations from executives, consultants, and self-declared experts on how to improve health care. But the success rate for implementation has been low, and health care systems still struggle with problems of quality, cost, and access—not to mention high employee turnover and provider burnout. However, across the country, there have been pockets of success in improving care delivery. A number of best practices show promise, including open access scheduling, care coordination and standardization, performance measurement and feedback, the expansion of palliative care, community health worker programs, and the integration of behavioral care. Through lectures, case studies presented by multiple expert faculty, and interviews with leaders in the field, you will examine these transformative practices, and the leadership techniques that have led to their success. You will identify organizations that are primed for transformation, potential directions for leading transformation, and ways to direct change within your organization.
Taught by: Ezekiel J. Emanuel, MD, PhD
Activity: Online Course
1.0 Course Unit

HCIN 618 Building a Case for Transformation
Analyze an existing case from a health care setting and identify an opportunity for change in your own professional context that you would develop in the following course.
Activity: Online Course
0.5 Course Units

HCIN 619 Pitching Innovation
Further define an innovation project and develop a written proposal and oral pitch geared toward stakeholders.
Activity: Online Course
0.5 Course Units

Health Care Management (HCMG)

HCMG 101 Health Care Systems
This introductory course takes a policy and politics angle to health care's three persistent issues - access, cost and quality. The roles of patients, physicians, hospitals, insurers, and pharmaceutical companies will be established. The interaction between the government and these different groups will also be covered. Current national health care policy initiatives and the interests of class members will steer the specific topics covered in the course. The course aims to provide skills for critical and analytical thought about the U.S. health care system and the people in it. No pass/fail. Grade only.
Taught by: Harrington
One-term course offered either term
Activity: Lecture
1.0 Course Unit

HCMG 202 The Economics and Financing of Health Care Delivery
The course provides an application of economic models to demand, supply, and their interaction in the medical economy. Influences on demand, especially health status, insurance coverage, and income will be analyzed. Physician decisions on the pricing and form of their own services, and on the advice they offer about other services, will be considered. Competition in medical care markets, especially for hospital services, will be studied. Special emphasis will be placed on government as demander of medical care services. Changes in Medicare and regulation of managed care are among the public policy issues to be addressed. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Candon
One-term course offered either term
Also Offered As: ECON 039
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit

HCMG 203 Clinical Issues in Health Care Management: Doctors, Patients and Managers in Modern Society
This course will explore the effects of the changing health care environment on the physician, patient and health care manager. It is intended for any undergraduate with an interest in how 1/6th of the American economy is organized as well as those planning careers as health care providers and managers. The course complements other health care courses (that take a societal perspective) by focusing on the individuals who participate in the health care enterprise. There are no prerequisites, as the course will stand on its own content. The course will be divided into modules that focus on the participants of the health care process and the process itself. We will analyze the patient, the doctor, and manager in light of the patient-doctor interaction, the turbulent health care marketplace, expensive new technologies, resource allocation, and ethics.
Taught by: Asch
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HCMG 204 Comparative Health Care Systems
This course examines the structure of health care systems in different countries, focusing on financing, reimbursement, delivery systems and adoption of new technologies. We study the relative roles of private sector and public sector insurance and providers, and the effect of system design on cost, quality, efficiency and equity of medical services. Some issues we address are normative: Which systems and which public/private sector mixes are better at achieving efficiency and equity? Other issues are positive: How do these different systems deal with tough choices, such as decisions about new technologies? Our main focus is on the systems in four large, prototypical OECD countries—Germany, Canada, Japan, and the United Kingdom—and then look at other countries with interesting systems— including Italy, Chile, Singapore, Brazil, China and India. We draw lessons for the U.S. from foreign experience and vice versa.
Taught by: Lucarelli
Course usually offered in spring term
Also Offered As: HCMG 859
Activity: Lecture
1.0 Course Unit
HCMG 213 Health Care Strategy and Management: the Business of Health Care
This course presents an overview of the business of health and how a variety of health care organizations have gained, sustained, and lost competitive advantage amidst intense competition, widespread regulation, high interdependence, and massive technological, economic, social and political changes. Specifically, we evaluate the challenges facing health care organizations using competitive analysis, identify their past responses, and explore the current strategies they are using to manage these challenges (and emerging ones) more effectively. Students will develop generalized skills in competitive analysis and the ability to apply those skills in the specialized analysis of opportunities in producer (e.g. biopharmaceutical, medical product, information technology), purchaser (e.g. insurance), and provider (e.g. hospitals, nursing homes, physicians) organizations and industry sectors. The course is organized around a number of readings, cases, presentations, and a required project.
Taught by: Burns
Course usually offered in fall term
Prerequisite: HCMG 101
Activity: Lecture
1.0 Course Unit

HCMG 215 Management and Economics of Pharmaceutical and Biotech Industries
This course provides an overview of the management, economic and policy issues facing the pharmaceutical and biotechnology industries. The course perspective is global, but with emphasis on the U.S. as the largest and most profitable market. Critical issues we will examine include: R&D intensive cost structure and rapid technological change; biotech startups and alliances with the pharma industry; pricing and promotion in a complex global marketplace where customers include governments and insurers, as well as physicians, pharmacists and consumers. We use Wharton and industry experts from various disciplines to address these issues.
Taught by: Alpert
Course usually offered in spring term
Prerequisite: HCMG 101 OR ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit

HCMG 216 Health Insurance and Health Care Strategy
This course combines the insights of health economics with a strategic perspective on the business of health. The first section will consider the costs and benefits of medical interventions, while the second considers insurance theory and places special emphasis on the challenges facing firms in the face of the rising costs of health benefits as well as opportunities for private insurers operating in publically financed markets. The third section will analyze strategies of vertical and horizontal integration and their effect on the balance of power in local healthcare markets. Finally, the course will cover the effects of reform on firm incentives. The course will be taught using a mix of lectures and cases.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HCMG 250 Health Care Reform and the Future of the American Health Care System
Under stress from COVID-19, this course provides students with a rigorous understanding of the current American health care system and how it is likely to evolve over the next decade. The course will focus on six topics: 1) the development of the current health care system; 2) challenges of health care costs, quality, and access; 3) lessons of previous attempts to reform the system including the Affordable Care Act (ACA); 4) analysis of current policies regarding provider payment, technology, and electronic health records and how various sectors (e.g. public health and hospitals) are evolving in the current system; 5) impact of COVID-19 on health care delivery and finance, and 6) future megatrends in American health care system. Throughout the course, lessons will integrate basic health economics, history, health policy, and politics to elucidate key principles for understanding the health care system. The course will also examine at least one other country’s health system for comparison. The course will end with a consideration of the long-term outlook for the structure of the US health system and potential reforms.
Taught by: Emanuel, Schwartz
Course usually offered in fall term
Also Offered As: BIOE 575, HCMG 850
Activity: Lecture
1.0 Course Unit

HCMG 302 Economics and Financing of Health Care Delivery
This course provides an application of economic principles to the health care sector. By recognizing the importance of scarcity and incentives, this course will focus on the critical economic issues in producing, delivering, and financing health care. In particular, the course will analyze determinants of demand for medical care, such as health status, insurance coverage, and income; the unique role of physicians in guiding and shaping the allocation of resources in medical care markets; and competition in medical care markets, especially among hospitals. Special emphasis will be placed on the evaluation of policy instruments such as government regulation, antitrust laws, ’sin taxes’ on cigarettes and alcohol, and public health programs. This course is similar to HCMG 202, but uses more advanced quantitative methods and formal economic theory; knowledge of calculus and basic microeconomics is recommended. Students who take HCMG 302 may not also take HCMG 202 (ECON 039) for further credit.
Taught by: David
Course usually offered in fall term
Prerequisite: ECON 001 AND (ECON 002 OR BEPP 250)
Activity: Lecture
1.0 Course Unit
HCMG 352 Health Services Delivery: A Managerial Economic Approach
The purpose of this course is to apply economics to an analysis of the health care industry, with special emphasis on the unique characteristics of the US healthcare markets, from pre-hospital to post-acute care. This course focuses on salient economic features of health care delivery, including: the role of nonprofit providers, the effects of regulation and antitrust activity on hospitals, the degree of input substitutability within hospitals, the nature of competition in home health care, public versus private provision of emergency medical services, the effect of specialty hospitals and ambulatory surgery centers, the economics of direct-to-consumer advertising and its effect on drug safety, defining and improving medical performance in hospitals, specialization and investment in physical and human capital, and shifting of services between inpatient and outpatient settings and its effect on health care costs and quality.
Taught by: David
Course usually offered in spring term
Also Offered As: HCMG 852
Activity: Lecture
1.0 Course Unit

HCMG 357 Healthcare Data and Analytics
In healthcare or anywhere else across science, or business, or sports, the importance of data and analytics is virtually unquestioned. That, however, does not mean that it needs no elucidation. In this course, we begin with a fundamental understanding of the state of data and analytics in healthcare and then move onto examples of its use in converting from business questions to implemented solutions. We 'sidestep' into the world of algorithms/machine-learning/AI and causal inference, but our focus is on business applications of these tools to the available data in the healthcare industry. As we discuss examples, we always seek to show how human creativity needs to be at the heart of the questions being probed. We highlight today's data universe in healthcare, the level of integration we have achieved, and the immensity of the remaining task, all with an eye to the business opportunities that exist now. We end with a showcasing of the art of the possible - in 2020 - and with (hopefully) a clear look ahead at what remains to be achieved. At the end of this course, students will: 1. Know the health care data landscape; 2. Understand the 'loop' that drives modern evidence-based businesses; 3. Dive into real health care data analytics problems, developing a first-hand familiarity with basic tools and concepts; 4. Anticipate the business opportunities evolving in health care data and analytics. Other experience in data science can serve as a substitute for the prerequisites. Knowledge of basic statistics is a must. Coding experience is a plus. Experience coding to solve data/statistics problems is ideal. Further training in data science is a plus, and we welcome those with more advanced preparation.
Taught by: Grennan, Mahadevan
Course usually offered in fall term
Also Offered As: HCMG 857
Prerequisite: STAT 101
Activity: Lecture
0.5 Course Units

HCMG 391 Health Care Entrepreneurship
Delivering basic health care advances worldwide and continuing to increase lifespan and quality (in an affordable manner) represent some of the major societal challenges of our time. Addressing these challenges will require innovation in both medical technology and the ways in which health services are delivered. Through readings, cases, guest lectures, and your own entrepreneurial work outside of class, we will examine the environment facing prospective health care entrepreneurs: (1) sources of health care innovation; (2) the many ‘customers’ in health care: patients, doctors, hospitals, insurers, and regulators; (3) the powerful established firms with developed clinical and sales expertise; (4) the investing community. Along the way we will develop a framework for thinking about what is different (and what is not) about the challenges of health care entrepreneurship.
Taught by: Grennan
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HCMG 653 Health Care Field Application Project
This course focuses on leadership and management issues in health care organizations while providing students with a practice setting to examine and develop their own management skills. Each team acts as a consultant to a local healthcare organization which has submitted a project proposal to the course. The teams define the issue and negotiate a contract with the client organization. By the end of the semester, teams present assessments and recommendations for action to their clients and share their experience with the class in a series of workshops and cross-team consultations.
Course usually offered in spring term
Prerequisite: HCMG 841
Activity: Lecture
1.0 Course Unit
Notes: Seminar and workshop, a written and oral presentation of the team management study and an individual paper.

HCMG 841 Health Services System
This course provides an overview of the evolution, structure and current issues in the health care system. It examines the unique features of health care as a product, and the changing relationships between patients, physicians, hospitals, insurers, employers, communities, and government. The course examines three broad segments of the health care industry: payors, providers and suppliers. Within the payor segment, the course examines the sources and destinations of spending, managed care (HMOs, PPOs), employer based health insurance, technology assessment, payor strategy, and efforts to pay for the elderly, the poor & the medically indigent. Within the provider segment, the course examines health services are delivered. Through readings, cases, guest lectures, and your own entrepreneurial work outside of class, we will examine the environment facing prospective health care entrepreneurs: (1) sources of health care innovation; (2) the many ‘customers’ in health care: patients, doctors, hospitals, insurers, and regulators; (3) the powerful established firms with developed clinical and sales expertise; (4) the investing community. Along the way we will develop a framework for thinking about what is different (and what is not) about the challenges of health care entrepreneurship.
Taught by: Grennan
Course usually offered in fall term

2020-21 Catalog | Generated 09/18/20
HCMG 845 US Payer and Provider Strategy
This course, co-taught with Brad Fluegel (former Chief Strategy Officer at Aetna, Anthem, and Walgreens and presently on the boards of several health care firms, including Fitbit and Premera Blue Cross), provides an overview of the challenges facing payers and providers in US healthcare as well as the strategies they use (or should use) to succeed. We cover all major aspects of the healthcare sector as seen from the perspective of payers and providers, starting from their core products and services (consumer preferences and health plan design, provider quality), the market environment they operate in (regulation and the role of public insurers, payment reforms, rising costs, and consolidation), and their strategic and operational responses (new organization models, mergers and acquisitions, and new ventures). The pedagogy is accordingly a mix of faculty lectures and talks by senior industry leaders to balance theory and practice.
Taught by: Gupta, Fluegel
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Lectures, cases, assignments, term project, and final presentation.

HCMG 849 Financial Management of Health Institutions
This course focuses on health care organizations’ financing and financial decisions in the changing health care landscape. The course involves case analyses and lectures, including presentations by practitioners with extensive real-world experience. Students seeking careers in health care with minimal finance background will obtain a solid introduction to key areas of health care finance and financial decision making. Students with more background will extend and enhance their analytical skills in a variety of important areas.
Taught by: Harrington
Course usually offered in fall term
Prerequisite: FNCE 611 OR FNCE 614
Activity: Lecture
1.0 Course Unit

HCMG 850 Health Care Reform and the Future of the American Health Care System
Under stress from COVID-19, this course provides students with a rigorous understanding of the current American health care system and how it is likely to evolve over the next decade. The course will focus on six topics: 1) the development of the current health care system; 2) challenges of health care costs, quality, and access; 3) lessons of previous attempts to reform the system including the Affordable Care Act (ACA); 4) analysis of current policies regarding provider payment, technology, and electronic health records and how various sectors (e.g., public health and hospitals) are evolving in the current system; 5) impact of COVID-19 on health care delivery and finance, and 6) future megatrends in American health care system. Throughout the course, lessons will integrate basic health economics, history, health policy, and politics to elucidate key principles for understanding the health care system. The course will also examine at least one other country’s health system for comparison. The course will end with a consideration of the long-term outlook for the structure of the US health system and potential reforms.
Taught by: Emanuel, Schwartz
Course usually offered in fall term
Also Offered As: BIOE 575, HCMG 250
Activity: Lecture
1.0 Course Unit

HCMG 852 Health Services Delivery: A Managerial Economic Approach
The purpose of this course is to apply economics to an analysis of the health care industry, with special emphasis on the unique characteristics of the US healthcare markets, from pre-hospital to post-acute care. This course focuses on salient economic features of health care delivery, including: the role of nonprofit providers, the effects of regulation and antitrust activity on hospitals, the degree of input substitutability within hospitals, the nature of competition in home health care, public versus private provision of emergency medical services, the effect of specialty hospitals and ambulatory surgery centers, defining and improving medical performance in hospitals, specialization and investment in physical and human capital, shifting of services between inpatient and outpatient settings and its effect on health care costs and quality, and innovation in primary care from retail clinics to patient-centered medical homes and retainer-based medicine.
Taught by: David
Course usually offered in spring term
Also Offered As: HCMG 352
Activity: Lecture
1.0 Course Unit

HCMG 853 Management and Strategy in Medical Devices and Technology
Successful medical devices are an amalgamation of creative and innovative thinking, clinical expertise, and engineering know-how that endures intense regulatory and reimbursement scrutiny. This course will provide a foundation for understanding the nuances of the medical device industry. It will cover topics ranging from device design and discovery, regulatory issues, marketing, reimbursement, management, and strategy. Classroom activities will be supplemented with optional tours of hospitals, research and manufacturing facilities, and hands-on demonstrations of devices. Though the course is intended primarily for MBA students, it will be open to medical and engineering students as well as to hospital house staff.

Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
HCMG 855 Management of Health Care for the Elderly
This mini course is designed to provide students with an appreciation of the good, the bad and the ugly of how our current health care system cares for one of our nation's most precious resources - our seniors! This course will review care provided to seniors within a variety of institutional settings (hospitals, nursing facilities, various senior housing levels) as well as outpatient and home care services. Special attention will be paid to nursing homes and senior housing options and their past, present and future role within the overall health care system in the United States. The course will start with an overview of the senior population with special attention to their health and social needs. Several classes will be held off campus at selected nursing facilities and senior housing complexes. In addition, a broad range of special programs and services will be reviewed such as sub-acute care, long term care insurance, Medicare Risk Programs, elderly housing, adult day care, managed care, Medicare Part D, case management, hospice and other recent developments. Throughout the course, emphasis will be placed on entrepreneurial opportunities to serve the senior market at all levels. Students are required to produce a paper for this course that focuses on a specific area impacting the senior market. This is a wonderful opportunity for students to select an area of personal interest and conduct an in depth review of that area including making direct contact with national experts within the topic selected. All student topics must be approved during the first two weeks of class and the depth of research required agreed upon by the by the student and the instructor. Interested students not in the HCMG major are urged to speak to the instructor before enrolling in the course.
Taught by: Whitman

HCMG 859 Comparative Health Care Systems
This course examines the structure of health care systems in different countries, focusing on financing, reimbursement, delivery systems and adoption of new technologies. We study the relative roles of private sector and public sector insurance and providers, and the effect of system design on cost, quality, efficiency and equity of medical services. Some issues we address are normative: Which systems and which public/private sector mixes are better at achieving efficiency and equity? Other issues are positive: How do these different systems deal with the tough choices, such as decisions about new technologies? Our focus first on the systems in four large, prototypical OECD countries - Germany, Canada, Japan, and the United Kingdom - and then look at other developed and emerging countries with interesting systems - including Italy, Chile, Singapore, Brazil, China and India. We will draw lessons for the U.S. from foreign experience and vice versa.
Taught by: Lucarelli

HCMG 860 Managing Health Care Organizations
This course aims to improve enrollees’ ability to effectively manage and lead health care organizations (HCOs, including hospitals, medical groups, insurers, biopharmaceutical firms, etc.). The course is designed to integrate previous course work in general management, health care, and health policy to further participants’ understanding of organizational, managerial, and strategic issues facing HCOs and the health care workforce. The course will provide participants with a foundation for developing, implementing, and analyzing efforts to improve HCOs’ performance. A major objective of the course is to sharpen the leadership, problem-solving, and presentation skills of those who aim to hold operational and strategic positions in health care organizations. Another objective is to introduce enrollees to leading HCOs. Through case studies, readings, in-class exercises and class discussions, participants will learn analytic frameworks, concepts, tools and skills necessary for leading and managing organizational learning, quality improvement, innovation, and overall performance in HCOs.

HCMG 863 Management and Economics of Pharmaceutical and Biotech Industries
This course provides an overview of the management, economic and policy issues facing the pharmaceutical and biotechnology industries. The course perspective is global, but with emphasis on the U.S. as the largest and most profitable market. Critical issues we will examine include: R&D intensive cost structure with regulation and rapid technological change; strategic challenges of biotech startups; pricing and promotion in a complex global marketplace where customers include governments and insurers, as well as physicians and consumers; intense and evolving M&A, joint ventures, and complex alliances; government regulation of all aspects of business including market access, pricing, promotion, and manufacturing. We use Wharton and industry experts from various disciplines to address these issues.

Taught by: Alpert

HCMG 866 E-Health: Business Models and Impact
Healthcare is in the early stages of extraordinary change in the business model of care delivery and financing. This transformation will lead to a system based on the proactive management of health, integration of care across the continuum, blurred boundaries between care providers and purchasers and the placement of the consumer at the center. As has been the case in other industries, this new business model will be based on a foundation of diverse, potent, and well implemented information technology. This course will help prepare students to lead a digital health future. Specifically, the course will cover three major areas. (1) The context of health care information technology: the size, composition and evolution of the digital health market; federal government agencies, and related regulations, that shape the market; leadership roles and factors that enable healthcare organizations to effectively implement and leverage information technology. (2) Emerging technologies that will fuel the transformation of healthcare: artificial intelligence and advanced analytics; interoperability; telehealth; consumer-directed digital health; use of behavioral economics to influence patient and provider decisions. (3) Digital health use by specific sectors of the healthcare industry: healthcare providers; health plans; retail-based primary care; life sciences; wellness and chronic disease management. The course will include lectures from industry leaders who will share their ideas and experiences.

Taught by: Glaser/Patel
Course usually offered in spring term
Activity: Lecture

HCMG 867 Health Care Entrepreneurship
The course focuses on the creation, funding, and management of digital health, biotech, medtech, and other health services enterprises. The course is designed to supplement other offerings in the Health Care Systems and Management Departments for those students with entrepreneurial interest in such ventures, and will focus on special issues surrounding the conceptualization, planning, diligence, and capitalization of these ventures and also includes management and compensation practices. In addition, course offers methods for self-assessment & development of business models and plans, techniques for technology assessment and strategy, develops foundation for capitalization and partnering strategies, and creates a basis for best practices in company launch and plan execution. Students must apply to take this course. Please see the Health Care Management Department for the application.

Taught by: Kurtzman, Libson
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
HCMG 868 Private Sector Role in Global Health
Issues surrounding global health have captivated the attention of the public sector and foundations for many decades. Many of their initiatives are realizing progress on the health-related Millennium Development Goals. The private sector has been less engaged in global health, but has a significant role to play in providing resources and in building infrastructure, human resource capacity and sustainability. This course explores entrepreneurial and other private sector solutions for health services and access to medicines and technologies in the developing world and other underserved areas. The course also encomasses study of creative programs to engage the private sector in development of vaccines and medicines for tropical and neglected diseases. Furthermore, the course addresses novel care systems and therapeutic strategies for the rapidly growing burden of chronic, non-communicable diseases in the developing world. In short, the course builds on the content of conventional global health courses from a managerial and entrepreneurial perspective. Learning is driven through readings, class discussion and a series of guest speakers representing a wide range of global health issues. Evaluation is largely based on a student group project.

HCMG 890 Advanced Study Project: Management of Health Care Service Businesses
HCMG 890-001: This course examines issues related to the Services Sector of the health care industry. For those interested in management, investing, or banking into the health care industry, the services sector will likely be the largest and most dynamic sector within all of health care. We will study key management issues related to a number of different health care services businesses with a focus on common challenges related to reimbursement, regulatory, margin, growth, and competitive issues. We will look at a number of different businesses and subsectors that may have been unfamiliar to students prior to taking the course. We will make extensive use of outside speakers, many of whom will be true industry leaders within different sectors of the health care services industry. Speakers will address the current management issues they face in running their businesses as well as discuss the career decisions and leadership styles that enables them to reach the top of their profession. Students will be asked to develop a plan to both buyout and manage a specific health care services business of their choosing and will present their final plans to a panel of leading Health Care Private Equity investors who will evaluate their analysis. Prerequisites: HCMG 841. Health Care Management MBA majors only Senior healthcare executives and policy leaders will be engaged as guest speakers.

Taught by: Present
Course usually offered in fall term

Activity: Independent Study
1.0 Course Unit

HCMG 900 Proseminar in Health Economics: Models and Methods
This course is intended to provide entering doctoral students with information on the variety of health economics models, methods, topics, and publication outlets valued and used by faculty in the HCMG doctoral program and outside of it. The course has two main parts: the first, to acquaint students with theoretical modeling tools used frequently by health economists. This part of the course involves a number of lectures coupled with students’ presentations from the health economics, management and operations research community at Penn on a research method or strategy they have found helpful and they think is important for all doctoral students to know.

Taught by: David
One-term course offered either term
Activity: Lecture
1.0 Course Unit

HCMG 901 Proseminar in Health Economics: Health Econometrics
This course will cover empirical methods used in economics research with an emphasis on applications in health care and public economics. The methods covered include linear regression, matching, panel data models, instrumental variables, regression discontinuity, bunching, qualitative and limited dependent variable models, count data, quantile regressions, and duration models. The discussion will be a mix of theory and application, with emphasis on the latter. The readings consist of a blend of classic and recent methodological and empirical papers in economics. Course requirements include several problem sets, paper presentations, an econometric analysis project and a final exam. The course is open to doctoral students from departments other than Health Care Management with permission from the instructor.

Taught by: Gupta
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HCMG 902 Special Topics in Health Economics: The Industrial Organization of Health Care
This advanced PhD seminar will explore topics in the industrial organization of health care and structural econometric approaches in health economics. The focus in this course is the development of advanced econometric tools. The (tentative) topics covered include health insurance and hospital demand estimation, the analysis of hospital competition, insurer competition, quality competition, technology adoption, models of entry and exit and dynamic oligopoly games. The readings will focus on recent advances in economics. Students are required to present recent research from the field and write an empirical research paper that broadly based on the topics covered in the course.

With the permission of the instructor, the seminar is open to doctoral students from departments other than Health Care Management.

Taught by: Lucarelli
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
HCMG 903 Economics of Health Care and Policy
This course applies basic economic concepts to analyze the health care market and evaluate health policies. The course begins with a discussion of productivity in health care and of the theoretical and empirical effects of asymmetric information and market failure. The second part of the course explores several topic areas in the health care economics literature: health insurance and the labor market; health policy interventions; and health as human capital. The third part of the course examines competition and the behavior of health care providers, with emphasis on the impact of policy on competition, behavior, and finally, bringing us full circle, health care productivity. 
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HCMG 904 Doctoral Seminar in Organizational Behavior and Theory in Health Care
This course introduces students to organizational behavior and theory (OBT) by examining key issues in OBT, different perspectives on key issues, and how OBT informs health services research and practice. This course examines 'micro' theories (i.e., social psychological theories of organizational behavior) and 'macro' theories (i.e., theories focused on the structural and environmental aspects of organizations). We will examine the strengths and weaknesses of various theories, how they can be used as a foundation for research, methods used to study them, and the implications for health policy and management. Examples of published health services research grounded in OBT will be discussed so that students become familiar with the theories-in-use and various publication outlets for health care management (HCM) research. 
Taught by: Nembhard
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

Health Policy Research (HPR)

HPR 501 Economics of Health Care Delivery
This course examines how medical care is produced and financed in private and public sectors, economic models of consumer and producer behavior, applications of economic theory to health care. Prerequisite: Course only open to Masters of Science in Heath Policy Research students. 
Taught by: Dr. Mark Pauly
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

HPR 503 Qualitative Methods in Health Research
The purpose of this course is to expose students to a variety of qualitative approaches/methodologies that may be used in health services/policy research. In didactics we will discuss the pros and cons of a range of qualitative Methods, how the method is actually implemented (with multiple experts presenting approaches), and pair the presentation with a broader discussion in which students compare and contrast health oriented articles in which the method was used. Students will have the opportunity to apply the theoretical approaches to their own research interests with direct input from the faculty and their peers. Prerequisite: Permission needed from Instructor.
Taught by: Drs. Frances Barg and Judy Shea
Course usually offered summer term only
Also Offered As: PUBH 538
Activity: Lecture
1.0 Course Unit

HPR 504 Principles and Practice of Healthcare Quality Improvement
Healthcare delivery is complex and constantly changing. A primary mission of leading healthcare organizations is to advance the quality of patient care by striving to deliver care that is safe, effective, efficient, timely, cost-effective, and patient-centered (Institute of Medicine). The goal of this interprofessional course is to provide students with a broad overview of the principles and tools of quality improvement and patient safety in healthcare as well address the knowledge, skills and attitudes as defined by the Quality and Safety Education for Nurses (QSEN) guidelines. It will provide a foundation for students or practicing clinicians who are interested in quality improvement and patient safety research, administration, or clinical applications. Content will address the history of the quality improvement process in healthcare, quality databases and improvement process tools and programs. Through the use of case studies and exercises students will be become familiar with the use of several quality improvement programs and tools. For example, the Plan-Do-Study-Act (PDSA) cycle, Six Sigma and the Toyota Production System known as Lean Production processes will be addressed. Students can use this course to identify the tools and design the methods that they plan to employ in a quality improvement or patient safety project in their area of interest. 
Taught by: Myers, J.; Burke, K.
Course usually offered in fall term
Also Offered As: NURS 612
Activity: Lecture
1.0 Course Unit

HPR 550 Clinical Economics and Clinical Decision Making
This course focuses on the application of decision analysis and economic analysis to clinical and policy research. The course begins with material about the selection, use, and analysis of diagnostic tests using two by two tables, likelihood ratios, and ROC curves. The course continues with the introduction of more general tools for decision analysis, including decision trees and other mathematical models. Special emphasis is placed on the assessment and use of utilities in these models. A major focus of the course is the application of economic principles to the evaluation of health outcomes. During seminars, students will carry out practical exercises that include problem solving, critically analyzing published articles, and learning to use computer software that facilitates decision and economic analyses. Prerequisite: Permission of instructor.
Taught by: Glick,Williams
Course usually offered in spring term
Also Offered As: EPID 550
Activity: Lecture
1.0 Course Unit
HPR 580 Outcomes Research
This course is divided into two main parts. The first part addresses issues related to the measurement of quality in health care. Included is a review of the classical structure-process-outcome quality paradigm. The paradigm's strengths and limitations are addressed. This part especially focuses on outcome measure of quality and examines the validity of alternative measures. The second part deals with observational, or quasi-experimental, research studies. It addresses the advantages and limitations of alternative designs, and covers the role of clinical risk adjustment in observational studies of medical interventions. It focuses on the problem of selection bias, and reviews recent methods for dealing with this bias, such as instrumental variables. Prerequisite: Permission of instructor if prerequisite is not met.
Taught by: Silber
Course usually offered in fall term
Also Offered As: EPID 580
Activity: Lecture
1.0 Course Unit

HPR 588 Advanced Leadership Skills in Community Health
Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in healthcare advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discusses ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods. Prerequisite: Undergraduates with permission of the instructor
Taught by: Klurasitz
Course usually offered in spring term
Also Offered As: NURS 587, PUBH 588
Activity: Lecture
1.0 Course Unit

HPR 600 Health Services Research and Innovation Science
This course will provide students with an introduction to health services and health policy research. First, faculty representing various departments and and schools at the University of Pennsylvania will introduce students to a number of 'hot topics,' including health disparities, medical decision making, neighborhoods and health, quality of care, access to care, behavioral incentives, and cost effectiveness research. Second, the course will offer an introduction to various career paths in the research and policy domains. Third, the course will provide a brief overview of practical issues such as grant opportunities, data options, publishing, and dissemination. Prerequisite: This course is only open to Masters of Science in Health Policy Research students.
Taught by: Drs. Zachary Meisel and Raina Merchant
Course usually offered in summer term only
Activity: Seminar
1.0 Course Unit

HPR 603 Health Services and Policy Research Methods I: Primary Data Design and Collection
This course will introduce students to commonly used primary data collection methods and provide multiple examples of how they have been used in health services research. Through the course students will define a primary data collection research project and develop the methods necessary to conduct the project. To get the full benefit of this course, students should use this course to develop the methods they plan to employ in their primary data collection project. Prerequisite: Permission needed from Instructor.
Taught by: Drs. Marilyn Schapira and Judy Shea
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HPR 604 Introduction to Statistics for Health Policy
This is the first semester of a two-semester sequence. It is an introductory statistics course covering descriptive statistics, probability, random variables, estimation, hypothesis testing, and confidence intervals for normally distributed and binary data. The second semester stresses regression models. Prerequisite: Permission needed from Instructor.
Taught by: Dr. Kevin Lynch
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HPR 606 Fundamentals of Health Policy
While academic researchers often think of health policy in terms of research evidence and outcomes, politics and political processes also play important roles. The purpose of this course is to provide those pursuing careers in health services research and health policy with an understanding of the political context from which U.S. health policy emerges. This understanding is important for researchers who hope to ask and answer questions relevant to health policy and position their findings for policy translation. This understanding is important for policy leaders seeking to use evidence to create change. The class provides an overview of the U.S. health care system and then moves on to more comprehensive understanding of politics and government, including the economics of the public sector, the nature of persuasion, and techniques and formats for communication. The course emphasizes reading, discussion and applied policy analysis skills in both written and oral forms. Concepts will be reinforced with case studies, written assignments and a final policy simulation exercise where students will be placed in the position of political advisors and policy researchers. Prerequisite: Permission needed from Instructor.
Taught by: Dr. David Grande
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
HPR 607 Health Services and Policy Research Methods II: Causal Inference Using Secondary Data
Empirical research for health care policy frequently involves the analysis of observational data—information that is not primarily collected for research purposes. With the rapid increase in U.S. health information technology capacity, future opportunities for research using these ‘secondary data’ appear promising. The objective of this course is to teach the skills necessary to conduct quality health policy research using secondary data. These skills include formulating research aims and applying appropriate study designs for achieving these aims. The course will also include a survey of the content and structure of several commonly used administrative and public databases available to researchers and workshops to develop the skills to access and manipulate these valuable resources. Prerequisite: Permission needed from Instructor.

Taught by: Dr. Rachel M. Werner
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HPR 608 Applied Regression Analysis for Health Policy Research
This course deals with the work-horse of quantitative research in health policy research—the single outcome, multiple predictor regression model. Students will learn how to 1) select an appropriate regression model for a given set of research questions/hypotheses, 2) assess how adequately a given model fits a particular set of observed data, and 3) how to correctly interpret the results from the model fitting procedure. After a brief review of fundamental statistical concepts, we will cover analysis of variance, ordinary least squares, and regression models for categorical outcomes, time to event data, longitudinal and clustered data. We will also introduce the concepts of mediation, interaction, confounding and causal inference. Prerequisite: Permission needed from Instructor.

Taught by: Dr. Nandita Mitra
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HPR 611 Implementation Science in Health and Health Care
This course presents a survey of the field of implementation science in health. The structure of the course will include two parts. In the first part, we will introduce the field of implementation science, with an emphasis on theory, design and measurement. In the second part, we will focus on applied implementation science which will include examples of research programs in implementation science as well as applying insights of implementation science to practical implementation. An emphasis on qualitative and mixed methods approaches is included. Prerequisite: Permission needed from Instructor.

Taught by: Drs. Rinad Beidas and Meghan Lane-Fall
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HPR 612 Advanced Topics in Implementation Science in Health
This seminar course offers an opportunity for students to advance their understanding of the thorniest methodological challenges in implementation science. Broadly, topics include study design, study execution, and tensions in the field. The intention will be for attendees to directly apply their learnings to their ongoing or proposed implementation research. This half credit course is intended for those who have already been exposed to the foundational content of implementation science. This can be achieved via HPR 611, the Penn Implementation Science Institute, or other training opportunities such as the NIH TIDIRH/TIDIRC or mentored K awards. Instructor permission is required for enrollment. Additional prerequisites: the Penn Implementation Science Institute, or other training opportunities such as the NIH TIDIRH/TIDIRC or mentored K awards.

Taught by: Rinad Beidas, Meghan Lane-Fall
Course usually offered summer term only
Prerequisite: HPR 611
Activity: Seminar
0.5 Course Units

HPR 625 Pragmatic Clinical Trials in Healthcare
This seminar course offers an opportunity for students to understand what a pragmatic randomized controlled trial (RCT) is, how it differs from explanatory RCTs, why it is relevant, and key methodological and analytic issues that arise in the conduct of pragmatic trials. The student will also learn about ethical issues in pragmatic trials, nesting relevant studies within a trial, and trial reporting requirements. The intention will be for attendees to be able to directly apply their learnings to their ongoing or future clinical research.

Taught by: Katherine R. Courtright
Activity: Seminar
0.5 Course Units

HPR 637 Advocacy & Public Health
This course is designed to provide the foundational context and practical skills necessary to effectively advocate for evidence-based policy change in furtherance of public health objectives. the class will be interactive in nature and will require participation in public health advocacy exercises in order to hone advocacy skills. there will also be a focus on persuasive communication, both oral and written. we will explore the entire advocacy process from the identification of a problem and evaluation of possible policy solutions to utilizing the full range of advocacy tools to promote policy change.

Course usually offered in spring term
Also Offered As: PUBH 637
Prerequisite: PUBH 505 OR PUBH 507
Activity: Lecture
1.0 Course Unit
HPR 640 Coaching in Quality Improvement Work
The purpose of this course is to provide participants with the skills and tools to successfully guide learners in experiential quality improvement (QI) work in healthcare while developing a network of educators with similar roles. Faculty will be placed into groups based upon their level of experience and confidence in teaching and advising learners in this field. Both groups will discuss topics such as QI project selection, using QI frameworks to structure teaching sessions, key organizational and team factors, providing feedback, common teacher and learner pitfalls in QI, and many others. This will be a blended course with two in-person workshops and monthly asynchronous online educational components with assignments. Prerequisite: Prior knowledge and/or experience in Quality Improvement is required to enroll in this course. Examples of prior knowledge and/or experience include completion of: (1) one or more years of practical experience leading and/or advising a QI project team, (2) a local, regional, or national course in which QI methods and skills were taught (minimum of 4 hours), (3) Completion of the Institute for Healthcare Improvement’s Open School Certificate Program, (4) CHOP’s Improvement Leader Course, (5) Penn’s performance Improvement in Action (PIIA) Course, (6) HPR 504: Principles and Practice of Quality Improvement Course. Faculty who wish to enroll who do not meet 1 or more of the above criteria should contact one of the course directors for discussion and guidance.
Taught by: Jennifer Myers, Neha Patel, Elena Huang
Course usually offered in fall term
Activity: Online Course
0.5 Course Units

HPR 650 Systems Thinking in Patient Safety
This blended online/in-classroom graduate level course integrates principles of systems thinking with foundational concepts in patient safety. Utilizing complexity theories, students assess healthcare practices and identify factors that contribute to medical errors and impact patient safety. Using a clinical microsystem framework, learners assess a potential patient safety issue and create preventive systems. Lessons learned from the science of safety are utilized in developing QI frameworks to structure teaching sessions, key organizational and team factors, providing feedback, common teacher and learner pitfalls in QI, and many others. This will be a blended course with two in-person workshops and monthly asynchronous online educational components with assignments. Prerequisite: Prior knowledge and/or experience in Quality Improvement is required to enroll in this course. Examples of prior knowledge and/or experience include completion of: (1) one or more years of practical experience leading and/or advising a QI project team, (2) a local, regional, or national course in which QI methods and skills were taught (minimum of 4 hours), (3) Completion of the Institute for Healthcare Improvement’s Open School Certificate Program, (4) CHOP’s Improvement Leader Course, (5) Penn’s performance Improvement in Action (PIIA) Course, (6) HPR 504: Principles and Practice of Quality Improvement Course. Faculty who wish to enroll who do not meet 1 or more of the above criteria should contact one of the course directors for discussion and guidance.
Taught by: Susan Keim
Course usually offered in spring term
Also Offered As: NURS 650
Activity: Lecture
1.0 Course Unit

HPR 660 Applied Predictive Modeling for Health Services Research
The course offers an introduction to the principles and applications of predictive modeling. It is geared toward health services researchers with an emphasis on clinical and policy scenarios and the use of electronic health record and administrative claims data. The primary goals of this course are to help each student understand (1) the fundamental concepts of predictive modeling and what distinguishes it from traditional causal inference approaches in statistics, (2) the different evaluation metrics for model performance and their appropriate use and (3) the role of domain knowledge in developing a statistical plan for model development with the end-user in mind. Students will be building their own predictive models by the end of the course and may elect to use R, STATA or Python for coding exercises. No prior programming experience is required. A background in basic statistical principles would be helpful. Prerequisite: Permission needed from Instructor.
Taught by: Dr. Gary Weissman
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

HPR 670 Health Care Strategic Leadership and Business Acumen
The weeklong intensive course aims at developing essential business acumen and leadership skills required to thrive in a constantly changing health care ecosystem. Taught by invited faculty who have experience working with health care leaders, this course will focus on actionable knowledge in financial acumen, strategic decision making, innovation and building high-performance teams. Through interactive mixed-mode delivery methods, faculty will share tools and frameworks, always with a focus on how to apply them, both personally and within an organizational context. Prerequisite: Permission needed from Instructor.
Taught by: Drs. Guy David and David Grande
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

HPR 714 Grant Writing/Review
This course will assist students in the design of an NIH grant (F-32, K, R21 or R01) for submission by enhancing their appreciation of the specifics of the grant writing process and in understanding the grant review process. This course is designed to provide background, training, and practice with the writing and submitting of NIH style grants. As a minimum all students who enroll will be expected to write and submit a reasonable draft of a full NIH style grant proposal by the end of the term. During the process, the portions of each proposal will be reviewed as a group by the other students in the course. In response to each review, students are expected to revise their grant sections. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Farrar, Gerber
Course usually offered summer term only
Also Offered As: EPID 714
Prerequisite: EPID 510 AND EPID 526 AND EPID 560 AND EPID 570
Activity: Seminar
0.5 Course Units

HPR 799 Independent Study
This course is designed to provide the student with an opportunity to gain or enhance knowledge and to explore an area of interest related to health policy research under the guidance of a faculty member. Prerequisite: Permission of Program Director and Faculty Member.
Taught by: Faculty
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit
HPR 951 Health Policy Research Thesis I
Each student completes a mentored research project that includes a thesis proposal and a thesis committee and results in a publishable scholarly product. Prerequisite: Course only open to Masters of Science in Health Policy Research students.
Taught by: Faculty
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

HPR 952 Health Policy Research Thesis II
Each student completes a mentored research project that includes a thesis proposal and a thesis committee and results in a publishable scholarly product. Prerequisite: Course only open to Masters of Science in Health Policy Research students.
Taught by: Faculty
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Hebrew (HEBR)

HEBR 051 Elementary Modern Hebrew I
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew. A grade of B- or higher is needed to continue in the language.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 651, JWST 051
Activity: Lecture
1.0 Course Unit

HEBR 052 Elementary Modern Hebrew II
A continuation of first semester Elementary Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 652, JWST 052
Prerequisite: HEBR 051
Activity: Lecture
1.0 Course Unit

HEBR 053 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 653, JWST 053
Prerequisite: HEBR 052
Activity: Lecture
1.0 Course Unit

HEBR 054 Intermediate Modern Hebrew IV
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Last Language Course
One-term course offered either term
Also Offered As: HEBR 654, JWST 054
Prerequisite: HEBR 053
Activity: Lecture
1.0 Course Unit

HEBR 059 Advanced Modern Hebrew: Conversation & Writing
In this course students are introduced to the vibrant world of contemporary Israeli culture by reading some of the best plays, poems, short stories and journalism published in Israel today. They also watch and analyze some of Israel's most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and inter generational conflict, war and society, and the recent dynamic changes in Israel society. Students must have taken four semesters of Hebrew at Penn or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: HEBR 552, JWST 059
Prerequisite: HEBR 054
Activity: Lecture
1.0 Course Unit

HEBR 151 Elementary Biblical Hebrew I
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 451, JWST 171, JWST 471
Activity: Lecture
1.0 Course Unit

HEBR 152 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some Modern Hebrew. Prerequisite: If course requirement not met, permission of instructor required.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 452, JWST 172, JWST 472
Prerequisite: HEBR 151
Activity: Lecture
1.0 Course Unit
HEBR 153 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills. Prerequisite: If course requirement not met, permission of instructor required. Successful completion of HEBR 152 or permission of the instructor. This course is the prerequisite for HEBR 154 (no one is ‘permitted’ into that smester; you must take the previous semester course).
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 153, JWST 173, JWST 473
Prerequisite: HEBR 152
Activity: Lecture
1.0 Course Unit

HEBR 154 Intermediate Biblical Hebrew II
This course is a continuation of the fall semester’s Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.
For BA Students: Last Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 454, JWST 174, JWST 474
Prerequisite: HEBR 153
Activity: Lecture
1.0 Course Unit

HEBR 451 Elementary Biblical Hebrew I
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 151, JWST 171, JWST 471
Activity: Lecture
1.0 Course Unit

HEBR 452 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some Modern Hebrew. Prerequisite: If course requirement not met, permission of instructor required.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 152, JWST 172, JWST 472
Prerequisite: HEBR 451
Activity: Lecture
1.0 Course Unit

HEBR 453 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.

HEBR 486 Rabbinic Writers on Rabbinic Culture
This course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period - - Midrash, Mishna, and Talmud - - and in later juridical genres - - Talmudic commentary, codes and responses. Attention will be paid to the mechanics of different genres, the role of the underlying proof text, the inclusion or exclusion of variant opinions, the presence of non-legal information, the balance between precedent and innovation. Prerequisite: Reading knowledge of Hebrew is required.
Taught by: Fishman
Course not offered every year
Activity: Seminar
1.0 Course Unit

HEBR 552 Advanced Modern Hebrew: Conversation & Writing
After four semesters of language study, it’s time to enter the vibrant world of contemporary Israeli culture. In this course students read some of the best plays, poems, short stories, and journalism published in Israel today. They also watch and analyze some of Israel’s most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and intergenerational conflict, war and society, and the recent dynamic changes in Israeli society. HEBR 054 or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
For BA Students: Advanced Language Course
Taught by: Engel
One-term course offered either term
Also Offered As: HEBR 059, JWST 059
Prerequisite: HEBR 054
Activity: Lecture
1.0 Course Unit

HEBR 557 Seminar in Rabbinic Literature
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor. Prerequisite: Proficiency in Hebrew and/or Greek recommended. Undergraduates need permission to enroll. May be repeated for credit.
Course usually offered in spring term
Also Offered As: JWST 553, NELC 557
Activity: Seminar
1.0 Course Unit

HEBR 583 Studies in Medieval Jewish Culture
Through close reading of primary sources in the original Hebrew, participants in this seminar will explore historical circumstances that engaged and shaped medieval Jews in both Christian and Muslim lands, along with the enduring cultural projects that Jews themselves produced. Topics will include Geonica, Karaism, the encounter of Reason and Revelation; the Christian ‘Other’; the Muslim ‘Other’; legal codification; the Tosafist project; Rhineland Pietism; Minhag (custom); family life; the aesthetic dimension; Kabbalah; conversos; messianism. Students should be able to comfortably read unpointed Hebrew.
Taught by: Fishman
Course usually offered in fall term
Also Offered As: JWST 523, RELS 523
Activity: Seminar
1.0 Course Unit

HEBR 651 Elementary Modern Hebrew I
An introduction to the skills of reading, writing, and conversing in Modern Hebrew. This course assumes no previous knowledge of Hebrew. For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 051, JWST 051
Activity: Lecture
1.0 Course Unit

HEBR 652 Elementary Modern Hebrew II
A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 052, JWST 052
Prerequisite: HEBR 651
Activity: Lecture
1.0 Course Unit

HEBR 653 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in Modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 053, JWST 053
Prerequisite: HEBR 652
Activity: Lecture
1.0 Course Unit

HEBR 654 Intermediate Modern Hebrew IV
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
One-term course offered either term
Also Offered As: HEBR 054, JWST 054
Prerequisite: HEBR 653
Activity: Lecture
1.0 Course Unit
HEBR 999 Independent Study
An independent study in Hebrew language for PhD students
Activity: Independent Study
1.0 Course Unit

Hindi (HIND)

HIND 400 Beginning Hindi-Urdu Part I
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.
For BA Students: Language Course
Taught by: Pien
Course usually offered in fall term
Also Offered As: NELC 401, URDU 401
Activity: Lecture
1.0 Course Unit

HIND 401 Beginning Hindi-Urdu Part II
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.
For BA Students: Language Course
Taught by: Pien
Course usually offered in spring term
Also Offered As: NELC 402, URDU 402
Prerequisite: HIND 400
Activity: Lecture
1.0 Course Unit

HIND 420 Intermediate Hindi Part I
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations--through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.
For BA Students: Language Course
Taught by: Pien
Course usually offered in fall term
Prerequisite: HIND 400 OR 401
Activity: Lecture
1.0 Course Unit

HIND 421 Intermediate Hindi Part II
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations--through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.
For BA Students: Language Course
Taught by: Pien
Course usually offered in fall term
Prerequisite: HIND 420
Activity: Lecture
1.0 Course Unit

HIND 430 Advanced Hindi
Advanced Hindi aims at systematically developing higher level linguistic functions and cultural nuances. Students learn to describe, narrate and support opinions in informal and formal styles. The objective of the course is to promote a meaningful interaction with written literature and with native speakers in a socially acceptable manner in a variety of simple and complicated situations. A variety of authentic materials are used, such as short stories, plays, newspapers, magazines, videos, television and radio broadcasts, and interviews. Every semester the course materials and foci vary depending on the needs and interests of students in the class.
For BA Students: Advanced Language Course
Taught by: Pien
Course usually offered in fall term
Prerequisite: HIND 420 OR HIND 421
Activity: Lecture
1.0 Course Unit

HIND 520 Intermediate Hindi I for Graduate Students Only
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations--through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.
Two terms. student must enter first term.
Prerequisite: HIND 400 OR HIND 401
Activity: Lecture
1.0 Course Unit

Prerequisite: HIND 400 OR HIND 401
Activity: Lecture
1.0 Course Unit
Historic Preservation (HSPV)

HSPV 521 American Architecture
This course is a survey of architecture in the United States. The organization, while broadly chronological, emphasizes themes around which important scholarship has gathered. The central purpose is to acquaint you with major cultural, economic, technological, and environmental forces that shaped buildings and settlements in North America for the last 400 years. To that end, we will study a mix of 'high-style' and 'vernacular' architectures while encouraging you to think critically about these categories. Throughout the semester, you will be asked to grapple with both the content of assigned readings (the subject) and the manner in which authors present their arguments (the method). Louis Sullivan, for instance, gives us the tall office building 'artistically considered' while Carol Willis presents it as a financial and legal artifact. What do you make of the difference? Finally, you will learn how to describe buildings. While mastery of architectural vocabulary is a necessary part of that endeavor, it is only a starting point. Rich or 'thick' description is more than accurate prose. It is integral to understanding the built environment - indeed, to seeing it at all.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HSPV 528 American Vernacular Architecture
This course explores the form and development of America's built landscape--its houses, farm buildings, churches, factories, and fields--as a source of information on folk history, vernacular culture, and architectural practice.
Course not offered every year
Also Offered As: HIST 528
Activity: Seminar
1.0 Course Unit

HSPV 531 American Domestic Interiors
This course will examine the American domestic interior from the seventeenth through the twentieth centuries with emphasis on the cultural, economic, and technological forces that determined the decoration and furnishing of the American home. Topics covered include the evolution of floor plans; changes in finish details and hardware; the decorative arts; floor, wall, and window treatments; and developments in lighting, heating, plumbing, food preparation and service, as well as communication and home entertainment technologies. In addition to identifying period forms and materials, the course will offer special emphasis on historic finishes. The final project will involve re-creation of a historic interior based on in-depth documentary household inventory analysis, archival research, and study. Students will create a believable house interior and practice making design and furnishing choices based on evidence. Several class periods will be devoted to off-site field trips.
Taught by: Keim
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HSPV 534 Public History - Theory and Practice
This seminar is required for students wishing to concentrate on the Public History of the Built Environment while pursuing an MS in Historic Preservation. It builds on skills developed in HSPV 521 (American Architecture), HSPV 600 (Documentation), and HSPV 606 (Site Management); only HSPV 600 is a prerequisite. Unlike many public history courses, this one focuses on interpretation of the built environment. While proficiency in archival research is required, an understanding of form and chronology in American architecture is helpful. Fundamentally, this course is about community, memory, and their relationship to built form. As such, it examines oral history methodology and includes readings in sociology and ethnography. It acknowledges that while buildings and landscapes are in one sense simply larger forms of material culture than furniture or other movable objects, they also 'work' differently by dint of being inhabited, occupied, and publicly encountered, forming de facto frameworks for private and public life. More than other courses, this one grapples with interpretation and dissemination--everything from signage and monuments to websites and exhibits. It is not, however, a tutorial in the use of those media so much as a chance to reflect critically on their strengths and weaknesses in different contexts.
Course usually offered in spring term
Prerequisite: HSPV 600
Activity: Seminar
1.0 Course Unit

HSPV 538 Cultural Landscapes and Landscape Preservation
The course surveys and critically engages the field of cultural landscape studies. Over the semester, we will explore cultural landscape as a concept, theory and model of preservation and design practice; we will read cultural landscape historiography and creative non-fiction; we will examine a range of types (national parks, community gardens, designed landscapes, informal public spaces), and we will map the alternative preservation, planning and design methods that ground cultural landscape studies practically. Readings, class discussions, and projects will draw on cultural geography, environmental history, vernacular architecture, ecology, art, and writing.
Taught by: Randall Mason
Course not offered every year
Also Offered As: LARP 738
Activity: Lecture
1.0 Course Unit

HSPV 551 Building Pathology
This course addresses the subject of deterioration of buildings, their materials, assemblies and systems, with the emphasis on the technical aspects of the mechanisms of deterioration and their enabling factors, material durability and longevity of assemblies. Details of construction and assemblies are analyzed relative to functional and performance characteristics. Lectures cover: concepts in durability; climate; psychrometric, soils & hydrologic; conditions; physics of moisture in buildings; enclosure, wall and roof systems; structural systems; and building services systems with attention to performance, deterioration, and approaches to evaluation of remedial interventions.
Course usually offered in spring term
Prerequisite: HSPV 555
Activity: Seminar
1.0 Course Unit
HSPV 552 Building Diagnostics and Monitoring
Building diagnostics pertain to the determination of the nature of a building’s condition or performance and the identification of the corresponding causative pathologies by a careful observation and investigation of its history, context and use, resulting in a formal opinion by the professional. Monitoring, a building diagnostic tool, is the consistent observation and recordation of a selected condition or attribute, by qualitative and/or quantitative measures over a period of time in order to generate useful information or data for analysis and presentation. Building diagnostics and monitoring allow the building professional to identify the causes and enabling factors of past or potential pathologies in a building and building systems, thus informing the development appropriate interventions or corrective measures. In the case of heritage buildings, the process informs the selection of interventions that satisfy the stewardship goals for the cultural resource. In the case of recently constructed buildings, the process informs the identification of envelope and systems interventions for improved performance and energy efficiency.
Taught by: Henry
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HSPV 555 Conservation Science
This course presents the basic principles of conservation science of architectural materials and serves as the foundation for subsequent conservation courses such as HSPV738 - Wood, HSPV739 - Masonry, and HSPV740 - Architectural Surface Finishes, as well as, related courses such as HSPV551 - Building Pathology and HSPV552 - Building Diagnostics and Monitoring. The format includes lectures, demonstrations, and laboratories and is designed to provide a fundamental understanding of architectural materials with respect to their composition, properties, and performance. Beginning with a general discussion of mechanical properties such as strength, modulus, toughness, creep, and fatigue of all architectural materials, the course moves to porous building materials such as stone, brick, terra cotta, mud brick, concrete, cast stone, and mortar and focuses on the evaluation of their properties and their identification through an exploration of composition and texture using hand specimens and polarizing light microscopy. Rounding out the discussion of inorganic architectural materials is the examination of the unique set of properties of metals including their identification using methods of elemental analysis. The course then shifts to the important organic architectural materials such as wood and finishes and begins with an overview of basic organic chemistry and follows with a more in-depth exploration of the properties and performance of wood, adhesives, and clear finishes for wood; the chemistry of pigments and paint media; and the identification of pigments, paint media, and clear finishes using several analytical methods. Knowledge of basic college level chemistry is required.
Taught by: Wheeler
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSPV 572 Preservation Through Public Policy
This course explores the intersection between historic preservation, design and public policy, as it exists and as it is evolving. That exploration is based on the recognition that a challenging and challenged network of law and policy at the federal, state and local level has direct and profound impact on the ability to manage cultural resources, and that the pieces of that network, while interconnected, are not necessarily mutually supportive. The fundamental assumption of the course is that the preservation professional must understand the capabilities, deficiencies, and ongoing evolution of this network in order to be effective. The course will look at a range of relevant and exemplary laws and policies existing at all levels of government, examining them through case studies and in-depth analyses of pertinent programs and agencies at the local, state and federal level.
Taught by: Hollenberg
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HSPV 600 Documentation, Research, Recording I
The goal of this course is to help students learn to contextualize the history of buildings and sites. In order to gain first-hand exposure to the actual materials of building histories, we will visit a half-dozen key archival repositories. Students will work directly with historical evidence, including maps, deeds, the census, city directories, insurance surveys, photographs, and many other kinds of archival materials. After discussing each type of document in terms of its nature and the motives for its creation, students will complete a series of projects that develop their facility for putting these materials to effective use. Philadelphia is more our laboratory than a primary focus in terms of content, as the city is rich in institutions that hold over three centuries of such materials; students will find here both an exposure to primary documents of most of the types they might find elsewhere, as well as a sense of the culture of such institutions and of the kinds of research strategies that can be most effective. The final project is the completion of an historic register nomination.
Taught by: Ammon
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HSPV 601 Documentation, Research, Recording II
Documentation, Research, Recording II. This course provides an introduction to the survey and recording of historic buildings and sites. Techniques of recording include traditional as well as digitally-based methods including field survey, measured drawings, photography and rectified photography. Emphasis is placed on the use of appropriate recording tools in the context of a thorough understanding of the historical significance, form and function of sites. Required for first-year MSHP students; others by permission.
Course usually offered in spring term
Activity: Studio
1.0 Course Unit
HSPV 606 Historic Site Management
This course focuses on management, planning, decision making, and interpretation for heritage sites, from individual buildings and historic sites to whole landscapes and historic objects. Class projects ask students to analyze historic site operations and interpret objects. Course material will draw on model approaches to management, as well as a series of domestic and international case studies, with the goal of understanding the practicalities and particularities of site management. Topics to be examined in greater detail might include histories of historic sites, collections and conservation policies, interpretation, tourism, social justice, community engagement, strategic planning, in addition to fundraising and financial management. The course emphasizes making historic sites meaningful, relevant and sustainable in the present. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HSPV 620 Seminar in American Architecture
An examination of a specific topic related to the history of American architecture and planning. Following introductory lectures, students participate through detailed reports and informal discussion. The topic under investigation varies each semester the seminar is offered. Taught by: Aaron Wunsch
Course usually offered in spring term
Also Offered As: LARP 771
Activity: Seminar
1.0 Course Unit

HSPV 621 Heritage and Social Justice
How do historic preservation and other design and humanities professionals contribute to more equitable and just societies? How can our work be organized to result in greater equity, access and social justice? This seminar will explore connections between heritage, historic preservation (and related design, planning and artistic practices) and the pursuit of social justice. Our investigations will focus on both conceptual and theoretical constructions (how we think about built heritage and social change; how we conceptualize social justice) and practical examples of advancing social outcomes through preservation and design. We'll draw on work by: geographers, anthropologists and other social scientists and theorists; historians; public intellectuals; design practitioners; heritage organizations; artists; and more. Subjects will include public interest design, creative placemaking, public art, memorialization, and methods of practice and institutional organization; cases will be drawn from the US and abroad. The course will progress through a series of weekly topics, often including guest practitioners and scholars. Students will have significant agency in helping flesh out the topics and cases; final projects (individual and group) will be envisioned as a statement (in the form of a book or exhibit) of how social justice concerns have reshaped practice and how they could reshape our fields in the future. Taught by: Mason
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSPV 624 Digital Media for Historic Preservation I
A required praxis course designed to introduce students to the techniques and application of digital media for visual and textual communication. Techniques will be discussed for preservation use including survey, documentation, relational databases, and digital imaging and modeling. This course requires a weekly laboratory period (1.5 hours).
Taught by: Hinchman
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

HSPV 625 Preservation Economics
The primary objective is to prepare the student, as a practicing preservationist, to understand the language of the development community, to make the case through feasibility analysis why a preservation project should be undertaken, and to be able to quantify the need for public/non-profit intervention in the development process. A second objective is to acquaint the student with the measurements of the economic impact of historic preservation and to critically evaluate ‘economic hardship’ claims made to regulatory bodies by private owners. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HSPV 627 Digital Media for Historic Preservation II
A required praxis course designed for students to further explore the techniques and applications of digital media for visual and textual communication. Techniques will be discussed for preservation use including survey, documentation, relational databases, and digital imaging and modeling.
Taught by: Hinchman
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

HSPV 638 Topics in Historic Preservation
This seminar concentrates on a selected topic in the social and cultural history of the built environment. Past themes have included photography and the American city and the relationship between cities and sound. For full spring 2019 course description, please visit: https://www.design.upenn.edu/historic-preservation/courses
Course usually offered in spring term
Also Offered As: CPLN 687
Activity: Seminar
1.0 Course Unit
HSPV 640 Contemporary Design in Historic Settings
Contemporary design can add value and meaning to historic settings of any age or scale, from individual landmarks to landscapes and neighborhoods. Rigorous dialogue with history and context enriches contemporary design. This seminar immerses designers, planners and preservationists in the challenges of design with existing structures and sites of varying size and significance. Readings of source materials, lectures and discussions explore how design and preservation theory, physical and intangible conditions, and time have shaped design response, as well as the political, cultural and aesthetic environments that influence regulation. Through sketch analytical exercises set in Philadelphia and outstanding case studies from around the world, students will learn to communicate their understanding of historic places, to critique and generate a range of responses to historic contexts.
Taught by: Hawkes
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSPV 660 Theories of Historic Preservation
Theories of historic preservation serve as models for practice, integrating the humanistic, artistic, design, scientific and political understandings of the field. This course examines the historical evolution of historic preservation, reviews theoretical frameworks and issues, and explores current modes of practice. Emphasis is placed on literacy in the standard preservation works and critical assessment of common preservation concepts. In addition to readings and lectures, case studies from contemporary practice will form the basis for short assignments. Professional ethics are reviewed and debated. The instructor’s permission is required for any student not registered in the Graduate Program in Historic Preservation. Note that the course is organized in two parts; the first half, on the basics of preservation theory, is taught in the fall semester (HSPV660) while the second half (HSPV661) takes place in the spring semester and engages advanced topics. Note: This course continues in the second half of the spring semester for another 0.5 CU. Prerequisite: Instructor’s permission required for any student not registered in the Graduate Program in Historic Preservation.
Taught by: Mason
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

HSPV 661 Theories of Historic Preservation II
Theories of historic preservation serve as models for practice, integrating the humanistic, artistic, design, scientific and political understandings of the field. HSPV 661 builds on HSPV 660, which examines the historical evolution of historic preservation, reviews theoretical frameworks and issues, and explores current modes of practice. HSPV 661 engages advanced topics such as cultural landscape theory, economics of preservation, sustainability and environmental conservation, social justice, and urban design. In addition to readings and lectures, case studies from contemporary practice will be used to examine theories in practice. The principal assignment will be short position papers. Students from outside the Graduate Program in Historic Preservation are welcome; instructor’s permission is required for any non-HSPV student. (Note that the course is the second of two parts; the first half, on the basics of preservation theory is taught in the fall semester.)
Taught by: Mason
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

HSPV 671 Historic Preservation Law
Introduction to the legal framework of urban planning and historic preservation, with special emphasis on key constitutional issues, zoning, historic districts, growth management, and state and local laws for conserving historic buildings.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HSPV 701 Historic Preservation Studio
The Preservation Studio is a practical course making architectural, urban and landscape conservation operations, bringing to bear the wide range of skills and ideas at play in the field of historic preservation. As part of the core MSHP curriculum the Studio experience builds on professional skills learned in the first-year core. The work requires intense collaboration as well as individual projects. The Preservation Studio centers on common conflicts between historic preservation, social forces, economic interests, and politics. Recognizing that heritage sites are complex entities where communities, cultural and socio-economic realities, land use, building types, and legal and institutional settings are all closely interrelated, the main goals of the studio are (1) understanding and communicating the cultural significance of the built environment, (2) analyzing its relation to other economic, social, political and aesthetic values, and (3) exploring the creative possibilities for design, conservation and interpretation prompted by cultural significance. Studio teams undertake documentation, planning and design exercises for heritage sites and their communities, working variously on research, stakeholder consultation, comparables analysis, writing policies and designing solutions. Students work in teams as well as on individual projects. Study sites in Fall 2020 are expected to be located in both Philadelphia and Detroit.
Taught by: Mason
Course usually offered in fall term
Activity: Studio
2.0 Course Units
HSPV 703 Urban Regeneration in the Americas: The Conservation and Dev. of Urban Areas
This advanced topic seminar will focus on the challenges confronted by the conservation and urban planning professions in turning the urban heritage into a social and economic development resource for cities in developing countries. The preservation of the urban heritage is moving to a new paradigm of intervention responding to: a growing interest in communities for preserving their intangible and tangible urban heritage; rising development pressures on historic neighborhoods; the generalization of adaptive rehabilitation as a conservation strategy; and recent international agreements calling for expanding the role of the urban heritage in the social and economic development of the communities. This is a problem that is in the cutting edge of the research and practice of heritage conservation and urban planning and has conservation, planning and design implications making it ideally suited to a multi-discipline seminar approach. The course is modeled on successful 1-CU spring seminars conducted in recent years—the Gordion Site Planning Studio (2011), Parks for the People (2012), and the Regeneration of Historic Areas in the Americas (2012, 2014, 2016, 2018)—that attracted students from across the School and fit easily with core studios and thesis projects. Students from multiple departments are encouraged to participate in the course; enrollment will be kept to about 12. The course will combine seminar and field study methodologies in ways that they support each other. The knowledge acquired through the seminar work will be put to use in a field study exercise whose objective is to allow the students to work on topics of their interest and pursue research on urban development and heritage conservation interventions for expanding the contribution of the historic center of Cartagena in Colombia to the social and economic development of the city.
Taught by: Hector Eduardo Rojas
Course usually offered in spring term
Also Offered As: CPLN 773
Activity: Seminar
1.0 Course Unit
Notes: Course is open to second year Master of Science Historic Preservation and Master of Science in Design: Historic Preservation concentration students. All others need approval of the instructor to enroll.

HSPV 707 HISTORIC PRESERVATION POST-PROFESSIONAL STUDIO
Master of Design Capstone Studio. This intensive on-site studio will explore advanced topics in preservation theory, planning and design as applied to the challenges of a landmark historic site. Readings will focus on background research completed for the site as well as theoretical and local approaches to preservation and site management, supplemented by lectures, workshops, field trips and on-site investigations. Students will prepare a written report as well as design studies. Permission of department required to enroll. Course usually offered in summer term.
Course usually offered summer term only
Activity: Studio
2.0 Course Units

HSPV 710 Thesis I
The Graduate Program in Historic Preservation’s Thesis course is a two semester 2 CU capstone. The goal of the Thesis is demonstrated mastery of the research process by exploring a question of academic/professional relevance to the preservation field and presenting the results of the study in accordance with the highest standards of scholarly publishing. The Thesis spans the academic year, beginning with HSPV 710/Thesis I in the fall semester and continues in the spring with HSPV 711/Thesis II. Students are required to successfully complete 9-10 CUs (the first year of the curriculum) to qualify for Thesis. Dual degree students are expected to enroll in HSPV 710 before undertaking thesis studio in their respective dual program in their final year.
Taught by: Matero
Course usually offered in fall term
Activity: Independent Study
1.0 Course Unit

HSPV 711 Thesis II
Students are admitted to thesis after completion of two semesters or their equivalent in the graduate program. Theses should be based on original research and relate to each student’s elected concentration. Thesis guidelines, available in the Historic Preservation office, describe other details.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSPV 705 Topical Studio/Seminar: Interpretation in the Future Tense
The interpretation of heritage places is a core concern of historic preservation professionals, no matter what their area of specialization. Explicit and implicit interpretation is embedded deeply in the field’s theory, history and contemporary practice. In contemporary practice, site interpretation is challenged to draw on traditional preservationist modes of practice (based in historical scholarship and formal analysis) as well as new ideas about representation, communication, visitor experience, and information design shared by other fields (including museum studies, art, exhibit design, educational psychology, community development/social justice, and digital media design). This hybrid seminar-studio explores next-generation ideas and practices of heritage place interpretation: first, by building on a thorough program of research and analysis of contemporary best-practices in site interpretation; second, by experimenting along lines suggested by new audiences and innovative thinkers and designers inside and outside the preservation field. The course will include a series of guest presenters from design, public history, management and other fields; exercises to analyze the theoretical bases, best practices and issues facing contemporary practice; and prototyping of new/experimental approaches.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
HSPV 713 Professional Practice for Historic Preservation
This course is intended to introduce students to the professional practice of historic preservation and, more specifically, how preservation professionals fit into the larger fields of design and construction. It will expose students to the types of roles they may play once they enter the professional world, as well as the skills and knowledge they will be expected to have. Through a series of lectures, in-class exercises, and case studies of current or recently completed preservation projects, students will learn how projects are developed from inception through design and construction. There will be discussion of some of the inherent challenges in designing projects that involve existing historic buildings, as well as how architectural conservation is incorporated into such projects. It will also discuss the phasing of and ‘players’ involved with typical preservation projects. A significant portion of the course will be dedicated to preservation project management from the perspectives of the architectural conservator, the architect and the contractor — from writing a proposal to managing a complex project to project delivery methods. The course should be of particular interest to architects who anticipate being involved with historic buildings, architectural conservators, as well as planners and individuals interested in managing historic sites that might undergo preservation projects.

Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSPV 738 Conservation Seminar: Wood
Prior to the twentieth century, most structures found in the built environment relied upon wood as a primary material for both structural members and decorative features. An understanding of the physical properties as well as the historic application of this organic material provides the basis for formulating solutions for a wide spectrum of conversation issues. As the scope of preserving wooden structures and wooden architectural elements is continually broadened, new methods and technology available to the conservator together allow for an evolving program - one that is dependent upon both consistent review of treatments and more in-depth study of craft traditions. This course seeks to illustrate and address material problems typically encountered by stewards of wooden cultural heritage - among them structural assessment, bio-deterioration, stabilization and replication techniques. Through a series of lectures and hands-on workshops given by representative professionals from the fields of wood science, conservation, entomology, engineering, and archaeology, theoretical and practical approaches to retaining wooden materials will be examined with the goal to inform the decision-making process of future practicing professionals.

Taught by: Andrew Fearon
Course usually offered in spring term
Prerequisite: HSPV 555
Activity: Seminar
1.0 Course Unit

HSPV 739 Conservation Seminar: Masonry
This seminar will offer an in-depth study of the conservation of masonry buildings and monuments with a particular focus on American building stone. Technical and aesthetic issues will be discussed as they pertain to the understanding required for conservation practice. Part 1 will address a broad range of building stone, masonry construction technologies, and deterioration phenomenon; Part 2 will concentrate on conservation methodology as well as past and current approaches for the treatment of stone masonry structures. The subject will be examined through published literature and case studies. Students will gain practical experience through lab and field exercises and demonstrations. The subject matter is relevant to interested students of conservation and preservation, architecture, landscape architecture, architectural history, and archaeology. Prerequisite: HSPV 555 Conservation Science and permission needed from department.

Taught by: Ingraffia
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSPV 740 Conservation Seminar: Finishes
The seminar will advance students' knowledge of and skills at researching, analyzing and interpreting historic architectural finishes. Lectures, demonstrations, hands-on exercises, case studies, and site visits will consider the history, technology, analysis, deterioration, and treatment of historic finishes. Guest lecturers will enlarge the subject with discussion and demonstrations of archival research of finishes, advanced methods of scientific analysis and presentation of a long-term project to analyze and conserve historic finishes at the US Treasury Building (Robert Mills). The course will also address historic plaster with a guest lecture and demonstration of plaster materials, application, and casting for ornamental plaster. We will make and apply paints and other finishes in class. A visit to the decorative arts studio and Philadelphia sites displaying decorative painting will complement lectures and assignments. Bartram's Garden, the eighteenth-century home of botanist John Bartram in West Philadelphia, will serve as a case study and subject for the final assignment.

Taught by: Catherine Meyers
Course usually offered in spring term
Prerequisite: HSPV 555
Activity: Seminar
1.0 Course Unit

HSPV 741 Special Topics: Varies

Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit
HSPV 747 Conservation of Archaeological Sites and Landscapes
This seminar will address the history, theories, principles, and practices of the preservation and interpretation of archaeological sites and landscapes. The course will draw from a wide range of published material and experiences representing both national and international contexts. Topics will include site and landscape documentation and recording; site formation and degradation; intervention strategies including interpretation and display, legislation, policy, and contemporary issues of descendent community ownership and global heritage. Depending on the site, students will study specific issues leading toward the critique or development of a conservation and management program in accordance with guidelines established by ICOMOS/ICAHM and other official agencies.
One-term course offered either term
Also Offered As: ANTH 508
Activity: Seminar
1.0 Course Unit

HSPV 748 Preservation Case Studies
Preservation Case Studies will bring cutting-edge theoretical debates, current issues and the latest work of faculty and guests into the HSPV curriculum. Coordinated by the Chair, but populated with a number of other faculty, practitioners and guest scholars, the course will sample and explore current theoretical, conceptual, political and practical issues facing the historic preservation field.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HSPV 750 Architectural Conservation Praxis: Traditional Buildings / Traditional Practice
Architectural Conservation Praxis is an intensive 3-week summer course designed for students pursuing studies in architectural conservation and builds on Penn Preservation's core curriculum and the first-year conservation courses. The syllabus is organized around project fieldwork supplemented by lectures, demonstrations, exercises, and site visits that will allow students to experience firsthand the design and construction of vernacular buildings and the application of traditional craft-based methods to preserve them.
Course usually offered summer term only
Prerequisite: HSPV 540 AND HSPV 541 AND HSPV 555
Activity: Studio
1.0 Course Unit

HSPV 760 Preservation Planning Praxis
Hong Kong will be the venue for this year's HSPV 760-901 Heritage Praxis. Collaborators in Hong Kong have already been signed on including iDiscover, an innovative firm that has been doing citizen-based, bottom-up mapping of heritage precincts throughout Southeast Asia. Other university, NGO, and government collaborators are currently being recruited. The course will run from May 27 through June 6, 2019 and students should plan to arrive on May 25 or May 26 and depart on June 7. The first week will be lectures and tours. During the second week all participants will work in teams to conduct original research in under-recognized historic neighborhoods in Hong Kong. Through individual interviews, focus groups, and other social research tools, participants will first identify the 'values' assigned by local residents, business and property owners, and others to the neighborhood. This qualitative information will then be matched with GIS-based quantitative data. Using this qualitative + quantitative approach, participants will attempt to estimate the economic values of non-economic value components. Each of the teams will be made up of PennDesign graduate students, PennDesign alumni, and young professionals from Hong Kong. Course is open to all PennDesign graduate students.
Course usually offered summer term only
Activity: Studio
1.0 Course Unit

HSPV 790 Historic Preservation Summer Institute
The Summer Institute is a required orientation course designed to prepare incoming, first-year graduate students for the intense coursework of their first semester. Generally, the Institute orients students to the issues and methods of the core MSHP curriculum, begins familiarizing students to the resources of Philadelphia, and begins skill-building exercises, especially in the area of digital media. This non-credit course employs lectures, exercises, and field trips to introduce some of the important skills, questions, and issues that will be at the center of first year’s work in the Program. The Summer Institute also constitutes an extended introduction to the Program’s faculty and the students in first-year and second-year cohorts. Course enrollment is by permit only.
Course usually offered summer term only
Activity: Lecture
0.0 Course Units

HSPV 999 Independent Study
An opportunity for a student to work on a special project under the guidance of a faculty member.
One-term course offered either term
Activity: Independent Study
2.0 Course Units
History & Sociology of Science (HSSC)

HSSC 502 Public History
Many scholars find it challenging to explain and present their work to nonacademic audiences. There are also relatively few opportunities for scholars to put their skills to work in the service of improving the communities around them. This seminar considers ways of addressing these challenges through an examination of the many varieties of public history (and public humanities more broadly). The course includes hands-on projects in the Philadelphia area. Three primary themes orient the readings, discussions, and assignments of the course: 1) Places and Presentation: How can museums, historic sites, and other arenas in which audiences encounter history become more relevant and appealing to diverse audiences? 2) Authority: Who produces history for the public, in whose name, and based on what principles? 3) Engagement: How can history and related disciplines make a difference in the world, on small, medium, and large scales? Taught by: Barnes
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSSC 503 Current Issues in the History of Medicine
This seminar surveys a variety of popular and scholarly approaches to the study of medicine and its history, ranging from traditional physician-centered narratives to more recent cultural and epistemological methodologies. The potential values of journalistic, sociological, anthropological, geographical and other approaches to the historical study of health, disease, and health care will be explored.
Taught by: Barnes
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSSC 504 Reading Seminar in History of Science
Survey of major themes and figures in the history of western science, technology, and medicine since the Renaissance, through reading and discussion of selected primary and secondary sources. Topics include: Kepler, Galileo, Bacon, Newtonianism, Pasteur, the Industrial Revolution, the rise of German science, etc. Concurrent attendance at STSC 1 lectures is recommended.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSSC 505 Seminar in the History and Sociology of Science
Seminar for first-year graduate students, undergraduate majors, and advanced undergraduates. Reading will introduce the student to current work concerning the effect of social context on science, technology, and medicine.
Taught by: Linker/Benson
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSSC 506 Readings in Race and Science
What accounts for the persistence and resilience of racial conceptions in science? In this course we will look for answers to this and other questions by examining the historiography of race, colonialism, and science. The standard historiography has focused on the rise and fall of racial typologies in the north Atlantic and their contributions to troublesome political projects such as the Atlantic slave trade, Jim Crow policies, the eugenics movement, and the Holocaust. More recent histories have taken inspiration from postcolonial studies, standpoint theories, and indigenous studies to insist on a more global reckoning of race and science. If we focus on the southern hemisphere, for instance, we can see scientific racial conceptions enrolled for a different though not necessarily less innocent set of projects: the dispossession of indigenous lands and effacement of indigenous peoples, the glorification of race-mixing as a tool of nation building, and the cultivation of whiteness as a means to modernity. By examining classic and recent approaches to race and science we will grapple with the following questions: Is ‘race’ a product of 18th century French and English science? Or can we find earlier iterations in the idioms of conquest of Spanish America during the early modern period? Do the standard narratives concerning the history of racial conceptions in science change when looked at from the frame of the global south? Does race get ‘buried alive’ after WWII? And do recent developments in human genomics bring ‘race’ back from the dead, albeit in an anti-racist form?
Taught by: Gil-Riano, Sebastian

1.0 Course Unit

HSSC 508 Knowledge in Motion
This course provides a broad, interdisciplinary introduction to the movement of knowledge across space and time. In particular, we will be focusing on the economic models of knowledge movement, on comparative and trans-cultural views on science, on translation, and finally, on the global turn in the history of science. Since the movement of knowledge is inseparable from the production of knowledge, we will also start our discussion by looking back at some of the literature that constitutes the intellectual foundations of the history and sociology of science.
Taught by: Kucuk

1.0 Course Unit
**HSSC 517 Gender and Technical Knowledge**
In this graduate reading seminar, we explore how technical knowledge systems have historically intersected with identity and social order. The materials emphasize gender, but our discussions and readings will also engage at times with disability, race, class and other social categories that have shaped participation in technical endeavors and been the focus of technical study. Our goal is to understand how embodiment and expertise intersect. We will explore why certain kinds of people have been understood to be unreliable knowers, pathologically embodied, untrustworthy, or dangerously linked to emotion, incompetence or confusion, while other kinds of people have been socially marked as embodying reliability, trustworthiness, or epistemological neutrality. These embodiments bear on the historical development of technical knowledge as a social system for the establishment of consensus about the nature of reliable truth. They are also relevant at many different levels to embodied social experiences of scientific information, personal health, reproduction and everyday technology. This course will give students the tools and insights needed to draw on feminist/gender/queer theory when it is useful to their research. That is the purpose of all of our readings. We begin with an exploration of some key ideas in feminist scholarship of the last few decades. Then we turn to three broad, interconnected queries, relating to the social organization of science, technology and medicine (who has been excluded, who favored? What kinds of work have been understood to belong to different kinds of people?); to the intellectual content of expertise (how have experts made technical sense of social and bodily difference? How have technologies expressed and performed gender?); and to the philosophical debate about the nature of technical knowledge, particularly science, as a fundamentally gendered (masculine) endeavor which privileges hierarchical explanations in ways that mimic the social order.

1.0 Course Unit

**HSSC 525 Darwin and Evolution: New Perspectives**
In this graduate reading seminar, we consider evolution as a cluster of sometimes mismatched theories about nature and time, a political resource in emerging debates about human difference and social order, and a theological conundrum that persists into the twenty-first century. We consider primary source materials by Lamarck, Chambers, Darwin, Wallace, Mayr, and other naturalists; and explore the contexts of their production and their meanings through the work of scholars including Browne, Secord, Keller, Richards (both Robert and Eveleen), Smocovitis, Graham and many others. Our goal is to develop new perspectives on 'the Darwin Industry' and think critically about how to move the field forward drawing on the most exciting new scholarly work in this area.

**HSSC 530 Seminar in American Architecture: Philadelphia: Urban Experience & Public Memory**
This seminar will challenge students to encounter and interpret the city around around them in unconventional ways. At a time when public commemoration has vigorously and sometimes violently re-entered our country’s public discourse, we wish to re-examine how monuments, memory, politics, and our senses shape our understandings of Philadelphia’s past, present, and possible futures. Our focus is on two intertwined themes: How we remember and What we remember. Treating monuments, films, and historical texts as key forms of interpretation - the building blocks of an official if unstable ‘public past’, we will likewise attend to the ‘backdrop’ of such written and built statements: everyday urban and domestic life as well as more public histories that have remained silent or risen to the surface at key moments.

Taught by: Barnes/Wunsch
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

**HSSC 561 Disability: History and Theory**
Disability is the ‘next academic frontier,’ argues historian Douglas Baynton, ‘an analytic category with the transformative potential of race, class, sexuality, and gender.’ The purpose of this course will be explore recent literature on the history and theory of disability, focusing primarily on the history of physical disability. Throughout the semester, we will approach this literature with an eye to how disability studies relates to the fields of the history of science, medicine, and technology. Topics will include: the sociology of deviance, the medical vs. social model of disability, chronic illness and disease, genetics and disability, the role of disability in health care policy, as well as the politics of design and assistive technologies.

Taught by: Linker

Activity: Seminar
1.0 Course Unit
HSSC 564 History of Technology
In this course we read influential classic and recent works in the history and the philosophy of technology, tackling the ways in which the fields are analytically structured as well as their relation to each other. We also discuss approaches and methodological questions in general history and general philosophy. We start with Karl Marx, arguably the most influential historian and philosopher of technology of the modern era, and discuss him in relation to what has been one of the most visible debates in the historiography of technology - the question of technological determinism. We then travel in a roughly chronological order through key periods and methodological issues in the fields. During our journey we encounter the Middle Ages and historical theoreticians of the Annales School, the early modern period and questions about gender and microhistory, and the so-called Industrial Revolution and the questions it raises about what's modern about modern technology. Mid-way through the class, we discuss two classics in the philosophy of technology, Martin Heidegger and Jürgen Habermas, who grapple precisely with the question about the modern element in industrial technology. As we enter the nineteenth and twentieth centuries, we expand our methodological horizon to include examples from the cultural history of technology and applications of the social constructivism debate to the history of technology. We end the class with works on the recently emerging fields of biotechnology and nanotechnology and with a set of monographs written in the nascent sub-discipline in the history and philosophy of technology, engineering studies.

1.0 Course Unit

HSSC 567 Industrial and Post Industrial Ages
In this course we are concerned with phenomena surrounding industrialization and de-industrialization, and with post-industrial types of technologies and labor. We start with recent conceptualizations of the archetypal British 'Industrial Revolution' and its close relations to Indian industry and economy, move to the US American South as an example of a global agricultural economy in the industrial age, take North American and Western Europe as lenses for transitions from industrial to post-industrial eras, and discuss the nuclear and computer age of the Cold War from a number of perspectives: the Global South and cybernetics, medicine and isotopes, the recent climate debate and underlying computing, an anthropology of post-industrial labor, and gene-patenting and biological manufacturing in the twenty-first century.
Taught by: Voskuhl

HSSC 568 Minds and Machines
There is a plaque at Dartmouth College that reads: 'In this building during the summer of 1956 John McCarthy (Dartmouth College), Marvin L. Minsky (MIT), Nathaniel Rochester (IBM), and Claude Shannon (Bell Laboratories) conducted the Dartmouth Summer Research Project on Artificial Intelligence as a research discipline to proceed on the basis of the conjecture that every aspect of learning or any other feature of intelligence can in principle be so precisely described that a machine can be made to simulate it.' The plaque was hung in 2006, in conjunction with a conference commemorating the 50th anniversary of the Summer Research Project, and it enshrines the standard myth that Artificial Intelligence was born in 1955 when these veterans of early military computing applied to the Rockefeller Foundation for a summer grant to fund the workshop that in turn shaped the field. However, like so many myths, this one obfuscates the long-entangled histories that have come together in contemporary Artificial Intelligence research – including histories of labor, histories of automation, histories of intelligence, histories of mathematics, and histories of technology. This course surveys the historical scholarship that has investigated the intersections of minds and machines.

HSSC 588 Humanities Beyond the Human
The humanities are once again influx as scholars experiment with a variety of new techniques and conceptual frameworks. In recent years many of these experiments have involved turning away from longstanding questions of representation, language, epistemology, and human exceptionalism and toward questions of enactment, materiality, ontology, and the nonhuman. In this seminar we will examine a variety of manifestations of this turn as they have emerged in history, anthropology, literary studies, and philosophy under names such as new materialism, multi-naturalism, big/deep history, multispecies ethnography, and object-oriented ontology. We will try to situate these recent turns in longer intellectual genealogies, drawing especially on works in science studies and the history of science that seek to provide contingent, situated accounts of what exists and what we can know about it. Objects of inquiry will include dogs, mushrooms, cyborgs, seeds, mosquitoes, bacteria, stones, jugs, pictures, hormone disruptors, and the cosmos.

1.0 Course Unit

HSSC 597 Other Reasons
This course seeks to destabilize a monolithic vision of science as a singular, homogenous body of knowledge by revisiting its plural, heterogeneous histories. This course is particularly interested in exploring the historical entanglements between the sciences and the enchanted world of intangible entities such as spirits, ghosts and gods. The course will look at the theoretical critiques of 'Enlightenment Rationality' and 'Science' in post colonial theory; at a detailed and loosely chronological examination of the multifaceted entanglements of science and technology with the paranormal in the 19th and 20th centuries; and at the performative aspects of scientific rationality in colonial and postcolonial contexts in a bid to understand the background that led to postcolonial theorization.

HSSC 618 Cold War Science
Taught by: LINDEE
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSSC 624 Experience and Experiment
This course will examine the role of sensory knowledge relative to the creation of scientific knowledge, and to the creation of 'scientific knowledge' as a category of knowledge. We will consider the entangled histories of proof, trial, and observation in conjunction with histories of particular and accumulated experience. How can singular phenomena be understood as illustrative of a universal law? How do experience and experiment fit into hierarchies or taxonomies of knowledge at different times, and in different cosmologies? Whose experience or experimentation is authoritative, and what makes it so? Readings will include theoretical and historical perspectives, as well as such topics as medieval and early modern optics and astral science, artisanal knowledge, and exploration.

1.0 Course Unit

HSSC 629 Genetics and Genomics
This course is called 'Genetics and Genomics;' but we are defining those terms broadly to potentially encompass historical studies of biomedicine, evolution, race theory, biological anthropology, reproduction, agriculture, animal breeding, psychiatry, social sciences, and so on. We are thinking about knowledges of embodiment and what they teach us about social and technical order—about systems, institutions, technologies, hierarchies, theories, practices, networks, and so on. The goal of the semester will be for each student to produce a first draft of a publishable research paper. Many of our readings are calibrated to complement the available archival collections at the American Philosophical Library, the University of Pennsylvania archives, the Academy of Natural History collections, the Chemical Heritage Foundation, Wagner Free Institute of Science, College of Physicians of Philadelphia, Hagley Museum and Library, and collections held in striking distance of Philadelphia, in New York, Princeton, Baltimore, and Washington DC. While APS will be a special of focus of attention, given the remarkable collections there, students should make a special effort to become familiar with the many other resources that are available in the region, some of which have not been the focus of significant historical attention.

HSSC 665 Research Seminar in the History of Medicine
This course is focused on comparing and contrasting ethnographic and historical approaches to health and medicine. We will engage ethnographic and historical approaches to health and medicine to explore the methodological, empirical, and theoretical stakes of thinking medicine, disease, and the body across and within disciplines. Taking a methodological and comparative approach, the course will explore ethnographic and historical approaches to such themes as the body, disease, pharmaceuticals, and biomedical knowledge-production in global and historical context. We aim to develop skills and knowledge for critically reading anthropological, historical, and sociological literatures on medicine, the body, and disease. As such, students will develop a research project, which may be in either the history or anthropology of medicine and/or science, or a project, which combines such approaches, utilizing the comparative and methodological frameworks of the course to develop an original analysis on a topic of their choosing.
Taught by: Aronowitz,R; McKay,R
Course not offered every year
Activity: Seminar
1.0 Course Unit
**HSSC 667 Capitalism: Theorizing economy in sci & med**

What are the relationships between capitalism and the practice and experience of medicine? How have historians and anthropologists theorized capitalism and political economy in accounts of health and medicine? What do such theories account for and what is foreclosed? This research seminar examines theories of capitalism as they are taken up in historical and ethnographic accounts of science, health, healing, and medicine. Exploring how contemporary and classic accounts have sought to analyze and unpack the relationship between economy and health, we will examine how political economic approaches to health and medicine have informed historical and ethnographic accounts of health and illness — asking, for instance, how theories of neoliberalism have been used to explain health inequalities (and vice versa) — and will analyze how scholars have linked practices of financialization, speculation, and investment to changing dynamics of health, medicine, healing, and the generation of medical knowledge. Course time will also be devoted to independent research through which students will develop and write up a research paper on an area of interest related to the course theme.

**HSSC 688 Research Seminar in History of Human Sciences**

This concentrated research seminar provides graduate students with time, support, and space to hone their writing skills. Thematically, the seminar closely examines historiographic trends within the history of human sciences - namely the stylistic, methodological, and investigative strategies adopted by prize-winning articles in the field. By carefully dissecting the architecture of these articles, our aim is to identify models that we can use in our own scholarly endeavors and to draft an article with these in mind. Accordingly, a significant portion of the course is devoted to examining archival and primary source resources in the region, to discussing research strategies, and to workingshopping our work-in-progress. Students can use the course to significantly revise an already written paper or to draft a new paper. The course’s overarching purpose is to create the scaffolding necessary for students to produce a substantial research paper in the history of human sciences (broadly conceived) that is potentially publishable as a journal article.

**HSSC 697 Other Reasons**

Postcolonial Theories, building largely on Frankfurt School theorists, have critiqued the totalizing aspirations of what it calls 'Enlightenment Rationality'. Such critiques have also fed a range of critiques of Science. At the heart of such critiques is a rather restricted and plastic idea of Science as a singular, homogenous body of knowledge that has steadily promoted the disenchantment of the world. In this course we seek to destabilize this monolithic vision of science by revisiting its plural, heterogeneous histories. The course is particularly interested in exploring the historical entanglements between the sciences and the enchanted world of intangible entities such as spirits, ghosts and gods. The course will be divided into three broad sections. The first will deal with the theoretical critiques of ‘Enlightenment Rationality’ and ‘Science’ in postcolonial theory. The second will undertake a detailed and loosely chronological examination of the multifaceted entanglements of science and technology with the paranormal in the 19th and 20th centuries. Finally, the last section will explore the performative aspects of scientific rationality in colonial and postcolonial contexts in a bid to understand the background that led to the postcolonial theorization.

**History (HIST)**

**HIST 001 Making of the Modern World**

How did the world we now live in come to be? Is globalization a recent development or does it have a history of its own? At what point can we say that a world economy emerged and what sort of relations of production and distribution linked it together? When did people start thinking and acting as citizens of nations rather than as subjects of rulers or members of religious or ethnic communities, and what were the consequences? How should we conceptualize the great revolutions (French, American, Russian, Chinese) that would determine the landscapes of modern global politics? This course is designed to help us think about the ‘making of the modern,’ not by means of an exhaustive survey but by exploring a range of topics from unusual perspectives: piracy, patriotism, prophecy; global struggles for political and human rights; drivers of war and peace, capitalism, nationalism, socialism, fascism, fundamentalism; communication and culture.

HIST 011 Deciphering America
This course examines American history from the first contacts of the indigenous peoples of North America with European settlers to our own times by focusing on a few telling moments in this history. The course treats twelve of these moments. Each unit begins with a specific primary document, historical figure, image, location, year, or cultural artifact to commence the delving into the American past. Some of these icons are familiar, but the ensuing deciphering will render them as more complicated; some are unfamiliar, but they will emerge as absolutely telling. The course meets each week for two 50-minute team-taught lectures and once recitation session. Course requirements include: in-class midterm and final exams; three short paper assignments; and punctual attendance and participation in recitations.

HIST 027 Ancient Rome
At its furthest extent during the second century CE, the Roman Empire was truly a ‘world empire’, stretching from northern Britain to North Africa and Egypt, encompassing the whole of Asia Minor, and bordering the Danube in its route from the Black Forest region of Germany to the Black Sea. But in its earliest history it comprised a few small hamlets on a collection of hills adjacent to the Tiber river in central Italy. Over a period of nearly 1500 years, the Roman state transformed from a mythical Kingdom to a Republic dominated by a heterogeneous, competitive aristocracy to an Empire ruled, at least notionally, by one man. It developed complex legal and administrative structures, supported a sophisticated and highly successful military machine, and sustained elaborate systems of economic production and exchange. It was, above all, a society characterized both by a willingness to include newly conquered peoples in the project of empire, and by fundamental, deep-seated practices of social exclusion and domination. This course focuses in particular upon the history of the Roman state between the fifth century BCE and the third century CE, exploring its religious and cultural practices, political, social and economic structures. It also scrutinizes the fundamental tensions and enduring conflicts that characterized this society throughout this 800-year period.

HIST 031 Making and Breaking European Hegemony
HIST 031 will trace the dramatic rise and fall of Europe’s global hegemony during the period roughly from 1450 to 1950. Among the major themes we will examine are: states and power, borders and resistance, race and genocide, economies and oppression, ideas and revolution, the building and change of hierarchies of gender and power. Truly, a dramatic story. The objectives of the course are: 1) To serve as an introduction to the study of history for majors and non-majors alike, and to teach the critical analysis of historical sources; 2) to teach substantive knowledge of European history; 3) to provide a foundation for further study of the European past. No previous background in European or World history is required.

HIST 046 Portraits of Soviet Society: Literature, Film, Drama
How can art and literature open a window on Russian lives lived over the course of the tumultuous twentieth century? This course adopts a unique approach to questions cultural and social history. Each week-long unit is organized around a medium-length text, film, or set of texts by some of the most important cultural figures of the era (novella, play, memoir, film, short stories) which opens up a single scene of social history: work, village, avant-garde, war, Gulag, and so on. Each cultural work is accompanied by a set of supplementary materials: historical readings, paintings, cultural-analytical readings, excerpts from other literary works, etc. We will read social history through culture and culture through history. Prerequisite: All readings and lectures in English.
For BA Students: Humanities and Social Science S
Taught by: Platt
Course usually offered in spring term
Also Offered As: REES 187
Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English

HIST 047 Portraits of Russian Society Society: Arts, Fiction, Drama
This course covers 19C Russian cultural and social history. Each week-long unit is organized around a single medium-length text (novella, play, memoir) which opens up a single scene of social history: birth, death, duel, courtship, tsar, and so on. Each of these main texts is accompanied by a set of supplementary materials: paintings, historical readings, cultural-analytical readings, excerpts from other literary works, etc. The object of the course is to understand the social codes and rituals that informed nineteenth-century Russian life, and to apply this knowledge in interpreting literary texts, other cultural objects, and even historical and social documents (letters, memoranda, etc.). We will attempt to understand social history and literary interpretation as separate disciplines yet also as disciplines that can inform one another. In short: we will read the social history through the text, and read the text against the social history.

HIST 048 The Rise and Fall of the Russian Empire, 1552-1917
How and why did Russia become the center of the world's largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

Out of an obscure, backward empire, the Soviet Union emerged to become the great political laboratory of the twentieth century. This course will trace the roots of the world's first socialist society and its attempts to recast human relations and human nature itself. Topics include the origins of the Revolution of 1917, the role of ideology in state policy and everyday life, the Soviet Union as the center of world communism, the challenge of ethnic diversity, and the reasons for the USSR's sudden implosion at the end of the century. Focusing on politics, society, culture, and their interaction, we will examine the rulers (from Lenin to Gorbachev) as well as the ruled (peasants, workers, and intellectuals; Russians and non-Russians). The course will feature discussions of selected texts, including primary sources in translation.

HIST 050 England and the British Isles to 1707
The subject of this course is the history of the British Isles from the Roman Conquest in 43AD to the creation of the United Kingdom in 1707. Between these two dates the various societies and cultures in the British Isles were brought into the orbit of the Roman Empire, converted to Latin Christianity, and developed distinctive cultures and strong ties with the Continent. From the twelfth century on, the kingdom of England began to exert its power over Wales, Ireland, and Scotland, although English power waxed and waned in these areas between the twelfth and the seventeenth centuries. The Anglo-Norman continental empire of the Plantagenet dynasty also played a large part in shaping the English monarchy, as did the playing out of the Hundred Years War, the internal divisions in fifteenth-century English society, and the rise of the Tudor-Stuart dynasty.

HIST 051 Modern Britain, 1700-present: Empire, Industry and Democracy
In this course, we will investigate the extraordinary story of Britain's rise to global predominance and the question of its 'decline' in the twentieth century. Our readings and discussions will engage with dominant ideas, social processes, and popular beliefs; we will look at the structure of government and the texture of everyday lives. We will encounter Britons in all corners of the world even as we explore the complexities of metropolitan British history. Big ideas were born there: industrial capitalism, political liberalism, and scientific racism. Britain's political system, with its early form of (limited) democracy, gave shape to party politics around the world. We begin in the early eighteenth century--focusing on the agricultural and social changes that accompanied the onset of the Industrial Revolution. We'll examine the rise of the Hanoverian fiscal-military state, and its consolidation and transformation in the course of the Napoleonic Wars. We end in the present day, looking at Britain which may have lost an Empire, but which retains a strong welfare state, a global cultural presence, and a permanent seat on the UN Security Council. Should we understand its rise and subsequent retraction as a store of an ascent and a decline? We will interrogate that narrative throughout the semester. The course moves roughly chronologically, but by way of discrete units that provide different perspectives on British politics, economics, and culture.
For BA Students: History and Tradition Sector
Taught by: Chase-Levenson
Course usually offered in spring term

1.0 Course Unit

HIST 055 Reading the Classics
In this course we will study the early roots of Western culture—the Biblical, Greek and Roman traditions—as well as how sixteenth- and seventeenth-century European authors reproduced, rethought and reshaped these early traditions. Instead of reading and discussing the required texts according to the date when they were written (first the early traditions and ending with the Renaissance views), we will focus our attention on a few themes that were central concerns to those living in Classic and Renaissance times, and that continue to influence modern ways of thinking and acting in Western societies: conceptions of God and the place of religion in society; nature of power and authority, and individuals' rights and duties; good, evil, and ethical philosophy; views on women, their nature and roles in society; ethnography and the perception of other cultures and societies. In addition to reading and discussing several of the biblical books—Genesis, Exodus, the Book on Revelation—we will study other seminal classical works—Sophocles' Antigone, Aristotle's Politics and Ethics, Herodotus’ The Histories; Plato's Apology— and works by Michel de Montaigne, Maria de Zayas y Sotomayor, Marie de Gournay, Christopher Marlowe, William Shakespeare, and several others. We will also work with books published in the last decades, analyzing the classics and and their reception in various periods of history, but also books that analyze what the classics tell us today—Dreyfus and Kelly's All things shining, Reading the Western Classics to find meaning in a secular Age; Anthony Grafton's Bring Out Your Dead: the Past as Revelation; James Miller, Examined Lives, from Socrates to Nietzsche; and Sarah Bakewell, How to Live: Or a Life of Montaigne in One Question and Twenty Attempts at an Answer.

HIST 060 Global Environmental History from Paleolithic to the Present
This course explores the changing relationships between human beings and the natural world from early history to the present. We will consider the various ways humans across the globe have interacted with and modified the natural world by using fire, domesticating plants and animals, extracting minerals and energy, designing petro-chemicals, splitting atoms and leaving behind wastes of all sorts. Together we consider the impacts, ranging from population expansion to species extinctions and climate change. We examine how human interactions with the natural world relate to broader cultural processes such as religion, colonialism and capitalism, and why it is important to understand the past, even the deep past, in order to rise to the challenges of the present.

HIST 070 Colonial Latin America
The year 1492 was pivotal in the history of the world. It precipitated huge population movements within the Americas and across the Atlantic - a majority of them involuntary as in the case of indigenous and African people who were kidnapped and enslaved. It led to cataclysmic cultural upheavals, including the formation of new cultures in spaces inhabited by people of African, European and indigenous descent. This course explores the processes of destruction and creation in the region known today as Latin America in the period 1400 - 1800. Class readings are primary sources and provide opportunities to learn methods of source analysis in contexts marked by radically asymmetrical power relationships.

HIST 071 Modern Latin America, 1808-Present
This course examines central themes of Latin American history, from independence to the present. It engages a hemispheric and global approach to understand the economic and social transformations of the region. We will explore the anti-imperial struggles, revolutions, social movements, and global economic crises that have given rise to new national projects for development, or have frustrated the realization of such goals. Taking a historical perspective, we ask: What triggers imperial breakdown? How did slaves navigate the boundary between freedom and bondage? Was the Mexican Revolution revolutionary? How did the Great Depression lead to the rise of state-led development? In what ways have citizens mobilized for equality, a decent standard of living, and cultural inclusion? And what future paths will the region take given uneasy export markets and current political uncertainty?

HIST 072 Introduction to Latin American and Latino Studies
Designed to introduce students to the interdisciplinary field of Latin American and Latino Studies, this is a seminar oriented toward first and second year students. Readings will range widely, from scholarly work on the colonial world that followed from and pushed back against the 'conquest', to literary and artistic explorations of Latin American identities; to social scientists' explorations of how Latinos are changing the United States in the current generation.

HIST 073 Colonial Pasts and Indigenous Futures: A History of Belize and Central America
The small country of Belize (formerly British Honduras) represents the past history and ongoing story of Central America and the region. Belize has a colonial past and present with strong ties to the UK and emerging connections to the US. At the same time, there is a growing post-colonial debate within the country about the role of indigenous Maya people in the past, present and future of the country. This course will be the first of two courses which will lead to active work in Belize during the summer of 2021 with the development and creation of a Community Museum within the Maya village of Indian Creek in southern Belize. This course will be taught by Richard M. Leventhal who has worked in Belize for the past 20 years. Leventhal will be joined by 3 Maya activists from Belize who will co-teach the class for 5-6 weeks out of the semester.

HIST 078 The African Diaspora: Global Dimensions
This class examines the cultural and social ramifications of the African diaspora on a global level. It is divided into two major sections. The first section provides the historical background to the African diaspora by focusing on the forced migration of Africans to Spanish and Portuguese colonies in the Americas. We will then delve into the black experience in French and British colonial spaces. In this section, we will also endeavor to move beyond the Atlantic-centric paradigm in studies of the African diaspora by examining free and unfree migrations of African people across the Indian Ocean to places as far away as India and the Philippines. The second half of the class devotes significant attention to the historical legacy of slavery and colonialism in places like Brazil, Cuba and the United States. In this section, we will discuss such issues as race relations, the struggle for civil rights for African-descent people as well as the emergence and the implementation of affirmative action policies in places like Brazil and the US.

HIST 081 History of the Middle East Since 1800
A survey of the modern Middle East with special emphasis on the experiences of ordinary men and women as articulated in biographies, novels, and regional case studies. Issues covered include the collapse of empires and the rise of a new state system following WWI, and the roots and consequences of the Palestinian-Israeli conflict, the Iranian revolution and the U.S.-Iraq War. Themes include: the colonial encounter with Europe and the emergence of nationalist movements, the relationship between state and society, economic development and international relations, and religion and cultural identity.

HIST 086 History, Culture, and Religion in Early India
This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the 'Aryan Invasion' and Vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabharata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings students will read select primary sources on the history of religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India's early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.

HIST 088 From Oil Fields to Soccer Fields: The Middle East in the 20th Century
How did the Middle East become modern? This seemingly simple question requires a complex appraisal of civic society. Life changed in spectacular ways for the denizens of the Middle East in the span of a century. Oil – once considered a scarce natural commodity – was discovered and exported in substantial quantities that altered the economic landscape of the region and the world. Movie theaters, sewage systems, and public housing projects changed the urban backdrops of Middle Eastern cities and towns. Soccer, swimming, and volleyball became some of the new-fangled sports embraced by Middle Eastern communities. This course will traverse these fascinating and fraught cultural transformations of the Middle East in the twentieth century. Although inclusive of the military battles and conflicts that have affected the region, this class will move beyond the cliches of war to show the range of issues and ideas with which intellectuals and communities grappled. The cultural politics and economic value of oil as well as the formation of a vibrant literary life will be among the topics covered. By considering illustrative cultural moments that shed light on the political history of the period, this course will develop a nuanced framework to approach the history of the U.S. involvement in the region, the Iran-Iraq war, the Arab/Israeli conflict, and the current crises in the Persian Gulf.

HIST 090 Knights with Katanas: Medieval Japan and Europe Compared
This course aims to provide an overview of some of the main themes and problems in the history and historiography of medieval Japan by drawing on comparisons with European counterparts and interpretive models. To this end, each week's readings on Japan are paired with one or more works on medieval Europe dealing with a similar theme. The primary purpose is not only to draw comparisons between the two civilizations and their development but also to use the great riches of scholarship on the European Middle Ages to shed light on possible new avenues of inquiry and perspectives on Japan.

HIST 096 Late Imperial China
This lecture course – the first of a two-part sequence – examines the history of late imperial China through the early 19th century. We begin with the Song dynasty transformation: the rise of gentry society and imperial absolutism, the institution of Confucian orthodoxy, the shift of the population and the economic center of gravity to the south, the commercialization of the economy, and change in the relative status of women and men. We then trace China’s subsequent political and social history, including the following themes: inner vs. outer court politics; law, government, and society; intellectuals and political dissent; gender, family, and kinship practices; patterns of peasant life and rebellion; traditional foreign relations and first contacts with the West; internal sources of the decline of imperial order.

HIST 097 History of Modern China
From an empire to a republic, from communism to socialist-style capitalism, few countries have ever witnessed so much change in a hundred year period as China during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally, 3) the development and transformation of Chinese modernity. Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao’s China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of ‘Greater China’ that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.

HIST 098 Introduction to Korean Civilization
This gateway course surveys the history of Korea from early times to the present. We will study the establishment of various sociopolitical orders and their characteristics alongside major cultural developments. Covered topics include: state formation and dissolution; the role of ideology and how it changes; religious beliefs and values; agriculture, commerce, and industry; changing family relations; responses to Western imperialism; and Korea’s increasing presence in the modern world as well as its future prospects. Students will also be introduced to various interpretive approaches in the historiography. No prior knowledge of Korean or Korean language is presumed.

HIST 108 American Origins
The United States was not inevitable. With that assumption as its starting point, this course surveys North American history from about 1500 to about 1850, with the continent’s many peoples and cultures in view. The unpredictable emergence of the U.S. as a nation is a focus, but always in the context of wider developments: global struggles among European empires; conflicts between indigenous peoples and settler-colonists; exploitation of enslaved African labor; evolution of distinctive colonial societies; and, finally, independence movements inspired by a transatlantic revolutionary age.

HIST 109 Hamilton's America: US History 1776-1800
In this course, students will learn about the political, constitutional, and social history of the United States from 1776 (the year the colonies declared their independence from Great Britain) to 1800 (the year Thomas Jefferson won the presidency in a heated partisan election for the presidency). Alexander Hamilton, an influential American statesman during this time, will be our guide to the many events and transformations that occurred during these years. The course is not, however, a biographical course about Hamilton. Topics covered include: the politics of independence, the Revolutionary War, the development of state and national republics, the creation of the U.S. Constitution, the role of ordinary people in the politics of the time period, the problem of slavery in the new nation, Native American power and loss, diplomatic affairs, and the rise of partisan politics.

1.0 Course Unit

HIST 118 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft—including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

HIST 121 Silver and Gold in the Americas from pre-history to the present
Precious metals have shaped economies and socio-cultural processes in the Americas for thousands of years. Students will work with pre-Columbian gold objects held by the University Museum and be introduced to the long history of indigenous metallurgy. We will also analyze the way gold and silver sent from the ‘New World’ to the ‘Old World’ played a key role in changing economies around the globe. Locally, mining centers were places marked by forced labor, conspicuous consumption, and the destruction of ecosystems. Internationally, gold and silver prices had outsized effects on monetary and trade policies. This course uses case studies to delve into the fascinating history of precious metals and mining in North and South America. We will analyze documents describing the gold objects ransacked by Spanish conquistadors, examine 17th Century proto-industrial silver mining at Potosi, Bolivia, trace the impact and human cost of the huge gold strikes in Minas Gerais, in colonial Brazil, read new work on the California and Yukon moments of ‘rush’, and briefly discuss the role of precious metals in money laundering. An introductory unit focuses on the history of the gold standard in the United States and internationally.

1.0 Course Unit

HIST 123 Economic History of Europe I
This course concentrates on the economy of Europe in the Early Modern Period, 1450-1750. It was a time of great transition. Europe developed from an agriculturally-based to an industrially-based economy, with attendant changes in society and culture. From subsistence-level productivity, the European economy expanded to create great surfeits of goods, with attendant changes in consumption and expectation. Europe grew from a regional economic system to become part—some would say the heart—of a global economy, with attendant changes in worldview and identity. Economic intensification, expansion, globalization, and industrialization are our topics, therefore. Beginning with economic organizations and practices, we will consider how these changed over time and influenced society and culture. The course takes as its point of departure the experience of individual, working men and women: peasants and artisans, merchants and landlords, entrepreneurs and financiers. Yet, it argues outward: from the particular to the general, from the individual to the social, from the local to the global. It will suggest ways in which the economy influenced developments or changes that were not in themselves economic, shaped, and deflected economic life and practice.

HIST 126 Modern Europe, 1789-1919
It’s old, it’s new. It’s unfamiliar, it’s recognizable. This course investigates the collapse of the ‘old regime’ and the birth of something like the Europe we recognize. The long nineteenth century witnessed the development of political, economic, and cultural phenomena we often see as characteristic of modern society. Topics considered include political revolution, industrialization, liberalism, imperialism, and new ideologies of gender, race, and class. Our focus will be consistently transnational. Where did Europe begin and end? How did borders and boundaries operate at the edge of nations, but also within societies? We will investigate these questions as we follow European history from the violence and optimism of the French Revolution to the chaos of the First World War.

HIST 127 The Material Past in a Digital World
The material remains of the human past - objects and spaces - provide tangible evidence of past people's lives. Today's information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today's world and for discussing the human consequences of these new technologies and data. We will discuss information technology's impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology's role in the preservation of the past in today's turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

Activity: Lecture
1.0 Course Unit

HIST 131 Financial Meltdown, Past and Present
Economic history is increasingly recognized as a crucial source of policy advice and is invoked with growing frequency in public debates. In particular, the subprime crisis in 2008 and after has generated a demand for 'historical perspective' that would improve the understanding of the causes of financial turmoil and facilitate the prevention of comparable catastrophes. This course begins with a review of the principal features of the subprime crisis of 2008 and asks, so to speak, 'how did we get there?' It answers by providing historical insights that shed light on crucial aspects of financial disasters. This is a history course, engaging with topics pertaining to economics, law and politics (national and international). Students with diverse backgrounds are expected to benefit from this course through acquiring a concrete knowledge of the historical evolution of fundamental institutions of financial capitalism. Ultimately, students enrolling in this course are expected to achieve proficiency in historically informed discussion of the mechanisms that were played out in the subprime crisis and beyond.

HIST 133 Free Speech and Censorship
This course will explore the idea of free speech - its justification, its relationship to various forms of censorship, and its proper limits - as a historical, philosophical, legal, and ultimately, political question. In the first half of the course, we will explore the long history across the West of the regulation of various kinds of ideas and their expression, from malicious gossip to heresies, and read classic arguments for and against censorship, copyright protections, and standards of taste and decency and of truth. In the second part of the seminar, after looking at how the idea of freedom of speech came to seem an existential prerequisite for democracy as well as individual liberty, we will take up the historical and philosophical questions posed by such recent dilemmas as whether or not hate speech deserves the protection of the First Amendment, the distinction between art and pornography from the perspective of freedom of expression, speech during wartime, and the transformative effects of the internet on the circulation and regulation of ideas. We will end the semester by thinking about the globalization of the idea of free speech as a human right and its implications, both positive and negative. Readings will range from Robert Darnton's The Forbidden Best-Sellers of Pre-Revolutionary France, to D. H. Lawrence's Lady Chatterley's Lover, to documents concerning the cartoons of Charlie Hebdo and law review articles about Citizens United v. FEC. We will also make considerable use of local resources, from museums to the library.

HIST 134 Origins of Nazism: From Democracy to Race War and Genocide
Where did the Nazis come from? Was the Weimar Republic bound to fail? Did the Treaty of Versailles or the Great Depression catapult the Nazis into power? What was the role of racism, of Anti-Semitism? How did the regime consolidate itself? What was the role of ordinary people? How do we explain the Holocaust and what kind of a war was the Second World War? Grappling with these and more questions, the first half of the course focuses on Germany's first democracy, the Weimar Republic and its vibrant political culture. In the second half, we study on the Nazi regime, how it consolidated its power and remade society based on the concepts of race and struggle. Discussions of race and race-making are crucial throughout the course. In the name of the 'racial purity', the Nazi state moved ruthlessly against Germany's Jewish population and cleansed German society of all 'undesirable' elements. These ideas and practices didn't originate with the Nazis and they didn't operate in a geopolitical vacuum. Thinking about Nazi racism and genocide in both its particular specifics and in a larger global historical context is the main goal of this course.

HIST 140 Medieval and Early Modern Jewry
Follow the journey of one global diaspora over a millennium of cultural, intellectual, social, and religious change. From the rise of Islam in the seventh century to the separation of church and state in the seventeenth, Jewish people were intimate parts of, and at the same time utterly othered by, the many societies in which they lived. This basic duality is at the heart of this course, exploring how Jewish religion and culture evolved in relationship with Muslim and Christian majorities. Students will develop an understanding of the rich dynamism of premodern Judaism and Jewish life, with an emphasis on global diversity and internal differentiation as well as change over time. We will look for threads of continuity and moments of transformation, decode illustrative texts, images, and documents (in English), and ask how the Judaism that faced modernity had been shaped by a staggering array of different cultural circumstances after antiquity. The course includes attention to anti-Jewish phenomena like expulsion and blood libel, but also at coexistence and creative cultural synthesis, avoiding any simplistic narrative and asking about their legacy in the present day. It will look at the Jewish past from the inside, including less familiar dimensions including philosophy, magic, messianism, and family life.

HIST 145 Discover the Middle Ages
This course offers a broad introduction to the history of medieval Europe roughly from the fourth century CE, when Roman civilization faced a series of crises that led to its eventual fall in the West and ushered in the Middle Ages, to the sixteenth century, when European society entered a new early-modern phase. As this is a long period, we will focus on themes that will help us explore some of the most important historical problems related to the period: why was it that a sophisticated and militarily superior Roman empire could fall to ‘barbarians’? How did political power transform into a feudal model? What did it mean to be a medieval knight? The Middle Ages are known as ‘an age of faith’ but, at the same time, it was an age of questioning that invented the modern university—what roles did faith and knowledge play in the medieval world? It was also a time where many cultures, races and religions came into contact, both at home and in efforts at exploration and conquest. How did medieval culture handle difference, and how did that influence early-modern and even modern approaches? The class will involve a mixture of lecture and discussion, and will include visits to local museum and manuscript collections to provide students first-hand contact with the visual and material culture of medieval Europe.

HIST 148 Warriors, Concubines & Converts: the Ottoman Empire in the Middle East & Europe
For almost six hundred years, the Ottomans ruled most of the Balkans and the Middle East. From their bases in Anatolia, Ottoman armies advanced into the Balkans, Syria, Egypt, and Iraq, constantly challenging the borders of neighboring European and Islamicate empires. By the end of the seventeenth century, Constantinople, Jerusalem, Cairo, Baghdad, Sarajevo, Budapest, and nearly Vienna came under Ottoman rule. As the empire expanded into Europe and the Middle East, the balance of imperial power shifted from warriors to converts, concubines, and intellectuals. This course examines the expansion of the Ottoman sultanate from a local principality into a sprawling empire with a sophisticated bureaucracy; it also investigates the social, cultural, and intellectual developments that accompanied the long arc of the empire’s rise and fall. By the end of the course, students will be able to identify and discuss major currents of change in the Ottoman Empire and the Middle East. The student will have a better understanding of the roles of power, ideology, diplomacy, and gender in the construction of empire and a refined appreciation for diverse techniques of historical analysis.

HIST 151 Race, Space and Place in American History
This course provides a historical introduction to America’s racial and ethnic groupings by examining the social, spatial and historical forces that have defined these groups. Weekly lectures and readings trace American racial formations, identities and experiences from the age of Columbus to the present day. Following the work of historians and geographers who emphasize the importance of space and place in constructions of racial and ethnic identity, most of the class readings chart the evolution of such identities within specific regions or communities. Early readings illuminate the origins of categories such as ‘white,’ black, ‘Native American’ and ‘Asian’ by exploring the colonial encounters in which these identities first took shape; while later readings trace how these identities have been maintained and/or changed over time. Less a product of racial attitudes than of economic and political interests, early American conceptions of race first took shape amidst contests over land and labor that pitted European immigrants against the indigenous peoples of North America, and ultimately led to the development of racial slavery. Colonial legal distinctions between Christians and Heathens were supplanted by legislation that defined people by race and ethnicity. Over time these distinctions were reinforced by a variety of other forces. Distinctive from place to place, America’s racial and ethnic groupings have been shaped and reshaped by regional economies such as the slave South, political initiatives such as Indian Removal and Chinese Exclusion Acts, a changing national immigration policy, and sexual and social intermixture and assimilation. Course readings will examine the links between race, region, labor, law, immigration, politics, sexuality and the construction and character of racialized spaces and places in America.

HIST 153 Transformations of Urban America: Making the Unequal Metropolis, 1945 to Today
The course traces the economic, social, and political history of American cities after World War II. It focuses on how the economic problems of the industrial city were compounded by the racial conflicts of the 1950s and 1960s and the fiscal crises of the 1970s. The last part of the course examines the forces that have led to the revitalization and stark inequality of cities in recent years.

HIST 154 Histories of Race and Science in Philadelphia
The history of race and science has its American epicenter in Philadelphia. Throughout this Academically-Based Community Service (ABCS) course, we will interrogate the past and legacy of racial science in the United States; the broad themes we broach will be met concretely in direct engagement with Penn and the Philadelphia community. As an extended case study, students will undertake independent research projects using primary source documents from local archives, tracing the global history of hundreds of human skulls in the 19th century Samuel G. Morton cranial collection at the Penn Museum, a foundational and controversial anthropological collection in the scientific study of race. These projects will be formed through an ongoing partnership with a Philadelphia high school in which Penn students will collaborate with high school students on the research and design of a public-facing website on the Morton collection and the legacy of race and science in America. In our seminar, we will read foundational texts on the study of racial difference and discuss anti-racist responses and resistance to racial science from the 19th century to the present. Throughout this course we will work directly with both primary and secondary sources, critically interrogating how both science and histories of science and its impacts on society are constructed. Throughout this course, we will explore interrelated questions about Penn and Philadelphia's outsize role in the history of racial science, about decolonization and ethics in scholarly and scientific practice, about the politics of knowledge and public-facing scholarship, and about enduring legacies of racial science and racial ideologies. All students are welcome and there are no prerequisites, save for intellectual curiosity and commitment to the course. This course will be of particular interest to those interested in race, American history and the history of science, anthropology, museum studies, education, and social justice.
Taught by: Mitchell

HIST 160 Strategy, Policy and War
Analysis of the political use of force, both in theory and in practice, through analytical readings and study of selected wars. Readings include Sun Zi, Kautilya, Machiavelli, Clausewitz and other strategists. Case studies vary but may include the Peloponnesian War, the Mongol conquests, the Crusades, the Crimean War, Russo-Japanese War, World War II, Korea, or the Falklands, among others, with focus on initiation, strategic alternatives, decision and termination. Some discussion of the law of war and international attempts to limit it.

HIST 162 The American West
This course explores the social and cultural history and current views of the many Wests we think we know. In 1872, President Grant established Yellowstone National Park, only the first of many national and state nature reserves in the west. Even while the Parks were widely celebrated, in 1876 Grant allowed miners and land speculators into the Black Hills, or Paha Sapa, land long considered sacred by the Lakota peoples and 'protected' for them as recently as 1868 Treaty of Laramie. From this pairing of events in the 1870s spring the many overlapping themes this course will address: Native peoples, their beliefs and material cultures, pressured by the arrival of scattered industries (gold rushes, silver and copper mining); irregular sources of industrial and banking capital from England, New York, Chicago, and elsewhere; the arrival of the US Army in 1851, then a break removing troops for the Civil War, then their renewed and constant appearance from 1866 on and the making and breaking of other treaties; the irregular scattering of land speculators and dirt farmers, even while the US government insisted the Sioux and Cheyennes, among other peoples, not disturb the passage of planters on the Oregon Trail, even as their hunting grounds were enclosed by the Union Pacific and North Pacific railroads by 1870. Naturalists, hikers, and artists arrived by rail to the western parks: Yellowstone, Yosemite (1890), and the Grand Canyon (1919). By 1900, American tourists went west to see wild West Indian Shows and wonder at the new parks. They ate at restaurants serving western food, wore western ware and cowboy boots, and listened to western music that finally reached its high point when folklorist Hal Cannon founded the National Cowboy Poetry Gathering in Elko, Nevada, in 1984, still active today with offshoots in Durango, Montana, and Texas.

HIST 163 Modern American Culture
Through the twentieth century, American culture took on new forms and meanings, spurred by technological innovation, commerce, and institutions, and shaped by an ever-changing population. In the process, American culture became self-consciously 'modern'-embraced, contested, repudiated, and continually redefined. This course explores the history of American culture from the 1890s to the 1990s, with a focus on the following questions: Why did culture become such an important part of American economic, social, and political life in the twentieth century? How has culture been created, understood, and mobilized by different groups in American society at different times? What have been the politics of culture over the twentieth century? Topics include the rise of 'culture industries' and mass entertainment, including amusement parks, film, radio, and television; the growth of consumer culture; the impact of gender in such arenas as sports and fashion; the role of working-class peoples, African Americans, and immigrants in American culture; the cultural response to the Depression and World War II; and popular activism. The course emphasizes the study of primary documents, journalism, fiction, letters and diaries, music, photographs, and film as a means of understanding the past.

HIST 164 American Monuments: Landscape, Memory, Power
Disputes over Confederate monuments expose a truth: The landscape of memory is a field of power. This place-based course examines U.S. public memory as expressed in the built environment--its making in the long nineteenth century, and its remaking in the long twentieth century. Lectures and readings cover a variety of memorial practices and structures, including obelisks, statues, edifices, cemeteries, battlefields, massacre sites, landmark buildings, and historic trees. (Museum collections, though important, will not be emphasized.) Drawing on cultural history, political history, and legal history, the instructor will help to explain the historic inscription of settler colonialism onto the nation's memorial landscape, and contextualize current efforts to decolonize U.S. public memory. For their part, students will have opportunities to do research on the monuments of Philadelphia.
Taught by: Farmer
Activity: Lecture
1.0 Course Unit

HIST 166 Arab/Israeli Conflict in Literature and Film
This course will explore the origins, the history and, most importantly, the literary and cinematic art of the struggle that has endured for a century over the region that some call the Holy Land, some call Eretz Israel and others call Palestine. We will also consider religious motivations and interpretations that have inspired many involved in this conflict as well as the political consequences of world wars that contributed so greatly to the reconfiguration of the Middle East after the fall of the Ottoman Empire, and after the revelations of the Holocaust in Western Europe. While we will rely on a textbook for historical grounding, the most significant material we will use to learn this history will be films, novels, and short stories. Can the arts lead us to a different understanding of the lives lived through what seems like unending crisis?

HIST 174 Capitalism, Socialism and Crisis in the 20th Century Americas
From the crisis of the Great Depression through the 1970s, the United States and Latin America produced remarkable efforts to remake society and political economy. This course analyzes the Cuban and Guatemalan revolutions, as well as social movements that transformed the United States: the black freedom movement, the labor movement, and changing forms of Latino politics. In all three countries, Americans looked for ways to reform capitalism or build socialism; address entrenched patterns of racism; define and realize democracy; and achieve national independence. They conceived of these challenges in dramatically different ways. Together, we'll compare national histories and analyze the relationships between national upheavals. In studying the US and Latin America together, the class allows students to explore central questions in both regions' histories. What did capitalism, socialism, and communism amount to? What did democracy mean? What were the roots of racial inequality and how did Americans address it? Why were Americans so enticed by economic growth, and how did they pursue it? How did the Cold War shape social movements? What purposes did unions serve? How did Christianity inform movements for and against social change? Studying these regions together also allows us to explore international interactions. How did the black freedom movement in the US relate to the Cuban revolution? How did Latin American immigration shape the US labor movement? How did US Cold War policy influence Latin American revolutionary movements? The goal of this class is for you to interpret the readings and decide what you think. What you learn in this class, and the quality of our experience together, depends on your reading closely, coming to class with informed ideas and questions, and being prepared to help your classmates answer theirs. We will read approximately 100 pages per week. No background is required. For BA Students: History and Tradition Sector

HIST 175 History of Brazil: Slavery, Inequality, Development
In the past decade, Brazil has emerged as a leading global power. As the world’s fifth-largest country, by size and population, and the ninth-largest by GDP, Brazil exerts tremendous influence on international politics and the global economy, seen in its position as an emerging BRIC nation and a regional heavyweight in South America. Brazil is often in the news for its strides in social welfare, leading investments in the Global South, as host of the World Cup and Olympics, and, most recently, for its political instability. It is also a nation of deep contradictions, in which myth of racial democracy – the longstanding creed that Brazilian society has escaped racial discrimination – functions alongside pervasive social inequality, state violence, political corruption, and an unforgiving penal system. This course examines six centuries of Brazilian history. It highlights the interplay between global events – colonialism, slavery and emancipation, capitalism, and democratization – and the local geographies, popular cultures, and social movements that have shaped this multi-ethnic and expansive nation. In particular, the readings will highlight Brazil’s place in Latin America and the Lusophone World, as well as the ways in which Brazil stands as a counterpoint to the United States, especially in terms of the legacy of slavery and race relation. In this lecture, we will also follow the current political and economic crises unfolding in Brazil, at a moment when it has become all the more important to evaluate just how South America’s largest nation has shaped and been shaped by global events.

HIST 178 The Foundations of the Early Modern Atlantic World 1450-1800
The purpose of this course is to provide students with a solid knowledge of Atlantic history during the early modern period (XV-XVIII centuries). Through readings of primary and secondary texts we will discuss the cultural, religious, intellectual, and economic developments of Europe, Africa, and the Americas, as well as the connections, struggles, and mutual influences between the peoples of these three continents. Throughout the semester we will study several important topics: medieval precedents of early modern expansion; theories of empire; ideologies and systems of conquest and colonization; the relevance of race and slavery to the understanding of the early modern Atlantic world; how different peoples perceived others and themselves; how European imperialism and colonization affected the internal development of Africa and America; the role played by religion in the Atlantic world; persistence and continuity of Native cultures and beliefs during an age of expansion; the creation of new identities; the role played by African nations in the creation of the Atlantic world; and the creation of an Atlantic economy.

HIST 179 The Rise and Fall of the Spanish Empire 1450-1700
This course will provide students with a solid knowledge of the history of early modern Spain (1450-1700). Through readings of primary and secondary texts that offer a complex vision of the cultural, religious, intellectual, and economic contexts and processes, students will be able to appreciate the intricacies of Spain’s historical evolution. The course focuses on the rise and decline of the Spanish monarchy: the conditions that enabled Spain to become the most powerful monarchy in early modern times, and the conditions that led to its decline. This course also touches upon other important aspects critical to understanding early modern Spain: relationships among Christians, Muslims, and Jews in the Iberian Peninsula; the conquest and colonization of the New World; and early modern debates about Spain’s rights to occupy America and the so-called ‘destruction of the Indies.’

HIST 187 Africa and the Transatlantic Slave Trade
This course focuses on the history of selected African societies from the sixteenth through the mid-nineteenth centuries. The primary goal is to study the political, economic, social, and cultural history of a number of peoples who participated in the Atlantic slave trade or were touched by it during the era of their involvement. The course is designed to serve as an introduction to the history and culture of African peoples who entered the diaspora during the era of the slave trade. Its audience is students interested in the history of Africa, the African diaspora, and the Atlantic world, as well as those who want to learn about the history of the slave trade. Case studies will include the Yoruba, Akan, and Fon, as well as Senegambian and West-central African peoples.

HIST 188 Civilizations at odds? The United States and the Middle East
Foe or friend, Satan or saint - America has often been depicted in the
Middle East either as a benevolent superpower or an ill-meaning enemy.
In America, too, stereotypes of the Middle East abound as the home of
terrorists, falafels, and fanatics. This undergraduate lecture course will
explore the relationship between the United States and the Middle East
by moving beyond such facile stereotypes. Our goal is to understand why
a century of interaction has done little to foster greater understanding
between these two societies. By reading novels, memoirs, and historical
counters, we will examine the origins of this cultural and diplomatic
account in the twentieth century. The readings will shed light on
America's political and economic involvement in the Middle East after the
Second World War. We will consider the impact of oil diplomacy on U.S.-
Middle East relations, as well as the role of ideology and religion, in our
effort to comprehend the current challenges that face these societies.

HIST 209 Industrial Metropolis
Although we no longer think of most U.S. cities as industrial
cities, metropolitan areas today are all products of industrial
economies, technologies, and social systems. This course explores the
industrialization and deindustrialization of American cities within their
evolving global context from the era of European colonization to the
present. It includes weekly readings and discussion, regular response
papers and walking tours, in-class exercises, and a research paper
using primary sources. Themes include energy and ecology, labor and
production, inner city and suburban development, globalization, and
economic restructuring. Ultimately, the class aims to give students a
broad knowledge of 1) the history of industrial capitalism, 2) its effects on
cities and regions over the past three centuries, and 3) analytical tools for
understanding the past, present, and future of metropolitan economies,
geography, and society.

HIST 220 Russia and the West
This course will explore the representations of the West in eighteenth-
and nineteenth-century Russian literature and philosophy. We will
consider the Russian visions of various events and aspects of Western
political and social life: Revolutions, educational system, public
executions, resorts, etc. within the context of Russian intellectual history.
We will examine how images of the West reflect Russia's own cultural
concerns, anticipations, and biases, as well as aesthetic preoccupations
and interests of Russian writers. The discussion will include literary
works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy,
as well as non-fictional documents, such as travelers' letters, diaries,
and historiographical treatises of Russian Freemasons, Romantic and
Positivist thinkers, and Russian social philosophers of the late Nineteenth
century. A basic knowledge of nineteenth-century European history is
desirable. The class will consist of lectures, discussion, short writing
assignments, and two in-class tests.

HIST 237 Berlin: History, Politics, Culture
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin. All readings and lectures in English.

HIST 241 Performing History
This seminar concentrates on the ways that various peoples in the world make their history by means other than relying on written texts alone. Over the course of the semester, we therefore may be examining such different public events and civic rituals as parades, political and religious processions, local historical pageants, carnivals, historic preservation, museums, military reenactments, and history theme parks. The emphasis in each of these forms, places, and semiotic processes will be on their identity and function as key performances that transform consciousness, shift individuals alternately into both actors and spectators, reframe the everyday as the metaphysical, and intensify the status of cultural values in the histories they present to view. Course requirements: a seminar paper, the topic of which you will discuss with me no later than week five of the course; and a working annotated bibliography and statement of your paper’s main thesis. I will say more about these assignments as they approach.

HIST 243 American Feminist and LGBT Movements, 1960s-1980s
This seminar explores the history of the feminist and LGBT movements from the mid-1960s to mid-1980s in Philadelphia. Although there will be some attention to national organizations, we will focus on social and political activism as it was made in local groups and spaces. We will explore the social and cultural web that fostered activism, for example, in gay and lesbian coffee houses, campus women's centers, bookstores, and radio shows. We will also pay attention to groups and actions that may not have been self-consciously defined as 'feminist' or 'gay liberationist,' but had important effects on social change related to gender and sexuality; these include African American, Latino/a, and working-class organizations. This is a hands-on research seminar, with students exploring local archives and special collections to document and analyze these complex movements. Each student will conduct an oral history, analyze a set of published and printed sources, and write a paper based on archival research.

1.0 Course Unit
**HIST 248 The Haitian Revolution**

In August 1791, enslaved Africans on the northern plain of Saint Domingue (colonial Haiti) rose up in a coordinated attack against their French colonial masters, launching the initial revolt in what would come to be known as the Haitian Revolution. In the years that followed, their actions forced the abolition of racial discrimination and slavery throughout the French Empire. When Napoleon Bonaparte threatened to return slavery to Saint Domingue, they waged a war for independence, declaring Haiti the world’s first ‘Black Republic’ in 1804. This seminar will examine some of the major themes and debates surrounding Haiti’s colonial and revolutionary history. We will begin by considering the colonial paradox: France’s leading role in the intellectual movement called the ‘Enlightenment’ coincided with its ascent as a slaveholding colonial power. The seminar will also explore parallels and points of connection between the revolutionary movements in France and Saint Domingue: how did increasingly radical ideas in France shape events in the Caribbean? Likewise, how did west African traditions and political ideologies influence insurgents and their leaders? And how, in turn, did revolution in the Caribbean impact the revolution in France? Finally, we will ask how the Haitian Revolution influenced ideas about liberty, sovereignty and freedom throughout the Atlantic World. We will read a combination of primary and secondary materials each week. A final research paper will be required of all students.

**HIST 252 Freud: The Invention of Psychoanalysis**

No other person in the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud’s life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud’s work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

**HIST 258 Extreme Heat: White Nationalism in the Age of Climate Change**

The Amazon is burning. The glaciers are melting. Heat waves, hurricanes, earthquakes, floods, wildfires, and droughts devastate ever larger swathes of the earth, producing crop failures, air pollution, soil erosion, famine and terrifying individual hardship. At the same time, the so-called Western World is literally walking itself off from the millions who are fleeing from disaster and war with what little they can carry. White militants chant ‘blood and soil’ and ‘Jews will not replace us,’ social media spreads memes and talking points about ‘white genocide’ and ‘white replacement’ and online ideologues fantasize about building white ethnostates. Are these developments connected? Is there a causal relationship? Or are these conditions purely coincidental? Increasingly, arguments about limits to growth, sustainability, development and climate change have come to stand in competitive tension with arguments for social and racial equality. Why is that case? What are the claims and underlying anxieties that polarize western societies? How do white nationalist movements relate to populist and fascist movements in the first half of the 20th century? What is new and different about them now? What is the relationship between environmentalism, rightwing populism and the climate crisis? And how have societies responded to the climate crisis, wealth inequality, finite resources and the threat posed by self-radicalizing white nationalist groups?

1.0 Course Unit
HIST 261 A People's History of Pakistan
This course asks what Pakistan's history would look like when told from the perspective of the most marginalized groups in the country. Such an approach would demand that we jettison state-centered narratives and geopolitical frameworks. Instead, the course prioritizes the ethical imperative to tell the history of a place by including the voices and experiences of its people. It explores questions about how the state might appear differently in such narratives, as also about the impact of colonialism on the nation-state and its oppressed. Over the semester, we will investigate the responses, resistances, and revolts of marginalized groups that are facing intensified and intersecting oppression in a global and national context of surveillance, militarization, and capitalist exploitation. This course explores these urgent questions about the forces shaping the global present through the histories of the region, women, peasants, displaced persons, labor, and students in Pakistan.

HIST 273 Penn Slavery Project Research Seminar
This research seminar provides students with instruction in basic historical methods and an opportunity to conduct collaborative primary source research into the University of Pennsylvania's historic connections to slavery. After an initial orientation to archival research, students will plunge in to doing actual research at the Kislak Center, the University Archives, the Historical Society of Pennsylvania, the American Philosophical Society, the Library Company, and various online sources. During the final month of the semester, students will begin drafting research reports and preparing for a public presentation of the work. During the semester, there will be opportunities to collaborate with a certified genealogist, a data management and website expert, a consultant on public programming, and a Penn graduate whose research has been integral to the Penn Slavery Project.
Taught by: Brown

1.0 Course Unit

HIST 274 African American Life and Culture in Slavery
This course will examine the lives of enslaved African Americans in the United States, both in the North and the South. We will engage historiographical debates, and tackle questions that have long concerned historians. For example, if slaves were wrenched from families and traded, could they sustain family relationships? If slaves worked from sun-up until sun-down, how could they create music? We will engage with primary and secondary sources to expand our understanding of values, cultural practices, and daily life among enslaved people. Topics will include: literacy, family, labor, food, music and dance, hair and clothing, religion, material culture, resistance, and memories of slavery. Several disciplines including History, Archaeology, Literature, and Music, will help us in our explorations. Written, oral, and artistic texts for the course will provide us with rich sources for exploring the nuances of slave life, and students will have opportunities to delve deeply into topics that are of particular interest to them. This course will also count as the AFRC 176 requirement for the AFRC major.

HIST 275 Faces of Jihad in African Islam
This course is designed to provide the students with a broad understanding of the history of Islam in Africa. The focus will be mostly on West Africa, but we will also look at developments in other regions of the continent. We will explore Islam not only as religious practice but also as ideology and an instrument of social change. We will examine the process of islamization in Africa and the different uses of Jihad. Topics include prophetic jihad, jihad of the pen and the different varieties of jihad of the sword throughout the history in Islam in sub-Saharan Africa.

HIST 287 Religion and Society in Africa
In recent decades, many African countries have perennially ranked very high among the most religious. This course serves as an introduction to major forms of religiosity in sub-Saharan Africa. Emphasis will be devoted to the indigenous religious traditions, Christianity and Islam, as they are practiced on the continent. We will examine how these religious traditions intersect with various aspects of life on the continent. The aim of this class is to help students to better understand various aspects of African cultures by dismantling stereotypes and assumptions that have long characterized the study of religions in Africa. The readings and lectures are will be drawn from historical and a few anthropological, and literary sources.

HIST 303 The Vikings
The Vikings were the terror of Europe from the late eight to the eleventh century. Norwegians, Danes and Swedes left their homeland to trade, raid and pillage; leaving survivors praying ‘Oh Lord, deliver us from the fury of the Norsemen!’ While commonly associated with violent barbarism, the Norse were also farmers, craftsmen, and merchants. As their dragon ships sailed the waterways of Europe and beyond, they also transformed from raiders to explorers, discoverers and settlers of found and conquered lands. This course will introduce students to various facets of the culture and society of the Viking world ranging from honor culture, gender roles, political culture, mythology, and burial practices. We will also explore the range of Viking activity abroad from Kiev and Constantinople to Greenland and Vineland, the Viking settlement in North America. We will use material and archeological sources as well as literary and historical ones in order to think about how we know history and what questions we can ask from different sorts of sources. Notably, we will be reading Icelandic sagas that relate oral histories of heroes, outlaws, raiders and sailors that will lead us to question the lines between fact and fiction, and myth and history.

HIST 306 Gunpowder, Art and Diplomacy: Islamic Empires in the Early Modern World
In the sixteenth century, the political landscape of the Middle East, Central Asia, and India changed with the expansion and consolidation of new Islamic empires. Gunpowder had transformed the modes of warfare. Diplomacy followed new rules and forms of legitimation. The widespread use of Persian, Arabic and Turkish languages across the region allowed for an interconnected world of scholars, merchants, and diplomats. And each imperial court, those of the Ottomans, the Safavids, and the Mughals, found innovative and original forms of expression in art and literature. The expansion of these Islamic empires, each of them military giants and behemoths of bureaucracy, marked a new phase in world history. The course is divided in four sections. The first section introduces the student to major debates about the so-called gunpowder empires of the Islamic world as well as to comparative approaches to study them. The second section focuses on the transformations of modes of warfare and military organization. The third section considers the cultural history and artistic production of the imperial courts of the Ottomans, the Mughals, and the Safavids. The fourth and final section investigates the social histories of these empires, their subjects, and the configuration of a world both connected and divided by commerce, expansion, and diplomacy.

Activity: Lecture
1.0 Course Unit

HIST 307 Love, Lust and Violence in the Middle Ages
Medieval Europe was undoubtedly gruff and violent but it also gave birth to courtly culture - raw worries transformed into knights who performed heroic deeds, troubadours wrote epics in their honor and love songs about their ladies, women of the elite carved out a place in public discourse as patrons of the arts, and princely courts were increasingly defined by pageantry from jousting tournaments to royal coronations. This course will trace the development of this courtly culture from the eleventh to the sixteenth century, from its roots in Southern France to its spread to Northern France and then to various kingdoms in Europe. Central themes will include the transformation of the warrior into the knight, the relationship between violence and courtliness, courtly love, cultural production and the patronage, and the development of court pageantry and ceremonial. This is a class cultural history and, as such, will rely on the interpretation of objects of art and material culture, literature as well as historical accounts.

Activity: Lecture
1.0 Course Unit

HIST 311 The Tudors
This course examines the history of England from the accession of Henry (VII) Tudor in 1485 to the death of Elizabeth I in 1603, with emphases on the political and personal history of this colorful dynasty, the religious revolution known as the protestant Reformation, the arts and literature known as the English Renaissance, imperial and trade ventures overseas, and aspects of popular culture including the witch craze. Unlike most English histories of the period, we will also look closely at the other realms of the British Isles, Scotland, Wales, and Ireland. Readings consist of a textbook with a British scope, and an array of primary sources, some in book form and others (marked with an asterisk on the syllabus) attached to Blackboard or distributed in class. Books are available at the Penn Book Center, except for biographies associated with film critiques. Most of the films noted in the syllabus will be available on PVN; otherwise, they can be viewed at the library or through Netflix. Assignments in square brackets are optional.

Taught by: Todd
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
HIST 312 Britain's Century of Revolution
England, Ireland, Wales and Scotland experienced revolutions in the first half of the seventeenth century that abolished monarchy and hereditary aristocracy, and carried out the first judicial execution of a monarch in European history. England was re-constructed as a republic, then with Scotland became the United Commonwealth of Great Britain, then declined into a military dictatorship, and finally invited the king back. In 1688, however, the Glorious Revolution deposed that king and declared Britain a strictly constitutional monarchy. This course will explore what motivated ordinarily obedient British subjects to take up arms against their rulers. The works of Milton and Marvell, Cromwell, Hobbes and Locke, and many lesser-known writers of diaries, autobiographies, sermons, statutes, and letters will illuminate the issues. The focus will be on how law, politics and religion interacted in the onset of war and defining of settlement, but with an eye to the larger social and cultural setting in which revolutions happened: this is also an era of both witchcraze and scientific revolution, puritanism and the slave trade, the near-destruction of London by fire and plague and its re-birth as the capital of a commercial empire.

HIST 313 The French Revolution and the Origins of Modern Politics
This course will examine the social, cultural, intellectual, economic, and especially political history of France and its Empire from the end of the Old Regime through the Napoleonic period. The origins, development, and outcome of the French Revolution, followed by the Haitian Revolution and the Napoleonic Wars, will be our main focus. Particular attention will be paid to the global legacy of these late 18th and early 19th century revolutions in terms of such key modern political concepts as human rights, nationalism, social welfare, feminism, democracy, terrorism, abolitionism, capitalism, and revolution itself. Throughout the course, we will also emphasize the different and often conflicting ways in which historians have interpreted the meaning and consequences of this critical moment of upheaval. Readings will be a mixture of primary and secondary sources, and classes will combine lecture and discussion. Requirements will be one mid-term examination (15%), one short paper (15%), one final paper (30%), and one final examination (30%), as well as class participation (10%).
Taught by: Rosenfeld
Course not offered every year

1.0 Course Unit

HIST 314 Victorian Britain: Spaces, Places, and Pests
In this course, we will examine the nooks and crannies of Victorian society. It was a period of squalor, but also innovation, devastating diseases, and crucial advances in public health and medical science. Its cities featured depressing slums and lurid crimes, but also new kinds of spectacles, entertainments, and commodities. It was, in many ways, as one of its greatest authors wrote, 'the best of times, and the worst of times.' Units under study will include 'The Docks,' 'The Germs,' 'The Empire,' 'The Church,' and 'the Museum.' We'll investigate killer diseases like cholera and typhus, dazzling buildings like the Crystal Palace, imperial wars and crises, and new scientific movements like Darwinism and mesmerism. Along the way, we will encounter proper and eminent Victorians as well as scandalous and marginalized ones. The aim will be to understand Victorian mentalities and ideas by looking at a diverse array of institutions and inventions. Readings will include novels, stories, pamphlets, essays, and cartoons as well as secondary literature. Classes will be a mixture of lecture and discussion, and no previous experience in British history is necessary.

Course not offered every year
Activity: Lecture
1.0 Course Unit

HIST 320 Nature's Nation: Americans and Their Environment
The United States is 'nature's nation.' Blessed with an enormous, resource-rich geographically diverse and sparsely settled territory, Americans have long seen 'nature' as central to their identity, prosperity, politics and power, and have transformed their natural environment accordingly. But what does it mean to be 'nature's nation'? This course describes and explores how American 'nature' has changed over time. How and why has American nature changed over the last four centuries? What have Americans believed about the nation's nature, what have they known about the environment, how did they know it and how have they acted on beliefs and knowledge? What didn't or don't they know? How have political institutions, economic arrangements, social groups and cultural values shaped attitudes and policies? How have natural actors (such landscape features, weather events, plants, animals, microorganisms) played roles in national history? In addition to exploring the history of American nature, we will look for the nature in American history. Where is 'nature' in some of the key events of American history that may not, on the surface, appear to be 'environmental?'

1.0 Course Unit
HIST 322 American Slavery and the Law
In this course, we will work both chronologically and thematically to examine laws, constitutional provisions, and local and federal court decisions that established, regulated, and perpetuated slavery in the American colonies and states. We will concern ourselves both with change over time in the construction and application of the law, and the persistence of the desire to control and sublimate enslaved people. Our work will include engagement with secondary sources as well as immersion in the actual legal documents. Students will spend some time working with murder cases from the 19th century South. They will decipher and transcribe handwritten trial transcripts, and will historicize and analyze the cases with attention to procedural due process as well as what the testimony can tell us about the social history of the counties in which the murders occurred. Students will have the opportunity to choose a topic and conduct original research using both primary and secondary sources, resulting in a 20-page research paper. We will spend a good deal of time throughout the semester learning how to research, write, and re-write a paper of this length. At the end of the semester students will present the highlights of their research to the class.

HIST 333 Napoleonic Era & Tolstoy
In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy’s War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the novel and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great novel? This semester marks the 200th anniversary of Napoleon’s attempt to conquer Russia and achieve world domination, the campaign of 1812. Come celebrate this Bicentennial with us! Because we will read War and Peace over the course of the entire semester, readings will be manageable and very enjoyable.

Course usually offered in fall term
Also Offered As: AFRC 345, GSWS 345
Activity: Recitation
1.0 Course Unit
HIST 346 Bodies, Race and Rights: Sex and Citizenship in Modern American History
What did it mean to be a man or woman in the post-Civil War United States? Was being a man the same as being a citizen? If African-American men were to be fully embraced as both men and citizens in the aftermath of slavery, where did that leave women, white and black? Why did a nation built on immigration become so hostile to certain groups of immigrants during this period? In this course, we consider how the meanings and experiences of womanhood, manhood, citizenship, and equality before the law changed from the period immediately after the Civil War until the present day. We look at political battles over the meaning of citizenship, the use of terror to subdue African Americans politically and economically, and the fears of white Americans that they would lose their political and economic dominance to immigrant groups they deemed irreconcilably different from themselves. We also consider the repercussions of these conflicts for medical, legal, and economic efforts to regulate the bodies of women, children, poor people, immigrants, working class laborers, military men, and African Americans. Throughout the course, we will follow the state’s changing use of racial, sexual, and economic categories to assess the bodily and intellectual capacities of different groups of citizens. We will also note some of the popular cultural expressions of manhood, womanhood, and citizenship. The lectures and reading assignments are organized around a series of historical problems, dynamic leaders, and controversies that illuminate these issues.
Taught by: Brown
Course usually offered in spring term
Also Offered As: AFRC 346, GSWS 346
Activity: Recitation
1.0 Course Unit

HIST 347 Gender History and American Film
More than any other medium, the motion pictures fostered new ideals and images of modern womanhood and manhood in the United States. Throughout the twentieth century, gender representations on the screen bore a complex relationship to the social, economic, and political transformations marking the lives and consciousness of American men and women. This course explores the history of American gender through film. It treats the motion pictures as a primary source that, juxtaposed with other kinds of historical evidence, opens a window onto gendered work, leisure, sexuality, family life, and politics. We will view a wide range of Hollywood motion pictures since 1900, as well as films by blacklisted artists, feminists, and independent producers.

HIST 354 American Expansion in the Pacific
This class will focus on America’s expansion into the Pacific around the turn of the century with the acquisition of Hawaii and the Philippines. It can deal with various issues, including the meaning of ‘frontier’ colonialism, development of capitalist economies in the region, diplomacy, racism, migration, an American brand of Orientalism in encountering the ‘natives’ and ‘heathens,’ and histories of the West and the Pacific Islands in general.
Taught by: Azuma
One-term course offered either term
Also Offered As: ASAM 354
Activity: Lecture
1.0 Course Unit

This course explores significant political and social developments that shaped the final decades of twentieth century U.S. history, an era notable for declining faith in political institutions, ideological and partisan polarization, and a variety of new rights claims by marginalized citizens. Until very recently, scholars have characterized this period as one of conservative political resurgence spurred by its most towering figure, Ronald Reagan, the nation’s 40th president. While Reagan is an essential actor in this class, the course will consider a variety of perspectives, developments, and movements across the political spectrum as well as others that defy easy ideological or partisan categorization. In addition to tracing the transformation of the major political parties and ideologies, topics may include the evolution of the post-1960s civil rights movement and the rise of the incarceration crisis; the rise and transformation of the religious right; the AIDS crisis and the LGBTQ movement; the financialization of the global economy and the mortgage crisis of 2008; and the emergence of the concept of the “free market” as an idealized way of reordering not just social and political commitments but society itself.

HIST 370 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students. Prerequisite: A university-level survey course in Middle Eastern, African, or Mediterranean history.

Activity: Seminar
1.0 Course Unit

HIST 371 Africa and the Mid-East
This seminar will explore the historical relationship between these two regions from the early modern age to the present. We will examine the history of trade, particularly the slave trade, and its cultural and political legacy. We will compare the experiences of European imperialism—how the scramble for Africa dovetailed with the last decades of the Ottoman Empire—with an eye to how this shaped nationalist movements in both regions. The course will also explore the decades of independence with a special eye towards pan-Africanism and pan-Arabism. We will also study the ramifications of the Arab-Israeli conflict on the relationship between African and Middle-Eastern countries, from Uganda to Ethiopia, from OPEC to Darfur. The course will pay close attention to migrations through the regions, whether forced or economic or religious. Whenever possible we will explore, through film and literature, how people in Africa and the Middle East see their connections, and their differences.

1.0 Course Unit

HIST 372 The History of Foreign Aid and Intervention in Africa
This course examines the history, politics, and significance of foreign aid to Africa since the late 19th century. While we do not typically think about the European colonial period in Africa in terms of ‘foreign aid,’ that era introduced ideas and institutions which formed the foundations for modern aid policies and practices. So we start there and move forward into more contemporary times. In addition to examining the objectives behind foreign assistance and the intentions of donors and recipients, we will look at some of the consequences (intended or unintended) of various forms of foreign aid to Africa over the past century. While not designed to be a comprehensive history of development theory, of African economics, or of international aid organizations, the course will touch on all of these topics. Previous course work on Africa is strongly advised.
Taught by: Cassanelli
One-term course offered either term
Also Offered As: AFRC 373
Activity: Lecture

1.0 Course Unit

HIST 380 Modern Jewish Intellectual and Cultural History
An overview of Jewish intellectual and cultural history from the late 18th century until the present. The course considers the Jewish enlightenment Reform, Conservative and Neo-Orthodox Judaism, Zionist and Jewish Socialist thought, and Jewish thought in the 20th century, particularly in the context of the Holocaust. Readings of primary sources including Mendelsohn, Geiger, Hirsch, Herzl, Achad-ha-Am, Baeck, Buber, Kaplan, and others. No previous background is required.
Taught by: Ruderman
One-term course offered either term
Also Offered As: JWST 380, RELS 320
Activity: Lecture
1.0 Course Unit
HIST 385 Human-Animal Relationships in Historical Perspective
We live in a paradoxical moment in the history of people's relationships with animals. Certain species suffer today more than ever due to environmental degradation and modern food production practices. Yet other mammalian species are subject to a degree of sentimental attention (perhaps) unprecedented in history. This paradox is related to an unresolved tension in Western cultures: do the commonalities that bind humans to other animals unite them more or less than the differences that divide them? The course is organized around three main segments: animal domestication; modes of interaction (hunting, husbandry, pets, science) in early modern Europe; and contemporary science. We will conclude with a consideration of current philosophical and ethical perspectives of our treatment of non-human animals. By considering a variety of disciplinary approaches but with an emphasis on historians' methodologies, we will investigate these questions through careful reading of primary sources as well as secondary sources.
Taught by: Norton
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HIST 390 China & USSR Compared
A comprehensive and multi-faceted survey of China and Russia, mostly in the twentieth century, through examining preludes and postludes, but focusing above all on their time as Communist states and sometimes quarreling Cold War allies. Of course we will cover the history, the geography, the economics, the leaders (Stalin, Mao), and the great events - not least the Second World War in each - always comparing, contrasting, and drawing linkages. We will also examine, however, daily life and work for ordinary people, developments in society, and not least their common attempts at revolution, at somehow creating new and unprecedented polities, having populations of radically transformed new people. This informative, fascinating quest will take us from folklore to literature and the arts to dissent and religion and ecology, among other topics. As far as possible we will let their people speak for themselves, by assigning mostly translations of original sources including novels and memoirs, even poetry. A comprehensive assessment of the strategically critical Asian heartland - which at over 14 million square miles is larger than Canada, the United States, and Western Europe combined. Lectures, readings, midterm, short paper, and in-class final.
Taught by: Waldron
Course usually offered in spring term
Also Offered As: REES 390
Activity: Lecture
1.0 Course Unit

HIST 391 The Vietnam War
A thorough historical, military, and social history of the Vietnam war, which lasted in one form or another from the end of WWII in 1945 to 1975, in which occurred the longest and most humiliating defeat in our history. Since that time the Vietnamese have published hundreds of documents, some in English, which provide an entirely new perspective on what we believed during the war. These, supplemented by other primary and secondary materials, as much as possible written by Vietnamese or by Americans having first-hand knowledge, will form the backbone of the course. The various American and Vietnamese strategies will be scrutinized carefully, and a good deal said about the home front in America. The actual fighting, that determined the outcome, will not be slighted. We expect at least some guest speakers having long diplomatic or military experience in Vietnam. The present will be our conclusion.
Lectures TTH 12:1-30; midterm in class, short paper, an regular final. If you want to understand the world you now live in, this course a good place to start.
Taught by: Waldron
One-term course offered either term
Also Offered As: EALC 196
Activity: Lecture
1.0 Course Unit

HIST 393 20th Century China: Ideas, Politics, States
Since 1900 four types of states have ruled China: dynastic, elective parliamentary, authoritarian nationalist, and communist. We will trace each from its intellectual origins to conclusion. By doing so we will present a solid and wide-ranging narrative of China's past century, introducing newly discovered material, some controversial. Above all we will dig into the issues raised by the century's mixture of regimes. Right now China is a dictatorship but once it was an imperfect democracy. Does this prove that Chinese are somehow incapable of creating democracy? That sadly it is just not in their DNA? Or only that the task is very difficult in a country nearly forty times the size of England and developing rapidly? That without dictatorship the Chinese almost inevitably collapse into chaos? Or only that blood and iron have been used regularly with harsh effectiveness? You will be given a solid grounding in events, and also in how they are interpreted, right up to the present. Readings will be mostly by Chinese authors (translated), everything from primary sources to narrative to fiction. We will also use wartime documentary films. Two lectures per week, regular mid-term and final exams, and a paper on a topic of your own choice. No prerequisites.
Taught by: Waldron
Course usually offered in fall term
Also Offered As: EALC 145
Activity: Lecture
1.0 Course Unit
Notes: Two lectures per week, regular mid-term and final exams, and a paper on a topic of your choice.
HIST 394 China and the World: Modern Times
History 394 is a comprehensive introduction to the last hundred years of China's relations with the world, with emphasis on American-Chinese relations, but within the necessary context of China's relations with other countries from Asia to Europe to Africa and elsewhere (as well as Washington's changing relations with Beijing). China's role in the world can be understood only when the full background and international context is made clear. This course has no prerequisites: freshmen and others lacking background will find it manageable and interesting. Students who have successfully completed this course will be well positioned to understand some of the most important of current events, and if they like, pursue the topics as careers (there will be no shortage, I assure you). Although much will be said about diplomacy, and Chinese diplomatic strategy in particular, the mile-posts of the course will be a series of wars: World War I and its effects on China; the heroic Chinese war of resistance against Japan (1937-1945) in which, effectively without allies, the Chinese avoided defeat; the bitter Civil War that followed almost immediately (1946-1949) and brought Mao Zedong and his Communists to power while the predecessor Nationalist government fled to the island of Taiwan; then the Korean War (1950-1953) and the close Chinese-Soviet alliance that followed; The Taiwan Straits Crises (1954-1955, 1958, 1996); the Chinese-Indian war (1962) the origin of a situation now heating up; the Sino-Soviet border conflicts (1969); the Vietnam War (1955-1975) which changed the United States profoundly while reorientating China internationally; the (at the time) little noticed Chinese invasion of Vietnam (1979) - and finally the increasingly tense situation today, between China and India, and China and her maritime neighbors from Japan to Indonesia, many U.S. allies.

Also Offered As: EALC 044
Activity: Lecture
1.0 Course Unit

HIST 395 East Asian Diplomacy
Home to four of the five most populous states and four of the five largest economies, the Asia/Pacific is arguably the most dynamic region in the twenty-first century. At the same time, Cold War remnants (a divided Korea and China) and major geopolitical shifts (the rise of China and India, decline of the US and Japan) contribute significantly to the volatility of our world. This course will examine the political, economic, and geopolitical dynamics of the region through a survey of relations among the great powers in Asia from the sixteenth century to the present. Special emphasis will be given to regional and global developments from the perspective of the three principal East Asian states--China, Japan and Korea. We will explore the many informal, as well as formal, means of intercourse that have made East Asia what it is today. Graduate students (EALC 505) should consult graduate syllabus for graduate reading list, special recitation time and graduate requirements.
Taught by: Dickinson
Course usually offered in fall term
Also Offered As: EALC 105, EALC 505
Activity: Recitation
1.0 Course Unit

HIST 398 Junior Honors in History
Open to junior honors candidates in history. Introduction to the study and analysis of historical phenomena. Emphasis on theoretical approaches to historical knowledge, problems of methodology, and introduction to research design and strategy. Objective of this seminar is the development of honors thesis proposal.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HIST 400 Senior Honors in History I
Open to senior honors candidates in history who will begin writing their honors thesis during this seminar.
Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit

HIST 406 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom, self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.
Taught by: Amponsah
Course usually offered in spring term
Also Offered As: AFRC 406, AFRC 506, PHIL 555

1.0 Course Unit

HIST 412 Topics in World History
One-term course offered either term
Also Offered As: EALC 442
Activity: Seminar
1.0 Course Unit

HIST 414 Human Rights and History
The idea of universal, inalienable rights--once dismissed by the philosopher Jeremy Bentham as 'nonsense upon stilts'--has become the dominant moral language of our time, the self-evident truth par excellence of our age. Human rights have become a source of inspiration to oppressed individuals and groups across the world, the rallying cry for a global civil society, and not least, a controversial source of legitimation for American foreign policy. This seminar asks: how did all this come to be? We will investigate human rights not only as theories embodied in texts, but as practices embedded in specific historical contexts. Are human rights the product of a peculiarly European heritage, of the Enlightenment and protestantism? How did Americans reconcile inalienable rights with the reality of slavery? Did human rights serve as a 'civilizing' mask for colonialism? Can universal rights be reconciled with genuine cultural diversity? Through case studies and close readings, the seminar will work toward a genealogy of human rights.
Taught by: Nathans
One-term course offered either term
Activity: Seminar
1.0 Course Unit
HIST 418 European Intellectual History since 1945
This course concentrates on French intellectual history after 1945, with some excursions into Germany. We will explore changing conceptions of the intellectual, from Sartre's concept of the 'engagement' to Foucault's idea of the 'specific intellectual'; the rise and fall of existentialism; structuralism and poststructuralism; and the debate over 'postmodernity.'
Taught by: Breckman
Course usually offered in spring term
Also Offered As: COML 418
Activity: Seminar
1.0 Course Unit

HIST 420 European International Relations from the Age of Enlightenment to the Great War
This course will examine the international politics of Europe in the 18th and 19th centuries, up to the outbreak of World War I. During these centuries, the European great powers experienced significant internal transformations and also a revolution in their relations, both of which reinforced and accelerated each other. In the process, Europe asserted a dominant position in world politics, but also sowed the seed for the terrible cataclysms of the 20th Century. The course will address this transformation of European diplomacy with special attention to the rivalries between the great powers, the impact of nationalism and emerging mass politics, the interplay between military and economic power, and the relationship between the European powers and the rest of the world.
Taught by: McDougall
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HIST 421 Europe and the World since 1914
This course looks at Europe's interactions with other world regions throughout the twentieth century. Over the course of roughly a hundred years, Europeans have shaped the fates of peoples living beyond the western world, for instance through the impact of two world wars, European colonialism, and the global Cold War. At the same time, European societies 'at home' were not left unaffected by these interactions. Even today, Europeans are facing the legacies of some of these histories in immigration and the politics of religion and secularism for example. The past century also saw a dramatic shift in Europe's position in the world - from dominance to a loss of influence in the shadow of the United States and more recently, China. The course spends significant time covering the histories of world regions other than Europe. It furthermore considers some interactions and exchanges between world regions from a social and cultural point of view. Because the class spans roughly a century, the content has to remain introductory and general, although a very basic familiarity with 20th-century international history is helpful.
Taught by: Ogle
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit

HIST 425 World War I
This survey course examines the outbreak, conduct, and aftermath of the First World War. The First World War put an end to the world of the 19th century and laid the foundations of the 20th century, the age of destruction and devastation. This course will examine the war in three components: the long-term and immediate causes of the First World War; the war's catastrophic conduct, on the battlefield and on the home front; and the war's devastating aftermath. While we will discuss military operations and certain battles, this course is not a military history of the war; it covers the social, economic, political and diplomatic aspects that contributed to the war's outbreak and made possible its execution over four devastating years. No preliminary knowledge or coursework is required.
Taught by: Holquist
Two terms. student may enter either term.
Activity: Recitation
1.0 Course Unit

HIST 441 North American Colonial History
A survey of the development of American colonial society, 1607-1750, with emphasis on the regional differences between life in early New England, the Mid-Atlantic, and the South, as well as the relationships between British colonists, Native Americans, and African Americans.
Taught by: Brown
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HIST 447 Histories of the Information Economy
This course provides a perspective on the role of information as a historical actor. Moving beyond common narratives of the progress of the information economy driven by technological factors, the course underscores the significance of what may be called the political economies of information. We will approach major works, dealing with the historical importance of information (Foucault, Cohn, Habermas) and simultaneously engages with the history of institutions to store and circulate information. We will emphasize the importance of value (social, political, economic) which is at the heart of information gathering and producing. In particular, we will discuss the rise and fall of institutions to store and circulate information. We will study the importance of information in historical processes such as imperialism and colonization, state building, propaganda, the Enlightenment, as well as the informational aspects of the rise of global NGOs and international organization, police and spying. Information may be accumulated or lost; it can be safeguarded or debased; it can confer power or undermine it. In the age of fake news, these are issues worthy of a closer interest.
Taught by: Flandreau
One-term course offered either term
Activity: Lecture
1.0 Course Unit
HIST 451 The U.S. and the World since 1898
This class examines the emergence of the U.S. as a world power since 1898, and considers both the international and domestic consequences of U.S. foreign relations. In one respect, the twentieth century was a strange time to become a global empire: it was the period when colonial systems centered in Europe, Russia, Japan, and Turkey collapsed, and new nations emerged throughout Africa and Asia. This class explores the changing strategies of military, economic, and political intervention that the U.S. pursued as colonization lost legitimacy. Within that framework, the class invites students to think about several questions: How did the idea and practice of empire change over the twentieth century? How did the United States relate to new visions of independence emerging in Africa, Asia, and Latin America? How did global interactions both inform and reflect racial ideology in the United States? Finally, how did international affairs transform U.S. politics and social movements?

One-term course offered either term
Also Offered As: LALS 451
Activity: Lecture
1.0 Course Unit

HIST 463 History of American Education
This course will examine the growth and development of American schools, from the birth of the republic into the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of ‘America’ itself? In an irreducibly diverse society, the answers were never simple. Americans have always defined their nation in a myriad of contrasting and often contradictory ways. So they have also clashed vehemently over their schools, which remain our central public vehicle for deliberating and disseminating the values that we wish to transmit to our young. Our course will pay close attention to these education-related debates, especially in the realms of race, class, and religion. When immigrants came here from other shores, would they have to relinquish their old cultures and languages? When African-Americans won their freedom from bondage, what status would they assume? And as different religious denominations fanned out across the country, how would they balance the uncompromising demands of faith with the pluralistic imperatives of democracy? All of these questions came into relief at school, where the answers changed dramatically over time. Early American teachers blithely assumed that newcomers would abandon their old-world habits and tongues; today, ‘multicultural education’ seeks to preserve or even to celebrate these distinctive patterns. Post-emancipation white philanthropists designed vocational curricula for freed African-Americans, imagining blacks as loyal serfs; but blacks themselves demanded a more academic education, which would set them on the road to equality. Protestants and Catholics both used the public schools to teach their faith systems until the early 1960s, when the courts barred them from doing so; but religious controversies continue to hound the schools, especially on matters like evolution and sex education. How should our public schools address such dilemmas? How can the schools provide a ‘common’ education, as Horace Mann called it, melding us into an integrated whole while still respecting our inevitable differences?
Taught by: Zimmerman
Course usually offered in spring term
Also Offered As: EDUC 599
Activity: Seminar
1.0 Course Unit
HIST 645 Graduate Research Seminar
SPRING 2019: This seminar is suitable for graduate students in any discipline in which historical research may be relevant. We will work with both secondary and primary sources, and students will have the opportunity to visit and undertake research in an archive. The principal interpretive questions will resolve around two clusters of issues. One cluster involves evidence and standards of verification; the other involves the ethics and rhetoric of cultural translation/representation.
Taught by: Williams
One-term course offered either term

HIST 670 Topics in Trans Regional History
Reading and discussion course on selected topics in Transregional History
One-term course offered either term
Activity: Seminar
1.0 Course Unit

HIST 670 Proseminar in History
Weekly readings, discussions, and writing assignments to develop a global perspective within which to study human events in various regional/cultural milieus, c. 1400 to the present.
Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit

HIST 706 Introduction to Africa and African Diaspora Thought
This course examines the processes by which African peoples have established epistemological, cosmological, and religious systems both prior to and after the institution of Western slavery.
Taught by: Amponsah
One-term course offered either term
Also Offered As: AFRC 706
Activity: Seminar
1.0 Course Unit

Hungarian (HUNG)
HUNG 121 Elementary Hungarian I
The elementary Hungarian I course focuses on providing reading, writing, listening and reading-comprehension skills on basic level Hungarian. Interactive class activities and authentic Hungarian material will enable students to develop language skills so they could talk about themselves and their families, discuss every day and weekend routines, express likes and dislikes, converse about school and family activities, and get acquainted with Hungarian holidays and cultural traditions. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

HUNG 122 Elementary Hungarian II
Continuation of EEUR121. The second semester of elementary Hungarian course continues on providing functional language competency in basic grammar, vocabulary, comprehension, reading, writing and speaking in Hungarian. Students will continue to learn communicating in everyday life situations as well as in organizing a trip to Hungary, staying in a hotel, ordering meals, buying goods, and participating in cultural activities by using authentic Hungarian online resources and interactive class activities. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Prerequisite: EEUR 121
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.
HUNG 123 Intermediate Hungarian I
The Intermediate Hungarian I course builds on and continues the course material in Elementary Hungarian I-II. Course activities, authentic audio and video material along with Hungarian online resources will enable students to further develop their reading, writing, listening comprehension and conversational skills. Students will practice their skills by discussing and writing about their interests, student lives, travel and cultural experiences, life on campus as well as learning about Hungarian seasonal traditions, cultural events, and Hungarian student life. Prerequisite: Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Prerequisite: EEUR 122
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

HUNG 124 Intermediate Hungarian II
The intermediate Hungarian II course continues EEUR123. Class documents and activities enable students to develop functional intermediate Hungarian competency by exploring Hungary and its culture, reading authentic online news sources, practicing listening and comprehension skills via video and audio material, researching cultural events and traditions, and exploring Hungarians' everyday lives. At the end of the semester, students will be able to participate and pass their Oral Competency Exit Interview on intermediate level and discuss topics, such as student life, family, friends, academic and student life activities/interests, travel, shopping, and cultural events. Prerequisite: Offered through Penn Language Center.
For BA Students: Last Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Prerequisite: EEUR 123
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

HUNG 299 Independent Study in Hungarian
This is an independent study course for students who select to do individual language and culture projects in Hungarian under the guidance of the Hungarian language instructor; students need to be done with the four semesters of Hungarian prior to requesting such course.
Taught by: Mizsei
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Igbo (IGBO)

IGBO 490 Elementary Igbo I
The main objective of this course is to allow students to study an African language of their choice, depending on the availability of the instructor. The course will provide students with linguistics tools which will facilitate their research work in the target country. Cultural aspects of the speakers of the language will be introduced and reinforced. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

IGBO 491 Elementary Igbo II
Continuation of AFST 490. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

IGBO 492 Intermediate Igbo I
Intermediate level courses in a variety of African languages: Igbo, Shona, Wolof, Malagasy, Chichewa, Setswana, Manding, Afrikaans, Setswana. Focus on oral proficiency and productive language skills. All course are language specific and follow ACTFL proficiency guidelines. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

IGBO 493 Intermediate Igbo II
Continuation of AFST 492. Prerequisite: Offered through Penn Language Center.
For BA Students: Last Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

IGBO 494 Advanced Igbo I
Language specific sections for students interested in doing country-specific research in a target language. Courses cover project-based skills for AFST research. Prerequisite: Offered through Penn Language Center.
For BA Students: Advanced Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

IGBO 495 Advanced Igbo II
Continuation of AFST 494. Prerequisite: Language will be specified in each section.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Languages will be specified in each section.

IGBO 496 Igbo Language and Culture
Aspects of the targeted language's history, language, and culture.
Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center
**Immunology (IMUN)**

**IMUN 506 Immune Mechanisms**
This is an introductory graduate course which surveys most areas of immunology. It is assumed that students have a background in biochemistry and molecular biology, and at least some familiarity with immunological concepts. Topics covered include the major histocompatibility complex, structure of antibodies and T cell receptors, antigen-antibody interactions, the generation of diversity of immunoglobulins and B cells, antigen presentation, and immunological tolerance. There will be two exams, both of which will require assessment and interpretation of experimental data and/or readings from the primary literature. Prerequisite: Permission of instructor.

Taught by: Michael May
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**IMUN 507 Immunopathology**
The relationship between basic immunology and clinical immunologic diseases is emphasized. Course lecturers represent University faculty who are established investigators in immunological research and established clinical immunologists. Course topics include plasma protein systems; B cell, T cell, macrophage immunology; immunohematology; tumor immunology; benign and malignant, immunoproliferative disorders; neuro-immunology; pulmonary immunology; renal immunology; immune complex disease and immunoregulatory abnormalities. Prerequisite: Permission from instructor.

Taught by: Michael May and Erica Stone
Course usually offered in fall term
Prerequisite: IMUN 506
Activity: Lecture
1.0 Course Unit

**IMUN 520 Tutorials in Immunology**
This tutorial course is designed to provide students with an in-depth knowledge of a specific branch of Immunology. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their thesis projects or to expand on a topic that the student found interesting in one of their basic courses. The course is currently the only immunology elective and is, therefore, required for all Immunology Graduate Group students. It is also open as an elective to BGS students who meet the prerequisite. The tutorial course will be examined by the program director and the tutorial leader and the grade will be based on a written paper on the subject studied (5 to 10 typewritten pages) and by an oral presentation of the paper (15 to 20 minutes). Prerequisite: A senior undergraduate, graduate or professional school course in Immunology.

Taught by: Randy Cron, M.D., Ph.D.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

**IMUN 577 Advanced Epigenetics Technology**
Second year students in GCB, CAMB (G&E), or IGG programs using genomics methods to measure transcriptomics and epigenomics changes in their experimental systems. The goal is to familiarize students with the latest cutting-edge genomics tools and cover solutions to major experimental and computational challenges in the investigation of genome-wide epigenetic data sets. Students will develop competence in (i) variations of experimental techniques improving resolution and throughput, (ii) issues related to the computational analyses closely related to the various genome-wide assays used to probe epigenetic processes and signals, (iii) computational approaches useful to overcome pitfalls associated to the analysis of a given epigenetic data modality, (iv) methods, techniques and studies on the integration of multi-layer epigenetic data sets.

Taught by: Golnaz Vahedi
Course usually offered in spring term
Also Offered As: CAMB 577, GCB 577
Prerequisite: (BIOL 483 OR BIOL 493) AND GCB 534 AND (GCB 535 OR GCB 536)
Activity: Lecture
1.0 Course Unit

**IMUN 601 Molecular Immunology**
The purpose of this course is to provide examples in which the cell biology topics covered in BIOM 600 are studied in the context of immune cells or used to explain immune system function. This course will help students become proficient at reading and critically assessing the published literature and encourage students to actively participate in scientific discussion with their peers.

Taught by: Drs. Paula Oliver and Jan Burkhardt
Course not offered every year
Activity: Lecture
0.5 Course Units

**IMUN 607 Grant Writing**
This course will introduce the student to basic principles of grant writing. In this regard a primary objective of the course is to teach you how to describe your ideas and experimental objectives in a clear and concise manner within the standard NIH grant format. To accomplish this, you will be required to write an NIH, ‘RO1’ type grant proposal based on your current laboratory project. Prerequisite: Permission from instructor.

Taught by: Andrew Wells, Bruce Freedman, Michael Cancro
Course usually offered in spring term
Prerequisite: IMUN 506 AND IMUN 507
Activity: Seminar
1.0 Course Unit
IMUN 699 Vaccines and Immune Therapeutics
Vaccination is perhaps the most successful medical technological intervention. The goal of this course is to expand on students’ general understanding of the immune system and to focus this understanding towards the application of modern vaccines and immune therapies in the 21st century. The course will provide the student with a sense of how these principles are applied to a vaccine and immune therapeutic development. The course covers basic vaccine science and describes how this science is translated through clinical, regulatory, ethical, and political issues to result in a final vaccine product. The courses’ goal is to leave the student with an understanding of the implications of modern vaccines/immunotherapies and their impact on world health. Initial lectures review immune mechanisms believed to be responsible for vaccine-induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism, as well as vaccines and immunotherapies for cancer. An appreciation for the application of laboratory science to the clinical development and clinical trials of vaccines are provided. An important focus on the regulatory, safety, and ethical implications of vaccines in different world situations based on true world examples are presented. The financial implications of specific vaccines with these implications for global health is a focus of the course. The course is presented in a lecture-style consisting of multiple distinguished guest lecturers who are experts in their particular area of vaccine development. There are required readings to provide the student context and background for the diverse lectures. Students are graded on course participation and a final project/exam which the students will present. The project is to design a vaccine strategy for a current disease or pathogen of importance that does not as yet have an effective vaccine or immune therapy and present this to the class. Strategies used should build on the material presented in the class lectures. The course is intended for graduate students or medical students in various MS, Ph.D., or MD/Ph.D. programs on the campus, as well as local scientists and professionals in the community. As a prerequisite, students should have taken biology, biochemistry, or immunology courses at the advanced college level. This course is offered in the fall semester. Prerequisite: Biology, Biochemistry at the advanced college level, college-level immunology is recommended. Not limited to CAMB students, however first options are to CAMB students, the permission of the instructors via email.
Taught by: David Weiner, Paul Offit, Stanley Plotkin
Course usually offered in fall term
Also Offered As: CAMB 609
Activity: Lecture
1.0 Course Unit

Indonesian (INDO)

INDO 150 Elementary Indonesian
Elementary Indonesian I course is designed for both beginners and those who may have some previous experience with the language. This course will focus on developing and using the four foundational language skills (speaking, listening, reading, and writing) in a communicative format. Students will develop not only their ability to use and understand contemporary Indonesian, but also their knowledge of Indonesian history and culture. By the end of the semester, students will be able to engage in simple conversations about familiar things such as family, friends and daily activities. They will know every day expressions, will be able to tell time, to negate sentences and to build questions. Students will develop reading strategies and learn about the practical life and the cultural practices in Indonesia and compare them with their own.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit

INDO 151 Elementary Indonesian II
Elementary Indonesian II course is the second course in the first-year series. It is designed to strengthen and expand students Indonesian language competencies in listening, speaking, reading, writing and to deepen their understanding of Indonesian culture. By the end of the semester, students will be able to engage in more detail conversations about familiar things and topics pertinent to them. Students will know everyday expressions and will be able to describe their cities, to tell story about their friends, family, about celebration and family tradition. Furthermore, students will be able to talk about events that happened in the past and in the future, will be able to make comparisons, to express their preference, describe people, things, or an important experience in increasing detail. Furthermore, students will be able to make plan for a party or a trip, write and retell a story or fairy tale.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

INDO 250 Intermediate Indonesian I
This course is designed to improve students writing and speaking competencies, to increase their vocabulary, to deepen grammar usage, and to help them develop effective reading and listening strategies in Indonesian. The authentic Indonesian reading texts and videos provide cultural and historical background information. In class, students will practice grammar, interpret reading texts, analyze and discuss Indonesian cultural practices and compare them with their own.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit

IMUN 699 Laboratory Rotation
Laboratory research conducted under a faculty advisor. Three different rotations covering usually the fall semester of the first year through the fall semester of the second year are required of all Immunology Ph.D. students. Students will defend the rotation research in their Preliminary Exams. Prerequisite: Permission of instructor and immunology chair.
Taught by: Immunology Graduate Group Faculty
One-term course offered either term
Activity: Laboratory
1.0 Course Unit

IMUN 799 Independent Study
Activity: Independent Study
1.0 Course Unit

INDO 250 Intermediate Indonesian II
This course is designed to improve students writing and speaking competencies, to increase their vocabulary, to deepen grammar usage, and to help them develop effective reading and listening strategies in Indonesian. INDO 251 Intermediate Indonesian II  
This course is designed to expand students writing and speaking competencies, to increase their vocabulary and to deepen grammar usage. Students will practice effective reading and listening strategies in Indonesian. The authentic Indonesian reading texts and videos give students opportunities to deepen their knowledge about cultural practices and historical moments in Indonesia. In class, students will have ample opportunities to practice speaking on a daily basis through partner and group work, discussion forums and oral presentations. The variety of communicative activities exposes students to rich input of spoken Indonesian and leads them from structured practice to free expression.
For BA Students: Last Language Course  
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit

INDO 350 Advanced Indonesian Conversation I  
This course will focus on the development of communicative skills and the ability to use Indonesian in extended discourse and abstract discussions at the advanced level. Student will give oral presentations, lead discussions on selected topics from authentic texts, short stories, and Indonesian video clips. Students will also write weekly journals and compositions. The course will provide students with tools to improve understanding of intercultural competence and communication with a focus on Indonesian culture.
One-term course offered either term  
Activity: Lecture  
1.0 Course Unit

INDO 351 Advanced Indonesian Conversation II  
This is continuation of Advanced Indonesian Conversation I, and builds on the student's communicative skills and the ability to use Indonesian in extended discourse and abstract discussions at the advanced level. Student will give oral presentations, lead discussions on selected topics from authentic texts, short stories, and Indonesian video clips. Students will also write weekly journals and compositions. The course will provide students with tools to improve understanding of intercultural competence and communication with a focus on Indonesian culture.
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit

Integrated Product Design (IPD)  

IPD 500 Product Engineering Basics  
The course targets non-engineering majors interested in understanding engineering approaches to product fabrication. The course covers a broad variety of engineering topics including mechanical, electrical, computer and material science. Many of these topics would normally be full courses in themselves. This course intends to teach familiarity with a focus on hands-on practice as applied to products. Students will briefly use equipment such as MTS materials testing machines, mills, lathes, oscilloscopes, laser cutters, photodiodes, motors, servos, microcomputers as well as engineering software such as Solidworks, C compilers, Labview, Matlab, and Cambridge Engineering Selector. The class concludes with independent projects.  
Activity: Lecture  
1.0 Course Unit

IPD 501 Integrated Computer-Aided Design, Manufacturing and Analysis  
The majority of today's engineered products move through an advanced computer-aided workflow which greatly speeds design and process time. This course will explore the fundamental components of this workflow through a combination of lectures, hands-on exercises, and a semester design project. General course topics include: fundamental design principles, project definition and needfinding, advanced computer-aided design, rapid prototyping techniques, computer-controlled machining, and an in-depth exploration of the modern analysis and simulation tools that have revolutionized the way in which products are designed. Enrollment is limited.  
Course not offered every year  
Prerequisites: MEAM 101, MEAM 150, and MEAM 210, or graduate standing in the School of Engineering, Design, or Wharton with similar experience  
Activity: Studio  
1.0 Course Unit

IPD 503 Design Fundamentals  
The creation of a successful product requires the integration of design, engineering, and marketing. The purpose of this intensive studio course is to introduce basic concepts in the design of three-dimensional products. For purposes of the course, design is understood as a creative act of synthesis expressed through various modes of 2-dimensional and 3-dimensional representation. The course develops basic design skills ranging from hand sketching to the use of digital modeling software and rapid prototyping. Fulfills the requirement for a design background course in the interdisciplinary graduate program in Integrated Product Design (IPD).  
Taught by: Richard Wesley  
Course usually offered summer term only  
Also Offered As: ARCH 303  
Activity: Studio  
1.0 Course Unit

IPD 504 Rehab Engineering and Design  
Students will learn about problems faced by disabled persons and medical rehabilitation specialists, and how engineering design can be used to solve and ameliorate those problems. The course combines lectures, multiple design projects and exercises, and field trips to clinical rehabilitation facilities. Students will have substantial interaction with clinical faculty, as well as with patients. Prerequisite: Graduate students or permission of the instructor.  
Course usually offered in fall term  
Also Offered As: BE 514  
Activity: Lecture  
1.0 Course Unit
IPD 509 Needfinding
Needfinding is an approach that puts people and their needs at the center of product development and business strategy creation. Over 90% of new products introduced into the marketplace fail. A good portion of these failures are due to lack of understanding of end consumers and their needs. To develop truly successful new products, it’s not enough just to ask people what they need or want. Designers and engineers need tools and techniques to get beyond what people can explicitly state and determine their implicit needs. Needfinding is an approach for developing deep insights that provide strategic direction for corporations and opens new possibilities for product development. In this class students will gain a toolkit from which to develop their own approaches to conducting research for design: learning how to think about other people, about culture, and about new perspectives. They will also learn tactical skills: how to define research questions, how to conduct observations and interviews, how to interpret results, how to synthesize them into a design, and how to communicate their findings in a way that is compelling and actionable for designers, marketers, and business strategists. This class is designed for graduate students and upper level undergraduates with a specific interest in product design or design thinking.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

IPD 511 Creative Thinking and Design
This is a creative & iterative problem-solving course that uses a series of mechanical design challenge projects to move students into the broad realm of unpredictable, often incalculable, time-constrained problem solving. It explores a wide variety of problem definition, exploration, and solving ‘tools’, and a variety of surrounding ‘design thinking’ topics, such as ethics and the design of experience. Drawing and prototyping are used in the projects for ideation, iteration, speculation, and communication. Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: It is recommended that undergraduates take MEAM 101 prior to this course.

IPD 514 Design for Manufacturability
This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems. Prerequisite: Senior or graduate standing in the School of Design, Engineering, or Business with completed product in development and/or design engineering core coursework or related experience.
Course usually offered in spring term
Also Offered As: MEAM 514
Prerequisites: MEAM 101, 210
Activity: Lecture
1.0 Course Unit

IPD 515 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior, or graduate student.
Also Offered As: MEAM 415, OIDD 415, OIDD 515
Activity: Lecture
1.0 Course Unit

IPD 516 Advanced Mechatronic Reactive Spaces.
This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation control and data. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processor and protocols for large scale actuation control and design. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera.
Course not offered every year
Also Offered As: MEAM 516
Prerequisite: MEAM 510
Activity: Lecture
1.0 Course Unit

IPD 519 Real-Time Embedded Systems
The use of distributed wireless sensor networks has surged in popularity in recent years with applications ranging from environmental monitoring to people- and object-tracking in both cooperative and hostile environments. This course is targeted at understanding and obtaining hands-on experience with the state-of-the-art in such wireless sensor networks which are often composed using relatively inexpensive sensor nodes that have low power consumption, low processing power and bandwidth. The course will span a variety of topics ranging from radio communications, network stack, systems infrastructure including QoS support and energy management, programming paradigms, distributed algorithms and example applications. Some guest lectures may be given. Prerequisite: One course in computer networks and Senior or Graduate standing
Course usually offered in fall term
Also Offered As: ESE 519
Prerequisite: CIS 120 AND ESE 350
Activity: Lecture
1.0 Course Unit
IPD 521 Designing Smart Objects for Play and Learning
Today's children enjoy a wide array of play experiences, with stories, learning, characters and games that exist as physical stand-alone objects or toys enhanced with electronics or software. In this course, students will explore the domain of play and learning in order to develop original proposals for new product experiences that are at once tangible, immersive and dynamic. They will conduct research into education and psychology while also gaining hands-on exposure to new product manifestations in a variety of forms, both physical and digital. Students will be challenged to work in teams to explore concepts, share research and build prototypes of their experiences in the form of static objects that may have accompanying electronic devices or software. Final design proposals will consider future distribution models for product experiences such as 3D printing, virtual reality and software/hardware integration. Instruction will be part seminar and part workshop, providing research guidance and encouraging connections will subject matter experts throughout the Penn campus.
Course usually offered in fall term
Also Offered As: ARCH 721
Activity: Seminar
1.0 Course Unit

IPD 525 Ergonomics/Human Factors Based Product Design
Human Factors and Ergonomics knowledge is a critical component of a product designer or design engineer’s toolbox. This course teaches the direct application of existing human factors/ergonomic data to the creation of new product designs. Applying human factors knowledge to problem solving for product design happens throughout the design process. It is a useful input as initial ideas begin to take shape and as a way to verify completed concepts through directly documented user testing and design iteration. The course would be a mini-lecture/studio style course in which the students will work in class on assigned projects, finding, analyzing, extrapolating and applying data to design solutions and creating mockups, model and prototypes for user testing of their designs.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

IPD 527 Industrial Design I
This course provides an introduction to the ideas and techniques of Industrial Design, which operates between Engineering and Marketing as the design component of Integrated Product Development. The course is intended for students from engineering, design, or business with an interest in multi-disciplinary, needs-based product design methods. It will follow a workshop model, combining weekly lectures on design manufacturing, with a progressive set of design exercises.
Course usually offered in spring term
Also Offered As: ARCH 727
Activity: Lecture
1.0 Course Unit

IPD 528 Design of Contemporary Products: Mass Customization
Personalization is quickly becoming the norm for mass production in a variety of consumer-centric industries. From retail to food, the idea of designing and making custom-made products tailored to fit one’s lifestyle will be our exploration. Utilizing digital design innovations, we are able to incubate ideas, prototype, test and be entrepreneurial in design to create these individualized products. Cues from these industries will be used to shift both cultural and experiential product design from a regional discovery to a global focus. This course will embrace digital design and utilize its engagement with manufacturing solutions for a physical output. Through research and a series of design exercises, the approach will be built upon several strategies including adaptability, materiality, fabrication, modularity, and human-centric design. The final project will interpret the research and result in the creation of a design strategy for a mass customized product or system. This course will explore product design solutions through a combination of physical and digital design methods. Beginning with an examination of case studies, students will gain a sense of the breadth of product and interaction design practice as it applies to smart objects. Through a series of lectures and hands-on studio exercises, students will explore all aspects of smart object design including expressive behaviors (light, sound and movement), interaction systems, ergonomics, data networks and contexts of use. The course will culminate in a final project that considers all aspects of smart object design within the context of a larger theme.
Course usually offered in spring term
Also Offered As: ARCH 728
Activity: Seminar
1.0 Course Unit

IPD 529 Designing Connected Objects and Experiences
The objective of this course is to introduce students to a more conceptual, creative, and meaningful approach to creating interactive functional objects utilizing analog, digital, and electronic skillsets acquired through the core engineering curriculum. This course will cover basics of design as an art form, wearables design, electronic sensors, and creating connected devices. Students will be challenged to create 3 pieces of work both individually and in teams culminating in a gallery show of the students' work. Visit the course website at www.ipd529.com to view previous student work.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

IPD 544 Postdigital Craft
As we have entered a postdigital era, the dominance of a purely technological approach as a vehicle for design innovation has waned. Questions of substance and disciplinary autonomy have found their way back into the contemporary cultural discourse, enriching the way we examine and deploy advanced technologies towards novel expressions in architecture. This seminar will investigate, through the production of estranged objects, opportunities for design that are being generated at the intersection of machinic and human minds, and speculate on possible futures in which concepts of nature and technology have been inseparably intertwined.
Course usually offered in spring term
Also Offered As: ARCH 744
Activity: Seminar
1.0 Course Unit
IPD 545 Engineering Entrepreneurship I
Engineers and scientists create and lead great companies, hiring managers when and where needed to help execute their vision. Designed expressly for students having a keen interest in technological innovation, this course investigates the roles of inventors and founders in successful technology ventures. Through case studies and guest speakers, we introduce the knowledge and skills needed to recognize and seize a high-tech entrepreneurial opportunity - be it a product or service - and then successfully launch a startup or spin-off company. The course studies key areas of intellectual property, its protection and strategic value; opportunity analysis and concept testing; shaping technology driven inventions into customer-driven products; constructing defensible competitive strategies; acquiring resources in the form of capital, people and strategic partners; and the founder’s leadership role in an emerging high-tech company. Throughout the course emphasis is placed on decisions faced by founders, and on the sequential risks and determinants of success in the early growth phase of a technology venture. The course is designed for, but not restricted to, students of engineering and applied science and assumes no prior business education. Prerequisite: Third or Fourth year or Graduate standing
One-term course offered either term
Also Offered As: EAS 545
Activity: Lecture
1.0 Course Unit

IPD 551 Design Processes
This course is structured for IPD students as an intensive, interdisciplinary exploration of Design as purposeful for Integrated Product Design. The goal of the studio is to give students a firsthand experience of various processes involved in creating successful integrated product designs. This first semester of the four-semester studio sequence focuses on giving students experience developing designs based on a range of starting points: form, function, materiality and manufacturing process. Students will practice design through rigorous, consistent processes for thinking through the evolution of their ideas. In this course, they will go through an entire design process from conceptualization to design to producing prototypes. They will be taught to focus on the specifics of their designs, causing them to be conscious of what drives their choices as designers and providing them with a wider range of tools to design from in successive projects. Course work will involve readings, assignments, class participation, in-class exercises, a mid-term presentation and a final submission.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

IPD 552 Problem Framing
In the second semester of the four-semester studio sequence, we ask students to take a step back from what and how they are designing and ask the question of why they are designing it. We will teach them a rigorous process for understanding stakeholder needs and for translating those needs into implications for product design. They will begin to develop greater awareness of the personal, social, competitive and technological contexts that their products fit into, and to learn how to design for those contexts. They will develop the ability to dive into a topic and frame a design problem, and to understand the implications of how they frame the problem on what they design. Ideally, they will use this process to identify a problem or opportunity to work on for their final project. Course work will involve readings, assignments, class participation, in-class exercises, and a final submission.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

IPD 568 Integrative Design Studio: Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century. The course will be a pilot study of the first biodesign challenge organized by CUT/PASTE/GROW. The final projects will be submitted to a competition and the winning entry will be featured at Biofabricate in Summer 2017.
One-term course offered either term
Also Offered As: FNAR 268, FNAR 568
Activity: Studio
1.0 Course Unit

IPD 572 Design Thinking
Creating new product concepts was once a specialized pursuit exclusively performed by design professionals in isolation from the rest of an organization. Today’s products are developed in a holistic process involving a collaboration among many disciplines. Design thinking - incorporating processes, approaches, and working methods from traditional designers’ toolkits - has become a way of generating innovative ideas to challenging problems and refining those ideas. Rapid prototyping techniques, affordable and accessible prototyping platforms, and an iterative mindset have enabled people to more reliably translate those ideas into implementable solutions. In this course, students will be exposed to these techniques and learn how to engage in a human-centered design process.
Course usually offered in fall term
Also Offered As: ARCH 725
Activity: Seminar
1.0 Course Unit

IPD 590 Special Topics in Integrated Product Design
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Advanced Manufacturing, Design of Interactive Objects, Medical Devices and Sustainable Products.
Course not offered every year

**Integrated Studies (INTG)**

**INTG 261 Emerging Technologies and the Future of the World**
Technological change is always occurring, but the rate of change seems to be accelerating. Advances in robotics, artificial intelligence, cyber, biotechnology, and other areas generate promise as well as peril for humanity. Will these emerging technologies unleash the innovative capacity of the world, generating new opportunities that help people live meaningful lives? Alternatively, are automation and other technologies chipping away at the labor market in a way that could create severe generational dislocation at best, and national and international turmoil at worst? These questions are important, and have consequences for how we live our lives, how nations interact, and the future of the world writ large. Emerging technologies could shape public policy at the local, national, and international level, and raise questions of fairness, ethics, and transparency. This course takes a unique approach, combining insights from engineering, political science, and law in an interdisciplinary way that will expose students both to the key technologies that could shape the future and ways to think about their potential politics, and society.

Taught by: Horowitz
One-term course offered either term
Also Offered As: EAS 261, PSCI 261
Activity: Seminar
1.0 Course Unit

**INTG 344 Curiosity: Ancient and Modern Thinking about Thinking**
This course will examine two approach to the skill unanswered question of what happend when we humans come up with new knowledge. How should we describe the impulse, or set of impulses, that leads us to seek it? What is happening when we achieve it? And how do we describe the new state in which we find ourselves after we have it? We will study the work of contemporary physicists and cognitive scientists on these questions along side the approaches developed by the two most powerful thinkers from antiquity on the topic, Plato and Aristotle.

Course not offered every year

Activity: Seminar
1.0 Course Unit

**Intercultural Communication (ICOM)**

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

**ICOM 100 Intercultural Communication**
Language is a complex and multifaceted phenomenon, simultaneously communicative, creative, and cultural. An intercultural perspective is vital to learning a new language and engaging meaningfully with speakers of other languages and cultures. Focusing on the key ideas of intercultural practices, reflections, and strategies, this course offers students a foundation for understanding language, culture, and communication as well as the intricate relationship between them. Registration limited to BAAS degree candidates. Program fee of $175 for On Campus Learning Experience.

Activity: Online Course
1.0 Course Unit

**International Relations (INTR)**

**INTR 101 Transnational Issues in Global Politics**
This course is designed to provide students with an introduction to transnational issues and world politics and to acquaint them with some of the leading issues, theories, concepts and processes, and history that shape and define world events. It is suitable for students embarking on long-term study of international affairs as well as for students with other majors and intellectual interest who simply want to know more about how the world works and how the material covered in this class affects their lives. It is expected that students taking the course will gain an ability to analyze, understand objectively evaluate and appreciate the complex dynamics that affect ‘global politics’ writ large, including issues relating to trade, diplomacy, people-to-people and business transactions, and shifts in demography, borders, international institutions and global governance. In addition to issues of diplomacy, statecraft, and security we will assess some of the major international issues of our time (i.e. climate change, proliferation of weapons of mass destruction, genocide and human trafficking) and debate the prospects for bringing peace and prosperity to a world that is rife with conflict and poverty.

One-term course offered either term
Activity: Lecture

1.0 Course Unit

Notes: An application is required to register this course. Please refer the syllabus or click on the link under additional course information above.
INTR 350 Research Methods/Practice in IR
International Relations is concerned with both theory and practice so we employ a range of analytical tools to examine actors and events in world politics. The purpose of this course is to introduce students to the various research methods utilized by students and scholars in the field of IR including: case studies, historical-comparative and archival research, survey research, interviewing techniques, simulations, quantitative and statistical analysis.
One-term course offered either term
Prerequisite: PSCI 150
Activity: Lecture
1.0 Course Unit
Notes: MAJORS ONLY

INTR 390 Senior Seminar for Thesis Research
Seminar in International Relations. A two semester sequence including review of advanced International Relations theory and research methods for the preparation of the senior thesis.
Course usually offered in fall term
Prerequisite: INTR 350 AND PSCI 150
Activity: Seminar
1.0 Course Unit
Notes: MAJORS ONLY

INTR 391 Senior Seminar For Thesis Research
Seminar in international relations. Second semester of a two semester sequence including review of advanced international relations theory and research methods for the preparation of the senior thesis.
Course usually offered in spring term
Prerequisite: INTR 390
Activity: Seminar
1.0 Course Unit
Notes: MAJORS ONLY

INTR 395 Senior Project I
This seminar will prepare students to plan, implement, and present their senior research project. Students will draw on the experience and insight they have gained in the course of their fieldwork or internship to develop defensible policy recommendations for their target audience. As such, the seminar will introduce students to the policy formation process as they develop the practical skills needed to formulate and produce actionable policy recommendations. Students will produce a formal report and will present their findings to relevant stakeholders at the conclusion of the Seminar. This class will ensure that students develop the skills necessary to undertake a substantive research project.
Course usually offered in fall term
Prerequisite: INTR 350 AND PSCI 150
Activity: Seminar
1.0 Course Unit
Notes: MAJORS ONLY

INTR 396 Senior Project II
This course is a continuation of INTR-395, culminating with the production of a policy research paper and presentation.
Course usually offered in spring term
Prerequisite: INTR 395
Activity: Seminar
1.0 Course Unit
Notes: MAJORS ONLY

INTR 399 Independent Study for Thesis Research
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: MAJORS ONLY

Irish Gaelic (IRIS)

IRIS 081 Beginning Irish Gaelic I
Irish Gaelic, spoken primarily on the west coast of Ireland, is rich in oral traditions, song, poetry and literature. Knowledge of this language provides a foundation to understanding Celtic folklore and linguistics and also enhances the study of Anglo-Irish literature and history. The first-year course will include reading, conversation, listening and speaking.
Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Blyn-LaDrew
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

IRIS 082 Beginning Irish Gaelic II
This course is a continuation of Elementary Irish Gaelic with increasing emphasis on the native idiom and literary forms. Drama texts and poetry will be used to supplement the grammar component and encourage oral proficiency, while simultaneously providing an understanding of the challenges faced by contemporary authors writing in Irish. Prerequisite: Offered through the Penn Language Center.
For BA Students: Last Language Course
Taught by: Blyn-LaDrew
One-term course offered either term
Prerequisite: IRIS 081
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

IRIS 083 Intermediate Irish Gaelic I
Prerequisite: Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Blyn-LaDrew
One-term course offered either term
Prerequisite: IRIS 082
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

IRIS 084 Intermediate Irish Gaelic II
A continuation of Elementary Irish Gaelic with increasing emphasis on the native idiom and literary forms. Drama texts and poetry will be used to supplement the grammar component and encourage oral proficiency, while simultaneously providing an understanding of the challenges faced by contemporary authors writing in Irish. Prerequisite: Offered through the Penn Language Center.
For BA Students: Last Language Course
Taught by: Blyn-LaDrew
One-term course offered either term
Prerequisite: IRIS 083
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center
ITAL 084 Advanced Irish Gaelic I
Prerequisite: Offered through Penn Language Center.
For BA Students: Advanced Language Course
Taught by: Blyn-LaDrew
One-term course offered either term
Prerequisite: IRIS 084
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

ITAL 085 Advanced Irish Gaelic II
This course will emphasize reading of literary texts, and advanced aspects of grammar, composition, and conversation. Offered through the Penn Language Center.
For BA Students: Advanced Language Course
Taught by: Blyn-LaDrew
One-term course offered either term
Prerequisite: IRIS 085
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

Italian (ITAL)

ITAL 081 Film Music in Post 1950 Italy: Nino Rota and Ennio Morricone
An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorve, Pasolini, and Coppola. Highlights include several excerpts form the Fellini/Rota collaboration, including The White Sheik, I vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clown, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota's music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone's work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick's Days of Heaven and Tarantino's The Hateful Eight. Weekly screenings required. Open to all: music majors, and non-majors; will count toward requirements for music minor.
Knowledge of music and Italian helpful but not required. All readings and lectures in English.
Taught by: Samuel
Also Offered As: CIMS 081, MUSC 081
Activity: Seminar
1.0 Course Unit

ITAL 101 Italian Survival Kit: The Language and Culture of getting around in Italy
This course provides content that is taught efficiently in order to be used practically. If you are going to Italy and questioning how you will survive your total immersion experience, this course will provide you with the linguistic and cultural skills you will need to effectively function in Italy and fully enjoy its wonders. In this course, you will learn and practice the language you need to talk about: yourself; others; travel; public transportation; housing; food; shopping; technology; health; money, etc. Students participate in conversations that replicate day-to-day life in Italy thereby developing the skills needed for face-to-face and online situations. This course does not count toward fulfillment of the language requirement. Students wishing to continue in Italian 120 should register for Italian 110 rather than Italian 101. This course is open to students who have never taken Italian and who don't intend to satisfy the language requirement by taking courses in Italian.
Taught by: Lillyrose Veneziano Broccia
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

ITAL 105 Sicilian Language and Culture
Occupied over the centuries by the Greeks, Romans, Arabs, Normans, French, and Spaniards, Sicily is a region of many histories and many traditions. Birthplace and crossroad of cultures and artistic movements, the Sicilian land has shaped the imagination of its inhabitants and has never ceased to fascinate its visitors. Its language and culture have also been exported abroad, through the many Sicilians who left the island and settled all over the world. This course is an introduction to Sicilian Language and Culture. We will study spoken Sicilian and cultural artifacts ranging from film to literature, to music and food, in order to learn to recognize and understand the unique sounds and features of 'siciliano' and to converse in Sicilian with native speakers and with one another. Class sessions include lectures and interactive discussions. Between classes, the learning experience is extended through assignments, lectures and discussions.
Taught by: Lillyrose Veneziano Broccia
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

ITAL 106 Elementary Italian I
A first-semester elementary language course for students who have never studied Italian or who have had very little exposure to the language. Students who have previously studied Italian are required to take the placement test. Class work emphasizes the development of spontaneous discourse skills and interactional competence. Out-of-class homework required.
For BA Students: Language Course
Taught by: Veneziano Broccia
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ITAL 107 Topics: Freshman Seminar
Topics vary. See the Department’s website at https://www.sas.upenn.edu/italians/courses for a description of current offerings.
One-term course offered either term
Also Offered As: CIMS 014, COML 107
Activity: Seminar
1.0 Course Unit
ITAL 112 Accelerated Elementary Italian
An intensive two-credit course covering the first and second semester of the elementary year for students who have never studied Italian before but have already fulfilled the language requirement in another modern language, preferably a romance language. Students who have fulfilled the language requirement in a language other than a romance language will be considered on an individual basis. All students must have departmental permission to register. Prerequisite: Proficiency in another foreign language. Class work emphasizes the development of spontaneous discourse skills and interactional competence. Out-of-class homework required.
For BA Students: Language Course
One-term course offered either term
Activity: Seminar
2.0 Course Units

ITAL 120 Elementary Italian II
This course is the continuation of the elementary-level sequence designed to develop functional competence in the four skills. Class work emphasizes the further development of spontaneous discourse skills and interactional competence. Out-of-class homework required.
For BA Students: Language Course
Taught by: Veneziano Broccia
One-term course offered either term
Prerequisite: ITAL 110
Activity: Seminar
1.0 Course Unit

ITAL 130 Intermediate Italian I
Italian 130 is the first half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. You are expected to have already learned the most basic grammatical structures in elementary Italian and to review these. The course materials will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.
For BA Students: Language Course
One-term course offered either term
Prerequisite: ITAL 10
Activity: Seminar
1.0 Course Unit

ITAL 134 Accelerated Intermediate Italian
Italian 134 is the intensive and accelerated course that combines in one semester the intermediate sequence (130 and 140). It will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.
For BA Students: Last Language Course
One-term course offered either term
Prerequisite: ITAL 112
Activity: Seminar
2.0 Course Units

ITAL 140 Intermediate Italian II
Italian 140 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of analogies and differences between your native culture and the Italian world. The course will move beyond stereotypical presentations of Italy and its people to concentrate on specific social issues together with cultural topics.
For BA Students: Last Language Course
One-term course offered either term
Prerequisite: ITAL 130
Activity: ITAL 130
1.0 Course Unit

ITAL 180 Italian Conversation
The course materials and nature of assignments and projects complement the Italian Studies curriculum by supporting the cultural content, linguistic functions, and types of assignments students may have already been exposed to in other Italian courses. This course will serve not only as a gateway to inspire students to take Italian Studies courses in the future, but will also accompany classes they may be taking simultaneously. The learning objectives of the works studied in this course will mirror and support the goals of the Italian Studies Curriculum while paying particular attention to oral expression, communication, and fostering a community of students of Italian both inside and outside the classroom. Knowledge of Italian Language at any level is prerequisite.
Taught by: Lillyrose Veneziano Broccia
Two terms. student may enter either term.
Activity: Seminar
0.5 Course Units

ITAL 201 Advanced Italian I
Italian 201 will focus on contemporary Italian culture following its development since the 1960s. Pertinent films, literary texts, articles, as well as material in other media will complement the analysis of films and allow in-depth discussion. The cultural material explored in the course will be also used as a basis for a review of linguistic structures and vocabulary. Prerequisite: Open to students who have satisfied the language requirement in Italian. ITAL 201 or equivalent is a prerequisite for all other courses taught in Italian at the 200/300 level. Audiovisual materials develop students' comprehension and production in Italian and enable them to function in an academic setting. Class work will center primarily on conversation to improve students' fluency, vocabulary, and accuracy in speaking. Homework will consist of research and writing assignments in written Italian. Additionally, students will be required to prepare presentations. Students will write a final essay.
For BA Students: Advanced Language Course
One-term course offered either term
Activity: Seminar
1.0 Course Unit
ITAL 202 Advanced Italian II
In Italian 202, students will strengthen their communication skills, while continuing to explore significant aspects of contemporary Italian culture and history. Students will take further steps towards being able to understand in depth and to contextualize authentic Italian documents. Films, songs, and a variety of readings, will be used as windows on particular historical periods, cultural movements, political issues, and social customs. They will serve as a tool to investigate the many facets of Italian identity and, at the same time, as a way to prepare those students who will continue their study of Italian literature and culture in higher-level courses. Prerequisite: Open to students who have completed ITAL 201. Please see the Undergraduate Chair if you have any questions. Students are expected to participate in conversations and all other class activities in order to improve their oral and written ability to narrate, express opinion, hypothesize, and discuss a variety of topics, using rich, appropriate vocabulary and grammar, and organizing well-structured discourses, be they oral presentations, weekly compositions or the final essay. To reach these goals, speaking, listening, reading and writing activities -- role plays, discussions, oral presentations, journals, grammar reviews -- will be based on audio-visual material and written texts and/or proposed by the students themselves, based on their independent explorations and research.
For BA Students: Advanced Language Course
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ITAL 203 Masterpieces-Italian Literature
This course surveys the history of Italian literature through its major masterpieces. Beginning with Dante's Divine Comedy, Petrarch's love poems, and Boccaccio's Decameron, we will follow the development of Italian literary tradition through the Renaissance (Machiavelli's political theory and Ariosto's epic poem), and then through Romanticism (Leopardi's lyric poetry and Manzoni's historical novel), up to the 20th century (from D'annunzio's sensual poetry to Calvino's post-modern short stories). The course will provide students with the tools needed for analyzing the texts in terms of both form and content, and for framing them in their historical, cultural, and socio-political context. Classes and readings will be in Italian. ITAL 203 is mandatory for Minors in Italian Literature and Majors in Italian Literature. If necessary, ITAL 201 can be taken at the same time as ITAL 203. Prerequisite: Open to students who have completed ITAL 201 or equivalent.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: COML 203
Prerequisite: ITAL 201
Activity: Seminar
1.0 Course Unit

ITAL 204 Italian History on Screen: How Movies Tell the Story of Italy
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy's rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy. Lectures and readings are in English.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: CIMS 206, COML 206
Activity: Seminar
1.0 Course Unit

ITAL 205 Sicily on Page and Screen
What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore's Cinema paradiso and Coppola's The Godfather II, and read texts such as Lampedusa's The Leopard and Maraini's Bagheria. This course aims to increase students' understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others', cultural frameworks.
Taught by: Broccia
Course usually offered summer term only
Also Offered As: CIMS 204, COML 208, ENGL 083
Activity: Seminar
1.0 Course Unit
Notes: Course taught in English. Course Materials in English. There are no prerequisites for this course.
ITAL 208 Business Italian
The course is conducted entirely in Italian and should be taken after completion of Italian 201 or equivalent. It is designed to enable students to acquire language proficiency in the current Italian business and labor world. Business terminology will be used in specific business situations such as banking, trade, communications, etc. The course will examine Italian business practices, cultural differences such as the attitude towards money, work, leisure and consumerism through websites, newspaper and magazine articles and video clips. Students will learn to read business publications, write and compose business texts, and participate in business-related conversations. Additionally, guest lecturers from the local business world with ties to Italy will provide students with information about internship and job opportunities and the knowledge necessary to navigate international and Italian commercial routes. All reading and lectures in Italian. Prerequisite: Open to students who have completed ITAL 201 or equivalent.

ITAL 257 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema 'the strongest weapon.' This course explores the world of 'fascist' cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles. All readings and discussions in English.

ITAL 333 Dante's Divine Comedy
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in their original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required. When crosslisted with ENGL 323, this is a Benjamin Franklin Seminar.

ITAL 511 A Black Seed (He) Sowed: An Introduction to Paleography & History of Books
Writing and reading are common actions we do every day. Nonetheless they have changed over the centuries, and a fourteenth century manuscript appears to us very different from a Penguin book. The impact of cultural movements such as Humanism, and of historical events, such as the Reformation, reshaped the making of books, and therefore the way of reading them. The course will provide students with an introduction to the history of the book, including elements of paleography, and through direct contact with the subjects of the class: manuscripts and books. Furthermore, a section of the course will focus on digital resources, in order to make students familiar with ongoing projects related to the history of book collections (including the 'Philosophical Libraries' and the 'Provenance' projects, based at the Scuola Normale Superiore in Pisa and at Penn). The course will be conducted in English; a basic knowledge of Latin is desirable but not required. The class will meet in Van Pelt.

ITAL 531 Dante's Commedia I
Please check the department's website for the course description at: http://www.sas.upenn.edu/italians/graduate/courses Dante Visualizing: Dante Visualizing and Dante Visualized. Dante's Commedia has inspired art, but at the same time art is present within the Comedy itself, through images, metaphors, descriptions and even more concrete examples. This course aims at discussing these aspects, taking into consideration also the philosophical, political and religious background of these motifs. While analyzing images in and from the Commedia, we will look at illustrations and artistic interpretations, spanning from medieval illuminations and Renaissance printed books (mainly from Van Pelt Library) to contemporary examples, and focusing on artists such as Giotto, Botticelli, Michelangelo, Blake, Dore, and Dali. The course will be taught in English.

ITAL 540 Plato and Aristotle in the Renaissance
In one of the most evocative frescoes of the Renaissance, Raphael juxtaposes Plato and Aristotle. The pairing would seem obvious, since the two thinkers had been for centuries symbols of philosophy and wisdom. But only the recent revival of Plato, begun in the mid-fifteenth century, had allowed Latin West to gain a better understanding of Platonic philosophy and therefore to compare Plato's doctrines directly to those of Aristotle. Were master and disciple in harmony? And if not, which of the two should be favored? Such questions were less innocent than one might think, and the answers to them had implications for philosophy, theology, speculation on the natural world, and even politics. The course will offer an overview of Renaissance philosophy and culture by focusing on the different ways in which Plato and Aristotle were read, interpreted and exploited between the fifteenth and seventeenth centuries. The course will be conducted in English; a basic knowledge of Latin is desirable but not required.

ITAL 541 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance
In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Ficino, Pico della Mirandola Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructors. It counts toward the bachelor’s minor in Global Medieval Studies and the graduate certificate in Global and Medieval Renaissance Studies. Undergraduates must obtain permission from instructor to enroll.

ITAL 594 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as ‘foundational.’ Very often these texts have been epics or romances designated ‘medieval,’ that is, associated with the period in which specific vernaculars or ‘mother tongues’ first emerged. France and Germany, for example, have long fought over who ‘owns’ the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time those two countries go to war. In this course we will thus study both a range of ‘medieval’ texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow’s great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin’s Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called ‘Hindu epics’ can also be a delicate matter. Some ‘uses of the medieval’ have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark; is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory’s Morte Darthur was chosen to provide scenes for the queen’s new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Itinerary models, which do not observe national boundaries, might be explored, and also the cultural history of watercourses, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.

Theoretical and practical aspects of academic research. Please check the department's website for the course description at: https://www.sas.upenn.edu/italians/courses
Course not offered every year
Also Offered As: COML 602, MUSC 604
Activity: Seminar
1.0 Course Unit

ITAL 641 Topics in Southern Renaissance Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be 'Figure and Ground.' We owe the Renaissance picture more than the idealized human figure. For figure, depends on ground, here defined in at least three senses: 1) the ground as the material preparation of the support; 2) the plane where figures anchor their place in the pictorial world; and 3) the field in and against which figuration occurs, namely the background. In this graduate seminar, we will attempt to discuss, debate, and formulate ideas and methods to interpret the Renaissance picture according to these three semantic areas of ground. We will begin with gold grounds in the fourteenth century and conclude with the darkened grounds of tenebrist painters such as Caravaggio. In addition to reading current art historical scholarship grappling with several 'turns' (material, global, ecocritical) as well as Anne Cheng's notion of 'ornamentalism' that draws from critical race and gender theory, we will also focus our attention on those Renaissance writers who described and prescribed the look of the picture in ways not usually accommodated by standard art historical approaches. Rather than recuperating the ground as an integral category, we will instead consider the acute dilemma of the ground's theoretical exception.

Kannada (KAND)

KAND 407 Beginning Kannada I
This is a systematic introduction to the Kannada language and culture for beginners. The course aims at developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Kannada script is introduced from the beginning and the language is presented in its socio-cultural context for achieving a meaningful and operational control of the language. Students acquire basic rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Swaminathan
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

KAND 408 Beginning Kannada II
This is a systematic introduction to the Kannada language and culture for beginners. The course aims at developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Kannada script is introduced from the beginning and the language is presented in its socio-cultural context for achieving a meaningful and operational control of the language. Students acquire basic rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Swaminathan
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center
KAND 427 Intermediate Kannada I
This course continues the study of the Kannada language and culture from where the beginners II course ended. The course continues developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Kannada script is learned in its socio-cultural context for achieving a meaningful and operational control of the language. Students acquire rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments. Prerequisite: Offered through the Penn Language Center.

For BA Students: Language Course
Taught by: Sundaram
Course usually offered in fall term
Prerequisite: KAND 408
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

KAND 428 Intermediate Kannada II
Students continue their study of Intermediate Kannada I, both in language and culture. The course aims at honing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Kannada script is learned in its socio-cultural context for achieving a meaningful and operational control of the language. Students acquire basic rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments. Prerequisite: Offered through Penn Language Center.

For BA Students: Last Language Course

Japanese (JPAN)

JPAN 001 Introduction to Spoken Japanese I
Intended for students who have no Japanese background. The major emphasis is on oral communication skills, although some reading and writing instructions are given. Japanese pop-culture will also be incorporated. Prerequisite: See LPS Course Guide. **This course does not fulfill the language requirement the College.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. **This course does not fulfill the language requirement in the College.

JPAN 002 Introduction to Spoken Japanese II
Although some reading/writing instruction is given, the major emphasis is on oral communication skill. Prerequisite: See LPS Course Guide. **This course does fulfill the language requirement the College.
Course usually offered in spring term
Prerequisite: JPAN 001
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. **This course does not fulfill the language requirement in the College.

JPAN 011 Beginning Japanese I
Intended for students who have no Japanese background. All four skills, speaking/listening/writing/reading, are equally emphasized. Hiragana/Katakana (Two sets of Japanese syllabic letters) and some Chinese characters (Kanji) are introduced. Textbooks: Genki I (Lesson 1- Lesson 7), Kanji: reproduction-approx.70/recognition-approx.110
For BA Students: Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

JPAN 012 Beginning Japanese II
A continuation of Beginning Japanese I, this course continues the introduction of the Japanese language. All four skills, speaking/listening/writing/reading, are equally emphasized. Hiragana/Katakana (Two sets of Japanese syllabic letters) and some Chinese characters (Kanji) are introduced. Textbooks: Genki I (Lesson 8- Lesson 12) and Genki II (Lesson 13- Lesson 14) Kanji: reproduction-approx.170/recognition-approx.250
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: JPAN 011
Activity: Lecture
1.0 Course Unit

JPAN 021 Intensive Beginning Japanese I
Intended for students who have little or no background in Japanese who wish to finish the language requirement in one year. This is equivalent to Beginning Japanese I & II in one semester, 2 CU. Textbooks: Genki I (Lesson 1-Lesson 12) and Genki II (Lesson 13-Lesson 14) Kanji: reproduction-approx.170/recognition-approx.250
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
2.0 Course Units

JPAN 022 Intensive Beginning Japanese II
A continuation of Intensive Beginning Japanese I, this class is equivalent to Beginning Japanese III and Beginning Japanese IV in one semester, 2CU, and completes the College language requirement. Textbooks: Genki II (Lesson 13- Lesson 23) and Tobira: Gate way to Advanced Japanese (Unit 1-Unit 3) Kanji: Approximately 140 new Kanji will be introduced. Overall Kanji knowledge will be about approx. 400.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: JPAN 012 OR JPAN 021
Activity: Lecture
2.0 Course Units
JPAN 111 Beginning Japanese III
This course is a continuation of Beginning Japanese II and focuses on the development of the elementary grammatical structures of the Japanese language through aural-oral practices. The course also aims to develop the four basic skills: listening, speaking, reading, and writing. The course also introduces aspects of Japanese culture and customs, knowledge that is necessary for behaving in a socio-culturally appropriate manner. Students will learn and practice skills to communicate in situations they might face in real life. Example topics and functions are travel, part-time job, work, asking for favors, asking permission, stating your intension/opinion, reporting what you heard, and various speech styles including Keigo (respectful speech). Textbooks: Genki II (Lesson 15-Lesson 21) will be covered, and around 100 new Kanji will be introduced. Overall kanji knowledge will be 286.

For BA Students: Language Course
Course usually offered in fall term
Prerequisite: JPAN 012 OR JPAN 021
Activity: Lecture
1.0 Course Unit

JPAN 112 Beginning Japanese IV
Prerequisites: Completion of JPAN 111 or the equivalent This course completes the College language requirement. Textbooks: Genki II (Lesson 22-Lesson 23) and Tobira: Gate way to Advanced Japanese (Unit 1-Unit 3) Kanji: Approximately 140 new Kanji will be introduced. Overall Kanji knowledge will be about approx. 400.

For BA Students: Language Course
Course usually offered in spring term
Prerequisite: JPAN 111
Activity: Lecture
1.0 Course Unit

JPAN 211 Intermediate Japanese I
A continuation of Japanese language beyond the language requirement. Textbooks: Tobira: Gateway to Advanced Japanese (Unit 4-Unit 8) Kanji: reproduction-approx.400/recognition-approx.550

For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: JPAN 112 or JPAN 022
Activity: Lecture
1.0 Course Unit

JPAN 212 Intermediate Japanese II
A continuation of Japanese language at the intermediate level. Textbooks: Tobira: Gateway to Advanced Japanese (Unit 9-Unit 15) Kanji: reproduction-approx.470/recognition-approx.650

For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: JPAN 211
Activity: Lecture
1.0 Course Unit

JPAN 311 Intermediate Japanese III
This course is a continuation of Japanese language at the upper intermediate level, and authentic materials and video clips will be used. For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in fall term
Prerequisite: JPAN 212
Activity: Lecture
1.0 Course Unit

JPAN 312 Intermediate Japanese IV
PREREQUISITES Completion of JPAN 311 or the equivalent. Authentic materials and video clips will be used
For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in spring term
Prerequisite: JPAN 311
Activity: Lecture
1.0 Course Unit

JPAN 381 Japanese for the Professions

For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in spring term
Prerequisite: JPAN 212
Activity: Lecture
1.0 Course Unit

Notes: Offered through Penn Language Center.

JPAN 382 Japanese for the Professions II

For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in spring term
Prerequisite: JPAN 381
Activity: Lecture
1.0 Course Unit

Notes: Offered through the Penn Language Center

JPAN 411 Advanced Japanese I
Minimum 600 - 700 kanji knowledge is expected. A continuation of Japanese language beyond the intermediate level.

For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: JPAN 312 OR JPAN 382
Activity: Lecture
1.0 Course Unit

JPAN 412 Advanced Japanese II
A continuation of Japanese language at the advanced level. Authentic materials and video clips will be used.

For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: JPAN 411
Activity: Lecture
1.0 Course Unit
JPAN 481 Advanced Japanese for Proficiency I
This course is for students with an advanced background in Japanese, who are interested in taking at least the Level 2 Japanese Proficiency Test. Solid grammar, an extensive vocabulary, and the knowledge of at least 800-900 Chinese characters is required. This course is not continuous with any existing intermediate or advanced-level Japanese course; therefore, your grade from any of those courses does not qualify you to take this class. Eligibility will be determined through an interview and placement test taken in the first meeting. All students who take this course are required to take the Japanese Proficiency Test in December. Since the JLPT is administered in December every year, if you wish to fully prepare for the test, the instructor strongly recommends that you take Advanced Proficiency II in the same calendar year. For example, if you plan to take the test in December, take Advanced Proficiency II the prior spring and take Advanced Proficiency I in the fall. Different from other courses, this full-year course begins in the spring and ends in the fall, because the test is given in December. However, participation in 482 is optional.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: JPAN 312 OR JPAN 382
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

JPAN 482 Advanced Japanese for Proficiency II
This course is for students with an advanced-low or advanced-mid background in Japanese, aiming to strengthen the four language skills (speaking, reading, writing, and listening) and to deepen their understanding of Japanese culture. The class will use authentic Japanese through media, such as newspapers, television, and articles, regarding Japanese culture and society as well as current news. Students will narrate, describe, and express their opinions with details, examples, and strong reasoning, using sophisticated terms and phrases related such topics. Prerequisite: Japanese proficiency test and permission of instructor. Offered through the Penn Language Center.
For BA Students: Advanced Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

JPAN 491 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.
For BA Students: Advanced Language Course
Taught by: Chance, L.
Course usually offered in fall term
Also Offered As: EALC 251, EALC 651
Prerequisite: JPAN 212
Activity: Lecture
1.0 Course Unit

JPAN 511 Readings in Advanced Japanese
Readings in advanced literary and journalistic texts written in modern Japanese.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: JPAN 412
Activity: Lecture
1.0 Course Unit

JPAN 512 Readings Advanced Japanese II
Readings in advanced literary and journalistic texts written in modern Japanese.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: JPAN 511
Activity: Lecture
1.0 Course Unit

JPAN 515 Japanese-English Translation
In this course, students learn basic techniques and skills in translation through hands-on practices. Depending on the interests of enrolled students, both literary and non-literary texts are drawn from a wide range of fields, including popular culture (e.g. manga, animation, film, game, music, and short story), religion, law, and medicine. As students read papers pertinent to principles and problems of translation from Japanese to English, they acquire practical experience in translation tasks and approaches, learn cultural and communicative differences between Japanese and English, and familiarize themselves with ethics and resources.
Taught by: Nishimura
Course usually offered in fall term
Prerequisite: JPAN 412
Activity: Lecture
1.0 Course Unit

Jewish Studies Program (JWST)

JWST 026 Jews and China: Views from Two Perspectives
Jews in China???? Who knew???? The history of the Jews in China, both modern and medieval, is an unexpected and fascinating case of cultural exchange. Even earlier than the 10th century, Jewish trader from India or Persia on the Silk Road, settled in Kaifeng, the capital of the Northern Song Dynasty, and established a Jewish community that lasted through the nineteenth century. In the mid-nineteenth century, Jewish merchants, mainly from Iraq, often via India, arrived in China and played a major role in the building of modern Shanghai. After 1898, Jews from Russia settled in the northern Chinese city of Harbin, first as traders and later as refugees from the Bolshevik Revolution and Russian Civil War. In the first decades of the twentieth century, a few Jews from Poland and Russia visited China as tourists, drawn by a combination of curiosity about the cultural exoticism of a truly foreign culture and an affinity that Polish Jewish socialists and communists felt as these political movements began to emerge in China. During World War II, Shanghai served as a port of refuge for Jews from Central Europe. In this freshman seminar, we will explore how these Jewish traders, travelers, and refugees responded to and represented China in their writings. We will also read works by their Chinese contemporaries and others to see the responses to and perceptions of these Jews. We will ask questions about cultural translation: How do exchanges between languages, religions, and cultures affect the identities of individuals and communities? What commonalities and differences between these people emerge?
Taught by: Hellerstein
Course not offered every year
Also Offered As: GRMN 026
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar
JWST 031 Beginning Yiddish I
Yiddish is a 1000-year-old language with a rich cultural heritage. YDSH 101, the first in the Beginning Yiddish language series, introduces the student who has no previous knowledge of the language to the skills of reading, writing, and speaking Yiddish. Starting with the alphabet, students study grammar, enriched by cultural materials such as song, literature, folklore, and film, as well as the course s on-line Blackboard site, to acquire basic competency. By the end of the first semester, students will be able to engage in simple conversations in the present tense, know common greetings and expressions, and read simple texts, including literature, newspapers, songs, and letters. Students are encouraged to continue with YDSH 102 / JWST 032 / YDSH 501 in the Spring. Four semesters of Yiddish fulfill the Penn Language Requirement. For BA Students: Language Course
Course usually offered in fall term
Also Offered As: YDSH 101, YDSH 501
Activity: Lecture
1.0 Course Unit

JWST 032 Beginning Yiddish II
In this course, you can continue to develop basic reading, writing and speaking skills. Discover treasures of Yiddish culture: songs, literature, folklore, and films.
For BA Students: Language Course
Course usually offered in spring term
Also Offered As: YDSH 102, YDSH 502
Prerequisite: JWST 031
Activity: Lecture
1.0 Course Unit

JWST 033 Intermediate Yiddish I
A continuation of JWST 032/ YDSH 102, Beginning Yiddish II, this course develops the skills of reading, writing, and speaking Yiddish on the intermediate level through the study of grammar and cultural materials, such as literature, newspapers, films, songs, radio programs.
For BA Students: Language Course
Taught by: Hellerstein
Course usually offered in fall term
Also Offered As: YDSH 103, YDSH 503
Prerequisite: GRMN 402
Activity: Lecture
1.0 Course Unit

JWST 034 Intermediate Yiddish II
Continuation of JWST 033; emphases in reading texts and conversation.
For BA Students: Last Language Course
Taught by: Hellerstein
Course usually offered in spring term
Also Offered As: YDSH 104, YDSH 504
Prerequisite: GRMN 403
Activity: Lecture
1.0 Course Unit

JWST 041 Israel in Middle East
Also Offered As: NELC 034
Activity: Seminar
1.0 Course Unit

JWST 051 Elementary Modern Hebrew I
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew. A grade of B- or higher is needed to continue in the language.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 051, HEBR 651
Activity: Lecture
1.0 Course Unit

JWST 052 Elementary Modern Hebrew II
A continuation of first semester Elementary Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 052, HEBR 652
Prerequisite: HEBR 051
Activity: Lecture
1.0 Course Unit

JWST 053 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 053, HEBR 653
Prerequisite: HEBR 052
Activity: Lecture
1.0 Course Unit

JWST 054 Intermediate Modern Hebrew IV
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Last Language Course
One-term course offered either term
Also Offered As: HEBR 054, HEBR 654
Prerequisite: HEBR 053
Activity: Lecture
1.0 Course Unit
JWST 059 Advanced Modern Hebrew: Conversation & Writing
In this course students are introduced to the vibrant world of contemporary Israeli culture by reading some of the best plays, poems, short stories and journalism published in Israel today. They also watch and analyze some of Israel’s most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and inter generational conflict, war and society, and the recent dynamic changes in Israel society. Students must have taken four semesters of Hebrew at Penn or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: HEBR 059, HEBR 552
Prerequisite: HEBR 054
Activity: Lecture
1.0 Course Unit

JWST 100 Themes Jewish Tradition: Iberian Conversos: Jew-Christian?
Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the ‘open’ and ‘closed’ in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.
For BA Students: History and Tradition Sector
Taught by: Ben-Amos/Dohrmann/Fishman
Course not offered every year
Also Offered As: FOLK 252, NELC 252, NELC 552, RELS 129
Activity: Seminar
1.0 Course Unit

JWST 102 Jewish Humor
In modern American popular culture Jewish humor is considered by Jews and non-Jews as a recognizable and distinct form of humor. Focusing upon folk-humor, in this course we will examine the history of this perception, and study different manifestation of Jewish humor as a particular case study of ethnic in general. Specific topics for analysis will be: humor in the Hebrew Bible, humor in Europe and in America, JAP and JAM jokes, Jewish tricksters and pranksters, Jewish humor in the Holocaust and Jewish humor in Israel. The term paper will be a project of Jewish jokes. For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: HEBR 059, HEBR 552
Prerequisite: HEBR 054
Activity: Lecture
1.0 Course Unit

JWST 103 The Messianic Impulse in Jewish History
Taught by: Ruderman
One-term course offered either term
Also Offered As: HIST 101
Activity: Seminar
1.0 Course Unit

JWST 122 Religions of the West
This course surveys the intertwined histories of Judaism, Christianity, and Islam. We will focus on the shared stories which connect these three traditions, and the ways in which communities distinguished themselves in such shared spaces. We will mostly survey literature, but will also address material culture and ritual practice, to seek answers to the following questions: How do myths emerge? What do stories do? What is the relationship between religion and myth-making? What is scripture, and what is its function in creating religious communities? How do communities remember and forget the past? Through which lenses and with which tools do we define ‘the West’?
For BA Students: History and Tradition Sector
Taught by: Durmaz
One-term course offered either term
Also Offered As: RELS 002
Activity: Lecture
1.0 Course Unit

JWST 126 Jewish Mysticism
Survey of major periods of development of mystical speculation and experience within Judaism. Mystical symbolism as a basis for theosophical interpretations of Torah, immanentist theologies, mystical ethics. Types of experiences and practices which were cultivated by Jewish mystics in order to achieve intimate communion with the Divine and to facilitate a sacred transformation of themselves and the world. Includes ‘Riders of the Chariot’, The Zohar (Book of Splendor), Lurianic Kabbalah, Hasidism.
Course not offered every year
Also Offered As: NELC 186, RELS 126
Activity: Lecture
1.0 Course Unit

JWST 128 Spirituality in Contemporary Israel
This course maps out spiritual and religious life in Israel today, ranging from state-supported orthodox communities to groups that practice alternative forms of spirituality. What role do tradition, custom and ritual practice play in the construction of contemporary Israeli identity? How does the State shape religious and spiritual life? What forms of spiritual life are emerging beyond orthodoxy? The course will explore these and other questions through the examination of various media including newspapers, movies, and online conversations with Israeli religious leaders and important figures in popular culture.
Taught by: Ben Lulu
Course offered fall; even-numbered years
Also Offered As: RELS 128
Activity: Lecture
1.0 Course Unit

JWST 130 American Jewish Experience
This course offers a comprehensive survey of American Jewish history from the colonial period to the present. It will cover the different waves of Jewish immigration to the United States and examine the construction of Jewish political, cultural, and religious life in America. Topics will include: American Judaism, the Jewish labor movement, Jewish politics and popular culture, and the responses of American Jews to the Holocaust and the State of Israel.
Taught by: Wenger
Course usually offered in fall term
Also Offered As: HIST 150, RELS 124
Activity: Lecture
1.0 Course Unit
JWST 131 How to Read the Bible
The aim of this course is to explore what the Bible means, and why it means such different things to different people. Why do people find different kinds of meaning in the Bible. Who is right in the struggle over its meaning, and how does one go about deciphering that meaning in the first place? Focusing on the book of Genesis, this seminar seeks to help students answer these questions by introducing some of the many ways in which the Bible has been read over the ages. exploring its meaning as understood by ancient Jews and Christians, modern secular scholars, contemporary fiction writers, feminist activists, philosophers and other kinds of interpreter.
Taught by: WEITZMAN
Also Offered As: ANCH 133, RELS 130
Activity: Seminar
1.0 Course Unit

JWST 132 The History of God
This course introduces the history of God as understood by modern scholars of religion. Why do people believe in gods in the first place? How did so many people come to believe that there was only one god, and how is that god different from earlier gods? How is the God of Judaism different from that venerated by Christians and Muslims. And what is the future of God in a world shaped by secularism, capitalism, and climate-change? This course will address these and other questions in light of anthropology, psychology, intellectual history, and other approaches that scholars uses to illumine religion.
Taught by: Weitzman
Course not offered every year
Also Offered As: ANCH 133, RELS 132
Activity: Seminar
1.0 Course Unit

JWST 136 Death and the Afterlife in Ancient Judaism and Christianity
This course surveys the development of concepts about death and the afterlife in Judaism and Christianity, exploring the cultural and socio-historical contexts of the formation of beliefs about heaven and hell, the end of the world, martyrdom, immortality, resurrection, and the problem of evil. Readings cover a broad range of ancient sources, including selections from the Hebrew Bible and New Testament, as well as other Jewish and Christian writings (e.g., ‘apocrypha,’ ‘pseudepigrapha,’ Dead Sea Scrolls, classical rabbinic literature, Church Fathers, ‘gnostic’ and ‘magical’ materials). In the process, this course introduces students to formative eras and ideas in the history of Judaism, Christianity, and Western culture.
One-term course offered either term
Also Offered As: RELS 136
Activity: Lecture
1.0 Course Unit

JWST 141 The Israeli Soul: Religion and Psychology in Modern Israel
This course aims to introduce what it means to be an Israeli today by exploring how Israeli identity relates to politics, religion, violence and trauma. Taught by an anthropologist, the course is focused on being Israeli not as a national identity but as a psychological experience, and aims to illumine the religious, cultural, social and political forces that are shaping that experience.
Taught by: Friedman-Peleg
Course not offered every year
Also Offered As: RELS 141
Activity: Seminar

Activity: Lecture
1.0 Course Unit

JWST 151 Great Books of Judaism (Fall 2018: Lifecycle in the Talmud)
The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision; bar/bat mitzva and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will also be provided.
For BA Students: Arts and Letters Sector

JWST 153 Jewish Literature in the Middle Ages in Translation
Course explores the cultural history of Jews in the lands of Islam from the time of Mohammed through the late 17th century (end of Ottoman expansion into Europe) –in Iraq, the Middle East, al-Andalus and the Ottoman Empire. Primary source documents (in English translation) illuminate minority-majority relations, internal Jewish tensions (e.g., Qaraism), and developments in scriptural exegesis, rabbinic law, philosophy, poetry, polemics, mysticism and liturgy. Graduate students have additional readings and meetings. Spring 2015
Taught by: Fishman
One-term course offered either term
Also Offered As: COML 257, NELC 158, NELC 458
Activity: Seminar
1.0 Course Unit
JWST 154 Modern Hebrew Literature and Film in Translation: Autobiography
This course examines cinematic and literary portrayals of childhood. While Israeli works constitute more than half of the course’s material, European film and fiction play comparative roles. Many of the works are placed, and therefore discussed, against a backdrop of national or historical conflicts. Nonetheless, private traumas (such as madness, abuse, or loss) or an adult’s longing for an idealized time are often the central foci of the stories. These issues and the nature of individual and collective memory will be discussed from a psychological point of view. Additionally, the course analyzes how film, poetry and prose use their respective languages to reconstruct the image of childhood; it discusses the authors and directors struggle to penetrate the psyche of a child and to retrieve fragments of past events.

JWST 157 Medieval and Early Modern Jewry
Follow the journey of one global diaspora over a millennium of cultural, intellectual, social, and religious change. From the rise of Islam in the seventh century to the separation of church and state in the seventeenth, Jewish people were intimate parts of, and at the same time utterly othered by, the many societies in which they lived. This basic duality is at the heart of this course, exploring how Jewish religion and culture evolved in relationship with Muslim and Christian majorities. Students will develop an understanding of the rich dynamism of premodern Judaism and Jewish life, with an emphasis on global diversity and internal differentiation as well as change over time. We will look for threads of continuity and moments of transformation, decode illustrative texts, images, and documents (in English), and ask how the Judaism that faced modernity had been shaped by a staggering array of different cultural circumstances after antiquity. The course includes attention to anti-Jewish phenomena like expulsion and blood libel, but also at coexistence and creative cultural synthesis, avoiding any simplistic narrative and asking about their legacy in the present day. It will look at the Jewish past from the inside, including less familiar dimensions including philosophy, magic, messianism, and family life.
For BA Students: History and Tradition Sector

JWST 158 Jews in the Modern World
This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected.

JWST 160 The Making of Scripture: From Revelation to Canon
The Bible as we know it is the product of a lengthy process of development, elaboration, contest, and debate. Rather than a foregone conclusion, the process by which the texts and traditions within the bible, and the status ascribed to them, was turbulent and uncertain. This course examines that process, examining the Bible, traditions and communities from the Second Temple Period - such as the Dead Sea Scrolls and community - that rewrote, reconsidered, revised, or rejected now well-recognized figures and stories, and constructed distinct ideas of what was considered scripture and how it should be approached. Even as the bible began to resemble the corpus as we now know it, interpretive strategies rendered it entirely different, such as Hellenistic Allegorizers, working from the platonic tradition, rabbinic readers who had an entirely different set of hermeneutics, early Christians, who offered different strategies for reading the ‘Old’ and ‘New’ Testaments alongside one another (and employing categories like ‘Old’ and ‘New,’ themselves constituting a new attitude and relationship to and between these texts), and lastly early Muslim readers, who embraced many of the stories in the Bible, altered others, and debated the status of these corpuses under Islam.

Freshman seminar.

JWST 171 Elementary Biblical Hebrew I
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 151, HEBR 451, JWST 471
Activity: Lecture
1.0 Course Unit
JWST 172 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some modern Hebrew. Prerequisite: If course requirement not met, permission of instructor required. For BA Students: Language Course Taught by: Carasik Course usually offered in fall term Also Offered As: HEBR 152, HEBR 452, JWST 472 Prerequisite: HEBR 151 Activity: Lecture 1.0 Course Unit

JWST 173 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills. Prerequisite: If course requirement not met, permission of instructor required. Successful completion of HEBR 152 or permission of the instructor. This course is the prerequisite for HEBR 154 (no one is ‘permitted’ into that semester; you must take the previous semester course). For BA Students: Language Course Taught by: Carasik Course usually offered in fall term Also Offered As: HEBR 153, HEBR 453, JWST 473 Prerequisite: HEBR 152 Activity: Lecture 1.0 Course Unit

JWST 207 Jews, Race and Religion
Contemporary Jewish identity exists at an uneasy cross-section of race, religion and ethnicity. This course aims to expose students to the diversity of Jewish experience through the lenses of race and religion, examining the various ways these categories intersect and complicate each other. How can the study of race and religion help us to understand the present and future of Jewish life? How do Jews figure in the study of race and race relations in North America and Israel? Of what relevance is the category of whiteness for understanding Jewish identity, and what does their association in the U.S. mask about Jews and Jewish life today? And what are the roles of Jews in the continuing struggle for racial justice now underway in the world? This course aims to address these questions in light of a range of intellectual perspectives and disciplinary approaches. It will be built around a series of weekly guest lectures by leading scholars of Jews, race and/or religion, and will include among the questions and topics that it explores opportunities to explore connections among scholarship, personal experience and activism. Taught by: Weitzman Course not offered every year Also Offered As: RELS 207 Activity: Seminar 1.0 Course Unit

JWST 213 The Religious Other
Course explores attitudes toward monotheists of other faiths, and claims made about these ‘religious Others’ in real and imagined encounters between Jews, Christians and Muslims from antiquity to the present. Strategies of ‘othering’ will be analyzed through an exploration of claims about the Other’s body, habits and beliefs, as found in works of scripture, law, theology, polemics, art, literature and reportage. Attention will be paid to myths about the other, inter-group violence, converts, cases of cross-cultural influence, notions of toleration, and perceptions of Others in contemporary life. Primary sources will be provided in English. Taught by: Fishman Course not offered every year Also Offered As: NELC 383 Activity: Seminar 1.0 Course Unit

One-term course offered either term Also Offered As: AFRC 215, HIST 216, URBS 220 Activity: Seminar 1.0 Course Unit

JWST 244 Miracles to Mindfulness
In 1902, the most famous philosopher in America, William James, revolutionized the study of religion by analyzing religion as an experience rather than as a set of doctrines or scriptures. In this course, we will pick up the inquiry that James and scholars such as Sigmund Freud began by exploring new approaches to the science and philosophy of religious experience. We will invite a series of experts from a wide range of fields-neuroscience, psychoanalysis, phenomenology, psychology, anthropology, to name only a few—to present their cutting-edge research on the nature of religious experience. How can religious experience be studied? What does the research reveal about religious experience? And what can we learn from such experiences about the workings of the human mind and human society? The course has two components: 1) a discussion-centered mini-seminar from 3:30-5:00 will open consideration of the subject with help from relevant readings 2) a guest lecture series every Tuesday from 5:00-6:30. Many angles or in light featuring leading scholars who approach religious experience from different disciplinary angles or in light of different questions. Taught by: Steve Weitzman, Phil Webster Also Offered As: RELS 244 Activity: Lecture 1.0 Course Unit

2020-21 Catalog | Generated 09/18/20
**JWST 249 Ultimate Meanings**

Does life have some ultimate meaning? In their search for an answer to this question, people tell stories—stories about the creation of the world, about great human beings confronted with the mysteries of existence, about what happens to people after death. To explore the role of stories in finding meaning in life, we will focus on some of the most meaningful stories ever composed: the biblical stories of Adam and Eve, Abraham and his family, the Exodus, Job and his friends, and the life and death of Jesus. One of our goals is to try to retrieve the original meaning of these narratives, what their authors intended, but we will also explore what they have come to mean for readers in our own day for believers and skeptics, scientists and artists, fundamentalists and feminists.

**JWST 255 The Bible in Translation**

This course introduces students to one specific Book of the Hebrew Bible. 'The Bible in Translation' involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. Although no prerequisites are required, this class is a perfect follow-up course to 'Intro to the Bible.'

Also Offered As: COML 380, NELC 250, NELC 550, RELS 224
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit.

**JWST 259 Introduction to Modern Hebrew Literature: Short Story Reinvented**

The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story reinvented, literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.

**JWST 260 Jewish Folklore**

The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms.

1.0 Course Unit

**JWST 261 Topics in Jewish-American Literature**

From the 1922 silent film 'Hungry Hearts' through the first 'talkie,' 'The Jazz Singer,' produced in 1927, and beyond 'Schindler's List,' Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's 'King Lear' to Sholom Aleichem's 'Teyve the Dairyman,' primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we 'read' literature and film, b) the various ways that the media of fiction, drama, and film 'translate' Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

**JWST 262 Jewish Literature in Translation**

The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year. Fall 2016 - REPRESENTATION OF THE HOLOCAUST IN LITERATURE AND FILM: This discussion-centered course is about the enormous difficulties faced by those who felt the urgent need to describe their own or others' experiences during the genocide of the European Jews, 1933-1945. We will explore the complex options they have faced as narrators, witnesses, allegorists, memoirists, scholars, teachers, writers and image-makers. Some linguistically (or visually) face the difficulty head on; most evade, avoid, repress, stutter or go silent, and agonize. One purpose of the course is for us to learn how to sympathize with the struggle of those in the latter group. This is not a history course, although the vicissitudes of historiography will be a frequent topic of conversation. Students will write frequent short papers, called position papers, due before class, in order to provide a basis for discussion. Students need not know anything about the Holocaust, although enrollees should consider historical reading over the summer.

JWST 266 Jewish Art
Jewish Art provides a survey of art made by and for Jews from antiquity to the present. It will begin with ancient synagogues and their decoration, followed by medieval manuscripts. After a discussion of early modern representation of Jews in Germany and Holland (esp. Rembrandt), it focuses most intently on the past two centuries in Europe, American, and finally Israel and on painting and sculpture as Jewish artists began to pursue artistic careers in the wider culture. No prerequisites or Jewish background assumed.

JWST 268 Women in Jewish Literature
'Jewish woman, who knows your life? In darkness you have come, in darkness do you go.' J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres -- devotion literature, memoir, fiction, and poetry -- we will study women's roles and selves, the relations of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotion literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinc commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English. All readings and lectures in English.

JWST 270 Middle Eastern Jews in Israel
This undergraduate seminar offers an in-depth look at the history of Middle Eastern and North African Jews, focusing in particular on their place in Israeli society and culture. It will begin with a historical background on the Jewish communities in Ottoman Palestine, and in the larger Ottoman Empire, Iran, and Morocco. We will then proceed to consider the engagement of these Jewish communities with Zionism, and with other conflicting forces, such as European colonialism, Arab nationalism, and Cosmopolitanism. We will learn about Jewish immigration from the region to Palestine/Israel in the period between 1880 to 1948, and about their exodus/expulsion post-1948. We will then explore in depth their settlement in Israel: governmental policies towards Jewish immigrants from the Islamic World, especially between the 1950s and the 1970s; their integration in Israeli society; identity politics in Israel (or, the 'invention' of 'Mizrahim'); Mizrahi political action; Mizrahi music, film, literature, and food culture; and Mizrahi attitudes towards Arabs, both within and outside Israel. Students will leave the class with a firm grasp of the social and cultural history of Middle Eastern Jews in Israel, and the issues facing third-generation Mizrahim in Israel today. Students will also be introduced to basic methods of inquiry in history, sociology, anthropology, and cultural studies. Students will engage with a mix of scholarly research, readings in original documents, film, literature, music, and some material and visual artifacts.
Taught by: Alon Tam

**JWST 277 Jewish American Literature**
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers 'immigrate' from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature. All readings and lectures in English.

One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**JWST 303 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews**
We imagine ancient Greece and Rome as the cradles of democracy and republicanism, early Judea as a pious theocracy, but monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). In this class, we will take a special look at kinship among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences. In all these cultures, the king was a polarizing figure in reality and in conception. On the one hand, some revered the monarch as ideal leader, and monarchy provided the language with which to describe and even imagine the very gods. On the other, monarchs were widely reviled in both theory and practice, from the Greek tyrants to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal and the worst form of government. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, human frailty, and utopianism.

**JWST 305 Jewish Diaspora in the Roman Empire**
Under the Roman Empire, Jewish communities developed and flourished especially in the cities of the Eastern Mediterranean, in Egypt, Syria, Asia Minor, Greece, Northern Africa, and Italy proper. In many of these cities, the Jews formed a considerable part of the population; they influenced the cultural, social, and political communal life and developed an identity that was distinctively different from that in Judea. In this seminar, we will trace Jewish life in the Diaspora under Roman rule. How did Jews and non-Jews interact? What was the legal status of Jewish communities under the Roman Empire? What caused conflicts and how were they solved? What can the history of Jewish Diaspora communities tell us about minorities in the Roman Empire in general? We will use literary texts, inscriptions, papyri, and archaeological material to answer these questions and many more.
Taught by: Wilker
Also Offered As: ANCH 305
Activity: Seminar
1.0 Course Unit

**JWST 320 Spirit and Law**
While accepting 'the yoke of the commandments’, Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law’s meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

**JWST 337 Jewish Magic: Defense Against the Dark Arts**
The Hebrew Bible legislates against magic and witchcraft. But Jewish literature is replete with demons, witches, spells and incantations. This course will examine the phenomenon of Jewish magic in the longue duree. We will explore a wide array of sources describing ancient Jewish magical practices, and attempt to reconstruct the various aspects of ancient Jewish magic. We will start with demonology and exorcism in biblical and Second Temple literature. Then we will examine rabbinic attitudes towards magic and sorcery and rabbinic magical recipes. We then turn to material artifacts: late antique Jewish amulets and magic bowls. Finally we will survey the large corpus of magical texts from the Cairo Geniza and Hebrew manuscripts of magic from the middle ages. During the course we will consider broader questions such as the relationships between magic and religion, the identity of the Jewish magicians and their clients, relationship between Jewish and contemporary non-Jewish magic, and the role of women in magical practice.

**JWST 359 Seminar in Modern Hebrew Literature**
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern ‘descendants,’ autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.

**JWST 471 Elementary Biblical Hebrew I**
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 151, HEBR 451, JWST 171
Prerequisite: For the second semester: Completion of the first semester or permission of the instructor
Activity: Lecture
1.0 Course Unit

**JWST 472 Elementary Biblical Hebrew II**
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some modern Hebrew. Prerequisite: If course requirement not met, permission of instructor required.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 152, HEBR 452, JWST 172
Prerequisite: HEBR 151
Activity: Lecture
1.0 Course Unit
JWST 473 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills. Prerequisite: If course requirement not met, permission of instructor required. Successful completion of HEBR 152 or permission of the instructor. This course is the prerequisite for HEBR 154 (no one is 'permitted' into that smester; you must take the previous semester course).
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 153, HEBR 453, JWST 173
Prerequisite: HEBR 152
Activity: Lecture
1.0 Course Unit

JWST 490 Topics in Jewish History
Reading and discussion course on selected topics in Jewish history.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

JWST 509 Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define ‘Jewish writing,’ in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation’s process and products.
Course not offered every year
Also Offered As: COML 509, GRMN 509, GSWS 509, YDSH 509
Activity: Seminar
1.0 Course Unit

JWST 520 Spirit and Law
While accepting ‘the yoke of the commandments’, Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law’s meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.
Taught by: Fishman
Course not offered every year
Also Offered As: JWST 320, NELC 454, RELS 520
Activity: Seminar
1.0 Course Unit

JWST 523 Studies in Medieval Jewish Culture
Through close reading of primary sources in the original Hebrew, participants in this seminar will explore historical circumstances that engaged and shaped medieval Jews in both Christian and Muslim lands, along with the enduring cultural projects that Jews themselves produced. Topics will include Geonica, Karaism, the encounter of Reason and Revelation; the Christian ‘Other’: the Muslim ‘Other’; legal codification; the Tosafist project; Rhineland Pietism; Minhag (custom); family life; the aesthetic dimension; Kabbalah; conversos; messianism. Students should be able to comfortably read unpointed Hebrew.
Taught by: Fishman
Course usually offered in fall term
Also Offered As: HEBR 583, RELS 523
Activity: Seminar
1.0 Course Unit

JWST 537 Translating Literature: Theory and Practice
Course not offered every year
Also Offered As: COML 519, GRMN 537
Activity: Seminar
1.0 Course Unit

JWST 553 Seminar in Rabbinic Literature
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor. Prerequisite: Proficiency in Hebrew and/or Greek recommended. Undergraduates need permission to enroll. May be repeated for credit.
Course usually offered in spring term
Also Offered As: HEBR 557, NELC 557
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit
JWST 565 Reading Benjamin Reading Kafka
Readings and discussions in English. Walter Benjamin's study of the works of Franz Kafka is as enlightening as it can be bewildering. Moving from philology to Marxism, metaphysics to messianism, Daoism to Talmud, this densely argued piece elliptically touches on almost all of Kafka's published works in just four short sections. This seminar proposes a line-by-line reading Benjamin's 1934 'Franz Kafka on the Tenth Anniversary of His Death' with an eye to its literary, philosophical and religious contexts as well as to the rich history of its intellectual reception. Reading Kafka's works as the essay evokes them, we will situate this piece with regard to Benjamin's other writings, the essay's interlocutors (Brod, Scholem, Lukacs, Brecht) and its most illustrious interpreters (Adorno, Arendt, Celan, Hamacher).
Taught by: Fleishman
Course not offered every year
Also Offered As: COML 565, GRMN 545
Activity: Seminar
1.0 Course Unit

JWST 582 Topics in Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of his works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.
Taught by: Weissberg
Course not offered every year
Also Offered As: ARTH 560, COML 582, GRMN 580, PHIL 480
Activity: Seminar
1.0 Course Unit

JWST 612 Hannah Arendt
The seminar will consider Hannah Arendt's early Jewish writings. It will then center on Arendt's major work, The Origins of Totalitarianism (in particular, the sections on 'Antisemitism' and 'Imperialism'). Finally, we will discuss Arendt's controversial study on Eichmann in Jerusalem.
Course not offered every year
Also Offered As: COML 612, GRMN 612
Activity: Seminar
1.0 Course Unit

JWST 657 Becoming Modern
Course not offered every year
Also Offered As: COML 657, GRMN 657
Activity: Seminar
1.0 Course Unit

JWST 659 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern 'descendants;' autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
Taught by: Gold
Course usually offered in spring term
Also Offered As: COML 359, JWST 359, NELC 359, NELC 659
Prerequisite: HEBR 059

1.0 Course Unit

Korean (KORN)

KORN 001 Spoken Korean I
This class is for those that have little to no knowledge of Korean. The main focus is the development of Korean communication skills by exploring a variety of everyday topics beyond school settings. Students will improve their Korean communication skills by engaging in a variety of interactive activities, role plays, and presentations. Class topics include, but are not limited to, introducing oneself, describing one's surroundings, discussing daily activities and past events, talking about common objects and people, etc. We will also introduce cultural topics in order to deepen students' understanding of Korea's culture and language. NOTE: This course does not count toward the language requirement or the EALC major or minor. Offered through the Penn Language Center.
Taught by: Lee
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
KORN 002 First-year Spoken Korean II
Offered through the Penn Language Center. A continuation of KORN 001, this course aims to further develop oral communication skills by exploring a variety of topics, such as shopping, hobbies, family, and future plans. Class activities include interactive tasks, role plays, and presentations. Cultural topics (including short & full-length movies) will also be incorporated in order to further deepen students’ understanding of Korea’s culture and language. Upon completion of the course, students will be able to comprehend and carry on basic conversations; exchange information on a variety of topics in the past, present, and future tenses; and achieve a proficiency level of Novice High based on the ACTFL (American Council on the Teaching of Foreign Languages) proficiency scale. NOTE: This course does not count toward the language requirement or the EALC major or minor.
Taught by: Lee
Course usually offered in spring term
Prerequisite: KORN 001
Activity: Lecture
1.0 Course Unit

KORN 011 Elementary Korean I
This course is designed for students who have little or no knowledge of Korean. This course aims to develop foundational reading, writing, listening, and speaking skills through meaningful communicative activities and tasks. Upon successful completion of this course, students should be able to comprehend and carry on simple daily conversations and create simple sentences in the past, present, and future tenses. Students will learn how to introduce themselves, describe their surroundings, talk about daily lives, friends and relatives, and talk about past and future events.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

KORN 012 Elementary Korean II
This is a continuation of KORN 011. This course aims to further develop the four language skills of students to the novice-high level by building on materials covered in KORN 011. Students will learn how to use three speech styles (polite formal, informal, and intimate) appropriately in a given context. Upon successful completion of this course, students should be able to handle simple and elementary needs of daily lives and talk (and write) about a variety of topics such as family, college life, birthday celebration, shopping, Korean food, etc.
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: KORN 011
Activity: Lecture
1.0 Course Unit

KORN 021 Intensive Elementary Korean I & II
This is an intensive Korean course that covers the material from Elementary Korean I and Elementary Korean II in an intensive format, designed for novice learners who have little or no knowledge of Korean. This course aims to develop a solid foundation for reading, writing, listening, and speaking skills through meaningful communicative activities and tasks in cultural context. Upon completion of the course, students should be able to handle simple and elementary needs of daily lives and be able to talk and write about a variety of topics such as mood and personalities, clothing, weather, illness, Korean food, etc. Students will also learn how to use three speech styles (polite formal, informal, and intimate) appropriately in a given context. Students are also expected to obtain the Novice High level of proficiency based on the ACTFL (American Council on the Teaching of Foreign Languages) proficiency scale. During the summer, this course will be given in an online format that provides a communicative learning environment through Adobe Connect and Canvas. Students will be required to view PowerPoint slide shows and do homework questions in Canvas before each class, and class time will be mostly spent on communicative activities. After class, students will practice four language skills with the online exercises on Canvas, class blogs, and Voice Thread. This online course requires access to a reliable computer with high-speed internet and good quality headsets with a microphone. This course is offered through the Penn Language Center.
Course usually offered summer term only
Activity: Lecture
2.0 Course Units

KORN 111 Intermediate Korean I
This is a continuation of Elementary Korean II. This course is designed to develop students’ Korean language proficiency to the intermediate-low level of the ACTFL Proficiency Guidelines. Authentic materials, as well as various student-centered activities that are highly contextualized in everyday interactions will be used. Upon completion of the course, students will be able to present and exchange information on a variety of topics such as weather, fashion, travel, mailing, housing, public transportation, and shopping.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: KORN 012
Activity: Lecture
1.0 Course Unit

KORN 112 Intermediate Korean II
This is a continuation of Intermediate Korean I. This course is designed to develop students’ Korean language proficiency to the intermediate-mid level of the ACTFL Proficiency Guidelines. This course expands student’s competence by dealing with more functions in various contexts that students can frequently encounter in everyday interactions. In order to prepare students for social contexts, students are encouraged to engage in conversations by personalizing the topics, functions or contexts. Students will perform in an interpersonal way by providing and obtaining information, expressing feelings and emotions, and exchanging opinions on a variety of topics such as birthday parties, recreation and hobbies, Korean holidays, marriage, cultural differences, education and jobs. This course completes the College language requirement.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: KORN 111
Activity: Lecture
1.0 Course Unit
KORN 131 Korean for Heritage Speakers I
This course is designed for heritage speakers who have a strong background in everyday Korean. This course focuses on enhancing linguistic accuracy (spelling, grammar, vocabulary, pronunciation) and fluency (idiomatic and figurative expressions, narrative structure, discursive practice) in both spoken and written Korean, as well as gaining a deeper understanding of Korean culture. Upon completion of the course, students will be able to express themselves more accurately and participate in Korea-related communities more meaningfully. This course and its subsequent course KORN 132 complete the College language requirement. Prerequisite: Restricted to students who have previous knowledge in Korean. Students are required to take the Korean placement test.
Taught by: Jung
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

KORN 132 Korean for Heritage Speakers II
This course is a continuation of Korean for Heritage Speakers I, and aims to further develop students’ linguistic and cultural competence by building on materials covered in that class. In addition to gaining a deeper understanding of Korean culture, the course focuses on enhancing linguistic accuracy and fluency in both spoken and written Korean. Particular emphasis will be placed on building a meaningful Korean-speaking community, as well as consolidation of grammar structures, and expansion and enhancement of vocabulary. Topics include preparing for a trip to Korea, finding housing, college culture in Korea, entertainment and participating in various social events. Upon completion of this course, students will be able to express themselves more accurately and participate in Korea-related communities more meaningfully. This course completes the College language requirement.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: KORN 131
Activity: Lecture
1.0 Course Unit

KORN 211 Advanced Korean I
This course aims to develop functional proficiency in Korean at the intermediate-high level. Students will develop competence in fluency, grammatical accuracy and socio-linguistic/cultural appropriateness through a variety of activities and assignments. In addition, students will learn to communicate using more sophisticated grammatical structures and advanced vocabulary on various topics. The development of each of the four language skills (speaking, listening, reading and writing) is equally emphasized.
For BA Students: Advanced Language Course
Taught by: Cho
Course usually offered in fall term
Prerequisite: KORN 112 OR KORN 132
Activity: Lecture
1.0 Course Unit

KORN 212 Advanced Korean II
This is a continuation of Advanced Korean I. Students continue to develop functional proficiency in Korean at the advanced-low level. The topics include literature, culture, Korean customs, and social issues in contemporary Korea.
For BA Students: Advanced Language Course
Taught by: Cho
Course usually offered in spring term
Prerequisite: KORN 211
Activity: Lecture
1.0 Course Unit

KORN 281 Business Communication in Korean
Offered through the Penn Language Center. This course is designed to help students improve their Korean language proficiency by learning essential communication skills necessary to engage in business in Korea. Students will also develop their knowledge of and competence in Korean business culture and practice. The course objectives include: (1) to learn essential business terms, advanced grammar structures and communication strategies in business transactions; (2) to learn Korean business customs and culture, work norms, and business etiquette that students need to successfully communicate in a Korean business context. Topics include job application, business correspondence and reports, discussion and presentation in business meetings, communication styles and strategies in business contexts, current business culture, etc.
Taught by: Cho
Course usually offered in fall term
Prerequisite: KORN 112 AND KORN 132
Activity: Lecture
1.0 Course Unit

KORN 311 Topics in Advanced Korean
This course aims to develop an in-depth understanding of Korean culture and society through the analysis of spoken and written Korean discourse. Students will engage with key sociolinguistic concepts of politeness, hierarchy, solidarity, power, age, and gender, and enhance their advanced vocabulary and grammar. Students will also develop their abilities in conversation management, self-presentation, socialization, and sense of socio-cultural appropriateness, and gain a better understanding of how native speakers’ cultural practices are reflected in language use and how interpersonal relationships are built and maintained through language.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: KORN 212
Activity: Lecture
1.0 Course Unit
KORN 331 Current Korean Media I
Offered through the Penn Language Center. This course aims to develop a deeper understanding of the contemporary Korean society through critical analysis of language use and viewpoints expressed in various types of media including the internet, TV, films and newspapers. This course will provide students with rich opportunities to relate what they have learned in previous Korean language courses to the larger context of Korean culture and society. The course is conducted entirely in Korean and utilizes both written and audiovisual materials to develop students' reading/listening comprehension and critical thinking. The course also involves in-depth class discussion and writing short compositions to enhance conversation and writing skills.
One-term course offered either term
Prerequisite: KORN 212
Activity: Lecture
1.0 Course Unit

KORN 332 Current Korean Media II
Offered through the Penn Language Center. Current Korean Media II aims at a deeper understanding of the contemporary Korean society, through critical analysis of language use and viewpoints expressed in various types of media including the Internet, TV, films, magazines and newspapers. This course will focus on cultural products and practices such as popular culture, media culture, and entertainment. By catering to the needs and interests of individual learners of Korean, the course will provide them with a rich opportunity to relate what they have learned in previous Korean language courses to the larger context of Korean culture and society. In addition, students will have an in-depth discussion on topics related to Korean society as well as Penn news. This course is conducted entirely in Korean.
Course usually offered in fall term
Prerequisite: KORN 331
Activity: Lecture
1.0 Course Unit

KORN 381 Business Korean I
Offered through the Penn Language Center. Business Korean I is designed for students who want to sharpen their Korean language skills to the advanced-high level by focusing their study on Korean business and economy. Students will learn business/economy-related terminologies and concepts. They will also take an in-depth look at the issues related to business practices and environment in Korea. Students will improve and refine their language skills through actively participating in discussions, research, and presentations.
For BA Students: Advanced Language Course
Taught by: Cho
Course not offered every year
Prerequisite: KORN 212
Activity: Lecture
1.0 Course Unit

KORN 382 Business Korean II
Offered through the Penn Language Center. A continuation of the material offered in KORN 381. Business Korean I. Students further develop their Korean language proficiency at the advanced-high level by studying case studies, participating in discussions, and doing research and giving presentations on the topic of current Korean business and economy.
For BA Students: Advanced Language Course
Taught by: Cho
Course not offered every year
Prerequisite: KORN 212
Activity: Lecture
1.0 Course Unit

KORN 381 Advanced Readings in Modern Korean I
This course is designed for advanced level students. Based on literary pieces in the form of short stories, essays, and novels, students are to gain an in-depth, multi-faceted and critical understanding of Korean people, society, and culture. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Korean writers; and 2) regular writing exercises. Some Korean films that are related to the topics of the reading text will be used.
For BA Students: Advanced Language Course
Taught by: Jung
Course not offered every year
Prerequisite: KORN 311
Activity: Lecture
1.0 Course Unit

KORN 382 Advanced Readings in Modern Korean II
This course allows development of creative and analytical thinking through introduction of more organized thematic topics such as family, human relationships, and the reflection of self-images, and individual's mental status while the society changes in time.
For BA Students: Advanced Language Course
Taught by: Jung
Course not offered every year
Prerequisite: KORN 311
Activity: Lecture
1.0 Course Unit

KORN 481 Advanced Business Korean I
Offered through the Penn Language Center. This course aims to further develop students' advanced language proficiency and simultaneously deepen their knowledge and understanding of specific areas related to Korean business and economy such as an expansion of business into Asian markets and globalization strategies. Through research, discussion and presentation on various case studies and other business-related materials, students will enhance their critical thinking skills and gain an in-depth perspective on issues related to contemporary Korean business operations and practices.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: KORN 311
Activity: Lecture
1.0 Course Unit

KORN 482 Advanced Business Korean II
Offered through the Penn Language Center. A continuation of the material offered in Advanced Business Korean I. Students continue to closely follow the current topics of business and financial markets of Korea by actively participating in discussions, research, and presentations.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: KORN 311
Activity: Lecture
1.0 Course Unit
KORN 511 Advanced Academic Korean I
This course aims to assist students who wish to improve their knowledge of the advanced Korean language skills required to conduct academic research. Students will critically read, analyze, and discuss academic and other relevant texts, written in either Korean or mixed scripts. Readings include, but are not limited to, academic journal articles and book chapters that are important in the field of each student’s research, as well as major primary sources, such as periodicals, government documents, and other authentic texts from the late nineteenth century to the present. Students will develop familiarity with these texts and a deeper understanding of academic writing styles in Korean. In addition, students will expand their proficiency in Sino-Korean vocabulary and Hanja (Chinese characters), both essential to developing their academic language skills in Korean. This course will be conducted in Korean.

Taught by: Lee
Course offered fall; even-numbered years
Prerequisite: KORN 432
Activity: Lecture
1.0 Course Unit

KORN 512 Adv Academic Korean II
This course aims to further develop and enhance the language and critical thinking skills required for conducting academic research in Korean studies or relevant disciplines. Through a historical lens, students will have the opportunity to explore a variety of topics, such as culture, gender, international relations, politics, the economy, and religion from early times to the nineteenth century. Students will continue to read critically, evaluate, analyze, and discuss these academic texts (both primary and secondary sources), written in Korean or mixed scripts, and will broaden and expand their repertoires of the Sino-Korean vocabulary and Hanja (Chinese characters) common in academic disciplines. Course materials will include academic journal articles, book chapters, and primary sources pertaining to the fields of each student’s research, as well as Korean historical movies and documentaries. This course will be conducted in Korean.

Taught by: Lee
Course offered fall; odd-numbered years
Prerequisite: KORN 432
Activity: Lecture
1.0 Course Unit

LARP 501 Studio I
The focus of this foundation studio is to explore ways of recording and representing landscape - with an emphasis on material, space, rhythm and measure - through a range of drawings and constructions. The studio attempts to create a sensibility toward landscape where the act of surveying a site is as much an imaginative endeavor as is the crafting of an artifact or the construction of a path in a landscape. Emphasis is placed on visual and manual skills in two-dimensional and three-dimensional constructions (drawing, fabrications, model-making, etc.), while developing ways to ‘see’ landscape.

Taught by: Faculty
Course usually offered in fall term
Activity: Studio
2.0 Course Units

LARP 502 Studio II
This foundation design studio explores the relationship among sites, drawings, models and the making of landscape architectural projects. Sites are fairly large in size and present a complex set of issues, including fragmentation, lack of access, and contamination. Through the design of a park, students test and refine the relationship among project concept, modes of visualization, and project formation (organizational and material). The objective for the studio is to develop an informed and imaginative response to the site in order to create new relationships among the site, its immediate edges and the larger neighborhood or region.

Taught by: M'Closkey/Faculty
Course usually offered in spring term
Prerequisite: LARP 501
Activity: Studio
2.0 Course Units

LARP 511 Workshop I: Ecology and Built Landscapes
This workshop explores a sequence of sites extending from the Atlantic Ocean to the Appalachian Mountains that illustrates the changing geology and topography of the regional physiographic provinces including the Atlantic Coastal Plain, Piedmont, and Valley and Ridge. In moving westward along the transect, field trips to natural areas and constructed sites will highlight the diversity of regional plant communities ranging from primary dune to salt marsh, serpentine Virginia pine-oak forest to seepage wetland, and more. Analysis of the inter-connections between the underlying geology, topography, hydrology, soils, vegetation, wildlife, and human interventions will reveal patterns reflecting process and demonstrate key ecological and cultural systems and processes through the production of field notebooks as well as large-scale measured drawings. Ultimately students will develop a vocabulary (recognition, identification and nomenclature) of the materials of landscape, its substance, its ecology, and its changing nature owing to place and time. NOTE: COURSE MEETS IN ASSIGNED CLASSROOM FROM 9-1PM. CLASS MEETING FROM 2-5PM IS DEDICATED TO FIELD WORK.

Taught by: Willig and Popowsky
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
LARP 512 Workshop II: Landform and Planting Design
Workshop II combines two of the most elemental tools in the practice of landscape architecture: landform and planting design. Grading - the shaping and sculpting of the landform - is both art and science, and thus Workshop II aims to provide an appreciation of landform as an evocative component in the design vocabulary as well as a critical tool in solving difficult design problems. The basic techniques and strategies of grading design (slopes, terraces, water management, grade change devices) will be introduced, practiced and reinforced, so that grading design becomes an integral part of the students' design approach. Lecture, field trips, modeling, in-class exercises, and group projects will be used. The Planting component provides students with a working overview of the principles and processes of planting design. Plants will be considered both as individual elements and as part of larger dynamic systems. The natural distribution of plants, concepts of plant community and successional patterns, and the relationship of planting an topography will be used as the initial framework for planting design. Planting design typologies will be examined as an outgrowth of these 'natural' patterns. The role of plants as a key element in the structural design of the landscape will be explored through a combination of modeling, plan and section drawing, temporal studies, writing, field trips and case studies. Emphasis will be placed on process and evolution: the temporality of planting (daily, seasonal and annual changes), establishment and maintenance of plantings, and the process of planting design. During the first week of May, a five-day field ecology course focuses on techniques of urban revitalization, sustainable land use, reclamation, and restoration. The field trips offer insight into the diversity of approaches to using plants to promote positive environmental change.
Taught by: Olgyay
Course usually offered in spring term
Prerequisite: LARP 533
Activity: Lecture
1.0 Course Unit

LARP 533 Media I: Drawing and Visualization
Drawing is the ability to experience deeply things we see and envision. It allows us, not only to represent things or images seen, but, to discover and construct space and depth on the two dimensions of drawing surface. Expanding the tools of drawing, this course presents inquiries into applied media providing a basis for envisioning the speculative and developing an economy of expression. Work will be closely related to work in Studio I. Students will be introduced to the formal syntax of drawing (line, contour, structure, texture, chiaroscuro), graphic grammar (orthographic, oblique, perspective projection drawings and free-hand sketching) alongside exercises in material expression (collage, assemblage).
Taught by: Faculty
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LARP 535 Theory I: The Culture of Nature
Landscape architecture, architecture and visual art are all mediations between nature and culture. This course is designed to help students form their own view regarding our relationship with the 'natural' world around us in an age of ecological crisis. To achieve this, the course provides a stimulating historical and contemporary survey of ideas of nature. We explore ways 'nature' has been understood mythically, theoretically, ideologically, philosophically, scientifically, and artistically through the ages, with an emphasis on contemporary culture. We survey the way in which the polarity of culture and nature has been historically constructed and more recently, deconstructed. The pedagogical philosophy of this course is that an appreciation of the broad pattern of history and the ideas that have shaped it are foundational to living a critical and ethical life and central to the process of making contemporary art, architecture, and landscape architecture.
Taught by: Weller
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LARP 540 Theory II: Landscape Architecture History and Theory
This course unfolds several contemporary issues that shape the profession, such as giving form to environmental values, balancing science and art, ecology and design, reconsidering the need for the beautiful vis-a-vis the many sites challenged by pollution and abuse. Among the topics of discussion, this course will also take into account how recent phenomena such as the late twentieth-century increase in world population, sprawl, and environmental pollution, and how these have changed the reality described by the very word 'nature' and have contributed to expand the domain of landscape architecture. The discussion of topics will integrate contemporary ideas and their roots in earlier theoretical formulation. The past will be presented as a way to illuminate, receive, and critique the present. Course objectives are to become familiar with the social and cultural processes that inform the landscape architectural discourse and to be able to discuss in an informed manner the impact of the latter upon design trends; to be able to trace the roots of contemporary ideas in earlier theoretical formulations; and to be able to think critically and to enhance synthesis and augmentation skills.
Taught by: Fabiani Giannetto
Course usually offered in spring term
Also Offered As: LARP 770
Activity: Lecture
1.0 Course Unit

LARP 542 Media II: Digital Visualization
Continuing the sequence of the Landscape Architecture media classes, this course will provide students with the techniques to explore and examine precision surface profiles and land forming strategies, in both physical and digital models. These models provide a basis to speculate on what processes and programs might be engendered or instigated. Rhino will be the primary modeling platform. Associated plug-ins of Grasshopper, Rhino Terrain, Sonic, and Bongo will help extend the toolset. GIS will facilitate the collection and analysis of extent data. The Adobe Creative Cloud will also be used for documenting and expressing modeling processes through static and time-based visualizations.
Taught by: VanDerSys
Course usually offered in spring term
Prerequisite: LARP 533
Activity: Lecture
1.0 Course Unit
LARP 543 Media III: Flows: Linear / Non-Linear
This course is the third in the media sequence and is required of all MLA students at the 600 level. This course engages the generative potential of the dynamic and temporal attributes of the landscape medium. Time-based visualizations are used to investigate landscape organizations shaped through the dynamic interplay of varying processes and their spatial consequences. Emphasis will parallel the LARP 601 on urban ecology and landscape systems. Taught by: VanDerSys/Faculty
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LARP 544 Media IV: Futures: Trends and Trajectories
This course is the fourth in the media sequence and is required of all MLA students at the 600 level. This course exposes students to parametric tools as mechanisms for analyzing and generating both predictable and emergent terrain dependent urban morphologies. Rather than inert lines of shapes, space infrastructure are visualized as products of force and flow. Emphasis will parallel the LARP 602 studio on forms of urbanization. This course is open to Landscape Architecture students only. Students outside of Landscape Architecture will need instructor permission to enroll in this course. Taught by: Freese
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

LARP 601 Studio III
This studio brings together both two-year and three-year MLA students for a landscape studio problem that works at a regional scale, as well as multiple design scales. LARP 601 - the Green Stimuli studio - emphasizes rigorous site analysis, the strategic organization of living material, and the potential of design to produce a wide range of effects. Studio problems are 'live' - local leaders and experts are actively trying to solve them, there is an audience for student work outside the University, and projects have the potential to stimulate debate and new directions. The Green Stimuli studio takes on design problems where soil, terrain, geology, mineral resources, climate, water, plants, wildlife, and living systems interactions are major drivers. Studio projects explore one or more of these dimensions in depth to reach high levels of design exploration, strategic thinking, technical resolution and physical expression. The studio's topics intersect with a broader universe of practical concerns, including land use, local and regional economies, real estate development and public policy, as well as philosophical and artistic questions about nature and ecology. The intent is that designed Green Stimuli make new connections between the material of landscape and the economic, infrastructural, scientific, social, cultural and creative attributes of a region. Taught by: Faculty
Course usually offered in fall term
Activity: Studio
2.0 Course Units

LARP 602 Studio IV
This studio is the fourth and final studio in the core sequence and is designed to introduce students to essential competencies related to contemporary problems in urban design. The studio operates in what have been referred to as 'global cities' - contexts in which there are significant pressures on the physical form of a metropolis from substantial population and economic growth (both ongoing and projected). These pressures induce considerable demands for the development of new contexts. The studio is focused on managing and negotiating these pressures through landscape-driven strategies capable of guiding and organizing this urbanization. Students develop individual design strategies through a process of mapping, modeling, scenario building and fieldwork that lead to both conceptual and physical proposals for the development of new urban districts and metropolitan agendas. Taught by: Marcinkoski/Faculty
Course usually offered in spring term
Activity: Studio
2.0 Course Units

LARP 611 Workshop III: Site Engineering and Water Management
Building upon the skills and concepts developed in Workshops I and II, this intermediate workshop focuses on technical aspects of site design, with an emphasis on landscape performance. Functional considerations related to landscapes and their associated systems - including circulation, drainage and stormwater management, site stabilization and remediation - will be explored as vital and integral components of landscape design, from concept to execution. Lectures, case studies, field trips, and focused design exercises will enable students to develop facility in the tools, processes and metrics by which landscape systems are designed, evaluated, built and maintained. In concert with the concurrent design studio, students will consider the means by which functional parameters can give rise to the conceptual, formal, and material characteristics of designed landscapes. Taught by: Faculty
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LARP 612 Workshop IV: Advanced Landscape Construction
Advanced Landscape Construction: The Art and Craft of Design Documentation and Detailing introduces students to the process of landscape documentation as means of strengthening design intent through careful material selection and articulation of form. The course builds upon Workshop III by expanding the concept of site systems to the full range of drawings, details, specifications, and contracts used by landscape designers in the creation of the man-made environment. The course features lectures, case studies and field walks, exploring documentation from initial concept through construction administration. Topics will include materials and their use in exterior environments, documentation phases and their role in a projects evolution and the art of detailing to ensure beautiful, durable landscapes that define cohesive design. Taught by: Burrell
Course usually offered in fall term
Prerequisite: LARP 611
Activity: Lecture
1.0 Course Unit
LARP 660 Fundamentals of Urban Design
This course is a requirement for students enrolled in Certificate in Urban Design and for Master of City Planning students enrolled in the Urban Design concentration. How should urban designers give shape to the city? What urban design methods could they apply? This course helps students acquire the principles that can inform urban design practice. It has three major pedagogical objectives. First, it helps students understand the contemporary city through a series urban design tools. Second, it covers both historical and modern urban design principles. Finally, it includes all the scales in which urban designers operate, ranging from the fundamentals of social interaction in public space, to the sustainability of the region.’ This course is open to other interested PennDesign students if there is space and with permission of the instructor.
Taught by: Lin, Zhongjie
Course usually offered in spring term
Also Offered As: CPLN 660
Activity: Studio
2.0 Course Units

LARP 685 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Taught by: Dean Steiner
Course usually offered in fall term
Also Offered As: ARCH 685, CPLN 685
Activity: Seminar
1.0 Course Unit

LARP 701 Studio V
These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouverneur, Marcinkoski, Mathur, M'Closkey, Neises, Olin, Pevzner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia. More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedito (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).

LARP 704 Urban Design Research Studio
This course is a requirement for students enrolled in the Certificate of Urban Design. The Urban Design Research Studio (UDRC) is a capstone educational experience open to students of architecture, planning, landscape architecture and historic preservation in PennDesign. The studio’s focus is how design intelligence can be applied to complex urban problems which are at once systemic and spatial. Reaching across scales and across disciplines the studio immerses students in the social, economic, political, ecological and aesthetic complexity of the contemporary city in a way that interweaves the speculative quality of the design process with the analytical and evidence-based empiricism of urban research. Interdisciplinary collaboration is the studio’s modus operandi and its purpose is to develop techniques and strategies by which contemporary cities can become not only metabolically more efficient but also more edifying of the human spirit in the 21st century. Acceptance into the studio is based on interview and portfolio with priority placements given to students enrolled in the Urban Design Certificate Program.
Taught by: Gouverneur
Course usually offered in spring term
Activity: Studio
2.0 Course Units

LARP 710 Implementation of Urban Design
This course is a requirement for students enrolled in the Certificate of Urban Design. With a focus on contemporary major cities this subject charts the various ways in which urban design is typically conceived, procured, administered and ultimately delivered. From the very conception of a project to its completion, the various methods and avenues through which contemporary cities are planned, designed, and constructed are examined from multiple perspectives so that students become familiar with the myriad issues and main actors involved in urban development. Though exemplary case studies the subject offers a comprehensive understanding of the complexities and contingencies of contemporary city making, placing a particular emphasis on the role of the urban designer as a practical, ethical and visionary agent of change.
This course may open to other interested PennDesign students if there is space and with permission of the instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

LARP 720 Topics in Representation
In these advanced representation courses the work extends to new ways of documenting and seeing landscape. These courses are open to all interested School of Design students who have previous drawing experience or have taken foundation studios. Recent topics have been: Traces and Inscriptions (spring 2013), instructors: Anuradha Mathur, Matthew Neff; Landscape Representation (fall annually), instructors: Valerio Morabito; Landscape Drawing (spring annually), instructor: Laurie Olin; Landscape Drawing (spring 2008), instructors: David Gouverneur, Trevor Lee; Shifting Landscapes: A Workshop in Representation (spring 2005, 2004), instructor: Anuradha Mathur; and The Agile Pencil and Its Constructs (spring 2004) instructor: Mei Wu.
Taught by: Faculty
One-term course offered either term
Also Offered As: FNAR 720
Prerequisite: LARP 501 OR LARP 533 OR LARP 601 OR ARCH 501 OR ARCH 532 OR ARCH 601
Activity: Seminar
1.0 Course Unit

LARP 730 Topics in Professional Practice
These seminar courses explore ideas and methods in current landscape architectural practice. They include instruction in professional procedures, office management, project development, contracts, and collaborative ventures. They include visits to construction sites, professional offices and archives. Recent topics have been: Transformational Leadership (fall 2015), instructor: Lucinda Sanders, Office Practice (spring 2003-2015) instructor: Lucinda Sanders.
Taught by: Sanders
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Fall 2016: course offering is limited to LARP majors or by permission of the instructor.

LARP 734 Designing a Green New Deal: From Concept to Program
This advanced social science and design seminar is about mobilizing expert knowledge to develop transformative policy ideas to make the Green New Deal come alive. We’ll look at cutting edge social science and design scholarship on the problems we’re trying to solve, and the successes and failures of past efforts at transformative policy. And we’ll focus in particular on the built environment. How might a Green New Deal make the physical changes to our infrastructures, homes, energy landscapes, transportation systems, public recreation amenities, care facilities, and more, in ways that slash carbon emissions, increase resiliency, and abolish inequalities of race, class, gender, and nation? That’s not a rhetorical question: in this class, we’ll assemble knowledge, get into teams, and come up with concrete proposals.
Taught by: Daniel Cohen and William Fleming
Also Offered As: SOCI 434
Activity: Seminar
1.0 Course Unit

LARP 738 Cultural Landscapes and Landscape Preservation
The course surveys and critically engages the field of cultural landscape studies. Over the semester, we will explore cultural landscape as a concept, theory and model of preservation and design practice; we will read cultural landscape historiography and creative non-fiction; we will examine a range of types (national parks, community gardens, designed landscapes, informal public spaces), and we will map the alternative preservation, planning and design methods that ground cultural landscape studies practically. Readings, class discussions, and projects will draw on cultural geography, environmental history, vernacular architecture, ecology, art, and writing.
Taught by: Randall Mason
Course not offered every year
Also Offered As: HSPV 538
Activity: Lecture
1.0 Course Unit
LARP 740 Topics in Digital Media
These courses offer advanced instruction in the uses and applications of various digital media, including Geographical Information Systems, 3D modeling, video, animation, and web-design. These courses are open to all interested School of Design students who already have a working knowledge of basic digital graphic techniques and with permission of the instructor. Recent topics have been: Simulated Natures (fall 2015, 2014), instructors Keith VanDerSys, Joshua Freese; Digital Fabrication (spring 2009-2013), instructor Keith VanDerSys; Non-Static Representation: Video, Animation, and Interactive Media (fall 2013, 2012), instructor: Todd Montgomery; Interoperable Terrains (fall 2008-2013), instructor: Keith Kaseman; Kino-Eye: Intro to Spatial Filmmaking (fall 2011, 2010), instructor: Richie Gelles; Geometry Clouds, Fluid Landscapes (fall 2002-2006), instructor: David Ruy; Tactical Surfaces / Topographic Modeling (fall 2002), instructor: Charles McGloughlin.
Taught by: Faculty
One-term course offered either term
Prerequisite: LARP 543
Activity: Lecture
1.0 Course Unit

LARP 741 Modeling Geographic Space
This course explores the nature and use of raster-oriented (i.e. image-based) Geographic Information Systems (GIS) for the analysis and synthesis of spatial patterns and processes. Previous experience in GIS is not required.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: CPLN 632
Activity: Lecture
1.0 Course Unit

LARP 743 Geospatial Software Design
The purpose of this course is to equip students with a selected set of advanced tools and techniques for the development and customization of geospatial data-processing capabilities. It is open to any student with experience equivalent to that of an entry-level class on GIS.
Taught by: Tomlin
Course usually offered in fall term
Also Offered As: CPLN 670
Activity: Seminar
1.0 Course Unit

LARP 745 Advanced Topics in GIS
This course offers students an opportunity to work closely with faculty, staff, local practitioners, and each other in conducting independent projects that involve the development and/or application of Geographic Information System (GIS) technology. The course is open to all students who can demonstrate sufficient experience, expertise, or initiative to pursue a successful term project.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: CPLN 680
Activity: Seminar
1.0 Course Unit

LARP 750 Topics in Construction, Horticulture and Planting Design
These courses explore relevant topics in construction, horticulture and planting design as they relate to contemporary landscape architecture. The aim is to supplement fundamental skills and ideas explored in the core curriculum workshops with more advanced, cutting-edge research, technology and case studies. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested School of Design students. Recent topics have been: Urban Horticulture and Planting Design (fall annually since 2009), instructor: David Ostrich; Detailing New Urban Landscapes (spring 2012, 2011), instructor: Tom Ryan; Building New Urban Landscapes, Construction, and Planting Design (fall 2009, 2008), instructor: Tom Ryan; Urban Horticulture: Designing and Managing Landscape Plantings in Stressful Environments (1998-2003), instructor: Paul Meyer; Advanced Planting Design, instructors: Rodney Robinson (2003-2009), Dennis McGlade (fall 2006), Sheila Brady; and Sustainable Large Scale Planting of Trees, Shrubs, Perennials and Grasses (fall 2001), instructor: Wolfgang Oehme. Taught by: Faculty
One-term course offered either term
Activity: Lecture
1.0 Course Unit

LARP 755 Arboretum Management I: Understanding Plants
In this course, students will learn about plants from an oraganismal perspective, an applied/practical perspective, an aesthetic perspective, an environmental perspective, and an evolutionary perspective. Utilizing the plant collection of the Morris Arboretum as a living laboratory and the expertise of arboretum staff, this course will bring students, novices and experts alike, to a better understanding of plants. Session topics integrate both theoretical and hands-on practical work. Course assessment will be based on weekly practical assignments and two exams. Please note that this course takes place at the Morris Arboretum in the Chestnut Hill section of Philadelphia and students are responsible for transporting themselves to and from the arboretum on their own for class each week. For further information about the course, students may contact Cynthia Skema (cskema@upenn.edu).
Taught by: Skema
Course usually offered in fall term
Activity: Laboratory
1.0 Course Unit
LARP 756 Arboretum Management II: Evaluating Public Gardens
This interdisciplinary course looks at public gardens as a whole, studying these public institutions and their performance in the four major services they undertake: research, horticultural display, conservation and education/outreach. Students, of any level or discipline, begin the course by learning what arboreta and botanic gardens are, how they function, and what role they fill in our society through a series of lecture sessions at the Morris Arboretum. For the remainder of the semester, the students take that knowledge into the field to apply what they have learned and evaluate some of the many public gardens in 'America's Garden Capital', the Philadelphia region, with expert instructors from the Morris Arboretum as guides. Course assessment will be based on one exam, and a series of essays pertaining to their garden evaluations. Garden evaluations and the written work can be tailored to a particular subject of interest to a student, if pertinent within the public garden realm. Please note that this course takes place at the Morris Arboretum in the Chestnut Hill section of Philadelphia and students are responsible for transporting themselves to and from the arboretum on their own or to other Philadelphia area public gardens as required for class each week. For further information about the course, students may contact Cynthia Skema (cskema@upenn.edu).
Taught by: Skema
Course usually offered in spring term
Activity: Laboratory
1.0 Course Unit

LARP 760 Topics in Ecological Design
These elective courses explore relevant topics in ecological design and new technologies as they relate to contemporary landscape architecture. The courses explore topics such as ecology, sustainability, habitat restoration, hydrology, green roof and green architecture technology, soil technology, and other techniques pertinent to the construction of ecologically dynamic, functioning landscapes. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested PennDesign students. Recent topics have been: Large-Scale Land Reclamation Projects (annually since 2005), instructor: William Young; Green Roof Systems (spring 2010-2014), instructor: Susan Weiler; Restoration Ecology (fall biennially since 2004), instructor: David Robertson; Sustainable Development: The Queen Elizabeth Olympic Park, London (fall 2012), instructor: John Hopkins; Ecological Economies and Infrastructure (spring 2012), instructor: John Hopkins; Contemporary Issues in Sustainability: The London 2012 Olympic Park and Other European Examples (fall 2011), instructor: John Hopkins; James Ludwig (spring 2004); Sustainable Landscape Design for Watershed Protection (fall 2008, 2006, 2005, 2004, 2003, 2002), instructor: Katrin Scholz-Barth; and Ecological Restoration in the Urban Context (spring 2002, 2001), instructor: Deborah Marton.
Taught by: Faculty
One-term course offered either term
Activity: Lecture
1.0 Course Unit

LARP 761 Urban Ecology
This course introduces students to the core concepts, processes, and vocabulary of contemporary urban ecology. It aims to provide a conceptual framework and grounding in an understanding of ecological processes, in order to empower students to develop and critique the function and performance of landscape interventions. Urban ecology describes the interaction of the built and natural environment, looking at both ecology in the city, as well as ecology of the city. Lectures, case studies, critical reading and design exercises will enable students to increase their ability to analyze and interpret ecological systems and processes. By analyzing the application of ecological concepts in the design management of urban landscapes, urban ecology will be explored as a dynamic, human-influenced system. Registration is limited to MLA students in the LARP 601 studio.
Taught by: Carlisle/Pevzner
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LARP 770 Theory II: Landscape Architecture History and Theory
This course unfolds several contemporary issues that shape the profession, such as giving form to environmental values, balancing science and art, ecology and design, reconsidering the need for the beautiful vis-a-vis the many sites challenged by pollution and abuse. Among the topics of discussion, this course will also take into account how recent phenomena such as the late twentieth-century increase in world population, sprawl, and environmental pollution, and how these have changed the reality described by the very word 'nature' and have contributed to expand the domain of landscape architecture. The discussion of topics will integrate contemporary ideas and their roots in earlier theoretical formulation. The past will be presented as a way to illuminate, receive, and critique the present. Course objectives are to become familiar with the social and cultural processes that inform the landscape architectural discourse and to be able to discuss in an informed manner the impact of the latter upon design trends; to be able to trace the roots of contemporary ideas in earlier theoretical formulations; and to be able to think critically and to enhance synthesis and augmentation skills.
Taught by: Fabiani Giannetto
Course usually offered in spring term
Also Offered As: LARP 540
Activity: Lecture
1.0 Course Unit

LARP 771 Seminar in American Architecture
An examination of a specific topic related to the history of American architecture and planning. Following introductory lectures, students participate through detailed reports and informal discussion. The topic under investigation varies each semester the seminar is offered.
Taught by: Aaron Wunsch
Course usually offered in spring term
Also Offered As: HSPV 620
Activity: Seminar
1.0 Course Unit
LARP 780 Topics in Theory and Design
These advanced seminars explore advanced ideas in contemporary landscape architectural design and theory. A special link is made between the analysis of built work and text to design practice and the making of projects. Topics include the intersections of art, nature and creativity; practices of analysis and criticism; ideas of urbanism and infrastructure; collaborative ventures and cross-disciplinarity; vision and visuality; and representational structures, both verbal and visual. These courses fulfill the Landscape Architecture Theory III requirement and are open to all interested School of Design students. Spring 2017: Environmental Readings. In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section. Recent topics have been: Classics Considered: The Craft and Criticism of Landscape Architecture (fall 2015), instructors: Laurie Olin, Raffaella Fabiani Giannetto; Designing with Risk (spring 2016, 2015), instructors: Matthijs Bouw, Ellen Neises (2015); WORK: Aspects and Topics in Landscape Architecture (spring 2016, 2015), instructor: Laurie Olin; Edge Operations (spring 2014), instructor: Meg Studer; Landscape Thinking Research Seminar (spring 2013), instructor: Richard Weller; Designed Ecologies (fall 2011-2013), instructor: Ellen Neises; Environment Regimes (spring 2013, fall 2011, 2010, 2009, spring 2007, 2006), instructor: Dilip da Cunha; Case Studies in Urbanism, Landscape and Design (spring 2004-2014) instructor: David Gouverneur; Landscape Production and Visual Culture (spring 2009), instructor: Claudia Taborda; Landscape and Globalization (spring 2010), instructor: Claudia Taborda; Concepts & Theories in Contemporary Landscape Architecture (fall 2008, 2007, 2006, 2004, 2003), instructor: Anita Berriozábal; Paradoxical Spaces (spring 2008), instructors: Linda Pollak and Sandro Marpillero; Contemporary European Landscape Architecture (fall 2007), instructor: Joseph Disponzio; Taught by: Faculty One-term course offered either term Activity: Seminar 1.0 Course Unit

LARP 781 Contemporary Urbanism
This course will expose students to a wide array of case studies in planning, urban design, and landscape architecture including notions of sustainable development, the interplay between open space and built form, the rehabilitation of existing areas as historic districts, commercial corridors, and the improvement of squatter settlements. Also, it will focus on city expansions and new towns, housing, mix-use developments, and areas of new centrality. The program will also address territorial planning, the improvement of open space systems, and site specific interventions of parks, plazas, streetscape and gardens. Cases will provide the proper ground for analysis and interpretation of issues related to the design and implementation of ‘good’ landscape and urban form. Class discussions will be complemented with short design exercises. We will also enjoy the presence of outstanding visiting lecturers who will share with us cutting-edge information, derived from their professional practice and research. Registration is limited to MLA students in the LARP 602 studio and to students in the Urban Design Certificate program. Taught by: Weller/Gouverneur Course usually offered in spring term Also Offered As: CPLN 673 Activity: Lecture 1.0 Course Unit

LARP 789 LARP Summer Institute: Intro to Design Languages (3-year students)
This one-week course is for entering three-year MLA students who do not have a background in architectural, or landscape architectural design or related design fields. The workshop introduces students to architectural terminology, concepts and conventions, as well as to basic analog and digital drawing techniques, in order to bring all students to a minimum level of proficiency, prior to the start of the more intensive Summer Institute coursework. Exemption from this requirement will be granted upon request, based on academic record, professional experience and admissions portfolio. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu. Taught by: Faculty Course usually offered summer term only Activity: Studio 0.0 Course Units Notes: Course fee: $500.00

LARP 790 LARP Summer Institute: Natural Systems (3-year Students)
This one-week session for entering three-year MLA students will provide an introduction to the varied physiographic provinces and associated plant communities of the greater Philadelphia region. Through a review of available mapping and on-site study we will characterize and consider the connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic. With a focus on plants students will begin to develop a familiarity with the local flora (native and non-native) including plant species identification, preferred growing conditions, and potential for use. Field trips will include visits to the Inner Coastal Plain and Piedmont. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu. Taught by: Willig Course usually offered summer term only Activity: Studio 0.0 Course Units Notes: Course fee: $500.00
LARP 791 LARP Summer Institute: Landscape Operations (3-year Students)
This one-week course, for entering three-year MLA students, introduces concepts and techniques for analyzing, representing, and operating on landform, the fundamental medium of landscape architecture. Students will learn representational and model-making techniques for conveying topography, and will describe a series of landscape interventions on a topographic surface. Through models and drawings, students will develop an appreciation for the spatial implications of landform, for landscape narrative, for the movement of water and people across the landscape, and for the operation of reshaping the ground. An introduction to the Fine Arts Library will also be included. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Faculty
Course usually offered summer term only
Activity: Studio
0.0 Course Units
Notes: Course fee: $500.00

LARP 792 LARP Summer Institute: Introduction to Digital Media (3-year Students)
This four-day introductory course is intended to enable students to orient themselves to digital media facilities, programs, and workflows. The course is focused around daily projects building up to a final pinup. Each daily project illustrates a different set of work paths between digital programs, as well as teaches students how to use different software applications key to the practice of landscape architecture today. The focus of this course is to enable students to understand what each digital software application offers to the landscape process, and how to build change and iteration into digital workflows. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Faculty
Course usually offered summer term only
Activity: Studio
0.0 Course Units
Notes: Course fee: $500.00

LARP 793 LARP Summer Institute: Landform and Grading Workshop
The reading and shaping of landform is an elemental tool in the practice of landscape architecture. The act of grading design - the shaping and sculpting of landform - is both art and science. This four-day session for entering two-year MLA students aims to provide an appreciation of landform as both an evocative component in the design vocabulary and as a critical tool in resolving difficult design problems. Basic techniques and strategies of grading design are introduced and reinforced, so that grading design becomes an integral part of the student’s design approach. This session is intended to provide a concise overview of the principles and process of landform and grading design, and is designed to prepare the entering two-year students for Workshop III. Course enrollment is by permit only. Please contact Darcy Van Buskirk at darcyv@design.upenn.edu.
Taught by: Olgyay
Course usually offered summer term only
Activity: Lecture
0.0 Course Units
Notes: Course fee: $500.00

LARP 794 LARP Summer Institute: Natural Systems (2-year students)
This five-day session for entering two-year MLA students will provide an introduction to the varied physiographic provinces and associated plant communities of the greater Philadelphia region. Through a review of available mapping and on-site study we will characterize and consider the connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic. With a focus on plants students will begin to develop a familiarity with the local flora (native and non-native) including plant species identification, preferred growing conditions and potential for use. Field trips will include visits to the Coastal Plan and Piedmont of New Jersey and Pennsylvania. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Willig
Course usually offered summer term only
Activity: Lecture
0.0 Course Units
Notes: Course fee: $500.00

LARP 795 LARP Summer Institute: Computing Introduction (2-year Students)
The Intro to Computing session introduces students to the facilities of digital media as the primary mode of design visual communication. The course provides a short, yet intensive, hands-on inquiry into the production and expression of digital media that is essential for all designers. Through a series of working labs, students learn various software applications and associated techniques to execute precise two-dimensional representations of three-dimensional concepts. Students also learn the PennDesign systems, network basics and computer lab procedures. In the Academic Writing session, students will also receive a basic introduction to research methods, research resources, academic writing, citation formats and standards expected by the School of Design. Course enrollment is by permit only. Please contact Darcy Van Buskirk at darcyv@design.upenn.edu.
Taught by: VanDerSys/Fleming
Course usually offered summer term only
Activity: Lecture
0.0 Course Units
Notes: Course fee: $500.00

LARP 796 Independent Studio
An independent studio may be undertaken in the final semester but is not required. The independent studio is intended to provide highly motivated students who have demonstrated their ability to work independently with the opportunity to pursue topics that extend the boundaries of the profession. For permission, students must prepare a written proposal in the preceding semester and apply for approval from the faculty. Details available in Landscape Architecture department office.
Taught by: Faculty
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit

LARP 999 Independent Study
An independent study may be taken for elective credit at any point during the degree program for a letter grade. For permission, students must prepare a written proposal in the preceding semester and obtain a Landscape Architecture faculty advisor to oversee their work. Details are available in the Landscape Architecture department office.
Taught by: Faculty
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit
Latin (LATN)

LATN 101 Elementary Latin I
An introduction to the Latin language for beginners. Students begin learning grammar and vocabulary, with practical exercises in reading in writing. By the end of the course students will be able to read and analyze simple Latin texts, including selected Roman inscriptions in the Penn Museum.
For BA Students: Language Course
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

LATN 102 Elementary Latin II
Prerequisite(s): LATN 101 or equivalent. Completes the introduction to the Latin language begun in 101. By the end of the course students will have a complete working knowledge of Latin grammar, a growing vocabulary, and experience in reading simple continuous texts.
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: LATN 101
Activity: Seminar
1.0 Course Unit

LATN 112 Intensive Elementary Latin
An introduction to the Latin language for beginners, with explanation of basic grammatical concepts and intensive exercises in reading and writing. Ideal for undergraduates or graduate students from Penn or elsewhere with some background in learning other languages, or who need to learn Latin rapidly. The course covers the first year of college-level Latin, equivalent to LATN 101 + 102 at more than twice the normal pace. This is an online course. 2 c.u. Students are not required to be in Philadelphia. Course activities will involve a series of intensive online exercises completed each day according the students own schedule, plus one daily video-linked session 5.30-7.00pm EST (Monday thru Thursday). The textbook is Learn to Read Latin (Keller & Russell; textbook only, not workbook). The instructor for summer 2020 is Daniel Mackey, a Ph.D. student in Classical Studies. For further information about the course, please contact Prof. James Ker (jker@sas.upenn.edu).
For BA Students: Language Course
Course usually offered summer term only
Activity: Seminar
2.0 Course Units

LATN 203 Intermediate Latin Prose
Prerequisite(s): LATN 102 or equivalent (such as placement score of 550). Introduction to continuous reading of unadapted works by Latin authors in prose(e.g., Cornelius Nepos, Cicero, Pliny), in combination with a thorough review of Latin grammar. By the end of the course students will have thorough familiarity with the grammar, vocabulary, and style and style of the selected authors, will be able to tackle previously unseen passages by them, and will be able to discuss questions of language and interpretation.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: LATN 102
Activity: Seminar
1.0 Course Unit

LATN 204 Intermediate Latin Poetry
Prerequisite(s): LATN 203 or equivalent (such as placement score of 600). Continuous reading of several Latin authors in poetry (e.g., Ovid, Virgil, Horace) as well as some more complex prose, in combination with ongoing review of Latin grammar. By the end of the course students will have thorough familiarity with the grammar, vocabulary, and style and style of the selected authors, will be able to tackle previously unseen passages by them, and will be able to discuss language and interpretation. Note: Completion of Latin 204 with C- or higher fulfills Penn's Foreign Language Requirement.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: LATN 203
Activity: Seminar
1.0 Course Unit

LATN 212 Intensive Intermediate Latin
An introduction to the basic history and conventions of Latin prose and poetry, with continuous readings from classical authors accompanied by grammar review and exercises. Ideal for undergraduates or graduate students from Penn or elsewhere who have completed the equivalent of one year Latin (e.g., LATN 112). The course covers the second year of college-level Latin, equivalent to LATN 203 + 204 at more than twice the normal pace. This is an online course. 2 c.u. Students are not required to be in Philadelphia. Course activities will involve a series of intensive online exercises completed each day according the students own schedule, plus one daily video-linked session 5.30-7.00pm EST (Monday thru Thursday). The focus of the course will be Romans and Carthaginians, combining readings on Hannibal and the second Punic war (mostly in prose, focusing on Cornelius Nepos Life of Hannibal) with readings from the story of Dido (mostly in poetry, focusing on Ovids Heroides). The instructor for summer 2020 is Zachary Elliott, a Ph.D. student in Classical Studies. For further information about the course, please contact Prof. James Ker (jker@sas.upenn.edu).
For BA Students: Last Language Course
Course usually offered summer term only
Activity: Seminar
2.0 Course Units

LATN 298 Study Abroad
This course code is assigned to a course taken abroad that lacks an equivalent course on the Penn roster.
Activity: Seminar
1.0 Course Unit
LATN 301 Latin Prose Composition
For this introduction to Latin prose composition we will be using Bradley's Arnold, Latin Prose Composition, edited and revised by J. F. Mountford, which offers a thorough grammar review and challenging exercises. The exercises will give you an active command of Latin syntax: you'll be asking 'how do I say X?' rather than 'what does this author mean by X?' This is an important step towards awareness of the variety of possible expressions for any given X. And awareness of this variety is one of the things that will help you appreciate an author's style. What advantage does a participle have over a clause? or vice versa? Why use an abstract noun rather than an indirect question? or vice versa? Gerund vs. gerund-replacing gerundive? Repraesentatio? We will also read passages from a variety of Latin prose authors with an eye to their style. My aim in this course, which is open to undergraduate and graduate students alike, is that your ability to read and appreciate Latin prose improve substantially.
Taught by: Damon
Course not offered every year
Also Offered As: LATN 501
Activity: Seminar
1.0 Course Unit

LATN 308 Latin Love Letters
In this course we look at an intersection between emotion and rhetoric, reading ancient theorists and practitioners in the art of love-letter writing. Readings will include Cicero, Ovid, Propertius, Horace, Seneca, and Petronius. 'Love' will include the full breadth of affections from intellectual friendship to erotic desire, and 'letters' will include the whole spectrum of written communication, both formal and informal. A special goal of this course will be to gently develop our speaking and writing skills in Latin. Final projects will be flexible, ranging from a traditional term-paper to creative experiments in speaking and writing Latin.
Taught by: Ker
Course not offered every year
Activity: Seminar
1.0 Course Unit

LATN 309 Triangulating Augustanism: Livy, Horace, and Ovid
What is a Roman? How does the rise of Augustus Caesar change the meaning of Romaness? In this course, we will read selections from the historian Livy and the poets Horace and Ovid as they try (and sometimes fail) to navigate and accommodate the new regime. Livy's prose history of Rome, Ab Urbe Condita, looks to the past for moral guidance and attempts to draw lessons for the imperial future. Horace's Odes veer from ironic to patriotic (and back again) as he works out the new reality and his place in it. Ovid's Fasti, written during the poet's exile from Rome, report the origins of Rome's sacred festival calendar. Through close readings of these three texts, this course will consider Augustanism from several angles and distances, and attempt to construct a richer picture of a complicated and vibrant period. Prerequisite: Reading knowledge of Latin or permission of instructor.
Taught by: Mulhern
One-term course offered either term
Activity: Seminar
1.0 Course Unit

LATN 310 Seneca, On the Brevity of Life and other essays
Seneca was the most important writer of Latin in the early imperial period. In addition to poetry, satire, and natural philosophy, he wrote ethical philosophy in the form of letters, dialogues, and essays. His works 'On the Brevity of Life' and 'On Leisure' speak both the ethical issues of his own time and those of many others, including our own. In this course we will read both these essays with the goals of becoming familiar with Seneca's thought and style of expression, both as an individual and as a writer representative of his age. Students will have the opportunity to respond to Seneca in the form of critical essays, essayistic or epistolary responses, or other forms of their choosing.
Taught by: Farrell Jr.
Activity: Seminar
1.0 Course Unit

LATN 311 Plague and Pestilence in Latin Literature
Plagues and pestilences were a common feature of life in the ancient world. As such, they fueled the literary imagination. Historians, doctors, poets, and others have left many accounts of diseases, both endemic and epidemic. This literature can be considered a kind of literary genre with its own conventions, literal and metaphorical frames of reference, and intertextual relations. We will focus on a few representative examples in Latin literature to read in the original, and will read Greek and Roman accounts in translation to gain familiarity with the broader context. Students will gain experience in reading upper-level Latin while broadening their knowledge of Latin literature and literary history.
Taught by: Farrell
Course not offered every year
Prerequisite: Completion of 200-level Latin sequence or high school equivalent
Activity: Seminar
1.0 Course Unit

LATN 399 Supervised Study in Latin Literature
This course is taken by students doing independent work with a faculty advisor, such as students approved to work on a senior research paper in pursuit of honors in the major.
Activity: Independent Study
1.0 Course Unit

LATN 501 Latin Prose Composition
For this introduction to Latin prose composition we will be using Bradley's Arnold, Latin Prose Composition, edited and revised by J. F. Mountford, which offers a thorough grammar review and challenging exercises. The exercises will give you an active command of Latin syntax: you'll be asking 'how do I say X?' rather than 'what does this author mean by X?' This is an important step towards awareness of the variety of possible expressions for any given X. And awareness of this variety is one of the things that will help you appreciate an author's style. What advantage does a participle have over a clause? or vice versa? Why use an abstract noun rather than an indirect question? or vice versa? Gerund vs. gerund-replacing gerundive? Repraesentatio? We will also read passages from a variety of Latin prose authors with an eye to their style. My aim in this course, which is open to undergraduate and graduate students alike, is that your ability to read and appreciate Latin prose improve substantially.
Taught by: Damon
Course not offered every year
Also Offered As: LATN 301
Activity: Seminar
1.0 Course Unit
LATN 540 The Latin Text: Language and Style
What do we need to read texts in Latin? In these courses we read just one prose text and one poetic text, or a very limited number of texts and passages, with a focus on language and formal analysis (such as diction, grammar, stylistics, metrics, rhetoric, textual criticism). A range of exercises will be used to develop this, including composition, lexical studies, recitation, memorization, exegesis, written close-readings, and sight-translation.
Course not offered every year
Activity: Seminar
1.0 Course Unit

LATN 541 Latin Literary History
In this course we survey an extensive range of readings in a variety of authors in both prose and poetry, and consider the problems and opportunities involved in literary history.
Course not offered every year
Activity: Seminar
1.0 Course Unit

LATN 600 Tacitus' Annals
In this seminar we will read Tacitus' Annals, a work replete with stirring history presented in a style that eschews complacency. Through careful study of this work and selected passages of its predecessor, the Histories, we will develop a richly detailed understanding of Tacitus' historiographical method, principles, and practice. Consideration of surviving epigraphic parallels will allow us to see a particularly important element of his historiographical practice, namely, his awareness of but deviation from the official record of events. Each class session will involve close reading of the text and student-led discussion of important features of Tacitus work. As a group project we will produce a variorum edition of the Annals for on-line publication. Final projects will take the form of papers suitable for presentation at the SCS Annual Meeting.
Topics will vary.
Taught by: Damon
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Topics will vary

LATN 603 Julio-Claudian Literature
The years between the principates of Augustus and Nero are commonly regarded as a 'fallow' period in Latin literary history. In fact, this is objectively untrue in terms of both the amount of literature produced during this time and in terms of its influence. If one considers the relationship between contemporary Latin and Greek literature or the evidence for increased institutional support of literature during this period, the sense of its importance increases. In this course we will study the formative aspects of literature culture during the regimes of Tiberius, Gaius, and Claudius and their decisive influence on the Latin and Greek literature of the subsequent Imperial Period.
Taught by: Farrell
Activity: Seminar
1.0 Course Unit

LATN 605 The Mostly Latin Epigram
In this seminar we will explore the themes and aesthetics of the Latin epigram, a genre (or is it?) best known for its brevity and wit but one whose precise nature is tantalizingly elusive. After orienting ourselves in the epigrams of Hellenistic Greek epigrammatists and late Republican authors like the so-called Neoterics (Catullus, Cinna, Calvus, Caesar), we will turn our attention to the poetry of Martial, whose accounts of Rome, its inhabitants, and their foibles exerted a profound influence on subsequent epigrammatists. Among the themes we will engage are: epigram as a genre; persona in tessellated textual collections; the interaction of refined and obscene language; and the artistic and intellectual implications of replication, anthology, and remix.
Taught by: Bret Mulligan
Activity: Seminar
1.0 Course Unit

LATN 607 Roman Humor and Invective
This seminar will explore Roman humor in epigram, iambic, oratory, and satire as a method of constructing and policing norms of sexuality, the body, and social identity. We will read from a wide range of authors including Catullus, Martial, Cicero, Quintilian, Petronius, and Juvenal, as well as texts that discuss or depict laughter and ridicule. Beyond focused analysis of the works at hand, we will evaluate modern theories of humor and laughter according to the ancient evidence and develop models for understanding Roman humor. In addition to weekly readings, students will be responsible for class presentations, contributing to works-in-progress workshops, and a final research paper.
Taught by: Brassel
Course not offered every year
Also Offered As: CLST 607
Activity: Seminar
1.0 Course Unit

LATN 999 Independent Study
For doctoral candidates.

Latin American & Latino Studies (LALS)

LALS 016 Topics in Literature
An introduction to Writing about Literature, with emphasis on a particular theme, genre, or period. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also Offered As: CIMS 015, CLST 019, ENGL 015, GSWS 017
Activity: Seminar
1.0 Course Unit
Notes: Freshman Seminar
LALS 060 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs' experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer Latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.
Taught by: Sternad Ponce de Leon
Course not offered every year
Also Offered As: ARTH 070, COML 070, ENGL 070, GSWS 060
Activity: Lecture
1.0 Course Unit

LALS 070 Colonial Latin America
The year 1492 was pivotal in the history of the world. It precipitated huge population movements within the Americas and across the Atlantic - a majority of them involuntary as in the case of indigenous and African people who were kidnapped and enslaved. It led to cataclysmic cultural upheavals, including the formation of new cultures in spaces inhabited by people of African, European and indigenous descent. This course explores the processes of destruction and creation in the region known today as Latin America in the period 1400 - 1800. Class readings are primary sources and provide opportunities to learn methods of source analysis in contexts marked by radically asymmetrical power relationships.
For BA Students: History and Tradition Sector
Taught by: Norton
Course usually offered in fall term

Activity: Recitation
1.0 Course Unit
Notes: Fulfills History & Tradition Distribution Requirement

LALS 071 Modern Latin America, 1808-Present
This course examines central themes of Latin American history, from independence to the present. It engages a hemispheric and global approach to understand the economic and social transformations of the region. We will explore the anti-imperial struggles, revolutions, social movements, and global economic crises that have given rise to new national projects for development, or have frustrated the realization of such goals. Taking a historical perspective, we ask: What triggers imperial breakdown? How did slaves navigate the boundary between freedom and bondage? Was the Mexican Revolution revolutionary? How did the Great Depression lead to the rise of state-led development? In what ways have citizens mobilized for equality, a decent standard of living, and cultural inclusion? And what future paths will the region take given uneasy export markets and current political uncertainty?
For BA Students: History and Tradition Sector
Taught by: Teixeira
Course usually offered in spring term
Also Offered As: HIST 071
Activity: Recitation
1.0 Course Unit

LALS 072 Introduction to Latin American and Latino Studies
Designed to introduce students to the interdisciplinary field of Latin American and Latino Studies, this is a seminar oriented toward first and second year students. Readings will range widely, from scholarly work on the colonial world that followed from and pushed back against the 'conquest'; to literary and artistic explorations of Latin American identities; to social scientists' explorations of how Latinos are changing the United States in the current generation.
Taught by: Dr. Ann Farnsworth-Alvear
Course usually offered in spring term
Also Offered As: HIST 072
Activity: Lecture
1.0 Course Unit

LALS 078 The African Diaspora: Global Dimensions
This class examines the cultural and social ramifications of the African diaspora on a global level. It is divided into two major sections. The first section provides the historical background to the African diaspora by focusing on the forced migration of Africans to Spanish and Portuguese colonies in the Americas. We will then delve into the black experience in French and British colonial spaces. In this section, we will also endeavor to move beyond the Atlantic-centric paradigm in studies of the African diaspora by examining free and unfree migrations of African people across the Indian Ocean to places as far away as India and the Philippines. The second half of the class devotes significant attention to the historical legacy of slavery and colonialism in places like Brazil, Cuba and the United States. In this section, we will discuss such issues as race relations, the struggle for civil rights for African-descent people as well as the emergence and the implementation of affirmative action policies in places like Brazil and the US.
Taught by: Ferreira
Course usually offered in spring term
Also Offered As: AFRC 073, HIST 078
Activity: Lecture
1.0 Course Unit

LALS 091 Sustainable Development and Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development -environmental, economic, and social- through an examination of three products -peyote, coca, and coffee- that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts.
Taught by: Gimenez
Course offered fall; even-numbered years
Also Offered As: ANTH 091, ENVS 091, SPAN 091
Activity: Seminar
1.0 Course Unit
LALS 092 Corona Capitalism: Crisis and Inequality Across the Americas
The coronavirus pandemic has exacerbated existing social inequalities. It has also accelerated the pace of history so sharply that the course of events has become nearly impossible to predict. This CWiC critical speaking seminar takes as its starting point our shared participation in the experience of uncertainty. At the same time, in looking to Latin America and the US, it articulates the fact that COVID-19 is anything but a ‘great equalizer’: its impact varies widely and decisively across race, class, and gender. As the world confronts multiple layers of wreckage, not only biological but also ecological and economic, how can we frame and communicate both uncertainty and truth in a thoughtful way? We will examine social problems that have been laid bare by the pandemic and have since become sites of ethical and political reevaluation, namely health disparities, ecological racism, the distribution of labor, and criminal justice. This seminar’s aim is to collaboratively assess one fundamental question: How can we understand COVID-19 not as an exceptional moment in history, but as a crisis of racial capitalism? By studying media, activism, policy, and scholarship produced during the pandemic alongside foundational critical theory, students will gain the analytical tools to contextualize its disproportionate global impact on poor communities and people of color, and to envision a just post-pandemic recovery. We will engage Marxist, feminist, and anti-racist theoretical approaches, and while familiarity with these methods is not necessary, an openness to them is. Self-examination is crucial to the success of the course, which requires students reflect on their own political, intellectual, and emotional investments in racialized inequality. This is a speaking intensive seminar intended to improve students’ oral communication and listening skills through class discussions, prepared presentations, and mixed-media communication projects. Conducted in English.

LALS 107 Freshman Seminar: The World After 1800
Freshmen seminars are small, substantive courses taught by members of the faculty and open only to freshmen. These seminars offer an excellent opportunity to explore areas not represented in high school curricula and to establish relationships with faculty members around areas of mutual interest. See www.college.upenn.edu/admissions/freshmen.php
One-term course offered either term
Also Offered As: AFRC 012, PSCI 010
Activity: Seminar
1.0 Course Unit

LALS 116 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region’s long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantations of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.
Taught by: Thomas, D.
Course not offered every year
Also Offered As: AFRC 116, ANTH 116
Activity: Lecture
1.0 Course Unit

LALS 121 Silver and Gold in the Americas from pre-history to the present
Precious metals have shaped economies and socio-cultural processes in the Americas for thousands of years. Students will work with pre-Columbian gold objects held by the University Museum and be introduced to the long history of indigenous metallurgy. We will also analyze the way gold and silver sent from the ‘New World’ to the ‘Old World’ played a key role in changing economies around the globe. Locally, mining centers were places marked by forced labor, conspicuous consumption, and the destruction of ecosystems. Internationally, gold and silver prices had outsized effects on monetary and trade policies. This course uses case studies to delve into the fascinating history of precious metals and mining in North and South America. We will analyze documents describing the gold objects ransacked by Spanish conquistadors, examine 17th Century proto-industrial silver mining at Potosi, Bolivia, trace the impact and human cost of the huge gold strikes in Minas Gerais, in colonial Brazil, read new work on the California and Yukon moments of ‘rush’, and briefly discuss the role of precious metals in money laundering. An introductory unit focuses on the history of the gold standard in the United States and internationally.
Taught by: Farnsworth-Alvear
Course usually offered in spring term
Also Offered As: HIST 121
Activity: Lecture
1.0 Course Unit
LALS 157 Accordion of the New World
This course focuses on the musical genres and styles (both traditional and popular) that have grown up around the accordion in the New World. We will begin our explorations in Nova Scotia and move toward the Midwest, travelling though the polka belt. From there, our investigation turns toward Louisiana and Texas–toward zydeco, Cajun, and Tex-Mex music. We will then work our way through Central and South America, considering norteno, cumbia, vallenato, tango, chamame, and forro. Our journey will include in the Caribbean, where we will spend some time thinking about merengue and rake-n-scrape music. Throughout the semester, the musical case studies will be matched by readings and films that afford ample opportunity to think about the ways that music is bound up in ethnicity, identity, and class. We will also have occasion to think about the accordion as a multiply meaningful instrument that continues to be incorporated into debates over cultural politics and mobilized as part of strategies of representation through the New World.
Taught by: Rommen, T.
Course not offered every year
Also Offered As: AFRC 157, FOLK 157, MUSC 255
Activity: Lecture
1.0 Course Unit

LALS 158 Latin American Music
This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts—concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertories of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production. (Formerly Music 158).
Taught by: Rommen
Course not offered every year
Also Offered As: AFRC 258, MUSC 258
Activity: Lecture

LALS 174 Capitalism, Socialism and Crisis in the 20th Century Americas
From the crisis of the Great Depression through the 1970s, the United States and Latin America produced remarkable efforts to remake society and political economy. This course analyzes the Cuban and Guatemalan revolutions, as well as social movements that transformed the United States: the black freedom movement, the labor movement, and changing forms of Latino politics. In all three countries, Americans looked for ways to reform capitalism or build socialism; address entrenched patterns of racism; define and realize democracy; and achieve national independence. They conceived of these challenges in dramatically different ways. Together, we'll compare national histories and analyze the relationships between national upheavals. In studying the US and Latin America together, the class allows students to explore central questions in both regions' histories. What did capitalism, socialism, and communism amount to? What did democracy mean? What were the roots of racial inequality and how did Americans address it? Why were Americans so enticed by economic growth, and how did they pursue it? How did the Cold War shape social movements? What purposes did unions serve? How did Christianity inform movements for and against social change? Studying these regions together also allows us to explore international interactions. How did the black freedom movement in the US relate to the Cuban revolution? How did Latin American immigration shape the US labor movement? How did US Cold War policy influence Latin American revolutionary movements? The goal of this class is for you to interpret the readings and decide what you think. What you learn in this class, and the quality of our experience together, depends on your reading closely, coming to class with informed ideas and questions, and being prepared to help your classmates answer theirs. We will read approximately 100 pages per week. No background is required.

Activity: Lecture
1.0 Course Unit

LALS 175 Society and Culture in Brazil
With its booming economy, the recent inauguration of its first female president, and its selection as host to the 2012 World Cup and Olympic games, Brazil is growing in global prestige. But amid all these exciting developments are devastating socioeconomic inequalities. Access to safe living conditions, livable wages, higher education, and overall social mobility remain painfully out of reach to many Brazilians, the majority of whom are the descendants of slaves. Why do these problems persist in a country that has had such an enduring and widespread reputation as a 'racial democracy'? What are the possibilities of closing the equality gap in Brazil?
Taught by: Walker, T.
Course not offered every year
Also Offered As: AFRC 175, HIST 175
Activity: Lecture
1.0 Course Unit
LALS 177 Colonial Pasts and Indigenous Futures: A History of Belize and Central America
The small country of Belize (formerly British Honduras) represents the past history and ongoing story of Central America and the region. Belize has a colonial past and present with strong ties to the UK and emerging connections to the US. At the same time, there is a growing post-colonial debate within the country about the role of indigenous Maya people in the past, present and future of the country. This course will be the first of two courses which will lead to active work in Belize during the summer of 2021 with the development and creation of a Community Museum within the Maya village of Indian Creek in southern Belize. This course will be taught by Richard M. Leventhal who has worked in Belize for the past 20 years. Leventhal will be joined by 3 Maya activists from Belize who will co-teach the class for 5-6 weeks out of the semester.

Taught by: Leventhal
Course not offered every year
Also Offered As: ANTH 177, HIST 073
Activity: Lecture
1.0 Course Unit

LALS 180 From Ayahuasca to Zoloft: Anthropological Approaches to Drugs and Drug Use
In this course we will consider the cultural, social, political, medical, and biological aspects of drugs (legal, illegal, pharmaceutical, botanical, and otherwise) through space and time. We will take a broad approach, thinking critically about what, who, and under what circumstances a given substance becomes a ‘drug.’ In doing so, we will be able to interrogate the linguistic dimensions of drugs, considering the way in which language creates social worlds and social meanings. We will explore different kinds of drugs, their origins, biochemical properties, and the biological pathways through which they affect us. We will also think about how drugs and drug use has changed over time, taking a cross-cultural and materialist perspective to investigate drug use past and present. Topics we will address include debates over the commercialization, criminalization, and decriminalization of hallucinogenic plants such as marijuana, the recent use of drugs ranging from LSD to magic mushrooms to treat depression and other mental illnesses, the legacies of colonialism and botanical migrations, the ethics of the pharmaceutical industry, and comparative explorations of the language about and approaches to addressing both the ‘crack epidemic’ of the early 80s and 90s and the current opioid crisis. We will read both classic anthropological texts including ethnographies as well as works from other disciplines including science studies, biology, history, ethnobotany, and sociology.

Taught by: Hoke
Course offered fall; even-numbered years
Also Offered As: ANTH 180
Activity: Lecture
1.0 Course Unit

LALS 187 Africa and the Transatlantic Slave Trade
This course focuses on the history of selected African societies from the sixteenth through the mid-nineteenth centuries. The primary goal is to study the political, economic, social, and cultural history of a number of peoples who participated in the Atlantic slave trade or were touched by it during the era of their involvement. The course is designed to serve as an introduction to the history and culture of African peoples who entered the diaspora during the era of the slave trade. Its audience is students interested in the history of Africa, the African diaspora, and the Atlantic world, as well as those who want to learn about the history of the slave trade. Case studies will include the Yoruba, Akan, and Fon, as well as Senegambian and West-central African peoples.

Taught by: Ferreira
One-term course offered either term
Also Offered As: AFRC 186, HIST 187
Activity: Lecture
1.0 Course Unit

LALS 208 International Organizations in Latin America
International Organizations (IOs) play a powerful role in mitigating conflict at the global level. What role do they play in solving problems related to global politics, economic development, corruption, inequality and civil society in Latin America? How much power, influence and control do they possess in the region? This course examines the role and impact international organizations have had on Latin America since the mid-20th century. After a review of theoretical and methodological perspectives on the significance of IOs in international relations, students will examine the workings, issues and often controversies surrounding IOs in Latin America, including the IMF, World Bank, UN, OAS and ICC as well as regional organizations such as the Inter-American Court of Human Rights and area trade blocs and agreements of Mercosur, NAFTA and others. There will be a special focus on the Organization of American States in preparation for the Washington Model OAS students will be invited to attend from April 6-10, 2020 in Washington, D.C. Students attending this simulation will represent the delegation of Dominican Republic. In addition, the course hosts policymakers and scholars as guest speakers throughout the semester.

Taught by: Bartch
Course usually offered in spring term
Also Offered As: PSCI 208
Activity: Seminar
1.0 Course Unit

LALS 209 Latino/as and the Law
Based in concepts and principles of Constitutional law, this course explores the interpretation and impact of seminal court cases in U.S. history as applied to Latino/as in the United States and abroad. With a particular focus on the 20th century, students will examine how court decisions have affected civil rights, immigration policies, welfare, political incorporation and identity and other important issues affecting Latino/as. Students will also explore additional themes including the status and treatment of Latinos in the criminal justice system, representation of Latino/as in the judiciary, and how Supreme Court decisions have also affected U.S. foreign policy with Latin America. Students will be introduced to a number of guest speakers who are academic experts and practitioners in the field.

Taught by: Bartch
Also Offered As: PSCI 202
Activity: Lecture
1.0 Course Unit
LALS 210 Indigenous Communities and Community Museums: Directions for the Future
Community museums are becoming more commonplace within indigenous communities throughout the Americas. These museums are created internally, by and for communities, as a way of framing self-identity and representation. The development of these museums is focused upon the need to define and highlight identity and differences between indigenous communities and the surrounding world. These community museums contrast dramatically with other cultural museums where the stories and histories of groups tend to be controlled by the nation-state and professional curators. This course will focus on the nature of indigenous communities, cultural representation, and identity with a focus upon the modern Maya communities of southern Belize. In addition, museums and community museums, world-wide, will be examined and analyzed. What are the different models of community museums and what is the process for the development of such museums? Is the only de-colonized museum one created and framed within and by the community? Seminar format with weekly discussions, readings, and a final research paper. There are no pre-requisites for this course and a background in anthropology is not required. This course will be connected to a community museum project in Indian Creek, Belize where travel and work will be initiated over the summer of 2021. This course is recommended but not required for participation in summer research program in Belize

Activity: Seminar
1.0 Course Unit

LALS 213 Latin American Politics
This course examines the dynamics of political and economic change in twentieth century Latin America, with the goal of achieving an understanding of contemporary politics in the region. We will analyze topics such as the incorporation of the region to the international economy and the consolidation of oligarchic states (1880s to 1930s), corporatism, populism, and elict pacts (1930s and 1940s), social revolution, democratic breakdown, and military rule (1960s and 1970s), transitions to democracy and human rights advocacy (1980s) market-oriented reforms (1990s), and the turn to the left of current governments (2000s). The course will draw primarily from the experiences of Argentina, Brazil, Colombia, Chile and Mexico. No prior knowledge of the region is required.
Taught by: Falleti
One-term course offered either term
Also Offered As: PSCI 213
Activity: Recitation
1.0 Course Unit

LALS 215 The Ancient Maya: Integrating Material, Text, and Image
Ancient Maya studies is one of the most dynamic and innovative fields in world archaeology today. Emerging as a true historical archaeology only in the past three decades, the decipherment of Maya script now provides a powerful complement and counterpart to both traditional excavation data and new remote sensing technologies. Equally, the reading of images, and their interaction with texts and artifacts, forms a vital part of our interest in the broader humanistic concerns of worldview and the transcendent—where our primary interest lies in gaining access to past mentalities. This course will provide a comprehensive introduction into current knowledge of the Ancient Maya, with a recurring methodological focus on how different types of evidence are integrated to assemble a persuasive ‘portrait of the past.’ This scope of this process is unique in the ancient Americas, since only the Maya offer us the opportunity to read their own descriptions of the world two millennia or more in the past. Geographically, we will be looking at the greater Yucatan Peninsula, which today covers parts of southeastern Mexico, the whole of Guatemala and Belize, and the western extremities of Honduras and El Salvador. Since archaic times (before 1200 BCE) this has been occupied by speakers of the Mayan language group, and millions of people identified as Maya by that means continue to do so today (despite popular notions to the contrary, they have never ‘disappeared’). No prior knowledge of archaeology or art history is necessary. The course structure is one 3-hour session per week, consisting of a lecture followed by group discussion in seminar-style. Additionally, in Week 6 there will be a virtual tour of the new Mexico and Central American Gallery at Penn Museum. This will introduce the class to the issues of disseminating scholarship and building narratives that are accessible to the wider public.
Taught by: Martin
Course not offered every year
Also Offered As: ANTH 215, ARTH 220
Activity: Lecture
1.0 Course Unit

LALS 227 Educating for Democracy in Latin America and the U.S.
What does it mean to educate for a democracy, and for what type of democracy should we educate for? This course will examine these central questions and others pertaining to citizenship, democracy, and education as it relates to Latin America and Latino/as in the U.S. The course will first examine theories of education for democracy comparing and contrasting the works of persons including U.S. progressive-era writer John Dewey, Brazilian scholar Paolo Freire, and Penn President and political scientist Amy Gutmann. The course will delve into a civic and political education curriculum and pedagogies that have been carried out in institutions, inequality, and culture in the region. The latter part of the course will examine civic education practices of Latino/as here in the U.S. from primary schools to higher education. This course offers a service-learning component where students will be encouraged to volunteer with educational organizations in the Philadelphia community.

LALS 231 Perspectives in Brazilian Culture
Topics vary. For current course description, please see department’s webpage: http://ccat.sas.upenn.edu/roml/portuguese/undergraduate/courses.html
Taught by: Mercia Flannery
Course not offered every year
Also Offered As: PRTG 221
Prerequisite: PRTG 202
Activity: Seminar
1.0 Course Unit

LALS 232 Race and Ethnic Politics
This course examines the role of race and ethnicity in the political discourse through a comparative survey of recent literature on the historical and contemporary political experiences of the four major minority groups (Blacks or African Americans, American Indians, Latinos or Hispanic Americans, and Asian Americans). A few of the key topics will include assimilation and acculturation seen in the Asian American community, understanding the political direction of Black America in a pre and post Civil Rights era, and assessing the emergence of Hispanics as the largest minority group and the political impact of this demographic change. Throughout the semester, the course will introduce students to significant minority legislation, political behavior, social movements, litigation/court rulings, media, and various forms of public opinion that have shaped the history of racial and ethnic minority relations in this country. Readings are drawn from books and articles written by contemporary political scientists.

LALS 235 Latinos in United States
This course presents a broad overview of the Latino population in the United States that focuses on the economic and sociological aspects of Latino immigration and assimilation. Topics to be covered include: construction of Latino identity, the history of U.S. Latino immigration, Latino family patterns and household structure, Latino educational attainment. Latino incorporation into the U.S. labor force, earnings and economic well-being among Latino-origin groups, assimilation and the second generation. The course will stress the importance of understanding Latinos within the overall system of race and ethnic relations in the U.S., as well as in comparison with previous immigration flows, particularly from Europe. We will pay particular attention to the economic impact of Latino immigration on both the U.S. receiving and Latin American sending communities, and the efficacy and future possibilities of U.S. immigration policy. Within all of these diverse topics, we will stress the heterogeneity of the Latino population according to national origin groups (i.e. Mexican, Puerto Rican, Cuban, and other Latinos), as well as generational differences between immigrants and the native born.

One-term course offered either term
Also Offered As: AFRC 248, HIST 248
Activity: Seminar
1.0 Course Unit

LALS 250 U.S. Intervention in Latin America
Why has the United States government participated in regime change in Latin America? How have these interventions affected Latin American political and economic outcomes? How have they helped or hurt U.S. interests in the region? This lecture course provides an introduction to the history and politics of U.S. participation in regime change in Latin America since 1949. For each event, the course will help students understand (1) the goals of the U.S. government; (2) the historical and political context of the intervention; and (3) the outcomes and consequences, both in Latin America and for the United States. One set of short writing assignments will train students to identify the main argument of a reading and assess the quality of the evidence presented in support of that argument; a second set of short writing assignments will train students to make and defend their own argument (see draft syllabus for details).
Taught by: Kronick
Course offered spring; even-numbered years
Also Offered As: PSCI 250
Activity: Recitation
1.0 Course Unit
LALS 254 Archaeology of the Inca
The Incas created a vast and powerful South American empire in the high Andes Mountains that was finally conquered by Spain. Using Penn's impressive Museum collections and other archaeological, linguistic, and historical sources, this course will examine Inca religion and worldview, architecture, sacred temples, the capital of Cuzco, ritual calendar, ceque system, textiles, metalworking, economic policies and expansionist politics from the dual perspectives of Inca rulers and their subjects. Our task is to explain the rise, dominance, and fall of the Incas as a major South American civilization.
For BA Students: History and Tradition Sector
Taught by: Erickson
Course not offered every year
Also Offered As: ANTH 254
Activity: Seminar
1.0 Course Unit

LALS 258 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertories of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North-American contexts of music consumption and production. (Formerly Music 258).
Taught by: Rommen
Course not offered every year
Also Offered As: ANTH 256, MUSC 257
Activity: Lecture
1.0 Course Unit

LALS 273 The Immigrant City
This course focuses on immigrant communities in United States cities and suburbs. We survey migration and community experiences among a broad range of ethnic groups in different city and suburban neighborhoods. Class readings, discussions, and visits to Philadelphia neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, refugee resettlement, and local, state, and national immigration policies. The class introduces students to a variety of social science approaches to studying social groups and neighborhoods, including readings in sociology, geography, anthropology, social history, and political science. Ultimately, the class aims to help students develop: 1) a broad knowledge of immigration and its impacts on U.S. cities and regions; 2) a comparative understanding of diverse migrant and receiving communities; and 3) familiarity with policies and institutions that seek to influence immigration and immigrant communities.
For BA Students: Society Sector
Taught by: Vitiello, Domenic
Course usually offered in spring term
Also Offered As: SOCI 270, URBS 270
Activity: Seminar
1.0 Course Unit

LALS 274 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

Activity: Lecture
1.0 Course Unit

LALS 291 Latin American Literature
This course explores an aspect of Latina/o literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ENGL 270
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors
LALS 310 Transdisciplinary Environmental Humanities
Emergent transdisciplinary fields, such as the environmental humanities, reflect a growing awareness that responses to contemporary environmental dilemmas require the collaborative work of not only diverse scientists, medical practitioners, and engineers, but also more expansive publics, including artists, urban and rural communities, social scientists, and legal fields. This course is inspired by the need to attend to environmental challenges, and their health, justice, and knowledge production implications, as inherently social concerns. The class is co-taught by faculty from the School of Arts and Sciences and the School of Medicine, and will address the challenges and possibilities of working across disciplinary boundaries, building collaborative affinities, and negotiating frictions between diverse methodologies and epistemological approaches. Dr. Kristina Lyons from the Department of Anthropology brings years of experience collaborating with soil scientists, small farmers, indigenous communities, lawyers, and judges in Colombia on watershed restoration projects, soil degradation, toxicity, and the implementation of socio-ecological justice. Dr. Marilyn Howarth is a medical doctor from the Center of Excellence in Environmental Toxicology of the School of Medicine and has experience engaging the public, legislators and regulators around environmental health issues affecting the quality of air, water, soil and consumer products. Through their different lenses, they will foster interdisciplinary environmental collaboration and scholarship by engaging students in discussions and research that bring together the arts and sciences regarding issues of urban air pollution, soil remediation, and water contamination, among other environmental health problems. This inaugural course seeks to explore environmental humanities on the global scale. Using Dr. Lyons' deep insight and valuable connections to communities in Colombia, we will explore the experience of environmental degradation, opportunities and challenges for mitigation, and socio-environmental health implications there while placing these issues in conversation with U.S. public health, regulatory and political frameworks and community experiences on similar issues. A comparative exploration of environmental justice in both Colombia and the U.S. will be infused into much of the discussion. This class offers a unique opportunity for students from engineering, natural and social sciences, humanities and the arts to learn to converse and collaborate around pressing socio-environmental and public health issues.

Also Offered As: PSCI 314
Activity: Seminar
1.0 Course Unit

LALS 317 The Politics of Matter and the Matter of Politics
What is nature? What is culture? What kinds of practices and actors constitute what we call science? Who and what constitute the sphere we refer to as politics? A number of theoretical developments in cultural anthropology, political theory, critical geography, and feminist science studies have problematized the modernist ontological divide between Nature and Culture and a whole series of binary oppositions (such as objects/subjects, matter/form, bio/geo) that follow from it. Taking inspiration from this literature and placing it in conversation with Native and Indigenous scholarship and a series of contemporary socio-environmental struggles occurring in Latin America and beyond, this course will discuss the conceptual-methodological tools that a concern with politics of matter has generated. The epistemic and political implications of these tools go beyond their analytical usefulness as innovative devices to explore novel phenomena. They complicate well-established fields of inquiry, such as political ecology and economy, environmental studies, ethics, social justice, and modern politics; and, indeed, the singular ontology that these fields may inadvertently and explicitly sustain. We will explore how it is that things, stuff, matter, ‘nature’ came to fall outside modern politics as such, and the kinds of ethico-political repercussions that problematizing this division may produce.
Taught by: Kristina Lyons
One-term course offered either term
Also Offered As: ANTH 317
Activity: Seminar
1.0 Course Unit

LALS 328 Diplomacy in the Americas - The Penn Model OAS Program
'Diplomacy in the Americas’ an academically based community service course in which students work with Philadelphia and Norristown public school students to explore solutions to critical problems facing the Americas. Entrenched political, economic, and social inequality, combined with environmental degradation, weak institutions, pervasive health epidemics, weapon proliferation, and other issues pose formidable hurdles for strengthening democratic ideals and institutions. The Organization of the American States (OAS), the world’s oldest regional organization, is uniquely poised to confront these challenges. ‘Diplomacy in the Americas’ guides students through the process of writing policy resolutions as though the students were Organization of the American States (OAS) diplomats, basing their research and proposals on democracy, development, security, and human rights - the four pillars of the OAS. Students will also read literature about what it means to educate for a democracy and global citizenry, and they will have the opportunity to turn theory into practice by creating and executing curriculum to teach and mentor the high school students through interactive and experiential pedagogies.
Taught by: Bartch
Course usually offered in fall term
Also Offered As: PSCI 328
Activity: Seminar
1.0 Course Unit
LALS 350 Archaeology of Civilizations in South America
This course provides a basic survey of the archaeology of civilizations of South America (the Andean region of the central highland and coastal areas that today are Peru and Bolivia and parts of Ecuador, Chile, and Argentina). Topics include the history of South American archaeology, peopling of the continent, origins and evolution of agriculture, early village life, ceremonial and domestic architecture, prehistoric art and symbolism, Andean cosmology and astronomy, indigenous technology, the historical ecology of landscapes, outside contacts and relationships, economics and trade, social and political structure, state formation and urbanism, and early contacts with Europeans. The lectures and readings are based on recent archaeological investigations and interpretations combined with appropriate analogy from ethnohistory and ethnography. The prehistory of the Amazonian lowlands and northern South America will be covered in other courses.
Taught by: Erickson
Course not offered every year
Also Offered As: ANTH 359, URBS 359
Activity: Lecture
1.0 Course Unit

LALS 359 Nutritional Anthropology
The course is an introduction to nutritional anthropology, an area of anthropology concerned with human nutrition and food systems in social, cultural and historical contexts. On the one hand, nutritional anthropologists study the significance of the food quest in terms of survival and health. On the other hand, they also know that people eat food for a variety of reasons that may have little, if anything, to do with nutrition, health, or survival. While the availability of food is dependent upon the physical environment, food production systems, and economic resources, food choice and the strategies human groups employ to gain access to and distribute food are deeply embedded in specific cultural patterns, social relationships, and political and economic systems. Thus, nutritional anthropology represents the interface between anthropology and the nutritional sciences, and as such, can provide powerful insights into the interactions of social and biological factors in the context of the nutritional health of individuals and populations. Because food and nutrition are quintessential biocultural issues, the course takes a biocultural approach drawing on perspectives from biological, socio-cultural and political-economic anthropology. Course content will include: a discussion of approaches to nutritional anthropology; basics of human nutrition; food systems, food behaviors and ideas; methods of dietary and nutritional assessment; and a series of case studies addressing causes and consequences to nutritional problems across the world.
Taught by: Hoke

Course not offered every year
Also Offered As: AFRC 384, ARTH 384
Activity: Seminar
1.0 Course Unit

LALS 385 Rel & Pol in Latin Amer
This course offers an introductory examination of the political and social role that the Catholic Church has played in Latin America from the time of the Spanish and Portuguese conquests in the 16th century to the end of the 20th century. Throughout this five-century period, the Catholic Church has not acted as a monolithic institution. Some members of the church have been associated with governments and those in power in order to exert control and domination over the population. Others have been among the few individuals or institutions that have spoken up against the injustices and oppression both of colonial governments in the 16th to 18th centuries, and of authoritarian regimes of independent republics in the 19th and 20th centuries. In this latter period, our analysis will include the churches role in defending human, civil, political, and indigenous rights and in promoting the transition from the period of military or civilian dictatorships that ruled a good part of the region starting in the 1960s to civilian democratic regimes in the 1980s and 1990s. We will analyze six countries, three of which were under national security regimes: Brazil, Chile, and Argentina, and three others that experienced internal wars between guerrillas and military-backed civilian juntas: Guatemala, El Salvador, and Nicaragua.

Activity: Seminar
1.0 Course Unit

LALS 387 Topics in Africana Studies
Topics vary: Black Feminist Approaches to History & Memory · The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women's lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected.

LALS 417 Comparative Racial Politics
This course combines scholarship on race and racism in plural societies with qualitative approaches to the study of political institutions, phenomena and actors. Germany, Brazil, France and Cuba will be examined as individual country cases and in comparative perspective. Conceptual and theoretical readings on race, racism and politics provide students with the analytic tool to draw more abstract lessons and generalizable conclusions about how racial and ethno-national hierarchy involves the role of the state and political economy, culture, norms and institutions. Students will also examine the impact of civil rights movements for political equality in response to legacies of racial and ethno-national hierarchy and inequality. Finally, students will become familiar with scholarship on nationalism and social movements as they relate to racial politics.
Taught by: Hanchard
One-term course offered either term
Also Offered As: AFRC 417, HIST 467, PSCI 412, SOCI 417
Activity: Lecture
1.0 Course Unit
LALS 420 Advanced Topics in Africana Studies
Topics vary. See the Africana Studies Department’s course list at https://africana.sas.upenn.edu for a description of the current offering. After an examination of the philosophical, legal, and political perspectives on Human Rights, this course will focus on US policies and practices relevant to Human Rights. Toward that end, emphasis will be placed on both the domestic and the international aspects of Human Rights as reflected in US policies and practices. Domestically, the course will discuss (1) the process of incorporating the International Bill of Human Rights into the American legal system and (2) the US position on and practices regarding the political, civil, economic, social, and cultural rights of minorities and various other groups within the US. Internationally, the course will examine US Human Rights policies toward Africa. Specific cases of Rwanda, Kenya, South Africa and Egypt, as well as other cases from the continent, will be presented in the assessment of US successes and failures in the pursuit of its Human Rights strategy in Africa. Readings will include research papers, reports, statutes, treaties, and cases.
Taught by: Charles, Hanchard, Fetni, Zuberi

LALS 451 The U.S. and the World since 1898
This class examines the emergence of the U.S. as a world power since 1898, and considers both the international and domestic consequences of U.S. foreign relations. In one respect, the twentieth century was a strange time to become a global empire: it was the period when colonial systems centered in Europe, Russia, Japan, and Turkey collapsed, and new nations emerged throughout Africa and Asia. This class explores the changing strategies of military, economic, and political intervention that the U.S. pursued as colonization lost legitimacy. Within that framework, the class invites students to think about several questions: How did the idea and practice of empire change over the twentieth century? How did the United States relate to new visions of independence emerging in Africa, Asia, and Latin America? How did global interactions both inform and reflect racial ideology in the United States? Finally, how did international affairs transform U.S. politics and social movements?

LALS 510 Inner Outer Space Travel Writing: A Creative Writing Workshop
Inner Outer Space Travel Writing is a creative writing workshop focused on writing work within the science fiction/speculative fiction/alternative futurities, science/land/travel writing, and creative-critical nonfiction traditions. Students will work within a variety of genres, with an emphasis on the essay, the short story, screen/tele-play, play, blog and performance. Students will read recommended texts from within their particular interests, and the course will culminate in both a public performance and dissemination/publication via another media platform (zine, website, podcast, etc). All levels of experience, from none/first-time writer to published writers, are encouraged to register for the course.
Taught by: Bracho
Course not offered every year
Also Offered As: ENGL 131, GSWS 510
Activity: Seminar
1.0 Course Unit
LALS 511 Ethics, Archaeology, and Cultural Heritage
This seminar will explore some of the most important issues that are now a central part of archaeological, anthropological and historical research throughout the world. The identification and control of cultural heritage is a central part of the framework for research within other communities. Issues for this course will also include cultural identity, human rights, repatriation, colonialism, working with communities and many other topics. Field research today must be based upon a new series of ethical standards that will be discussed and examined within this class. Major topics include: cultural heritage - definitions and constructs, cosmopolitanism and collecting, archaeology and looting, cultural heritage preservation, museums - universal and national, museum acquisition policies, cultural identity, international conventions (including underwater issues), national laws of ownership, community based development, cultural tourism, development models, and human rights.
Taught by: Leventhal
Course not offered every year
Also Offered As: ANTH 511
Activity: Seminar
1.0 Course Unit

LALS 512 Passion Projects: Radical Experiments in Writing Plays, Screenplays, and Pilots
This creative writing workshop will focus on writing for screen, stage and internet and is open to undergraduate and graduate students at every level of writing experience. The course will be writing intensive and also include the reading and analysis of feminist, trans, queer, working class and racially liberatory plays, films, television and performance as models of inspiration. Meditation, drawing, theater games, improv exercises, screenings and outings to see work on and off campus will round out this holistic and experimental approach to making work that illuminates and entertains audiences from across the US and global audience spectrum.
Taught by: Bracho
Also Offered As: ENGL 134, GSWS 512

LALS 527 Spring 2015: Race, Gender & Auto/Biography
SPRING 2017: Market Women, Madames, Mistresses & Mother Superior studies gender, labor, sexuality, and race in the Caribbean. In our historical examination of primary source documents alongside literature, and popular media, we will question some of the iconic representations of Caribbean and Latin American women in order to understand the meaning, purpose and uses of these women's bodies as objects of praise, possession, obsession and/or ridicule by communities, governments and religions within and outside of the region. Beginning in the late-18th century and ending with contemporary migration narratives, this course considers the relationship between slave society and colonial pasts on gender performance in the modern Caribbean, Latin America, and their diasporas.
Taught by: Sanders

Also Offered As: AFRC 527, GSWS 527
Activity: Seminar
1.0 Course Unit

LALS 528 Latinxs and the Law
Based in concepts and principles of Constitutional law and critical race theory, this course explores the interpretation and impact of seminal court cases in U.S. history as applied to Latinxs in the United States and abroad. With a particular focus on the 20th century, students will examine how court decisions have affected civil rights, immigration policies, welfare, political incorporation, education, and other important issues affecting Latinxs. Students will also explore additional themes including the status and treatment of Latinxs in the criminal justice system, representation of Latinxs in the judiciary and how Supreme Court decisions have affected U.S. foreign policy with Latin America.
Taught by: Bartch
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

LALS 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Erickson, C.
Course not offered every year
Also Offered As: AAMW 557, ANTH 557
Prerequisite: ANTH 241 OR ANTH 600
Activity: Seminar

LALS 590 Introduction to Francophone Literature
An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.
Course not offered every year
Also Offered As: CIMS 580, COML 590, ENGL 590, GSWS 589
Activity: Seminar
1.0 Course Unit
LALS 655 Democratization
This graduate class focuses on issues of democratization (and de-democratization), as studied in the comparative politics literature. The course is structured in four parts. In the first part, we scrutinize conceptualizations and measurements of democracy. In the second part, we study competing political theories about the origins of democracy. The third part of the seminar is devoted to the study of democratic transition and consolidation processes. To finish, we tackle specific issues in democratization such as social capital and civic participation, as well as the resilience of (subnational) authoritarianism.
Taught by: Falleti
Course not offered every year
Also Offered As: PSCI 655
Activity: Seminar
1.0 Course Unit

LALS 656 Topics in Black Political Thought: Difference And Community
This course is designed to familiarize graduate students with some of the key texts and debates in Africana Studies concerning the relationship between racial slavery, modernity and politics. Beginning with the Haitian Revolution, much of black political thought (thinking and doing politics) has advocated group solidarity and cohesion in the face of often overwhelming conditions of servitude, enslavement and coercion within the political economy of slavery and the moral economy of white supremacy. Ideas and practices of freedom however, articulated by political actors and intellectuals alike, have been as varied as the routes to freedom itself. Thus, ideas and practices of liberty, citizenship and political community within many African and Afro-descendant communities have revealed multiple, often competing forms of political imagination. The multiple and varied forms of political imagination, represented in the writings of thinkers like Eric Williams, Richard Wright, Carole Boyce Davies and others, complicates any understanding of black political thought as having a single origin, genealogy or objective. Students will engage these and other authors in an effort to track black political thought's consonance and dissonance with Western feminisms, Marxism, nationalism and related phenomena and ideologies of the 20th and now 21st century.
Taught by: Hanchard
Also Offered As: AFRC 655, GSWS 655, PSCI 612
Activity: Seminar
1.0 Course Unit

LALS 661 Language Diversity and Education
Exploration of issues affecting educational policy and classroom practice in multilingual, multicultural settings, with an emphasis on ethnographic research. Selected U.S. and international cases illustrate concerns relating to learners' bilingual/bicultural/biliterate development in formal educational settings. Topics include policy contexts, program structures, teaching and learning in the multilingual classroom, discourses and identities in multilingual education policy and practice, and the role of teachers, researchers, and communities in implementing change in schools. Prerequisite: Permission needed from the department.
Taught by: Hornberger/Flores
Course usually offered in fall term
Also Offered As: EDUC 661
Activity: Lecture
1.0 Course Unit

LALS 683 Collective Violence, Trauma, and Representation
This seminar is organized as a laboratory space for graduate students and faculty working in a number of adjacent fields and problems. Seminar discussions will be led not only by the primary instructors, but also by a number of guests drawn from the Penn faculty. For the first weeks of the course, we will focus on seminal works in the interlinked areas of history and memory studies, cultural representations of collective violence, trauma studies, and other related topics. Beginning with the Xth week of the course, we will turn to case studies in a variety of geographic, cultural and historical contexts. Additionally, some later sessions of the course will be devoted to a presentation and discussion of a work in progress of a Penn graduate student, faculty member or a guest lecturer.

Law - Master in Law (LAWM)

Leadership and Communication (LEAD)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).
LEAD 101 Leadership Theory, Practice and Purpose
Using an innovative combination of academic theory, empirical research, and self-reflection, this course is an intensive introduction to multiple and competing concepts of leadership. Students will critically analyze texts and research related to effective leadership and leaders and, at the same time, develop their own, individualized leadership traits and skills profile. A culminating biographical analysis paper requires students to compare and contrast their own distinctive leadership traits and skills to those of an admired leader. The course concludes with each student crafting a 5-year leadership and communication career plan.
Activity: Online Course
1.0 Course Unit

LEAD 102 Leadership Theory and Practice
Using an innovative combination of academic theory, empirical research, and self-reflection, this course is an introduction to leadership as studied and applied in various scholarly disciplines in the social sciences. Academic texts will introduce students to several social science fields, while case studies will offer them the opportunity to consider the practical and organizational applications of the theories being studied. Students' papers will synthesize the material of the course in thoughtful ways, and apply it to to problems of leadership. You have the option to enroll in the individual course without committing to the entire Certificate in Leadership and Communication, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.

LEAD 202 Leadership Lessons from Social Sciences
Drawing on several social science fields and subfields, from economics to psychology and more, this course is an introduction to leadership as studied and applied in various scholarly disciplines in the social sciences. Academic texts will introduce students to several social science fields, while case studies will offer them the opportunity to consider the practical and organizational applications of the theories being studied. Students’ papers will synthesize the material of the course in thoughtful ways, and apply it to to problems of leadership. You have the option to enroll in the individual course without committing to the entire Certificate in Leadership and Communication, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.
Activity: Online Course
1.0 Course Unit

LEAD 203 Leadership Lessons from Humanities
Using philosophy, literature, religious studies and biographies of famous public leaders, students conduct a searching examination of competing ideas and concepts regarding leadership, moral reasoning and ethical action. Students reflect on the complexities of problem-solving through an ethical lens and further define their individual interpretations and approaches to ethical decision-making. As an integral part of this simultaneously academic and practical exploration of leadership ethics, students co-author a mini-biography assessing the ethics of a famous (or infamous) public leader. Prerequisite: This course counts toward the Certificate in Leadership and Communication and degree concentration. Taught by: Rebecca Padot
Prerequisite: LEAD 101 OR LEAD 304
Activity: Online Course
1.0 Course Unit

LEAD 304 Professional Communication and Self-Development
This writing-intensive course is designed to enhance each student's ability to communicate effectively in the workplace and other professional settings. Students will learn how to edit their own writing, give persuasive oral presentations to different audiences, communicate effectively during conflicts or crises, and apply evidence-based lessons from positive psychology to personal development and professional success. Students who have taken LEAD 101 will complete the first draft of a plan.
Activity: Online Course
1.0 Course Unit

LEAD 305 Introduction to Data Analytics
In our digital world, data-driven decision-making is becoming more common and more expected. Effective leadership and communication, therefore, often hinges on the ability to acquire, manage, analyze, and display large, quantitative data sets. Even many entry-level jobs assume or require basic knowledge of data analytics. This course introduces students to important concepts in data analytics across a wide range of applications using the programming language R. Students complete the course with a clear understanding of how to utilize quantitative data in real-time problem identification, decision-making, and problem-solving. No prerequisites in statistics or math are required. This course will have required synchronous sessions and the instructor will offer a choice of times. Only open to Data Analytics certificate students in LPS Online Program. Please email lps@sas.upenn.edu to request a permit.
Taught by: Samantha Sangenito
Also Offered As: DATA 101
Activity: Online Course
1.0 Course Unit

LEAD 310 Leadership and Public Administration
In LEAD 310, Leadership and Public Administration, students are introduced to both classic and contemporary studies of how public laws and policies are translated into effective action, how and why government reform efforts succeed or fail, and complete an original case study on the ongoing revolution in public management theory and practice favoring public-private partnerships and collaborative governance.
Taught by: Rebecca Padot
Activity: Online Course
1.0 Course Unit

LEAD 320 Leadership and Business Organization
In LEAD 320, Leadership and Business Organization, students interactively and critically study five of the most influential books ever published regarding why for-profit enterprises succeed or fail; do an original 'management consulting' report on an actual business firm; and write a final paper on what, if any, particular individual styles or institutional structures predictably and reliably enable one to 'succeed in business.'
Activity: Online Course
1.0 Course Unit

LEAD 320 Leadership and Business Organization
In LEAD 320, Leadership and Business Organization, students interactively and critically study five of the most influential books ever published regarding why for-profit enterprises succeed or fail; do an original 'management consulting' report on an actual business firm; and write a final paper on what, if any, particular individual styles or institutional structures predictably and reliably enable one to 'succeed in business.'
Activity: Online Course
1.0 Course Unit
LEAD 330 Ldrshp Nonprofit Mgmt
In LEAD 330, Leadership and Nonprofit Management, students are immersed in research that profiles Americas vast and varied, large and growing independent sector, exploring what works (and what doesn't) when it comes to leadership and innovation in the non-governmental, not-for-profit organizations (charities, churches, private colleges, hospitals, and others) that, even if only counting the about 1.4 million registered with the IRS, now have more $2 trillion a year in annual revenues, more than $5 trillion in total assets, and more than 14 million full-time employees.
Activity: Online Course
1.0 Course Unit

LEAD 340 Introduction to Positive Psychology
In the 20th century, the field of psychology made enormous and important strides in addressing mental health challenges. Today research in the field has expanded, inspired, in part, by Martin E.P. Selignman's 1998 APA presidential address, to include the scientific study of optimal functioning and what helps people live full lives. This course focuses on the science of of thriving—what does it mean to be 'happy'; and how can one cultivate well-being at the individual and community level? Students explore the foundations of this science, understand a conceptual framework for well-being, and actively engage in activities that help to cultivate well-being. Drawing upon theory, empirical research, ancient and collective wisdom, we examine these topics critically and experientially and together build an engaged learning community. For those pursuing a Certificate in Applied Positive Psychology, this course is strongly recommended as a prerequisite for the other three courses.
Taught by: na
Also Offered As: APOP 100
Activity: Online Course
1.0 Course Unit

LEAD 350 Human Flourishing: Strengths and Resilience
What does it mean to flourish? What are we like when we are at our best? What helps us bounce back from challenges and adversity? Continuing the exploration of the science of positive psychology, students delve deeply into the study of character strengths as a framework for building positive character and well-being, and explore the concept of resilience, or the ability to overcome challenging situations. In this course, we explore how we can leverage our strengths to more effectively contribute to the greater world and enhance our own well-being. We also study the physical and psychological protective factors that constitute resilience, and how they are cultivated. Students learn about these topics from a scientific and experiential perspective, both as individuals and within our learning community. This course will have required synchronous sessions and the instructor will offer a choice of times. Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.
Also Offered As: APOP 120
Activity: Online Course
1.0 Course Unit

LEAD 360 Positive Psychology at Work
If flourishing is related to our lived daily experience, and approximately 50% of our waking hours are spent working, how do our workplaces contribute to, and diminish, our ability to thrive? Students are exposed to an array of research-informed strategies that have been applied in a variety of disciplines and workplaces, including business, education, health care, and nonprofit organizations. Exploration of case studies and salient research topics such as relationships at work, positive leadership, prosocial behavior, and our sense of meaning and purpose, guide our learning. Students gain an understanding of the variables that contribute to our ability to flourish at work and understand how we both experience and shape our work environments through our individual contributions. This course will have required synchronous sessions and the instructor will offer a choice of times.
Taught by: Meredith Myers
Also Offered As: APOP 200
Activity: Online Course
1.0 Course Unit

LEAD 400 Global Leadership and Problem-Solving
According to research sponsored by the Organization for Economic Cooperation and Development (OECD), over the last 200 years, human beings in virtually every corner of the globe have become ever more likely to live longer, healthier, wealthier, and more personally satisfying lives. But global progress in improving human well-being has been neither linear nor universal. For instance, measured at living on just $5.50 a day per person, nearly 3.5 billion people still live in extreme poverty. Moreover, humankind now faces several unprecedented existential threats to human life itself such as global warming and the persistence or spread of drug-resistant infectious diseases including ones once thought to be nearly eradicated. In this course, students are introduced to multiple and competing concepts and empirical theories on each of two interrelated questions regarding global leadership and problem-solving: (1) What, if any, particular approaches (for example, 'collaborative governance' or 'boundary-spanning leadership') might predictably and reliably increase the odds that the next century-long chapter in the annals of global human well-being—the chapter to be written between now and the decade that will begin in 2120—will be a tale of greater wealth, health, and happiness for all or most people worldwide? (2) Under what, if any, conditions can diverse institutions—families and social networks; neighborhood and community groups; nonprofit or social sector organizations; for-profit firms; and local, national, and transnational government institutions—act, either independently or in tandem with each other, to maintain or improve human well-being? Each student quasi-independently researches and writes a capstone research paper describing, analyzing, and assessing an existing policy or program pertaining to one of the following three challenges: elder care with a focus on China; education with a focus on Africa; or economic development with a focus on Latin America.
Activity: Online Course
1.0 Course Unit
LEAD 504 Professional Communication and Academic Writing
Writing effectively for a variety of audiences is a required skill for professional masters students, both inside the classroom and in the workplace. This graduate level online seminar introduces writing and communication strategies and skills for all graduate professional students who wish to pursue leadership opportunities in their chosen fields. Students will learn professional communication and academic writing practices and that will enable them to respond to a variety of workplace scenarios as well as influence and inspire others through effective written communication strategies. Through frequent writing assignments, hands-on exercises during class sessions, and a final analysis paper, students will learn how to write concise prose; summarize and evaluate documents and scenarios effectively; develop technical skills in writing clear instructions; and write persuasive proposals. The class will focus on strategies for effective critical thinking and writing, as well as how to write persuasively for multiple audiences, ranging from the general public to an academic audience. There will be special attention to analysis of genres and audiences, and effective writing and revision strategies. Most importantly, you will be able to use the skills developed in this class throughout your academic and professional careers.
Activity: Online Course
1.0 Course Unit
Notes: The course will meet virtually, via Zoom, on Wednesdays 8-9:30: May 29; June 5, 12, 19, and 26; and July 3, 10, and 17.

Legal Studies & Business Ethics (LGST)

LGST 100 Ethics and Social Responsibility
This course explores business responsibility from rival theoretical and managerial perspectives. Its focus includes theories of ethics and their application to case studies in business. Topics include moral issues in advertising and sales; hiring and promotion; financial management; corporate pollution; product safety; and decision-making across borders and cultures.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

LGST 101 Law and Social Values
This course presents law as an evolving social institution, with special emphasis on the legal regulation of business in the context of social values. It considers basic concepts of law and legal process, in the U.S. and other legal systems, and introduces the fundamentals of rigorous legal analysis. An in-depth examination of contract law is included.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

LGST 202 Law of Corporate Management and Finance
This course provides an introduction to the law of corporate management and finance, focusing on large publicly held corporations. It is presented from the perspective that before too long virtually all students will serve on one or more corporate boards of directors and that each should, therefore, know about the duties owed by directors and officers to those toward whom they bear a fiduciary duty. The course covers the basic obligations of corporate directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stake holders in the governance of public corporations, including shareholders, creditors/bondholders, employees (including corporate executives), investment bankers, corporate lawyers, and accountants. Particular attention is given to the law of mergers and acquisitions. Important issues of social policy concerning large business corporations are also discussed.
Taught by: Buccola, Orts
One-term course offered either term
Also Offered As: LGST 802
Activity: Lecture
1.0 Course Unit

LGST 204 Real Estate Law
This course examines the fundamentals of real estate finance and development from a legal and managerial perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. Lectures and class discussion required.
One-term course offered either term
Also Offered As: LGST 804, REAL 204, REAL 804
Activity: Lecture
1.0 Course Unit

LGST 205 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.
Taught by: H. Hovenkamp
One-term course offered either term
Also Offered As: LGST 805, MKTG 260, MKTG 760
Activity: Lecture
1.0 Course Unit
LGST 206 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.

One-term course offered either term
Also Offered As: MGMT 291, OIDD 291
Activity: Lecture
1.0 Course Unit

LGST 207 The Sports Industry: Business and Legal Aspects
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues.

Taught by: DiGisi
One-term course offered either term
Activity: Lecture
1.0 Course Unit

LGST 208 The Law at Work: Employment Law for Managers
This course is based on the principle that knowledge and understanding of employment law facilitate (1) promotion of a workforce with a high degree of commitment to reaching business goals, (2) the development of practical business solutions to problems arising in the workplace, (3) effective human resources policy and procedures that comply with applicable laws, and (4) justice for workers. The course provides students with an introduction to the law of the workforce and examines the balance between business goals and employment law compliance. The course examines the various employment laws with which businesses must comply and the legal rights and responsibilities of employees and employers. The emphasis is on laws concerning equal employment opportunity with respect to discrimination and harassment because of sex, race, national origin, religion, sexual orientation, age, disability and other characteristics protected by workforce laws; constitutional – and especially free speech – rights at work; work-related privacy including investigations, electronic communication and social media; classifying workers in the gig economy; diversity and affirmative action; and the legal and regulatory environment regarding immigration, wage and hour, leaves of absence, hiring, termination and afterwards; and labor/management relations and collective bargaining.

LGST 212 Economic Analysis of Law
This course provides an introduction to the economic analysis of law and legal institutions. Our goal is develop intuitions about the ways law simultaneously shapes and responds to private behavioral incentives. In the first half of the course, we will survey the application of key economic concepts to basic features of the Anglo-American common law of property, contract, and tort. In the second half of the course, we will use the tools developed in our survey to focus in depth on the law of intellectual property.

Activity: Lecture
1.0 Course Unit

LGST 213 Legal Aspect of Entrepreneurship
This practically oriented course examines the critical legal issues confronting start-ups with a focus on innovation and disruption. Cutting edge topics include blockchain, fintech, AI, digital and mobile based issues. Students will learn to use the law to manage risk, deploy resources and maximize value. The course covers the entire lifecycle of a business, including confidentiality, non-competition and invention assignment clauses, intellectual property (IP) including patent, trade secrets, copyrights and trademarks, tax advantages of limited liability companies (LLC) vs. corporations or partnerships, securities law strategy for raising angel financing, convertible debt and venture capital (covering SAFE and KISS), independent contractor vs. employee concerns, discrimination laws, merger and acquisition exit plans, as well as restructuring and bankruptcy. Students will emerge from the course with the skills and tools to draft term sheets and contracts, negotiate deals tailored to their business models, as well as mitigate liability via risk-protective policies, insurance and management of litigation. The course fulfills elective requirements for 5 Concentrations, Majors, or Minors: * Wharton Legal Studies and Business Ethics; * Wharton Entrepreneurship and Innovation/Management; * Wharton Social Impact and Responsibility; * SAS Legal Studies Minor; * SAS STSC Major (Science, Technology and Society) – with permission.

LGST 214 International Business Transactions
This course aims to familiarize students with and prepare students for the conduct of international transactions. Students will work their way through a series of hypothetical trade transactions, placed against a background of concepts and general theories. Students will take a hypothetical firm through a series of possible transnational investments, again after discussion of concepts and general theories. Throughout, the course will discuss issues of importance to emerging economies. Students should be able to make thoughtful choices rather than simply reciting bullet points about international business transactions.

Taught by: Nichols
Course not offered every year
Also Offered As: LGST 814
Activity: Lecture
1.0 Course Unit
LGST 215 Environmental Management: Law & Policy
This course provides an introduction to environmental management by focusing on foundational concepts of environmental law and policy and how they affect business decisions. The primary aim of the course is to give students a deeper practical sense of the important relationship between business and the natural environment, the existing legal and policy framework of environmental protection, and how business managers can think about managing their relationship with both the environment and the law.
Taught by: Light, Orts
One-term course offered either term
Also Offered As: LGST 815
Activity: Lecture
1.0 Course Unit

LGST 216 Emerging Economies
This course explores important issues in conducting business internationally in and with emerging economies. Much of the course attempts to define emerging economies and to understand the changes occurring in these countries. The course also examines the position of emerging economies in the global context, and how broad social issues affect the development of emerging economies and the ability to establish relationships or conduct business in emerging economies.
Taught by: Nichols
One-term course offered either term
Activity: Lecture
1.0 Course Unit

LGST 218 Diversity and the Law
The goal of this course is to study the role the law has played, and continues to play, in addressing the problems of racial discrimination in the United States. Contemporary issues such as racial profiling, affirmative action, and diversity will all be covered in their social and legal context. The basis for discussion will be assigned texts, articles, editorials and cases. In addition, interactive videos will also be used to aid class discussion. Course requirements will include a term paper and class case presentations.
Taught by: Anderson

Also Offered As: AFRC 218
Activity: Lecture
1.0 Course Unit

LGST 219 Law and Policy in International Business
This course introduces students to the legal frameworks for regulating international business - national, regional, and international. Topics include mechanisms for dispute resolution, different standards on assigning nationality, jurisdictional and choice of law problems, controversies regarding the treatment of incoming foreign direct investment and expropriation of foreign-owned businesses, patterns in extraterritoriality, problems of clashing legal standards affecting areas like labor and the environment, and projects for creating more uniform rules governing the conduct of international business. Throughout students will be encouraged to evaluate the policy dimensions of laws and to develop their own critical perspectives regarding these.
Taught by: Zaring
One-term course offered either term
Activity: Lecture
1.0 Course Unit

LGST 220 International Business Ethics
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.
Taught by: Berkey, Laufer
One-term course offered either term
Also Offered As: LGST 820
Activity: Lecture
1.0 Course Unit

LGST 221 Constitutional Law and Free Enterprise
The course explores the foundations of U.S. constitutional doctrine and adjudication, with an emphasis on commercial and business issues and implications of constitutional law. The course starts by considering the Constitution and the structure and relationship of the governmental entities it establishes and upon which it depends. Special attention is given to the role of the federal courts, especially the Supreme Court, in interpreting and applying constitutional principles. From this foundation, the course moves on to examine in detail the major economic and business implications of constitutional law in different eras of the nation's history. A core theme is how historical events and changing notions of public policy have affected and been affected by the evolution of constitutional doctrine.
Taught by: Sepinwall
One-term course offered either term
Activity: Lecture

LGST 222 Internet Law, Privacy, and Cybersecurity
This course looks at how courts, legislatures, and regulators confront the major issues of the internet world. Billions of people are now active on social media, and firms such as Google, Facebook, Amazon, and Alibaba are among the worlds most valuable and influential. The legal interfaces between the physical world and the digital world are therefore increasingly important. In particular, exploitation of personal information online by governments, digital platforms, and bad actors is becoming a constant source of major controversies. The material in the course ranges from the foundations of cyberlaw, developed during the e-commerce bubble of the 1990s, to current leading-edge questions around the power and responsibility of digital intermediaries; data protection in the U.S. and Europe; cybercrime, blockchain; and network neutrality. No pre-existing legal or technical knowledge is required.
One-term course offered either term
Also Offered As: OIDD 222
Activity: Lecture
1.0 Course Unit
LGST 223 Securities Regulation
The course examines the federal securities laws and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management, and real estate.
One-term course offered either term

1.0 Course Unit

LGST 224 Human Rights and Globalization
The 2000 UN Global Compact has confirmed the role of TNCs as central actors in the UN system of international human rights law, but whether their role should be voluntary or legally mandated remains in dispute. This course introduces students to how globalization has led to projects for expanding international human rights law to capture the operations of TNCs and why this development is opposed in many quarters. Competing perspectives on the pros and cons of imposing human rights responsibilities on TNCs and on the respective roles that businesses and governments should play will be examined. The Positions of various governments, businesses, international institutions, academics, and NGOs will be considered, and a number of illustrative case studies will be analyzed.
One-term course offered either term
Also Offered As: LGST 524
Activity: Lecture
1.0 Course Unit

LGST 226 Markets, Morality & the Future of Capitalism
Markets play a central role in the life of a capitalist democracy. But is this a good thing? Should we let markets decide who is rich and who is poor? Who makes decisions and who follows them? Whose ideas get heard and whose ideas do not? The goal of this class will be to examine the market from the perspective of various social values to see whether we should want a market system and, if so, what kind of market system we should want. Among the issues we will examine are the following. Does the market contribute to the common good? If so, how? Does the market conflict with the idea that all human beings are of equal value? What is the relation between the market and freedom? Does the market liberate us or oppress us? Can we reconcile the market with our democratic ideals? What role should corporations play in a healthy democracy? What role should markets play in an increasingly globalized world? We will read several important philosophers, economists and political theorists writing on these issues, including Adam Smith, John Rawls, Amartya Sen, Friedrich Hayek, Karl Marx, Robert Nozick, Jurgen Habermas, and others. Grades will be based on three papers and class participation.
Taught by: Hughes
One-term course offered either term
Activity: Lecture
1.0 Course Unit

LGST 227 Literature of Success
This course explores the history, literature, and philosophy of two age-old questions: what does it mean to be successful and how does one achieve this elusive goal? It surveys some of the classics of the ‘success’ genre - from Benjamin Franklin’s Autobiography in the 18th century to Dale Carnegie’s How to Win Friends and Influence People and Marcus Buckingham’s Now, Discover Your Strengths in the 20th and 21st centuries. Case studies of remarkable achievements in business and society and Arthur Miller’s play Death of a Salesman provide additional contexts within which to reflect on the questions at the center of the course. Students will keep a personal journal and use web-based tools to examine their own character strengths, talents, and achievement orientations. Grading is based on class attendance and participation, reading response papers, personal journals on assigned topics involving self reflection, a mid-term paper on an assigned research subject related to success, and a final, longer paper exploring, based on course readings and original research, each students personal philosophy of success. No final exam.

1.0 Course Unit
LGST 228 Sports Law
This course focuses on the areas of association, contract, constitutional, labor, antitrust, and agency law as they apply to the sports industry. This course exposes the student to many of the legal issues facing stakeholders in sport organizations. Special attention is given to the regulation of professional sports leagues promoting competitive balance, as well as antitrust law and labor-management relations dealing with the organization structure of sports leagues. The course also takes an inside look at previous and newly formed collective bargaining agreements and the use of Salary Cap or lack thereof in professional sports leagues. The development of effective communication skills will be emphasized through class presentations, written assignments, and quizzes; leadership and interpersonal communications will be cultivated through small group projects and meetings, and critical thinking and problem solving skills will be fostered through the careful study of case law impacting the sports industry in a variety of facets.

LGST 230 Social Impact and Responsibility: Foundations
What role can business play in helping to meet global societal needs, whether it involves the environment, improving health, expanding education or eradicating poverty? Is there any responsibility on the part of business to help meet those needs? What are models of successful business engagement in this area? How should success be measured?
Are there limits to what businesses can and should do, and what institutional changes will enable businesses and entrepreneurs to better succeed? This survey course provides students the opportunity to engage in the critical analysis of these and other questions that lie at the foundation of social impact and responsibility as an area of study. The course involves case studies, conceptual issues, and talks by practitioners. The course is designed to help students develop a framework to address the question: How should business enterprises and business thinking be engaged to improve society in areas not always associated with business? The course is required for the secondary concentration in Social Impact and Responsibility.
Activity: Lecture
1.0 Course Unit

LGST 241 Theories of Business Enterprise
What is a business firm? How did various forms of business, including the corporation, arise historically? How do contemporary economic and financial theories explain how business firms evolve, grow, and die? What are the legal underpinnings of the forms of business enterprise, ranging from sole proprietorships to partnerships to family-owned enterprises to multinational corporate groups? How do business firms relate to politics and government, as well as religion? What about the environment? This interdisciplinary course offers an introduction to pursuing answers to these questions. Students will gain perspective on the nature of business enterprises from different points of view that will be useful in further research, as well as having practical application. Ubiquitous economic concepts such as agency costs, principal-agent relationships, transaction costs, and influence costs will be studied. Different legal structures of firms will also be introduced, including new hybrid organizations such as benefit corporations, which seek to meld non-profit and profit objectives.
In the course, we will read high-profile U.S. Supreme Court cases such as Citizens United and Hobby Lobby and debate appropriate boundaries (or not) between business and politics, as well as business and religion. Business ethics and the nature of any social responsibilities owed by business and business people will be topics too.

LGST 242 Big Data, Big Responsibilities: The Law and Ethics of Business Analytics
Significant technologies always have unintended consequences, and their effects are never neutral. A World of ubiquitous data, subject to ever more sophisticated collection, aggregation, and analysis, creates massive opportunities for both financial gain and social good. It also creates dangers in areas such as privacy, security, discrimination, exploitation, and inequality, as well as simple hubris about the effectiveness of management by algorithm. Firms that anticipate the risks of these new practices will be best positioned to avoid missteps. This course introduces students to the legal, policy, and ethical dimensions of big data, predictive analytics, and related techniques. It then examines responses—both private and governmental—that may be employed to address these concerns.
Taught by: Werbach
Activity: Lecture
0.5 Course Units
LGST 243 Other People’s Money: The Law, Politics, and History of Financial Institutions
We learn in introductory economics courses that money is fungible: that is, one dollar is as good as the next. Indeed, using money as a ‘medium of exchange’ is one of its defining characteristics. But what happens when we take a big pile of money and put it in different buckets. On one bucket we might write ‘hedge fund’; on another, ‘central bank’; on still another, ‘payday lender.’ Then money starts to change in ways defined by law, history, ethics, and politics. This course will take you on a tour of these different buckets—different kinds of financial institutions, broadly defined—throughout the modern financial system. We will look at hedge funds, insurance companies, investment banks, sovereign wealth funds, central banks, consumer banks, payday lenders, state-sponsored enterprises (like the Export-Import Bank in the United States and much of the financial system in China), and the cutting edge of fintech, including crowd-funded lending, digital currencies, and more. In each case, students will be exposed to a series of specialized questions: Where did this institution come from? What problem is it trying to solve that other alternatives could not resolve? What is the basic business (or, where relevant, regulatory) model for each institution? How is each institution regulated, and by whom? What are the ethical considerations in each context? What are the political considerations that each market participant faces?

LGST 244 Blockchain & Cryptocurrencies: Business, Legal, and Regulatory Considerations
Blockchain technology is a form of decentralized database that allows for the secure exchange of value without reliance on trusted intermediaries. Blockchain is the foundation for cryptocurrencies such as Bitcoin, as well as for distributed ledger platforms used by enterprise consortia in various industries. Many believe that blockchain solutions have revolutionary potential. They promise to replace legal enforcement with technical mechanisms of cryptographic consensus as the means of generating trust. The technology has generated significant excitement, investment, and entrepreneurial activity in recent years. However, the business value of blockchain-based solutions is uncertain, cryptocurrency valuations are speculative, and there are serious legal, regulatory, and governance challenges to be addressed. This course is designed to give students the tools for critical assessment of ongoing developments in this evolving area.
Taught by: Werbach

LGST 247 Value of Values: Contemporary Ethical Issues in Business
This course explores the concepts of value and values in economic life. All strategic and many tactical decisions begin with a value proposition of some kind. Investors, customers, employees, suppliers, and community members are potential sources of value in the creation, exchange, distribution and sale of a good or service. This course examines different conceptions of ‘value/values’ in business life and the role they play in interpreting issues such as artificial intelligence, corporate governance, business and professional education, international business, value theory, and personal values. The class will utilize a combination of theoretical readings, class exercises, student presentations and case discussions.

LGST 292 Advanced Negotiation
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course assumes familiarity with the basic negotiation concepts covered in the prerequisite for this course: Negotiations. In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.

LGST 401 Global Social Enterprise Consulting Project
This proposed undergraduate capstone course, sponsored by the Legal Studies and Business Ethics Department, is a 7-week, .5 cu class designed to give Wharton seniors the chance to connect academic theory with complex real-world issues arising within the context of award-winning social enterprise projects identified by the World Bank’s ‘Ideas for Action Initiative.’ The course is especially appropriate for sponsorship by the Legal Studies and Business Ethics Department because the Initiative is jointly sponsored by the World Bank and Wharton’s Zicklin Center for Business Ethics Research. The aim of the course is to integrate and strengthen students’ academic skills by applying them in cross-functional ways to the production of real-world consulting reports for project founders. The course will also require students to grapple with current ethical and legal challenges that business organizations face, such as defining the purpose of a business, determining how to incorporate global standards like the Sustainable Development Goals or other Environmental, Social, and Governance (ESG) standards into a business plan, and designing mechanisms to promote ethical behavior and combat such systemic challenges as corruption.

LGST 611 Responsibility in Global Management
This course uses the global business context to introduce students to important legal, ethical and cultural challenges they will face as business leaders. Cases and materials will address how business leaders, constrained by law and motivated to act responsibly in a global context, should analyze relevant variables to make wise decisions. Topics will include an introduction to the basic theoretical frameworks used in the analysis of ethical issues, such as right-based, consequentialist-based, and virtue-based reasoning, and conflicting interpretations of corporate responsibility. The course will include materials that introduce students to basic legal (common law vs. civil law) and normative (human rights) regimes at work in the global economy as well as sensitize them to the role of local cultural traditions in global business activity. Topics may also include such issues as comparative forms of corporate governance, bribery and corruption in global markets, human rights issues, diverse legal compliance systems, corporate responses to global poverty, global environmental responsibilities, and challenges arising when companies face conflicting ethical demands between home and local, host country mores. The pedagogy emphasizes globalized cases, exercises, and theoretical materials from the fields of legal studies, business ethics and social responsibility. Format: class participation, midterm and final exams. Materials: coursepack.

Activity: Lecture
0.5 Course Units
LGST 612 Responsibility in Business
This course introduces students to important ethical and legal challenges they will face as leaders in business. The course materials will be useful to students preparing for managerial positions that are likely to place them in advisory and/or agency roles owing duties to employers, clients, suppliers, and customers. Although coverage will vary depending on instructor, the focus of the course will be on developing skills in ethical and legal analyses that can assist managers as they make both individual-level and firm-level decisions about the responsible courses of action when duties, loyalties, rules, norms, and interests are in conflict. For example, the rules of insider trading may form the basis for lessons in some sections. Group assignments, role-plays, and case studies may, at the instructor’s discretion, be used to help illustrate the basic theoretical frameworks. Course materials will highlight industry codes and professional norms, as well as the importance of personal and/or religious values. Format: class participation, quiz, group report, and final paper or exam. Materials: coursepack. Prerequisites: none.

Activity: Lecture
0.5 Course Units

LGST 613 Business, Social Responsibility, and the Environment
This course focuses on the social and environmental responsibilities of business that may extend beyond profit maximization. In 2019, the Business Roundtable composed of leading chief executive officers of U.S.-based companies released a statement that resurrected and reinforced interest in this view. This view contrasts with a traditional approach famously expressed by the economist Milton Friedman that ‘the social responsibility of business is to increase its profits.’ Although Friedman acknowledged normative side constraints to the profit motive—namely, a need to conform to the ‘basic rules of the society, both those embodied in law and those embodied in ethical custom’—he did not see business as playing a central role in the creation and sustenance of these ‘basic rules.’ As this course will explore in depth, Friedman’s view has been challenged by various competing views of business purpose, such as in normative stakeholder theory and the related idea of ‘shared value’—the view that business can be a force for good. The course will explore the various competing views of business purpose and the nature of business social responsibility. Business operations are surely ‘part of the problem’ in the sense of being the source of the production and release of large quantities of greenhouse gases every year. But can and should business also become ‘part of the solution’? If so, how? Do business firms have an ethical, if not a legal responsibility to minimize their own carbon footprints or other externally harmful actions? When social or environmental priorities collide directly with the profit motive, how should these competing mandates be properly reconciled? Similar questions may be asked (and touched on in this class) about other social challenges in the world today, including democratic values, poverty reduction, fresh water supplies, and global health issues affecting those less able to pay for life-saving drugs and medical services.

LGST 729 Intellectual Property Strategy for the Innovation-Driven Enterprise
Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: 'And boy, have we patented it!' How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategist and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In Unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.
Also Offered As: MGMT 229, MGMT 729
Activity: Lecture
0.5 Course Units

LGST 762 Environmental Sustainability and Value Creation
This course provides an overview of topics related to corporate sustainability with a focus on how environmentally sustainable approaches can create value for the firm. The course explores trends in corporate practices and students consider specific examples of such practices to examine the interactions between the firm and the environment. This course has three objectives: to increase students’ knowledge of sustainability practices and their impact on firm performance; to teach students to think strategically and act entrepreneurially on environmental issues; and to help students design business approaches to improve environmental outcomes, while simultaneously creating value.
Taught by: G. Survis

Activity: Lecture
0.5 Course Units

LGST 785 Business Strategy & Corp
This course explores strategic, business and legal decision making in a fluid real world corporate context. Classes will cover a series of timely financial and legal subjects as well as case studies that deal with topical problems in corporate governance, investment strategy, finance, private equity, executive compensation, and potential corporate and criminal behavior. Press, public market reaction, and governmental/political considerations will be integrated into the discussion. All students will be required to participate in one major and two minor team projects. An equal number of graduate law and business students will be enrolled in this class. The instructor, a 30 year veteran and partner at a major private equity firm, is also an attorney and CPA. No prerequisites.
Taught by: Perry Golkin
Also Offered As: FNCE 785, LAW 542
Activity: Lecture
1.0 Course Unit

LGST 799 Seminar in Law & Society
A study of the nature, functions, and limits of law as an agency of societal policy. Each semester an area of substantive law is studied for the purpose of examining the relationship between legal norms developed and developing in the area and societal problems and needs.
One-term course offered either term
Also Offered As: LGST 299
Activity: Seminar
1.0 Course Unit

LGST 802 Corporate Law and Management in Global Perspective
This course provides an introduction to the law of corporate management and finance, focusing on large publicly held corporations. It is presented from the perspective that before too long virtually all students will serve on one or more corporate boards of directors and that each should, therefore, know about the duties owed by directors and officers to those toward whom they bear a fiduciary duty. The course covers the basic obligations of corporate directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stake holders in the governance of public corporations, including shareholders, creditors/bondholders, employees (including corporate executives), investment bankers, corporate lawyers, and accountants. Particular attention is given to the law of mergers and acquisitions. Important issues of social policy concerning large business corporations are also discussed. Format: Lecture and legal case discussion. Materials: To be determined.
Taught by: Buccola, Orts
One-term course offered either term
Also Offered As: LGST 202
Activity: Lecture
1.0 Course Unit
LGST 804 Real Estate Law
This course examines the fundamentals of real estate finance and development from a legal and managerial perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. Lectures and class discussion required.
One-term course offered either term
Also Offered As: LGST 204, REAL 204, REAL 804
Activity: Lecture
1.0 Course Unit

LGST 805 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.
Taught by: H. Hovenkamp
One-term course offered either term
Also Offered As: LGST 205, MKTG 260, MKTG 760
Activity: Lecture
1.0 Course Unit

LGST 806 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills. Cross-listed with MGMT 691/OIDD 691/LGST 806. Format: Lecture, class discussion, simulation/role play, and video demonstrations. Materials: Textbook and course pack.
Taught by: Faculty
One-term course offered either term
Also Offered As: LAW 518, MGMT 691, OIDD 691
Activity: Lecture
1.0 Course Unit

LGST 807 Securities Regulation
The course examines the federal securities law and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management and real estate. Requirements: Midterm and final exam. Materials: Text, pamphlet of statutes and rules, and study guide.
One-term course offered either term
Also Offered As: LGST 223
Activity: Lecture
1.0 Course Unit

LGST 808 Employment Law
This course is based on the principle that knowledge and understanding of employment law facilitate (1) promotion of a workforce with a high degree of commitment to reaching business goals, (2) the development of practical business solutions to problems arising in the workplace, (3) effective human resources policy and procedures that comply with applicable laws, and (4) justice for workers. The course provides students with an introduction to the law of the workforce and examines the balance between business goals and employment law compliance. The course examines the various employment laws with which businesses must comply and the legal rights and responsibilities of employees and employers. The emphasis is on laws concerning equal employment opportunity with respect to discrimination and harassment because of sex, race, national origin, religion, sexual orientation, age, disability and other characteristics protected by workforce laws; constitutional – and especially free speech – rights at work; work-related privacy including investigations, electronic communication and social media; classifying workers in the gig economy; diversity and affirmative action; and the legal and regulatory environment regarding immigration, wage and hour, leaves of absence, hiring, termination and afterwards; and labor/management relations and collective bargaining.
Taught by Sepinwall

Also Offered As: LGST 208
Activity: Lecture
1.0 Course Unit
LGST 809 Sports Business Management
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues. This course is crosslisted with MGMT815.
One-term course offered either term
Also Offered As: LGST 215
Activity: Lecture
1.0 Course Unit

LGST 813 Legal and Transactional Aspects of Entrepreneurship
Legal and Transactional Aspects of Entrepreneurship is a practical and intensive course that examines the critical legal and transactional issues confronting start-up and emerging growth companies. Although the context of the course is early stage companies, many of the concepts studied are equally applicable to more mature, established companies. The course provides perspective on how to use the law strategically to manage risk, deploy resources and maximize shareholder value. Topics include the enforceability of confidentiality, non-competition and other restrictive covenants in employment agreements; choice of business form including the legal, financial and tax advantages and disadvantages of general partnerships, limited partnerships, corporations and limited liability companies; tax and securities law; legal aspects of raising capital including structuring venture capital and private equity financing; entrepreneurial acquisition structures, employment law, and intellectual property law including trade secrets, copyrights, patents, and trademarks. Format: Lecture and discussion with coverage of legal cases and materials. Requirements: Class participation, midterm and final exam. Materials: Course pack.
Taught by: Borghese

LGST 820 International Business Ethics
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.
Taught by: Berkey, Lauffer

Also Offered As: LGST 220
Activity: Lecture
1.0 Course Unit

LGST 830 Social Impact and Responsibility: Foundations
What role can business play in helping to meet global societal needs, whether it involves the environment, improving health, expanding education or eradicating poverty? Is there any responsibility on the part of business to help meet those needs? What are models of successful business engagement in this area? How should success be measured? Are there limits to what businesses can and should do, and what institutional changes will enable businesses and entrepreneurs to better succeed? This survey course provides students the opportunity to engage in the critical analysis of these and other questions that lie at the foundation of social impact and responsibility as an area of study. The course involves case studies, conceptual issues, and talks by practitioners. The course is designed to help students develop a framework to address the question: ‘How should business enterprises and business thinking be engaged to improve society in areas not always associated with business?’ Format: Twelve-session discussion-based course with midterm exam and final project
Activity: Lecture
0.5 Course Units

LGST 920 Ethics in Business and Economics
The seminar explores the growing academic literature in business ethics. It also provides participants an opportunity to investigate an ethical issue of their choosing in some depth, using their field of specialty as context. The seminar assumes no previous exposure to business ethics. Different business ethics theories and frameworks for investigating issues will be discussed, including corporate social responsibility, corporate moral agency, theories of values, and corporate governance. In turn, these theories will be applied to a range of issues, both domestic and international. Such issues include: corruption in host countries, the management of values in modern corporations, the ethical status of the corporation, ethics in sophisticated financial transactions (such as leveraged derivative transactions), and gender discrimination in the context of cultural differences. Literature not only from business ethics, but from professional and applied ethics, law, and organizational behavior will be discussed. Often, guest speakers will address the seminar. At the discretion of the class, special topics of interest to the class will be examined. Students will be expected to write and present a major paper dealing with a current issue within their major field. The course is open to students across fields, and provides integration of ideas across multiple business disciplines.
Course not offered every year
Activity: Seminar
1.0 Course Unit
LING 051 Proto-Indo European Language and Society
Most of the languages now spoken in Europe, along with some languages of Iran, India and central Asia, are thought to be descended from a single language known as Proto-Indo-European, spoken at least six thousand years ago, probably in a region extending from north of the Black Sea in modern Ukraine east through southern Russia. Speakers of Proto-Indo-European eventually populated Europe in the Bronze Age, and their societies formed the basis of the classical civilizations of Greece and Rome, as well as of the Celtic, Germanic and Slavic speaking peoples. What were the Proto-Indo-Europeans like? What did they believe about the world and their gods? How do we know? Reconstruction of the Proto-Indo-European language, one of the triumphs of comparative and historical linguistics in the 19th and 20th centuries, allows us a glimpse into the society of this prehistoric people. In this seminar students will, through comparison of modern and ancient languages, learn the basis of this reconstruction -- the comparative method of historical linguistics -- as well as explore the culture and society of the Proto-Indo-Europeans and their immediate descendants. In addition, we will examine the pseudo-scientific basis of the myth of Aryan supremacy, and study the contributions of archaeological findings in determining the 'homeland' of the Indo-Europeans. No prior knowledge of any particular language is necessary. This seminar should be of interest to students considering a major in linguistics, anthropology and archaeology, ancient history or comparative religion. (Also fulfills Cross-Cultural Analysis.)

Notes: Freshman Seminar

LING 054 Bilingualism in History
This course introduces the foundations of linguistics - the scientific study of language - through exploration of multilingualism in the USA and in different societies around the world. Contacts between groups of people speaking different languages are documented from earliest records, and around the world it remains the norm to find more than one language in regular use in a single community. In this course we will see that multilingualism is a catalyst for linguistic change: sometimes languages are lost; sometimes new languages are created; sometimes the structure of a language is radically altered. We will consider: Which parts of linguistic structure are most susceptible to change under conditions of bilingualism? Does language contact - whether a result of trade, education, migration, conquest, or intermarriage - influence language structure in predictable ways? How do individual speakers handle multiple languages? How have attitudes to speakers of multiple languages changed through history? How have socio-historical events shaped the linguistic situation in the USA?
Course not offered every year

1.0 Course Unit
Notes: Freshman Seminar
LING 058 Language and Social Identity
Language is an important part of both human cognition as well as social organization. Our identities, our societies, and our cultures are all informed by and how we use language. Language interacts with the social, political and economic power structures in crucial ways. This course will focus on the ways in which language and the social facts of life are dependent upon each other. In this course, we will examine issues related to class, race, gender, culture and identity, as well as how language exists to both challenge and uphold systems of power.
Taught by: Holliday
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

LING 102 Introduction to Sociolinguistics
Human language viewed from a social and historical perspective. Students will acquire the tools of linguistic analysis through interactive computer programs, covering phonetics, phonology and morphology, in English and other languages. These techniques will then be used to trace social differences in the use of language, and changing patterns of social stratification. The course will focus on linguistic changes in progress in American society, in both mainstream and minority communities, and the social problems associated with them. Students will engage in field projects to search for the social correlates of linguistic behavior, and use quantitative methods to analyze the results.
For BA Students: Society Sector
Taught by: Tamminga
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Satisfies Quantitative Data Analysis

LING 103 Introduction to Language: Language Structure and Verbal Art
The purpose of this course is to explore the relationship between linguistic structure and the use of language for artistic purposes. The syllabus is organized as a sequence of units, each built around a particular theme. These include the sound structure of poetry (meter, rhyme, and other linguistic patterns in Jabberwocky, the Odyssey, Shakespeare, the Troubadours, and others); how precise linguistic data can be used to solve an outstanding literary problem (determining the approximate date when Beowulf was composed); and the structure of folktales of various cultures and of narratives of everyday experience.
For BA Students: Arts and Letters Sector
Taught by: Ringe
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 105 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Course usually offered in fall term
Also Offered As: CIS 140, COGS 001, PHIL 044, PSYC 207
Activity: Lecture
1.0 Course Unit
Notes: This counts as a Formal Reasoning course for College students.

LING 106 Introduction to Formal Linguistics
This course is an introduction to Information Theory, as originated by Claude Shannon, emphasizing its application to the study of language, including both modern structural linguistics and the quantitative study of language in use. The course will be of interest to linguistics students, cognitive science students, and students with an interest in ongoing developments in contemporary language technology.
Taught by Kroch
Activity: Lecture
1.0 Course Unit
Notes: This is a Formal Reasoning course.

LING 107 Language and Information
This course is an introduction to Information Theory, as originated by Claude Shannon, emphasizing its application to the study of language, including both modern structural linguistics and the quantitative study of language in use. The course will be of interest to linguistics students, cognitive science students, and students with an interest in ongoing developments in contemporary language technology.
Taught by Kroch
Activity: Lecture
1.0 Course Unit

LING 115 Writing Systems
The historical origin of writing in Sumer, Egypt, China, and Mesoamerica; the transmission of writing across languages and cultures, including the route from Phoenician to Greek to Etruscan to Latin to English; the development of individual writing systems over time; the traditional classification of written symbols (ideographic, logographic, syllabic, alphabetic); methods of decipherment; differences between spoken and written language; how linguistic structure influences writing, and is reflected by it; social and political aspects of writing; literacy and the acquisition of writing.
For BA Students: History and Tradition Sector
Taught by Buckley
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
LING 150 The Keys to Language Structure (and How to Use Them) 
The purpose of this course is to introduce students to the basic concepts of sentence structure in a pretheoretical framework, demonstrating that any natural human language must have certain structures and must choose the rest from a restricted universal set. The textbook, which was written for this course, discusses each set of structures with examples from six languages: English, Spanish, Latin, Biblical Hebrew, Mandarin, and Navajo. The instructor will add languages from among those with which the students are familiar, within the limits of his competence. This course will help students not only to learn foreign languages, but also to improve their own writing skills, by making the structures that they must use more explicit and intelligible.
Taught by: Ringe
Course offered fall; even-numbered years
Activity: Lecture
1.0 Course Unit

LING 151 Language and Thought
This course describes current theorizing on how the human mind achieves high-level cognitive processes such as using language, thinking, and reasoning. The course discusses issues such as whether the language ability is unique to humans, whether there is a critical period to the acquisition of a language, the nature of conceptual knowledge, how people perform deductive reasoning and induction, and how linguistic and conceptual knowledge interact.
Taught by: Trueswell
One-term course offered either term
Also Offered As: PSYC 151
Prerequisite: PSYC 001 OR PSYC 207 OR COGS 001 OR LING 105
Activity: Lecture
1.0 Course Unit

LING 170 Experimental Methods for Linguists
Controlled experiments are a key element of empirical research, and they play an increasingly important role in the study of language and communication. This course will be divided into two halves. In the first half, students will be introduced to the fundamentals of how to conduct an experiment, along with a basic introduction to statistical methods. The emphasis will be on understanding the basic logic of experimental design, but special lectures will focus on the application of particular methods to the study of language. In the second half, classes will become more like lab meetings as students develop their own experimental projects from the ground up. At the end of the semester they will write up these projects as papers.
Taught by: Roberts
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 175 Language, Cognition and Culture
This is a course on how language relates to other cognitive systems. We will discuss the question of whether and how the language one speaks affects the way one thinks, the relation between words and concepts, the link between language acquisition and conceptual development in children, and the potential role of language in shaping uniquely human concepts. The course incorporates cross-linguistic, cross-cultural and developmental perspectives and combines readings from linguistics, psychology, philosophy, neuroscience and other fields within cognitive science.
Taught by: Anna Papafragou
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 210 Introduction to Language Change
This course covers the principles of language change and the methods of historical linguistics on an elementary level. The systematic regularity of change, the reasons for that regularity, and the exploitation of regularity in linguistic reconstruction are especially emphasized. Examples are drawn from a wide variety of languages, both familiar and unfamiliar. The prerequisite for the course is any course in phonetics or phonology, or LING 001, or permission of the instructor. Note that this course does not satisfy any sector requirement.
Taught by: Ringe
Course not offered every year
Prerequisite: LING 001
Activity: Lecture
1.0 Course Unit

LING 220 Phonetics I: Experimental
This course focuses on experimental investigations of speech sounds. General contents include: the fundamentals of speech production and perception; speech analysis tools and techniques; and topics in phonetic studies. The course consists of integrated lectures and laboratory sessions in which students learn computer techniques for analyzing digital recordings.
Taught by: Kuang
Course usually offered in fall term
Also Offered As: LING 520
Activity: Lecture
1.0 Course Unit

LING 230 Sound Structure of Language
An introduction to phonetics and phonology. Topics include articulatory phonetics (the anatomy of the vocal tract; how speech sounds are produced); transcription (conventions for representing the sounds of the world’s languages); classification (how speech sounds are classified and represented cognitively through distinctive features); phonology (the grammar of speech sounds in various languages: their patterning and interaction) and syllable structure and its role in phonology. Prerequisite: A prior course in linguistics or permission of instructor.
Taught by: Noyer
Course usually offered in spring term
Also Offered As: LING 503
Prerequisite: LING 001 OR LING 105 OR LING 220
Activity: Lecture
1.0 Course Unit

LING 241 Language in Native America
This course is an introduction to linguistic perspectives on the languages native to the Americas (their nature and distribution, typological similarities and differences), with an emphasis on North America. The diverse languages of this region will be examined from the point of view of particular linguistic phenomena, such as phonology, morphology, and syntax; and in addition we will study their historical development and their place in culture, society, and thought.
Taught by: Buckley
Course not offered every year
Activity: Lecture
1.0 Course Unit
LING 242 Construct a Language
In this course, students construct their own language, one that is compatible with what is known about possible human languages. To this end, the course investigates language typology through lectures and examination of grammars of unfamiliar languages. Topics include language universals, points of choice in a fixed decision space, and dependencies among choices. Prerequisite: Students who have taken LING 140: Construct a Language are not eligible to enroll in LING 242.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Students who have taken Ling 140: Construct a Language are not eligible to enroll in Ling 242.

LING 247 Structure of American Sign Language
This course covers the linguistic structure of American Sign Language (ASL), including its phonology (articulatory features, phonological constraints, nonmanuals), morphology (morphological constraints, compounds, incorporation, borrowing), and syntax (syntactic categories, basic phrase structure, common sentence types). Also discussed are the topics of classifiers and deixis. In keeping with the comparative perspective of linguistic theory, parallels and differences between ASL and other (primarily spoken) languages are pointed out where appropriate. Historical and sociolinguistic issues are addressed where they are relevant to elucidating linguistic structure. Though the course focuses on ASL, it necessarily touches on issues concerning sign languages more generally, notably the possible effects of modality (sign vs. speech) on linguistic structure and the implications of the signed modality for general linguistics. Although the course does not presuppose knowledge of ASL, it does require acquaintance with basic concepts of linguistics.
Taught by: Fisher/Santorini
Course not offered every year
Prerequisite: LING 001 OR LING 072
Activity: Lecture
1.0 Course Unit

LING 250 Introduction to Syntax
This course is an introduction to current syntactic theory, covering the principles that govern phrase structure (the composition of phrases and sentences), movement (dependencies between syntactic constituents), and binding (the interpretation of different types of noun phrases). Although much of the evidence discussed in the class will come from English, evidence from other languages will also play an important role, in keeping with the comparative and universalist perspective of modern syntactic theory.
Taught by: Santorini
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 270 Language Acquisition
An introduction to language acquisition in children and the development of related cognitive and perceptual systems. Topics include the nature of speech perception and the specialization to the native language; the structure and acquisition of words; children's phonology; the development of grammar; bilingualism and second language acquisition; language learning impairments; the biological basis of language acquisition; the role in language learning in language change. Intended for any undergraduate interested in the psychology and development of language.
Taught by: Yang
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 295 Thinking with Models: Cultural Evolution
When a flu pandemic strikes, who should get vaccinated first? What's our best strategy for minimizing the damage of global climate change? Why is Philadelphia racially segregated? Why do most sexually reproducing species have two sexes, in roughly even proportions? These and many other scientific and practical problems require us to get a handle on complex systems. And an important part of deepening our understanding and sharpening our intuitions requires us to think with models, that is, to use models in our deliberations about what to believe and what to do. Modeling is the construction and analysis of idealized representations of real-world phenomena. This practice is ubiquitous across the sciences, and enters into many practical decisions from setting international policy to making everyday business decisions. The principal aim of this course is to acquaint students with the modeling process and, especially, to help students learn how to think critically about modeling results, as well as how to construct, analyze, and verify such models. Students who take this course will learn about the varied practices of modeling, and will learn how to construct, analyze, and validate models. Most importantly, students who take this course will learn how to critically evaluate the predictions and explanations generated by models, whatever the source of these results. While we will familiarize students with a variety of types of models, our primary focus will be on computer simulations, as they are increasingly relied upon for scientific research and practical deliberation. In addition to studying general methodological discussions about modeling, this will be a 'hands on,' laboratory-based course. Students will practice manipulating, modifying, and analyzing models, as well as constructing models from scratch. The conduct of the course will be heavily influenced by SAIL (structured active in-class learning) ideas. As such, in most class meetings there will be a short lecture and Q&A session, followed by individual and group exercises, which will be discussed later in the class. As an essential feature of learning about modeling we will actually design and build (program) models, which we then study. NetLogo will be the main programming environment. Students will learn to program in it and build agent-based models. NetLogo was designed to be easy to learn and we assume no prior programming experience. For approximately the first 2/3 of the course we will focus on learning NetLogo and building and analyzing models in it. During approximately the last 1/3 of the semester, students will work on their term projects and the course presentations will focus on modeling issues that transcend or extend the basics of modeling in NetLogo.
Taught by: Clark
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
LING 300 Tutorial in Linguistics
This tutorial allows students to deal in a concentrated manner with selected major topics in linguistics by means of extensive readings and research. Two topics are studied during the semester, exposing students to a range of sophisticated linguistic questions. Senior status or permission of the instructor to enroll. Majors only.
Taught by: Legate
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

LING 301 Conference
An independent study for majors in linguistics.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

LING 302 Linguistic Field Methods
Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 502.
Taught by: Buckley/Legate
Course not offered every year
Also Offered As: LING 502
Prerequisite: LING 230 AND LING 250
Activity: Seminar
1.0 Course Unit

LING 304 Neurolinguistics
This course is an upper level undergraduate/graduate seminar in neurolinguistics. We will explore language in the brain through readings and discussions.
Taught by: Schuler
Also Offered As: LING 504
Activity: Seminar
1.0 Course Unit

LING 310 History of the English Language
This course traces the linguistic history of English from its earliest reconstructable ancestor, Proto-Indo-European, to the present. We focus especially on significant large-scale changes, such as the restructuring of the verb system in Proto-Germanic, the intricate interaction of sound changes in the immediate prehistory of Old English, syntactic change in Middle English, and the diversification of English dialects since 1750.
Taught by: Ringe/Kroch
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 380 Introduction to Semantics
This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.
Taught by: Schwarz
Course usually offered in fall term
Also Offered As: LING 580
Prerequisite: LING 250
Activity: Lecture
1.0 Course Unit

LING 398 Senior Thesis
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

LING 404 Morphological Theory II
This course takes a detailed look at a number of central topics in morphological theory. The material examined in the course consists of primary readings and reviews, covering a number of central topics in the field. These topics include (but are not restricted to) allomorphy, blocking, the interface of phonology and morphology, syncretism, affixation, the syntax-morphology interface, and compounding. The primary requirements for the class involve short assignments that are based on the readings, in the form of both problem sets and critical appraisals of core theoretical positions. In addition to this, students will write a short paper at the end of the semester.
Taught by: Embick
Course not offered every year
Prerequisite: LING 404
Activity: Lecture
1.0 Course Unit

LING 411 Old English
The main purpose of this course is to teach students to read Old English ('Anglo-Saxon'), chiefly but not exclusively for research in linguistics. Grammar will be heavily emphasized; there will also be lectures on the immediate prehistory of the language, since the morphology of Old English was made unusually complex by interacting sound changes. In the first eight weeks we will work through Moore and Knott's 'Elements of Grammar' and learn the grammar; the remainder of the term will be devoted to reading texts.
Taught by: Kroch
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 449 Language and Computation
The computational study of natural language and its implications for linguistic theories. Topics include finite state tools, computational morphology and phonology, grammar and parsing, computational models of language learning in children and machines.
Taught by: Yang
Course not offered every year
Activity: Seminar
1.0 Course Unit
LING 455 Experiments in the Study of Meaning
This course provides an introduction to the experimental study of meaning in natural language. We begin by introducing some basic notions of formal semantics and pragmatics and review relevant technical background. Next we discuss recent developments in studying meaning-related phenomena experimentally, which, in addition to theoretical questions, involve issues in the acquisition and processing of semantic information. In the course of this, we will also introduce the basics of experimental design and relevant psycholinguistic methodology. In addition to readings and homework assignments, students will embark on a small research project (individually or jointly), which will be presented in class at the end of the semester and written up as a term paper.

Taught by: Schwarz
Course not offered every year
Prerequisite: LING 106 OR LING 170 OR LING 250 OR LING 380 OR LING 580 OR LING 550
Activity: Seminar
1.0 Course Unit

LING 495 Games and Signals
Game Theory has provided a new way of looking at linguistic meaning, particularly pragmatics (the use of language). This course will survey the use of Game Theory in linguistics as well as develop the techniques for studying signaling behavior. We will look at the formal foundations of signaling with particular attention paid to games of incomplete information (games where even which game is being played is uncertain). This will allow us to extend pragmatics beyond Gricean conversational maxims to areas like deception and polite signaling.

Taught by: Robin Clark
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 496 Agents and Evolution
The course surveys Evolutionary Game Theory and Agent-Based Models with special reference to language. We will develop systems for modeling various types of language change as well as the dynamics of linguistic micro-variation. Topics include semantic/pragmatic cycles in signaling, the maintenance of conventional meaning, and testing for selection in language change.

Taught by: Clark
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 500 Research Workshop
This course is designed for advanced graduate students who are interested in developing a research paper. Each student will present his or her topic several times during the semester as the analysis develops, with feedback from the instructor and other students to improve the organization and content of the analysis. The goal is an end product appropriate for delivery at a national conference or submission to a journal.

Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

LING 502 Linguistic Field Methods
Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 302. Each student will write a final paper on some aspect of the language.

Taught by: Buckley/Legate
Course not offered every year
Also Offered As: LING 302
Activity: Seminar
1.0 Course Unit

LING 503 Sound Structure of Language
An introduction to articulatory and acoustic phonetics; phonetic transcription; basic concepts and methods of phonological analysis.

Taught by: Noyer
Course usually offered in spring term
Also Offered As: LING 230
Activity: Lecture
1.0 Course Unit

LING 504 Neurolinguistics
This course is a graduate seminar in neurolinguistics. We will explore language in the brain through readings and discussion.

Taught by: Schuler
Course usually offered in fall term
Also Offered As: LING 304
Activity: Seminar
1.0 Course Unit

LING 510 Historical and Comparative Linguistics

Taught by: Ringe
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 511 Language Variation & Change
Speech communities as a focus for the understanding of language evolution and change: language variation in time and space. The relationship between language structure and language use; between language change and social change. Populations as differentiated by age, sex, social class, race, and ethnicity, and the relationship of these factors to linguistic differentiation.

Taught by: Tammenga
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

LING 515 Dynamics of Language
This course introduces the tools, techniques, as well as current research on the approach to language as a dynamical system, which seeks to fruitfully integrate linguistic theory, psycholinguistics, corpus linguistics, and historical linguistics through the means of mathematical modeling. Topics include: string processing, dynamical systems and stability, stochastic processes, mathematical models of population dynamics, and dynamical models of language learning, processing, and change.

Taught by: Yang
One-term course offered either term
Prerequisite: LING 510
Activity: Seminar
1.0 Course Unit
LING 520 Phonetics I
Speech: its linguistic transcription, its quantitative physical description, and its relationship to the categories and dimensions of language structure and use. The physical basis of speech: acoustics, vocal tract anatomy and physiology, hearing and speech perception, articulation and motor control. Phonetic variation and change. Prosody: stress, intonation, phrasing speech rate. Phonetic instrumentation, the design and interpretation of phonetic experiments, and the use of phonetic evidence in linguistic research, with emphasis on computer techniques. Introduction to speech signal processing. Speech technology: introduction to speech recognition, text-to-speech synthesis, speech coding. This course will emphasize the phonetics of natural speech, and its connections to issues in other areas of linguistics and cognitive science.
Taught by: Liberman/Kuang
Course usually offered in fall term
Also Offered As: LING 220
Prerequisite: LING 001
Activity: Lecture
1.0 Course Unit

LING 521 Phonetics II
This is a methodology course, which focuses on how to conduct phonetics research using very large speech corpora. Topics include scripting and statistical techniques, automatic phonetic analysis, integration of speech technology in phonetics studies, variation and invariability in large speech corpora, and revisiting classic phonetic and phonological problems from the perspective of corpus phonetics.
Taught by: Kuang/Liberman
Course usually offered in spring term
Prerequisite: LING 520
Activity: Lecture
1.0 Course Unit

LING 525 Computer Analysis and Modeling of Biological Signals and Systems
A hands-on signal and image processing course for non-EE graduate students needing these skills. We will go through all the fundamentals of signal and image processing using computer exercises developed in MATLAB. Examples will be drawn from speech analysis and synthesis, computer vision, and biological modeling.
Taught by: Liberman
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 530 Phonology I
First half of a year-long introduction to the formal study of phonology. Basic concepts in articulatory phonetics; the distribution of sounds (phonemes and allophones); underlying and surface forms, and how to relate them using both ordered-rule and surface-constraint approaches. The survey of theoretical topics in this term includes distinctive features (context, organization, underspecification); the autosegmental representation of tone; and the theory of phonological domains and their interaction with morphological and syntactic constituency. Emphasizes hands-on analysis of a wide range of data.
Taught by: Noyer
Course usually offered in fall term
Prerequisite: LING 503
Activity: Lecture
1.0 Course Unit

LING 531 Phonology II
Second half of a year-long introduction, continues LING 530. Topics to be surveyed include syllable structure and moraic theory; the prosodic hierarchy; the properties and representation of geminates; templatic and prosodic morphology; reduplication and emergence of the unmarked; and metrical phonology (properties of stress, foot typology, and issues of constituency). Emphasizes hands-on analysis of a wide range of data.
Taught by: Buckley
Course usually offered in spring term
Prerequisite: LING 530
Activity: Lecture
1.0 Course Unit

LING 550 Syntax I
A general introduction at the graduate level to the analysis of sentence structure. The approach taken is that of contemporary generative-transformational grammar.
Taught by: Kroch
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 551 Syntax II
The second half of a year-long introduction to the formal study of natural language syntax. Topics to be covered include grammatical architecture; derivational versus representational statement of syntactic principles; movement and locality; the interface of syntax and semantics; argument structure; and other topics. The emphasis is on reading primary literature and discussing theoretical approaches, along with detailed case-studies of specific syntactic phenomena in different languages.
Taught by: Legate
Course usually offered in spring term
Prerequisite: LING 550
Activity: Lecture
1.0 Course Unit

LING 555 Historical Syntax
Introduction to the study of the syntax of languages attested only in historical corpora. The course will cover methods and results in the grammatical description of such languages and in the diachronic study of syntactic change.
Taught by: Kroch
Course not offered every year
Prerequisite: LING 551
Activity: Seminar
1.0 Course Unit

LING 560 The Study of the Speech Community: Field Methods
For students who plan to carry out research in the speech community. Techniques and theory derived from sociolinguistic studies will be used to define neighborhoods, enter the community, analyze social networks, and obtain tape-recorded data from face-to-face interviews. Students will work in groups and study a single city block.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
LING 562 Quantitative Study of Linguistic Variation
This course provides students with the opportunity to hone their statistical, computational, and organizational skillsets while conducting original linguistic research on data gathered in continuing fieldwork in the speech community. Topics include forced alignment and vowel extraction, auditory and automated variable coding, the application of linear and logistic regression, and techniques for effective data visualization.
Taught by: Tammenga
Course offered fall; odd-numbered years
Prerequisite: LING 560 OR STAT 500 OR STAT 501
Activity: Seminar
1.0 Course Unit

LING 570 Developmental Psycholinguistics
The generative literature on language acquisition has produced many accurate and insightful descriptions of child language, but relatively few explicit accounts of learning that incorporate the role of individual experience into the knowledge of specific languages. Likewise, the experimental approach to language development has identified processes that could provide the bridge between the data and the grammar, but questions remain whether laboratory findings can sufficiently generalize to the full range of linguistic complexity. This course is an overview of research in language acquisition with particular focus on the important connection between what children know and how they come to know it.
Taught by: Yang
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

LING 571 The Acquisition of Meaning
This is a seminar on the acquisition of a first language by children. We will discuss the acquisition of the meanings of words and sentences, and the pragmatic and social interpretation of sentences in context. We will also consider how language relates to other cognitive systems and to human social reasoning. Particular emphasis will be placed on discovering the mechanisms children possess that enable them to learn and use language.
Taught by: Papafragou
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 575 Mental Lexicon
An investigation of the psychological representations and processing of words. Topics include: the extraction of words from speech; lexical access and production; the induction of morphological and phonological regularities in word learning; decomposition of morphologically complex words; frequency effects in morphological processing; storage vs. computation in the lexicon; the past tense debate; morphological change. This course makes extensive use of linguistic corpora. Students will also be familiarized with experimental design issues in the psycholinguistic study of the lexicon.
Taught by: Yang
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 580 Semantics I
This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analyses, including set theory, propositional logic, and predicate logic are also introduced.
Taught by: Schwarz
Course usually offered in fall term
Also Offered As: LING 380
Prerequisite: LING 550
Activity: Lecture
1.0 Course Unit

LING 581 Semantics II
The first part of the course expands the system from LING 580 to include intensional contexts. In particular, we discuss analyses of modals, attitude verbs, and conditionals, as well as the scope of noun phrases in modal environments. The second part of the course discusses a selection of topics from current work in semantics, such as the semantics of questions, tense and aspect, donkey anaphora, indefinites, genericity, degree constructions, events and situations, domain restriction, plurality and focus.
Taught by: Schwarz
Course usually offered in spring term
Prerequisite: LING 551
Activity: Lecture
1.0 Course Unit

LING 595 Game Theoretic Pragmatics
A great deal of linguistic meaning can be explained if we conceive of language as being a signaling system used by rational agents. Game theory provides an explicit mathematical account of rational, strategic interaction. This course will lay out the fundamentals of game theory, evolutionary game theory and multi-agent systems necessary to develop a theory of ‘radical pragmatics.’ We will discuss game theoretic models of implicature; presupposition and accommodation; reference tracking; scalar implicature as well as a number of other phenomena.
Taught by: Clark
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 596 Pragmatics Workshop
Pragmatics Workshop
Taught by: Clark
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 603 Topics in Phonology
Topics are chosen from such areas as featural representations; syllable theory; metrical structure; tonal phonology; prosodic morphology; interaction of phonology with syntax and morphology.
Taught by: Buckley/Noyer
Course not offered every year
Prerequisite: LING 530 OR LING 531
Activity: Seminar
1.0 Course Unit
LING 607 Topics in Psycholinguistics
Topics in Psycholinguistics
Taught by: Schuler
Activity: Seminar
1.0 Course Unit

LING 608 Topics in Semantics and Pragmatics
Topics in Semantics & Pragmatics
Taught by: Clark/Schwarz
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 610 Seminar in Historical and Comparative Linguistics
Selected topics either in Indo-European comparative linguistics or in historical and comparative method.
Taught by: Ringe
One-term course offered either term
Activity: Seminar
1.0 Course Unit

LING 615 Comparative Indo-European Grammar
A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.
Taught by: Ringe
Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit

LING 616 Comparative Indo-European Grammar II
A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.
Taught by: Ringe
One-term course offered either term
Activity: Seminar
1.0 Course Unit

LING 620 Topics in Phonetics
Topics in Phonetics
Taught by: Liberman/Kuang
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 630 Seminar in Morphology
Readings in modern morphological theory and evaluation of hypotheses in the light of synchronic and diachronic evidence from various languages.
Taught by: Noyer/Embick
Course not offered every year
Prerequisite: LING 530
Activity: Seminar
1.0 Course Unit

LING 650 Topics in Natural-Language Syntax
Detailed study of topics in syntax and semantics, e.g., pronominalization, negation, complementation. Topics vary from term to term.
Taught by: Kroch/Legate
One-term course offered either term
Prerequisite: LING 551
Activity: Seminar
1.0 Course Unit

LING 653 Topics in the Syntax-Semantics Interface
Topics in the Syntax-Semantics Interface
Taught by: Kroch
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

LING 660 Research Seminar in Sociolinguistics
Students approaching the dissertation level will explore with faculty frontier areas of research on linguistic change and variation. Topics addressed in recent years include: experimental investigation of the reliability of syntactic judgments; the development of TMA systems in creoles; transmission of linguistic change across generations. The course may be audited by those who have finished their course work or taken for credit in more than one year. This course will have different topics each term.
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 670 Topics in the Cultural Evolution of Language
Readings in the cultural evolution of language. This encompasses research on the contribution of processes of cultural change to the emergence of language in the human species, the emergence of new languages, and language change viewed as a cultural-evolutionary process. There will be an emphasis on research employing empirical methods, particularly experimentation. Otherwise focus varies from term to term.
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 675 Language and Cognition
This is a seminar on how language relates to perception and cognition. The seminar pays particular attention to the question of whether and how language might affect (and be affected by) other mental processes, how different languages represent the mental and physical world, and how children acquire language-general and language-specific ways of encoding human experience. The course incorporates cross-linguistic, cognitive and developmental perspectives on a new and rapidly changing research area.
Taught by: Papafragou, Trueswell
Course usually offered in spring term
Also Offered As: PSYC 675
Activity: Seminar
1.0 Course Unit

LING 999 Independent Study and Research
Prerequisite: Student must submit brief proposal for approval. May be repeated for credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Notes: Student must submit brief proposal for approval. May be repeated for credit.
Logic, Information and Computation (LGIC)

LGIC 010 Formal Logic I
This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantificational logic, and logical decision problems.
Taught by: Singer
One-term course offered either term
Also Offered As: PHIL 005, PHIL 505
Activity: Lecture
1.0 Course Unit
Notes: This is a Formal Reasoning course.

LGIC 210 Discrete Mathematics I
Topics will be drawn from some subjects in combinatorial analysis with applications to many other branches of math and science: graphs and networks, generating functions, permutations, posets, asymptotics.
Course not offered every year
Also Offered As: MATH 340
Prerequisite: MATH 114 OR MATH 115 OR MATH 116
Activity: Lecture
1.0 Course Unit

LGIC 220 Discrete Mathematics II
Topics will be drawn from some subjects useful in the analysis of information and computation: logic, set theory, theory of computation, number theory, probability, and basic cryptography.
Also Offered As: MATH 341
Prerequisite: MATH 340 OR LGIC 210
Activity: Lecture
1.0 Course Unit

LGIC 310 Logic I
Taught by: Scedrov, Towsner, Weinstein
Course not offered every year
Also Offered As: MATH 371 OR PHIL 503
Prerequisite: MATH 340 OR LGIC 210
Activity: Lecture
1.0 Course Unit

LGIC 320 Logic II
The second semester of a two-semester course on the fundamental results and techniques of mathematical logic. Topics will be drawn from model theory, proof theory, recursion theory, and set theory. Connections between logic and algebra, analysis, combinatorics, computer science, and the foundations of mathematics will be emphasized.
Taught by: Scedrov, Towsner, Weinstein
Course not offered every year
Also Offered As: MATH 571, PHIL 410
Prerequisite: PHIL 410 OR MATH 570
Activity: Seminar
1.0 Course Unit

LGIC 496 Topics in Logic
The course focuses topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Taught by: Weinstein
Course not offered every year
Also Offered As: MATH 671, PHIL 412
Activity: Seminar
1.0 Course Unit

Malagasy (MALG)

MALG 490 Elementary Malagasy
The main objective of this course is to allow students to study an African language of their choice, depending on the availability of the instructor. The course will provide students with linguisics tools which will facilitate their research work in the target country. Cultural aspects of the speakers of the language will be introduced and reinforced. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MALG 491 Elementary Malagasy II
Continuation of AFST 490. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MALG 492 Intermediate Malagasy I
Intermediate level courses in a variety of African languages: Igbo, Shona, Wolof, Malagasy, Chichewa, Setswana, Manding, Afrikaans, Setswana. Focus on oral proficiency and productive language skills. All course are language specific and follow ACTFL proficiency guidelines. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MALG 493 Intermediate Malagasy II
Continuation of AFST 492. Prerequisite: Offered through Penn Language Center.
For BA Students: Last Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MALG 494 Advanced Malagasy I
Language specific sections for students interested in doing country-specific research in a target language. Courses cover project-based skills for AFST research. Prerequisite: Offered through Penn Language Center.
For BA Students: Advanced Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center
MALG 495 Advanced Malagasy II
Continuation of AFST 494. Prerequisite: Language will be specified in each section.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Languages will be specified in each section.

Malayalam (MLYM)

MLYM 408 Beginning Malayalam Part I
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.
For BA Students: Language Course
Taught by: Kurichi
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MLYM 409 Beginning Malayalam Part II
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.
For BA Students: Language Course
Taught by: Kurichi
Course usually offered in spring term
Prerequisite: MLYM 408
Activity: Seminar
1.0 Course Unit

MLYM 428 Intermediate Malayalam Part I
This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.
For BA Students: Language Course
Taught by: Kurichi
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

MLYM 429 Intermediate Malayalam Part II
This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.
For BA Students: Last Language Course
Taught by: Kurichi
Course usually offered in spring term
Prerequisite: MLYM 428
Activity: Seminar
1.0 Course Unit

Management (MGMT)

MGMT 101 Introduction To Management
We all spend much of our lives in organizations. Most of us are born in organizations, educated in organizations, and work in organizations. Organizations emerge because individuals can't (or don't want to) accomplish their goals alone. Management is the art and science of helping individuals achieve their goals together. Managers in an organization determine where their organization is going and how it gets there. More formally, managers formulate strategies and implement those strategies. This course provides a framework for understanding the opportunities and challenges involved in formulating and implementing strategies by taking a 'system' view of organizations, which means that we examine multiple aspects of how managers address their environments, strategy, structure, culture, tasks, people, and outputs, and how managerial decisions made in these various domains interrelate. The course will help you to understand and analyze how managers can formulate and implement strategies effectively. It will be particularly valuable if you are interested in management consulting, investment analysis, or entrepreneurship - but it will help you to better understand and be a more effective contributor to any organizations you join, whether they are large, established firms or startups. This course must be taken for a grade.
One-term course offered either term
Activity: Recitation
1.0 Course Unit

MGMT 111 Multinational Management
Most successful firms go global in some way; why do they go global, and how do they navigate across international borders? This is the question at the core of multinational management. In this course, you will learn about topics such as how firms choose where and how to invest abroad, how shifts in the political economy landscape affect firm strategy, and how firms respond to restrictions on the movement of both physical and human capital across borders. The class utilizes economics and global strategy frameworks to provide students with an understanding of how to formulate multinational firm strategy. Fulfills the Global Economy, Business, and Society requirement. This course has a mandatory attendance policy.
Taught by: Britta Glennon
Prerequisite: WH 101 OR MGMT 101
Activity: Lecture
1.0 Course Unit

MGMT 198 SPECIAL TOPICS INDEPENDENT STUDY
Please check with the instructor for each section regarding the course content. Content is likely to vary across special topics sections. Feel free to contact the Management Department at: MGMT-Courseinfo@wharton.upenn.edu regarding course related inquiries.
Taught by: Weigelt, K.; Guillen, M.
Activity: Lecture
0.5 Course Units
Notes: Special Topic Independent Studies vary in the Management Department. Please contact the instructor for course content for each study.
MGMT 205 Multinational Corporate Strategies
This course focuses on the creation of competitive advantage in the multinational firm. It examines the nature of global competition by exploring the characteristics of global versus non-global industries and firms. We also explore different types of international strategy and structure and examine the specific challenges of managing in multiple countries and markets. Finally, we consider the strategic allocation of resources along the value chain and the role of strategic alliances as a crucial element of an effective global strategy.
Course usually offered in spring term
Prerequisite: MGMT 101 AND MGMT 111 AND WH 101
Activity: Lecture
1.0 Course Unit

MGMT 208 Globalization and International Political Economy
Managing Globalization and Anti-Globalization is an upper level undergraduate course that provides students with a solid foundation in the history of globalization and anti-globalization, the institutions that manage the global economy, and the current challenges these institutions must address. The course objectives are to help students develop their own worldview, to provide a basis for thinking about powerful forces now shaking the international political economy, and to build a solid foundation upon which new material can be added throughout the students' careers. In the first half of the course, students study the historical trajectory of globalization and the institutions that seek to manage it. In the second half, students study how these institutions manage present-day global governance challenges ranging from global migration, the rise of populist anti-globalization movements, the collapse of communism, and global inequality to disruptive technologies such as bitcoin. Format: Class discussions will be interactive and structured to encourage maximum student participation.
Requirements: midterm and final exam, a final course paper of 10-20 pages and short reaction papers dealing with the readings for the week.
Taught by: Mitchell Orenstein
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MGMT 209 The Political Environment of the Multinational Firm
Managers, consultants, investors and creditors increasingly acknowledge the importance of stakeholder opinions of the acceptability of a company's operations for that company's ability to achieve its organizational mission and to deliver a financial return. The rhetoric that companies must manage their stakeholder relations as well as shareholder relations is rapidly shifting from a philosophical critique of the functioning of the capitalist system to a strategic, financial, operational and societal imperative. Managers, consultants and investors are increasingly drawing on new unstructured data on the identity and issues of concern of stakeholders to align corporate and investment strategy with stakeholder demands on issues ranging from environmental externalities (e.g., climate change) to human rights. This course provides students the latest tools to use this data for stakeholder and issue mapping as well as financial valuation. It also offers more behavioral skills critical for external stakeholder engagement including trust building and communications as well as internal stakeholder engagement. In short, it prepares students to engage in Corporate Diplomacy (i.e., to influence or assess external stakeholders' opinions of the acceptability of a company's operations at a moment in time and to convince internal stakeholders to adapt their behaviors, systems and outputs when necessary).
Taught by: Witold Henisz
Activity: Lecture
1.0 Course Unit

MGMT 211 Competitive Strategy
This is an advanced course in competitive strategy. The course will apply the tools of industrial organization economics and game theory to examine the strategic decisions that managers make. We will examine those decisions concerning pricing, capacity investment, advertising, new product introductions, and research and development. Emphasis will be placed on the strategic interaction among rival sellers. In particular we will look at the various methods of entry deterrence and strategic commitment. The course will attempt to integrate traditional economic models with case study materials. In addition to prerequisites, some knowledge of microeconomics is suggested. The course will be discussion oriented and based largely on case materials and mini-lectures.
Taught by: James Ostler
Course usually offered in fall term
Prerequisite: WH 101 AND MGMT 101
Activity: Lecture
1.0 Course Unit

MGMT 212 Social Entrepreneurship
This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to generate more projects and in so doing, the more the profits made, the more the problem is alleviated. Even if it is not possible to eventually create a profit-making enterprise, the process of striving to do so can lead to a resource-lean not-for-profit entity. Creating a profitable social entrepreneurship venture is by no means a simple challenge. Cross-listed with MGMT 212.
Course usually offered in fall term
Also Offered As: MGMT 812
Activity: Lecture
0.5 Course Units

MGMT 213 Entrepreneurship through Acquisition
The objective of this course is to study the process of entrepreneurship through the acquisition of existing operating businesses. We will study this process through a series of lectures, assigned readings, case studies, and a final project which will follow the acquisition process. Freshmen require instructor's permission.
Taught by: Richard Perlman
Prerequisite: FNCE 100 AND ACCT 101
Activity: Lecture
0.5 Course Units
Notes: Lectures, case discussions, and student presentations. Class participation, homework and final project. You are expected to attend all course sessions. Failure to attend will result in being automatically dropped from the course with no further right to admission.
MGMT 214 Market Dynamics and Technical Change
The course is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. There is definitely an overlap in content with other courses in intermediate microeconomics, or managerial economics. Nevertheless, the treatment is sufficiently distinctive to make it complementary to those other treatments for a student who is particularly interested in economic change, or is otherwise interested in acquiring a broader view of economics. Students need to have taken a first college course in economics. Multivariate calculus is generally useful in economic theory at this level, but does not carry significant weight in this course. Similarly, an understanding of basic linear algebra enhances the value of the linear programming analysis of the firm, but is not a prerequisite. The course is reserved for Wharton juniors and seniors.
Taught by: Rahul Kapoor
Activity: Lecture
1.0 Course Unit

MGMT 223 Business Strategy
This course encourages students to analyze the problems of managing the total enterprise in the domestic and international setting. The focus is on the competitive strategy of the firm, examining issues central to its long- and short-term competitive position. Students act in the roles of key decision-makers or their advisors and solve problems related to the development or maintenance of the competitive advantage of the firm in a given market. The first module of the course develops an understanding of key strategic frameworks using theoretical readings and case-based discussions. Students will learn concepts and tools for analyzing the competitive environment, strategic position and firm-specific capabilities in order to understand the sources of a firm’s competitive advantage. In addition, students will address corporate strategy issues such as the economic logic and administrative challenges associated with diversification choices about horizontal and vertical integration. The second module will be conducted as a multi-session, computer-based simulation in which students will have the opportunity to apply the concepts and tools from module 1 to make strategic decisions. The goal of the course is for students to develop an analytical tool kit for understanding strategic issues and to enrich their appreciation for the thought processes essential to incisive strategic analysis. This course offers students the opportunity to develop a general management perspective by combining their knowledge of specific functional areas with an appreciation for the requirements posed by the need to integrate all functions into a coherent whole. Students will develop skills in structuring and solving complex business problems. In addition to prerequisites, enrollment is limited to seniors and juniors who have completed introductory courses in finance, marketing, and accounting.
Taught by: Saerom Lee
Prerequisite: WH 101 AND MGMT 101
Activity: Lecture
1.0 Course Unit

MGMT 224 Leading Diversity in Organizations
People in the workplace are constantly interacting with peers, managers, and customers with very different backgrounds and experiences. When harnessed effectively, these differences can be the catalyst for creative breakthroughs and the pathway to team and organizational learning and effectiveness; but when misunderstood, these differences can challenge employees’ values, performance, workplace relationships, and team effectiveness. This course is designed to help students navigate diverse organizational settings more effectively and improve their ability to work within and lead diverse teams and organizations. It also offers students the opportunity to develop their critical thinking on topics such as identity, relationships across difference, discrimination and bias, equality, and equity in organizations and society and how they relate to organizational issues of power, privilege, opportunity, inclusion, creativity and innovation and organizational effectiveness. Class sessions will be experiential and discussion-based. Readings, self-reflection, guest speakers from organizations, case studies and a final project will also be emphasized. By the end of this course, you should be able to: 1) Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations 2) Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations 3) Propose ways to make relationships across difference in organizations more effective 4) Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in organizations 5) Analyze a company’s current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company.
Taught by: Stephanie Creary
One-term course offered either term
Activity: Lecture
0.5 Course Units
Notes: Class attendance is required. No more than 2 absences will be allowed to receive a passing grade in the course. Absences due to late enrollment will be counted towards the two max. No student will be allowed to enroll after the first day of class without instructor permission.
MGMT 225 Value Creation and Value Capture in American Business History
This course examines how the kind of firms in which most Wharton students will spend the next stage of their careers came to be as they are today. At a superficial level, the course's objectives are descriptive and narrative. But history, considered thoughtfully and critically, is never just description and a narrative: the course's deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. In this the course is as much an applied strategy course as it is a historical survey. The course considers the development of the business enterprise as an economic institution. It also covers the evolution of competition and strategy, marketing institutions, some aspects of the history of operations management, and corporate finance. Issues arising in these different management disciplines are considered in part for the purpose of showing off their interrelationships. Questions of how value can be created and captured at the enterprise level form the core of the perspective. The course's focus is on American developments, since many of the innovations took place here, but there is scope for comparison with Japan and the leading European economies if there is student interest. Chronologically the course runs from Franklin's days through the early twenty-first century. It proceeds through discussion of actual business decisions and performance in a series of challenging and otherwise interesting moments in the evolution of the American business environment. The materials are unusual for the Wharton School—they are not just often case-like but wherever possible draw on documents contemporary to the decisions such as correspondence, internal memoranda, minutes of meetings, old newspaper and magazine stories, and eyewitness accounts. The objective in this is to give students as minimally mediated access as is feasible to what the embedded actors knew and thought. These materials require thoughtful preparation. Weekly short writing assignments during the first twelve weeks of the term develop students' skill in turning such preparation into crisp analytical prose. The course as a process is much more focused on the students than many and the most productive experience of it demands that the students both engage with the materials when they prepare and then take an active role in the class discussion. The largest single element in the grading is a substantial term paper on a topic agreeable to both the student and the instructor. For more information, please contact the instructor: raff@wharton.upenn.edu.

Activity: Lecture
1.0 Course Unit

MGMT 229 Intellectual Property Strategy for the Innovation-Driven Enterprise
Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: 'And boy, have we patented it!' How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategist and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In Unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.
Also Offered As: LGST 729, MGMT 729
Activity: Lecture
0.5 Course Units
Notes: See the description for MGMT 729. This is a cross-listed course.

MGMT 230 Entrepreneurship
MGMT 230 integrates the material introduced in business fundamental courses and applies it to the design and evaluation of new ventures. The purpose of this course is to explore the many dimensions of new venture creation and growth and to foster innovation and new business formations in independent and corporate settings. The course addresses both a theoretical perspective on venture initiation and the application of writing an actual business plan. In this course you are asked to get out of the habit of being a receiver of ideas, facts, concepts and techniques, and get into the habit of generating ideas, identifying problems, analyzing and evaluating alternatives, and formulating workable action plans, thus putting textbook knowledge into practice. Students will get this hands-on experience in the following ways: Through the formation and ongoing work of venture teams that will design a comprehensive business development plan for a particular start-up company. Teams are expected to utilize the tools and analytical approaches discussed in class to their venture, through simulations, labs, lectures and class discussions that are designed to familiarize students with the many dimensions of entrepreneurship and new venture initiation. Class format varies throughout the course. In some class sessions, there will be a lecture on specific topics. Other sessions will consist of live simulations, labs, in-class exercises, and discussions of a particular topic or venture ideas that students are developing. Guest speakers will also lead and participate in some class sessions.
Activity: Lecture
0.5 Course Units
MGMT 231 Entrepreneurial Implementation
This advanced course on entrepreneurship focuses on developing a validated opportunity or concept into a venture that is ready for seed financing and/or launching the product or service. Participants in this course must previously have developed a validated opportunity, either in a previous course or through independent efforts. Students may participate as a team of up to three people. Ideally, participants are committed to pursuing their opportunity commercially, or at least to seriously explore that possibility. The course provides a practical guidance for developing the product or service, forming the entity, raising capital building the team, establishing partnerships, and sourcing professional services. After completing the course, you will be 'pitch ready' - whether submitting to campus venture competitions or to outside investors. Most coursework is focused on applying concepts and frameworks to project tasks in developing the venture. Students must have successfully completed MGMT 801 before enrolling in this course. Students must have successfully completed MGMT801 before enrolling in this course. Format: Readings, discussion, and developing an implementation plan for a real venture.
Also Offered As: MGMT 806
Prerequisite: MGMT 801
Activity: Lecture
1.0 Course Unit

MGMT 233 Strategies and Practices of Family-Controlled Companies
This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making; financial and resource driven options for long-run competitiveness, organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, family dynamics and communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm. The class is structured around topical lectures with frequent utilization of case studies requiring active class participation, as well as on-site and off-site project work time. Submission of several written case studies, and a term project are required. Open to Wharton MBA and Penn graduate students. Format: The class is structured around topical lectures with frequent utilization of case studies. There will be in-class discussion, as well as on-site and off-site project work time.
Also Offered As: MGMT 833
Activity: Lecture
1.0 Course Unit

MGMT 237 Management of Technology
The course is designed to meet the needs of the future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. In addition to prerequisites, this course is exclusively reserved for Management and Technology students.
Taught by: Saikat Chaudhuri
Course usually offered in spring term
Prerequisite: WH 101 AND MGMT 101
Activity: Lecture
1.0 Course Unit

MGMT 238 Organizational Behavior
Management 238 is an organizational behavior course, examining individual, interpersonal, and group effectiveness at work. Topics range from decision-making, motivation, and personality to networks, influence, helping, leadership, teamwork, and organizational culture. The learning method is heavily experiential, with a focus on applying key principles to the human side of management in role-play exercises, simulations, a mini-TED talk, and group projects in local organizations. This course requires the instructor's permission. Registration is by application only; Penn InTouch requests will not be processed. The link to the application form will be available on the Management Department's website: https://mgmt.wharton.upenn.edu/programs/undergraduate. The deadline for applications is March 15, 2019 at 5 PM. Students will be notified by March 25, 2019 regarding the status of their application.
Activity: Lecture
1.0 Course Unit
Notes: This course is open to juniors and seniors across Penn. This course also has a first-day mandatory attendance policy.

MGMT 240 Group Dynamics
Open to all sophomores, juniors, and seniors. This course develops your knowledge and skills for designing, leading, and consulting with teams in organizations. The goals are to provide both the conceptual understanding and the behavioral skills required to improve team effectiveness. This course makes use of analytic and reflective writing, peer feedback and coaching, simulations, and an intensive field project with a real team in the Philadelphia area. There are four kinds of teams that are the focus of your study: teams of which you’ve been a member in the past; your 240 Team, with three or four other classmates; a team outside of 240 that your 240 Team will observe, analyze, and report on -- your Host Team; and a team you expect to be on in the future. The primary case material for applying course concepts (learned from readings and lectures) will be these teams you know from direct observation and experience. Expect to leave this course with new knowledge of how to diagnose and intervene -- as leader, member, or consultant -- to improve the performance sustainability, and impact on the members of any team. Prerequisite: Sophomore standing or above.
Activity: Lecture
1.0 Course Unit
MGMT 241 Knowledge for Social Impact: Analyzing Current Issues & Approaches
Recent technological changes have raised awareness of the magnitude and devastating long-term effects of poverty, food insecurity, limited and unequal access to education, and other social issues. Coupled with growing awareness of these issues is the emerging sense that traditional government programs and charities may be unable to solve these problems - at least, not alone. What may be needed are new strategies - strategies borne of (a) a deep understanding of the issues; (b) interdisciplinary collaboration; and (c) access to business knowledge, frameworks, and resources. This course is designed to provide the information, strategies, examples, and analytical mindset to help students more rigorously, insightfully, and effectively analyze social ills and craft potential solutions. Together, a cross-disciplinary group of undergraduate students, including students in Wharton, the College, and other Penn Schools, will examine the nature and extent of two pressing social problems - food insecurity and barriers to post-secondary education - and current approaches to solving these problems. After an introduction to the social impact landscape and review of frameworks and tools for social impact, we will meet with researchers, business leaders, and non-profit leaders to learn what's not working, what is working, and what might work even better.
Taught by: Klein, Katherine
Activity: Lecture
1.0 Course Unit

MGMT 242 Corporate Governance, Executive Compensation and the Board
This course examines the relationships between corporate managers, the boards of directors charged with overseeing them, and investors. We'll review the responsibilities of the board, including financial statement approval, CEO performance assessment, executive compensation, and succession planning. While boards are legally bound to represent the interests of equity investors, in the course of carrying out this role they are often called on to respond to the needs of numerous other stakeholders, including customers, employees, government and society at large. With global brands at risk and mistakes instantly transmitted via Internet and social media, the reputational stakes are very high. The course is a combination of lecture, guest lecture, discussion, case analysis, and in-class research workshops. We will review some of the theory underlying modern governance practice, drawing from theories and evidence provided by research across diverse fields, including finance, sociology, and organization and management theory. We'll study specific situations where boards and management teams face governance challenges, and assess the strategies used to deal with them. Finally, we'll examine the ways in which governance arrangements and external stakeholder involvement in governance affect corporate social behavior and global citizenship.
Prerequisite: WH 101 AND MGMT 101
Activity: Lecture
1.0 Course Unit
Notes: Classes will comprise of a combination of mini-lectures and case discussions. Students will be expected to participate fully in class discussions. Effective participation will require sufficient and informed preparation of cases and assigned readings in advance of each class. See instructor regarding course materials.

MGMT 243 Work and Technology: Choices and Outcomes
Technology is changing the workplace, as it has since the Industrial Revolution, but now in new ways that can both enhance human capabilities and threaten to replace them. In the first module 'Technology, Operations, and Strategy,' we will look at how firms utilize human labor under different strategies and production paradigms, plus past and current approaches to automation (replacing labor) and outsourcing (moving where work is done). In the second module 'Technology and Managing People,' we'll examine how traditional practices of managing people are being transformed by new technologies that give managers new ways to enact control and induce commitment, while also giving individuals with high levels of human capital ('talent') new sources of leverage in negotiating the employment contract and new opportunities to acquire skills and construct a career path across firms. Take this course if you are fascinated by the intersection of the social (individuals and organizations) and the technical (technology and operations) - and if you want a glimpse into the future of your own work life. Students will be evaluated on class participation, written work and a group assignment.
Taught by: Professor John Paul MacDuffie
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: Students will be evaluated on class participation, written work and group assignment.

MGMT 248 How to be the Boss
Despite the press accounts about the 'gig' economy, the Bureau of Labor Statistics calculates that about 92 percent of the people working in the US are employees who are supervised by someone. That figure has remained roughly the same for decades. The term 'supervisor' is sometimes used for the first-level of supervision in an organization, but in fact that role - and indeed the title - goes all the way up to the very top of any employer organization. Even CEO's are the supervisor of their direct reports. When people talk about their 'boss,' they almost always are referring to the person who supervises them. Stepping into a supervisor position is challenging, exceptionally so the first time. That time comes relatively soon for Wharton grads. Undergrads pursuing consulting jobs typically find themselves supervising new hires by their third year, those working for corporations find themselves in those roles even sooner. Roughly three-quarters of our MBA students report that they had been required to supervise subordinates after college and before arriving here. In this class, we examine the role of the supervisor and the unique tasks associated with performing that role. We do special attention to the unique challenges of taking on that role for the first time.
Course not offered every year
Activity: Lecture
0.5 Course Units

MGMT 249 Mergers and Acquisitions
This course explores the role of mergers and acquisitions and alternative methods of corporate development in advancing the strategies of operating business. Emphasis is on the way companies use acquisitions to alter business mixes; seize opportunities in new products, technologies and markets; enhance competitive positioning; adjust to changing economics, and promote value-creating growth. Although the course will emphasize strategic acquisitions, it also will explore leveraged buy-outs and hostile financial acquisitions as well as their influence on corporate buyers. Please note that you must fulfill the prerequisites in order to enroll in this class.
Course usually offered in fall term
Prerequisite: WH 101 AND MGMT 101
Activity: Lecture
1.0 Course Unit
MGMT 251 Consulting to Growth Companies
This course offers students a unique opportunity to develop consulting skills and entrepreneurial expertise by working as consultants to thriving entrepreneurial ventures in the Philadelphia area. This capstone course combines both fieldwork and class work and allows students to apply knowledge and skills acquired through other course work to real world issues that must be addressed by operating companies. An understanding of characteristics producing rapid entrepreneurial growth and skills related to effective communications and management of a business relationship are emphasized. Team term consulting assignment, lectures, case analysis, and small group discussions. Junior or Senior standing recommended to enroll.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MGMT 264 Venture Capital and Entrepreneurial Management
This course focuses on venture capital management issues in the context of a high-growth potential start-up company. The course is motivated by rapid increases in both the supply of and demand for private equity over the past two decades. The topic is addressed from two distinct perspectives: issues that relate to the demand for private equity and venture capital (the entrepreneur's perspective) on the one hand, and issues that relate to the supply of capital (the investor's perspective) on the other. As well, we will address management issues that relate to how the VC and the entrepreneur work together once an investment has been made, compensation issues, and governance issues in the privately held venture capital backed company. Format: Case/discussion format, supplemented by lectures and guest speakers. Requirements: Classroom participation, written case assignments, late midterm. Materials: Required Coursepack and supplemental recommended reading.
Course usually offered in fall term
Prerequisite: Junior or Senior Standing Recommended
Activity: Lecture
1.0 Course Unit

MGMT 265 Culture of Technology: Culture & Institutions of the Tech Sector--Bridging Research and Practice
Academics, students and practitioners alike are fascinated by the culture of tech sector - its people, practices, and organization. In this course we explore this sector using a combination of research papers, press coverage, and practitioner involvement. Each class session will be devoted to discussion of a single research article, during which we will be joined via state-of-the-art videoconferencing by a Wharton alum from the tech sector whose expertise is relevant to the paper topic. Therefore, the learning objectives half-credit course are to: 1) understand the managerial, organizational, and regional institutions that characterize the tech sector, with particular emphasis on the case of Silicon Valley 2) Bridge research and practice by critical analysis of academic research papers in conjunction with practitioner input 3) Forge connections with tech sector practitioners, particularly with our west coast alumni base.
Taught by: Vice Dean Lori Rosenkopf
Activity: Lecture
0.5 Course Units

MGMT 267 Entrepreneurship and Technological Innovation
This course will give you an overview of entrepreneurial development, especially within the realm of technical innovation. We will be concerned with content and process questions as well as with formulation and implementation issues that related to conceptualizing, developing and managing successful new ventures. The class serves as both a stand-alone one and as a preparatory course to a more in-depth venture implementation class (MGMT 231) as well as other classes in the domain of management and entrepreneurship. Management 267 will appeal to individuals who have a desire to become entrepreneurs at some stage of their career. Similarly, students who intend to work in the entrepreneurial ecosystem (such as in the venture capital industry) will benefit from the course.
Activity: Lecture
0.5 Course Units

MGMT 272 Power and Politics in Organizations
’If you want to test a (person’s) character, give (him/her) power.’ These famous words articulate one of the many tensions of exercising power. Regardless of whether you have an appetite for power or disdain it, power and politics are likely to play an important role in your career. The purpose of this course is to introduce you to concepts that are useful for understanding, analyzing, and developing your political skill. But beyond discovering ways to extend your own power in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of scholarly articles, cases, exercises, assessments and simulations, we will extract a variety of lessons relevant to your role in organizations. Topics include diagnosing power in organizations, building coalitions, change management, understanding networks, coping with intolerable bosses and incivility, and downsizing. Students will be expected to engage in field research for their coursework and final paper, and the course requires that students submit assignments for almost every class session. Organizations are inherently political arenas that require social astuteness, and an understanding of the ‘rules of the game.’ This course is designed for students aiming to develop their leadership, general management and career skills through a better understanding of power and politics, and relates to other courses on these topics in the Management department.
Activity: Lecture
0.5 Course Units
MGMT 276 Cultivating Judgment Skills: Forecasting in Business Politics
This course will explore the diverse ways in which scholars and practitioners have defined ‘good judgment.’ It will introduce students to practical tools for assessing and improving judgment, with special emphasis on probabilistic reasoning. Students will have the opportunity both to fine-tune their personal judgment skills as well as to master and then weave together insights from several bodies of scientific knowledge, including frequentist and Bayesian statistics, psychological work on judgment and choice, group dynamics, organizational behavior and political science (key concepts discussed in Tetlock’s (2015) book ‘Superforecasting’). We will focus on bottom-line accuracy in sizing up real world problems. Class work will be primarily exercises, including working as an individual and in teams. You will have opportunities to forecast on a wide range of political, business, and macro-economic questions, which we will use as feedback tools to help you calibrate your judgment. Assessments include a weekly concept test and a final group presentation aimed to help you improve your judgment. The goal is to launch you on the lifelong process of learning how much trust you should place in your judgments of trustworthiness. Finally, note this has been approved by the Curriculum Committee effective 11/11/15.
Activity: Lecture
1.0 Course Unit

MGMT 288 Managing and Competing in China
The business environment in China is characterized by both uncertainty and complexity. On the one hand, it is changing fast; on the other hand, it is influenced by deep-rooted political, economic, and cultural forces that exhibit tremendous inertia. This course will help students–as potential managers, entrepreneurs, and investors–gain the knowledge and analytical skills necessary to compete effectively in China. We will discuss various types of firms in the Chinese economy–from large state-owned enterprises (SOEs) to newly minted Internet giants, from prominent multinational companies (MNCs) to virtually anonymous local suppliers–and the unique institutions in which these firms operate. Such discussions will also help managers whose firms compete or collaborate with Chinese firms on the global stage. We will use a combination of lectures, cases, debates, and role play in class. You will also have the opportunity to apply your learning to real business scenarios.
Also Offered As: MGMT 788
Activity: Lecture
1.0 Course Unit

MGMT 291 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.
One-term course offered either term
Also Offered As: LGST 206, OIDD 291
Activity: Lecture
1.0 Course Unit

MGMT 292 Advanced Negotiation
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course assumes familiarity with the basic negotiation concepts covered in the prerequisite for this course: Negotiations. In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.
Taught by: Schweitzer, Staff

Prerequisite: LGST 206 OR OIDD 291 OR MGMT 291
Activity: Lecture
1.0 Course Unit

MGMT 301 Teamwork and Interpersonal Influence
Organizations emerge because individuals cannot (or do not want to) accomplish their goals alone. Therefore, an organization is most often defined as a collective oriented toward a common goal. Collaboration—in relationships and in teams—is the building block of organizational effectiveness. That is, much of your work each day will occur in a social context, and will require you to wield influence (and be influenced). Moreover, over 80% of Fortune 1,000 companies now use teams. The ability to work effectively in teams is thus a critical skill. In this course we will use the latest evidence from the science of organizations to understand an array of tactics that can help you work with others (and manage them) as you strive to attain shared goals, especially in the context of teams. You will develop a portable toolkit of ideas related to managing team decision making, team conflict, team diversity, interpersonal influence and emotional intelligence. This is a cross-listed course. Students may enroll in either MGMT 301 or WH 301.
Taught by: Professors Carton, Lee, and Parke
Activity: Lecture
0.5 Course Units
Notes: This course is the third module of the four-module set that comprises the Leadership Journey.

MGMT 353 Wharton Field Challenge FLCP
Do you want to make a real difference in the lives of a student? Do you want to set kids on a path to becoming financially literate? Do you want to learn leadership skills in the classroom? Here at the Financial Literacy Community Project (FLCP) we are able to create an experience that achieves all three. We partner with various public schools around the West Philadelphia area and teach concepts integral to financial literacy. We teach a wide range of grades from middle school to high school, and work with students to help them learn how to be financially responsible. In addition to teaching in neighboring high schools, we also have group class meetings run by Professor Keith Weigelt on Mondays from 7:00 PM-8:30 PM. We learn about the disparity of wealth and how to best address it while also learning teaching techniques, classroom strategies, and overall basic financial literacy. A basic understanding of personal financial literacy is required.
Taught by: Weigelt and Staff.

MGMT 399 Serve Learn Client Proj
MGMT 399 builds on the foundation established by the pre-requisites in the Leadership Journey. As seniors, you will draw on the self-awareness you acquired in WH101, the speaking skills you practiced in WH201, and the teamwork and interpersonal skills you honed in MGMT/WH 301. Moreover, MGMT 399 serves as a capstone course by giving you the opportunity to work with a robust nonprofit and in order to frame the problems and address the challenges your host organization faces; in the process, you will use your creative and critical thinking skills, apply what you have learned, and reflect on your growth and development through iterative feedback and constructive coaching. As a highly experiential course, MGMT 399 is relatively unstructured, giving you ample opportunity to demonstrate leadership by providing direction and teamwork by pulling together to deliver results for your host. MGMT 399 will enable you to draw on your Wharton undergraduate education and apply what you have learned in a way that promises to provide real impact for your host organization and a meaningful and memorable experience for you. This course requires permission of your advisor. It is only open to Wharton seniors. In short, MGMT 399 gives Wharton seniors the opportunity to: - Engage in a service learning and experiential course - Demonstrate leadership and work as a team on a real, host engagement - Think creatively, critically, and practically for the benefit of your host - Refine your interpersonal communication and presentation skills - Heighten your self-awareness through feedback and reflection Taught by: Professor Anne Greenhalgh and Professor Keith Weigelt Prerequisite: WH 101 AND WH 201 AND (WH 301 OR MGMT 301)
Activity: Lecture
0.5 Course Units

MGMT 409 Huntsman Capstone Study
The objective of the capstone study is to provide participants with the opportunity to integrate the knowledge gained in various courses Huntsman students take in Wharton and the College in a focused application to a specific project. The project would have sufficient breadth and depth to require participants to draw upon multiple analytical perspectives, theoretical lenses, and stocks of empirical data to collaboratively develop distinctive insights in relation to a given problem. The end product is a paper summarizing the research/application journey of the students, as well as a group presentation highlighting key findings as well as their theoretical and practical implications. Prerequisite: This course is only open to students in the Huntsman Program.
Taught by: Professor Exequiel Hernandez
Activity: Lecture
0.5 Course Units

MGMT 418 The India Startup Ecosystem
The objective of OIDD/MGMT 418 and the Wharton India Fellows program is to introduce Penn juniors to the entrepreneurship and innovation ecosystem in India through a course covering topics in entrepreneurship, innovation, venture capital and technology in India and then matching students to a specific short-term project with a Bangalore-based early-stage startup or rapidly scaling company. Students will complete preliminary work on the project assignment during the course, and then travel as a group to Bangalore with the instructor for a two week immersion in the company to which they have been assigned for their entrepreneurship project. Penn Wharton Entrepreneurship will cover airfare and lodging expenses for students selected as Wharton India Fellows for the duration of the 2 week immersion in India. For more information: https://entrepreneurship.wharton.upenn.edu/wharton-india-fellows/
Also Offered As: OIDD 418
Activity: Lecture
0.5 Course Units

MGMT 610 Foundations of Teamwork and Leadership
MGMT 610 is the first core course in the MBA Program and it cannot be waived. The first week of the fall term (in August) is dedicated to this formative and foundational experience. This course focuses on developing students’ knowledge and skill set for teamwork and leadership. It is meant to be an intense immersion experience that draws strongly on the pedagogy of the Wharton Teamwork and Leadership Simulation, a team-based, highly interactive simulation that was custom-designed specifically to allow students to experience the core concepts they learn in this class. The three goals of this course are for students to learn: 1. Leadership behaviors: how to enact the skills that contribute to a team’s effective performance. 2. Team dynamics: how to be an effective team member, as well as how to best design work teams; 3. Organizational awareness: understanding organizational culture. Format: A custom-designed Wharton-only simulation is paired with course sessions to deliver a unique learning experience. Classes will include experiential learning combined with debriefings, lectures, readings, class discussion and personal and group performance feedback. This course reflects the realities that informal leadership occurs in teams on an ongoing basis, that being a good team player is a part of leadership, and that many of one’s early experiences with leadership will occur while working on teams. Because of the team-based nature of this course, and time intensive nature of this experience, attendance is mandatory for ALL five sessions of this class. NOTE: Credit-bearing, core coursework begins with the MGMT610: Foundations of Teamwork and Leadership course.
Activity: Lecture
0.5 Course Units

MGMT 611 Managing Established Enterprises
This course is about managing large enterprises that face the strategic challenge of being the incumbent in the market and the organizational challenge of needing to balance the forces of inertia and change. The firms of interest in this course tend to operate in a wide range of markets and segments, frequently on a global basis, and need to constantly deploy their resources to fend off challenges from new entrants and technologies that threaten their established positions. The class is organized around three distinct but related topics that managers of established firms must consider: strategy, human and social capital, and global strategy.
Taught by: John Paul MacDuffie
Also Offered As: LAW 516
Activity: Lecture
1.0 Course Unit
MGMT 612 Management of Emerging Enterprises
This course is about managing during the early stages of an enterprise, when the firm faces the strategic challenge of being a new entrant in the market and the organizational challenge of needing to scale rapidly. The enterprises of interest in this course have moved past the purely entrepreneurial phase and need to systematically formalize strategies and organizational processes to reach maturity and stability, but they still lack the resources of a mature firm. The class is organized around three distinct but related topics that managers of emerging firms must consider: strategy, human and social capital, and global strategy. Taught by: Exequiel Hernandez
Activity: Lecture
1.0 Course Unit

MGMT 613 Managing the Enterprise
One-term course offered either term
Activity: Lecture
1.0 Course Unit

MGMT 624 Leading Diversity in Organizations
People in the workplace are constantly interacting with peers, managers, and customers with very different backgrounds and experiences. When harnessed effectively, these differences can be the catalyst for creative breakthroughs and the pathway to team and organizational learning and effectiveness; but when misunderstood, these differences can challenge employees’ values, performance, workplace relationships, and team effectiveness. This course is designed to help students navigate diverse organizational settings more effectively and improve their ability to work within and lead diverse teams and organizations. It also offers students the opportunity to develop their critical thinking on topics such as identity, relationships across difference, discrimination and bias, equality, and equity in organizations and society and how they relate to organizational issues of power, privilege, opportunity, inclusion, creativity and innovation and organizational effectiveness. Class sessions will be experiential and discussion-based. Readings, self-reflection, guest speakers from organizations, case studies and a final project will also be emphasized. By the end of this course, you should be able to: 1) Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how you interact and engage with you in organizations 2) Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations 3) Propose ways to make relationships across difference in organizations more effective 4) Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in organizations 5) Analyze a company’s current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company. Class attendance is required. No more than 2 absences will be allowed to receive a passing grade in the course. Absences due to late enrollment will be counted towards the two max. No student will be allowed to enroll after the first day of class without instructor permission. Taught by: Stephanie Creary
Course not offered every year
Activity: Lecture

MGMT 625 Corporate Governance, Executive Compensation and the Board
This course examines the relationships between corporate managers, the boards of directors charged with overseeing them, and investors. We'll review the responsibilities of the board, including financial statement approval, CEO performance assessment, executive compensation, and succession planning. While boards are legally bound to represent the interests of equity investors, in the course of carrying out this role they are often called on to respond to the needs of numerous other stakeholders, including customers, employees, government and society at large. With global brands at risk and mistakes instantly transmitted via Internet and social media, the reputational stakes are very high. The course is a combination of lecture, guest lecture, discussion, case analysis and in-class research workshops. We will review some of the theory underlying modern governance practice, drawing from theories and evidence provided by research across diverse fields, including finance, sociology, and organization and management theory. We'll study specific situations where boards and management teams faced governance challenges, and assess the strategies used to deal with them. Finally, we'll examine the ways in which governance arrangements and external stakeholder involvement in governance affects corporate social behavior and global citizenship. Taught by: Mary-Hunter McDonnell
Activity: Lecture
0.5 Course Units

MGMT 653 Field Application Project
FAP is an experiential-based course where learning is done outside of the classroom. It is unique in its lack of a classroom setting all meetings take place in a professor's office in small teams of 4 to 6 students. Teams are faced with real-time issues of outside organizations and work with faculty and host managers to construct innovative solutions. Solutions are integrative and cross-functional in nature. We encourage creative thinking giving students wide access to what we call 'area of expertise' faculty. Depending on the project scope we help students arrange meetings with professors who are experts in their field. Host organizations range from large multinational firms to start-ups. A significant percentage of the projects are with non-profits and organizations focused on social causes. Format: Teams (4-6 members) meet with faculty on a weekly basis (30-45 minutes). There are also 3-5 meetings with host managers. In addition to meeting with a Faculty Head, students are given access to 'area of expertise' faculty. These faculty members are chosen based on their specific expertise. The final deliverable consists of an oral presentation and a written document. Requirements: Weekly team meetings with faculty project head and a final PowerPoint report and presentation. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MGMT 656 Global Immersion Program
The Global Immersion Program is a pass/fail, 0.5 credit course that is designed to provide students with an in-depth exposure to international business practices and first-hand insights into a foreign culture. In past years, programs were offered in India, the Middle East, China, South America, Southeast, Asia, and Africa. The program offers students the opportunity to learn about a foreign business environment by way of academic lectures and a multi-week study tour, allowing students to visit with corporate and government officials, network with alumni, and take cultural excursions. Taught by: Amy Miller
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
**MGMT 671 Executive Leadership**

Leaders mobilize resources toward valued goals. In this course, the focus is on growing the student’s capacity as a leader in all parts of life. The purpose is to learn practical and customized lessons about how to improve performance and results at work, at home, in the community, and in the private self (mind, body, spirit) by finding mutual value among these four domains. The core idea is that leadership is about making a difference in all aspects of one’s life. This course offers students the opportunity to practice the skills needed to do so, now and in the future. Students learn and apply key leadership principles and actively explore what it means for them to be real (to act with authenticity by clarifying what's important), to be whole (to act with integrity by respecting the whole person), and to be innovative (to act with creativity by experimenting with how things get done). Please visit www.totalleadership.org to learn more. This course is only available to Wharton MBA students.

Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**MGMT 690 Managerial Decision Making**

The course is built around lectures reviewing multiple empirical studies, class discussion, and a few cases. Depending on the instructor, grading is determined by some combination of short written assignments, tests, class participation and a final project (see each instructor’s syllabus for details).

One-term course offered either term
Also Offered As: OIDD 690
Activity: Lecture
1.0 Course Unit

**MGMT 691 Negotiations**

This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.

Taught by: Faculty
One-term course offered either term
Also Offered As: LAW 518, LGST 806, OIDD 691
Activity: Lecture
1.0 Course Unit

**MGMT 692 Advanced Topics Negotiation**

This is a course the builds on the basic Negotiation course. In this course, we explore a wide range of negotiation topics from crisis and hostage negotiations, to the role of emotions including anxiety, envy and anger in negotiations, to backlash effects for women in negotiations, and the role of alcohol in negotiations. We will survey many aspects of current negotiation research, discuss historic negotiation cases, and students will participate in role-play exercises. Many of the role play exercises will involve multi-party negotiations and afford opportunities to hone skills in team-based negotiations.

Taught by: Faculty
One-term course offered either term
Also Offered As: LGST 692, OIDD 692
Activity: Lecture
1.0 Course Unit

**MGMT 701 Strategy and Competitive Advantage**

This course is concerned with strategy issues at the business unit level. Its focus is on the question of how firms can create and sustain a competitive advantage. A central part of the course deals with concepts that have been developed around the notions of complementarities and fit. Other topics covered in the course include the creation of competitive advantage through commitment, competitor analysis, different organizational responses to environmental changes, modularity, and increasing returns. An important feature of the course is a term-length project in which groups of students work on firm analyses that require the application of the course concepts.

Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
1.0 Course Unit

**MGMT 711 Competitive Strategy and Industrial Structure**

This is a course in analyzing competitive interactions. The course emphasizes a vision of strategy in which each competitor simultaneously chooses its strategy, taking into account the strategies of its opponents. Crucial to this vision is the anticipation of the moves of your opponent and, in particular, the expectation that your opponent is (almost) as smart as you are. Equal attention will be given to the development of techniques for analyzing competitive interactions and to the application of those techniques. Game theory and the economics of industrial organization provide the basis for the theoretical constructs developed in the course. Topics that will be explored include: market failures and profitability, competitive bidding, signaling, entry deterrence, agenda setting, regulations, and price wars.

Taught by: James Ostler
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MGMT 712 Managing Strategic Partnerships
This course explores the management of strategic partnerships between firms, which have surged in recent years in response to globalization, technological evolution, deregulation, shortened product life cycles, and intensified competition. Today’s alliances drive corporate growth and change, and vary greatly in terms of partner type, commitment, equity investment, degree of control, between scale, and scope. They range from bilateral arrangements to ecosystems to outsourcing, often blurring traditional organizational boundaries and leading to the creation of globally distributed enterprises. In view of these contemporary developments, the objectives of the course are two-fold: (1) to arm you with a set of tools to facilitate the selection of an appropriate alliance strategy in a given situation; and, (2) to provide you with frameworks to help the initiate and implement different kinds of partnerships. The emphasis lies on strategic and organizational aspects in the formation and management of these transactions, rather than financial considerations. Alternative growth strategies to strategic alliances (e.g., acquisitions), the impact of these partnerships on competition within an industry, and regulatory constraints will also be discussed. In terms of its pedagogical approach, this is designed to be an interactive, applied, case-based course with accompanying conceptual readings to help structure your thinking. Given the nature of the course, we will also apply the lessons from the cases to understand the challenges and implications of relevant recent and on-going deals. In addition, guest speakers with experience in investment banking, consulting, and industry will be invited to share their perspectives. A group project is intended to give you the opportunity to apply your learning from the course to a context that is most interesting and relevant to you.
Course not offered every year
Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
0.5 Course Units

MGMT 714 Value Creation and Value Capture in American Business History
This course examines how the kind of firms in which most Wharton students will spend the next stage of their careers came to be as they are today. At a superficial level, the course’s objectives are descriptive and narrative. But history, considered thoughtfully and critically, is never just description and a narrative: the course’s deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. In this the course is as much an applied strategy course as it is a historical survey. The course considers the development of the business enterprise as an economic institution. It also covers the evolution of competition and strategy, marketing institutions, some aspects of the history of operations management, and corporate finance. Issues arising in these different management disciplines are considered in part for the purpose of showing off their interrelationships. Questions of how value can be created and captured at the enterprise level form the core of the perspective. The course’s focus is on American developments, since many of the innovations took place here, but there is scope for comparison with Japan and the leading European economies if there is student interest. Chronologically the course runs from Franklin’s days through the early twenty-first century. It proceeds through discussion of actual business decisions and performance in a series of challenging and otherwise interesting moments in the evolution of the American business environment. The materials are unusual for the Wharton School—they are not just often case-like but wherever possible draw on documents contemporary to the decisions such as correspondence, internal memoranda, minutes of meetings, old newspaper and magazine stories, and eyewitness accounts. The objective in this is to give students as minimally mediated access as is feasible to what the embedded actors knew and thought. These materials require thoughtful preparation. Weekly short writing assignments during the first twelve weeks of the term develop students’ skill in turning such preparation into crisp analytical prose. The course as a process is much more focused on the students than many and the most productive experience of it demands that the students both engage with the materials when they prepare and then take an active role in the class discussion. The largest single element in the grading is a substantial term paper on a topic agreeable to both the student and the instructor. For more information, please contact the instructor: raff@wharton.upenn.edu.
Taught by: Daniel Raff

MGMT 715 Political Environment of the Multinational Firm
All successful firms go global. This course provides a broad introduction to international business. You will learn about who loses and who gains from trade, what are the effects of tariffs and non-tariff barriers, the World Trade Organization (WTO), regional trading blocs, and NAFTA. The core then turns to the international financial architecture, focusing on exchange rate risk. We then move to multinational firm strategies, including a discussion of the reasons for why firms choose to do business globally through trade or FDI, international tax strategy, joint ventures, technology transfer, different ways to be a multinational firm, and ethical dilemmas. The class is a mix of lectures and cases that allow students to synthesize the extensive materials on multinational management, international institutions, economic policies, and politics with a goal towards formulating multinational firm strategy.
Activity: Lecture
0.5 Course Units
MGMT 717 Deals: The Economic Structure of Transacting and Contracting
This course focuses on the role of professionals, including lawyers of all types (corporate, tax, securities, etc.), direct private equity investors, corporate business development officers, and investment bankers, in creating value through transaction engineering. The overall goal of the course is to explore how private parties could order their commercial interactions, to develop a theory of how they ought to do this, and to gain a thorough understanding of how business deals are actually done. The long first half of the course is devoted to analyzing impediments to transacting, including asymmetric information, difficulties intrinsic to contracting over time, enforceability, various forms of strategic behavior, exogenous risk, all with a view to understanding the logic of the variety of techniques used to ameliorate them and more broadly to create distributable value through transaction structuring. These Part I classes are accompanied by exercises of various sorts. In the second part of the course, student teams apply the conceptual tools and techniques developed in the first half to analyzing the fine detail of a series of recently completed and interestingly complex transactions. Each team is given access to the original documents implementing their deal. A week of class time is devoted to each transaction. In the first (Monday) session, the student teams present their deal to the class, laying out strategic motivations, analyzing key structuring moves, and exploring the advantages and disadvantages of proceeding in the way the participants did. In the second, on the Wednesday, one or (usually) more of the professionals who worked on it will present the deal from the participant perspective, address the always interesting process questions, and take questions from the class. The requirements for the class are regular attendance, active participation in class discussions, a series of homework assignments and a short individual paper in Part I, the group presentation project and a group memorandum from each deal team on what there was to be learned from the Wednesday presentation their week in Part II, and a six-hour take-home exam. The course meets jointly on what there was to be learned from the Wednesday presentation their week in Part II, and a six-hour take-home exam. The course meets jointly with an upper-class Law School and LLM course. Wharton enrollment will be restricted this year to 25 MBA students. In the event that the course is oversubscribed, students will be admitted from the waiting list only if other students drop the course. If this happens, it usually happens fairly early on. Priority for admission in these circumstances will go to students who have attended the class from the beginning. For more information, please contact the instructor: raff@wharton.upenn.edu.

Taught by: Daniel Raff

1.0 Course Unit

MGMT 720 Corporate Diplomacy
Managers, consultants, investors and creditors increasingly acknowledge the importance of stakeholder opinions of the acceptability of a company’s operations for that company’s ability to achieve its organizational mission and to deliver a financial return. The rhetoric that companies must manage their stakeholder relations as well as shareholder relations is rapidly shifting from a philosophical critique of the functioning of the capitalist system to a strategic, financial, operational and societal imperative. Managers, consultants and investors are increasingly drawing on new unstructured data on the identity and issues of concern of stakeholders to align corporate and investment strategy with stakeholder demands on issues ranging from environmental externalities (e.g., climate change) to human rights. This course provides students the latest tools to use this data for stakeholder and issue mapping as well as financial valuation. It also offers more behavioral skills critical for external stakeholder engagement including trust building and communications as well as internal stakeholder engagement. In short, it prepares students to engage in Corporate Diplomacy (i.e., to influence or assess external stakeholders’ opinions of the acceptability of a company’s operations at a moment in time and to convince internal stakeholders to adapt their behaviors, systems and outputs’ when necessary). There are no formal prerequisites but participants should be able to contribute some individual expertise from previous coursework, training, and work experience and will, at other times, rely heavily on their peers to summarize and introduce key concepts and perspectives from other disciplines, industries or countries with which they may be less familiar.

Taught by: Witold Henisz
Activity: Lecture
1.0 Course Unit

MGMT 721 Corporate Development: Mergers and Acquisitions
This course explores the role of mergers and acquisitions and alternative methods of corporate development in advancing the strategies of operating business. Emphasis is on the way companies use acquisitions to alter business mixes; seize opportunities in new products, technologies and markets; enhance competitive positioning; adjust to changing economics, and promote value-creating growth. Although the course will emphasize strategic acquisitions, it also will explore leveraged buy-outs and hostile financial acquisitions as well as their influence on corporate buyers. Please note that you must fulfill the prerequisites in order to enroll in this class.

Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
1.0 Course Unit
MGMT 729 Intellectual Property Strategy for the Innovation-Driven Enterprise
Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: ‘And boy, have we patented it!’ How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategists, and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In Unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.

Also Offered As: LGST 729, MGMT 229

Activity: Lecture
0.5 Course Units

MGMT 731 Technology Strategy
The course is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. The course uses a combination of cases, simulation and readings. The cases are drawn primarily from technology-based industries. Note, however, that the case discussions are mainly based on strategic (not technical) issues. Hence, a technical background is not required for fruitful participation.

Taught by: Rahul Kapoor

Activity: Lecture
0.5 Course Units

MGMT 740 Leading Effective Teams
This course develops your knowledge and skills for designing, leading, and consulting with teams in organizations. The goals are to provide both the conceptual understanding and the behavioral skills required to improve effectiveness. This course emphasizes class participation, readings, analytic and reflective writing, assessments, peer feedback and coaching, lectures simulations and an intensive field project. with a real team in the Philadelphia area. Four kinds of teams are the focus of study: teams of which you’ve been a member in the past; your 740 team, with three or four classmates; a team outside of 740 that your 740 Team will observe, analyze, and report on--your Host Team; and a team that you expect to be on in the future. The case material for learning and applying course concepts will be these teams that you know from direct observation and experience. Expect to leave this course with new knowledge of how to diagnose and intervene - as leader, member, or consultant - to improve the performance, sustainability, and impact on the members of any team in any setting. The text is by J. Richard Hackman, Leading Teams (Harvard Business).

Prerequisite: MGMT 610

Activity: Lecture
0.5 Course Units
MGMT 751 Strategic Management of Human Assets
Successful firms often excel in the capability of employing and deploying human assets (resources) to achieve the effective implementation of business strategy. To understand this capability, this course will address two central themes: 1) How to think systematically and strategically about various aspects of managing the organization's human assets; and 2) What really needs to be done to implement these policies and achieve competitive advantage. In order to think 'systematically' about this topic for any particular organization, we will consider the bundles of work practices and human resources processes that make up the overall system for managing people and evaluate whether these are internally consistent and aligned ('internal fit'). To think 'strategically', we will then assess the relationship between practices/processes of managing people and the firm's strategy and strategic context, e.g., industry structure, competitive landscape, political, social, and economic environment -- for evidence of external fit. By paying attention to implementation, we will recognize that although many organizations recognize the importance of managing the workforce effectively (and even 'know' what approaches have been effective elsewhere), firms and managers very often fail to implement these approaches. The course is organized in four sections: 1) Setting out basic frameworks for viewing the strategic management of human assets as a source of competitive advantage for firms; 2) Comparing and contrasting four different approaches to organizing human assets: 'Control', 'Commitment' model, 'Talent' model, and 'Collaborative', 3) Addressing the 'make' vs. 'buy' decision for human assets, i.e., when to upgrade the internal skills of existing employees (including promotion from within) in order to boost capabilities and compete in new areas vs. when to hire people who already have the necessary skills, via external hires and/or hiring individuals on contract; and 4) Analyzing the relationships among culture, HR systems, and organization change when faced with strategic shifts; leadership crises; rapid growth; and global expansion. The strategic management of human assets is only one source of competitive advantage. Yet many managers recognize (and many successful organizations embody) the reality that the competitive edge gained from the newest technology, the latest marketing strategy, or the most creative product design may be relatively short-lived as competitors rush to imitate and follow. Aligning human resource systems with business strategy is not easy, but once achieved, it seems to offer a more sustainable - because more unique and difficult to imitate - source of competitive advantage.
Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
0.5 Course Units

MGMT 765 Venture Capital and Entrepreneurial Management: Practices and Institutions of Silicon Valley
This elective half-semester course will highlight venture capital and entrepreneurship in general and will explore selected aspects of this industry, including: industry trends and dynamics in Silicon Valley and the South of Market area (SOMA) of San Francisco; the recent emergence of alternative sources of startup financing, including incubators/accelerators and crowdfunding platforms, angel groups and stage-agnostic institutional investors; business and operational aspects of early stage companies in transition to mezzanine-level stages of growth; and company 'exits,' including both initial public offerings and merger/sale transactions. MGMT765 and MGMT804 cover separate issues within the same general industry and are not redundant. This course addresses issues faced by later stage VC backed firms, while MGMT804 centers on early stage, pre-revenue startups. It is recommended students take MGMT 801 before enrolling in this course. The format of this course relies heavily on site visits and recognized leaders within the Bay Area to bring forth on-the-ground perspectives of a changing and important industry. While MGMT804 is not a prerequisite, the two courses are complementary.
Activity: Lecture
0.5 Course Units
Notes: Requirements: Individual participation in lectures, discussions, and company visits, student presentations, and final paper.

MGMT 772 Power and Politics in Organizations
'If you want to test a (person's) character, give (him/her) power.' These famous words articulate one of the many tensions of exercising power. Regardless of whether you have an appetite for power or disdain it, power and politics are likely to play an important role in your career. The purpose of this course is to introduce you to concepts that are useful for understanding, analyzing, and developing your political skill. But beyond discovering ways to extend your own power in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of scholarly articles, cases, exercises, assessments and simulations, we will extract a variety of lessons relevant to your role in organizations. Topics include diagnosing power in organizations, building coalitions, change management, understanding networks, coping with intolerable bosses and incivility, and downsizing. Students will be expected to engage in field research for their coursework and final paper, and the course requires that students submit assignments for almost every class session. Thematically, this course highlights how your relationships with organizational stakeholders and an understanding of the organizational context are crucial to successfully navigating the political terrain of organizations. Organizations are inherently political arenas that require social astuteness, and an understanding of the 'rules of the game.' This course is designed for students aiming to develop their leadership, general management and career skills through a better understanding of power and politics, and relates to other courses on these topics in the Management department.
Activity: Lecture
0.5 Course Units
MGMT 773 Managing Organizational Change
During the last decade it has become clear that in the global economy, firms must constantly adapt to changing technological, competitive, demographic and other environmental conditions in order to survive and prosper. The importance of acquiring the knowledge and tools for changing organizations successfully cannot be overemphasized (particularly for students headed for consulting and general management careers, although not limited to them). This course focuses on specific concepts, theories and tools that can guide executives entrusted with the task of leading organizational change to successful execution. Among other topics, the course will focus on various change strategies such as leading change, managing cultural change, and mergers and acquisitions, corporate transformation, managing growth, building the customer-centric organization, business process outsourcing both from client and provider perspectives, and managing radical organizational change. The perspective of the course is integrative and the focus is on successful execution.
Taught by: Pottruck D
Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
0.5 Course Units

MGMT 782 Strategic Implementation
Much more is known about strategy formulation than its implementation, yet valid, sensible strategies often fail because of problems on the implementation side. This course provides you with tools to turn good strategy into successful reality. It covers the choices, structure, and conditions that enable the successful attainment of strategic objectives. Students learn from rigorous academic research on successful implementation, as well as a series of seasoned business leaders who will visit to share their own experience from the front lines.
Taught by: Professor Claudine Gartenberg
Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
1.0 Course Unit

MGMT 784 Managerial Economics and Game Theory
The purpose of this course is to develop students’ abilities to apply game theory to decision making. Development of the tools of game theory and the application of those tools is emphasized. Game theory has become an important tool for managers and consultants in analyzing and implementing tactical as well as strategic actions. This course will primarily focus on examples useful for developing competitive strategy in the private sector (pricing and product strategy, capacity choices, contracting and negotiating, signaling and bluffing, takeover strategy, etc.). Game theory can also be used to address problems relevant to a firm’s organizational strategy (e.g., internal incentives and information flow within a firm) and to a firm’s non-market environment (e.g., strategic trade policies, litigation and regulation strategy). Recommended background in intermediate microeconomics or equivalent. It is expected that the student has been introduced to some basic game theory. There will be a quick review of the basics and some recommended supplemental readings for those who have little or no background in game theory.
Prerequisite: MGEC 611
Activity: Lecture
0.5 Course Units

MGMT 788 Managing and Competing in China
The business environment in China is characterized by both uncertainty and complexity. On the one hand, it is changing fast; on the other hand, it is influenced by deep-rooted political, economic, and cultural forces that exhibit tremendous inertia. This course will help students—as potential managers, entrepreneurs, and investors—gain the knowledge and analytical skills necessary to compete effectively in China. We will discuss various types of firms in the Chinese economy—from large state-owned enterprises (SOEs) to newly minted Internet giants, from prominent multinational companies (MNCs) to virtually anonymous local suppliers—and the unique institutions in which these firms operate. Such discussions will also help managers whose firms compete or collaborate with Chinese firms on the global stage. We will use a combination of lectures, cases, debates, and role play in class. You will also have the opportunity to apply your learning to real business scenarios.
Also Offered As: MGMT 288
Activity: Lecture
1.0 Course Unit

MGMT 793 People Analytics
This course examines the use of data to improve how people are managed within organizations. Recent years have seen a growing movement to bring more science to how we manage people. In some cases, that means ensuring that whatever practices and approaches we adopt are backed up by solid evidence as to their effectiveness. Often, organizations will seek to go further, analyzing their own data to identify problems and learn what is working and what is not in their own context. This course applies the insights of the people analytics movement to help students become better managers and more critical analysts within their organizations. The course aims to develop students in three specific ways. First, it provides students with an up-to-the-minute grounding in current evidence about managing people, providing a knowledge base that can ensure that their future management is guided by best practices. Second, it develops the skills and understanding necessary to be thoughtful, critical consumers of evidence on people management, allowing them to make the most of the analysis available to them as they make people decisions. Third, it provides guidance and practice in conducting people analytics, preparing students to gather data of their own, and making them more skilled analysts. The course addresses these topics through a mixture of lecture, case discussion, and hands on exploration of a variety of data sets.
Taught by: Matthew Bidwell
Also Offered As: OIDD 793
Activity: Lecture
0.5 Course Units
MGMT 794 Understanding Careers and Executive Labor Markets
This course examines the structure of executive careers in order to help understand how those careers can be managed most effectively. By drawing on extensive economic, sociological and psychological research on careers, we will examine such questions as when executives should move on to the next job or even change fields altogether, and what are effective means of finding jobs, achieving promotions, managing networks, and achieving work-life balance. The first few sessions of the course explore the basic building blocks of the career, outlining our knowledge on the different orientations that individuals take to their careers, how approaches to the career change as people get older, and how different kinds of job moves within and across firms advance careers. The second part of the course explores in more detail the social resources that affect careers, notably social networks and relationships with mentors. The third section of the course then examines a number of the most important and difficult issues affecting modern careers, including making successful transitions, the effects of gender on careers, work-life balance, and international careers. Format: The course is structured around a combination of academic research, cases, guest speakers, and examples and exercises. A project encourages the students to compare their own plans for their careers with the careers that have been experienced by older executives.
Activity: Lecture
0.5 Course Units

MGMT 799 Epidemics, Natural Disasters & Geopolitics: Managing Global Bus/Fin Uncertainty
Epidemics and natural disasters are exogenous shocks that create many challenges for companies, financial markets, and political systems. This class draws on the expertise of 12 Wharton faculty members to provide a deep understanding of how global business and financial uncertainty can be managed in the wake of such dramatic events. The topics include: leading in uncertain times, the reaction of the financial markets to the coronavirus, disaster risk and asset returns, the significance of borders in an integrated world, emotional contagion and epidemics, the evolving U.S./China relationship in the context of trade wars and the pandemic, and the disruption of trade and global supply chains. Students may take this class in person or online. Requirements include participation (in the classroom or in a class blog), daily multiple-choice tests, and a short team paper to be peer-graded.
Taught by: Mauro F. Guillen
Activity: Lecture
0.5 Course Units

MGMT 801 Entrepreneurship
MGMT 801 is the foundation course in the Entrepreneurial Management program. The purpose of this course is to explore the many dimensions of new venture creation and growth. While most of the examples in class will be drawn from new venture formation, the principles also apply to entrepreneurship in corporate settings and to non-profit entrepreneurship. We will be concerned with content and process questions as well as with formulation and implementation issues that relate to conceptualizing, developing, and managing successful new ventures. The emphasis in this course is on applying and synthesizing concepts and techniques from functional areas of strategic management, finance, accounting, managerial economics, marketing, operations management, and organizational behavior in the context of new venture development. The class serves as both a stand alone class and as a preparatory course to those interested in writing and venture implementation (the subject of the semester-long course, MGMT 806). Format: Lectures and case discussions. Requirements: Class participation, interim assignments, final project. Enrollment limited to Wharton MBA students only.
Activity: Lecture
0.5 Course Units

MGMT 802 Change, Innovation & Entrepreneurship
Designed for students with a serious interest in entrepreneurship, this course will provide you with an advanced theoretical foundation and a set of practical tools for the management of startups and entrepreneurial teams in fast-changing and innovative environments. Building on the skills of MGMT 801, every class session is built around an experience where you have to put learning into practice, including the award-winning Looking Glass entrepreneurial simulation, role-playing exercises, and a variety of other games and simulations. The goal is to constantly challenge you to deal with entrepreneurial or innovative experiences, as you learn to navigate complex and changing environments on the fly, applying what you learned to a variety of scenarios. MGMT 802 is built to be challenging and will require a desire to deal with ambiguous and shifting circumstances. It is recommended students take MGMT 801 before enrolling in this course. Format: Lectures, discussion, interim reports, class participation, readings report, and presentations, and an innovation assessment in PowerPoint format.
Activity: Lecture
0.5 Course Units
MGMT 804 Venture Capital and Entrepreneurial Management
This elective half-semester course focuses on venture capital management issues in the context of the typical high-growth potential early stage start-up company. The course is fundamentally pragmatic in its outlook. It will cover seven principal areas relevant to the privately held high-growth start-up which include: commentary on the venture capital industry generally, as well as a discussion of the typical venture fund structure and related venture capital objectives and investment strategies; common organizational issues encountered in the formation of a venture backed start-up, including issues relating to initial capitalization, intellectual property and early stage equity arrangements; valuation methodologies that form the basis of the negotiation between the entrepreneur and the venture capitalist in anticipation of a venture investment; the challenges of fundraising, financing strategies and the importance of the business plan and the typical dynamics that play out between VC and entrepreneur. It is recommended students take MGMT 801 before enrolling in this course. Typical investment terms found in the term sheet and the dynamics of negotiation between the entrepreneur and the venture capitalist; compensation practices in a venture capital backed company; and corporate governance in the context of a privately-held, venture capital-backed start-up company and the typical dynamics that play out between VC and entrepreneur in an insider-led, ‘down round’ financing. Requirements: Classroom participation, weekly case assignments, and final exam Format: Lecture, case studies, class participation, weekly case assignments, and final exam.
Activity: Lecture
0.5 Course Units

MGMT 806 Venture Implementation
This advanced course on entrepreneurship focuses on developing a validated opportunity or concept into a venture that is ready for seed financing and/or launching the product or service. Participants in this course must previously have developed a validated opportunity, either in a previous course or through independent efforts. Students may participate as a team of up to three people. Ideally, participants are committed to pursuing their opportunity commercially, or at least to seriously explore that possibility. The course provides a practical guidance for developing the product or service, forming the entity, raising capital building the team, establishing partnerships, and sourcing professional services. After completing the course, you will be ‘pitch ready’ - whether submitting to campus venture competitions or to outside investors. Most coursework is focused on applying concepts and frameworks to project tasks in developing the venture. Students must have successfully completed MGMT 801 before enrolling in this course. Students must have successfully completed MGMT801 before enrolling in this course. Format: Highly interactive Requirements: Class participation, interim assignments.
Taught by: Patrick FitzGerald or Ethan Mollick
Also Offered As: MGMT 231
Prerequisite: MGMT 801
Activity: Lecture
1.0 Course Unit

MGMT 809 Private Equity in Emerging Markets
This course investigates the private equity industry in emerging markets. The goal of the course is to give students a realistic understanding of the roles, responsibilities and analytical skills required of market practitioners, as well as the tensions that arise between various stakeholders, including government officials, investors, entrepreneurs and the press. The underlying premise is that the basic rules for private equity in those countries are similar to the rules in more industrialized countries, but market participants face a broader range of issues in areas such as valuations, governance, legal structures, contract enforcement and regulatory transparency. To provide students with a practical grasp of the issues, classes will be a mix of lectures, expert guest speakers and business cases. Cases will highlight the challenges and tasks at each stage of the investment cycle, such as structuring and launching a new fund, originating new deals, conducting due diligence, creating value, monitoring the performance of portfolio companies and exiting. Each classes will focus on a specific topic, ranging from the basics of how and why private equity funds operate to complex issues such as fund governance and adding value to family firms.
Taught by: Peter Tropper
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

MGMT 811 Entrepreneurship Through Acquisition
MGMT 811 focuses on the theoretical, strategic, analytics, and practical issues of acquiring a business. Topics include: locating a business, due diligence, reviewing and analyzing data, valuation, raising capital/financing the deal, search funds, structuring the acquisition, letters of intent, contracts/asset purchase agreements, integrating the target, acquisition growth strategies, and transitioning/exiting the acquisition. Format: The class consists of lectures, in-class discussions of cases, assigned readings, homework problems, case studies, and a group or individual project. It is recommended students take MGMT 801 before enrolling in this course.
Taught by: Robert Chalfin
Activity: Lecture
0.5 Course Units

MGMT 812 Social Entrepreneurship
This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to do so can lead to a resource-lean not-for-profit entity. Creating a profitable social entrepreneurship venture is by no means a simple challenge. Cross-listed with MGMT 212.
Course usually offered in fall term
Also Offered As: MGMT 212
Activity: Lecture
0.5 Course Units
MGMT 815 Sports Business Management
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues. This course is crosslisted with MGMT 815.
One-term course offered either term
Also Offered As: LGST 809
Activity: Lecture
1.0 Course Unit

MGMT 816 Building Human Assets in Entrepreneurial Ventures
The success of entrepreneurial endeavors depends, even more so than in larger more bureaucratic organizations, on the ability to locate and manage talent effectively. Specifically, on the need to find the right people and keep them engaged in working on the organization's goals. We focus in this course on leading, building, and maintaining human assets in start-up and small, growing operations. The course is designed with several key components, these are: conceptual and practical readings relevant to the topic; case studies illustrating key concepts and issues; lecture on practical application and examples; and lastly every class will also feature a presentation by and conversation with an outside expert whose work is relevant to guiding or advising start-ups and fast-growing small firms. We will focus on the following objectives: identifying the talent needed to initiate and sustain an entrepreneurial endeavor; structuring human resource policies and corporate culture to prepare for and facilitate firm growth; assessing the human aspects of valuing entrepreneurial companies; and responding to conflict and organizational threats within nascent firms. This course will apply recent research from strategic human resource management, personnel economics and organizational behavior to the practical issues of building and managing human assets in new ventures. Format: Case discussion, guest speakers and lectures, active class participation, final project Enrollment limited to MBA students only.
Activity: Lecture
0.5 Course Units

MGMT 833 Strategies and Practices of Family-controlled Companies
This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making; financial and resource driven options for long-run competitiveness; organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, family dynamics, communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm. The class is structured around topical lectures with frequent utilization of case studies requiring active class participation, as well as on-site and off-site project work time. Submission of several written case studies, and a term project are required. Open to Wharton MBA and Penn graduate students.
Also Offered As: MGMT 233
Activity: Lecture
1.0 Course Unit

MGMT 871 Advanced Global Strategy
This class is designed to develop world class, globally-minded managers. Many of the most important business issues of today are global in nature. Both 'macro' phenomena (e.g. nationalism, protectionism, demographic change) and 'micro' trends (e.g. competition within and from emerging markets, distributed talent and innovation, digitization and automation) are inherently international issues. They require firms and managers to think, innovate, and organize globally. This class offers a comprehensive set of tools to evaluate opportunities and challenges in global markets, to leverage cross-country differences to enhance innovation and performance, to manage the complexities of a business spread across multiple countries, and to win against foreign rivals. The course will focus on both the formulation and execution of global strategy, with a heavy emphasis on current events and hands on activities. Sample topics include: quantifying opportunities and risks of foreign investments; formulating and executing strategies that balance local responsiveness, global efficiency, and innovation; exploiting differences across countries to enhance innovation while protecting intellectual property; managing organizational structure, culture, and people in multinational organizations; structuring and managing cross-national and cross-cultural teams; developing a global mindset among managers and employees. This course builds on the global management portion of MGMT 611 or MGMT 612, but taking those classes is not a prerequisite for MGMT 871.

MGMT 892 Advanced Study Project - Collaborative Innovation Program
Business success is increasingly driven by a firm's ability to create and capture value through innovation. Thus, the processes used by firms to develop innovations, the choices they make regarding how to commercialize their innovations, the changes they make to their business models to adapt to the dynamic environment, and the strategies they use to position and build a dominate competitive position are important issues facing firms. In MGMT. 892, you will learn to address these issues through an action learning approach. MGMT. 892 is a 1.0-credit course conducted in the spirit of an independent study. By working on consulting projects for leading global companies, you will develop and then apply your knowledge about innovation management and help these firms better understand the challenges and opportunities posed by emerging technologies and markets.

MGMT 896 Decision Making in the Leadership Chair
Contact the Management Department for additional information at: Courseinfo@wharton.upenn.edu. Decision making in the leadership chair is a complex task and one that is difficult to teach in a business school setting. To bridge this gap, Mr. William P. Lauder and invited executives will bring their experiences into the classroom, primarily addressing key decision they made, how they weighed their options, and what they learned from the outcomes. The framework for the class centers around two crucial aspects of decision making in the leadership chair: the need to manage many groups of stakeholders, and the need to play many roles when doing this. This course is by application only to second-year Wharton MBAs and a maximum of 48 students will be selected. A communication will be sent regarding the application details.

MGMT 900 Economic Foundations of Management
This course examines some of the central questions in management with economic approaches as a starting point, but with an eye to links to behavioral perspectives on these same questions. It is not a substitute for a traditional microeconomics course. Economics concerns itself with goal directed behavior of individuals interacting in a competitive context. We adopt that general orientation but recognize that goal directed action need not take the form of maximizing behavior and that competitive processes do not typically equilibrate instantaneously. The substantive focus is on the firm as a productive entity. Among the sorts of questions we explore are the following: What underlies a firms capabilities? How does individual knowledge aggregate to form collective capabilities? What do these perspectives on firms say about the scope of a firms activities, both horizontally (diversification) and vertically (buy-sell-supply relationships)? We also explore what our understanding of firms says about market dynamics and industry evolution, particularly in the context of technological change. A central property of firms, as with any organization, is the interdependent nature of activity within them. Thus, understanding firms as ‘systems’ is quite important Among the issues we explore in this regard are the following. Organizational ‘systems’ have internal structure, in particular elements of hierarchy and modularity. Even putting aside the question of individual goals and objectives and how they may aggregate, the question of organizational goal is non-trivial. To say that a firms objective is to maximize profits is not terribly operational. How does such an overarching objective get decomposed to link to the actual operating activities of individual subunits, including individuals themselves. This issue of goals has links to some interesting recent work that links the valuation process of financial markets to firm behavior. Financial markets are not only a reflection of firm value, but may guide firms initiatives in systematic ways. Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

MGMT 918 Personnel Economics A
This is a half-semester PhD course in the Management Department that is also open to any current PhD students at Wharton. The canonical model in economics views an agent as a fully rational, atomistic individual making optimal choices under scarcity. This approach has been very powerful theoretically and empirically to explain and to predict behavior in the workplace. This model has also been enriched to accommodate other phenomena arguably affecting behavior in the workplace like the social context (e.g. peer effects, altruism, or social comparison), non-standard time preferences, loss aversion, and cognitive costs. Incorporating these ideas into the standard model can be accomplished in various ways but the real stress test for these theories is whether they predict behavior more generally (i.e. we don't just use theory to explain one choice but choices more generally) and to generate empirical predictions that can be tested using experiments. In this mini-course we start-off with a tour de force of the fundamental principal-agent model and the various behavioral extensions. The core of the course is, however, not theoretical but a practical course on how to design field experiments to test these ideas.
Activity: Seminar
0.5 Course Units
MGMT 919 Personnel Economics B
This is a half-semester PhD course in the Management Department that is also open to any current PhD students at Wharton. It is a continuation and builds on MGMT 918 - please see the course description for MGMT 918. As in MGMT 918 we expand on the canonical model in economics and introduce views from behavioral economics and introduce views from behavioral economics to derive novel theories with empirically testable implications on workplace behavior and individual performance in labor markets and health. In this mini-course the focus is on continuing our review of the literature but the primary aim is to work towards a project description and paper that can be developed into a PhD chapter or journal article.
Activity: Seminar
0.5 Course Units

MGMT 920 Seminar in Human Resources Research
This class is designed to give students an overview of the fundamental topics and arguments in the area of employment, how different social science paradigms consider employment topics, and some pf the new and emerging approaches to this topic.
Taught by: Professor Peter Cappelli
Activity: Seminar
0.5 Course Units

MGMT 925 Seminar in Corporate Strategy
This course explores current research on corporate strategy. Over the past two decades, research in the area of corporate strategy has evolved considerably. The fundamental focus of the field has been on sources of competitive advantage at the of the firm, and the process of building and maintaining competitive advantage. In this class, we explore current research articles that best represent the development of rent-generating resources at the level of the firm. Topics addressed include the concept of strategy, research on the evolution of firm capabilities, competitive interaction, top management teams and strategy formation, and changes in firm scope through acquisitions, divestitures and alliances.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

MGMT 926 Corporate Transactions & Strategy
This course explores current research on firm boundaries and scope. Issues of firm boundaries and scope have received much attention in the strategic management field over the past twenty years. Theoretical frameworks explaining firm boundaries have been proposed, and empirical research on key success factors within particular boundary choices has flourished. Firm scope is one of the long-standing domains of research in strategic management that is still drawing substantial attention. While certain core perspectives have academic and empirical support, there is much debate and many new research questions to examine, particularly in a global context. In this class, we explore current research articles that best represent the research. Topics addressed include corporate diversification, choices between modes of market entry, key success factors in acquisitions and alliances, and impact of diversification on innovation.
Activity: Seminar
0.5 Course Units

MGMT 927 Technology & Innovation Strategy
This quarter-length doctoral seminar deals with major streams of management research in technology strategy and innovation. We will focus on both classical topics such as incumbents’ management of technological change and industry evolution, and new emergent topics such as ecosystems and platforms. The emphasis will be on understanding the link between technologies and firms in terms of both strategy choices and performance outcomes.
Taught by: Rahul Kapoor
Activity: Seminar
0.5 Course Units

MGMT 932 Proseminar in Management in Qualitative Methods
This course is designed to provide students with an understanding of the methodological approaches we commonly think of as qualitative, with special emphasis on ethnography; semi-structured interviews, case studies, content analysis, and mixed-methods research. The course will cover the basic techniques for collecting, interpreting, and analyzing qualitative (i.e. non-numerical) data. In the spring quarter, the course will focus on data collection and analyzing qualitative data. In the fall semester, the course will focus on theoretical approaches and how to use techniques to analyze qualitative data and present findings.
Notes: Topics for pro-seminars vary. Please contact the instructor as course content may vary.

MGMT 933 Psychological and Sociological Foundations of Research in Management
This course, is required of all first-year doctoral students in Management and open to other Penn students with permission, provides an introduction to the psychological and sociological roots of management theory and research. The course is predicated on the belief that to be effective as a contemporary management scholar one needs a background in "the classics." Therefore, we will be reading classics from the fields of psychology and sociology in their original form during this semester.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units
MGMT 935 Network Theory and Applications
This course explores network models and their applications to organizational phenomena. By examining the structure of relations among actors, network approaches seek to explain variations in beliefs, behaviors, and outcomes. The beauty of network analysis is its underlying mathematical nature - network ideas and measures, in some cases, apply equally well at micro and macro levels of analysis. Therefore, we read and discuss articles both at the micro level (where the network actors are individuals within organizations) and at the macro level (where the network actors are organizations within larger communities) that utilize antecedents or consequences of network constructs such as small worlds, cohesion, structural equivalence, centrality, and autonomy. We begin by examining the classic problem of contagion of information and behaviors across networks, and follow by considering the various underlying models of network structure that might underlie contagion and other processes. The next two sessions address a variety of mechanisms by which an actor's position in a network affects its behavior or performance. Then, the following two sessions address antecedents of network ties via the topics of network evolution and network activation. We close with a 'grab bag' session of articles chosen to match class interests.
Activity: Seminar
0.5 Course Units

MGMT 937 Entrepreneurship Research Seminar
The seminar seeks to expose students to theoretical and empirical perspectives on entrepreneurship research. We will focus on the main questions that define the field and attempt to critically examine how, using a range of methodologies, researchers have approached these questions. As we review the literature, we will seek to identify promising research areas, which may be of interest to you in the context of your dissertation research. In addition to addressing the content of the received literature, we will examine the process of crafting research papers and getting them published in top-tier journals. Towards that end, we will characterize the key elements of high-impact papers and review the development process of such studies. Students are expected to come fully prepared to discuss and critique the readings that are assigned to each class (see details below). Each class will center on discussing in depth 4-5 papers from the reading list assigned to that class. Before each class, I will let you know which papers to prepare. Each student will serve as the discussion leader for one or more of the class sessions. Discussion leaders are expected to critically review several articles, identify new insights in the research that is being reviewed and evaluate its contribution to the literature, position the articles within the literature on the subject matter, raise discussion questions, and act as the discussion moderator for the class session. Each discussion leader is asked to prepare a one or two page summary of the assigned papers which includes a statement of the main research question(s), the methodology, data set if any, summary of findings, a commentary with your thoughts on the reading, and proposed discussion questions. Prior to each class, the discussion leader will meet the instructor to help plan the class meeting. Towards the end of each class, each student will be asked to articulate a research question that emerged from the session and describe the research design used to investigate the issue.
Activity: Seminar
0.5 Course Units

MGMT 938 Family Business Research Seminar
Family firms differ in a number of ways from non-family firms. These differences may result in differential behavior by and performance of family firms versus non-family firms. Although family-controlled firms make up the vast majority of businesses around the world, academic research in this space is sparse. This seminar seeks to expose students to theoretical and empirical perspectives on family businesses. Throughout the course, we will focus on the ownership, control, and management issues that set family firms apart. We will focus on the main issues faced by family firms, and attempt to critically examine how, using a range of methodologies, researchers have approached these issues. As we review the literature, we will seek to identify promising research areas, which may be of interest to you in the context of your dissertation research. In addition to addressing the content of the received literature, we will examine the process of crafting research papers and getting them published in top-tier journals. Towards that end, we will characterize the key elements of high-impact papers and review the development process of such studies. Students are expected to come fully prepared to discuss and critique the readings that are assigned to each class (see details below). Each class will center on discussing in depth 4-5 papers from the reading list assigned to that class. Before each class, I will let you know which papers to prepare. Each student will serve as the discussion leader for one or more of the class sessions. Discussion leaders are expected to critically review several articles, identify new insights in the research that is being reviewed and evaluate its contribution to the literature, position the articles within the literature on the subject matter, raise discussion questions, and act as the discussion moderator for the class session. Each discussion leader is asked to prepare a one or two page summary of the assigned papers which includes a statement of the main research question(s), the methodology, data set if any, summary of findings, a commentary with your thoughts on the reading, and proposed discussion questions. Prior to each class, the discussion leader will meet the instructor to help plan the class meeting. Towards the end of each class, each student will be asked to articulate a research question that emerged from the session and describe the research design used to investigate the issue.

MGMT 939 Seminar in Entrepreneurial Innovation
This quarter-length course explores key topics at the intersection of entrepreneurship and innovation. While the course primarily draws from established theory and empirics from management and economics, it will also include discussions of emerging phenomena in this rapidly evolving field. We will begin by reviewing the basic properties of ideas that uniquely shape the sources and dynamics of entrepreneurship and innovation. Subsequently, we will explore innovation-related challenges and opportunities for startups. Special focus will be placed on research application in which students design and present their own research proposal broadly in the area of entrepreneurship and innovation. Students are highly encouraged to take this course in sequence with MGMT 937.
Taught by: Daniel Kim
Activity: Seminar
0.5 Course Units
MGMT 951 Seminar in Micro-Organizational Behavior
The purpose of this course is to examine and understand basics in the theory and empirical research in the field of micro-organizational behavior and to build an understanding of people’s behavior in organizations. The course covers a blend of classic and contemporary literature so that we can appreciate the prevailing theories and findings in various areas of micro-organizational behavior. We will cover topics such as influence/status, virtual teams, job design, organizational culture and socialization, identity in organizations and overall look on where the field of organizational behavior is going. This is a seminar based course, with active discussion and analysis. For a complete understanding of the basics of organizational behavior it is important for students to have taken Mgmt 933 - micro organizational behavior, which covers the remaining topics in basic organizational behavior. However, it is not mandatory to have taken Mgmt 933 before Mgmt 951 as they cover different sets of topics.

Taught by: Sigal Barsade

MGMT 952 Seminar in Macro-Organizational Behavior
Organizations are ubiquitous, and so is organization. This half-semester course explores organization theory (OT) from the 1960s through the end of the 20th century. We will examine the proliferation of organizational theories during this time period (such as contingency theory, resource dependence theory, ecological theory, and institutional theory) and understand how each theory attempts to relate structure and action over varying levels of analysis. We will determine one or two additional schools to add once we discuss your exposure in other management classes to other potential topics such as behavioral decision theory, sense-making and cognition, organizational economics, corporate governance, social networks, and the like.

Activity: Seminar
0.5 Course Units

MGMT 953 Seminar on Research Methods
This is an introductory doctoral seminar on research methods in management. We examine basic issues involved in conducting empirical research for publication in scholarly management journals. We start by discussing the framing of research questions, theory development, the initial choices involved in research design, and basic concerns in empirical testing. We then consider these issues in the context of different modes of empirical research (including experimental, survey, qualitative, archival, and simulation). We discuss readings that address the underlying fundamentals of these modes as well studies that illustrate how management scholars have used them in their work, separately and in combination.

Activity: Seminar
1.0 Course Unit

MGMT 955 Seminar in International Management
The goal of the course is to provide you with a foundation in some of the major research areas that underpin the study of Multinational Management. International Business (and the study of MNCs) is an interdisciplinary field. As such, our survey of the seminal articles in the field will span a number of different theoretical and empirical approaches (i.e., economic, managerial, organizational and institutional). Much of our seminar discussions will focus on identifying and developing interesting research questions raised by this interdisciplinary literature, which offers many opportunities for systematic empirical study.

Taught by: Kogut
Activity: Seminar
0.5 Course Units

MGMT 957 Emotions in Organizations
This is a one quarter class where we examine and understand basics in emotions theory and its application in organizational behavior. To do so, we will cover a blend of basic psychological theories and organizational behavior literature so that we can appreciate the prevailing theories and findings in various areas of emotions and organizations, and gain a deep understanding of the psychological basis necessary to fully understand organizational behavior research. Specifically, we will examine how affect (consisting of emotions, moods, and affective traits) influences perceptions, cognitions and behavior within organizations. We will critically examine the existing knowledge of emotions in organizational life and identify possible future venues of research. We will begin by examining the nature of emotions in general and then focus on the organizational context, examining specific types of emotions and content areas that have been investigated within organizational behavior research.

Activity: Lecture
0.5 Course Units

MGMT 960 Institutions and Multinational Management
This course builds on the foundational material presented in MGMT 955 with a deeper focus on current research examining institutional influences on multinational management. These include regulative supports (e.g., laws, regulations, contracts and their enforcement through litigation, arbitration of incentive compatible self-regulation) but also normative (e.g., socially shared expectations of appropriate behavior, and social exchange processes) and cognitive (e.g., creating shared identity to bridge differences in values, beliefs and framing) elements of the institutional environment. We will examine not only strategic responses in the market environment but also influence strategies of multinational and domestic firms that seek to alter the institutional environment in which they operate. We will draw not only upon the international business literature but also related literatures including political economy, law, finance, communications, institutional theory, strategic corporate social responsibility, tourist management, construction management, management of extractive industries, negotiations, social movements and network theory (really!).

Activity: Seminar
0.5 Course Units

MGMT 961 Advanced Topics in Micro-organizational Behavior
The purpose of this quarter course is to continue to explore key concepts and research programs in the field of micro-organizational behavior that we began to study in MGMT 951. To do so, we will cover a blend of classic and contemporary literature so that we can appreciate the prevailing theories and findings in various areas of micro-organizational behavior. In addition, for each topic we will then try to go beyond the existing literature. We will work to increase our understanding by re-framing the research variables, altering the perspective, bringing in new theory, and comparing levels of analysis. Building on the topics we examined in MGMT 951, we will explore further organizational behavior topics including identity, fit, extra role behaviors, job design, creativity, status, power and influence.

Activity: Seminar
0.5 Course Units
Management of Economics (MGEC)

MGEC 611 Microeconomics for Managers: Foundations
This course establishes the micro-economic foundations for understanding business decision-making. The course will cover consumer theory and market demand under full information, market equilibrium and government intervention, production theory and cost optimization, producing in perfectly competitive and monopoly markets, vertical relations, and game theory, including simultaneous, sequential, and infinitely repeated games. Finally, we will wrap up game theory with an application to auctions. Students are expected to have mastered these materials before enrolling in the second quarter course: Microeconomics for Managers: Advanced Applications.
Taught by: Selman, Featherstone, Toikka and Berkouwer
One-term course offered either term
Activity: Lecture
0.5 Course Units

MGEC 612 Microeconomics for Managers: Advanced Applications
This course will cover the economic foundations of business strategy and decision-making in market environments with other strategic actors and less than full information, as well as advanced pricing strategies. Topics include oligopoly models of market competition, creation, and protection, sophisticated pricing strategies for consumers with different valuations or consumers who buy multiple units (e.g. price discrimination, bundling, two-part tariffs), strategies for managing risk and making decisions under uncertainty, asymmetric information and its consequences for markets, and finally moral hazard and principle-agent theory with application to incentive contacts.
Taught by: Selman, Featherstone, Toikka and Lockwood
One-term course offered either term
Activity: Lecture
0.5 Course Units

Marathi (MRTI)

MRTI 410 Beginning Marathi I
The first year course in Marathi begins with learning the Devnagari script which is common for other important languages like Hindi and Nepali. With proper emphasis on grammar, vocabulary, and phonetics, the syllabus will see the student becoming able to speak conversational Marathi, read Marathi data from the Internet, and compose simple short essays on selected topics. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Ranade
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MGMT 962 Multinational Firms Global Economy A
This is a graduate course focusing on the empirical aspects of multinational firms and international trade. The goal of the course is to familiarize graduate students with empirical work on multinational firms in the global economy, by reviewing the recent as well as older literature on this topic. Econometrics and statistical techniques for doing empirical work in international trade will also be discussed. We will focus on a variety of issues that are related to the multinational firm, beginning with trends in multinational activity, then moving to both horizontal and vertical theories of the multinational firm. Topics over the course of the semester will include patterns in the expansion of multinational firms, horizontal and vertical multinationals; the linkages between openness to trade and investment and growth; trade orientation and firm performance; technology transfer and spillovers; innovation and productivity; immigration; labor markets and multinational firms; and global value chains. This course has a mandatory attendance policy.
Taught by: Britta Glennon
Activity: Seminar

MGMT 963 Multinational Firms Global Economy B
This is a graduate course focusing on the empirical aspects of multinational firms and international trade. The goal of the course is to familiarize graduate students with empirical work on multinational firms in the global economy, by reviewing the recent as well as older literature on this topic. Econometrics and statistical techniques for doing empirical work in international trade will also be discussed. We will focus on a variety of issues that are related to the multinational firm, beginning with trends in multinational activity, then moving to both horizontal and vertical theories of the multinational firm. Topics over the course of the semester will include patterns in the expansion of multinational firms, horizontal and vertical multinationals; the linkages between openness to trade and investment and growth; trade orientation and firm performance; technology transfer and spillovers; innovation and productivity; immigration; labor markets and multinational firms; and global value chains. This course has a mandatory attendance policy.
Taught by: Britta Glennon
Activity: Seminar
0.5 Course Units

MGMT 970 Applied Methods for Management Research
Students taking the course will be introduced to the seminal readings on a given method, have a hands-on discussion regarding their application often using a paper and dataset of the faculty member leading the discussion. The goal of the course is to make participants more informed users and reviewers of a wide variety of methodological approaches to Management research including Ordinary Least Squares, Discrete Choice, Count Models, Panel Data, Dealing with Endogeneity, Survival/failure/event history and event studies, experiments, factor analysis and structural equation modeling, hierarchical linear modeling, networks, comparative qualitative methods, coding of non-quantitative data, unstructured text and big data simulations.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
MRTI 411 Beginning Marathi II
Simple sentences in the present tense, narration (spoken as well written) of day to day activities, expressing likes & dislikes, culturally appropriate greetings and addressing, ability to describe events happening in present and present incomplete tense, consolidation of reading and writing skill acquired in the previous semester as well as proper pronunciations of common usage words and phrases. Speaking practices based upon the My Marathi Text book created by University of Mumbai. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Ranade
Course usually offered in spring term
Prerequisite: MRTI 410
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MRTI 412 Intermediate Marathi I
Intermediate Marathi builds up upon the Beginning Level of Marathi. Gaining ability to speak about past and future is the most important skill in the intermediate course. Students learn the grammar, vocabulary, sentence structures to narrate and write in simple language about their experiences, short anecdotes, their observations and opinions and future plans.
For BA Students: Language Course
Taught by: Ranade
Course usually offered in fall term
Prerequisite: MRTI 411
Activity: Lecture
1.0 Course Unit

MRTI 413 Intermediate Marathi Part II
In the syllabus for the fourth semester Marathi course gaining language inputs regarding Marathi culture and day to day daily life in Maharashtra becomes one important topic. Day to day communication skills necessary to survive in Maharashtra on the street like interaction with a grocery store clerk or a vegetable sales woman in the market, a rikshaw driver, a policeman, a commuter, asking and providing directions on the street and various day to day real life situations are improvised and practiced. Vocabulary, sentence structures and associated grammar is acquired during practice and real life situations based exercises.
For BA Students: Last Language Course
Taught by: Renade
Course usually offered in spring term
Prerequisite: MRTI 412
Activity: Lecture
1.0 Course Unit

MRTI 449 Advanced Marathi
Theater and Films, Literature and poetry, Folk Songs, Dance and Music; this one semester course will explore the rich Marathi culture as well as will work on increasing the spoken, listening, reading and written proficiency of the students. News stories from the Marathi print media as well as glimpses from Marathi Television, News as well as Serials and popular comedy shows become the authentic materials in this course. Students learn the linguistic as well as cultural aspect of the variety of material through discussions, presentations in which students acquire and use the language to describe, narrate, express their opinions, evaluate, critique and appreciate these aspects of Marathi urban and rural culture.
For BA Students: Advanced Language Course
Taught by: Ranade
Course not offered every year
Activity: Lecture
1.0 Course Unit

Marketing (MKTG)

MKTG 101 Introduction to Marketing
The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in assessing and solving marketing problems. The course is also a foundation for advanced electives in Marketing as well as other business/social disciplines. Topics include marketing strategy, customer behavior, segmentation, market research, product management, pricing, promotion, sales force management and competitive analysis.
Taught by: Lamberton
One-term course offered either term
Activity: Recitation
1.0 Course Unit
Notes: MKTG 101 will not be offered in Spring 2021A. You must be registered for a lecture section, (MKTG101001, MKTG101002, MKTG101003 OR MKTG101004) AND one of the corresponding recitation sections (MKTG1012XX) listed for that particular lecture to be fully enrolled in the course. Failure to sign up for both a lecture and corresponding recitation will result in you being dropped from whichever part of the course you have in your schedule. Summer Session sections do not have recitations; you only need to sign up for the lecture MKTG101920 in summer. PLEASE NOTE: Recitation Section MKTG101220 is reserved only for Joseph Wharton Scholars and Benjamin Franklin Scholars. Do not request a permit to take MKTG101220 if you are not in one of these scholars programs.

MKTG 211 Consumer Behavior
This course is concerned with how and why people behave as consumers. Its goals are to: (1) provide conceptual understanding of consumer behavior, (2) provide experience in the application of buyer behavior concepts to marketing management decisions and social policy decision-making; and (3) to develop analytical capability in using behavioral research.
Taught by: Melamud, Sharif
One-term course offered either term
Also Offered As: MKTG 711
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
MKTG 212 Data and Analysis for Marketing Decisions
This course introduces students to the fundamentals of data-driven marketing, including topics from marketing research and analytics. It examines the many different sources of data available to marketers, including data from customer transactions, surveys, pricing, advertising, and A/B testing, and how to use those data to guide decision-making. Through real-world applications from various industries, including hands-on analyses using modern data analysis tools, students will learn how to formulate marketing problems as testable hypotheses, systematically gather data, and apply statistical tools to yield actionable marketing insights.
Taught by: Ryan Dew, Zhenling Jiang
One-term course offered either term
Also Offered As: MKTG 712
Prerequisite: MKTG 101 AND (STAT 101 OR STAT 111 OR STAT 430)
Activity: Lecture
1.0 Course Unit
Notes: (Former course title Marketing Research.)

MKTG 221 New Product Management
Examination of the marketing aspects of products or services exclusive of their promotion, pricing or distribution. Focuses on decisions regarding product introduction, positioning, improvements, and deletion, and the tools available for making these decisions.
One-term course offered either term
Also Offered As: MKTG 721
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.

MKTG 224 Advertising Management
Immersion in the advertising development process and examination of the practice of advertising. Focuses on decisions regarding advertising objectives, copy selection, budget setting and media selection.
One-term course offered either term
Also Offered As: MKTG 724
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.

MKTG 225 Principles of Retailing
This course explores the domain of retailing; marketing to the final consumer. Emphasis is placed on marketing aspects of retailing not covered in other courses: retail strategy, merchandising, vendor relations and location.
Course usually offered in spring term
Also Offered As: MKTG 725
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.

MKTG 227 Digital Marketing and Electronic Commerce
The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing is critical to the success of firms that will shape the consumption-led economies that are fueled by these technologies. MKTG 227 provides a research-based and framework-driven approach to succeeding in this environment, through a rigorous approach to understanding digital marketing and electronic commerce. The course is organized into two sections and utilizes relevant theory, empirical analysis, and practical examples, to develop the key learning points. Guest speakers will participate as well, as appropriate.
Taught by: Berman
One-term course offered either term
Also Offered As: MKTG 727
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester. Students may not take both MKTG 227 and the full semester version of this course, MKTG 270 (formally MKTG 230 x) for credit.
MKTG 234 Idea Generation & the Systematic Approach for Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students’ (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people. The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges. 4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer. Taught by: Rom Schrift
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Students may not take both MKTG 292 and MKTG 234 for credit. Check meeting dates. Student must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.

MKTG 237 Introduction to Brain Science for Business
This course provides an overview of contemporary brain science and its applications to business. Students are first rapidly introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course then surveys major findings in neuroscience with applications to business, including vision, attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; social influence, team-building, and leadership; and discussion of the ethical, legal, and societal implications of applying neuroscience to business. Applications to business, education, sports, law, and policy are discussed throughout. Taught by: Platt
Course usually offered in spring term
Also Offered As: MKTG 737
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the First half or Second half of the semester. All freshman need a permit to register for this course. Students may not take both MKTG 351 (Special Topics version) and MGKTG 237 x for credit.

MKTG 239 Visual Marketing
As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, branding, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing. This course will use lectures, discussions, exercises and a group project, to help students understand the underlying processes that influence our visual perception and visual cognition. Students will learn about the theoretical processes and models that influence, attention and visual fluency. Students will also be exposed to eye-tracking instruments that help measure eye movement. Finally, we will explore how visual stimuli can influence consumer memory, persuasion, and choice. We will examine practical applications in marketing, advertising, packaging, retail, and design contexts.
Taught by: Kahn, Johnson
Course usually offered in spring term
Also Offered As: MKTG 739
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 354 (Special Topics version) and MKTG 239 x for credit.

MKTG 241 Entrepreneurial Marketing
This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will be to provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to mid-size and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.
Taught by: Lodish, Lautman
Course usually offered in fall term
Also Offered As: MKTG 741
Prerequisite: MKTG 101 AND MKTG 212
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.
**MKTG 247 Marketing Strategy for Technology Platforms**
This course focuses on the unique aspects of creating effective marketing and management strategies for technology-intensive on-line and off-line businesses. It addresses the effective competitive marketing strategies for winning in markets which are powered by technology: specifically, how firms create value for customers and how they can integrate technology in delivering a better consumer experience. While competitive marketing strategy is important for all managers, this course will be particularly useful to students who are planning to accept a position in leading technology companies, and marketing firms in which technology is likely to play an important role. In addition, the course will provide value to those who expect to work in consulting or investing in technology industries, and must analyze firm strategies. Must be Sophomore standing.
Taught by: Pinar Yildirim
Course usually offered in spring term
Also Offered As: MKTG 747
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units

**MKTG 254 Pricing Policy**
The pricing decision process including economic, marketing, and behavioral phenomena which constitute the environment for pricing decisions and the information and analytic tools useful to the decision maker.
One-term course offered either term
Also Offered As: MKTG 754
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or Second half of the semester. Students may not take both MKTG 254 and the full semester version of this course, MKTG 288, for credit

**MKTG 250 Innovation, Marketing Strategy, and Antitrust**
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.
Taught by: H. Hovenkamp
One-term course offered either term
Also Offered As: LGST 205, LGST 805, MKTG 760
Activity: Lecture
1.0 Course Unit
Notes: (Former MKTG 236)

**MKTG 262 New Product Development**
In this hands-on experiential course, students will partner with a local start-up to apply design thinking steps taught throughout the course. Students will learn how to uncover deep consumer needs, effectively ideate, and create rapid prototypes to test their ideas with real customers. This class is well suited for those interested in careers in innovation or management consulting, marketing, product management, technology, or entrepreneurship. No prior experience or requirements are needed for this course.
Course not offered every year
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 262 and MKTG 221 for credit

**MKTG 265 Principles of Advertising**
This course focuses on advertising via all media - print, digital, video, TV, Internet, etc. Emphasis is placed on understanding the communication development process and consumer behavior (psychology), the measurement and evaluation of advertising effects, and developing appropriate media plans.
One-term course offered either term
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 265 and MKTG 224 for credit

**MKTG 266 Marketing for Social Impact**
Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fundraising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.
Taught by: Deborah Small
Course usually offered in fall term
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 266 and MKTG 224 for credit.

**MKTG 262 New Product Development**

**MKTG 267 Marketing Management**
This course focuses on the management of the marketing function in a business. Emphasis is placed on the planning and implementation of marketing strategies. Students will learn how to develop marketing strategies that are consistent with the overall business strategy and objectives. Students will also learn how to measure and evaluate the effectiveness of marketing strategies. Students will be able to communicate the results of their analysis to senior management.
Course usually offered in spring term
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 267 and MKTG 281 for credit

**MKTG 280 Marketing Research**
This course introduces students to the field of marketing research. Students will learn how to design and conduct marketing research projects. They will learn how to analyze data and communicate the results of their analysis to senior management. This course is useful to students interested in careers in marketing research, marketing strategy, and management.
Course not offered every year
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 280 and MKTG 281 for credit

**MKTG 281 Marketing Strategy**
This course focuses on the management of the marketing function in a business. Emphasis is placed on the planning and implementation of marketing strategies. Students will learn how to develop marketing strategies that are consistent with the overall business strategy and objectives. Students will also learn how to measure and evaluate the effectiveness of marketing strategies. Students will be able to communicate the results of their analysis to senior management.
Course usually offered in spring term

0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or Second half of the semester. Students may not take both MKTG 254 and the full semester version of this course, MKTG 288, for credit

**MKTG 286 Innovation, Marketing Strategy, and Antitrust**
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.
Taught by: H. Hovenkamp
One-term course offered either term
Also Offered As: LGST 205, LGST 805, MKTG 760
Activity: Lecture
1.0 Course Unit
Notes: (Former MKTG 236)
MKTG 270 Digital Marketing, Social Media and E-Commerce

MKTG 270 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 227, Digital Marketing and Electronic Commerce, a half cu course offered by the department.

Taught by: Berman
One-term course offered either term
Also Offered As: MKTG 770
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 270 and MKTG 227 for credit. This course replaces experimental course MKTG 230 x.

MKTG 271 Models for Marketing Strategy

In today's business environment, marketing executives are involved in complex decision-making and they become responsible for return on their marketing investments. The first objective of this course is to help participants become better executives. By exposing students to various analytical and computer-based tools, developed for solving marketing problems, it will help to prepare them for careers in industries such as consumer packaged goods, hi-tech, financial services, media and entertainment, pharmaceutical, consulting, and venture capital.

The course's main focus is on various existing models, such as models that predict the consumer's dynamic adoption of an innovative product. However, at some point in their career, students may find themselves facing business problems for which a model can assist in making decisions, but no existing model is available. Hence, the second objective of the course is to provide participants with critical skills necessary to evaluate new models to which they may be exposed by attending presentations or reading the literature. The models to be discussed in the class have been implemented and proven useful in a wide range of industries (e.g., business-to-consumers and business-to-business).

The course is not only about models, however. It also covers modeling needs. Some industries such as the media and entertainment or the pharmaceutical industries present unique problems and modeling needs. The third objective of the course is to expose participants to the nature and essence of such idiosyncratic problems as well as modeling needs in such industries. Overall, the course will make participants understand better critical marketing problems by analyzing them rigorously and will enhance their skills in either designing or evaluating models-based strategies.

Taught by: Eliashberg
Course usually offered in fall term
Also Offered As: MKTG 777
Prerequisite: MKTG 101 AND STAT 101
Activity: Lecture
1.0 Course Unit

MKTG 277 Marketing Strategy

This course views marketing as both a general management responsibility and an orientation of an organization that helps one to create, capture and sustain customer value. The focus is on the business unit and its network of channels, customer relationships, and alliances. Specifically, the course attempts to help develop knowledge and skills in the application of advanced marketing frameworks, concepts, and methods for making strategic choices at the business level.

Taught by: Robertson, Yildirim
Course usually offered in fall term
Also Offered As: MKTG 777
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Lectures, discussions, cases

MKTG 278 Strategic Brand Management

Which brands make you happy? Apple? Amazon? Starbucks? Everlane? Soulcycle? Sweetgreen? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand.

The course is created for students interested in building a brand and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, and a final project. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students’ ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.

Taught by: Williams
Course usually offered in spring term
Also Offered As: MKTG 778
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit

MKTG 288 Pricing Strategies

This course is designed to equip students with the concepts, techniques, and latest thinking on pricing issues, with an emphasis on ways in which to help a firm improve its pricing. The orientation of the course is about practice of pricing, not theory. We will focus on how firms can improve profitability through pricing, look at how firms set their prices and how to improve current practices to increase profitability. The first part of the course focuses on how to analyze costs, customers, and competitors in order to formulate proactive pricing strategies. The second part focuses on price promotions, price bundling, price discrimination, versioning, nonlinear pricing, pricing through a distribution channel, dynamic pricing, etc.

Taught by: Zhang
Course usually offered in spring term
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 288 and MKTG 254 for credit.
MKTG 306 Special Topics: Retail Merchandising

RETAIL MERCHANDISING: This course introduces the role of merchandising at various retailers with an emphasis on apparel and soft-line businesses. Selected topics will include product development, line planning, sourcing, product lifecycle, forecasting, buying, planning and vendor relations. Special emphasis will be placed on current trends in retail merchandising through current articles and industry guest speakers. The objective of this course is to familiarize students with merchandising theory and strategies considered to be current best practices in retailing.

Course usually offered in fall term
Also Offered As: MKTG 806
Prerequisite: MKTG 101 OR MKTG 225
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u., One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are.

MKTG 309 Special Topics: Experiments for Business Decision Making

EXPERIMENTS FOR BUSINESS DECISION MAKING: In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a 'test and learn' philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the 'test and learn' philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments. Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.

Course offered fall; even-numbered years
Also Offered As: MKTG 809
Prerequisite: MKTG 101 AND MKTG 212
Activity: Lecture
1.0 Course Unit

MKTG 350 Special Topics - Consumer Neuroscience

CONSUMER NEUROSCIENCE: How can studying the brain improve our understanding of consumer behavior? While neuroscience made tremendous strides throughout the 20th century, rarely were meaningful applications developed outside of medicine. Recently, however, breakthroughs in measurement and computation have accelerated brain science and created a dizzying array of opportunities in business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini-course provides an overview of the neuroscience behind and the potential for these developments. Topics will range from well-known and widely used applications, such as eye-tracking measures in the lab and field, to emerging methods and measures, such as mobile technologies, face-reading algorithms, and neural predictors of marketing response. The course will also discuss applications in branding and product development, including wearable physiological devices and apps, sensory branding for foods and fragrances, pharmaceuticals and medical devices, and neuroscience-based products designed to enhance cognitive functions. These applications stem from many subfields of cognitive neuroscience, including attention, emotion, memory, and decision making. This course is self-contained and has no prerequisites. However, students with some background in business, economics, psychology, and/or neuroscience are likely to find the material covered in this course complementary to their existing knowledge.

Taught by: Gideon Nave
Course usually offered in spring term
Also Offered As: MKTG 850
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester. All freshman need a permit to register for this course.
MKTG 351 Special Topics: Introduction to Brain Science for Business
INTRODUCTION TO BRAIN SCIENCE FOR BUSINESS: Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social value, and optimize digital interactions. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law and policy will be discussed throughout.
Course usually offered in spring term
Also Offered As: MKTG 851
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. This course has been replaced by MKTG 237 x.

MKTG 352 Special Topics - Marketing Analytics
MARKETING ANALYTICS: Companies are currently spending millions of dollars on data-gathering initiatives - but few are successfully capitalizing on all this data to generate revenue and increase profit. Moving from collecting data to analysis to profitable results requires the ability to forecast and develop a business rationale based on identified data patterns. Marketing Analytics will cover the three pillars of analytics - descriptive, predictive and prescriptive. Descriptive Analytics examines different types of data and how they can be visualized, ultimately helping you leverage your findings and strengthen your decision making. Predictive Analytics explores the potential uses of data once collected and interpreted. You will learn to utilize different tools, such as regression analysis, and estimate relationships among variables to predict future behavior. Prescriptive Analytics takes you through the final step - formulating concrete recommendations. These recommendations can be directed toward a variety of efforts including pricing and social-platform outreach.
Taught by: Iyengar
Course usually offered in fall term
Also Offered As: MKTG 852
Prerequisite: MKTG 101 AND STAT 101
Activity: Lecture
0.5 Course Units

MKTG 353 Special Topics
Course usually offered in spring term
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units

MKTG 354 Special Topics: Visual Marketing
VISUAL MARKETING: As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, branding, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing. This course will use lectures, discussions, exercises and a group project, to help students understand the underlying processes that influence our visual perception and visual cognition. Students will learn about the theoretical processes and models that influence, attention and visual fluency. Students will also be exposed to eye-tracking instruments that help measure eye movement. Finally, we will explore how visual stimuli can influence consumer memory, persuasion, and choice. We will examine practical applications in marketing, advertising, packaging, retail, and design contexts.
Taught by: Johnson and Kahn
Course usually offered in spring term
Also Offered As: MKTG 854
Activity: Lecture
1.0 Course Unit
Notes: 1.0 c.u. This course has been replaced by MKTG 239 x.

MKTG 399 Independent Study
One-term course offered either term
Also Offered As: MKTG 899
Prerequisite: MKTG 212
Activity: Independent Study
1.0 Course Unit
Notes: Content arranged by student with project supervisor, 1.0 c.u

MKTG 401 Marketing Analytics Capstone: Learning by Doing
In this class students will (1) Apply knowledge to practice for an actual client, with a focus on the synthesis of knowledge acquired across curriculum (2) Practice analytical thinking skills (analyzing and framing business problems and problem-solving techniques), including consideration of ethical issues. (3) Practice written and oral communication skills, as well as working in an (assigned) team environment, by leveraging the experience developed in earlier years of the leadership Journey. (4) Reflect on their own social and intellectual development over their time at Wharton and Penn.
Taught by: Iyengar
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: MKTG 401 x fulfills the Wharton Senior capstone requirement. Students should have proficient knowledge of R/Python and SQL. Online courses are available through WCAI (Wharton Customer Analytics Initiative) if needed.
MKTG 476 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical 'building blocks' that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.
Taught by: Fader
Course usually offered in spring term
Also Offered As: MKTG 776, STAT 476, STAT 776
Activity: Lecture
1.0 Course Unit

MKTG 611 Marketing Management
This course addresses how to design and implement the best combination of marketing efforts to carry out a firm's strategy in its target markets. Specifically, this course seeks to develop the student's (1) understanding of how the firm can benefit by creating and delivering value to its customers, and stakeholders, and (2) skills in applying the analytical concepts and tools of marketing to such decisions as segmentation and targeting, branding, pricing, distribution, and promotion. The course uses lectures and case discussions, case write-ups, student presentations, and a comprehensive final examination to achieve these objectives.
Taught by: Berger, Iyengar, McCoy
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu

MKTG 612 Dynamic Marketing Strategy
Building upon Marketing 611, the goal of this course is to develop skills in formulating and implementing marketing strategies for brands and businesses. The course will focus on issues such as the selection of which businesses and segments to compete in, how to allocate resources across businesses, segments, and elements of the marketing mix, as well as other significant strategic issues facing today's managers in a dynamic competitive environment. A central theme of the course is that the answer to these strategic problems varies over time depending on the stage of the product life cycle at which marketing decisions are being made. As such, the PLC serves as the central organizing vehicle of the course. We will explore such issues as how to design optimal strategies for the launch of new products and services that arise during the introductory phase, how to maximize the acceleration of revenue during the growth phase, how to sustain and extend profitability during the mature phase, and how to manage a business during the inevitable decline phase.
Taught by: Van den Bulte, Bradlow
One-term course offered either term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates.

MKTG 613 Strategic Marketing Simulation
Building upon Marketing 611, Marketing 613 is an intensive immersion course designed to develop skills in formulating and implementing marketing strategies for brands and businesses. The central activity will be participation in a realistic integrative product management simulation named SABRE. In SABRE, students will form management teams that oversee all critical aspects of modern product management: the design and marketing of new products, advertising budgeting and design, sales force sizing and allocation, and production planning. As in the real world, teams will compete for profitability, and the success that each team has in achieving this goal will be a major driver of the class assessment. The SABRE simulation is used to convey the two foci of learning in the course: the changing nature of strategic problems and their optimal solutions as industries progress through the product life cycle, and exposure to the latest analytic tools for solving these problems. Specifically, SABRE management teams will receive training in both how to make optimal use of marketing research information to reduce uncertainty in product design and positioning, as well as decision support models to guide resource allocation.
Taught by: Reibstein
Course usually offered in spring term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu. Typically offered on two consecutive weekends, or on 4 days pre-term in January. Check meeting dates.

MKTG 711 Consumer Behavior
Marketing begins and ends with the customer, from determining customers' needs and wants to providing customer satisfaction and maintaining customer relationships. This course examines the basic concepts and principles in customer behavior with the goal of understanding how these ideas can be used in marketing decision making. The class will consist of a mix of lectures, discussions, cases, assignments, project work and exams. Topics covered include customer psychological processes (e.g., motivation, perception, attitudes, decision-making) and their impact on marketing (e.g., segmentation, branding, and customer satisfaction). The goal is to provide you with a set of approaches and concepts to consider when faced with a decision involving understanding customer responses to marketing actions.
Taught by: Reed
One-term course offered either term

Prerequisite: MKTG 211
Activity: Lecture
1.0 Course Unit
Notes: Format: Lectures and discussion, case analyses, presentations.
MKTG 712 Data and Analysis for Marketing Decisions
This course introduces students to the fundamentals of data-driven marketing, including topics from marketing research and analytics. It examines the many different sources of data available to marketers, including data from customer transactions, surveys, pricing, advertising, and A/B testing, and how to use those data to guide decision-making. Through real-world applications from various industries, including hands-on analyses using modern data analysis tools, students will learn how to formulate marketing problems as testable hypotheses, systematically gather data, and apply statistical tools to yield actionable marketing insights.

Taught by: Iyengar, Dew, Nave
One-term course offered either term
Also Offered As: MKTG 212
Prerequisite: MKTG 611 AND STAT 613
Activity: Lecture
1.0 Course Unit
Notes: Format: Lecture, discussion, and cases.

MKTG 721 New Product Management
This course provides a total immersion in the new product development process - from sourcing ideas and innovation, through new product sales forecasting. The focus is on collective learning, what works, what doesn’t, and why. While the primary focus is the new product development process within a corporate structure, some coverage is given to key issues surrounding start-ups.

One-term course offered either term
Also Offered As: MKTG 221
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5, c.u, Check Meeting dates. Format: Lectures, cases, simulations, class discussions, and guest speakers.

MKTG 724 Advertising Management
The purpose of this course is to provide students with an opportunity to learn and apply the major frameworks, theories, current research findings, principles and practices of effective advertising management as part of an Integrated Marketing Communications (IMC) program. By the end of this course, students should not only be familiar with a large body of advertising knowledge, but should also be able to apply this information to create and evaluate effective advertising strategies and tactics. The emphasis will be on: 1) understanding the psychology of customer motivation and persuasion; 2) crafting effective and creative messages; 3) making efficient selections and use of media; and 4) understanding metrics, all within the broader Integrated Marketing Communications perspective.

One-term course offered either term
Also Offered As: MKTG 224
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. Format: Case discussions, in-class exercises, lectures, group projects, guest lectures by marketing professionals.

MKTG 725 Principles of Retailing
This course provides an interdisciplinary overview of the retailing industry. Primary focus will be on the customer facing activities of retailers, including assortment planning, private-label development and the management of in-store operations, and the back-door activities (forecasting and supply chain management) that support customer interaction. In addition, current issues facing retailers, such as customer relationship management, industry consolidation and supplier relations, will be explored. The course will also survey topics in finance, operations, information technology and real estate as they relate to retail.

Course usually offered in spring term
Also Offered As: MKTG 225
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
0.5 Course Units

MKTG 727 Digital Marketing and Electronic Commerce
The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing plays a key role in shaping the modern consumption-led economies fueled by these technologies. MKTG 727 provides a research-based and framework-driven approach to understanding digital marketing and electronic commerce. The course is organized into two sections and utilizes relevant theory, empirical analysis, and practical examples, to develop the key learning points. Guest speakers will participate as well, as appropriate.

Taught by: Ron Berman
One-term course offered either term
Also Offered As: MKTG 227
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: One-half term. 0.5 cu, Check meeting dates. Students may not take both MKTG 727 and the full semester version of this course, MKTG 730 x or MKTG 770 for credit.

MKTG 733 Marketing for Social Impact
Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fund-raising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.

Taught by: Deborah Small
Course usually offered in fall term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. Format: Lecture, class discussion, simulations, cases and guest lecturers.
MKTG 734 Idea Generation and the Systematic Approach for Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students’ (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people. The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges. 4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer
Taught by: Rom Schrift
Course usually offered in fall term

Notes: Students may not take both MKTG 854 (Special Topics version) and MKTG 739 x for credit. Format: In-class exercises, team-based learning, discussions, and lectures.

MKTG 741 Entrepreneurial Marketing
This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will be to provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to mid-size and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.
Taught by: Lodish, Lautman
Course usually offered in fall term

Notes: One half term. 0.5 cu, Check meeting dates. Format: Guest speakers, lecture, class discussions, team project
MKTG 747 Marketing Strategy for Technology Platforms
This course focuses on the unique aspects of creating effective marketing and management strategies for technology-intensive on-line and off-line businesses. It addresses the effective competitive marketing strategies for winning in markets which are powered by technology, specifically, how firms create value for customers and how they can integrate technology in delivering a better consumer experience. While competitive marketing strategy is important for all managers, this course will be particularly useful to students who are planning to accept a position in leading technology companies, and marketing firms in which technology is likely to play an important role. In addition, the course will provide value to those who expect to work in consulting or investing in technology industries, and must analyze firm strategies.
Taught by: Pinar Yildirim
Course usually offered in spring term
Also Offered As: MKTG 247
Prerequisite: MKTG 611
Activity: Lecture

MKTG 754 Pricing Policy
The course provides a systematic presentation of the factors to be considered when setting price, and shows how pricing alternatives are developed. Analytical methods are developed and new approaches are explored for solving pricing decisions.
Taught by: Raju, Zhang
One-term course offered either term
Also Offered As: MKTG 254
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
0.5 Course Units
Notes: Format: Lecture and discussion

MKTG 760 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.
Taught by: H. Hovenkamp
One-term course offered either term
Also Offered As: LGST 205, LGST 805, MKTG 260
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 770 and MKTG 727 for credit. This course replaces experimental course MKTG 730 x.

MKTG 768 Contagious: How Products, Ideas and Behaviors Catch On
Why do some products catch on and achieve huge popularity while others fail? Why do some behaviors spread like wildfire while others languish? How do certain ideas seem to stick in memory while others disappear the minute you hear them? More broadly, what factors lead to trends, social contagion, and social epidemics? Interactive media, word of mouth, and viral marketing are important issues for companies, brands, and organizations. This course looks at these and other topics as it examines how products, ideas, and behaviors catch on and become popular. Marketers want their product to be popular, organizations want their social change initiative to catch on and entrepreneurs want their ideas to stick. This course will touch on four main aspects: (1) Characteristics of products, ideas, and behaviors that lead them to be successful. (2) Aspects of individual psychology that influence what things are successful. (3) Interpersonal processes, or how interactions between individuals drive success. (4) Social networks, or how patterns of social ties influence success.
Taught by: Berger
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Format: Lecture, class discussion, cases.

MKTG 770 Digital Marketing, Social Media and E-Commerce
MKTG 770 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 727, Digital Marketing and Electronic Commerce, a half cu course offered by the department.
Taught by: Berman
One-term course offered either term
Also Offered As: MKTG 270
Prerequisite: MKTG 611
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 770 and MKTG 727 for credit. This course replaces experimental course MKTG 730 x.
MKTG 771 Models for Marketing Strategy
In today's business environment, marketing executives are involved in complex decision-making and they become responsible for return on their marketing investments. The first objective of this course is to help participants become better executives. By exposing students to various analytical and computer-based tools, developed for solving marketing problems, it will help to prepare them for careers in industries such as consumer packaged goods, hi-tech, financial services, media and entertainment, pharmaceutical, consulting, and venture capital.

The course's main focus is on various existing models, such as models that predict the consumer's dynamic adoption of an innovative product. However, at some point in their career, students may find themselves facing business problems for which a model can assist in making decisions, but no existing model is available. Hence, the second objective of the course is to provide participants with critical skills necessary to evaluate new models to which they may be exposed by attending presentations or reading the literature. The models to be discussed in the class have been implemented and proven useful in a wide range of industries (e.g., business-to-consumers and business-to-business). The course is not only about models, however. It also covers modeling needs. Some industries such as the media and entertainment or the pharmaceutical industries present unique problems and modeling needs.

The third objective of the course is to expose participants to the nature and essence of such idiosyncratic problems as well as modeling needs in such industries. Overall, the course will make participants understand better critical marketing problems by analyzing them rigorously and will enhance their skills in either designing or evaluating models-based strategies.

Taught by: Eliashberg
Course usually offered in fall term
Also Offered As: MKTG 271
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
1.0 Course Unit
Notes: Format: Evaluating marketing models; practicing with computer-based models and software; discussing case studies that describe modeling applications; group presentations of model-based marketing analysis and strategy.

MKTG 775 Managing Customer Value
As the concept of CRM becomes common parlance for every marketing executive, it is useful to take a step back to better understand the various different behaviors that underlie the development of successful CRM systems. These 'behaviors' include customer-level decisions, firm actions, and the delicate but complex interplay between the two. Accordingly this course is comprised of four main modules. We start with the discussion of customer profitability - focusing on the concepts of 'customer lifetime value' and 'customer equity'. We will examine how to measure long-run customer profitability in both business-to-customer and business-to-business environments, and the uses of these measures as major components assessing overall firm valuation. Second, we move to the value that the firm provides to its customers - better understanding the true nature of customer satisfaction and its non-trivial relationship with firm profitability. Third, we examine each of the three main components of the firm's management of its customer base: customer acquisition, development, and retention - and the complex resource allocation task that must be balanced across them. Finally, we conclude with a discussion of various tactical and organizational aspects of customer relationship management.

Taught by: Fader
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Format: Lecture and discussion

MKTG 777 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical 'building blocks' that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.

Taught by: Fader
Course usually offered in spring term
Also Offered As: MKTG 476, STAT 476, STAT 776
Activity: Lecture
1.0 Course Unit
Notes: Format: Lecture, real-time problem solving

MKTG 777 Marketing Strategy
This course views marketing as both a general management responsibility and an orientation of an organization that helps one to create, capture and sustain customer value. The focus is on the business unit and its network of channels, customer relationships, and alliances. Specifically, the course attempts to help develop knowledge and skills in the application of advanced marketing frameworks, concepts, and methods for making strategic choices at the business level.

Taught by: Robertson, Yildirim
Course usually offered in fall term
Also Offered As: MKTG 277
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
1.0 Course Unit
Notes: Format varies by instructor. Typically, case, lecture, group projects and class discussion. See syllabus.
MKTG 778 Strategic Brand Management
Which brands make you happy? Apple? Amazon? Starbucks? Everlane? SoulCycle? Sweetgreen? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand. The course is created for students interested in building a brand and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, and a final project. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students’ ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.
Taught by: Williams
Course usually offered in spring term
Also Offered As: MKTG 278
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
1.0 Course Unit
Notes: Format: Lectures, cases, discussions, exercises, and a group project.

MKTG 806 Special Topics: Retail Merchandising
RETAIL MERCHANDISING; This course introduces the role of merchandising at various retailers with an emphasis on apparel and soft-line businesses. Selected topics will include product development, line planning, sourcing, product lifecycle, forecasting, buying, planning and vendor relations. Special emphasis will be placed on current trends in retail merchandising through current articles and industry guest speakers. The objective of this course is to familiarize students with merchandising theory and strategies considered to be current best practices in retailing.
Course usually offered in fall term
Also Offered As: MKTG 306
Prerequisite: MKTG 611 OR MKTG 725
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. Format: Lecture, discussion.

MKTG 809 Special Topics: Experiments for Business Decision Making
EXPERIMENTS FOR BUSINESS DECISION MAKING: In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a ‘test and learn’ philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the ‘test and learn’ philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments. Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.
One-term course offered either term
Also Offered As: MKTG 309
Prerequisite: MKTG 611
Activity: Lecture
1.0 Course Unit

MKTG 850 Special Topics - Consumer Neuroscience
CONSUMER NEUROSCIENCE: How can studying the brain improve our understanding of consumer behavior? While neuroscience made tremendous strides throughout the 20th century, rarely were meaningful applications developed outside of medicine. Recently, however, breakthroughs in measurement and computation have accelerated brain science and created a dizzying array of opportunities in business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini-course provides an overview of the neuroscience behind and the potential for these developments. Topics will range from well-known and widely used applications, such as eye-tracking measures in the lab and field, to emerging methods and measures, such as mobile technologies, face-reading algorithms, and neural predictors of marketing response. The course will also discuss applications in branding and product development, including wearable physiological devices and apps, sensory branding for foods and fragrances, pharmaceuticals and medical devices, and neuroscience-based products designed to enhance cognitive functions. These applications stem from many subfields of cognitive neuroscience, including attention, emotion, memory, and decision making. This course is self-contained and has no prerequisites. However, students with some background in business, economics, psychology, and/or neuroscience are likely to find the material covered in this course complementary to their existing knowledge.
Taught by: Gideon Nave
Course usually offered in spring term
Also Offered As: MKTG 350
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring), for sections offered in the SECOND half of the term.
MKTG 851 Special Topics: Introduction to Brain Science for Business
INTRODUCTION TO BRAIN SCIENCE FOR BUSINESS: Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing, team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social value, and optimize digital interactions. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law and policy will be discussed throughout.
Taught by: Michael Platt
Course usually offered in spring term
Also Offered As: MKTG 351
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. This course is now offered as MKTG 737 x.

MKTG 852 Special Topics - Marketing Analytics
MARKETING ANALYTICS: Companies are currently spending millions of dollars on data-gathering initiatives - but few are successfully capitalizing on all this data to generate revenue and increase profit. Moving from collecting data to analysis to profitable results requires the ability to forecast and develop a business rationale based on identified data patterns. Marketing Analytics will cover the three pillars of analytics - descriptive, predictive and prescriptive. Descriptive Analytics examines different types of data and how they can be visualized, ultimately helping you leverage your findings and strengthen your decision making. Predictive Analytics explores the potential uses of data once collected and interpreted. You will learn to utilize different tools, such as regression analysis, and estimate relationships among variables to predict future behavior. Prescriptive Analytics takes you through the final step - formulating concrete recommendations. These recommendations can be directed toward a variety of efforts including pricing and social-platform outreach.
Taught by: Iyengar
Course usually offered in fall term
Also Offered As: MKTG 352
Prerequisite: MKTG 611 AND STAT 613
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check course meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring) for sections offered in the SECOND half of the term.

MKTG 853 Special Topics: Design Thinking - A Human-Centered Approach to Innovation
DESIGN THINKING - A HUMAN-CENTERED APPROACH TO INNOVATION: In this hands-on experiential course, students will partner with a local start-up to apply design thinking steps taught throughout the course. Students will learn how to uncover deep consumer needs, effectively ideate, and create rapid prototypes to test their ideas with real customers. This class is well suited for those interested in careers in innovation or management consulting, marketing, product management, technology, or entrepreneurship. No prior experience or requirements are needed for this course.
Taught by: Caputo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MKTG 854 Special Topics: Visual Marketing
VISUAL MARKETING: As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, branding, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing. This course will use lectures, discussions, exercises and a group project, to help students understand the underlying processes that influence our visual perception and visual cognition. Students will learn about the theoretical processes and models that influence, attention and visual fluency. Students will also be exposed to eye-tracking instruments that help measure eye movement. Finally, we will explore how visual stimuli can influence consumer memory, persuasion, and choice. We will examine practical applications in marketing, advertising, packaging, retail, and design contexts.
Taught by: Johnson and Kahn
Course usually offered in spring term
Also Offered As: MKTG 354
Activity: Lecture
1.0 Course Unit
Notes: 1.0 cu. This course has been replaced by MKTG 739 x. Format: In-class exercises, team-based learning, discussions, and lectures.
MKTG 890 Advanced Study Project (ASP)
RETAIL ECOSYSTEM ACTION LEARNING PROJECTS: This course offers graduate students from Wharton and other Penn schools an opportunity to work on real-world projects for companies in the retail industry and in the wider retail ecosystem. It requires the exploration and analysis of actual business issues or opportunities identified by sponsoring/client companies, as well as the formulation of recommendations. It combines 1) academic principles, 2) application of prior business knowledge to the project at hand, and 3) a solutions-oriented mentality. In addition to supervised project work and regular updates to the corporate client/project sponsor, the course involves classroom meetings and discussions on topics pertaining to the projects. While this course focuses on ‘marketing’ topics, projects might also incorporate topics from related disciplines such as operations, management of innovation & technology, data analytics, international management, design, and real estate. Indeed, the goal will be to constitute interdisciplinary teams from Wharton and other relevant Penn graduate schools. ADVANCED STUDY PROJECT (GENERAL): The principal objectives of this course are to provide opportunities for undertaking an in-depth study of a marketing problem and to develop the students’ skills in evaluating research and designing marketing strategies for a variety of management situations. Selected projects can touch on any aspect of marketing as long as this entails the elements of problem structuring, data collection, data analysis, and report preparation. The course entails a considerable amount of independent work. (Strict library-type research is not appropriate) Class sessions are used to monitor progress on the project and provide suggestions for the research design and data analysis. The last portion of the course often includes an oral presentation by each group to the rest of the class and project sponsors. Along with marketing, the projects integrate other elements of management such as finance, production, research and development, and human resources.

MKTG 893 Advanced Study: MKTG in Emerging Economies: Understanding & MKTG to the Chinese and Indian Consumer
This course is a two part series. The first part concentrates on the Indian Consumer and the second part concentrates on the Chinese Consumer. India and China add up to half of the world’s population. Each presents its own challenges and opportunities. US and European MNCs have been in both countries for many years, but emerging market MNC’s are becoming stronger and in many cases overtaking US and European companies despite their strong brands and know-how. Marketing to the Indian Consumer will provide a careful understanding of: The opportunity and challenges in the Indian consumer market 2) Various segments within the Indian consumer market 3) Consumer psychology and decision making processes in each segment 4) Distribution channels in India and China: Mass, Local and non-traditional. 6) Bottom of the pyramid consumers and rural markets. 7) Product design and development decisions. The course will focus on the following industries: consumer packaged goods, mobile phones, financial services (insurance and banking), healthcare, sports and entertainment, and transportation. The course will involve case studies from local and international companies, guest lecturers, and visits to consumer homes to observe their tastes, habits, and preferences. Marketing to the Chinese Consumer will provide students with a critical understanding of the Chinese consumer, distribution channels, pricing environment, branding and competitive dynamics so as to enhance their ability to market to the Chinese consumer successfully. The course will consist of a combination of lectures, case studies, presentations by industry experts, and a short evening field trip.
Taught by: Raju and Zhang
Course not offered every year
Also Offered As: WH 216
Activity: Lecture
0.5 Course Units
Notes: Indian Consumer Section of the Course is taught in Mubai, India, The Chinese Consumer Section of the Course is taught in Bejing, China.
MKTG 895 Global Business Week
GLOBAL BUSINESS WEEK: MKTG 895 is one in an array of Global Business Week (GBW) study tour courses offered by various departments across Wharton. Each of the GBW courses offered in a term, will entail travel to a different part of the world and address a different element of economic driver for a country or industry. A faculty member will drive the topic and curriculum associated with a study tour to a region of the world where the study of a topic will provide insights and clarity available only by being in country. In country lectures from the lead faculty and area experts in industry, academia and government will form much of the basis of class time. In addition, students will experience relevant company and cultural settings where they will again hear from industry experts. Each course will require an individual student paper, a participation component, and a pre-travel or in-country set of assignments. See course syllabus for details. CUSTOMER CENTRICITY AT THE LEADING EDGE OF ANALYTICS AND TECHNOLOGY: LEARNING FROM SCANDINAVIA. Instructor: Peter Fader. The concept of ‘customer centricity’, i.e., that not all customers are created equal, is gaining credibility and traction. More and more firms are coming to the realization that understanding and leveraging the behavioral differences across customers can potentially be more sustainably profitable than more conventional product-centric thinking that continues to dominate today’s business landscape. At the heart of this transformation are three critical ingredients data, analytics, and technology. Using customer data at a granular level allows firms greater visibility into customer interactions, their use of social media, biometrics, and geolocation as tools to enhance business models and even create new ones. It allows a firm to be deliberate about which customers to go after and what kinds of services to provide them. For many, the key to profitable growth lies in successfully harnessing and developing the tools, organizational structures, and corporate cultures that can create and enhance these capabilities. Companies in Scandinavia are using these approaches in unique ways and more prevalently than in other regions of the world. Their unique ecosystem is a key to creating organizations that can flourish right out of the gate, and to help established ones adapt and change successfully. Ultimately the course will examine how customer centricity enables firms to change their interaction with consumers, vendors, government, and other ecosystem players in facilitating these changes.

MKTG 942 Research Methods in Marketing - Part A
This course provides an introduction to the fundamental methodological issues that arise in experimental and quasi-experimental research. Illustrative examples are drawn from the behavioral sciences with a focus on the behavior of consumers and managers. Topics that are covered include: the development of research ideas; data collection and reliable measurement procedures; threats to validity; control procedures and experimental designs; and data analysis. Emphasis is placed on attaining a working knowledge of the use of regression methods for non-experimental and quasi-experimental data and analysis of variance methods for experimental data. The primary deliverable for this course is a meta-analysis of a research problem of the students choosing that investigates the effects of research methods on empirical results.

MKTG 950 Judgment and Decision Making Perspectives on Consumer Behavior - Part A
The purpose of this course is to provide a solid foundation for critical thinking and research on the judgment, decision-making and choice aspects of consumer behavior. There is a focus on how people process information when making judgments and choices and how the processes of judgment and choice might be improved. Topics of discussion include rationality, judgment under uncertainty, judgment heuristics and biases, risk taking, dealing with conflicting values, framing effects, prospect theory, inter-temporal choice, preference formation, and the psychology of utility. The focus will be on the individual decision-maker, although the topics will also have some applicability to group and organizational decision-making and behavioral research methodologies.

MKTG 952 Information Processing Perspectives on Consumer Behavior - Part A
The purpose of this course is to provide graduate students with a solid foundation for critical thinking and research in psychology and marketing on information processing related topics. Topics of discussion include consumer knowledge (learning, memory and categorization), attitude theory, persuasion, affect and social influence. The course draws from the literature in marketing, psychology and economics. The course will enable students to conceptualize, operationalize, and develop research ideas. Therefore, the focus is on understanding theoretical and methodological approaches to various aspects of consumer behavior, as well as advancing this knowledge by developing testable hypotheses and theoretical perspectives that build on the current knowledge base.

MKTG 954 Economic/OR Models of Marketing - Part A
This doctoral seminar reviews analytical models relevant to improving various aspects of marketing decisions such as new product launch, product line design, pricing strategy, advertising decisions, sales force organization and compensation, distribution channel design and promotion decisions. The primary focus will be on analytical models. The seminar will introduce the students to various types of analytical models used in research in marketing, including game theory models for competitive analysis, agency theory models for improving organization design and incentives within organizations, and optimization methods to improve decision making and resource allocation. The course will enable students to become familiar with applications of these techniques in the marketing literature and prepare the students to apply these and other analytical approaches to research problems that are of interest to the students.

**MKTG 956 Empirical Models in Marketing - Part A**
This course is designed to generate awareness and appreciation of the way several substantive topics in marketing have been studied empirically using quantitative models. This seminar reviews empirical models of marketing phenomena including consumer choice, adoption of new products, sales response to marketing mix elements, and competitive interaction. Applies methods and concepts developed in econometrics and statistics but focuses on substantive issues of model structure and interpretation, rather than on estimation techniques. Ultimately, the goals are a) to prepare students to read and understand the literature and b) to stimulate new research interests. By the end of the course, students should be familiar with the key issues and approaches in empirical marketing modeling.
Course usually offered in spring term
Activity: Seminar

**MKTG 971 Advanced Topics in Marketing - Part A**
Taught collectively by the faculty members from the Marketing Department, this course investigates advanced topics in marketing. It is organized in a way that allows students to 1) gain depth in important areas of research identified by faculty; 2) gain exposure to various faculty in marketing and their research values and styles; and 3) develop and advance their own research interests.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units
Notes: 0.5 cu. Course meets entire semester.

**MKTG 972 Advanced Topics in Marketing - Part B**
Taught collectively by the faculty members from the Marketing Department, this course investigates advanced topics in marketing. It is organized in a way that allows students to 1) gain depth in important areas of research identified by faculty; 2) gain exposure to various faculty in marketing and their research values and styles; and 3) develop and advance their own research interests.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units
Notes: 0.5 cu. Course meets entire semester.

**MKTG 973 Research Seminar in Marketing - Part A**
This course is taught collectively by the faculty members from the Marketing Department. It is designed to expose Doctoral students to the cutting-edge research in marketing models in order to help them to define and advance their research interests. This course will offer in-depth discussions on some important topics in marketing by experts in respective areas; tools, and methodologies required for conducting research in those areas; broad exposure to our faculty members and their proven research styles.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units
Notes: 0.5 cu. Course meets entire semester.

**MKTG 974 Research Seminar in Marketing - Part B**
This course is taught collectively by the faculty members from the Marketing Department, this course investigates advanced topics in marketing. It is organized in a way that allows students to 1) gain depth in important areas of research identified by faculty; 2) gain exposure to various faculty in marketing and their research values and styles; and 3) develop and advance their own research interests.

MLA 541 Academic Writing and Research Design in the Arts and Sciences
Have you ever noticed that scholars in different academic disciplines seem to speak different languages? Have you wondered how scholars put together a plan for their research, explain their findings, and organize and write their papers? The class is designed to introduce MLA students and other advanced students to the research and writing conventions used by scholars in the arts and sciences. With attention to disciplines in the humanities, social sciences, and sciences, we will identify and explore some of the theories, sources, language, and qualitative and quantitative methodologies that scholars use as they conduct original research in their fields. Throughout the class, we will also discuss writing conventions across the arts and sciences, with special attention to the structure of argument; the use of evidence; voice and style in both traditional academic writing and more innovative forms of writing; and documentation conventions. Students will develop an original research project through incremental writing assignments, and will write a formal research proposal (15-20 pages), which can be used as their Capstone proposal if they wish.

Master of Science in Social Policy (MSSP)

MSSP 601 The Power of Partnerships between Government, Non-profits, & the Private Sector
Everything from the Affordable Care Act to the Mayor’s Rebuild Initiative here in Philadelphia could not be implemented by government without strong and vital partnerships with non-profits and the private sector. These collaborations provide an opportunity to help people, impact and change policy, improve outcomes, and multiply the impact that non-profit and private sector organizations can have. The course will help graduate (and advanced undergraduate) students not only understand the theory, policy, and practice of these collaborations but also learn how they actually happen. Students will also learn the characteristics of these three sectors, their roles and contributions, and competitive forces that are often at work in the collaborative process. Topics for discussion will include attitudes and expectations in the public sector, the ingredients of effective partnerships, and effective communication strategies with elected and appointed officials. The course will be conducted on a seminar basis. Graduate students are expected to take an active part in shaping the discussion. Students will be expected to rotate leadership for the class discussions and to supplement course materials with independent study of relevant magazine and newspaper articles. Course grades are assigned as follows: 20 percent for class participation, 15 percent for an in-class written exam, 30 percent for a group presentation and write up of a case study, and 35 percent for a final project. High quality written work and accurate citations is an expectation in all assignments.

Taught by: Ezekiel Dixon-Roman

1.0 Course Unit

MSSP 606 Data for Equitable Justice Lab
Data for Equitable Justice Lab is a non-credit research group that gives SP2 Masters students an opportunity to analyze some of today’s most important social issues through data and, with faculty support, create a product for audiences well beyond our classrooms and campus. With guidance from the lab faculty, students develop a project - either individually or as part of a team - to examine a contemporary social policy or political issue through or on data or digital technology. Through these projects students will produce an op-ed, blog post, podcast, academic article, short film, or other product of their choosing that creates or contributes to contemporary discourse.

Taught by: Dan Treglia
Course offered summer, fall and spring terms
Activity: Laboratory
0.0 Course Units
MSSP 607 Practical Programming for Data Science
This course familiarizes students with no prior programming experience with the core concepts of programming and the practice of software development for data-intensive applications in industry and government. After this course, students will be comfortable (1) writing code to save and load from files and spreadsheets into basic data structures like strings, lists, and maps; (2) manipulating data with code to perform tasks like generating aggregate statistics and filtering data into subsets; (3) effectively communicating findings from interactive, exploratory programming with others; and (4) working with technical teams, using best practices of software development when building line- of-business applications.
Taught by: Elijah Mayfield
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSSP 608 Practical Machine Learning Methods
This course prepares students with no background in machine learning or data science to use tools from those fields effectively in applied contexts. Using GUI-based software - or optionally, by programming with libraries - students will build skills including (1) feature representations of spreadsheet-based or text datasets; (2) training classification and regression models for prediction tasks; (3) evaluation of machine learning model accuracy and error analysis; and (4) reasoning about predictive models and making tradeoffs like bias vs. variance, granularity and annotation complexity in labeled training data, and the ethical application of predictive modeling to human-centered data.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 609 Invisible Injustices: How Policy & Bureaucracy Create (& Hide) Diff. & Power
How does the design of everyday objects and systems in our social world - from the workplace to the civic sector - produce variation in our political participation to promote or stifle the collective project of social justice? Systemic injustice expresses itself in everything from software interface designs to paper passport applications. Using these objects and others, this course focuses on the ways in which power operates through and within aesthetics to create and enforce difference and produce the inequalities that demand a collective reimagining of our world. What might we learn from these 'aesthetic assemblages' of power and difference, and their manifestations in current social policy? In this course, we will work with case studies from a range of politically urgent topics - mass incarceration, immigration reform, healthcare inequity - through the lens of critical theories and pedagogies that center the lives of those communities most impacted by discriminatory social policy. Students will learn to apply the thinking of scholars such as Fred Moten & Stefano Harney, Dean Spade, and Mel Chen towards their own social justice-informed approaches to social policy and practice. Through independent study projects, students will explore their own unique areas of interest beyond the scope of this course to rethink how critical theory can shape and be shaped by on-the-ground, everyday practices.
Taught by: Nicole Sansone
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSSP 628 Policy: Analysis of Issues, Strategy and Process
Policy analysis requires an understanding of social problems/social issues and the processes by which policy is developed and implemented. Critical skills in many policy frameworks include: problem definition and analysis, review of relevant research, identification of possible actions, implementation and evaluation, and fiscal analysis. Competency in written and oral communication is also essential. To develop these related skills, this course utilizes as a base a dynamic social problem analysis framework that addresses issues of equity, equality and adequacy. It also examines multiple theoretical and analytical perspectives. Through the review of contemporary and historical social policy debates and provisions, selected case examples and policy briefs, this course provides students with an understanding of the policy roles of the legislative and executive branches of government, including goal setting, policy rulemaking and enactment, allocation of resources, financing, regulation, and implementation. The policy process at state and local levels of government will also be addressed. The primary focus is on U.S. policy although global policies will be discussed when relevant.
Taught by: Amy Baker
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSSP 629 Research and Evaluation Design
Research and Evaluation Design introduces social research methods in the context of social policy and program evaluation. The course provides a conceptual and practical understanding in the design of experimental, quasi-experimental, and non-experimental research and in the application of quantitative and qualitative methods. Students learn about the application of the research process and skills in all phases of assessing a social policy and developing a social program, including needs assessment, implementation analysis, and evaluation of policy or program effectiveness. Students learn to be critical and informed consumers of research and to apply guidelines of research ethics in social policy settings.
Taught by: Geraldine Summerville
One-term course offered either term
Activity: Lecture
1.0 Course Unit

MSSP 630 Quantitative Reasoning/Social Statistics
The primary goals of this course are (1) to provide students with a solid understanding of the logic of social science research as well as (2) to provide students with an introduction to a broad range of statistical methods commonly used in social science research. The first portion of the semester concentrates on defining research problems, research design (including sampling, measurement, and causal inference), and assessing research quality. The latter portion of the semester focuses upon data analysis including descriptive statistics, measures of association for categorical and continuous variables, introduction to t-tests, ANOVA and regression, and the language of data analysis. Students will learn how to choose and apply statistical tools to data sources, how to interpret quantitative studies, and will gain experience using SPSS - a statistical software package.
Taught by: Ioana Marinescu
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MSSP 631 Law and Social Policy
This course introduces students to the basics of the American legal system, focusing on the interplay between litigation and social policy. Students will learn how law, and particularly case law, is made, how to read case law and evaluate precedent, legal reasoning and argument. This course will utilize various teaching methods including introduction to the 'Socratic' lecturing method which is frequently utilized in the study of law. Students will also study the structure of court systems at both state and federal levels as well as the litigation process and the role of law and courts in shaping and addressing social policy issues. Students will also learn the basics of several areas of substantive law, with an eye toward consideration of how that law has been, and can be, used to effect social change.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 632 Capstone Seminar I: Policy Communications
The focus of the Capstone Seminar is three-fold: 1) to enhance student integration of the theory and practice of social policy analysis; 2) to enhance the student’s competencies in the written and oral communication processes and procedures necessary for the policy world; and 3) to ensure basic knowledge about federal budget processes, stakeholder roles, and inter-organizational collaboration. Registration restricted to majors only.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

MSSP 633 Capstone Seminar I: Policy Communications
This course consists of an intensive, multi-week policy internship that is selected through a consultative process involving the student, MSSP advisors, internship coordinator/advisor, and mentors/supervisors at potential sites. The internship provides an opportunity for the student to expand horizons beyond the academic. It serves as a medium to integrate classroom learning with experiences in policy making activity. Registration restricted to majors only.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

MSSP 634 MSSP/DA Capstone I: Telling Stories with Data
The volume and complexity of data continues to increase in the world around us, including science, business, medicine, social media and everyday human activity. This course aims to expose students to visual representation methods and techniques that increase the understanding of complex data. Good visualizations not only present a visual interpretation of data, but do so by improving comprehension, communication, and decision making. In this course, students will learn about the fundamentals of perception, the theory of visualization, and good design practices for visualization. The course will also provide hands-on experience on the process of data communication, from initial data analysis, to identifying appropriate visualization techniques, to crafting informative visualizations.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

MSSP 635 Capstone II: Policy Internship in Data Analytics
Capstone II consists of an intensive, multi-week internship that is selected through a consultative process involving the student, MSSP advisors, internship coordinator/advisor, and mentors/supervisors at potential sites. The internship provides an opportunity for the student to expand horizons beyond the academic. It serves as a medium to integrate classroom learning with experiences in policy making activity. Registration restricted to majors only.
Activity: Seminar
0.5 Course Units

MSSP 667 Critical Global Politics, Policy & Identity
What is identity? Why do we identify with categories such as 'Black', 'Latino', 'Queer', 'American' or 'Asian'? How do these categories play a role in current Global Politics, and how have Global Politics & Policies helped configure different identities throughout history? According to critical analyses, our identities and classifications are socially constructed through social, economic, and political processes.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
MSSP 668 Economics for Social Policy
Economics allows us to determine the costs and benefits of social policies like cash benefits, unemployment insurance, health insurance, pensions, education, etc. Policies typically affect the behavior of agents like individuals, families and firms, and we have to take these reactions into account when analyzing policy. Economics allows us to predict how policy is likely to affect behavior by understanding how the policy changes individuals’ decisions, and what collective outcomes these myriad individual decisions bring about. For example, a universal basic income allows individuals to sustain themselves and their families when they are not working. At the same time, such guaranteed income has the potential to discourage people from looking for a job. If enough people are discouraged from looking for a job, employment in the economy will decrease, leading to lower production and lower tax revenues for the government. Policy makers have to take these phenomena into account in order to design a good income support system.

Course usually offered in fall term
Also Offered As: SWRK 668
Activity: Lecture
1.0 Course Unit

MSSP 701 Race, Technology, & the Body
The history of the relationship between race and technology has long been fraught. On the one hand, the sociopolitical formation of race constituted black and brown bodies in juxtaposition to the logics of reason that the instruments of post-Enlightenment technicity were built. On the other hand, as Wendy Chun argues, the discursive formation of race was a technology in and of itself that was designed to hierarchize and differentiate bodies as well as to make black and brown bodies extracted technologies for labor and Capital. This seminar will explore this deeply enmeshed history between race and technology by engaging text in the history of science and philosophy, critical theories of technology, cybernetics, and critical theories of difference. These text will range in topics from the transparent subject to surveillance studies to algorithmic bias to the speculative fiction of Afrofuturism. The text will include both scholarly written products as well as media and popular culture. Students will learn about the history of philosophy and technology in relation to race and the (em)body as well as how to examine for speculative futures.
Taught by: Ezekiel Dizon-Roman
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 702 Aestheticizing Assemblages: Power, Policy, Bureaucracy, and Difference
While social mechanisms of power might be kept out of sight, their productive capacities are generative of volumes of material. This course focuses on the material traces of power to map how bureaucracy, at all scales and registers, creates and enforces difference as a power differential. Specifically, we will explore how power expresses itself aesthetically in bureaucractic processes as in, for example, the organization of spreadsheets, the distribution of administrative power via forms and chains of command, and software design. Course materials, assignments, and lectures will triangulate theory, evidence, and policy as a way of grounding parallel inquiries into the ethics of these assemblages and their manifestations. The final three weeks of term have been reserved for group reflection and synthesis. Students are able to introduce new areas of exploration at this time specific to their interests.
Taught by: Nicole Sansone
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 703 Visual Techniques for the Contestation of an Unjust World
This course will observe alternate modes of contesting power asymmetries in society and culture. In particular we will observe how projects such as those organized by the Black Panther Party, Brown Berets, and the Farm Workers Movement reveal something to us about how policies are unjustly received on the ground, and how para-governmental projects can provide a pathway for understanding how to create more just societies, policies, and alliances. We will also explore more contemporary practices of social justice through art practices that have also specifically targeted policy, such as those carried out by the Carrot Workers Collective, Critical Art Ensemble, Natalie Jeremijenko, and others. The aim of the course will be to use these practices to try to develop an ethics divorced from norms that could then productively be applied to policy making.
Taught by: Nicole Sansone
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 704 Critical Studies in Health Inequity and Policymaking
The relentless focus on the being of health inequity often overshadows the becoming of health inequity. Each drip of social injustice pools into a confrontation that disproportionately affects the health and healthcare of the socially disadvantaged groups. This course navigates health policymaking through a sociohistoric lens and grapples with contemporary perspectives in health equity. We explore the theoretical frameworks that best informs the existence of health inequity along with the practices that eliminate health inequity. Students will have the opportunity to learn how to effectively communicate evidence-based strategies in both policy and academic grant formats. While generally structured as a seminar, this course extends the walls of the classroom and encourages students to confront real-life health policy issues while engaging local, state, and federal health policy influencers. Students will spend time in the robust archives and cutting-edge medical facilities at Penn to best hone their policymaking voice.
Taught by: Kevin Jenkins
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
MSSP 710 Democratizing Data? Critical Data Studies in Algorithmic Governance
With the advent of digital technologies and the increasing power of computational analytics, the proliferation and ubiquity of data production has increased at exponential rates enabling new possibilities for social analysis. This course will examine the emergence of democratizing data – the movement to make government and other data more widely or publicly available and its potential enabling for democratic possibilities. The types of data being made available, through various analytic systems, and the ways in which their accessibility and inaccessibility is contributing to reconfigured power relations, will be described. The paradigmatic tensions and shifts that have emerged in the debates on 'Big Data,' such as deductive versus inductive reasoning and the challenges posed to statistical sampling theory, will be interrogated. The appropriation of machine learning and predictive analytic algorithms for social analysis will be critically explored. Issues related to the ethical and legal use of administrative data, particularly data related to patient, client, student, and taxpayer information will be considered, as well as from internet-based sources including social media. Potential solutions to data security challenges will be additionally considered. Methods for web-scraping of data, analysis of web traffic data, and the use of social networking data in the modeling of social phenomena and public opinion will be examined. Students will learn how to make results accessible to non-technical audiences via data visualization tools, such as web-based data dashboards and web-based maps. These topics will be discussed for the analysis of health, education, and social policy as well as their implications for questions pertaining to race, gender, class, sexuality, dis/abilities, age and youth culture. This course will develop students’ knowledge of computational and data analytics and its applications for social policy analysis.
Taught by: Ezekiel Dixon-Roman
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSSP 741 Gender & Social Policy
Gender and Social Policy develops an advanced understanding of social policies through a focus on social issues and conditions through the lens of gender, economic and critical theory. The specialized focus on gender and social policy provides students with the opportunity to develop more specialized knowledge about how market dynamics and government policies respond to the needs and risks faced by women. Specific emphasis is placed on utilizing theoretical frameworks to evaluate the intersection between social policy, history and social science in relationship to gender issues. Students are also expected to conduct a policy analysis that includes an evaluation of how current and former social movements surrounding gender issues shaped their policy of interest.
Taught by: Baker
Course usually offered in spring term
Also Offered As: SWRK 741
Activity: Lecture
1.0 Course Unit

MSSP 755 International Social Policy & Practice: Perspectives from the Global South
This interdisciplinary course will introduce students to social policy and practice perspectives from outside the U.S. and especially from communities in the Global South. The course will familiarize them with global professions and help prepare them for overseas/cross-cultural practice. Through the course students will identify numerous strategies and skills professionals have used to collaboratively build interventions within human rights, social policy, social welfare, education, healthcare and sustainable development arenas.
Taught by: Anastasia Shown
Course usually offered in fall term
Also Offered As: SWRK 755
Activity: Lecture
1.0 Course Unit

MSSP 768 Social Policy Through Literature
Also Offered As: SWRK 768
Activity: Lecture
1.0 Course Unit

MSSP 780 Policy and ‘Difference’ in Postmodernity
Social constructions of ‘difference’ permeate the institutions, spaces, and assumptions of our society. These social constructions include but are not limited to the racialized, gendered, sexed, classed, and dis/abled constructions of the body. By leaning on postmodern thinkers such as Iris Marion Young, Pierre Bourdieu, Judith Butler, Jacques Derrida, Ernesto Laclau, and Michel Foucault, this seminar course will begin by engaging the questions of what is ‘difference’ and how is ‘difference’ discursively constructed and reproduced in society. Using a postmodern lens, the remainder of the course will engage various social science texts that deal with the varieties of ‘difference’ (i.e. race, gender, class, sexuality) and the explicit and/or implicit policy implications of these works. Thus, we will critically engage policies such as welfare, affirmative action, economic policies of taxation, and same-gender marriage, among others. The underlying questions throughout the course will be to what extend does social policy enable the possibilities of freedom, justice, and democracy for the ‘Other’, the deviant, the object, the marginalized, those of assumed ‘difference’? And, to what extent does policy constrain those possibilities at the same time? This course does assume familiarity with social theory and is an introduction to postmodern thought on the law, the political, and policy.
Taught by: Dixon-Roman
Course usually offered in spring term
Also Offered As: SWRK 780
Activity: Seminar
1.0 Course Unit
MSSP 796 Family Economic Mobility: Problems and Policies
The experiences and voices of mothers, fathers, children, employers, children's teachers, human service workers, job training providers, policymakers and others in cities across America graphically show us the 'real life' challenges to economic mobility facing today's families and organizations. These voices particularly illustrate how economic, social, and cultural policies, practices, and beliefs intersect to perpetuate economic inequality for low-income and many middle-income working families alike. The labor market, welfare and workforce programs, public schools and government are some of the institutions implicated in this intersection. In the course we deconstruct concepts such as the 'work ethic,' 'family-friendly workplace,' and 'good jobs' in terms of economic, racial and cultural inequalities and, more broadly, in terms of their meaning, aims and rhetoric. At base, this course examines occupational mobility in America within the broad framework of capitalism, democracy, race, ethnicity and gender. Students from GSE, SAS, City Planning, and Communications often join SP2 students to read and critique classic and contemporary literature from multiple disciplines and explore generative roles for 'meso-oriented' social change professionals.
Taught by: Roberta Iversen
One-term course offered either term
Also Offered As: SWRK 796
Activity: Seminar
1.0 Course Unit

MSSP 797 Social Policy in Revolutionary Cuba (1959-2017)
Cuba represents one of the world's long-standing institutionalized revolutions whose narrative and policies have changed from a strong nationalism yearning for independence, to an alignment with communism's ideology and modus operandi, to a nostalgic, post-Soviet Union 'socialism' ruled by a binary, state-controlled capitalism. In addition to the myriad of social and political changes affecting the island, the transition of leadership from Fidel Castro to his brother, Raul, and the death of the former in 2016, has put into question the theoretical pillars of the Revolution, thus undermining its initial legitimacy. This course is designed to provide students with the critical and analytical tools to dissect Cuban revolutionary politics, policies, and identity mutations within the island's historical trajectory. We will begin by critically reviewing key points of diplomatic and historical relationships between the U.S and Cuba, followed by an analysis of the notion of independence - upon which Castro relied to gather massive support - in the context of the 60's debates on decolonization and underdevelopment. In addition, we will delve into the theoretical foundations of the Revolution focusing, among other texts, on the literature by Cuba's 'founding father' Jose Marti, who deeply influenced the Spanish-American war (1898)'s outcomes as well as Fidel Castro's vision for Cuba. Throughout the course, students will also have the opportunity to critically read and discuss main Cuban social policies such as its famous Literacy Campaign, and other Education, Housing, Cultural, Health, and Immigration policies, as well as the island's complex relationship with technological development and communications. Finally, we will study identity and race dynamics, which are inextricably embedded in Cuba's political landscape. This course will begin with six introductory sessions at the University of Pennsylvania, followed by six class meetings during a two-week stay in Havana, Cuba. Once on the island, students will visit key historical and cultural sites such as El Mueso de la Revolucion (The Museum of the Revolution), El Museo de la Alfabetizacion (The Literacy Museum), and La Escuela de Artes Plasticas (National Art School). Parallel to these endeavors, students will also engage in conversations with distinguished Cuban scholars and cultural critics. Lastly, students are required to develop a research project on a particular Cuban social policy and produce a final paper or writing/multimedia project.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 799 Independent Study
Independent studies provide a flexible opportunity for standing faculty and students to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising standing faculty member. Part-time faculty members are not eligible to offer independent studies. Independent studies require the academic advisor's approval.
Activity: Independent Study
1.0 Course Unit
MSSP 806 Systematic Reviews: Meta-Analysis and Meta-Synthesis
Systematic reviews and the synthesis of their primary studies (meta-analysis for quantitative studies and meta-synthesis for qualitative studies) are proliferating, and emerging scholars need to be conversant in the methodology, so they can contribute this type of valuable evidence to their knowledge areas. Through this course, students will learn how to locate, understand, and critically appraise systematic reviews. They will also learn how to write a protocol for an original systematic review and carry one out within a small student group. At the completion of the course, students will have a finished systematic review.
Taught by: Jacqueline Corcoran
Course usually offered in spring term
Also Offered As: SWRK 806
Activity: Lecture
1.0 Course Unit

MSSP 897 Applied Linear Modeling
This course deals with the underlying assumptions and applications of the general linear model with social science, education, and social policy related questions/data. The first half of the course begins by covering simple linear regression and the assumptions of the general linear model, assumption diagnostics, consequences of violation, and how to correct for violated assumptions. This will also include methods of incomplete case analysis (i.e. missing data analysis). Then various aspects of regression analysis with multiple independent variables will be covered including categorical explanatory variables (e.g. to estimate group differences), interaction effects, mediating effects (e.g. to estimate the indirect effect of social processes), and non-linear effects. The course will then cover some of the applications of the generalized linear model including logistic regression, some elements of path modeling (structural equation modeling), multilevel analysis (hierarchical linear modeling), and longitudinal modeling (growth modeling). The course will be taught using SAS, but students are welcome to use any statistical package of comfort. Introductory Graduate Statistics is a prerequisite.
Taught by: Ezekiel Dixon-Roman
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 999 Independent Study
Independent studies provide a flexible opportunity for standing faculty and students to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising standing faculty member. Part-time faculty members are not eligible to offer independent studies. Plans for an Independent Study should include: a statement of the issue(s) to be studied; a rationale for why the identified issue(s) should be pursued via an independent study; a statement of how the independent study fits into the student’s overall educational plan; a summary of the independent study’s major learning objectives; the methods to be used in carrying out the study; a workable plan; the educational ‘products’ that will result from the study (normally a written report or paper); and the expected date by which the independent study will be completed. The process for arranging an independent study requires approval of both the student’s academic advisor and a standing faculty member who has agreed to conduct the independent study. The procedures to be followed are: 1) the student discusses interest in doing an independent study with the academic advisor; 2) if the advisor concurs with the student’s submission, the advisor and student will discuss potential standing faculty sponsors; 3) if a standing faculty sponsor can be located, the student and standing faculty sponsor craft the specific plan, including learning objectives, content, and structure for the course; and 4) the academic advisor informs the registrar that an independent study for the student has been approved. On the rare occasions that a student is unable to schedule a regular School course, the academic advisor makes a recommendation to the Associate Dean for Academic Affairs who will try to identify a standing or adjunct faculty member able to supervise the course delivered as an independent study.

Master of Science in Translational Research (MTR)

MTR 510 Introduction to Clinical and Translational Research
This introductory course lays the foundation for understanding practical aspects of conducting clinical research in an academic environment. The course is divided into two modules: Module 1: Research Methods & Protocol Development and Module 2: Regulatory Environment for Clinical Trials. The first module introduces clinical research, clinical protocols, study designs and biostatistics that underlie such studies. The second module covers ethical considerations in clinical research, study execution and oversight, and the regulatory environment for clinical research. Upon completion, students should have a strong foundation in the fundamentals of clinical research and should be able to apply contemporary research tools to clinically relevant areas of investigation.
Prerequisite: This course requires permission to register. Please contact Bethany Germany at (bgermany@upenn.edu) to register.
Taught by: Emma Meagher, MD
Course usually offered in fall term
Also Offered As: REG 510
Activity: Lecture

MTR 535 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python, R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 437/GCB 536 and GCB/CIS/BIOL537 are more appropriate. Prerequisites: An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as Biol 526 (Experimental Principles in Cell and Molecular Biology), BIOL 527 (Advanced Molecular Genetics), BIOL 540 (Genetic Systems), or equivalent, is a prerequisite.
Taught by: B Voight, C Greene
Course usually offered in spring term
Also Offered As: CIS 535, GCB 535, PHRM 535
Prerequisite: BIOL 421 OR BIOL 526 OR BIOL 527 OR BIOL 528 OR BIOL 540
Activity: Lecture
1.0 Course Unit

MTR 600 Introduction to Biostatistics
This course prepares students understand and apply the necessary statistical methods to their thesis project, critically assess the application of statistical methods in the literature, and collaborate with biostatisticians.
Taught by: Roger Vaughan, MS, DrPH
Course usually offered in fall term
Also Offered As: REG 600
Activity: Lecture
1.0 Course Unit
Notes: Only MTR degree and certificate students may enroll in this course.

MTR 601 Review Writing
This course will lead students through the process of writing a review article during their first summer in the MTR program. Review articles will be authored with the student’s primary mentor and will be used to accomplish the following goals: 1) attain rapid familiarity with background in their new area of study; 2) a mechanism for mentor and student to create a productive working/writing relationship; 3) help the student identify key gaps in the literature and/or areas of controversy that would benefit from pivotal experiments; 4) understand the factors that contribute to variability in research outcomes in their area and; 5) introduce the student to other scientists in their new area through an initial publication early in their career. Mentors will be asked to agree to participate in this process, or identify another senior individual in their group who would perform the function. The course director will provide guidance and critical reviews throughout the process.
Taught by: Rachel Locke, PhD
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
Notes: Only MTR degree students may take this course.

MTR 602 Proposal Development
Focuses on study design and proposal development as they relate to studies that probe the mechanism of disease. Discusses concepts such as writing a background section, asking a research question, designing a study, use of biomarkers, writing a research proposal, overview of study designs addressing feasibility issues. Development of thesis proposal starts during this course and concludes with each student submitting and presenting their proposal to the MTR faculty panel for critique and feedback.
Taught by: Anil Vachani, MD
Two terms. student must enter first term.
Also Offered As: REG 602
Activity: Seminar
1.0 Course Unit
Notes: Only MTR degree students may enroll in this course.

MTR 603 Disease Measurement
Students will acquire the knowledge to effectively incorporate disease measurements into the design of clinical and translational research protocols, gain a basic understanding of measurement methodologies used in clinical medicine, understand how ‘normal’ values are determined, and how to interpret test results in the context of patients/research subjects. Students will also approach disease measurements as a means of answering questions, and be able to choose appropriate tests to answer the question posed. The measurement aspects of the student’s research protocols are evaluated during this course. The course is separated into lab and imaging sections, with common introductory lectures.
Taught by: David Mankoff, MD, PhD, Yong Fan, PhD, Tracey Polsky, MD, PhD,
Charlene Bierl, MD, PhD
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Only MTR degree students may enroll in this course.
MTR 604 Scientific & Ethical Conduct
In this course, students will learn the foundational principles of scientific and ethical conduct of research, complete directed experience in evaluating these principles through IRB membership and ultimately be able to apply them to their own work. By the end of the foundational class sessions, students will understand scientific conduct, ethical considerations including human subjects and animal protections, regulations governing the use of health information, drugs, and devices, good laboratory practices, conflict of interest, and ethics in challenging new research domains. The directed experience will include membership for six months on an Institutional Review Board (IRB) at either the University of Pennsylvania or the Children’s Hospital of Philadelphia. This membership experience will expose students to real issues, considerations, and solutions in human subjects research and study design.
Taught by: Emma Meagher, MD
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MTR 605 Data Manuscript Writing
Students will write a primary data manuscript for publication with their primary lab mentor. Emphasis will be placed on identifying publishable data that was either generated by the student, or which is made available to the student for analysis from the mentor’s lab. The student will be expected to learn the role of first author including 1) coordination with the senior mentor to write the introduction, 2) organize data, analyses and figures, 3) obtain or write methods and results from collaborators, 4) writing a discussion and, 5) getting it out the door. Mentors will be asked to agree to participate in this process, or identify another senior individual in their group who would perform the function as a condition to have MTR students funded in their program. Course director and members of the curriculum committee will provide guidance and critical review of work throughout the process.
Taught by: Kachina Allen, PhD
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: Only MTR degree students may enroll in this course.

MTR 607 Thesis I
Candidates are expected to complete a thesis that involves designing a research project, writing a formal research proposal, performing the study described in it, preparing a comprehensive scholarly scientific paper reporting the results, and presenting and defending the thesis at a public seminar. At the time of application, each candidate specifies the project they will pursue, along with the lead mentor who will supervise the project.
Taught by: Emma Meagher, MD
Activity: Masters Thesis
1.0 Course Unit

MTR 608 Thesis II
Candidates are expected to complete a thesis that involves designing a research project, writing a formal research proposal, performing the study described in it, preparing a comprehensive scholarly scientific paper reporting the results, and presenting and defending the thesis at a public seminar. At the time of application, each candidate specifies the project they will pursue along with the lead mentor who will supervise the project.
Taught by: Emma Meagher, MD
Activity: Masters Thesis
1.0 Course Unit

MTR 620 Commercializing Translational Therapeutics
To provide an in-depth view of the process by which scientific discoveries are commercialized. This course covers discovery in the laboratory, technology transfer, regulatory, financial, and managerial issues involved in moving a technology from the lab into the market place. The course contents fall into three broad categories: (1) examples of scientific discoveries that are candidates for commercialization, (2) fundamental elements of technology transfer, such as intellectual property protection and licensing, and (3) aspects of commercialization, such as regulatory approval, financing, and startup formation. In using this structure, the course provides parallel coverage of both the science and the commercialization process, in such a way that the elements of one contribute to the student’s experience in learning the other. Prerequisite: Undergraduates and graduate students in other departments are welcome. Please contact mmmaxwell@upenn.edu to request permission to register.
Taught by: Nalaka Gooneratne, MD
Also Offered As: BE 608
Activity: Lecture
1.0 Course Unit

MTR 621 Cell and Gene Therapy
This course will provide students with a general overview of translational research in the area of gene and cell therapy. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area. Prerequisite: At least one course in immunology.
Taught by: Michael C. Milone, MD, PhD, Elizabeth Hexner, MD, MSTR
Course usually offered in spring term
Also Offered As: CAMB 707, REG 621
Activity: Lecture
1.0 Course Unit

MTR 622 New Trends in Medicine and Vaccine Discovery
Modern drug discovery has evolved to include human genetic diagnosis and various biological approaches which has enabled progress in a variety of fields, including rare diseases, immuno-oncology, precision medicine, and biomarkers. The goal of this course is for students to understand newer treatment modalities and approaches beyond one size fits all small molecule drugs, as well as the technologies that empower them. Students will learn regulatory processes that govern medicine discovery and development and also consider business and societal aspects of medical progress. Students will be able to apply concepts directly to work in the healthcare industry. Students will be taught by experts in the field internal and external to Penn. Prerequisite: Permission required to register. Please contact Rachel McGarrigle (rmcg@upenn.edu) to request a permit.
Taught by: Claudine Bruck, PhD
Course usually offered in fall term
Also Offered As: REG 622
Activity: Lecture
1.0 Course Unit
MTR 623 Writing An NIH Grant
This course will provide a comprehensive overview of the grant writing process. Audience: Faculty who have not written an NIH grant before or need guidance.
Taught by: Ragini Verma, PhD
Activity: Lecture
1.0 Course Unit

MTR 999 Master of Science in Translational Research LAB
Activity: Independent Study
1.0 Course Unit

Master of Urban Spatial Analytics (MUSA)

MUSA 500 Spatial Statistics and Data Analysis
This hands-on course will provide an introduction to statistical methods and will serve as a prequel to ESE502. Topics covered will include exploratory univariate analysis, correlation and Chi-square analysis, t-tests and ANOVA. Non-parametric alternatives to the standard tests will be discussed. OLS regression, including assumptions and diagnostics, will be covered in detail. Heavy emphasis will be placed on the application of each method covered. The course will conclude with an introduction to spatial statistical methods and a brief overview of linear algebra and matrix notation for OLS and spatial regression. Students will learn to use JMP-IN, ArcGIS and GeoDa for data analysis.
Taught by: Eugene Brusilovsky
Course usually offered in fall term
Also Offered As: CPLN 671
Activity: Lecture
1.0 Course Unit

MUSA 503 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with vector-oriented (i.e. drawing-based) geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Previous experience in GIS is not required.
Taught by: Tomlin or O’Neill
Course usually offered in fall term
Also Offered As: CPLN 503
Activity: Lecture
1.0 Course Unit

MUSA 508 Public Policy Analytics
Data scientists convert data into actionable intelligence. While most private sector data scientists optimize for profit, their public sector counterparts must address multiple complex bottom lines including economics, equity, politics, bureaucracy and social cohesion. This course teaches students how to wrangle government data; how to mine it for descriptive and predictive intelligence and how to communicate results to non-technical decision-makers. Broadly, coursework is focused on spatial analysis and geospatial machine learning and taught 70/30 in R and ArcGIS. Use cases include home price prediction, forecasting in criminal justice, land use modeling, transportation modeling and real estate site suitability. Prerequisites include vector and raster GIS and introductory statistics.
Taught by: Ken Steif
Course usually offered in fall term
Also Offered As: CPLN 592
Activity: Lecture
1.0 Course Unit

MUSA 509 Geospatial Cloud Computing & Visualization
This course teaches students how to collect, store, wrangle and display cartographic data in a cloud-based setting. Students will learn a reproducible approach for pulling spatial data from APIs with emphasis on PostGIS, Socrata and BigQuery; to wrangle these data in python; and visualize in various platforms including Seaborn and Carto. Students will build their own APIs and eventually develop their own introductory custom web applications. This course is the first in a progression and leads to the Spring course on Javascript Programming for Planning (a class on building comprehensive mapping applications.)
Taught by: Andy Eschbacher
Activity: Lecture
1.0 Course Unit

MUSA 550 Geospatial Data Science in Python
This course will provide students with the knowledge and tools to turn data into meaningful insights, with a focus on real-world case studies in the urban planning and public policy realm. Focusing on the latest Python software tools, the course will outline the ‘pipeline’ approach to data science. It will teach students the tools to gather, visualize, and analyze datasets, providing the skills to effectively explore large datasets and transform results into understandable and compelling narratives. The course is organized into five main sections: Exploratory Data Science; Introduction to Geospatial Data Science; Data Ingestion & Big Data; Geospatial Machine Learning; Data Visualization & Storytelling.
Taught by: Nick Hand
Course usually offered in fall term
Also Offered As: CPLN 672
Activity: Seminar
1.0 Course Unit

MUSA 551 Spatial Statistics and Data Analysis
This course will introduce City Planning, MUSA and design graduate students to Javascript. Students will learn the logic and syntax of the Java programming language for use in a simple web application (weeks 1 to 7); as well as how to program database and map-oriented web and desktop applications using Javascript (weeks 8 to 14). The ‘hands-on’ uses of Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.
Taught by: Faculty
Course usually offered in fall term
Also Offered As: CPLN 692
Activity: Lecture
1.0 Course Unit
MUSA 650 Geospatial Machine Learning in Remote Sensing
Satellite remote sensing is the science of converting raw aerial imagery into actionable intelligence about the built and natural environment. This course will provide students the foundation necessary for the application of machine learning algorithms on satellite imagery. Use cases include building footprint detection, multi-class object detection in cities and land cover/land use classification. The students will learn basic concepts of machine learning, including unsupervised and supervised learning, model selection, feature elimination, cross-validation and performance evaluation. After learning traditional methods and algorithms, the course will focus on recent deep learning methods using convolutional neural networks and their application on semantic image segmentation. Prerequisites include MUSA 508, Geospatial Data Science in Python or equivalent.
Taught by: Dr. Guray Erus
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MUSA 795 MUSA SUMMER: INTRODUCTION TO GIS & STATISTICS
The summer GIS Bootcamp prepare students for the intermediate GIS classes that begin in the fall semester. It begins with a discussion of GIS in planning and the social sciences and then moves on to topics related to spatial data, geocoding, projection, vector and raster-based geoprocessing, 3D visualization and more. Each class includes a brief lecture and a walk through involving actual planning related data. Course enrollment is by permit only. Please contact Roslynne Carter (CPLN Dept.) at roslynne@design.upenn.edu.
Taught by: Faculty
Course usually offered summer term only
Activity: Lecture
0.0 Course Units

MUSA 800 MUSA Capstone Project
One-term course offered either term
Activity: Seminar
1.0 Course Unit

MUSA 801 MUSA/Smart Cities Practicum
The purpose of this course is for students to work with city and non-profit clients on data science that convert government data into actionable public policy intelligence. Groups of 2-3 students will work with the client to understand the business process, wrangle data, develop spatial and aspatial analytics and serve these outputs to non-technical decision makers through the medium of data visualization. Students will be mentored by MUSA Faculty and advised by someone from the partnering agency. Prerequisites: students must have a working knowledge of R and experience building both spatial and statistical models including machine-learning models. Prerequisites include MUSA-507/CPLN-590 and either CPLN-505 or MUSA-500. Students must have taken or be enrolled concurrently in MUSA-601 or MUSA-800. Students without these specific prerequisites are asked to contact the instructor. Please contact the instructor for full admission details, no later than November 15, 2018. Interested students are asked to contact the instructor to learn about specific projects and how to apply for the course.
Taught by: Ken Steif
Course usually offered in spring term
Also Offered As: CPLN 790
Prerequisite: (MUSA 507 OR CPLN 590) AND (CPLN 505 OR MUSA 500)
Activity: Seminar
1.0 Course Unit

Materials Science and Engineering (MSE)

MSE 099 Undergraduate Research and/or Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student’s academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term. Note: a maximum of 2 c.u. of MSE 099 may be applied toward the B.A.S. or B.S.E. degree requirements. Open to all students.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Open to all students

MSE 201 Materials Lab I
This hands-on laboratory course covers mechanical testing, metal processing and various imaging methods.
Taught by: Karen I. Winey
Course usually offered in fall term
Prerequisite: ENGR 105 AND CHEM 101
Corequisite: MSE 220
Activity: Laboratory
0.5 Course Units

MSE 202 Materials Lab II
This hands-on laboratory course includes phase diagrams, thermal transitions and electronic and optical properties.
Taught by: Karen I. Winey
Course usually offered in spring term
Prerequisite: MSE 201
Corequisite: MSE 215 AND MSE 260
Activity: Laboratory
0.5 Course Units

MSE 215 Introduction to Functional Materials: From Macro to Nanoscale
The purpose of this course is: 1) to introduce key concepts underlying the design, properties and processing of functional materials and their applications, and 2) to apply these concepts in the rapidly growing field of nanomaterials and nanotechnology. Fundamental chemical and physical principles underlying electronic, dielectric, optical and magnetic properties will be developed in the context of metals, semiconductors, insulators, crystals, glasses, polymers and ceramics. Miniaturization and the nanotechnology revolution confronts materials science with challenges and opportunities. Examples in which nanoscale materials exhibit qualitatively different properties compared to bulk will be emphasized.
Course usually offered in spring term
Prerequisite: MSE 221
Activity: Lecture
1.0 Course Unit
MSE 220 Introduction to Materials Science and Engineering
The course is an introduction to the most important concepts in materials science and engineering. You will learn how the control of chemical bonding, synthesis, processing, structure and defects can be used to tailor the properties and performance of materials for applications that range from sustainable sources of energy, to construction, to consumer electronics. Case studies are also included to highlight environmental issues associated with materials degradation. This course includes lab demonstrations of key materials properties and a final project where students research an area of materials technology of their own interest.
Taught by: Dr. Peter Davies
Course usually offered in fall term
Also Offered As: MEAM 220
Prerequisite: CHEM 101 OR PHYS 140 OR MEAM 110
Activity: Lecture
1.0 Course Unit

MSE 221 Quantum Physics of Materials
This course develops the background in basic physics required to understand the behavior of electrons in atoms, molecules and solids. Beginning with experiments and ideas that led to the foundation and postulates of Quantum Mechanics, the behavior of an electron in simple potential wells is treated. The electron in a harmonic oscillator well and the Coulomb potential of a hydrogen atom are treated next. Pauli’s exclusion principle and generalization to multi-particle systems are introduced. The Fermi energy, density of states and free electron band structure will be introduced. Many state-of-the-art materials analysis techniques will also be demonstrated throughout the course.
One-term course offered either term
Prerequisites: PHYS 140, 141 concurrent and MATH 240
Activity: Lecture
1.0 Course Unit
Notes: Meets Natural Science Requirement

MSE 250 Nano-scale Materials Lab
In this class you will learn laboratory methods used to synthesize materials, to examine the structure of materials, to measure electrical, mechanical and thermal properties, and to investigate the relationships between processing, structure and properties. Emphasis is placed on laboratory skills, technical understanding, and technical communications (figures, writing). The laboratory exercises involve: 1) learning how to use state of the art equipment for studying the properties and internal structure of materials, 2) qualitative and quantitative interpretation of data and observations, and 3) the development of analytical skills necessary to form general and fundamental conclusions from observations and data. This course focuses on how materials’ structure and chemistry can be controlled to tailor properties and how properties of nanoscale materials can differ significantly from their bulk counterparts.
Course usually offered in spring term
Prerequisite: MSE 220
Activity: Lecture
1.0 Course Unit

MSE 260 Energetics of Macro and Nano-scale Materials
Basic principles of chemical thermodynamics as applied to macro and nano-sized materials. This course will cover the fundamentals of classical thermodynamics as applied to the calculation and prediction of phase stability, chemical reactivity and synthesis of materials systems. The size-dependent properties of nano-sized systems will be explored through the incorporation of the thermodynamic properties of surfaces. The prediction of the phase stability of two and three component systems will be illustrated through the calculation and interpretation of phase diagrams for metallic, semiconductor, inorganic systems.
Course usually offered in spring term
Prerequisite: CHEM 102
Activity: Lecture
1.0 Course Unit

MSE 296 Study Abroad
Activity: Lecture
1.0 Course Unit

MSE 301 Materials Lab III
This hands-on laboratory course covers X-ray diffraction, ceramic synthesis, nanoparticle synthesis, and thin film fabrication, as well as superconductivity and electro-optical properties of nanoparticles.
Taught by: Karen I. Winey
Course usually offered in fall term
Prerequisite: MSE 201 AND MSE 202
Corequisite: MSE 360
Activity: Laboratory
0.5 Course Units

MSE 330 Self-Assembly of Soft Materials
Soft matter is found in diverse applications including sports (helmets & cloths); food (chocolate, egg); consumer products (e.g., lotions and shampoo); and devices (displays, electronics). Whereas solids and liquids are typically hard and crystalline or soft and fluid, respectively, soft matter can exhibit both solid and liquid like behavior. In this class, we investigate the thermodynamic and dynamic principles common to soft matter as well as soft (weak) forces, self-assembly and phase behavior. Classes of matter include colloidal particles, polymers, liquid crystalline molecules, amphiphilic molecules, biomacromolecules/membranes, and food. Active learning activities will be included.
Course usually offered in fall term
Also Offered As: BE 330
Prerequisite: CHEM 102 OR MSE 220 OR BE 220
Activity: Lecture
1.0 Course Unit

MSE 360 Structure at the Nanoscale
To understand the atomic arrangements of crystalline matter, this class focuses on crystallography, symmetry, and diffraction techniques. The first half focuses on learning how to describe the structure of crystalline matter through the basics of crystallography and symmetry by introducing two-dimensional symmetry operations, point, and plane groups; this knowledge is then extended into three-dimensions to arrive at an understanding of space lattices and space groups. The second half is concerned with applying this information to understand structures through various diffraction and microscopy techniques.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MSE 393 Materials Selection
Throughout mankind's history, materials have played a critical role in civilization and technology. The selection of materials has been based on availability and functionality. The rapid advances of materials technologies in the last 150 years, however, have made nearly all classes and forms of materials available, at a cost. These costs include the dollars and cents costs that typically accompany the use of stronger, lighter materials, but environmental costs are also important and significant. Therefore, in theory at least, materials selection can now proceed on a rational basis as an optimization process involving performance and costs - both financial and environmental. In this course, we will focus on structural applications where mechanical design is central. By the end of the course, the students can expect to acquire a level of engineering familiarity with a broad range of materials, and be prepared to undertake responsible material design projects in the future.
Prerequisite: Junior standing or approval of the instructor
Course usually offered in spring term
Prerequisite: MSE 220
Activity: Lecture
1.0 Course Unit

MSE 405 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in spring term
Also Offered As: MEAM 405, MEAM 505, MSE 505
Prerequisite: MSE 220 OR MEAM 210 OR MATH 240
Activity: Lecture
1.0 Course Unit

MSE 430 Introduction to Polymers
Polymers are one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in fall term
Also Offered As: CBE 430, CBE 510, MSE 580
Prerequisites: MSE 260 or CBE 231, CHEM 221, MEAM 203
Activity: Lecture
1.0 Course Unit

MSE 440 Phase Transformations
The state of matter is dependent upon temperature, thermal history, and other variables. In this course the science of structural transitions is treated, with the purpose in mind of utilizing them for producing materials with superior properties. The subjects covered include the methods of structural analysis, solidification, solid state transformation, and order-disorder transition.
Course usually offered in spring term
Prerequisites: MSE 220, MSE 260, or equivalent or permission of the instructor
Activity: Lecture
1.0 Course Unit

MSE 455 Electrochemical Engineering of Materials
After introducing electrochemical concepts (redox reactions, electrolytic versus galvanic cells, standard oxidation potentials), this course will cover the broad impact of electrochemical phenomena on materials. Topics that will be discussed include: (1) Materials extraction from their ores to finished products by electrowinning, (2) Chemical refining (Mond process) and electrorefining of materials, (3) Materials degradation by destructive electrochemical corrosion, (4) Three-dimensional nanostructured materials by selective electrochemical corrosion, (5) Enhancing the electrochemical performance of materials via nanostructuring - e.g. lithium-ion battery electrodes; (6) Enhancing the electrochemical performance of materials via surface chemistry - e.g. oxygen evolution electrocatalysts; (7) Light-enhanced electrochemical performance of materials - e.g. solar water splitting photoelectrocatalysts. Students will be engaged in interactive classroom activities.
Course usually offered in fall term
Also Offered As: MSE 555
Activity: Lecture
1.0 Course Unit

MSE 460 Computational Materials Science
This course provides an introduction to modeling and simulation in materials science, covering continuum methods (e.g. finite element methods) and atomistic and molecular simulation (e.g. molecular dynamics). These tools play an increasingly important role in modern engineering. You will get hands-on training in both the fundamentals and applications of these methods to key engineering problems. The lectures will provide an exposure to areas of application, based on the scientific exploitation of the power of computation. We will use software packages (Comsol and LAMMPS) and thus extensive programming skills are not required. Matlab background needed for the course will be covered in a self-contained module. Junior or Senior Standing. Ability to write simple computer codes would be an advantage.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
MSE 465 Fabrication and Characterization of Micro and Nanostructured Materials
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and biological applications. Basic principles of materials chemistry, physics, thermodynamics and surface/interfacial science are applied to solid state, liquid, and colloidal approaches to making materials. A wide range of nano- and microfabrication techniques, including photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 30% of class time and 50% of the homework devoted to hands on experiences and lab report writing. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3 lab reports, 4 problem sets with journal paper reading assignment, and a final project design.
Course usually offered in spring term
Also Offered As: MSE 565
Activity: Lecture
1.0 Course Unit

MSE 495 Senior Design
The senior design course is a two-semester capstone program that gives students the opportunity to design and execute an original experimental or theoretical project in materials science, engineering, or product/device development that is solving a real world problem. Students will work closely with a scientific advisor in their lab and meet once a week in the classroom to learn from an innovative curriculum that will build real-world skills in the context of their research and design project. These skills include project management, networking, teamwork, impactful written and verbal communications, upward management, self-reflection and feedback. Students will also learn how to design research in the context of having an impact on the world. This will be through weekly vignettes of innovative materials science solutions that solve problems in industries ranging from construction to healthcare to consumer products.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSE 496 Senior Design
The senior design course is a two-semester capstone program that gives students the opportunity to design and execute an original experimental or theoretical project in materials science, engineering, or product/device development that is solving a real world problem. Students will work closely with a scientific advisor in their lab and meet once a week in the classroom to learn from an innovative curriculum that will build real-world skills in the context of their research and design project. These skills include project management, networking, teamwork, impactful written and verbal communications, upward management, self-reflection and feedback. Students will also learn how to design research in the context of having an impact on the world. This will be through weekly vignettes of innovative materials science solutions that solve problems in industries ranging from construction to healthcare to consumer products.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 500 Experimental Methods in Materials Science
This laboratory course introduces students to a variety of experimental methods used in materials science and engineering. Hands-on training will be provided for atomic force microscopy, X-ray diffraction and scattering, mechanical testing with image capture, and dynamic light scattering. Students will use numerous software packages for data collection and analysis, as well as being introduced to LabVIEW as a method for customizing experiments. In addition, students will see demonstrations of scanning electron microscopy, transmission electron microscopy, and electron diffraction and analyze data from these methods. The format for the course will include a weekly lecture (1.5 hours), a weekly lab session (4 hours) and six assignments. Prerequisite: Permission of the Undergraduate Curriculum Chair and Instructor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSE 505 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in spring term
Also Offered As: MEAM 405, MEAM 505, M5E 405
Prerequisite: MSE 220 OR MEAM 210 OR MATH 240
Activity: Lecture
1.0 Course Unit

MSE 506 Failure Analysis of Engineering Materials
This course will introduce students to the broad field of failure through hands-on real-life examples of specific failures. All engineering materials classes will be considered, including metals, polymers, elastomers, ceramics, and glasses. Emphasis will be placed on understanding how to actually analyze a failed component and understand the cause of failure. Several classes will be conducted by outside experts from places like the NTSB, FBI and OSHA.
Taught by: David Pope, Prof.
Course usually offered in fall term
Also Offered As: MEAM 506
Prerequisite: MSE 220 AND (MSE 393 OR MEAM 354)
Activity: Lecture
1.0 Course Unit

MSE 507 Fundamentals of Materials
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them. The course assumes an undergraduate background in any area of physical/chemical science and undergraduate mathematics appropriate to this. The course will also be accessible to students of applied mathematics.
Course usually offered in fall term
Also Offered As: MEAM 507
Activity: Lecture
1.0 Course Unit
MSE 515 Mathematics for Materials Science
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSE 520 Structure of Materials
Crystal structure and bonding. Symmetry, line, plane, point, and space groups. Symmetry considerations in structure-property relations. Physical optics, diffraction as Fourier transforms. Effects of size, shape, temperature and distortion on diffraction intensity. Diffraction of gas, liquid, fibers, and DNA. Diffuse scattering, order/disorder. Pair distribution function, inverse problem, small angle scattering. Radiation-matter interaction, scattering physics, atomic and electronic spectroscopy. Prerequisite: Permission of the Undergraduate Curriculum Chair and Instructor
Taught by: I-Wei Chen
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 525 Nanoscale Science and Engineering
Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustention of current approaches, and for the development of revolutionary designs and applications. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in fall term
Also Offered As: ESE 525
Prerequisite: ESE 218 OR PHYS 240 OR MSE 220
Activity: Lecture
1.0 Course Unit

MSE 530 Thermodynamics and Phase Equilibria
Fundamental elements of engineering thermodynamics, statistical thermodynamics, chemical thermodynamics and defect thermodynamics. Thermodynamic functions, stability, phase transitions, mixtures (gases, condensed matter, polymer solution), defects and interfaces. Phase diagrams and predominance diagrams. Applications to energy problems (engines, efficiency, power, electrochemical cells) and properties (Curie’s law, rubber elasticity, specific heat, phonon/photon spectra, constitutive equations, equation of states). Prerequisite: Permission of the Undergraduate Curriculum Chair and instructor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSE 536 Electronic Properties of Materials
This course will introduce the physical principles underlying broad spectrum of electronic properties in the solid state. Starting with the band structure of solids, the course will give an overview of electronic, dielectric, magnetic, thermal and optical properties of materials. The treatment will use quantum mechanical and statistical mechanical concepts familiar to students at the undergraduate level. Commonly used theories and models will be introduced and their predictions will be compared with observations. Students who have taken MSE 221/260 and/or MSE 570/MSE 575 will benefit from this advanced introduction to material properties.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 537 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course. Prerequisite: Freshman physics or consent of instructor.
Course not offered every year
Also Offered As: MEAM 537
Prerequisite: MEAM 354
Activity: Lecture
1.0 Course Unit

MSE 540 Phase Transformations
The phase of a material determines macroscopic properties such as strength, diffusivity, and permeability. Whereas thermodynamics provides an idealistic understanding of phase behavior, the real phase (composition) and morphology of a solid material depends on the rate of transformation from one state to another. Namely, kinetics is the study of the rates at which systems approach the ideal state predicted by thermodynamics. This course will introduce the physical principles underlying broad spectrum of electronic properties in the solid state. Starting with the band structure of solids, the course will give an overview of electronic, dielectric, magnetic, thermal and optical properties of materials. The treatment will use quantum mechanical and statistical mechanical concepts familiar to students at the undergraduate level. Commonly used theories and models will be introduced and their predictions will be compared with observations. Students who have taken MSE 221/260 and/or MSE 570/MSE 575 will benefit from this advanced introduction to material properties.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
MSE 545 Materials for Energy and Environmental Sustainability
This course will cover the fundamental materials science issues central to the design of sustainable energy technology. The goal of this course is to expose students to the emerging advances in materials science and materials chemistry that underpin technologies for energy conversion (fuel cells, thermoelectrics, photovoltaics, wind energy etc.), storage (biofuels, artificial photosynthesis, batteries etc) and distribution (smart grids and hydrogen and methane economy concepts etc.) and to place these in a real world context. This class will emphasize concepts in ‘green materials and green engineering practices’ that are emerging with a global focus on ‘Sustainable Technology.’ ‘Sustainability is defined as meeting the needs of the present without compromising the ability of future generations to meet their needs.’ Engineering materials and processes at all scales; molecular/nanometer, micro, and the macro-scale are critical to developing the tools society required to meet the growing needs for energy and sustainable materials for the built environment. This course is appropriate for graduate students and advanced undergraduates in Penn's Material Science Programs. Core MSE curriculum components in thermodynamics, structure, electronic & ionic transport, mechanics, polymers and optical materials will be expected, and exposure to the preparation in basic Chemistry and Physics will be advantageous in this highly interdisciplinary course.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSE 550 Elasticity and Micromechanics of Materials
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eshelby's problem etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed. Prerequisite: graduate standing or permission of the instructor.
Taught by: Reina Romo
Course usually offered in fall term
Also Offered As: MEAM 519
Activity: Lecture
1.0 Course Unit

MSE 555 Electrochemical Engineering of Materials
After introducing electrochemical concepts (redox reactions, electrolytic versus galvanic cells, standard oxidation potentials), this course will cover the broad impact of electrochemical phenomena on materials. Topics that will be discussed include: (1) Materials extraction from their ores to finished products by electrowinning, (2) Chemical refining (Mond process) and electorefining of materials, (3) Materials degradation by destructive electrochemical corrosion, (4) Three-dimensional nanostructured materials by selective electrochemical corrosion, (5) Enhancing the electrochemical performance of materials via nanostructuring - e.g. lithium-ion battery electrodes; (6) Enhancing the electrochemical performance of materials via surface chemistry - e.g. oxygen evolution electrocatalysts; (7) Light-enhanced electrochemical performance of materials - e.g. solar water splitting photoelectrocatalysts. Students will be engaged in interactive classroom activities.
Course usually offered in fall term
Also Offered As: MSE 455
Activity: Lecture
1.0 Course Unit

MSE 561 Atomic Modeling in Materials Science
This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis of the results such as radial distribution function, thermodynamics deduced from the molecular dynamics, fluctuations, correlations and autocorrelations. 2. Semi-empirical descriptions of atomic interactions: pair potentials, embedded atom method, covalent bonding, ionic bonding. Basics of the density functional theory. Mechanics, condensed matter physics, thermodynamics and statistical mechanics needed in interpretations are briefly explained. Prerequisite: Ability to write a basic code in a computer language such as fortran, C, C++
Course usually offered in spring term
Also Offered As: MEAM 553
Activity: Lecture
1.0 Course Unit

MSE 565 Fabrication and Characterization of Micro and Nanostructured Materials
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and biological applications. Basic principles of materials chemistry, physics, thermodynamics and surface/interfaces science are applied to solid state, liquid, and colloidal approaches to making materials. A wide range of nano- and microfabrication techniques, including photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 30% of class time and 50% of the homework devoted to hands on experiences and lab report writing. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3 lab reports, 4 problem sets with journal paper reading assignment, and a final project design. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Also Offered As: MSE 465
Prerequisite: MSE 360
Activity: Lecture
1.0 Course Unit

MSE 570 Physics of Materials I
Failures of classical physics and the historical basis for quantum theory. Postulates of wave mechanics; uncertainty principle, wave packets and wave-particle duality. Schroedinger equation and operators; eigenvalue problems in 1 and 3 dimensions (barriers, wells, hydrogen, atom).
Perturbation theory; scattering of particles and light. Use of computer-aided self-study will be made. Undergraduate physics and math through modern physics and differential equations
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MSE 570 Statistical Mechanics
Statistical Mechanics is a unique branch of physics that permeates our understanding of matter at all length scales, from nanometers to stellar dimensions, and ranging in temperatures from pico-Kelvin (or lower) to billions of degrees Kelvin. This course will provide an overview of select topics in equilibrium and non-equilibrium statistical mechanics. The course will introduce the basic postulates of classical and quantum equilibrium statistical mechanics, explain the methodology of calculating observables, and discuss several applications in diverse fields. The second part of the course will introduce the methodology of non-equilibrium processes and discussing important theorems and results in the linear response regime. Finally, a brief discussion of systems far from equilibrium will be presented. Select applications from condensed matter physics, chemistry, materials science, biology, astrophysics, economics and meteorology will be used to illustrate the fundamental principles. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 575 Statistical Mechanics
This course provides an overview of the latest techniques for the characterization of materials with synchrotron x-rays and electron microscopy. Emphasis is placed on understanding of x-ray and electron interactions with matter, and how these may be exploited to characterize structure and chemistry at the nanometer to atomic scale. Prerequisite: Graduate students: Background in solid-state physics, x-ray crystallography and quantum mechanics is strongly recommended. Undergraduates: MSE 570.
Taught by: Eric Stach
Activity: Lecture
1.0 Course Unit

MSE 611 Advanced Synchrotron and Electron Characterization of Materials
This course discusses the optical properties of modern materials engineered for specific functionality and cover exciting new developments being made in this rapidly evolving field. Emphasis is placed on how modern nanotechnology reshapes the light-matter interaction and delivers novel optical properties that are not available in nature.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 640 Optical Materials
This course discusses the optical properties of modern materials engineered for specific functionality and cover exciting new developments being made in this rapidly evolving field. Emphasis is placed on how modern nanotechnology reshapes the light-matter interaction and delivers novel optical properties that are not available in nature.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 650 Mechanics of Soft and Biomaterials
This course is aimed to expose the students to a variety of topics in material mechanics a variety of biological and engineering materials. The emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in fall term
Also Offered As: CBE 430, CBE 510, MSE 430
Prerequisites: MSE 260 or CBE 231, CHEM 221, MEAM 203
Activity: Lecture
1.0 Course Unit

MSE 597 Master’s Thesis Research
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

MSE 599 Master’s Indep Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

MSE 610 Transmission Electron Microscopy
Theory and application of transmission electron microscopy methods to problems in materials science and engineering, condensed matter physics, soft matter, polymeric materials, inorganic chemistry and chemical engineering. The principles of microscope operation, electron scattering, image formation and spectroscopy will be described, with an emphasis on both theory and experiment. With laboratory.
Taught by: Eric Stach
Course not offered every year
Activity: Lecture
1.0 Course Unit

MSE 640 Optical Materials
This course discusses the optical properties of modern materials engineered for specific functionality and cover exciting new developments being made in this rapidly evolving field. Emphasis is placed on how modern nanotechnology reshapes the light-matter interaction and delivers novel optical properties that are not available in nature.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 790 Selected Topics in Materials Science and Engineering
Students should check department office for special topics.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

MSE 895 Teaching Practicum.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

Mathematical Sciences (MTHS)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).
MTHS 100 Mathematical Foundations for Data Analytics
This course provides an introduction to key topics that form the foundation for further study in mathematics, data analytics, and statistics. Topics covered include finite math, logic, algebra (including basics of matrix algebra) functions, probability, and a conceptual introduction to calculus. Through this course, students will develop both an understanding of the concept the ability to apply the concepts and techniques to analysis and problem-solving. Course format includes readings, lectures and demonstrations, and extensive hands-on practice with instructor and peer feedback.
Taught by: Dennis Deturck
Activity: Online Course
1.0 Course Unit

MTHS 200 Maths All Around
This course covers topics logic, sets, probability, history and philosophy of mathematics, graph theory, game theory, geometry, and their relevance to contemporary science and society.
Activity: Online Course
1.0 Course Unit

MATH 110 Calculus for Wharton Students
Differential calculus, integral calculus, series, differential equations and elements of multivariable calculus, with an emphasis on applications.
1.0 Course Unit

MATH 114 Calculus, Part II
Functions of several variables, vector-valued functions, partial derivatives and applications, double and triple integrals, conic sections, polar coordinates, vectors and vector calculus, first order ordinary differential equations. Applications to physical sciences. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Prerequisite: MATH 104
Activity: Recitation
1.0 Course Unit
Notes: Non-LPS recitation sections are listed as TBD because they will be meeting during one of the lecture periods. For more information please refer to: <a href='https://www.math.upenn.edu/undergraduate/calculus-penn'>https://www.math.upenn.edu/undergraduate/calculus-penn</a>

MATH 115 Calculus, Part II with Probability and Matrices
Functions of several variables, partial derivatives, multiple integrals, differential equations; introduction to linear algebra and matrices with applications to linear programming and Markov processes. Elements of probability and statistics. Applications to social and biological sciences. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Prerequisite: MATH 104
Activity: Recitation
1.0 Course Unit
Notes: This is a Formal Reasoning course.

MATH 116 Honors Calculus
Students who are interested in math or science might also want to consider a more challenging Honors version of Calculus II and III, Math 114 and Math 260 (the analogues of Math 114 and Math 240, respectively). These courses will cover essentially the same material as 114 and 240, but more in depth and involve discussion of the underlying theory as well as computations.
One-term course offered either term
Activity: Recitation
1.0 Course Unit
Notes: This is a Formal Reasoning course.

MATH 122 Community Algebra Initiative
Community Algebra Initiative
One-term course offered either term
Activity: Lecture
1.0 Course Unit

MATH 123 Community Math Teaching Project
This course allows Penn students to teach a series of hands-on activities to students in math classes at University City High School. The semester starts with an introduction to successful approaches for teaching math in urban high schools. The rest of the semester will be devoted to a series of weekly hands-on activities designed to teach fundamental aspects of geometry. The first class meeting of each week, Penn faculty teach Penn students the relevant mathematical background and techniques for a hands-on activity. During the second session of each week, Penn students will teach the hands-on activity to a small group of UCHS students. The Penn students will also have an opportunity to develop their own activity and to implement it with the UCHS students.
Course not offered every year
Activity: Lecture
1.0 Course Unit
MATH 170 Ideas in Mathematics
Topics from among the following: logic, sets, calculus, probability, history and philosophy of mathematics, game theory, geometry, and their relevance to contemporary science and society. Prerequisite: May also be counted toward the General Requirement in Natural Science & Mathematics.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: May also be counted toward the General Requirement in Natural Science & Mathematics.

MATH 202 Proving Things: Analysis
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying real and complex numbers, sequences, series, continuity, differentiability and integrability: Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
One-term course offered either term
Corequisite: MATH 104 OR MATH 114 OR MATH 240
Activity: Seminar
1.0 Course Unit

MATH 203 Proving things: Algebra
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying arithmetic, algebra, linear algebra, groups, rings and fields. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
One-term course offered either term
Corequisite: MATH 104 OR MATH 114 OR MATH 240
Activity: Lecture
1.0 Course Unit

MATH 210 Mathematics in the Age of Information
This course counts as a regular elective for both the Mathematics Major and Minor. This is a course about mathematical reasoning and the media. Embedded in many stories one finds in the media are mathematical questions as well as implicit mathematical models for how the world behaves. We will discuss ways to recognize such questions and models, and how to think about them from a mathematical perspective. A key part of the course will be about what constitutes a mathematical proof, and what passes for proof in various media contexts. The course will cover a variety of topics in logic, probability and statistics as well as how these subjects can be used and abused.
One-term course offered either term
Prerequisite: MATH 114 OR MATH 115
Activity: Lecture
1.0 Course Unit

MATH 240 Calculus, Part III
Linear algebra: vectors, matrices, systems of linear equations, vector spaces, subspaces, spans, bases, and dimension, eigenvalues, and eigenvectors, matrix exponentials. Ordinary differential equations: higher-order homogeneous and inhomogeneous ODEs and linear systems of ODEs, phase plane analysis, non-linear systems.
One-term course offered either term
Prerequisite: MATH 114
Activity: Recitation
1.0 Course Unit
Notes: Non-LPS recitation sections are listed as TBD because they will be meeting during one of the lecture periods. For more information please refer to: <a href='https://www.math.upenn.edu/undergraduate/calculus-penn'>https://www.math.upenn.edu/undergraduate/calculus-penn</a>

MATH 241 Calculus, Part IV
Partial differential equations and their solutions, including solutions of the wave, heat and Laplace equations, and Sturm-Liouville problems. Introduction to Fourier series and Fourier transforms. Computation of solutions, modeling using PDE’s, geometric intuition, and qualitative understanding of the evolution of systems according to the type of partial differential operator.
One-term course offered either term
Prerequisite: MATH 240 OR MATH 260
Activity: Recitation
1.0 Course Unit

MATH 260 Honors Calculus, Part II
This is an honors version of Math 240 which explores the same topics but with greater mathematical rigor.
Course not offered every year
Prerequisite: MATH 116
Activity: Recitation
1.0 Course Unit

MATH 280 Entropy Math Evolution
The essential idea is that life exists because if increases overall entropy quicker than other processes. The course will include an introduction to thermodynamics as well as to the information theory definition of entropy. Eventually I want to apply this to other systems. For instance, I think the theory explains why political candidates who create chaos, tweet and require more bits of information to describe each day are favored by the second law. Demetrius makes a distinction between robust high entropy environments and precarious low entropy environments which is a very interesting in many different systems.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

MATH 290 Undergraduate Mathematics Research Course
This is a project-oriented mathematics research course that teaches students to solve real-world problems by constructing and analyzing mathematical models. Typically the problems considered will come from mathematics, chemistry, biology, and materials science but sometimes they will also come from economics, finance, and social sciences. The research problems in the course vary from year to year.
Activity: Lecture
1.0 Course Unit

MATH 299 Undergraduate Research in Mathematics
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
MATH 312 Linear Algebra
Linear transformations, Gauss Jordan elimination, eigenvalues and eigenvectors, theory and applications. Mathematics majors are advised that MATH 312 cannot be taken to satisfy the major requirements. Prerequisite: Students who have already received credit for either Math 370, 371, 502, or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and 313/513.
Course not offered every year
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or MATH 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.

MATH 313 Computational Linear Algebra
Many important problems in a wide range of disciplines within computer science and throughout science are solved using techniques from linear algebra. This course will introduce students to some of the most widely used algorithms and illustrate how they are actually used. Prerequisite: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 313. Students can receive credit for at most one of Math 312 and Math 313. Some specific topics: the solution of systems of linear equations by Gaussian elimination, dimension of a linear space, inner product, cross product, change of basis, affine and rigid motions, eigenvalues and eigenvectors, diagonalization of both symmetric and non-symmetric matrices, quadratic polynomials, and least squares optimization. Applications will include the use of matrix computations to computer graphics, use of the discrete Fourier transform and related techniques in digital signal processing, the analysis of systems of linear differential equations, and singular value decompositions with application to a principal component analysis. The ideas and tools provided by this course will be useful to students who intend to tackle higher level courses in digital signal processing, computer vision, robotics, and computer graphics.
Also Offered As: MATH 513
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313. Students can receive credit for at most one of Math 312 and Math 313.

MATH 314 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Canonical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polynomials; Symmetric and skew-symmetric tensors and exterior algebra. Prerequisite: MATH 314/514 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of Math 312 or Math 314.
Taught by: Staff.
Also Offered As: AMCS 514, MATH 514
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit
Notes: Math 314/514 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of MATH 312 and MATH 314.

MATH 320 Computer Methods in Mathematical Science I
Students will use symbolic manipulation software and write programs to solve problems in numerical quadrature, equation-solving, linear algebra and differential equations. Theoretical and computational aspects of the methods will be discussed along with error analysis and a critical comparison of methods.
Course usually offered in fall term
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 340 Discrete Mathematics I
Topics will be drawn from some subjects useful in the analysis of information and computation: logic, set theory, theory of computation, number theory, probability, and basic cryptography.
Also Offered As: LGIC 220
Prerequisite: MATH 340 OR LGIC 210
Activity: Lecture
1.0 Course Unit

MATH 341 Discrete Mathematics II
Topics will be drawn from some subjects in combinatorial analysis with applications to many other branches of math and science: graphs and networks, generating functions, permutations, posets, asymptotics.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 350 Number Theory
Congruences, Diophantine equations, continued fractions, nonlinear congruences, and quadratic residues.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 360 Advanced Calculus
Syllabus for MATH 360-361: a study of the foundations of the differential and integral calculus, including the real numbers and elementary topology, continuous and differentiable functions, uniform convergence of series of functions, and inverse and implicit function theorems.
MATH 508-509 is a masters level version of this course.
One-term course offered either term
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 361 Advanced Calculus
Continuation of MATH 360.
One-term course offered either term
Prerequisite: MATH 360 OR MATH 508
Activity: Lecture
1.0 Course Unit
MATH 370 Algebra
Syllabus for MATH 370-371: an introduction to the basic concepts of modern algebra. Linear algebra, eigenvalues and eigenvectors of matrices, groups, rings and fields. Prerequisite: MATH 502-503 is a masters level version of this course. Students who have already received credit for either Math 370, 371, 502, or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and math 313/513.
One-term course offered either term
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.

MATH 371 Algebra
Prerequisite: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.
One-term course offered either term
Prerequisite: MATH 370 OR MATH 502
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.

MATH 410 Complex Analysis
Complex numbers, DeMoivre’s theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy’s integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.
One-term course offered either term
Also Offered As: AMCS 510
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 420 Ordinary Differential Equations
After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.
One-term course offered either term
Also Offered As: AMCS 520
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 425 Partial Differential Equations
Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.
Course usually offered in fall term
Also Offered As: AMCS 525
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 432 Game Theory
A mathematical approach to game theory, with an emphasis on examples of actual games. Topics will include mathematical models of games, combinatorial games, two person (zero sum and general sum) games, non-cooperating games and equilibria.
One-term course offered either term
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 460 Topology
Point set topology: metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.
Course not offered every year
Also Offered As: MATH 500
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

MATH 465 Differential Geometry
Differential geometry of curves in the plane and in 3-space; n gauge theories Surfaces in 3-space; The geometry of the Gauss map; ons. The language of Intrinsic geometry of surfaces; Geodesics; Moving frames; of vector bundles, The Gauss-Bonnet Theorem; Assorted additional topics.
Course not offered every year
Also Offered As: MATH 501
Prerequisite: MATH 240 OR MATH 260 AND MATH 314 OR MATH 514
Activity: Lecture
1.0 Course Unit
MATH 480 Topics in Modern Math
Mathematics 480 will open with a review of the basics of real analysis (brief or extended background requires). The review will include: introduction of the real numbers through Dedekind cuts, continuity of real-valued functions on the real line; Cantor nested-interval principle, basic results for continuous functions, Maximum and Intermediate Value theorems, Heine-Borel Theorem, Uniform Continuity on closed intervals; metric spaces, convergence of sequences, Cauchy sequences, completeness, more general uniform continuity and intermediate value theorems; general topology, separation, compactness, product spaces, Tychonoff’s Theorem. Special topics in analysis: Weierstrass Polynomial Approximation Theorem, Bernstein polynomials and simultaneous approximations and derivatives, topics from divergent series, summation methods; r measure theory, the Lebesgue integral, Lp spaces, Holder, Minkowski, and and Cauchy-Schwarz inequalities; basics of Functional Analysis, normed spaces, Banach spaces and Hilbert space, with examples (Lp spaces, continuous-functions spaces), Banach spaces and spectral theory, groups and Fourier transforms, Tauberian theorems; approximation theory, again, through the prism of functional analysis; extension of the polynomial approximation theorem (Stone-Weierstrass theorem), Muntz approximation theorem (by polynomials with preassigned powers), compact operators, the Spectral theorem, Stone’s theorem (representations of the additive group of real numbers); Peter-Weyl theory (representations of compact groups). A selection from these topics as time and class preparation allow. Prerequisite: A year of analysis at the 300 level or above (for example, MATH 360 AND MATH 361 OR MATH 508 AND MATH 509; a semester of linear algebra at the 300 level or above (for example, MATH 314). Course not offered every year
Prerequisites: Prerequisite: A year of analysis at the 300 level or above (for example, Mathematics 360-361, 508-509); a semester of linear algebra at the 300 level or above (for example, Mathematics 370).
Activity: Lecture
1.0 Course Unit

MATH 499 Supervised Study
Study under the direction of a faculty member. Intended for a limited number of mathematics majors. Prerequisite: Hours and credit to be arranged.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Hours and credit to be arranged

MATH 500 Geometry-Topology, Differential Geometry
Point set topology: metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.
Course not offered every year
Also Offered As: MATH 460
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

MATH 501 Geometry-Topology, Differential Geometry
The course moves from a study of extrinsic geometry (curves and surfaces in n-space) to the intrinsic geometry of manifolds. After a review of vector calculus and a section on tensor algebra, we study manifolds and their intrinsic geometry, including metrics, connections, geodesics, and the Riemann curvature tensor. Topics include Euclidian curvature and Euler’s theorems, the Gauss map and first/second fundamental forms, the Theorema Egregium, minimal surfaces in n-space; other topics as time permits.
Course not offered every year
Also Offered As: MATH 465
Prerequisite: MATH 240 OR MATH 260 AND MATH 314 OR MATH 514
Activity: Lecture
1.0 Course Unit

MATH 502 Abstract Algebra
An introduction to groups, rings, fields and other abstract algebraic systems, elementary Galois Theory, and linear algebra – a more theoretical course than Math 370. Prerequisite: If course requirement not met, permission of instructor required. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.
Course usually offered in fall term
Prerequisite: MATH 240 OR MATH 260 AND MATH 314 OR MATH 514
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.

MATH 503 Abstract Algebra
Continuation of Math 502. Prerequisite: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.
Course usually offered in spring term
Prerequisite: MATH 502
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.

MATH 504 Graduate Proseminar in Mathematics
This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MATH 505 Graduate Proseminar in Mathematics
This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MATH 508 Advanced Analysis
Construction of real numbers, the topology of the real line and the foundations of single variable calculus. Notions of convergence for sequences of functions. Basic approximation theorems for continuous functions and rigorous treatment of elementary transcendental functions. The course is intended to teach students how to read and construct rigorous formal proofs. A more theoretical course than Math 360.
Course usually offered in fall term
Prerequisite: MATH 240 OR MATH 260 AND MATH 241 OR MATH 425
Activity: Lecture
1.0 Course Unit

MATH 509 Advanced Analysis
Course usually offered in spring term
Prerequisite: MATH 508
Activity: Lecture
1.0 Course Unit

MATH 512 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Canonical forms; Scalar products; Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Prerequisite: Math 512 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of Math 312 and Math 512.
Activity: Lecture
1.0 Course Unit

MATH 513 Computational Linear Algebra
A number of important and interesting problems in a wide range of disciplines within computer science are solved by recourse to techniques from linear algebra. The goal of this course will be to introduce students to some of the most important and widely used algorithms in matrix computation and to illustrate how they are actually used in various settings. Motivating applications will include: the solution of systems of linear equations, applications matrix computations to modeling geometric transformations in graphics, applications of the Discrete Fourier Transform and related techniques in digital signal processing, the solution of linear least squares optimization problems and the analysis of systems of linear differential equations. The course will cover the theoretical underpinnings of these problems and the numerical algorithms that are used to perform important matrix computations such as Gaussian Elimination, LU Decomposition and Singular Value Decomposition.
Also Offered As: MATH 313
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 514 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Canonical forms; Scalar products; Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Also Offered As: AMCS 514, MATH 314
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

MATH 520 Selections from Algebra
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Course not offered every year
Corequisite: MATH 502
Activity: Lecture
1.0 Course Unit

MATH 530 Mathematics of Finance
This course presents the basic mathematical tools to model financial markets and to make calculations about financial products, especially financial derivatives. Mathematical topics covered: stochastic processes, partial differential equations and their relationship. No background in finance is assumed.
Course not offered every year
Prerequisite: MATH 240 OR MATH 260 AND STAT 430
Activity: Lecture
1.0 Course Unit
MATH 546 Advanced Probability
The required background is (1) enough math background to understand proof techniques in real analysis (closed sets, uniform coverage, fourier series, etc.) and (2) some exposure to probability theory at an intuitive level (a course at the level of Ross's probability text or some exposure to probability in a statistics class). After a summary of the necessary results from measure theory, we will learn the probabilist's lexicon (random variables, independence, etc.). We will then develop the necessary techniques (Borel Cantelli lemmas, estimates on sums of independent random variables and truncation techniques) to prove the classical laws of large numbers. Next come Fourier techniques and the Central Limit Theorem, followed by combinatorial techniques and the study of random walks.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MATH 547 Stochastic Processes
Course not offered every year
Also Offered As: MATH 649, STAT 931
Prerequisite: MATH 546 OR STAT 930
Activity: Lecture
1.0 Course Unit

MATH 550 Introduction to Logic and Computability
Continuation of Math 570. Prerequisite: Permission of instructor if course prerequisites not met
Course not offered every year
Also Offered As: LGIC 320, PHIL 413
Prerequisite: MATH 570
Activity: Seminar
1.0 Course Unit

MATH 551 Introduction to Logic and Computability
Generating functions, enumeration methods, Polya's theorem, combinatorial designs, discrete probability, extremal graphs, graph algorithms and spectral graph theory, combinatorial and computational geometry. Permission of the instructor required to enroll.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 552 Combinatorial Analysis and Graph Theory
Continuation of Math 580.
Course not offered every year
Prerequisite: MATH 580
Activity: Lecture
1.0 Course Unit

MATH 553 Combinatorial Analysis and Graph Theory
The last several decades have seen major revolutions in both medical and non-medical and imaging technologies. Underlying all of these advances are sophisticated mathematical tools to model the measurement process and reconstruct images. This course begins with an introduction of the mathematical models and then proceeds to discuss the integral transforms that underlie these models: the Fourier transform, the Radon transform and the Laplace transform. We discuss how each of these transforms is inverted, both in theory and in practice. Along the way we study interpolation, sampling, approximation theory, filtering and noise analysis. This course assumes a thorough knowledge of linear algebra and a knowledge of analysis at the undergraduate level (Math 314 and Math 360 and Math 361, or Math 508 and Math 509).
Taught by: Staff.
Course not offered every year
Also Offered As: AMCS 584, BE 584
Prerequisite: MATH 114 AND MATH 360 OR MATH 508 AND MATH 361 OR MATH 509
Activity: Lecture
1.0 Course Unit

MATH 554 The Mathematics of Medical Imaging and Measurement
This course will cover various mathematical models and tools that are used to study modern biological problems. The specific emphasis will vary from year to year, but typically will include an introduction to stochastic processes and computational methods that arise in evolutionary biology and population genetics. No prior knowledge of biology is needed to take this course, but a strong background in probability and familiarity with algorithms and combinatorics will be assumed. Prerequisite: MATH 24 and 340 are recommended
Course not offered every year
Also Offered As: BIOL 586
Prerequisite: MATH 430
Activity: Lecture
1.0 Course Unit

MATH 555 Topics in Mathematical Biology
The required background is (1) enough math background to understand proof techniques in real analysis (closed sets, uniform coverage, fourier series, etc.) and (2) some exposure to probability theory at an intuitive level (a course at the level of Ross's probability text or some exposure to probability in a statistics class). After a summary of the necessary results from measure theory, we will learn the probabilist's lexicon (random variables, independence, etc.). We will then develop the necessary techniques (Borel Cantelli lemmas, estimates on sums of independent random variables and truncation techniques) to prove the classical laws of large numbers. Next come Fourier techniques and the Central Limit Theorem, followed by combinatorial techniques and the study of random walks.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MATH 556 Combinatorial Analysis and Graph Theory
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Course not offered every year
Corequisite: MATH 500
Activity: Lecture
1.0 Course Unit

MATH 557 Combinatorial Analysis and Graph Theory
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Course not offered every year
Corequisite: MATH 500
Activity: Lecture
1.0 Course Unit

MATH 558 Combinatorial Analysis and Graph Theory
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Course not offered every year
Corequisite: MATH 500
Activity: Lecture
1.0 Course Unit

MATH 559 Combinatorial Analysis and Graph Theory
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Course not offered every year
Corequisite: MATH 500
Activity: Lecture
1.0 Course Unit
MATH 594 Mathematical Methods of Physics
Introduction to mathematics used in physics and engineering, with the goal of developing facility in classical techniques. Vector spaces, linear algebra, computation of eigenvalues and eigenvectors, boundary value problems, spectral theory of second order equations, asymptotic expansions, partial differential equations, differential operators and Green's functions, orthogonal functions, generating functions, contour integration, Fourier and Laplace transforms and an introduction to representation theory of SU(2) and SO(3). The course will draw on examples in continuum mechanics, electrostatics and transport problems.
Course not offered every year
Also Offered As: PHYS 500
Activity: Lecture
1.0 Course Unit

MATH 599 Independent Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

MATH 600 Topology and Geometric Analysis
Course usually offered in fall term
Prerequisite: MATH 500 AND MATH 501
Activity: Lecture
1.0 Course Unit

MATH 601 Topology and Geometric Analysis
Covering spaces and fundamental groups, van Kampen's theorem and classification of surfaces. Basics of homology and cohomology, singular and cellular; isomorphism with de Rham cohomology. Brouwer fixed point theorem, CW complexes, cup and cap products, Poincare duality, Kunneth and universal coefficient theorems, Alexander duality, Lefschetz fixed point theorem.
Course usually offered in spring term
Prerequisite: MATH 600
Activity: Lecture
1.0 Course Unit

MATH 602 Algebra
Course usually offered in fall term
Prerequisite: MATH 370 AND MATH 371 OR MATH 502 AND MATH 503
Activity: Lecture
1.0 Course Unit

MATH 603 Algebra
Continuation of Math 602.
Course usually offered in spring term
Prerequisite: MATH 602
Activity: Lecture
1.0 Course Unit

MATH 604 First Year Seminar in Mathematics
This is a seminar for first year Mathematics graduate student, supervised by faculty. Students give talks on topics from all areas of mathematics at a level appropriate for first year graduate students. Attendance and preparation will be expected by all participants, and learning how to present mathematics effectively is an important part of the seminar. Open to first year Mathematics graduate students. Others need permission of the instructor.
Course usually offered in fall term
Prerequisites: Open to first year Mathematics graduate students. Others need permission of the instructor.
Activity: Seminar
1.0 Course Unit

MATH 605 Analysis
One-term course offered either term
Also Offered As: AMCS 608
Prerequisite: MATH 602
Activity: Lecture
1.0 Course Unit

MATH 606 Analysis
Complex analysis: analyticity, Cauchy theory, meromorphic functions, isolated singularities, analytic continuation, Runge's theorem, d-bar equation, Mittag-Leffler theorem, harmonic and sub-harmonic functions, Riemann mapping theorem, Fourier transform from the analytic perspective. Introduction to real analysis: Weierstrass approximation, Lebesgue measure in Euclidean spaces, Borel measures and convergence theorems, C0 and the Riesz-Markov theorem, Lp-spaces, Fubini Theorem.
One-term course offered either term
Also Offered As: AMCS 608
Prerequisite: MATH 602
Activity: Lecture
1.0 Course Unit

MATH 607 Analysis
Also Offered As: AMCS 610
Prerequisite: MATH 608 OR MATH 609
Activity: Lecture
1.0 Course Unit

MATH 608 Analysis
Continuation of Math 602.
Course usually offered in spring term
Prerequisite: MATH 602
Activity: Lecture
1.0 Course Unit

MATH 609 Analysis
Also Offered As: AMCS 610
Prerequisite: MATH 608 OR MATH 609
Activity: Lecture
1.0 Course Unit

MATH 610 Functional Analysis
Also Offered As: AMCS 610
Prerequisite: MATH 608 OR MATH 609
Activity: Lecture
1.0 Course Unit
MATH 612 Selections from Algebra
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Course not offered every year
Corequisite: MATH 600 AND MATH 602
Activity: Lecture
1.0 Course Unit

MATH 618 Algebraic Topology, Part I
Course usually offered in fall term
Prerequisite: MATH 600 AND MATH 602
Activity: Lecture
1.0 Course Unit

MATH 619 Algebraic Topology, Part I
Rational homotopy theory, cobordism, K-theory, Morse theory and the h-cobordism theorem. Surgery theory.
Course usually offered in spring term
Prerequisite: MATH 618
Activity: Lecture
1.0 Course Unit

MATH 620 Algebraic Number Theory
Dedekind domains, local fields, basic ramification theory, product formula, Dirichlet unit theory, finiteness of class numbers, Hensel's Lemma, quadratic and cyclotomic fields, quadratic reciprocity, abelian extensions, zeta and L-functions, functional equations, introduction to local and global class field theory. Other topics may include: Diophantine equations, continued fractions, approximation of irrational numbers by rationals, Poisson summation, Hasse principle for binary quadratic forms, modular functions and forms, theta functions.
Course not offered every year
Prerequisite: MATH 602 AND MATH 603
Activity: Lecture
1.0 Course Unit

MATH 621 Algebraic Number Theory
Continuation of Math 620.
Course not offered every year
Prerequisite: MATH 620
Activity: Lecture
1.0 Course Unit

MATH 622 Complex Algebraic Geometry
Algebraic geometry over the complex numbers, using ideas from topology, complex variable theory, and differential geometry. Topics include: Complex algebraic varieties, cohomology theories, line bundles, vanishing theorems, Riemann surfaces, Abel's theorem, linear systems, complex tori and abelian varieties, Jacobian varieties, currents, algebraic surfaces, adjunction formula, rational surfaces, residues.
Course not offered every year
Prerequisite: MATH 602 AND MATH 603 AND MATH 609
Activity: Lecture
1.0 Course Unit

MATH 623 Complex Algebraic Geometry
Continuation of Math 622.
Course not offered every year
Prerequisite: MATH 622
Activity: Lecture
1.0 Course Unit

MATH 624 Algebraic Geometry
Algebraic geometry over algebraically closed fields, using ideas from commutative algebra. Topics include: Affine and projective algebraic varieties, morphisms and rational maps, singularities and blowing up, rings of functions, algebraic curves, Riemann Roch theorem, elliptic curves, Jacobian varieties, sheaves, schemes, divisors, line bundles, cohomology of varieties, classification of surfaces.
Course not offered every year
Prerequisite: MATH 602 AND MATH 603
Activity: Lecture
1.0 Course Unit

MATH 625 Algebraic Geometry
Continuation of Math 624.
Course not offered every year
Prerequisite: MATH 624
Activity: Lecture
1.0 Course Unit

MATH 626 Commutative Algebra
Topics in commutative algebra taken from the literature. Material will vary from year to year depending upon the instructor's interests.
Course not offered every year
Prerequisite: MATH 625
Activity: Lecture
1.0 Course Unit

MATH 627 Homological Algebra
Complexes and exact sequences, homology, categories, derived functors (especially Ext and Tor). Homology and cohomology arising from complexes in algebra and geometry, e.g. simplicial and singular theories, Cech cohomology, de Rham cohomology, group cohomology, Hochschild cohomology. Projective resolutions, cohomological dimension, derived categories, spectral sequences. Other topics may include: Lie algebra cohomology, Galois and etale cohomology, cyclic cohomology, l-adic cohomology. Algebraic deformation theory, quantum groups, Brauer groups, descent theory.
Course not offered every year
Prerequisite: MATH 626
Activity: Lecture
1.0 Course Unit

MATH 628 Homological Algebra
Continuation of Math 627.
Course not offered every year
Prerequisite: MATH 628
Activity: Lecture
1.0 Course Unit

MATH 629 Homological Algebra
Continuation of Math 628.
Course not offered every year
Prerequisite: MATH 629
Activity: Lecture
1.0 Course Unit

MATH 630 Arithmetic Geometry
Arithmetic Geometry
Activity: Lecture
1.0 Course Unit

MATH 632 Complex Algebraic Geometry
Continuation of Math 622.
Course not offered every year
Prerequisite: MATH 622
Activity: Lecture
1.0 Course Unit

MATH 634 Arithmetic Geometry
Arithmetic Geometry
Activity: Lecture
1.0 Course Unit

MATH 642 Topics in Partial Differential Equations
Problems in differential geometry, as well as those in physics and engineering, inevitable involve partial derivatives. This course will be an introduction to these problems and techniques. We will use P.D.E. as a tool. Some of the applications will be small, some large. The proof of the Hodge Theorem will be a small application. Discussion of the Yamabe problem and Ricci flow (used to prove the Poincare Conjecture) will be larger.
Prerequisite: MATH 608 AND MATH 609
Activity: Lecture
1.0 Course Unit
MATH 644 Partial Differential Equations
Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and non-linear problems. Sobolev spaces and the theory of distributions will be developed as needed.
Course not offered every year
Prerequisite: MATH 608 AND MATH 609
Activity: Lecture
1.0 Course Unit

MATH 645 Partial Differential Equations
Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and nonlinear problems. Sobolev spaces and the theory of distributions will be developed as needed.
Course not offered every year
Prerequisite: MATH 608 AND MATH 609
Activity: Lecture
1.0 Course Unit

MATH 648 Probability Theory
Taught by: Pemantle
Course usually offered in fall term
Also Offered As: STAT 930
Prerequisite: STAT 430 OR STAT 510 OR MATH 608
Activity: Lecture
1.0 Course Unit

MATH 649 Stochastic Processes
Course not offered every year
Also Offered As: MATH 547, STAT 931
Prerequisite: MATH 546 OR STAT 930
Activity: Lecture
1.0 Course Unit

MATH 652 Operator Theory
Subject matter may include spectral theory of operators in Hilbert space, C*-algebras, von Neumann algebras.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 654 Lie Groups
Connection of Lie groups with Lie algebras, Lie subgroups, exponential map. Algebraic Lie groups, compact and complex Lie groups, solvable and nilpotent groups. Other topics may include relations with symplectic geometry, the orbit method, moment map, symplectic reduction, geometric quantization, Poisson-Lie and quantum groups.
Course not offered every year
Prerequisite: MATH 600 AND MATH 601 AND MATH 602 AND MATH 603
Activity: Lecture
1.0 Course Unit

MATH 655 Lie Groups
Continuation of Math 654.
Course not offered every year
Prerequisite: MATH 654
Activity: Lecture
1.0 Course Unit

MATH 656 Representation of Continuous Groups
Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 660 Differential Geometry
Riemannian metrics and connections, geodesics, completeness, Hopf-Rinow theorem, sectional curvature, Ricci curvature, scalar curvature, Jacobi fields, second fundamental form and Gauss equations, manifolds of constant curvature, first and second variation formulas, Bonnet-Myers theorem, comparison theorems, Morse index theorem, Hadamard theorem, Preissmann theorem, and further topics such as sphere theorems, critical points of distance functions, the soul theorem, Gromov-Hausdorff convergence.
Course not offered every year
Prerequisite: MATH 600 AND 601 AND 602 AND 603
Activity: Lecture
1.0 Course Unit

MATH 661 Differential Geometry
Continuation of Math 660.
Course not offered every year
Prerequisite: MATH 660
Activity: Lecture
1.0 Course Unit

MATH 671 Topics in Logic
Discusses advanced topics in logic.
Course not offered every year
Also Offered As: LGIC 496, PHIL 412
Prerequisite: MATH 570 AND MATH 571
Activity: Seminar
1.0 Course Unit

MATH 694 Mathematical Foundations of Theoretical Physics
Selected topics in mathematical physics, such as mathematical methods of classical mechanics, electrodynamics, relativity, quantum mechanics and quantum field theory.
Course not offered every year
Activity: Lecture
1.0 Course Unit
MATH 695 Mathematical Foundations of Theoretical Physics
Selected topics in mathematical physics, such as mathematical methods of classical mechanics, electrodynamics, relativity, quantum mechanics and quantum field theory.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 702 Topics in Algebra
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 720 Advanced Number Theory
Ramification theory, adeles and ideles, Tate's thesis, group cohomology and Galois cohomology, class field theory in terms of ideles and cohomology, Lubin-Tate formal groups, Artin and Swan conductors, central simple algebras over local and global fields, general Hasse principles. Other topics may include the following: zero-dimensional Arakelov theory, Tate duality, introduction to arithmetic of elliptic curves, local and global epsilon factors in functional equations, $p$-adic $L$-functions and Iwasawa theory, modular forms and functions and modular curves.
Course not offered every year
Prerequisite: MATH 620 AND MATH 621
Activity: Lecture
1.0 Course Unit

MATH 721 Advanced Number Theory
Continuation of Math 720.
Course not offered every year
Prerequisite: MATH 720
Activity: Lecture
1.0 Course Unit

MATH 724 Topics in Algebraic Geometry
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 622 AND MATH 623 OR MATH 624 AND MATH 625
Activity: Lecture
1.0 Course Unit

MATH 730 Topics in Algebraic and Differential Topology
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 618 AND MATH 619
Activity: Lecture
1.0 Course Unit

MATH 731 Topics in Algebraic and Differential Topology
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 618 AND MATH 619
Activity: Lecture
1.0 Course Unit

MATH 748 Topics in Classical Analysis
Harmonic analysis in Euclidean space, Riemann surfaces, Discontinuous groups and harmonic analysis in hyperbolic space, Pseudodifferential operators and index theorems, Variational methods in non-linear PDE, Hyperbolic equations and conservation laws, Probability and stochastic processes, Geometric measure theory, Applications of analysis to problems in differential geometry. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 608 AND MATH 609
Activity: Lecture
1.0 Course Unit

MATH 752 Topics in Operator Theory
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 608 AND MATH 609
Activity: Lecture
1.0 Course Unit

MATH 753 Topics in Operator Theory
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 608 AND MATH 609
Activity: Lecture
1.0 Course Unit

MATH 760 Topics in Differential Geometry
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 660 AND MATH 661
Activity: Lecture
1.0 Course Unit

MATH 761 Topics in Differential Geometry
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 660 AND MATH 661
Activity: Lecture
1.0 Course Unit

MATH 820 Algebra Seminar
Seminar on current and recent literature in algebra.
Course not offered every year
Activity: Seminar
1.0 Course Unit

MATH 830 Geometry-Topology Seminar
Seminar on current and recent literature in geometry-topology.
Course not offered every year
Activity: Seminar
1.0 Course Unit

MATH 831 Geometry-Topology Seminar
Seminar on current and recent literature in geometry-topology.
Course not offered every year
Activity: Seminar
1.0 Course Unit

MATH 871 Logic Seminar
Seminar on current and recent literature in logic.
Course not offered every year
Activity: Seminar
1.0 Course Unit
MATH 878 Probability and Algorithm Seminar
Seminar on current and recent literature in probability and algorithm.
Taught by: Staff.
Activity: Seminar
1.0 Course Unit

MATH 881 Combinatorics Seminar
Seminar on current and recent literature in combinatorics.
Course not offered every year
Activity: Seminar
1.0 Course Unit

Mechanical Engineering and Applied Mechanics (MEAM)

MEAM 099 Independent Study
An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal. Subject to the approval of the MEAM Undergraduate Curriculum Chair.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Open to all students. A maximum of 2 c.u. of MEAM 099 may be applied toward the B.A.S. or B.S.E. degree requirements

MEAM 101 Introduction to Mechanical Design
This hands-on, project-based course covers the fundamentals of the modern mechanical design process, from needfinding and brainstorming to the basics of computerized manufacturing and rapid prototyping. Topics include: product definition (needfinding, observation, sketching, and brainstorming); computer-aided design (part creation, assemblies, and animation using SolidWorks); fundamental engineering design practices (material selection, dimensioning, tolerances, etc.); basic computer simulation and analysis; and rapid prototyping (laser cutter, 3-D fused-deposition modeling, and an introduction to computer-controlled machining).
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: This course is available to all Engineering majors. Seniors are not permitted to register for this class.

MEAM 110 Introduction to Mechanics
This lecture course and a companion laboratory course (MEAM 147) build upon the concepts of Newtonian (classical) mechanics and their application to engineered systems. This course introduces students to mechanical principles that are the foundation of upper-level engineering courses including MEAM 210 and 211. The three major parts of this course are: I. Vector Mechanics; II. Statics and Structures; and III. Kinematics and Dynamics. Topics include: vector analysis, statics of rigid bodies, introduction to deformable bodies, friction, kinematics of motion, work and energy, and dynamics of particles. Case studies will be introduced, and the role of Newtonian mechanics in emerging applications including bio- and nano- technologies will be discussed.
Course usually offered in fall term
Corequisite: MATH 104 AND MEAM 147
Activity: Lecture
1.0 Course Unit

MEAM 147 Introduction to Mechanics Lab
This half-credit laboratory class is a companion to the Introduction to Mechanics lecture course (MEAM 110). It investigates the concepts of Newtonian (classical) mechanics through weekly hands-on experiments, emphasizing connections between theoretical principles and practical applications in engineering. In addition to furthering their understanding about the workings of the physical world, students will improve their skills at conducting experiments, obtaining reliable data, presenting numerical results, and extracting meaningful information from such numbers.
Course usually offered in fall term
Corequisite: MEAM 110
Activity: Laboratory
0.5 Course Units

MEAM 201 Machine Design and Manufacturing
Building upon the fundamentals of mechanical design taught in MEAM 101, this hands-on, project-based course provides students with the knowledge and skills necessary to design, analyze, manufacture, and test fully-functional mechanical systems. Topics covered include an introduction to machine elements, analysis of the mechanics of machining, manufacturing technology, precision fabrication (milling, turning, and computer-controlled machining), metrology, tolerances, cutting-tool fundamentals and engineering materials. Enrollment is limited.
Taught by: Graham Wabiszewski
One-term course offered either term
Prerequisite: MEAM 101
Activity: Lecture
1.0 Course Unit

MEAM 202 Introduction to Thermal and Fluids Engineering
This course introduces students to the main concepts and applications of thermodynamics, fluid mechanics, and heat transfer. Topics covered include the first law of thermodynamics, fluid statics, Bernoulli’s equation, drag, lift, streamlines, conduction, convection, radiation, thermal resistances, and lumped capacitance. Mass, momentum, and energy equations are developed using the Reynolds Transport Theorem.
Taught by: Paulo Campos Arratia
Prerequisite: MATH 104 AND (MEAM 110 OR PHYS 150)
Corequisite: MATH 114
Activity: Lecture
1.0 Course Unit

MEAM 203 Thermodynamics I
Thermodynamics studies the fundamental concepts related to energy conversion in such mechanical systems as internal and external combustion engines (including automobile and aircraft engines), compressors, pumps, refrigerators, and turbines. This course is intended for students in mechanical engineering, chemical engineering, materials science, physics and other fields. The topics include properties of pure substances, first-law analysis of closed systems and control volumes, reversibility and irreversibility, entropy, second-law analysis, exergy, power and refrigeration cycles, and their engineering applications.
Course usually offered in spring term
Prerequisites: MATH 104, 114
Activity: Lecture
1.0 Course Unit
MEAM 210 Statics and Strength of Materials
This course is primarily intended for students in mechanical engineering, but may also be of interest to students in materials science and other fields. It continues the treatment of statics of rigid bodies begun in MEAM 110/PHYS 150 and progresses to the treatment of deformable bodies and their response to loads. The concepts of stress, strain, and linearly elastic response are introduced and applied to the behavior of rods, shafts, beams and other mechanical components. The failure and design of mechanical components are discussed.
Course usually offered in fall term
Prerequisites: MEAM 110,147 or PHYS 150
Corequisite: MATH 240 AND MEAM 247
Activity: Lecture
1.0 Course Unit

MEAM 211 Engineering Mechanics: Dynamics
This course introduces the basic concepts in kinematics and dynamics that are necessary to understand, analyze and design mechanisms and machines. These concepts are also fundamental to the modeling and analysis of human movement, biomechanics, animation of synthetic human models and robotics. The topics covered include: Particle dynamics using energy and momentum methods of analysis; Dynamics of systems of particles; Impact; Systems of variable mass; Kinematics and dynamics of rigid bodies in plane motion; Computer-aided dynamic simulation and animation.
Taught by: Michael Posa
Course usually offered in spring term
Prerequisite: MEAM 210 AND MATH 240 AND ENGR 105
Corequisite: MATH 241 OR ENM 251
Activity: Lecture
1.0 Course Unit

MEAM 220 Introduction to Materials Science and Engineering
The course is an introduction to the most important concepts in materials science and engineering. You will learn how the control of chemical bonding, synthesis, processing, structure and defects can be used to tailor the properties and performance of materials for applications that range from sustainable sources of energy, to construction, to consumer electronics. Case studies are also included to highlight environmental issues associated with materials degradation. This course includes lab demonstrations of key materials properties and a final project where students research an area of materials technology of their own interest.
Taught by: Dr. Peter Davies
Course usually offered in fall term
Also Offered As: MSE 220
Prerequisite: CHEM 101 OR PHYS 140 OR MEAM 110
Activity: Lecture
1.0 Course Unit

MEAM 247 Mechanical Engineering Laboratory I
This is the first of a two semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. This fall semester course follows closely with MEAM 210, involving experiments to explore the principles of statics and strength of materials. Prerequisite: Sophomore standing in engineering
Course usually offered in fall term
Corequisite: MEAM 210
Activity: Laboratory
0.5 Course Units

MEAM 248 Mechanical Engineering Lab I
This is the second of a two-semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. The spring semester course follows closely with MEAM 203 and MEAM 211, expanding upon the principles of experimentation, measurement, analysis, and design of systems through hands-on laboratories and projects in thermodynamics and dynamics. Prerequisite: Sophomore standing in engineering
Course usually offered in spring term
Corequisite: MEAM 203 AND MEAM 211
Activity: Lecture
0.5 Course Units

MEAM 302 Fluid Mechanics
Physical properties; fluid statics; Bernoulli equation; fluid kinematics; conservation laws and finite control-volume analysis; conservation laws and differential analysis; inviscid flow; The Navier-Stokes equation and some exact solutions; similitude, dimensional analysis, and modeling; flow in pipes and channels; boundary layer theory; lift and drag.
Course usually offered in fall term
Prerequisites: MATH 241 or ENM 251 and PHYS 150 or MEAM 110, 147
Activity: Lecture
1.0 Course Unit

MEAM 320 Intro to Mechanical and Mechatronic Systems
This course introduces topics in the design and analysis of modern mechanical systems. The course will cover concepts in mechanism design, kinematics, electronic circuits, motors and electromechanical systems, and measurement and filtering. Specific topics include kinematics of linkages, operational amplifiers, and interfacing with mechanical systems by programming microcontrollers.
Prerequisite: MEAM 211
Corequisite: MEAM 347
Activity: Lecture
1.0 Course Unit

MEAM 321 Dynamic Systems and Control
This course teaches the fundamental concepts underlying the dynamics of vibrations for single-degree of freedom, multi-degree and infinite-degree of freedom mechanical systems. The course will focus on Newton's Force Methods, Virtual-Work Methods, and Lagrange's Variation Methods for analyzing problems in vibrations. Students will learn how to analyze transient, steady state and forced motion of single and multi-degree of freedom linear and non-linear systems. The course teaches analytical solution techniques for linear systems and practical numerical and simulation methods for analysis and design of nonlinear systems.
Course usually offered in spring term
Prerequisites: MATH 241, ENM 251 MEAM 211
Activity: Lecture
1.0 Course Unit
MEAM 333 Heat and Mass Transfer
This course covers fundamentals of heat and mass transfer and applications to practical problems in energy conversion and conservation. Emphasis will be on developing a physical and analytical understanding of conductive, convective, and radiative heat transfer, as well as design of heat exchangers and heat transfer with phase change. Topics covered will include: types of heat transfer processes, their relative importance, and the interactions between them, solutions of steady state and transient state conduction, emission and absorption of radiation by real surfaces and radiative transfer between surfaces, heat transfer by forced and natural convection owing to flow around bodies and through ducts, analytical solutions for some sample cases and applications of correlations for engineering problems. Students will develop an ability to apply governing principles and physical intuition to solve problems.
Course usually offered in spring term
Prerequisites: MEAM 210, BE 200
Activity: Lecture
1.0 Course Unit

MEAM 347 Mechanical Engineering Design Laboratory
This is the first of a two-semester junior level laboratory sequence that students complete over the fall and spring semesters. The course is project-based, with problems whose solution requires experimental data and quantitative analysis, as well as creative mechanical design. The technical content is connected to MEAM 302 and MEAM 354, including aerodynamics, applied fluid systems and structural analysis. The course also includes electromechanical systems and application s of finite element analysis. Prerequisite: Junior standing in engineering
Course usually offered in fall term
Activity: Laboratory
1.0 Course Unit

MEAM 348 Mechanical Engineering Design Laboratory
This is the second of a two-semester junior level laboratory sequence that students complete over the fall and spring semesters. The course is project-based, with open-ended design problems that challenge students to develop original experiments and choose appropriate analyses, with an increasing emphasis on teamwork and project planning. The technical content is connected to MEAM 321 and MEAM 333, including multimodal transient heat transfer and dynamic systems modeling. Prerequisite: Junior standing in engineering
Course usually offered in spring term
Activity: Laboratory
1.0 Course Unit

MEAM 354 Mechanics of Solids
This course builds on the fundamentals of solid mechanics taught in MEAM 210 and addresses more advanced problems in strength of materials. The students will be exposed to a wide array of applications from traditional engineering disciplines as well as emerging areas such as biotechnology and nanotechnology. The methods of analysis developed in this course will form the cornerstone of machine design and also more advanced topics in the mechanics of materials. Prerequisite: If course requirements not met, permission of instructor required.
Course usually offered in fall term
Prerequisites: MEAM 210, BE 200
Activity: Lecture
1.0 Course Unit

MEAM 405 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in spring term
Also Offered As: MEAM 505, MSE 405, MSE 505
Prerequisite: MSE 220 OR MEAM 210 OR MATH 240
Activity: Lecture
1.0 Course Unit

MEAM 415 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product, development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student.
Taught by: Faculty
Also Offered As: IPD 515, OIDD 415, OIDD 515
Activity: Lecture
1.0 Course Unit

MEAM 421 Control For Autonomous Robots
This course introduces the hardware, software and control technology used in autonomous ground vehicles, commonly called 'self-driving cars.' The weekly laboratory sessions focus on development of a small-scale autonomous car, incrementally enhancing the sensors, software, and control algorithms to culminate in a demonstration in a realistic outdoor operating environment. Students will learn basic physics and modeling; controls design and analysis in Matlab and Simulink; software implementation in C and Python; sensor systems and filtering methods for IMUs, GPS, and computer vision systems; and path planning from fixed map data. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in fall term
Also Offered As: ESE 421
Prerequisite: (CIS 110 OR CIS 120 OR ENGR 105) AND (ESE 210 OR ESE 215 OR MEAM 211)
Activity: Lecture
1.5 Course Unit

MEAM 445 Mechanical Engineering Design Projects
This capstone design project course is required of all mechanical engineering students. Student teams will design and test complex mechanical systems that address a societal or consumer need. Projects are devised by the team, sponsored by industry, or formulated by Penn professors. Each project is approved by the instructor and a faculty advisor. Topics treated in the course include project planning, prototyping, patent and library searches, intellectual property, ethics, and technical writing and presentations. The work is spread over MEAM 445 and MEAM 446. Prerequisite: Junior standing
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MEAM 446 Mechanical Engineering Design Projects
This is the second course in the two course sequence involving the capstone design project. See MEAM 445 for course description. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MEAM 502 Energy Engineering in Power Plants and Transportation Systems
Most energy consumed in the U.S. and in the world is produced using thermal-to-mechanical energy conversion. In this course, students will learn the engineering principles that govern how heat is converted to mechanical power in electric power plants, jet aircraft, and internal combustion engines. Topics covered include a review of thermodynamics and basic power cycles, supercritical, combined, and hybrid cycles, cogeneration, jet propulsion, and reciprocating internal combustion engines. A brief introduction to desalination and combustion is also included. The material in this course will provide students a foundation important for industrial and research employment in energy engineering. Course usually offered in fall term
Prerequisites: MEAM 203, 333
Activity: Lecture
1.0 Course Unit

MEAM 503 Direct Energy Conversion: from Macro to Nano
The course focuses on devices that convert thermal, solar, or chemical energy directly to electricity, i.e., without intermediate mechanical machinery such as a turbine or a reciprocating piston engine. A variety of converters with sizes ranging from macro to nano scale will be discussed, with the advantages offered by nanoscale components specifically highlighted. Topics will include thermoelectric energy converters and radioisotope thermoelectric generators (RTGs), thermonuclear energy converters (TEC), photovoltaic (PV) and thermophotovoltaic (TPV) cells, as well as piezoelectric harvesters. Additional topics may include magnetohydrodynamic (MHD) generators, alkali metal thermal-to-electric converters (AMTEC), and fuel cells. Course usually offered in fall term
Prerequisites: MEAM 203, 333
Activity: Lecture
1.0 Course Unit

MEAM 504 Tribology
The course will comprehensively cover both theoretical and practical tribology, the science and technology of interacting surfaces in relative motion. The various modes of lubrication, hydrodynamic, elastohydrodynamic, hydrostatic, mixed, solid and dry, will be studied in detail. The contact between solid surfaces will be covered, leading to an understanding of friction and various modes of wear. At each stage, it will be shown how the tribological principles learned can be applied in practice to improve the efficiency and durability of mechanical equipment and thereby enhance sustainability through energy and materials conservation. Prerequisite: Senior standing in Mechanical Engineering or Material Science of permission of the instructor Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MEAM 505 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving. Course usually offered in spring term
Also Offered As: MEAM 405, MSE 405, MSE 505
Prerequisite: MSE 220 OR MEAM 210 OR MATH 240
Activity: Lecture
1.0 Course Unit

MEAM 506 Failure Analysis of Engineering Materials
This course will introduce students to the broad field of failure through hands-on real-life examples of specific failures. All engineering materials classes will be considered, including metals, polymers, elastomers, ceramics, and glasses. Emphasis will be placed on understanding how to actually analyze a failed component and understand the cause of failure. Several classes will be conducted by outside experts from places like the NTSB, FBI and OSHA.
Taught by: David Pope, Prof.
Course usually offered in fall term
Also Offered As: MSE 506
Prerequisite: MSE 220 AND (MSE 393 OR MEAM 354)
Activity: Lecture
1.0 Course Unit

MEAM 507 Fundamentals of Materials
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them. The course assumes an undergraduate background in any area of physical/chemical science and undergraduate mathematics appropriate to this. The course will also be accessible to students of applied mathematics. Course usually offered in fall term
Also Offered As: MSE 507
Activity: Lecture
1.0 Course Unit

MEAM 508 Materials and Manufacturing for Mechanical Design
The selection of materials and manufacturing processes are critical in the design of mechanical systems. Material properties and manufacturing processes are often tightly linked, thus this course covers both topics in an integrated manner. The properties and manufacturing processes for a wide range of materials (i.e., metals, ceramics, polymers, composites) are examined from both a fundamental and practical perspective. From a materials standpoint, the course focuses on mechanical properties, including modulus, strength, fracture, fatigue, wear, and creep. Established and emerging manufacturing processes will be discussed. Design-based case studies are used to illustrate the selection of materials and processes. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
MEAM 510 Design of Mechatronic Systems
In many modern systems, mechanical elements are tightly coupled with electronic components and embedded computers. Mechatronics is the study of how these domains are interconnected, and this hands-on, project-based course provides an integrated introduction to the fundamental components within each of the three domains, including: mechanical elements (prototyping, materials, actuators and sensors, transmissions, and fundamental kinematics), electronics (basic circuits, filters, op amps, discrete logic, and interfacing with mechanical elements), and computing (interfacing with the analog world, microprocessor technology, basic control theory, and programming). Prerequisite: Graduate standing in engineering or permission of the instructor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MEAM 513 Feedback Control Design and Analysis
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach. Course usually offered in spring term
Also Offered As: ESE 505
Prerequisite: MEAM 321 OR ESE 210
Activity: Lecture
1.0 Course Unit

MEAM 514 Design for Manufacturability
This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems. Prerequisite: Senior or graduate standing in the School of Design, Engineering, or Business with completed product in development and/or design engineering core coursework or related experience.
Course usually offered in spring term
Also Offered As: IPD 514
Prerequisites: MEAM 101, 210
Activity: Lecture
1.0 Course Unit

MEAM 516 Advanced Mechatronic Reactive Spaces.
This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera. Course not offered every year
Also Offered As: IPD 516
Prerequisite: MEAM 510
Activity: Lecture
1.0 Course Unit

MEAM 517 Control and Optimization with Applications in Robotics
This course covers a variety of advanced topics in model-based nonlinear control, primarily focused on computational techniques and dynamic robotic applications. Students will learn both the theoretical basics of nonlinear and optimal control along with computational algorithms. Topics include dynamic programming, trajectory optimization, canonical underactuated systems, control of limit cycles, stability analysis, nonsmooth mechanics, and model predictive control. Applications include walking and running robots, manipulation, and flying machines. As the course will cover state of the art techniques, we will review relevant research papers. At the end of the semester, students will prepare and present a final project on a related topic of their choosing. Prerequisite: If course requirement not met, permission of instructor required. Course not offered every year
Prerequisites: MATH 312, MEAM 513 or ESE 500, 505, MEAM 211, 520
Activity: Lecture
1.0 Course Unit

MEAM 519 Elasticity and Micromechanics of Materials
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eshelby’s problem etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed. Prerequisite: graduate standing or permission of the instructor.
Taught by: Reina Romo
Course usually offered in fall term
Also Offered As: MSE 550
Activity: Lecture
1.0 Course Unit
MEAM 520 Introduction to Robotics
The rapidly evolving field of robotics includes systems designed to replace, assist, or even entertain humans in a wide variety of tasks. Recent examples include human-friendly robot arms for manufacturing, interactive robotic pets, medical and surgical assistive robots, and semi-autonomous search-and-rescue vehicles. This course presents the fundamental kinematic, dynamic, and computational principles underlying most modern robotic systems. The main topics of the course include: rotation matrices, homogeneous transformations, manipulator forward kinematics, manipulator inverse kinematics, Jacobians, path and trajectory planning, sensing and actuation, and feedback control. The material is reinforced with hands-on lab exercises involving a robotic arm. Taught by: Cynthia Sung
Course usually offered in fall term
Prerequisite: MEAM 211 AND MATH 240 AND ENGR 105
Activity: Lecture
1.0 Course Unit

MEAM 523 Control Systems for Robotics
In this course, we present approaches for designing controllers for a varied class of robotic systems. We focus on mathematical concepts of linear and nonlinear control theory and how the theory translates to practical robotic applications with emphasis on manipulators, ground, and aerial robots. Topics include inverse kinematics based controllers, trajectory following controllers, non-holonomic robot controllers, artificial potential functions, and model predictive control. Coursework consists of problem sets, programming assignments, critical reading of research papers, and a final project. Prerequisite: If course requirement not met, permission of instructor required.
Course not offered every year
Prerequisites: MEAM 513, 520, ESE, 500
Activity: Lecture
1.0 Course Unit

MEAM 527 Finite Element Analysis
The objective of this course is to equip students with the background needed to carry out finite elements-based simulations of various engineering problems. The first part of the course will outline the theory of finite elements. The second part of the course will address the solution of classical equations of mathematical physics such as Laplace, Poisson, Helmholtz, the wave and the Heat equations. The third part of the course will consist of case studies taken from various areas of engineering and the sciences on topics that require or can benefit from finite element modeling. The students will gain hands-on experience with the multi-physics, finite element package FemLab. Course usually offered in fall term
Prerequisite: MATH 241 OR ENM 251 AND PHYS 151
Activity: Lecture
1.0 Course Unit

MEAM 529 Introduction to Micro- and Nano-electromechanical Technologies
Course usually offered in spring term
Also Offered As: ESE 529
Activity: Lecture
1.0 Course Unit

MEAM 530 Continuum Mechanics
This course serves as a basic introduction to the Mechanics of continuous media, and it will prepare the student for more advanced courses in solid and fluid mechanics. The topics to be covered include: Tensor algebra and calculus, Lagrangian and Eulerian kinematics, Cauchy and Piola-Kirchhoff stresses, General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics; constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure. Multivariable Calculus, Linear Algebra, Partial Differential Equations. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MEAM 535 Advanced Dynamics
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MEAM 536 Viscous Fluid Flow and Modern Applications
This is an intermediate course that builds on the basic principles of Fluid Mechanics. The course provides a more in depth and unified framework to understand fluid flow at different time and length scales, in particular viscous flows. Topics include review of basic concepts, conservation laws (momentum, mass, and heat), fluid kinematics, tensor analysis, Stokes' approximations, non-Newtonian fluid mechanics, and turbulence. The course will explore important modern topics such as microfluidics, swimming of micro-organisms, wind turbines, rheology, biofluid mechanics, and boundary layers. This course is intended for juniors, seniors, and graduate students from the Schools of Engineering and/or Arts and Sciences that have a general interest in fluid dynamics and its modern applications. Students should have an understanding of basic concepts in fluid mechanics and a good grasp on differential equations.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: This course is intended for juniors, seniors and graduate students from the Schools of Engineering and/or Arts and Sciences that have a general interest in fluid dynamics and its modern applications. Students should have an understanding of basic concepts in fluid mechanics and a good grasp on differential equations.

MEAM 537 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course. Prerequisite: Freshman physics or consent of instructor.
Course not offered every year
Also Offered As: MSE 537
Prerequisite: MEAM 354
Activity: Lecture
1.0 Course Unit

MEAM 538 Turbulence
This course is an introductory course on turbulent flows. The course provides physical and mathematical framework for quantitative and qualitative descriptions of fundamental processes involved in turbulent flows. Topics include the Navier-Stokes equations, the statistical description of turbulence, equations for mean and fluctuations, energy cascade, turbulence spectra, Kolmogorov hypotheses, behavior of shear flows, and isotropic turbulence. The course will also explore modern topics such as computational modeling of turbulence. Prerequisite: Instructor permission required for undergraduates
Course usually offered in spring term
Prerequisites: MEAM 570, 536
Activity: Lecture
1.0 Course Unit
Notes: Instructor Permission required for undergraduates

MEAM 543 Performance, Stability and Control of UAVs
This course covers the application of classical aircraft performance and design concepts to fixed-wing and rotary-wing Unmanned Aerial Vehicles (UAVs). A survey of the latest developments in UAV technology will be used to motivate the development of quantitative mission requirements, such as payload, range, endurance, field length, and detectability. The implications of these requirements on vehicle configuration and sizing will be revealed through application of the fundamentals of aerodynamics and propulsion systems. The course will also cover basic flight dynamics and control, including typical inner-loop feedback applications.
Course usually offered in fall term
Prerequisites: MEAM 210, 211, MATH 240
Activity: Lecture
1.0 Course Unit

MEAM 545 Aerodynamics
Review of fluid kinematics and conservation laws; vorticity theorems; two-dimensional potential flow; airfoil theory; finite wings; oblique shocks; supersonic wing theory; laminar and turbulent boundary layers.
Course usually offered in spring term
Prerequisite: MEAM 302
Activity: Lecture
1.0 Course Unit

MEAM 550 Design of Microelectromechanical Systems
A course that covers the design and fabrication of micro- and nanoelectromechanical systems. Topics in the course include micro- and nano-fabrication techniques, mechanics of flexures, thin film mechanics, sensing and actuation approaches (e.g., electrostatic, piezoelectric, and piezoresistive), as well as materials and reliability issues. The fundamentals of these topics will be augmented with device-based case studies.
Course not offered every year
Prerequisite: MEAM 354
Activity: Lecture
1.0 Course Unit

MEAM 553 Atomic Modeling in Materials Science
This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis of the results such as radial distribution function, thermodynamics deduced from the molecular dynamics, fluctuations, correlations and autocorrelations. 2. Semi-empirical descriptions of atomic interactions: pair potentials, embedded atom method, covalent bonding, ionic bonding. Basics of the density functional theory. Mechanics, condensed matter physics, thermodynamics and statistical mechanics needed in interpretations are briefly explained. Prerequisite: Ability to write a basic code in a computer language such as fortran, C, C++
Course usually offered in spring term
Also Offered As: MSE 561
Activity: Lecture
1.0 Course Unit
MEAM 555 Nanoscale Systems Biology
Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invoke innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small-scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano-thru micro-scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (e.g., fluorescence down to nano-scale, AFM), physical methods (e.g. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology. Prerequisite: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor. Taught by: Discher Course usually offered in fall term
Also Offered As: BE 555, CBE 555
Activity: Lecture
1.0 Course Unit

MEAM 561 Thermodynamics: Foundations, Energy, Materials
To introduce students to advanced classical equilibrium thermodynamics based on Callen’s postulatory approach, to exergy (Second-Law) analysis, and to fundamentals of nonequilibrium thermodynamics. Applications to be treated include the thermodynamic foundations of energy processes and systems including advanced power generation and aerospace propulsion cycles, batteries and fuel cells, combustion, diffusion, transport in membranes, materials properties and elasticity, superconductivity, biological processes. Undergraduate thermodynamics. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MEAM 564 The Principles and Practice of Microfabrication Technology
A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project). Course not offered every year
Also Offered As: ESE 460, ESE 574
Prerequisites: ESE 218, MSE 321, MEAM 333, CBE 351, PHYS 250
Activity: Lecture
1.0 Course Unit

MEAM 567 Transport Processes I
The course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and the constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows featuring a few examples from mechanical, chemical, and biological systems. Reactive flows will also be considered. Prerequisite: graduate standing or permission of the instructor. Taught by: Campos Arratia Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MEAM 570 Transport Processes II
MEAM 571 Advanced Topics in Transport Phenomena
The course deals with advanced topics in transport phenomena and is suitable for graduate students in mechanical, chemical and bioengineering who plan to pursue research in areas related to transport phenomena or work in an industrial setting that deals with transport issues. Topics include: Transport processes with drops, Bubbles and particles; Phase change Phenomena: condensation, evaporation, and combustion; Radiation heat transfer: non-participating media; participating media, equation of radiative transfer, optically thin and thick limits; Introduction to Hydrodynamic and Thermal Instability; Microscale energy transport; Nano-particle motion in fluids and transport. Prerequisite: If course requirements not met, permission of instructor required. Course not offered every year
Prerequisite: MEAM 570 OR MEAM 642 OR CBE 640
Activity: Lecture
1.0 Course Unit

MEAM 575 Micro and Nano Fluidics
The course focuses on topics relevant for micro-fluidics, lab on chip technology, point of care diagnostics, nano-technology, biosensing, and interfacial phenomena. Although we will discuss briefly the fabrication of micro and nano fluidic devices, the course will mostly focus on physical phenomena from the continuum point of view. The mathematical complexity will be kept to a minimum. The course will be reasonably self-contained, and any necessary background material will be provided, consistent with the students’ background and level of preparation. Specifically, we will examine fluid and nanoparticle transport under the action of pressure, electric, magnetic, and capillary forces; the structure and role of superhydrophobic surfaces; how the solid/liquid interface acquires electric charge; ion transport in electrolytes (Poisson-Nernst-Planck equations); colloid stability; electroosmosis, electrophoresis, and particle polarization; electrowetting and digital microfluidics; particle and cell sorting; immunoassays; and enzymatic amplification of nucleic acids. Course not offered every year
Activity: Lecture
1.0 Course Unit
MEAM 580 Electrochemistry for Energy, Nanofabrication and Sensing
Principles and mathematical models of electrochemical processes in energy conversion and storage, water desalination, nanofabrication, electroplating, and sensing for engineering and science graduate students and advanced undergraduates, lacking prior background in electrochemistry. The course covers equivalent circuits, electrode kinetics, electrokinetic and transport phenomena, and electrostatics. The course will introduce and use the finite element program COMSOLTM. We will discuss, among other things, applications to stationary and flow batteries, supercapacitors, integrated circuit fabrication, electrokinetics, and biosensing. In contrast to CBE 545 Electrochemical Energy Conversion that focuses on solid state electrochemistry, this course emphasizes liquid-based electrochemistry.
Course usually offered in spring term
Prerequisites: MEAM 302, 333
Activity: Lecture
1.0 Course Unit

MEAM 597 Master's Thesis Research
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

MEAM 599 Master's Independent Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

MEAM 613 Non-Linear Control Theory
The course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility, and observability, for nonlinear systems; Forbenius’ theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations.
Course not offered every year
Also Offered As: ESE 617
Prerequisite: ESE 500
Activity: Lecture
1.0 Course Unit

MEAM 620 Advanced Robotics
This course covers advanced topics in robotics and includes such topics as multi-body dynamics, nonlinear control theory and planning algorithms with application to robots and systems of multiple robots. Prerequisite: Graduate standing in engineering
Course usually offered in spring term
Prerequisite: MEAM 520 OR MEAM 535 OR ESE 500 OR CIS 580
Activity: Lecture
1.0 Course Unit

MEAM 630 Advanced Continuum Mechanics
This course is a more advanced version of MEAM 530. The topics to be covered include: tensor algebra and calculus, Lagrangian and Eulerian kinematics; Cauchy and Piola-Kirchhoff stresses. General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics. Constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure. One graduate level course in applied mathematics and one in either fluid or Solid Mechanics.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 632 Plasticity
This course develops the mathematical theory of plastic deformation for both crystalline and disordered materials. Phenomenological models for strain-hardening, creep and size-dependent plastic flow as well as physically-based theories for single crystals are discussed. Applications are drawn from problems in structural mechanics, deformation processing, friction and contact, and fracture. Large strain deformations and problems involving strain localization are considered. Prerequisite: If course requirement not met, permission of instructor required.
Course not offered every year
Prerequisites: MEAM 519, ENM 510
Activity: Lecture
1.0 Course Unit

MEAM 633 Mechanics of Adhesion and Fracture
This course focuses on mechanics aspects of adhesion and fracture of solids. The topics are intimately related, as fracture involves decohesion. Topics include forces of interaction between surfaces of solids, perfect versus imperfect adhesion, aspects of contact mechanics, linear analysis of cracks in elastic materials, non-linear analysis of cracks in elastic-plastic materials, J-integral methods, phenomenological theories, crack growth and heeling, and stability. Micro-mechanical models of fracture are analyzed using non-linear elasticity and energy methods. Applications to various material systems and processes, including structural materials, layered materials, friction and wear.
Course not offered every year
Prerequisite: MEAM 519 AND ENM 510
Activity: Lecture
1.0 Course Unit

MEAM 634 Rods and Shells
This course is intended for 2nd year graduate students and introduces continuum mechanics theory of rods and shells with applications to structures and to biological systems as well as stability and buckling. The course begins with topics from differential geometry of curves and surfaces and the associated tensor analysis on Riemannian spaces. A brief introduction to variational calculus is included since variational methods are a powerful tool for formulating approximate structural mechanics theories and for numerical analysis. The structural mechanics theories of rods, plates and shells are introduced including both linear and nonlinear theories. First-year graduate-level applied mathematics for engineers (ENM 510 and 511) and a first course in continuum mechanics or elasticity or permission of instructor.
Course not offered every year
Activity: Lecture
1.0 Course Unit
MEAM 635 Composite Materials
This course deals with the prediction of the average, or effective properties of composite materials. The emphasis will be on methods for determining effective behavior. The course will be concerned mostly with linear mechanical and physical properties, with particular emphasis on the effective conductivity and elastic moduli of multi-phase composites and polycrystals. However, time-dependent and non-linear properties will also be discussed.
Course not offered every year
Prerequisite: ENM 510
Corequisite: ENM 511
Activity: Lecture
1.0 Course Unit

MEAM 642 Advanced Fluid Mechanics
Fluid mechanics as a vector field theory; basic conservation laws, constitutive relations, boundary conditions, Bernoulli theorems, vorticity theorems, potential flow. Viscous flow; large Reynolds number limit; boundary layers.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 646 Computational Mechanics
The course is divided into two parts. The course first introduces general numerical techniques for elliptical partial differential equations - finite difference method, finite element method and spectral method. The second part of the course introduces finite volume method. SIMPLER formulation for the Navier-Stokes equations will be fully described in the class. Students will be given chances to modify a program specially written for this course to solve some practical problems in heat transfer and fluid flows.
Course not offered every year
Prerequisites: ENM 510, ENM 511, and one graduate level introductory course in mechanics. FORTRAN or C programming experience is necessary.
Activity: Lecture
1.0 Course Unit

MEAM 650 Mechanics of Soft and Biomaterials
This course is aimed to expose the students to a variety of topics in mechanic materials via discussion of 'classic' problems that have had the widest impact long period of time and have been applied to analyze the mechanical behavior a variety of biological and engineering materials.
Course not offered every year
Also Offered As: MSE 650
Activity: Lecture
1.0 Course Unit

MEAM 662 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory.
The course usually offered in fall term
Also Offered As: BE 662, CBE 618
Activity: Lecture
1.0 Course Unit

MEAM 663 Mechanics of Macromolecules
This course is targeted for engineering/physics students working in the areas of nano/bio technology. The course will start with a quick review of statistical mechanics and proceed to topics such as Langevin dynamics, solution biochemistry (Poisson-Boltzmann and Debye-Huckel theory), entropic elasticity of bio-polymers and networks, reaction rate kinetics, solid state physics and other areas of current technological relevance. Students will be expected to have knowledge of undergraduate mechanics, physics and thermodynamics.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 690 Advanced Topics in Thermal Fluid Science or Energy
This course will be offered when demand permits. The topics will change due to the interest and specialties of the instructor(s). Some topics could include: Computational Fluid Mechanics, Visualization of Computational Results, Free Surface Flows, Fluid Mechanics of the Respiratory System, and transport in Reacting Systems.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 691 Special Topics in Mechanics of Materials
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Compliant Mechanisms, Optimal Control, and Fluid-Structure interaction.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 692 Topics in Mechanical Systems
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Electromagnetics, Control Theory, and Micro-Electro-Mechanical Systems.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 699 MEAM Seminar
The seminar course has been established so that students get recognition for their seminar attendance as well as to encourage students to attend. Students registered for this course are required to attend weekly departmental seminars given by distinguished speakers from around the world. In order to obtain a satisfactory (S) grade, the student must not only attend more than 70% of the departmental seminars but also provide satisfactory answers to the mini-essay assignments (shown as quizzes on Canvas) about three of those seminars. It is recommended that the student pick the seminars closest to their research interests, but they may choose any seminar they wish. There will be three such quizzes distributed through the semester, graded pass/fail. Participation in the seminar course will be documented and recorded on the students transcript.
In order to obtain their degree, doctoral students will be required to accumulate six seminar courses and MS candidates two courses. Under special circumstances, i.e. in case of conflict with a course, the student may waive the seminar requirement for a particular semester by petition to the Graduate Group Chair.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
MEAM 891 Shop Training: Special Topics
Intended for graduate students conducting research. Building upon the fundamentals of mechanical design, this hands-on, project-based course provides participants with the knowledge and skills necessary to design, analyze, manufacture, and test fully functional subtractive manufacturing processes and part components. Topics covered include an introduction to machine elements, analysis of the mechanics of machining, manufacturing technology, precision fabrication (milling, turning and computer-controlled machining), metrology, tolerances, cutting-tool fundamentals and engineering materials. Graduate standing in engineering or permission of the instructor. Completion of MEAM 101 or suitable computer aided design experience; this prerequisite may be waived at the discretion of the instructor if a CAD portfolio which includes technical drawings and assemblies is demonstrated. One-term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 892 Shop Training: Additive Fundamentals
Intended for graduate students conducting research. This course introduces students to the methods, techniques, and machines utilized in additive manufacturing spaces at Penn. The focus will be on iterative design using Fused Deposition Modeling, Stereolithography, and Polyjetting. These methods will be compared with alternatives such as Digital Light Processing, Selective Laser Sintering, Subtractive Manufacturing, and other fabrication techniques. Students will use computer-aided design tools and additive machines to solve problems of physical device and item manufacture. Graduate standing in engineering or permission of the instructor. MEAM 101 or a suitable 3D computer aided design experience to be determined by the instructor. One-term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 895 Teaching Practicum
This course provides training in the practical aspects of teaching. The students will work with a faculty member to learn and develop teaching and communication skills. As part of the course, students will participate in a range of activities that may include: giving demonstration lectures, leading recitations, supervising laboratory experiments, developing instructional laboratories, developing instructional material, preparing homework assignments, and preparing examinations. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty responsible for the course. At the completion of the 0.5 c.u. of teaching practicum, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation from the faculty member responsible for the course. The evaluation will be based on comments of the students taking the course and the impressions of the faculty. One-term course offered either term
Activity: Lecture
0.5 Course Units

MEAM 899 Independent Study
For students who are studying specific advanced subject areas in mechanical engineering and applied mechanics. Before the beginning of the term, the student must submit a proposal outlining and detailing the study area, along with the faculty supervisor’s consent, to the graduate group chair for approval. At the conclusion of the independent study, the student should prepare a brief report. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

MEAM 900 Masters Thesis
Master’s Thesis
Activity: Masters Thesis
1.0 Course Unit

MEAM 995 Dissertation
Activity: Dissertation
1.0 Course Unit

MEAM 999 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master’s thesis or Ph.D. dissertation requirements. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Medical Physics (MPHY)

MPHY 600 Professional Development
Introduction of subspecialties of medical physics (radiation oncology, diagnostic imaging, nuclear medicine and medical health physics), and professional competencies and skills needed for success in a medical physics career. Focus on career placement after graduation with an emphasis on preparation for the medical physics residency application, match, and interview process. Two terms. student may enter either term.
Activity: Lecture
0.0 Course Units

MPHY 601 Introduction to Radiation Protection
Introduction to applied nuclear and atomic physics; radioactive decay; radiation interactions; biological effects and safety guidelines; radiation detection, instrumentation and protection.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: CAMPEP core course.

MPHY 602 Physics of Medical / Molecular Imaging
Physical principles of diagnostic radiology, fluoroscopy, computed tomography; principles of ultrasound and magnetic resonance imaging; radioisotope production, gamma cameras, SPECT systems, PET systems; diagnostic and nuclear medicine facilities and regulations. The course includes a component emphasizing the emerging field of molecular imaging.
Course usually offered in fall term
Also Offered As: BE 483, BE 583
Prerequisite: MATH 241 AND BIOL 215 AND BE 305
Activity: Lecture
1.0 Course Unit
Notes: CAMPEP core course.

MPHY 603 Image-Based Anatomy
Taught by a radiation oncologist, this course covers major organ systems and disease areas and is presented from a radiologic or imaging (including cross-sectional) viewpoint in addition to a standard anatomy and physiology presentation.
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: This course is required by the ABR. CAMPEP core course.
MPHY 604 Radiological Physics
Fundamental concepts underlying radiological physics and radiation dosimetry. Covers photon and neutron attenuation; radiation and charged particle equilibrium; and interactions of photons and charged particles with matter and radiotherapy dosimetry including photographic, calorimetric, chemical and thermoluminescence dosimetry (formerly Medical Radiation Engineering).
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: CAMPEP core course.

MPHY 605 Medical Ethics / Governmental Regulation
Fundamentals of professional ethics for medical physicists through exploration of Code of Ethics (published by the American Association of Physicists in Medicine); case studies; survey of governmental regulations pertinent to medical physics.
Activity: Lecture
0.5 Course Units
Notes: CAMPEP core course.

MPHY 606 Physics of Radiation Therapy
Clinical radiation oncology physics; principles of radiation-producing equipment; photon and electron beams; ionization chambers and calibration protocols; brachytherapy, dose modeling and calculations; treatment planning.
Activity: Lecture
1.0 Course Unit
Notes: CAMPEP core course.

MPHY 607 Radiation Biology
Fundamental knowledge of mechanisms and biological responses of human beings to ionizing and non-ionizing radiation through the study of effects of radiation on molecules, cells and humans; radiation lesions and repair; mechanisms of cell death; cell cycle effect, radiation sensitizers and protectors; tumor radiobiology; relative sensitivities of human tissue and radiation carcinogenesis. This course is required by the American Board of Radiology (ABR).
Activity: Lecture
1.0 Course Unit
Notes: CAMPEP core course.

MPHY 608 Radiation Detection and Measurement
Fundamentals of detection and measurement of ionizing radiation; working principles of many detectors used currently in the field including their application in radiotherapy, nuclear medicine, and diagnostic radiology.
Activity: Lecture
1.0 Course Unit

MPHY 610 Computational Medical Physics
Fundamentals of computational calculations with MATLAB on common problems in radiation therapy physics: Compton scattering cross-section and its applications; bremsstrahlung scattering cross-sections and its applications; 3D photon dose calculation algorithms; 3D electron dose calculation algorithms; CT reconstruction; DICOM format.
Activity: Lecture
1.0 Course Unit

MPHY 611 Medical Physics Laboratory
Lab course offering hands-on experience with a range of measurements commonly encountered in the practice of clinical medical physics. Project offerings may include: Task Group 51 calibration of linear accelerators; 4-Dimensional Computed Tomography (4DCT) imaging and image analysis; Deformable image registration and dose sum reconstruction; Monthly linear accelerator Quality Assurance (QA) procedures; Brachytherapy source calibration and High Dose Rate (HDR) machine QA; Positron emission tomography (PET) imaging and image analysis; MRI imaging and image analysis; Linear accelerator shielding calculations and radiation survey.
Activity: Laboratory
1.0 Course Unit

MPHY 699 Independent Study
Activity: Independent Study
1.0 Course Unit

MPHY 700 Clinical Practicum
Practical experience in a subspecialty of medical physics including radiation therapy, diagnostic imaging, radiation safety, and nuclear medicine. Taking place in a clinical setting and supervised by a qualified medical physicist, the 256 hour practicum provides an understanding of instrumentation methodology, calibration, treatment planning, and quality assurance; and may include patient interaction, clinical conference attendance, and a review of new techniques in radiation oncology.
Activity: Laboratory
1.0 Course Unit

MPHY 990 THESIS I
Faculty-mentored research project (extended research paper or original research) resulting in a final paper and short oral presentation that is the culmination of a master student's graduate study.
Activity: Masters Thesis
1.0 Course Unit

MPHY 991 THESIS II
Faculty-mentored research project (extended research paper or original research) resulting in a final paper and short oral presentation that is the culmination of a master student's graduate study.
Activity: Masters Thesis
1.0 Course Unit

Military Science (MSCI)

MSCI 101 Basic Leadership I Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Course usually offered in fall term
Corequisite: MSCI 110
Activity: Laboratory
1.0 Course Unit

MSCI 102 Basic Leadership I Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Course usually offered in spring term
Corequisite: MSCI 120
Activity: Laboratory
1.0 Course Unit
MSCI 110 Leadership and Personal Development
Introduces students/cadets to the personal challenges and competencies that are critical for effective leadership. Focus is placed on developing basic knowledge and comprehension of the U.S. Army's Leadership Dimensions while gaining a 'big picture' understanding of the Army ROTC program, its purpose in the U.S. Army and our nation, and its advantages for the student. Classes are conducted for one hour once each week. Credit excluded from full-time calculation.
Course usually offered in fall term
Corequisite: MSCI 101
Activity: Lecture
1.0 Course Unit

MSCI 120 Foundations In Leadership
Reviews leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback and using effective writing skills. Students/cadets are also exposed to key fundamentals of skills required to be successful as an MS II cadet; namely military map reading and land navigation, and small unit operations/leadership drills. Credit excluded from full-time calculation.
Course usually offered in spring term
Corequisite: MSCI 102
Activity: Lecture
1.0 Course Unit

MSCI 201 Basic Leadership 2 Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Course usually offered in fall term
Corequisite: MSCI 210
Activity: Laboratory
1.0 Course Unit

MSCI 202 Basic Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Basic Course Leadership Laboratory. 2h. Open only to (and required of) students in the associated Military Science course. Series, with different roles for students at different levels in the program. Learn and practice basic skills. Gain insight into Advanced Course in order to make an informed decision whether to apply for it. Build self-confidence and team-building leadership skills that can be applied throughout life. Basic Course Physical Fitness. Only open to students in MSCI 101, MSCI 102, MSCI 201 and MSCI 202. Series, with different roles for students at different levels in the program. Participate in and learn to lead a physical fitness program. Emphasis on the development of an individual fitness program and the role of exercise and fitness is one's life. Students who continue in the advanced course as juniors and seniors become obligated to serve either on active duty or in the reserve component. The Advanced Course consists of the courses MSCI 301, MSCI 302, MSCI 401 and MSCI 402. It is open only to students who have completed the Basic Course or earned placement credit for the basic course (various methods). The Advanced Course is designed to qualify a student for a commission as an officer of the United States Army. Students must complete all courses numbered greater than 300, to include a six-week Advanced Camp during the summer, usually between the junior and senior years. The courses must be taken in sequence unless otherwise approved by the Professor of Military Science. All contracted students receive $150 per month stipend during the school year. No credit, or as awarded by cross-enrolled schools.
Course usually offered in spring term
Corequisite: MSCI 220
Activity: Laboratory
1.0 Course Unit

MSCI 210 Innovative Tactical Leadership
Explores the dimensions of creative and innovative tactical leadership strategies and styles by studying historical case studies and engaging in interactive student exercises. Focus is on continued development of the knowledge of leadership values and attributes through an understanding of rank, uniform, customs and courtesies. Credit excluded from full-time calculation.
Course usually offered in fall term
Corequisite: MSCI 201
Activity: Lecture
1.0 Course Unit

MSCI 220 Leadership In Changing Environments
Examines the challenges of leading in complex contemporary operational environments. Students/cadets are exposed to more complex land navigation/map reading tasks, as well as more advanced small unit operations/leadership drills. Cadets develop greater self awareness as they practice communication and team building skills. Credit excluded from full-time calculation.
Corequisite: MSCI 202
Activity: Lecture
1.0 Course Unit

MSCI 230 Adaptive Team Leadership
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Taught by: Kushner
Activity: Laboratory
1.0 Course Unit
**MSCI 301 Leadership Laboratory/Practicum 3**
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Course usually offered in fall term
Prerequisite: MSCI 101 AND MSCI 102 AND MSCI 110 AND MSCI 120 AND MSCI 201 AND MSCI 202 AND MSCI 210 AND MSCI 220
Corequisite: MSCI 310
Activity: Laboratory
1.0 Course Unit

**MSCI 302 Leadership Laboratory/Practicum**
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. ROTC Advanced Camp. A six-week camp conducted at an Army post. Only open to (and required of) students who have completed MSCI 301 and MSCI 302. The student receives pay. Travel, lodging and most meal cost are defrayed by the US Army. The Advanced Camp environment is highly structured and demanding, stressing leadership at small unit levels under varying, challenging conditions. Individual leadership and basic skills performance are evaluated throughout the camp. The leaders and skills evaluations at the camp weigh heavily in the subsequent selection process that determines the type commission and job opportunities given to the student upon graduation from ROTC and the university Nurse Summer Training Program. Consist of three weeks at an Advanced Camp (see above) and up to five weeks serving as a nurse in a military medical treatment facility. Only open to (and required of) nursing students who have completed MSCI 301 and MSCI 302. Replaces normal advanced. The student receives pay. Travel, lodging and most meal costs are defrayed by the US Army. The camp and clinical environments are demanding, stressing leadership and basic skills performance are evaluated throughout. The leadership and skills evaluations weigh heavily on the subsequent selection process that determines the job opportunities offered to the nurse upon graduation. No credit, or awarded by cross-enrolled schools.
Course usually offered in spring term
Prerequisite: MSCI 101 AND MSCI 102 AND MSCI 110 AND MSCI 120 AND MSCI 201 AND MSCI 202 AND MSCI 210 AND MSCI 220
Corequisite: MSCI 301
Activity: Laboratory
1.0 Course Unit

**MSCI 310 Leadership in Contact**
Uses increasingly intense situational leadership challenges to build cadet awareness and skills in leading small units. Skills in decision-making, persuading, and motivating team members when ‘in combat’ are explored, evaluated, and developed. Credit excluded from full-time calculation.
Prerequisite: MSCI 101 AND MSCI 102 AND MSCI 110 AND MSCI 120 AND MSCI 201 AND MSCI 202 AND MSCI 210 AND MSCI 220
Corequisite: MSCI 301
Activity: Lecture
2.0 Course Units

**MSCI 320 Complex Team Leadership Issues**
Challenges cadets with more complex leadership issues to further develop, practice, and evaluate adaptive leadership. Cadets continue to analyze and evaluate their own leadership values, attributes, skills and actions in preparation for the Leadership Development and Assessment Course (LDAC). Primary attention is given to preparation for LDAC and the development of both tactical skills and leadership qualities. Credit excluded from full-time calculation.
Course usually offered in spring term
Corequisite: MSCI 302
Activity: Lecture
1.0 Course Unit

**MSCI 330 Military Leadership**
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Taught by: Kushner
Prerequisite: MSCI 101 AND MSCI 102 AND MSCI 110 AND MSCI 120 AND MSCI 201 AND MSCI 202 AND MSCI 210 AND MSCI 220
Activity: Laboratory
1.0 Course Unit

**MSCI 401 Leadership Laboratory/Practicum 4**
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Credit excluded from full-time calculation.
Course usually offered in fall term
Prerequisite: MSCI 101 AND MSCI 102 AND MSCI 110 AND MSCI 120 AND MSCI 201 AND MSCI 202 AND MSCI 210 AND MSCI 220
Corequisite: MSCI 410
Activity: Laboratory
1.0 Course Unit

**MSCI 402 Leadership Laboratory/Practicum**
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Advance Course Leadership Laboratories. 2h. Open only to students in the associated Military Science course. Series, with different roles for students at different levels in the program. Involves leadership responsibilities for the planning, coordination, execution and evaluation of various training and activities with Basic Course students and for the ROTC program as a whole. Students develop, practice and refine leadership skills by serving and being evaluated in a variety of resposible positions. Advanced Course Physical Fitness. Only offered to (and required of) students in MSCI 301, MSCI 302, MSCI 401 and MSCI 402, of which this program is an integral part. Series, with different roles for students at different levels in the program. Participate in and learn to plan and lead physical fitness programs. Develops the physical fitness required of an officer in the Army. Emphasis on the development of an individual fitness program and the role of exercise and fitness in one's life. No credit, or as awarded by cross-enrolled schools.
Course usually offered in spring term
Prerequisite: MSCI 101 AND MSCI 102 AND MSCI 110 AND MSCI 120 AND MSCI 201 AND MSCI 202 AND MSCI 210 AND MSCI 220 AND MSCI 301 AND MSCI 302 AND MSCI 310 AND MSCI 320
Corequisite: MSCI 420
Activity: Laboratory
1.0 Course Unit
MSCI 410 Developing Adaptive Leaders
Develops cadet proficiency in planning, executing, and assessing complex operations, functioning as a member of a staff, and providing leadership performance feedback to subordinates. Cadets are given situational opportunities to assess risk, make ethical decisions, and provide coaching to fellow ROTC cadets. Credit excluded from full-time calculation.
Course usually offered in fall term
Prerequisite: MSCI 101 AND MSCI 102 AND MSCI 110 AND MSCI 120 AND MSCI 201 AND MSCI 202 AND MSCI 210 AND MSCI 220 AND MSCI 301 AND MSCI 302 AND MSCI 310 AND MSCI 320
Corequisite: MSCI 401
Activity: Lecture
1.0 Course Unit

MSCI 420 Leadership in the Contemporary Operating Environment of the 21st Century
Explores the dynamics of leading in the complex situations of current military operations. Cadets examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. Aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support are examined and evaluated. Credit excluded from full-time calculation.
Prerequisite: MSCI 101 AND MSCI 102 AND MSCI 110 AND MSCI 120 AND MSCI 201 AND MSCI 202 AND MSCI 210 AND MSCI 220 AND MSCI 301 AND MSCI 302 AND MSCI 310 AND MSCI 320

Modern Middle East Studies (MODM)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

MODM 100 The Middle East and the West
This course provides an overview of themes and issues in Middle Eastern history from the medieval era to the present, with an emphasis on encounters and exchanges between the 'Middle East' (defined as Southwest Asia and North Africa) and the 'West' (chiefly Europe and the United States). Key topics include perceptions of Islam since its inception, conflicts between predominantly Christian Europe and the Islamic world during the Crusades, East-West encounters during the age of exploration, European colonial domination of the Middle East from the 19th century, independence movements and the rise of nationalism in the 20th century, the Middle East and the Cold War, and the challenge of Islamist radicalism and anti-Western sentiment in recent times.
Activity: Online Course
1.0 Course Unit

MODM 200 Women and Gender in the Middle East
Depictions of Middle Eastern women frequently present them as voiceless, oppressed, and disadvantaged, and often cite Islam as the cause. This course explores the many complexities of gender and the position of women in the predominantly Islamic Middle East, surveying the major developments, themes, and problems in women's history from the medieval era to the contemporary period. Special emphasis will be placed on the role of women in foundational Islamic texts and the many interpretations of those texts regarding questions of gender. The course will also challenge the idea that gender divisions and the role assigned to women have been static throughout history, by tracing women's legal status, sexual morality, family life, and economic and political participation over time. Themes discussed include the importance of the harem and the influence of women in political life, the challenges posed by the impact of the West, women's reactions to these challenges, the return of Islam and Islamism, and the repercussions for women in dress, employment, and moral life. The course will also consider gender norms and homoerotic relations. In addition, the course will also look at Western representations of the Oriental woman, the effects of colonialism and nationalism on Middle Eastern women, and the rise of Muslim women activist movements. We will also address the highly contested subject of veiling and consider the effects of modern US wars on Middle Eastern women. Seeking to go beyond just scholarly studies, this course will make use of art, documentaries, and literature in order to demonstrate how, in the modern period, women have defined themselves amid great political, social and economic turmoil.
Activity: Online Course
1.0 Course Unit

MODM 260 Oil, Poli in Mid East
Few issues have dominated the economic and political landscape of the Middle East over the past hundred years more visibly than oil. This course examines the historical, economic, political and social dimensions of petroleum exploration in the region, from the first major oil discoveries in Iran in 1908 to more recent attempts to diversify the regions economic and energy practices. Topics discussed include oil and economic development, colonialism and foreign oil exploration, petro-nationalism and the rise of OPEC, the Arab oil embargo of 1973, the significance of oil in the US-Saudi relationship, and the role of climate change and sustainability priorities in the Middle East.
Activity: Online Course
1.0 Course Unit
MODM 300 Rigs Trads Mid East
Understanding the modern Middle East is almost impossible without first developing an appreciation for the importance of its diverse religious traditions, and the role that religion has played in the development of the region since antiquity. This course examines the many ways that religion has functioned in Middle Eastern societies, beginning with ancient, pre-Islamic practices, such as the Zoroastrian religion of the Persian Empire, the development of Judaism among the ancient Israelites, and the spread of Christianity in the eastern Roman Empire. Of special interest will be the rise of Islam in the seventh century, and the development of unique and localized Islamic traditions in the rapidly expanding Arab empires of the medieval period. The class will focus on such themes as the differences between Sunni and Shia Islam, the position of non-Muslim minorities in Islamic history and the different responses offered by Muslims to the challenge of west ern hegemony in predominantly Muslim lands. The class will conclude by looking closely at the many ways religion is practiced in the Middle East today, from the official secularism of states like Turkey, to the post-revolutionary religious politics of the Islamic Republic of Iran, to the complex relationship between Judaism and Zionism in Israel, to the special challenges faced by Christian and other minorities in places like Egypt or Lebanon.

Music (MUSC)

MUSC 005 College Music Program
Private study in voice, keyboard, strings, woodwind, brass, percussion, and non-western instruments. Such study is designed to meet the artistic, technical, and/or professional needs of the student. Note: This is not a syllabus. Course requirements and assessment will be determined by the private instructor. Private lessons in the College House Music cannot be taken Pass/Fail. Please visit http://www.sas.upenn.edu/music/performance. Students cannot register through Penn In Touch. Registration will be maintained by the music department upon receipt of application and instructor permission. Prerequisite: Permits will be entred after student completes College Music House. Forms available in Music department.

Activity: Studio
0.5 Course Units
Notes: Permits will be entered after student completes College Music House form. Forms available in Music department.

MUSC 007 Ensemble Performance
Successful participation in a music department sponsored group. Ensemble groups: University Orchestra, University Wind Ensemble, Choral Society, University Choir, Ancient Voices, Baroque and Recorder Ensemble, Chamber Music Society, Arab Music Ensemble, Samba and Jazz Combo. This course must be taken for a letter grade (Pass/Fail registration option may not be utilized for this course). Prerequisite: Please contact Ensemble Director if you are interested in taking Music 007 for credit.

Activity: Studio
0.5 Course Units
Notes: Please contact Ensemble Director if you are interested in taking Music 007 for credit.

MUSC 010 Marian Anderson Performance Program
Special instruction in vocal and instrumental performance for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate level of musical performance. They also must participate in a Music Department ensemble throughout the academic year, perform in public as a soloist at least once during the year (recital), perform a jury at the end of the spring semester, and attend and participate in masterclasses. Prerequisite: Must be a music major or minor.

Two terms. student must enter first term.
Activity: Lecture
0.5 Course Units

MUSC 016 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics will be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings http://www .college.upenn.edu/courses/seminars/freshman.php. Fulfills Arts and Letters sector requirement.
Course not offered every year
Activity: Seminar

MUSC 030 1000 Years of Musical Listening
We know that we like music and that it moves us, yet it is often difficult to pinpoint exactly why, and harder still to explain what it is we are hearing. This course takes on those issues. It aims to introduce you to a variety of music, and a range of ways of thinking, talking and writing about music. The majority of music dealt with will be drawn from the so-called ‘Classical’ repertoire, from the medieval period to the present day, including some of the ‘greats’ such as Handel, Beethoven, Mozart, Berlioz, and Verdi, but will also introduce you to music you will most likely never have encountered before. This course will explore the technical workings of music and the vocabularies for analyzing music and articulating a response to it; it also examines music as a cultural phenomenon, considering what music has meant for different people, from different societies across the ages and across geographical boundaries. As well as learning to listen ourselves, we will also engage with a history of listening. No prior musical knowledge is required. (Formerly Music 021).
Fulfils College Cross Cultural Foundational Requirement.
For BA Student: Arts and Letters Sector
Taught by: Calcagno, Caldwell, Goodman
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Open to all students
MUSC 032 Composers
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Caldwell, Goodman, Kallberg
Course not offered every year
Activity: Lecture
1.0 Course Unit

MUSC 033 History of Opera
An investigation, through a series of representative works, of the central problem of opera: how does the combination of music, text, and visual spectacle create an art form in which the whole is more powerful than its parts. Today this issue can be examined not only in live performances but also through media such as film, DVD, streaming video-- media to which this four-centuries-old multimedia form has adapted, evolving in still compelling ways. The works chosen for the course provide a chronological survey but also represent the variety of sources on which opera has drawn for it subject matter: myth and legend, the epic, the novel, and the play.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Goodman
Course not offered every year
Activity: Lecture
1.0 Course Unit

MUSC 034 Music Makers
Courses under this number will treat composer performers and performance. Courses will include a class on Haydn and Mozart (formerly 027); Beethoven (Formerly 028; and Mahler (formerly 025).
Taught by: Caldwell, Goodman, Kallberg
Course not offered every year
Activity: Lecture
1.0 Course Unit

MUSC 035 Jazz Style and History
This course is an exploration of the family of musical idioms called jazz. Attention will be given to issues of style development, selective musicians, and to the social and cultural conditions and the scholarly discourses that have informed the creation, dissemination and reception of this dynamic set of styles from the beginning of the 20th century to the present. Fulfills Cultural Diversity in the U.S.
Taught by: Ramsey
Course not offered every year
Also Offered As: AFRC 077
Activity: Lecture
1.0 Course Unit
Notes: This course is an exploration of the family of musical idioms called jazz. Fulfills Cultural Diversity in the U.S.

MUSC 044 Thinking About Popular Music
Catchy and controversial, fluffy and hard-hitting: by definition popular music snags our attention and entertains. This course digs into the experiences of musicians and fans, unpacking how popular music manifests the hopes, contradictions, ingenuity, and challenges of life in the United States. Music 44 is organized around three core questions: first, what counts as good music and who gets credit for being creative; second, why has popular music, at various points in history, been perceived as socially dangerous (and musicians as deviant); third, what is the history of borrowing and appropriation, and how do these habits, which overwhelmingly affect musicians of color, continue to play out today? We delve into these questions and more by analyzing the musical traits of specific repertoire, profiling artists’ lives, investigating changes in the music industry, and situating popular music in U.S. cultural history from the mid-nineteenth century to today. Lectures introduce the social and cultural history of popular music. Through close listening exercises and out of class students will learn how to hear and respond to music critically. Selected readings demonstrate for students how to form an argument using musical sources. Discussions in class, presentations and debates, exams, and writing assignments provide students the chance to build, exercise, and improve these skills.
Taught by: Goodman
Course not offered every year
Activity: Lecture

MUSC 047 That's My Song!: Musical Genre as Social Contract
Music in American history has been fundamental to identity formation because, as one scholar notes, it comprises 'the deepest feelings and qualities that make a group unique. Through moving and sounding together in synchrony, people can experience a feeling of oneness with others.' This course examines how various musical genres have served as ‘social contracts’ among audiences throughout the process of this country’s nation building process. Within America’s melting pot ideal, communities of listeners have asserted their powerful convictions about social identity through musical praxis and its ‘rules of engagement.’ The discourses surrounding the notion of ‘genre’ have often made these meanings legible, audible and powerful for many. From Protestant church performance practices, to minstrelsy, to Tin Pan Alley to rock and hip-hop, the social agreements of musical genres help us understand the dynamism of American identities.
Taught by: Ramsey
Course not offered every year
Also Offered As: AFRC 047
Activity: Lecture
1.0 Course Unit
MUSC 049 Listening to Nostalgia from the Phonograph to YouTube.
In revising the past, nostalgia invites us to also rethink the present, its ideals and its utopias. This CWIC course covers a century of nostalgia's aural technological mediation, from the invention of the phonograph to today's digital media such as YouTube. We will explore how conflicting forms of aural nostalgia (the longing for the sounds of other times or other places) are seen either as a suspicious refuge or an empowering cultural resource, and how they affect personal and collective identities, such as enhancing self-esteem or providing interpersonal bonds. The objective is to develop the students public speaking skills by voicing their own experiences of nostalgia while trying to understand the broader social, cultural, and communal issues at stake in nostalgic sounds. Through the examination of readings, analyses of recent and archival recordings, exhibits, and discussions, we will examine the intricate roles nostalgia has played at the intersections of aesthetics, technology, politics, marketing, the environment, and various audiovisual media, and how they affect us as individuals and communities. In order to develop their oral communication skills, students will be required to give presentations on topics chosen by the instructors in formats that employ different research, organization, and presentation competencies. Every week a small group of students will report on an example of sonic nostalgia found in Philadelphia in the style of a nostalgic radio program (or podcast). Each student will give a more formal oral critique of a nostalgic artifact of their choice, engaging with the plurality of oral (and aural) forms of nostalgia. Prerequisite: Communication within the Curriculum.
Taught by: Pare-Morin
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Communication within the Curriculum.

MUSC 050 World Musics and Cultures
This course examines how we as consumers in the 'Western' world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways—particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of 'World Music' by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process. Fulfills College Cross Cultural Foundational Requirement.
For BA Students: Arts and Letters Sector
Taught by: Muller, Rommen, Sykes
One-term course offered either term
Also Offered As: AFRC 050, ANTH 022, FOLK 022
Activity: Lecture
1.0 Course Unit

MUSC 051 Music of Africa
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwai to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African Fuji, and North African rai and hophop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post colonial era. (Formerly Music 053). Fulfills College Cross Cultural Foundational Requirement.
For BA Students: Arts and Letters Sector
Taught by: Muller
Course not offered every year
Also Offered As: AFRC 053, COML 053
Activity: Lecture
1.0 Course Unit

MUSC 053 Music in Troubled Places
In this class, we go beyond the headlines to discuss the history and cultures of peoples who have had to endure terrible suffering, particularly through ethnic conflict and civil war. We will focus on a curious phenomenon: populations typically defined as separate from one another (e.g., Israelis and Palestinians) often have a history of shared or related cultural practices, of which music is a prime example. We will survey a number of current and recent conflict zones and use music as a way to deepen our understanding of the identities and relationships between the peoples involved including through a consideration of my own fieldwork in Sri Lanka. Querying the very definitions of music, trouble, and place, the course then broadens out to consider how musicians have been affected by and/or responded to important global problems like slavery, sexual violence, climate change and other ecological disasters, like Hurricane Katrina. Regions to be considered in our lectures and/or readings include: Afghanistan, Iraq, Syria (including Kurdish musics), Israel-Palestine, Sri Lanka, the Maldives, Myanmar/Burma, Uganda, Sierra Leone, North and South Korea, the Marshall Islands, Cambodia, Mexico, and the United States.
Taught by: Sykes
Course not offered every year
Also Offered As: ANTH 053, NELC 054
Activity: Lecture
1.0 Course Unit

MUSC 056 Seeing/Hearing Globally: Knowing People, Culture, and Places through Travel
Students are provided a general introduction to a country's history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the 12 day intensive travel to that country (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites for journaling and are expected to produce a written/creative project at the end of the travel. The itinerary and specific course content will vary according to the travel site and focus of each class.
Taught by: Muller
Course not offered every year
Also Offered As: AFRC 056, ANTH 056, COML 056

**MUSC 070 Introduction to Theory and Musicianship: Making Sense of Music.**
This course will cover basic skills and vocabulary for reading, hearing, performing, analyzing, and writing music. Students will gain command of musical rudiments, including notation, reading and writing in treble and bass clefs, intervals, keys, scales, triads and seventh chords, and competence in basic melodic and formal analysis. The course will include an overview of basic diatonic harmony, introduction to harmonic function and tonization. Musicianship skills will include interval and chord recognition, rhythmic and melodic dictation and familiarity with the keyboard. There will be in-depth study of selected compositions from the ‘common practice’ Western tradition, including classical, jazz, blues and other popular examples. Listening skills—both with scores (including lead sheets, figured bass and standard notation), and without—will be emphasized. There is no prerequisite. Fulfills College Formal Reasoning and Analysis Foundational Requirement.
Taught by: Waltham-Smith, Weesner
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**MUSC 075 Musical Interfaces and Robotics**
Musical Interfaces and Robotics is a skills and discussion-based class for students interested in learning the basics of electricity and physical computing specifically for musical purposes. Discussions will be organized around readings related to art and technology with a focus on sound-based works. Students will learn to program Arduinos that control DC motors and respond to physical buttons or sensors. We will learn how to integrate these tools with music applications that communicate with MIDI such as Reaper, Logic Pro, and/or Max/MSP. As a final project students will present a working prototype for a new instrument they’ve created or plans for an art installation featuring a kinetic sculptural element.
Taught by: Jacobs
Activity: Seminar
1.0 Course Unit

**MUSC 077 Introduction to Electronic Musicmaking**
An exploration of composition, style, and technique in a variety of popular and experimental electronic music genres. We'll study and practice making works in genres including acousmatic music, beat-driven music such as hip-hop and techno, pop songwriting, and sound art. As we proceed, we'll investigate techniques including field recording, sampling, sound synthesis, and generative music. Within each genre, we'll begin from the analysis and technique of exemplary music, then work towards presentation and group discussion of student composition projects.
Taught by: Burns
Course not offered every year
Activity: Lecture
1.0 Course Unit

**MUSC 080 Introduction to Electronic Musicmaking**
An exploration of composition, style, and technique in a variety of popular and experimental electronic music genres. We'll study and practice making works in genres including acousmatic music, beat-driven music such as hip-hop and techno, pop songwriting, and sound art. As we proceed, we'll investigate techniques including field recording, sampling, sound synthesis, and generative music. Within each genre, we'll begin from the analysis and technique of exemplary music, then work towards presentation and group discussion of student composition projects.

**MUSC 081 Film Music in Post 1950 Italy: Nino Rota and Ennio Morricone**
An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorve, Pasolini, and Coppola. Highlights include several excerpts from the Fellini/Rota collaboration, including The White Sheik, I vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clowns, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota's music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone's work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick’s Days of Heaven and Tarantino’s The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.
Taught by: Samuel
Also Offered As: CIMS 081, ITAL 081
Activity: Seminar
1.0 Course Unit

**MUSC 099 Guided Research**
Individual research under the supervision of a member of the faculty. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**MUSC 130 Introduction to European Art Music**
This course aims to introduce students to what it means to study the European musical tradition. Students will approach the diverse music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone's work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick’s Days of Heaven and Tarantino’s The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.
Taught by: Samuel
Also Offered As: CIMS 081, ITAL 081
Activity: Seminar
1.0 Course Unit

**MUSC 130 Introduction to European Art Music**
This course aims to introduce students to what it means to study the European musical tradition. Students will approach the diverse music that constitute the classical tradition from a variety of scholarly perspectives. The goal of this class is to listen deeply and think broadly. Students will consider questions such as: what sort of object is music? Where is it located? What does it mean to say a work is ‘canonic’? What is left out of the story? This class will be in dialog with other tier-one classes, and will consider what the historian can bring to the study and understanding of music. Fulfills the requirements of the Music major.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Caldwell, Goodman, and Kallberg
Course not offered every year
Prerequisite: MUSC 070
Activity: Lecture
1.0 Course Unit
Notes: Fulfills the requirements of the Music Major. Music 070 prerequisite.
MUSC 135 Introduction to the Music Life in America
This course surveys American musical life from the colonial period to the present. Beginning with the music of Native Americans, the European legacy, and the African Diaspora, the course treats the singular social and political milieu that forged the profile of America’s musical landscape. Attention will be given to the establishment of the culture industry and to various activities such as sacred music, parlor music, concert and theater music, the cultivation of oral traditions, the appearance of jazz, the trajectory of western art music in the United States, and the eventual global dominance of American popular music. Music 070 prerequisite. Preference given to music Majors and Minors. Fulfills the Cultural Diversity in the U.S. College Requirement.
Taught by: Ramsey, Goodman
Course not offered every year
Activity: Lecture
1.0 Course Unit

MUSC 150 Introduction to Ethnomusicology
This course introduces students to the field of ethnomusicology through a series of case studies that explore a range of traditional, popular, and art musics from around the world. The course takes as a point of departure several works of musical ethnography, musical fiction, and musical autobiography and, through in-depth reading of these texts, close listening to assigned sound recordings, and in-class case studies, generates a context within which to think and write about music. Prerequisite: Fulfills the requirements of the Music major.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Fulfills the requirements of the Music Major.

MUSC 170 Theory and Musicianship I
Introduction to and development of principles of tonal voice-leading, harmonic function, counterpoint, and form through written analysis, composition, improvisation, and written work. Course covers diatonic harmony and introduction to chromaticism. Repertoires will focus on Western classical music. Musicianship component will include sight-singing, dictation keyboard harmony. Fulfills College Formal Reasoning and Analysis Foundational Requirement. Required of music majors.
Taught by: Moreno, Primosch, Weesner
Course usually offered in fall term
Prerequisite: MUSC 070
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 171 Theory and Musicianship II
Continuation of techniques established in Theory and Musicianship I. Explores chromatic harmony. Concepts will be developed through analysis and model composition. Musicianship component will include sight singing, clef reading, harmonic dictation and keyboard harmony. Required of music majors.
Taught by: Moreno, Weesner
Course usually offered in spring term
Prerequisite: MUSC 170
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 230 Historical Eras and Topics: Earlier Periods
This course offers an in-depth look at topics and repertoires of the ‘earlier’ periods, namely one (or more) of three historical epochs: Medieval, Renaissance, or Baroque. The purpose of this course is to give students the opportunity to engage deeply with musical works historically, analytically, and contextually, in addition to introducing a range of methodologies within the historical study of Music. (Formerly Music 120, 121,122).
Taught by: Calcagno, Caldwell, Goodman
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 231 Historical Eras and Topics: Later Periods
This course offers an in-depth look at topics and repertoires of the eighteenth century to today. Classes focus on one (or more) of four historical epochs: Enlightenment, Romantic, Modern, and Postmodern. The purpose of this course is to give students the opportunity to engage deeply with musical works historically, analytically and contextually, in addition to introducing a range of methodologies within the historical study of music. (Formerly 123, 124).
Taught by: Goodman, Kallberg, Ramsey
Activity: Lecture
1.0 Course Unit

MUSC 232 Themes in Music History
In this course, students will have the opportunity to explore music history from a thematic or conceptual perspective, frequently through several eras. Past themes organizing the course include the Voice, the Sacred, Uncanny, Technology, Instruments, Orality and Literacy, and Machines. Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Activity: Lecture
1.0 Course Unit

MUSC 234 Music Makers
Courses under this number will treat composer, performers, and performance. This class may also on occasion have a performance component, including collaborations with local performance venues, artists in residence. Courses will include a class on Haydn and Mozart (formerly 027); Beethoven (formerly 28); Mahler (formerly 25); Monks and Nuns; String Quartets.
Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Activity: Lecture
1.0 Course Unit
MUSC 235 Studies in African-American Music
This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways that black music produces 'meaning' and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments. The course will also engage other expressive art forms from visual and literary sources in order to better position music making into the larger framework of African American aesthetics. (Formerly Music 146).
Taught by: Ramsey
Course not offered every year
Also Offered As: AFRC 147
Activity: Lecture
1.0 Course Unit

MUSC 236 Performance, Analysis, History
Participation in the course is contingent upon a successful audition. This course must be taken for a letter grade (pass/fail option may not be utilized for this course). This weekly seminar will explore music from the past and present through class discussions of performance, historical context, and analytical aspects of the music led by a professor and/or performer. One example of a class in this number will be an indepth study of chamber music repertoire led by the Daedalus Quartet. Students will prepare for a final performance at the end of the semester as well as a paper/presentation. Students interested in this applied approach to music may also wish to take 256 and/or 276. Prerequisite: Students must successfully audition to be in the course; previous private study in an instrument is required. Basic fluency in rudiments of music theory is also required.
Taught by: Weesner
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MUSC 239 Honors Thesis in Music I
Individual research under the supervision of a member of the faculty. Prerequisite: either 130 or 135 or 150; and 170. The objective is the development of honors thesis proposal. Students must complete Honors Thesis I and II (each counting for half a credit) in order to be eligible for departmental honors.
Course usually offered in fall term
Prerequisite: (MUSC 130 OR MUSC 135 OR MUSC 150) AND MUSC 170
Activity: Independent Study
0.5 Course Units

MUSC 252 Music, Religion, Ritual in South and Southeast Asia.
What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today's public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.
Taught by: Sykes
Course not offered every year
Also Offered As: ANTH 242, SAST 252
Activity: Lecture
1.0 Course Unit

MUSC 255 Accordions of the New World
This course focuses on the musical genres and styles (both traditional and popular) that have grown up around the accordion in the New World. We will begin our explorations in Nova Scotia and move toward the Midwest, travelling through the polka belt. From there, our investigation turns toward Louisiana and Texas--toward zydeco, Cajun, and Tex-Mex music. We will then work our way through Central and South America, considering norteno, cumbia, vallenato, tango, chamame, and forro. Our journey will conclude in the Caribbean, where we will spend some time thinking about merengue and rake-n-scrape music. Throughout the semester, the musical case studies will be matched by readings and film that afford ample opportunity to think about the ways that music is bound up in ethnicity, identity, and class. We will also have occasion to think about the accordion as a multiply meaningful instrument that continues to be incorporated into debates over cultural politics and mobilized as part of strategies of representation through the New World. (Formerly Music 157).
Taught by: Rommen
Course not offered every year
Also Offered As: AFRC 157, FOLK 157, LALS 157
Activity: Lecture
1.0 Course Unit

MUSC 256 Music and Performance of Africa
This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required.
Taught by: Muller
Course not offered every year
Also Offered As: AFRC 253, ANTH 263
Activity: Lecture
1.0 Course Unit
MUSC 257 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertories of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North-American contexts of music consumption and production. (Formerly Music 258).
Taught by: Rommen
Course not offered every year
Also Offered As: ANTH 256, LALS 258
Activity: Lecture
1.0 Course Unit

MUSC 258 Latin American Music
This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts—concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertories of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production. (Formerly Music 158).
Taught by: Rommen
Course not offered every year
Also Offered As: AFRC 258, LALS 158
Activity: Lecture
1.0 Course Unit

MUSC 259 Honors Thesis in Music II
Individual research under the supervision of a member of the faculty. Prerequisite: either 130 or 135 or 150; 170; 239. The objective is the writing and completion of Honors Thesis. Students must complete Honors Thesis I and II (each counting for half a credit) in order to be eligible for departmental honors.
Course usually offered in fall term
Prerequisite: (MUSC 130 OR MUSC 135 OR MUSC 150) AND MUSC 170
Activity: Independent Study
0.5 Course Units

MUSC 270 Theory and Musicianship III
Continuation of techniques established in Theory and Musicianship I and II. Concepts will be developed through analysis and model composition. Musicianship component will include advanced sight singing, clef reading, harmonic dictation and keyboard harmony.
Taught by: Moreno, Primosch, Weesner
Course usually offered in fall term
Prerequisite: MUSC 170 AND MUSC 171
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 271 Composition I: Historical Practices
Studies in selected 16th through 19th century compositional practices. Possible topics may include 16th century modal counterpoint; sonata forms in Viennese classicism; advanced chromatic harmony. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.
Taught by: Primosch
Course not offered every year
Prerequisite: MUSC 170 AND MUSC 171
Activity: Lecture
1.0 Course Unit

MUSC 272 Composition II: Contemporary Practices
Studies in selected 20th and 21st century compositional practices. Possible topics may include symmetry in post-tonal harmony; composing for piano; the sonata in the 20th century. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.
Course not offered every year
Prerequisite: MUSC 170 AND MUSC 171
Activity: Lecture
1.0 Course Unit

MUSC 273 Orchestration
An introduction to writing for the instruments of the orchestra. Course will include study of individual instruments and various instrumental combinations, including full orchestra. Representative scores from the 18th century to the present day will be analyzed. Students will be responsible for several scoring projects and will have opportunities to hear readings of their projects. Prerequisite: at least two semesters of music theory or permission of instructor. (Formerly 285).
Taught by: Primosch
Course not offered every year
Prerequisite: MUSC 070 OR MUSC 170
Activity: Lecture
1.0 Course Unit

MUSC 275 Electronic Music
MUSC275 offers an introduction to electronic music/sound production with a focus on analogue systems and performance. Guest artists will join us for in-class visits and performances during the semester. Meetings will take place in the classroom, in concert spaces and in the studio. Preference given to Music majors and minors for registration.
Taught by: Lew
Course not offered every year
Prerequisite: MUSC 070 OR MUSC 170
Activity: Lecture
1.0 Course Unit
MUSC 277 Recording Music
An introduction to music and sound recording with a focus on concerts and live performances. The entire process will be examined from start to finish, including the roles played by composers, musicians, listeners, performance spaces, and recording technology. Meetings will take place in the classroom, in concert spaces and in the studio. Music majors and minors will be given preference for registration.
Taught by: Lew
Course usually offered in fall term
Prerequisite: MUSC 070 OR MUSC 170
Activity: Seminar
1.0 Course Unit
Notes: This course is for Music Majors and minors.

MUSC 278 Composition for Musicians
Music 278 is a Composition Seminar that treats composing as both an end in itself and a means for thinking broadly and speculatively about music. We will work on various compositional techniques through exercises as well as 'free' composition, giving attention to skills as well as to personal voice. We will survey the current musical landscape through listening, analysis and discussion. The question of musical style itself will be pursued, and while we will be oriented to western art music, we will consider a wide range of styles, including popular music. It is assumed that students will have fluency with musical notation. Prerequisite: If course requirement not met, permission of the instructor.
Taught by: Weesner
Prerequisite: MUSC 171
Activity: Seminar
1.0 Course Unit
Notes: Music 171 prerequisite

MUSC 330 Seminar in Music History
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply and critically with a specialized research topic. The topic of the seminar is determined by the instructor, and can focus on a particular genre or body of repertoire, music-maker or composer, the cultural and social dynamics of a period in music history. Prerequisites: MUSC 170 or other demonstration of familiarity with music notation and music theory. It is recommended that students also have taken MUSC 130 and at least one 200-level course. However, students who have not taken these courses may be admitted at the discretion of the instructor.
Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Prerequisite: MUSC 170
Activity: Seminar
1.0 Course Unit

MUSC 350 Seminar in Ethnomusicology
Advanced study in a selected topic in Ethnomusicology.
Taught by: Muller, Rommen, Sykes
One-term course offered either term
Activity: Seminar
1.0 Course Unit

MUSC 370 Seminar in Theory and Composition
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply with study of Composition and Theory. Possible course content includes: compositional practice in the first half of the 20th century (Anna Weesner), study of compositional practices of the past fifty years (including a range of musical styles-James Primosch) and seminar in Theory (Popular Music-Jairo Moreno). Please check department website for specific course term descriptions. https://music.sas.upenn.edu/
Taught by: Moreno
Course not offered every year
Prerequisite: MUSC 170 AND MUSC 171
Activity: Seminar
1.0 Course Unit

MUSC 508 Advanced Musicianship
Advanced techniques of score reading and general musicianship at the keyboard. Goals of the course include increasing proficiency in sight singing (including C clefs). Taking harmonic, melodic, and rhythmic dictations. Accurate performance of rhythms. Prerequisite: Reasonable keyboard and sight-reading facility.
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

MUSC 520 Composing with Instruments
Students will study the capabilities of instruments, singly and in combination. Historical and contemporary practices will be analyzed. Creative projects will be completed. Please see department website https://music.sas.upenn.edu/courses for current term course descriptions.
Taught by: Diels, Primosch, Sorey, Weesner
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 530 Composing with Electronics
Students will study a variety of hardware and software used in making electronic music. Historical and contemporary practices will be analyzed. Creative projects will be completed. Please see department website https://music.sas.upenn.edu/courses for current term course descriptions.
Taught by: Diels, Primosch
Course not offered every year
Activity: Seminar
1.0 Course Unit
MUSC 540 Composing with Performers
The goal of this course is to explore and mine for possibilities the space between a score and the performance of a score. What do performers bring to a piece of music and how do composers best anticipate these possibilities? How much ‘room’ for interpretation exists and how do composers capitalize on it? What is performance practice? The course will engage compositional techniques in connection with a wide range of performance practices. In order to highlight and pursue elements of interpretation in music performance, students will coach performers in both old and new repertoire. The course will involve interactions with live performers, often Penn’s string quartet-in-residence, The Daedalus Quartet. Other topics may include notational solutions, the role of improvisation, aleatoric techniques, and music analysis. Please see department website https://music.sas.upenn.edu/courses for current term course descriptions.
Taught by: Diels, Primosch, Sorey, Weesner
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 542 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the ‘black interior’, how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be team taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia’s jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.
Taught by: Beavers
Course not offered every year
Also Offered As: AFRC 542, ARTH 519, ENGL 541, URBS 542
Activity: Seminar
1.0 Course Unit

MUSC 549 Audio Ethnography
This is an intensive, graduate-level, practice-based course in which students will record, edit, and produce anthropologically informed audio works that record and interpret culture and lived experience. Projects in this class will look beyond conventional linguistic or musical codes to sounds whose semiotic or affective value may be less immediately evident. Through the process of making location recordings, analyzing those recordings, composing them into autonomous works, and critiquing every step of the way, this course will engage with questions of ethnographic representation through the medium of sound. In parallel with contextualizing readings and sound projections, throughout the semester students will work intensively on audio projects, receiving training on recording techniques, audio editing, and basic post-production techniques. The course is an opportunity to open up the question of what might constitute ‘audio documentary’ or ‘ethnographic audio’.
Presentation strategies for final projects will be discussed and decided on individual bases. Projects will be situated in relationship to cognate fields, including the anthropology of the senses, interdisciplinary sound studies, ethnomusicology, ethnographic cinema, sound art, sound mapping, soundscape composition, and experimental nonfiction media practices which involve location recording. Through weekly sound projections and home listening, students will also gain a familiarity with existing genres and uses of nonfiction audio in anthropology and related fields.
Taught by: Karel
Course not offered every year
Also Offered As: ANTH 559
Activity: Seminar
1.0 Course Unit

MUSC 576 Anthromedialities: Experimental Theory and Practice
In recent years much has been made of the ‘beyond text’ turn in anthropology, specifically the need to re-evaluate the singular authority of ‘writing culture.’ Several new approaches advocate for non-textual medialities, with representations originating in both sonovisual media and performance. Less, however, has been theorized and advocated about intermediality and the multicompositional practices of transmediality and plurimediality, specifically their more transgressive multisensory epistemology. This course will examine these radical approaches to interacting textual, visual, sonic and performative mediations, theorizing their epistemic and ethical implications, collaborative potentials, affordances in narrative and non-narrative representation, and political and aesthetic investments. Students will both critically engage histories of transmedial anthropology, and produce projects that are multicompositional.
Taught by: Feld
Course not offered every year
Also Offered As: ANTH 576, COMM 877
Activity: Seminar
1.0 Course Unit

MUSC 601 Texts and Material Culture
Topics may include book, manuscript, and print culture; history of the book; history of music notation; codicology and paleography; textual criticism, philology, and editing; encoding and textual technologies; musical bibliographies.
Taught by: Caldwell
Course not offered every year
Activity: Seminar
1.0 Course Unit
MUSC 603 Topics in Musicology
This seminar investigates topics unfolding across different historical periods. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Calcagno, Caldwell, Goodman, Kallberg
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 604 Historical and Historiographic Approaches
This course focuses on theories and models of historical investigation. It explores, among others, methodologies and conceptions of archival research, textual criticism and editing, codicology and paleography, philology and bibliography, encoding and textual technologies, and digital humanities; critical frameworks such as performance, gender/sexuality, critical race, transnational, environmental/landscape, materiality, and ritual and religious studies; and topics concerning oral histories, notational systems, and book, manuscript, and print cultures.
Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 605 Intellectual History of Ethnomusicology
Topics may include the intellectual history of ethnomusicology, current readings in ethnomusicology, a consideration of theoretical principles based upon the reading and interpretation of selected monographs, and area studies. Please see department website https://music.sas.upenn.edu/ for current term course descriptions. Prerequisite: Open to graduate students from all departments.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Open to graduate students from all departments

MUSC 606 The Interpretation of Oral Traditions
Topics may draw on methodologies derived from jazz studies, chant studies, and ethnomusicology. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Ramsey
Course not offered every year
Also Offered As: AFRC 606
Activity: Seminar
1.0 Course Unit

MUSC 620 Creative and Compositional Approaches
This course focuses on methods for thinking and engaging creatively through sound, whether compositionally or through other kinds of sound objects. Topics may include: compositional strategies; recording and producing; film; sound installations; experimental ethnography; sound art; and performance practice. Students will begin to put these methodological ideas into practice by developing semester-long projects. These projects can be individual or collaborative.
Taught by: Diels, Primosch, Sorey; Weesner
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 621 Theory-Critical Perspectives
Study of the relation of theory and criticism to analytic, ethnographic, and historical methods. Topics may include anthropology of nature and culture; archaeology and genealogy; actor-network and assemblage theories; critical race theory; deconstruction; feminist theories; gender and sexuality; materialisms and new materialisms; media archaeology and cultural techniques; phenomenology; technics.
Taught by: Moreno
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 622 Analytical and Theoretical Approaches
This course focuses on the analytical methods and theoretical approaches. Topics may include: the politics of listening; score-based analysis; social and critical theories; issues and politics of translation, inscription, and transcription; questions of form; the history of theory; performance studies; the history of musical notation; voice and vocality; and sound studies. Students will typically begin to put these methodological ideas into practice through a series of hands-on assignments which could be either individual or collaborative in nature.
Taught by: Moreno
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 630 Perspectives on the String Quartet
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 650 Ethnographic and Anthropological Approaches
This course focuses on the ethics, politics, and practice of ethnography. Topics may include: fieldwork methods; collaborative practice; ethnography and the archive; power and subjectivity; multimodal approaches; reciprocity and questions of accessibility; oral histories; experimental ethnography; and the politics of transcription, inscription, and translation. Students will begin to put these methodological ideas into practice by developing semester-long ethnographic projects. These projects can be individual or collaborative partnerships, and might also connect students to ongoing community-based research.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 655 Seminar in Ethnomusicology
Open to graduate students from all departments. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Diels, Primosch, Sorey, Weesner
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Open to graduate students from all departments

MUSC 700 Seminar in Composition
Seminar in selected compositional problems, with emphasis on written projects. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Diels, Primosch, Sorey, Weesner
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 705 Seminar in Ethnomusicology
Topics in Ethnomusicology. Open to graduate students from all departments. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Muller, Rommen, Sykes
Course not usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Open to graduate students from all departments

<td>Composers' Forum</td>
<td>Composer's Forum is a regular meeting of graduate composers, often along with other members of the Penn composing community, in which recent performances are discussed, musical issues taken up, and visitors occasionally welcomed to present their work or offer master classes. In addition to weekly Forum meetings, students will be paired with a composer for individual lessons in composition. Ph.d. Candidates in Composition in their third year in the program will continue non-credit participation in both forum and lessons. Taught by: Diels, Primosch, Sorey, Weesner One-term course offered either term Activity: Lecture</td>

MUSC 999 Independent Study and Research
Individual study and research under the supervision of a member of the faculty. May be taken for multiple course-unit credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be taken for multiple course-unit credit

Nanotechnology (NANO)

NANO 597 Master's Thesis Research
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

NANO 599 Master's Independent Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

NANO 990 Masters Reg
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

Naval Science (NSCI)

NSCI 100 Naval Science Drill
A professional laboratory covering various aspects of naval leadership and professional development. While emphasis is given to military marching, formation, and parade, the course also includes lectures from sources in and out of the Navy. Guest speakers cover topics such as leadership, Navy career paths, equal opportunity, rights and responsibilities, AIDS awareness, terrorism/counterterrorism, naval warfare doctrine, employment of naval forces, ethics and values, operations security, and safety. Must be taken concurrently with NSCI 101 (fall) NSCI 102 (spring).
One-term course offered either term
Activity: Lecture
1.0 Course Unit

NSCI 101 Naval Orientation
A course designed to familiarize the student with the history, characteristics and present employment of sea power. Particular emphasis is placed upon our naval forces and their capability in achieving and maintaining our national objectives. Naval organization and operational functions are discussed in conjunction with sea power concepts. Additionally, the student is given an insight into the Naval Service, shipboard organization and safety, time management skills and study techniques.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NSCI 102 Seapower and Maritime Affairs
A broad survey of naval history designed to add historical perspective to current defense problems. Topics covered include: naval power as an aspect of national defense policy, navies as an instrument of foreign policy, strategy selection, resource control, technology, and manning.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Only Engineering and Nursing students receive credit.

NSCI 201 Leadership & Management
This course emphasizes principles of leadership, personnel and material management, and subordinate development in the context of the naval organization. Practical applications are explored through experiential exercises and case studies.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Only Engineering, Nursing, and Wharton students receive credit.

NSCI 202 Navigation I
A comprehensive study of the theory and practice of terrestrial, and electronic navigation and the laws of vessel operations. Topics include fundamentals of coastal and harbor piloting, electronic navigation and mean of navigating without reference to land. An in-depth study of the international and inland nautical Rules of the Road is also included. Case studies and practical exercises are used to reinforce the fundamentals of marine navigation.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Only Engineering students receive credit.

NSCI 301 Engineering
This course provides an overview of how propulsion and electricity are provided to our Navy's fighting ships. The basic engineering principles relating to thermodynamics, steam propulsion (conventional and nuclear), gas turbine propulsion, internal combustion engines, electricity generation and distribution, and various support systems will be taught. Ship design, stability, damage control, and some engineering-related ethical issues will also be discussed.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Only Engineering students receive credit.

NSCI 302 Weapons
This course provides an overview of the theory and concepts underlying modern weapons systems. The principles behind sensors and detection systems, tracking systems, computational systems, weapon delivery systems, and the fire control problem will be examined, with a consistent emphasis on the integration of these components into a 'weapons system'. Case studies will be used to illustrate and reinforce concepts introduced in the course.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Only Engineering students receive credit.

NSCI 310 Evolution of Warfare
