Course usually offered in fall term
Prerequisite: CHEM 221
Activity: Lecture
1.0 Course Unit
CHEM 524 Quantum Chemistry II
Approximate methods in quantum theory and applications to molecular systems.
Course usually offered in spring term
Prerequisite: CHEM 523
Activity: Lecture
0.5 Course Units

CHEM 525 Molecular Spectroscopy
This course is broken into two sections: (1) optics, and (2) theory of spectroscopy including the discussion of techniques and examples. In the first section you will be introduced to both linear and nonlinear optics, through thinking about how to design optical components in the laboratory setting. The second part of the course is a more traditional spectroscopy course, where different spectroscopies in the visible and infrared spectral region will be discussed. This part of the course will focus on understanding what we can learn from using spectroscopy and what sort of dynamical processes can be observed with different spectroscopic techniques. Topics to be covered include, but are not limited to: optics, time-dependent perturbation theory, lineshapes, density matrix, group theory, selection rules.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 526 Chemical Dynamics
Theoretical and experimental aspects of important rate processes in chemistry.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CHEM 541 Physical Organic Chemistry
This course a high level overview of methods for the study of organic, organometallic, and inorganic reaction mechanism. Chem 441 (Mechanisms) or Chem 564 (Organometallics) is required. The course will survey thermodynamic and kinetic measurements used in understanding chemical reactions. Topics include kinetic measurements and interpretation, Arrhenius theory, Eyring theory, kinetic isotope effects, Hammett analyses, and electronic structure calculations. Articles discussing these techniques in delineating the reaction mechanisms for problems of current interest will be analyzed. The focus will be on experiments that can be accomplished with readily available analytical tools (NMR, IR, UV, GC, HPLC) and how an understanding of mechanism can be used to optimize reaction yields and selectivities.
Taught by: Kozlowski
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

CHEM 551 Methods for in vivo biochemical discovery
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 555 Macromolecular Crystallography: Methods and Applications
This is an introductory course on methods and applications of macromolecular structure determination using X-ray crystallography. The course will be broken up into three parts: 1) Principles of X-ray crystallography involving didactic lectures on the technique with weekly problem sets; 2) Workshops on macromolecular structure determination involving hands-on experience with the technology; 3) Student journal club presentations on current high impact publications involving X-ray crystal structure determination. Prerequisite: Undergraduate calculus and trigonometry.
Taught by: Marmorstein and Skordalakes
Course usually offered in fall term
Also Offered As: BMB 554
Activity: Lecture
1.0 Course Unit

CHEM 557 Mechanisms of Biological Catalysis
Reaction mechanisms in biological (enzymes, abzymes, ribozymes) and biomimetic systems with emphasis on principles of catalysis, role of coenzymes, kinetics, and allosteric control.
One-term course offered either term
Prerequisite: CHEM 242 AND (CHEM 251 OR BIOL 204)
Activity: Lecture
1.0 Course Unit

CHEM 558 Biomolecular Spectroscopy and Microscopy
Chem 558 covers basic fluorescence spectroscopy and microscopy, as well as advanced topics such as single molecule spectroscopy and non-linear and super-resolution microscopies. In addition to lectures, the course includes hands-on laboratory ‘field trips’ where students will collect and analyze data relevant to course topics. There are weekly homework assignments that include problems based on the lectures as well as reading of primary literature.
Taught by: Rhoades
Course usually offered in fall term
Also Offered As: BMB 558
Activity: Lecture
1.0 Course Unit

CHEM 563 Organic Chemistry
This course is focused on molecular species that contain metal-carbon bonds, and the role of these compounds in catalytic processes and organic synthesis. Aspects of the synthesis, structure and reactivity of important classes of organometallic compounds such as metallo alkyl, aryl, alkene, alkylidene and alkylidyne complexes are surveyed for the d and f block metals. Emphasis is placed on general patterns of reactivity and recurring themes for reaction mechanisms.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CHEM 564 Organometallics
This course encompasses a comprehensive survey of the chemistry and properties of the p-block elements of the periodic table. Topics include syntheses, structures and reactivities of important compounds. In addition, alternative bonding theories which have been used to explain the unique properties of these compounds are critically examined.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CHEM 567 Bio-inorganic Chemistry
The course covers selected topics in bioinorganic chemistry; special emphasis is placed on dioxygen chemistry and electron transfer processes. Course topics include: (i) oxygen uptake and utilization; (ii) diatomic oxygen trans port; (iii) diatomic and monoatomic oxygen incorporation into substrates; (iv) metalloenzyme-catalyzed C-C bond formation; (v) the metallobiocatalyst of DNA; (vi) metal-sulfide proteins; (vii) manganese-containing metallproteins; (viii) Photosystem II: light-driven electron transfer and the biological water-splitting reaction; (ix) biological electron transfer; (x) electron transfer theory; (xi) mechanisms of energy storage and release; and (xii) long-distance electron transfer reactions.
One-term course offered either term
Also Offered As: BMB 567
Activity: Lecture
1.0 Course Unit

CHEM 601 Chemical Information
This course examines the structure and organization of the chemical literature and introduces techniques of searching this literature, focusing on the logic and thought processes necessary for effective information retrieval. Each technique is illustrated using information tools available at the University of Pennsylvania, and we take an 'under the hood' look at the organization and functionality of each tool introduced. Students should choose a course section based on their preferred area of chemistry research: organic, inorganic, biological, and physical chemistry; all four sections are taught at a level appropriate for graduate students and advanced undergraduates. Topics vary by section, but all students learn the basics of subject, author, structure, and reaction searching, and a unit on ethics in publication and scholarly communication completes the course.
Taught by: Judith Currano
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 652 Proposal Writing for Biological and Physical Chemists
Students will learn the key components in proposal writing and develop the skills needed to prepare a compelling and original graduate research proposal. The course involves significant writing, in-class discussions and presentations.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

CHEM 662 Proposal Writing for Inorganic and Organic Chemists
The ability to communicate original, written research proposals is essential to the modern chemist. This course, for graduate students in the organic and inorganic divisions, will promote development of proposal writing skills. Students will develop original ideas, practice written work, graphic design and peer review. Outcomes of the course will include writing (and submission, when eligible) of an NSF GRFP application and a 'proposed work' section of a candidacy exam report.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

CHEM 721 Mathematics for Chemistry
This course examines the basic mathematics needed for physical chemistry, including (but not limited to) a brief review of linear algebra, Fourier transforms, delta functions, optimization, and the residue theorem. Depending on the year, selected other topics will also be included.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 723 Dynamics of Polymers
This course discussed the structure of polymers from a statistical physics point of view as well as dynamical response of polymeric systems such as mechanical response of polymer melts, polymer glass transition, properties of polymers in solutions, and properties of block co-polymers and ionomers.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 741 Spectroscopy
The course will cover Nuclear Magnetic Resonance (NMR) theory at a level appropriate for graduate students in Organic Chemistry. It will also provide hands-on practical training in the correct use of high-field NMR spectrometers. Organic Spectroscopic methods for the determination of structure using NMR will be stressed. Permission of instructor required.
Taught by: Dailey
Course usually offered in spring term
Prerequisite: CHEM 441 AND CHEM 541
Activity: Lecture
0.5 Course Units

CHEM 742 Medicinal Chemistry and Drug Design
This course focuses on concepts and strategies in medicinal chemistry, and how it is applied to modern drug discovery and development. Topics include the drug discovery process, drug targets (GRCR?S, enzymes, channels etc.), physical chemistry of molecular interactions between drug and target, drug design, methods for hit and lead identification, lead optimization, chemical biology, natural products chemistry and combinatorial and diversity oriented synthesis. This course is geared to upper level undergraduate students in chemistry or biochemistry, and first year chemistry graduate students. A strong understanding of organic chemistry is required.
Taught by: Donna Huryn
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 743 Heterocyclic Chemistry
The course deals with topics in Heterocyclic Chemistry. It covers nitrogen-containing monocyclic hetero rings, examining the most recent syntheses, the reactions and their mechanisms. The course will focus on recent variations and improvements of known heterocycles as well as their synthetic utility. Students will be expected to read critically a recent article on heterocyclic chemistry and do a presentation to the class.
Taught by: M. Joullie
One-term course offered either term
Activity: Lecture
0.5 Course Units
This class will discuss selected topics related to Bioinspired synthesis, methods, tactics and strategies. Target molecules, methods and strategies are designed by using biological systems as models. Taught by: Virgil Percec
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 745 Total Synthesis
The focus of this course comprise the development of two synthetic strategies to access architecturally complex natural products of biological significance exploiting innovative chemistry. Lectures towards this end are given. As a project, each student is given a different complex natural product and expected at the end of the course to develop two strategies, one based on asymmetric induction to provide the absolute stereochemical structure, the second where the absolute stereochemistry derives from commercially available starting materials. Taught by: Amos B. Smith III
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 746 Intermediate Organic Chemistry
This course will include a review of basic reaction mechanisms, stereoelectronic effects, functional groups and acid-base chemistry. The course will emphasize the writing of mechanisms using the curved-arrow notation and organic reactions. Bonding and electronic structure theories and more involved mechanisms will be discussed. Students are expected to have a good working knowledge of reactions, functional groups, stereochemistry and mechanisms from undergraduate organic chemistry. Students will be expected to review basic concepts in Organic Chemistry and spectroscopy. The course will include lectures and recitations, and students are expected to attend and participate.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: MCS and PhD students only.

CHEM 751 Chemical Biology
This course focuses on current topics in Chemical Biology, particularly experiments in which 1) chemical synthesis enables one to probe or control biological systems, or 2) manipulation of biological systems facilitates novel chemical syntheses. The course is broadly divided into two sections, one dealing with the study of individual proteins and nucleic acids, and one dealing with complex cellular systems. As the goal of the course is to familiarize students with innovative recent experimental approaches and to stimulate them to conceive of their own new methodology, students will be responsible for delivering presentations on topics selected from the literature, designing experiments to address currently unsolved problems in Chemical Biology (in take-home examinations), and generating several novel research proposal ideas, one of which will be elaborated into a full proposal.
Taught by: EJ Petersson
One-term course offered either term
Also Offered As: BMB 751
Activity: Lecture
1.0 Course Unit

CHEM 761 Coordination Chemistry
Ligands have a remarkable ability to alter the properties of metal ions, and the study of this coordination chemistry underlies many modern advances in science, including energy harvesting and storage, chemical catalysis, and sustainability. This course explores the relationships between the identities of ligands and the physical manifestations that result from their binding to metal centers. Topics to be covered include: symmetry and chirality in molecular complexes, variations in coordination number, ligand field effects, recent advances in bonding theory, and inorganic reaction mechanisms. Taught by: Neil Tomson
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 762 X-ray I
An introduction to the theory and practice of structure determination by X-ray crystallography. Topics discussed include point group and space group symmetry, structure factor theory, data collection methods and a survey of solution methods. The course culminates with a series of real-world structure determinations worked through in-class using the XSeed program package. Taught by: PCarroll
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 763 X-ray II
Continuation of X-ray I course, CHEM 741
Taught by: PCarroll
One-term course offered either term
Prerequisite: CHEM 762
Activity: Lecture
0.5 Course Units

CHEM 764 Materials Chemistry
This course will focus on the structure-property relationships in materials chemistry on length scales from atomic dimension up to the microscale and then core concepts to Chemical design that underpins future, 'Energy and Environmental Sustainability'. We will introduce the '12 Principles of Green Chemistry' and '12 Principles of Green Engineering' as a guide to modern materials chemistry design and then follow a trajectory that proceeds with increasing length scales of ordering in the solid state. We will introduce techniques of x-ray, neutron, electron, and ion beam based scattering, real space imaging and spectroscopies and use these to explore non-crystalline materials (amorphous, glasses, and time permitting quasicrystals and aperiodic systems) and crystalline solids. Studies will proceed from atomic scales through nanoscale, mesoscale, and micro-scale discussing the emergence of band structure and delocalized electronic and optical properties that emerge due to the finite scale of ordering and influence of the surface. We will then focus on how these foundations of materials chemistry are shaping advances in solar energy utilization with photochemistry and photoelectrochemistry and materials for photovoltaic and enabling advances electrochemical energy conversion and storage.
Taught by: C.Murray
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CHEM 765 Chemistry of the f-Block Elements
The course encompasses the descriptive chemistry, and topics related to, the f-block including the rare earth metals and actinides. Coverage includes coordination chemistry and periodic trends, electronic structure and magnetism, and modern applications of f-block chemistry including lanthanide ions as spectroscopic probes, separations chemistry, materials chemistry and applications, organo-f-element chemistry, the chemistry of the actinides and transactinides, and reactivity/catalysis with f-block compounds.
Taught by: E.Schelter
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 766 Electrochemistry: Methods and Chemical Applications
The goal of this course is for students to gain an understanding of the principles of electrochemistry along with some practical experience. Potentiometric methods will be discussed in the context of electrochemical equilibrium. Amperometric analytical methods – chronoamperometry, chronocoulometry, stripping voltammetry, cyclic voltammetry, pulse polarography, AC impedance, and hydrodynamic methods – will be described from the perspective of mathematical models of mass transport and electrode kinetics. As time permits, special topics and applications, such as electrochemical energy conversion, spectroelectrochemistry, photoelectrochemistry, ultramicroelectrodes, microfluidics, corrosion, electrochemical synthesis, and scanning electrochemical microscopy, will be covered. To complement and reinforce the material learned in class, students will fabricate electrodes, perform cyclic voltammetry and other experiments, and analyze electrochemical data. Equipment will be available in the instructor’s research laboratory to do these experiments in small groups on students’ own time outside of class. The instructor will provide out-of-class assistance to students who are not yet familiar with the use of electrochemical equipment.
Taught by: Mallouk
Activity: Lecture
1.0 Course Unit

CHEM 767 Applications of Group Theory
This course will provide a fundamental understanding of symmetry, the character tables, how to derive these, and apply them in spectroscopy, and molecular orbital diagrams. The course will require some fundamental understanding of matrix algebra, and apply concepts of symmetry to derive character tables, predict spectroscopic properties of molecules, and derive molecular orbitals diagrams including hybridized orbitals.
Taught by: Mindiola
Activity: Lecture
0.5 Course Units

CHEM 999 Independent Study and Research
(1) Advanced study and research in various branches of chemistry. (2) Seminar in current chemical research. (3) Individual tutorial in advanced selected topics. May be taken for multiple course unit credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be taken for multiple course unit credit

Chichewa (CHIC)

CHIC 490 Elementary Chichewa I
The main objective of this course is to allow students to study an African language of their choice, depending on the availability of the instructor. The course will provide students with linguistics tools which will facilitate their research work in the target country. Cultural aspects of the speakers of the language will be introduced and reinforced. Offered through Penn Language Center
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

CHIC 491 Elementary Chichewa II
Continuation of AFST 490. Offered through Penn Language Center
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

CHIC 492 Intermediate Chichewa I
Intermediate level courses in a variety of African languages: Igbo, Shona, Wolof, Malagasy, Chichewa, Setswana, Manding, Afrikaans, Setswana. Focus on oral proficiency and productive language skills. All course are language specific and follow ACTFL proficiency guidelines. Offered through Penn Language Center
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

CHIC 493 Intermediate Chichewa II
Continuation of AFST 492. Offered through Penn Language Center
For BA Students: Last Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center
Chinese (CHIN)

CHIN 001 First Year Spoken Chinese I
This course is designed for students who have little or no previous exposure to Chinese. The main objective of the course is to help students develop their listening and speaking skills. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have immediate concern to them, such as relating one’s personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, asking for directions. Chinese characters will not be taught. See LPS Course Guide. **This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges only.
For BA Students: Language Course
Taught by: Dietrich
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. ** This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges only

CHIN 002 First Year Spoken Chinese II
A continuation of CHIN001, This course is to help students develop their listening and speaking skills. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the semester, students will be able to manage many situations that have immediate concern to them, such as relating one’s personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, asking for directions. To achieve this goal, the class is to be conducted in Chinese as much as possible. Chinese characters will also be introduced, but will not be the focus of the class. SEE LPS Course Guide. **This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges only.
For BA Students: Language Course
Taught by: Dietrich
Course usually offered in spring term
Prerequisite: CHIN 001
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. ** This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges.

CHIN 003 Second Year Spoken Chinese I
This course is designed for students who have completed one year of college level Chinese classes or equivalent. The main objective of the course is to improve students’ conversational ability in Chinese in order to accomplish day-to-day tasks. These tasks include relating one’s personal life and experiences, expressing preference, feeling and opinion, ordering a meal, purchasing goods, asking for directions, making travel plans, visiting a doctor, attending a social function etc. Short Chinese movies or television shows will be integrated into the course curriculum. Chinese characters will not be taught.
For BA Students: Language Course
Taught by: Dietrich
Course usually offered in fall term
Prerequisite: CHIN 002
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. ** This course fulfills LPS language requirement only. It does not only fulfill the language requirement for other colleges.

CHIN 004 2nd Year Spoken Chinese II
This course is the continuation of Spoken Chinese III. The primary goal of the course is to improve students’ conversational ability in Chinese. By the end of the semester, students will reach the survival level, namely, they can accomplish basic day to day tasks. These tasks include relating one’s personal life and experiences, expressing preference, feeling and opinion, ordering a meal, purchasing goods, asking directions, making travel plans, visiting a doctor, attending a social function, etc. Short Chinese movies or television shows will be integrated into the course curriculum. Chinese characters will not be taught.
Taught by: Dietrich
Course usually offered in spring term
Prerequisite: CHIN 003
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. ** This course fulfills LPS language requirement only. It does not only fulfill the language requirement for other colleges.

CHIN 011 Beginning Modern Chinese I
Along with Beginning Modern Chinese II, Beginning Chinese III (Non-Intensive) and Beginning Chinese IV, this is the first course of a four-semester sequence. By completing all four semesters, students fulfill the College language requirement. The sequence starts each fall. Students cannot begin their study in the spring. This course is designed primarily for students who have little or no prior exposure to Chinese. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones, and mastery of basic grammatical structures, laying the foundation needed to be able to manage social situations such as relating one’s personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, and asking for directions. In order to achieve these goals, students are expected to thoroughly preview and review the materials according to the weekly lesson plan (on course website) prior to attending class. Regular attendance is mandatory and strictly monitored.
For BA Students: Language Course
Taught by: Dietrich
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CHIN 012 Beginning Modern Chinese II
This course is the continuation of CHIN 011. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have immediate concern to them, such as relating one’s personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods and asking for directions. Prerequisite: Along with CHIN 011 and CHIN 112, this is the second course in a four-semester sequence. By completing all four semesters, students fulfill the College language requirement.
For BA Students: Language Course
Taught by: Dietrich
Course usually offered in spring term
Prerequisite: CHIN 011 AND CHIN 111 AND CHIN 112
Activity: Lecture
1.0 Course Unit
Notes: Along with CHIN011, CHIN111 and CHIN112, this is the second course in a four-semester sequence. By completing all four semesters, students fulfill the College language requirement.

CHIN 021 Intensive Beginning Modern Chinese I & II
This is a two-semester course covering the same material as CHIN011, CHIN012, CHIN111 and CHIN112. The main objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing Chinese. By the end of this course and CHIN022, students should achieve the following goals: 1) pronounce all the sounds in Mandarin Chinese accurately and comfortably with a good command of the 4 tones; 2) carry out basic conversations in daily activities; 3) recognize and reproduce approximately 600-650 characters; and 4) read edited simple stories and write short notes or letters. Grammatical and cultural related issues are discussed during lecture hours. Oral communication tasks are given every week. Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
2.0 Course Units
Notes: Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.

CHIN 022 Intensive Beginning Modern Chinese III & IV
Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level. The language practiced in CHIN 022 will be more formal and written style than that of CHIN 021, including more authentic materials reading, listening and viewing.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: CHIN 021
Activity: Lecture
2.0 Course Units
Notes: Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.

CHIN 031 Beginning Reading and Writing in Chinese I (for Fluent Speakers)
The course is designed for students who can speak Chinese but cannot read and write in Chinese characters. The major purpose of this course is to help students develop the ability to use written Mandarin Chinese in linguistically and socially appropriate ways. The literacy goal is to master 350 to 1000 Chinese characters and to reach an intermediate-low level of ACTFL literacy proficiency. The key teaching approach is to holistically read a prodigious amount of materials. Students’ reading abilities will be developed through reading short stories under instructions, and eventually through reading long stories and news independently.
For BA Students: Language Course
Taught by: Wu
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CHIN 032 Beginning Reading and Writing in Chinese II (for Fluent Speakers)
CHIN 032 is designed for students who can speak Chinese and have reading ability of about 1000 Chinese characters. This Chinese reading and writing course is specifically designed for students at the ACTFL intermediate-low reading and writing level. The literacy goal is to master 1000 to 2000 Chinese words and reach the intermediate-mid proficiency level. Reading material covers topics that are meaningful to students not only to increase engagement and confidence in their Chinese reading skills, but also foster students’ apprehension and understanding of the Chinese deep culture.
For BA Students: Last Language Course
Taught by: Wu
Course usually offered in spring term
Prerequisite: CHIN 031
Activity: Lecture
1.0 Course Unit

CHIN 041 Beginning Cantonese I
Beginning Cantonese is a preliminary course for spoken Cantonese. The course provides fundamental aspects of the dialect as experienced in daily life situations and lays the foundation which will enable students to communicate in Cantonese for daily life needs, such as making phone calls, making purchases, getting around by various means of transportation, seeing a doctor, being a guest or a host at dinner, talking about the weather, talking about sports and entertainment, etc. It is strongly recommended that students continue to Beginning Cantonese II to become conversational.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center. This course does not fulfill the College of Arts & Sciences’ language requirement.
CHIN 042 Beginning Cantonese II
A continuation of Beginning Cantonese I, this class is a preliminary course for spoken Cantonese. The course provides fundamental aspects of the dialect as experienced in daily life situations and will enable students to communicate in Cantonese for daily life needs, such as making phone calls, making purchases, getting around by various means of transportation, seeing a doctor, being a guest or a host at dinner, talking about the weather, talking about sports and entertainment, etc.
Course usually offered in spring term
Prerequisite: CHIN 041
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

CHIN 051 Beginning Taiwanese I
Beginning Taiwanese I is designed to help students learn enough to enable them to handle basic social interactions when visiting Taiwan, such as greeting others, introducing yourself, ordering food, asking directions, etc. You will also learn to listen and understand the oral language typically heard in locations such as the grocery store, train station, bus stop, and restaurants.
Taught by: Wu
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

CHIN 052 Beginning Taiwanese II
A continuation of Beginning Taiwanese I, this course will cover language training as well as cultural topics including history and political aspects of Taiwan. Conversation topics range from daily conversation to professional and formal situations.
For BA Students: Language Course
Taught by: Wu
Course usually offered in spring term
Prerequisite: CHIN 051
Activity: Lecture
1.0 Course Unit

CHIN 081 Beginning Business Chinese I
The course is designed for juniors and seniors, and Penn working professionals who have no prior exposure to Chinese, and are interested in learning basic Chinese language and culture for the preparation of a business trip to China. The objective of this course is to build a foundation of basic Chinese in the business context, with a main focus on speaking and listening, and minimal reading. Upon completion, students are expected to be able to converse and interact with people in a variety of traveling settings and in company visits. Topics include meeting people, talking about family, introducing companies, making inquiries and appointments, visiting companies, introducing products, initiating dining invitations, and practicing dining etiquette.
For BA Students: Language Course
Course not offered every year
Activity: Lecture
1.0 Course Unit

CHIN 082 Beginning Business Chinese II
As a continuation of CHIN081, this course is to help students develop their listening and speaking skills as well as understanding of Chinese social development since 1976. The emphasis is on current China business development, correct pronunciation, accurate tones and mastery of basic grammatical structures.
Course usually offered in spring term
Prerequisite: CHIN 081
Activity: Lecture
0.0 Course Units

CHIN 111 Beginning Chinese III (Non-Intensive)
Along with CHIN011, CHIN012 and CHIN112, this is the third course in a four-semester sequence. The objective of the course is to continue building a solid foundation of the four basic skills—listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 450-500 characters; and 4) read short textbook stories and write simple notes. In order to develop students’ listening and speaking ability, oral communication tasks are given on each lesson.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: CHIN 012
Activity: Lecture
1.0 Course Unit

CHIN 112 Beginning Chinese IV
Along with CHIN011, CHIN012 and CHIN111, this is the fourth course in a four-semester sequence. The objective of the course is to continue building a solid foundation of the four basic skills—listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 600-650 characters; and 4) read short textbook stories and write simple notes. In order to develop students’ listening and speaking ability, oral communication tasks are given every other week.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: CHIN 111
Activity: Lecture
1.0 Course Unit

CHIN 141 Intermediate Cantonese I
Intermediate Cantonese is a course for students who are able to communicate in the dialect in basic survival situations. Through this course, the students will acquire a better understanding of Cantonese and its related culture, and can confidently cope with a wide range of situations. Classes will be conducted through Cantonese textbooks, discussions of various topics, and composition and presentation of students’ own dialogues so that in time they may express more complex ideas and feelings. Continuation to Intermediate Cantonese II is strongly encouraged.
Course usually offered in fall term
Prerequisite: CHIN 042
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center
CHIN 142 Intermediate Cantonese II
A continuation of Intermediate Cantonese I. Intermediate Cantonese is a course for students who are able to communicate in the dialect in basic survival situations. Through this course, the students will acquire a better understanding of Cantonese and its related culture, and can confidently cope with a wide range of situations. Classes will be conducted through Cantonese textbooks, discussions of various topics, and composition and presentation of students' own dialogues so that in time they may express more complex ideas and feelings.
Course usually offered in spring term
Prerequisite: CHIN 141
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

CHIN 151 Intermediate Taiwanese I
Students will further develop their speaking and listening skills and will be able to communicate with ease and confidence when dealing with everyday routine tasks. Students will also gain skills to process and seek information in Taiwanese. Conversation topics include New Year, folk songs, and Tang poetry. Authentic materials are used for enhancing reading, listening, and speaking practices.
Taught by: Wu
Course usually offered in fall term
Prerequisite: CHIN 052
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

CHIN 152 Intermediate Taiwanese II
This is a continuation of Intermediate Taiwanese I. Students will further develop their speaking and listening skills and will be able to communicate with ease and confidence when dealing with everyday routine tasks. Students will also gain skills to process and seek information in Taiwanese. Conversation topics include the New Year, folk songs and Tang poetry. Authentic materials are used for enhancing reading, listening, and speaking practices.
Course usually offered in spring term
Prerequisite: CHIN 151
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center.

CHIN 211 Intermediate Modern Chinese I
This is an intermediate language course. It aims to develop students' overall linguistic skills in listening, speaking, reading, and writing Chinese. The specially designed textbook gives introduction to various topics on Chinese culture. Students can expect to gain knowledge about China while they are learning the language. By completion of the course, students are expected to be able to master 1200 most frequently used characters in common reading materials, and to communicate with Chinese on
Taught by: Lee
Course usually offered in fall term
Prerequisite: CHIN 112
Activity: Lecture
1.0 Course Unit

CHIN 212 Intermediate Modern Chinese II
This course is the continuation of CHIN 211. It aims to further develop students' overall language skills. The textbook will introduce various topics related to Chinese culture, society, economy, people and their everyday life as well as China's development since Deng Xiaoping's reform and opening-up policies in 1978. In class, current issues in China will be integrated to provide a new perspective for discussion. The emphasis is not only to consolidate students' foundation, but also enhance their understanding and distinguish different levels of language. Over the semester, students will have many opportunities to express and share their opinions on various topics related to China via communicative activities, presentations, and written assignments.
Taught by: Lee
Course usually offered in spring term
Prerequisite: CHIN 211
Activity: Lecture
1.0 Course Unit

CHIN 231 Intermediate Reading and Writing Chinese I (for Fluent Speakers)
CHIN 231 is an intermediate reading and writing course designed for students at the ACTFL intermediate-mid reading and writing proficiency. The goal of this course is to reach the intermediate-high level of proficiency. This course concentrates on writing of multi-paragraph essays through the use of conventional rhetorical modes and standard grammatical structures. Students will be given ample time to think and to discuss (the crucial 'brainstorming' phase) before writing. The course stresses content, culture and comparison and draws its content from assigned readings and evidence-based argument from texts and other stimuli such as Internet, newspapers and films. Restricted to fluent speakers who have only limited reading and writing ability.
Taught by: Wu
Course usually offered in fall term
Prerequisite: CHIN 032
Activity: Lecture
1.0 Course Unit
Notes: Restricted to fluent speakers who have only limited reading and writing abilities.

CHIN 232 Intermediate Reading and Writing Chinese II (for Fluent Speakers)
This is an intermediate language class presuming basic fluency in speaking and listening and focusing on reading and writing abilities. By the end of the semester students are expected to have mastered the 1200 most commonly used characters and to have the ability to read basic Chinese texts. Students will be prepared for Advanced Modern Chinese, Media Chinese and Business Chinese.
Taught by: Wu
Course usually offered in spring term
Prerequisite: CHIN 231
Activity: Lecture
1.0 Course Unit
CHIN 311 Advanced Modern Chinese I
Students learn to work on materials which were written or produced for native speakers, instead of the classroom materials that were written for the non-native speakers. The reading materials include a larger vocabulary with more idioms. Students will also learn how to understand and use certain oral expressions in conversation. They will learn ways to narrate, to describe, and to comment in native Chinese ways. Reading and audio materials are provided and discussed in the classes. Writing and oral presentations in Chinese are required in classroom under instruction. Students will be encouraged to practice oral communication with each other.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: CHIN 212
Activity: Lecture
1.0 Course Unit

CHIN 312 Advanced Modern Chinese II
Chin 312 is a continuation of Chinese 311, training speaking, listening, reading and writing skills so to reach the advanced-low or advanced-mid level of proficiency. Major topics of the course include Chinese food culture, Chinese architecture, Confucianism in modern China, 'educated youth', democracy, and cross-Taiwan Strait relations.
For BA Students: Advanced Language Course
Taught by: Jiao
Course usually offered in spring term
Prerequisite: CHIN 311
Activity: Lecture
1.0 Course Unit

CHIN 331 CHINESE SHORT STORIES
Designed for students with advanced level Chinese language training but who need some further refinements on pronunciation, grammar, and vocabulary usage, this course stresses oral discussion, composition, and accuracy of language performance. By reading texts written by contemporary writers, students will also gain knowledge of China from an analytical and comparative perspective.
Taught by: Chiang
One-term course offered either term
Prerequisite: CHIN 312
Activity: Lecture
1.0 Course Unit

CHIN 361 Media Chinese
Chin 361 will help students improving their language skills, and enlarge vocabulary through reading online news on Chinese internet. The students will learn formal vocabulary and enhance their grammatical accuracy in the semester. Students are encouraged to explore Chinese government and company websites and Baidu Baike, so to conduct their own online search for both professional and academic purposes. Linguistic features in news headlines, accuracy of online translation tools, media censorship, social media usage will also be discussed in this class. The course goal is to help students gain Chinese media literacy by reading, browsing, and viewing online materials.
Taught by: Chiang
One-term course offered either term
Prerequisite: CHIN 232 AND CHIN 311 AND CHIN 331
Activity: Lecture
1.0 Course Unit

CHIN 371 Advanced Spoken Mandarin I
This course is designed for students who have completed at least the intermediate level Chinese language course, or have studied the language for at least three years. The objective of this course is to consolidate the knowledge and skills students have acquired from their previous Mandarin Chinese classes and to enhance their oral expressive skills. By the end of the semester, students are expected to be able to carry on a conversation with a native Mandarin speaker on various common topics, including the current issues in China about its education, society, politics, culture, and history. Students will also learn how to gather information necessary for conducting oral presentations and speeches.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: CHIN 212
Activity: Lecture
1.0 Course Unit

CHIN 372 Advanced Spoken Mandarin II
Following the format of Advanced Spoken Mandarin I with more discussions on current issues in both China and the US, including topics ranging from race, religion, gender issues to internet, cinema and pop cultures. The objective of this course is to consolidate the knowledge and skills students have acquired from their previous Mandarin Chinese classes and to enhance their oral expressive skills. By the end of the semester, students are expected to be able to carry on a conversation with a native Mandarin speaker on various common topics, and to gather information necessary for conducting oral presentations and speeches.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: CHIN 212
Activity: Lecture
1.0 Course Unit

CHIN 371 Business Chinese I
This course is aimed to enhance students' language skills in a business context and to promote their understanding about business environment and culture in contemporary China. The text is developed from real business cases from real multinational companies that have successfully embarked on the Chinese market. The forms of classes include lectures, drills on vocabulary and sentence patterns, and discussions. Class will be conducted in Chinese. In addition to the course textbook, students will learn to read business news in Chinese selected from Wall Street Journal.
For BA Students: Advanced Language Course
Taught by: Wang
Course usually offered in fall term
Prerequisite: CHIN 232 AND CHIN 312
Activity: Lecture
1.0 Course Unit
CHIN 382 Business Chinese II
This course is the second half of a one-year course for business oriented subjects. This course will provide an overview of China's changing macro-environment, while real business cases let us look into individual Chinese companies and their development in the new millennium. By the end of the semester, students are expected to 1) enhance the cultural awareness of contemporary China and the Chinese business world; 2) gain vocabulary and fluency in Chinese to function more confidently and comfortably in real business settings; 3) access business news and information in Chinese; 4) give business presentation in Chinese.

For BA Students: Advanced Language Course
Taught by: Wang
Course usually offered in spring term
Prerequisite: CHIN 312 AND CHIN 361 CHIN 381
Activity: Lecture
1.0 Course Unit

CHIN 411 Readings in Modern Chinese: Literature
This course is designed for students who have completed three years of college level Mandarin classes or equivalent. This course may be used to fulfill language or elective requirement for Chinese major or minor. The objectives of the course are 1) to help students gain an in-depth, multi-faceted and critical understanding of Chinese people, Chinese society and Chinese culture; 2) to facilitate students' acquisition of formal or written language; and 3) to develop students' analytical and critical thinking skills. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Chinese writers; and 2) regular writing exercises. Students will also view several Chinese films that are related to the topics of the reading text. The class is to be conducted exclusively in Chinese.

Taught by: Dietrich
Course usually offered in fall term
Prerequisite: CHIN 331 AND CHIN 361 AND CHIN 381
Activity: Lecture
1.0 Course Unit

CHIN 412 Readings Modern Chinese II: Literature
The main difference between this course and CHIN411 is the reading materials and topics. This course is designed for students who have completed a minimum of three years of college level Mandarin classes or equivalent. This course may be used to fulfill language or elective requirement for Chinese major or minor. The objectives of the course are 1) to help students gain an in-depth, multi-faceted and critical understanding of Chinese people, Chinese society and Chinese culture; 2) to facilitate students' acquisition of formal or written language; and 3) to develop students' analytical and critical thinking skills. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Chinese writers; and 2) regular writing exercises. Students will also view several Chinese films that are related to the topics of the reading text. The class is to be conducted exclusively in Chinese.

Taught by: Dietrich
Course usually offered in spring term
Prerequisite: CHIN 331 AND CHIN 361 AND CHIN 382
Activity: Lecture
1.0 Course Unit

CHIN 415 Readings Modern Chinese Documents
The main purpose of this content-based course is to promote advanced-level language proficiency in reading, writing, speaking and listening. Through the use of modern Chinese documents, the secondary purpose of this course is to facilitate your understanding of the changes of Chinese society in the 20th century. Topics will include the Constitution of China, China's legal system, speeches by Mao Zedong, Deng Xiaoping, Sun Yet-sen and Qiu Jin.

Taught by: Chiang
Course not offered every year
Prerequisite: CHIN 361 AND CHIN 381 AND CHIN 411
Activity: Lecture
1.0 Course Unit

CHIN 481 Advanced Business Chinese I
This content-based course provides students with the conceptual framework to understand issues China has been facing since its economic reform in 1978. Topics include WTO principles, the change of China's state-owned enterprises, China's economy in Mao's period, and the pros and cons of globalization. Students will be trained in reading financial articles, discussing international trades, conducting online research and giving business presentations. After the course, students will become more sophisticated in their understanding of China's economic development and in using Chinese business terminology at professional settings. The course assumes basic background in business and advanced level proficiency in Chinese language. The course is NOT open to freshman with no undergraduate business course. Course may be offered through Penn Language Center.

For BA Students: Advanced Language Course
Taught by: Chiang
Course usually offered in fall term
Prerequisite: CHIN 382
Activity: Lecture
1.0 Course Unit
Notes: May be offered through Penn Language Center.

CHIN 482 Advanced Business Chinese II
Chin 482 is a continuation of Chin 481. Following the format of Chin 481, Advanced Business Chinese II, this course covers topics on Eastern and Western management styles, the global financial market, China's financial market reforms, and mergers and acquisitions in China. At the end of the semester, students will submit a business proposal for the final project.

For BA Students: Advanced Language Course

CHIN 491 First Year Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.

Taught by: Mair
Course usually offered in fall term
Also Offered As: EALC 221, EALC 621
Activity: Lecture
1.0 Course Unit
CHIN 492 1st Year Classical Chin II
Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.

CHIN 510 Topics in Chinese Culture
The objective of this superior level content-based course is to extend and refine students’ language and analytical skills while enhancing the appreciation of Chinese culture. The course is for students with native-like competence in Mandarin. Each class will proceed from reading, reflection, and interpretation, to the exchange of ideas. All reading materials are in Chinese with no glossary and all are written by scholars whose expertise are wither in contemporary and traditional culture of China, or in comparative study of Chinese and Western thoughts. Topics include: (1) the shared beliefs and behaviors of Chinese people; (2) traditional values and new values in the technological and business society; (3) how affection and love are manifested in Chinese culture; (4) what influenced the surge of popularity of Chinese wuxia fiction; (5) what it meant to be descendants of Chinese (huayi) living outside China. The class is conducted exclusively in Mandarin Chinese.
Taught by: Chiang
Course usually offered in spring term
Prerequisite: CHIN 411 AND CHIN 481
Activity: Lecture
1.0 Course Unit

CHIN 515 Topics in Chinese Literature
This course surveys the literary movements of the post-Cultural Revolution era (1978-present). The reading consists of fictional works representative of each literary movement. Students will write four short (1-2 pages, double space) ‘responding’ papers and two longer critical essays (5-7 pages double spaced). Each student will also give one oral presentation to the class on an assigned story. This course is designed for students who have achieved native or near native level of reading and writing proficiency in Chinese. The class is conducted exclusively in Chinese.

Cinema and Media Studies (CIMS)

CIMS 005 In Dark Times: The Dystopian Imagination in Literature and Film
This CWiC course will offer a guided introduction to the one of the most resilient genres of the human imagination: dystopian and apocalyptic fiction. Like a group of survivors huddled around a campfire, we will turn to literature and cinema to debate some of the big questions about the future of science, technology, religion, and capitalism. This course is designed as a Critical Speaking Seminar, and the majority of class assignments will be devoted to oral presentations: including a Parliamentary-style debate and a video essay. We will begin by reading some of the early, influential works in the dystopian genre by authors like Mary Shelley, H.G. Wells, and Aldous Huxley. Next, we will explore the paranoid, schizophrenic world of Cold-War-era dystopias by J.G Ballard, Philip K. Dick and Octavia Butler. We will conclude by reading contemporary climate fiction by the likes of Margaret Atwood and Kim Stanley Robinson. Alongside the literary material, we will also track the changing nature of dystopian cinema-- from classics like Metropolis (1927) and La Jetee (1962) to the latest Zombie film. By the end of course, students will have a firm grasp of the history of the genre and will be able to draw on this knowledge to effectively debate issues related to privacy, big business, animal rights, climate change, migration etc.
Taught by: Dadawala
Also Offered As: ENGL 005
Activity: Seminar
1.0 Course Unit

CIMS 009 Introduction to Digital Humanities
This course provides an introduction to foundational skills common in digital humanities (DH). It covers a range of new technologies and methods and will empower scholars in literary studies and across humanities disciplines to take advantage of established and emerging digital research tools. Students will learn basic coding techniques that will enable them to work with a range data including literary texts and utilize techniques such as text mining, network analysis, and other computational approaches.

CIMS 036 The Middle East through Many Lenses
This freshman seminar introduces the contemporary Middle East by drawing upon cutting-edge studies written from a variety of disciplinary perspectives. These include history, political science, and anthropology, as well as studies of mass media, sexuality, religion, urban life, and the environment. We will spend the first few weeks of the semester surveying major trends in modern Middle Eastern history. We will spend subsequent weeks intensively discussing assigned readings along with documentary films that we will watch in class. The semester will leave students with both a foundation in Middle Eastern studies and a sense of current directions in the field.

CIMS 039 Perspectives on International Cinema (Cannes Film Festival)
Penn-in-Cannes is designed for students interested in the film industry and international cinema. Using the Cannes Film Festival as its focal point, the program examines the ways in which international film functions in the context of celebrity, marketing, and festivals. The scope and substance of the festival provide a unique opportunity, not only for students of cinema, but also for liberal arts students studying cultural diversity and international relations. In preparation for fieldwork at the Cannes Film Festival in May, two three-hours introductory lectures will be held in late March and April on Penn's campus to enable students to establish a critical vocabulary for film study. The lectures and subsequent discussions will examine: a) The Business and Art of the Film Festival; b) Contemporary International Cinema. Those introductory lectures will be coordinated with the Philadelphia Film Festival, which is held on April 5-18, 2007. During both the Philadelphia Film Festival and the Cannes Film Festival, students attend screenings of current international films, applying the critical tools and knowledge of the film industry gained from their earlier work. Students research and critique both the artistic aspects and the commercial p

1.0 Course Unit

CIMS 061 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices.

CIMS 062 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
Taught by: Reynolds/Novack
One-term course offered either term
Also Offered As: FNAR 062, FNAR 662
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

CIMS 063 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.
Taught by: Reynolds
Course usually offered in fall term
Also Offered As: FNAR 063, FNAR 663
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit
CIMS 065 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.

Activity: Lecture
1.0 Course Unit

CIMS 075 Image and Sound Editing
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, foleys, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.
Taught by: Novack/Novack
Course usually offered in spring term

CIMS 081 Film Music in Post 1950 Italy: Nino Rota and Ennio Morricone
An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorve, Pasolini, and Coppola. Highlights include several excerpts form the Fellini/Rota collaboration, including The White Sheik, I vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clowns, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota's music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone's work with various directors will be discussed in The God, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick's Days of Heaven and Tarantino's The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.

CIMS 101 World Film History to 1945
This course surveys the history of world film from cinema's precursors to 1945. We will develop methods for analyzing film while examining the growth of film as an art, an industry, a technology, and a political instrument. Topics include the emergence of film technology and early film audiences, the rise of narrative film and birth of Hollywood, national film industries and movements, African-American independent film, the emergence of the genre film (the western, film noir, and romantic comedies), ethnographic and documentary film, animated films, censorship, the MPPDA and Hays Code, and the introduction of sound. We will conclude with the transformation of several film industries into propaganda tools during World War II (including the Nazi, Soviet, and US film industries). In addition to contemporary theories that investigate the development of cinema and visual culture during the first half of the 20th century, we will read key texts that contributed to the emergence of film theory. There are no prerequisites. Students are required to attend screenings or watch films on their own.

CIMS 102 World Film History 1945-Present
Focusing on movies made after 1945, this course allows students to learn and to sharpen methods, terminologies, and tools needed for the critical analysis of film. Beginning with the cinematic revolution signaled by the Italian Neo-Realism (of Rossellini and De Sica), we will follow the evolution of postwar cinema through the French New Wave (of Godard, Resnais, and Yvarda), American movies of the 1950s and 1960s (including the New Hollywood cinema of Coppola and Scorsese), and the various other new wave movements of the 1960s, 1970s and 1980s (such as the New German Cinema). We will then selectively examine some of the most important films of the last two decades, including those of U.S. independent film movement and movies from Iran, China, and elsewhere in an expanding global cinema culture. There will be precise attention paid to formal and stylistic techniques that are defining screen culture today. There are no prerequisites. Requirements will include readings in film history and film analysis, an analytical essay, a research paper, a final exam, and active participation.

CIMS 103 Television and New Media
How and when do media become digital? What does digitization afford and what is lost as television and cinema become digitized? As lots of things around us turn digital, have we started telling stories, sharing experiences, and replaying memories differently? What has happened to television and life after New Media? How have television audiences been transformed by algorithmic cultures of Netflix and Hulu? How have (social) media transformed socialities as ephemeral snaps and swiped intimacies become part of the ‘new’ digital/phone cultures? This is an introductory survey course and we discuss a wide variety of media technologies and phenomena that include: cloud computing, Internet of Things, trolls, distribution platforms, optical fiber cables, surveillance tactics, social media, and race in cyberspace. We also examine emerging mobile phone cultures in the Global South and the environmental impact of digitization. Course activities include Tumblr blog posts and Instagram curations. The final project could take the form of either a critical essay (of 2000 words) or a media project.

CIMS 109 New Korean Cinema
In 2019, Bong Joon-ho’s Parasite won the Palme d’Or at the 72nd Cannes Film Festival. This event marked the apex of South Korean cinematic renaissance, having steadily become a tour de force in the international film festival scene since 1997 onwards. This course explores the major auteurs, styles, themes, and currents of the so-called ‘New Korean Cinema’ that emerged in the mid-to-late 1990s to continue to this day. Drawing from texts on critical film and Korean studies, we will pay particular attention to how the selected works re-present, resist, and interweave the sociopolitical climate they concern and are born out of. Using cinema as a lens with which to see the society, we will touch upon major events of the twentieth century including national division, military dictatorship and democratization movements, IMF economic crisis, youth culture, hallyu (the Korean wave), and damunhwa (multiculturalism initiative). In so doing, we will closely examine how each cinematic medium addresses the societal power structure and the role of the ‘Other’ it represents in terms of class, race, gender, and sexuality in the construction of contemporary Korean society. We will also briefly survey the history of South Korean cinema that has evolved hand-in-hand with the history of modern Korea itself, walking through its five different phases (1945-Korean War era; 1955-1972 ‘Golden Age’; 1973-1979 censorship era; 1980-1996 democratization era; and 1997 onwards). No prior experience of Korean studies courses necessary; all films will be screened with English subtitles. IMPORTANT: This class has TWELVE total Monday evening film screenings, of which you are required to attend AT LEAST SEVEN. Screening times are Mondays 5:20-7:30 PM, Williams Hall 440.

CIMS 111 Poetics of Screenwriting
This course studies scriptwriting in a historical, theoretical and artistic perspective. We discuss the rules of drama and dialogue, character development, stage vs. screenwriting, adaptation of nondramatic works, remaking of plots, author vs. genre theory of cinema, storytelling in silent and sound films, the evolvement of a script in the production process, script doctoring, as well as screenwriting techniques and tools. Coursework involves both analytical and creative tasks.
Taught by: Todorov
Course not offered every year
Also Offered As: COML 118, REES 111
Activity: Seminar
1.0 Course Unit

CIMS 112 Study of a Theme
This topic course explores multiple and different aspects of Cinema Studies. Specific course topics vary from year to year. See the Cinema Studies website at cinemastudies.sas.upenn.edu/courses for a description of the current offerings.
For BA Students: Arts and Letters Sector
One-term course offered either term

CIMS 113 Religion and Cinema in India
Course not offered every year
Also Offered As: RELS 118, SAST 112
Activity: Lecture
1.0 Course Unit
CIMS 116 Screenwriting Workshop
This is a workshop-style course for those who have thought they had a terrific idea for a movie but didn’t know where to begin. The class will focus on learning the basic tenets of classical dramatic structure and how this (ideally) will serve as the backbone for the screenplay of the aforementioned terrific idea. Each student should, by the end of the semester, have at least thirty pages of a screenplay completed. Classic and not-so-classic screenplays will be required reading for every class, and students will also become acquainted with how the business of selling and producing one’s screenplay actually happens. Students will be admitted on the basis of an application by email briefly describing their interest in the course to the instructor.
Taught by: Kathy DeMarco Van Cleve
One-term course offered either term
Also Offered As: ENGL 116
Activity: Seminar
1.0 Course Unit

CIMS 118 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, art, history and politics through film in the contemporary era. We will examine a variety of works that represent the social, political, economic and cultural circumstances of post-revolutionary Iran. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the function of cinema in present day Iranian society. Films to be discussed will be by internationally acclaimed filmmakers, such as Abbas Kiarostami, Mohsen Makhmalbaf, Rakhshan Bani-Etemad, Tahmineh Milani, Jafar Panahi, Bahman Gobadi, among others.
Taught by: Entezari
Course not offered every year
Also Offered As: COML 120, GSWS 118, NELC 118, NELC 618
Activity: Seminar
1.0 Course Unit

CIMS 125 Sex and Representation
This course explores literature that resists normative categories of gender and sexuality. By focusing on figures writing from the margins, we will explore how radical approaches to narrative form and subject-matter invite us to think in new ways about desire and identity. We will read texts that blur the boundaries between fact and fiction, hybridizing the genres of poetry, drama, and autobiography to produce new forms of expression, such as the graphic novel, auto-fiction, and prose poetry. From Virginia Woolf’s gender-bending epic, Orlando, to Tony Kushner’s Angels in America, this course traces how non-normative desire is produced and policed by social and literary contexts - and how those contexts can be re-imagined and transformed.
Taught by: Halstead
One-term course offered either term
Also Offered As: COML 127, GSWS 125
Activity: Seminar
1.0 Course Unit
Notes: All readings and discussions in English.

CIMS 130 Advanced Screenwriting
This is a workshop style course for students who have completed a screenwriting class, or have a draft of a screenplay they wish to improve or want to learn everything in one shot and are ready to do a lot of writing, and even more rewriting.
Taught by: Kathleen DeMarco Van Cleve
One-term course offered either term
Also Offered As: ENGL 130
Activity: Seminar
1.0 Course Unit

CIMS 142 Duchamp is My Lawyer
This course examines the impact of copyright law on artists and creative industries. Looking at publishing, music, film, and software, we will ask how the law drives the adoption of new media, and we will consider how regulation influences artistic decisions. A mix of the theoretical with the practical, we will be using UbuWeb (the largest and oldest site dedicated to the free distribution of the avant-garde) as our main case study. The course will cover both the history of copyright law and current debates, legislation, and cases. We will also follow major copyright stories in the news. Readings cover such diverse topics as the player piano, Disney films, YouTube, video game consuls, hip hop, the Grateful Dead, file sharing, The Catcher in the Rye, and many more. We will also examine the critical role of ‘shadow libraries,’ (free culture hubs) in regards how the cultural artifact is produced and distributed in the digital age, alongside today’s gatekeepers of algorithmic culture, such as Netflix, Amazon, and Spotify.
Taught by: Decherney
Course usually offered in spring term
Also Offered As: ENGL 142
Activity: Seminar
1.0 Course Unit

CIMS 150 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we’re accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we'll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?
For BA Students: Arts and Letters Sector
Taught by: Richter, Simon
Course not offered every year
Also Offered As: COML 151, ENVS 150, GRMN 150

CIMS 151 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan's war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi. For BA Students: Arts and Letters Sector Taught by: Kano Course not offered every year Also Offered As: COML 256, EALC 151, EALC 551, GSWS 257 Activity: Lecture 1.0 Course Unit

CIMS 152 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
Can the humanities help us think differently about the forest? What happens if we imagine forests as the agents of their stories? At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and the forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. The course places a wide range of literature and film in which forests are strongly featured in relation to environmental history and current environmental issues. Taught by: Richter Course not offered every year Also Offered As: COML 154, ENVS 151, GRMN 151 Activity: Lecture 1.0 Course Unit

CIMS 153 European Film from the October Revolution to World War II
This course presents the Russian contribution to world cinema before World War II - nationalization of the film industry in post-revolutionary Russia, the creation of institutions of higher education in filmmaking, film theory, experimentation with the cinematic language, and the social and political reflex of cinema. Major themes and issues involve: the invention of montage, Kuleshov effect, the means of visual propaganda and the cinematic component to the communist cultural revolutions, party ideology and practices of social-engineering, cinematic response to the emergence of the totalitarian state. Great filmmaker and theorist in discussion include Vertov, Kuleshov, Eisenstein, Pudovkin, Medvedkin and others. Taught by: Todorov Course not offered every year Also Offered As: REES 164 Activity: Lecture 1.0 Course Unit

CIMS 154 Russian and East European Film after World War II
This course examines the Russian and East European contribution to world cinema after WWII - Stalinist aesthetics and desalinization, WWII in film, the installation of totalitarianism in Eastern Europe and the Cold War in film, the fall of the Berlin Wall, the collapse of the Soviet Union and the post-soviet condition, cinematic representations of Yugoslavia's violent breakup; the new Romanian waive. Major filmmakers in discussion include Kalatozov, Tarkovsky, Wajda, Polanski, Forman, Mentzel, Sabo, Kusturitsa, Konchalovsky, Mikhalkov and others. Taught by: Todorov Course not offered every year Also Offered As: REES 165 Activity: Lecture 1.0 Course Unit

CIMS 155 Contemporary Fiction & Film in Japan: The Aftermath
This course will explore fiction and film in contemporary Japan after World War II, focusing on postwar reconstruction, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. CIMS 156 Queer German Cinema
Taught in English. This course offers an introduction into the history of German-language cinema with an emphasis on depictions of lesbian, gay, bisexual, trans and queer themes. The course provides a chronological survey of Queer German Cinema from its beginnings in the Weimar Republic to its most recent and current representatives, accompanied throughout by a discussion of the cultural-political history of gay rights in the German-speaking world. Over the course of the semester, students will learn not only cinematic history but how to write about and close-read film. No knowledge of German or previous knowledge required. Taught by: Fleishman Course not offered every year Also Offered As: COML 156, GRMN 156, GSWS 156 Activity: Lecture 1.0 Course Unit

CIMS 157 European Film from the October Revolution to World War II
This course presents the Russian contribution to world cinema before World War II - nationalization of the film industry in post-revolutionary Russia, the creation of institutions of higher education in filmmaking, film theory, experimentation with the cinematic language, and the social and political reflex of cinema. Major themes and issues involve: the invention of montage, Kuleshov effect, the means of visual propaganda and the cinematic component to the communist cultural revolutions, party ideology and practices of social-engineering, cinematic response to the emergence of the totalitarian state. CIMS 159 Modern Hebrew Literature and Film in Translation: Autobiography
This course examines cinematic and literary portrayals of childhood. While Israeli works constitute more than half of the course's material, European film and fiction play comparative roles. Many of the works are placed, and therefore discussed, against a backdrop of national or historical conflicts. Nonetheless, private traumas (such as madness, abuse, or loss) or an adult's longing for an idealized time are often the central foci of the stories. These issues and the nature of individual and collective memory will be discussed from a psychological point of view. Additionally, the course analyzes how film, poetry and prose use their respective languages to reconstruct the image of childhood; it discusses the authors and directors struggle to penetrate the psyche of a child and to retrieve fragments of past events. For BA Students: Arts and Letters Sector Taught by: Gold One-term course offered either term Also Offered As: COML 282, JWST 154, NELC 159 Activity: Lecture 1.0 Course Unit
CIMS 166 Arab/Israeli Conflict in Literature and Film
This course will explore the origins, the history and, most importantly, the literary and cinematic art of the struggle that has endured for a century over the region that some call the Holy Land, some call Eretz Israel and others call Palestine. We will also consider religious motivations and interpretations that have inspired many involved in this conflict as well as the political consequences of world wars that contributed so greatly to the reconfiguration of the Middle East after the fall of the Ottoman Empire, and after the revelations of the Holocaust in Western Europe. While we will rely on a textbook for historical grounding, the most significant material we will use to learn this history will be films, novels, and short stories. Can the arts lead us to a different understanding of the lives lived through what seems like unending crisis?

CIMS 200 Virtual Reality Lab
In this collaboration between Penn and the Philadelphia Museum of Art (PMA), students will work with with curators to create virtual reality projects connected to the museum's collections. This course mixes virtual reality theory, history, and practice. We will read a wide range of scholarship, manifestoes, and memoirs that examine virtual reality and other immersive technologies, stretching from the 18th century to today. We will explore virtual reality projects, including narrative and documentary films, commercial applications, and games. We will work with many different virtual reality systems. And we will learn the basics of creating virtual reality, making fully immersive 3-D, 360-degree films with geospatial soundscapes. Finally, we will take what we have learned out of the classroom, working with the Philadelphia Museum of Art curators to create virtual reality experiences based around the museum's objects and exhibits. Students will gain an understanding of the unique approaches needed to appeal to museum visitors in a public setting, so we can make viable experiences for them. No previous knowledge of VR or experience is necessary. Interested students should email Prof. Peter Decherney to obtain a permit for the course.

CIMS 204 Sicily on Page and Screen
What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omertà. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore's Cinema.paradiso and Coppola's The Godfather II, and read texts such as Lampedusa's The Leopard and Maraini's Bagheria. This course aims to increase students' understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others', cultural frameworks.

CIMS 206 Italian History on Screen: How Movies Tell the Story of Italy
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy’s rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifacted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy.

CIMS 245 French Cinema
This course will introduce students to key films of the French film canon, selected over a period ranging from the origins of French cinema to the present. Students will also be introduced to the key critical concepts (such as the notion of the ‘auteur’ film genre) informing the discussion of films in France. The films will be studied in both a historical and theoretical context, related to their period styles (e.g. ‘le realisme poétique,’ ‘la Nouvelle Vague,’ etc.), their ‘auteurs,’ the nature of the French star system, the role of the other arts, as well to the critical debated they have sparked among critics and historians. Students will acquire the analytical tools in French to discuss films as artistic and as cultural texts.

CIMS 250 Andrei Tarkovsky: Cinema, Spirit and the Art of the Long Take
Andrei Tarkovsky is universally acknowledged to be the greatest Soviet filmmaker of the last half of the twentieth century. Kurosawa claimed that Tarkovsky had ‘no equal among film directors alive now.’ Bergman called his work ‘a miracle.’ His films are beautiful, intellectually challenging, and spiritually profound. They also represent a prolonged exploration of the potential of the long take - unusually extended, continuous shots. Tarkovsky’s works range from ‘Ivan’s Childhood,’ a study of wartime experience through the eyes of a child; to ‘Solaris,’ a philosophical essay in the form of a science-fiction thriller; to ‘Andrei Rublev,’ an investigation of the power of art and spirituality. In this course, we will study Tarkovsky’s films and life, with attention to his formal and artistic accomplishments, his thought and writings, and the cultural and political contexts of his work. Each student will learn to analyze film form and content and write two short and one longer paper on some longstanding aspect of Tarkovsky’s work of the student’s choice.

CIMS 257 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema ‘the strongest weapon.’ This course explores the world of ‘fascist’ cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles. All readings and discussions in English.

CIMS 271 American Musical Theatre
The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.

Activity: Lecture
1.0 Course Unit
CIMS 274 Dark Comedy in Theatre and Film
This course will examine the ‘troublesome genre’ of dark comedy by looking at the ways in which theatre and film use comic and tragic structures and traditions to explore concepts and stories seemingly at odds with those traditions. Although not always organized chronologically in time, we will examine the formal and structural characteristics of tragicomedy by tracing its development, from some of its earliest roots in Roman comedy, to its manifestation in contemporary films and plays. Aside from close readings of plays and analysis of films, we will read selected critical essays and theory to enhance our understanding of how dark comedies subvert categories and expectations. We will look at how dark comedies affect audiences and read sections of plays aloud in class. Issues to be considered include comparing the way the genre translates across theatre and film (adaptation) and examining the unique placement of the genre at the heart of contemporary American culture. Students will have the opportunity to experiment with creating tragicomic effect through performance in their presentations. The class is a seminar, with required participation in discussions. Other assignments include an 8-10 page paper and a presentation. We will read plays by authors as diverse as Plautus, Anton Chekhov, and Lynn Nottage, and filmmakers including Charlie Chaplin, Sofia Coppola, and Bong Joon-ho.
Taught by: Ferguson
Also Offered As: ENGL 014, THAR 273
Activity: Seminar
1.0 Course Unit

CIMS 275 Russian History in Film
This course draws on fictional, dramatic and cinematic representations of Russian history based on Russian as well as non-Russian sources and interpretations. The analysis targets major modes of imagining, such as narrating, showing and reenacting historical events, personae and epochs justified by different, historically mutating ideological postulates and forms of national self-consciousness. Common stereotypes of picturing Russia from ‘foreign’ perspectives draw special attention. The discussion involves the following themes and outstanding figures: the mighty autocrats Ivan the Terrible, Peter the Great, and Catherine the Great; the tragic ruler Boris Godunov; the brazen rebel and royal impostor Pugachëv; the notorious Rasputin, his uncanny powers, sex-appeal, and court machinations; Lenin and the October Revolution; images of war; times of construction and times of collapse of the Soviet Colossus.

CIMS 279 Jewish Films and Literature
From the 1922 silent film ‘Hungry Hearts’ through the first ‘talkie,’ ‘The JazzSinger,’ produced in 1927, and beyond ‘Schindler’s List,’ Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare’s ‘King Lear’ to Sholom Aleichem’s ‘Teyve the Dairyman,’ primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we ‘read’ literature and film, b) the various ways that the media of fiction, drama, and film ‘translate’ Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience. All readings and lectures in English.
For BA Students: Arts and Letters Sector

Course not offered every year
Also Offered As: COML 265, ENGL 279, GRMN 261, JWST 263
Activity: Lecture
1.0 Course Unit

CIMS 285 Art and Business of Film
The course will explore how a screenplay is conceptualized and developed, the role of agency relationships in the film business, and - casting as wide a net as possible - the financing, production, direction, distribution, exhibition and marketing of both independent and studio films. A combination of lectures by instructors and practitioners, case studies, film screenings, and consulting projects with independent and Hollywood creators, packagers, financiers, exhibitors, distributors and publicists will illustrate the relationship between the art of film and the business of film. Guests will include screenwriters, agents, producers, directors, distributors, film festival curators and film critics. In short, we will try to cover all aspects of making a film, and explore that often-tricky intersection of art and commerce.
Taught by: DeMarco & Van Cleve
One-term course offered either term
Activity: Seminar
1.0 Course Unit

CIMS 289 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.
One-term course offered either term
Also Offered As: FNAR 289, FNAR 589
Prerequisite: FNAR 123 AND FNAR 264
Activity: Studio
1.0 Course Unit
CIMS 291 East Asian Cinema
This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g. modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required.
Taught by: Zhou
Also Offered As: ARTH 291, EALC 106, EALC 506
Activity: Lecture
1.0 Course Unit

CIMS 293 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

CIMS 304 Japanese Cinema
This course is a survey of Japanese cinema from the silent period to the present. Students will learn about different Japanese film genres and histories, including (but not limited to) the benshi tradition, jidaigeki (period films), yakuza films, Pink Film, experimental/arthouse, J-horror, and anime. Although the course will introduce several key Japanese auteurs (Mizoguchi, Ozu, Kurosawa, Oshima, Suzuki, etc), it will emphasize lesser known directors and movements in the history of Japanese film, especially in the experimental, arthouse, and documentary productions of the 1960s and 1970s. Finally, in addition to providing background knowledge in the history of Japanese cinema, one of the central goals of the course will be to interrogate the concept of ‘national’ cinema, and to place Japanese film history within an international context.
Taught by: Alekseyeva
One-term course offered either term
Also Offered As: EALC 268, ENGL 304
Activity: Seminar
1.0 Course Unit

CIMS 305 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as ‘cinema,’ to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be no screenings for this course. No knowledge of film theory is presumed. Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class midterm; 1 take-home final.

1.0 Course Unit
CIMS 344 Documentary Experiments in Urban Research
What can video art, experimental documentary, and sensory ethnography teach us about the practice of urban research? How can we build on the traditions of first person and essay cinema to produce compelling documents of our own questions and findings? This course surveys a range of film and video works on themes such as the production of space, urban nature, infrastructure, and collective memory. Taken as a genre, these time-based works provide a powerful model for training scholars' observational skills, conceptualizing scales of analysis, and engaging broader publics in urban research. In this course, we will explore this audiovisual genre in dialogue with selected theoretical, ethnographic, and case study readings in urban studies. As an advanced theory-practice course, it combines seminar readings and discussion with regular screenings and a series of workshops on photo, video, audio, and postproduction skills. The course will provide a general fluency in contemporary urban research, with particular emphasis on urban political ecology. In dialogue with this scholarship, students will develop and situate their own experimental documentary research projects.
Taught by: Mendelsohn
Course not offered every year
Also Offered As: ANTH 344, URBS 344
Activity: Seminar
1.0 Course Unit

CIMS 347 Gender History and American Film
More than any other medium, the motion pictures fostered new ideals and images of modern womanhood and manhood in the United States. Throughout the twentieth century, gender representations on the screen bore a complex relationship to the social, economic, and political transformations marking the lives of American men and women. This course explores the history of American gender through film. It treats the motion pictures as a primary source that, juxtaposed with other kinds of historical evidence, opens a window onto gendered work, leisure, sexuality, family life, and politics. We will view a wide range of Hollywood motion pictures since 1900, as well as films by blacklisted artists, feminists, and independent producers.
Taught by: Peiss
Course usually offered in spring term
Also Offered As: GSWS 347, HIST 347
Activity: Seminar
1.0 Course Unit

CIMS 365 Russian Cinema and Culture
What's so funny, Mr. Chekhov? This question is often asked by critics and directors who still are puzzled with Chekhov's definition of his four major plays as comedies. Traditionally, all of them are staged and directed as dramas, melodramas, or tragedies. Should we cry or should we laugh at Chekhovian characters who commit suicide, or are killed, or simply cannot move to a better place of living? Is the laughable synonymous to comedy and the comic? Should any fatal outcome be considered tragic? All these and other questions will be discussed during the course. The course is intended to provide the participants with a concept of dramatic genre that will assist them in approaching Chekhov's plays as comedies. In addition to reading Chekhov's works, Russian and western productions and film adaptations of Chekhov's works will be screened. Among them are, Vanya on 42nd Street with Andre Gregory, and Four Funny Families. Those who are interested will be welcome to perform and/or direct excerpts from Chekhov's works.
Course not offered every year
Also Offered As: REES 426
Activity: Seminar
1.0 Course Unit

CIMS 370 Blacks in American Film and Television
An examination and analysis of the changing images and achievements of African Americans in motion pictures and television. The first half of the course focuses on African-American film images from the early years of D.W. Griffith's 'renegade bucks' in The Birth of a Nation (1915); to the comic servants played by Steppin Fetchit, Hattie McDaniel, and others during the Depression era; to the post-World War II New Negro heroes and heroines of Pinky (1949) and The Defiant Ones (1958); to the rise of the new movement of African American directors such as Spike Lee (Do the Right Thing), Julie Dash (Daughters of the Dust), Charles Burnett, (To Sleep With Anger) and John Singleton (Boyz N the Hood). The second half explores television images from the early sitcoms 'Amos 'n Andy' and 'Beulah' to the 'Cosby Show,' 'Fresh Prince of Bel Air,' and 'Martin.' Foremost this course will examine Black stereotypes in American films and television—and the manner in which those stereotypes have reflected national attitudes and outlooks during various historical periods. This course will also explore the unique 'personal statements' and the sometimes controversial 'star personas' of such screen artists as Sidney Poitier, Dorothy Dandridge, Paul Robeson, Richard Pryor, Oscar Micheaux, Spike Lee, Bill Cosby, Eddie Murphy, and Whoopi Goldberg. The in-class screenings and discussions will include such films as Show Boat (1936), the independently produced 'race movies' of the 1930s and 1940s, Cabin in the Sky (1943), The Defiant Ones (1958), Imitation of Life (the 1959 remake), Super Fly (1972), and She's Gotta Have It (1986) and such television series as 'I Spy,' 'Julia,' 'Good Times,' 'The Jeffersons,' 'Roots,' 'A Different World,' 'I'll Fly Away,' 'LA Law,' and 'Hangin' With Mr. Cooper.'

One-term course offered either term
Also Offered As: AFRC 400
Activity: Seminar
1.0 Course Unit
CIMS 378 Global Media
This course explores a broad media landscape through new critical and conceptual approaches. It is designated as a Benjamin Franklin Seminar. This course maps the footprints of television at a global scale. Adopting comparative approaches, we will be studying TV's formation of national and global discourses, and thereby recognizing not only television's impact on processes of globalization, but also the ability of television to matter globally. Working through concepts of 'broadcasting,' 'flow,' 'circulation,' and 'circumvention,' the course examines the movement of (and blocks encountered by) television programs and signals across national borders and cultures. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services? Navigating from United States and Cuba to India and Egypt, the readings in the course illuminate how particular televisual genres, institutions, and reception practices emerged in various countries during specific historical periods. We shall be addressing a range of questions: what kind of global phenomenon is television? Can we study television in countries where we do not know the existing local languages? In what different ways (through what platforms, interfaces, and screens) do people in different continents access televisual content? What explains the growing transnational exports of Turkish and Korean TV dramas? What is the need to historically trace the infrastructural systems like satellites (and optical fiber cables) that made (and continue to make) transmission of television programming possible across the world? How do fans circumvent geo-blocking to watch live sporting events? Assignments include submitting weekly discussion questions and a final paper. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

CIMS 382 Horror Cinema
The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionists masterworks of the silent era, the Universal classics of the 30's and the low-budget horror films produced by Val Lewton in the 40's for RKO in the US, the 1950's color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60's, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre's main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics...). Prerequisite: Two 200-level French courses taken at Penn or equivalent are required for FREN 382. There are no pre-requisites for CIMS 382. This course will be taught in English.

CIMS 386 Paris in Film
Latter-day examples like Christophe Honore's Dans Paris, Cedric Klapisch's Paris or the international omnibus Paris, je t'aime (with each director paying homage to a distinctive 'arondissement' of the capital), not to mention American blockbusters like The Da Vinci Code and Inception or Woody Allen's Midnight in Paris, are there to remind us that there is something special -- indeed, a special kind of magic -- about Paris in and on film. Despite the extreme polarization between Paris and provincial France in both cultural and socio-economic terms, cultural historians have argued that Paris is a symbol of France (as a centralized nation), more than Rome is of Italy and much more than Madrid is of Spain or Berlin of Germany, for example. The prevalence of the City of Lights on our screens, Gallic and otherwise, should therefore come as no surprise, be it as a mere backdrop or as a character in its own right. But how exactly are the French capital and its variegated people captured on celluloid? Can we find significant differences between French and non-French approaches, or between films shot on location that have the ring of 'authenticity' and studio-bound productions using reconstructed sets? Do these representations vary through time and perhaps reflect specific historical periods or zeitgeists?

CIMS 501 Nationalism and Ethnic Conflict in Film
This course studies political violence, terrorism, civil wars, ethnic conflicts, and genocidal policies as represented in the social media, cable news, documentaries, feature films. We discuss various techniques and strategies of the propaganda wars, post-truth media environment, etc. The regions of interest are Former Soviet Union, Russia, the Caucasus, and the Balkans, US homegrown political violence, and the Middle East. The students are expected to develop and demonstrate a critical approach to different aspects of the cinematic, news, and social media representation of ethnic conflict. We focus on the violent developments that took place in Russia and the Balkans after the collapse of the Soviet Bloc, conditioned by the geopolitical dynamics that the fall of communism had created. We study media broadcasts, documentaries, feature films representing both, the Eastern and the Western perspective.

CIMS 515 Topics in Criticism & Theory
Topic for Spring 2021: Cultures of Reading in Imperial Russia What did it mean to be a reader in imperial Russia? What did people read, and to what ends? How was literacy cultivated, and what were the social implications? In this course, students will read several canonical works of nineteenth-century Russian literature that thematize and foreground the act of reading: as a pursuit undertaken for the betterment of self, society, nation, and world; as a light pastime for the bored or underemployed; but also as an enterprise fraught with potential for moral or civic ruin. In addition to closely investigating allusions to the specific texts and authors read by literary characters, we will also examine the reading habits of our own authors as both consumers and producers of literary culture. We will consider these dynamics against a backdrop of constant fluctuations in educational policies, the book market, and the circulation of texts within and beyond Russia as we work together to develop an understanding of the imperial Russian reading public(s).

CIMS 555 Terrorism
This course studies the emergence of organized terrorism in nineteenth-century Russia and its impact on public life in the West, the Balkans, and America. We investigate the political and cultural origins of terrorism, its conspiratorial routine, structures, methods, manuals, and manifestoes. Historical and cultural approaches converge in the discussion of intellectual movements that forged the formula of terrorism and influenced the professionalization of the underground, such as nihilism, anarchism, and populism. We discuss the stern terrorist personality, self-denial, revolutionary martyrdom, and conspiratorial militancy. The theatricals of terrorism are of particular interest, its bombastic acts, mystification, and techniques of spreading disorganizing fear in the global media environment. We trace the creation of counterterrorism police in late imperial Russia and its methods to infiltrate, demoralize, and dismantle the terrorist networks, and reengineer their social base. First Red Scare and the formation of the FBI constitutes a unique case of managing rampant political violence and countering the asymmetrical threat of terrorism.

CIMS 582 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches – thematic, psychoanalytic, cultural, narratological – will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the 'real,' making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include 'recits fantastiques' by Merimee, Gautier, Nerval, Maupassant, Breton, Pierre de Mandiargues, Jean Ray and others.

CIMS 694 Mexican Cinema
This seminar will address the specificity and uniqueness of Spanish America’s cultural production, that is, those elements that make the Spanish American case differ from the paradigmatic postcolonial situation, and which make recent developments in postcolonial studies not fully applicable to it. We will explore these issues in the context of the literary production of the twentieth century in Spanish America from roughly the twenties to the present, that is, the epoch encompassing the larger metropolitan cultural phenomena of Modernism and Postmodernism.
Course not offered every year
Also Offered As: LALS 694, SPAN 694
Activity: Seminar
1.0 Course Unit
CIMS 791 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programing part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films—features, shorts, documentaries, and television shows—paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of ‘African film and media’; and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant Western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in Western media?

To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu. Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport.

Activity: Seminar
1.0 Course Unit

CIMS 792 Reading Against Racism
This course takes as its starting point Audre Lorde’s 1981 keynote presentation at the National Women’s Studies Association Conference, ‘The Uses of Anger: Women Responding to Racism.’ Lorde, critiquing white feminists, states, ‘I cannot hide my anger to spare you guilt, nor hurt feelings, nor answering anger; for to do so insults and trivializes all our efforts. Guilt is not a response to anger; it is a response to one’s own actions or lack of action. If it leads to change then it can be useful, since it is then no longer guilt but the beginning of knowledge. Yet all too often, guilt is just another name for impotence, for defensiveness destructive of communication; it becomes a device to protect ignorance and the continuation of things the way they are, the ultimate protection for changelessness.’ Eschewing defensiveness, ignorance, and innocence, and opening to meaningful change by engaging the writings of anti-racist and anti-imperialist thinkers, including those focused on the transformation of higher education, this course examines the responsibilities scholars take on when we affirm that ‘Black Lives Matter’, and acknowledges that higher education, including the humanities, is actively implicated in the structures and operations of white privilege and anti-black racism as well as in other intersectional modes of exclusion, including all forms of discrimination based on race, ethnicity, national origin, ability, class, sexuality, gender, and beliefs. The course aims to approach these urgent but longstanding issues in ways that help us to understand some of the complexities, practicalities, and temporalities of the work of change; to grapple with what Rosalyn Deutsche in Hiroshima After Iraq (2011) describes as ‘the inseparability of the social and the psychic’, and to seek out effective alternatives to the tendency of politicized academic writing in time of conflict to regress to what Deutsche calls ‘heroic masculinism.’ Reading Against Racism’ is imagined as a way of catalyzing active, collective, and long-term anti-racist, anti-imperialist intellectual work. It seeks to participate in the development of more just and inclusive academic modes and spaces by fostering time and structure for thought and self-reflection, by generating ideas for implementation, and by learning from our readings as well as from each other. All students, white and BIPOC, are welcome to participate, but we will begin this course by working together to establish a community agreement that takes account of the different ways in which such a course is likely to be experienced by white and BIPOC people. For example, recognizing that discussions about race and racism require immense emotional labor from BIPOC people in particular, BIPOC students should not be asked to use their personal experiences to frame questions under discussion or to represent any group. We will establish together other guidelines to create as safe and supportive a space (or spaces) for reading, thinking, and acting against racism as we can muster, including deciding how we would like to include in our process tools like trigger warnings, opt-out mechanisms, smaller subgroups, etc.

Requirements: Weekly reading; weekly journal for self-reflection (required, but not for submission); participation in discussion; design a syllabus for an introductory course in your field. Thanks to all the students who have generously participated in developing this course and to the scholars who have written the materials we will read.

City and Regional Planning (CPLN)

CPLN 500 Introduction to City Planning: Past, Present and Future
Orientation to the profession, tracing the evolution of city and regional planning from its late nineteenth-century roots to its twentieth century expression. Field trips included.
Taught by: Ammon or Drake Rodriguez
Course usually offered in fall term
Also Offered As: URBS 440
Activity: Lecture
1.0 Course Unit

CPLN 501 Quantitative Planning Analysis Methods
Introduction of methods in analyzing demographic conditions, land use and housing trends, employment and business changes, community and neighborhood development. Focus on using spreadsheet models and data analysis for local and neighborhood planning.
Taught by: Faculty
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CPLN 502 Public Finance and Public Policy
This course deals with how governments tax and spend. Students become familiar with the theoretical, empirical, and practical tools and methods used to create and analyze government budgets, as well as the flow of public resources. The course examines public revenues and expenditures within the context of fiscal federalism, in addition to budgeting and resource management and the social, economic, and political forces that shape the fiscal environment within which governments (particularly state and local governments) operate. Significant attention is paid to tax policy analysis and the fiscal crises confronting many large cities and states. Additional special topics covered include health care & social security, public education finance, public finance and the environment, bond markets & municipal finance, and public pensions.
Taught by: Gershberg
Course usually offered in spring term
Also Offered As: GAF 651
Activity: Lecture
1.0 Course Unit

CPLN 503 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with vector-oriented (i.e. drawing-based) geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Previous experience in GIS is not required.
Taught by: Tomlin or O'Neill
Course usually offered in fall term
Also Offered As: MUSA 503
Activity: Lecture
1.0 Course Unit

CPLN 504 Site Planning
This course introduces students to the practice of site planning. Skills and methods examined in the course include observation of the physical and community environment, physical and environmental site inventorying and analysis; analysis of alternative site programming and uses; site design processes and strategy;and the creation of site plans and development standards. Methods of community participation and collaboration with other disciplines will be explored. The spring version of this course differs from the fall version in its orientation toward urban designers and/or those with prior design backgrounds and skills.
Taught by: Page
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 505 Planning by Numbers
This class emphasizes the theory, practice, and use of statistics as applied to planning and policy problems and data. Starting with a review of basic descriptive statistics and measures of association, this course will introduce students to the regression techniques, including multiple regression analysis and logistical and probabilistic models for categorical data; data mining techniques, measures of spatial autocorrelation, and time-series modeling; and causal inference techniques, including structural equation modeling(SEM). A basic familiarity with descriptive and inferential statistics at the upper-division undergraduate level is expected at the beginning of the class. This course uses the popular, free, and open source statistical software R. Meets methods breadth requirement.
Taught by: Ryerson
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
**CPLN 506 Negotiation and Conflict Resolution**
This course is designed to introduce graduate students to the theory and practice of negotiation, conflict resolution and community engagement. We will start by looking at basic approaches to interpersonal negotiation and then move to considering contemporary approaches to understanding and addressing public disputes using negotiation, facilitation and public involvement. Design professionals - architects, construction managers, planners and others - face a variety of kinds of problems and challenges in their work. Some problems and challenges, whether simple or complex, are amenable to technical solutions based solely on the expertise of planners, managers, architects and others. There are, however, other problems and challenges that require adaptive work, primarily because technical expertise alone is insufficient to address the problems or challenges being faced. In this course, we'll focus on perspectives and methods for working through those later sorts of problems and challenges. Meets methods breadth requirement.
Taught by: Sokoloff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**CPLN 508 Urban Research Methods**
This new course will introduce students to the practice of conducting original social, policy, and planning research in an urban context, and through a series of applied exercises, cover the following topics: research conceptualization and design, logic models, survey and ethnographic research, urban policy analysis and evaluation.
Taught by: Drake Rodriguez, Akira
Activity: Lecture
1.0 Course Unit

**CPLN 509 Law of Planning and Urban Development**
The central focus will be on selected aspects of the field of the law of planning and development, a field that embraces a range of legal doctrines that are particularly relevant to cities and suburbs. We will study the principles that govern the regulation of land use and management of urban growth (through land use controls and other techniques for regulating new development) and, to a limited extent, environmental planning laws.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**CPLN 520 Introduction to Community and Economic Development**
Introduction to the theories and practices of urban economic and community development with a focus on improving opportunity and quality of life in low-income communities. Provides foundation for advanced courses in real estate and economic development finance, housing policy, downtown and neighborhood revitalization, workforce development and metropolitan regional development.
Taught by: Servon, Lisa
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**CPLN 528 Research Seminar 21st Century Urbanism**
Course usually offered in spring term
Also Offered As: URBS 428
Activity: Seminar
1.0 Course Unit

**CPLN 530 Introduction to Land Use Planning**
Exploration of the methods and tools for managing land use and shaping the built environment. Presents how to create a successful Comprehensive Plan, Zoning Ordinance, Subdivision Regulations, Capital Improvements Program, and design guidelines. Also, presents functional area, regional, and state-level plans.
Taught by: Daniels
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**CPLN 531 Introduction to Environmental Planning & Policy**
Overview of federal programs for protecting air quality, water quality, and endangered species along with managing climate change, solid waste, toxics, energy, transportation, and remediating brownfields in an overall sustainability framework. State-level, local government, and NGO efforts to protect the environment are also explored as are green infrastructure and green cities.
Taught by: Daniels
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**CPLN 535 Topics in Energy Policy**
This seminar will explore a collection of ideas influencing energy policy development in the U.S. and around the world. Our platform for this exploration will be seven recent books to be discussed during the semester. These books each contribute important insights to seven ideas that influence energy policy: Narrative, Transition, Measurement, Systems, Subsidiarity, Disruption, Attachment. Books for 2018 will be chosen over the summer; the 2017 books are listed here as examples: Policy Paradox (2011) by Stone, Climate Shock (2015) by Wagner and Weitzman, Power Density (2015) by Smil, Connectography (2016) by Khanna, Climate of Hope (2017) by Bloomberg and Pope, Utility of the Future (2016) by MIT Energy Initiative, Retreat from a Rising Sea (2016) by Pilkey, Pilkey-Jarvis, Pilkey.
Course usually offered in spring term
Also Offered As: ENMG 503
Activity: Seminar
1.0 Course Unit

**CPLN 540 Introduction to Property Development**
This course is designed to acquaint students with the fundamental skills and techniques of real estate property development. It is designed as a first course for anyone interested in how to be a developer, and as a foundation for further courses in urban development and real estate.
Taught by: Reina, Vincent
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**CPLN 550 Introduction to Transportation Planning**
Survey of the technological and design aspects of urban transportation systems and land use patterns. Covers facilities operations, congestion, environmental concerns and policy debates revolving around mobility issues at the federal, state, and metropolitan levels.
Taught by: Guerra
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CPLN 551 Transport Justice
This course will explore the concept of transport justice and how this idea can inform changes to public transit infrastructure. The first half of the course will set theoretical foundations through close reading and discussion of spatial and social justice theories, emphasizing questions of transportation and mobility. The second half of the course will feature a project-based application of these theories. Students will develop analyses to inform a proposed extension to the Southeastern Pennsylvania Transportation Authority's (SEPTA) bus Route 52, which serves a corridor between the Kingsessing and Overbrook sections of West Philadelphia. Students will be encouraged to explore multiple analytic approaches including: interviews and qualitative data collection; GIS and spatial analysis; quantitative analysis and predictive modeling, and more. The course will culminate in written and oral presentations given to partners from SEPTA and other planning agencies in Philadelphia.
Taught by: Joshua Davidson
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CPLN 560 Introduction to Graphics for Urban Design
This course introduces students to visual literacy and the use of a variety of software packages. Through a series of assignments and in-class discussions, participants develop a visual vocabulary and skills to function in and between AutoCAD, Adobe Creative Suite, and 3D modeling software.
Taught by: Fogelson
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CPLN 571 Sensing the City
This course will teach you to design and build sensing installations that engage with real-time urban environmental stimuli. Using the Arduino microcontroller as a prototyping platform, you will write code and wire circuits, learn to select and implement available sensors, and generate raw environmental data. You will populate databases and interpret data streams, and then create responsive urban interventions. Following the model of hackerspaces around the globe, we will collaboratively pose problems and find solutions, teaching and learning from one another. No background in coding or electronics is required, but a desire to learn is absolutely necessary. Also, this course is hands-on. You are a maker! Be prepared to build, design, and create.
Taught by: Lassiter
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CPLN 572 Modern Architectural Theory
A survey of architectural theory from the mid-eighteenth century to the present. The discussion of original writings will be emphasized.
Taught by: Brownlee
Course not offered every year
Also Offered As: ARTH 571
Activity: Seminar
1.0 Course Unit

CPLN 577 Introduction to International Development Finance for Cities
With the world's population growth exploding - 2050 will see the addition of some 2 billion inhabitants, primarily in cities in low and middle income countries - decision-makers are pressed to meet basic infrastructure needs (transportation, water and sanitation, public space, electricity, social service facilities and others) while responding to such large global issues as climate change. This course will review the history, theory, and current practice of international development finance with special attention to urban places. It will examine the challenges of the planning and financing projects, explore innovation and best practices in the field and suggest needed regulatory and governance reforms. Student research undertaken in the course will contribute to the 'Cities Investment and Financing Initiative,' an important project being incubated at the University of Pennsylvania through the Perry World House and Penn Institute for Urban Research with support from the World Economic Forum (WEF), the Chicago Council on Global Affairs, United Cities and Governments (UCLG) and C-40. Guest speakers will be invited.
Taught by: Eugenie Birch
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CPLN 581 Issues in Global Sustainable Development: Adapting in Rapidly Urbanizing Places
The world is beset by interconnected economic, social, and environmental challenges of a magnitude difficult to grasp, much less address. Population growth and urbanization are at the heart of these challenges, with 2.5 billion additional people expected to be living in urban places by 2050. Poverty (3 billion people live on less than $2.50 a day), environmental deprivation (75% of the earth's land is degraded) and low productivity (global productivity has increased only .5% in the past decade) are key issues. To have a sense of the magnitude of today's urbanization, realize that accommodating the increased population will require the construction of a city of a million every week for the next forty years - mainly in Asia and Africa. The speed with which city growth is occurring is overwhelming cities' abilities to provide formal employment and core services both necessary to achieve sustainable urban development. Dealing with mounting concerns will be a central task that city and regional planners will confront in the next decades. Between 2015 and 2016, the 193 members of the United Nations approved five global agreements to deal with development issues that are of great importance to city and regional planners. These agreements, Sendai Framework for Disaster Risk Reduction (2015), Addis Ababa Action Agenda (2015), Transforming Our World, Agenda 2030 (2015), Paris Agreement (2015), and New Urban Agenda (2016), represent a worldwide consensus to frame current and future development policies over the next decades. Each will require significant efforts in aligning national and subnational programs and their financing. In fact, estimates for the achievement of the UN's Sustainable Development Goals (a proxy for core service provision) calls for some $4.5 trillion/year in investment for the next 15 years. In this class, students will explore the agreements, their underlying theoretical concepts, their evolution, and their implementation. They will focus on the explicit and implicit urban implications and the challenges faced by subnational governments in coming to grips with integrating aspirational goals with political and economic realities of their specific contexts.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
CPLN 582 Place, Taste and Neighborhood Change: Frameworks for Integrating Aesthetics, Equity and Creativity
Places provide a sense of identity and orientation to the world for its users in ways that go beyond the traditional practice areas that urbanists are trained to understand (i.e. housing, economic development, transportation). The popularization of artistic, cultural, and ‘creative interventions’ in redevelopment has added to that complexity in hybrid ways require new tools, languages, and frameworks to meaningfully participate in the development process. By taking a humanistic and scientific views of the longstanding arts-based community development field now known as ‘creative placemaking’, the class will help learners formulate critical, evaluative answers pressing, emergent questions for urban practitioners. In particular, learners will explore the various state-sponsored meanings of creative placemaking, artistic excellence, and artistic merit. During the course we will interrogate, compare, and articulate the power dynamics embedded in those definitions with new, alternate, and stakeholder-centric definitions. The course aims to invite conversation, reflection, and sharing of best practices alongside community-based leaders with the promise that learners will be able to apply equity-based frameworks to these debates. Learners will emerge from this guided journey with a sharpened ability to identify, generate, and extend authentic, inclusive arts-based neighborhood change.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 591 INTRODUCTION TO SMART CITIES
This course reviews the infrastructure, databases, deployment, and development of emerging digital technologies in cities. We review existing initiatives, discuss challenges and opportunities, and critically evaluate what technology has and has not been able to offer cities. We contrast utopian visions of teaching with the possible realities. Finally, we ask; what makes a city smart?
Taught by: Lassiter
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CPLN 592 Public Policy Analytics
Data scientists convert data into actionable intelligence. While most private sector data scientists optimize for profit, their public sector counterparts must address multiple complex bottom lines including economics, equity, politics, bureaucracy and social cohesion. This course teaches students how to wrangle government data; how to mine it for descriptive and predictive intelligence and how to communicate results to non-technical decision-makers. Broadly, coursework is focused on spatial analysis and geospatial machine learning and taught 70/30 in R and ArcGIS. Use cases include home price prediction, forecasting in criminal justice, land use modeling, transportation modeling and real estate site suitability. Prerequisites include vector and raster GIS and introductory statistics.
Taught by: Ken Steif
Course usually offered in fall term
Also Offered As: MUSA 508
Activity: Lecture
1.0 Course Unit

CPLN 600 Planning Workshop
Application of planning skills (including community inventorying and reconnaissance, goal articulation; alternatives creation and analysis, and plan development and implementation) to community plan creation. Students work in groups of seven to eight students each. Juried presentation required.
Taught by: Landis
Course usually offered in spring term
Activity: Studio
2.0 Course Units

CPLN 620 Techniques of Urban Economic Development
This course is about how planners act to catalyze and support economic well-being in cities and regions. Students in the course examine the effectiveness of alternative strategies and approaches to economic development and practice a variety of specific economic development policy and finance techniques. The semester is divided into three modules. In part one, students build knowledge about how theories of growth, specialization, agglomeration and innovation inform (and fail to inform) economic development strategies. In part two, they develop a working understanding of economic development finance, completing exercises on tax increment finance, tax-credit financed development and ‘double bottom line’ lending and equity investment. In part three, they review best practices in the formulation and negotiation of location incentives and subsidies, examine ‘growth with equity’ policies, and explore the technical and political details of economic impact analysis.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 621 Metropolitan Food System
This course introduces students to the planning and development of metropolitan food systems. Major topics include regional planning and policy; sustainable agriculture; food access and distribution; and markets. The class includes a mix of lectures, discussion, and field trips; and students will work on real-world projects in Philadelphia. Ultimately, the course aims to develop students’ broad knowledge of food systems planning in the global North and South, with an emphasis on community and economic development strategies for sustainable food systems and food security.
Taught by: Vitiello
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
CPLN 624 Race, Poverty and Place
In recent years, long-disinvested cities have become the site of renewed investment, population growth, and economic development in a phenomenon often described as gentrification. Nonetheless, socioeconomic inequality between races, ethnicities, genders, and places within the larger metropolitan area continue to persist, suggesting that a rising tide does not raise all boats. Planners must grapple with these issues of inequality and inequity, particularly the implementation of plans and policies that may in theory provide benefits to all, but in practice continue to accumulate benefits for a select few. This course examines the construction of race, the making of a place, and the persistence of poverty in racialized places in the city. This course will engage in a critical discussion of the aforementioned themes, such that the normative notions of race, capitalism, urbanism, gender, power, and space are upended to privilege more marginalized perspectives of these processes.

Taught by: Drake-Rodriguez
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CPLN 625 Politics of Housing and Community Development
This course offers an exploration of how legislative action, government policy making, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as consideration of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden's waterfront and downtown-area neighborhoods.

Taught by: Kromer
Course usually offered in fall term
Also Offered As: GAFL 569, URBS 451
Activity: Lecture
1.0 Course Unit

CPLN 627 Social Impact in Practice
The course will be an opportunity for students across PennDesign (and other schools) to meaningfully engage with community partners and practitioners working in Philadelphia and the surrounding region, and to grapple with the complex issues necessary for understanding community perspective, thereby influencing the approach when planning and designing as professionals. The course intends to reverse common perceptions and practices of community engagement (beyond the theater of engagement) and discuss how to productively and sensitively work with communities of all types, on projects of all scales, to work towards common goals and high aspirations. The organization of the course, will be a combination of readings and discussions, guest lecturers, and tours in the immediate community. The primary assignments will be reflection pieces, case studies, a collaborative group project, and a implementation project proposal. The group project(s) would partner students with a current, ongoing, or new community project that is funded and actionable. Students will work together, with the partner, and with community members to complete a project (could be built, a printed deliverable, evaluation, or other). The final assignment would ask students to brainstorm and present a potential 'Phase II' implementation project, thinking through the mechanics of funding partnerships, academic research, etc, that could carry forward the work.

Taught by: Donofrio, Julie / Gould, David
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CPLN 628 Migration and Development
Human migration is one of the most important phenomena driving urban, social community and economic development. This course focuses on the ways that migrants and community, government, and private institutions work to influence development around the world. We explore a range of large- and small-scale economic development, social and community development. After a brief introduction to histories and theories of migration and development, our major themes include: Local revitalization, labor and housing markets, workforce and enterprise development; Diaspora-led transnational development, including remittances, hometown and country associations, and transnational advocacy and community organizing; The work of institutions, governments, and private sector firms in sending and receiving nations that influence migration and development. Readings are drawn from a variety of social sciences, planning and development studies, including from academic and practice. Guests from local and transnational development organizations will visit the class. Assignments include short papers on the readings and a research paper or project designed by each student in consultation with the instructor. Ultimately, the course aims to help students develop: 1) a broad knowledge of migration and development in geographic and institutional settings around the world; 2) an in-depth understanding of community and economic development practices in migrant sending and receiving communities; and 3) familiarity with social science approaches to evaluating the dynamics and impacts of migration and development.

Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
CPLN 630 Innovations in Growth Management
The US population is expected to grow by more than 85 million from now to 2050. This course evaluates the tools and techniques for managing growth in America, especially to control sprawl in metropolitan regions. The course analyzes the form and functions of the central cities, suburbs, edge cities, ex-urbs, and megaregions. Federal, state, and local programs that influence metro change are evaluated. Regional planning approaches are analyzed in case studies.
Taught by: Daniels, Thomas
Course usually offered in spring term
Prerequisite: CPLN 530 OR CPLN 531
Activity: Lecture
1.0 Course Unit

CPLN 631 Planning for Land Conservation
Land preservation is one of the most powerful, yet least understood planning tools for managing growth and protecting the environment. This course provides an introduction to the tools and methods for preserving private lands by government agencies and private non-profit organizations (e.g., land trusts). Topics include purchase and donation of development rights (also known as conservation easements), transfer of development rights, land acquisition, limited development, and the preservation of urban greenways, trails, and parks. Preservation examples analyzed: open space and scenic areas, farmland, forestland, battlefields, and natural areas.
Taught by: Daniels
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 632 Modeling Geographic Space
This course explores the nature and use of raster-oriented (i.e. image-based) Geographic Information Systems (GIS) for the analysis and synthesis of spatial patterns and processes. Previous experience in GIS is not required.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: LARP 741
Activity: Lecture
1.0 Course Unit

CPLN 635 Water Policy
Aging infrastructure, urbanization, climate change, and limited public funds are contributing to urban water management crises in cities around the globe. This course examines the systems and policies that comprise urban water. We begin with the infrastructures that underlie drinking water, wastewater, and stormwater services. Then, we review innovative management technologies and strategies, focusing on case studies of infrastructure shifts in Philadelphia and Melbourne. Finally, we undertake a global investigation of water management challenges and opportunities.
Taught by: Lassiter
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 641 Progressive Development
Using a lecture/guest lecture/case study approach, this course will teach students how to plan, develop, and finance a variety of progressive real estate development forms including affordable housing; infill, mixed-use and brownfield development transit-oriented development; green and LEED-certified office and housing development; historic preservation projects; public-private partnerships; and suburban retrofit and master-planned-community development. In each case, we will consider site acquisition, entitlement, market and marketing conditions, financing options, ownership and deal structures, ongoing operation and asset management issues; and connections to the community. Sessions will include lectures as well as case study presentations by guest developers and students.
Course usually offered in spring term
Prerequisite: CPLN 540 OR REAL 821
Activity: Lecture
1.0 Course Unit

CPLN 642 Downtown Development
The course will provide an overview of the changing role of downtowns and commercial centers, how and why they have evolved, diversified and been redeveloped and who are the various public and private actors that are helping them reposition themselves in a new regional and global context. There will be a strong focus on implementation, on how things get done, on the role of business improvement districts, not-for-profit development corporations and local government in the United States, Canada and a few international cities.
Taught by: Levy
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CPLN 643 Design and Development
This newly reconstituted course will introduce designers and planners to practical methods of design and development for major real estate product types. Topics will include product archetypes, site selection and obtaining entitlements, basic site planning, programming, and conceptual and basic design principles. Project types will include, among others; infill and suburban office parks, all retail forms, campus and institutional projects. Two-person teams of developers and architects will present and discuss actual development projects.
Course usually offered in spring term
Also Offered As: ARCH 762
Activity: Lecture
1.0 Course Unit
CPLN 644 Housing Policy
The government intervenes in housing markets in different ways and for different reasons. This course is designed to explore why the federal and local government in the U.S. intervene in housing markets and what forms these interventions take. Specifically, students will learn about: the mechanisms that drive both the supply and demand for housing; how U.S. housing policy has changed over time; factors that affect the production, distribution, and location of housing; the social and economic impact of housing on households and neighborhoods; the equity implications of housing policies. This course will place particular emphasis on low-income rental housing. By the end of this class students will have a firm understanding of U.S. housing policy and be able to engage in a meaningful debate about future challenges and opportunities in the U.S. housing market and the implications of different policy interventions. Ultimately, this course will provide students the conceptual tools necessary to evaluate, formulate, and implement housing policy. Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CPLN 650 Transportation Planning Methods
This course introduces students to the development and uses of the 4-step urban transportation model (trip generation-trip distribution-mode choice-traffic assignment) for community and metropolitan mobility planning. Using the VISUM transportation desktop planning package, students will learn how to build and test their own models, apply them to real projects, and critique the results. Prerequisite: CPLN 505 or other planning statistics course.
Taught by: Ryerson
Course usually offered in spring term
Also Offered As: ESE 548
Prerequisite: CPLN 505
Activity: Lecture
1.0 Course Unit

CPLN 652 Topics in Infrastructure
Course examines current trends and topics pertaining to the nation’s infrastructure.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CPLN 653 Global Challenges in International Development
An investigation of how international organizations, national, subnational government and non-governmental groups are responding to recent global agreements addressing major economic, social and environmental issues, this course will focus on the Sendai Framework, Addis Ababa Action Agenda, 2030 Framework for Sustainable Development, Paris Agreement and New Urban Agenda. It will cover selected topics related to poverty reduction, health, food security, disaster risk reduction, climate change, and urbanization. Course objectives: 1. to provide a sophisticated understanding of the fundamental assumptions, definitions, current state, and proposed paths toward a global sustainable development to students of city and regional planning; 2. to outline the role of city and regional planners as members of multi-disciplinary teams in participating in these agreements at the global, national, regional and local levels; 3. to highlight innovations in the models, tools and approaches to the field. Requirements: team project, midterm examination and final paper.
Taught by: Eugenie Birch
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CPLN 654 The Practice of Trans.Plng:Crafting Policies & Bldg. Infrastructure
As the first woman and planner to serve as Secretary of the Pennsylvania Department of Transportation (PennDOT), Leslie Richards has over 20 years of leadership experience working on the planning and delivery of transportation projects, including overseeing one of the largest and most innovative transportation agencies in the U.S. She is recognized for her ability to find common ground among bi-partisan boards, as well as her commitment to engage local communities before the implementation of transportation projects to incorporate quality of life issues in all decisions. Her experience gives her a unique perspective on understanding operational, financial and stakeholder issues of transportation planning. In this seminar-style course, Leslie Richards will explore the planning, development and delivery of multimodal projects and policies at the state and regional level, including national influences and an awareness of the many actors and processes involved. Topics to be discussed include: funding and implementation processes through the levels of government (municipal, county, region, state, national); challenges and opportunities working with different sectors, politics, and contexts; current issues and emerging technologies (e.g. Pennsylvania’s policies and advocacy related to Automated Vehicles); and best practices for individuals pursuing careers in planning or public administration. Presentations and lectures will be supplemented by guest presentations from transportation leaders, policymakers, and planning consultants offering local, regional, and state perspectives. Students will have the opportunity to learn directly from leaders in the field and develop the skills and knowledge to work effectively with federal, state, and local entities.
Taught by: Richards, Leslie
Activity: Lecture
1.0 Course Unit

CPLN 655 Multimodal Transport
The purpose of this course is to explore contemporary multimodal transportation systems, policy, planning, and practice through a series of comparative international case studies. Topics include innovative parking management in San Francisco, congestion charging in London, Metro investments in Mexico City, informal transportation in Indonesia, Bus Rapid Transit in Bogota, and bicycle infrastructure investments in Copenhagen. The course will also include one or more site visits to innovative multimodal transportation projects in the Philadelphia or New York City regions. By analyzing contemporary planning challenges and best practices, students will develop a better understanding of how the transportation system works and how to design and employ specific multimodal interventions and policies effectively.
Taught by Guerra
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
CPLN 656 Life Cycle Assessment in Residential Land Use and Transportation
This course explores the benefits and limitations of life cycle assessment (LCA) as a methodological approach for thoroughly assessing energy use associated with residential land use and transportation. This interdisciplinary class brings together designers and planners to conduct a comprehensive examination of GHG emissions of design proposals. Energy assessment in residential land use is particularly complex because, in addition to construction of buildings and the daily energy use, city planning factors, such as the spatial location of buildings, shapes the extent to which people consume fossil fuels to commute to job-rich areas. Therefore, energy assessment of residential land use should be based on comprehensive understanding of design quality, use of buildings, and transportation.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 660 Fundamentals of Urban Design
This course is a requirement for students enrolled in Certificate in Urban Design and for Master of City Planning students enrolled in the Urban Design concentration. How should urban designers give shape to the city? What urban design methods could they apply? This course helps students acquire the principles that can inform urban design practice. It has three major pedagogical objectives. First, it helps students understand the contemporary city through a series urban design tools. Second, it covers both historical and modern urban design principles. Finally, it includes all the scales at which urban designers operate, ranging from the fundamentals of social interaction in public space, to the sustainability of the region. This course is open to other interested PennDesign students if there is space and with permission of the instructor.
Taught by: Lin, Zhongjie
Course usually offered in spring term

Activity: Studio
2.0 Course Units

CPLN 662 Design and the City
The rumor of a great city goes out beyond its borders to all the latitudes of the known earth. Metropolis and her Children, the Federal Writers; Project Guide, 1938. Great cities are both real and legendary. They have economies and cultures, identity and brand, pattern and chaos, inclusion and exclusion. They are made by men (and women) who either reap the benefits of their labors or are excluded from them. They are dynamic, or they are dead. Constant change is essential to the city. This seminar will explore the ways in which design - including architecture, urban design, and landscape design - is a constructive force in the creation of cities. What are the various scales of the operation of design? What are its elements? With whom do urban designers collaborate? How does design make ‘place’? How is the city experienced? How does it cultivate identity, inclusion, and equity? Each class will be a wide-ranging discussion about a series of open questions regarding the city and design. Each student will be expected to bring examples, quotes, readings, and news clips to support his/her answers. In alternating weeks, we will introduce a design problem to be addressed by teams of two or three students.

Activity: Seminar
1.0 Course Unit

CPLN 670 Geospatial Software Design
The purpose of this course is to equip students with a selected set of advanced tools and techniques for the development and customization of geospatial data-processing capabilities. It is open to any student with experience equivalent to that of an entry-level class on GIS.
Taught by: Tomlin
Course usually offered in fall term
Also Offered As: LARP 743
Activity: Seminar
1.0 Course Unit

CPLN 671 Spatial Statistics and Data Analysis
This hands-on course will provide an introduction to statistical methods and will serve as a prequel to ESE502. Topics covered will include exploratory univariate analysis, correlation and Chi-square analysis, t-tests and ANOVA. Non-parametric alternatives to the standard tests will be discussed. OLS regression, including assumptions and diagnostics, will be covered in detail. Heavy emphasis will be placed on the application of each method covered. The course will conclude with an introduction to spatial statistical methods and a brief overview of linear algebra and matrix notation for OLS and spatial regression. Students will learn to use JMP-IN, ArcGIS and GeoDa for data analysis.
Taught by: Eugene Brusilovsky

Activity: Lecture
1.0 Course Unit

CPLN 672 Geospatial Data Science in Python
This course will provide students with the knowledge and tools to turn data into meaningful insights, with a focus on real-world case studies in the urban planning and public policy realm. Focusing on the latest Python software tools, the course will outline the ‘pipeline’ approach to data science. It will teach students the tools to gather, visualize, and analyze datasets, providing the skills to effectively explore large datasets and transform results into understandable and compelling narratives. The course is organized into five main sections: Exploratory Data Science; Introduction to Geospatial Data Science; Data Ingestion & Big Data; Geospatial Machine Learning; Data Visualization & Storytelling.
Taught by: Nick Hand
Course usually offered in fall term

Activity: Seminar
1.0 Course Unit
**CPLN 673 Contemporary Urbanism**
This course will expose students to a wide array of case studies in planning, urban design, and landscape architecture including notions of sustainable development, the interplay between open space and built form, the rehabilitation of existing areas as historic districts, commercial corridors, and the improvement of squatter settlements. Also, it will focus on city expansions and new towns, housing, mix-use developments, and areas of new centrality. The program will also address territorial planning, the improvement of open space systems, and site specific interventions of parks, plazas, streetscape and gardens. Cases will provide the proper ground for analysis and interpretation of issues related to the design and implementation of ‘good’ landscape and urban form. Class discussions will be complemented with short design exercises. We will also enjoy the presence of outstanding visiting lecturers who will share with us cutting-edge information, derived from their professional practice and research. Registration is limited to MLA students in the LARP 620 studio and to students in the Urban Design Certificate program.

**CPLN 675 Land Use and Environmental Modeling**
Planners at every scale and of every type are increasingly using spatial data and models to analyze existing patterns, identify and parameterize key trends and urban processes, visualize alternative futures, and evaluate development impacts. This course will introduce students to various GIS-based land use and environmental planning models, including, among others: TR55 for analyzing parcel-level stormwater runoff; BASINS for analyzing watershed-level stream volumes, runoff, and water quality; HAZUS for analyzing the potential damage impacts of floods, earthquakes, and hurricanes; UPlan and CUF/CURBA for developing detailed urban growth projections; CommunityViz for analyzing, simulating, and visualizing the impacts of proposed development projects; and other packages as available. A basic familiarity with ArcGIS is required.

Taught by: Landis
Course usually offered in spring term
Activity: Laboratory
1.0 Course Unit

---

**CPLN 676 The Immigrant City**
Immigration is among the most important phenomena shaping neighborhoods, cities, and regions. Understanding migration is fundamental to understanding urbanization, community development, and urban society today. This course examines the development of immigrant communities in United States cities and suburbs. Class readings, discussions, and visits to a variety of Philadelphia immigrant neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, and the public sphere. We study the diverse dynamics and impacts of immigration through foundational readings and close observation of various newcomer and receiving communities. The first part of the course surveys migration and community formation among a broad range of ethnic groups in different sorts of city and suburban neighborhoods, mainly through history, sociology, and geography. The second part focuses on public policy and community and economic development practices related to migration at the local, regional, national, and trans-national scales.

**CPLN 678 Informal Housing in the North: Learning from the Global South**
After decades of rapid urbanization, informal settlements account for the largest proportion of urban areas in Latin American cities. Given this reality, a consensus is emerging that housing policy in the Global South should focus on upgrading informal settlements. More specifically, participatory approaches to slum upgrading policy (PSUP) are found to offer the most effective solutions to improving self-help housing (Bredenoord 2010; Amoako et al., 2017; Brown-Luthango et al., 2017; De Indranil 2017). Participatory approaches foster productive partnerships between residents and community-based organizations, local governments, and non-governmental organizations to facilitate effective solutions for housing upgrading. However, despite the efforts of the PSUP and its emphasis on participatory approaches, upgrading projects may fail if residents in informal communities are poorly organized, as reported by Newton (2013) and Brown-Luthango et al., (2017) in Africa, by De Indranil (2017) in Asia, and by Ward (2015) in Latin America. Another challenge is the continuity of housing policy, which depends on the capacity of governments to provide adequate economic and technical resources. This reveals the key roles of community-based organizations in enabling the delivery of policy resources, as well as the importance of participatory approaches to empower the inclusion of all stakeholders to sustain comprehensive slum upgrading projects over time. Drawing on self-help housing literature, you will study the characteristics of informal settlements in the Global South and analyze the challenges of housing upgrading. This review will serve as a reference for a more inclusive understanding of informal housing in the North. You will examine forms of informal housing emerging in the United States, from Texas colonies along the United States-Mexico border to illegal conversions of apartments in New York City. You will select a case study, either in the Global South or in the United States, and propose solutions for enabling participatory housing upgrading. By solutions, I refer to integrated proposals for housing upgrades to address deficiencies of self-help housing through the use of technological innovations. Alternatively, you may propose a project to empower residents, particularly women and the youth, residents’ engagement in housing upgrading.

Activity: Seminar
1.0 Course Unit
CPLN 679 The City in Crisis & Recovery
The seminar is designed to be a discussion of goals of cities and alternative strategies on how to achieve them. Through readings, guest critic conversations, and open idea exchange, we will learn to effectively share our views and priorities for taking on the multiple risks to cities and households, the infrastructures that are necessary, and the policies that support diversity and equality as the keys to uplifting disadvantaged places and communities.
Taught by: Taylor, Marilyn

CPLN 680 Advanced Topics in GIS
This course offers students an opportunity to work closely with faculty, staff, local practitioners, and each other in conducting independent projects that involve the development and/or application of Geographic Information System (GIS) technology. The course is open to all students who can demonstrate sufficient experience, expertise, or initiative to pursue a successful term project.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: LARP 745
Activity: Seminar
1.0 Course Unit

CPLN 685 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Taught by: Dean Steiner
Course usually offered in fall term
Also Offered As: ARCH 685, LARP 685

CPLN 692 Java Script Programming for Planners and Designers
This course will introduce City Planning, MUSA and design graduate students to Javascript. Students will learn the logic and syntax of the Java programming language for use in a simple web application (weeks 1 to 7); as well as how to program database and map-oriented web and desktop applications using Javascript (weeks 8 to 14). The ‘hands-on’ uses of Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.

CPLN 709 Studio V
These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouverneur, Marcinkoski, Mathur, M’Closkey, Neises, Olin, Pevzner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia. More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedito (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Gano (Berlin).

CPLN 720 Community and Economic Development Practicum
This practicum involves a weekly mixture of lecture and seminar course-time with applied problem solving for real-world clients. It will be a second-year course focused on organizational development, business planning, and other strategic planning techniques that complement the physical planning focus of Penn Planning Workshop and Studio. Required of students in the CED concentration.
Taught by: Servon
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CPLN 730 Sustainable Cities
Sustainability as a concept has been around for almost thirty years, but only recently has become a major factor in planning practice. This seminar course will explore the following sustainability topics and practices: (i) Goals and organization of urban sustainability initiatives; (ii) Transportation, water and air quality, solid waste reduction; (iii) Climate change and energy efficiency initiatives; and (iv) Green building policies. We will thoroughly examine case studies drawn from sustainability planning initiatives from major American cities, with selected international comparisons.
Taught by: Lassiter, Allison
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CPLN 750 Advance Transportation Seminar
Air transportation is a fascinating multi-disciplinary area of transportation bringing together business, planning, engineering, and policy. In this course, we explore the air transportation system from multiple perspectives through a series of lessons and case studies. Topics will include airport and intercity multimodal environmental planning, network design and reliability, air traffic management and recovery from irregular operations, airline operations, economics, and fuel, air transportation sustainability, and land use issues related to air transportation systems. This course will introduce concepts in economics and behavioral modeling, operations research, statistics, environmental planning, and human factors that are used in aviation and are applicable to other transportation systems. The course will emphasize learning through lessons, guest lecturers, case studies of airport development and an individual group and research project.
Taught by: Ryerson
Course usually offered in spring term
Also Offered As: ESE 550
Prerequisite: CPLN 550
Activity: Seminar
1.0 Course Unit

CPLN 760 Public Realm Studio
This intensive foundation studio focuses on the physical planning and design skills necessary in shaping the public realm. Students will undertake a series of targeted exercises that introduce them to project conceptualization, context analysis, programming, site planning, technical issues, and detailed design of public space in cities. Focusing on issues pertinent to local municipalities, students will work collaboratively and individually over the semester on design elements that cover a range of scales. Intellectual objectives within the studio include: the links between theory and practice, the development of principles to guide design, understanding associations between design and stakeholder-user interests, and exploring larger issues of sustainability and participation in design practice. Emphasis on the pragmatics of problem solving and implementation will be balanced with essential skills in visioning, critical thinking and design leadership.
Taught by: Lin, Zhongjie
Course usually offered in fall term
Activity: Studio

CPLN 773 Urban Regeneration in the Americas: The Conservation and Dev. of Urban Areas
This advanced topic seminar will focus on the challenges confronted by the conservation and urban planning professions in turning the urban heritage into a social and economic development resource for cities in developing countries. The preservation of the urban heritage is moving to a new paradigm of intervention responding to: a growing interest in communities for preserving their intangible and tangible urban heritage; rising development pressures on historic neighborhoods; the generalization of adaptive rehabilitation as a conservation strategy; and recent international agreements calling for expanding the role of the urban heritage in the social and economic development of the communities. This is a problem that is in the cutting edge of the research and practice of heritage conservation and urban planning and has conservation, planning and design implications making it ideally suited to a multi-discipline seminar approach. The course is modeled on successful 1-CU spring seminars conducted in recent years—the Gordon Site Planning Studio (2011), Parks for the People (2012), and the Regeneration of Historic Areas in the Americas (2012, 2014, 2016, 2018)—that attracted students from across the School and fit easily with core studios and thesis projects. Students from multiple departments are encouraged to participate in the course; enrollment will be kept to about 12. The course will combine seminar and field study methodologies in ways that they support each other. The knowledge acquired through the seminar work will be put to use in a field study exercise whose objective is to allow the students to work on topics of their interest and pursue research or urban development and heritage conservation interventions for expanding the contribution of the historic center of Cartagena in Colombia to the social and economic development of the city.
Taught by: Hector Eduardo Rojas
Course usually offered in spring term
Also Offered As: HSPV 703
Activity: Seminar
1.0 Course Unit

CPLN 790 MUSA/Smart Cities Practicum
The purpose of this course is for students to work with city and non-profit clients on data science that convert government data into actionable public policy intelligence. Groups of 2-3 students will work with the client to understand the business process, wrangle data, develop spatial and aspatial analytics and serve these outputs to non-technical decision makers through the medium of data visualization. Students will be mentored by MUSA Faculty and advised by someone from the partnering agency. Prerequisites: students must have a working knowledge of R and experience building both spatial and statistical models including machine-learning models. Prerequisites include MUSA-507/CPLN-590 and either CPLN-505 or MUSA-500. Students must have taken or be enrolled concurrently in MUSA-601 or MUSA-800. Students without these specific prerequisites are asked to contact the instructor. Please contact the instructor for full admission details, no later than November 15, 2018. Interested students are asked to contact the instructor to learn about specific projects and how to apply for the course.
Taught by: Ken Steif

Notes: Ph.D. candidates. Independent study and research under faculty supervision.

Classical Studies (CLST)

CLST 010 Archaeology & Technology
This seminar explores how humans apply and modify technologies in contexts as diverse as everyday life, major politico-economic undertakings, or scholarly research. We investigate this through a comparison of technologies of the past with technologies of the present used to study the past. We will dig into the details of topics like building pyramids and tombs, the function of ancient astronomical devices, pre-telegraph long-distance communication, tools for cutting and carving stone, and kilns for firing pottery. Archaeologists study these issues by examining the material remains of past societies: the cut-marks on stone blocks, extant tomb structures, the debris of manufacturing activities, and much more. Today's technologies enable the detailed scientific examination of the evidence, improving our understanding of the past. Thus, in parallel with our investigation of past technologies, we will also study the history of the application of present technologies to research on the archaeological record. We will dig into topics like the first uses of computers and databases, the development of statistical methods, early digital 3d modeling of objects and architecture, the adoption of geophysical prospection and geographic information systems, and the emerging uses of machine learning. In some cases, we can even compare old and new technologies directly, such as with land measurement and surveying techniques. Throughout the class we will engage in readings and discussions on the theory of humans and technology, to gain a better understanding of how processes such as innovation function in all time periods.
Taught by: Peter Cobb

CLST 011 The Iliad and its Afterlife
As the first work in the western tradition, Homer's Trojan War epic, the Iliad, has been a constant point of reference for thinking about heroism, friendship, the search for meaning in the face of mortality, and the effects of war on individuals and societies. We will begin with a close reading of the Iliad in English translation, paying attention both to the story of its hero Achilles as he experiences disillusionment, frustration, anger, triumph, revenge, and reconciliation and to the poem's broader portrait of a society at war; this portrait incorporates the diverse perspectives of invaders and defenders, men and women, old and young, gods and mortals, along with tantalizing glimpses of peacetime life. We will then consider how later writers and artists have drawn on the Iliad to present a range of perspectives of their own – whether patriotic, mock heroic, romantic, or pacifist – with particular attention to 20th and 21st century responses by such figures as W.H. Auden, Simone Weil, Jonathan Shay, Cy Twombly, David Malouf, Alice Oswald, and Adrienne Rich. No previous knowledge of the Iliad is required. The course is intended for anyone who is interested in how cultures use their shared myths both to affirm and to question their central values.

CLST 012 Private Life in Ancient Rome
What was it like to live in the Roman world? What did that world look, taste and smell like? How did Romans raise their families, entertain themselves, understand death, and interact with their government? What were Roman values and how did they differ from our own? This course takes as its subject the everyday lives of individuals and explores those lives using the combined tools of archaeology, art and written sources. In doing so, it seeks to integrate the well-known monuments of Roman civilization into a world of real people. Some of the topics explored will include Roman houses, diet, leisure, gender and sexuality, slavery, and poverty.

CLST 014 Classical Antiquity and the Modern World
The ancient Greek and Roman civilizations, whether individually, together, or in relation to other ancient civilizations, have frequently been seen as ancestors of the modern world. This ancestry has been seen both as a common and unifying heritage and as one that divides. This course will consider the relationship between Classical Antiquity and the modern world in the light of different themes, including those of Civilization, Empire, Race, Ethnicity, Simplicity and Complexity, Morality, Religion, and Universality. Classes will focus on discussion of readings with an emphasis on coming to grips with multiple and conflicting points of view. Students will write a research paper related to one of the themes mentioned above or to another one of similar importance.

CLST 015 Town and Country in Ancient Greece
The ancient city of Athens, Greece, is renowned as the birthplace of democracy; Sparta is famous for its warlike society; Olympia for the Olympic Games; and Delphi for its famed oracle. But the Greek landscape was dotted with hundreds of other cities, towns, villages, sanctuaries, and hamlets. This seminar is a journey through town and country in ancient Greece, from dense urban spaces to vast forests and agro-pastoral countrysides. We will examine many lines of evidence: (1) ancient texts (e.g., Homeric epics, Hesiod’s depiction of rural life, the histories of Herodotus and Thucydides, the tragedies and comedies of the great playwrights, the geography of Strabo, the travel writing of Pausanias); (2) inscriptions that record details of life and death; and (3) archaeology (site discovery and excavation, recovery of the material remains of everyday life). These sources will reveal much information about how urban and rural life were organized. A central aim of this seminar is to address this question: is the past a foreign country, or is there nothing new under the sun?

CLST 026 Ancient Greece
The Greeks enjoy a special place in the construction of western culture and identity, and yet many of us have only the vaguest notion of what their culture was like. A few Greek myths at bedtime when we are kids, maybe a Greek tragedy like Sophokles' Oidipous when we are at school: these are often the only contact we have with the world of the ancient Mediterranean. The story of the Greeks, however, deserves a wider audience, because so much of what we esteem in our own culture derives from them: democracy, epic poetry, lyric poetry, tragedy, history writing, philosophy, aesthetic taste, all of these and many other features of cultural life enter the West from Greece. The oracle of Apollo at Delphi had inscribed over the temple, 'Know Thyself.' For us, that also means knowing the Greeks. We will cover the period from the Late Bronze Age, c. 1500 BC, down to the time of Alexander the Great, concentrating on the two hundred year interval from 600-400 BC.

CLST 027 Ancient Rome
At its furthest extent during the second century CE, the Roman Empire was truly a 'world empire', stretching from northern Britain to North Africa and Egypt, encompassing the whole of Asia Minor, and bordering the Danube in its route from the Black Forest region of Germany to the Black Sea. But in its earliest history it comprised a few small hamlets on a collection of hills adjacent to the Tiber river in central Italy. Over a period of nearly 1500 years, the Roman state transformed from a mythical Kingdom to a Republic dominated by a heterogeneous, competitive aristocracy to an Empire ruled, at least notionally, by one man. It developed complex legal and administrative structures, supported a sophisticated and highly successful military machine, and sustained elaborate systems of economic production and exchange. It was, above all, a society characterized both by a willingness to include newly conquered peoples in the project of empire, and by fundamental, deep-seated practices of social exclusion and domination. This course focuses in particular upon the history of the Roman state between the fifth century BCE and the third century CE, exploring its religious and cultural practices, political, social and economic structures. It also scrutinizes the fundamental tensions and enduring conflicts that characterized this society throughout this 800-year period.

CLST 029 Rome & America
This course explores a range of social structures and contexts, cultural understandings and intellectual practices where the influence of Roman exemplars is discernible in both historical and present-day America. It presents students with Roman and American materials placed in explicit or implicit dialog with one another: e.g., descriptions and discussions of political processes and structures; attitudes towards games, public entertainments, and communal cohesion; rhetorics and vocabularies of public space. Among other tasks and projects, students will stage a 'reimagination' of the Constitutional (Philadelphia) Convention of 1787, which resulted in the United States Constitution. They will also emulate ancient moralists and satirists, who attacked Rome's 'Bread and Circuses' culture, by focusing their attention upon comparable practices in modern America.

1.0 Course Unit
Notes: Freshman Seminar

CLST 100 Greek & Roman Mythology
Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? We investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

1.0 Course Unit

CLST 101 Sex and Gender in Ancient Greece and Rome
What is being a man, being a woman, being masculine, being feminine, being neither, being both? Is sex about pleasure, domination, identity, reproduction, or something else? Are sexual orientation and gender identity innate? How can words, myths and stories inform cultural assumptions about sex and gender? Did people in ancient times have a concept of sexuality? How do gendered English terms (like 'girly', 'effeminate', or 'feisty') compare to gendered ancient Greek and Latin terms, like virtus, which connotes both 'virtue' and 'masculinity'? Why did the Roman and English speaking worlds have to borrow the word 'clitoris' from the ancient Greeks? How did people in antiquity understand consent? Can we ever get access to the perspectives of ancient women? In this introductory undergraduate course, we will learn about sex and gender in ancient Greece and Rome. We will discuss similarities and differences between ancient and modern attitudes, and we will consider how ancient texts, ancient art, ancient ideas and ancient history have informed modern western discussions, assumptions and legislation. Our main readings will be of ancient texts, all in English translation; authors studied will include Ovid, Aristophanes, Plato, Euripides, and Sappho. Class requirements will include participation in discussion as well as quizzes, reading responses, and a final exam.
Taught by: Wilson
Also Offered As: COML 105, GSWS 104
Activity: Lecture
1.0 Course Unit

CLST 102 Classical Traditions
A broad consideration of the ways in which writers and artists from the early modern era to the present day have responded to the classical tradition, borrowing from, imitating, questioning, and challenging their classical predecessors. Through modern reworkings of ancient epic, tragedy, biography, and lyric by authors ranging from Shakespeare and Racine to contemporary poets, painters, and filmmakers, we will ask what the terms 'classical' and 'tradition' might mean and will track the continuities and differences between antiquity and the modern world. Should we see ancient Greek and Roman culture as an inheritance, a valuable source of wealth bequeathed to the modern age? Or is there something wrong with that picture? How do ancient texts have to be adapted and transformed if they are to speak to modern conditions and concerns? This is an introductory-level course open to anyone who cares about the relationship between the present and the past.

1.0 Course Unit
CLST 103 History of Ancient Philosophy

What is philosophy? How does it differ from science, religion, literature, and other modes of human discourse? This course traces the origins of philosophy as a discipline in the Western tradition, looking to thinkers of Ancient Greece and Rome. We will examine how natural philosophers such as Thales, Anaximander, and Heraclitus distinguished their inquiries from the teachings of poets such as Homer and Hesiod; how ancient atomism had its origins in a response to Parmenides’ challenge to the assumption that things change in the world; how Socrates reoriented the focus of philosophy away from the natural world and toward the fundamental ethical question, how shall I live? We will also examine how his pupil, Plato, and subsequently Aristotle, developed elaborate philosophical systems that address the nature of reality, knowledge, and human happiness. Finally, we will examine in which later thinkers such as the Epicureans and Stoics transformed and extended the earlier tradition.

CLST 104 Race and Ethnicity in the Ancient World

Modern political and artistic movements often appeal to an ancient past in order to construct their own social and racial identities. But how did ancient peoples understand themselves and others? How should we understand race and ethnicity in the ancient past? And how are perceptions of the past used today to construct or dismantle structures of power? This course explores both ancient and modern representations of race and ethnicity in antiquity. We will investigate both how ancient peoples around or near the Mediterranean (e.g. Greeks, Romans, Egyptians, Persians, and Nubians) understood difference and also how modern eras have appropriated ancient identities. Our discussions will include ancient ethnographies, literature, and visual arts as well as modern theories and media, with an emphasis on active learning and collaboration. Students will be encouraged to produce both analytical and creative responses to our materials.

CLST 107 Ancient Drama

This course will introduce students to some of the greatest works of dramatic literature in the western canon. We will consider the social, political, religious and artistic functions of drama in ancient Greece and Rome, and discuss both differences and similarities between ancient drama and modern art forms. The course will also pursue some broader goals: to improve students skills as readers and scholarly critics of literature, both ancient and modern; to observe the implications of form for meaning, in considering, especially, the differences between dramatic and non-dramatic kinds of cultural production: to help students understand the relationship of ancient Greek and Roman culture to the modern world; and to encourage thought about some big issues, in life as well as in literature: death, heroism, society, action and meaning.

CLST 111 Introduction to Mediterranean Archaeology

The cultures of Greece and Rome, what we call classical antiquity, span over a thousand years of multicultural achievement in the Mediterranean. This course tells the story of what it was like to live in the complex societies of ancient Greece and Rome. This story is told principally using the art, architecture, pottery and coins produced by these societies. We will examine both the bold and sexy, and the small and humble, from the Parthenon to wooden huts, from the Aphrodite of Knidos to the bones of a fisherman named Peter.

1.0 Course Unit

CLST 123 Great Discoveries in Archaeology

In this course, we examine famous (Pompeii, Troy, Machu Picchu) and not-so-famous (Uluburun, Kalamianos) archaeological sites, mainly in the Old World of the Mediterranean, Near East, and Asia, but also in the New World of North and South America. We adopt a thematic and comparative approach to delve deeper to explore these societies and examine cultural similarities and differences across the ancient world. A typical sequence of meetings will begin with lecture on a particular theme, such as Writing Systems or Sacred Spaces and Places, followed by the presentation of relevant monuments, sites, or regions from different parts of the world, with discussion and assessment of the cross-cultural similarities and differences. In this way, both the great diversity of culture in our world, and as well as our underlying similarities, can be revealed. How different are we from our ancestors who lived hundreds or thousands of years ago? Museum visits and exercises will allow students to engage with the material creations of these civilizations. CLST 123 is a non-technical introduction for students interested in archaeology, history, art history, anthropology, or related subjects. There are no prerequisites. The course fulfills the Cross Cultural Analysis foundational requirement.

CLST 127 The Material Past in a Digital World

The material remains of the human past -objects and spaces- provide tangible evidence of past people's lives. Today's information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today's world and for discussing the human consequences of these new technologies and data. We will discuss information technology's impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology's role in the preservation of the past in today's turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

CLST 129 The Decline and Fall of the Roman Empire?
The Roman Empire, teetering under the weight of its bureaucracy, oppressed by the demands of its soldiers, weakened by wave after wave of barbarian invasions, and, with the rise of Christianity, confronted by its own immorality, finally fell when the last Roman emperor, Romulus Augustulus, was sent into exile in 476 CE. That, at least, is one version of the story. In truth, there are many stories that can be told of the period between the apogee of the Roman empire in the 2nd c. AD and the rise of Christianity and Islam and origins of the so-called Barbarian Kingdoms in the 7th and 8th centuries AD. This course will explore this period of 600 years, using methodologies from history, archaeology, social science and the sciences to understand the complex problem of empire and its evolutions. No previous knowledge of ancient or medieval history required.

Also Offered As: ANCH 129
Activity: Lecture
1.0 Course Unit

CLST 136 The Ancient Economy
This class presents an introduction to economies before economics, a study of economic activity in the Greco-Roman world. Ancient Greece and Rome have been called some of the first 'global' economies - they engaged in long-distance trade, introduced the first coinage systems, and built and manufactured at large scales. At the same time, they remained agrarian societies, with majority peasant populations, high levels of inequality and social systems that often placed social capital ahead of profit. Using textual sources, archaeology and techniques from the natural and social sciences, this class will not only look at basic elements of economic activity in the ancient world - demographics, trade, monetization, industry - but also ask critical questions about how - or if - modern economic methods can be applied to the distant past. No previous knowledge of the ancient world or economics is necessary.

CLST 140 Scandalous Arts in Ancient and Modern Communities
What do the ancient Greek comedian Aristophanes, the Roman satirist Juvenal, have in common with Snoop Dogg and Eminem? Many things, in fact, but perhaps the most fundamental is that they are all united by a stance that constantly threatens to offend prevailing social norms, whether through obscenity, violence or misogyny. This course will examine our conceptions of art (including literary, visual and musical media) that are deemed by certain communities to transgress the boundaries of taste and convention. It juxtaposes modern notions of artistic transgression, and the criteria used to evaluate such material, with the production of and discourse about transgressive art in classical antiquity. Students will consider, among other things, why communities feel compelled to repudiate some forms of art, while others into classics.’

CLST 143 Great Books of Greece and Rome
The literature of ancient Greece and Rome has been foundational for the national literatures of Europe and the Americas, and in the modern period it remains one of the most influential and widely read world literatures. This course introduces many of the most representative works that define the Greek and Roman canon from Homer to Augustine, along with the most characteristic issues that they examine. In the process, students will become familiar not only with the works themselves, but with the idea of a literary canon consisting of 'great books,' and will consider differing perspectives both on that idea and those of what constitutes a 'foundational' or a 'classical' literature, of literary influence, and of a community or culture defined in part by such a literature.

CLST 146 Ancient Mediterranean Empires
What constituted an empire in antiquity and how was imperialism legitimized? Which measures were used to maintain and organize imperial power? How did foreign rule affect the daily life of people all over the Mediterranean? In this course we will discuss and compare ancient empires from Achaemenid Persia to Alexander the Great and the Hellenistic kingdoms of his successors to the emergence of Rome as one of the most successful and influential empires in world history. Topics that will be discussed include ancient ideas and concepts of imperial rule, patterns of political, economic and cultural power and their interrelations as well as imperial crises and local resistance. All texts will be discussed in translation. There are no prerequisites.

CLST 148 Food and Fire: Archaeology in the Laboratory
This course will let students explore the essential heritage of human technology through archaeology. People have been transforming their environment from the first use of fire for cooking. Since then, humans have adapted to the world they created using the resources around them. We use artifacts to understand how the archaeological record can be used to trace breakthroughs such as breaking stone and bone, baking bread, weaving cloth and firing pottery and metals. The seminar will meet in the Penn Museum’s new Center for the Analysis of Archaeological Materials. Students will become familiar with the Museum’s collections and the scientific methods used to study different materials. Class sessions will include discussions, guest presentations, museum field trips, and hands-on experience in the laboratory.

CLST 185 Ancient Political Thought
The way in which the Greeks understood and expressed their political institutions, activities and challenges has deeply impressed our own conception of politics. This course will trace the history of this ancient heritage from its inception to today, first through a close analysis of key texts from Thucydides, Plato, Aristotle, and Polybius, and then by considering several important moments in the reception of the Greek political tradition, from the Renaissance and American Revolution to the crisis of modernity and the Neo-Conservative Movement. We evaluate the relationship between distant and recent past as well as the influence of both on our own day.

CLST 202 Greek Art and Artifact
Cleopatra VII (70/69 30 BCE) is one of the most famous women in world history. She has been remembered, admired, and reproached as a power-hungry Hellenistic queen, as the last pharaoh of Egypt, as a self-confident female ruler, and as the vicious seductress of Julius Caesar and Mark Antony. Her supposedly extravagant lifestyle, her political schemes, but also her integrity in choosing suicide over submission have inspired poets, artists, and historians from her own time to the modern world. In this seminar, we will take a closer look at some of the common perceptions and stereotypes that have shaped the image of Cleopatra for more than 2000 years. The main focus, however, will be on the historical queen, her biography, and the political and cultural contexts of her life. We will use ancient literary texts, papyri, inscriptions, coins, and archaeological evidence to analyze Cleopatra’s rise to power, how she presented herself to her subjects, and how she was perceived by others, as well as her role in the tumultuous events that led to the end of the Hellenistic period and the rise of imperial Rome under the rule of Augustus. No prerequisites, but some background in Hellenistic and/or Roman history will be helpful.

Course not offered every year
Also Offered As: ANCH 202
Activity: Seminar
1.0 Course Unit

CLST 211 Ancient Moral Philosophy
A survey of the ethical theories debated by philosophers in Classical Greece and Rome. Plato, Aristotle, Stoics, Epicureans and Pyrrhonist Sceptics offer competing answers to the fundamental question raised by Socrates: How are we to live? That is, what is the best life for a human being? These philosophers generally agree that virtue is an important part of the best human life, but disagree about whether it is the greatest good (Epicurus, for example claims that pleasure is the highest good), or whether there are any other goods (for example, health, wealth, family).
Much attention is paid in their theories to accounts of the virtues of character, and to the place of wisdom in the best sort of human life.

CLST 217 Periclean Athens
Athens in the 5th Century BCE is often viewed as a high point of human civilization. We will assess this claim by looking at the period’s cultural achievements (in such areas as drama, architecture, and oratory) within their social and political contexts. Topics for discussion include: the structure and workings of the Athenian democracy; the interplay between pro-democratic and anti-democratic positions in Athenian political life; the connections between democracy and imperialism; conceptions of citizenship and relations between citizens and non-citizens (women, slaves, and resident foreigners); the role of the law courts in both dispute resolution and elite competition; sexual politics; and the civic significance of religious ritual.

CLST 223 The Archaeology of Homer's World
Did you ever wonder what the world of the Iliad and Odyssey was really like? This illustrated lecture course surveys the prehistory and early history of the Greek world through texts and material remains, with the aim of bringing to life the society, economy, and politics of this ancient era. Among the topics are the rise and fall of the great Bronze Age civilizations of the Aegean area, the Minoans of Crete and the Mycenaeans of the Greek mainland; the cataclysmic volcanic eruption on the island of Thera (modern Santorini) and its long-term consequences; the Trojan War (myth or history??); the world of the Dark Age that followed the collapse of the Mycenaean palaces; and the Greek renaissance of the eighth century B.C. - including the adoption of the alphabet, the great colonizing movement, and the great Panhellenic sanctuaries like Olympia and Delphi - that laid the foundation for the Classical world to come. There are no prerequisites, and no prior knowledge of archaeology or the Greek world is assumed.
Taught by: Tartaron
Course not offered every year

CLST 228 Excavating Ancient Cities: Troy & Gordion
The instructor has spent the last 30 years excavating the Turkish sites of Troy and Gordion, the latter of which has been explored under Penns sponsorship. The former was famous in antiquity as the site of the Trojan War, the latter served as the capital of the Phrygian Kingdom, ruled by Midas. Both of these are multi-period sites, with nine settlements built above each other during more than four millennia, and determining the chronology and appearance of each settlement has consistently been controversial. In this course we will examine the history of both sites, focusing on the problems of archaeological interpretation. Students will be placed in the position of the archaeologist and charged with re-interpreting the existing archaeological evidence.
Taught by: Rose
Activity: Lecture
1.0 Course Unit

CLST 244 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. clst 244 will take place in the new Center for the Analysis of Archaeological Materials (CAAM) and will be team taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.

CLST 267 The Ancient Novel
The ancient Greek and Roman novels include some of the most enjoyable and interesting literary works from antiquity. Ignored by ancient critics, they were until fairly recently dismissed by classical scholars as mere popular entertainment. But these narratives had an enormous influence on the later development of the novel, and their sophistication and playfulness, they often seem peculiarly modern—or even postmodern. They are also an important source for any understanding of ancient culture or society. In this course, we will discuss the social, religious and philosophical contexts for the ancient novel, and we will think about the relationship of the novel to other ancient genres, such as history and epic. Texts to be read will include Lucian’s parodic science fiction story about a journey to the moon; Longus’ touching pastoral romance about young love and sexual awakening; Heliodorus’ gripping and exotic thriller about pirates and long-lost children; Apuleius’ Golden Ass, which contains the story of Cupid and Psyche; and Petronius’ Satyricon, a hilarious evocation of an orgiastic Roman banquet.
Taught by: Wilson

Activity: Seminar
1.0 Course Unit

CLST 268 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the new Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.
Taught by: Kassabaum, Monge, Moore
Course not offered every year
Also Offered As: ANTH 267, ANTH 567, CLST 568, NELC 286, NELC 586
Activity: Lecture
1.0 Course Unit

CLST 271 Greek & Roman Medicine
This course will examine the ways in which the Greeks, and then the Romans, conceptualized the body, disease, and healing, and will compare these to medical culture of our time. We will consider sources from Hippocrates, Plato, and Aristotle to Galen and Soranus, and will juxtapose these writings with modern discourse about similar topics. We will also pay some attention to ancient pharmacology and religious healing, and will visit the Penn Museum to see their collection of ancient medical instruments. All readings will be in English and no previous background in Classical Studies is required. This course will be especially appealing (and useful) to Pre-med and Nursing students, and to students interested in the History of Science, Ancient Philosophy, and Classics.
Taught by: Rosen

Activity: Seminar
1.0 Course Unit

CLST 270 Lies My Ancient History Teacher Taught Me
The neat, comforting narratives that we construct of the histories of ancient Greece and Rome cover up a collection of controversies and debates that continue to rage in contemporary scholarship. Can we use the Homeric epics as sources of early Greek history? Who was responsible for the Peloponnesian War? How can we best explain Rome’s acquisition of empire? How new was the political revolution of Augustus? What were the main reasons for the rise of Christianity? In this course, we explore these and other controversies, focusing on both modern scholarship and the ancient sources. All texts will be discussed in translation. No prior knowledge of Ancient History is required, although it would be useful to have taken ANCH 026 and/or ANCH 027.

Also Offered As: ANCH 301
Activity: Seminar
1.0 Course Unit

CLST 305 Archaeologies of Subalternity
This course addresses the various areas and approaches to ‘otherness’ in ancient Mediterranean archaeology, and the power dynamics of oppression. We’ll not only examine disempowerment around cultural identity, class, gender and sexuality, and race/ethnicity, but we’ll spend equal time pondering how those subjects have been studied - or ignored - by classical archaeologists. The power relationships both inherent in the subjugation of various kinds of people in the ancient world, and in the academic discourses around them, are the themes of the course. While this course will be focused on the Bronze Age through late antique Mediterranean, those with other period/interests are most welcome. Students will be asked to bring their own interests to the course, which help shape the course. Upper-level courses in archaeology, anthropology or ancient history are recommended prior to enrollment.

CLST 310 Ancient and Modern Constitution Making
Constitutionmaking reemerged as an urgent issue with the transformation of colonial empires after World War II, the collapse of the Soviet empire in 1991, and nationalist movements in the Balkans, the British Isles, and the European Union. It has remained important as competition for control of Central Asia, the Middle East, and Northern Africa has intensified. The written constitution has been hailed by some as the vehicle for changing long established cultures, but its success has been uneven when it comes to reducing political conflict and to reforming if not improving customs, character, habits, and actions. What might explain this uneven success? Is an explanation to be found by going back to what appear to be the roots of constitutionmaking? This course builds on contemporary scholarship to reconstruct what we may call the constitutionmaking tradition as it develops in the main ancient texts, which are read in English translation. The course traces this tradition through the classically trained thinkers of the Seventeenth Century, the American colonial compacts and covenants, the so-called state constitutions, and the debates in the U.S. Constitutional Convention up to recent efforts in, for example, Zimbabwe (2013) or Egypt (2014).
Taught by: Mulhern

1.0 Course Unit
CLST 311 Disasters in the Ancient World
Natural disasters occupy a powerful place in our imagination. Stories of floods, plagues, earthquakes and storms excite and horrify us, and communities mobilize their resources quickly in response to these events. In the ancient Mediterranean world, natural disasters could take on potent meaning, indicating the anger or disfavor of the gods, acting as warnings against certain courses of action, or confirmations of individuals’ fears or suspicions about the world in which they lived. In this course, we explore the evidence for some disasters in the ancient Mediterranean world, the ways in which contemporaries reacted to those disasters and interpreted their causes. This project is, of necessity, multidisciplinary, involving textual, archaeological, geological, and comparative materials and drawing on methodologies from history, political and archaeological science, and the emerging field of disaster studies. In the process, we will gain an appreciation of the social structures of communities in the period, the thought-world in which they operated, and the challenges and opportunities that attend a project of this sort. No prior knowledge of Ancient History is required, although it would be useful to have taken an introductory survey course. Texts will be discussed in translation.

CLST 312 Writing History in Greece and Rome
What constituted history in ancient Greece and Rome? What claims to knowledge did history make, and how did these differ from other forms of knowledge? How did historians envision their task, and how did they go about performing it? We will read the works of the major Greek and Roman historians in translation in an attempt to answer those questions. Other issues to consider include the origins and development of historical writing, the place of history within the ancient literary tradition, and the similarities and differences between the ancient and modern practice of history.

CLST 313 Landscapes and Seascapes of the Ancient Mediterranean
The Mediterranean environment is both diverse and unique, and nurtured numerous complex societies along its shores in antiquity. This seminar offers a primer on theoretical and methodological approaches to studying landscapes and seascapes of the Mediterranean from the Bronze Age to the early modern era, at scales from local to international and on land and underwater. Concepts from processual, post-processual, and current archaeologies will be considered, and field techniques including excavation and surface survey, remote sensing and geophysics, GIS modeling, and ethnography/ethnoarchaeology are examined. Course content and discussion focus on case studies that illustrate how these tools are used to reconstruct the appearance and resources of the natural environment; overland and maritime routes; settlement location, size, function, and demography; social and economic networks; and agricultural, pastoral, and nomadic lifeways. Seminar participants will develop case studies of their own geographical and chronological interest.

CLST 315 Kinship and Connectivity in the Roman World
An individual’s life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.
Taught by: Brent
Also Offered As: AAMW 514, ANCH 315, ANTH 315, CLST 515
Activity: Seminar
1.0 Course Unit

CLST 316 Africa and Roman Literature
In this course, we will explore race and ethnicity in the Roman world by focusing on the life and works of Roman Africans and the ways in which non-African Romans engaged with and presented the peoples of Africa. The course covers Roman literature in translation from the comedies of Plautus produced in the late 3rd - 2nd centuries BCE, to African Christian writing of the 5th century CE. It also covers a wide range of genres: we will examine how Roman writers articulate questions of race in comedy and satire, epic, history, biography, and elegy among others. We will read African writers (Apuleius, Augustine) and ask how their Africanness influences their works. We will read Roman accounts of journeys to Africa, wars with Africa, and encounters with Africans to ask how the Romans saw themselves as different from or similar to Africans. The course will also explore in more general terms how Romans talk about race: did racism exist? What aspects of different cultures and peoples did Romans choose to emphasize when they talked of non-Romans?
Taught by: Lewis
Also Offered As: AFRC 316, ANCH 316
Activity: Seminar
1.0 Course Unit
CLST 325 Topics in Roman Art and Architecture
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be "The Last Days of Pompeii." Pompeii is one of the most famous archaeological sites in the world. Not fully excavated and only partially understood, it seems to offer a tantalizing cross-section of Roman architecture, art, and society, preserved as it was when the volcano Mount Vesuvius erupted on 24 August 79 CE. At the same time, the rediscovery of Pompeii since the eighteenth century has had a profound impact on western culture. This course will look at the discovery, reception, and reinvention as well as 'original' character of Pompeii and other settlements around Vesuvius destroyed at the same time as Pompeii, such as Herculaneum and Stabiae. We will examine the evidence that these Campanian sites provide for Roman architecture, art, and society, and the difficulties we face in trying to use it. The course will include a range of material, from the architecture of houses and public areas of the city, tackling the notions of public and private in Roman society, the wall painting in Pompeian houses, examining the forms and functions of Roman frescoes as well as the ways in which they have been viewed in antiquity and modern times, to the shops, workshops and taverns that populated the ancient city and provide evidence for its economy. The approach is thematic, addressing the urban planning and development of the city, the domestic spaces and activities, the public spaces and buildings, and economy of the city, concentrating on case studies, such as the Forum, the House of the Vettii, the textile industry and the Villa of the Papyri. No special prior knowledge of antiquity is assumed.

CLST 332 The Rise and Decline of Macedonia
In this course, we will study the rise and development of Macedonia from a tiny kingdom on the northern fringes of the Greek world to one of the major powers of the region and beyond. Regarded by the Greeks as an at least semi-barbarian culture on the periphery, Macedonia became the dominant power in the Greek world during the fourth century BC and its king Alexander the Great set out to conquer the world. After his death, Macedonia was one of the Hellenistic kingdoms competing for power and influence in the Mediterranean until it finally came under Roman control. Topics that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general. Special emphasis will therefore be laid on critical reading and interpretation of ancient literary texts, documentary evidence and archaeological material. that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general.

CLST 335 Etruscan Art & Archaeology in the Penn Museum
The Etruscans, who spoke a language unlike any others known, were cast by their Greek and Roman rivals as outsiders and enemies: pirates, lovers of luxury, loose women. Today we must rely on the archaeological evidence of painted tombs, decorated Tuscan temples and massive engineering works to correct the picture. The course will survey a millennium (1st millennium BCE) of Etruscan culture through archaeological sites, works of art and everyday material culture, especially illustrated with objects in the collection of the Penn Museum. An additional insight into Italic culture comes from tomb groups excavated for the Museum at the Faliscan settlement of Narce. Students will gain familiarity with the societies of pre-Roman Italy through close study of their vases, jewels, arms, armor, textiles and tools, and even their very bones, and discover a surprising amount of Etruscan heritage surviving today.

1.0 Course Unit
CLST 337 Iliad
Homer's Iliad presents a dark and difficult vision of the world, but one that nonetheless inspires. Casual cruelty, divine caprice, and savage violence test heroes and lesser folk and provoke a reckoning with the stark realities of both human vulnerability and capability. It inspires kind of terror, but still also somehow provides a kind of comfort, albeit one whose character seems almost beyond comprehension. By a close and careful reading of Homer’s text, along with some reflections and readings drawn from more contemporary wars, including the current ones, we will try to examine these issues with one eye on the past and one on the present. Our goal will be to achieve some further understanding of war and human experience. This course will be offered online.

1.0 Course Unit

CLST 338 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine ancient Greece and Rome as the cradles of democracy and republicanism, early Judea as a pious theocracy, but monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). In this class, we will take a special look at kinship among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences. In all these cultures, the king was a polarizing figure in reality and in conception. On the one hand, some revered the monarch as ideal leader, and monarchy provided the language with which to describe and even imagine the very gods. On the other, monarchs were widely reviled in both theory and practice, from the Greek tyrants to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal and the worst form of government. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, human frailty, and utopianism.

CLST 343 The Iliad and its Afterlife
As the earliest work in the western tradition, the Iliad has been a constant point of reference for later considerations of heroism, friendship, the search for meaning in the face of mortality, and the effects of war on individuals and societies. We will begin with a close reading of the Iliad in translation, with attention both to the story of its hero Achilles as he experiences disillusionment, frustration, anger, triumph, revenge, and reconciliation and to the poems broader portrait of a society at war, which incorporates the diverse perspectives of invaders and defenders, men and women, old and young, gods and mortals, along with tantalizing glimpses of peacetime life. We will then consider how later writers and artists have drawn on the Iliad to present a range of perspectives of their own -- whether patriotic, mock heroic, romantic, or pacifist -- with particular attention to 20th and 21st century responses by such figures as W.H. Auden, Simone Weil, Cy Twombly, David Malouf, Alice Oswald, and Adrienne Rich. There are no specific prerequisites, but the course can serve as a complement to CLST 302, The Odyssey and its Afterlife or CLST 331 Reading the Iliad in a Time of War.

Taught by: Murnaghan
Activity: Seminar
1.0 Course Unit

CLST 344 Curiosity: Ancient and Modern Thinking about Thinking
This course will examine two approaches to the still unanswered question of what happens when we humans come up with new knowledge. How should we describe the impulse, or set of impulses, that leads us to seek it? What is happening when we achieve it? And how do we describe the new state in which we find ourselves after we have it? We will study the work of contemporary physicists and cognitive scientists on these questions along side the approaches developed by the two most powerful thinkers from antiquity on the topic, Plato and Aristotle.

1.0 Course Unit
CLST 345 Ancient Epic Poetry
Admission to this course is by application only. It is a collaboration between Penn and Yale-NUS in Singapore. It will require travel to study in Singapore during Penn’s Spring Break 2019. Seminars on both campuses will focus on five complete epics, Gilgamesh, the Iliad, Odyssey, Ramayana, and Aeneid. In addition to regular class times, it will also require additional evening meetings for plenary sessions via teleconference with Singapore. We will work with a mix of lectures, discussions, and group work with teams drawn from both campuses. Yale-NUS will travel to Philadelphia to join Penn students in face-to-face class sessions, and in additional cultural events, at Penn and in Philadelphia, including work in the Penn Museum. Penn students will also fly over to meet Yale-NUS students for a week that mirrors the Philadelphia experience, with attendance in classes, and cultural events, including the Asian Civilizations Museum. Part of the expectation for the class is that each group will host the others as they visit. Course grades will consist in a combination of sole-authored papers and collaborative projects. There will be a limited amount of grant money available to subvene travel for students. We will work with financial aid to determine need. Up-to-date passports are required for the course. Prerequisite: IMPORTANT - APPLICATION REQUIRED: Use the link in ‘Additional course information’.

Notes: IMPORTANT - APPLICATION REQUIRED: Use the link in ‘Additional course information’

CLST 360 Topics In Classicism and Literature
Ancient epic and mythology had a curious and rich afterlife in the Middle Ages. Virgil and Ovid were taught in medieval schools, read for their moral content, and revered as fiction that concealed great philosophical value. Their influence also gave rise to the great literary form of the Middle Ages, romance: narratives that place a premium on erotic love, individual quests, the unpredictability of adventure, and imaginary or exotic settings. Yet despite what may appear to be merely gratifying entertainment, medieval romance and medieval receptions of classical myth did tremendous cultural work, enabling profound explorations of history, political values, gender and sexual identity, and social power. We will spend some weeks reading Virgil’s Aeneid and Ovid’s Heroides and Metamorphoses. Then we will turn to medieval reimaginings of classical myth and metamorphosis, including poetry by Marie de France, Chretien de Troyes, and Chaucer, and anonymous works such as Sir Gawain and the Green Knight. The course requirements will be: one very short oral presentation on a research topic of your choice related to the reading, together with a short write-up of your research; one short critical paper; and one longer research paper (which can develop the subject of your oral presentation).

CLST 362 Intro to Digital Archaeology
Digital methodologies are now an integral part of archaeological practice and archaeologists are now expected to possess basic computing skills and be familiar with a range of data collection, analysis and visualization techniques. This course will use case studies and applied learning opportunities centered on a course project to explore a broad array of techniques. The course will use case studies and applied learning opportunities centered on a course project to explore a broad array of digital approaches in archaeology. The technological underpinnings, professional procedures, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include aerial and satellite image analysis, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.

Activity: Lecture
1.0 Course Unit

CLST 363 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty.
Taught by: Rose
Activity: Seminar
1.0 Course Unit

CLST 364 Foreigners in Rome
According to the stories the Romans told about the origins of their city, Rome began as a community of immigrants. As a growing metropolis and, eventually, the center of an empire, the city remained a magnet for people from other parts of the Empire and beyond. Foreigners came to the city as merchants and travelers, they settled here seeking a different and better life, pursuing a career, or escaping hardships in their home communities. Others were brought to Rome against their will, as prisoners or slaves. In this seminar, we will explore the different communities of foreigners and immigrants that shaped Rome. How and why did they move to the city? How did they experience their new home? How did they adapt to life in Rome and how, in turn, did they influence what we define as ‘Roman’ today? Finally, what can the legal, social, political, and social status of immigrants tell us about Roman society in general? To answer these questions (and more), we will look at a wide array of primary sources, including literary texts, inscriptions, and material culture.
Taught by: Wilker
Also Offered As: ANCH 363
Activity: Seminar
1.0 Course Unit
CLST 369 Literary Translation
This course is for graduate students and undergraduates with permission of the instructor. All students enrolled must have knowledge of at least one language other than English. We will study the history, theory and practice of literary translation, and participate in it. Readings will include theoretical works in translation studies, using selections from Lawrence Venuti’s Translation Studies Reader and Schulte/Biguenet’s Translation Theory Reader, with some supplemental readings; we will also look at comparative cases of multiple translations of the same original, and analyze how different translators make different interpretative/formal/aesthetic choices. Course assignments will include both a research paper, on the history and/or theory of translation, and an extended practical translation exercise, to be workshopped over the course of the semester, consisting of a literary translation of a text of the student’s choice.
Taught by: Wilson
Also Offered As: CLST 569, COML 369
Activity: Seminar
1.0 Course Unit

CLST 370 Classics & American Government
Before the universities established public-service programs in the twentieth century, many Americans prepared themselves for public life by studying Greek and Latin authors in school and college. In this course, using English translations, students survey an eighteenth-century classical curriculum and trace its influence in the political activity of Madison and others who guided the development of American governmental institutions.
Taught by: John Mulhern
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CLST 396 History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. The first half of the course will focus on early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio); and the early modern period (such as Philip Sidney and Giambattista Vico). In the second half of the course we will turn to modern concerns by looking at the literary (or ’art’) theories of some major philosophers and theorists: Kant, Hegel, Marx, Nietzsche, Freud, and Walter Benjamin. We end the course in the mid-twentieth century. The purpose driving this course is to consider closely how this tradition generated questions that are still with us, such as: what is the act of interpretation; what is the ’aesthetic’; what is ’imitation’ or mimesis; and how are we to know an author’s intention. During the semester there will be four short writing assignments in the form of analytical essays (3 pages each). Students may use these small essays to build into a long piece of writing on a single text or group of texts at the end of the term. Most of our readings will come from a published anthology of literary criticism and theory; a few readings will be on Canvas.

CLST 419 Mining Archaeology
In ancient times, materials such as stone and metals were used to produce artifacts including pigments, jewelry, tools, and weapons. This course is designed to introduce students to research on the early exploitation of mineral resources. Which techniques were used to access and process raw materials in antiquity? Which archaeological methods can be used to investigate these features and artifacts? The course will provide worldwide examples through time, ranging from Stone Age flint mining, Iron Age rock salt mining to Medieval silver mining. Ethnographic studies and hands-on activities will contribute to our understanding of mining in archaeology, and artifacts from the Museum’s collections will undergo scientific analysis in the Center for the Analysis of Archaeological Materials. Prerequisite: Desired but not mandatory: ANTH 221/521 Material World in Archaeological Science
Taught by: Jansen
Course usually offered in spring term
Also Offered As: ANTH 419, NELC 419
Activity: Seminar
1.0 Course Unit
CLST 425 Late Antique Arts
What is ‘Late Antiquity’? In 312 when Roman emperor Constantine inaugurated a Christian empire, ‘Roman’ culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of economic and political upheaval destruction was frequent but partial: Rome long survived, Constantine’s ‘new Rome’, Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition, in forms and styles: we critique art-historical models for Late Antique ‘decline’, analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies, and new peoples invading an already polyethnic Empire, interacted with Greco-Roman Late Antiquity; we visit arts of Sasanian and Islamic empires east and south, and ‘barbarian’ domains in Africa, Europe, Britain. Media discussed, for sacred, courtly, domestic, funerary, political and civic spaces and structures include not just ‘monumental’ painting, mosaic, sculpture, but also objects of silver, ceramic, ivory, figural textile, glass; painted books; jewelry; mass-media artifacts like coins and pilgrimage tokens. We also study Late Antique texts on art, objects, space and viewership.

CLST 427 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemoratory public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts (gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.
Taught by: Kuttner, Rose
Course not offered every year
Also Offered As: AAMW 427, ARTH 427
Activity: Lecture
1.0 Course Unit

CLST 441 Plants and Society
Interactions between humans and the living landscape around us have played - and continue to play - a fundamental role in shaping our worldview. This course is designed to introduce students to the diverse ways in which humans interact with plants. We will focus on the integration of ethnographic information and archaeological case studies in order to understand the range of interactions between humans and plants, as well as how plants and people have profoundly changed one another. Topics will include the origins of agriculture; cooking and plant processing; human health and the world of ethnomedicine; and poisonous and psychoactive plants. We will examine ancient plant material firsthand at the Center for the Analysis of Archaeological Materials (CAAM) and will handle botanical ecofacts from the Penn Museum’s collections. Students will also carry out a substantial research project focused on an archaeological culture and plant species of their own interest.
Taught by: White
Course not offered every year
Also Offered As: ANTH 440
Activity: Seminar
1.0 Course Unit

CLST 500 Materials and Methods, proseminar in CLASSICAL STUDIES AND ANCIENT HISTORY
This is the required proseminar for first-year graduate students in Classical Studies and Ancient History. It will introduce you to some key methodological, practical and theoretical tools for beginning a scholarly career in these fields.
Taught by: Ker
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CLST 503 Historical Grammar of Greek
Investigation of the grammar of Classical Greek from the viewpoint of historical linguistics. The course will offer historical explanations for numerous structural peculiarities of the Greek language and anomalies of Greek grammar, touch on the relationship of Greek with other languages, and incidentally introduce the student to some basic concepts of language analysis likely to be useful in teaching Greek and learning other languages. A fluent reading knowledge of ancient Greek is required to enroll.
Taught by: Ringe
Course not offered every year
Activity: Seminar
1.0 Course Unit

CLST 512 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.
Taught by Boileau
Course not offered every year
Also Offered As: AAMW 512, ANTH 514
Activity: Seminar
1.0 Course Unit

CLST 515 Kinship and Connectivity in the Roman World
An individual’s life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieu.
Taught by: Brent
Also Offered As: AAMW 514, ANCH 315, ANTH 315, CLST 315
Activity: Seminar
1.0 Course Unit
CLST 517 MLA Proseminar: Reading the Iliad in an Age of War
Homer's Iliad presents a dark and difficult vision of the world, but one that nonetheless inspires. Casual cruelty, divine caprice, and savage violence test heroes and lesser folk and provoke a reckoning with the stark realities of both human vulnerability and capability. It inspires kind of terror, but still also somehow provides a kind of comfort, albeit one whose character seems almost beyond comprehension. By a close and careful reading of Homer's text, along with some reflections and readings drawn from more contemporary wars, including the current ones, we will try to examine these issues with one eye on the past and one on the present. Our goal will be to achieve some further understanding of war and human experience. This course will be offered online.
Taught by: Struck/Reinhardt
Activity: Online Course
1.0 Course Unit

CLST 521 Topics in Greek and Roman Art
Topics varies from semester to semester. For the Spring 2020 semester, the topic will be Violence and Ancient Mediterranean Art. The Greek and Roman world was fascinated by representing humans and beasts enduring physical and psychological pain, and images of violence inflicted by mortal and supernatural beings alike. These images occur in art of all kinds, consumed both privately and publicly, emerging in the domestic, religious, military and political sphere. They had a range of aims, from affording emotional catharsis, building political cohesion or enforcing social norms, to generating religious awe or confidence in empire -- and giving entertainment. As we explore this corpus, we can ask: what might be the roots of such preoccupation with the art of violence and pain in the 'Classical tradition' and its post-antique legacy? Many modern cultures exhibit similar fascination: how far can modern reactions to and theories about such images be guides to reconstructing ancient viewership? How can ancient texts and histories help us in this interdisciplinary project?
Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 525, ARTH 525
Activity: Seminar
1.0 Course Unit

CLST 522 Narrative in Ancient Art
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of 'Western' art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask 'who is the story for, and why?' for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors' expertise in Mesopotamian visual culture, and in the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.
Taught by: Kuttner/Pittman
Also Offered As: AAMW 523, ARTH 523, NELC 523
Activity: Seminar
1.0 Course Unit

CLST 524 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty.
Taught by: Rose
Also Offered As: AAMW 524
Activity: Seminar
1.0 Course Unit

CLST 526 Material & Methods in Mediterranean Archaeology
This course is intended to familiarize new graduate students with the collections of the University of Pennsylvania Museum of Archaeology and Anthropology and the wide range of scholarly interests and approaches used by faculty at Penn and neighboring institutions, as well as to provide an introduction to archaeological methods and theory in a Mediterranean context. Each week, invited lecturers will address the class on different aspects of archaeological methodology in their own research, emphasizing specific themes that will be highlighted in readings and subsequent discussion. The course is divided into five sections: Introduction to the Mediterranean Section; Collections; Method and Theory in Mediterranean Archaeology; Museum Work; and Ethics. The course is designed for new AAMW graduate students, though other graduate students or advanced undergraduate students may participate with the permission of the instructor.
Taught by: Tartaron
Course usually offered in fall term
Also Offered As: AAMW 526
Activity: Seminar
1.0 Course Unit
CLST 532 Ancient Greek Colonies
This seminar examines the archaeology of Greek colonization from the Late Bronze Age to ca. 500 B.C. These colonies were highly diverse in their motivations, physical settings, and political and social structures, as well as in their relationships with mother cities and the new worlds they inhabited. Emphasis is placed on the colonial experience as a cross-cultural and negotiated process; several streams of the changing theoretical and conceptual approaches to Greek colonization are explored. In addition to archaeological and epigraphic evidence, literary and historical traditions are examined. Colonies from the southern Balkan peninsula, Black Sea, Ionia, northern Africa, and Magna Graecia will be the focus of reading and reports. Seminar meetings will consist of oral reports and discussion of these reports and other topics. Depending on the number of participants, each person will be responsible for two or three reports of approximately 30-45 minutes length. Accompanying the oral report will be a PowerPoint document (in most cases), a synopsis/summary of one to two pages, and a bibliography. These will all be posted on the course Canvas site. No later than one week before an oral presentation, the presenter will identify one or two key readings for all to read, in consultation with the instructor. These will be posted, in PDF format, on the Canvas site. One or more visits to the Penn Museum may be built into the course.
Taught by: Tom Tartaron
Course not offered every year
Also Offered As: AAMW 519
Activity: Seminar
1.0 Course Unit

CLST 533 Topography and Monuments of Ancient Rome
An intensive exploration of Rome's urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required.
Course not offered every year
Also Offered As: AAMW 533, CLST 328
Activity: Seminar
1.0 Course Unit

CLST 540 Plato and Aristotle in the Renaissance
In one of the most evocative frescoes of the Renaissance, Raphael juxtaposes Plato and Aristotle. The pairing would seem obvious, since the two thinkers had been for centuries symbols of philosophy and wisdom. But only the recent revival of Plato, begun in the mid-fifteenth century, had allowed Latin West to gain a better understanding of Platonic philosophy and therefore to compare Plato's doctrines directly to those of Aristotle. Were master and disciple in harmony? And if not, which of the two should be favored? Such questions wer less innocent than one might think, and the answers to them had implications for philosophy, theology, speculation on the natural world, and even politics. The course will offer an overview of Renaissance philosophy and culture by focusing on the different ways in which Plato and Aristotle were read, interpreted and exploited between the fifteenth and seventeenth centuries. The course will be conducted in English; a basic knowledge of Latin is desirable but not required.
Taught by: Del Soldato
Course not offered every year
Also Offered As: COML 545, ITAL 540, PHIL 545
Activity: Seminar
1.0 Course Unit

CLST 543 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.
Taught by: Chantel White
Course not offered every year
Also Offered As: AAMW 539, ANTH 533, NELC 585
Activity: Seminar
1.0 Course Unit

CLST 559 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as 'myth' entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.
Taught by: Kuttner, Brisman
Also Offered As: AAMW 559, ARTH 559, COML 559, GRMN 559
Activity: Seminar
1.0 Course Unit

CLST 562 Intro to Digital Archaeology
Digital methodologies are an integral part of contemporary archaeological practice, and demand that archaeologists to hold a new set of skills and knowledge fundamentals. This course will expose students to a broad range of digital approaches through a review of relevant literature and through applied learning opportunities centered on a course project. The technological underpinnings, best practices, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include: aerial and satellite remote sensing, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D modeling and visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.
Taught by: Herrmann

CLST 568 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the new Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.
Taught by: Kassabaum, Monge, Moore
Course not offered every year
Also Offered As: ANTH 267, ANTH 567, CLST 268, NELC 286, NELC 586
Activity: Lecture
1.0 Course Unit

CLST 569 Literary Translation
This course is for graduate students and undergraduates with permission of the instructor. All students enrolled must have knowledge of at least one language other than English. We will study the history, theory and practice of literary translation, and participate in it. Readings will include theoretical works in translation studies, using selections from Lawrence Venuti’s Translation Studies Reader and Schulte/Biguenet’s Translation Theory Reader, with some supplemental readings; we will also look at comparative cases of multiple translations of the same original, and analyze how different translators make different interpretative/formal/aesthetic choices. Course assignments will include both a research paper, on the history and/or theory of translation, and an extended practical translation exercise, to be worked over the course of the semester, consisting of a literary translation of a text of the student’s choice.
Taught by: Wilson
Also Offered As: CLST 369, COML 369
Activity: Seminar
1.0 Course Unit

CLST 572 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Taught by: Herrmann
Course offered spring; even-numbered years
Also Offered As: AAMW 572, ANTH 572, NELC 572
Activity: Laboratory
1.0 Course Unit

CLST 598 Language Pedagogy Workshop
The Workshop is intended to serve as a forum for first-time teachers of Latin or Greek. This will include discussing course-plans and pedagogical theories and strategies, collaborating on course materials, and addressing any concerns in the language courses presently being taught.
Taught by: James Ker
Activity: Seminar
1.0 Course Unit

CLST 600 Graduate Seminar
Topics will vary
One-term course offered either term
Activity: Seminar
1.0 Course Unit

CLST 604 Troy and Homer
An interdisciplinary seminar focusing on the city of Troy both as an archaeological site and as the setting of the legendary Trojan War. We will consider Homer’s Iliad (with selected sections read in Greek) together with the topography and archaeology of the site of Troy in order to address a series of interrelated questions: What are the points of continuity and discontinuity between the stories told by the literary tradition and the material record? How do both types of evidence contribute to our understanding of political relations and cultural interactions between Greece and Anatolia in the Bronze Age? How do Hittite sources bear on our reconstruction of the events behind the Troy legend? How have the site and the poem contributed to each other’s interpretation in the context of scholarly discovery and debate? We will give some attention to modern receptions of the Troy legend that deliberately combine material and textual elements, such as Cy Twombly’s ‘Fifty Days at Iliam’ and Alice Oswald’s ‘Memorial; An Excavation of Homer’s Iliad.’ The seminar will include a visit to the site of Troy during the Spring Break.
Taught by Murnaghan
Also Offered As: AAMW 604, GREK 604
Activity: Seminar
1.0 Course Unit
CLST 605 Archaeologies of Subalternity
This course addresses the various areas and approaches to ‘otherness’ in ancient Mediterranean archaeology, and the power dynamics of oppression. We'll not only examine disempowerment around cultural identity, class, gender and sexuality, and race/ethnicity, but we'll spend equal time pondering how those subjects have been studied - or ignored - by classical archaeologists. The power relationships both inherent in the subjugation of various kinds of people in the ancient world, and in the academic discourses around them, are the themes of the course. While this course will be focused on the Bronze Age through late antique Mediterranean, those with other period/interests are most welcome. Students will be asked to bring their own interests to the course, which help shape the course. Upper-level courses in archaeology, anthropology, or ancient history are recommended prior to enrollment.
Taught by: Bowes
Course not offered every year
Also Offered As: AAMW 550, CLST 305
Activity: Seminar
1.0 Course Unit

CLST 607 Roman Humor and Invective
This seminar will explore Roman humor in epigram, iambic, oratory, and satire as a method of constructing and policing norms of sexuality, the body, and social identity. We will read from a wide range of authors including Catullus, Martial, Cicero, Quintilian, Petronius, and Juvenal, as well as texts that discuss or depict laughter and ridicule. Beyond focused analysis of the works at hand, we will evaluate modern theories of humor and laughter according to the ancient evidence and develop models for understanding Roman humor. In addition to weekly readings, students will be responsible for class presentations, contributing to works-in-progress workshops, and a final research paper.
Taught by: Brassel
Course not offered every year
Also Offered As: LATN 607
Activity: Seminar
1.0 Course Unit

CLST 610 Middle English Literature
This seminar will study a number of selected Middle English texts in depth. Attention will be paid to the textual transmission, sources, language, genre, and structure of the works. Larger issues, such as the influence of literary conventions (for example, ‘courtly love’), medieval rhetoric, or medieval allegory will be explored as the chosen texts may require.
Course not offered every year
Also Offered As: COML 714, ENGL 715
Activity: Seminar
1.0 Course Unit

CLST 611 Greek Epigraphy
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his ‘Ancient Economy’ have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

Activity: Seminar
1.0 Course Unit

CLST 612 The Flavian Era
The time of the Flavians (69-96 BCE) holds a special place in Roman history and culture as it marks the transition from the Julio-Claudian period to the High Empire. Historically, the rule of Rome’s second dynasty saw a stabilization of the imperial power system, the consolidation of social and political hierarchies, and an increasing integration of the empire. Major construction projects reshaped the city of Rome, topographically and ideologically. The literary production in various genres reached a new peak, developed new forms, and explored new topics. The unusually high number of Greek and Latin texts and documents preserved allow us to analyze such changes closely; our focus will be on the interrelation and conjunction of these developments. Final projects will take the form of papers suitable for presentation at the SCS Annual Meeting.
Taught by: Wilker, Damon
Also Offered As: ANCH 612
Activity: Seminar
1.0 Course Unit

CLST 613 Landscapes and Seascapes of the Ancient Mediterranean
The Mediterranean environment is both diverse and unique, and nurtured numerous complex societies along its shores in antiquity. This seminar offers a primer on theoretical and methodological approaches to studying landscapes and seascapes of the Mediterranean from the Bronze Age to the early modern era, at scales from local to international and on land and underwater. Concepts from processual, post-processual, and current archaeologies will be considered, and field techniques including excavation and surface survey, remote sensing and geophysics, GIS modeling, and ethnography/ethnoarchaeology are examined. Course content and discussion focus on case studies that illustrate how these tools are used to reconstruct the appearance and resources of the natural environment; overland and maritime routes; settlement location, size, function, and demography; social and economic networks; and agricultural, pastoral, and nomadic lifeways. Seminar participants will develop case studies of their own geographical and chronological interest.
Taught by: Tartaron

CLST 623 The (Mostly) Latin Epigram
In this seminar we will explore the themes and aesthetics of the Latin epigram, a genre (or is it?) best known for its brevity and wit but one whose precise nature is tantalizingly elusive. After orienting ourselves in the epigrams of Hellenistic Greek epigrammatists and late Republican authors like the so-called Neoterics (Catullus, Cinna, Calvus, Caesar), we will turn our attention to the poetry of Martial, whose accounts of Rome, its inhabitants, and their foibles exerted a profound influence on subsequent epigrammatists. Among the themes we will engage are: epigram as a genre; persona in tessellated textual collections; the interaction of refined and obscene language; and the artistic and intellectual implications of replication, anthology, and remix.
Taught by: Mulligan
Activity: Seminar
1.0 Course Unit

CLST 635 Etruscan Art & Archaeology in the Penn Museum
The Etruscans, who spoke a language unlike any others known, were cast by their Greek and Roman rivals as outsiders and enemies: pirates, lovers of luxury, loose women. Today we must rely on the archaeological evidence of painted tombs, decorated Tuscan temples and massive engineering works to correct the picture. The course will survey a millennium (1st millennium BCE) of Etruscan culture through archaeological sites, works of art and everyday material culture, especially illustrated with objects in the collection of the Penn Museum. An additional insight into Italic culture comes from tomb groups excavated for the Museum at the Faliscan settlement of Narce. Students will gain familiarity with the societies of pre-Roman Italy through close study of their vases, jewels, arms, armor, textiles and tools, and even their very bones, and discover a surprising amount of Etruscan heritage surviving today.
Taught by: Turfa
Course not offered every year
Also Offered As: AAMW 630, CLST 335
Activity: Lecture
1.0 Course Unit

CLST 636 Approaches to Literary Texts
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields. Master classes are taught by Kevin Brownlee, Linda Chance, Eva del Soldato, Huda Fakhreddine, Scott Francis, Nili Gold, Bridget Murnghan, Deven Patel, Kevin Platt, Michael Solomon, Emily Steiner, Julia Verkholantsev, and Emily Wilson.

CLST 698 Prospectus Workshop
Designed to prepare graduates in any aspect of study in the ancient world to prepare for the dissertation prospectus. Course will be centered around individual presentations and group critique of prospectus in process, as well the fundamentals of large-project research design and presentation.
Taught by: Wilker
Course usually offered in spring term
Also Offered As: AAMW 698
Activity: Seminar
1.0 Course Unit
Notes: Graduates only

CLST 700 GEOARCHAEOLOGY
In this course, students will learn the basic concepts of earth systems and explore the ways that archaeologists use various environmental sciences (e.g., geomorphology, limnology, palynology, and dendroclimatology) and paleoecological modeling in their research. The course will include lectures and laboratory activities on the basics of geology, including surficial geology, rock and mineral identification, geomorphology and soils, sedimentation and stratigraphy, as well as a systematic review of depositional environments and their archaeological potential. A series of archaeological case studies will illustrate the application of these concepts in real-world field archaeology.
Taught by: Tartaron & Magee

Activity: Seminar
1.0 Course Unit
CLST 702 Greek Sanctuaries
Sanctuaries remain an important focal point for the study of Greek religion. Both as sites for worship, dedication, oracular activity and other cult activity and as sites for the mediation of elite and state competition sanctuaries are, along with the polis, the most essential structuring institutions of Greek life. This seminar takes a selection of larger and smaller extra-urban sanctuaries and examines their growth, articulation and function.

Activity: Seminar
1.0 Course Unit

CLST 705 Ethnoarchaeology Greece
Ethnoarchaeology involves distinctive theoretical and methodological approaches to the study of living societies for the explicit purpose of shedding light on archaeological questions. In this seminar, we will review the intellectual history of ethnoarchaeology in North America and Europe, and explore case studies from Greece, the wider Mediterranean, and beyond. Among the topics will be analogy, cross-cultural comparison, experimental archaeology, oral history research, and archaeologically oriented ethnographic fieldwork. Students will create a proposal for ethnoarchaeological fieldwork in their area of interest in NSF or Wenner-Gren format, to be critiqued by the instructor and their peers.
Taught by: Tartaron

CLST 707 TOPICS IN AEGEAN ARCHAEOLOGY
Topics vary. This course explores current topics in Aegean archaeology. It is designed to inform and prompt debate and discussion on substantive, methodological, and theoretical matters of current interest, within a geographical and/or chronological framework. Spring 2017 topic TBA.
Taught by: Tom Tartaron
Also Offered As: AAMW 707
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates require permission of instructor

CLST 711 The Archaeology of Greece and Asia Minor in the Archaic and Classical Periods
An examination of new discoveries and conflicting interpretations in the archaeology of Greece and Asia Minor between the seventh and fourth centuries B.C.E. Both sides of the Aegean will receive equal attention, and emphasis will be placed on sanctuaries, settlements, and cemeteries.
Taught by: C. Brian Rose
Also Offered As: AAMW 726, ARTH 726
Activity: Seminar
1.0 Course Unit
Notes: Graduate Students Only

CLST 715 Archaeology of Troy
An introduction to the archaeology of Troy, in northwestern Turkey. The course will focus on the results of excavations at the site in 1988, although the earlier excavations of Schliemann, Dorpfeld, and Blegen will also be considered. The course will cover a broad chronological span—from the early Bronze age through the late Roman period, and will include Greek, Roman, and Medieval attitudes toward Troy and the Trojan legend.
Taught by: Rose
Course not offered every year
Also Offered As: AAMW 715
Activity: Seminar
1.0 Course Unit

CLST 720 Topics in Aegean Art
Fall 2018: The choices made by groups of people with regard to the treatment of their dead can be reflective of a society’s beliefs and social structure. In this course, we will examine the burial traditions of the people of the Prehistoric Aegean from the Neolithic through the end of the Bronze Age, circa 7,000-1,100 BCE. We will focus on burial architecture, grave goods, burial rituals, mortuary variability, and the symbolic meaning of death and burial in Prehistoric Greece. Particular attention will be paid to recent discoveries on Crete, the Mainland, and the Cycladic islands. Students will write two papers, and these papers will be presented to the class. The first paper will be circa 15 pages long with footnotes, bibliography, and images (presented via powerpoint) and the second will be a 20-25 page paper with footnotes, bibliography, and images presented via powerpoint.
Taught by: Shank
Course not offered every year
Also Offered As: AAMW 720, ARTH 720
Activity: Seminar
1.0 Course Unit

CLST 990 Masters Thesis
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

CLST 995 Dissertation
One-term course offered either term
Activity: Dissertation
1.0 Course Unit

CLST 999 Independent Study and Research
For doctoral candidates. Permission of Graduate Chair and instructor required to enroll.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Climate Change (CLCH)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/academics/certificates/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

CLCH 160 Oceanography
This course is designed to provide an overview of geological, chemical, and physical oceanography. It is constructed such that all students (irrespective of their major area of study) can learn about the oceans. Through frequent individual and group assignments, readings, video lectures, and collaborative discussions, students are exposed to the major areas of oceanography including marine geology, physical oceanography, and marine chemistry. This includes the following themes: plate tectonics (particularly as it pertains to the making, shaping, and disruptions of the global ocean), marine provinces, marine sediments, seawater chemistry, air-sea interactions and ocean circulation (particularly as they pertain to climate change), waves and water dynamics, tides, renewable ocean energy, and beaches and shoreline processes.
Activity: Online Course
1.0 Course Unit

CLCH 220 Atmospheric Science
The study of atmospheric science includes the prediction of weather and climate change as well as their impact on society. Designed to provide an understanding of the fundamentals of atmospheric science at the local, regional, and global levels, this course covers the nature, composition, and structure of the atmosphere, its interactions with other parts of the Earth, and the major chemical mechanisms controlling the occurrence and mobility of air pollutants in the atmosphere. Course topics also include global atmospheric composition, ecosystems, living organisms, and environmentally important atmospheric species such as greenhouse gases, stratospheric ozone, acid precipitation, urban smog, and air toxins.
Activity: Online Course
1.0 Course Unit

CLCH 230 Climate Change
Climate change is happening right now! Climate change is a hoax this is normal variation! Climate change is something we can worry about in 50 to 100 years, no need to worry about it now. On an almost daily basis we are bombarded by mixed messages about climate in the media. Who is right? What is the truth? This course will examine the cryosphere and build on the previous Climate Certificate courses CLCH 160 Oceanography and CLCH 220 Atmospheric Science to better understand Earth's climate system. We will explore past climate, how we know what that climate was like, and how and why we believe it has changed. We will then examine current evidence for climate change (sea level rise, loss of glacier mass, changes in weather systems) and critique various climate models. Once the class has a good understanding of the science behind climate change we will examine potential impacts in various parts of the world. Finally we will examine climate policy in the US at the federal, state and local level and in various parts of the world.
Taught by: Yvette Bordeaux
Activity: Online Course
1.0 Course Unit

CLCH 300 Communicating Science
Even the most brilliant scientists must be able to communicate clearly to effectively share their enthusiasm for their fields. Relating scientific concepts and quantitative data to colleagues is very different than sharing it with the general public. This course will show students how to refine their communication skills in crafting messages to address different audiences and genres. There are no required prerequisites for this course, although students pursuing the Certificate in Climate Change are strongly encouraged to already have completed CLCH 160: Oceanography, CLCH 220: Atmospheric Science, and CLCH 230: Climate Change prior to enrolling in this course.
Taught by: N/A
Activity: Online Course
1.0 Course Unit

Cognitive Science (COGS)

COGS 001 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Course usually offered in fall term
Also Offered As: CIS 140, LING 105, PHIL 044, PSYC 207
Activity: Lecture
1.0 Course Unit
Notes: This counts as a Formal Reasoning course for College students.

COGS 298 Study Abroad
Activity: Lecture
1.0 Course Unit

COGS 301 Independent Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

COGS 398 Senior Thesis
This course is a directed study intended for cognitive science majors who have been admitted to the cognitive science honors program. Upon admission into the program, students may register for this course under the direction of their thesis supervisor.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
College (COLL)

COLL 135 The Art of Speaking
This course is designed to equip students with the major tenets of rhetorical studies and peer education necessary to work as a CWiC speaking advisor. The course is a practicum that aims to develop students' abilities as speakers, as critical listeners and as advisors able to help others develop those abilities. In addition to creating and presenting individual presentations, students present workshops and practice advising. During this ABCS course, students will practice their advising skills by coaching and mentoring students at a public school in Philadelphia. Prerequisite: Students need to apply and are interviewed by the instructor and Associate Director of CWiC. Taught by: Weber
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Students need to apply and are interviewed by the instructor and Associate Director of CWiC.

Communications (COMM)

COMM 025 Fellows Proseminar I (SNF Paideia Program Course)
The SNF Paideia Fellows Proseminar I introduces sophomore Fellows to academic research and practice related to the civic engagement mission of the SNF Paideia program. We engage diverse perspectives on the purpose of higher education, the nature of citizenship, the value of civility, and the relationship between individual and community wellness. Students will develop their personal civic identity and wellness goals through intentional course exercises and assignments. The goal of the course is to equip students with the knowledge, skills, experiences, and ethical frameworks for healthy, sustainable and robust civic leadership at Penn and in their local, national, and global communities. This course is open only to SNF Paideia Fellows, who are required to take it during the fall of their sophomore year. Prerequisite: This course is open only to SNF Paideia Fellows, who are required to take it during the fall of their sophomore year.
Taught by: Anderson/Howard
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

COMM 125 Introduction to Communication Behavior
This course introduces students to social science research regarding the influence of mediated communication on individual and collective attitudes, beliefs, and behaviors. Throughout the semester we explore the impacts of various types of mediated content (e.g., violence, gender and sexuality, race and ethnicity, politics and activism, health and wellbeing); genres (e.g., news, entertainment, educational, marketing); and mediums (e.g., television, film, social media) on what we think and how we act. The aim of the course is to provide students with (1) a general understanding of both the positive and negative effects of mediated communication on people's personal, professional, social, and civic lives; and (2) the basic conceptual tools needed to evaluate the assumptions, theories, methods, and empirical evidence supporting these presumed effects. Class meets twice a week (MW) as a lecture and once a week (F) in smaller discussion groups led by graduate teaching fellows. In addition to a midterm exam and occasional short assignments, students have the option of producing a multi-media capstone project or a final term paper on a media-effects topic of their choice. Group projects or final papers are permitted, with approval of the instructor. In addition to fulfilling General Education Curriculum Sector 1 Requirement (Society), this course fulfills one of the two introductory-level courses required of Communication majors or prospective majors.
For BA Students: Society Sector
Taught by: Delli Carpini
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 130 Media Industries and Society
For Communication majors or prospective majors.
Curriculum Sector 1 Requirement (Society), this course fulfills one of the two introductory-level courses required of Communication majors or prospective majors.
For BA Students: Society Sector
Taught by: Turow
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 123 Critical Approaches to Popular Culture
Popular culture has been alternately condemned as too trivial to warrant attention and too powerful to resist. Its consumers have been dubbed fashion victims, couch potatoes, and victims of propaganda. This course considers these critiques, as well as those that suggest that popular culture can be emancipatory, allowing for the creation and renegotiation of meaning. Over the course of the semester, we consider the impacts of various forms of popular culture, and discuss their effects on how we see ourselves and others. We explore the ever-shifting distinctions between high, middlebrow, and low culture and analyze how power and resistance structure the production and consumption of popular texts.
Taught by: Lingel/Paxton
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 203 Media, Culture & Society in Contemporary China
This course studies contemporary China in the context of globalization. Starting with an analysis of the origins of economic reform and the struggles for political change in the 1970s and 1980s, the course moves on to cover critical issues in the twenty-first century, including migration and work, middle class consumerism, youth, religion, media and communication, environmental degradation, new forms of inequality, civil society and popular protest. Taking a sociological approach, this course introduces methods and theories for analyzing institutions, inequality, and social change.
Taught by: Yang
Course not offered every year
Also Offered As: SOCI 238
Activity: Lecture
1.0 Course Unit
COMM 210 Quantitative Research Methods in Communication
This course is a general overview of the important components of social research. The goal of the course is to understand the logic behind social science research, be able to view research with a critical eye and to engage in the production of research. It will cover defining research problems, research design, assessing research quality, sampling, measurement, and causal inference. The statistical methods covered will include descriptive and inferential statistics, measures of association for categorical and continuous variables, inferences about means, and the basic language of data analysis. Course activities will include lectures, class exercises, reading published scientific articles, using statistical software, and discussing research featured in the news.
Taught by: Jemmott
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

COMM 211 Media Activism Studies
This seminar provides an introduction to the politics and tactics underlying various types of media activism. The class will examine interventions aimed at media representations, labor relations in media production, media policy reform, activists' strategic communications, and 'alternative' media making. The course will draw from an overview of the existing scholarship on media activism, as well as close analyses of actual activist practices within both old and new media at local, national, and global levels. We will study how various political groups, past and present, use media to advance their interests and effect social change. Each member of the class will choose one case study of an activist group or campaign to explore throughout the semester.
Taught by: Pickard/Balaji
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

COMM 214 Media and South Asia
This course examines the historical development of media institutions across the Indian subcontinent, and how media texts have helped to shape post-colonial national/cultural/religious/social identities, nationalism, and geopolitical relations. The course looks at how the post-colonial State in South Asia (India, Pakistan, Bangladesh, Nepal, Bhutan, and Sri Lanka) has interacted with media industries, and the implications of this interaction.
Taught by: Balaji
One-term course offered either term
Also Offered As: SAST 110
Activity: Lecture
1.0 Course Unit

COMM 225 Children and Media
This course examines children's relationships to media in their historic, economic, political, and social contexts. The class explores the ways in which 'childhood' is created and understood as a time of life that is qualitatively unique and socially constructed over time. It continues with a review of various theories of child development as they inform children's relationships with and understanding of media. It reviews public policies designed to empower parents and limit children's exposure to potentially problematic media content and simultaneously considers the economic forces that shape what children see and buy. The course also provides a critical examination of research on the impact of media on children's physical, cognitive, social, and emotional development. Students in this course produce a proposal for an educational children's media product as their final project.
Taught by: Woolf
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 226 Introduction to Political Communication
This course is an introduction to the field of political communication and conceptual approaches to analyzing communication in various forms, including advertising, speech making, campaign debates, and candidates' and office-holders' uses of social media and efforts to frame news. The focus of this course is on the interplay in the U.S. between media and politics. The course includes a history of campaign practices from the 1952 presidential contest through the election of 2020.
Taught by: Jamieson
Course usually offered in fall term
Also Offered As: PSCI 232
Activity: Lecture
1.0 Course Unit

COMM 230 Advertising and Society
This course explores the historical and contemporary role of the advertising industry in the U.S. media system. The course will cover the social history of advertising: the structure of today's advertising industry; the workings of advertising in digital media; and critical analyses of advertising's role in society. In addition to academic writings, the class will read industry reports to understand contemporary strategies and processes.
Taught by: Turow
Course not offered every year
Activity: Lecture
1.0 Course Unit
COMM 243 Ethnography and Media for Social Justice
How do qualitative social scientists study urban communities? What kinds of powerful tales can be told about urban lifestyles and social issues in places like Philadelphia? This course will allow students to study various ethnographic treatments of urban communities in the United States, using films, articles, TV serials, and books as guides for the framing of their own independent research on the streets of Philadelphia. Students will also form production teams of two or three people, and these production teams will be responsible for (i) identifying and researching an important urban issue in contemporary Philadelphia and (ii) turning that research into a 15-30 minute video documentary or pod cast. Mixing video/audio journalism with ethnographic methods will enhance their skills at archival and social research, from participant observation and interviewing techniques to sound editing and production. This course is intended to be a rigorous and exciting opportunity for students to tell empirically grounded stories using the voices of their participants and the sounds of the city.
Taught by: Ustun
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 248 Digital Dissidence: Networked Movements in the Age of the Internet
This course examines digital dissidence, which takes a wide variety of forms in today's online mediascape. Key issues we will explore include: What is the infrastructure of the global Net and who made it? What is the logic of networked action online and how effective is it? Have the supposedly democratic rules of the internet resulted in positive social transformations? What impact does ever-increasing internet surveillance have on digital dissidence? What can ensure the safety and freedom of online resistance? The sociological concepts and theories covered in this course will help students understand and assess the threats that networked movements face in the political context of contemporary global uprisings.
Taught by: Ustun
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 253 Divine Mediation: Media and the Shaping of Religious Identity and Practice
This course surveys how religious groups interact with media, and how media texts and institutions have played a role in defining religions. The intersections between media and religion are numerous, from the mediated growth of national identities, the rise of online religious extremism, the ingroup/outgroup dynamics within and among religious groups, and the ways in which media is used to legitimize/delegitimize theological positions. We examine how media institutions have played a role in propping up religious norms (both explicitly and implicitly) and the shaping of religious identities. This course looks at media as both enforcer and disruptor, as well as the ways in which religions have been challenged by those with media literacy and access. The evolution of religious practice and social norms can also be linked with technological innovations such as the mass distribution of Bibles in the 15th and 16th century thanks to the printing press, the rise of radio and television messiahs in the 20th century, and the individualization of religious practices through new apps.
Taught by: Balaji
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 270 Global Digital Activism
This seminar examines the forms, causes, and consequences of global digital activism, defined broadly as activism associated with the use of digital media technologies (e.g., Facebook, Twitter, mobile phones, and the Chinese Weibo). The goal is to provide students with a theoretical tool-kit for analyzing digital activism and to develop a critical understanding of the nature of contemporary activism and its implications for global social change. Major cases to be examined include the 'Occupy Wall Street' movement in the US, the Arab Spring, the 'indignados' protests in Spain, and internet activism in China. Students are required to conduct primary, hands-on research on a contemporary case (or form) of digital activism and produce a final research paper. This research project may be done individually or in small groups.
Taught by: Yang
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 275 Communication and Persuasion
This course examines theory, research, and application in the persuasive effects of communication in social and mass contexts. The primary focus will be on the effects of messages on attitudes, opinions, values, and behaviors. Applications include political, commercial, and public service advertising, propaganda, and communication campaigns (e.g. anti-smoking). Students will develop their own communication campaign over the semester. The campaign will include identifying and analyzing the persuasion problem, the target audience's characteristics and media habits, and then reating a persuasive message consistent with research and practice targeted to the problem and its solution.
Taught by: Cappella
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 282 Sick and Satired: The Insanity of Humor and How it Keeps Us Sane
This course will examine how and why humor, as both an instigator and peacemaker, might be considered one of the most influential and profoundly useful forms of communication devised by human beings. The unique ability of jokes and satire to transcend familiar literary and journalistic forms for the purpose of deepening (or cheapening) socio-philosophical arguments and to inspire (or discourage) debate and participation in public conversations about innumerable political and social issues will be explored. The fearless analytical nature of both high and lowbrow comedy will be examined, as well as its deflective qualities. The course will enable students to consider, through analysis of both contemporary and historical examples, the political and cultural satirist's unique role in society as a witness, a predictor and, in some circumstances, an instigator of public and private debate. We will examine the role of satire in revealing and mediating differences between disparate social groups based not solely on language differences, but also on political affiliation, cultural identity, ethnicity, gender, religious fellowship, sexual orientation, and socio-economic caste.
Taught by: Booth
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 283 Ethnography and Media for Social Justice
This course surveys how qualitative social scientists study urban communities? What kind of powerful tales can be told about urban lifestyles and social issues in places like Philadelphia? This course will allow students to study various ethnographic treatments of urban communities in the United States, using films, articles, TV serials, and books as guides for the framing of their own independent research on the streets of Philadelphia. Students will also form production teams of two or three people, and these production teams will be responsible for (i) identifying and researching an important urban issue in contemporary Philadelphia and (ii) turning that research into a 15-30 minute video documentary or pod cast. Mixing video/audio journalism with ethnographic methods will enhance their skills at archival and social research, from participant observation and interviewing techniques to sound editing and production. This course is intended to be a rigorous and exciting opportunity for students to tell empirically grounded stories using the voices of their participants and the sounds of the city.
Taught by: Ustun
One-term course offered either term
Activity: Seminar
1.0 Course Unit
COMM 286 Masculinity and the Media
This course examines the construction of masculinity in American and global media, highlighting how masculinity developed in parallel to social, cultural, economic, and political norms. Using case studies and multiple theoretical approaches, we will seek to understand how constructions of masculinity across the world have served to uphold - or challenge - the status quo. Analysis of individual texts across time periods and different cultural contexts will also help us better come to terms with the idea of masculinity and its proliferation across media platforms.
Taught by: Balaji
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 290 Special Topics in Communication
This is an intermediate level special topics course that covers varying topics in communication. For more information about the course, please see: https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements
Taught by: Various Instructors
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 292 WARNING! Graphic Content: Political Cartoons, Comix and the Uncensored Artist
This course examines the past, present and future of political cartooning, underground comix, graphic journalism and protest art, exploring the purpose and significance of image-based communication as an unparalleled propagator of both noble and nefarious ideas. The work presented will be chosen for its unique ability to demonstrate the inflammatory effect of weaponized visual jokes, uncensored commentary and critical thinking on a society so often perplexed by artistic free expression and radicalized creative candor.
Taught by: Booth
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 301 Introduction to the Political Economy of Media
This course has two aims. First, assuming that communications are central to any society, it situates media systems within larger national and international social relationships and political structures. Second, this course critically examines the structures of the communication systems themselves, including ownership, profit imperatives, support mechanisms such as advertising and public relations, and the ideologies and government policies that sustain these arrangements. Considering case studies ranging from traditional news and entertainment media to new digital and social media, the course provides a comprehensive survey of the major texts in this vibrant sub-field of media studies.
Taught by: Pickard/Various
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 310 The Communication Research Experience
In this hands-on course students will work with active researchers in the Communication Neuroscience lab at Penn to gain experience in how research works. Students will have the opportunity to interact closely with a mentor and will gain experience conceptualizing research questions, designing experiments, and collecting and analyzing data. In fall 2019, the course 'field experiment' will examine how to increase voter turn-out among Penn students, but the specific research approaches taken to this topic will be driven by students' interests (e.g. in persuasion, marketing, network science, etc). Prerequisite: COMM 210, an equivalent research methods class, or permission of the instructor.
Taught by: Falk
Course not offered every year
Prerequisite: COMM 210
Activity: Seminar
1.0 Course Unit

COMM 311 Peace Comm: The Use and Abuse of Communications in Intergroup Conflict
Why are conflicts between groups of humans so tragically predictable? What drives us to exclude, demean and fight with members of other groups? And what can we do about it? In this class, we will examine the biological roots of intergroup conflict between religious, ethnic and political groups, and take a critical view of the ways in which psychology and communication have been employed to help foment or transcend conflict. In the first part of the course, we will examine the theoretical work from intergroup psychology. In the second part of the course, we will examine the specific biases that drive conflict (e.g., stereotypes, emotions, prejudice, dehumanization) and how they are measured using both explicit self-report and implicit measures (e.g., physiology, neuroimaging); in the third part, we will explore the interventions that have been demonstrated to work (and fail) to decrease intergroup conflict. No prior experience in psychology or neuroscience is required. The course is lecture-based, but will include class discussions and in-class activities.
Taught by: Bruneau/Moore-Berg
Course not offered every year
Activity: Lecture
1.0 Course Unit
COMM 313 Computational Text Analysis for Communication Research
In this 'big data' era, presidents and popes tweet daily. Anyone can broadcast their thoughts and experiences through social media. Speeches, debates and events are recorded in online text archives. The resulting explosion of available textual data means that journalists and marketers summarize ideas and events by visualizing the results of textual analysis (the ubiquitous 'word cloud' just scratches the surface of what is possible). Automated text analysis reveals similarities and differences between groups of people and ideological positions. In this hands-on course students will learn how to manage large textual datasets (e.g., Twitter, YouTube, news stories) to investigate research questions. They will work through a series of steps to collect, organize, analyze and present textual data by using automated tools toward a final project of relevant interest. The course will cover linguistic theory and techniques that can be applied to textual data (particularly from the fields of corpus linguistics and natural language processing). No prior programming experience is required. Through this course students will gain skills writing Python programs to handle large amounts of textual data and become familiar with one of the key techniques used by data scientists, which is currently one of the most in-demand jobs.
Taught by: O'Donnell
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 318 Stories From Data: Introduction to Programming for Data Journalism
Today masses of data are available everywhere, capturing information on just about everything and anything. Related but distinct data streams about newsworthy events and issues – including activity from social media and open data sources (e.g., The Open Government Initiative) – have given rise to a new source for and style of reporting sometimes called Data Journalism. Increasingly, news sites and information portals present visually engaging, dynamic, and interactive stories linked to the underlying data (e.g., The Guardian DataBlog). This course offers an introduction to Python programming for data analysis and visualization. Students will learn how to collect, analyze, and present various forms of data. Because numbers and their visualizations do not speak for themselves but require context, interpretation, and narrative, students will practice making effective stories from data and presenting them in blogs and other formats. No programming experience is required for this class.
Taught by: O'Donnell
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 322 History and Theory of Freedom of Expression
Can legal penalties be assessed against Donald Trump for suggesting his followers might beat up journalists at rallies? Is shouting 'Heil Hitler! Heil Trump!' at a performance of Fiddler on the Roof the same as crying fire falsely in a crowded theater? Should racist speech be banned from Penn's campus? If we were to fashion laws about speech all over again for our media-saturated, fake news world, would they be different from the ones we have? Does the First Amendment–invented for a print world in which most citizens weren't literate unlike the ultra-connected world we have today–protect democracy or endanger it? This seminar examines the philosophical foundation of the First Amendment, its interpretation by the Supreme Court over time, and the struggles over its application to current controversies. We also examine the challenges of civil society censorship that gets people banned from social media or fired from their jobs for controversial speech, such as the NFL's threats to fire players for taking a knee. All societies make laws to limit speech. What are these limits in the United States, and are they the ones we want? Taught by: Marvin
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 323 Contemporary Politics, Policy and Journalism
This course explores modern media and their impact on government and politics. We focus on the post Watergate/Vietnam era and look, in depth, at the challenges faced by journalists in the contemporary political moment. We will examine the presidency of Donald Trump and the ongoing press coverage of the 2020 election cycle. This course also gives students unique opportunities to discuss the nexus of press, politics and public policy with leading practitioners in these fields.
Taught by: Hunt
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 330 The Hidden World of Privacy Policies
The US Federal Trade Commission considers privacy policies essential for internet sites and apps. Lawyers for firms with internet sites and/or apps spend much time writing privacy policies. Yet surveys show that most Americans don't read the policies and in fact cannot understand them because of their legal jargon. Moreover, surveys indicate, most Americans don't even correctly understand what the label privacy policy means. The aim of this course will be to examine this crucial but misunderstood aspect of modern life. You will learn how to read privacy policies, how to understand their strategic business purposes within the internet industry, and how to think about the implications for society when the key rules of surveillance and privacy are hidden from all but a relative few. You will also work with others in the class to create and carry out a survey of college students' understanding of privacy policies. There will be one exam and a paper related to the survey.
Taught by: Turow
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 332 Survey Research and Design
Survey research is a small but rich academic field and discipline, drawing on theory and practice from many diverse fields including political science, communication, sociology, psychology, and statistics. Surveys are perhaps the most ubiquitous tool of measurement in the social sciences today. Successful practitioners develop expertise in the art and science of survey methodology, including sampling theory and practice, questionnaire instrument development and operationalization, and the analysis and reporting of survey data. Survey researchers are scientists of the method itself testing various practices by which surveys can be improved upon, as well as developing a keen understanding of the nature of error in surveys and how to control it. This course offers an overview of survey research and design. It is highly experiential but also based upon introductory statistical theory and analysis.
Taught by: Dutwin
Course not offered every year
Also Offered As: PSCI 332
Activity: Seminar
1.0 Course Unit

COMM 339 Critical Perspectives in Journalism
This course aims to provide students with a critical understanding of journalism. It combines theoretical perspectives on the making of news with primary source material produced by and about journalists. Students will analyze theoretical material on journalism – about how news is made, shaped, and performed – alongside articles and broadcasts appearing in the media, interviews with journalists in the trade press, and professional reviews. Topics include models of journalistic practice, journalistic values and norms, gatekeeping and sourcing practices, storytelling formats in news, and ethical problems related to misrepresentation, plagiarism, and celebrity.
Taught by: Zelizer
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 354 Power and Design in Global Communication
In this course, students will critically explore global communication platforms and internet infrastructures with attention to their social and political implications. The goal is to reflect on how the design of communication technologies embeds power relations, and how these impact specific social groups and shape the relations between the global South and the global North. The course will examine topics such as biased algorithms, digital labor, censorship, surveillance, infrastructure standards and protocols, and their public interest dimensions. Cases to be analyzed include gendered and racially biased artificial intelligence tools, the outsourcing of content moderation in social media that links the United States to the Philippines, connectivity shutdowns from the United Kingdom to India, as well the politics of the domain name system affecting LGBTQ+ groups and indigenous communities in the Amazon region. Students will select case studies to research throughout the semester and will examine the relations between technological design, communication, globalization, and transnationalism to imagine new possibilities for the future of global communication.
Taught by: Rosa
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 359 Journalism in an Age of Information Disorder
As audiences navigate the polluted information environment, they increasingly look to journalists to help them understand what is true or false. As a result, newsrooms now publish regular debunks, journalists verify eyewitness footage posted to Twitter in real-time, and a new ‘disinfo’ beat has emerged with reporters investigating conspiracy theories being peddled on 4Chan, Discord or Reddit. At the same time, some members of the public see journalists as being part of the problem itself and Trump has famously labeled them as the ‘enemy of the people’. This course will examine the major shifts that have happened in the information ecosystem since 2005 and will explore how they have impacted journalism. Each week, we will consider a current challenge US newsrooms are facing, for example: the rise of social networks and the resulting collapse of the local newspaper industry, the media manipulation campaigns aimed at hoaxing and tricking newsrooms into amplifying false or divisive content, and the new pressures on ‘objectivity’ as journalists report on stories related to the current political and social climate. This course will focus on the practical strategies journalists and newsrooms will be adopting in the run-up to the Presidential election including hearing from reporters who now work on this new ‘disinfo beat’.

Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 367 Communication in the Networked Age
Communication technologies, including the internet, social media, and countless online applications create the infrastructure and interface through which many of our interactions take place today. This form of networked communication opens new questions about how we establish relationships, engage in public, build a sense of identity, promote social change, or delimit the private domain. The ubiquitous adoption of new technologies has also produced, as a byproduct, new ways of observing the world: many of our interactions now leave a digital trail that, if followed, can help us unravel the determinants and outcomes of human communication in unprecedented ways. This course will give you the theoretical and analytical tools to critically assess research that uses networked technologies to produce new evidence about communication dynamics, their effects, and how to promote social change.
Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Seminar
1.0 Course Unit
**COMM 368 Kinesthetic Anthropology**
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).
Taught by: Wilson
Also Offered As: AFRC 368, ANTH 368, ANTH 668, FNAR 368
Activity: Seminar
1.0 Course Unit

**COMM 373 Black Geographies: Race and Visual Culture**
What is the relationship between the Flint water crisis, the hyper-policing of racialized people, and the increased surveillance of neighborhoods deemed ‘poverty-stricken’ or ‘at risk?’ How do regimes of security, surveillance, policing, and forms of violence depend upon the concept of ‘risk’ as central to their operation? How is risk informed by systemic racism and forms of anti-Blackness? How does visual culture (e.g., media coverage, documentary photographs, etc.) inform how we come to see and define certain people, communities, and ways of life as ‘risky?’ How have those living in racialized geographies of ‘risk’ found ways to live in, make do, and challenge the faulty narratives of risk? This interdisciplinary course will examine critical debates and key moments—historical (e.g., MOVE bombing in Philadelphia) and contemporary (e.g., Ferguson riots)—that have informed the concept of risk. Over the course of the semester, we will read scholarly texts and engage with objects such as archival documents, photographs, conceptual art, performance art and installations, journalistic texts, and films. This communications course will be approached from a cultural studies perspective, with particular attention to race, gender, and sexuality.
Taught by: Ward
Activity: Seminar
1.0 Course Unit

**COMM 377 Philosophical Problems of Journalism**
This course explores the relationship between journalism and philosophy by examining particular issues in epistemology, political philosophy, ethics, and aesthetics. Topics will include: the concept of a ‘fact’; the role of the press in the state; whether journalists (like doctors and lawyers) operate according to specialized ‘professional’ ethics; and the limits of journalism as a literary or visual genre. Course readings will include philosophical texts, breaking print journalism, and blogs that specialize in media issues.
Taught by: Romano
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

**COMM 378 Journalism & Public Service**
In this course we examine links between journalism and public service by scrutinizing core concepts involved, practices that sometimes put journalism and public service in conflict (e.g., investigative reporting, coverage of war), and how journalism stacks up against other forms of public service from NGO work to government employment. Beginning with a reading of Robert Coles’s classic The Call of Service, we dissect the notion of the ‘public,’ assess so-called public-service journalism by reading Pulitzer-Prize-winning examples, and reflect on the news media as a political institution. Individual weeks focus on such topics as the conflict that arises when a journalist’s obligation to a confidential source clashes with a duty to the judicial system, whether the business of journalism is business, how journalism and NGO work compares as public service, and whether journalism by committed political activists (such as I.F. Stone) surpasses mainstream ‘neutral’ journalism as a form of public service.
Taught by: Romano
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

**COMM 378 Comparative Journalism**
Is journalism the same all over the world? Do press systems and practices differ in fundamental ways that affect how we evaluate them politically, morally, aesthetically, epistemologically and economically? Where does U.S. journalism fit among the models? This new undergraduate seminar will introduce students to concrete differences in journalism around the world, but it won’t only be an empirical look at how various press systems operate. We will also examine and argue about which journalistic practices and systems work best for which purposes, and explore the distinctive journalistic and philosophical assumptions and histories that undergird diverse practices and systems. Asian, European, African and Mideast journalism will all be attended to.
Taught by: Romano
Course not offered every year
Activity: Seminar
1.0 Course Unit

**COMM 388 Ritual Communication**
This course explores the significance of rituals as communicative events in contemporary American culture. We will pay particular attention to the ways in which rituals contribute to the making and re-making of social groups, be they ethnic, religious, familial, or institutional. And we will also attend to the obverse: the ways in which rituals create and perpetuate boundaries between ‘us’ and ‘them’ and between ‘appropriate’ and ‘deviant’ social behavior. Issues of race, class, gender, nationality, religion, age and sexuality will be central to our exploration of how rituals function. Over the course of the semester, we will analyze individual rites of passage – from quinceanera to funerals – as well as rituals that mark transitions on a far larger scale such as presidential inaugurations. We will explore rituals that unfold at the local level as well as those that most of us experience only in mediated forms. Students will gain hands-on experience conducting original ethnographic fieldwork and will learn how to develop compelling research proposals.
Taught by: Paxton
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
COMM 390 Special Topics in Communication
This is a special topics course that covers varying topics in communication. For more information about the course, please see: https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements
Taught by: Various Instructors
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 393 Political Polling
Political polls are a central feature of elections and are ubiquitously employed to understand and explain voter intentions and public opinion. This course will examine political polling by focusing on four main areas of consideration. First, what is the role of political polls in a functioning democracy? This area will explore the theoretical justifications for polling as a representation of public opinion. Second, the course will explore the business and use of political polling, including media coverage of polls, use by politicians for political strategy and messaging, and the impact polls have on elections specifically and politics more broadly. The third area will focus on the nuts and bolts of election and political polls, specifically with regard to exploring traditional questions and scales used for political measurement; the construction and considerations of likely voter models; measurement of the horserace; and samples and modes used for election polls. The course will additionally cover a fourth area of special topics, which will include exit polling, prediction markets, polling aggregation, and other topics. It is not necessary for students to have any specialized mathematical or statistical background for this course. Equivalent R based course if prerequisite not met.
Taught by: Dutwin
Course not offered every year
Also Offered As: PSCI 333
Prerequisite: PSCI 107
Activity: Seminar
1.0 Course Unit

COMM 395 Communication and the Presidency
This course examines the vital aspect of communication as a tool of the modern Presidency. Reading and class discussions focus on case studies drawn from modern Presidential administrations (beginning with FDR) that demonstrate the elements of successful and unsuccessful Presidential initiatives and the critical factor of communication common to both. This course is also an introduction to primary research methods and to the use of primary research materials in the Presidential Library system.
Taught by: Eisenhower
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

COMM 397 New Media and Politics
This course examines the evolving media landscape and the political process from three perspectives: 1) the voter, 2) political campaigns and candidates, and 3) the news media. The course opens with a broad overview of the main theories of political communication and a historical review of the role played by new media technologies in U.S. political campaigns leading up to 1996, the year the internet debuted in presidential campaigns. The course then follows this evolution from the 1996 presidential campaign through the current 2020 presidential campaign. We will take a deep dive into the landmark changes brought on by new media technologies to mobilize, persuade, inform, and fundraise around modern presidential campaigns. While the course takes a historical perspective it will also focus on what is happening currently in this environment, with special emphasis on President Trump's campaign for re-election, the Democratic primaries and caucuses, sustained attacks on the press, 'fake news,' bots, and outside interference in elections.
Taught by: Winneg
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 404 Media and Politics
Media and Politics will examine multiple issues specific to the past and present political media environment in the United States. Focus will be primarily, though not exclusively, on the contemporary news media. Topics covered will include political primaries, how elections have been influenced by the rise of partisan media, selective exposure, freedom of political speech as it relates to elections, the theoretical purpose of elections, money and media, political targeting, etc. We will also explore the quantitative and qualitative methods underlying what is and is not known about how elections work. Reading expectations will be relatively heavy, and under the supervision of the professor, students will write an original research paper examining a specific topic in greater depth.
Taught by: Mutz
Course not offered every year
Also Offered As: PSCI 404
Activity: Seminar
1.0 Course Unit

COMM 407 Understanding Social Networks
Digital technologies have made communication networks ubiquitous: even when we can’t really notice them, they mediate most aspects of our daily activities. Networks, however, have always been the backbone of social life: long before Facebook, Twitter, Snapchat, or other similar platforms, communication created channels for information diffusion that linked people in myriad other ways. Through letters, commerce, or simply face to face interactions, people have always been exposed to the behavior of others. These communicative ties embed us into an invisible web of influence that we can make tangible and analyze. This course will teach you how to map those connections in the form of networks, and how to study those networks so that we can improve our understanding of social life. The goal is to help you grasp the consequences of connectivity, and how small changes in the structure of our ties can lead to big differences in how networks behave.
Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 411 Communication, Activism, and Social Change
This course examines the communication strategies of 20th and 21st-century social movements, both U.S. and global. We analyze the communication social movements create (including rhetorical persuasion, art activism, bodily argumentation, protest music, media campaigns, public protest, and grassroots organizing), and the role of communication in the identity formation, circulation, and efficacy of social movements. We also consider the communication created by forces seeking to undermine social change, define the study of social movements from a communication perspective, identify major historical and contemporary movements, and apply theories of communication and social change to ‘real world’ activism. Students are required to research and design their own social movement campaign.
Taught by: Jackson, S.
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 431 Is Public Opinion the Voice of the People?
Democracy relies on mechanism in which the public communicates with policy makers. This course examines the extent to which public opinion effectively represents this mechanism. We begin with historical conceptions of public opinion tracing back to ancient Athens and 18th century enlightenment thinking. We then consider the extent to which public opinion can be captured by modern day polling, or whether it only emerges after considered deliberation and discussion. We then discuss the ways in which elite rhetoric and the media move public opinion, including through the use of public opinion polls. Finally, we ask whether policymakers are actually sensitive to the voice of the people or only the voice of some of the people.
Taught by: Lelkes
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 432 Digital Inequalities
Digital information and communication technologies are intertwined with our everyday lives, from banking, to working, and dating. They’re also increasingly crucial parts of our most powerful institutions, from policing, to the welfare state, and education. This course examines the ways that these technologies combine with traditional axes of inequality like race, gender, and class in ways that may deepen social inequality. We’ll consider major approaches to understanding digital inequalities and apply them to case studies of both problems and solutions. Students will learn to critically analyze policies and programs from a variety of perspectives, and to evaluate the promise of digital technologies against their potential perils.
Taught by: Ticona
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

COMM 441 The Impact of the Internet, Social Media, & Information Technology on Democracy
At the turn of the 21st century, many claimed that the internet would make the world a more democratic place. Have these prophecies borne out? We examine the effects the internet has had on democracy, looking at research that examines whether, for instance, the internet has increased or decreased inequality, polarization, and political participation. In addition to reading and discussing empirical literature, we will also test many of the theories in this course through hands-on workshops in data analysis.
Taught by: Lelkes
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 446 Media Industries and Nationalism
Media institutions have long played a central role in constructing national identity, particularly in the era of nation-states. As globalization increases, media industries have also helped countries project their national identities - and nationalism - for both domestic and international audiences. With contemporary nationalist movements in the spotlight, this course examines how media institutions and cultural industries help to shape nationalism while framing in-group/out-group dynamics for audiences. This course examines case studies in mediated nationalism, paying particularly close attention to - but not limited to - countries such as the United States, the United Kingdom, Brazil, Hungary, Israel, India, Sri Lanka, and Turkey. Using Benedict Anderson’s idea of imagined communities as a theoretical basis, this course seeks to investigate how media industries affirm - and occasionally challenge - nationalistic sentiment, and how much of a role state intervention has played in the production of media texts. This course provides students with an understanding of the deep connection between media institutions and state-sponsored/populist-nationalist movements, as well as the dynamics that shape nationalism in both wartime and peacetime eras.
Taught by: Balaji
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 459 Social Networks and the Spread of Behavior
This course explores the nature of diffusion through social networks, the ways networks are formed and shaped by social structures, and the role they play in health behavior, public policy, and innovation adoption. Topics include: the theory of social networks; the small world model of network structure; constructing models to represent society; the social bases of the adoption of innovations and the spread of new ideas; the role of social networks in controlling changes in public opinion; the emergence of unexpected fashions, fads, and social movements; and the connection between social network models and the design of public policy interventions. Students will learn how to use the agent-based computational modeling tool ‘NetLogo’, and they will work directly with the models to understand how to test scientific theories. We will examine the basic theory of social networks in offline, face-to-face, networks, as well as the role of online networks in spreading new ideas and behaviors through social media. Long standing debates on the effects of social networks on changing beliefs and behaviors, their impact on social change, and ethical concerns regarding their potential manipulation will be given careful consideration throughout. Students will be taught new skills that will enable them to use and develop their own agent-based models. Prerequisite: Permission of the instructor
Taught by: Centola
Course not offered every year
Prerequisite: COMM 210 OR COMM 310 OR SOCI 100
Activity: Seminar
1.0 Course Unit

COMM 468 Annenberg Media Lab 2020: It's not Just TV - The HBO Project
'It's not TV. It's HBO.' This is one of the marketing slogans Home Box Office started using in the 1990s to articulate its difference from standard network television. Using videotaped interviews already conducted with many of the executives who helped launch HBO in the 1970s, this hands-on course will provide students with a unique opportunity to engage with the methodological and theoretical implications of crafting arguments/stories in images and sound. Students should be prepared to put theory into practice by working on smaller media products linked to these archival materials. Students will study these interviews with HBO execs, watch fictional and non-fictional films/videos of various genres, discuss relevant media/social theory, and acquire training in (and exposure to) the basics of digital media-making. At the end of the course, students should have acquired a more sophisticated aesthetic and analytical approach to media analysis, to media production, and to the inescapable interconnections between the two.
Taught by: Jackson, J.
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 491 Communication Internship
This seminar provides a scholarly counterpart for students’ internships in various communication-related organizations. Through individually-selected readings, class discussion, and individual conferences, students develop their own independent research agendas which investigate aspects of their internship experience or industry. In written field notes and a final paper, students combine communication theory and practice in pursuit of their individual questions. Requires approval of the Communication Undergraduate Office.
Taught by: Haas
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

Comm 493 Independent Study
The independent study offers the self-motivated student an opportunity for a tailored, academically rigorous, semester-long investigation into a topic of the student’s choice with faculty supervision. Students must complete and file a designated form, approved and signed by the supervising faculty member and the Associate Dean for Undergraduate Studies. This form must be received by the Undergraduate Office before the end of the first week of classes in the semester in which the independent study will be conducted.
Taught by: Various
Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

COMM 494 Honors & Capstone Thesis
The senior thesis provides a capstone intellectual experience for Honors students and Communication and Public Service Program (ComPS) participants. Students conduct a primary research study on a communication-related issue over the course of two semesters. Students should consult with and arrange for a faculty supervisor no later than the summer before senior year. Students must also file a designated form and topic statement, approved and signed by the supervising faculty member, no later than the first week of class. Required of all students planning to enroll in COMM 495 or COMM 499 in the Spring. All Honors students must have a 3.5 cumulative GPA at the end of junior year for eligibility. See the Annenberg website for complete eligibility requirements.
Taught by: Ben-Porath/Woolf
Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit

COMM 495 COMPS Capstone Thesis
Second semester of two semester thesis course. Successful completion of COMM 494 is required for enrollment. The capstone thesis is a requirement for all Communication and Public Service Program participants. Students complete the primary research project started during COMM 494. For students graduating with a 3.5 cumulative GPA after completing COMM 495 with a grade of 3.7 or higher, the capstone thesis may be designated as a senior honors thesis in communication and public service. Prerequisite: written proposal approved by both thesis supervisor and major chair.
Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

COMM 499 Senior Honors Thesis
Second semester of two semester thesis course. Completion of COMM 494 with a grade of 3.3 or higher and a 3.5 cumulative GPA at the end of the Fall semester of senior year are required for enrollment. The Senior Honors Thesis provides a capstone intellectual experience for students who have demonstrated academic achievement of a superior level. Students complete the primary research project started during COMM 494.
Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit
COMM 500 Proseminar
Introduction to the field of communications study and to the graduate program in communications. Required of all degree candidates. Open only to graduate students in communication.
Course usually offered in fall term
Activity: Lecture
0.0 Course Units

COMM 522 Introduction to Communication Research
The logic of scientific inquiry and the nature of research. Hypothesis development, research design, field and laboratory observation and experimentation, measurement, interviewing, and content analysis, sampling, and basic statistical analysis. Required of all degree candidates. Open only to graduate communication students.
Taught by: Hornik/Lelkes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 523 Qualitative Ways of Knowing
How do social scientists create new knowledge? What are the qualitative processes and philosophies of knowing for communication scholars? This course provides students with a range of theories and frameworks for gathering data and developing claims, as well as understanding the limits of social science inquiry. Key areas of focus are identifying research questions, research ethics, understanding evidence, making causal claims and scholarly writing. COMM 523 is required of all degree candidates and open only to graduate communication students.
Taught by: Lingel
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 525 Introduction to Political Communication
This course is designed as a PH.D.-level introduction to the study of political communication, and is recommended as a foundational course to be taken early in ones course of study for students interested in political communication as a primary or secondary area of research and teaching. As an introduction to the field it is structured to cover a wide-range of topics and approaches, including media institutions and the effects of both mass mediated and deliberative communications. While no single course can provide comprehensive coverage of a subfield with as long and diverse a history as political communication, our hope is that you will leave this course with a strong grasp of the major theories, trends, methods, findings and debates in this area of study, as well as the gaps in our knowledge and promising directions for future research.
Taught by: Lelkes
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 530 Advertising and the Digital Age
It is impossible to understand the development of the contemporary digital era without understanding the role played by the advertising industry, broadly the understood. From the launch of first popular web browsers in the mid-1990s, various forms of marketing communication have shaped the most popular activities-from search to social to apps—and redefined the ways companies think about individuals in society. The aim of this course is to study these developments historically and contemporaneously. First we will range across the history of advertising and its related social force, consumerism, through the late 20th century. We will next investigate the forces that guided the rise of the internet as a commercial medium in the face of an earlier ethic that decreed that very idea. Then we will dive into the ways marketers attempt to guide the internet and other digital media to their benefit by exploring a range of key contemporary activities: the rise of the smartphone as a marketing device, programmatic advertising, personalization strategies, location and cross-platform targeting and attribution, online retailing, the responses of brick and mortar retailers, advertisers roles in the cratering of print media, native advertising/branded content, the rise of 'influencers,' and the transformation of 'television' as a product, an activity, and an industry. We will read industry documents and other materials to assess how all these activities actually work and what drives them. Then we will consider their societal implications through a variety of lenses, including surveillance, privacy, pluralism, and democracy.
Taught by: Turow
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 553 Computational Social Science Research Seminar
This is a graduate research seminar in which top researchers in the field of Computational Social Science will present cutting-edge research. Our focus will be on carefully reading the speaker's work, and discussing in detail their theoretical models, empirical methods, and overall scientific contribution. Participants will also present in the seminar, which will help to prepare them for professional presentations of their work at conferences and job talks. This seminar will meet weekly.
Taught by: Centola
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 575 Social Psychology of Communication
Contributions of social psychology to understanding communication behavior: message systems; social cognition; persuasive communications; attitude formation and change; face-to-face interactions and small group situations; strategies of attributional and communicative interpretation; mass communication effects; social influence and networks.
Taught by: Cappella
One-term course offered either term
Activity: Seminar
1.0 Course Unit
COMM 576 Communication & Public Opinion
An exploration of enduring research questions concerning mass communication and American public opinion. The course introduces students to the literature on public opinion, with a focus on the role of communication in public opinion formation and change. Important normative, conceptual and theoretical issues are identified and examined by reviewing some early writings (ca. 1890-1930) in social philosophy and social science. These issues are then investigated further through a review and discussion of relevant research in sociology, political science, social psychology and mass communication.
Taught by: Delli Carpini
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 577 Attitudes and Attitude Theory
This course surveys classic and contemporary theory and research in the area of attitude formation and change and examines the principles of social information processing that underlie attitudes. We cover some of the basic concepts of the psychology of attitudes, including attitude structure and measurement at both conscious and unconscious levels. After this introduction, we will review persuasion approaches, the role of affect and fear in communication, influences of past behavior, to finally turn to models that explain behavioral change and allow researchers and practitioners to design ways of modifying recipients’ actions.
Taught by: Jemmott
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 594 Intro To Networks
Much of what we think and do is shaped by social interactions, by the behavior we see in other people, or the information we receive from them: we pay attention to what our friends or we monitor news through the feeds of social media, and we are more likely to use technologies already embraced by other users. Networks are behind those (and, by extension, most) dimensions of social life. They offer the language to capture the invisible structure of interdependence that links us together, and the means to analyze dynamics like diffusion, influence, or the effects of media in an increasingly diverse information environment. The aim of this course is to introduce networks and the relational way of thinking. Students will gain the necessary literacy to read, interpret, and design network-based research; learn how to go from concepts to metrics; and draw and interpret networks through the lens of substantive research questions. We will pay equal attention to the theory and the empirics of network science, and set the foundations for more advanced work on networks.
Taught by: Gonzalez-Bailon
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 615 Experimental Design and Issues in Causality
The main goal of this course is to familiarize students with experiments, quasi-experiments, survey experiments and field experiments as they are widely used in the social sciences. Some introductory level statistics background will be assumed, though this is a research design course, not a statistics course. By the end of the course, students will be expected to develop their own original experimental design that makes some original contribution to knowledge. Throughout the course of the semester, we will also consider how to deal with the issue of causality as it occurs in observational studies, and draw parallels to experimental research.
Taught by: Mutz
One-term course offered either term
Also Offered As: COMM 498, PSCI 439, PSCI 635
Activity: Seminar
1.0 Course Unit

COMM 623 Health Psychology Seminar
Seminar members shall critically review current applications of psychosocial theory and methodology to health-related issues with the goal of suggesting new directions that research might take. Preventive health behavior, HIV risk-associated behavior, psychosocial factors and physical health, practitioner patient interactions, patterns of utilization of health services, and compliance with medical regimens are among the topics that will be studied.
Taught by: Jemmott
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 630 History of Media Research, 1890-1990
An introduction into the field of mass communication research covering classic studies from the late 19th century through 1990s. Emphasis is on the societal, organizational, political, and other considerations that shaped the field.
Taught by: Turow
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 637 Public Health Communication
Theories of health behavior change and the potential role for public health communication; international experience with programs addressing behaviors related to cancer, AIDS, obesity, cardiovascular disease, child mortality, drug use and other problems, including evidence about their influence on health behavior; the design of public health communication programs; approaches to research and evaluation for these programs.
Taught by: Hornik
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
**COMM 639 Communication and Cultural Studies**
This course tracks the different theoretical appropriations of 'culture' and examines how the meanings we attach to it depend on the perspectives through which we define it. The course first addresses perspectives on culture suggested by anthropology, sociology, communication, and aesthetics, and then considers the tensions across academic disciplines that have produced what is commonly known as 'cultural studies.' The course is predicated on the importance of becoming cultural critics versed in alternative ways of naming cultural problems, issues, and texts. The course aims not to lend closure to competing notions of culture but to illustrate the diversity suggested by different approaches.
Taught by: Zelizer
Course not offered every year
Activity: Seminar
1.0 Course Unit

**COMM 660 Content Analysis**
An introduction to content analysis, the analysis of large bodies of textual matter, also called message systems analysis, quantitative semantics, propaganda analysis, and (computer-aided) text analysis. The course inquires into the theories, methods, and empirical problems common to these analytical efforts: sampling, text retrieval, coding, reliability, analytical constructs, computational techniques, and abductive inference. It illustrates these problems by studies of mass media content, interview or panel data, legal research, and efforts to draw inferences from personal documents typical in psychology and literature. Students design a content analysis and do the preparatory work for an academic or practical research project. They may also use the opportunity of forging available theories into a new analytical technique and test it with available texts, or solve a methodological problem in content analysis research.
Taught by: Krippendorf
Course not offered every year
Activity: Seminar
1.0 Course Unit

**COMM 675 Message Effects**
Current research, theory and statistical methods for assessing the effects of messages. Specific focus on messages designed to have a persuasive effect on attitudes, beliefs, opinions, or behaviors. Experimental and non-experimental research from mass and interpersonal communication, health, social psychology, advertising, political science and journalism will be considered. Unintended effects - such as the consequences of violent pornography - are not considered.
Taught by: Cappella
Course not offered every year
Prerequisite: COMM 575
Activity: Seminar
1.0 Course Unit

**COMM 684 Data Visualization for Research**
Empirical research employs data to gain insights and build a theoretical understanding of the world. An appropriate visualization of data is key to illuminating hidden patterns and effectively communicate the main findings of research. This course will discuss the visualization strategies of published research, give recommendations of best practice, and discuss tips and techniques for specific research purposes (i.e. hypothesis testing, group comparison) and data structures, including temporal, geographic, and network data. This course will equip you with tools you can use to learn through visualization and to communicate more effectively your own research.
Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Seminar
1.0 Course Unit

**COMM 697 Popular Culture and Politics**
Not surprisingly, most research regarding the media's impact on political attitudes, opinions, knowledge and behaviors focuses on news and public affairs genres, ignoring the vast majority of media content labeled 'entertainment.' Spurred in part by technological, economic, cultural and political changes that have increasingly blurred the line between news and entertainment, a small but growing body of empirical research is exploring the political influence of popular culture. In this course we will critically review this literature, focusing on issues of theory, methods, findings and implications.
Taught by: Delli Carpini
Course not offered every year
Activity: Seminar
1.0 Course Unit

**COMM 699 Advanced Project in a Medium**
Proposal written in specified form and approved by both the student's project supervisor and academic advisor must be submitted with registration. Open only to graduate degree candidates in communication. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**COMM 701 Introduction to the Political Economy of Media**
This course has two aims. First, assuming that communications are central to any society, it situates media systems within larger national and international social relationships and political structures. Second, this course critically examines the structures of the communication systems themselves, including ownership, profit imperatives, support mechanisms such as advertising and public relations, and the ideologies and government policies that sustain these arrangements. Considering case studies ranging from traditional news and entertainment media to new digital and social media, the course provides a comprehensive survey of the major texts in this vibrant sub-field of media studies.
Taught by: Pickard
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 706 Analysis of Election Data
This course is intended to serve as a workshop for students interested in the empirical analysis of elections, public opinion and political communication more generally. The centerpiece of the course will be an original research paper produced by each student on a topic of his or her own choosing. The requirements for these papers are fairly open, but demanding: the research papers must a) involve empirical analysis of a major election data set, b) be oriented toward answering an original research question selected with the guidance of the instructor, and c) aim to be of publishable quality. There are no formal prerequisites for the course. However, if you have less than two semesters of statistical training, and/or no formal background in the study of elections, public opinion or political communication, then this is probably not the right course for you. In order to be able to formulate an original research question, you need some background in the literature, which is provided by other courses, but is not a formal part of this course.
Taught by: Mutz
One-term course offered either term
Also Offered As: PSCI 805
Activity: Seminar
1.0 Course Unit

COMM 715 Political Communication
This course examines the role of political communication in influencing political attitudes and behaviors. Because of the broad nature of the topic, course readings and lectures will be interdisciplinary, drawing on research in sociology, history, psychology, political science and communication research. There are two primary goals for the course. One goal is to acquaint graduate students with the wide-ranging literature on political communication. A second major goal is to stimulate ideas for original research in the field of political communication. Toward this end, by the end of the semester students will be expected to be sufficiently familiar with the field to propose original studies on topics of their choosing. The formulation of an original research question and research design will be an important component of the final examination.
Taught by: Mutz
Course not offered every year
Also Offered As: PSCI 715
Activity: Seminar
1.0 Course Unit

COMM 722 Theories and Methods in Qualitative Research
The objective of this course is to ensure that students have a grasp of the fundamental theories and methods of qualitative research. After spending time immersing ourselves in the metatheories that shape social science research, we will address ethical issues that emerge in all human subjects research (qualitative and otherwise), focusing primarily on responsible treatment of participants and their data. Then we will work through a series of research techniques, including semi-structured interviews, focus groups, ethnography, discourse analysis and participatory mapping. With the goal of providing practical instruction on qualitative methods and a grounding in theoretical issues, this course is meant to prepare students for conducting a broad range of qualitative research projects in communication and media studies.
Taught by: Lingel
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 727 Evaluation of Communication Campaigns
The various roles of research in campaign work: foundational research, formative research, monitoring research, summative evaluation research, policy research. The place for a theory of campaign effects. The ethics of evaluation research. Alternative designs, measurement, statistical and analytic approaches.
Taught by: Hornik
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 741 Media Effects Research Design
This course will include three components. Part one will focus on readings and lectures about media effects research design, with some emphasis on exposure measurement, and on constructing out-of-laboratory designs including natural and quasi experiments, longitudinal and time series designs and designs appropriate for evaluating persuasive campaigns. Part two will be case focused, asking for design critiques of current published research studies. Part three will provide an opportunity for development of designs relevant to students’ own interests.
Taught by: Hornik
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 746 Discursive Constructions of Realities
This seminar develops qualitative methods for critical inquiries into what language does. It explores linguistic tropes and social interactions in which realities come to be constructed, contested, and maintained. We critically evaluate the epistemological entailments of several dominant theories of language, and settle on conceptions that enable us to examine the cognitive and social consequences of talk, text, and social interaction. These conceptions provide powerful alternatives to the representational theories that dominate popular discourses. For example, we take language as performative: focusing on how narratives are enacted in the presence of others, ranging from speech acts, instructions, individual stories in therapy to nationalism and war. We develop analytical vocabularies that reveal and try to overcome questionable ontological claims, highlighting actionable possibilities in preference to merely describing facts. We rely on dialogical, socially interactive, and constructive conceptions, ranging from conversations and computer interfaces to discourses, whose artifacts make differences to different communities. The methods that this seminar develops are fundamentally emancipatory and liberating. Realizing that most experiences of power and oppression results from linguistically constructed cognitive or disciplinary traps enables us to explore linguistically informed alternatives. Communication research cannot be undertaken without language but theories have largely failed to reflect on their consequences.
Taught by: Krippendorff
One-term course offered either term
Activity: Seminar
1.0 Course Unit
COMM 783 Describing Your Data
This course is for students who have collected empirical data and will explore ways of describing data for scholarly and translational purposes. For example, students will explore different ways to explore and visualize their data (e.g., a conference abstract vs. a blog post), present their data (e.g., a conference talk vs. a pop talk) and make their findings more reproducible. Students will also read scholarly work (oversampling, though not limited to work on media effects and the science of science communication) and critique their work in relation to what is known about effective communication and reproducibility. Students should come prepared to engage with art, science and computer programming.
Taught by: Falk, O'Donnell
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 788 Studying Social Behavior with Internet Experiments
In the last decade, new studies have used Web-based experimentation to identify previously unobservable features of communication networks - from processes of cumulative advantage, to the spread of innovations, to the emergence of cooperation. This course offers a deep-dive into the design, creation and execution of Web-based experiments. Students will learn the core principles of Web-based experimental design, which will prepare them to design their own Web-based studies. Students will learn the relationship between theory and methods through a careful analysis of the theoretical implications of past Web-based experiments (both in terms of their value for some scientific problems, and their limitations for others). To this end, students will explore Web-based experiments through the lens of the theories that motivate them. Discussions and assignments will focus on eliciting both the strengths and limitations of this approach with specific emphasis on identifying the scientific potential for new studies. Longstanding debates concerning the value of identification and replication in social science, alongside the relationship between theoretical models, observational data and experimental data, are given careful consideration throughout. Students will be exposed to new ways of conducting empirical research that will prepare them to design their own Web-based experimental studies.
Taught by: Centola
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 799 Independent Research
Proposal written in specified form and approved by both the student's project supervisor and academic advisor or another member of the faculty must be submitted with registration.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

COMM 801 Filter Bubbles, Long Tails, & Info Cascades: Methods for a Fragmented Media Env
Scholars and pundits have made many claims in recent years about the impact that digital technologies, and social media in particular, play in shaping access to political information and the formation of beliefs. However, all these claims rely on specific measurement instruments and research designs that are not always appropriately scrutinized or evaluated. This course will discuss the different analytical approaches that can be used to measure media consumption, selective exposure, bias, opinion formation, and the diffusion of information in the online media environment. Our goal is to assess the strengths and weaknesses of different research designs with an eye on how to best triangulate available evidence and advance in a cumulative fashion in this important research domain.
Taught by: Gonzalez-Bailon and Lelkes
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 814 Doing Internet Studies
This is a project-based seminar with two key objectives: introducing students to core theories and methods in internet studies and completing a research project that uses digital media, broadly construed. Comprising many methods and research approaches, Internet studies is inherently interdisciplinary, and this course is designed to provide a practical set of guidelines for doing work in this diverse and growing field. Students will have a lot of independence in developing a final research project for the course they may work individually, in pairs or in small groups, and the final project can take the form of a research paper, an art project or a piece of long-form journalism, as long as these projects use both digital media and critical theory from internet studies.
Taught by: Lingel
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 815 Labor, Communication and Technology
Debates about the future of work, automation, and the working conditions of on-demand work have opened up new questions rooted in long intellectual lineages. This course introduces students to key theoretical perspectives and concepts in the study of labor, communication, and technology from the 19th and 20th centuries and examines their relevance to 21st century issues. We will examine the meaning of labor from Marxist, post-industrial, cultural, and sociological perspectives as well as the place of labor in communication scholarship. We will also examine the relationship between digital transformations of the workplace and new forms of surveillance, social stratification and inequality.
Taught by: Ticona
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 824 Critical Race Media
This course will attempt to engage students in an interdisciplinary conversation about how ‘race’ and ‘racism’ are theorized, operationalized and debated in both the academy and ‘the real world.’ The offering’s goal is to articulate one fundamental (though multi-pronged) question: How do disputed about the ontological reality and epistemological utility of race and racism pivot around various themes/concerns, including (i) essentialism vs. anti-essentialism; (ii) the politics of culture and the semiotics of politics; (iii) globalization and its links to mass-mediation; and (iv) a neoliberalist dispensation’s commodifications of social identities. This course examines the history of race as a socially meaningful category. Where did it come from? Why/how did it develop? What are some of its past and present manifestations? In which ways might it be inextricably linked to other forms of social differentiation (such as class, gender, religion, ethnicity, and sexuality)? Critical Race. Theory also requests that students think carefully about their own political, intellectual, and emotional investments in race as a social/biological claim. Race is a deceptively complicated construct (considering how much we all think we understand it), one that demands careful attention to culture and biology, mythology and history, science and superstition. This course seeks to unpack race-thinking in everyday life and popular media/culture.
Taught by: Jackson
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 837 The Meaning of Measures: Quantification, Culture & Digital Technologies
It’s been said that what’s counted counts. Numbers and other measurements communicate meaning and create hierarchies of value. As such, measurement is a political act. From prices to ratings, risk scores to the 2020 Census, quantification projects surround our daily lives. This class will ask, how do numbers and other metrics communicate meaning throughout the social world? Specifically, we’ll focus on the role of technologies and data in the process of quantification and the construction of cultural meaning and conflict about knowledge and truth. How do our ideas about data shape what we know about ourselves? How we seek to know others? This course will engage in an interdisciplinary conversation about the past and present of culture and quantification, from the cultural pre-history of ‘big data’ technologies’ appeals to objectivity and efficiency, to current conflicts over privacy and platforms.
Taught by: Ticona
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Fulfills ASC Influence Requirement

COMM 839 (De)Sexing the Internet
From the earliest message boards and email chains, the internet has given people a way to connect, not just digitally but sexually. Porn, online dating, sex education: digital technology has made it easier for people to find each other and explore sexuality, but these same tools have also been used in exploitative and criminal. In this course, we look at the different connections between sex, gender, queerness and the internet: changing policies regulating sex (like FOSTA and SESTA), the platforms that have created controversies around sex (for example, craigslist, tumblr and Grindr) and shifting norms around how sex and sexuality manifest online. This is an interdisciplinary course that brings together internet studies, queer theory, STS and cultural studies in order to understand the social and historical dimensions of sex, sexuality and digital technologies.
Taught by: Lingel
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 841 The Ethics of Forgetting: Media at Risk of Deletion
Digital information is continually being created and circulated, but it is also forgotten, deleted and otherwise lost. Whether from the perspective of journalists, activists, artists or academics, how do we deal with the deletion or loss of media? Where is information archived and what politics guide its organization, curation and erasure? Where do our media live and die? This course begins with theories of institutional and individual archiving. It then moves to concepts of remediation and machine learning to complicate how information travels, data is stored and archives are ‘retrieved’. Finally, using case studies of arts-based digital archiving projects, the course focuses on the politics of forgetting media.
Taught by: Lingel
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 843 It’s About Time: Problematizing Time in Social Science Research
Human experience is characterized by a complex interplay of processes that play out across multiple timescales: from second to second, from week to week, and from generation to generation. We will critically examine an expansive literature touching on emotions, personality, media engagement, health communication, and more, all in the service of identifying notions of time that are often implicit in theories of human experience. In doing so, students will become accustomed to applying the following questions to the topics they encounter in their everyday readings and their own research: What timescale(s) are addressed by a theory, either implicitly or explicitly? Is the timing of measurement matched to the timescale(s) over which phenomena are unfolding? Seminars will be accompanied by a data science laboratory in which students will gain hands-on experience in describing, visualizing, and analyzing daily diary data.
Taught by: Lydon-Staley
Activity: Seminar
1.0 Course Unit
COMM 855 Polarization and Partisan Discord
In this course we examine the nature, causes and consequences of polarization and incivility. We pay special attention to the role that the media and information plays in exacerbating these problems, as well as ways in which technology can be redesigned to ameliorate incivility and polarization.
Taught by: Lelkes
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 861 Surveillance Capitalism
This course explores the history, technologies, political economy, and regulatory tensions relating to the monitoring of populations and individuals in the contemporary digital media environment.
Taught by: Turow
Activity: Seminar
1.0 Course Unit

COMM 865 Digital Inequalities: Theories & Method
This graduate course will introduce students to key approaches to understanding digital inequalities across communication, media studies, and sociology. From divides in access and skills, to institutional and intersectional approaches, this emerging research area utilizes different types of theories about social inequalities and social scientific methods to understand novel issues arising in our increasingly digitally mediated society. Over the course of the semester, students will develop a research proposal that will prepare them to utilize and contribute to theory and methods discussed in the course.
Taught by: Ticona
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 876 The Black Public Sphere, from Freedoms Journal to Black Lives Matter
The field of communication projects and encourages particular visions of deliberation and the public that have been critiqued for failing to represent groups whose citizenship and inclusion in democratic processes is not assured. In this course we correct this practice by centering scholarship on the Black public sphere, recognizing it as central to political and media theory on publics and counterpublics. We will connected 'classical' theoretical works and epistemological schools to contemporary critical, cultural, and institutional analysis of Black media-making, geographies, innovation, protest, and deliberation.
Taught by: Jackson, S
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 877 Anthromedialities: Experimental Theory and Practice
In recent years much has been made of the 'beyond text' turn in anthropology, specifically the need to re-evaluate the singular authority of 'writing culture.' Several new approaches advocate for non-textual medialities, with representations originating in both sonovisual media and performance. Less, however, has been theorized and advocated about intermediality and the multicompositional practices of transmediality and plurimediality, specifically their more transgressive multisensory epistemology. This course will examine these radical approaches to interacting textual, visual, sonic and performative mediations, theorizing their epistemic and ethical implications, collaborative potentials, affordances in narrative and non-narrative representation, and political and aesthetic investments. Students will both critically engage histories of transmedial anthropology, and produce projects that are multicompositional.
Taught by: Feld
Course not offered every year
Also Offered As: ANTH 576, MUSC 576
Activity: Seminar
1.0 Course Unit

COMM 880 The Social Neuroscience of Communication
This interdisciplinary course focuses on understanding the mechanisms of social thinking, media effects and interpersonal communication across multiple levels of analysis. We use the brain as one powerful window to understand and predict outcomes that are challenging to predict otherwise. The course will cover foundational readings and involve weekly, seminar style discussions of recent papers in social neuroscience, neuroeconomics and communication science.
Taught by: Falk
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 881 The Performance Society: Readings in Social and Media Theories
Social action has a performative character - people act as if on a stage in response to audience expectations, whether offline or online. This seminar traces the history of this line of critical thought from Weber and Bakhtin through Goffman and Victor Turner to contemporary authors such as Judith Butler, Byung-Chul Han, Jon McKenzie, and Charles Tilly. Special attention will be devoted to the relationship between media and performance, examined through recent work by media scholars and sociologists such as Ben Agger, Jeffrey Alexander, Jeffrey Berry, Danah Boyd, Alice Marwick, and Sarah Sobieraj. A central issue concerns the will to perform. Why are individuals in modern society compelled to perform? What are the manifestations and forms of performance in institutional and non-institutional politics (such as revolutions and social movements)? How are performances related to emotion? How do the internet and digital media shape the forms and meanings of performance? What are the consequences of the performance imperative? A term paper is required.
Taught by: Yang G
Course not offered every year
Also Offered As: SOCI 881
Activity: Seminar
1.0 Course Unit
COMM 885 Summer Culture: Risk and Resistance
What does media at risk look like in the Southern Cone? Summer Culture 2020 will examine risk and resistance in Argentina, situating Argentine media within a global context of media repression and concentration. There are media at risk; there are populations at risk that have to find alternative ways to express themselves. Examining both its past and present, the course will address how populations at risk express themselves when surrounded by the memories and experiences of state dictatorship, censorship, poverty and precarious labor, yet at the same time presenting innovative strategies on the part of active voluntary associations, community media, alternatives to mainstream media and emergent modes of communication. Using the Argentine case as a roadmap for understanding more fully the patterns by which media are put at risk and the societal responses to it, SummerCulture 2020 will be co-taught by Elizabeth Jelin and Barbie Zelizer, with participation by Silvio Waisbord.

Taught by: Zelizer
Activity: Lecture
0.0 Course Units

COMM 889 Cultural Sociology
Studies culture as values, scripts, practice, performance, and style in the contexts of everyday life, social class and status groups, social movements, and status groups, social movements, and changes of communication technologies. Approaches politics, society, institutions, identities, and social change as dynamic processes and complex interactions at both micro/meso and meso/macro levels. Examines the production, reception, circulation, and effects of signs, symbols, and stories. Readings include both classic authors (Elias, Simmel, Bakhtin, Goffman, Foucault, Bourdieu, Raymond Williams, etc) and contemporary works from sociology and communication studies.

Taught by: Yang
Course not offered every year
Also Offered As: SOCI 561
Activity: Seminar
1.0 Course Unit

COMM 891 Special Topics in Media at Risk
The Center for Media at Risk hosts a visiting scholar each semester who teaches a course related to the risks associated with engagement in journalism, documentary, entertainment or digital spaces, with particular attention paid to practitioners under threat from political intimidation. COML 012 India's Literature: Love, War, Wisdom and Humor
This course introduces students to the extraordinary quality of literary production during the past four millennia of South Asian civilization. We will read texts in translation from all parts of South Asia up to the sixteenth century. We will read selections from hymns, lyric poems, epics, wisdom literature, plays, political works, and religious texts.
For BA Students: Arts and Letters Sector
Taught by: Patel
Course not offered every year
Also Offered As: SAST 004
Activity: Lecture
1.0 Course Unit

COML 013 Introduction to Modern South Asian Literatures
This course will provide a wide-ranging introduction to the literatures of South Asia from roughly 1500 to the present, as well as an exploration of their histories and impact on South Asian society today. How are literary movements and individual works - along with the attitudes towards religion, society, and culture associated with them - still influential in literature, film, and popular culture? How have writers across time and language engaged with questions of caste, gender, and identity? We will read from the rich archive of South Asian writing in translation - from languages that include Braj, Urdu, Bangla, and Tamil - to consider how these literatures depict their own society while continuing to resonate across time and space. Topics of discussion will include the Bhakti poetries of personal devotion, the literature of Dalits - formerly referred to as the Untouchables - and the ways in which literature addresses contemporary political and social problems. Students will leave this course with a sense of the contours of the literatures of South Asia as well as ways of exploring the role of these literatures in the larger world. No prior knowledge of South Asia is required; this course fulfills the cross-cultural analysis requirement.
For BA Students: Arts and Letters Sector
Taught by: Goulding
One-term course offered either term
Also Offered As: SAST 007
Activity: Seminar
1.0 Course Unit

COML 014 Critical Speaking Seminar
American political discourse, especially since September 11th, has often depicted Islam as an oppressive force from which both Muslims and non-Muslims, particularly women and gender/sexual minorities, must be saved. In this CWiC critical speaking seminar, we will investigate how oral and written narratives - such as political rhetoric, apologetics and historical sources - claim to establish unassailable 'facts' about Islam, Muslims and the Middle East. We will also investigate how the notion of empire both in its traditionally understood form in Islamic and European history, as well as in its iterations as US Military and soft power privileges certain voices over others, and how we can reclaim the voices of the marginalized in both contemporary discourse as well as historical oral traditions.
Taught by: Rafi
One-term course offered either term
Also Offered As: GSW 008, NELC 008
Activity: Seminar
1.0 Course Unit

COML 016 Topics in Literature
This course will explore various topics within the diverse landscape of literature with an emphasis on a particular theme or genre.
Course not offered every year
Also Offered As: AFRC 017, ENGL 016
Activity: Seminar
1.0 Course Unit
Notes: Freshman seminar.

COML 023 In Praise of the Small
We can memorize aphorisms and jokes, carry miniature portraits with us, and feel playful in handling small objects. This seminar will ask us to pay attention to smaller texts, art works, and objects that may easily be overlooked. In addition to reading brief texts and looking at images and objects, we will also read texts on the history and theory of short genres and the small.
Taught by: Weissberg
Course not offered every year
Also Offered As: GRMN 023
Activity: Seminar
1.0 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

COML 031 Introduction to Renaissance Literature and Culture
This course will survey the cultural history of sixteenth and seventeenth century England. Interdisciplinary in nature and drawing on the latest methodologies and insights of English studies, we will explore how aesthetics, politics, social traditions, impacted literature at this vital and turbulent time of English history. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Taught by: Loomba
Course not offered every year
Also Offered As: ENGL 031
Activity: Lecture
1.0 Course Unit

COML 053 Music of Africa
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwai to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African fuji, and North African rai and hop hop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post-colonial era.
For BA Students: Arts and Letters Sector
Taught by: Muller
Course not offered every year
Also Offered As: AFRC 053, MUSC 051
Activity: Lecture
1.0 Course Unit
COML 054 Sounding Poetry: Music and Literature
Never before has poetry been so inescapable. Hip hop, the soundtrack of our times, has made rhyme, meter, and word-play part of our daily lives. How did this happen? This course begins not on the page, but in the bardic traditions of Homer’s Iliad, which encoded many of the values of its time in oral formulas. Poetry was, however, no mere encyclopedia, but also a source of risk, as we will read in Plato’s warning against its hypnotic powers, and in the excesses of the Bacchae. We continue through 19th and 20th century attempts to recover these classic traditions (Wordsworth, Longfellow, Pound). Yet Europe was not the only center of poetic production. How does the Homeric tradition relate to living traditions of West African singing poets (griots) and Southern African praise songs? And what traces of these traditions can we hear in the blues? We will listen to early blues recordings and discuss the politics of collecting folklore, and the genius of African American modernists (Langston Hughes, Claude McKay, Georgia Douglas Johnson) who bought vernacular speech onto the page. We will read and listen to a number of 20th century poets inspired when page meets stage in jazz poetry, dub poetry, spoken word, and hip hop. Assignments will include 2 papers, 2 small-group performances, memorization exercises, and a creative adaptation of one poem. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
For BA Students: Arts and Letters Sector
Taught by: TBD
Course usually offered in fall term
Also Offered As: AFRC 054, ENGL 054
Activity: Lecture
1.0 Course Unit

COML 056 Seeing/Hearing Globally: Knowing People, Culture, and Places through Travel
Students are provided a general introduction to a country’s history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the 12 day intensive travel to that country (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites for journaling and are expected to produce a written/creative project at the end of the travel. The itinerary and specific course content will vary according to the travel site and focus of each class.
Taught by: Muller

1.0 Course Unit
Notes: Application required through Penn Global: <a href=https://global.upenn.edu/pennabroad/pgs>https://global.upenn.edu/pennabroad/pgs</a>

COML 059 Modernisms and Modernities
This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts -- including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin.
Course not offered every year
Also Offered As: ENGL 059, FREN 258
Activity: Lecture
1.0 Course Unit
Notes: This is a topics course.

COML 061 20th-Century British Literature
This course introduces major works in twentieth-century British literature. We will read across a range of fiction, poetry, plays, and essays, and will consider aesthetic movements such as modernism as well as historical contexts including the two World Wars, the decline of empire, and racial and sexual conflict. Authors treated might include: Conrad, Yeats, Joyce, Eliot, Lawrence, Forster, Shaw, Woolf, Auden, Orwell, Beckett, Achebe, Rhys, Synge, Naipaul, Rushdie, Heaney, and Walcott.
Course not offered every year
Also Offered As: ENGL 061
Activity: Lecture
1.0 Course Unit

COML 062 20th-Century Poetry
From abstraction to beat, from socialism to negritude, from expressionism to ecopoetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetics, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course.
Course not offered every year
Also Offered As: ENGL 062
Activity: Lecture
1.0 Course Unit
COML 065 20th-Century British Novel
This course traces the development of the novel across the twentieth-century. The course will consider the formal innovations of the modern novel (challenges to realism, stream of consciousness, fragmentation, etc.) in relation to major historical shifts in the period. Authors treated might include: Conrad, Lawrence, Joyce, Forster, Woolf, Cather, Faulkner, Hemingway, Achebe, Greene, Rhys, Baldwin, Naipaul, Pynchon, Rushdie, and Morrison.
Course not offered every year
Also Offered As: ENGL 065
Activity: Lecture
1.0 Course Unit

COML 070 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs' experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.
Taught by: Sternad Ponce de Leon
Course not offered every year
Also Offered As: ARTH 070, ENGL 070, GSWS 060, LALS 060
Activity: Lecture
1.0 Course Unit

COML 090 Women and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherré Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg.
One-term course offered either term
Also Offered As: ENGL 090, GSWS 090
Activity: Lecture
1.0 Course Unit
Notes: This is a topics course. If the topic is ‘Gender, Sexuality, and Literature,’ the following description applies.

COML 093 Introduction to Postcolonial Literature
English is a global language with a distinctly imperial history, and this coursework serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender.
Course not offered every year
Also Offered As: CIMS 093, ENGL 093
Activity: Lecture
1.0 Course Unit
Notes: This is a topics course.

COML 094 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning, appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the ‘New’ Criticism of the 1920’s and 30’s, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory. See the Comparative Literature website at http://ccat.sas.upenn.edu/complit/ for a description of the current offerings.
Course not offered every year
Also Offered As: ENGL 094, GRMN 279
Activity: Lecture
1.0 Course Unit

COML 095 Universal Language: From the Tower of Babel to Artificial Intelligence
‘Universal Language’ is a course in intellectual history. It explores the historical trajectory, from antiquity to the present day, of the idea that there once was, and again could be, a universal and perfect language among the human race. If recovered, this language can explain the origins and meaning of human experience, and can enable universal understanding and world peace.
Taught by: Verkholantsev
One-term course offered either term
Also Offered As: ENGL 219, HIST 056, REES 095
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course. If the topic is ‘Gender, Sexuality, and Literature,’ the following description applies.
COML 096 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality -- a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platos Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldua, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennessy, Chandra Tadpole Mohanty, and Susan Stryker. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

COML 100 Introduction to Literary Study

Literature does not exist for your protection. So dangerous is it, that Socrates argued poets ought to be banned from his ideal Republic. And Socrates himself--one of the most subversive of all poetic thinkers--was condemned to death for corrupting the young with his speeches.

All great literature is unsettling and alarming. Along with its beauty and delicacy and rhetorical power and ethical force, it can be terrifyingly sublime and even downright ugly: full of contempt and horror and grandiosity and malice. From Socrates’ day to our own, countless writers have been jailed, exiled, and murdered, their works censored, banned, burned, for daring to say what others wish would remain unsaid--about religion and the State; sexuality, gender, and the body; art, science, and commerce; freedom and order; love and hate--and for saying it in ways that are aesthetically innovative, surprising, seductive, ravishingly unanticipated. See COML website for current semester’s description at https://complit.sas.upenn.edu/course-list/2019A

COML 102 Narratives of Memory

For the great Colombian writer Gabriel Garcia Marquez, ‘Life is not what happens to you, but what you remember and how you remember it.’ Across the last century-and-a-half, major books and films from the world over have thought about memory in all its dimensions. What does it mean to remember and narrate one’s life in the context of family, of tradition, and community? How is the legacy of major traumatic events like the Holocaust and the 1947 partition shaped by traveling objects and people? How do memories mean different things as they intersect with emotions such as nostalgia or trauma, and when they belong to different communities of gender, race, nation, and religion? By thinking through a range of genres such as films, the novel, memoir, poetry, and song, this course will ask students to consider how our ways of writing and remembering create both memory and our sense of self. Reading work by the likes of Rigoberta Menchu, Julian Barnes, and Vladimir Nabokov while watching canonical films such as Casablanca and The Eternal Sunshine of the Spotless Mind, students will be invited to remember and narrate their lived experiences, and to consider the significance of memory on their own terms.

Activity: Lecture
1.0 Course Unit

COML 105 Sex and Gender in Ancient Greece and Rome

What is being a man, being a woman, being masculine, being feminine, being neither, being both? Is sex about pleasure, domination, identity, reproduction, or something else? Are sexual orientation and gender identity innate? How can words, myths and stories inform cultural assumptions about sex and gender? Did people in ancient times have a concept of sexuality? How do gendered English terms (like ‘girly’, ‘effeminate’, or ‘feisty’) compare to gendered ancient Greek and Latin terms, like virtus, which connotes both ‘virtue’ and ‘masculinity’? Why did the Roman and English speaking worlds have to borrow the word ‘clitoris’ from the ancient Greeks? How did people in antiquity understand consent? Can we ever get access to the perspectives of ancient women? In this introductory undergraduate course, we will learn about sex and gender in ancient Greece and Rome. We will discuss similarities and differences between ancient and modern attitudes, and we will consider how ancient texts, ancient art, ancient ideas and ancient history have informed modern western discussions, assumptions and legislation. Our main readings will be of ancient texts, all in English translation; authors studied will include Ovid, Aristophanes, Plato, Euripides, and Sappho. Class requirements will include participation in discussion as well as quizzes, reading responses, and a final exam.

COML 106 Ancient Drama
This course will introduce students to some of the greatest works of dramatic literature in the western canon. We will consider the social, political, religious and artistic functions of drama in ancient Greece and Rome, and discuss both differences and similarities between ancient drama and modern art forms. The course will also pursue some broader goals: to improve students skills as readers and scholarly critics of literature, both ancient and modern; to observe the implications of form for meaning, in considering, especially, the differences between dramatic and non-dramatic kinds of cultural production: to help students understand the relationship of ancient Greek and Roman culture to the modern world; and to encourage thought about some big issues, in life as well as in literature: death, heroism, society, action and meaning.

For BA Students: Arts and Letters Sector

COML 108 Greek & Roman Mythology
Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? We investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

Activity: Lecture
1.0 Course Unit

COML 110 Meditation and Text
Meditation, so it seems, is everywhere. Walking across Locust Walk, numerous posters jump to the eye calling for engagement with all sorts of mindfulness and spiritual contemplations. We often associate with it: quiet, detachment, calm. Yet before meditation acquired this silent character, it was in fact rather ecstatic and voluble. Meditators used to employ text to erase an introspection and put their experience into extensive writing that documents their reaction to the text, allowing the meditator to construct and reveal his or her self through the engagement with the written word. To study the history of meditation is thus to great extent to study the history of reading, and maybe more importantly, the history of the self. The course offers a survey of the history of meditation in the West: Starting with the self-examination of the Roman emperor Marcus Aurelius and the medieval monastic traditions, going through some salient meditators of the early modern period (Montaigne, Ignacio of Loyola, Descartes), all the way to the invasion of Buddhist trends to the West in the 19th and 20th century. It also provides a window to major intellectual trends in the West, and to some key texts of various religions. Given the nature of the material, we will be interested in the ways in which texts affect us, considering the impact of timing, location, reading out loud vs. silently etc. The course involves weekly reading of primary and secondary sources, active in-class discussions and brief individual presentations by the students. Students will be encouraged to bring from their own national/religious/cultural background and to develop a personal project that will culminate in a final conference-like presentation. This is proposed as a Critical Speaking Seminar.

COML 114 Literature of the South Asian City: Space, Culture, Politics
The South Asian city as a way of organizing space and social relations, as a symbol, as a memory is the subject of this course. Through primarily, though by no means exclusively, readings of literature in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary flœneurie. We will see reflections of the city in poetry recited in its homes, detective novels sold in its train stations, stories scribbled in its cafes, plays staged in its theaters, and films produced in its backlots. Readings will attempt to address urban spaces across South Asia, and will include works by writers such as Mirza Ghalib, Rabindranath Tagore, Saadat Hasan Manto, and Vijay Tendulkar. We will examine these works in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.

Activity: Seminar
1.0 Course Unit

COML 120 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Ghobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.
Taught by: Entezari
Course not offered every year
Also Offered As: CIMS 118, GSWS 118, NELC 118, NELC 618
Activity: Seminar
1.0 Course Unit

COML 121 Working with Translations
In this class we will study and translate some of the major figures in 20th century poetry, including Rainer Maria Rilke, Claire Malroux, Pablo Neruda, Cesare Pavese, Anna Akhmatova, and Bei Dao. While the curriculum will be tailored to the interests and linguistic backgrounds of the students who enroll, all those curious about world poetry and the formidable, irresistible act of translation are welcome. Students should have at least an intermediate knowledge of a language other than English. We will study multiple translations of seminal poems, render our own versions in response, and have the additional opportunity to work directly from the original. Students may also work in pairs, or groups. A portion of the course will be set up as a creative writing workshop in which to examine the overall effect of each others’ translations so that first drafts can become successful revisions. While class discussions will explore the contexts and particularity of (among others) Urdu, Italian, French, and Polish poetry, they might ultimately reveal how notions of national literature have radically shifted in recent years to more polymictic and globally textured forms. Through guest speakers, essays on translation theory, and our own ongoing experiments, this course will celebrate the ways in which great poetry underscores the fact that language itself is a translation. In addition to the creative work, assignments will include an oral presentation, informal response papers, and a short final essay.

Course not offered every year
Also Offered As: ENGL 120
Activity: Seminar
1.0 Course Unit

COML 122 Prague: The Making of a European Nation
Even though such ‘supercities’ as New York, Los Angeles, Chicago, Washington, Boston, and San Francisco claim a special place in the minds and hearts of Americans, no American city plays as crucial a role in the formation of national identity among Americans as Prague does among the Czechs. One may even argue that the formation of a national identity associated with a nation’s urban center is a European phenomenon. The focus of the proposed course is Prague, the capital of the Czech Republic and the geographical center of Europe. From the 14th century, when it became a seat of the Holy Roman Emperor, to the Hussite Revolution; from the 19th-century national revival and the birth of the independent Czechoslovakia in 1918, to the ‘Prague Offensive,’ the last major operation of the Soviet Army in World War II and the re-appearance of the Soviet tanks after the ‘Prague Spring’ in 1968, to the ‘Velvet’ Revolution in 1989, and on to the present day as an EU member, Prague has been the site of major European developments and is where the Czech national identity was forged. Today a popular tourist destination with a uniquely preserved historical center that is part of the UNESCO World Heritage List, Prague combines national character with an increasingly cosmopolitan flavor. Focusing on what makes Prague a national capital, we will note how the ‘national’ negotiates its place with the ‘global.’ As a cultural hub and political center, Prague is the repository of a cultural collective memory and of historical and emotional records. It thus presents an excellent case study of how a national identity could be formed around a single urban center. The study of the many layers of Prague’s urban landscape allows us to observe how history is built into the physical environment, while the analysis of literary and artistic production reveals how the city has become perceived as a national shrine, embodied in word and image. Students will read the ‘Prague text’ as humanists, anthropologists, and historians. They will learn to apply methods of literary, cultural, and historical analyses, and will ask questions of what it means to be a Czech, a Central European, a European, and even, perhaps, an American. The travel component will further one of the key goals of this seminar: to develop cultural knowledge and sensitivity together with the appreciation of socio-cultural differences. Prerequisite: Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs

COML 125 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.
Taught by: Loomba

Activity: Lecture
1.0 Course Unit
COML 126 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science of technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and life. Our discussions will be based on a reading of Sigmund Freud’s essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Merimee, Villiers de Isle-Adam, and others. All readings and lectures in English.
For BA Students: Arts and Letters Sector

Course not offered every year
Also Offered As: GRMN 242, GSWS 243
Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.

COML 127 Sex and Representation
This course explores literature that resists normative categories of gender and sexuality. By focusing on figures writing from the margins, we will explore how radical approaches to narrative form and subject-matter invite us to think in new ways about desire and identity. We will read texts that blur the boundaries between fact and fiction, hybridizing the genres of poetry, drama, and autobiography to produce new forms of expression, such as the graphic novel, auto-fiction, and prose poetry. From Virginia Woolf’s gender-bending epic, Orlando, to Tony Kushner’s Angels in America, this course traces how non-normative desire is produced and policed by social and literary contexts - and how those contexts can be re-imagined and transformed.
Taught by: Halstead
One-term course offered either term
Also Offered As: CIMS 125, GSWS 125
Activity: Seminar
1.0 Course Unit
Notes: All readings and discussions in English.

COML 133 Creative Writing and the World
A creative writing workshop devoted to writing in and across various social, political, geographical, and historical contexts. Offerings may include Writing for a Diasporic World, Writing the City, the Environment, or other topics and themes. See the Comparative Literature Program’s website at http://ccat.sas.upenn.edu/Complit/ for current offerings.

COML 140 Topics In Modernism
This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Prerequisite: Some knowledge of 20th-century poetry.
Spaces will be reserved for English majors
Course not offered every year
Also Offered As: ARTH 385, ENGL 259, FREN 259, GRMN 249
Activity: Seminar
1.0 Course Unit
Notes: Critical Speaking

COML 141 Scandalous Arts in Ancient and Modern Communities
What do the ancient Greek comedian Aristophanes, the Roman satirist Juvenal, have in common with Snoop Dogg and Eminem? Many things, in fact, but perhaps the most fundamental is that they are all united by a stance that constantly threatens to offend prevailing social norms, whether through obscenity, violence or misogyny. This course will examine our conceptions of art (including literary, visual and musical media) that are deemed by certain communities to transgress the boundaries of taste and convention. It juxtaposes modern notions of artistic transgression, and the criteria used to evaluate such material, with the production of and discourse about transgressive art in classical antiquity. Students will consider, among other things, why communities feel compelled to repudiate some forms of art, while others into classics.

1.0 Course Unit

COML 143 Foundations of European Thought: from Rome to the Renaissance
This course offers an introduction to the world of thought and learning at the heart of European culture, from the Romans through the Renaissance. We begin with the ancient Mediterranean and the formation of Christianity and trace its transformation into European society. Along the way we will examine the rise of universities and institutions for learning, and follow the humanist movement in rediscovering and redefining the ancients in the modern world.
For BA Students: History and Tradition Sector
Taught by: Moyer
Also Offered As: HIST 143
Activity: Lecture
1.0 Course Unit
COML 150 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional ‘fog of war’ describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war’s traditional dependence on declaration is often warped by language games—‘police action,’ ‘military intervention,’ ‘nation-building,’ or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terrorist or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation—propaganda, nationalist messaging, memorialization, xenophobic depiction—affect the approaches we use to study art? Finally, is it possible to read a narrative rarely touched or merely contextualized by war and attend to the question of war’s shaping influence? The class will concentrate on literary objects—short stories, and graphic novels—as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literary experience.

COML 151 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we’re accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvianism, literature, art, film, and commemorative practice. The basic question we’ll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

COML 153 Is Europe Facing a Spiritual Crisis?
Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective ‘cultural identities’ (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modern) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...).

COML 154 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
Can the humanities help us think differently about the forest? What happens if we imagine forests as the agents of their stories? At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and the forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. The course places a wide range of literature and film in which forests are strongly featured in relation to environmental history and current environmental issues.

COML 156 Queer German Cinema
Taught in English. This course offers an introduction into the history of German-language cinema with an emphasis on depictions of lesbian, gay, bisexual, trans and queer themes. The course provides a chronological survey of Queer German Cinema from its beginnings in the Weimar Republic to its most recent and current representatives, accompanied throughout by a discussion of the cultural-political history of gay rights in the German-speaking world. Over the course of the semester, students will learn not only cinematic history but how to write about and close-read film. No knowledge of German or previous knowledge required.

COML 191 World Literature
How do we think ‘the world’ as such? Globalizing economic paradigms encourage one model that, while it connects distant regions with the ease of a finger-tap, also homogenizes the world, manufacturing patterns of sameness behind simulations of diversity. Our current world-political situation encourages another model, in which fundamental differences are held to warrant the consolidation of borders between Us and Them, ‘our world’ and ‘theirs.’ This course begins with the proposal that there are other ways to encounter the world, that are politically compelling, ethically important, and personally enriching—and that the study of literature can help tease out these new paths. Through the idea of World Literature, this course introduces students to the appreciation and critical analysis of literary texts, with the aim of navigating calls for universality or particularity (and perhaps both) in fiction and film. ‘World literature’ here refers not merely to the usual definition of ‘books written in places other than the US and Europe, ‘but any form of cultural production that explores and pushes at the limits of a particular world, that steps between and beyond worlds, or that heralds the coming of new worlds still within us, waiting to be born. And though, as we read and discuss our texts, we will glide about in space and time from the inner landscape of a private mind to the reaches of the farthest galaxies, knowledge of languages other than English will not be required, and neither will any prior familiarity with the literary humanities. In the company of drunken kings, botanical witches, ambisexual alien lifeforms, and storytellers who’ve lost their voice, we will reflect on, and collectively navigate, our encounters with the faraway and the familiar—and thus train to think through the challenges of concepts such as translation, narrative, and ideology. Texts include Kazuo Ishiguro, Ursula K. LeGuin, Salman Rushdie, Werner Herzog, Jamaica Kincaid, Russell Hoban, Hiroshi Teshigahara, Arundhati Roy, and Abbas Kiarostami.
One-term course offered either term

COML 193 Great Story Collections
This course is intended for those with no prior background in folklore or knowledge of various cultures. Texts range in age from the first century to the twentieth, and geographically from the Middle East to Europe to the Unite States. Each collection displays various techniques of collecting folk materials and making them concrete. Each in its own way also raises different issues of genre, legitimacy, canon formation, cultural values and context.

COML 197 Madness and Madmen in Russian Culture
Is ‘insanity’ today the same thing as ‘madness’ of old? Who gets to define what it means to be ‘sane,’ and why? Are the causes of madness biological or social? In this course, we will grapple with these and similar questions while exploring Russia’s fascinating history of madness as a means to maintain, critique, or subvert the status quo. We will consider the concept of madness in Russian culture beginning with its earliest folkloric roots and trace its depiction and function in the figure of the Russian ‘holy fool,’ in classical literature, and in contemporary film. Readings will include works by many Russian greats, such as Pushkin, Gogol, Dostoevsky, Chekhov, Bulgakov and Nabokov.

COML 203 Masterpieces-Italian Literature
This course surveys the history of Italian literature through its major masterpieces. Beginning with Dante’s Divine Comedy, Petrarch’s love poems, and Boccaccio’s Decameron, we will follow the development of Italian literary tradition through the Renaissance (Machiavelli’s political theory and Ariosto’s epic poem), and then through Romanticism (Leopardi’s lyric poetry and Manzoni’s historical novel), up to the 20th century (from D’annunzio’s sensual poetry to Calvino’s post-modern short stories). The course will provide students with the tools needed for analyzing the texts in terms of both form and content, and for framing them in their historical, cultural, and socio-political context. Classes and readings will be in Italian. ITAL 203 is mandatory for Minors in Italian Literature and Majors in Italian Literature. If necessary, ITAL 201 can be taken at the same time as ITAL 203. Prerequisite: Open to students who have completed ITAL 201 or equivalent.
One-term course offered either term
Also Offered As: ITAL 203
Prerequisite: ITAL 201
Activity: Seminar
1.0 Course Unit

COML 204 Tolstoy
Few authors have ever been able to combine their moral and artistic visions as closely as Tolstoy. Over the course of the semester, we will plot how Tolstoy’s ethical concerns changed over the course of his life and how this was reflected in works, which include some of the greatest prose ever written. We will begin by surveying the majestic and far-reaching world of his novels and end with some of Tolstoy’s short later works that correspond with the ascent of ‘Tolstoyism’ as virtually its own religion.

1.0 Course Unit

COML 206 Italian History on Screen: How Movies Tell the Story of Italy
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy’s rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy.

Also Offered As: CIMS 206, ITAL 204
Activity: Seminar
1.0 Course Unit

COML 208 Sicily on Page and Screen
What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore’s Cinema Paradiso and Coppola’s The Godfather II, and read texts such as Lampedusa’s The Leopard and Maraini’s Bagheria. This course aims to increase students’ understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others’, cultural frameworks.

Notes: Course taught in English. Course Materials in English. There are no prerequisites for this course.

COML 209 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The ‘origins of environmentalism’ lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others. Taught in English.

COML 211 Literature of Dissent: Art as Protest in 20th-Century Poland and Czechoslovakia
Eastern and Central Europe was the site of monumental political changes in the twentieth century, including the disillusion of monarchical empires in the First World War and the expansion of Soviet-style communism. At every point, artists have taken part in political debates, sometimes advancing radical agendas, sometimes galvanizing movements, sometimes simply shouting into the void to register their own dissatisfaction. In this course, we will consider texts including literature, political philosophy and film that pushed back against the dominant political norms. In so doing, we will investigate Aesopian language, the mechanics of censorship, the repercussions of dissent, performativity, samizdat and the rise of an alternative culture. We will contextualize our readings of literature with the sociological and historical work of Benedict Anderson, Tony Judt, Jonathan Bolton, Shana Penn, Alexei Yurchak and the series Discourses of Collective Identity in Central and Southeast Europe. As well as becoming familiar with major thinkers and movements in Eastern and Central Europe, students will develop a sense of art as a tool of political protest.

COML 212 Modern Middle Eastern Literature in Translation
The Middle East boasts a rich tapestry of cultures that have developed a vibrant body of modern literature that is often overlooked in media coverage of the region. While each of the modern literary traditions that will be surveyed in this introductory course-Arabic, Hebrew, Persian and Turkish-will be analyzed with an appreciation of the cultural context unique to each body of literature, this course will also attempt to bridge these diverse traditions by analyzing common themes such as modernity, social values, the individual and national identity as reflected in the genres of poetry, the novel and the short story. This course is in seminar format to encourage lively discussion and is team-taught by four professors whose expertise in modern Middle Eastern literature serves to create a deeper understanding and aesthetic appreciation of each literary tradition. In addition to honing students’ literary analysis skills, the course will enable students to become more adept at discussing the social and political forces that are reflected in Middle Eastern literature, explore important themes and actively engage in reading new Middle Eastern works on their own in translation. All readings are in English.

COML 213 Saints and Devils in Russian Literature and Tradition
This course is about Russian literary imagination, which is populated with saints and devils, believers and religious rebels, holy men and sinners. In Russia, where people’s frame of mind had been formed by a mix of Eastern Orthodox Christianity and earlier pagan beliefs, the quest for faith, spirituality, and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Is humility the way to salvation? Should one live for God or for the people? Does God even exist?

Also Offered As: FREN 232
Activity: Seminar
1.0 Course Unit

COML 220 Russia and the West
This course will explore the representations of the West in eighteenth- and nineteenth-century Russian literature and philosophy. We will consider the Russian visions of various events and aspects of Western political and social life—Revolutions, educational system, public executions, resorts, etc. within the context of Russian intellectual history. We will examine how images of the West reflect Russia's own cultural concerns, anticipations, and biases, as well as aesthetic preoccupations and interests of Russian writers. The discussion will include literary works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy, as well as non-fictional documents, such as travelers' letters, diaries, and historiosophical treatises of Russian Freemasons, Romantic and Positivist thinkers, and Russian social philosophers of the late Nineteenth century. A basic knowledge of nineteenth-century European history is desirable. The class will consist of lectures, discussion, short writing assignments, and two in-class tests.
For BA Students: Humanities and Social Science Sector
One-term course offered either term
Also Offered As: HIST 220, REES 220
Activity: Seminar
1.0 Course Unit

COML 221 Creating New Worlds: The Modern Indian Novel
Lonely bureaucrats and love-struck students, Bollywood stars and wayward revolutionaries: this course introduces students to the worlds of the Indian novel. From the moment of its emergence in the 19th century, the novel in India grappled with issues of class and caste, colonialism and its aftermath, gender, and the family. Although the novel has a historical origin in early modern Europe, it developed as a unique form in colonial and post-colonial India, influenced by local literary and folk genres. How did the novel in India—and in its successor states after 1947—transform and shift in order to depict its world? How are novels shaped by the many languages in which they are written, including English? And how do we, as readers, engage with the Indian novel in its diversity? This course surveys works major and minor from the past 200 years of novel-writing in India—with surveys both into predecessors of the Indian novel and parallel forms such as the short story. Readings will include works in translation from languages such as Hindi, Bangla, Urdu, Telugu, and Malayalam, as well as works written originally in English. Students will leave this course with an understanding of the Indian novel, along with the social conditions underlaying it, especially those relating to caste and gender.

COML 230 Words Are Weapons: Protests and Political Activism in South Asian Literature
This course focuses on the key themes of protest and resistance in contemporary South Asian literature. Most South Asian countries have been witnessing an endless wave of protests and resistance from various sections of public life for the last three decades. In India, for example, protest literature emerges not only from traditionally marginalized groups (the poor, religious and ethnic minorities, depressed castes and tribal communities), but also from upper-caste groups, whose protest literature expresses concerns over economic oppression, violence and the denial of fundamental rights. Literature is becoming an immediate tool to articulate acts of resistance and anger, as many writers and poets are also taking on new roles as political activists. In this class, we will read various contemporary works of short fiction, poetry and memoirs to comprehend shifts in public life toward political and social activism in South Asia. We will also watch two or three documentaries that focus on public protests and resistance. No pre-requisites or South Asian language requirements. All literary works will be read in English translations.

Activity: Lecture
1.0 Course Unit

COML 236 Napoleonic Era & Tolstoy
In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy's War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the novel and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great novel?

Course not offered every year
Also Offered As: HIST 333, REES 240
Activity: Lecture
1.0 Course Unit

Notes: All readings and lectures in English.
COML 237 Berlin: History, Politics, Culture
What do you know about Berlin’s history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelin to establish a new capital for this country. It will tell the story of Berlin’s rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin’s transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin’s position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin’s urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker’s housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin’s Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin. All readings and lectures in English.

COML 241 Global Sustainable
This research-oriented seminar focuses on the ways in which ‘sustainability’ and ‘sustainable development’ are linguistically and culturally translated into the world’s languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn’s diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world’s languages of sustainability.

COML 247 Free Radicals: Marx, Marxism, and the Culture of Revolution
‘A spectre is haunting Europe—the spectre of Communism’: This, the famous opening line of The Communist Manifesto, will guide this course's exploration of the history, legacy, and potential future of Karl Marx's most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx's ideas might still hold in a world vastly different from his own. All readings and lectures in English.

**COML 253 Freud: The Invention of Psychoanalysis**

No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

**COML 256 Contemporary Fiction & Film in Japan**

This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan's war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request.

COML 265 Jewish Films and Literature
From the 1922 silent film 'Hungry Hearts' through the first 'talkie,' 'The JazzSinger,' produced in 1927, and beyond 'Schindler's List,' Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's 'King Lear' to Sholom Aleichem's 'Tvey the Dairyman,' primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we 'read' literature and film, b) the various ways that the media of fiction, drama, and film 'translate' Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience. All readings and lectures in English.
For BA Students: Arts and Letters Sector
Taught by: Hellerstein
Course not offered every year
Also Offered As: CIMS 279, ENGL 279, GRMN 261, JWST 263
Activity: Lecture
1.0 Course Unit

COML 266 Introduction to Modern Hebrew Literature: Short Story Reinvented
The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story reinvented, literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold
Course usually offered in fall term
Also Offered As: JWST 259, NELC 259, NELC 559
Prerequisite: HEBR 054
Activity: Seminar
1.0 Course Unit

COML 269 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema 'the strongest weapon.' This course explores the world of 'fascist' cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles. All readings and discussions in English.
For BA Students: Arts and Letters Sector

Also Offered As: CIMS 257, GRMN 257, ITAL 257
Activity: Lecture
1.0 Course Unit
Notes: All readings and discussions in English.

COML 270 German Cinema
An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film's place in its historical and political context, the course will explore the 'Golden Age' of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to 'Papa's Kino' and the rise of New German Cinema in the late 1960's. All readings and discussions in English.

COML 272 French Literature in Translation
The content of the course will vary from semester to semester. All works read in English. Please check the department's website for a description.
https://www.sas.upenn.edu/french/pc. Prerequisite: Two 200-level French courses taken at Penn or equivalent.
Course not offered every year
Also Offered As: ENGL 360, FREN 250, HIST 251
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.
COML 275 Faces of Love: Gender, Sexuality and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and 'queerness' in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.
Taught by: Shams
Course usually offered in fall term
Also Offered As: COML 574, GSWS 275, GSWS 575, NELC 290, NELC 574
Activity: Lecture
1.0 Course Unit
Notes: No prior knowledge of Persian is required as all literary works will be available in English translation. Students are expected to attend seminars and take part in discussions. Please note that this syllabus is subject to change.

COML 277 Jewish American Literature
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers 'immigrate' from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature. All readings and lectures are in English.

COML 281 Topics Poetry and Poetics
This course explores an aspect of poetry and poetics intensively; specific course topics will vary from year to year. Prerequisite: Spaces will be reserved for English majors. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ENGL 269
Activity: Seminar
1.0 Course Unit

COML 282 Modern Hebrew Literature and Film in Translation: Autobiography
This course examines cinematic and literary portrayals of childhood. While Israeli works constitute more than half of the course's material, European film and fiction play comparative roles. Many of the works are placed, and therefore discussed, against a backdrop of national or historical conflicts. Nonetheless, private traumas (such as madness, abuse, or loss) or an adult's longing for an idealized time are often the central foci of the stories. These issues and the nature of individual and collective memory will be discussed from a psychological point of view. Additionally, the course analyzes how film, poetry and prose use their respective languages to reconstruct the image of childhood; it discusses the authors and directors struggle to penetrate the psyche of a child and to retrieve fragments of past events.
For BA Students: Arts and Letters Sector
Taught by: Gold
One-term course offered either term
Also Offered As: CIMS 159, JWST 154, NELC 159
Activity: Lecture
1.0 Course Unit

COML 283 Jewish Folklore
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migration of Jews into different countries and historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms.
Taught by: Ben-Amos
Course not offered every year
Also Offered As: FOLK 280, JWST 260, NELC 258
Activity: Lecture
1.0 Course Unit

COML 285 Theatre and Politics
This course will examine the relationship between theatre and politics in the twentieth and twenty-first centuries. How do theatre artists navigate their artistic and political aims? How do we distinguish between art and propaganda? Throughout the semester we will ask how the unique components of theatre--its poetic structure, engagement with spectators, aesthetics of representation, relationship to reality, and rehearsal process--contribute to its political capacity. Students will read a variety of plays drawn from late twentieth century and contemporary global theatre practice alongside political and aesthetic theory to interrogate the relationship between artistic production, power, and resistance.
We will conclude with a consideration of the ways politics is itself a performance, considering how power is supported by theatrical means and how performance functions in resistance movements.
Taught by: Thompson
Also Offered As: ENGL 287, THAR 282
Activity: Seminar
1.0 Course Unit
COML 287 Ethnic Humor
Humor in ethnic societies has two dimensions: internal and external. The inside humor of an ethnic group is accessible to its members; it draws upon their respective social structures, historical and social experiences, languages, cultural symbols, and social and economic circumstances and aspirations. The external humor of an ethnic group targets members of other ethnic groups, and draws upon their stereotypes, and attributed characteristics by other ethnic groups. The external ethnic humor flourishes in immigrant and ethnically heterogenic societies. In both cases jokes and humor are an integral part of social interaction, and in their performance relate to the social, economic, and political dynamics of traditional and modern societies.
Taught by: Ben-Amos, D.
Course not offered every year
Also Offered As: FOLK 202, NELC 287
Activity: Lecture

Course not offered every year
Also Offered As: ARTH 293, CIMS 295, ENGL 295
Activity: Seminar
1.0 Course Unit

COML 299 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as 'cinema,' to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be a weekly film screening for this course. No knowledge of film theory is presumed.
Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class mid-term; 1 final project.
Taught by: Redrobe
Course not offered every year
Also Offered As: ARTH 295, ARTH 695, CIMS 305, ENGL 305, GSWS 295

Notes: This is a topics course. Topics will vary from year to year.

COML 302 Odyssey & Its Afterlife
As an epic account of wandering, survival, and homecoming, Homer's Odyssey has been a constant source of themes and images with which to define and redefine the nature of heroism, the sources of identity, and the challenge of finding a place in the world.
Taught by: Murnaghan
Course usually offered in spring term
Also Offered As: CLST 302
Activity: Lecture
1.0 Course Unit
COML 304 Topics In Classicism and Literature
Ancient epic and mythology had a curious and rich afterlife in the Middle Ages. Virgil and Ovid were taught in medieval schools, read for their moral content, and revered as fiction that concealed great philosophical value. Their influence also gave rise to the great literary form of the Middle Ages, romance: narratives that place a premium on erotic love, individual quests, the unpredictability of adventure, and imaginary or exotic settings. Yet despite what may appear to be merely gratifying entertainment, medieval romance and medieval receptions of classical myth did tremendous cultural work, enabling profound explorations of history, political values, gender and sexual identity, and social power. We will spend some weeks reading Virgil’s Aeneid and Ovid’s Heroides and Metamorphoses. Then we will turn to medieval reimaginings of classical myth and metamorphosis, including poetry by Marie de France, Chretien de Troyes, and Chaucer, and anonymous works such as Sir Gawain and the Green Knight. The course requirements will be: one very short oral presentation on a research topic of your choice related to the reading, together with a short write-up of your research; one short critical paper; and one longer research paper (which can develop the subject of your oral presentation).
Taught by: Copeland
Course not offered every year
Also Offered As: CLST 360, ENGL 229, GSWS 228
Activity: Seminar
1.0 Course Unit

COML 307 Love, Lust and Violence in the Middle Ages
Medieval Europe was undoubtedly gruff and violent but it also gave birth to courtly culture - raw worries transformed into knights who performed heroic deeds, troubadours wrote epics in their honor and love songs about their ladies, women of the elite carved out a place in public discourse as patrons of the arts, and princely courts were increasingly defined by pageantry from jousting tournaments to royal coronations. This course will trace the development of this courtly culture from the eleventh to the sixteenth century, from its roots in Southern France to its spread to Northern France and then to various kingdoms in Europe. Central themes will include the transformation of the warrior into the knight, the relationship between violence and courtliness, courtly love, cultural production and the patronage, and the development of court pageantry and ceremonial. This is a class cultural history and, as such, will rely on the interpretation of objects of art and material culture, literature as well as historical accounts.
Taught by: KUSKOWSKI
One-term course offered either term
Also Offered As: GSWS 307, HIST 307
Activity: Lecture
1.0 Course Unit

COML 321 National Literatures
A course that traces how particular literary texts, very often medieval, are adopted to become foundational for national literatures. Key moments of emphasis will be the early nineteenth century, the 1930s, and (to some extent) the unfolding present. Research subtending this offering has been conducted over the last years, both in my editing of Europe: A Literary History, 1348-1418 (2 vols and 82 chapters, Oxford UP, 2016) and in preparation for ‘Medieval Studies in Troubled Times: the 1930s,’ to be offered as Presidential plenary at the Medieval Academy of America convention at Penn on 9 March 2019. I have also travelled and lectured extensively for Penn Alumni Travel over the last decade, crossing national boundaries and also pondering how complex literary issues might be framed for a broad (but exceptionally intelligent) audience. Issues arising in traversing Mediterranean space are explored in an article published (in Italian) in Studi migranti. Some texts immediately suggest themselves for analysis. The Song of Roland, for example, has long been fought over between France and Germany; each new war inspires new editions on both sides. The French colonial education system, highly centralized, long made the Chanson de Roland a key text, with the theme of Islamic attack on the European mainland especially timely, it was thought, during the Algerian war of independence. Germany also sees the Niebelungenlied as a key text, aligning it with the Rhine as an impeccably Germanic: but the Danube, especially as envisioned by Stefan Zweig, offers an alternative, hybridized, highly hyphenated cultural vision in running its Germanic-Judaic-Slavic-Roman course to the Black Sea. The course will not be devoted exclusively to western Europe. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow’s great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin’s Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called ‘Hindu epics’ can also be a delicate matter. Some ‘uses of the medieval’ have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? Preference given to Ben Franklin students.
Taught by: Wallace
One-term course offered either term
Also Offered As: ENGL 321
Activity: Seminar
1.0 Course Unit
Notes: Preference given to Ben Franklin students
COML 322 Advanced Topics in Global Gender and Sexuality Studies
How do sex and gender become sites of cultural production, identity-formation, and contentious politics? This seminar engages these questions in the context of the ‘Middle East’ as a constructed geopolitical space for imperial politics and political intervention. The class is divided into three units. In the first unit, we engage feminist and queer theories to discuss the shifting meanings of ‘sex’ and ‘gender’ in transnational and postcolonial contexts. In the second unit we explore the contextual and shifting notions of ‘private’ and ‘public’ as they have been elaborated in political theory, feminist theory, and media studies. We also consider how different media technologies enable and constrain the performance and expression of gender and sexual identities. In the last unit, we examine the material and symbolic construction of sex and gender in the shadow of Orientalism, the War on Terror, Multiculturalism, and the recent Arab uprisings. In this unit, we consider how geopolitics are refracted in public controversies around issues like gay rights, female genital mutilation, the veil, and honor killing.
Also Offered As: GSWS 322, SOCI 322
Activity: Seminar
1.0 Course Unit

COML 324 Sanskrit Literature in Translation
This course will focus solely on the specific genres, themes, and aesthetics of Sanskrit literature (the hymn, the epic, the lyric, prose, drama, story literature, the sutra, etc.) and a study of the history and specific topics of Sanskrit poetics and dramaturgy. All readings will be in translation.
Taught by: Patel
Course not offered every year
Also Offered As: COML 624, SAST 324, SAST 624
Activity: Seminar
1.0 Course Unit

COML 333 Dante's Divine Comedy
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in the original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required. When crosslisted with ENGL 323, this is a Benjamin Franklin Seminar.
Taught by: Brownlee
One-term course offered either term
Also Offered As: ENGL 323, ITAL 333
Activity: Seminar
1.0 Course Unit

COML 334 A Survey of Sanskrit, Pakrit, and Classical Tamil Literature in Translation
This course will cover most of the genres of literature in South Asia’s classical languages through close readings of selections of primary texts in English translation. Special focus will be given to epics, drama, lyric poetry, satirical works, and religious literature.
Taught by: Patel
Course not offered every year
Also Offered As: SAST 334, SAST 534
Activity: Seminar
1.0 Course Unit

COML 343 Nineteenth Century European Intellectual History
Starting with the dual challenges of Enlightenment and Revolution at the close of the eighteenth century, this course examines the emergence of modern European thought and culture in the century from Kant to Nietzsche. Themes to be considered include Romanticism, Utopian Socialism, early Feminism, Marxism, Liberalism, and Aestheticism. Readings include Kant, Hegel, Burke, Marx, Mill, Wollstonecraft, Darwin, Schopenhauer, and Nietzsche.
Taught by: Breckman
Course usually offered in fall term
Also Offered As: HIST 343
Activity: Lecture
1.0 Course Unit

COML 344 20th Century European Intellectual History
European intellectual and cultural history from 1870 to 1950. Themes to be considered include aesthetic modernism and the avant-garde, the rebellion against rationalism and positivism, Social Darwinism, Second International Socialism, the impact of World War One on European intellectuals, psychoanalysis, existentialism, and the ideological origins of fascism. Figures to be studied include Nietzsche, Freud, Woolf, Sartre, Camus, and Heidegger.
Taught by: Breckman
Course usually offered in spring term
Also Offered As: HIST 344
Activity: Lecture
1.0 Course Unit

COML 353 Arabic Literature and Literary Theory
This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory. This course in taught in translation.
Taught by: Fakhreddine
Course usually offered in fall term
Also Offered As: COML 505, NELC 434
Activity: Lecture
1.0 Course Unit

COML 357 Myth in Society
In this course we will explore the mythologies of selected peoples in the Ancient Near East, Africa, Asia, and Native North and South America and examine how the gods function in the life and belief of each society. The study of mythological texts will be accompanied, as much as possible, by illustrative slides that will show the images of these deities in art and ritual.
Taught by: Ben-Amos
Course not offered every year
Also Offered As: FOLK 229, NELC 249
Activity: Lecture
1.0 Course Unit
COML 359 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern ‘descendants,’ autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold
Course usually offered in spring term
Also Offered As: JWST 359, JWST 659, NELC 359, NELC 659
Prerequisite: HEBR 059
Activity: Seminar
1.0 Course Unit

COML 369 Literary Translation
This course is for graduate students and undergraduates with permission of the instructor. All students enrolled must have knowledge of at least one language other than English. We will study the history, theory and practice of literary translation, and participate in it. Readings will include theoretical works in translation studies, using selections from Lawrence Venuti’s Translation Studies Reader and Schulte/Biguenet’s Translation Theory Reader, with some supplemental readings; we will also look at comparative cases of multiple translations of the same original, and analyze how different translators make different interpretative/formal/aesthetic choices. Course assignments will include both a research paper, on the history and/or theory of translation, and an extended practical translation exercise, to be workshopped over the course of the semester, consisting of a literary translation of a text of the student’s choice.
Taught by: Wilson
Also Offered As: CLST 369, CLST 569
Activity: Seminar
1.0 Course Unit

COML 378 Topics in Literature and Society
This course explores an aspect of Postcolonial literature intensively. Specific course topics vary from year to year.
Course not offered every year
Also Offered As: ENGL 293
Activity: Seminar
1.0 Course Unit

COML 380 The Bible in Translation
This course introduces students to one specific Book of the Hebrew Bible. ‘The Bible in Translation’ involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. Although no prerequisites are required, this class is a perfect follow-up course to ‘Intro to the Bible.’
Taught by: Cranz
One-term course offered either term
Also Offered As: JWST 255, NELC 250, NELC 550, RELS 224
Activity: Seminar
1.0 Course Unit

COML 385 Japanese Theater
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theatre in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage, design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. Requirements include short writing assignments, presentations, and one research paper. Reading knowledge of Japanese and/or previous course-work in literature/theatre will be helpful, but not required. The class will be conducted in English, with all English materials.
Taught by: Kano
Course usually offered in fall term
Also Offered As: EALC 255, EALC 655, FOLK 485, THAR 485
Activity: Seminar

Course not offered every year
Also Offered As: ENGL 393, SAST 323
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

COML 393 Queering North African Subjectivities
This seminar will explore the ways in which literary and visual representations of sexual difference and gender roles disrupt the cultural imagination of everyday life in North Africa and its Diasporas. Special attention will be given to representations of Arab women and queer subjectivities as sites of resistance against dominant masculinity. We will analyze the ways in which representations of gender have allowed for a redeployment of power, a reconfiguration of politics of resistance, and the redrawing of longstanding images of Islam in France. Finally, we will question how creations that straddle competing cultural traditions, memories and material conditions can queer citizenship. Course taught in English.
Taught by: Gueydan-Turek
One-term course offered either term
Also Offered As: AFRC 392, FREN 392, GSWS 392
Activity: Seminar
1.0 Course Unit
COML 396 History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. The first half of the course will focus on early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (such as Philip Sidney and Giambattista Vico). In the second half of the course we will turn to modern concerns by looking at the literary (or ‘art’) theories of some major philosophers and theorists: Kant, Hegel, Marx, Nietzsche, Freud, and Walter Benjamin. We end the course in the mid-twentieth century. The purpose driving this course is to consider closely how this tradition generated questions that are still with us, such as: what is the act of interpretation; what is the ‘aesthetic’; what is ‘imitation’ or mimesis; and how are we to know an author’s intention. During the semester there will be four short writing assignments in the form of analytical essays (3 pages each). Students may use these small essays to build into a long piece of writing on a single text or group of texts at the end of the term. Most of our readings will come from a published anthology of literary criticism and theory; a few readings will be on Canvas.
Taught by: Copeland

COML 418 Europe Intellectual History Since 1945
This course concentrates on French intellectual history after 1945, with some excursions into Germany. We will explore changing conceptions of the intellectual, from Sartre’s concept of the ‘engagement’ to Foucault’s idea of the ‘specific intellectual’; the rise and fall of existentialism; structuralism and poststructuralism; and the debate over ‘postmodernity.’
Taught by: Breckman
Course usually offered in spring term
Also Offered As: HIST 418
Activity: Seminar
1.0 Course Unit

COML 432 Arabic Readings in Belles-Lettres
This course aims to improve reading skills and vocabulary by introducing students to extensive passages taken from a variety of Arabic literary genres from all periods. Taught in MSA with writing assignments in MSA.
Course usually offered in fall term
Also Offered As: ARAB 432
Prerequisite: ARAB 036 OR ARAB 636
Activity: Seminar
1.0 Course Unit

COML 498 Honors Thesis
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

COML 499 Independent Study
Supervised study for Seniors.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

COML 501 History of Literary Theory
Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing and often confrontational dialogues between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the professional study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature. We will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism.
Course usually offered in fall term
Also Offered As: CLST 511, ENGL 601, GRMN 534, REES 500
Activity: Seminar
1.0 Course Unit

COML 504 Electronic Literary Studies Proseminar
This course is designed to introduce advanced undergraduate and graduate students to the range of new opportunities for literary research afforded by recent technological innovation.
Course not offered every year
Also Offered As: ARTH 506, CIMS 505, ENGL 505
Activity: Seminar
1.0 Course Unit

COML 505 Arabic Literature and Literary Theory
This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory. This course is taught in translation.
Taught by: Fakhreddine
Course usually offered in fall term
Also Offered As: COML 353, NELC 434
Activity: Lecture
1.0 Course Unit

COML 506 Topics in Twentieth-Century Literature
This course treats some aspect of literary and cultural politics in the 20th-Century with emphasis varying by instructor.
Course not offered every year
Also Offered As: ENGL 461
Activity: Seminar
1.0 Course Unit
COML 509 Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define ‘Jewish writing,’ in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products.
Taught by: Hellerstein
One-term course offered either term
Also Offered As: GRMN 509, GSWS 509, JWST 509, YDSH 509
Activity: Seminar
1.0 Course Unit

COML 510 Masters in Liberal Arts Seminar
This MLA course in the history of art explores an aspect of Art History and Theory, specific course topics vary. Please see the College of Liberal and Professional Studies Course Guide for a description of current offerings.
Course not offered every year
Also Offered As: ARTH 505, CIMS 502, GSWS 574
Activity: Seminar
1.0 Course Unit

COML 511 Life Writing: Autobiography, Memoir, and the Diary
This course introduces three genres of life writing: Autobiography, Memoir and the Diary. While the Memoir and the diary are older forms of first persons writing the Autobiography developed later. We will first study the literary-historical shifts that occurred in Autobiographies from religious confession through the secular Eurocentric Enlightenment men, expanded to women writers and to members of marginal oppressed groups as well as to non-European autobiographies in the twentieth century. Subsequently we shall study the rise of the modern memoir, asking how it is different from this form of writing that existed already in the middle ages. In the memoirs we see a shift from a self and identity centered on a private individual autobiographer to ones that comes from connections to a community, a country or a nation; a self of a memoirist that represents selves of others. Students will attain theoretical background related to the basic issues and concepts in life writing: genre, truth claims and what they mean, the limits of memory, autobiographical subject, agency or self, the autonomous vs. the relational self. The concepts will be discussed as they apply to several texts. Some examples are: parts of Jan Jacques Rousseau's Confessions; the autobiography of Benjamin Franklin; selected East European autobiographies between the two world wars; the memoirs of Lady Ann Clifford, Sally Morgan, Mary Jamison and Saul Friedlander. The third genre, the diary, is a person account, organized around the passage of time, and its subject is in the present. We will study diary theories, diary’s generic conventions and the canonical text, trauma diaries and the testimonial aspect, the diary's time, decoding emotions, the relation of the diary to an audience and the process of transition from archival manuscript to a published book. The reading will include travel diaries (for relocation and pleasure), personal diaries in different historical periods and countries, diaries in political conflict (as American Civil War women's diaries, Holocaust diaries, Middle East political conflicts diaries). We will conclude with diaries online, and students will have a chance to experience and report about differences between writing a personal diary on paper and diaries and blogs on line. Each new subject in this online course will be preceded by an introduction. Specific reading and written assignments, some via links to texts will be posted weekly ahead of time. We will have weekly videos and discussions of texts and assigned material and students will post responses during these sessions and class presentations in the forums.
Taught by: Ben-Amos, B.
Course not offered every year
Activity: Online Course
1.0 Course Unit
COML 513 A Black Seed (He) Sowed: An Introduction to Paleography & History of Books
Writing and reading are common actions we do every day. Nonetheless they have changed over the centuries, and a fourteenth century manuscript appears to us very different from a Penguin book. The impact of cultural movements such as Humanism, and of historical events, such as the Reformation, reshaped the making of books, and therefore the way of reading them. The course will provide students with an introduction to the history of the book, including elements of paleography, and through direct contact with the subjects of the class: manuscripts and books. Furthermore, a section of the course will focus on digital resources, in order to make students familiar with ongoing projects related to the history of book collections (including the ‘Philosophical Libraries’ and the ‘Provenance’ projects, based at the Scuola Normale Superiore in Pisa and at Penn). The course will be conducted in English; a basic knowledge of Latin is desirable but not required.
Taught by: Del Soldato
Course usually offered in spring term
Also Offered As: ITAL 511
Activity: Seminar

COML 519 Translating Literature: Theory and Practice
Taught by: Hellerstein
Also Offered As: GRMN 537, JWST 537
Activity: Seminar
1.0 Course Unit

COML 522 Chaucer
An advanced introduction to Chaucer's poetry and Chaucer criticism. Reading and discussion of the dream visions, Troilus and Criseyde, and selections from Canterbury Tales, from the viewpoint of Chaucer's development as a narrative artist.
Taught by: Wallace
Course not offered every year
Also Offered As: ENGL 525, GSWS 524, ITAL 525
Activity: Seminar
1.0 Course Unit

COML 523 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud's work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud's work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud's work, and a humanist one? Where do we locate Freud's relevance today? The graduate course will concentrate on Freud's descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture. Prerequisite: Readings and discussions in English.
Taught by: Weissberg
Course not offered every year
Also Offered As: GRMN 526, GSWS 525
Activity: Seminar
1.0 Course Unit
Notes: Reading and discussions in English.

COML 524 Petrarch
This course will study Petrarch's lyric poetry with reference to its Italian roots (Sicilian school, dolce stil nuovo) and European posterity. Renaissance and Baroque Petrarchism as well as impingement on the Romantics.
Taught by: Brownlee
Course not offered every year
Also Offered As: ITAL 535
Activity: Seminar
1.0 Course Unit

COML 533 Dante's Divine Comedy I
'Divine Comedy' in the context of Dante's medieval worldview and culture.
Taught by: Brownlee, K.
Course not offered every year
Also Offered As: ITAL 531
Activity: Seminar
1.0 Course Unit

COML 534 Words are Weapons
This course focuses on the key themes of protest and resistance in contemporary South Asian literature. Most South Asian countries have been witnessing an endless wave of protests and resistance from various sections of public life for the last three decades. In India, for example, protest literature emerges not only from traditionally marginalized groups (the poor, religious and ethnic minorities, depressed castes and tribal communities), but also from upper-caste groups, whose protest literature expresses concerns over economic oppression, violence and the denial of fundamental rights. Literature is becoming an immediate tool to articulate acts of resistance and anger, as many writers and poets are also taking on new roles as political activists. In this class, we will read various contemporary works of short fiction, poetry and memoirs that focus on public protests and resistance. No pre-requisites or South Asian language requirements. All literary works will be read in English translations.

Also Offered As: COML 230, SAST 223, SAST 523
Activity: Lecture
1.0 Course Unit
COML 537 Topics in Cultural History
Topic for Spring 2016: Making and Marking Time. What is time? In the late 19th century, the questions of how to define time, how to slow down time, and, above all, how to accelerate movement have become focus of the work by many European philosophers who have tried to come to terms with what is now termed as the Industrial Revolution, and the idea of 'progress.' And can time be understood as something continuous, or is it fragmented, proceeding in fits and burst? Such contemplations on time have deeply influenced writers. Marcel Proust was a reader of Henri Bergson and translated his theories of time into a concept of memory. Thomas Mann has tried to navigate timelessness in a novel set on a 'Magic Mountain.' Virginia Woolf and James Joyce have pictured an entire universe in a single day (Mrs. Dalloway, Ulysses) while early 20th century Italian Futurists made the contemplation of time part of their manifestos. With them, and with expressionist writers in Germany or writers from the DADA movement there elsewhere in Europe, a reckoning with time would also influence their choice of genre and form, writerly practice, and technique. Parallel to these literary experimentation, pictures were set into motion in scholarly studies by Eadweard Muybridge and finally in the new medium film: Impressionist painters insisted on picturing fleeting moments, and composers experimented with temporal sequences. We may be able to understand a reconsideration of time as driving force for the modern movement, or simply 'modernity.' In this seminar, we will study a selection of literary texts of the late 19th century and the modernist movement, consider the philosophical background and changes in historiography, and integrate a consideration of the visual arts and music. Course not offered every year
Also Offered As: ARTH 584, ENGL 563, GRMN 541
Activity: Seminar

COML 542 Topics in Eighteenth-Century British Literature
This course covers topics in eighteenth-century British literature. Its emphases varies with instructor. Course not offered every year
Also Offered As: GRMN 542
Activity: Seminar
1.0 Course Unit

COML 543 The Elemental Turn
The unfolding effects of climate change—rising sea level, melting ice sheets, subsiding land masses, drought stricken regions, wild fires, air laden with greenhouse gases, and inundated cities—heighen our awareness of the elements: air, earth, fire and water: Within the context of the new materialism, philosophers, eco-critics, and writers are re-turning to the elements and encountering, at the same time, predecessor texts that assume new relevance. This seminar will place current thinking and writing about the elements into dialogue with older traditions ranging from the classical (Empedocles, Plato, Lucretius) to writers and thinkers of the eighteenth, nineteenth and twentieth centuries (e.g., Goethe, Novalis, Tieck, Stifter, Bachelard, Heidegger, Boehme).
Taught by: Richter
Course not offered every year
Also Offered As: GRMN 535
Activity: Seminar
1.0 Course Unit

COML 545 Plato and Aristotle in the Renaissance
In one of the most evocative frescoes of the Renaissance, Raphael juxtaposes Plato and Aristotle. The pairing would seem obvious, since the two thinkers had been for centuries symbols of philosophy and wisdom. But only the recent revival of Plato, begun in the mid-fifteenth century, had allowed Latin West to gain a better understanding of Platonic philosophy and therefore to compare Plato's doctrines directly to those of Aristotle. Were master and disciple in harmony? And if not, which of the two should be favored? Such questions were less innocent than one might think, and the answers to them had implications for philosophy, theology, speculation on the natural world, and even politics The course will offer an overview of Renaissance philosophy and culture by focusing on the different ways in which Plato and Aristotle were read, interpreted and exploited between the fifteenth and seventeenth centuries. The course will be conducted in English; a basic knowledge of Latin is desirable but not required.
Taught by: Del Soldato
Course not offered every year
Also Offered As: CLST 540, ITAL 540, PHIL 545
Activity: Seminar
1.0 Course Unit

COML 550 Stalinist Culture
This course will explore the cultural context in which the so-called Romantic Movement prospered, and will pay special attention to the relationship between the most notorious popular genres of the period (Gothic fiction and drama) and the poetic production of both canonical and emerging poets.
Taught by: Platt
Course not offered every year

Activity: Seminar
1.0 Course Unit

COML 552 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance
In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Ficino, Pico della Mirandola Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructors. It counts toward the undergraduate minor in Global Medieval Studies and the graduate certificate in Global and Medieval Renaissance Studies. Undergraduates must obtain permission from instructor to enroll.

COML 554 British Women Writers
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825.
Course not offered every year
Also Offered As: ENGL 553, GSWS 553
Activity: Seminar
1.0 Course Unit

COML 555 Affect Theory and Power
This seminar will examine contemporary affect theory and its relationship with Michel Foucault’s theory of power. We will begin by mapping out Foucault’s ‘analytics of power’ from his early work on power knowledge to his late work on embodiment, desire, and the care of the self. We will then turn to affect theory, an approach which centralizes the non-rational, emotive force of power. No previous knowledge of theory is required.
Taught by: Schaefer
Also Offered As: GSWS 554, RELS 552
Activity: Seminar
1.0 Course Unit

COML 558 Major Renaissance Writers
This is a monographic course, which may be on Spenser, Milton, or other major figures of the period. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Taught by: Sanchez
Course not offered every year
Also Offered As: ENGL 538
Activity: Seminar
1.0 Course Unit

COML 559 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as ‘myth’ entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.

Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.

COML 562 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentorship to develop and execute cross-disciplinary, public engagement projects on the environment.
Taught by: Wiggin
Course not offered every year

Activity: Seminar
1.0 Course Unit

COML 564 Modern British Literature
An introduction to British Literary Modernism. Specific emphasis will depend on instructor.
Course not offered every year
Also Offered As: ENGL 564
Activity: Seminar
1.0 Course Unit

COML 565 Reading Benjamin Reading Kafka
Readings and discussions in English. Walter Benjamin’s study of the works of Franz Kafka is as enlightening as it can be bewildering. Moving from philology to Marxism, metaphysics to messianism, Daoism to Talmud, this densely argued piece elliptically touches on almost all of Kafka’s published works in just four short sections. This seminar proposes a line-by-line reading Benjamin’s 1934 ‘Franz Kafka on the Tenth Anniversary of His Death’ with an eye to its literary, philosophical and religious contexts as well as to the rich history of its intellectual reception. Reading Kafka’s works as the essay evokes them, we will situate this piece with regard to Benjamin’s other writings, the essay’s interlocutors (Brod, Scholem, Lukacs, Brecht) and its most illustrious interpreters (Adorno, Arendt, Celan, Hamacher).
Taught by: Fleishman
Course not offered every year
Also Offered As: GRMN 545, JWST 565
Activity: Seminar
1.0 Course Unit
COML 566 The Long Nineteenth Century: Literature, Philosophy, Culture
The present course will discuss German literature and thought from the period of the French Revolution to the turn of the twentieth century, and put it into a European context. In regard to German literature, this is the period that leads from the Storm and Stress and Romanticism to the political period of the Vormarz, Realism, and finally Expressionism; in philosophy, it moves from German Idealism to the philosophy of Schopenhauer, Nietzsche, and neo-Kantian thought. It is also the period that saw the rise of the novel, and new forms of dramatic works. Painting moved out of the studio into plein air; the invention of photography made an imprint on all arts, and the rise of the newspaper led to new literary genres such as the feuilleton. Economically, Germany experienced the industrial revolution; politically, it was striving for a unification that was finally achieved in 1871. The nineteenth century saw the establishment of the bourgeoisie, the emergence of the German working class, and the idea of the nation state; it also saw Jewish emancipation, and the call for women's rights. Readings will focus on a variety of literary, political, and philosophical texts; and consider a selection of art works.
Taught by: Weissberg
Course not offered every year
Also Offered As: ARTH 777, GRMN 558
Activity: Seminar
1.0 Course Unit

COML 570 Topics in Criticism & Theory
Topic for Spring 2021: Cultures of Reading in Imperial Russia What did it mean to be a reader in imperial Russia? What did people read, and to what ends? How was literacy cultivated, and what were the social implications? In this course, students will read several canonical works of nineteenth-century Russian literature that thematize and foreground the act of reading: as a pursuit undertaken for the betterment of self, society, nation, and world; as a light pastime for the bored or underemployed; but also as an enterprise fraught with potential for moral or civic ruin. In addition to closely investigating allusions to the specific texts and authors read by literary characters, we will also examine the reading habits of our own authors as both consumers and producers of literary culture. We will consider these dynamics against a backdrop of constant fluctuations in educational policies, the book market, and the circulation of texts within and beyond Russia as we work together to develop an understanding of the imperial Russian reading public(s).
Taught by: Kim, Brian
Course not offered every year
Also Offered As: ARTH 573, CIMS 515, ENGL 573, GRMN 573, REES 683
Activity: Seminar
1.0 Course Unit
Notes: This course covers topics in literary criticism and theory. It's specific emphasis varying with instructor.

COML 574 Faces of Love: Gender, Sexuality, and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and queerness in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.
Taught by: Shams
Course usually offered in fall term
Also Offered As: COML 275, GSWS 275, GSWS 575, NELC 290, NELC 574
Activity: Lecture
1.0 Course Unit
Notes: No prior knowledge of Persian is required as all literary works will be available in English translation. Students are expected to attend seminars and take part in discussions. Please note that this syllabus is subject to change.

COML 575 Topics in African Literature
This course is based on a selection of representative texts written in English, as well as a few texts in English translation. It involves, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions established writers in their use of old forms and experiments with new.

COML 579 Slavic Literary Theory in Western Context
This course will compare selected theoretical concepts advanced by Russian Formalists, Prague Structuralists, and the Bakhtin group (e.g., defamiliarization, aesthetic sign, dialogue) with similar or analogous notions drawn from Western intellectual tradition.
Taught by: Steiner, P.
Course not offered every year
Also Offered As: REES 575
Activity: Seminar
1.0 Course Unit
COML 580 Introduction to Bibliography
This course offers an introduction to the principles of descriptive and analytic bibliography and textual editing. The history of authorship, manuscript production, printing, publishing, and reading will be addressed as they inform an understanding of how a particular text came to be the way it is. Diverse theories of editing will be studied and put into practice with short passages. The course is generally suitable for students working in any historical period, but particular emphases specified in the current offerings on the English website. www.english.upenn.edu
Course offered fall; even-numbered years
Also Offered As: ENGL 574, HIST 574
Activity: Seminar
1.0 Course Unit

COML 582 Topics in Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.
Course not offered every year
Also Offered As: ARTH 560, GRMN 580, JWST 582, PHIL 480
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.

COML 583 Materialism
How do we recognize materialism? This seminar poses this question by acknowledging ‘materialism’ as a contested category with disparate and contradictory historical meanings: as a synonym for dogmatism, as the arch-enemy of reason and morality, as the scientific philosophy of the revolutionary workers’ movement, as an alternative to (idealist) metaphysics, as a poetic practice, or as a central concern for material nature and environment, among others. Less concerned with enumerating philosophical systems, we will search out ‘family resemblances’ and materialist tendencies among a wide range of texts. To this end, we will not only read the major historical texts of the so-called materialists (from Lucretius to Spinoza, from La Mettrie to Lenin), but also engage with materialism’s supposed critics and antagonists (from Plato to Kant and Hegel). A special emphasis will be placed on the attempts to recuperate materialism as a positive category in recent critical theory and continental philosophy, for example, in the reinventions of Marxist and Spinozist traditions. We will also survey the attempts that found new traditions, such as aleatory materialism or various new materialisms. By reading exemplary literary texts that engage with the problem of materialism the seminar will also ask: can one speak of materialist poetics?
Taught by: Biareishyk
Course not offered every year
Also Offered As: GRMN 572
Activity: Seminar
1.0 Course Unit

COML 589 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches – thematic, psychoanalytic, cultural, narratological – will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the ‘real,’ making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include ‘recits fantastiques’ by Merimee, Gautier, Nerval, Maupassant, Breton, Pieyre de Mandiargues, Jean Ray and others.
Course not offered every year
Also Offered As: CIMS 582, FREN 582
Activity: Seminar
1.0 Course Unit
COML 591 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as ‘foundational.’ Very often these texts have been epics or romances designated ‘medieval,’ that is, associated with the period in which specific vernaculars or ‘mother tongues’ first emerged. France and Germany, for example, have long fought over who ‘owns’ the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time these two countries go to war. In this course we will thus study both a range of ‘medieval’ texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow’s great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin’s Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called ‘Hindu epics’ can also be a delicate matter. Some ‘uses of the medieval’ have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark, is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory’s Morte Darthur was chosen to provide scenes for the queen’s new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Methodological models, which do not observe national boundaries, might be explored, and also the cultural history of waterscapes, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.

COML 593 Modern/Contemporary Italian Culture
This is a topics course. One topic may be ‘Futurism, Classicism, Fascism’ or ‘Philology and History.’ Please see the Comparative Literature website for the description.

One-term course offered either term
Also Offered As: ITAL 581, JWST 581
Activity: Seminar
1.0 Course Unit
**COML 608 Global France**
The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The extraordinary innovations of ‘ethnosurrealism’ in the twenties and thirties by such key figures of the avant-garde as Breton, Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring ‘anthropology as cultural critique’ in the United States. Besides the authors just indicated, key texts by Durkheim, Mauss and Levi-Strauss will be considered both on their own terms and in relation to their obvious influence. The institutional fate of these intellectual crossovers and their correlative disciplinary conflicts will provide the overarching historical frame for the course, from the turn of the century to the most recent debates.

Also Offered As: GRMN 612, JWST 612
Activity: Seminar
1.0 Course Unit

**COML 616 Approaches to Literary Texts**
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields. Master classes are taught by Kevin Brownlee, Linda Chance, Eva del Soldato, Huda Fakhreddine, Scott Francis, Nili Gold, Bridget Murnghan, Deven Patel, Kevin Platt, Michael Solomon, Emily Steiner, Julia Verkholantsev, and Emily Wilson.
Taught by: Verkholantsev

**COML 618 Medieval Poetics**
This course may include some of the following fields: studies of medieval stylistic practices, formal innovations, and theories of form; medieval ideas of genre and form; medieval thought about the social, moral, and epistemological roles of poetry; interpretive theory and practice; technologies of interpretation; theories of fiction (fabula) and allegory; sacred and secular hermeneutics; theories of language and the histories of the language arts; vernacular(s) and Latinity; material texts.
Course not offered every year
Also Offered As: CLST 628, ENGL 721
Activity: Seminar
1.0 Course Unit

**COML 620 Studies in the Eighteenth Century**
This course varies in its emphases, but in recent years has explored the theory of narrative both from the point of view of eighteenth-century novelists and thinkers as well as from the perspective of contemporary theory. Specific attention is paid to issues of class, gender, and ideology.
Course usually offered in fall term
Also Offered As: FREN 660
Activity: Seminar
1.0 Course Unit

**COML 622 Postmodernism**
An advanced seminar on postmodernist culture. Recently offered as a study of relationship between poetry and theory in contemporary culture, with readings in poststructuralist, feminist, marxist, and postcolonial theory and in poets of the Black Mountain and Language groups.
Course not offered every year
Also Offered As: ENGL 774
Activity: Seminar
1.0 Course Unit
COML 623 Literary History and Aesthetics in South Asia
This seminar surveys the multiple components of literary culture in South Asia. Students will engage critically with selected studies of literary history and aesthetics from the past two millennia. In order to introduce students to specific literary cultures (classical, regional, contemporary) and to the scholarly practices that situate literature in broader contexts of culture and society, the course will focus both on the literary theories - especially from the nineteenth and twentieth centuries - that position South Asia's literary cultures within broader disciplinary frameworks that use literary documents to inform social, historical and cultural research projects. The aim is to open up contexts whereby students can develop their own research projects using literary sources.
Taught by: Patel
Also Offered As: SAST 623
Activity: Seminar
1.0 Course Unit

COML 625 Global Perspectives in French Studies
This course explores the literal and literary landscapes of 19th-century Paris and Philadelphia, paying particular attention to the ways in which the built environment is shaped by and shapes shifting ideologies in the modern age. Although today the luxury and excesses of the 'City of Light' seem worlds apart from the Quaker simplicity of the 'City of Brotherly Love,' Paris and Philadelphia saw themselves as partners and mutual referents during the 1800s in many areas, from urban planning to politics, prisons to paleontology. This interdisciplinary seminar will include readings from the realms of literature, historical geography, architectural history, and cultural studies as well as site visits to Philadelphia landmarks, with a view to uncovering overlaps and resonances among different ways of reading the City. We will facilitate in-depth research by students on topics relating to both French and American architectural history, literature, and cultural thought.

COML 626 Nineteenth-Century Novels: Representations of Work
A study of the tradition of 'serio-comic' literature from ancient times to the present, focusing on works that combine ostensibly incompatible tones, genres, and themes to produce a particular sense of man in history. Readings include: the dialogues of Lucian, Petronius' SATYRICON, extracts from Rabelais and Boccaccio, GULLIVER'S TRAVELS, extracts from Sterne, and Gogol's DEAD SOULS. Students will be expected to attend a series of undergraduate lectures on these works; an additional hour will be scheduled in which the history and theory of menippean satire will be discussed. Special attention is given to general problems of genre theory that are raised by works that seem to challenge generic norms.
Course not offered every year
Also Offered As: SPAN 630
Activity: Seminar
1.0 Course Unit

COML 627 South Asia Literature as Comparative Literature
The extent to which the narrative reflexes of the novel can accommodate and express the nature of human work are explored primarily in a study of two nineteenth-century writers. Eliot and Hardy. Reading for the course also includes novels and short stories of other nineteenth-century writers (Dickens, Zola, tolstoy, Stowe, Melville), and background reading on the social and philosophic theory of work.

Notes: This is a topics course.

COML 632 The Sanskrit Epics
Ancient India's two epic poems, composed in Sanskrit and received in dozens of languages over the span of two thousand years, continue to shape the psychic, social, and emotional worlds of millions of people around the world. The epic Mahabharata, which roughly translates to The Great Story of the Descendants of the Legendary King Bharata, is the longest single poem in the world (100,000 lines of Sanskrit verse) and tells the mythic history of dynastic power struggles in ancient India. An apocalyptic meditation on time, death, and the utter devastation brought upon the individual and the family unit through social disintegration, the epic also houses one of the great religious works of the world, The Bhagavad Gita (translation: The Song of God), which offers a buoy of hope and possibility in the dark ocean of the epic's violent narrative. The other great epic, The Ramayana (Rama's Journey), though essentially tragic, offers a brighter vision of human life, how it might be possible to live happily in an otherwise hopeless situation. It too is about struggles for power in ancient India but it offers characters--especially Rama--that serve as ideals for how human beings might successfully negotiate life's great challenges. It also provides a model of human social order that contrasts with dystopic polities governed by animals and demons.
Our course will engage in close reading of selections from both of these epic poems (in English translation, of course) and thus learn about the epic genre, its oral and textual forms in South Asia, and the numerous modes for interpreting the epic. We will also look at the reception of these ancient works in modern forms of media, such as the novel, television, theater, cinema and the comic book/anime. In the process, through selected essays and reflections, we will pay special attention to the ways in which the ancient epics remain deeply relevant in the modern world, reflecting on topics such as the aesthetics of war, the psychic life of social ideals, and creative responses to ethical conflicts.

COML 657 Becoming Modern
Yuri Slezkine described the twentieth century as a ‘Jewish Age’—to be modern would essentially mean to be a Jew. In German historical and cultural studies, this linkage has long been made—only in reference to the last years of the German monarchy and the time of the Weimar Republic. Indeed, what has become known as ‘modern’ German culture—reflected in literature, music, and the visual arts and in a multitude of public media—has been more often than not assigned to Jewish authorship or Jewish subjects. But what do authorship and subject mean in this case? Do we locate the German-Jewish experience as the driving force of this new ‘modernity’, or is our understanding of this experience the result of this new ‘modern’ world?

COML 675 Topics in 19th Century Literature
Edgar Allan Poe was considered a vulgar hack by many of his fellow Americans, but in 19th-century France, he was touted as an ill-fated poetic genius, the original poete maudit. Through the translations and biographical essays of Charles Baudelaire, who found in Poe a kindred spirit in the ‘gout de l'infini,’ French intellectuals came to know the American writer as a model of compositional lucidity and morbid mastery. From his inklings of an urban modernity in ‘The Man in the Crowd’ to the neurotic perversity of ‘Berenice,’ Poe’s aesthetics have cast an influential shadow on French culture. Beginning with Baudelaire, we will explore in this course the many literary and artistic movements in France that were directly inspired by Poe’s uncanny mix of the macabre and the methodical: Symbolist poetry (Valery, Mallarme), the Scientific Fantastic (Maupassant, Villers de l’Isle-Adam), fin-de-siecle Decadence (Huysmanns,Odilon Redon), Science Fiction, (Verne), the detective novel (Gaboriau), and 20th-century Surrealism (Breton, Max Ernst).

COML 677 The Life of Forms: Ontogenesis, Morphology, Literature
In recent years, the notions of form, formalism, and morphology have reentered contemporary debates across the humanities. This seminar considers the current resurgence of interest in form by tracing form’s evolving concepts throughout modernity. It departs from the observation that experimentation with and debates on form in art and literature are inextricably linked to various notions of life and the living. These debates—this is the provisional thesis of the seminar—are the battlefield where literary and art criticism undermine the major presuppositions of the western metaphysical tradition (e.g., determinations of inside-outside, form-content, living-inorganic). On the one hand, the seminar will explore a selective genealogy of various attempts to dynamize the concept of form through theories of 1) ontogenesis (e.g., Spinoza, Simondon, Malabou), 2) morphology (e.g., Goethe, Propp, Goldstein), and 3) aesthetics (e.g., Baumgarten, Schlegel brothers, Adorno). On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines, including literary studies (literary morphology, Russian Formalism), art history (Focillon, Kubler), On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines ranging from literary studies (e.g., Jolles, Russian Formalism, Jauss), art history (e.g., Panofsky, Focillon, Kubler), philosophy (e.g., Wittgenstein, Blumenberg, Macherey), history of science (e.g., Vygotsky, Varela), and sociology (e.g., Tarde, DeLanda). Finally, the seminar will engage in close reading of exemplary literary and art works, and situate the findings on the conjunction of form and life in current debates on New Formalisms (e.g., Levine, Levinson, Kornbluh) and New Materialisms (e.g., Bennett, Grosz).

COML 683 Collective Violence, Trauma, and Representation
This seminar is organized as a laboratory space for graduate students and faculty working in a number of adjacent fields and problems. Seminar discussions will be led not only by the primary instructors, but also by a number of guests drawn from the Penn faculty. For the first weeks of the course, we will focus on seminal works in the interlinked areas of history and memory studies, cultural representations of collective violence, trauma studies, and other related topics. Beginning with the 8th week of the course, we will turn to case studies in a variety of geographic, cultural and historical contexts. Additionally, some later sessions of the course will be devoted to a presentation and discussion of a work in progress of a Penn graduate student, faculty member or a guest lecturer.

COML 685 Literary Criticism and Theory in Japanese Literature
While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japanese; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan’s position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese. This course will be taught in English and all texts will be read in English translation.

COML 700 African Literature and Society
An advanced seminar in anglophone African literature, possibly including a few works in translation.
Course not offered every year
Also Offered As: AFRC 775, ENGL 775
Activity: Seminar
1.0 Course Unit

COML 703 Topics in 16th-Century History and Culture
This is an advanced course treating topics in 16th Century history and culture particular emphasis varying with instructor.
Course not offered every year
Also Offered As: ENGL 730
Activity: Seminar
1.0 Course Unit

COML 710 Political Economy and Social History of Africa and the African Diaspora
This course provides the opportunity for students to investigate the relationship between the emergence of African peoples as historical subjects and their location within specific geopolitical and economic circumstances.
Taught by: Hanchard
Course not offered every year
Also Offered As: AFRC 710, LALS 710, PSCI 711
Activity: Seminar
1.0 Course Unit

COML 711 Theory in/and East Asia
‘Theory’ can be exciting and seductive to some scholars, but intimidating or pretentious to others. Unfortunately, this difference in feeling about theoretical scholarship and discussion has a tendency to produce a divide in academia between those who ‘do theory’ and those who do not. This graduate seminar pursues the question of how theory can be engaged in the context of East Asian cultural studies, with the goal of collectively working through texts to understand how theoretical reflection opens up possibilities for productive conversations across disciplinary boundaries. Many critiques have been made of the way ‘traveling theory’ serves as a Euro-American universal applied to the ‘raw material’ of East Asian texts, or a transdisciplinary common language in the Humanities and Social Sciences. Instead, we will take such critiques as a starting point to pragmatically and creatively explore the intersections and interactions of ‘theory’ and ‘East Asia,’ emphasizing the archival, historical, political, and institutional contexts that motivate theorization. In that spirit, special attention will be given to discussing what problems we find in our own work that require theoretical consideration, and how such considerations might contribute to, challenge, or transform but may also include Japanese, Chinese, or Korean depending on student interest and language abilities.
Taught by: Poland
Course not offered every year
Also Offered As: EALC 711
Activity: Seminar
1.0 Course Unit

COML 714 Middle English Literature
This seminar will study a number of selected Middle English texts in depth. Attention will be paid to the textual transmission, sources, language, genre, and structure of the works. Larger issues, such as the influence of literary conventions (for example, ‘courtly love’), medieval rhetoric, or medieval allegory will be explored as the chosen texts may require.
Course not offered every year
Also Offered As: CLST 610, ENGL 715
Activity: Seminar
1.0 Course Unit

COML 730 Topics in 16th-Century History and Culture
This is an advanced course treating topics in 16th Century history and culture particular emphasis varying with instructor.
Course not offered every year
Also Offered As: ENGL 730
Activity: Seminar
1.0 Course Unit
COML 734 Renaissance Drama
This is a topics course. For Spring 2015, the topic is Genre and Performative Media.
Taught by: Bushnell
Course not offered every year
Also Offered As: ENGL 734
Activity: Seminar
1.0 Course Unit

COML 736 Renaissance Studies
This is an advanced topics course treating some important issues in contemporary Renaissance studies.
Course not offered every year
Also Offered As: ENGL 736
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.

COML 738 Victorian British Literature
An advanced seminar treating some topics in Victorian British Literature, usually focusing on non-fiction or on poetry. See the Comparative Literature and Literary Theory Program's website for descriptions of the current offerings at http://ccat.sas.upenn.edu/Complit/
Also Offered As: ENGL 753
Activity: Seminar
1.0 Course Unit

COML 769 Feminist Theory
Specific topic varies. The seminar will bring together the study of early modern English literature and culture with histories and theories of gender, sexuality and race. Contact with 'the East' (Turkey, the Moluccas, North Africa and India) and the West (the Americas and the Caribbean) reshaped attitudes to identity and desire. How does this history allow us to understand, and often interrogate, modern theories of desire and difference? Conversely, how do postcolonial and other contemporary perspectives allow us to re-read this past?
Course not offered every year
Also Offered As: ENGL 769, GSWS 769, NELC 783, SAST 769
Activity: Seminar
1.0 Course Unit

COML 781 Writing Sound--Sounding Literature
Seminar on selected topics in sound studies. Please see department website http://ccat.sas.upenn.edu/Complit/ for current term course descriptions.
Taught by: Waltham-Smith
One-term course offered either term
Also Offered As: MUSC 781
Activity: Seminar

Activity: Seminar
1.0 Course Unit

COML 790 Recent Issues in Critical Theory
Course varies with instructor.
Course not offered every year
Also Offered As: ENGL 790, GSWS 790
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.
COML 791 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programing part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films—features, shorts, documentaries, and television shows—paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of ‘African film and media’; and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media? To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 20, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu. Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport.
Taught by: Redrobe/Woubshet
Course not offered every year
Also Offered As: AFRC 791, ARTH 791, CIMS 791, ENGL 777
Activity: Seminar
1.0 Course Unit

COML 981 M.A. Exam Prep
Course open to first-year Comparative Literature graduate students in preparation for required M.A. exam taken in spring of first year.
Course not offered every year
Activity: Seminar
1.0 Course Unit

COML 998 Independent Study and Research
Designed to allow students to pursue a particular research topic under the close supervision of an instructor.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

COML 999 Independent Reading and Research
May be taken for multiple course credit to a maximum of two for the M.A. and four for the Ph.D. Designed to allow students to broaden and deepen their knowledge of literary theory, a national literature, and/or an area of special interest.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Computer and Information Science (CIS)

CIS 099 Undergraduate Research/Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and techniques and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student’s academic level. To register for this course, the student must submit a detailed proposal, signed by the independent study supervisor, to the SEAS Office of Academic Programs (111 Towne) no later than the end of the ‘add’ period. Prerequisite: A maximum of 2 c.u. of CIS 099 may be applied toward the B.A.S. or B.S.E. degree requirements.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CIS 105 Computational Data Exploration
The primary goal of this course is to introduce computational methods of interacting with data. In this course, students will be introduced to the IPython programming environment. They will learn how to gather data, store it in appropriate data structures and then either write their own functions or use libraries to analyze and then display the salient information in that data. Data will be drawn from a variety of domains, including but not limited to travel, entertainment, politics, economics, biology etc.
For BA Students: Formal Reasoning and Analysis
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CIS 106 Visualizing the Past
Most people's information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of 'ancient, mysterious, and lost' civilizations, and tours often lead by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote and interpret the past? How can modern technologies be applied to do a better job at presenting what is difficult to experience firsthand? This class will focus on case studies, c and methods of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art. Each year, the studio-seminar focuses on a project. In addition to exploring general concepts of archaeology and the media, students will work in teams to produce an interactive, digital media exhibit using the latest modeling visualization programs for presenting the sacred landscape of the Inca capital of Cuzco, Peru. Cuzco is one of the most important UNESCO World Heritage sites and visited by nearly a million tourists a year. Potential class project include fly-throughs of architectural and landscape renderings, simulations of astronomy and cosmology, modeling of human behavior within architectural and landscape settings, and study artifacts in the Penn Museum.
One-term course offered either term
Also Offered As: ANTH 258
Activity: Lecture
1.0 Course Unit

CIS 110 Introduction to Computer Programming
Introduction to Computer Programming is the first course in our series introducing students to computer science. In this class you will learn the fundamentals of computer programming in Java, with emphasis on applications in science and engineering. You will also learn about the broader field of computer science and algorithmic thinking, the fundamental approach that computer scientists take to solving problems.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: See the CIS 110 website for information about registration in recitations and permission to register for closed sections of CIS 110. Counts as a Formal Reasoning course for College students.

CIS 120 Programming Languages and Techniques I
A fast-paced introduction to the fundamental concepts of programming and software design. This course assumes some previous programming experience, at the level of a high school computer science class or CIS110. (If you got at least 4 in the AP Computer Science A or AB exam, you will do great.) No specific programming language background is assumed: basic experience with any language (for instance Java, C, C++, VB, Python, Perl, or Scheme) is fine. If you have never programmed before, you should take CIS 110 first.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: This counts as a Formal Reasoning course for College students.

CIS 121 Programming Languages and Techniques II
This is a course about Algorithms and Data Structures using the JAVA programming language. We introduce the basic concepts about complexity of an algorithm and methods on how to compute the running time of algorithms. Then, we describe data structures like stacks, queues, maps, trees, and graphs, and we construct efficient algorithms based on these representations. The course builds upon existing implementations of basic data structures in JAVA and extends them for the structures like trees, studying the performance of operations on such structures, and the efficiency when used in real-world applications. A large project introducing students to the challenges of software engineering concludes the course.
Course usually offered in spring term
Prerequisites: CIS 120, 160
Activity: Lecture
1.0 Course Unit

CIS 125 Technology and Policy
Have you ever wondered why sharing music and video generates such political and legal controversies? Is information on your PC safe and should law enforcement be able to access information you enter on the Web? Will new devices allow tracking of your every move and every purchase? CIS 125 is focused on developing an understanding of existing and emerging technologies, along with the political, societal and economic impacts of those technologies. The technologies are spread across a number of engineering areas and each of them raise issues that are of current concern or are likely to be a future issue.
Activity: Lecture
1.0 Course Unit

CIS 160 Mathematical Foundations of Computer Science
What are the basic mathematical concepts and techniques needed in computer science? This course provides an introduction to proof principles and logic, functions and relations, induction principles, combinatorics and graph theory, as well as a rigorous grounding in writing and reading mathematical proofs.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CIS 181 The Quantum and the Computer
This Freshman Seminar is designed to be a very introductory exposition about Quantum Computation and Quantum Information Science. There are no formal physics, mathematics, or computer science prerequisites. It is meant primarily for freshmen in SAS and Wharton, who have an itch to learn about a beautiful subject that intrinsically unites quantum physics, computation, and information science. The structure of the course will be lecture-based using small-team based exercises for evaluation. The enrollment will be limited to 20 students. Freshmen standing.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: No Prior Physics, Mathematics, or Computer Science Experience required.

CIS 188 Special Topics
This course will be used for 'pilot versions' of new CIS courses of this type that the department is planning to offer. A given course will be offered as CIS 188 at most twice; after this, it will be assigned a permanent course number.
Taught by: Swapneel Sheth
Activity: Lecture
0.5 Course Units
CIS 189 Solving Hard Problems in Practice
What does Sudoku have in common with debugging, scheduling exams, and routing shipments? All of these problems are provably hard -- no one has a fast algorithm to solve them. But in reality, people are quickly solving these problems on a huge scale with complex systems and heuristics! In this course, we'll explore how researchers and organizations like Microsoft, Google, and NASA are solving these hard problems, and we'll get to use some of the tools they've built!
Taught by: Swapneel Sheth
Prerequisite: CIS 121
Activity: Lecture
0.5 Course Units

CIS 190 C++ Programming
This course will provide an introduction to programming in C++ and is intended for students who already have some exposure to programming in another language such as Java, C++ provides the programmer with a greater level of control over machine resources and are commonly used in situations where low level access or performance are important. This course will illuminate the issues associated with programming at this level and will cover issues such as explicit memory management, pointers, the compilation process and debugging. The course will involve several programming projects which will provide students with the experience they need to program effectively in these languages. This course assumes programming experience equivalent to CIS 110, CIS 120 or ESE 112.
One-term course offered either term
Prerequisite: CIS 240
Activity: Lecture
0.5 Course Units

CIS 191 Using and Understanding Unix and Linux
Unix, in its many forms, runs much of the world's computer infrastructure, from cable modems and cell phones to the giant clusters that power Google and Amazon. This half-credit course provides a thorough introduction to Unix and Linux. Topics will range from critical basic skills such as examin and editing files, compiling programs and writing shell scripts, to higher level topics such as the architecture of Unix and its programming model. The material learned is applicable to many classes, including CIS 240, CIS 331, CIS 341, CIS 371, and CIS 380.
One-term course offered either term
Prerequisite: CIS 110
Activity: Lecture
0.5 Course Units

CIS 192 Python Programming
Python is an elegant, concise, and powerful language that is useful for tasks large and small. Python has quickly become a popular language for getting things done efficiently in many in all domains: scripting, systems programming, research tools, and web development. This course will provide an introduction to this modern high-level language using hands-on experience through programming assignments and a collaborative final application development project.
One-term course offered either term
Prerequisite: CIS 120 OR ESE 112
Activity: Lecture
0.5 Course Units

CIS 193 C# Programming
C# is the premier programming language for the .NET framework. Over the last decade, the language has evolved to meet the needs of a variety of programming styles while supporting the ever-growing capabilities of the .NET runtime and libraries. This course provides a thorough introduction to the C# language and the .NET framework, building on the skills gained in the introductory programming courses (CIS 110, CIS 120, or ESE 112). In addition to providing the student with a solid background in C#, this course also explores topics that the .NET platform exposes such as object oriented design, .NET runtime internals, and others based on class interest. A series of short, weekly homework assignments reinforces the concepts introduced in class and a group-based final project of the students' design allows them to apply their C# knowledge toward a substantial problem.
One-term course offered either term
Prerequisite: CIS 110
Activity: Lecture
0.5 Course Units

CIS 194 Haskell
Haskell is a high-level, purely functional programming language with a strong static type system and elegant mathematical underpinnings. It is being increasingly used in industry by organizations such as Facebook, AT&T, and NASA, along with several financial firms. We will explore the joys of function programming, using Haskell as a vehicle. The aim of the course will be to allow you to use Haskell to easily and conveniently write practical programs. All are welcome, including those with no programming experience. Evaluation will be based on regular homework assignments and class participation.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CIS 195 Mobile App Development
This project-oriented course is centered around application development on current mobile platforms like iOS and Android. The first half of the course will involve fundamentals of mobile app development, where students learn about mobile app lifecycles, event-based programming, efficient resource management, and how to interact with the range of sensors available on modern mobile devices. In the second half of the course, students work in teams to conceptualize and develop a significant mobile application. Creativity and originality are highly encouraged! Prerequisite: CIS 120 or previous programming experience.
One-term course offered either term
Prerequisite: CIS 120
Activity: Lecture
0.5 Course Units

CIS 196 Ruby on Rails Web Development
This course will teach the fundamentals of developing web applications using Ruby on Rails, a rapid-development web framework developed by Basecamp, and adopted by companies like Airbnb, GitHub, Bloomberg, CrunchBase, and Shopify. The first part of the course will focus on Ruby, the language that powers Rails. Along the way, students will also pick up essential skills such as git, bash, HTML and CSS. The second part will focus on Rails, the web framework and will include all topics required to develop and deploy production-ready modern web applications with Rails. Throughout the course, students will be working on a web application project of their own choosing. Upon completion of the course, this application will be deployed and made accessible to the public.
Prerequisite: CIS 120
Activity: Lecture
0.5 Course Units
CIS 197 Javascript
This course provides an introduction to modern web development frameworks, techniques, and practices used to deliver robust client side applications on the web. The emphasis will be on developing JavaScript programs that run in the browser. Topics covered include the JavaScript language, web browser internals, the Document Object Model (DOM), HTML5, client-side app architecture and compile-to-JS languages like (CoffeeScript, TypeScript, etc.). This course is most useful for students who have some programming and web development experience and want to develop moderate JavaScript skills to be able to build complex, interactive applications in the browser.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CIS 198 Rust Programming
Rust is a new, practical, community-developed systems programming language that 'runs blazingly fast, prevents almost all crashes, and eliminates data ra (rust-lang.org). Rust derives from a rich history of languages to create a multi-paradigm (imperative/functional), low-level language that focuses on high-performance, zero-cost safety guarantee in concurrent programs. It has begun to gain traction in industry even before official 1.0 release in May 2015, showing a recognized need for a new low-level systems language. In this course, we will cover what makes Rust so unique and apply it to practical systems programming problems. Topics covered will include traits and generics; memory safety (move semantics, borrowing, and lifetimes); Rust’s rich macro system; closures; and concurrency. Evaluation is based on regular homework assignments as well as a final project and class participation.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CIS 223 Introduction to Data Ethics
This class introduces students to the basics of data ethics.
Taught by: Michael Kearns
One-term course offered either term
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 233 Introduction to Blockchain
Blockchain or Distributed Ledger Technology (DLT) provides a decentralized method of information sharing between parties that do not trust each other. Instead the trust is in the underlying cryptographic algorithms. This practical introductory course provides hands-on experience with the fundamentals of cryptography (codes and ciphers, symmetric and asymmetric encryption, public and private keys, hashes, and zero knowledge proofs) - as it is applied to implementing a blockchain solution. This course covers the basics of a distributed ledger, how it is built, used, and secured at the network and data-structure levels. Methods of ensuring consensus - from proof-of-work to more complex solutions (e.g. proof-of-time, proof-of-space, proof-of-stake) will be explored and analyzed. Students will have both written and practical, Python-based, assignments to build and deploy components of a blockchain solution.
One-term course offered either term
Prerequisite: CIS 120
Activity: Lecture
1.0 Course Unit

CIS 240 Introduction to Computer Systems
You know how to program, but do you know how computers really work? How do millions of transistors come together to form a complete computing system? This bottom-up course begins with transistors and simple computer hardware structures, continues with low-level programming using primitive machine instructions, and finishes with an introduction to the C programming language. This course is a broad introduction to all aspects of computer systems architecture and serves as the foundation for subsequent computer systems courses, such as Digital Systems Organization and Design (CIS 371), Computer Operating Systems (CIS 380), and Compilers and Interpreters (CIS 341).
Course usually offered in fall term
Prerequisite: CIS 110
Activity: Lecture
1.0 Course Unit

CIS 261 Discrete Probability, Stochastic Processes, and Statistical Inference
The purpose of this course is to provide a 1 CU educational experience which tightly integrates the theory and applications of discrete probability, discrete stochastic processes, and discrete statistical inference in the study of computer science. The intended audience for this class is both those students who are CS majors as well as those intending to be CS majors. Specifically, it will be assumed that the students will know: Set Theory, Mathematical Induction, Number Theory, Functions, Equivalence Relations, Partial-Order Relations, Combinatorics, and Graph Theory at the level currently covered in CIS 160. This course could be taken immediately following CIS 160. Computation and Programming will play an essential role in this course. The students will be expected to use the Maple programming environment in homework exercises which will include: numerical and symbolic computations, simulations, and graphical displays.
Course usually offered in fall term
Prerequisite: CIS 160
Activity: Lecture
1.0 Course Unit

CIS 262 Automata, Computability, and Complexity
This course explores questions fundamental to computer science such as which problems cannot be solved by computers, can we formalize computing as a mathematical concept without relying upon the specifics of programming languages and computing platforms, and which problems can be solved efficiently. The topics include finite automata and regular languages, context-free grammars and pushdown automata, Turing machines and undecidability, tractability and NP-completeness. The course emphasizes rigorous mathematical reasoning as well as connections to practical computing problems such as test processing, parsing, XML query languages, and program verification.
Course usually offered in fall term
Prerequisite: CIS 160
Activity: Lecture
1.0 Course Unit
CIS 320 Introduction to Algorithms
How do you optimally encode a text file? How do you find shortest paths in a map? How do you design a communication network? How do you route data in a network? What are the limits of efficient computation? This course gives a comprehensive introduction to design and analysis of algorithms, and answers along the way to these and many other interesting computational questions. You will learn about problem-solving; advanced data structures such as universal hashing and red-black trees; advanced design and analysis techniques such as dynamic programming and amortized analysis; graph algorithms such as minimum spanning trees and network flows; NP-completeness theory; and approximation algorithms.
Course usually offered in spring term
Prerequisites: CIS 120, 121, 160, 262
Activity: Lecture
1.0 Course Unit

CIS 331 Introduction to Networks and Security
This course introduces principles and practices of computer and network security. We will cover basic concepts, threat models, and the security mindset; an introduction to cryptography and cryptographic protocols including encryption, authentication, message authentication codes, hash functions, public-key cryptography, and secure channels; an introduction to networks and network security including IP, TCP, routing, network protocols, web architecture, attacks, firewalls, and intrusion detection systems; an introduction to software security including defensive programming, memory protection, buffer overflows, and malware; and discuss broader issues and case studies such as privacy, security and the law, digital rights management, denial of service, and ethics.
Course usually offered in fall term
Prerequisites: CIS 160, 240
Activity: Lecture
1.0 Course Unit

CIS 334 Advanced Topics in Algorithms
Can you check if two large documents are identical by examining a small number of bits? Can you verify that a program has correctly computed a function without ever revealing their scores to each other? Can you be convinced of the correctness of an assertion without ever seeing the proof? The answer to all these questions is in the affirmative provided we allow the use of randomization. Over the past few decades, randomization has emerged as a powerful resource for solving; advanced data structures such as universal hashing and red-black trees; advanced design and analysis techniques such as dynamic programming and amortized analysis; graph algorithms such as minimum spanning trees and network flows; NP-completeness theory; and approximation algorithms.
Course not offered every year
Activity: Lecture
1.0 Course Unit

CIS 341 Compilers and Interpreters
You know how to program, but do you know how to implement a programming language? In CIS341 you'll learn how to build a compiler. Topics covered include: lexical analysis, grammars and parsing, intermediate representations, syntax-directed translation, code generation, type checking, simple dataflow and control-flow analyses, and optimizations. Along the way, we study objects and inheritance, first-class functions (closures), data representation and runtime-support issues such as garbage collection. This is a challenging, implementation-oriented course in which students build a full compiler from a simple, typed object-oriented language to fully operational x86 assembly. The course projects are implemented using OCaml, but no knowledge of OCaml is assumed. Prerequisite: Two semesters of programming courses, e.g., CIS 120, 121, 240.
Course not offered every year
Activity: Lecture
1.0 Course Unit

CIS 350 Software Design/Engineering
You know how to write a 'program'. But how do you create a software 'product' as part of a team, with customers that have expectations of functionality and quality? This course introduces students to various tools (source control, automated build systems, programming environments, test automation, etc.) and processes (design, implementation, testing, and maintenance) that are used by professionals in the field of software engineering. Topics will include: software development lifecycle; agile and test-driven development; source control and continuous integration; requirements analysis; object-oriented design and testability; mobile and/or web application development; software testing; refactoring; and software quality metrics.
Course not offered every year
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 371 Computer Organization and Design
This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly programming, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipelining, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization.
Course usually offered in spring term
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit

CIS 380 Computer Operating Systems
This course surveys methods and algorithms used in modern operating systems. Concurrent distributed operation is emphasized. The main topics covered are as follows: process synchronization; interprocess communication; concurrent/distributed programming languages; resource allocation and deadlock; virtual memory; protection and security; distributed operation; distributed data; performance evaluation.
Course usually offered in fall term
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit
CIS 390 Robotics: Planning Perception
This introductory course will present basic principles of robotics with an emphasis to computer science aspects. Algorithms for planning and perception will be studied and implemented on actual robots. While planning is a fundamental problem in artificial intelligence and decision making, robot planning refers to finding a path from A to B in the presence of obstacles and by complying with the kinematic constraints of the robot. Perception involves the estimation of the robots motion and path as well as the shape of the environment from sensors. In this course, algorithms will be implemented in Python on mobile platforms on ground and in the air. No prior experience with Python is needed but we require knowledge of data structures, linear algebra, and basic probability. Course not offered every year
Prerequisite: CIS 121 AND MATH 240
Activity: Lecture
1.0 Course Unit

CIS 399 Quantum Computer and Information Science
The purpose of this course is to introduce undergraduate students in computer computer science and engineering to quantum computers (QC) and quantum information science (QIS). This course is meant primarily for juniors and seniors in Computer Science. No prior knowledge of quantum mechanics (QM) is assumed. Enrollment is by permission of the instructor.
One-term course offered either term
Prerequisites: PHYS 151, MATH 240, 312, 314, CIS 160 and 262
Activity: Lecture
1.0 Course Unit

CIS 398 Special Topics
Visit the CIS department website for descriptions of available Special Topics classes.
Course not offered every year
Activity: Lecture
0.5 Course Units
Notes: See the CIS department website for descriptions of available Special Topics classes

CIS 400 Senior Project
Design and implementation of a significant piece of work: software, hardware or theory. In addition, emphasis on technical writing and oral communication skills. Students must have an abstract of their Senior Project, which is approved and signed by a Project Adviser, at the end of the second week of Fall classes. The project continues during two semesters; students must enroll in CIS 401 during the second semester. At the end of the first semester, students are required to submit an intermediate report and give a class presentation describing their project and progress. Grades are based on technical writing skills (as per submitted report), oral presentation skills (as per class presentation) and progress on the project. These are evaluated by the Project Adviser and the Course Instructor. Senior standing or permission of instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 401 Senior Project
Continuation of CIS 400. Design and implementation of a significant piece of work: software, hardware or theory. Students are required to submit a final written report and give a final presentation and demonstration of their project. Grades are based on the report, the presentation and the satisfactory completion of the project. These are evaluated by the Project Adviser and the Course Instructor.
Course usually offered in spring term
Prerequisites: CIS 400, senior standing or permission of instructor
Activity: Lecture
1.0 Course Unit

CIS 410 CIS Senior Thesis
The goal of a Senior Thesis project is to complete a major research project under the supervision of a faculty member. The duration of the project is two semesters. To enroll in CIS 410, students must develop an abstract of the proposed work, and a member of the CIS graduate group must certify that the work is suitable and agree to supervise the project; a second member must agree to serve as a reader. At the end of the first semester, students must submit an intermediate report; if the supervisor and reader accept it, they can enroll in CIS 411. At the end of the second semester, students must describe their results in a written thesis and must present them publicly, either in a talk at Penn or in a presentation at a conference or workshop. Grades are based on the quality of the research itself (which should ideally be published or at least of publishable quality), as well as on the quality of the thesis and the oral presentation. The latter are evaluated jointly by the supervisor and the reader. The Senior Thesis program is selective, and students are generally expected to have a GPA is in the top 10-20% to qualify.
Activity: Senior Thesis
1.0 Course Unit

CIS 411 CIS Senior Thesis
The goal of a Senior Thesis project is to complete a major research project under the supervision of a faculty member. The duration of the project is two semesters. To enroll in CIS 410, students must develop an abstract of the proposed work, and a member of the CIS graduate group must certify that the work is suitable and agree to supervise the project; a second member must agree to serve as a reader. At the end of the first semester, students must submit an intermediate report; if the supervisor and reader accept it, they can enroll in CIS 411. At the end of the second semester, students must describe their results in a written thesis and must present them publicly, either in a talk at Penn or in a presentation at a conference or workshop. Grades are based on the quality of the research itself (which should ideally be published or at least of publishable quality), as well as on the quality of the thesis and the oral presentation. The latter are evaluated jointly by the supervisor and the reader. The Senior Thesis program is selective, and students are generally expected to have a GPA is in the top 10-20% to qualify.
Activity: Senior Thesis
1.0 Course Unit
CIS 419 Applied Machine Learning
Machine learning has been essential to the success of many recent technologies, including autonomous vehicles, search engines, genomics, automated medical diagnosis, image recognition, and social network analysis, among many others. This course will introduce the fundamental concepts and algorithms that enable computers to learn from experience, with an emphasis on their practical application to real problems. This course will introduce supervised learning (decision trees, logistic regression, support vector machines, Bayesian methods, neural networks and deep learning), unsupervised learning (clustering, dimensionality reduction), and reinforcement learning. Additionally, the course will discuss evaluation methodology and recent applications of machine learning, including large scale learning for big data and network analysis. One-term course offered either term
Also Offered As: CIS 519
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 421 Artificial Intelligence
This course investigates algorithms to implement resource-limited knowledge-based agents which sense and act in the world. Topics include, search, machine learning, probabilistic reasoning, natural language processing, knowledge representation and logic. After a brief introduction to the language, programming assignments will be in Python.
Also Offered As: CIS 521
Prerequisites: CIS 121 and ESE 301 or STAT 430
Activity: Lecture
1.0 Course Unit

CIS 423 Advanced Data Ethics
This class introduces aspiring data science technologists to the spectrum of ethical concerns, focusing on social norms like fairness, transparency and privacy. It introduces technical approaches to a number of these problems, including by hands-on examination of the tradeoffs in fairness and accuracy in predictive technology, introduction to differential privacy, and overview of evaluation conventions for predictive technology. It also provides guidelines for examining system training data for bias, representation (of race, gender and other characteristics) and ecological validity. Equipped with this knowledge, students will learn how to conduct informed analysis of the usefulness of predictive systems; they will audit for ethical concerns papers from the contemporary top artificial intelligence venues and the ongoing senior design projects.
Taught by: Michael Kearns
One-term course offered either term
Also Offered As: CIS 523
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 436 Introduction to Computational Biology & Biological Modeling
The goal of this course is to develop a deeper understanding of techniques and concepts used in Computational Biology. The course will strive to focus on a small set of approaches to gain both theoretical and practical understanding of the methods. We will aim to cover practical issues such as programming and the use of programs, as well as theoretical issues such as algorithm design, statistical data analysis, theory of algorithms and statistics. This course WILL NOT provide a broad survey of the field nor teach specific tools but focus on a deep understanding of a small set of topics. We will discuss string algorithms, hidden markov models, dimension reduction, and machine learning (or phylogeny estimation) for biomedical problems. Prerequisite: Probability theory and linear algebra are highly recommended.
Taught by: Kim
Course usually offered in fall term
Also Offered As: BIOL 437
Prerequisite: BIOL 446 AND MATH 104
Activity: Lecture
1.0 Course Unit

CIS 441 Embedded Software for Life-Critical Applications
The goal of this course is to give students greater design and implementation experience in embedded software development and to teach them how to model, design, verify, and validate safety critical systems in a principled manner. Students will learn the principles, methods, and techniques for building life-critical embedded systems, ranging from requirements and models to design, analysis, optimization, implementation, and validation. Topics will include modeling and analysis methods and tools, real-time programming paradigms and languages, distributed real-time systems, global time, time-triggered communications, assurance case, software architecture, evidence-based certification, testing, verification, and validation. The course will include a series of projects that implements life-critical embedded systems (e.g., pacemaker, infusion pumps, closed-loop medical devices).
One-term course offered either term
Also Offered As: CIS 541
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit

CIS 450 Database and Information Systems
This course provides an introduction to the broad field of database and information systems, covering a variety of topics relating to structured data, ranging from data modeling to logical foundations and popular languages, to system implementations. We will study the theory of relational and XML data design; the basics of query languages; efficient storage of data, execution of queries and query optimization; transactions and updates; web-database development; and 'big data' and NoSQL systems. The course assumes mathematical and programming experience equivalent to CIS160 and CIST21.
Course usually offered in fall term
Also Offered As: CIS 550
Prerequisites: CIS 121, 160
Activity: Lecture
1.0 Course Unit
CIS 455 Internet and Web Systems
This course focuses on the challenges encountered in building Internet and web systems: scalability, interoperability (of data and code), security and fault tolerance, consistency models, and location of resources, services, and data. We will examine how XML standards enable information exchange; how web services support cross-platform interoperability (and what their limitations are); how to build high-performance application servers; how 'cloud computing' services work; how to perform Akamai-like content distribution; and how to provide transaction support in distributed environments. We will study techniques for locating machines, resources, and data (including directory systems, information retrieval indexing, ranking, and web search); and we will investigate how different architectures support scalability (and the issues they face). We will also examine ideas that have been proposed for tomorrow's Web, and we will see some of the challenges, research directions, and potential pitfalls. An important goal of the course is not simply to discuss issues and solutions, but to provide hands-on experience with a substantial implementation project. This semester's project will be a peer-to-peer implementation of a Googles-style search engine, including distributed, scalable crawling; indexing with ranking; and even PageRank. As a side-effect of the material of this course you will learn about some aspects of large-scale software development assimilating large APIs. Prerequisite: Familiarity with threads and concurrency, strong Java programming skills.
One-term course offered either term
Also Offered As: CIS 555
Activity: Lecture
1.0 Course Unit

CIS 460 Interactive Computer Graphics
This course focuses on programming the essential mathematical and geometric concepts underlying modern computer graphics. Using 3D interactive implementations, it covers fundamental topics such as mesh data structures, transformation sequences, rendering algorithms, and curve interpolation for animation. Students are also introduced to two programming languages widely used in the computer graphics industry: C++ and GLSL. The curriculum is heavily project-based, and culminates in a group project focused on building an interactive first-person world exploration application using the various real-time interaction and rendering algorithms learned throughout the semester. Course usually offered in fall term
Also Offered As: CIS 560
Prerequisites: CIS 120, 121, 240
Activity: Lecture
1.0 Course Unit

CIS 461 Advanced Rendering
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping. Prerequisite: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
One-term course offered either term
Also Offered As: CIS 561
Activity: Lecture
1.0 Course Unit

CIS 462 Computer Animation
This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer game virtual reality simulations and high-end animation applications. The course balances theory with practice by 'looking under the hood' of current animation systems and authoring tools and examines the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents. Prerequisite: Previous exposure to major concepts inn linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.
One-term course offered either term
Also Offered As: CIS 562
Activity: Lecture
1.0 Course Unit

CIS 467 Scientific Computing
This course will focus on numerical algorithms and scientific computing techniques that are practical and efficient for a number of canonical science and engineering applications. Built on top of classical theories in multi-variable calculus and linear algebra (as a prerequisite), the lectures in this course will strongly focus on explaining numerical methods for applying these mathematical theories to practical engineering problems. Students will be expected to implement solutions and software tools using MATLAB/C++, practice state-of-the-art parallel computing paradigms, and learn scientific visualization techniques using modern software packages. Prerequisites: MATH 240, knowledge of C++, Python or MATLAB
Taught by: Chenfanfu Jiang
Also Offered As: CIS 567
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

CIS 471 Computer Organization and Design
This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly programming, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipeling, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization. Prerequisite: Knowledge of at least one programming language.
Taught by: Joseph Devietti
Course usually offered in spring term
Also Offered As: CIS 571
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit
**CIS 497 DMD Senior Project**
The goal of this course is to provide an opportunity for seniors to define, design, and execute a project of their own choosing that demonstrates the technical skill abilities that you have acquired during your 4 years as undergraduates. Evaluation is based on selecting an interesting topic, completing appropriate research on the state of the art in that area, communicating your objectives in writing and in presentations, accurately estimating what resources will be required and completing your chosen task, coding necessary functionality, and executing your plan. Senior Standing or Permission of the instructor. One-term course offered either term
Activity: Lecture
1.0 Course Unit

**CIS 498 Senior Capstone Project**
The Senior Capstone Project is required for all BAS degree students, in lieu of the senior design course. The Capstone Project provides an opportunity for the student to apply the theoretical ideas and tools learned from other courses. The project is usually applied, rather than theoretical, and should focus on a real-world problem related to the career goals of the student. The one-semester project may be completed in either the fall or spring term of the senior year, and must be done under the supervision of a sponsoring faculty member. To register for this course, the student must submit a detailed proposal, signed by the supervising professor and the student's faculty advisor, two weeks prior to the start of the term.
Taught by: Norman Badler
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**CIS 500 Software Foundations**
This course introduces basic concepts and techniques in the foundational study of programming languages. The central theme is the view of programs and programming languages as mathematical objects for which precise claims may be made and proved. Particular topics include operational techniques for formal definition of language features, type systems and type safety properties, polymorphism, constructive logic, and the Coq proof assistant. This course is appropriate as an upper-level undergraduate CIS elective. Undergraduates who have satisfied the prerequisites are welcome to enroll. No permission from the instructor is needed. Prerequisite: In addition to course prerequisites, at least two additional undergraduate courses in math or theoretical CS.
One-term course offered either term
Prerequisite: CIS 121 AND 160 AND 262
Activity: Lecture
1.0 Course Unit

**CIS 501 Computer Architecture**
This course is an introductory graduate course on computer architecture with an emphasis on a quantitative approach to cost/performance design tradeoffs. The course covers the fundamentals of classical and modern uniprocessor design: performance and cost issues, instruction sets, pipelining, superscalar, out-of-order, and speculative execution mechanisms, caches, physical memory, virtual memory, and I/O. Other topics include: static scheduling, VLIW and EPIC, software speculation, long (SIMD) and short (multimedia) vector execution, multithreading, and an introduction to shared memory multiprocessors. Knowledge of computer organization and basic programming skills.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**CIS 502 Analysis of Algorithms**
An investigation of paradigms for design and analysis of algorithms. The course will include dynamic programming, flows and combinatorial optimization algorithms, linear programming, randomization and a brief introduction to intractability and approximation algorithms. The course will include other advanced topics, time permitting. Prerequisite: Data Structures and Algorithms at the undergraduate level.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**CIS 505 Software Systems**
This course provides an introduction to fundamental concepts of distributed systems, and the design principles for building large scale computational systems. Topics covered include communication, concurrency, programming paradigms, naming, managing shared state, caching, synchronization, reaching agreement, fault tolerance, security, middleware, and distributed applications. This course is appropriate as an upper-level undergraduate CIS elective. Prerequisite: Undergraduate-level knowledge of Operating Systems and Networking, programming experience. Prerequisite: Undergraduate-level knowledge of Operating Systems and Networking.
One-term course offered either term
Prerequisite: CIT 594
Activity: Lecture
1.0 Course Unit

**CIS 511 Theory of Computation**
Review of regular and context-free languages and machine models. Turing machines and RAM models. Decidability, Halting problem, reductions, recursively enumerable sets, Universal TMs, Church/Turing thesis. Time and space complexity, hierarchy theorems, the complexity classes P, NP, PSPACE, L, NL, and co-NL. Reductions revisited, Cook-Levin Theorem, completeness, NL = co-NL. Advanced topics as time permits: Circuit complexity and parallel computation, randomized complexity, approximability, interaction and cryptography. Discrete Mathematics, Automata theory or Algorithms at the undergraduate level.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**CIS 515 Fundamentals of Linear Algebra and Optimization**
This course provides firm foundations in linear algebra and basic optimization techniques. Emphasis is placed on teaching methods and tools that are widely used in various areas of computer science. Both theoretical and algorithmic aspects will be discussed.
Taught by: Jean Gallier
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CIS 518 Topics in Logic: Finite Model Theory and Descriptive Complexity
This course will examine the expressive power of various logical languages over the class of finite structures. The course begins with an exposition of some of the fundamental theorems about the behavior of first-order logic in the context of finite structures, in particular, the Ehrenfeucht-Fraisse Theorem and the Trakhtenbrot Theorem. The first of these results is used to show limitations on the expressive power of first-order logic over finite structures while the second result demonstrates that the problem of reasoning about finite structures using first-order logic is surprisingly complex. The course then proceeds to consider various extensions of first-order logic including fixed-point operators, generalized quantifiers, infinitary languages, and higher-order languages. The expressive power of these extensions will be studied in detail and will be connected to various problems in the theory of computational complexity. This last motif, namely the relation between descriptive and computational complexity, will be one of the main themes of the course.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

CIS 519 Applied Machine Learning
Machine learning has been essential to the success of many recent technologies, including autonomous vehicles, search engines, genomics, automated medical diagnosis, image recognition, and social network analysis, among many others. This course will introduce the fundamental concepts and algorithms that enable computers to learn from experience, with an emphasis on their practical application to real problems. This course will introduce supervised learning (decision trees, logistic regression, support vector machines, Bayesian methods, neural networks and deep learning), unsupervised learning (clustering, dimensionality reduction), and reinforcement learning. Additionally, the course will discuss evaluation methodology and recent applications of machine learning, including large scale learning for big data and network analysis.
One-term course offered either term
Also Offered As: CIS 419
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 520 Machine Learning
This course covers the foundations of statistical machine learning. The focus is on probabilistic and statistical methods for prediction and clustering in high dimensions. Topics covered include linear and logistic regression, SVMs, PCA and dimensionality reduction, EM and HMMs, and deep learning. Elementary probability, calculus, and linear algebra. Basic programming experience.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 521 Artificial Intelligence
This course investigates algorithms to implement resource-limited knowledge-based agents which sense and act in the world. Topics include, search, machine learning, probabilistic reasoning, natural language processing, knowledge representation and logic. After a brief introduction to the language, programming assignments will be in Python.
One-term course offered either term
Also Offered As: CIS 421
Prerequisites: CIS 121 and ESE 301 or STAT 430
Activity: Lecture
1.0 Course Unit

CIS 522 Deep Learning for Data Science
Deep learning techniques now touch on data systems of all varieties. Sometimes, deep learning is a product; sometimes, deep learning optimizes a pipeline; sometimes, deep learning provides critical insights; sometimes, deep learning sheds light on neuroscience or vice versa. The purpose of this course is to deconstruct the hype by teaching deep learning theories, models, skills, and applications that are useful for applications.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 523 Advanced Data Ethics
This class introduces aspiring data science technologists to the spectrum of ethical concerns, focusing on social norms like fairness, transparency and privacy. It introduces technical approaches to a number of these problems, including by hands-on examination of the tradeoffs in fairness and accuracy in predictive technology, introduction to differential privacy, and overview of evaluation conventions for predictive technology. It also provides guidelines for examining system training data for bias, representation (of race, gender and other characteristics) and ecological validity. Equipped with this knowledge, students will learn how to conduct informed analysis of the usefulness of predictive systems; they will audit for ethical concerns papers from the contemporary top artificial intelligence venues and the ongoing senior design projects.
Taught by: Michael Kearns
One-term course offered either term
Also Offered As: CIS 423
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 526 Machine Translation
Google translate can instantly translate between any pair of over fifty human languages (for instance, from French to English). How does it do that? Why does it make the errors that it does? And how can you build something better? Modern translation systems like Google Translate and Bing Translator learn how to translate by reading millions of words of already translated text, and this course will show you how they work. The course covers a diverse set of fundamental building blocks from linguistics, machine learning, algorithms, data structures, and formal language theory, along with their application to a real and difficult problem in artificial intelligence.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 530 Computational Linguistics
Computational approaches to the problem of understanding and producing natural language text and speech, including speech processing, syntactic parsing, semantic interpretation, discourse meaning, and the role of pragmatics and world knowledge. The course will examine both rule-based and corpus-based techniques. It is recommended that students have some knowledge of logic, basic linguistics, and/or programming.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CIS 535 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 437/GCB 536 and GCB/CIS/BIOL 537 are more appropriate. Prerequisites: An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as Biol 526 (Experimental Principles in Cell and Molecular Biology), BIOL 527 (Advanced Molecular Genetics), BIOL 540 (Genetic Systems), or equivalent, is a prerequisite.
Taught by: B Voight, C Greene
Course usually offered in spring term
Also Offered As: GCB 535, MTR 535, PHRM 535
Prerequisite: BIOL 421 OR BIOL 526 OR BIOL 527 OR BIOL 528 OR BIOL 540
Activity: Lecture
1.0 Course Unit

CIS 536 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the ‘pencil and paper’ level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems-level analysis. Prerequisite: College level introductory biology required; undergraduate or graduate level statistics taken previously or concurrently required; molecular biology and/or genetics encouraged; programming experience encouraged.
Taught by: Kim
Course usually offered in fall term
Also Offered As: BIOL 536, GCB 536
Prerequisite: ((BIOL 101 AND BIOL 102) OR BIOL 121) AND STAT 111 AND STAT 112
Activity: Lecture
1.0 Course Unit

CIS 537 Biomedical Image Analysis
This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomaterials imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods. Prerequisite: Mathematics through multivariate calculus (MATH 241), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics.
One-term course offered either term
Also Offered As: BE 537
Activity: Lecture
1.0 Course Unit

CIS 540 Principles of Embedded Computation
This course is focused on principles underlying design and analysis of computational elements that interact with the physical environment. Increasingly, such embedded computers are everywhere, from smart cameras to medical devices to automobiles. While the classical theory of computation focuses on the function that a program computes, to understand embedded computation, we need to focus on the reactive nature of the interaction of a component with its environment via inputs and outputs, the continuous dynamics of the physical world, different ways of communication among components, and requirements concerning safety, timeliness, stability, and performance. Developing tools for approaching design, analysis, and implementation of embedded systems in a principled manner is an active research area. This course will attempt to give students a coherent introduction to this emerging area. This course is appropriate as an upper-level undergraduate CIS elective. This course assumes mathematical maturity, commensurate with either ESE 210 (Introduction to Dynamical Systems), or CIS 262 (Introduction to Theory of Computation). It is suitable for students who have an undergraduate degree in computer science, or computer engineering, or electrical engineering. It is also suitable for Penn undergraduates in CIS or CE as an upper-level elective.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 541 Embedded Software for Life-Critical Applications
The goal of this course is to give students greater design and implementation experience in embedded software development and to teach them how to model, design, verify, and validate safety critical systems in a principled manner. Students will learn the principles, methods, and techniques for building life-critical embedded systems, ranging from requirements and models to design, analysis, optimization, implementation, and validation. Topics will include modeling and analysis methods and tools, real-time programming paradigms and languages, distributed real-time systems, global time, time-triggered communications, assurance case, software architecture, evidence-based certification, testing, verification, and validation. The course will include a series of projects that implements life-critical embedded systems (e.g., pacemaker, infusion pumps, closed-loop medical devices).
One-term course offered either term
Also Offered As: CIS 441
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit
CIS 542 Embedded Systems Programming
This course explores techniques for writing correct and efficient embedded code. Topics include C/C++ idioms, data abstraction, elementary data structures and algorithms, environment modeling, concurrency, hard real time, and modular program reasoning. C proficiency. One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 545 Big Data Analytics
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CIS 547 Software Analysis
This course covers the theory and practice of software analysis - a body of algorithms and techniques to reason about program behavior with applications to effectively test, debug, and secure large, complex codebases. The course surveys a wide range of applications of software analysis including proving the absence of common programming errors, discovering and preventing security vulnerabilities, systematically testing intricate data structures and libraries, and localizing root causes in complex software failures. Familiarity with programming (CIS 120), algorithms (CIS 121), and mathematical foundations (CIS 160). Specifically: - Assignments involve programming in C/C++ in the LLVM compiler infrastructure. - Lectures and exams presume knowledge of search and graph algorithms, and background in logic and probability.
Taught by: Mayur Naik
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 548 Operating Systems Design and Implementation
The purpose of this masters-level course is to teach the design and implementation of operating systems and operating systems concepts that appear in other advanced systems. The course divides into three major sections. The first part of the course discusses concurrency: how to manage multiple tasks that execute at the same time and share resources. Topics in this section include processes and threads, context switching, synchronization, scheduling, and deadlock. The second part of the course addresses the problem of memory management; it will cover topics such as linking, dynamic memory allocation, dynamic address translation, virtual memory, and demand paging. The third major part of the course concerns file systems, including topics such as storage devices, disk management and scheduling, directories, protection, and crash recovery. After these three major topics, the class will conclude with specialized topics such as virtual machines and case studies of different operating systems (e.g. Android, Windows, Linux, etc.).
One-term course offered either term
Activity: Lecture
1.0 Course Unit

Notes: This is considered a faster-paced version of the CIS 380 taken by Penn undergraduates. Due to topic overlaps, undergraduates who have taken CIS 380 will not get credit for taking this course. Undergraduates who have taken CIS 380 should directly proceed to take CIS 505 if they are submatriculating.

CIS 549 Wireless Communications for Mobile Networks and Internet of Things
This course covers generations of wireless mobile network standards and systems, basic differences and their evolution, charting the development of mobile telecommunications systems from 3G, to today's state-of-the-art wireless technology 4G LTE, and the next generation wireless technology, 5G.
Taught by: Bongho Kim
One-term course offered either term
Prerequisite: ESE 407 or CIS 505 or 551 or 553
Activity: Lecture
1.0 Course Unit

CIS 550 Database and Information Systems
This course provides an introduction to the broad field of database and information systems, covering a variety of topics relating to structured data, ranging from data modeling to logical foundations and popular languages, to system implementations. We will study the theory of relational and XML data design; the basics of query languages; efficient storage of data, execution of queries and query optimization; transactions and updates; web-database development; and 'big data' and NoSQL systems. The course assumes mathematical and programming experience equivalent to CIS160 and CIS121.
Taught by: Susan Davidson
Course usually offered in fall term
Also Offered As: CIS 450
Prerequisites: CIS 121, 160
Activity: Lecture
1.0 Course Unit

CIS 551 Computer and Network Security.
This is an introduction to topics in the security of computer systems and communication on networks of computers. The course covers four major areas: fundamentals of cryptography, security for communication protocols, security for operating systems and mobile programs, and security for electronic commerce. Sample specific topics include: passwords and offline attacks, DES, RSA,DSA, SHA, SSL, CBC, IPSec, SET, DDoS attacks, biometric authentication, PKI, smart cards, S/MIME, privacy on the Web, viruses, security models, wireless security, and sandboxing. Students will be expected to display knowledge of both theory and practice through written examinations and programming assignments.
Taught by: Sebastian Angel
Course usually offered in spring term
Prerequisite: CIS 160 AND 240
Activity: Lecture
1.0 Course Unit

CIS 552 Advanced Programming
The goals of this course are twofold: (1) to take good programmers and turn them into excellent ones, and (2) to introduce them to a range of modern software engineering practices, in particular those embodied in advanced functional programming languages. Four courses involving significant programming and a discrete mathematics or modern algebra course. Enrollment by permission of the instructor only.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CIS 553 Networked Systems
This course provides an introduction to fundamental concepts in the design and implementation of networked systems, their protocols, and applications. Topics to be covered include: Internet architecture, network applications, addressing, routing, transport protocols, network security, and peer-to-peer networks. The course will involve written assignments, examinations, and programming assignments. Students will work in teams to design and implement networked systems in layers, from routing protocols, transport protocols, to peer-to-peer networks.
One-term course offered either term
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 554 Programming Paradigms
Achieving mastery in a new programming language requires more than just learning a new syntax; rather, different languages support different ways to think about solving problems. Not all programming languages are inherently procedural or object-oriented. The intent of this course is to provide a basic understanding of a wide variety of programming paradigms, such as logic programming, functional programming, concurrent programming, rule-based programming, and others.
One-term course offered either term
Prerequisite: CIS 121 OR CIT 594
Activity: Lecture
1.0 Course Unit

CIS 555 Internet and Web Systems
This course focuses on the challenges encountered in building Internet and web systems: scalability, interoperability (of data and code), security and fault tolerance, consistency models, and location of resources, services, and data. We will examine how XML standards enable information exchange; how web services support cross-platform interoperability (and what their limitations are); how to build high-performance application servers; how 'cloud computing' services work; how to perform Akamai-like content distribution; and how to provide transaction support in distributed environments. We will study techniques for locating machines, resources, and data (including directory systems, information retrieval indexing, ranking, and web search); and we will investigate how different architectures support scalability (and the issues they face). We will also examine ideas that have been proposed for tomorrow's Web, and we will see some of the challenges, research directions, and potential pitfalls. An important goal of the course is not simply to discuss issues and solutions, but to provide hands-on experience with a substantial implementation project. This semester's project will be a peer-to-peer implementation of a Google-style search engine, including distributed, scalable crawling; indexing with ranking; and even PageRank. As a side-effect of the material of this course you will learn about some aspects of large-scale software development assimilating large APIs, thinking about modularity, reading other people's code, managing versions, debugging, etc. Prerequisite: Familiarity with threads and concurrency, strong Java programming skills.
One-term course offered either term
Also Offered As: CIS 455
Activity: Lecture
1.0 Course Unit

CIS 556 Cryptography
This course is a graduate-level introduction to cryptography, both theory and applications. Topics covered include symmetric cryptography, message authentication, public-key cryptography, digital signatures, cryptanalysis, cryptographic security, and secure channels, as well as a selection of more advanced topics such as zero-knowledge proofs, secure multiparty computation, privacy-enhancing technologies, or lattice-based cryptography.
One-term course offered either term
Prerequisites: CIS 262, 320
Activity: Lecture
1.0 Course Unit

CIS 557 Programming for the Web
This course will focus on web programming. The first half will focus on the basics of the internet and the Web, HTML and CSS, and basic and advanced Ruby. The second half will focus on Rails. Teams (of size 2-3) will build a web application in the second half of the semester as the class project. Through Rails, we'll explore the 'culture' of web programming such as agile methodology, testing, key aspects of software engineering, using web services and APIs, and deploying to the cloud.
Prerequisites: CIS 121, CIT 594, or equivalent, or permission of the instructor
Activity: Lecture
1.0 Course Unit

CIS 559 Programming and Problem Solving
This course develops students problem solving skills using techniques that they have learned during their CS training. Over the course of the semester, students work on group projects in which they use programming techniques to solve open-ended problems, e.g. optimization, simulation, etc. There are no 'correct' answers to these problems; rather, the focus is on the four steps of the problem solving process: algorithmic thinking; programming; analysis; and communication. Prerequisite: Proficiency in Java.
One-term course offered either term
Prerequisite: CIS 320 OR CIS 502
Activity: Lecture
1.0 Course Unit

CIS 560 Interactive Computer Graphics
This course focuses on programming the essential mathematical and geometric concepts underlying modern computer graphics. Using 3D interactive implementations, it covers fundamental topics such as mesh data structures, transformation sequences, rendering algorithms, and curve interpolation for animation. Students are also introduced to two programming languages widely used in the computer graphics industry: C++ and GLSL. The curriculum is heavily project-based, and culminates in a group project focused on building an interactive first-person world exploration application using the various real-time interaction and rendering algorithms learned throughout the semester.
Course usually offered in fall term
Also Offered As: CIS 460
Prerequisites: CIS 120, 121, 240
Activity: Lecture
1.0 Course Unit
CIS 561 Advanced Computer Graphics
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping. Prerequisite: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
One-term course offered either term
Also Offered As: CIS 461
Activity: Lecture
1.0 Course Unit

CIS 562 Computer Animation
This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer games, virtual reality simulations and high-end animation applications. The course balances theory with practice by "looking under the hood" of current animation systems and authoring tools and examines the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents. Prerequisite: Previous exposure to major concepts in linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.
One-term course offered either term
Also Offered As: CIS 462
Activity: Lecture
1.0 Course Unit

CIS 563 Physically Based Animation
This course introduces students to common physically based simulation techniques for animation of fluids and gases, rigid and deformable solids, cloth, explosions, fire, smoke, virtual characters, and other systems. Physically based simulation techniques allow for creation of extremely realistic special effects for movies, video games and surgical simulation systems. We will learn state-of-the-art techniques that are commonly used in current special effects and animation studios and in video games community. To gain hands-on experience, students will implement basic simulators for several systems. The topics will include: Particle Systems, Mass spring systems, Deformable Solids & Fracture, Cloth, Explosions & Fire, Smoke, Fluids, Deformable active characters, Simulation and control of rigid bodies, Rigid body dynamics, Collision detection and handling, Simulation of articulated characters, Simulated characters in games. The course is appropriate for both upper level undergraduate and graduate students. Prerequisite: Students should have a good knowledge of object-oriented programming (C++) and basic familiarity with linear algebra and physics. Background in computer graphics is required (CIS 461 and 561).
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 564 Game Design and Development
The intent of the course is to provide students with a solid theoretical understanding of the core creative principles, concepts, and game play structures/schemas underlying most game designs. The course also will examine game development from an engineering point of view, including: game play mechanics, game engine software and hardware architectures, user interfaces, design documents, playtesting and production methods. Basic understanding of 3D graphics and animation principles, prior exposure to scripting and programming languages such as Python, C and C++
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 565 GPU Programming and Architecture
This course examines the architecture and capabilities of modern GPUs. The graphics processing unit (GPU) has grown in power over recent years, to the point where many computations can be performed faster on the GPU than on a traditional CPU. GPUs have also become programmable, allowing them to be used for a diverse set of applications far removed from traditional graphics settings. Topics covered include architectural aspects of modern GPUs, with a special focus on their streaming parallel nature, writing programs on the GPU using high level languages like Cg and BrookGPU, and using the GPU for graphics and general purpose applications in the area of geometry modeling, physical simulation, scientific computing and games. Students are expected to have a basic understanding of computer architecture and graphics, and should be proficient in OpenGL and C/C++. This course is appropriate as an upper-level undergraduate CIS elective. CIS 460 or CIS 560, and familiarity with computer hardware/systems. The hardware/systems requirement may be met by CIS 501; or CIT 593 and 595; or CIS 240 (with CIS 371 recommended); or equivalent coursework.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 566 Procedural Computer Graphics
Sprawling cities, dense vegetation, infinite worlds - procedural graphics empower technical artists to quickly create complex digital assets that would otherwise be unfeasible. This course is intended to introduce the mathematical and algorithmic foundations of procedural modeling and animation techniques, and to offer hands-on experience designing and implementing visual recipes in original graphics projects by applying these methods. Students should have a strong interest in both the creative and technical aspects of computer graphics, as well as a solid programming background.
One-term course offered either term
Prerequisite: CIS 460 OR CIS 560
Activity: Lecture
1.0 Course Unit
CIS 567 Scientific Computing
This course will focus on numerical algorithms and scientific computing techniques that are practical and efficient for a number of canonical science and engineering applications. Built on top of classical theories in multi-variable calculus and linear algebra (as a prerequisite), the lectures in this course will strongly focus on explaining numerical methods for applying these mathematical theories to practical engineering problems. Students will be expected to implement solutions and software tools using MATLAB/C++, practice state-of-the-art parallel computing paradigms, and learn scientific visualization techniques using modern software packages. Prerequisites: MATH 240, knowledge of C++, Python or MATLAB
Taught by: Chenfanfu Jiang
One-term course offered either term
Also Offered As: CIS 467
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

CIS 568 Game Design Practicum
The objective of the game design practicum is to provide students with hands on experience designing and developing 3D computer games. Working in teams of three or four, students will brainstorm an original game concept, write a formal game design document then develop a fully functional prototype consisting of a playable level of the game. In addition to creation of original art and animation assets for the game, technical features to be designed and implemented include a novel game mechanic and/or user interaction model, game physics (i.e. particle systems and rigid body dynamics), character animation, game AI (i.e. movement control, path planning, decision making, etc.), sound effects and effects and background music, 2D graphical user interface (GUI) design and optional multiplayer networking capabilities. Consistent with standard industry practices, game code and logic will be written using C++ and popular scripting languages such as Python and Lua. State-of-the-art game and physics engine middleware also will be used to expose students to commercial-grade software, production methodologies and art asset pipelines. As a result of their game development efforts, students will learn first hand about the creative process, design documentation, object-oriented software design and engineering, project management (including effective team collaboration and communication techniques), design iteration through user feedback and play-testing, and most importantly, what makes a game fun to play.
One-term course offered either term
Prerequisite: CIS 460 OR CIS 461 OR CIS 462 OR CIS 560 OR CIS 561 OR CIS 562
Corequisite: CIS 564
Activity: Lecture
1.0 Course Unit

CIS 569 Machine Perception
An introduction to the problems of computer vision and other forms of machine perception that can be solved using geometrical approaches rather than statistical methods. Emphasis will be placed on both analytical and computational techniques. This course is designed to provide students with an exposure to the fundamental mathematical and algorithmic techniques that are used to tackle challenging image based modeling problems. The subject matter of this course finds application in the fields of Computer Vision, Computer Graphics and Robotics. Some of the topics to be covered include: Projective Geometry, Camera Calibration, Image Formation, Projective, Affine and Euclidean Transformations, Computational Stereopsis, and the recovery of 3D structure from multiple 2D images. This course will also explore various approaches to object recognition that make use of geometric techniques, these would include alignment based methods and techniques that exploit geometric invariants. In the assignments for this course, students will be able to apply the techniques to actual computer vision problems. This course is appropriate as an upper-level undergraduate CIS elective. A solid grasp of the fundamentals of linear algebra. Some knowledge of programming in C and/or Matlab
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 570 Machine Perception
An introduction to the problems of computer vision and other forms of machine perception that can be solved using geometrical approaches rather than statistical methods. Emphasis will be placed on both analytical and computational techniques. This course is designed to provide students with an exposure to the fundamental mathematical and algorithmic techniques that are used to tackle challenging image based modeling problems. The subject matter of this course finds application in the fields of Computer Vision, Computer Graphics and Robotics. Some of the topics to be covered include: Projective Geometry, Camera Calibration, Image Formation, Projective, Affine and Euclidean Transformations, Computational Stereopsis, and the recovery of 3D structure from multiple 2D images. This course will also explore various approaches to object recognition that make use of geometric techniques, these would include alignment based methods and techniques that exploit geometric invariants. In the assignments for this course, students will be able to apply the techniques to actual computer vision problems. This course is appropriate as an upper-level undergraduate CIS elective. A solid grasp of the fundamentals of linear algebra. Some knowledge of programming in C and/or Matlab
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 571 Computer Organization and Design
This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly programming, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipelining, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization. Prerequisite: Knowledge of at least one programming language.
Taught by: Joseph Devietti
Course usually offered in spring term
Also Offered As: CIS 471
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit

CIS 573 Software Engineering
This course covers the theory and practice of software analysis -- a body of algorithms and techniques to reason about program behavior with applications to effectively test, debug, and secure large, complex codebases. The course surveys a wide range of applications of software analysis including proving the absence of common programming errors, discovering and preventing security vulnerabilities, systematically testing intricate data structures and libraries, and localizing root causes in complex software failures. Topics covered include dataflow analysis, constraint-based analysis, type systems, program specifications, randomized testing, automated debugging, and symbolic execution. Prerequisite: Proficiency in Java.
Course usually offered in fall term
Prerequisite: CIT 594 OR CIS 350
Activity: Lecture
1.0 Course Unit

CIS 574 Software Engineering
This course covers the theory and practice of software analysis -- a body of algorithms and techniques to reason about program behavior with applications to effectively test, debug, and secure large, complex codebases. The course surveys a wide range of applications of software analysis including proving the absence of common programming errors, discovering and preventing security vulnerabilities, systematically testing intricate data structures and libraries, and localizing root causes in complex software failures. Topics covered include dataflow analysis, constraint-based analysis, type systems, program specifications, randomized testing, automated debugging, and symbolic execution. Prerequisite: Proficiency in Java.
Course usually offered in spring term
Also Offered As: CIS 471
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit

CIS 580 Machine Perception
An introduction to the problems of computer vision and other forms of machine perception that can be solved using geometrical approaches rather than statistical methods. Emphasis will be placed on both analytical and computational techniques. This course is designed to provide students with an exposure to the fundamental mathematical and algorithmic techniques that are used to tackle challenging image based modeling problems. The subject matter of this course finds application in the fields of Computer Vision, Computer Graphics and Robotics. Some of the topics to be covered include: Projective Geometry, Camera Calibration, Image Formation, Projective, Affine and Euclidean Transformations, Computational Stereopsis, and the recovery of 3D structure from multiple 2D images. This course will also explore various approaches to object recognition that make use of geometric techniques, these would include alignment based methods and techniques that exploit geometric invariants. In the assignments for this course, students will be able to apply the techniques to actual computer vision problems. This course is appropriate as an upper-level undergraduate CIS elective. A solid grasp of the fundamentals of linear algebra. Some knowledge of programming in C and/or Matlab
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CIS 581 Computer Vision & Computational Photography
This is an introductory course to Computer Vision and Computational Photography. This course will explore three topics: 1) image morphing, 2) image matching and stitching, and 3) image recognition. This course is intended to provide a hands-on experience with interesting things to do on images/videos. The world is becoming image-centric. Cameras are now found everywhere, in our cell phones, automobiles, even in medical surgery tools. Computer vision technology has led to latest innovations in areas such as Hollywood movie production, medical diagnosis, biometrics, and digital library. This course is suited for students from all Engineering backgrounds, who have the basic knowledge of linear algebra and programming, and a lot of imagination.
Taught by: Jianbo Shi
Course not offered every year
Activity: Lecture
1.0 Course Unit

CIS 597 Master's Thesis Research
For students working on an advanced research leading to the completion of a Master's thesis.
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

CIS 599 Independent Study for Masters Students
For master's students studying a specific advanced subject area in computer and information science. Involves coursework and class presentations. A CIS 599 course unit will invariably include formally gradable work comparable to that in a CIS 500-level course. Students should discuss with the faculty supervisor the scope of the Independent Study, expectations, work involved, etc.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CIS 601 Advanced Topics in Computer Architecture
This course will focus on research topics in computer architecture, and include reading and presenting research papers and an optional project. The content will differ with each offering, covering topics such as multicore programmability, datacenter and warehouse-scale computing, security, energy-efficient architectures, etc.
One-term course offered either term
Prerequisite: CIS 501 OR CIS 371
Activity: Lecture
1.0 Course Unit

CIS 610 Advanced Geometric Methods in Computer Science
The purpose of this course is to present some of the advanced geometric methods used in geometric modeling, computer graphics, computer vision, etc. The topics may vary from year to year, and will be selected among the following subjects (nonexhaustive list): Introduction to projective geometry with applications to rational curves and surfaces, control points for rational curves, rectangular and triangular rational patches, drawing closed rational curves and surfaces; Differential geometry of curves (curvature, torsion, osculating planes, the Frenet frame, osculating circles, osculating spheres); Differential geometry of surfaces (first fundamental form, normal curvature, second fundamental form, geodesic curvature, Christoffel symbols, principal curvatures, Gaussian curvature, mean curvature, the Gauss map and its derivative dN, the Dupin indicatrix, the Theorema Egregium equations of Codazzi-Mainardi, Bonnet's theorem, lines of curvatures, geodesic torsion, asymptotic lines, geodesic lines, local Gauss-Bonnet theorem).
Course usually offered in spring term
Prerequisite: CIS 510
Activity: Lecture
1.0 Course Unit

CIS 620 Advanced Topics in Machine Learning
This course covers a variety of advanced topics in machine learning, such as the following: statistical learning theory (statistical consistency properties of surrogate loss minimizing algorithms); approximate inference in probabilistic graphical models (variational inference methods and sampling-based inference methods); structured prediction (algorithms and theory for supervised learning problems involving complex/structured labels); and online learning in complex/structured domains. The precise topics covered may vary from year to year based on student interest and developments in the field.
Course usually offered in spring term
Prerequisite: CIS 520
Activity: Seminar
1.0 Course Unit

CIS 625 Theory of Machine Learning
This course is an introduction to the theory of Machine Learning, a field which attempts to provide algorithmic, complexity-theoretic and statistical foundations to modern machine learning. The focus is on topics in machine learning theory for researchers and students in artificial intelligence, neural networks, theoretical computer science, and statistics.
Taught by: Michael Kearns
One-term course offered either term
Activity: Seminar
1.0 Course Unit

CIS 630 Advanced Topics in Natural Language Processing
Different topics selected each offering; e.g., NL generation, question-answering, information extraction, machine translation, restricted grammar formalisms, computational lexical semantics, etc.
One-term course offered either term
Prerequisite: CIS 530
Activity: Seminar
1.0 Course Unit
CIS 640 Advanced Topics in Software Systems: Data Driven IoT/Edge Computing
This course is to explore selected topics in data driven IoT/Edge Computing. We are currently witnessing a technological paradigm shift, in which the IoT systems are increasingly deployed in society. This course is to study emerging paradigms in IoT/Edge computing and to learn how to develop data driven applications that can harness the power of the IoT/Edge computing. For application domains, the course will target connected medical devices, smart home for aging, and connected automotive systems. Topics to be covered include IoT/Edge computing architectures, the Internet of medical things, connected vehicles, anomaly detection, mixed initiative systems, closed-loop systems, resource allocation, and security and privacy. The course will require a significant term project in connected health or connected automotive domains. Taught by: Insup Lee
Course usually offered in spring term
Prerequisite: (CIS 545 OR CIS 519) AND (CIS 505 OR CIS 541)
Activity: Lecture
1.0 Course Unit

CIS 650 Advanced Topics in Databases
Advanced topics in databases: distributed databases, integrity constraints, failure, concurrency control, relevant relational theory, semantics of data models, the interface between programming of languages and databases. Object-oriented databases. New topics are discussed each year.
Course usually offered in spring term
Prerequisite: CIS 550
Activity: Seminar
1.0 Course Unit

CIS 660 Advanced Topics in Computer Graphics and Animation
The goal of the course is to review state-of-the art research in the fields of computer graphics and animation as well as provide students with working knowledge of how to convert theory to practice by developing an associated graphics/animation authoring tool. The course is comprised of primers, lectures, student presentations and the authoring tool group project. Each student will be responsible for presenting one primer and at least two SIGGRAPH papers to the class. Working in teams of two, students will design and develop an authoring tool that facilitates the creation of a new type of user interaction, animation/simulation capability or 3D graphics special effect. Research papers published in the SigGraph Conference proceedings will provide the basis for the features/functionality/special effects that can be selected for implementation in the authoring tool. Each group will analyze the need and user requirements for the tool they plan to develop, prepare a formal software design document, construct a project work plan, develop the authoring tool functionality and user interface, test the design and demonstratethe authoring of associated content. A plug-in to standard authoring tools such as Maya or Houdini must also be developed to enable importing of appropriate assets and/or exporting of results.
Course usually offered in spring term
Prerequisite: CIS 560
Activity: Seminar
1.0 Course Unit

CIS 665 Advanced Topics in Computer Graphics and Animation
Graduate seminar in advanced work on machine perception as it applies to robots as well as to the modeling of human perception. Topics vary with each offering. A previous course in machine perception or knowledge of image processing, experience with an operating system and language such as Unix and C, and aptitude for mathematics.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CIS 670 Advanced Topics in Programming Languages
The details of this course change from year to year, but its purpose is to cover theoretical topics related to programming languages. Some central topics include: denotational vs operational semantics, domain theory and category theory, the lambda calculus, type theory (including recursive types, generics, type inference and modules), logics of programs and associated completeness and decidability problems, specification languages, and models of concurrency. The course requires a degree of mathematical sophistication.
One-term course offered either term
Prerequisite: CIS 500
Activity: Seminar
1.0 Course Unit

CIS 673 Computer-Aided Verification
This course introduces the theory and practice of formal methods for the design and analysis of concurrent and embedded systems. The emphasis is on the underlying logical and automata-theoretic concepts, the algorithmic solutions, and heuristics to cope with the high computational complexity. Topics: Models and semantics of reactive systems; Verification algorithms; Verification techniques. Topics may vary depending on instructor. Basic knowledge of algorithms, data structures, automata theory, propositional logic, operating systems, communication protocols, and hardware (CIS 262, CIS 380, or permission of the instructor).
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 677 Advanced Topics in Algorithms and Complexity
This course covers various aspects of discrete algorithms. Graph-theoretic algorithms in computational biology, and randomization and computation; literature in dynamic graph algorithms, approximation algorithms, and other areas according to student interests. Consent of the instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 680 Advanced Topics in Machine Perception
Graduate seminar in advanced work on machine perception as it applies to robots as well as to the modeling of human perception. Topics vary with each offering. A previous course in machine perception or knowledge of image processing, experience with an operating system and language such as Unix and C, and aptitude for mathematics.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
CIS 682 Friendly Logics
The use of logical formalisms in Computer Science is dominated by a fundamental conflict: expressiveness vs. algorithmic tractability. Database constraint logics, temporal logics and description logics are successful compromises in this conflict: (1) they are expressive enough for practical specifications in certain areas, and (2) there exist interesting algorithms for the automated use of these specifications. Interesting connections can be made between these logics because temporal and description logics are modal logics, which in turn can be seen, as can database constraint logics, as certain fragments of first-order logic. These connections might benefit research in databases, computer-aided verification and AI. Discussion includes other interesting connections, e.g., with SLD-resolution, with constraint satisfaction problems, with finite model theory and with automata theory.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 700 Special Topics
One time course offerings of special interest. Equivalent to a CIS 5XX level course.
Course not offered every year
Activity: Lecture
1.0 Course Unit

CIS 800 PhD Special Topics
One-time course offerings of special interest. Equivalent to CIS seminar course. Offerings to be determined.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 895 Teaching Practicum
Enrollment for students participating in Teaching Practicum.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 899 Doctoral Independent Study
For doctoral students studying a specified advanced subject area in computer and information science. The Independent Study may involve coursework, presentations, and formally gradable work comparable to that in a CIS 500 or 600 level course. The Independent Study may also be used by doctoral students to explore research options with faculty, prior to determining a thesis topic. Students should discuss with the faculty supervisor the scope of the Independent Study, expectations, work involved, etc. The Independent Study should not be used for ongoing research towards a thesis, for which the CIS 999 designation should be used.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CIS 990 Masters Thesis
For master’s students who have taken ten course units and need only to complete the writing of a thesis or finish work for incompletes in order to graduate. CIS 990 carries full time status with zero course units and may be taken only once.
Activity: Masters Thesis
1.0 Course Unit

CIS 995 Dissertation
For Ph.D. candidates working exclusively on their dissertation research, having completed enrollment for a total of ten semesters (fall and spring). There is no credit or grade for CIS 995.
Activity: Dissertation
1.0 Course Unit

CIS 999 Thesis/Dissertation Research
For students pursuing advanced research to fulfill PhD dissertation requirements.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Computer and Information Technology (CIT)

CIT 590 Programming Languages and Techniques
Introduction to fundamental concepts of programming and computer science for students who have little or no experience in these areas. Principles of modern object-oriented programming languages: abstraction, types, polymorphism, encapsulation, and inheritance. Basic algorithmic techniques and informal complexity analysis. Graphical user interfaces. Substantial programming assignments in Python and Java.
This course is for students who do not have an academic background in computer science and who are not pursuing the Master’s in Computer Information Technology and who are not graduate students in the CIS Department.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIT 591 Introduction to Software Development
Introduction to fundamental concepts of programming and computer science. Principles of modern object-oriented programming languages: abstraction, types, polymorphism, encapsulation, inheritance, and interfaces. This course will also focus on best practices and aspects of software development such as software design, software testing, pair programming, version control, and using IDEs. Substantial programming assignments.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIT 592 Mathematical Foundations of Computer Science
This course introduces you to math concepts that form the backbone of the majority of computer science. Topics covered include sets, functions, permutations and combinations, discrete probability, expectation, mathematical induction and graph theory. The goal of the course is to ensure that students are comfortable enough with the math required for most of the CIS electives. CIS 502 and CIT596 heavily rely on concepts taught in this course.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CIT 593 Introduction to Computer Systems
This course provides an introduction to fundamental concepts of computer systems and computer architecture. You will learn the C programming language and an instruction set (machine language) as a basis for understanding how computers represent data, process information, and execute programs. The course also focuses on the Unix environment and includes a weekly hands-on lab session.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIT 594 Data Structures and Software Design
This course will focus on data structures, software design, and advanced Java. The course starts off with an introduction to data structures and basics of the analysis of algorithms. Important data structures covered will include arrays, lists, stacks, queues, trees, hash maps, and graphs. The course will also focus on software design and advanced Java topics such as software architectures, design patterns, networking, multithreading, and graphics. We will use Java for the entire course.
One-term course offered either term
Prerequisite: CIT 591
Activity: Lecture
1.0 Course Unit

CIT 595 Computer Systems Programming
This course builds on your knowledge of C and focuses on systems programming for Linux, specifically the libraries that programmers use for threading and concurrency, synchronization, inter-process communication, and networking. The course also introduces the C++ programming language, and covers important concepts in modern operating systems, including processes, scheduling, caching, and virtual memory. After completing this course, you will have the requisite knowledge and experience for systems-focused CIS graduate-level electives.
One-term course offered either term
Prerequisite: CIT 593
Activity: Lecture
1.0 Course Unit

CIT 596 Algorithms and Computation
This course focuses primarily on the design and analysis of algorithms. We will begin with sorting and searching algorithms and then spend most of the course on graph algorithms. In order to study graph algorithms, general algorithm design patterns like dynamic programming and greedy algorithms will be introduced. A section of this course is also devoted to understanding NP-Completeness.
One-term course offered either term
Prerequisite: CIT 592
Activity: Lecture
1.0 Course Unit

Creative Writing (CRWR)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

CRWR 101 The Craft of Creative Writing
The Craft of Creative Writing is designed for students who are new to creative writing or who would like to return to the fundamentals of craft. Through frequent writing assignments, assigned readings and collaborative discussions, students familiarize themselves with a variety of styles and approaches, exploring a range of literary genres including poetry, fiction, creative nonfiction, memoir and journalistic prose. Students are expected to hone their skills in creative practice, to revise and take risks with their work and to cultivate their habits of close reading and peer workshop.
Activity: Online Course
1.0 Course Unit

CRWR 160 Modern and Contemporary US Poetry
In this fast-paced introductory course, students read and discuss a wide range of modern and contemporary American poets, beginning with Emily Dickinson and Walt Whitman and ending with 21st-century avant-garde poets like Tracie Morris?Questions central to this course include: 'How does experimental poetry help us understand the transition between modernism and postmodernism?' and 'What is the relationship between experimental poetry and experimental teaching?' The poems and poets we study challenge students to read critically and think differently about what a poem is, about what art can be and about what poetry can teach us about reading, writing and learning. Students do not need to have any prior knowledge of poetry or poetics. The course operates primarily as a discussion. Rather than attending lectures, students participate in web-based discussions of the poems, accessible in text, audio and video formats. Requirements include active participation in the online discussion forums, in addition to five short papers, quizzes, creative exercises and a comprehensive final examination.
Taught by: Anna Strong Safford
Also Offered As: ENLT 160
Activity: Online Course
1.0 Course Unit

CRWR 201 Poetry Workshop
Poetry Workshop is a course for students who are new to poetry or who would like to return to the fundamentals of poetry. This workshop uses frequent writing assignments, assigned readings and collaborative workshop discussions to explore various elements of poetic craft, including imagery, metaphor, line, stanza, music, rhythm, diction, and tone.
Activity: Online Course
1.0 Course Unit

CRWR 240 The Art of Editing
TBA
Taught by: Julia Bloch
Activity: Online Course
1.0 Course Unit

CRWR 260 Fiction Workshop
Fiction Workshop is a course for students who are new to fiction writing or who are new to fiction writing or who would like to return to the fundamentals of fiction. This collaborative workshop uses frequent writing assignments, assigned readings and workshop discussions to explore various elements of the craft of fiction, including character, form, description, dialogue, setting, genre, and plot.
Activity: Online Course
1.0 Course Unit
CRWR 300 Writing About Place
This multi-genre, collaborative workshop is devoted to writing of and about place both literally and figuratively, about the city or the landscape, for example and engagingly, that engages thematically and formally with location, displacement, and with the writing process itself as a form of mapping and belonging.
Activity: Online Course
1.0 Course Unit

CRWR 320 Screenwriting
Students are required to complete and revise the first 30 pages of a feature-length screenplay. In place of introductory lectures on story and cinema, an interactive presentation provides multimedia lectures that include sample text, images, and audio and video clips. In addition to two rounds of individual student workshop sessions, students have one-on-one meetings with the instructor conducted through video, audio, or text chat. The final grade is a cumulative assessment of student performance over the course of the term, factoring in all assignments, participation in discussion threads and progress made in the revision of 30 screenplay pages.
Taught by: John Scott F. Burkhardt
Also Offered As: CINM 320
Activity: Online Course
1.0 Course Unit

CRWR 360 Advanced Nonfiction
Activity: Online Course
1.0 Course Unit

CRWR 370 Journalism
This is a how-to course for talented aspiring writers, drawn from the instructor's three decades of experience as a full-time working journalist. Learn how to write well in the real world, how to hook the reader and sustain interest, how to mix scenes with exposition, and how to develop the journalistic skills that enable a writer to gather, sift and report information. While reading assignments include famous practitioners of nonfiction writing including Susan Orlean and Gene Weingarten, along with recent Penn alumni Matt Flegenheimer and David Murrell, the emphasis is on writing and reporting nonfiction pieces from personal memoirs to observational features and profiles of interesting people. The course is designed to inspire you to tap into your potential, gain fresh insights, and feel comfortable enough to share written assignments—both short and long pieces—with classmates over the span of the semester.
The course also addresses practical and ethical journalistic issues such as selecting and handling interviewees, how to use (and not use) the internet, and when to use (or not use) anonymous sources.
Activity: Online Course
1.0 Course Unit

Criminology (CRIM)

CRIM 100 Criminology
This introductory course examines the multi-disciplinary science of law-making, law-breaking, and law-enforcing. It reviews theories and data predicting where, when, by whom and against whom crimes happen. It also addresses the prevention of different offense types by different kinds of offenders against different kinds of people. Police, courts, prisons, and other institutions are critically examined as both preventing and causing crime. This course meets the general distribution requirement.
For BA Students: Society Sector
Course usually offered in fall term
Also Offered As: SOCI 233
Activity: Lecture
1.0 Course Unit

CRIM 200 Criminal Justice
This course examines how the criminal justice system responds to crime in society. The course reviews the historical development of criminal justice agencies in the United States and Europe and the available scientific evidence on the effect these agencies have on controlling crime. The course places an emphasis on the functional creation of criminal justice agencies and the discretionary role decision makers in these agencies have in deciding how to enforce criminal laws and whom to punish. Evidence on how society measures crime and the role that each major criminal justice agency plays in controlling crime is examined from the perspective of crime victims, police, prosecutors, jurors, judges, prison officials, probation officers and parole board members. Using the model of social policy evaluation, the course asks students to consider how the results of criminal justice could be more effectively delivered to reduce the social and economic costs of crime.
For BA Students: Society Sector
Course usually offered in spring term
Also Offered As: SOCI 200
Activity: Lecture
1.0 Course Unit

CRIM 240 Forensic Analysis
This course discusses the need for stronger scientific foundations in the analysis of forensic evidence from a scientific and a policy perspective. Forensic evidence, such as fingerprints, firearms, and hair, has been analyzed for hundreds of years to inform crime investigations and prosecutions. However, recent advances, especially the use of DNA technology, have revealed that a faulty forensic analyses may have contributed to wrongful convictions. These advances have demonstrated the potential dangers of information and testimony derived from imperfect analysis, which can result not just in wrongful convictions but also in errors of impunity. In this course, students learn about the history of forensics, as well as about the recent advances that aim to improve current practices. It is an interdisciplinary course, but it focuses mostly on the statistical and scientific aspects of testing in forensics. Students discuss recent developments that quantify the uncertainty, limitations, and errors associated with human factors, pattern evidence, and digital evidence. No prior statistical or forensic knowledge is expected. The course will be useful for students who wish to become forensic practitioners, law enforcement officers, lawyers, judges, researchers, or simply informed citizens.
Taught by: Cuellar
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
CRIM 250 Statistics for the Social Sciences I
Statistical techniques and quantitative reasoning are essential tools for properly examining questions in the social sciences. This course introduces students to the concepts of probability, estimation, confidence intervals, and how to use the statistical concepts and methods to answer social science questions. The course will require the use of R, a free, open source statistical analysis program. This course has been approved for the quantitative data analysis requirement (QDA).
Taught by: Ridgeway
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 251 Statistics for the Social Sciences II
In this course, students learn to conduct quantitative data analyses for social sciences, with an emphasis on identifying causal relationships in data. Many social science analyses aim to answer causal questions: Do longer prison sentences reduce crime? Do tougher gun laws reduce homicides and suicides? Can summer jobs help keep youth safe? Students will learn about research designs and data analysis methods to answer these kinds of questions, and especially to learn to implement them in practice. The goal of this class is to help students conduct their own analyses, and to become critical readers of statistical analyses, both in social science publications and in public discourse. The focus will be on what to compute and how to interpret the results. The emphasis is on the intelligent use of statistics. We will be using R, an open-source programming language.
Course usually offered in spring term
Prerequisite: CRIM 250
Activity: Lecture
1.0 Course Unit

CRIM 260 Crime and Human Development
One of the central research problems in criminology is the relationship between human development and the likelihood of committing crime. This course will examine the tools for measuring the onset of crime, its persistence, intermittency, and desistence. These tools include the study of birth cohorts of everyone born in a certain time and place, life course studies of juvenile delinquents and non-delinquents, trajectory analysis of people studied from pre-school through middle age, and interviews with 70 year old former delinquents who reflect on how their life-course affected the crimes they committed. This course will also analyze the research findings that have been produced using these tools. Students will be asked to consider what these findings imply for major theories of crime causation as well as policies for crime prevention.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CRIM 270 Biopsychosocial Criminology
Is there a 'natural-born killer'? Why don't psychopaths have a conscience? And is it morally wrong for us to punish those who are biologically-wired for a life of crime? This interdisciplinary biosocial course argues that answers to these inscrutable questions can be found in the fledgling field of 'neurocriminology'. This new sub-discipline brings together the social, clinical, and neurosciences to help us better understand, predict, and prevent future crime. We will explore the biosocial bases to crime and violence, analyze controversial neuroethical, legal and philosophical issues surrounding neurocriminology, and take a field trip to prison.
This interdisciplinary course presents perspectives from the fields of psychology, neuroscience, criminology, sociology, law, business, public health, psychiatry, anthropology, neuroimaging, neuroendocrinology, forensics, nutrition, and pediatrics. It is suitable for those without a background in biology or criminology. It is particularly relevant for majors in Criminology, Psychology, Nursing, and Biological Basis of Behavior.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 280 Neighborhood Dynamics of Crime
Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.
Course usually offered in spring term
Also Offered As: URBS 280
Activity: Seminar
1.0 Course Unit

CRIM 290 Wrongful Convictions
This course explores wrongful convictions from an interdisciplinary perspective. Using research from the disciplines of law, criminology, psychology and sociology, this course explores how legal errors occur and how they might be prevented in the future. Connections to quality control research and practice in other industries will also be examined. No prerequisites are required.
Taught by: Loeffler
Activity: Seminar
1.0 Course Unit

CRIM 300 Law and Criminal Justice
This course explores constitutional criminal procedure or the law of the Fourth, Fifth, and Sixth Amendments to the United States Constitution. Topics included the laws and rules associated with search and seizure, arrest, interrogation, the exclusionary rule, and deprivation of counsel. Social science evidence that supports or raises questions about legal doctrine will be examined. No prerequisites are required.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CRIM 315 American Death Penalty in Theory and Practice
Over the past forty years, in response to controversy over the American death penalty, the Supreme Court has created a framework of rules designed to make the death penalty conform to current societal standards. In this course, we will identify the critical issues identified by the courts (and the critics) in light of the practical realities of capital litigation, and we will ask whether the efforts to address these issues have been successful. The class will use specific case examples to identify the critical points in a death penalty case—e.g., how the decision to designate a prosecution as 'capital', the performance of defense counsel, the penalty decision, and the method of execution. These critical stages will provide a platform for discussing critical issues like the proper limits of discretion; bias; cruelty; and the decision to disqualify certain groups of people from capital punishment (the mentally disabled, minors). Students will be assigned readings from different kinds of sources. Cases from the Supreme Court will identify key issues and the efforts to address them under the law. More general death penalty history will provide some context. We will also read pieces by advocates (pro and con). Finally, we will focus on a few specific prosecutions and discuss how abstract theories work in a particular case.
Taught by: Dolgenos
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 402 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is organized around key questions about police shootings, victimization rates, identifying crime hotspots, calculating the cost of crime, and finding out what happens to crime when it rains. On the way to answer these questions, the course will cover topics including data sources, basic programming techniques, SQL, regular expressions, webscraping, and working with geographic data. The course will use R, an open-source, object oriented scripting language with a large set of available add-on packages.
Course usually offered in fall term
Also Offered As: CRIM 602, SOCI 605
Activity: Lecture
1.0 Course Unit

CRIM 410 Research Seminar in Experiments in Crime and Justice
This seminar focuses on examining data from experiments in criminology including randomized controlled trials of criminal justice policies, 'natural' experiments in crime, and other quasi-experimental studies. A series of experiments conducted by Penn scholars and elsewhere will be examined. This seminar also guides criminology majors in writing a research proposal for their thesis. Students will learn about how to formulate a research question, develop a review of the literature, and how to apply necessary empirical methods. The final paper for this course will be a research proposal that can serve as the basis for the student's senior thesis and to satisfy the senior capstone requirement. Readings will come from the disciplines of criminology, sociology, psychology, economics, and urban planning. Prerequisite: Any statistics or research methods course leading to familiarity with Excel, SPSS, R, Stata, SAS, Matlab, or NumPy.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CRIM 450 Senior Research Thesis
Senior Research Thesis is for senior Criminology majors only. Students are assigned advisors with assistance from the Undergraduate Chair. Course usually offered in spring term
Prerequisite: CRIM 410
Activity: Senior Thesis
1.0 Course Unit
Notes: CRIM:410

CRIM 474 Modern Regression for the Social, Behavioral and Biological Sciences
Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Berk
Course usually offered in spring term
Also Offered As: STAT 474, STAT 974
Prerequisite: STAT 102 OR STAT 112
Activity: Lecture
1.0 Course Unit

CRIM 535 Introduction to Quantitative Methods for Policy Analysis
This course provides an introduction to applied statistical techniques in the social sciences and is tailored, in particular, to students pursuing the master of science degree in the Department of Criminology. It is taught as a basic course in statistics and presumes minimal mathematical or statistical background. We'll begin with a brief introduction to the research process. We'll then cover the computation, interpretation and understanding of basic descriptive statistics, distribution, hypothesis testing, measures of association and finally regression analysis. Depending on how much time we have, we will cover several more advanced topics in regression analysis at the end of the semester.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 536 Quantitative Methods in Sociology I
This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and–with the permission of the instructor–advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory 'lab.'
Taught by: Allison, Smith
Course usually offered in fall term
Also Offered As: DEMG 535, SOCI 535
Activity: Lecture
1.0 Course Unit
CRIM 600 Pro-Seminar in Criminology
This course provides an overview of the leading criminological theories of crime. The central focus is on the major theories of crime developed over the past century from the disciplines of economics, psychology, and sociology. The course will focus on the application of social science research as a way to evaluate theories of crime. Special attention is devoted to the issues of measurement of crime and what is known from the available empirical data. In addition, the course will focus on how these theoretical perspectives relate to public policy responses to crime. Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CRIM 601 Pro-Seminar in Criminal Justice
This course provides an overview of what we know about the criminal justice system in the United States and other developed nations. The central purpose of the course is to increase your knowledge about how the U.S. criminal justice system works and how we can apply that knowledge to the problems we face. The course focuses on how the criminal justice system functions and how it can be used to address issues in the criminal justice system. The course is taught by Dr. Ridgeway.
Course usually offered in spring term
Prerequisite: CRIM 500
Activity: Seminar
1.0 Course Unit

CRIM 602 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is organized around key questions about police shootings, victimization rates, identifying crime hotspots, calculating the cost of crime, and finding out what happens to crime when it rains. Students will be taught how to use R, an open-source, object oriented scripting language with a large set of available add-on packages. 
Course usually offered in fall term
Taught by: Ridgeway
Activity: Lecture
1.0 Course Unit

CRIM 603 Research Methods/Crime Analysis
This course provides an overview of the application of social science research methods and data analysis to criminology. Students will learn research design principles and statistical techniques for the analysis of social science data, including how to interpret results as part of the rigorous practice of evidence-based criminology. M.S. students will conduct a semester-long, data-intensive crime analysis project using qualitative methods to address a specific research question. Students will present their findings in a written research paper.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CRIM 604 Criminology in Practice
In this capstone course, students will meet weekly with guests who work on or close to the front line of the criminal justice system. Past guests have included police chiefs, forensic scientists, lobbyists for gun rights and lobbyist for gun control, formerly incarcerated individuals, crime analysts, directors of sentencing commissions, prosecutors and defenders, politicians, and researchers at research organizations working closely with criminal justice agencies. Guests share their career paths, the roles of their organizations in the justice system, and key justice system challenges. Students interact with all guest speakers. Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit

CRIM 634 Evidence-Based Crime Prevention
This course considers the use of evidence to identify effective crime prevention policies. The course will teach students to think critically about what constitutes convincing evidence, use benefit-cost analysis in comparing policy alternatives, and write effective policy memos that can translate research into practice. We will develop these skills by studying the effects of different policy approaches to crime prevention including incarceration, policing, gun control, drug regulation, and place-based interventions, as well as education, social programs, and labor market policies. Emphasis will be on the methodological challenges to identifying ‘what works’ and the empirical methods to overcome those challenges.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 662 Panel Data Analysis
This course focuses on the ability to use, analyze, and understand panel data. Panel data contain repeated measurements of the dependent variable for the same individuals, and possibly repeated measurements of the predictor variables as well. Panel data are important opportunities for controlling unobserved variables and for answering questions about causal ordering.
Taught by: Song
Also Offered As: DEMG 662, SOCI 662
Activity: Lecture
1.0 Course Unit

CRIM 671 Violence: A Clinical Neuroscience Approach
Developed for both Psychology and Criminology graduates in particular, this interdisciplinary course outlines a clinical neuroscience approach to understanding violence in which the tools of neuroscience-neuroanatomy, neurophysiology, neurocognition, neuroendocrinology, neuropharmacology, molecular and behavioral genetics- are used to help inform the etiology and treatment of violence. Clinical components include psychopathy, proactive and reactive aggression, homicide domestic violence, conduct disorder, oppositional defiant disorder, antisocial personality disorder, crime, and delinquency as well as their comorbid conditions (schizophrenia, drug abuse, hyperactivity). The interaction between social, psychological, and neurobiological processes in predisposing to violence will be highlighted, together with neurodevelopmental perspectives on violence focusing on prospective longitudinal and brain imaging research. Key implications for the criminal justice system, neuroethics, forensics psychology, and intervention will also be outlined.
Course usually offered in fall term
Also Offered As: PSYC 671
Activity: Lecture
1.0 Course Unit
CRIM 700 Advanced Pro-Seminar in Criminology
This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the unifying perspectives of criminology. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the causes and prevention of crime will report on their developing research ideas.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CRIM 701 Advanced Pro-Seminar in Criminal Justice
This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the behavior and operation of criminal law systems. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published and unpublished research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the behavior of criminal law will report on their developing research ideas.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CRIM 999 Independent Study and Research
Primarily for advanced students who work with individual faculty upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Both terms.

Czech (CZCH)

CZCH 110 Czech Through Film
This course has two separate but related components: a series of Czech films, shown with subtitles and open to the entire University of Pennsylvania community, and a Czech language class which relies on the films for content. Each film screening will be preceded by introductory remarks and followed by a discussion, with optional reading material made available in advance. In this way, the film series can but need not also be offered as a for-credit course, cross-listed through REES and Cinema and Media Studies. The films will be sequenced chronologically through Czech history, as opposed to film history, so that the series will double as a survey of Czech history. For example, we will begin with films set in the medieval period, such as Marketa Lazarova (dir. Frantisek Vlacil, 1967) and Cisaruv pekar-Pekaruv cisar (Emperor’s Baker-Baker’s Emperor, dir. Martin Fric, 1955). Eventually we will progress to recent films that deal with the current moment. Classic and contemporary films will be intermingled to simultaneously present a variety of important historical eras and cinematic techniques. Concurrently, students enrolled in the language course will learn basic Czech using custom-made materials drawn from the films. As their vocabulary and grasp of grammatical concepts increases, we will be able to work with longer and more complex sections of the film-texts. The films will provide the material for listening and reading exercises, and the students’ oral and written work will be anchored by their responses to the films. We will advance from picking out simple statements to analyzing dialogue and identifying irony in film and composition, developing skills of intercultural communication and competence. By the end of the course, students will be able to read about Czech cinema using authentic materials, and discuss the films’ aesthetic, historical and political importance.
Taught by: Weil
Activity: Lecture
1.0 Course Unit

CZCH 530 Elementary Czech I
An introduction to the fundamentals of the Czech language, acquisition of conversational, reading and writing skills. Offered through the Penn Language Center.
For BA Students: Language Course
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center.

CZCH 531 Elementary Czech II
Continuation of SLAV 530. Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Stejskal
Two terms. student may enter either term.
Prerequisite: SLAV 530
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center.
CZCH 532 Intermediate Czech I
Emphasis on vocabulary building, conversation and reading skills. Grammar review. Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Stejskal
Two terms. student may enter either term.
Prerequisite: SLAV 532
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center.

CZCH 533 Intermediate Czech II
Continuation of SLAV 532. Offered through the Penn Language Center.
For BA Students: Last Language Course
Taught by: Stejskal
Two terms. student may enter either term.
Prerequisite: SLAV 532
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center.

Data Analytics (DATA)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

DATA 101 Introduction to Data Analytics
In our digital world, data-driven decision-making is becoming more common and more expected. Effective leadership and communication, therefore, often hinges on the ability to acquire, manage, analyze, and display large, quantitative data sets. Even many entry-level jobs assume or require basic knowledge of data analytics. This course introduces students to important concepts in data analytics across a wide range of applications using the programming language R. Students complete the course with a clear understanding of how to utilize quantitative data in real-time problem identification, decision-making, and problem-solving. No prerequisites in statistics or math are required. This course will have required synchronous sessions and the instructor will offer a choice of times. Only open to Data Analytics certificate students in LPS Online Program. Please email lps@sas.upenn.edu to request a permit.
Taught by: Samantha Sangenito
Also Offered As: LEAD 305
Activity: Online Course
1.0 Course Unit

DATA 201 Intermediate Data Analytics
In Data Analytics 201: Intermediate Data Analytics students learn the fundamentals of two skills required by many data science jobs: survey and experimental research. The course trains students in all aspects of the survey research process, including designing good survey questionnaires, drawing samples, weighting data, and analyzing survey responses. Students come away from the class with an understanding in how to design, analyze a randomized experiment and build upon the R skills gained in previous courses. Certificate students and individual course takers must complete a prerequisite data analytics course before enrolling in this course. Although courses in the Certificate in Data Analytics must be taken sequentially to build your expertise in data analytics, you have the option to take courses in order without committing to the entire certificate. Students who complete all four courses earn the Certificate in Data Analytics. Data Analytics courses admit a limited number of students each term. Early registration is recommended. To confirm whether registration is still open for a specific term before you enroll, please email lpsonline@sas.upenn.edu or call (215) 746-6903.
Taught by: Samantha Sangenito
Prerequisite: DATA 101
Activity: Online Course
1.0 Course Unit

DATA 310 Introduction to Statistical Methods
Introduction to Statistical Methods exposes students to the process by which quantitative social science and data science research is conducted. The class revolves around three separate, but related tracks. Track one teaches some basic tools necessary to conduct quantitative social science research. Topics covered include descriptive statistics, sampling, probability, and statistical theory. Track two teaches students how to implement these basic tools using R. The third track teaches students the fundamentals of research design. Topics will include independent and dependent variables, generating testable hypotheses, and issues in causality.
Taught by: Samantha Sangenito
Prerequisite: DATA 101 AND DATA 201
Activity: Online Course
1.0 Course Unit

DATA 401 Advanced Data Analytics
Data Analytics 401: Advanced Topics in Data Analytics emphasizes the skills necessary to do predictive modeling of data. This is one of the most commonly sought-after skills in data science jobs, since it can help companies structure future investments, non-profits organize funding drives, or political candidates decide where to focus their get-out-the-vote efforts. The class begins with a comprehensive discussion on basic regression analysis and then moves on to more advanced topics in R like web scraping, mapping, textual analysis, and working with string variables. The course also features content about more advanced data visualization skills, including creating interactive data visualizations in RShiny. Please email lps@sas.upenn.edu to request a permit.
Taught by: Samantha Sangenito
Prerequisite: DATA 101 AND DATA 210 AND DATA 310
Activity: Online Course
1.0 Course Unit
Notes: Data Analytics courses admit a limited number of students each term. Early registration is recommended. To confirm whether registration is still open for a specific term before you enroll, please email lpsonline@sas.upenn.edu or call (215) 746-6903.
Demography (DEMG)

DEMG 535 Quantitative Methods in Sociology I
This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and--with the permission of the instructor--advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory 'lab.'
Taught by: Allison, Smith
Course usually offered in fall term
Also Offered As: CRIM 536, SOCI 535
Activity: Lecture
1.0 Course Unit

DEMG 536 Quantitative Methods in Sociology II
As the second part of a two-semester sequence, this graduate course focuses on regression analysis as used in social science research. In particular, we discuss features and assumptions of linear regression and logistic regression models. We learn how to apply regression models to real social science data using Stata and how to interpret the results.
Taught by: Allison, Kohler, Park, Schnittker, Smith
Course usually offered in spring term
Also Offered As: SOCI 536
Prerequisite: SOCI 535
Activity: Lecture
1.0 Course Unit

DEMG 541 Gender, the Labor Force, and Markets
Course not offered every year
Also Offered As: GSWS 532, SOCI 541
Activity: Seminar
1.0 Course Unit

DEMG 541 Methodology of Social Research
This course will give students familiarity with the common research methods social scientists use to conduct research. Ethnographic, interview, survey, experimental and historical/comparative research methods will be covered. Four themes will be explored: 1) the basics of solid research design, 2) the various advantages and disadvantages of each method, 3) when the use of a method is appropriate or inappropriate for the research question, and 4) how to evaluate researchers’ claims on the basis of the evidence they present. These themes will be explored by reading examples of and conducting exercises designed to give students hands-on experience in each of the methods. Students will conduct the exercises on a topic of their choice, which together will culminate in their final paper. The course is required and restricted to second year students in sociology and demography.
Taught by: Smith, Wilde, Zuberi
Course usually offered in spring term
Also Offered As: SOCI 604
Activity: Lecture
1.0 Course Unit

DEMG 607 Introduction to Demography
A nontechnical introduction to fertility, mortality and migration and the interrelations of population with other social and economic factors.
Course usually offered in fall term
Also Offered As: SOCI 607
Activity: Lecture
1.0 Course Unit

DEMG 609 Basic Demographic Methods
This course provides an introduction to basic demographic concepts, data, indicators, and techniques. The course emphasizes hands-on applications of techniques in the analysis of population dynamics in the U.S. and elsewhere. Students will learn about the main sources of demographic data, including censuses, surveys, and vital statistics, and methods to estimate demographic processes (e.g. mortality, fertility). Students will leave the course with a solid grounding in a) the sources and limitations of demographic data; b) the construction of basic demographic indicators; and c) appropriate use of basic demographic techniques to answer questions about human populations.
Taught by: Guillot
One-term course offered either term
Also Offered As: SOCI 128, SOCI 609
Activity: Lecture
1.0 Course Unit

DEMG 611 Structural Equation Model
Statistical modeling with multiple equations and latent variables. The first part of the course will focus on linear models that could be estimated with any of the well-known SEM programs (e.g., LISREL, EQS, or Amos). Both Mplus and SAS will be used exclusively in this part of the course. The second part will focus on Mplus models for variables that are categorical, count, or censored. Maximum likelihood methods for missing data will also be covered.
Taught by: Allison
Course not offered every year
Also Offered As: SOCI 611
Activity: Lecture
1.0 Course Unit

DEMG 612 Categorical Data Analysis
This course deals with techniques for analyzing multivariate data which the dependent variable is a set of categories (a dichotomy or polytomy). Topics will include linear probability models, logit (logistic) regression models, probit models, logit analysis of contingency tables, cumulative logit and probit (for ordinal data), multinomial logit, conditional logit (discrete choice), unobserved heterogeneity, log-linear models, square tables, response-based sampling, and repeated measures. Methods will be illustrated using the Stata System. There will be several assignments using Stata to analyze data provided by the instructor.
Taught by: Allison
Course not offered every year
Also Offered As: SOCI 612
Activity: Lecture
1.0 Course Unit

DEMG 613 Event History
An applications-oriented course on statistical methods for the analysis of longitudinal data on the occurrence of events, also known as survival analysis, failure-time analysis, hazard analysis or duration analysis. Emphasis on regression-like models in which the risk of event occurrence is a function of a set of explanatory variables. Topics include accelerated failure-time models, hazard models, censoring, Cox regression models, time-dependent covariates, competing risks, repeated events, unobserved heterogeneity, discrete-time methods.
Taught by: Allison
Course not offered every year
Also Offered As: SOCI 613
Prerequisite: SOCI 536
Activity: Lecture
1.0 Course Unit
DEM 621 Health, Mortality & Population Aging
The course focuses on the description and explanation of health and mortality in human populations and their variability across several dimensions such as age, time, place, social class, race etc. The course includes general theories of health, mortality and morbidity, investigations of mortality and related processes in developing and developed countries, and discussions of future mortality trends and their implications for individual lives and the society at large.
Taught by: Elo
Course not offered every year
Also Offered As: SOCI 621
Activity: Lecture
1.0 Course Unit

DEM 622 Fertility
The biological, social and demographic factors explaining the levels, trends and differentials in human fertility. Data, measures, and methods used in the context of the more and the less developed countries, with an emphasis on the historical and current course of the fertility transition.
Taught by: Smith, Kohler, H
Course not offered every year
Also Offered As: SOCI 622
Activity: Seminar
1.0 Course Unit

DEM 630 Advanced Special Topics
Topics vary from semester to semester. Course titles include: Race, Colonialism & Methods; Mistakes, Errors, Accidents & Disasters, Graduate Research Practicum, Sociology of Violence: Gangs & Organized Crime.
Course not offered every year
Also Offered As: SOCI 430, SOCI 630
Activity: Seminar
1.0 Course Unit

DEM 634 Population Processes II
Population Processes II is part of a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, and migration) and recent developments in the field. PP II is divided into two parts. The first focuses on family demography and the biological, social and demographic factors explaining levels, trends, and differentials in human fertility transition with an emphasis on the historical and current course of fertility transition in developed and developing countries. The second part of the course provides a comprehensive review of theories and research on international migration. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significant attention to theoretical and empirical perspectives on immigrant adaptation, including the relationship between gender and migration.
Taught by: Flippen, Harknett, Kohler, Parrado, Smith
Course not offered every year
Also Offered As: SOCI 634
Activity: Seminar
1.0 Course Unit

DEM 643 Social Stratification
In this course we study the current levels and historical trends of inequality in the United States especially in cross-national comparative perspective. We discuss causes and consequences of inequality as well as various policy efforts to deal with inequality. Topics include intergenerational social mobility, income inequality, education, gender, race and ethnicity among others.
Taught by: Song
Course not offered every year
Also Offered As: SOCI 010, SOCI 643
Activity: Lecture
1.0 Course Unit

DEM 662 Panel Data Analysis
This course focuses on the ability to use, analyze, and understand panel data. Panel data contain repeated measurements of the dependent variable for the same individuals, and possibly repeated measurements of the predictor variables as well. Panel data offer important opportunities for controlling unobserved variables and for answering questions about causal ordering.
Taught by: Song
Also Offered As: CRIM 662, SOCI 662
Activity: Lecture
1.0 Course Unit

DEM 677 International Migration
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significant attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.
Taught by: Flippen
Course not offered every year
Also Offered As: SOCI 377, SOCI 677
Activity: Seminar
1.0 Course Unit

DEM 707 Second-Year Research Seminar I
This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master's papers and second year research papers are written. This is a required course for second year graduate students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in fall term
Also Offered As: SOCI 707
Activity: Seminar
1.0 Course Unit
DEMGM 708 Second-Year Research Seminar II
Demography 708 is the second part of a two-course sequence designed to introduce and familiarize second year students with current norms for academic research, presentation and publishing in the field of Demography. In DEMGM 708 students are expected to finalize the analyses and to complete their second year research paper. This is a required course for second year demography students. Others interested in enrolling in the course may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in spring term
Also Offered As: SOCI 708
Activity: Seminar
1.0 Course Unit

DEMGM 731 Advanced Demographic Methods
This course considers a variety of procedures for measuring and modeling demographic processes. We will consider both deterministic (drawn from classic demographic methods, stable population theory, and the like) and stochastic (drawn from statistics) perspectives and methods, including their integration. Prerequisites: DEMG 609 and SOCI 536 (or its equivalent).
Taught by: Kohler
Course not offered every year
Also Offered As: SOCI 731
Prerequisite: DEMG 609 AND SOCI 536
Activity: Seminar
1.0 Course Unit

DEMGM 796 Demographic, Economic, and Social Interrelations
The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demography change? How does immigration to the US affect the ethnic composition of the population, the earnings of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women's participation in the labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development with low income countries? In addition to these topics, the course also covers selected methods not included in DEMG 535, DEMG 536 or DEMG 609.
Taught by: Smith
Course not offered every year
Also Offered As: SOCI 796
Prerequisite: DEMG 609 AND SOCI 536
Activity: Seminar
1.0 Course Unit

DCOH 708 Health Promotion S
Activity: Seminar
0.5 Credit Hours

DCOH 712 Community Oral Health
Activity: Clinic
0.5 Credit Hours

DCOH 785 Practice Management
Practice Management Lectures and seminars provide students with foundation knowledge regarding career planning and policies and procedures related to employment and business management in dental practice.
Activity: Lecture
0.25 Credit Hours

DCOH 808 Health Promotion
Health Promotion Clinical experiences provide students with the opportunity to apply knowledge and develop competencies related to oral health promotion and disease prevention activities with individual patients in the clinics at Penn Dental Medicine.
Activity: Clinic
1.0 Credit Hour

DCOH 812 Community Oral Health
Community Oral Health Experiences in alternate oral health care delivery settings provide students with the opportunity to develop and expand their skills in providing comprehensive oral health care in community based settings under the direct supervision of faculty members. Students are scheduled in the mobile dental vehicle, PennSmiles, and are also scheduled at Community Volunteers in Medicine, a community based medical and dental treatment facility in West Chester, PA. Students attend small group seminars to discuss their experiences and theoretical underpinnings of community oral health activities.
Activity: Clinic
1.25 Credit Hour

DCOH 885 Practice Management II
Activity: Lecture
1.0 Credit Hour

Dental - Community Oral Health (DCOH)

Dental - Dental Medicine (DENT)

DENT 245 Breakdown Barriers Club
Activity: Seminar
1.0 Credit Hour

DENT 260 Form Inclusive Practice
Activity: Lecture
0.5 Credit Hours

DENT 500 Foundation Sciences I
Foundation Sciences I is aimed at providing students with a thorough understanding of the basic principles of molecular biology and general biochemistry; the biochemical concepts underlying healthy metabolism, nutrition and selected disease states and comprehension at an advanced level of selected topics in cell biology
Activity: Lecture
4.25 Credit Hours
DENT 502 Foundation Sciences II
The course is structured to provide basic information about the evolutionary relationship, structure, physiology and molecular biology of the prokaryotic cells and viruses, and the basic mechanisms of immunology in relation to oral health. Emphasis will also be placed on how oral microorganisms participate in plaque/biofilm formation, caries and periodontal disease. Primary objectives related to the clinical setting include an understanding of the basis of the selective inhibition of antibiotics and the development of resistance, understanding the basis of serological tests and immunization and interpretation of radiographic evidence for caries and periodontal disease.
Activity: Lecture
3.5 Credit Hours

DENT 504 Foundation Sciences III
Foundation Sciences III is the first course in the curriculum that focuses on the underlying cellular and molecular basis of disease and is a critical component of a larger subject commonly known as Pathology. In its simplest terms, Pathology is the study of the structural, biochemical and functional abnormalities that develop within cells, tissues and organs resulting in disease. The disease process forms the core of pathology and includes: etiology, pathogenesis, lesions and clinical manifestations. Traditionally, Pathology is divided into general and systemic pathology. FSIII is the first of two courses (the other being FSIV) that collectively comprise the topic of general pathology. Specifically, FSIII will focus on: (1) the reactions of cells and tissues to abnormal stimuli leading to either adaption or cell injury and (2) pathogenic mechanisms responsible for disease development.
Activity: Lecture
3.5 Credit Hours

DENT 506 Foundation Sciences IV
This series of lectures will present relevant and important diseases and their treatments. We will explore the mechanisms used by bacteria to infect cells and present two major classes of bacteria, the Streptococcus and Staphylococcus. We will introduce odontogenic infections important to the oral cavity. Gastrointestinal infections, sexually transmitted diseases, tuberculosis and bacterial endocarditis will also be presented. There will be an introduction to antibiotics. This will be followed by a set of lectures on viruses with oral manifestations. These will include herpes, hepatitis, influenza, rhino, coxsackie, measles, mumps, rubella viruses and treatments using antiviral drugs. Highlighted will be HIV and opportunistic infections of AIDS. Next, fungal infections and treatments will be presented. Finally, infection control in dentistry will be featured.
Activity: Lecture
3.5 Credit Hours

DENT 510 Biological Systems I
Biological Systems I is multi-disciplinary, module-based course. Module I will provide the student with a basic understanding of the molecular, tissue patterning and functional mechanisms that give rise to the human form. Clinical aberrations, including craniofacial dysorphisms will be presented to illustrate what happens when normal developmental mechanisms are disrupted. Module 2 will provide the student with a thorough understanding of the development, biology, morphology and function of mucosal epithelium, connective tissue, skin and salivary glands. Module 3 combines perspectives from neurocytology, neurophysiology and pharmacology to help students develop a pre-clinical understanding of neuronal conduction and coordination as applied to the function and pharmacology of the somatic and autonomic nervous systems. Clinical correlations will be used where appropriate.
Activity: Lecture
4.25 Credit Hours

DENT 512 Biological Systems II
Presented in lectures and seminars, Module 1, will present information on the history of Radiology, in particular Dental Radiology and its implications for diagnosis and patient care. Module 2 will present a detailed survey of osteology of the skull, cervical spine and laryngeal skeleton in a series of interactive lectures and small-group conferences. Appreciation of the three-dimensional anatomy of the cranial, temporomandibular joint and the orofacial skeletal complex will be reinforced with integrative presentations of radiographic anatomy to introduce some clinical correlations. Module 3 will present a basic knowledge of bone based on developmental, anatomical, histological, radiological, molecular and functional perspectives. Teach the fundamental principles of cell-cell interactions, extracellular matrix deposition and mineralization related to bone homeostasis, remodeling and healing. Concepts will be emphasized with radiological presentation of bone diseases using different imaging modalities.
Activity: Lecture
4.0 Credit Hours

DENT 514 Biological Systems III
Biological Systems III combines the study of the general principles of anatomy/physiology of the human vascular, muscular and neuroanatomic systems with an emphasis on the orofacial complex. The goals of the course are to provide students with a sound knowledge of normal biology and organization of those organ systems and to examine and discuss examples of pathophysiologic conditions. Students should subsequently be able to recognize the anatomical structures, identify tissue types, and explain the principal physiological functions of the vasculature, muscle and cranial nerves. The third module also includes clinical assessment of cranial nerve function.
Activity: Lecture
4.0 Credit Hours

DENT 516 Biological Systems IV
Cadaveric Anatomy of the Head and Neck is designed to facilitate the integration of the gross anatomy learned systemically in the Biological Science track through the meticulous regional dissection of a human cadaver. In addition to enabling visualization of both anatomical structures and their clinically significant relationships in a three-dimensional context, the course provides initiation into the tactile manipulation of the human body.
Activity: Lecture
3.0 Credit Hours
DENT 518 Biological Systems V
The course will provide the student with a sound knowledge of hematology and the basic biology and organization of the cardiovascular, pulmonary and renal systems; and establish the general integrative knowledge of the pathologies most commonly associated with these systems. The student will be made aware of the relevance of those pathologies, and the therapeutic agents applied, to dental practice. On the basis of the information and concepts learned during the course, the student will subsequently be able to: 1) Understand laboratory medicine, hematologic disorders, and transplant medicine; 2) To recognize the anatomical structures, identify tissue types, and explain the principal physiological functions of the three internal systems; 3) To recognize and explain the interrelationships within and between the anatomical structures of the heart, blood vessels, lung, and kidney; 4) To familiarize with the common pathologies likely to be encountered during dental practice and their implications to oral health; 5) To understand how specific systemic diseases affect diagnosis, management and general well-being of the dental patient.
Activity: Seminar
3.0 Credit Hours

DENT 530 Advanced Simulation
The objective of the Freshman Advanced Simulation Laboratory course is to introduce and develop specific psychomotor and cognitive skills through the use of virtual reality based training that will enhance and augment future skills acquired in the preclinical General Restorative Dentistry, Operative Dentistry course. Technical skills are developed through learning preparations with a high speed handpiece, and dental hand instruments in a virtual reality, advanced simulation environment. Suitable operative skills, knowledge, and ergonomics will be emphasized for the successful transition into the preclinical operative course. Dental terminology and principles of tooth preparation will be applied to the theory of all the basic preparations. Suitable operative skills, knowledge, and ergonomics will be emphasized for the successful transition into the preclinical operative course.
Activity: Laboratory
0.5 Credit Hours

DENT 532 Dental Devel.& Anatomy
The Freshman Dental Development and Anatomy provides foundational knowledge regarding Tooth development, Primary dentition, Permanent dentition, Tooth numbering systems, Tooth classification (Incisors, Canines, Premolars, Molars), Set Traits (traits between Primary and Permanent dentition), Class traits (traits for each kind of tooth), Arch traits (traits of maxillary vs. mandibular), and Type traits (differences between teeth within the Class). Dental morphology relative to Operative dentistry procedures will be discussed. This knowledge will be called upon throughout all four years of the dental curriculum.
Activity: Lecture
2.5 Credit Hours

DENT 534 Intro. To Occlusion
The objective of the Freshmen Dental Occlusion course is to provide foundational knowledge regarding human occlusion and the temporomandibular joint. Dental occlusion relative to Operative dentistry procedures will be discussed. This knowledge will be called upon throughout all four years of the dental curriculum. This course includes lectures and laboratory sessions where waxing of teeth using only concepts related to dental occlusion, selective grinding to achieve an ideal occlusal relationship, alginate impressions and diagnostic model making, facebow transfer, and diagnostic model mounting procedures will be completed to reinforce didactic materials presented.
Activity: Lecture
2.0 Credit Hours

DENT 536 Operative Dent. Lecture
The objective of the Freshmen Operative Dentistry lecture course is to give foundation knowledge of operative instrumentation, operative dentistry, terminology, principles of cavity preparations, and the basics of single tooth restorations.
Activity: Lecture
1.5 Credit Hour

DENT 538 Operative Dent. Lab
The objective of the Freshmen Operative Dentistry Laboratory course is to develop an understanding of the normal, healthy stomatognathic system and to introduce fundamental didactic and psychomotor skills, relative to operative dentistry procedures. The course includes a review of individual tooth anatomy and the study of occlusion to define what is normal and healthy. The study of cariology and the treatment of the pathologic progress continues afterward. Restoration of form and function with basic intracoronal amalgam and composite procedures then follows. More complex intracoronal procedures such as gold inlay and porcelain onlay preparations and restorations are then taught. Throughout the entire course, the study of occlusion as it applies to restorative dentistry procedures is continued.
Activity: Laboratory
3.25 Credit Hours

DENT 539 Dental Materials
The course is divided into two segments. The first segment teaches the principles of materials science. The second segment is designed to present topics in applied dental materials as students use these materials in General Restorative Dentistry (GRD). After successful completion, the student should understand how the basic principles aid in material selection, risk/benefit assessment, restoration design, patient information and evaluation of new materials and manufacturer's claims.
Activity: Lecture
1.25 Credit Hour

DENT 540 Periodontics I
This course is presented in two parts. The first part presents basic biology concepts applied to the healthy and diseased periodontium. Macroscopic and microscopic changes of the periodontium will be featured and how these are altered by disease. In addition the biological basis for etiology, pathogenesis and epidemiology of periodontal disease is presented. The second part consists of presenting the basic clinic procedures for diagnosis and non-surgical treatment of periodontal diseases through lectures, preclinical labs and clinical rotations. Part 2: consists of lectures, pre-clinical labs and clinical rotations. Those will be dedicated to presenting diagnostic and non-surgical aspects of periodontal therapy.
Activity: Lecture
1.75 Credit Hour
DENT 550 Behav Sci I-Health Promo
Lectures, seminars, clinical sessions and community field experiences are provided so that students gain the necessary knowledge and skills in oral health promotion and disease prevention activities related to caries, periodontal diseases and oral cancer. Focus is placed on assessment, planning, implementation and evaluation of strategies designed to target the individual patient, the community and a population perspective. Course topics include discussion of the philosophy, modalities, rationale and evaluation of health promotion and disease preventive activities related to caries, periodontal diseases and oral cancer. Focus is placed on assessment, planning, implementation and evaluation of strategies designed to target the individual patient, the community and a population perspective. Course includes an introduction to evidence based care and research principles in application to critique of current dental literature. Activity: Lecture
2.0 Credit Hours

DENT 552 Ethics I
The objective of the PEDM courses (1st,2nd and 3rd year courses) is to impart a general knowledge of fundamental concepts in principles of professionalism and ethical decision making with emphasis on care-based discussions. The courses utilize lectures, seminars, online discussions, and reflection papers to address issues related to doctor-patient relationships, academic integrity as well as professional communication. These Pass/Fail courses provide a forum for discussing, debating and understanding parameters of professional and ethical behavior, and their impact on the patients, colleagues, the public, and the profession. PEDM I focuses on academic integrity and ethical behavior during pre-clinical years translates into ethical clinical practice. Activity: Lecture
0.5 Credit Hours

DENT 560 Intro To the Patient
This course will provide foundational knowledge about the doctor patient relationship, present medical history skills and cover the basics of a dental orofacial physical exam. The first part of the course includes lectures outlining the doctor patient relationship, components and applications of the medical history. The second part includes lectures outlining the components and application of the physical exam, including vital signs, cranial nerve exam, head and neck examination, and examination of the heart and lungs. The third and final part of the course includes two practical workshops in small groups where students are required to practice taking medical histories and performing various components of the physical examination. The second rotation occurs in the Oral Diagnosis clinic where students take a medical history and perform a physical examination on a PDM admissions patient. Activity: Lecture
5.0 Credit Hours

DENT 562 Clinical Prac II - Dau
This course is designed to teach the first-year student a four-handed dental assisting technique which is used to assist third and fourth year students in clinical practice. In addition, skills such as patient communication, team building, and record keeping are taught. Students gain clinical experience and assist in the same procedures that they are encountering in GRD, thus forming a clinical bridge to pre-clinical learning. Lectures, a written exercise, a lab, clinical rotations and completion of a clinical exam make up the didactic portions of the course. Activity: Clinic
3.75 Credit Hours

DENT 564 Intro To Clinical Dent I
This course provides first-year dental students with a variety of different clinical experiences. The student spends day-long rotations in various predoctoral and specialty PDM clinics. In addition, students gain a unique perspective in practice management by assisting PDM staff with dispensing clinical supplies and in Instrument Management Services. Activity: Lecture
0.25 Credit Hours

DENT 580 Orthodontics I
This course will expose the students to the diagnostic and treatment planning process in orthodontics. The student will also be taught the basic principles and events in child growth and development (craniofacial, somatic and dentitional) as well as the development and diagnosis of malocclusions. Activity: Seminar
2.25 Credit Hours

DENT 600 Intro To Pharmacology
Neuroparmacology is both a basic science and a clinical science. It builds on the foundation of anatomy, biochemistry, physiology, and pathology and bridges the gap into clinical dentistry. This course in basic neuroparmacology will give the students a better understanding of drugs, interpreting complicated drug/medical histories, and understanding drug reactions. This module will focus on pharmacology of the central nervous system with lectures on analgesic agents, anti-nxiety drugs, general anesthetics, arthritis and gout drugs, prescription writing and a host of other agents used to treat diseases of the CNS including Parkinson’s, seizures, and a variety of psychiatric disorders. Clinically relevant drug-drug interactions will also be covered in this course. Activity: Lecture
0.75 Credit Hours

DENT 606 Neuro,Neuropharm,Beh Mg
Activity: Lecture
2.75 Credit Hours

DENT 610 Biological Systems V
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human cardiovascular, pulmonary and renal systems, with an extensive study of the pathology and therapeutics of these systems, with an explicit emphasis on their relationship to dental practice. This course is presented in three modules. We have assembled a diverse and experienced group of lecturers, including experts in oral medicine, oral surgery, anatomy, physiology, pharmacology and pulmonary and renal medicine. Activity: Lecture
5.75 Credit Hours

DENT 612 Biological Systems VI
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human gastrointestinal, hepatobiliary, and endocrine systems, with an extensive study of the pathology and therapeutics of these systems, with an explicit emphasis on their relationship to dental practice. Activity: Lecture
4.0 Credit Hours
DENT 614 Biological Systems VII
Cadaveric Anatomy is designed to facilitate integration of the gross anatomy learned systematically in the Biological Systems curriculum stream through the meticulous regional dissection of a human cadaver. In addition to enabling visualization of both anatomical structures and their clinically significant relationships in a three-dimensional context, the course provides initiation into the tactile manipulation of the human body.
Activity: Laboratory
1.25 Credit Hours

DENT 616 Biological Systems VIII
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human hematopoietic and lymphoid system and neurologic systems with an extensive study of the pathology and therapeutics of these systems, and with an explicit emphasis on their relationship to dental practice.
Activity: Lecture
2.0 Credit Hours

DENT 620 Oral & Maxil Complex I
This is a course that will apply what students have already learned in Foundation Sciences and Biologic Systems courses to the study, interpretation and diagnosis of oral disease. It is an essential link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, genetic disease, neoplasia, immunopathology) and the disease processes that students will encounter during their careers in dentistry. The emphasis will be on oral soft and hard tissue pathology, including oral manifestations of systemic diseases that may impact on the health of the patients.
Activity: Lecture
3.0 Credit Hours

DENT 622 Oral & Maxil Complex II
This course will develop a general knowledge of fundamental concepts in orofacial function and occlusion. The course is presented in two modules, with an exam at the end of each module. The orofacial function module will focus on physiology anatomy and function of the facial structures, including saliva, mastication, speech, swallow, smell and taste. The goal is for the students to have a basic understanding of orofacial function. The occlusion module will discuss the role of occlusion in restorative dentistry with emphasis on the clinical application of fundamental biomechanical principles, techniques and instruments. By focusing on diagnosis, the student will be able to understand and develop the parameters to create successful restorative decisions and well-sequence treatment plans. This module will provide a mandatory hands-on session for facebow transfer, interocclusal record and articulator setup.
Activity: Lecture
1.75 Credit Hour

DENT 624 Oral & Maxil Complex III
This course is designed to give the student exposure to all methods of anesthesia and pain control used in dentistry, as well as, various medical emergencies encountered in practice. In addition, the students will learn about the mechanisms and consequences of orofacial pain. All lectures will be presented by faculty members from the departments of Oral and Maxillofacial Surgery & Pharmacology and Oral Medicine.
Activity: Lecture
3.75 Credit Hours

DENT 628 Oral Diagnosis and Emergency Medical Clerkship
The purpose of this course is to give students a foundation for understanding physical diagnosis, medical work-ups, medical consultations and medical conditions which directly affect the medical management of the dental patient.
Activity: Seminar
3.0 Credit Hours

DENT 630 Fixed Prosthodontics Lec
The curriculum of the Fixed Prosthodontics Lecture Course deals with the building of knowledge, thought processes and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable prostheses. Students will learn diagnosis, treatment planning, rehabilitation and maintenance of oral function, comfort, appearance and health of patients with clinical conditions associated with missing or deficient teeth using biocompatible substitutes. These restorations must provide an improved state of oral health, function and esthetics for patients.
Activity: Lecture
3.0 Credit Hours

DENT 631 Fixed Prosthodontics Lab
The curriculum of Fixed Prosthodontics Laboratory deals with the building of knowledge, thought processes, skills and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable prostheses. Student will gain hands-on experience in the clinical and technical aspects of fixed prosthodontics.
Activity: Laboratory
3.75 Credit Hours

DENT 632 Complete Rem Dent Pros L
The goal of this course is to provide students with the foundation of knowledge needed to diagnose and treat edentulous patients. Students should be able to: 1. Recognize and define complete denture terminology deemed relevant in the classroom, course syllabus, and assigned readings. 2. Describe medical, emotional, and oral anatomic factors that aid in formulation of diagnostic considerations in the complete denture therapy. 3. Describe functional anatomy of the edentulous mouth. 4. Understand the clinical procedures performed during the construction of conventional complete dentures and during the maintenance phase of treatment. 5. List the fundamental clinical procedures performed during the construction of immediate complete dentures. 6. Understand the complete denture occlusion. Upon completion of this course, the students should have an in-depth understanding of: 1. The need for therapy in and restoration of the edentulous arch with complete prostheses. 2. The significance of avoiding the edentulous condition in a patient wherever possible. 3. The dental materials that are used at the different stages of complete dentures therapy. 4. The concept and techniques of the clinical steps involved in the treatment of the edentulous patient.
Activity: Lecture
2.25 Credit Hours
DENT 633 Complete Rem Dent Pros B
The goal of this second-year course is to provide the dental students with the technical knowledge and skills needed to perform all the laboratory procedures used in the construction of complete dentures and apply the foundation knowledge learned in the lectures. Students should be knowledgeable and skilled in the following: 1. Describing and performing selected sequential clinical and laboratory procedures required during the construction of complete dentures. 2. Applying the knowledge related to dental materials learned in the lectures. Upon completion of this course, the students should be able to: 1. Perform all the laboratory procedures used in construction of complete dentures. 2. Demonstrate the function and the usage of Hanau face bow and articulator in the construction of complete dentures. 3. Communicate with the laboratory technicians via properly written work authorizations.
Activity: Laboratory
2.75 Credit Hours

DENT 634 Partial Rem Dent Pros Lb
A combination of lectures, seminars and laboratory exercises provide the dental student with a fundamental understanding of the partially edentulous condition. Topics covered include classification, diagnosis, treatment planning and treatment of partially edentulous patients with RPDs. This course is designed to provide students with the terminology, concepts and principles necessary for case selection, design, construction of, and patient therapy with conventional RPDs.
Upon completion of this course students will have the neccessary didactic knowledge to successfully understand and treat removable partial denture cases in conjunction with the clinical faculty during their third and fourth years.
Activity: Lecture
1.75 Credit Hour

DENT 640 Periodontics II Lec/Lab
This course will be focused on non-surgical periodontal therapy. The macroscopic and microscopic effects of this modality of treatment will be discussed. Different forms of periodontal diseases and non-surgical therapeutic tools will also be presented as well as information on the prognosis of the periodontal therapy and the relevance of maintenance.
Activity: Lecture
2.5 Credit Hours

DENT 650 Local,Public Hlth,Ethic
Lectures, seminars and community experiences provide students with foundation knowledge in general principles of public health and community health, with specific application to the following dental public health concepts: access to care, cost, quality of care and international health. Students complete community experiences that provide foundation experiences in developing and implementing community oral health promotion activities.
Activity: Lecture
1.75 Credit Hour

DENT 652 Ethics II
PEDM II focuses on preparing students to enter the clinical practice of dentistry, building relationships with patients, colleagues, and faculty; and developing a moral framework for clinical decision making.
Activity: Lecture
0.5 Credit Hours

DENT 654 Behavioral Management
This course provides students with the knowledge and skills to communicate with and manage appropriately a diverse group of clinical patients. Eight hours of small group activity, including experiences with standardized patients, as well as twelve hours of large group activities provide the foundational knowledge and skills in patient management with diverse and challenging patients. Motivational interviewing is presented and discussed as a strategy for communication and management with patients.
Activity: Lecture
1.0 Credit Hour

DENT 662 Clinical Prac Ill-Dau
Dental Auxiliary Utilization for the sophomore class builds on the dental assisting skills the student has mastered in DAU 562. In 662, the student moves on from assisting to Expanded Functions Dental Auxiliary skills that have been taught in the General Restorative Dentistry course. Goals of the course include the goals of DRAUT 562, as well as the development of skills to restore prepared teeth, cement and fabricate temporary crowns, and obtaining, clinical patient records of third and fourth-year student patients. Emphasis is increased on the student’s independent completion of patient-centered tasks and preparation for becoming primary providers in the third year.
Activity: Clinic
3.25 Credit Hours

DENT 664 Intro To Clin Dent II
This course is offered by the Department of Preventive and Restorative Sciences at the University of Pennsylvania School of Dental Medicine. It is intended to integrate topics from General Restorative Dentistry courses and DAU courses at the PDM with clinical expectations and procedures of PDM clinics.
Activity: Lecture
2.25 Credit Hours

DENT 666 Recall Clinic
This course provides students with the knowledge and skills to communicate with and manage appropriately a diverse group of clinical patients. Eight hours of small group activity, including experiences with standardized patients, as well as twelve hours of large group activities provide the foundational knowledge and skills in patient management with diverse and challenging patients. Motivational interviewing is presented and discussed as a strategy for communication and management with patients.
Activity: Lecture
1.0 Credit Hour

DENT 670 Endodontics Lecture
The Department of Endodontics trains pre-doctoral students to become competent in basic endodontic procedures. This includes instruction in the foundational core of Endodontics, including pulp biology, primary non-surgical root canal treatment. Clinical Endodontics: The Department of Endodontics furthermore trains pre-doctoral students to understand advanced endodontic procedures. This includes instruction in trauma, resorption, retreatment, endodontic surgery, bleaching, etc. Our ultimate goal is to implement that treatment/education in a caring, respectful, and responsible manner.
Activity: Lecture
3.75 Credit Hours

DENT 672 Endodontics Lab
The pre-clinical endodontic laboratory course is designed to introduce endodontic concepts and techniques to a student under simulated conditions using extracted teeth.
Activity: Laboratory
1.5 Credit Hour
DENT 680 Orthodontics
The purpose of this course is to provide students with the knowledge of growth and development, concentrating on child somatic, craniofacial, and dental growth and development. The students build a solid foundation along the lines of diagnosing problems and understanding the etiology of malocclusion and space maintenance.
Activity: Lecture
2.25 Credit Hours

DENT 682 Adjunctive Ortho Lec/Lab
This course is designed to expose the student to basic orthodontic laboratory and clinical procedures and encourages the development of technical abilities in banding, bonding, wire bending, and removable appliance fabrication.
Activity: Lecture
1.25 Credit Hour

DENT 685 Pediatric Dentistry I
Pediatric Dentistry. This course will cover Fundamentals of Pediatric Dentistry that will allow you to have a working knowledge of how to manage infants, children, adolescents and patients with special needs that come into your office as a general dentist. The course also describes topics in pediatric relevant to a variety of dental specialties for those interested in pursuing post-graduate studies.
Activity: Seminar
3.0 Credit Hours

DENT 690 Oral Surgery I
This course is designed to give the student exposure to all aspects of the wide and varied scope of oral and maxillofacial surgery. The course also promotes the integration of the basic sciences and medicine into the daily practice of oral and maxillofacial surgery and dentistry. It builds upon and incorporates knowledge from many prerequisite courses, particularly the Pharmacology, Microbiology, and Anesthesia, Pain, and Anxiety courses. After successful completion of this course and its clinical counterpart (course #872), the student should be competent in the management of all aspects of oral and maxillofacial surgery as outlined above under the course goals. Lectures will be presented by faculty members of the department of Oral and Maxillofacial surgery. The lecture material and reading assignments are designed to be complementary. Examinations will encompass material from both sources. Additionally at the request of the dean of academic affairs, the examinations will include questions that reinforce the knowledge obtained by completion of the prerequisite courses of PHARMACOLOGY, MICROBIOLOGY, and Anesthesia, Pain, and Anxiety. Students should review the material from those courses as both the midterm and final examinations will contain questions from knowledge obtained by their completion.
Activity: Seminar
3.0 Credit Hours

DENT 699 Selectives II
Activity: Lecture
1.0 Credit Hour

DENT 752 Ethics III
PEDM III focuses on responsibility transitioning into the post-graduation world of dentistry and covers a variety of topics such as licensure, residency applications, completing graduation requirements, as well as mentorship and real-world clinical practice dilemmas.
Activity: Seminar
0.25 Credit Hours

DENT 790 Multidisciplinary Seminar
The main objective of this year-long seminar-based course is to ensure that students develop the ability to understand biomedical, behavioral and dental sciences and apply such information in a problem-solving context for the comprehensive treatment planning and management of their patients.
Activity: Seminar
1.25 Credit Hour

DENT 799 Selectives III
Activity: Lecture
2.0 Credit Hours

DENT 800 Art Reg Dental School
Activity: Lecture
54.0 Credit Hours

DENT 899 Selectives IV
The Penn Dental Medicine’s Selectives Program enhances the predoctoral curriculum by allowing students to individualize their education to reflect their own professional interests. Students must complete this requirement in order to graduate.
Activity: Lecture
1.0 Credit Hour

DENT 996 Intro To Statistics
Activity: Lecture
1.0 Credit Hour

DENT 997 Systematic Reviews
Activity: Lecture
1.0 Credit Hour

Dental - Endodontics (DEND)

DEND 756 Endodontics Clinic
Activity: Clinic
2.75 Credit Hours

DEND 856 The Endodontic Clinic
The Endodontic Clinic trains predoctoral students to become competent in basic endodontic procedures on vital and non-vital teeth. This includes instruction in diagnosis, treatment planning, treatment/obturation, post-endodontic restoration and related entities (bleaching of non-vital teeth, treatment of traumatic injuries, etc.). This instruction is expanded and reinforced in the fourth-year clinic.
Activity: Clinic
2.0 Credit Hours

Dental - Graduate Core Curriculum (DADE)

DADE 910 Clinical Microbiology
The purpose of Microbiology is to provide modern information in five broad categories: 1. Molecular biology of prokaryotic cells as it relates to oral health. 2. Basic principles of immunology as they relate to infection and immunity. 3. Infectious diseases caused by microbial agents. 4. Relationship of microbes to oral health and how microbes cause caries and periodontal disease. 5. Basic aspects of viral infections and how they related to oral health (herpes, hepatitis B and HIV)
Course usually offered in fall term
Activity: Lecture
0.5 Credit Hours
DADE 911 Ethics
The program includes the core basic science courses, designed to encompass the various disciplines basic to advanced studies in the science and practice of dentistry. They are designed to expose students to modern concepts in the areas covered with the objective of updating and expanding upon their predoctoral knowledge of oral biology. The courses are designed to meet the requirements of the different specialty organizations. All programs are presented on an academic term basis. Course usually offered in fall term
Activity: Lecture
0.25 Credit Hours

DADE 912 Genetics, Embryology
The treatment of patients with cleft lip/palate and other types of craniofacial anomalies in the United States has improved dramatically, many children still receive care that is substantially inferior to what can or should be provided. Inadequate care results from diagnostic errors, failure to recognize and treat the full spectrum of health problems associated with these anomalies, unnecessary and poorly timed treatment, and inappropriate or poorly performed procedures. This course will inform of these persistent problems. Embryology lecture is an overview of the field from its 19th Century with Hegel and 'Ontogeny recapitulates Phylogeny' to the 21st century research on 'Evo-Devo' and the HOX development genes and their relations to the contemporary understanding of embryological development including stem cells. Course usually offered in fall term
Activity: Lecture
0.25 Credit Hours

DADE 914 Maxillofacial Radiology
This course is intended to supplement the basic science course by radiographically showing dissimilar pathoses that appear similar on x-rays.
Course usually offered in fall term
Activity: Lecture
0.25 Credit Hours

DADE 915 Nitrous Oxide Analgesia
This course is designed to provide didactic and clinical instruction in nitrous oxide/oxygen analgesia in accordance with American Dental Association Guidelines. Upon completion of this course, the participant will be eligible for an Anesthesia Restricted Permit II from the Pennsylvania State Board of Dentistry. Participants will have the opportunity to administer (to each other and patients) and undergo nitrous oxide sedation under close supervision. The course is geared to general dentists and dental specialists.
Activity: Lecture
1.0 Credit Hour

DADE 916 Practice Management
Practice Management Lectures and clinical experiences provide students with foundation knowledge regarding the policies and procedure governing practice.
Activity: Lecture
0.25 Credit Hours

DADE 917 Pathology
Pathology is a course that will apply what students have already learned to the study of disease. It is an essential link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, neoplasia, and immunopathology) and the disease processes that students will encounter during their careers in dentistry. While the emphasis will be on oral pathology, one must also be familiar with systemic diseases that may impact on the health of the patients.
Activity: Lecture
0.25 Credit Hours

DADE 918 Pulp/Dentin Biology
Biology of Pulp/Dentin Complex Microcirculation COURSE GOALS/
OBJECTIVES: 1. To give the student an understanding of the normal and abnormal biology of the dentin pulp complex. 2. To provide the student with fundamental information on clinically related subjects such as pain control and pulp capping procedures. 3. To provide the student with a general knowledge of the literature related to pulp biology. 4. To review the various physiological methods of investigating pulpal tissue.
Activity: Lecture
0.25 Credit Hours

DADE 919 Head and Neck Anatomy
The purpose of this lecture series is to review the principal anatomy comprising the stomatognathic system. The lectures build on the knowledge of head and neck anatomy acquired in dental school and integrate clinical relevance to this important subject. Slide presentations are employed to teach the anatomical structures of the major head and neck morphologic systems.
Activity: Lecture
0.75 Credit Hours

DADE 920 Advance Library
Activity: Lecture
0.25 Credit Hours

DADE 921 Cultural Competency
Participants in this workshop will assess their beliefs and awareness around cross cultural communication and diversity and inclusiveness. Through lecture, group participation, skill practice, role-play, case studies, and coaching they learn to advance their skill levels and take communication to the next level. Participants will also be recorded at the opening and conclusion of the to assess skill development.
Activity: Lecture
0.25 Credit Hours

DADE 922 Pharmacology
Pharmacology is both a basic science and a clinical science. It builds on the foundation of anatomy, biochemistry, physiology, and pathology and bridges the gap into clinical dentistry. This course in basic pharmacology will give the students a better understanding of drugs, interpreting complicated drug/medical histories, and understanding drug reactions
Activity: Lecture
0.5 Credit Hours
DADE 923 Osteoimmunology
This is a web based course with face to face review sessions prior to in class testing over course material. The material for the course will be presented to students via the online interface. This course covers topics from the text book ‘osteoimmunology’ and from supplemental material provided on Canvas. The course directors will be available by phone, appointment or email for a one hour period each week to address questions. In addition, 90 minute review sessions will be held prior to each exam.
Activity: Lecture
2.0 Credit Hours

DADE 924 Oral Medicine
There are numerous conditions that affect the oral and maxillofacial region, including oral mucosal diseases, temporomandibular joint disorders, orofacial pain syndromes and salivary gland dysfunction. Patients presenting with these disorders can be challenging to diagnose and manage. Several techniques are available for evaluation of these conditions and will guide the clinician toward proper diagnosis. Management protocols vary based upon the specific affecting the oral and maxillofacial region. This course will highlight the etiology, clinical presentation, diagnostic techniques, and management protocols of several conditions, including oral mucosal diseases, temporomandibular joint disorders, orofacial pain syndromes, and salivary gland disorders.
Activity: Lecture
0.25 Credit Hours

DADE 925 Nutrition & Oral Health
Activity: Lecture
0.25 Credit Hours

DADE 926 Wound Healing
The course includes information given by experts in the basic and/or clinical sciences. The first seven lectures cover the basic biologic aspects of wound healing. These are followed by a series of five lectures discussing wound healing in a more clinical context covering the topics of fracture repair, osseointegration, orthodontics, endodontics and periodontics.
Activity: Lecture
2.0 Credit Hours

DADE 927 Grand Rounds
This course will be in the form of a monthly Penn conference for all the residents of graduate specialty programs in PDM. Each conference will include residents' presentations of patients' treatment with complex dental needs that require multi-disciplinary approach and then open discussion with all involved specialties as panel. This conference is designed to provide residents with an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis.
Activity: Lecture
0.5 Credit Hours

DADE 928 Biostatistics
This course will provide a summary of the main statistical concepts needed to make decisions based on data. Some of the material that will be covered includes: data displays, summary statistics, probability distributions and expectation, statistical inference procedures for univariate and bivariate data, linear regression models, and analysis of variance. You will learn how to test a hypothesis, which includes phrasing a hypothesis, making a rationale choice of experimental design, choosing the statistics best suited to test the hypothesis, and assessing the results with standard errors, confidence intervals, and p-values.

GOMD 972 Off-Service Clin Rot II
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
Activity: Recitation
2.75 Credit Hours

GOMD 973 S. Gary Cohen Conf III
This course will allow academic discussion of disease, disease processes and therapeutic management of a wide range of topics related to oral medicine.
Activity: Seminar
1.5 Credit Hour

GOMD 974 V.J. Brightman Conf III
This conference provides residents with didactic training in the fundamentals of oral medicine.
Activity: Seminar
1.0 Credit Hour

GOMD 975 Omfs Path II
This course introduces residents to the techniques and principles needed for the histopathologic evaluation of tissue specimens from the oral cavity/perioral region.
Activity: Seminar
0.75 Credit Hours

GOMD 976 Oral Medicine Clin III
Residents will participate in the clinical care of oral medicine patients with direct supervision by department faculty in a variety of different locations within UPHS and Penn Dental Medicine.
Activity: Clinic

DOMD 760 Oral Medicine L
The purpose of this course is to give students a foundation for common oral lesions, facial pain, and salivary gland disease as well as an understanding of medical conditions which directly affect the oral and maxillofacial structures.
Activity: Lecture
1.25 Credit Hour

DOMD 761 Admissions and Emergency
Activity: Clinic
1.5 Credit Hour

DOMD 764 Od&E Medical Clerkship
This course is designed to give students a foundation for understanding physical diagnosis, medical workups, consultations, and conditions that directly affect management of the dental patient. Students learn the skills of physical diagnosis, how to complete the ‘History and Physical,’ how to interpret and evaluate clinical, laboratory, radiographic, and other diagnostic information and procedures. In addition, students learn how to recognize the normal range of clinical findings as well as significant abnormalities requiring medical management of the dental patient.
Activity: Lecture
1.0 Credit Hour

DOMD 861 Admissions and Emergency
Admissions and Emergency The Admissions and Emergency Care Clinic rotation consists of combined rotations in the Emergency Care Clinic, and the Oral Diagnosis Clinic. The Emergency Care Clinic provides emergency care to ‘walk-in’ non-registered patients. Emphasis is placed on efficient and thorough dental care to ensure that the patient receives the highest quality of emergency dental care in a timely manner. The Admissions or Oral Diagnosis Clinic provides an initial evaluation for Penn Dental Medicine patients who register for comprehensive care on an appointment basis. Students that rotate through the Oral Diagnosis Clinic assess the medical and oral health status of the patients. Additionally, the medical status of all patients (except ASA I patients) are reassessed annually in the Oral Diagnosis Clinic.
Activity: Clinic
6.25 Credit Hours

DOMD 887 Hospital Assignment
Students spend four weeks in an extramural program at an affiliated hospital or a non-affiliated hospital program approved by Penn Dental Medicine. During the hospital rotation, students evaluate hospitalized patients to reinforce principles of physical and laboratory diagnosis, participate in dental treatment for patients with severe medical problems, and learn to request and answer consultations from other clinical departments such as radiology and otolaryngology.
Activity: Clinic
6.25 Credit Hours
Dental - Oral Surgery (DOSP)

DOSP 770 Oral Surgery L
This lecture-based course provides students exposure to all aspects of the wide and varied scope of oral and maxillofacial surgery. The course promotes the integration of the basic sciences and medicine into the daily practice of oral and maxillofacial surgery and dentistry.
Activity: Lecture
2.25 Credit Hours

DOSP 772 Oral Surgery Clinic
Students perform uncomplicated exodontia and minor pre-prosthetic surgical procedures that are approved by the clinical instructors, assist the instructors in complicated surgical procedures, and observe the administration of intravenous sedation and general anesthesia.
Activity: Clinic
1.0 Credit Hour

DOSP 872 Oral Surgery Clinic
Students perform uncomplicated exodontia and minor pre-prosthetic surgical procedures that are approved by the clinical instructors, assist the instructors in complicated surgical procedures, and observe the administration of intravenous sedation and general anesthesia. The bulk of the students' clinical experience is delivered in a continuous 2-week block. This type of experience enables students to better understand the delivery of surgical care.
Activity: Clinic
2.0 Credit Hours

Dental - Orthodontics (DORT)

DORT 753 Orthodontics II
Activity: Lecture
1.75 Credit Hour

DORT 788 P and I Clinic
Through clinical rotation, the student is exposed to patients with malocclusions that arise in a normally developing craniofacial complex. Management of these problems aims at providing an unimpeded eruption and alignment of dentition.
Activity: Clinic
0.75 Credit Hour

DORT 803 Adjunctive Orthodontics
Adjunctive orthodontic intervention involves the management of orthodontic problems prior to restorative treatment. Each student is required to complete the treatment of a clinical case which may involve the following: 1. repositioning teeth that have drifted after extraction or bone loss caused by periodontal disease. 2. forced eruption of broken teeth to expose sound root structure of which to place permanent restorations. 3. correction of crossbites which do not involve a skeletal discrepancy. 4. alignment of anterior teeth for more esthetic restorations.
Activity: Clinic
0.5 Credit Hours

Dental - Pediatrics (DPED)

DPED 704 Pediatric Dentistry L/B
Activity: Lecture
2.75 Credit Hours

DPED 751 Pediatric Dentistry Clin
Activity: Clinic
1.25 Credit Hour

Dental - Periodontics (DPRD)

DPRD 780 Periodontics L
This course is designed to acquaint the student practitioner with the fundamentals of periodontal surgery necessary for the comprehensive practice of general dentistry. A major emphasis includes understanding the normal periodontium and a correlation of the events in the histopathology of inflammation, trauma and wound healing.
Activity: Lecture
2.0 Credit Hours

DPRD 781 Periodontics Clinic
The Periodontics Clinic provides third-and fourth-year students the opportunity to treat patients with differences of severity in existing periodontal disease.
Activity: Clinic
5.25 Credit Hours

DPRD 881 Periodontics Clinic
The Periodontics Clinic provides fourth-year students the opportunity to treat patients with differences of severity in existing periodontal disease. In most cases, the patients afford the students adequate experiences and impart to them comprehensive knowledge of the tissues of the periodontium and the fundamental principles underlying the prevention and treatment of diseases that afflict the periodontal tissues.
Activity: Clinic
5.0 Credit Hours

Dental - Radiology (DRAD)

DRAD 777 Radiology Clinic/Seminar
Students are assigned 12-15 rotations in the Radiology Clinic during their third and fourth years. During these rotations, students take full-mouth x-ray series on newly admitted patients.
Activity: Clinic
0.75 Credit Hours

DRAD 877 Radiology Clinic
Students are assigned 12-15 rotations in the Radiology Clinic during their third and fourth years. During their rotations, they take full-mouth x-ray series on newly admitted patients who are sent to Radiology from the Admissions Clinic.
Activity: Clinic
0.25 Credit Hours

Dental - Restorative Dentistry (DRST)

DRST 739 Pass Preparatory Course
Activity: Laboratory
4.25 Credit Hours
Design (DSGN)

DSGN 220 Pixel to Print
This studio course introduces students to the world of print media and circulation through techniques in Risograph (a high-speed digital printing system developed in Japan in the 1980s), xerography, and letterpress, focusing particularly on the format of posters and artists’ ephemera. Beginning with the Adobe Creative Suite, students will create their own broadsides, flyers, announcement cards, and print-based installations throughout the course, exploring ways in which artists and designers make use of the printed form to disseminate information; initiate happenings; advertise events; or foment change. Students will learn about some of the most significant producers working within this realm—such as Dada and punk bands in the '70s to contemporary hybrid publishing collectives—develop skills in page layout, typography, and design; and develop mechanized and hand-pulled press operations. The course includes a field trip to NYC.
Taught by Kayla Romberger
Also Offered As: DSGN 520
Activity: Studio
1.0 Course Unit

DSGN 233 Digital Illustration
Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation storyboarding, figure illustration, technical diagram illustration, and photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, and three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and creatively and skillfully execute finished artwork.
One-term course offered either term
Also Offered As: DSGN 633
Prerequisite: DSGN 264 AND FNAR 123
Activity: Studio
1.0 Course Unit

DSGN 234 Art of the web: Interactive Concepts for Art & Design
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze, and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge of how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical conceptual skills and foster creative thinking.
One-term course offered either term
Also Offered As: DSGN 634
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit
DSGN 235 3-D Computer Modeling
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanisms while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.
One-term course offered either term
Also Offered As: DSGN 635
Prerequisite: FNAR 123 AND DSGN 636
Activity: Studio
1.0 Course Unit

DSGN 236 Digital Figure Modeling
This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution rendering, and rapid prototyping.
Course usually offered in spring term
Also Offered As: DSGN 536
Prerequisite: DSGN 235
Activity: Studio
1.0 Course Unit

DSGN 238 Open Book
‘Open Book’ will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.
Course usually offered in fall term
Also Offered As: DSGN 538
Activity: Seminar
1.0 Course Unit

DSGN 245 Book and Publication Design
Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of books-literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs and textbooks, and serial editions-discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book Collection - and studio time where students will design books with attention to the format’s conceptual relationship to the material at hand with a focus on typography and page layout, as well as on understanding production methods of printing and binding. In addition to the conventions of page layout, students will examine paratextual elements (title page, practice of pagination and other internal structuring, content lists and indexes, colophons, notes, and marginalia, and end-leaves binding, etc.). Prerequisite: DSGN 264 or permission from the instructor.
Taught by: Hyland
Course usually offered in fall term
Also Offered As: DSGN 645
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 247 Environmental Animation
This studio-based course examines the disciplinary spaces of landscape, art, and architecture through the medium of 3D animation and storytelling. We immerse ourselves in environments that may be as small as a cell or as large as a planet. From the refiguring of images, models, graphic design, or video to visualization or coding the genesis of whole environments, this course will allow for a variety of entry point for students of different disciplines and skill levels. Projects will range in scope from animated GIFs to animated shorts. This course embraces a spirit of invention, collaborative learning, and interdisciplinary cross-pollination. Experience in landscape architecture, architecture, animation, programming, film, GIS, and/or graphic design is encouraged. We will examine and discuss some standard typologies such as the walk-through, data-visualization, as well as filmic and avant garde strategies as starting points for creative reinterpretation of space. We will primarily be using Blender and After Effects with support from Unreal Engine. Python scripting will be included in most assignments to enhance artistic control of the software.
Taught by: Landau
Course usually offered in spring term
Also Offered As: DSGN 547
Activity: Studio
1.0 Course Unit

DSGN 264 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over a broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
For BA Students: Humanities and Social Science S
One-term course offered either term
Also Offered As: DSGN 636, VLST 264
Activity: Studio
1.0 Course Unit

DSGN 266 Graphic Design with Creative Technologies
This aim this course is to introduce students creative ways to use color, typography, and layout across new materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and date-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. Course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects.
One-term course offered either term
Also Offered As: DSGN 566
Prerequisite: DSGN 264 OR DSGN 636
Activity: Studio
1.0 Course Unit
DSGN 268 Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century.
One-term course offered either term
Also Offered As: DSGN 568
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 269 Typography
The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collection and analyzing type, designing an original typeface, researching type history and experimenting with typographic forms.
One-term course offered either term
Also Offered As: DSGN 569
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 270 Graphic Design Practicum
Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in portfolio-ready finished product. Students will participate in full design experience including design, client interaction, presentations, production and project management. In addition, students will take field trips, meet professionals and go on studio visits.
One-term course offered either term
Also Offered As: DSGN 570
Prerequisite: DSGN 266 OR DSGN 269
Activity: Studio
1.0 Course Unit

DSGN 286 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. Visual Narrative focuses on traditional as well as emerging modes of production and distribution for documentary, visual storytelling, and photojournalism, exploring new aesthetics and the social impact of visual narratives. Visual Narrative immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series and the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers. Students will work within and across disciplines of art, design, and visual journalism, exploring topics including context, cause and effect, time, space, flow, picture-to-picture relationships, sequence, visual hierarchy, and linearity. Study of non-narrative systems: categorical, rhetorical, abstract, and associational forms - as well as interactive narratives will also be included.
Course usually offered in fall term
Also Offered As: DSGN 686
Activity: Studio
1.0 Course Unit

DSGN 300 Contemporary Theories of Design
This seminar explores a range of theories, concepts, and thought patterns that shape different disciplines of design. From critical science studies to object-orient ontology and speculative design, it discusses how theoretical frameworks drive innovation, critique, and user experience.
Taught by: Telhan
Also Offered As: DSGN 500
Activity: Seminar
1.0 Course Unit

DSGN 306 Design 21: Design After the Digital
Last century, the digital revolution transformed every aspect of our lives. It shaped every design discipline and defined the ways we imagine and fabricate anything from images to everyday products to clothing, cars, buildings and and megacities. Today, design is going through other technical and conceptual revolutions. We design with biotechnologies, fall in love in Virtual Reality with AI bots, rent our cognitive labor through cryptocurrencies. Our creative capabilities, on the other hand, are bounded by a polluted, over-crowded, and resource-constrained planet that is suffering major income and educational inequality. Design After the Digital interrogates the role of design for this century. The seminar surveys the conceptual and technical developments in the past decade to develop an interdisciplinary understanding of design, science and technology. We will study how new design and fabrication methods shape what we eat, what we wear, how we form opinions and express ourselves. The goal will be to develop new literacies of design that will help us acclimate better to the realities of the century as creative and critical citizens who can shape its products and values.

Course usually offered in fall term
Also Offered As: DSGN 506
Activity: Seminar
1.0 Course Unit
DSGN 317 Cultures of Making
Cultures of Making is an integrative studio that explores new frontiers of design that enable, empower, and interrogate the human in the 21st century. We will take the human body, identity, or image as a site of investigation and design new types of products for it. Through our designs, we will raise questions about the motivations behind quantifying ourselves, desires for being permanently available and connected, complacency with not having privacy or intimacy, and eagerness to substitute craft, labor, and decision-making with intelligent systems from self-driving cars to painting bots and trading algorithms. This studio will pursue a research and production-oriented format. We will incorporate techniques and technologies from fields as diverse as printed electronics, biochemical fabrication, machine learning and robotics to develop applications that respond to the emergent perceptions of the human for its individual, social, or environmental identity.

Taught by: Orkan Telhan
Also Offered As: DSGN 517
Activity: Studio
1.0 Course Unit

DSGN 328 Functions for Form and Material
This studio course will introduce methods of material selection and fabrication with the goal of developing evocative and effective designs. We will learn parametric modeling techniques that allow visualization to begin before all of the requirements of a design are known. We will implement techniques that allow us to test and optimize forms to be stronger, lighter, or to fail or perform more predictably. The class will work to identify materials with properties that introduce new structural or conceptual possibilities for our designs. For each project, we will use a broad range of fabrication techniques for metals, natural and synthetic materials. The goal of the course is to develop a creative approach towards learning to work with unfamiliar tools and materials.

Taught by: Mosely
Also Offered As: DSGN 528
Activity: Studio
1.0 Course Unit

DSGN 337 Information Design and Visualization
Information Design and Visualization is an introductory course that explores the structures of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.
One-term course offered either term
Also Offered As: DSGN 637
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 343 Language of Design
The course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in the decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design - as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics related to their field of study.
Course usually offered in spring term
Also Offered As: DSGN 643
Activity: Seminar
1.0 Course Unit

DSGN 366 Advanced 3-D Modeling
Advanced 3-D Modeling will give students the opportunity to refine skills in modeling, texturing, lighting and rendering with an emphasis on the evolution of ideas through constant revision based class critique. Students will use a variety of industry standard software packages, including but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content within a simulated production environment.
One-term course offered either term
Also Offered As: DSGN 646
Prerequisite: DSGN 235 OR DSGN 635 OR DSGN 236 OR DSGN 536
Activity: Studio
1.0 Course Unit

DSGN 370 Advanced Graphic Design and Typography
This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio. Prerequisite: Permission from instructor if prerequisites are not met.
Course usually offered in fall term
Also Offered As: DSGN 670
Prerequisite: DSGN 266 AND DSGN 269
Activity: Studio
1.0 Course Unit
DSGN 378 Interfacing Cultures: Designing for Mobile, Web and Public Media
This course introduces advanced topics related to contemporary media technologies, ranging from social media to mobile phone applications and urban interfaces. Students learn how to use new methods from interaction design, service design, and social media and work towards prototyping their ideas using new platforms and media. The class will cover a range of topics such as online-gaming, viral communication, interface culture, networked environments, internet of things and discuss their artistic, social, and cultural implications to the public domain.
Course usually offered in spring term
Also Offered As: DSGN 678
Prerequisite: DSGN 234
Activity: Studio
1.0 Course Unit

DSGN 380 Design Future(s)
Design Future(s) is production-oriented studio which explores the relationship between critical design and emerging technologies. Students learn how to work with sensing, machine learning, robotics, and biofabrication to explore what it means to design in response to the social, cultural, and environmental realities of our times. The course is organized through hands-on workshops, lectures, design and critique sessions to develop both technical skills and learn about new design methodologies. Every semester, the studio is developed around a specific theme (i.e., future of body and labor, future of identity, future interfaces) and work towards developing a discursive and multi-disciplinary understanding of 'future' that is informed by methodologies outside the traditional Western design canon.
Taught by: Orkan Telhan
Also Offered As: DSGN 580
Activity: Studio
1.0 Course Unit

DSGN 388 Creative Research
This seminar explores different aspects of research—knowledge production and dissemination—across a variety of creative practices from the arts to the humanities, engineering, and sciences. Students investigate what it means to observe, measure, analyze, test, study, experiment, diagram, prototype, speculate, generate and criticize; apply multiple modes of inquiry; be conceptual, analytical, propositional and critical at the same time, all in order to develop their work from different perspectives. As students work across different methodologies, they also explore ways of making their work public through various social protocols, publications, and exhibitions that address different audiences.

DSGN 580 Design Future(s)
Design Future(s) is production-oriented studio which explores the relationship with critical design and emerging technologies. Students learn how to work with sensing, machine learning, robotics, and biofabrication and explore what it means to design in response to the social, cultural, and environmental realities of our times. The course is organized through hands-on workshops, lectures, design and critique sessions to develop both technical skills and learn about new design methodologies. Every semester, the studio is developed around a specific theme (i.e., future bodies, future of identity, future interfaces, etc.) and work towards developing a discursive and multi-disciplinary understanding of 'future' that is informed by methodologies outside the traditional Western design canon.
Taught by: Orkan Telhan
Also Offered As: DSGN 380
Activity: Studio
1.0 Course Unit

DSGN 633 Digital Illustration
Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation storyboard rendering, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and plan creatively and skillfully execute finished artwork.
One-term course offered either term
Also Offered As: DSGN 233
Prerequisite: DSGN 664 AND FNAR 123
Activity: Studio
1.0 Course Unit

DSGN 634 Art of the Web: Interactive Concepts for Art & Design
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical conceptual skills and foster creative thinking.
One-term course offered either term
Also Offered As: DSGN 234
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 635 3-D Computer Modeling
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanisms while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.
One-term course offered either term
Also Offered As: DSGN 235
Prerequisite: FNAR 123 AND DSGN 636
Activity: Studio
1.0 Course Unit
DSGN 636 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over a broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: DSGN 264, VLST 264
Activity: Studio
1.0 Course Unit

DSGN 637 Information Design and Visualization
Information design and visualization is an introductory course that explores the structure of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.
One-term course offered either term
Also Offered As: DSGN 337
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 638 Creative Research
This seminar explores what it means to do research in creative and critical practices. Students learn about different research methods from design, engineering, humanities and sciences; utilize them for developing and evaluating their individual creative work as cultural producers. This is an interdisciplinary course that encourages students to observe, measure, analyze, test, study, experiment, diagram, prototype, speculate, generate and criticize; apply multiple modes of inquiry; be conceptual, analytical, propositional and critical at the same time to develop their work from different perspectives.
Taught by: Orkan Telhan
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

DSGN 643 Language of Design
The course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design - as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal visual language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics to their field of study.
Course usually offered in spring term
Also Offered As: DSGN 343
Activity: Seminar
1.0 Course Unit

DSGN 645 Book and Publication Design
Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of book-literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs, and textbooks, and serial editions-discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book collection - and studio time where students will design books with attention to the format's conceptual relationship to the material at hand with a focus on typography and page layout, as well as understanding production methods of printing and binding. In addition to the conventions of page layout students will examine paratextual elements (title page, practices of pagination and other internal structuring, content lists and indexes, and colophons, notes and marginalia, end-leaves, binding etc.). Prerequisite: DSGN 264 or permission from the instructor.
Taught by: Hyland
Course usually offered in fall term
Also Offered As: DSGN 245
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 646 Advanced 3D Modeling
Advanced 3D Modeling will give students the opportunity to refine skills in modeling, texturing, lighting, and rendering with an emphasis on the evolution of ideas through constant revision based on class critique. Students will use a variety of industry standard software packages, including but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content with a simulated production environment.
One-term course offered either term
Also Offered As: DSGN 366
Prerequisite: DSGN 235 OR DSGN 635 OR DSGN 236 OR DSGN 536
Activity: Studio
1.0 Course Unit
DSGN 670 Advanced Graphic Design and Typography
This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used build a portfolio. Prerequisite: Permission from instructor if prerequisites are not met.
Course usually offered in fall term
Also Offered As: DSGN 370
Prerequisite: DSGN 266 AND DSGN 269
Activity: Studio
1.0 Course Unit

DSGN 678 Interfacing Culture: Designing for Mobile, Web and Public Media
This course introduces advanced topics related to contemporary media technologies, ranging from social media to mobile phone applications and urban interfaces. Students learn how to use new methods from interaction design, service design, and social media and work towards prototyping their ideas using new platforms and media. The class will cover a range of topics such as online-gaming, viral communication, interface culture, networked environments, internet of things and discuss their artistic, social, and cultural implications to the public domain.
Course usually offered in spring term
Also Offered As: DSGN 378
Prerequisite: DSGN 234
Activity: Studio
1.0 Course Unit

DSGN 686 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. It proposes that studying and making sequential images and visual essays in a wide range of media- comics and graphic novels, propaganda, environments and installations, social media, animation, video, and digital media- are critical to understanding culture. The course immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series an the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. STudents will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers.

DTCH 153 Is Europe Facing a Spiritual Crisis?
Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective ‘cultural identities’ (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modern) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...).

DTCH 574 Politics and Societies in the Early Modern World
In this seminar, we will discuss how early modern globalization affected societies and the ways their members and rulers made politics. Following a historiographical introduction, it is divided in three sections. In the first, we will concentrate on empires and kings in order to detect common features of dynastic power across the globe and to explore how such characteristics influenced each other. Second, we will shift our attention to citizens and the ways they made politics in their city-states. For a long time, research on citizenship has been confined to the post-revolutionary nation states. However, recent research suggests that urban citizenship has far deeper roots in medieval and early modern cities. Up to now most research has focused on urban centers in Western Europe and more precisely on the so-called urban belt stretching from Central and North-Italy, over Switzerland and Southern Germany to the Rhineland and the Low Countries. Comparisons with urban centers in Asia and the colonial Americas will be needed to test that view. In the third section, we will study the people who provided information to societies and decision makers. Often, they held multiple identities or they acted as religious or ethnic outsiders. Therefore, we call them, with a term borrowed from anthropology ‘brokers’. Taken together, the analysis of these aspects will deepen our understanding of politics and societies in the globalizing early modern world. Thus, the seminar will contribute to a more comprehensive, less Europe-centered view on that period.

Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Fulfills Cross-Cultural Analysis
EALC 008 East Asian Religions
This course will introduce students to the diverse beliefs, ideas, and practices of East Asia’s major religious traditions: Buddhism, Confucianism, Daoism, Shinto, Popular Religion, as well as Asian forms of Islam and Christianity. As religious identity in East Asia is often fluid and non-sectarian in nature, these religious traditions will not be investigated in isolation. Instead, the course will adopt a chronological and geographical approach, examining the spread of religious ideas and practices across East Asia and the ensuing results of these encounters. The course will be divided into three units. Unit one will cover the religions of China. We will begin by discussing early Chinese religion and its role in shaping the imperial state before turning to the arrival of Buddhism and its impact in the development of organized Daoism, as well as local religion. In the second unit, we will turn eastward into Korea and Japan. After examining the impact of Confucianism and Buddhism on the religious histories of these two regions, we will proceed to learn about the formation of new schools of Buddhism, as well as the rituals and beliefs associated with Japanese Shinto and Korean Shamanism. The third and final unit will focus on the modern and contemporary periods through an analysis of key themes such as religion and modernity, the global reception and interpretation of East Asian religions, and the relationship between religion and popular culture. The class will be conducted mainly in the form of a lecture, but some sessions will be partially devoted to a discussion of primary sources in translation. The course assignments are designed to evaluate the development of both of these areas. No previous knowledge of East Asian languages is necessary, and all readings will be available in English on the Canvas site in PDF form.

EALC 013 Art and Civilization in East Asia
Survey of the major artistic traditions of East Asia from Neolithic times through the 18th century. Will serve as an introduction to upper level lecture courses that deal with the arts and civilizations of China, Korea, and Japan. Students study and handle objects during weekly session in the Museum.
For BA Students: Arts and Letters Sector
Taught by: Davis, Steinhardt
Two terms. student may enter either term.
Also Offered As: ARTH 103, VLST 233
Activity: Lecture
1.0 Course Unit

EALC 015 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and its time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems effect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among lay communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as ‘Just-War,’ Women’s Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.
Taught by: McDaniel
One-term course offered either term
Also Offered As: RELS 173, SAST 142
Activity: Lecture
1.0 Course Unit
EALC 022 Gods, Ghosts, and Monsters
This course seeks to be a broad introduction. It introduces students to the diversity of doctrines held and practices performed, and art produced about ‘the fantastic’ from earliest times to the present. The fantastic (the uncanny or supernatural) is a fundamental category in the scholarly study of religion, art, anthropology, and literature. This course will focus both theoretical approaches to studying supernatural beings from a Religious Studies perspective while drawing examples from Buddhist, Shinto, Christian, Hindu, Jain, Zoroastrian, Egyptian, Central Asian, Native American, and Afro-Caribbean sources from earliest examples to the present including mural, image, manuscript, film, codex, and even comic books. It will also introduce students to related humanistic categories of study: material and visual culture, theodicy, cosmology, shamanism, transcendentalism, soteriology, eschatology, phantasmagoria, spiritualism, mysticism, theophany, and the historical power of rumor. It will serve as a gateway course into the study of Religion among numerous Asian, and East Asian Studies, as well as Visual Culture and Film Studies. It will include guest lectures from professors from several departments, as well as an extensive hands-on use of the collections of the Penn Museum of Archaeology and Anthropology and the manuscripts held in the Schoenberg Collection of Van Pelt Library. It aims to not only introduce students to major approaches, and terms in the study of religion and the supernatural, but inspire them to take more advanced courses by Ilya Vinitsky, Liliane Weissberg, Projet Mukharji, Talya Fishman, Annette Reed, David Barnes, David Spafford, Frank Chance, Michael Meister, Paul Goldin, Renata Holod, Paul Rozin, among several others.

EALC 034 What is Taoism?
This course introduces a wide variety of ideas and practices that were at one time or another been labeled as Daoist (or ‘Taoist’ in the Wade-Giles Romanization), in order to sort out the different senses of the term, and consider whether these ideas and practices have had any common features. We will begin with the two most famous Daoist works—the Zhuangzi and the Daodejing (or Laozi). We will also survey other bi-spiritual practices, such as the meditational techniques of Inner Alchemy and the self-cultivation regimens known today as Qigong and Tai-chi, as well as the theological and ritual foundations of organized Daoist lineages, many of which are still alive across East Asia. We will conclude with a critical review of the twentieth-century reinvention of ‘Daoism,’ the scientization of Inner Alchemy, and the new classification of ‘religious’ versus ‘philosophical Daoism.’ While familiarizing ourselves with the key concepts, practices, and organizations developed in the history of Daoism, this course emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the label of ‘Daoist’ (as well as ‘Confucian’ and ‘Buddhist’) in Chinese history and in modern scholarship. We will also question modern demarcations between the fields of philosophy, religion, and science.

EALC 041 Late Imperial China
From an Eurasian empire ruled by Mongols to an ethnically defined Han Chinese Ming dynasty, then again to a multi-ethnic empire ruled by a minority group of Manchus, the disruptions and transformations in the very idea of ‘China’ in the past seven centuries defies our modern notion of China as a unitary nation with the world’s longest continuous cultural tradition. How to understand the continuities and discontinuities of the last three imperial dynasties of China will be the central focus of our survey. How did these different ethnic groups adjust to each other’s way of life? Did complicated cultural interaction prompt different visions of empires? How did the meaning of ‘Chinese change over this time period? How did international politics shape the fate of Chinese empires? With no assumption of prior knowledge, lectures open with an overview of Chinese society before the eve of the Mongolian invasion, and then trace the changing visions of ethnic and social orders in the subsequent regimes ruled by three different ethnic groups (Mongolian, Han Chinese, and Manchurian). We will examine and compare bureaucratic operations, cultural ideals, domestic and international policies from above as well as the daily life experiences from below. The course will conclude with an analysis of the collapse of the imperial order at the beginning of the twentieth century, after it was severely challenged by a semi-Christian Utopian movement from within and global drug trade imperialist attacks from without.

EALC 047 History of Modern China
From an empire to a republic, from communism to capitalist-style capitalism, few countries have ever witnessed so much change in a hundred year period as China during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally, 3) the development and transformation of Chinese modernity. Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao’s China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of ‘Greater China’ that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.

EALC 064 Sushi & Ramen: Making Japanese Food Global
Who defines Japanese food? Is it the chef at a top establishment in Tokyo, a home cook in Osaka, a tea master in Kyoto, the ancient capital? Or is it the midwestern American who thinks sushi means raw fish? Is it the person who scarfs cup noodles, or the devotee of artisan ramen stock? Perhaps it is the Japanese government, which in 2006 sent undercover agents abroad to guard against inferior Japanese food outlets. In this class we will consider how Japanese food came to be defined in distinction to Western and Chinese foods beginning in the nineteenth century, and how Japanese food became a global cuisine. Among our questions: What makes a dish Japanese? How did Portuguese or Spanish frying habits (tempura) and Chinese lamian (ramen) become hallmarks? How traditional is the diet of rice and fish, and in what ways does it interact with the environment? How did Buddhist vegetarians justify sukiyaki? What relationship does food have to the longevity of Japanese today? How does gender affect Japanese food cultures? What are the origins of Iron Chef and bento? We will survey the Philadelphia Japanese food scene and learn to make our own sushi. Some controversies we will discuss include the consumption of whale meat in Japan. We will also investigate Japanese government controls of food to combat obesity and to make food safe. after the Fukushima nuclear catastrophe. Materials include essays, films, novellas, menus, and cookbooks.

Notes: Freshman Seminar

EALC 069 Japanese Popular Culture
Today Japanese manga, anime, J-pop, and film have a global audience. But these exports can only be truly understood in light of longstanding domestic anxieties about sex, violence, gender, and ‘the kids these days.’ More recent concerns about the country’s declining birthrate, weakening geopolitical position, and vulnerability to natural and anthropogenic disaster also deeply influence Japanese media products. This course explores some of these anxieties through critical examinations of manga, anime, video games, television, music, and fashion in Japan. Film screenings include work by directors Kon Satoshi, Otomo Katsuhiro, Takahata Isao, Miyazaki Hayao; Itami Juzo, and Takita Yojiro; manga excerpts include work by Tezuka Osamu, Urasawa Naoki, and Yazawa Ai. Secondary readings include scholarship in anthropology, history, sociology, literature, film studies and religious studies.

EALC 086 Korean Popular Culture
‘Korean Wave’ (Hallyu) is currently raging throughout non-Western parts of the world, especially Asia, and may be making its way to the West. From South Korean tele-dramas and K-pop music to their respective celebrity icons, these popular cultural forms from Korea are increasingly becoming part of the everyday landscape and vocabulary. We will attempt to understand and evaluate this cultural phenomenon-its promises and limitations as well as its popularity and backlash against it. More specifically, this course explores the ways in which television, music, manhwa (comic books), and the internet participate in the transnational production and circulation of culture, modernity, tradition, ideology, and politics. Some of the more specific topics covered may include: Korean emotions and melodramas; imitation versus innovation in K-pop; fictions of history in period dramas; the marketing of new masculinity; revival of folk culture; preservation of traditional values in postmodern times; repatriation of Korean American pop stars to Korea; and youth culture. Requires outside viewing and listening.

EALC 101 Introduction to East Asian History
This course will provide an overview of early modern and modern East Asian history. We will discuss developments from ca. 1400 to the present as integrally bound to the history of the modern world. We will also introduce the craft of history and some basic tools and methods of humanities/social science research. By the end of this course you will be able to develop a basic understanding of major topics in early modern and modern East Asian history; learn critical approaches to both primary and secondary sources; compose coherent and persuasive reviews of scholarly works.
Taught by: Spafford
Course not offered every year
Activity: Lecture
1.0 Course Unit
EALC 105 East Asian Diplomacy
Home to four of the five most populous states and four of the five largest economies, the Asia/Pacific is arguably the most dynamic region in the twenty-first century. At the same time, Cold War remnants (a divided Korea and China) and major geopolitical shifts (the rise of China and India, decline of the US and Japan) contribute significantly to the volatility of our world. This course will examine the political, economic, and geopolitical dynamism of the region through a survey of relations among the great powers in Asia from the sixteenth century to the present. Special emphasis will be given to regional and global developments from the perspective of the three principal East Asian states–China, Japan and Korea. We will explore the many informal, as well as formal, means of intercourse that have made East Asia what it is today. Graduate students (EALC 505) should consult graduate syllabus for graduate reading list, special recitation time and graduate requirements.

1.0 Course Unit

EALC 106 East Asian Cinema
This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g. modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required.
Taught by: Zhou
Also Offered As: ARTH 291, CIMS 291, EALC 506
Activity: Lecture
1.0 Course Unit

EALC 108 Sports in East Asia
This course will examine sports in East Asia from the nineteenth century to the present. Recently, East Asia plays an important role in transforming the global geopolitics of sport. The post-war East Asian Olympic Games-1964 Tokyo Olympics, 1972 Sapporo Winter Olympics, 1988 Seoul Olympics, 1998 Nagano Winter Olympics, and 2008 Beijing Olympics-and the 2002 FIFA World Cup Korea/Japan illustrate the fact that a new global sports order led by East Asia has emerged. East Asia nations will play hosts to other major sporting events, including the 2018 Pyeongchang Winter Olympics, 2020 Tokyo Olympics, and 2022 Beijing Winter Olympics. Chinese, Japanese, and Korean athletes have been highly active in MLB, NBA, English Premier League, and LPGA. The popularity of the various martial arts proves that East Asian sports seem to be everywhere these days. This class will focus on helping students understand how sports have affected and transformed East Asia exploring various issues: imperialism, colonialism, race, class, gender, foreign policy, nationalism, religion, economics, industrialization, tourism, and urbanization. Course contents include lecture, discussions, secondary readings, primary source readings, documentaries, and films.

1.0 Course Unit

EALC 109 New Korean Cinema
In 2019, Bong Joon-ho’s Parasite won the Palme d’Or at the 72nd Cannes Film Festival. This event marked the apex of South Korean cinematic renaissance, having steadily become a tour de force in the international film festival scene since 1997 onwards. This course explores the major auteurs, styles, themes, and currents of the so-called ‘New Korean Cinema’ that emerged in the mid-to-late 1990s to continue to this day. Drawing from texts on critical film and Korean studies, we will pay particular attention to how the selected works re-present, resist, and interweave the sociopolitical climate they concern and are born out of. Using cinema as a lens with which to see the society, we will touch upon major events of the twentieth century including national division, military dictatorship and democratization movements, IMF economic crisis, youth culture, hallyu (the Korean wave), and damunhwa (multiculturalism initiative). In so doing, we will closely examine how each cinematic medium addresses the societal power structure and the role of the ‘Other’ it represents in terms of class, race, gender, and sexuality in the construction of contemporary Korean society. We will also briefly survey the history of South Korean cinema that has evolved hand-in-hand with the history of modern Korea itself, walking through its five different phases (1945-Korean War era;1955-1972 ‘Golden Age’; 1973-1979 censorship era; 1980-1996 democratization era; and 1997 onwards). No prior experience of Korean studies courses necessary; all films will be screened with English subtitles. IMPORTANT: This class has TWELVE total Monday evening film screenings, of which you are required to attend AT LEAST SEVEN. Screening times are Mondays 5:20-7:30 PM, Williams Hall 440.

EALC 111 East Asian Digital Humanities

‘Are you interested in cutting-edge digital methods for the humanities in East Asia, but don’t know where to start? This course covers a wide range of current and emerging digital projects and topics in East Asian studies. Students will engage with digital projects focused on East Asia (encompassing Japan, China, Korea, and Taiwan) as well as research being done on digital methodologies for the humanities in those areas. Coursework consists of project and research analysis, active discussion, and learning about the implementation of various digital projects. Example topics include text analysis, APIs, network analysis, digital literary studies, and mapping. Note: technical expertise is required but students must have reading knowledge of Chinese, Japanese, or Korean at the high-intermediate or advanced level. Course presentations, discussions, and all course readings will be in English, but midterm and final projects involve reading articles and critiquing projects in East Asian language. Prerequisite: Reading knowledge (intermediate or above) of East Asian language.

Activity: Lecture
1.0 Course Unit

EALC 116 East Asian Gardens

Explore the beauty of gardens (and associated buildings) in Japan, China, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.

Also Offered As: EALC 522
Activity: Lecture
1.0 Course Unit
EALC 123 Love in China
We all know that love is not easy. But what makes it so complicated? This course examines how the notion of ‘love’ in Chinese culture offers a key for us to understand Chinese emotions, family structure, gender and sexuality, consumer economy, as well as the formation of political identity. Is ‘love’ always defined in light of romantic or intimate relationships? Where can we posit the Chinese ideas of ‘love’ in the English lexicons of passion, desire, and romance? What were considered the (im)proper expressions and behaviors of ‘love’ between sovereigns and subjects, parents and children, husbands and wives? Why did metaphors of ‘love’ often go hand in hand with the aspiration for political engagement and the appreciation of literary talents? How did the concepts of ‘love’ challenge Confucian social and moral hierarchies by bonding individuals as equals, which marked the advent of the modern era? And, lastly, in what ways can the transformation of ‘love’ over the two millennia of Chinese cultural history broaden our contemporary perceptions of selfhood, partnership, and community? We will probe into these issues through some of the most essential Chinese literary and cultural texts from the 8th century B.C.E. to the 20th century, examining a variety of genres including poetry, plays, memoirs, and fictional narratives. We will also discuss contemporary media adaptations and visit the Penn Museum, exploring different perspectives to approach textual sources. This course is organized both chronologically and thematically: in each week, we read representative works from a specific historical period. They together illuminate both the paradigm of ‘love’ at a given historical time and the transformation of ‘love’ in Chinese culture in the longue durée. The format of the course contains a mixture of lecture and discussion, with a special focus on developing students’ skills of close reading.

EALC 126 Seminar in Modern Chinese Literature
Modern Chinese writers are known for their efforts in creating a literary revolution that sought to reformulate the paradigm of Chinese writing. However, these Chinese writers also endeavored to learn from other cultures such as the European and Indian civilizations. For example, Tagore was invited to visit China in 1923 and was considered a cultural model by many Chinese cultural elites. Hu Shi, a leading Chinese intellectual, wrote The Indianization of China: A Case Study in Cultural Borrowing and India Our Great Teacher, to emphasize the Indian elements in Chinese culture. Other Chinese writers also sought to compare the European with Chinese cultures in different occasions in order to find a path for the rise of modern China. This course explores the ways in which foreign cultures were introduced and how they influenced the way Chinese see themselves in their search for a cultural identity free from the constraints of classical tradition. We will read a variety of writers from the Peoples Republic of China, Hong Kong, Taiwan, and Malaysia, in order to examine how modern Chinese literature thrives on cross-cultural elements. All readings will be in English. No prior knowledge is required. Those who are proficient in Chinese are invited to read some of the texts in Chinese.
Taught by: Lin
Course not offered every year
Also Offered As: EALC 526
Activity: Seminar
1.0 Course Unit

EALC 127 Arts of China
A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China's Bronze Age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting.
Prerequisite: Graduate students may take this course as EALC 527 and should see the instructor to discuss additional requirements for graduate credit.

EALC 139 Religion in Modern China
This course focuses on the history and role of religion in the Chinese cultural sphere (Mainland China, Taiwan, and the Diaspora) from the mid-19th century to the present day, focusing on the relationship between religious institutions and the state during the imperial, republican, and communist regimes. We will learn about the impact of religious ideas, practices, and organizations on social, political and economic processes and inspect the role of religion in the consolidation of individual, communal, and national identity. Adopting a comparative and interdisciplinary approach, we will attempt to ascertain the impact of the various Chinese religious traditions: Confucianism, Daoism, Buddhism, and popular sects, as well as global religions such as Islam and Christianity, on the internal sociopolitical structure of the Chinese state and their role in shaping power relations on a transregional, national, and local level. Special emphasis will be given to the role and use of the grand narratives of secularism and modernity in the shaping of the Chinese nation-state, as well as the value of using these frameworks in the study of modern China. The class is discussion based, supplemented by lectures, student presentations, and documentary films. No knowledge of Chinese is presumed. All readings will be in English. Taught by: Tavor

EALC 145 20th Century China: Ideas, Politics, States
Since 1900 four types of states have ruled China: dynastic, elective parliamentary, authoritarian nationalist, and communist. We will trace each from its intellectual origins to conclusion. By doing so we will present a solid and wide-ranging narrative of China's past century, introducing newly discovered material, some controversial. Above all we will dig into the issues raised by the century's mixture of regimes. Right now China is a dictatorship but once it was an imperfect democracy. Does this prove that Chinese are somehow incapable of creating democracy? That sadly it is just not in their DNA? Or only that the task is very difficult in a country nearly forty times the size of England and developing rapidly? That without dictatorship the Chinese almost inevitably collapse into chaos? Or only that blood and iron have been used regularly with harsh effectiveness? You will be given a solid grounding in events, and also in how they are interpreted, right up to the present. Readings will be mostly by Chinese authors (translated), everything from primary sources to narrative to fiction. We will also use wartime documentary films. Two lectures per week, regular mid-term and final exams, and a paper on a topic of your own choice. No prerequisites.

Notes: Two lectures per week, regular mid-term and final exams, and a paper on a topic of your choice.

EALC 151 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan's war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirou, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

Notes: Fulfills Cross-Cultural Analysis

EALC 152 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words 'love' and 'loss' imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.

EALC 153 Loyal Warriors in Japanese Literature
From the earliest literature to the latest think piece on Japanese society, the roles of the ‘warrior’ and of ‘loyalty’ in Japanese culture have fascinated those both inside and outside of Japan. In this course we will trace the development of paragons of loyalty and warrior prowess from the earliest literary works, through the epic Tales of the Heike, and on to the 'Treasury of Loyal Retainers,' theater, and film. We will read in the philosophy of fidelity and samurai codes to track the growing dedication to ideals of loyalty, exploring evidence of behavior less than loyal as we seek the real influence of these notions. Related topics include the extremes of vengeance and fanaticism.
Taught by: Chance
Course not offered every year
Activity: Lecture
1.0 Course Unit

EALC 154 Topics in Japanese Art
Topics vary from semester to semester. For the Fall 2020 semester, the topic will be: From Edo to Tokyo. How did a fishing village with a ramshackle castle become an early modern megalopolis over the course of a century? How did that city modernize rapidly, rebuild, and rebuild again to become one of the most technologically advanced urban environments in the world? In this course we will study the development of the city of Edo and its transformation into Tokyo through its urban planning, architecture, and visual arts. Starting with the formation of the shogun's city, Edo, we'll look at castles, mausolea, paintings, and other works to track the uses of architecture and art in the service of political power. At the same time, the long-time imperial capital of Kyoto (Miyako) and other regions actively expanded artistic modes, making this one of the most dynamic eras in Japanese art history, and a new urban population supported other forms of architecture and visual arts, including gardens, paintings, ceramics, and prints. In the final weeks of the course, we will consider how Edo became Tokyo, and how the city was rebuilt through modernization and land reclamation as well as after the 1923 earthquake and the Allied firebombing of WWII. And how did the postwar boom once more transform Tokyo, while also retaining traces and spaces of this earlier part of the city? Finally, we'll think about the ways in which the Olympics in 1964 and 2020 put the city on display.

EALC 156 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how 'art' and 'history' are being defined in the cinematic context. How other directors also took up these issues, and referred to the 'big three' is also be discussed.

Notes: Graduate students may take this course as EALC 527 and should see the instructor to discuss additional requirements for graduate credit.

EALC 162 City & Citizenship: Samurai Politics and Commoner Culture in Early Modern Japan
In the early modern period (1600-1867), Japan underwent a staggering urban transformation. Edo, the shogunal capital, grew in barely a century from a new settlement to a sprawling metropolis of over a million. Indeed, most of Japan's current urban centers descend directly from the castle towns built by regional warlords in the late sixteenth and early seventeenth centuries in an effort keep the peace after over a hundred years of civil war. As a result, Japanese cities in the early modern period became a central component of what historians have called a 're-feudalization' of society, and retained strong vestiges of their military origins. At the same time the samurai-centered space of the new military origins. At the same time the samurai-centered space of the new cities created opportunities for the development of alternative cultural practices and values by urban commoners. The juxtaposition of the regimented, honor-driven society designed and longed for by samurai and the fluid, money-driven society that grew out of the burgeoning cities’ commoner quarters is one of the animating forces of the early modern period. Through study of scholarship and contemporary sources (laws and sumptuary regulations, codes of conducts, but also diaries, novels, plays), this course will explore the many facets of early modern urban society, its medieval antecedents, and its legacies in contemporary Japan.
Taught by: Spafford

EALC 165 Environment, Climate, and Culture in Japan
This course explores how Japanese literature, cinema, and popular culture have engaged with questions of environment, ecology, pollution, and climate change from the wake of the dropping of the atomic bomb on Hiroshima in 1945 to the ongoing Fukushima nuclear power plant disaster in the present. Environmental disasters and the slow violence of their aftermath have had an enormous impact on Japanese cultural production, and we examine how these cultural forms seek to negotiate and work through questions of representing the unrepresentable, victimhood and survival, trauma and national memory, uneven development and discrimination, the human and the nonhuman, and climate change's impact on imagining the future. Special attention is given to the possibilities and limitations of different forms—the novel, poetry, film, manga, anime—that Japanese writers and artists have to think about humans' relationship with the environment.

EALC 171 Knights with Katana: Medieval Japan and Europe Compared
This course aims to provide an overview of some of the main themes and problems in the history and historiography of medieval Japan by drawing on comparisons with European counterparts and interpretive models. To this end, each week's readings on Japan are paired with one or more works on medieval Europe dealing with a similar theme. The primary purpose is not only to draw comparisons between the two civilizations and their development but also to use the great riches of scholarship on the European Middle Ages to shed light on possible new avenues of inquiry and perspectives on Japan.

Activity: Seminar
1.0 Course Unit

EALC 176 Japan: The Age of the Samurai
Who (or what) where the samurai? What does it mean to say that Japan had an 'Age of the Samurai'? In popular imagination, pre-modern Japan has long been associated with its hereditary warrior class. Countless movies have explored the character and martial prowess of these men. Yet warriors constituted but a tiny portion of the societies they inhabited and ruled, and historians researching medieval Japan have turned their attention to a great range of subjects and to other classes (elite and commoner alike). This class is designed to acquaint students with the complex and diverse centuries that have been called the 'Age of the Samurai'-roughly, the years between ca. 1110 and 1850. In the course of the semester, we will explore the central themes in the historiography of warrior society, while introducing some of the defining texts that have shaped our imagination of this age (from laws to epic poems, from codes of conduct to autobiographies).

EALC 183 Readings in Korean History
This course introduces students to English-language scholarship on social history of Korea from the founding of the Choson dynasty (1392-1910) to the mid-nineteenth century. Conducted as a reading seminar, the course will examine status and gender in early modern Korean society by considering, among others, descent, kinship, marriage, education, and economy. A reading list of noteworthy studies is intended to help the students map some critical questions and debates that have shaped the historiography. Everyone must participate actively in discussions, provide oral presentations as a discussion leader, and submit two review essays. No knowledge of Korean language or culture is presumed. This course satisfies Cross Cultural Analysis requirement.

EALC 184 Two Koreas: The Politics of Division
In today's world, the inter-Korean border or DMZ (demilitarized zone) is widely regarded as one of the most impermeable and conflictual frontiers. The purpose of this course is to explore the dynamics of its formation between, and impact within, the two Koreas. The course therefore proposes to analyze how the division of the Korean peninsula not only came into being but also how it has shaped the socio-political trajectories of both the North and the South since 1945. The course also aims at introducing students to conceptual frameworks and comparative debates relevant to understanding the Korean case(s) from a social science perspective.

1.0 Course Unit

EALC 220 Tang China and Nara Japan
This is a seminar about Tang China and Nara Japan, and Early Heian Japan, Unified Silla Korea, Northeast Asia under Parhae, and Uyghur Inner Asia through their cities, palaces, monasteries, Buddhist art, and painting. We begin by studying material remains of the two best-documented civilizations of East Asian in the seventh-ninth centuries. Using painting, sculpture, ceramics, and architecture of Tang China and Nara Japan, we investigate the validity of the frequent assessment of an international Tang through material remains in China and Japan. We then move to Korea, Mongolia, and Central Asia. Students will have a wide range of topics to work on. They will be encouraged to find comparative topics. This seminar is an opportunity for students to use Chinese, Japanese, or Korean in research papers. There are no exams. Readings will be assigned to the whole group and to individual students for short presentations every week. Undergraduates will write one short and write and present one long paper.
Taught by: Steinhardt
Also Offered As: EALC 620
Activity: Seminar
1.0 Course Unit

EALC 221 First Year Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Taught by: Mair
Course usually offered in fall term
Also Offered As: CHIN 491, EALC 621
Activity: Lecture
1.0 Course Unit

EALC 222 1st Year Classical Chin II
Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Taught by: Mair
Course usually offered in spring term
Also Offered As: CHIN 492, EALC 622
Prerequisite: EALC 221
Activity: Lecture
1.0 Course Unit

EALC 223 Language, Script and Society in China
The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumero-Akkadian cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinitic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class.
Taught by: Mair
Course not offered every year
Also Offered As: EALC 623
Activity: Seminar
1.0 Course Unit

EALC 226 East Asian Funerary Arts
Study of tombs and tomb decoration of emperors and officials in China, Korea, and Japan from the pre-Buddhist era through the 19th century.
Taught by Steinhardt
Course not offered every year
Also Offered As: EALC 626
Activity: Seminar
1.0 Course Unit

EALC 227 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting styles are analyzed, but themes such as landscape and narrative are considered with regard to larger social, cultural, and historical issues. The class will pay particular attention to the construction of the concepts of the 'artist' and 'art criticism' and their impact on the field into the present. Visits to study paintings at the University of Pennsylvania Museum and Philadelphia Museum of Art.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: ARTH 217, ARTH 617, EALC 627
Activity: Lecture
1.0 Course Unit
EALC 229 Chinese Architecture
Survey of Chinese buildings and building technology from the formative period in the second millennium BCE through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wutai, imperial palaces in Chang’an and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction. Graduate-level option requires a 20-page paper and permission of the instructor.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: EALC 629
Activity: Lecture
1.0 Course Unit
Notes: Graduate-level option requires a 20-page paper and permission of the instructor

EALC 230 Gender, Religion, and China
This course examines the interrelationship among ‘gender,’ ‘religion,’ and ‘China’ as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of ‘China’ as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation.
Taught by: Cheng
Course usually offered in spring term
Also Offered As: EALC 630, GSWS 234, GSWS 630, RELS 237, RELS 630
Activity: Seminar
1.0 Course Unit

EALC 233 Chinese Aesthetics
This seminar investigates classical Chinese conceptions of art and beauty as exemplified in philosophy, literature, music, painting, calligraphy, and architecture. All readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 633
Activity: Lecture
1.0 Course Unit

EALC 234 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.
Taught by: Cheng
Course not offered every year
Also Offered As: EALC 634, RELS 233, RELS 634
Activity: Seminar
1.0 Course Unit

EALC 239 Sex and Society in Ancient China
Ancient Chinese writers considered sexual activity to be an essential component of humanity, and the study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no prerequisites, and no knowledge of Chinese is presumed.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 639
Activity: Seminar
1.0 Course Unit

EALC 240 Early Chinese History
This seminar covers the span of Chinese history from the Bronze Age to the end of the Han dynasty in A.D. 220. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.
Taught by: Goldin
Course usually offered in spring term
Also Offered As: EALC 640
Activity: Seminar
1.0 Course Unit
EALC 241 Law in Pre-Modern China
This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty—an interval of over two millennia—and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 641
Activity: Seminar
1.0 Course Unit

EALC 242 Medicine and Healing in China
This course explores Chinese medicine and healing culture, its diversity, and its change over time. We will discuss topics including the establishment of canonical medicine, Daoist approaches to healing and longevity, diverse views of the body and disease, the emergence of treatments for women, medical construction of sex difference and imagination of female sexuality, the thriving and decline of female healers, the identity of scholar physicians, the transmission of medical knowledge, domestic and cross-regional drug market, healer-patient relations, and new visions of traditional Chinese medicine in modern China.
Taught by: Cheng, H
Course not offered every year
Also Offered As: EALC 642
Activity: Lecture
1.0 Course Unit

EALC 243 Pastoralism & Mobility
‘Pastoralism and Mobility’ will examine the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class will focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How have Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? What purposes does mobility serve in Inner Asian societies? How have various forms of livestock lease-holding changed and shaped wealth in Inner Asian pastoralist society? How did class differentiation emerge & function in pre-modern pastoralist societies? What happens when pastoralists become farmers? How have modern schemes of social improvement and productivity, especially collectivization and decollectivization, shaped pastoralist lives?
Taught by: Atwood
Course offered fall; odd-numbered years
Also Offered As: EALC 643
Activity: Seminar
1.0 Course Unit

EALC 251 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.
For BA Students: Advanced Language Course
Taught by: Chance
Course usually offered in fall term
Also Offered As: EALC 651, JPAN 491
Prerequisite: JPAN 212
Activity: Lecture
1.0 Course Unit

EALC 253 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan’s past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan’s nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irredescent core of Japanese culture, a tiny subset of Japanese Buddhism, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.
Taught by: Jolyon Thomas
Course usually offered in spring term
Also Offered As: EALC 653, RELS 271, RELS 671
Activity: Seminar
1.0 Course Unit

EALC 254 War and Literature in Japan: Tales of the Heike
Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan’s first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no prerequisites.
Taught by: Chance, L
Course not offered every year
Also Offered As: EALC 654
Activity: Seminar
1.0 Course Unit

EALC 255 Japanese Theater
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, and audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.

One-term course offered either term
Also Offered As: COML 385, EALC 655, FOLK 485, THAR 485
Activity: Seminar
1.0 Course Unit
EALC 256 The Tale of Genji

'Crowning masterpiece of Japanese literature, 'the world's first novel,' 'fountainhead of Japanese literary and aesthetic culture,' 'a great soap opera in the vein of Jacqueline Susann.' Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu's work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji's loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author's portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adapters. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale's many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.

EALC 259 Gender and Sexuality in Japan

If you have ever wondered about the following questions, then this is the right course for you: Is Japan a hyper-feminine nation of smiling geisha and obedient wives? Is it a hyper-masculine nation of samurai and economic warriors? Is it true that Japanese wives control the household? Is it true that Japanese men suffer from over-dependence on their mothers? What do young Japanese women and young men worry about? What does the government think about the future of Japanese women and men? Assuming that expressions of gender and sexuality are deeply influenced by cultural and social factors, and that they also show profound differences regionally and historically, this course examines a variety of texts--historical, biographical, autobiographical, fictional, non-fictional, visual, cinematic, analytical, theoretical--in order to better understand the complexity of any attempts to answer the above questions.

Taught by: Kano

Activity: Lecture
1.0 Course Unit

EALC 260 History of the Book in East Asia

Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we'll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.

Also Offered As: ARTH 517, EALC 661
Activity: Seminar
1.0 Course Unit

EALC 261 Japanese Science Fiction and Fantasy

This course will provide an overview of the major tropes, themes, and interpretations of contemporary Japanese science fiction and fantasy. As we establish a foundational knowledge of the history and structural formulations of genre fiction in Japan, we will cover topics such as folklore, high fantasy, apocalypse, dystopia, magical realism, posthumanism, video games, and transnational media franchises and cross-cultural marketing. By the end of the semester, students will possess a deeper understanding and appreciation of the role that science fiction and fantasy play in shaping contemporary media cultures in Japan and around the world.

Taught by: Hemmann
Also Offered As: EALC 662
Activity: Lecture
1.0 Course Unit

EALC 264 Lawlessness and Violence in Pre-Modern Japan

This course will be an exploration of premodern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for lawbreakers and political losers) and of the non-sanctioned variety (piracy, banditry, warrior and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we shall examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn't) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.

Taught by: Spafford, D.
Course not offered every year
Also Offered As: EALC 664
Activity: Seminar
1.0 Course Unit
EALC 268 Japanese Cinema
This course is a survey of Japanese cinema from the silent period to the present. Students will learn about different Japanese film genres and histories, including (but not limited to) the benshi tradition, jidaigeki (period films), yakuza films, Pink Film, experimental/arthouse, J-horror, and anime. Although the course will introduce several key Japanese auteurs (Mizoguchi, Ozu, Kurosawa, Oshima, Suzuki, etc.), it will emphasize lesser known directors and movements in the history of Japanese film, especially in the experimental, arthouse, and documentary productions of the 1960s and 1970s. Finally, in addition to providing background knowledge in the history of Japanese cinema, one of the central goals of the course will be to interrogate the concept of 'national' cinema, and to place Japanese film history within a international context. Taught by: Alekseyeva
One-term course offered either term
Also Offered As: CIMS 304, ENGL 304
Activity: Seminar
1.0 Course Unit

EALC 270 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History
This course tackles about a millennium of pre-modern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source’s composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse. Taught by: Spafford, D.
Course not offered every year
Also Offered As: EALC 670, HIST 277
Activity: Seminar
1.0 Course Unit

EALC 291 Archaeology of Central Asia
A site by site investigation of Buddhist and non-Buddhist ruins in Central Asia. Included are Nisa, Khwarezm, Pyandzhikent, Khalchayan, Ay-Khanum, Bamiyan, Miran, Tumshuk, Kizil, Kucha, Khotan, Adzhina-Tepe, Khoch, Khara-Khoto, and Bezeklik. Taught by: Steinhardt
One-term course offered either term
Also Offered As: EALC 691
Activity: Seminar

EALC 293 Introduction to Classical Mongolian
In this class students who already know some modern Mongolian in the Cyrillic script will learn how to transfer that knowledge to the reading of first post-classical, and then classical texts written in the vertical or Uyghur-Mongolian script. Topics covered will include the Mongolian alphabetic script, dealing with ambiguous readings, scholarly transcription, vowel harmony and syllable structure, post-classical and classical forms of major declensions, converbs, verbal nouns, and finite verbs, syntax, pronunciation and scribal readings. Readings will be adjusted to interests, but as a rule will include selections from short stories, diaries, chronicles, Buddhist translations, government documents, popular didactic poetry, ritual texts, and traditional narratives. Students will also be introduced to the most important reference works helpful in reading classical and post-classical Mongolian. One year of modern Mongolian or equivalent required to enroll. Taught by: Tseveendulam
Course usually offered in fall term
Also Offered As: EALC 693
Activity: Seminar

1.0 Course Unit
EALC 501 Chinese History and Civilization
This seminar offers a thematic overview of the academic study of Chinese history from the Neolithic period to the 21st century. Over the course of the semester, students will be introduced to different scholarly approaches to the study of history through a close reading and analysis of the work of leading scholars in the field of Sinology. We will learn about the various subfields in the study of history, such as cultural history, social history, administrative and legal history, intellectual history, history of religion, literary history, history of gender, world history, and historiography, examine their different methodological frameworks and tools, and draw on them in order to problematize and enrich our understanding of Chinese culture. In addition, this seminar will provide incoming students with the relevant tools to produce original graduate-level research on all aspects of Chinese history, society, and culture and present it in a clear and persuasive fashion orally and in written form. While original-language research for the final project is encouraged, all course materials will be in English. Prerequisite: Course intended for first year MA and PhD students. Undergraduates need permission. Course usually offered in fall term Activity: Seminar 1.0 Course Unit

EALC 502 Japanese History and Civilization
This seminar introduces students to the graduate-level study of Japan. In addition to getting a broad overview of Japanese culture, students in the course will develop familiarity with major debates in the history of the field of Japanese studies. The course also provides basic training in using primary and secondary sources in Japanese, Japanese bibliographic conventions, and other skills necessary for pursuing advanced research or a teaching career in the field. Open to all graduate students and to undergraduates with permission from the instructor. Familiarity with Japanese language is a plus but is not required. Taught by: Thomas J Course not offered every year Activity: Seminar 1.0 Course Unit Notes: Undergraduates need permission from instructor.

EALC 503 Korean History & Civilization
This graduate-level seminar focuses on the political, social, and cultural history of the Korean Peninsula and the vicinity from early times to the contemporary era. Readings will consist of primary and secondary sources, including influential modern studies of Korean history and civilization. All course materials are in English and no knowledge of Korean is presumed. Course usually offered in spring term Activity: Lecture 1.0 Course Unit

EALC 504 Introduction to Inner Asian Civilizations
This class is intended for new graduate students and upper-division undergraduates with some prerequisites who wish to get a solid grounding in the study of Inner Asia. The class will introduce Inner Asia as a coherent civilization network, focusing on: 1) the steppe-imperial tradition; 2) the Tibetan-rite Buddhist commonwealth that developed from the Tibetan and Mongol empires; and 3) the increasing integration of these two Inner Asian civilizations with that of imperial China. There will also be some consideration of the Islamic Turco-Mongolian synthesis that developed in the post-Mongol period. Regionally, the class introduce: 1) core Inner Asia (the Mongolian plateau, the Tarim Basin, the Tibetan plateau, the Manchuria) and 2) the main dynasties of China that formed in the Mongolia and Manchuria (Liao, Jin, Yuan and Qing). There will also be some consideration of historically Inner Asian populations in Hexi (Gansu-Qinghai), and the North China plains and the Shaanxi-Shanxi-Rehe uplands. Chronologically, the class will touch on prehistory and the contemporary period, but will mostly cover the period from the emergence of historical records on the Mongolian plateau and the Tarim basin to roughly 1950. Prehistory and the contemporary period will be give less detailed coverage. Taught by: Atwood Course not offered every year Activity: Seminar 1.0 Course Unit Notes: Graduate Seminar

EALC 505 East Asian Diplomacy
This course will survey recent scholarship on East Asian diplomacy from the sixteenth century to the present. We will engage several fundamental debates about the relationship between China, Japan, Korea and the outer world and introduce not only orthodox diplomatic analyses but also newer approaches to modern China, Japan and Korea by international and global historians. Taught by: Dickinson Course usually offered in fall term Also Offered As: EALC 105, HIST 395 Activity: Lecture 1.0 Course Unit

EALC 506 Easts Asian Cinema
This survey course introduces students to major trends, genres, directors, and issues in the cinema of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g. modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required. Taught by: Zhou Also Offered As: ARTH 291, CIMS 291, EALC 106 Activity: Lecture 1.0 Course Unit
EALC 511 East Asian Digital Humanities
Are you interested in cutting-edge digital methods for the humanities in East Asia, but don’t know where to start? This course covers a wide range of current and emerging digital projects and topics in East Asian studies. Students will engage with digital projects focused on East Asia (encompassing Japan, China, Korea, and Taiwan) as well as research being done on Digital methodologies for the humanities in those areas. Coursework consists of project and research analysis, active discussion, and learning about the implementation of various digital projects. Example topics include text analysis, APIs, network analysis, digital literary studies, and mapping. Notechnical expertise is required but students must have reading knowledge of Chinese, Japanese, or Korean at the high-intermediate or advanced level. Class presentations, discussions, and all course readings will be in English, but midterm and final projects involve reading articles and midterm and final projects involve reading articles and/or critiquing projects is.
Reading knowledge (intermediate or above) of East Asian language required.
Taught by: Des Jardin
Also Offered As: EALC 111
Activity: Lecture
1.0 Course Unit

EALC 515 Buddhist Arts of East Asia: Sources, Iconography and Styles
Survey of art and architecture created for Buddhist religious purposes in China, Japan, and to a lesser extent Korea, Tibet, and Central Asia. The course will include a brief overview of Buddhist monuments in South Asia, study of the iconography of Buddhist images in graphic and sculptural media, and analysis of a variety of Buddhist styles in painting, sculpture, and architecture. Research in an East Asian language required for graduate credit.
Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 115, RELS 175
Activity: Lecture
1.0 Course Unit

EALC 516 East Asian Gardens
Explore the beauty of gardens (and associated buildings) in Japan, China, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.
Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 116
Activity: Lecture
1.0 Course Unit

EALC 519 East Asian Ceramics
History of ceramic forms, techniques, and aesthetic principles in China, Korea, and Japan from neolithic times to the present century, illustrated by slides and examples, augmented by readings, field trips, and student presentations. Aimed at students with general interest in Japan and/or ceramics history; particularly but not exclusively those majoring in East Asian Languages & Civs, East Asian Area Studies or History of Art; also art majors interested in ceramics.
Taught by: Chance, F
Course not offered every year

EALC 521 Chinese Poetry & Prose: In translation
A wide variety of poetic & prose genres from the earliest times to the 19th century is introduced through English translation. A few selections will also be studied in Chinese characters with romanized transcriptions. There are no prerequisites for this course.
Taught by: Mair
Course usually offered in fall term
Also Offered As: EALC 121
Activity: Lecture
1.0 Course Unit

EALC 522 Chinese Fiction and Drama in Translation
This course explores Romance of Three Kingdoms the most popular classical novel in East Asia and an important source for understanding Chinese culture, politics, history, and military strategy. We propose to read this work not only as a textbook of Chinese literature and culture, but also as a guidebook for career development and risk assessment. Why didn’t T Pangtong have a career as successful as Zhuge Liang? Why did Ma Su volunteer in a project that he is not good at? If Cao Cao, Liu Bei, Sun Quan run for presidency in the U.S., who would you vote for and why? These are some of the questions that we will explore alongside our inquiry into the historical development of various genres of Chinese fiction. In addition to Romance of Three Kingdoms, this course introduces Sun Tsu’s The Art of War and other classical Chinese novels such as Dream of the Red Chamber and Strange Tales from a Chinese Studio, as well as classical literary criticism such as Cao Pi’s On the Standard of Literature (Dian lun), Lu Ji’s Essays on Literature (Wen lun), and Liu Xie’s The Literary Mind and the Carving of Dragons.

EALC 525 Cultural Chinas: 20th Century Chinese Literature and Film
This course serves as a thematic introduction to modern Chinese literature and cinema in China, Hong Kong, Taiwan and other transnational Chinese communities in the twentieth century. By discussing a wide range of key literary and filmic texts, this class looks into major issues anddiscourses in China’s century of modernization: enlightenment and revolution, politics and aesthetics, sentimental education and nationalism, historical trauma and violence, gender and sexuality, social hygiene and body politics, diaspora and displacement, youth sub-culture and urban imagination.
Course usually offered in spring term
Also Offered As: EALC 125
Activity: Lecture
1.0 Course Unit
EALC 526 Seminar in Modern Chinese Literature
Modern Chinese writers are known for their efforts in creating a literary revolution that sought to reformulate the paradigm of Chinese writing. However, these Chinese writers also endeavored to learn from other cultures such as the European and Indian civilizations. For example, Tagore was invited to visit to China in 1923 and was considered a cultural model by many Chinese cultural elites. Hu Shi, a leading Chinese intellectual, wrote The Indianization of China: A Case Study in Cultural Borrowing and India Our Great Teacher, to emphasize the Indian elements in Chinese culture. Other Chinese writers also sought to compare the European with Chinese cultures in different occasions in order to find a path for the rise of modern China. This course explores the ways in which foreign cultures were introduced and how they influence the way Chinese see themselves in their search for a cultural identity free from the constraints of classical tradition. We will read a variety of writers from the Peoples Republic of China, Hong Kong, Taiwan, and Malaysia, in order to examine how modern Chinese literature thrives on cross-cultural elements. All readings will be in English. No prior knowledge is required. Those who are proficient in Chinese are invited to read some of the texts in Chinese.

Activity: Lecture
1.0 Course Unit

EALC 530 Mongol Century
This course deals with the empire built by the Mongols in the 13th century - the largest land empire in the world. Most readings will be from translated primary sources of the 13th and 14th centuries, written by the Mongols themselves and also by Persians, Chinese, Eastern Christians, Europeans, and other peoples that fought, surrendered to, or traded with the Mongol conquerors. The course will explore the Mongols, the most spectacular example of the nomadic conquerors who played such a large role in all Eurasian history, and survey how their empire affected themselves and the peoples they conquered. By using primary sources, the course will also provide a survey of civilizations in Eurasia in the 13th and 14th centuries, and give a hands-on example of how historians build historical knowledge from varied sources. Graduate students will receive training in more advanced source critical methodologies for dealing with these sources and for beginning research in this topic.

Course offered spring; odd-numbered years
Also Offered As: EALC 131
Activity: Lecture
1.0 Course Unit

EALC 536 Chinese Martial Arts
This course offers a thematic introduction to the history of martial arts in China. Throughout the semester, we will explore the social, political, and cultural contexts of martial arts practice, from the classical period to the 21st century. The course will take an interdisciplinary approach to situating martial arts practices in history through an examination of religious, literary, and visual sources, against the backdrop of theoretical approaches from across gender studies, anthropology, and cultural theory. The course will be divided into three units. The first unit will focus on the cultural background that led to the emergence of martial arts practices in the pre-modern period. We will examine classical discourses on the human body and its cultivation and the role of medical practices and religious institutions, such as the Shaolin Temple, in the development of martial arts regimens. In the second unit, we will discuss the spread and popularization of martial arts practices in late imperial and modern Chinese society through a close reading of literary sources, such as wuxia novels and other works of fiction. In addition, we will explore the modernization and re-invention of martial arts in the late 19th and early 20th century, when China attempts to re-establish itself as a modern nation. The third and final unit will be devoted to the global impact of Chinese martial arts in contemporary popular culture. Through a discussion and analysis of Kung Fu films, as well as video games, we will explore the role of martial arts narratives and practices in the construction of gender, cultural, and national identity and the various ways in which they are used by the current Chinese regime to assert its influence in the global arena. No knowledge of Chinese is presumed, and all readings will be available in English on the Canvas website in PDF form. Graduate students may take this course as EALC536 and should see the instructor to discuss requirements for graduate credit.

EALC 552 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words 'love' and 'loss' imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse array of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation. Research in an East Asian language required for graduate credit.
Taught by: Chance
Course usually offered in fall term
Also Offered As: EALC 152, GSWS 152
Activity: Lecture
1.0 Course Unit

EALC 553 Ukiyo-e: Beyond the Great Wave
In this seminar we will take a closer look at the prints, paintings, and illustrated books produced in the genre known as 'ukiyo-e,' the 'pictures of the floating world.' We'll begin by asking how the 'Great Wave' became a global icon and we'll bust the myth of prints being used as wrapping paper. As we learn the history of the genre, from 1600 to ca. 1850, we'll also make critical interventions into that narrative, asking how 'ukiyo-e' became a genre within a larger artistic sphere; how publishers collaborated with designers to construct artistic personae; how illustrated books contributed to knowledge formations; and how concepts of authenticity and authorship remain critical to its understanding. Taught online, this course will also consider how internet resources affect our understanding of the work of art. Students need not have any Japanese language skills, but should have taken related courses in art history or East Asian Studies. Advanced undergraduates and graduate students preferred.
Taught by: Davis

EALC 555 Modern Japanese Literature
This course surveys Japanese literature (novels, short stories, poetry, drama, essays) from 1868 to World War II. The purpose is not only to read some of the most important and interesting literary texts of this period, but also to reflect on the ways we read and study literature, and how we draw connections between literature, self, and society. The reading material will be entirely in English.
Taught by: Kano
Course usually offered in fall term
Also Offered As: EALC 155
Activity: Lecture
1.0 Course Unit

EALC 556 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujirou, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how 'art' and 'history' are being defined in the cinematic context. How other directors also took up these issues, and referred to the 'big three' is also be discussed.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 290, ARTH 690, CIMS 223, EALC 156
Activity: Lecture
1.0 Course Unit

EALC 557 Arts of Japan
This course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age.
Taught by: Davis
One-term course offered either term
Also Offered As: ARTH 213, ARTH 613, EALC 157
Activity: Lecture
1.0 Course Unit

EALC 559 Topics in Japanese Art
Topic varies. Fall 2018: This course will consider Japanese woodblock prints, illustrated books, and paintings from the seventeenth through the twentieth century. Topics include: the formation of 'Ukiyo-e' or 'the pictures of the floating world' as a genre; the development of the publishing system and its audience; specific artists and their works; the reception of Japanese prints in Europe and America; the modern reinvention of the woodblock print; and others. We will also make extensive use of the collections held in the Kislak Center, the Philadelphia Museum of Art, and in other local collections. Assignments may include: close study of a single work; web page development; research paper; regular participation in discussions.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 513
Activity: Seminar
1.0 Course Unit
EALC 565 Environment, Climate, and Culture in Japan
This course explores how Japanese literature, cinema, and popular culture have engaged with questions of environment, ecology, pollution, and climate change from the wake of the dropping of the atomic bomb on Hiroshima in 1945 to the ongoing Fukushima nuclear power plant disaster in the present. Environmental disasters and the slow violence of their aftermath have had an enormous impact on Japanese cultural production, and we examine how these cultural forms seek to negotiate and work through questions of representing the unrepresentable, victimhood and survival, trauma and national memory, uneven development and discrimination, the human and the nonhuman, and climate change's impact on imagining the future. Special attention is given to the possibilities and limitations of different forms—the novel, poetry, film, manga, anime—that Japanese writers and artists have to think about humans' relationship with the environment.

EALC 571 Knights with Katanas: Medieval Japan and Europe Compared
This course aims to provide an overview of some of the main themes and problems in the history and historiography of medieval Japan by drawing on comparisons with European counterparts and interpretive models. To this end, each week's readings on Japan are paired with one or more works on medieval Europe dealing with a similar theme. The primary purpose is not only to draw comparisons between the two civilizations and their development but also to use the great riches of scholarship on the European Middle Ages to shed light on possible new avenues of inquiry and perspectives on Japan.

Activity: Seminar
1.0 Course Unit

EALC 584 Two Koreas: The Politics of Division
In today's world, the inter-Korean border or DMZ (demilitarized zone) is widely regarded as one of the most impermeable and conflictual frontiers. The purpose of this course is to explore the dynamics of its formation between, and impact within, the two Koreas. The course therefore proposes to analyze how the division of the Korean peninsula not only came into being but also how it has shaped the socio-political trajectories of both the North and the South since 1945. The course also aims at introducing students to conceptual frameworks and comparative debates relevant to understanding the Korean case(s) from a social science perspective.
Course not offered every year
Also Offered As: EALC 184
Activity: Lecture
1.0 Course Unit

EALC 590 Silk Road: From the Mediterranean to the Pacific
A journey along the overland and sea routes that connected China, India, Iran, and Rome from 200-1000 CE and served as conduits for cultural exchange. Precursor and successor routes will also be taken into consideration. The lives of merchants, envoys, pilgrims, and travelers interacting in cosmopolitan communities will be examined. Exploration of long-known and newly discovered archaeological ruins, along with primary sources in translation, will be studied.
Taught by: Mair
Also Offered As: EALC 190, SAST 190, SAST 590
Activity: Lecture
1.0 Course Unit

EALC 592 Arts of Korea
The goal of this course is understanding the development of visual, performing, and literary arts in Korea and the historical, religious, and social contexts in which they flourished. It serves as an introduction to the arts of Korea, with emphasis on painting, sculpture, ceramics, and architecture and additional consideration of dance, drama, poetry, and culinary arts. Covers the whole history of Korea, from prehistoric times to the twenty-first century. Students enrolled in this graduate number are expected to do research in an East Asian language.

EALC 616 Chinese Arts Under the Mongols
The Yuan Dynasty (1257-1368), the period of Mongolian rule, was the only time in Chinese history when China was part of a larger empire that spanned the Asian continent. Using architecture, sculpture, painting, and excavated evidence, this course examines the unique results of an international Asian world centered in China.
Taught by: Steinhardt
Course not offered every year
Also Offered As: EALC 229
Activity: Seminar
1.0 Course Unit

EALC 620 Tang China and Nara Japan
This is a seminar about Tang China and Nara Japan, and Early Heian Japan, Unified Silla Korea, Northeast Asia under Parhae, and Uyghur Inner Asia through their cities, palaces, monasteries, Buddhist art, and painting. We begin by studying material remains of the two best-documented civilizations of East Asian in the seventh-ninth centuries. Using painting, sculpture, ceramics, and architecture of Tang China and Nara Japan, we investigate the validity of the frequent assessment of an international Tang through material remains in China and Japan. We then move to Korea, Mongolia, and Central Asia. Students will have a wide range of topics to work on. They will be encouraged to find comparative topics. This seminar is an opportunity for students to use Chinese, Japanese, or Korean in research papers. There are no exams. Readings will be assigned to the whole group and to individual students for short presentations every week. Graduate students will write and present research papers.
Taught by: Steinhardt
Also Offered As: EALC 220
Activity: Seminar
1.0 Course Unit

EALC 621 First Year Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Taught by: Mair
Course usually offered in fall term
Also Offered As: CHIN 491, EALC 221
Activity: Lecture
1.0 Course Unit

EALC 622 1st Year Classical Chin II
Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Taught by: Mair
Course usually offered in spring term
Also Offered As: CHIN 492, EALC 222
Prerequisite: EALC 621
Activity: Lecture
1.0 Course Unit

EALC 623 Language, Script and Society in China
The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumerian-Akkadian cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinitic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class.
Taught by: Mair
Course not offered every year
Also Offered As: EALC 223
Activity: Seminar
1.0 Course Unit

EALC 626 East Asian Funerary Arts
Study of tombs and tomb decoration of emperors and officials in China, Korea, and Japan from the pre-Buddhist era through the 19th century.
Taught by: Steinhardt
Course not offered every year
Also Offered As: EALC 226
Activity: Seminar
1.0 Course Unit

EALC 627 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting styles are analyzed, but themes such as landscape and narrative are considered with regard to larger social, cultural, and historical issues. The class will pay particular attention to the construction of the concepts of the ‘artist’ and ‘art criticism’ and their impact on the field into the present.
Visits to study paintings at the University of Pennsylvania Museum and Philadelphia Museum of Art.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: ARTH 217, ARTH 617, EALC 227
Activity: Lecture
1.0 Course Unit

EALC 629 Chinese Architecture
Survey of Chinese buildings and building technology from the formative period in the second millennium BCE through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wutai, imperial palaces in Chang’an and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: EALC 229
Activity: Lecture
1.0 Course Unit
EALC 630 Gender, Religion, and China
This course examines gender in Chinese religious culture from ancient to contemporary times. We will explore topics including the Buddhist accommodation of Chinese family system, Chinese transformation of the bodhisattva Guanyin, female deities in Daoist and popular religious pantheons, writings about religious women, female ghosts and fox spirits in literary imagination and folk tales, and the significance of yin force in Chinese medicine and Daoist alchemy. Through the case of China, we will look at how gender plays critical and constitutive roles in religious traditions, and how religion can be used both to reinforce and to challenge gender norms.
Taught by: Cheng, H
Course not offered every year
Also Offered As: EALC 230, GSWS 234, GSWS 630, RELS 237, RELS 630

1.0 Course Unit

EALC 633 Chinese Aesthetics
This seminar investigates classical Chinese conceptions of art and beauty as exemplified in philosophy, literature, music, painting, calligraphy, and architecture. All readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 233
Activity: Lecture
1.0 Course Unit

EALC 634 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.
Taught by: Wang
Course not offered every year
Also Offered As: EALC 234, RELS 233, RELS 634
Activity: Seminar
1.0 Course Unit

EALC 639 Sex and Society in Ancient China
Ancient Chinese writers considered sexual activity to be an essential component of humanity, and that study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no pre-requisites, and no knowledge of Chinese is presumed.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 239

1.0 Course Unit

EALC 640 Early Chinese History
This seminar covers the span of Chinese history from the Bronze Age to the establishment of the empire in 221 B.C. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.
Taught by: Goldin
Course usually offered in spring term
Also Offered As: EALC 240
Activity: Seminar
1.0 Course Unit

EALC 641 Law in Pre-Modern China
This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty—an interval of over two millennia—and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 241
Activity: Seminar
1.0 Course Unit

EALC 642 Medicine and Healing in China
This course explores Chinese medicine and healing culture, its diversity, and its change over time. We will discuss topics including the establishment of canonical medicine, Daoist approaches to healing and longevity, diverse views of the body and disease, the emergence of treatments for women, medical construction of sex difference and imagination of female sexuality, the thriving and decline of female healers, the identity of scholar physicians, the transmission of medical knowledge, domestic and cross-regional drug market, healer-patient relations, and new visions of traditional Chinese medicine in modern China.
Taught by: Cheng, H
Course not offered every year
Also Offered As: EALC 242
Activity: Lecture
1.0 Course Unit
EALC 643 Pastoralism & Mobility

‘Pastoralism and Mobility’ will examine the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class will focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How have Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? What purposes does mobility serve in Inner Asian societies? How have various forms of livestock lease-holding changed and shaped wealth in Inner Asian pastoralist society? How did class differentiation emerge & function in pre-modern pastoralist societies? What happens when pastoralists become farmers? How have modern schemes of social improvement and productivity, especially collectivization and decollectivization, shaped pastoralist lives?

Taught by: Atwood
Course offered fall; odd-numbered years

EALC 651 Readings in Classical Japanese I

Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.

For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: EALC 251, JPAN 491
Prerequisite: JPAN 212
Activity: Lecture
1.0 Course Unit

EALC 653 The Politics of Shinto

Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan’s past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan’s nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an oppressive political ideology linked to the emperor system, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

Course usually offered in spring term
Also Offered As: EALC 253, RELS 271, RELS 671
Activity: Seminar
1.0 Course Unit

EALC 654 Tales of the Heike

Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan’s first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese may learn to read a famous section in the original.) There are no prerequisites. Research in an East Asian language required for graduate credit.

Activity: Seminar
1.0 Course Unit

EALC 656 The Tale of Genji

‘Crowning masterpiece of Japanese literature,’ ‘the world’s first novel,’ ‘fountainhead of Japanese literary and aesthetic culture,’ ‘a great soap opera in the vein of Jacqueline Susann.’ Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu’s work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji’s loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author’s portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adaptors. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale’s many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites. Research in an East Asian language required for graduate credit.

1.0 Course Unit
EALC 657 Asian Religions in the Global Imagination
This seminar critically examines the missionary impulses, colonial exploits, and translation endeavors that contributed to the rise of Asian studies and the emergence of the scholarly notion of ‘Asian religions’. It shows the crucial roles played by Asian agents and their European counterparts in the formation of modern conceptions of ‘religion’; it also engages reflexive questions regarding theory, method, and the geopolitical underpinnings of both Asian studies and the non-confessional academic study of religion. Students will conduct sustained research projects on the country or region of their choice.

EALC 661 History of the Book in East Asia
Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we'll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.
Taught by: Davis, Chance
Course not offered every year
Also Offered As: ARTH 517, EALC 260
Activity: Seminar
1.0 Course Unit

EALC 662 Japanese Science Fiction and Fantasy
This course will provide an overview of the major tropes, themes, and interpretations of contemporary Japanese science fiction and fantasy. As we establish a foundational knowledge of the history and structural formulations of genre fiction in Japan, we will cover topics such as folklore, high fantasy, apocalypse, dystopia, magical realism, posthumanism, video games, and transnational media franchises and cross-cultural marketing. By the end of the semester, students will possess a deeper understanding and appreciation of the role that science fiction and fantasy play in shaping contemporary media cultures in Japan and around the world.
Taught by: Hemmann
Also Offered As: EALC 261
Activity: Lecture
1.0 Course Unit

EALC 664 Lawlessness and Violence in Pre-Modern Japan
This course will be an exploration of premodern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for law-breakers and political losers) and of the non-sanctioned variety (piracy, banditry, warrior and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we shall examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn't) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.

1.0 Course Unit

EALC 670 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History
This course tackles about a millennium of pre-modern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source's composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse.

1.0 Course Unit
EALC 693 Introduction to Classical Mongolian
In this class students who already know some modern Mongolian in the Cyrillic script will learn how to transfer that knowledge to the reading of first post-classical, and then classical texts written in the vertical or Uyghur-Mongolian script. Topics covered will include the Mongolian alphabetic script, dealing with ambiguous readings, scholarly transcription, vowel harmony and syllable structure, post-classical and classical forms of major declensions, converbs, verbal nouns, and finite verbs, syntax, pronunciation and scribal readings. Readings will be adjusted to interests, but as a rule will include selections from short stories, diaries, chronicles, Buddhist translations, government documents, popular didactic poetry, ritual texts, and traditional narratives. Students will also be introduced to the most important reference works helpful in reading classical and post-classical Mongolian. One year of modern Mongolian or equivalent required to enroll.
Taught by: Tseveendulam
Course usually offered in fall term
Also Offered As: EALC 293
Prerequisite: One year of modern Mongolia or equivalent
Activity: Seminar
1.0 Course Unit

EALC 711 Theory and East Asia
'Theory' can be exciting and seductive to some scholars, but intimidating or pretentious to others. Unfortunately, this difference in feeling about theoretical scholarship and discussion has a tendency to produce a divide in academia between those who 'do theory' and those who do not. This graduate seminar pursues the question of how theory can be engaged in the context of East Asian cultural studies, with the goal of collectively working through texts to understand how theoretical reflection opens up possibilities for productive conversations across disciplinary boundaries. Many critiques have been made of the way 'traveling theory' serves as a Euro-American universal applied to the 'raw material' of East Asian texts, or a transdisciplinary common language in the Humanities and Social Sciences. Instead, we will take such critiques as a starting point to pragmatically and creatively explore the intersections and interactions of 'theory' and 'East Asia,' emphasizing the archival, historical, political, and institutional contexts that motivate theorization. In that spirit, special attention will be given to discussing what problems we find in our own work that require theoretical consideration, and how such considerations might contribute to, challenge, or transform theory originating outside of East Asia. Readings will primarily be in English, but may also include Japanese, Chinese, or Korean depending on student interest and language abilities.

EALC 731 Tang-Song Religious and Medical Texts
This seminar aims at developing the skill in reading religious and medical texts of a range of different genres from the Tang-Song period, including treatises in medical theory, no sological texts, recipe compilations, material medical, macrobiotic texts, Buddhist and Daoist meditation and ritual instructions, as well as case histories in anecdotal forms. There are a variety of topics we can choose to focus on the studying those texts, and the choice will be made on the students' on research interests. Each week we will look at one type of texts, consider its edition, textual history, chapter organization and genre (sometimes with background readings), read line-by-line a sample text assigned in advance, as well as sight-read short samples that students bring to class. Prerequisite: At least one year Classical Chinese is required.

Course not offered every year
Prerequisite: CHIN 491 AND CHIN 492
Activity: Seminar
1.0 Course Unit

EALC 733 Song Dynasty Texts
The goal of this course is to gain a practical ability in doing research concerning the Song dynasty by utilizing Chinese primary sources. Each session we will take a type of source, look at examples of it in the library, consider indexes and other reference aids, consider historiographical uses and limitations, and do some communal reading of a sample text distributed in advance, as well as sight-reading of short samples students bring to class, prepared to translate for the class. We will cover sources including standard histories (Song shi, Liao shi, Jin shi), narrative history (Xu zizhi tongjian changbian), biographical accounts, religious and medical texts of a range of different genres from the Tang-Song period, including treatises in medical theory, no sological texts, recipe compilations, material medical, macrobiotic texts, Buddhist and Daoist meditation and ritual instructions, as well as case histories in anecdotal forms. There are a variety of topics we can choose to focus on the studying those texts, and the choice will be made on the students' on research interests. Each week we will look at one type of texts, consider its edition, textual history, chapter organization and genre (sometimes with background readings), read line-by-line a sample text assigned in advance, as well as sight-read short samples that students bring to class. EALC 738 Religion & Ethnicity in Inner Asia
'Religion and Ethnicity in Inner Asia' will examine these two phenomena and their interaction in Inner Asia from earliest times to the present. The class will cover Mongolia, Tibet, Kazakhstan, and Turkic and Mongolian peoples of Russia and China. Religions addressed primarily include Buddhism, Islam, shamanism, and secularism. Why 'ethnicity and religion'? In practice the scholarly research and literature on these two topics in Inner Asia have been closely related. In addition to theoretical works on ethnicity, nationalism, religion and identity, the class will focus on issues such as ethnicity and religious conversions, place-based ethnic and religious identities, ethnicity and the Chinese and Russian states, nationalism, nationality policy, reformist and atheist secularisms, revivalist and apocalyptic movements, and the intersection of ethnicity, race, sexuality, and international networks.

Taught by: Atwood
Activity: Seminar
1.0 Course Unit

EALC 740 Sinological Methods
This seminar is designed to acquaint graduate students with the basic methods and resources of Sino logical research. The course will begin with an overview of essential reference works and aids to study, such as dictionaries and concordances, and continue with a survey of the major primary sources for the study of traditional Chinese history. Students are required to demonstrate the use of the methods learned in the course in a research paper, to be presented to the class in the form of a brief lecture at the end of the semester. Only graduate students may enroll in this course. The prerequisites are reading knowledge of modern Chinese and two years of the classical language. Familiarity with Japanese, though not required, would prove helpful.

EALC 755 Literary Criticism and Theory in Japanese Literature
While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan's position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese.

Taught by: Kano
Course not offered every year

Activity: Seminar
1.0 Course Unit

EALC 771 Current Japanology
Major trends in scholarship as reflected in important recent publications, especially formative books and periodical literatures. The trajectory within certain disciplines as well as the interaction among them will be critically evaluated in terms of gains and losses. Implications of these theses in the planning of graduate and postgraduate research.
Prerequisite: Knowledge of reading Japanese.
Course not offered every year
Also Offered As: GSWS 771
Activity: Lecture
1.0 Course Unit

EALC 777 Readings in Premodern Japanese History: War & Peace, 1000-1850
This seminar is an introduction to the most recent historiography on premodern Japan, with a special attention to work focused on the medieval and early modern periods (twelfth through nineteenth centuries). The course will range broadly from religious history to social history, from new takes on biography and material culture to new approaches to think of Japanese’s relation to the other, within the archipelago and beyond. Each week will feature a monograph published in the last decade or so, alone or (when possible) in conversation with earlier pieces on similar subjects. Students will be expected to take turns presenting on readings, to write three short book reviews during the course of the semester and a longer seminar paper at the end of the semester (to be submitted by 12/15). The short papers should be handed in no more than three weeks after the book was discussed in class.

Economics (ECON)

ECON 001 Introduction to Micro Economics
Introduction to economic analysis and its application. Theory of supply and demand, costs and revenues of the firm under perfect competition, monopoly and oligopoly, pricing of factors of production, income distribution, and theory of international trade. Econ 1 deals primarily with microeconomics.
For BA Students: Society Sector
One-term course offered either term
Activity: Recitation
1.0 Course Unit

ECON 002 Introductory Economics: Macro
Introduction to economic analysis and its application. An examination of a market economy to provide an understanding of how the size and composition of national output are determined. Elements of monetary and fiscal policy, international trade, economic development, and comparative economic systems.
For BA Students: Society Sector
One-term course offered either term
Prerequisite: ECON 001
Activity: Recitation
1.0 Course Unit

ECON 010 Introduction to Economics for Business
The first part of the course covers basic microeconomic concepts such as opportunity cost, comparative advantage, supply and demand, importance of costs and revenues under perfect competition vs. monopoly, externalities and public goods. The second part of the course introduces macroeconomic data, two models of the labor market, a model of the aggregate household, and the standard AD-AS model. The course concludes with an introduction to fiscal policy, banking, and the role of the Central Bank.
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit
Notes: For Wharton students only
ECON 013 Strategic Reasoning
This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and movies. Some interactive games will be played in class. There will be little formal theory, and the only prerequisites are some high-school algebra and having taken ECON 001. However, general numeracy (facility interpreting and doing numerical graphs, tables, and arithmetic calculations) is very important. This course will also be accepted by the Economics department as an Econ course, to be counted toward the minor in Economics (or as an Econ elective). Prerequisite: This course course may not be taken concurrently with or after ECON 212.
Taught by: Dillenberger
Course usually offered in fall term
Also Offered As: PPE 311
Prerequisite: ECON 001
Activity: Lecture
1.0 Course Unit
Notes: This course may NOT be taken concurrently or after ECON 212.

ECON 014 American Capitalism
A broad overview of American economic history will be provided by focusing on the following topics: European colonization of the western hemisphere; mercantilism and the British Economy; the economics of slavery; metro-industrialization; agricultural expansion and technological innovation in the nineteenth century; the growth and role of credit institutions; financial panics and business cycles; the evolution of federal government interventions into the economy; women and work; the dynamics of mass consumerism; the Great Depression and the New Deal; political economic shifts in post-World II America; forms of globalization; deindustrialization; the ‘financialization’ of the American economy; and the economic disorders of our own times.
For BA Students: Society Sector
Taught by: Licht
One-term course offered either term
Also Offered As: HIST 161
Activity: Recitation
1.0 Course Unit

ECON 024 Development Economics
This course presents an overview of the field of development economics. The general aim is to show how economic analysis has been applied to issues related to developing countries. Among the topics covered are: income distribution, poverty, health, population growth, migration, growth, and the rural economy. Students may NOT take ECON 024 and 261.
One-term course offered either term
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Students may NOT take ECON 024 and 261

ECON 028 Financial Meltdown, Past and Present
Economic history is increasingly recognized as a crucial source of policy advice and is invoked with growing frequency in public debates. In particular, the subprime crisis in 2008 and after has generated a demand for ‘historical perspective’ that would improve the understanding of the causes of financial turmoil and facilitate the prevention of comparable catastrophes. This course begins with a review of the principal features of the subprime crisis of 2008 and asks, so to speak, ‘how did we get there?’ It answers by providing historical insights that shed light on crucial aspects of financial disasters.
For BA Students: Humanities and Social Science S
Taught by: Flandreau
One-term course offered either term
Also Offered As: HIST 131
Activity: Lecture
1.0 Course Unit

ECON 030 Public Policy Analysis
This course provides an introduction to the economic method for analyzing public policy questions. It develops the implications of this method for the role of government in a market economy and for the analysis of specific public projects. Credit cannot be received for both ECON 030 and 231.
One-term course offered either term
Prerequisite: (ECON 001 AND ECON 002) OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 030 and 231.

ECON 032 Political Economy
This course examines the effects of strategic behavior on political outcomes and government policies. Topics and applications may include voting behavior, candidate competition, voting systems, social choice and welfare, policy divergence, redistributive policies and theories of political transitions. Credit will NOT be given for ECON 032 and ECON 232.
One-term course offered either term
Prerequisite: (ECON 001 AND ECON 002) OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit will NOT be given for ECON 032 and ECON 232

ECON 033 Labor Economics
The course begins with an extensive discussion of models of labor market demand and supply. The rest of the course addresses a variety of related topics including the school-to-work transition, job training, employee benefits, the role of labor unions, discrimination, workforce diversity, poverty, and public policy. Credit cannot be received for both ECON 033 and ECON 233.
Course usually offered in spring term
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 033 and ECON 233.
ECON 035 Industrial Organization
Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, moral hazard and adverse selection. These theories are then applied to the study of various industries, antitrust cases, and regulatory issues. Credit cannot be received for both ECON 035 and 235.
One-term course offered either term
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 035 and 235.

ECON 036 Law and Economics
The relationship of economic principles to law and the use of economic analysis to study legal problems. Topics will include: property rights and intellectual property; analysis of antitrust and economic analysis of legal decision making. Credit cannot be received for both ECON 036 and 234.
One-term course offered either term
Also Offered As: PPE 036
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 036 and ECON 234.

ECON 039 The Economics and Financing of Health Care Delivery
The course provides an application of economic models to demand, supply, and their interaction in the medical economy. Influences on demand, especially health status, insurance coverage, and income will be analyzed. Physician decisions on the pricing and form of their own services, and on the advice they offer about other services, will be considered. Competition in medical care markets, especially for hospital services, will be studied. Special emphasis will be placed on government as demander of medical care services. Changes in Medicare and regulation of managed care are among the public policy issues to be addressed. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Candon
One-term course offered either term
Also Offered As: HCMG 202
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit

ECON 045 Economics and Theories of Fairness
Free markets excel at producing wealth, but seem to do so at the cost of economic inequality. Is this inequality unjust? Is it a problem economics and public policy should solve? Liberal democracies have traditionally had the protection of private property as a core mandate. But they also have varying degrees of redistribution in order to fund social welfare systems. How can we reconcile these objectives which seem to conflict? Is the protection of individual rights more important than the promotion of the greatest good for all? To what extent can personal liberty and the common good be reconciled? Are current entitlement programs like Medicare unfair to the younger generation? Is our current natural resource usage unfair to future generations? In this course, we will use the philosophical concept of justice to address these and other related questions. We will draw from the economic history, political theory, and the history of philosophy in order to acquire a framework for understanding the concepts of justice, liberty, rights, and equality. We shall then apply this historical and conceptual framework to discussion topics and case studies drawn from present day economics and contemporary social issues. In this way, we shall come to understand economics as more than a social science of laws and theorems. Instead we shall see how economics as an applied science influences the well-being of the whole of society.
Taught by: Kane
Course usually offered in fall term
Prerequisite: ECON 001 AND ECON 002
Activity Lecture
1.0 Course Unit

ECON 050 International Economics
Introduction to the theory of international trade and international monetary economics. The theoretical background is used as a basis for discussion of policy issues. Patterns of international trade and production; gains from trade; tariffs, and impediments to trade; foreign exchange markets, balance of payments, capital flows, financial crises, coordination of monetary and fiscal policy in a global economy.
Prerequisite: ECON 050 is a one-semester course in international economics. Students wishing to study the subject in greater depth should take instead the two-semester sequence ECON 251, 252.
One-term course offered either term
Prerequisite: (ECON 001 AND ECON 002) OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: ECON 050 is a one-semester course in international economics. Students wishing to study the subject in greater depth should take instead the two-semester sequence ECON 251, 252.

ECON 101 Intermediate Microeconomics
Theories of consumer behavior, demand, production, costs, the firm in various market contexts, factor employment, factor incomes, elementary general equilibrium, and welfare. Prerequisite: Incoming freshman with AP or transfer credit. Upper classmen must have at least a B+ in MATH 104 to take ECON 101 or MATH 114 or MATH 115 concurrently.
One-term course offered either term
Prerequisite: ECON 001 AND ECON 002 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Note: Incoming freshmen with AP or transfer credit for ECON 001 and ECON 002, MUST complete MATH 104, MATH 114 or MATH 115 before enrolling in ECON 101. Upper classmen must have at least a B+ in MATH 104 to take ECON 101 and MATH 114 or MATH 115 concurrently.
ECON 102 Intermediate Macroeconomics
Facts and theories about the determination of per capita income and its differences across countries and across time. The study of economic fluctuations in output and employment. The role of government in influencing these aggregate variables: monetary and fiscal policy. FNCE 101 does not satisfy any of the Economics department requirements. Therefore, students are required to take ECON 102.
One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (ECON 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: FNCE 101 does not satisfy any of the Economics department requirements. Therefore, students are required to take ECON 102.

ECON 103 Statistics for Economists
The course focuses on elementary probability and inferential statistical techniques. The course begins with a survey of basic descriptive statistics and data sources and then covers elementary probability theory, sampling, estimation, hypothesis testing, correlation, and regression. The course focuses on practical issues involved in the substantive interpretation of economic data using the techniques of statistical inference. For this reason empirical case studies that apply the techniques to real-life data are stressed and discussed throughout the course, and students are required to perform several statistical analyses of their own. Prerequisite: Intended primarily for economics majors. ECON cannot be taken by any students who has already completed Statistics at least at the level of STAT 430 (including the sequence STAT 430 and 431). Such students must take an additional 200-level course to satisfy requirements of the major.
One-term course offered either term
Prerequisite: ECON 001 AND ECON 002 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Intended primarily for economics majors. ECON 103 cannot be taken by any student who has already completed Statistics at least at the level of STAT 430 (including the sequence STAT 430 and 431). Such students must take an additional 200-level course to satisfy requirements of the major.

ECON 104 Econometrics
This course is designed to introduce students to econometric techniques and their applications in economic analysis and decision-making.
The main objective of the course is to train the student in (i) handling economic data; (ii) quantitative analyses of economic models with probabilistic tools; (iii) econometric techniques, their application as well as their statistical and practical interpretation; (iv) implementing these techniques on a computer. Estimation and inference procedures are formally analyzed for simple econometric models and illustrated by empirical case studies using real-life data. The course covers linear regression models, simultaneous-equations models, discrete choice models and univariate time series models. Estimation and Inference is conducted using least squares and likelihood based techniques. Students are required to perform several econometric analyses of their own.
Course usually offered in spring term
Prerequisite: ECON 101 AND ECON 103 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 199 Independent Study
Individual study and research under the direction of a member of the Economics Department faculty. At a minimum, the student must write a major paper summarizing, unifying, and interpreting the results of the study. This is a one semester, one c.u. course. Please see the department for permission.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103
Activity: Independent Study
1.0 Course Unit
Notes: Please see the Undergraduate Coordinator in Economics (160 McNeil) for the appropriate sequence number.

ECON 210 Economics of Family
This course will use economic tools to explore decision making and allocation of resources within the family. The course will use both economic theory and econometric evidence to investigate these issues. The impact of gender roles and differences will be examined and the effect of these differences on economic decisions and outcomes both within and outside the family will be discussed. In addition, any 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.
Student participation will be an integral part of the course. During class, students will be required to evaluate data and relate it to the theoretic model covered. Student participation will also include two in-class oral presentations. Students will be working with CWiC (Communication Within the Curriculum) as they work on these presentations.
Course not offered every year
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 211 Social Choice Theory
This course investigates a topic which lies at the heart of economic, social and political sciences, namely the aggregation of individual preferences. Can a society as a whole exhibit preferences as individuals do? Can these preferences be based on individual ones, and show the same level of coherence? Which process can lead from individual preferences to the preferences of the society? At the end of the 18th century, the pioneers in the field already realized that mathematics is the only language powerful enough to make deep progress in the understanding of these questions. The formalization involves pure logic as well as geometry and combinatorics. In addition, any 200-level LPS course (Section 601) when offered, MAY NOT count for Economics Majors, unless you are officially registered as an LPS student.
Course not offered every year
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level LPS course (Section 601), when offered, MAY NOT count for Economics Majors, unless you are officially registered as an LPS student.
ECON 212 Game Theory
An introduction to game theory and its applications to economic analysis. The course will provide a theoretical overview of modern game theory, emphasizing common themes in the analysis of strategic behavior in different social science contexts. The economic applications will be drawn from different areas including trade, corporate strategy and public policy. Any 200-level LPS course when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Any 200-level LPS course when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 221 Econometric Forecasting
This course provides a comprehensive introduction to forecasting in economics and business. Topics covered include statistical graphics, trends, seasonality, cycles, forecast construction, forecast evaluation and forecast combination. In addition, any 200-level CGS course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103 AND ECON 104 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Any 200-level CGS course (Section 601), when offered, MAY NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 222 Advanced Econometric Techniques and Applications
This course introduces students to advanced study in econometrics, with an emphasis on methods used in microeconomic applications and in evaluating the effects of social interventions. The methods covered include methods for handling limited dependent variables (useful, for example, in forecasting the demand for a new good), maximum likelihood estimators, and flexible semiparametric and nonparametric estimation methods, and randomized and nonexperimental methods of estimating treatment effects. Applications of econometrics to the field of program evaluation will also be studied. In addition, any 200-level LPS course, when offered WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

One-term course offered either term
Prerequisite: ECON 101 AND ECON 104 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Any 200-level LPS course when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 224 Statistical Learning and Causal Inference for Economics
ECON 224 is an applied data analysis course that introduces students to ideas from modern statistical learning and causal inference, and provides hands-on experience applying them to real-world problems using the R statistical programming language. Topics include regression, randomized controlled trials, classification, instrumental variables, shrinkage methods, random forests, regression discontinuity, and differences-in-differences.

Taught by: DiTraglia
Prerequisite: ECON 103
Activity: Lecture
1.0 Course Unit

ECON 225 Empirical Economics of Climate Change
This course provides a broad introduction to the economics of climate change. The relevant theory is reviewed, but the emphasis throughout is thoroughly empirical. We begin by providing necessary background in geophysics and econometrics. We then move into aspects of the bidirectional feedback relationship between climate change and economic activity. First we examine effects of economic activity on climate, and then we examine the effects of climate on economic activity. Finally, we move to economic strategies, policies, and institutions for climate change mitigation and adaptation, including trading or taxing carbon, hedging climate risk in financial markets, and monetary and supervisory policy.

Taught by: Diebold
Course usually offered in fall term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103 AND ECON 104
Activity: Lecture
1.0 Course Unit

ECON 231 Public Finance
This course has two parts. The first looks at market and government failures and discusses the need for public policies as well as limits to their effectiveness including the evaluation of public projects using cost benefit analysis. The second part focuses on the economic analysis of taxation, including the economic incidence and efficiency of taxes.

Prerequisite: Credit cannot be received for both ECON 030 and 231.
ECON 103 recommended.

One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 030 and 231.

ECON 232 Political Economy
This course examines the political and economic determinants of government policies. The course presents economic arguments for government action in the private economy. How government decides policies via simple majority voting, representative legislatures, and executive veto and agenda-setting politics will be studied. Applications include government spending and redistributive policies. Prerequisite: ECON 103 is recommended.

One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
ECON 233 Labor Economics
Labor supply and labor demand, income distribution, labor market contracts and work incentives, human capital, labor market discrimination, job training and unemployment. Prerequisite: Credit cannot be received for both ECON 033 and 233. ECON 103 is recommended. One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 or MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 033 and 233.

ECON 234 Law and Economics
This course will use basic microeconomic tools to understand how the law often, but not always, promotes economic efficiency. Among the areas to be discussed will be tort law, property law, intellectual property, antitrust regulation. The distinction between common law and legislative law will be drawn. Prerequisite: Credit cannot be received for both ECON 036 and 234. One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 036 and 234.

ECON 235 Industrial Organization
Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, nonlinear pricing and price discrimination. These theories are used to model various industries, antitrust cases, and regulatory issues. Prerequisite: Credit for both ECON 035 and 235. ECON 103 is recommended. One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 035 and 235.

ECON 236 Health Economics
In this course we will use the tools of microeconomics to analyze the functioning of the health care system. We will draw from the sub-disciplines of information economics, industrial organization, labor economics, public economics, and behavioral economics. The primary goal is to use these tools to develop a critical analysis of the functioning of the health care system as well as of the policies aimed at improving it. We will learn about US specific institutional details and policies (most notably the Affordable Care Act), and we will compare them to other important international experiences. Prerequisite: Wharton students can satisfy the ECON 101 prerequisite with BEPP 250 honors. The regular BEPP 250 course does not count as a substitute for ECON 101. One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: For ECON majors only. Intermediate Micro is a prerequisite and this course will use advanced quantitative methods.

ECON 237 Urban Fiscal Policy
The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example. One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103 AND ECON 104 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 238 Economics of Education
The course focuses on the educational decisions, including individual choices, institutional strategies and government policies. It is an elective course in economics and it is designed for junior and senior students. During the first part of the course we will go over the mathematical and empirical tools needed to understand and perform quantitative analysis on topics in the economics of education. Students should expect to work on optimization methods, regression analysis and causal inference analysis. We will use Stata (https://www.stata.com/) as statistical software. After we have built a solid foundation of knowledge, we will cover the first ‘real’ topic of the economics of education: the return to schooling. During this phase of the course we seek to address two questions: what are the benefits that an individual acquires (i.e. in terms of earnings in the labor market or career opportunities) by attending more years of school and what are the benefits for society as a whole? While these questions seem to have a simple explanation, we will discover that they are actually quite challenging and require a more complex explanation. Once we have analyzed the benefits of schooling, we will study what motivates some students to further their education for more years, as opposed to others. In particular, we will focus on the differences in the quality of environments that children face throughout childhood (e.g.: family environment and school/classroom environment) and the consequences for observed inequities. Finally, in the remaining portion of the course we will study the evaluations of different policies that have been implemented in the past from previous governments, with the goal of gaining insight for possible future policy recommendations. Taught by: Agostinelli
Course usually offered in spring term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103
Activity: Lecture
1.0 Course Unit
ECON 239 The Digital Economy
This is an advanced undergraduate course on the digital economy. Our two main goals are (a) to understand how people and companies interact in digital markets and (b) to understand how digital markets should be designed. The course uses a combination of theoretical modeling and empirical evidence in order to achieve those goals. We analyze some key features that are prevalent in digital markets, including network effects, two-sided markets, search and matching, reputation systems, and the use of data. We also zoom in on individual markets, such as search engines, e-commerce platforms, and the gig economy.
Taught by: Castillo
Course usually offered in spring term
Prerequisite: ECON 101 AND ECON 104 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 241 Economic Growth
The process of economic growth and the sources of differences in economic performance across nations are some of the most interesting, important and challenging areas in modern social science. You cannot travel or read the news without wondering why differences in standards of living among countries are so large. The primary purpose of this course is to introduce undergraduate students to these major issues and the theoretical tools necessary for studying them. The course therefore strives to provide students with a solid background in dynamic economic analysis, as well as empirical examples and data analysis.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 242 Topics in Macroeconomics
This course covers topics of interest in macroeconomics. Two sections are offered: Markets with Frictions. This course studies allocations in markets with frictions, as described by the difficulty in finding a trading partner, private information problems, commitment issues, and so on. Applications to labor markets, monetary economics, the marriage market will be discussed. The main technical tool will be search theory, but a liberal amount of calculus and other mathematics will be used. Numerical Methods for Macroeconomists. This course will study some of the numerical methods that are used in modern macroeconomics. This class will learn how to solve nonlinear equations, difference equations, interpolate functions, smooth data, and conduct Monte Carlo simulations on the computer. This will be done while studying economic problems, such as the determination of labor supply, economic growth and business cycle analysis. Calculus is an integral part of the course and some elementary probability theory will be drawn upon. The MATLAB programming language will be used.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 243 Monetary and Fiscal Policies
This is an advanced course in macroeconomics. A relatively simple, but well defined and internally consistent model of the U.S. economy is set up and used to study how output is generated given the initial resources, how output is divided between consumption and addition to capital stock, and how this process accumulates over time. The role of prices including the rate of interest in this process is also reviewed, and monetary and fiscal policies needed to improve the performance of the economy under such circumstances are discussed. Prerequisite: ECON 103 is recommended.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 244 Macro-Modeling
This is an advanced undergraduate course in models of economic growth. Students will be introduced to the workhorse theoretical models that are used to understand growth by modern macroeconomic researchers and policy makers. The types of questions that we will address include: Why are some countries richer than others? Why do some countries grow quickly while others stagnate? Why did modern economic growth start in Western Europe? What can governments do to accelerate economic growth? How does economic growth interact with demographic and geographic factors? We will build theoretical models that can be used to answer these questions. There will be a strong focus on emphasizing the microeconomic foundations of models, and using the language of mathematics to express the underlying assumptions and assess their implications for policy. Hence, there are strict mathematical prerequisites. We will also compare the predictions of our models with the data. Thus, a fair amount of econometrics will be required. A class in statistics and econometrics is highly recommended. Prerequisite: ECON 103 is recommended.
Course not offered every year
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 246 Money and Banking
Money and Banking. This course studies the role that financial markets, institutions, and money play in resource allocation. Financial intermediation and the role of banks in the economic system are analyzed and the economic rationale behind banking regulation is studied. The course examines how monetary policy influences interest rates and asset markets, such as the bond market and the stock market. Finally, the instruments and goals of monetary policy are discussed, focusing in particular on credibility and commitment for central banks. All of the questions are explored analytically, using the tools of economic theory.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
ECON 251 International Trade
Structure of the world economy; theory of international trade; economic growth and international trade; international trade policy; developed countries; developing countries. Direct investment, technology transfers, and the multinational firm. Prerequisite: In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LP student.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level LPS course, when offered WILL NOT count for Economics Major unless you are officially registered as an LPS student.

ECON 252 International Finance
International monetary economics with emphasis on economic policy in an open economy. Topics covered in the course include: balance-of-payments adjustment, theories of exchange rate determination, the effects of exchange rate devaluation, macroeconomic policy under fixed and floating exchange rates, the Euro-dollar market, currency and balance of payments crises. Prerequisite: In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level LPS course, when offered WILL NOT count for Economics Major unless you are officially registered as an LPS student.

ECON 260 Decision Making Under Uncertainty
This course will show how individuals make decisions in a world full of uncertainties, both normatively and descriptively. This theory will help us build skills in understanding and analyzing a choice problem with uncertainty in a systematic fashion, as well as deepening our understanding of the fundamental concept of a utility function, which plays a critical role in economic modeling. The course requires a substantial ability of abstract thinking. Homework is intended to be thought-provoking rather than skill-sharpening. All prerequisites MUST be taken prior to enrolling in this course.
Course not offered every year
Prerequisite: ECON 101 AND ECON 103 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: All prerequisites MUST be taken prior to enrolling in this course.

ECON 261 Topics in Development
This course studies institutions in developing economies. The first section of the course will cover the organization of production in traditional agrarian societies. Topics will include land, labor and credit markets. The second section of the course will focus on the role of the community in facilitating the transition to the modern market economy. Here we will study how the community spreads information, permits the formation of informal networks and organizes collective institutions, allowing individuals to take advantage of new economic opportunities. Prerequisite: Student may not receive credit for ECON 024 and ECON 261. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless officially registered as a LPS student.
ECON 103 recommended.
Course not offered every year
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Student may not receive credit for ECON 024 and ECON 261. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 262 Market Design
Market design is broadly about designing interventions in economic systems so as to enhance their performance. The power and potential of market design has recently entered a new era of possibility with the rise of Artificial Intelligence. Artificial Intelligence is concerned with the design of intelligent autonomous systems. Such systems are rapidly transforming our society and economy and have been enabled by major advances in cloud computing and network telecommunications. Yet underlying the technological surface of many AI-oriented applications are fundamental economic and econometric principles which are central to their design and implementation. In short, to perform well, an AI system must ‘think like economists’ - it must: 1. Make predictions about its environment; 2. Test causal hypotheses about the effect of various actions they can take, and; 3. Make decisions about an optimal plan of action in the face of uncertainty, which is a cycle that repeats and iteratively improves. Many of the established success stories in AI today have largely been focused on achieving (1), the trend is towards AI increasingly encompassing (2) and (3). In this course we aim to isolate these economic principles and understand their role in the modern development of AI, as well as gaining an appreciation for what the proliferation of AI based technologies means for the economy in which we live. Although the course will be principally interested in the former, we won’t fully shy away from some discussion of the latter. Topics include human judgment and decision making biases (a light intro to behavioral economics), predictive machine learning and regularization, causal inference as distinct from prediction with application to product pricing, and reinforcement learning for dynamic decisions. Prerequisite: The LPS 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as a LPS student.
Taught by: Gandhi
One-term course offered either term
Prerequisite: ECON 101 AND ECON 103 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: The LPS 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as a LPS student.
ECON 271 Foundations of Market Economies
This course will study the historical and intellectual forces behind the appearance of market economies on the world stage. The voyages of exploration undertaken by Europeans in the 15th and 16th century created, in just a few decades, a global economy. By 1600, silver from Mexico was exchanged in Manila for ceramics made in Nanjing (China). After a long trip through the Pacific, Mexico, and the Atlantic, the ceramics ended up in the tables of prosperous merchants in Bruges (modern day Belgium). How did this integrated global economy appear? How did global interconnections over the centuries shape our current world? How did markets emerge and influence these interconnections? Who were the winners of globalization? And who were the losers? How did economists, political scientists, and others think about the strengths and weakness of market economies? This course will explore these questions and the role that markets have played in it from the late 15th century to the present. Even if the economic theory will structure much of the discussion, insights from intellectual history, cultural history, microhistory, legal history, and institutional history will help to frame the main narrative. The course will be, as well, truly global. First, beyond the traditional focus of economic history courses on Europe and the Americas, particular attention will be devoted to Africa and Asia. Second, the priority will be to highlight the interconnections between the different regions and to understand how the people living in them negotiated the opportunities and tensions created by the economic transformations triggered by globalization and how they conceptualized the changing lives around them. Finally, the class will highlight how diverse intellectual traditions handled the challenges presented by historical change.
One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 272 China: Institution & the Economy
The rise of China since its economic reform starting from 1978 is one of the most important developments the world witnessed in the twenty first century. In this seminar course, we explore topics including the political logic of China's economic reform, the institutional foundations of the Chinese economic growth miracle, as well as detailed analysis of Chinese financial markets, housing markets, fiscal reform, corruption/anti-corruption, labor market transitions, China's integration into the world economy, village democracy and its impact on resource allocation, the impact of population ageing, the impact of China on US economy and politics, among others. The discussions will focus on China, but will relate broadly to emerging and developed economies. The course will be based on reading and discussing research articles and books selected by the instructors. Prerequisite: ECON 103 recommended. PSCI majors PSCI 110 recommended.
Also Offered As: PSCI 227
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 273 The Political Economy of Early America
This course will study the political economy of Early America, from the British Settlement to c. 1820. In particular, we will explore the forces behind the economic growth of the British colonies, the economic forces behind the Revolution, the economic consequences of the Revolution, the political economy of the constitutional convention and ratification, the role of SCOTUS in creating a national market, and the opposing Hamilton-Jefferson views of an American economy. Early America is a fascinating and rich historical period, and we will need to skip many issues of interest. Nevertheless, we hope to provide you with a good overview of how a group of small peripheral colonies created an institutional arrangement that allowed them, in less than two centuries, to become the biggest economy in the world.
Taught by: Fernandez-Villaverde
Course usually offered in spring term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 274 History of Economic Thought
This course surveys the history of the development of economic thought, beginning with the Classical school and the works of Smith, Ricardo, J.S. Mill, Marx and others and continuing to the 20th century thought, including Keynes, Hayek, and Arrow.
Taught by: Arteaga
Course offered spring; even-numbered years
Prerequisite: ECON 101 AND ECON 102 AND 103 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 300 Honors Seminar
Students prepare an honors thesis in economics over the academic year, supervised by a faculty member of their choice. In both semesters students present their work in progress to the class. Any student intending to do empirical work in the thesis should have completed ECON 103 and ECON 104. Course meets weekly. Required of all honors majors.
Two terms. student must enter first term.
Prerequisite: ECON 101 AND ECON 102 AND ECON 103 AND ECON 104 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Seminar
1.0 Course Unit
Notes: Course meets weekly. Required of all honors majors.

ECON 681 Microeconomic Theory
Basic tools of microeconomic theory: consumer choice, firm behavior, partial and general equilibrium theory. This is a more theoretical treatment of the basic tools of microeconomic analysis than ECON 680.
Course usually offered in fall term
Prerequisite: ECON 101
Activity: Lecture
1.0 Course Unit

ECON 682 Game Theory and Applications
A graduate level introduction to decision making under uncertainty, applied game theory, and information economics.
Course usually offered in spring term
Prerequisite: ECON 681
Activity: Lecture
1.0 Course Unit
ECON 701 Microeconomic Theory I
Nonlinear programming, theory of the consumer and producer, general equilibrium. Prerequisite: Meeting the Department’s minimal mathematical requirements, ECON 897 Summer Math program. Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ECON 702 Macroeconomic Theory I
Dynamic programming, search theory, neoclassical growth theory, asset pricing, business cycles. Taught by: Krueger Course usually offered in fall term
Prerequisite: MATH 701 AND MATH 897
Activity: Lecture
0.5 Course Units

ECON 703 Microeconomic Theory II
Game theory, decision making under uncertainty, information economics. Prerequisite: Meeting the department’s minimal mathematical requirements, ECON 897 Summer Math Program. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ECON 704 Macroeconomic Theory II
Equilibrium notions in the growth model. Economies with distortions. Incomplete markets. Overlapping generations. Prerequisite: Meeting the Department’s minimal mathematical requirements; ECON 700, 701, 703, 897 Summer Math Program. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ECON 705 Econometrics I: Fundamentals
Violations of classical linear regression assumptions, nonlinear regression models (including logit, probit, etc.), diagnostic testing, distributed lag models, panel data models, identification, linear simultaneous-equations model. Prerequisite: Meeting the Department’s minimal mathematical requirements, ECON 897 Summer Math Program. Taught by: Faculty Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ECON 706 Econometrics II: Methods & Models
Analysis in time and frequency domains, state space representations, Kalman filtering, conditional heteroskedasticity, nonlinear and nonparametric methods for time series, integration, co-integration, numerical and simulation techniques. Prerequisite: Meeting the department’s minimal mathematical requirements; ECON 705, 897 Summer Math Program. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ECON 708 The Economics of Agency, Information, and Incentives
This course studies the economics of adverse selection and moral hazard in strategic settings. The primary focus is on the agency relationship and the structure of agency contracts. Other settings include auctions, bilateral trading, and the internal organization of the firm. Prerequisite: Meeting the Department’s minimal mathematical requirements; ECON 898 or equivalent. One-term course offered either term
Activity: Lecture
0.5 Course Units

ECON 712 Topics in Advanced Economic Theory and Mathematical Economics
Topics and prerequisites announced each year.
Taught by: Faculty One-term course offered either term
Activity: Lecture
1.0 Course Unit

ECON 714 Quantitative Macroeconomic Theory
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706
Activity: Lecture
0.5 Course Units

ECON 719 Economic Theory
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 712

ECON 720 Econometrics III: Advanced Techniques of Cross-Section Econometrics
Qualitative response models, panel data, censoring, truncation, selection bias, errors in variables, latent variable models, survey design, advanced techniques of semiparametric estimation and inference in cross-sectional environments. Disequilibrium models. Methods of simulated moments. One-term course offered either term
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706
Activity: Lecture
1.0 Course Unit

ECON 721 Econometrics IV: Advanced Techniques of Time-Series Econometrics
Focuses on macro-econometrics. Topics include comparison of Bayesian and frequentist inference in nonstandard settings (e.g. time series models with persistent roots), Bayesian inference in VARS and DSGE models including modern computational tools such as Gibbs sampling, MCMC, Sequential Monte Carlo, particle filtering, etc., and tools for evaluating DSGE models. Taught by: Schorfheide/Diebold One-term course offered either term
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706
Activity: Lecture
1.0 Course Unit
ECON 729 Econometrics  
One-term course offered either term  
Activity: Seminar  
1.0 Course Unit  
Notes: Related Courses: ECON 721 and 722

ECON 749 Monetary Economics  
One-term course offered either term  
Activity: Seminar  
1.0 Course Unit  
Notes: Related Courses: ECON 740, 741

ECON 750 Public Economics  
Public goods, externalities, uncertainty, and income redistribution as sources of market failures; private market and collective choice models as possible correcting mechanisms. Microeconomic theories of taxation and political models affecting economic variables.  
One-term course offered either term  
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706  
Activity: Lecture  
0.5 Course Units

ECON 751 Public Economics II  
Expenditures: Alternative theories of public choice; transfers to the poor; transfers to special interests and rent seeking; social insurance; publicly provided private goods; public production and economic coordination. Taxation: Tax incidence in partial and general equilibrium; excess burden analysis.  
Topics on tax incidence and efficiency: lifetime incidence and excess burden, dynamic incidence, the open economy. Normative theories of taxation: Optimal commodity and income taxation. The political economy of income taxation.  
One-term course offered either term  
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706  
Activity: Lecture  
0.5 Course Units

ECON 779 Comparative Economic Systems  
One-term course offered either term  
Activity: Seminar  
1.0 Course Unit  
Notes: Related Courses: ECON 770, 771

ECON 781 Empirical Methods for Industrial Organization  
The goal of the course is to explore links between theory and data in order to identify and test implications of economic models. Reduced form and structural approaches will be used to study a variety of topics that include: Estimation of multiproduct cost functions; detection of collusion, multimarket contact, and network externalities; asymmetric information: auctions and nonlinear pricing; price competition and product differentiation; and complementarities: innovation and organizational design.  
One-term course offered either term  
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706  
Activity: Lecture  
1.0 Course Unit

ECON 789 Applied Microeconomics Workshop  
One-term course offered either term  
Activity: Seminar  
1.0 Course Unit  
Notes: Related Courses: ECON 780, 781

ECON 792 Economics of Labor I  
Topics include: Theories of the supply and demand for labor; wage determination, wage differentials, labor market discrimination, unemployment, occupational choice and dynamics of specific labor markets, theory of matching, trade unions. The theory and empirics of human capital accumulation, intertemporal labor supply, search, intergenerational mobility of income and wealth, contracts and bargaining, efficiency wage models, principal/agent models, and signaling models.  
One-term course offered either term  
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706 AND ECON 721  
Activity: Lecture  
1.0 Course Unit

ECON 793 Economics of Labor II  
A continuation of ECON 792.  
One-term course offered either term  
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706 AND ECON 721 AND ECON 792  
Activity: Lecture  
0.5 Course Units

ECON 799 Empirical Microeconomics  
One-term course offered either term  
Activity: Seminar  
1.0 Course Unit  
Notes: Related Courses: ECON 791, 792, 793

EDUC 202 Urban Education  
This seminar focuses on two main questions: 1) How have US schools and urban ones in particular continued to reproduce inequalities rather than ameliorating them? 2) In the informational age, how do the systems affecting education need to change to create more successful and equitable outcomes? The course is designed to bridge the divide between theory and practice. Each class session looks at issues of equity in relation to an area of practice (e.g. lesson design, curriculum planning, fostering positive student identities, classroom management, school funding, policy planning...), while bringing theoretical frameworks to bear from the fields of education, sociology, anthropology and psychology.  
Taught by: Clapper  
One-term course offered either term  
Also Offered As: URBS 202  
Activity: Seminar  
1.0 Course Unit

EDUC 235 Psychology of Women  
Critical analyses of the psychological theories of female development, and introduction to feminist scholarship on gender development and sexuality.  
One-term course offered either term  
Activity: Lecture  
1.0 Course Unit
EDUC 240 Education in American Culture
This course explores the relationships between forms of cultural production and transmission (schooling, family and community socialization, peer group subcultures and media representations) and relations of inequality in American society. Working with a broad definition of ‘education’ as varied forms of social learning, we will concentrate particularly on the cultural processes that produce as well as potentially transform class, race, ethnic and gender differences and identities. From this vantage point, we will then consider the role that schools can and/or should play in challenging inequalities in America.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 241 Educational Psychology
Current issues and research, applying psychological theory to educational practice. As such, this course will explore the fundamental themes in behavioral, developmental, and cognitive areas of psychology as they relate to education. Topics include: learning, motivation, growth and development, cognitive processes, intelligence tests, measurements, evaluations, etc.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 250 Learning from Children
This course is about looking at elementary school classrooms and understanding children's experiences of school from a variety of perspectives, and from a variety of theoretical and methodological lenses from which the student can interpret children's educational experiences. This course is about developing the skills of observation, reflection, and analysis and to begin to examine some implications for curriculum, teaching and schooling. This course requires you to spend time in an elementary school classroom.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 251 Mindfulness and Human Development
This course will introduce the student to the many ways in which mindfulness is currently being implemented to support the health and success of students of all ages. Mindfulness-Based Stress Reduction (MBSR), which utilizes secularized practices from Asian and South Asian traditions for the remediation of various health concerns, has revolutionized behavioral medicine, and the scientific evaluation of MBSR has shed new light on the biomechanical pathways linking mind and body. This course will 1) explore fundamental principles underlying mindfulness, 2) the scientific data on its effects, and 3) the ways in which mindfulness is being applied to clinical and educational settings to support healthy human development. Contemplative practices include all forms of meditation, including contemplative dimensions of yoga, tai chi, qigong and other mind-body wellness activities. By far the most well known contemplative practice in the U.S. today is ‘mindfulness.’ Mindfulness meditation was introduced into clinical medicine in the 1980’s in the form of Mindfulness-Based Stress Reduction (MBSR) by Jon Kabat-Zinn and his colleagues at U Mass; since that time it has had a significant impact on psychoneuroimmunology, clinical medicine, and especially behavioral medicine. Both psychological theory and practice have slowly been transformed by new findings emerging from mindfulness research. Brain imaging studies of persons engaged in meditation suggest that focused mental activities can actually change cerebral blood flow (Newberg et al 2010), brain morphology and neural circuitry, in addition to strengthening the immune system (Davidson et al 2003) and improving attention skills (Jha et al 2007). MBSR has been repeatedly documented to be effective in treating mental health problems, particularly depression and anxiety, in numerous adult populations (Goyal et al 2014). Now, researchers are testing MBSR and other mindfulness approaches in children and adolescents as both a way to treat social-emotional dysfunction as well as to promote health and enhance academic performance (Greenberg and Harris 2011). Prompted by the robust scientific findings of mindfulness as a tool to support physical and mental health, several groups have sprung up over the last decade devoted to applying and evaluating mindfulness in educational settings such as, The Garrison Institute, Mindful Schools, Mindful Education Institute, Mindfulness in Education Network, and the Association for Contemplative Mind in Higher Education. Teachers across the country are enrolling in mindfulness training programs, administrators are introducing mindfulness to their schools, and researchers are devising ways to evaluate the effects of mindfulness. From kindergarten classes to schools of law and medicine, mindfulness is being proffered as a strategy to support health (both physical and mental), enhance performance, and improve interpersonal communication. This course critically examines how mindfulness has been applied and assessed with regard to healthy development. Through readings and class discussions, it is intended that students will acquire a deep appreciation for how the contemporary exploration of mindfulness is changing the way we understand the human mind, the interface between mind and body, and the tools at our disposal to promote well-being as well as to address dysfunction.
Taught by: Elizabeth Mackenzie
Course offered spring; even-numbered years
Activity: Seminar
1.0 Course Unit
EDUC 323 Tutoring School: Theory and Practice
This course represents an opportunity for students to participate in academically-based community service involving tutoring in a West Phila. public school. This course will serve a need for those students who are already tutoring through the West Phila.Tutoring Project or other campus tutoring. It will also be available to individuals who are interested in tutoring for the first time.
Course usually offered in spring term
Also Offered As: URBS 323
Activity: Seminar
1.0 Course Unit

EDUC 326 Tutoring in Urban Public Elementary Schools: A Child Development Perspective
The course provides an opportunity for undergraduate students to participate in academically based community service learning. Student will be studying early childhood development and learning while providing direct, one-to-one tutoring services to young students in Philadelphia public elementary schools. The course will cover foundational dimensions of the cognitive and social development of preschool and elementary school students from a multicultural perspective. The course will place a special emphasis on the multiple contexts that influence children's development and learning and how aspects of classroom environment (i.e., curriculum and classroom management strategies) can impact children's achievement. Also, student will consider a range of larger issues impacting urban education embedded in American society. The course structure has three major components: (1) lecture related directly to readings on early childhood development and key observation and listening skills necessary for effective tutoring, (2) weekly contact with a preschool or elementary school student as a volunteer tutor and active consideration of how to enhance the student learning, and (3) discussion and reflection of personal and societal issues related to being a volunteer tutor in a large urban public school.
Taught by: Fantuzzo
Course usually offered in fall term
Also Offered As: URBS 326
Activity: Seminar
1.0 Course Unit

EDUC 345 Psychology of Personal Growth
Intellectual, emotional and behavioral development in the college years. Illustrative topics: developing intellectual and social competence; developing personal and career goals; managing interpersonal relationships; values and behavior. Recommended for submatriculation in Psychological Services Master's Degree program.
One-term course offered either term
Also Offered As: GSWS 344
Activity: Lecture
1.0 Course Unit

EDUC 360 Human Development in Global Perspective
A life-span (infancy to adulthood) approach to development. Topics include: biological, physical, social and cognitive basis of development. Films and guest speakers are often included.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 414 Children's Literature
Theoretical and practical aspects of the study of literature for children. Students develop both wide familiarity with children's books, and understanding of how children's literature fits into the elementary school curriculum.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 500 Linguistic Anthropology of Education
Linguistic anthropologists study the role of language use in culturally patterned behavior. The course focuses on recent research by linguistic anthropologists in educational settings in the US and Europe marked by increasing linguistic and cultural diversity. The goal of the course is to uncover useful tools that contemporary linguistic anthropology offers to educational research.
Taught by: Moore
Course usually offered in spring term
Prerequisite: EDUC 546
Activity: Lecture
1.0 Course Unit

EDUC 501 Economics of Education in Developing Countries
This is a course on economics of education, a field within the subject of economics that draws upon many areas of economic specialization. The course focuses on developing countries and includes papers and case-studies covering themes such as returns to investment in education, production, costs and financing of education, teacher labor markets, economic growth, education markets, and equity issues.
Taught by: Thapa
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 502 Citizen Sociolinguistics
In this course we will draw on the Internet and daily news (internet circulated, usually) to find 'Citizen Sociolinguists' who speak with authority, while juxtaposing these media with the usual scholarly sources.
Taught by: Rymes
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 503 Global Citizenship
This course examines the possibilities and limitations of conceiving of and realizing citizenship on a global scale. Readings, guest lecturers, and discussions will focus on dilemmas associated with addressing issues that transcend national boundaries. In particular, the course compares global/local dynamics that emerge across different types of improvement efforts focusing on distinctive institutions and social domains, including: educational development; human rights; humanitarian aid; free trade; micro-finance initiatives; and the global environmental movement. The course has two objectives: to explore research and theoretical work related to global citizenship, social engagement, and international development; and to discuss ethical and practical issues that emerge in the local contexts where development initiatives are implemented.
Taught by: Hall
Course usually offered in spring term
Also Offered As: ANTH 546, URBS 546
Activity: Seminar
1.0 Course Unit
EDUC 504 Contemporary Issues in Higher Education
An introduction to the central issues and management problems in contemporary American higher education.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 505 Globalization & the University
The aim of this course is to help students understand the basic concept of globalization, how it impacts higher education in general, and how it shapes the global market for human capital and fosters private sector and for profit provision and diversifies modes of delivery of higher education. The seminars cover the nature of globalization and the way it affects the movement of people between economies to gain and apply skills and knowledge, the creation of branch campuses, the growth of transnational education and the importance of brands and information in the global higher education market.
Taught by: Ruby
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 506 Migration, Displacement, and Education
This course examines the effects of migration (forced and voluntary) on education in a variety of contexts across the world (including the United States). The course reviews sociological and anthropological theories of immigrant incorporation and inclusion. Such frameworks are then applied to migration through case studies of im/migrants, refugees, and displaced persons in order to consider educational practices, programs and policies that address the effects of migration and displacement on education in diverse contexts.
Taught by: Ghaffar-Kucher
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 507 Teaching & Learning in Student Centered Classrooms
Most teachers have ambitious goals for their classrooms. They strive to make their classrooms spaces where students engage in authentic and meaningful work, where students collaborate on challenging and complex tasks, and where students develop deep disciplinary knowledge and the skills and mindsets that are necessary for their success in college, career, and society. However, many classrooms fall short of this ambitious vision. This course explores the challenges and opportunities teachers face when they attempt to build student-centered learning environments, and offers educators tangible insights and practices to support their work.
Taught by: Herrmann
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 508 Maker Studio
In this seminar, we will discuss and design projects related to the 'maker movement' in education using various materials and technologies as we consider issues of access and diversity around making.
Taught by: Kafai
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 509 Merit and America
What constitutes merit? What should constitute merit? These questions are both philosophical and practical - and are faced by every educator in some form. The notion of meritocracy has long been at the heart of varied discourses about the place of education in American society. Merit is most often understood as inhering in consistent and individual personality traits such as competency, intelligence, and diligence. And yet, every individual is embedded in complex social worlds that are culturally specific and historically contingent. Drawing on a broad array of disciplines and literatures, this seminar-style course challenges students to consider how ideas of merit and its measurement are shaped by American history, culture, and society, and to articulate their own views as they move toward their professional goals.
Taught by: Posecznick
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 511 Education and the Culture Wars: Historical and Contemporary Perspectives
America is wracked by 'culture wars,' pitting different moral and religious values against each other. But these conflicts are hardly new. Since the founding of the Republic, we have battled over religion, sex, gender, and race. And many of these conflicts have entered our schools, which remain our primary vehicle for deliberating and determining who we are. What languages should we use in school? What should we teach young people about sex? About race? About religion? Most of all, what stories should we tell about the nation itself? This course will probe these issues and also help students write primary-source research papers that examine different culture wars in American education.
Taught by: Zimmerman
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 512 University-Community Partnerships
Ranging from civic engagement to economic development, institutions of higher education in the United States have long been involved in a variety of relationships with their local communities; in recent years, there has been increasing attention paid to the opportunities and challenges implicit in those relationships. In this Academically Based Community Service (ABCS) course, students will study and discuss the history, rationales, and manifestations of the partnerships that have developed. Through readings, faculty-and student-led discussions, guest lecturers, and policy-oriented projects, students will develop better understandings of the many topics surrounding university-community partnership activities. Among other themes we will consider institutional roles and relationships, service learning, community perspectives, policy issues, and evaluation.
Taught by: Grossman
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 513 Development of the Young Child (TLL)
This course will blend an explanatory and descriptive account of behavioral evolution over the yearly years of life. After a review of ‘grand’ developmental theory and the major themes of child change (from images to representation; from dependence to independence; from instinctual to social beings), this course will survey the child’s passage from infancy through the early school years. While the emphasis will be on the nature of the child—what she/he sees, feels, thinks, fantasizes, wants and loves—these realities will be understood in terms of developmental theory. At each stage, the course will review the development of cognition, personal identity, socialization, and morality in pluralistic contexts.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 514 Education in Developing Countries
In recent years the construct of ‘global development’ has come under increasing scrutiny, leading some scholars and practitioners to wonder whether development remains a useful concept. In this course, we will actively engage in this debate through a survey of the development literature in the field of education. We will examine theoretical frameworks and historical perspectives that will allow us to develop a better understanding of what is meant by ‘development’ as well as recognize how these concepts relate to basic educational planning and practice in various international contexts. Prerequisite: Prior graduate work in related areas recommended. The course will work from primary and secondary materials on theories, research, and applications used to promote global development and basic education. Some programs are carried out by multinational/bilateral agencies such as World Bank, Unicef, UNESCO, and USAID, while others are undertaken by intermediary organizations (such as NGOs and universities) and local organizations or individual specialists. Issues include a range of social, economic and political obstacles to the provision of quality education. The goal of this course is to improve your understanding of how different theories of education and development influence educational policy, priorities, and programs of international, national, and local institutions. Prerequisite: Prior graduate work in related areas recommended.
Taught by: Wagner/Ghaffer-Kucher
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 515 Field Seminar (Elementary & Secondary Education)
This seminar is designed to integrate student teaching fieldwork and university course work through reading, discussion, and reflection. Central to this course will be teacher research, an inquiry stance toward learning how to teach, and a social justice approach to education. Throughout the semester, we will be examining a range of issues through theoretical and practice-oriented lenses that will deepen our understanding of teaching and learning. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in fall term
Activity: Lecture
3.0 Course Units

EDUC 516 Teaching Writing in Multilingual Contexts
This course introduces participants to a range of theoretical and practical issues related to second language literacy development, with a particular emphasis on writing instruction. An intensive service-learning project offers course participants the opportunity to work with developing writers in a bilingual community organization. The dual emphasis on theory and pedagogy is intended to create space for critical reflection on the characteristics, production, teaching, and assessment of written texts in bi/multilingual educational settings.
Taught by: Pomerantz
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 517 Classroom Discourse and Interaction
In this course students will read research that investigates the role of classroom interaction in learning and human development. Students will also learn how to ‘do’ discourse analysis using real classroom data. Students will practice and critique methods for analyzing classroom discourse data as teachers, with an aim of developing a critical awareness of our own language use and role in society.
Taught by: Rymes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 518 Integrating the Arts in the K-8 Classroom
It is an unfortunate state of public elementary and middle level education that programs and time spent in arts education are becoming more and more limited, as school leaders feel the pressure to prepare their students for mandated assessments. In this context, it is essential that K-8 educators enter schools prepared to fill this gap through the development of opportunities for children to explore their worlds and express their knowledge through creative channels. This course has been designed to emphasize student-centered pedagogies and to prepare teachers to utilize the arts as one mechanism for building culturally responsive classrooms. This course will prepare K-8 teachers to enact lessons that support students in authentic, collaborative, iterative learning through the creative integration of visual arts and music. The course is split into two modules, one that focuses on visual arts and one that focuses on integration of music. Additionally, this course supports the development of Pennsylvania Department of Education (PDE) PreK-8 teacher competencies. Prerequisite: Admission to the UTAP program or permission of instructor.
Taught by: Jeffrey Mordan
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDUC 519 The Evolution of Assessment: Classroom and Policy Uses
This course explores the evolution and diverse uses of assessment in four major areas: the historical roots of testing and the development of the achievement testing industry; the rising interest and exploration of alternative forms of assessment; how teachers employ a variety of assessments in their classrooms; and how policymakers use assessment for decision-making and accountability purposes. Prerequisite: Permission needed from department.
Taught by: Supovitz
Course not offered every year
Activity: Lecture
1.0 Course Unit
EDUC 520 Literacy in Elementary/Middle Schools
In this course, the interconnections of language, literacy and culture are explored in order to build a knowledge base and understanding of how children learn to read and write. Emphasis will be on how to teach and develop literacy curriculum in the elementary grades, and on how close listening and observation of children in their classroom contexts, combined with a critical reading of research and theory, can inform teaching practices. A central tenet of this course is that the best teachers of reading and writing are themselves active and engaged readers and writers. An important goal is to combine an inquiry approach to teaching and learning with an inquiry approach to thinking about how we teach. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 521 Science Methods: Project-Based Learning Approaches
The goal of this course is to prepare teachers to facilitate science learning in the elementary and middle school. Special emphasis is placed on striving for a balance between curricular goals; individual needs and interests; and the nature of science. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 522 Psychology of the African-American
Using an Afro-centric philosophical understanding of the world, this course will focus on psychological issues related to African Americans, including the history of African American psychology, its application across the life span, and contemporary community issues.
Taught by: Stevenson
Course usually offered in spring term
Also Offered As: AFRC 522
Activity: Lecture
1.0 Course Unit

EDUC 523 Social Studies in the Elementary and Middle Schools
This course will focus on teaching and learning in the content area of social studies. Curricular and pedagogical theories and practices will be examined for their educational significance, meaningful integration of content areas, respect for students’ cultures (past and present), and contribution to social justice issues. Offered within the Urban Teaching Apprenticeship Program.
Two terms. student must enter first term.
Activity: Lecture
0.5 Course Units

EDUC 524 Philosophical Aspects of Education Policy
This course, which is unofficially titled 'Justice goes to School' explores the philosophical or normative foundations of educational policy decisions. School choice, standards-based reform, civic education, children's and parents' rights, school finance reform - how do different arguments for these policies view the role of schools in society? What are their concept of the person, and their view of the educated person? We will consider arguments for and against a variety of contemporary educational policies. Students are encouraged, if they are interested, to bring to class educational policy decision that perplex or intrigue them.
Taught by: Ben-Porath
One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 525 Fieldwork in Language in Education
Supervised fieldwork for individuals preparing to work with reading specialist/teachers in school settings.
Taught by: Waff
One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 526 Technology for Educators
The aim of this course is to provide educators with hands-on experience with a range of technologies. During the course we will explore and learn how to handle web-based, free technologies that can be used by educators to design educational activities appropriate for their students.
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

EDUC 527 Approaches to Teaching English and Other Modern Languages
This course provides students with an introduction to theory and practice in second and foreign language teaching. Students will (a) develop an understanding of the history of language teaching practice and how such a perspective informs current day approaches, (b) explore the relationship between the context in which the language is learned and taught and classroom practice, and (c) develop an awareness of teaching principles central to a personal pedagogical approach and teaching philosophy. Students should have a field site where they can observe, participate, and collect classroom data.
Taught by: Box/Wagner, S
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 528 TESOL Practice Teaching
Fieldwork course for TESOL students. This course focuses on reflective teaching practice, providing a space for students to combine theory and practice as they apply the theoretical constructs of TESOL coursework to their own language teaching. Students will become accurate and systematic observers of and thinkers about their own teaching methodology, in order to continue to develop into increasingly effective language teachers. The theme of a student-centered language classroom will be explored through scholarly literature, pedagogical techniques, and students’ own classroom teaching. To participate in this course, a student must be teaching a language class for the majority of the semester. Prerequisite: Permission needed from the department.
Taught by: Pomerantz/Box
Course usually offered in fall term
Prerequisite: EDUC 527 AND EDUC 537
Activity: Lecture
1.0 Course Unit
EDUC 529 Systems Thinking for International Development and Educational Change
This course explores what it means to take a ‘systems approach’ to understanding international development, particularly as it relates to the design and implementation of projects supported at least in part by international aid and donor institutions. We focus overall on the education sector, but we begin with a broader view of complex adaptive systems and international development, drawing upon case studies about education, water, sanitation, health, savings groups, empowering the disabled, climate change and community radio, and others. There is ample room for the course to appeal to those focused on sectors other than education. We build upon a deep discussion of the complexity of development contexts. Next, we turn to systems thinking and ‘theories of change.’ We ultimately go deepest into educational processes, politics, systems and outcomes. Concerns for governance and accountability have increased attention to ‘systems thinking’ in the design and implementation of public services, including education plans and educational reform; therefore, reformers must grasp the range of meanings of an ‘education system’ as complex, multidimensional processes, interactions, and institutional structures. Students will learn to use systems thinking to approach, define, understand and analyze the biggest challenges to improving social outcomes—so called ‘wicked problems’. We will consider the roles of and relationships between the myriad layers and components of educational systems: (a) national and sub-national governments; (b) schools, classrooms, and curricula; (c) external and internal stakeholders and interest groups (e.g., citizens, bureaucrats, elected officials, teachers, unions, textbook publishers, the private sector, community organizations, parents, students, etc); and (d) international development institutions and other global actors. We will discuss a wide range of cases in developed countries (e.g., The United States, France, Finland, Australia, Spain, South Korea); transitional economies (e.g. Russia, Czech Republic, etc); and developing countries (e.g. Brazil, Mexico, Chile, Cuba, Romania, Egypt, India, Indonesia, Cambodia, Nigeria, Rwanda, South Africa, the Republic of Georgia, etc). We will pay particular attention to (and assess critically) some of the most common applications of education-related system approaches by influential global actors: The World Bank (SABER), UNESCO (GEQAF), OECD, DFID, USAID, and The Global Partnership for Education. Students will be introduced to both qualitative and quantitative approaches for analyzing systems, and discuss the benefits and limitations of each; however, the focus of the course is on the more qualitative approaches to systems thinking. The course will be taught in a stylized seminar format with some lecture, some group work, and discussion and student participation. Significant portions of class time will serve to workshop out developing conceptualizations of systems thinking. We will draw upon diverse fields and disciplines: comparative education, international development, public health, engineering, design, planning, and the social sciences. Students will have the opportunity to develop a project and apply an approach to a system of their choosing. The course will consist of a combination of lecture, discussion, and maker lab. Students will explore a variety of techniques including basic circuitry, coding, architecture, and design while seeking a balance between free exploration and discovery within parameters. Prerequisite: Admission to the UTAP program or permission of instructor required. Taught by: Allison Frick
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDUC 530 Cultivating Creativity in the K-8 Classroom
This course is an introduction to maker education and project-based learning, and will prepare K-8 teachers to enact classroom practices that support students in authentic, collaborative, iterative learning through the use of a variety of creative and technological mediums. Classes will consist of a combination of lecture, discussion, and maker lab. This course is about learning to create and teach others how to make. Students will explore a variety of techniques including basic circuitry, coding, architecture, and design while seeking a balance between free exploration and discovery within parameters. Prerequisite: Admission to the UTAP program or permission of instructor required. Taught by: Allison Frick
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDUC 531 Mathematics in the Elementary and Middle Schools
Learning to teach mathematics in ways that foster mathematical understanding and enjoyment for every student requires that teachers draw on different kinds of knowledge, skills, and dispositions. In addition to developing an understanding of central mathematical ideas, learning to teach math involves learning about learners, the understandings and conceptions they hold, and the processes through which they learn. It also involves developing skill in constructing tasks that engage students in mathematical exploration, creating an environment that facilitates reasoning, and finding ways to analyze and learn from one’s own teaching. Offered within the Urban Teaching Apprenticeship Program.
Taught by: Remillard/Ebby
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 532 Pursuing Institutions of Excellence: Strategies, Choices, Pitfalls & Possibilities
The aim of this course is to help students understand how universities pursue excellence by examining national and institutional strategies to become high performing institutions. The seminar series will look at the basic concepts of organizational culture and the merits and flaws of different conceptions of excellence.
Taught by: Ruby/Hartley
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 533 Forming and Reforming the Elementary Reading/Writing/Literacy Curriculum
Students explore the theory and practice of constructivist approaches to teaching reading/writing/talking across the curriculum. They read widely and discuss issues that are informed by theory and research in many fields of inquiry including children’s and adolescent literature, educational linguistics, cognitive psychology, curriculum, and anthropology and assessment. They write and share integrative journals; develop, teach and reflect upon holistic lessons; and complete an individual or group project of their own choosing.
Taught by: Campano
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 534 Diversity and Social Justice in American K-12 Education
In this course, students will develop a critical understanding of how various markers of social difference mediate the privileging of some and the marginalization of others within K-12 schools. Additionally, by considering their potential to act as agents of change, students will devise and share strategies for anti-oppressive educational practices. Taught by: Brockenbrough
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 535 Literature for Children and Adolescents
Theoretical and practical aspects of the study of literature for children and adolescents. Students develop both wide familiarity with children’s/adolescents’ books and understanding of how literature can be used in elementary/middle/secondary school curricula. Students complete course projects that focus on literature in specific classroom, research, home, or professional contexts. Taught by: Thomas
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 536 Indigenous Education and Language Revitalization
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 537 Educational Linguistics
For students with little or no linguistics background. An introduction to the basic levels of language (phonetics and phonology, morphology and semantics, syntax, pragmatics) with special emphasis on the relevance of linguistic concepts to education. Other topics may include bi/multilingualism, language variation, and language acquisition. Taught by: Butler/Moore/Matsumoto
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 538 Stereotype Threat, Impostor Phenomenon, and African Americans
This course critically examines stereotype threat and impostor phenomenon as they relate to African Americans. Both stereotype threat and impostor phenomenon negatively affect African Americans. The apprehension experienced by African Americans that they might behave in a manner that confirms an existing negative cultural stereotype is stereotype threat, which usually results in reduced effectiveness in African Americans’ performance. Stereotype threat is linked with impostor phenomenon. Impostor phenomenon is an internal experience of intellectual phoniness in authentically talented individuals, in which they doubt their accomplishments and fear being exposed as a fraud. While stereotype threat relies on broad generalization, the impostor phenomenon describes feelings of personal inadequacy, especially in high-achieving African Americans. This course will explore the evolving meanings connected to both stereotype threat and impostor phenomenon in relation to African Americans. Taught by: Abiola
Course usually offered in fall term
Also Offered As: AFRC 602
Activity: Seminar
1.0 Course Unit

EDUC 539 Teaching Performance Art for Cross-Cultural Education
This class examines issues related to cultural communities and the arts, specifically performance, writing and storytelling as an educational tool for generating cross cultural and intercultural understanding, dialogue and exchange. Assignments will focus on, cross-cultural research and dialogue, and skill building in teaching, writing and performance. Students will also develop an understanding of how performance can be used to enhance classroom activities in elementary/middle/secondary/post secondary classroom curricula. Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 540 Differentiating Instruction for Diverse Learners/Special Education & Bilingual
This course engages student teachers working with diverse learners, presenting factual information about specific areas of need situated within a socio-cultural framework. It addresses content related to both special education and English language learners in four areas: (1) Introduction to Special Education; (2) Learning Categories; (3) Issues in Special Education; and (4) Working with English Language Learners. Offered within the Urban Teaching Apprenticeship Program. Prerequisite: Permission needed from department Taught by: Watts, Bialka, Kinney Grossman
Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit
EDUC 541 Access & Choice in American Higher Education
College enrollment is a complex process that is shaped by the economic, social, and policy context, higher education institutions, K-12 schools, families, and students. The course will examine the theoretical perspectives that are used to understand college access and choice processes. The implications of various policies and practices for college access and choice will also be explored, with particular attention to the effects of these policies for underrepresented groups. As an Academically Based Community Service (ABCS) course, this course is also designed to generate tangible recommendations that program administrators and institutional leaders may be used to improve college access and choice.
Taught by: Perna
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 542 TESOL Classroom Fundamentals
This course focuses on the fundamental teaching skills that you need as a language educator. It is designed to help you develop effective ways of doing as much as knowing and thinking about language teaching and learning within a reflective practice framework.
Taught by: Box/Kozlova/Pomerantz/Wagner, S
Course usually offered in spring term
Prerequisite: EDUC 527 AND EDUC 537
Activity: Lecture
1.0 Course Unit

EDUC 543 Understanding Minority Serving Institutions
Students taking this course will learn about the historical context of HBCUs in educating African Americans, and how their role has changed since the mid-1800’s. Specific contemporary challenges and successes related to HBCUs will be covered and relate to control, and enrollment, accreditation, funding, degree completion, and outreach/retention programming. Students will become familiar with MBCUs in their own right, as well as in comparison to other postsecondary institutions.
Taught by: Gasman
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 544 School and Society in America
This course reviews the major empirical and theoretical research from the social history, and social theory on the development, organization and governance of American education, and the relationship between schooling and the principal institutions and social structures of American society.
Taught by: Puckett/Staff
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

EDUC 546 Sociolinguistics in Education
The educational consequences of linguistic and cultural diversity. A broad overview of sociolinguistics, introducing both early foundational work and current issues in the field. Topics include language contact and language prestige, multilingualism and language ecology, regional and stylistic variation, verbal repertoire and communicative competence, language and social identity, codeswitching and diglossia, language socialization and language ideology, as they relate to educational policy and practice in the United States and around the world.
Taught by: Flores/Moore
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 547 Anthropology and Education
An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.
Taught by: Hall or Posecznick
Course offered summer, fall and spring terms
Also Offered As: ANTH 547, URBS 547
Activity: Lecture
1.0 Course Unit

EDUC 548 American Education Reform: History, Policy, Practice
An examination of major trends, central tendencies, and turning points in American education reform, giving particular attention to contemporary developments such as accountability laws and school choice. This historical development of the federal role in American schooling is also considered, as is the history of school desegregation. What is the purpose of ‘school’? How have schools evolved across time, and how have Americans tried to change them? And what can we learn from this long history of reform?
Taught by: Zimmerman/Puckett
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 549 Language Teaching and Literacy Development in Multilingual Community Contexts
Immigrant youth often face the dual challenge of learning a new language and learning academic content in that language simultaneously. Many educators, however, struggle to identify and implement instructional practices that acknowledge learners’ strengths, while also attending to their communicative, academic, and social needs. This course brings insights and findings from sociolinguistics to bear on research on language and literacy teaching to develop a situated, interactionally mindful approach for supporting emergent bi/multilinguals. An intensive service-learning project offers course participants the opportunity to 'learn by doing' by working closely with children and adolescents in one multilingual, community-based after-school setting. Although the course takes the case of English learners attending U.S. elementary and secondary schools as its starting point, discussion of the implications and applications to other national/educational contexts is encouraged. The goal of this course is to prepare participants to provide language and literacy instruction in contextually sensitive, theoretically informed, and interactionally attuned ways.
Taught by: Anne Pomerantz
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
EDUC 550 Educational and Social Entrepreneurship
This course provides an understanding of the nature of entrepreneurship related to public/private/for profit and non-profit educational and social organizations. The course focuses on issues of management, strategies and financing of early stage entrepreneurial ventures, and on entrepreneurship in established educational organizations.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 551 Outside the School Box: History, Policy and Alternatives
This course explores historical and contemporary challenges involved in the policy and practice of non-school education agencies and factors that work in service to local school/community settings. Students will explore several historical case studies, conceptual frames, and current policy challenges, culminating in a community-based research project.
Taught by: Johanek
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 552 Video Games and Virtual Worlds as Sites for Learning
Drawing on work from the education, psychology, communication, and the growing field of games studies, we will examine the history of video games, research on game play and players, review how researchers from different disciplines have conceptualized and investigated learning in playing and designing games, and what we know about possible outcomes. We will also address issues of gender, race and violence that have been prominent in discussions about the impact of games.
Taught by: Kafai
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 553 Foundations of Education for Diverse Learners
An introduction to Special Education including the history, the legal regulation of Special Education, and an examination of critical issues.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 554 Managing Collaborative Learning Environments in Urban Contexts
This course marks the beginnings of your year-long inquiry as preservice teachers, and hopefully your career-long inquiry as committed educational professionals, into the challenges of and opportunities for teaching and learning in urban settings. The theories and practices explored in this course are offered as foundations for instructional approaches that are intentional, reflective, inquiry-based, and learner-centered. As we investigate multiple dimensions of teaching and learning (curriculum design, learning theories, instructional techniques, etc.), you will have opportunities to both clarify and challenge the assumptions, beliefs, hopes, fears, and goals that you bring to your preparation to teach in urban secondary schools. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDUC 555 Advanced Field Seminar (Elementary & Secondary Education)
This course focuses on praxis—the mutually supporting roles of theory and practice that bring rigor and relevance to the work of educational professionals. This course is designed to give student teachers opportunities to develop pedagogical orientations, to learn from 'problems of practice' at placement sites, and to enrich student teachers' theoretical and practical knowledge. All of these experiences will inform the master's portfolio and will prepare teachers to continue to see themselves and their practice as continuing sites for research. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 556 Higher Education Finance
Designed for non-financial managers, this course provides students with an introduction to basic concepts related to the finance of higher education. It examines the forces that influence the financing of higher education at both the state and federal levels. It addresses both the macro-economic and micro-economic issues related to higher education finance. In addition, students will be introduced to issues related to institutional finance.
Taught by: Finney
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 557 Developmental Theories: Applications with Adolescents
Focuses on theories of adolescent development and the nature of transactions among adolescents, peers, teachers, specialists, and significant others. Also covers methods of intervening to promote psychological growth.
Taught by: Nakkula
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 558 Developmental Theories: Applications with Young Adults
This course is designed as a collaborative inquiry toward constructing and elaborating upon theories of young adult development and interactions with young adults as counselors, teachers, family members, and higher education administrators. Using a seminar or working group format, participants explore the relationships among developmental theory, sociocultural contexts of young adults, practice (e.g., interventions, relationships), and research. Using literature from empirical and popular, mainstream sources, participants will engage in learning of how young adults navigate the transition from adolescence to adulthood. Specific topics to be addressed include, 'the quarterlife crisis,' financial needs of young adults, relationships, family, and career exploration and crystallization.
Course not offered every year
Activity: Lecture
1.0 Course Unit
EDUC 559 Sociology of Education
This course provides an overview of key theoretical perspectives and topics in the sociology of education, including expansion of formal educational systems; the extent to which educational systems contribute to or inhibit social mobility; inequality of educational inputs and outcomes by race, social class, and gender; and the social organization of educational institutions, including sources of authority, community, and alienation. The course includes both K-12 and higher education topics.
Taught by: Ingersoll
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 560 Human Development
Provides an introduction to physical, social, cognitive, emotional and linguistic development from infancy to adulthood. Major theories related to human development will be discussed along with methods of intervention for individuals in various life stages.
Taught by: Fegley/Frye
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 561 Adolescent Development
An interdisciplinary view will be used to frame biological, psychological, and social development among adolescents. Special emphasis will be placed on how contextual factors influence developmental outcomes. Theories of adolescent development and methods of intervention will also be discussed.
Taught by: Fegley
Activity: Lecture
1.0 Course Unit

EDUC 562 Personality & Social Development
The effects of social processes on human development in the interlocking contexts of parents, family, peers, school, communities and culture are considered during the major developmental periods of infancy, childhood, adolescence and adulthood. The course examines what is unique about social developments, how social relationships can be defined, and what are the social precursors and consequences of specific developmental changes.
Taught by: Chen
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 563 TESOL Seminar
A weekly seminar that seeks to consolidate, broaden, and deepen knowledge of the main themes, trends, issues, and practices in the field of TESOL. Students will demonstrate their ability to observe, analyze, and reflect upon their teaching as they make connections between theory and practice, all critical skills for ongoing professional development which relate to the students’ final project, a reflective-analytical or action research paper. The project is based on a thirty-hour teaching internship completed during the semester in which the students are enrolled in EDUC 563. The project is individually designed and subject to the instructor’s approval. All students in the M.S.Ed./TESOL and Language & Literacy must submit a proposal for the internship in the semester before they take the Seminar. Prerequisite: Permission needed from the department.
Taught by: Wagner,S/Box/Kozlova
One-term course offered either term
Prerequisite: EDUC 528
Activity: Seminar
1.0 Course Unit

EDUC 564 Ethics & Schools
This course explores the ethical elements of the work of schooling by examining ethical dilemmas faced by teachers, administrators, and policy makers. This course also explores how ethics should be taught in schools (and if it should be taught at all). The course raises and engages with the following questions: How can educators approach ethical dilemmas in their everyday work? How might an educator respond when she believes school-based policies and procedures are not in a student’s best interest? How might an educator balance responses to particular events with system’s level transformation? Should policy makers pander to upper-middle class parents to attract them to urban districts? How can individual teachers and entire schools teach ethics?
Taught by: BEN-PORATH,S
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 565 Introduction to Teaching & Classroom Routines
This course is designed to support summer fieldwork in libraries, and serves as a bridge between fieldwork and course and fieldwork that begins in the fall. The course begins with a set of experiences in local communities which, along with courses, helps apprentices learn about neighborhoods and communities in which schools are located. This course provides apprentices with approaches to establishing classroom/group norms and practices allowing teachers to develop relationships with children. Apprentices will learn to establish routines and activities to be used in summer and fall fieldwork, as well as the professional cycle of planning, enacting, observing, and reflecting in a professional learning community. This course will also contribute to apprentices’ understanding of literacy and math learning in the K-8 classroom.
Prerequisite: Admission to the UTAP program or permission of the instructor.
Taught by: Janine Remillard
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
EDUC 566 Cross Cultural Awareness
This course provides students experiential and cognitive awareness through affective exercises and readings. It explores issues of living in a diverse society through a variety of educational strategies including workshops, small group process, guest lectures, etc. It represents the seminar portion of P.A.C.E. (Programs for Awareness in Cultural Education): An 'Educating the Peer Educator' Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 567 Internship: ICC
All students in the MS/ICC program must complete a supervised internship of at least 160 hours prior to enrolling in this course. The supervised internship is individually designed and is subject to approval; students must submit a Prospectus describing the internship in the Fall or Spring semester prior to beginning the internship. This course offers guidance as students complete the portfolio or reflective paper, which is based on the experience and data collected during the internship. Through this course, students in the M.S.Ed./ICC program will discuss ways to conceptualize the internship experience, situate it meaningfully within the field of intercultural communication, locate and analyze relevant research literature, and prepare the portfolio or reflective paper, with an overall goal of developing the ability to communicate clearly and effectively for an academic and/or professional audience. Prerequisite: Eight or more courses toward M. S. Ed. degree in Intercultural Communication. Permission needed from department.
Taught by: Pomerantz
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 568 Cognitive Development
This course examines the cognitive development of the child from infancy to adolescence with an emphasis on cultural context. Topics include: origins of thinking, Piaget, Vygotsky, intelligence, development of learning and memory, language development, and moral development.
Taught by: Frye
Course usually offered in fall term
Prerequisite: EDUC 560
Activity: Lecture
1.0 Course Unit

EDUC 569 Administration of Student Life
This course covers a variety of issues in the management of student services on campus. After examining the historical context of student affairs and the theoretical frameworks of student development, students explore ways to most effectively administer the numerous activities that comprise student affairs programs.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 570 Education and the American Metropolis
Education and the American City centers on major trends and factors that have shaped cities and their preK-16 school systems since the Second World War, including racial discrimination, migration and immigration, suburbanization, deindustrialization, U.S. housing policy, social welfare policy, and urban renewal.
Taught by: Puckett
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 571 Collaboration & Conflict
Collaboration & Conflict is an experiential and interdisciplinary exploration of how people work together to solve complex problems. The course explores the deeply intrapersonal and interpersonal demands of exercising leadership within partnerships, teams, and complex organizations. The course seeks to help students understand why effective leadership is a cognitively demanding task, requiring both adept emotional intelligence as well as expert technical skill, and why most of us must develop as individuals in order to develop as leaders. The course draws on relevant research, theoretical frameworks, and best practices from psychology, sociology, business, law, medicine, negotiation, economics, education, and more.
Taught by: Herrmann
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 572 Language and Gender
This course traces the development of research on language and gender, introducing key theoretical issues and methodological concerns in this area. Participants will consider how gender ideologies shape and are shaped by language use, with particular attention to how research findings can be applied to educational and other professional settings.
Taught by: Pomerantz
Course not offered every year
Also Offered As: GSWS 572
Activity: Lecture
1.0 Course Unit

EDUC 573 Higher Education Policy : What Can We Learn from Other Countries?
This course examines the proposition that policy makers, educational leaders and practitioners can learn from what has worked and failed in higher education policy and practice in other nations.
Taught by: Ruby/Eynon
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 574 Race/Ethnicity in Human Development
This interdisciplinary course will employ a critical perspective on minority youth development, analyze the existing literature, and propose alternative explanations for observed phenomena. It will consider pertinent issues and theories of middle childhood, adolescent and young adult development.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 575 Topics of Psychology in Education: Qualitative Studies of Developmental Interventions
This course is designed to introduce students to innovative approaches to the psychology of education, especially with regard to populations from at-risk contexts, sociocultural dimensions of education, and social-emotional learning.
Course not offered every year
Also Offered As: AFRC 575
Activity: Seminar
1.0 Course Unit
EDUC 576 The Social & Political Philosophy of Education
Is the purpose of education to allow individuals to better themselves by pursuing personal tastes and interests, or should education be primarily aimed at creating good citizens or good members of a group? Is there a way of reconciling these two aims? Assuming that adult relations with children are inherently paternalistic, is it possible for children to be educated for future autonomy to pursue major life goals free from such paternalistic control; and if so, how? How much, if any control over education can be allocated to the state, even when this conflicts with the educational goals parents have for their children? Such questions are especially relevant in multicultural or pluralistic societies in which some groups within a liberal state are non-liberal. Should a liberal democratic state intervene in education to ensure the development of children's personal autonomy, or must toleration of non-liberal groups prevail even at the expense of children's autonomy?
Taught by: Detlefsen, K.
Course not offered every year
Also Offered As: GSWS 249, PHIL 249
Activity: Lecture
1.0 Course Unit

EDUC 577 Selected Topics in Educational Linguistics
The focus for each semester will vary to reflect those issues most relevant to current concerns in educational linguistics.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 578 Teaching Reading and Study in Colleges and Universities
This course is designed for both pre-service and experienced instructors and administrators who are interested in teaching and/or researching the concept of academic literacies and the array of academic skills in postsecondary settings, and/or directing programs in reading, writing and study strategies at the postsecondary level. The course presents theoretical frameworks relevant to the teaching of study strategies, theories of cognitive development, and practical instructional methods. Emphasis is placed on the process and content of such instruction, materials and methods for teaching, and ways to organize postsecondary literacy programs.
Taught by: Cohen, M
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 579 Intercultural Communication and Miscommunication
An introduction to basic issues in intercultural communication, reviewing various perspectives on the nature of culture, communication, ‘miscommunication’ and inter-cultural relations. The course criticizes two commonly held assumptions: 1) that ‘cultures’ are unitary and unchanging and 2) that inter-cultural contact and communication is inherently more troublesome then intra-cultural communication. The course considers ways in which intercultural communication has important consequences in education, medicine, social services, business settings, and international contact situations.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 580 Developmental Theories & Applications with Children
The purpose of this course is to provide students with an opportunity to consider mandates, models, and methods related to enhancing the learning and development of preschool and early elementary school children. This course emphasizes the application of developmental psychology and multicultural perspectives to the design of effective classroom-based strategies. Students will consider a ‘whole-child’ approach to understanding children’s classroom behavior in context. Major assignments will involve gathering and synthesizing information about children in routine classroom situations. This information will be used to better understand children’s needs and strengths and how they are manifested in transaction with classroom contexts. Students will focus on one or more students to conduct a comprehensive child study of the child in context. This contact must include opportunities to observe children in a natural setting and interact with them on a regular basis through out the semester. The placement needs to be approved by the professor. If students do not have a regular classroom contact, one will be arranged.
Taught by: Fantuzzo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 581 Advanced Psychology of Women
The course is intended for those who already have a foundation in the study of the psychology of women and want to expand their understanding of the provision of psychological services to include a contextual, feminist, and relational perspective. Theoretical and applied practices regarding women's mental health, issues of diversity, sexuality and relationships for women will be addressed. Prerequisite: Introduction to Psychology and an undergraduate course in the Psychology of Women or approval by professor.
Also Offered As: GSWS 581
Activity: Lecture
1.0 Course Unit

EDUC 582 Theories and Pedagogies of Teaching Writing
This seminar examines various theories and pedagogies of teaching writing in multilingual, multimodal contexts. It explores the historical and ideological underpinnings of contemporary theories of writing and attends to how writing, and the teaching of writing, is shifting in a mobile, networked, and global age.
Taught by: Stornaiuolo
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 583 Content-Based Instruction
This course offers students opportunities to investigate, observe, design practice, and critically evaluate the integration of content and language teaching - Content Based Instruction. The settings investigated include thematic English Language teaching; co-teaching and peer coaching by ESL and content teacher teams; and sheltered content instruction, among others. Standards, integrations of tasks, and special language requirements in various content areas are reviewed.
Taught by: Box
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
EDUC 584 Basic Counseling Skills
This course will teach basic counseling skills to students not seeking a license in professional counseling as a way to help them connect with and work well with others. It will predominantly be oriented towards skill building. We will review/discuss a selection of basic counseling skills and use in-class demonstrations to practice these skills. This course is required for the Counseling and Human Development Skills Concentration.
Taught by: Schultz, Kyle
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 585 Advanced Group and Family Counseling
This course focuses on the basics of systems intervention with a specific focus on families and groups. The purpose is to develop more advanced knowledge of practical therapeutic problem-solving skills at the graduate student level using ecological, systemic, and cultural perspectives. Students will be exposed to advanced group therapy strategies with children, youth, and adults, with family interventions across various mental health diagnostic populations, and how to intervene within groups and families in which cultural differences and styles are key themes. Prerequisite: Students must be enrolled in the M. Phil. Ed. in Professional Counseling Program. Students will also be challenged to develop a preliminary rationale for a systemic theory of behavior change. Given the diversity of clients that counselors see professionally, some advanced and demonstrated knowledge of how cultural differences will be addressed in the counseling session and in the relationships of larger societal institutions will be expected. This course will satisfy the Group work II requirement of the MPE program in Professional Counseling and Psychology. The course also fits within the APHD theme of Applied Psychology: Intervention and Certification. Prerequisite: Students must be enrolled in the M. Phil. Ed. in Professional Counseling Program.
Taught by: Lappin
Activity: Lecture
1.0 Course Unit

EDUC 586 Ethnographic Filmmaking
This ethnographic methodology course considers filmmaking/videography as a tool in conducting ethnographic research as well as a medium for presenting academic research to scholarly and non-scholarly audiences. The course engages the methodological and theoretical implications of capturing data and crafting social scientific accounts/narratives in images and sounds. Students are required to put theory into practice by conducting ethnographic research and producing an ethnographic film as their final project. In service to that goal, students will read about ethnography (as a social scientific method and representational genre), learn and utilize ethnographic methods in fieldwork, watch non-fiction films (to be analyzed for formal properties and implicit assumptions about culture/sociality), and acquire rigorous training in the skills and craft of digital video production. This is an ABCS course, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. Due to the time needed for ethnographic film production, this is a year-long course, which will meet periodically in both the fall and spring semesters.
Taught by: Hall, Kathleen & Das, Amit
Two terms. Student must enter first term.
Also Offered As: ANTH 583
Activity: Seminar
1.0 Course Unit

EDUC 587 Human Sexuality
All persons have moments that elicit reflection on issues related to myriad aspects of sexuality. When working with people in clinical or school settings, these issues are ubiquitous. This course will provide a broad understanding of sexuality and specific ways to address sexuality problems.
Taught by: Schultz, Kyle
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 588 Digital Literacies in a Networked World
This graduate seminar is designed to explore how literacy and learning are changing as people participate with digital technologies across intersecting local and global networks. Participants will collaboratively investigate how young people's digital literacies- their culturally and socially situated meaning making practices mediated by digital tools-emerge in relation to constantly shifting technologies of communication and are constructed, reconstructed, negotiated, and embodied in multiple semiotic systems across everyday contexts. This course highlights how digital literacies are situated, and how these socio-cultural understandings illuminate issues of power and privilege.
Taught by: Stornaiuolo, A
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 589 Teaching and Learning in the Global Era
We are living in an era in which economic, social, cultural, environmental and technological transformations are connecting people across the globe in new and unprecedented ways. Given that our world is increasingly interconnected, it is no longer adequate to prepare students to succeed simply as citizens of a particular nation. Students also must acquire the knowledge, skills, dispositions, understanding and aptitude to engage with people from different regions in the world who may hold varying or conflicting perspectives, forms of knowledge, and ways of knowing that are culturally and historically specific and informed. This course will focus on issues related to teaching and learning in the 21st century, and to preparing young people for global citizenship. We will consider what it means to be a global citizen as well as the various approaches to educating for global citizenship that have emerged in the U.S. and around the world. We will also explore instructional and curricular innovations that aim to enrich how young people learn about world regions and cultural traditions, engage with global issues and come to respect contrasting perspectives.
Taught by: Hall
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 590 Gender & Education
This course is designed to provide an overview of the major discussions and debates in the area of gender and education. While the intersections of gender, race, class, ethnicity, and sexuality are emphasized throughout this course, the focus of the research we will read is on gender and education in English-speaking countries. We will examine theoretical frameworks of gender and use these to read popular literature, examine teaching practices and teachers with respect to gender, using case studies to investigate the topics.
Course not offered every year
Activity: Lecture
1.0 Course Unit
EDUC 591 Applied Research Methods to Inform Policy and Practice
The class is designed to provide students with the knowledge and tools to define relevant research questions to guide program design and operations, as well as to guide policy development; to map questions to appropriate methods of research; to judge the quality of research evidence; and to design strong analysis and evaluation strategies for various purposes. The primary, but not exclusive, focus of the course is on education policy concerns. Prerequisite: Permission needed from department.
Taught by: Maynard
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 592 Professional Development in Higher Education
To prepare for a career in higher education, students are engaged in a 20-hour a week assistantship in the field. This course complements and enhances the graduate assistantship. Emphasizing practical application of theory and skill development, the course does the following: provides students with tools to embark on a successful job search; offers networking opportunities with administrators in higher education; and introduces students to relevant and timely literature and resources in higher education professional development.
Taught by: Aikins
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 593 Experiential Learning Design for Intercultural Communication
Provides new and experienced educators the opportunity to learn and practice training design and facilitation using the principles of experiential and adult learning. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: EDUC 676
Activity: Lecture
1.0 Course Unit

EDUC 594 Diversity in Higher Education
This course explores issues of diversity as they pertain to higher education, including race, ethnicity, gender, class, religion, sexual orientation, ideology, etc. Rather than focusing on specific populations of people, the course will tackle issues of diversity within the context of concrete higher education functions and problems.
Taught by: Tiao/Staff
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 595 Politics and Education
How is education a form of political action? In this course we look at the governance of schools, the trust in them and their relations to socioeconomic conditions in society, among other topics, using research in education, political science, and political theory.
Taught by: BEN-PORATH
Course usually offered in fall term
Also Offered As: PSCI 545
Activity: Seminar
1.0 Course Unit

EDUC 596 International Early Childhood Policies and Programs
This course focuses on early childhood development research, policies, and practices in low and middle-income countries. The first part of the course reviews the evidence for investing in young children from economic, health, and education perspectives. The second part of the course discusses current issues related to designing, implementing, and evaluating quality, contextually-appropriate early childhood interventions.
Taught by: Neuman
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 597 Policy Planning in International Educational Development: Theory and Practice
This course focuses on education policy in low and middle-income countries. The first part examines global policy frameworks and international institutions/actors that shape education reform efforts. The second part covers the contexts, processes, and tools for national education policy planning. The third part analyzes a series of current cross-national education policy issues.
Taught by: Neuman
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 598 Interfaith Dialogue in Action
This ABCS course explores religious pluralism and interfaith dialogue and action on college campuses. It brings together students with diverse faith commitments (including atheism) to engage with and learn from one another in academic study, dialogue, and service.
Taught by: Hall/Kocher
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
EDUC 599 History of American Education
This course will examine the growth and development of American schools, from the birth of the republic to the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of ‘America’ itself? In an irreducibly diverse society, the answers were never simple. Americans have always defined their nation in a myriad of contrasting and often contradictory ways. So they have also clashed vehemently over their schools, which remain our central public vehicle for deliberating and disseminating the values that we wish to transmit to our young. Our course will pay close attention to these education-related debates, especially in the realms of race, class, and religion. When immigrants came here from other shores, would they have to relinquish their old cultures and languages? When African-Americans won their freedom from bondage, what status would they assume? And as different religious denominations fanned out across the country, how would they balance the uncompromising demands of faith with the pluralistic imperatives of democracy? All of these questions came into relief at school, where the answers changed dramatically over time. Early American teachers blithely assumed that newcomers would abandon their old-world habits and tongues; today, ‘multicultural education’ seeks to preserve or even to celebrate these distinctive patterns. Post-emancipation white philanthropists designed vocational curricula for freed African-Americans, imagining blacks as loyal serfs; but blacks themselves demanded a more academic education, which would set them on the road to equality. Protestants and Catholics both used the public schools to teach their faith systems until the early 1960s, when the courts barred them from doing so; but religious controversies continue to hound the schools, especially on matters like evolution and sex education. How should our public schools address such dilemmas? How can the schools provide a ‘common’ education, as Horace Mann called it, molding us into an integrated whole while still respecting our inevitable differences?
Taught by: Zimmerman
Course usually offered in spring term
Also Offered As: HIST 463
Activity: Seminar
1.0 Course Unit

EDUC 600 Curriculum Development and Enactment
The purpose of this course is to advance students’ understanding of curriculum as a phenomenon and artifact of educational practice. Students will explore curriculum as a social and cultural phenomenon, be introduced to an approach to developing curriculum, and examine factors that influence how curriculum is enacted.
Taught by: Remillard
One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 601 Economic Aspects of Educational Policy
This course has two main goals. One is to teach students to apply economic principals to analyze a wide range of educational policy issues. The other is to provide students with a foundation in contemporary education policy issues. The course is designed to address analytic issues relevant to a wide range of educational professionals, including managers, policy makers, and evaluators. The course will be divided into five units: (1) principles of economic analysis in the context of education policy; (2) the economics of early care and education; (3) cost-effectiveness analysis; (4) human capital investment; and (5) education finance.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 602 Youth Cultural Formations
This course explores anthropological perspectives on peer-based youth cultures. It explores how educational institutions, media (fashion, music, magazines), and states shape youth cultures in cross-cultural contexts through social processes such as capitalism, nationalism, and increasing globalization. The course emphasizes ethnographies and histories which explore the relationship of these wider social processes to the lived realities of young people, situated in class, gender, national and race-specific contexts.
Taught by: Strong
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 603 Wellness and Addictions Counseling
This course will provide an overview of addictions and addiction counseling from research, theory, and applied perspectives. It will also explore contemporary conceptions of ‘wellness’ and wellness-promotion strategies, particularly for people struggling with addictions. Applied skills for addressing wellness and addiction will be framed within current evidence-based research. Prerequisites: Students must be enrolled in the M. Phil. ED. in Professional Counseling Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 604 Ethics and Leadership in Higher Education
This course looks critically at the various theories of leadership with a special emphasis on the ethical dimensions of leadership. Initial classes are devoted to common ethical frameworks from Plato and moving through Kant, Hume and into the present practical application of ethics to leadership. Leadership theory and practice reveal that there is no one approach that is best or that works in all situations. Aspiring leaders must have a variety of lenses through which they can analyze and understand the elements involved in ethical leadership. At the end of the course students will be able to apply essential concepts of ethical decision making and leadership - the role of trust and the ability to build trust, the uses of power, the importance of good decision-making, the conflicting priorities that arise from living out your core values in the workplace.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
EDUC 606 Literacy Research, Theory, and Practice
This graduate seminar is a capstone course in the Reading, Writing, and Literacy master’s program, designed to help students develop understandings about key theoretical underpinnings of literacy research. As a foundational course, the seminar will explore how literacy has been conceptualized over time and across disciplines, examining how literacy has functioned as a touchstone issue in policy and practice as people debate what ‘counts’ as literacy. While we explore these debates, we focus particularly on contemporary literacy theories that understand literacy to be multiple, ideological, and socially situated - practices grounded in specific contexts that are fundamentally linked to broader social, cultural, and political power structures. Inquiry sits at the heart of the course, with students developing an online learning portfolio centered around their individual research, course readings, and prior experiences. Students will reflect on their RWL program of study, write about conceptual territories at the heart of the program, and curate materials from the semester and their program of study to demonstrate their learning and development over time. Students will work with coaches as well as engage in a workshop learning environment, culminating in an online learning portfolio and presentation to RWL faculty.
Taught by: Amy Stornaiuolo
Prerequisite: EDUC 533 AND EDUC 629
Activity: Seminar
1.0 Course Unit

EDUC 607 Faculty and Academic Governance
Introduction to selected issues pertaining to faculty and academic governance, such as: Who governs American colleges and universities? What are the respective roles of the president, the board of trustees, the faculty, and students in institutional decision making? The course will also explore key contemporary governance issues.
Taught by: Hartley/Garland/Eckel
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 608 Organizational Change in Higher Education
Colleges and universities today face tremendous challenges—calls by external constituencies for greater accountability, scarcity of resources, greater competition, and pedagogical innovations. The need for change, and for change agents, in our institutions of higher learning has never been greater. This course examines organizational change both theoretically and practically in college and university settings. Students will be introduced to many of the most current, influential, and promising theories about how change occurs at the departmental, institutional and system level. Using case studies, we will apply these frameworks in order to diagnose and develop constructive strategies for meaningful change.
Taught by: Hartley
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 609 Reading, Writing, and Literacy Research
This graduate seminar is a capstone course in the Reading, Writing, and Literacy master’s program, designed to help students develop understandings about key theoretical underpinnings of literacy research. As a foundational course, the seminar will explore how literacy has been conceptualized over time and across disciplines, examining how literacy has functioned as a touchstone issue in policy and practice as people debate what ‘counts’ as literacy. While we explore these debates, we focus particularly on contemporary literacy theories that understand literacy to be multiple, ideological, and socially situated - practices grounded in specific contexts that are fundamentally linked to broader social, cultural, and political power structures. Inquiry sits at the heart of the course, with students developing an online learning portfolio centered around their individual research, course readings, and prior experiences. Students will reflect on their RWL program of study, write about conceptual territories at the heart of the program, and curate materials from the semester and their program of study to demonstrate their learning and development over time. Students will work with coaches as well as engage in a workshop learning environment, culminating in an online learning portfolio and presentation to RWL faculty.
Taught by: Amy Stornaiuolo
Prerequisite: EDUC 533 AND EDUC 629
Activity: Seminar
1.0 Course Unit

EDUC 610 Cultural Perspectives on Human Development
This course focuses on children's and adolescents’ development from cultural and cross-cultural perspectives. Topics include traditional and recent theories of cultural influence on development, research strategies, socialization values and practices, and socioemotional and cognitive functions such as aggression and conflict, shyness, and academic achievement in cultural context. Issues involving ethnicity and social and cultural changes are also discussed.
Taught by: Chen
Activity: Lecture
1.0 Course Unit

EDUC 611 Educational Assessment of and for Learning
This course introduces the essential theories and practices of cognitively based educational assessment and the focus will be on exploring the implications of recent developments in cognitive psychology and learning theories for educational assessment by reviewing available assessment examples and research assessment prototypes. It includes topics like, what is the purpose of assessment, how can we design fair and valid assessments to elicit student cognition, how technologies can support the measurement of student cognition and learning processes, and assessment and social justice and accessibility issues.
Taught by: Lei Liu
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 612 LGBT Counseling & Development
In the past quarter century, the awareness of the unique issues facing lesbian, gay, bisexual and transgender (LGBT) individuals has expanded and become essential knowledge in our work as educators, providers of psychological services, and other service provision fields. This course provides a contextual and applied understanding the interactional processes facing LGBT individuals.
Course not offered every year
Also Offered As: GSWS 612
Activity: Lecture
1.0 Course Unit

EDUC 613 Group Counseling
Through didactic and experimental learning activities, students will explore various theoretical approaches to groups, learn and apply principles of group dynamics, develop familiarity with ethical, legal and professional standards relative to group leadership, learn member roles and functions in group, examine group counseling in a multicultural context, and relate these issues to the leader’s interpersonal style and behavior. Applications to specific developmental stages and contexts will be explored.
Activity: Lecture
1.0 Course Unit
EDUC 614 Child Development and Social Policy
The purpose of this course is to focus on major US social policies impacting our most vulnerable subpopulations of children living in poverty. The class will explore how developmental science can provide a broad conceptual framework to inform the construction of social policies for children and evaluate their effectiveness. Since much of the social policy issues for children in the US public square are currently hotly debated, the class format will incorporate debate and require students to actively research and defend positions on existing policies. Class size will be set at a level to maximize interaction and involvement.
Taught by: Fantuzzo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 615 Parenting and Children's Educational Development
Theory and research on family influences on achievement development, models of the home-learning environment; parental involvement in schools.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 616 Master's Foundations of Teaching and Learning
The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing, and learning? A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international.
Prerequisite: Permission needed from department.
Taught by: Baker
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 617 Counseling for School to Career Transitions
This psychology course will focus on the developmental and emotional changes that coincide with adolescents’ conceptions of work and work-related activities. As a course in career psychology, students will be exposed to readings from multiple disciplinary perspectives and will be expected to learn how to work with youth as they struggle through decisions on career and moving beyond the safety of childhood and adolescence. In addition, students will learn about the family-youth and school-student relational dynamics and that occur simultaneous to the adolescent’s development of a work ethic.
Taught by: Nakkula
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 618 Leadership in Educational Institutions
In this course class members will simultaneously engage in an academic study of educational leadership focusing on Pre-K-12 schools and school districts, and in a continuing leadership development laboratory experience designed to increase one’s personal efficacy as leader. A basic assumption for the course is that leadership is a central component of schooling; teaching is considered as foremost a leadership activity, whether with five year olds or high school seniors, and successful schools and districts are assumed to have capable leaders. The course will give particular attention to the recent shift in role expectations for school leaders - from competent manager to accountable instructional leader - and what this shift means in relation to the day-to-day work of educational leaders.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 619 College Student Health
College Student Health explores postsecondary student health issues from historical and research perspectives, including stress, sleep, sexual health and safety, alcohol and other drugs, and mental health and wellness, among other topics. This course surveys the roles, responsibilities, and best practices of campus health professionals.
Taught by: Aikins
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 620 Enrollment Management
Enrollment management is an organizational concept of strategies for achieving institutional goals. The course provides an overview of multiple enrollment management models, the evolution and maturation of these models, the related implications of these organizational structures and strategies, and the benefits and drawbacks on institutions and their markets.
Taught by: Kaplan/Staff
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 621 Proseminar in Professional Education
An integrative seminar that will provide an opportunity to reflect, orally and in writing, on the issues of quality, stability, and change in teaching, curriculum and school organization, toward the aim of fundamental reform in educational practice.
Taught by: Quinn
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 623 Big Data, Education, and Society
This class discusses the potential and risks of big data-based learning analytics. We will discuss the uses, applications, and benefits of analytics, the relationship between validity and risk, and potential ways to mitigate and reduce risks. We will discuss these issues in the context of existing and emerging educational systems.
Taught by: Baker
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EDUC 624 Gender in College
Examined in this course are theories and interdisciplinary perspectives pertaining to gender on college and university campuses. Emphasis is placed on the social construction of gender, gendered institutional norms and practices, gender disparities on college campuses, and the unique experiential realities of women, men, and transgender persons in a variety of roles and postsecondary educational contexts.
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 625 Data Processing and Analysis
Use of Statistical Software including Statistical Analysis (SAS) to effectively build a wide variety of datasets for use to address a range of empirical research questions. Evaluate conventional methods for dealing with missing data and apply contemporary methods using SAS.
Taught by: Rovine
Course usually offered in fall term
Prerequisite: EDUC 667
Activity: Lecture
1.0 Course Unit

EDUC 626 Literacy, Discourse, and Interaction
This course draws on varying pedagogical and personal perspectives to explore conceptions of reading comprehension and how it can be taught to children and adolescents. Focus will be given to how certain ways of structuring dialogue about a text profoundly change how readers think about and do reading.
Taught by: Thomas
Activity: Lecture
1.0 Course Unit

EDUC 627 Teaching in the Middle and Secondary Schools
Content-specific sections of this course (math, social studies, science) will examine approaches in planning, implementing and evaluating methods for teaching science, mathematics and social studies in middle and secondary schools. This course is grounded in the belief that teaching and learning require educators to question our teaching purposes and practices through a process of self-reflection, collegial and student-teacher interactions as well as personal and professional growth. Using a variety of learning theories and perspectives as the foundation for interactive teaching strategies, the stories, questions and contradictions of each content area are examined from a variety of perspectives. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 628 Education Finance Policy
This course examines the legal, political and economic issues surrounding how public schools are funded, including equity, productivity and the interaction of finance and school reform. Through readings, discussion and written assignments, students will develop and apply policy analysis skills to the area of education finance.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 629 Teaching English/Language and Literacy in Middle and Secondary Schools
This course is a collaborative inquiry into the dynamic concept of adolescent literacy and its potential as an organizing construct for improving teaching and learning. It provides opportunities to investigate a variety of resources including our own histories as well as a range of print, digital and visual texts and to conduct fieldwork in various middle and secondary school classrooms where youth are being positioned (and positioning themselves) as literacy learners and literacy is being defined, performed, practiced, interrogated, and interpreted, within and beyond the school curricula. By engaging with youth, in various texts and contexts and for a range of purposes, participants will try to make sense of how adolescents negotiate their worlds, in school and out. The approach to literacy is interdisciplinary, drawing from the domains of literature, composition, linguistics, curriculum theory, anthropology and psychology and from theory, research and practice of both university-based and school-based teachers, writers and researchers. The intent is to pose and refine questions about what it means to teach literacy in ways that take seriously what youth bring to school as their own knowledge and passions, cultural and linguistic resources.
Taught by: Stornaiuolo
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 630 Introduction to Mixed-Methods Research
This course introduces students to the theory, history, and practice of mixed methods research. Students will build skills in design and implementation of studies that incorporate both qualitative and quantitative methods. Theoretical framing, research questions, design and selection of methods, sampling, instrumentation and data collection, and analysis are addressed.
Taught by: Gray
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 631 Research Topics
This seminar offers students a collaborative setting in which to explore a topical area, craft a literature review and refine their research questions. The course will be of special interest to doctoral candidates who are drawn to an area of inquiry (e.g., presidential leadership, diversity, access, organizational change) but now wish to elicit from it a discrete ‘researchable’ question. Prerequisite: Permission needed from department.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 633 Selected Topics in Reading/Writing
Examines a topic of current interest to theory, research, and practice in writing.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
EDUC 634 Language Assessment
This course concerns a basic theoretical and practical foundation in language assessment, with particular emphasis on assessments used in second and foreign language education. The course covers various kinds of testing (both formal testing and performance-based assessment), theoretical and technical issues associated with test development, administration, the social influences of testing, and future directions in language assessment.
Taught by: Butler
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 635 Assessing Language and Learning Differences
This course exposes students to a wide variety of assessments used to look closely at growth in reading/writing/literacy. Students critique both formal and informal approaches to assessment as well as complete structured observations of learners within diverse instructional contexts. Emphases include contextual and affective components of reading/language difficulties, innovative assessment procedures, observational strategies and collaborative inquiry. Auditors not permitted.
Taught by: Gadsden/Campano
Course usually offered in spring term
Prerequisite: EDUC 533
Activity: Lecture
1.0 Course Unit

EDUC 636 Young Adult Literature, Media & Culture
This course acquaints students with the ever-expanding body of literature written for young adults, considering the theoretical and pedagogical issues it raises. Readings include many young adult novels; empirical research on adolescent response to literature; and literary theory.
Taught by: Thomas
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 637 Contemporary Issues in Science and Technology Education Research
This course focuses on topics that represent some of the most salient and contemporary issues in science education research today. The syllabus moves through four sections that address: 1) Curriculum and Content (What and Why); 2) Learning Processes (How); 3) Contexts (When and Where); and 4) Teaching and Teacher Education (Who).
Taught by: Yoon
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 638 Principles of Monitoring & Evaluation in International Education Development
This course covers theories, methods, and applications of monitoring and evaluation for educational and social programs, with special emphasis on international education development. Topics include basic statistical concepts, program theory, process and outcome assessment, concepts in survey methods, introduction to causal inference, introductory regression analysis, and an overview of impact assessments and cost-benefit/cost-effectiveness analysis.
Taught by: Thapa
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 639 Design of Learning Environments
This course examines different theoretical frames and strategies related to the study and design of learning environments in school, community and online contexts. Physical, social and cognitive aspects of learning situations are considered as students evaluate current research and applications in a variety of existing educational learning environments.
Taught by: Yoon/Staff
Course usually offered in fall term
Prerequisite: EDUC 616
Activity: Lecture
1.0 Course Unit

EDUC 640 History of American Higher Education
This interactive course focuses on the history of American higher education from the Colonial period through the current day. An emphasis is placed on underrepresented institutions and individuals. Students will have the opportunity to make connections between historical trends and movements and current issues.
Taught by: Gasman
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 641 Culturally Responsive Pedagogy in Urban Secondary Schools
While a wealth of evidence has illustrated the role of culture in mediating learning & engagement in educational spaces, responding to the pedagogical impact of culture remains challenging for many educational practitioners and institutions. This course will tackle that challenge by exploring the affordances of culturally responsive pedagogies, defined briefly as the philosophical beliefs and conceptual understandings of the interactions between cultures, learners, and educational contexts that guide the design and facilitation of learning experiences. Through course texts and discussions, dialogue with local educators, and inquiry- and practice-oriented assignments, this course will expose students to culturally responsive strategies for engaging, educating, and empowering students in urban secondary schools. Prerequisite: Admission to the UTAP program or permission of instructor.
Taught by: Ed Brockenbrough
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
EDUC 642 School, Society & Self
Teaching is a work of the whole self; and teachers are the lynchpins of schools and schooling in American society. The purpose of this course is to develop a critical understanding of the larger forces at play in our work as educators, and conceptualize what that means for the day-to-day of our teaching practice. In this course, we will explore the ways in which American schools have been molded by the social, political, economic, cultural, and ideological forces in society at large. By historically linking the development of educational initiatives to notions of power, nation building, and citizenship, this class furthers an understanding of the assumptions about the purpose of education within this democratic nation, and its role(s) within our current social and political climate. Additionally, we will explore how the work of teaching can support transformation, rather than reproduction, of these macro-level injustices and inequities. We will draw on students’ experiential knowledge of schools and teaching to imagine how urban educators can transform the socially reproductive practices of schools. The work of increasing access to opportunity has been a path walked by educators, individually and collectively, and schools, by leaders and as organizations, and by reformers. With these understandings about self, school, and society, we seek to create a community of practice of equity- and justice-minded teachers, driven by the belief that we are all co-learners in our endeavor as teachers and as citizens, and that we are all co-participants in a democratic society. Prerequisite: Admission to the UTAP program or permission of department. Taught by: A. J. Schiera
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDUC 644 Learning Sciences: Past, Present, Future
This course is a survey of the kinds of theories, methods, and applications through which educational researchers understand learning and how to improve it. The course is designed to provide information about how the field of the learning sciences emerged, has evolved, and is growing to address current and future learning needs. The learning sciences is a relatively new field of research in education that began in the late 80s. It is an interdisciplinary field consisting of researchers who study among other things, cognition, science and math education, language literacy, anthropological and sociological perspectives, computer science, and educational psychology. Learning scientists study learning as it happens in real world contexts and design resources and environments to improve learning in those contexts. This can happen in school, in informal places, at work, and online. Although the learning sciences is continually evolving, what remains true of the tenets of this educational field is that learning happens through mediated processes that most often require collaboration with others whereby learning is inextricably linked to context and culture. Taught by: Susan Yoon
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 645 Issues in Education and Health: Disparities and Prevention in Schools and Communities
Drawing upon research and scholarship in health and education, this course aims to deepen our knowledge, understanding, and ability to effect positive change in the health and health practices of students and families in urban settings, using schools and community agencies as sites of engagement. Taught by: Gadsden
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 646 Examining the School to Prison Pipeline: Implications of History, Policy, and Race
The term school-to-prison pipeline typically refers to a disturbing trend in which punitive policies have led to children being funneled out of schools and into the criminal justice system at an alarming rate. This course: 1. Examines the historical context and policies that have contributed to the school-to-prison pipeline. 2. Explores the workings of contemporary racism, in particular, colorblind racism and its relationship to education and corrections policies. Discusses the outcomes of such policies and explores interventions for an alternate approach to such policies. Taught by: Harper
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 647 Global Perspectives on School Climate
This course provides an international and comparative perspective on school climate using available case studies, examples and relevant articles from developed as well as developing countries. Topics include definitions and models of school climate, trends in the field, assessment mechanisms, policy discussions, challenges in the field, etc. Taught by: Thapa
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 650 Communication and Culture in Context
This course brings together scholarship in pragmatics, interactional sociolinguistics, and critical discourse analysis to help language teachers and intercultural educators foster pedagogies that respond to the complexities of living in a multilingual/multicultural society. Through a series of readings, small research projects, and activities, participants will develop a collection of educational practices that focus on 1) raising metalinguistic awareness, 2) developing resources and strategies for communicating across perceived social and cultural boundaries, and 3) assessing intercultural interactional competence. Taught by: Pomerantz
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 655 Ethnography for Intercultural Communication
This course is for practitioners and researchers engaging in and thinking about mentoring, supervision, and fieldwork in teacher education and counseling as well as in social work and other applied development fields. Taught by: Moore
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 656 College and University Teaching
In this class, students will learn how to systematically plan for a university course, develop a teaching philosophy, create a course syllabus relevant to their discipline and expertise, design and implement evaluation instruments to assess teaching and learning, experiment with a range of technologies to advance teaching, and participate in a teaching simulation. This course also incorporates issues of diversity with regard to teaching.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 657 Advanced Methods in Middle & Secondary Education
Formal teaching and learning are on-going processes that require an examination of our practice and purpose through self-reflection, self-evaluation, collegial and student/teacher interaction, and personal and professional growth. This course is the second half of a content-specific secondary methods sequence that is geared toward teaching middle and high school English, math, science and social studies in an urban setting. Special focus will be on content, pedagogical strategies as well as specific skills and Pennsylvania and national standards. We will work together as teacher-researchers to combine theory with practice to increase our understanding and utilization of an inquiry based, multiple perspective, constructivist approach to teaching. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 658 Diagnosis and Psychopathology
In this course, students will explore the etiology, course, and prevalence of psychological disorders of childhood and adolescence. Particular focus is on the role of these issues in the developing person within the context of family, school, and culture. Major clinical and empirical classification systems (DSMIV and the new DSM5) are examined, as well as some of the diagnostic and assessment strategies used to aid the conceptualization and treatment of these disorders.
Taught by: Richardson
Activity: Lecture
1.0 Course Unit

EDUC 659 How Innovations Flourish
This course is a survey of contemporary innovative developments, topics, and trends taking place in education across the world. It focuses on the education innovations themselves, the conditions under which they succeed, and the processes and mechanisms for change. Close analysis will be directed at the underlying methods people use to bring these current innovations to the field in a variety of new ways to improve learning. The course examines new pedagogies and approaches to teaching and learning, learning sciences research and its growing influence on solution development, technologies that continually respond to and lead change, and an emerging culture where learning takes place anytime, anywhere. The course will explore how these innovations can transform education systems to offer equitable access, experiences and outcomes for all. The course begins with an overview of the global state of education, including a critical review of comparative rankings of education systems and their contexts, seminal and non-canonized works, and national policy approaches to education. The second session focuses on an examination of what it means for a solution to be innovative and to whom. Each subsequent weekly class session will introduce a major contemporary topic in education innovation. In each discussion, you will explore the research underlying the innovation, the traction it is making in the field with examples from across diverse contexts and countries, and the conditions necessary for the innovation to succeed at scale across diverse communities. In addition, we will look with criticality at innovations that serve to perpetuate structural racism, institutionalize inequality and discrimination and investigate indigenous research and Participatory Action Research approaches to counteract them. The course is designed based on what we know about effective learning from the learning sciences and an innovative project-based pedagogy. We take a student-centered, blended learning approach with the course, using in-class and online discussions (a flipped classroom with a state-of-the-art social media platform) to build a vibrant, collaborative learning community and model the methods we are studying to enhance our learning. Curriculum for each session will include a leading expert on that topic joining the classroom virtually to share her/his expertise along with students selecting that topic of interest co-facilitating the discussion. By leveraging all of our knowledge: of the professor, students, and guest experts, we will all deepen our understanding of these topics as we examine current examples of promising and proven innovations in that area together. The course will culminate in a double-class period presentation of the students’ semester-long authentic products aligned to their interests and goals for the course and delivered through digital tools chosen to best convey its message. The core readings in the course have been selected to present an overview, background, case studies and multiple perspectives on each topic while ensuring a manageable workload for students. As co-contributors to the success of the course, you are each welcome to offer additional suggestions for readings to supplement these using the trending topic ‘General Resources’ on Yellowdig, our discussion board (additional guidance is included in the Discussion Board Guidelines). These readings will be integrated into online discussions and in class where appropriate to ensure students investigate the topics with criticality.
Taught by: Michael Golden
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
EDUC 660 Museum Education
Since the nineteenth century, museums have played a key role in the collection and dissemination of knowledge, and today their educational programs play a vital role for an array of communities. This seminar provides an introduction into museum education, the fields that influence it, pedagogical approaches used, and contemporary challenges.
Taught by: Aplenc
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 661 Language Diversity and Education
Exploration of issues affecting educational policy and classroom practice in multilingual, multicultural settings, with an emphasis on ethnographic research. Selected U.S. and international cases illustrate concerns relating to learners' bilingual/bicultural/biliterate development in formal educational settings. Topics include policy contexts, program structures, teaching and learning in the multilingual classroom, discourses and identities in multilingual education policy and practice, and the role of teachers, researchers, and communities in implementing change in schools. Prerequisite: Permission needed from the department.
Taught by: Hornberger/Flores
Course usually offered in fall term
Also Offered As: LALS 661
Activity: Lecture
1.0 Course Unit

EDUC 662 Picturebooks and the Practice of Literacy
This course examines the formal properties of picture books and their use in enabling literacy development. The course uses aesthetic theory, theories of text-picture relationships, theories of literacy and theories of literary understanding, and also exposes students to empirical research on children's responses to this literary form.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 663 Sociocultural Foundations in Counseling
The course provides an understanding of sociocultural concepts essential to the work of counselors and providers of psychological services. This course provides a contextual and applied understanding of working with socioculturally diverse clients. The purpose of this course is to expand one's understanding of the impact of sociocultural and contextual factors, social-psychological influences, the role of values, and the interaction of identities in counseling and psychological services. Both intervention and prevention strategies will be addressed. The student will be required to demonstrate a working knowledge of key concepts in sociocultural psychology and the topical areas addressed in the course.
Taught by: Warren/Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 664 Participatory Educational Research in Global Perspective: Theory and Practice
This course examines participatory models and frameworks in relation to international applied educational development research. Through a critical examination of approaches to international applied development research, the course examines real-world models of development research in order to examine questions regarding the nature of knowledge, post-colonial histories, researcher positionalities, and the relationships between concepts, theory, methodology, community, and identity. Course focuses on participatory methodologies as cross-sector strategy frameworks for sustainable, equitable, locally driven educational development efforts.
Taught by: Ravitch
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 665 Research on Teaching
This course is designed to explore the research literature on classroom teaching processes as well as the contrasting conceptual and methodological approaches upon which this literature is based. The course introduces students to the major substantive areas in the field, develops a critical perspective on contrasting paradigms, and raises questions about the implication of research on teaching for curriculum, instruction, evaluation, and teacher education.
Taught by: Remillard
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 667 Introductory Statistics for Educational Research
Scales of measurement; indices of central tendency and variability; product-movement correlation; introduction to the chi-squared; Z, T, and F distributions.
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

EDUC 668 Master's Paper Seminar
This seminar explores key foundational questions for graduate-level work: How is academic knowledge formed and reproduced? How do we engage with and interrogate the scholarly research? And, how do we participate in the academic conversation around a topic? The Master's Paper Seminar introduces students to academic discourse, disciplinary writing conventions, and research practices. As part of this course, students are guided through preparing a Capstone Project on a topic of their choice (TLL MSEd and LST MSEd students) or a literature review of a topic of their choice (ECS MSEd students). This review, in turn, forms the foundation of their Capstone Proposal and Capstone Project (TLL and LST students) or 30-40 page paper (ECS students) that are required for the completion of the M.S.Ed degree.
Taught by: Aplenc/Posecznick/Staff
Activity: Seminar
0.5 Course Units
EDUC 669 Seminar in Practitioner Inquiry
This course is designed as a collaborative investigation into practitioner inquiry and the work of inquiry communities in K-16 and graduate/professional school settings, professional networks and community-based organizations. The focus is on conceptual and methodological frameworks and methods of practitioner inquiry and the contexts, purposes and practices of differently situated inquiry communities. Participants will explore a range of practitioner inquiry traditions and texts that go by terms such as action, collaborative, critical, community-based, participatory, autobiographical, emancipatory, narrative and pedagogical. They will also conduct an inquiry based on their particular interests and contexts. The course will emphasize practitioner inquiry that intentionally engages issues of equity, access and culture in educational settings.
Taught by: Campano
Course offered spring; even-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 670 Second Language Development
This course provides an introduction to theory and research on second/multilingual language development. Linguistic, cognitive, social, political, and educational perspectives are considered through readings, lectures, activities, and assignments. Students gain an understanding of research design, methodology, and documentation through guided analysis of published studies and an opportunity to design research projects.
Taught by: Butler/Matsumoto
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 671 Adult Literacy
Teaching reading/writing/literacy to adults for whom English is a first or second language. Topics include contrasting conceptions of literacy and learning; participatory literacy programs; instruction and curriculum for adults with diverse cultural and linguistic backgrounds and nationalities; alternative/performance-based assessment; and practitioner research in adult literacy education.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 673 Curriculum & Pedagogy in International Contexts
This course explores the problems, issues, and approaches to teacher preparation and the development of curricula and instructional materials, particularly (though not exclusively) in developing country contexts through a seminar styled class and a hands-on semester long project.
Taught by: Ghaffar-Kucher, Ameena
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 674 Curriculum and Materials Development for English Language Teaching
This course is designed for those who are ready to develop skills in curriculum, course and materials design. The objectives of the course include learning how (a) to become able to analytically respond to readings on curriculum, course and materials development; (b) to analyze the sociocultural, economic, linguistic and occupational contexts of language teaching programs; (c) to design an original semester-long ESL/EFL course; (d) to design original pedagogical tasks and supplementary materials; and (e) to design in a group. EDUC 527 & EDUC 537 provide essential background for this advanced course. Prerequisite: Permission from instructor is required.
Taught by: Wagner
Course usually offered in fall term
Prerequisite: EDUC 527 AND EDUC 537
Activity: Lecture
1.0 Course Unit

EDUC 675 Structure of English
The goal of this course is to increase students’ explicit knowledge of selected isolatable parts of the English language and to identify their pedagogical applications with respect to the needs of learners of English as a foreign/second language. This goal is realized through an investigation of: 1) frequently occurring linguistic forms and the rules and principles that govern the way that these forms can be combined and ordered; 2) the meanings that can attach to these forms; and 3) the social functions associated with these forms.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 676 Discursive Approaches in Intercultural Communication
This course offers a discourse-based approach and hands-on introduction to the field of intercultural communication, from the micro-level of interpersonal interaction to the macro-level of institutional practice. Through a series of readings and service learning projects in multicultural settings, students will hone their observational and analytic abilities, while gaining an appreciation of and facility for participating in the communicative diversity around them. Topics will include a repertoire approach to examining language in use, interpretation and metacommentary, and the possibility of intervention to facilitate new communicative patterns.
Taught by: Rymes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 677 Information and Communications Technologies for Education and Development in Global Perspective
The importance of the relationship between education, technology, and social-economic development is increasing in the U.S. and around the world. What are new information and communications technologies (ICTs), how are they being deployed, and for what reasons? Are new ICTs a means for delivering skill-based or distance education information, and in what ways are they becoming a part of societies today? What constitute, then, ICTs for Development (ICT4D), and what role do they play in societies that are ‘industrialized’ and ‘developing’.
Taught by: Wagner
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EDUC 678 Gender and Sexuality in Education
This seminar gives an overview of the intersections and interplay among gender, sexuality, and education through theory, practice, current discussions, and analysis of varied contexts in English speaking countries (e.g., the United States, Canada, Great Britain, and Australia). After examining the theoretical foundations of genders and sexualities, we will look at their histories and effects in K-12 schools and colleges and universities as well as explore special topics.
Taught by: Cross
Course usually offered in fall term
Also Offered As: GSWS 678
Activity: Seminar
1.0 Course Unit

EDUC 679 Reading, Writing, and Critical Thinking for Applied Linguistics
This course offers international students a hands-on introduction to the practices that constitute academic language use in the fields of TESOL/ICC through a variety of scholarly readings that also serve as an introduction to multilingual writing research. Participants will focus on developing skills and strategies that will strengthen their existing expertise in the following areas: locating, reading, and critiquing academic articles; producing graduate-level written work across a variety of genres; and participating in oral activities.
Taught by: Pomerantz/Box/Kozlova
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 680 Evaluation of Policies, Programs and Projects
Basic evaluation policy and methods for determining nature and severity of problems, implementation of programs relative effects and cost-effectiveness of interventions to reduce problems, design and conduct of evaluation studies in education, social services, crime and delinquency, in the U.S. and other countries.
Taught by: Boruch
Course usually offered in fall term
Prerequisite: EDUC 667
Activity: Lecture
1.0 Course Unit

EDUC 681 Literacy and Illustrated Texts: Picturebooks, Comics and Graphic Novels
Students develop familiarity with illustrated materials - including picture books, comics, and graphic novels - while cultivating understanding of how illustrated texts like these can be used in 21st century elementary/ middle/secondary literacy curricula. Students complete individualized and group course projects that focus on illustrated texts in specific classroom, research, critical, theoretical, home, community, and/or professional contexts.
Taught by: Thomas
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 682 Qualitative Modes of Inquiry
This course surveys the field of qualitative research and focuses on foundational philosophies of and approaches to qualitative research. The course focuses on the stages of qualitative research including the development of researchable questions, research designs, conceptual frameworks, methodological stances, data collection and analysis and instrument design and implementation.
Taught by: Ravitch/Strong/Staff
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

EDUC 683 Survey Methods & Design
This course covers the methods and design of field surveys in the U.S. and other countries in education, the social sciences, criminal justice research, and other areas. It covers methods of eliciting information through household, mail, telephone surveys, methods of assuring privacy, enhancing cooperation rates and related matters. Finally, the fundamentals of statistical sampling and sample design are handled. Much of the course is based on contemporary surveys sponsored by the National Center for Education Statistics and other federal, state and local agencies.
Taught by: Boruch
Course usually offered in spring term
Prerequisite: EDUC 667
Activity: Lecture
1.0 Course Unit

EDUC 684 Measurement & Assessment
Analysis of primary assessment concepts including basic theoretical principles, types and purposes of assessment devices, levels of measurement, standardization and norming, and methods to support reliability and validity; special focus on appropriate test interpretation, fairness, measurement of change, and incremental validity; application of standards for test development, usage, and critique in education, health care, public policy, and scientific inquiry.
Taught by: Victor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 685 Career Counseling and Development
Career development is studied as an aspect of general development theories of educational and vocational choice and adjustment; psychological aspects of occupations. Prerequisite: Permission needed from instructor.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
**EDUC 686 Counseling Interventions**
This course will provide an overview of the approaches to various psychological interventions with a focus on theory, key concepts, and therapeutic processes. The purpose of this course is to develop a knowledge base of the underlying principles and approaches of psychological interventions. Students will be required to demonstrate a working knowledge of the key concepts of the psychotherapeutic approaches presented, distinguish between different approaches, and make a preliminary rationale for the use of a particular approach. Students are expected to develop a critical perspective and demonstrate the ability to analyze theories and interventions. Prerequisite: Admission to Counseling and Mental Health Services. Course usually offered in fall term. Activity: Lecture
1.0 Course Unit

**EDUC 687 Counseling Ethics & Professional Principles**
This course will provide the student with an opportunity to learn and incorporate the multifaceted roles of the professional counselor and assist the student in developing a sense of their professional identity. In this process, the course will focus on the professional role of the counselor; ethics and their application across situations and professional settings; and gaining strong professional communication abilities. The primary goals of the course are to develop the student's awareness of their roles and responsibilities as a professional, incorporating ethical standards as a counselor, increasing professional communication skills, and understanding the roles of counselor across professional settings. Course usually offered in fall term. Activity: Lecture
1.0 Course Unit

**EDUC 688 Counseling Practicum**
Seminar and lab to accompany supervised practicum or apprenticeship experiences in schools, colleges, or community agencies. Placement to be arranged by instructor. Two terms. Student must enter first term. Activity: Lecture
1.0 Course Unit

**EDUC 689 Contemporary Issues in Mathematics Curriculum**
Educational leaders and policy makers in the U.S. have long used curriculum reform to drive change in K-12 teaching and schooling practices. This course examines the assumptions underlying this approach and examines the related research evidence. Taught by: Remillard Course offered spring; odd-numbered years Activity: Seminar
1.0 Course Unit

**EDUC 690 International Educational Development in Practice: Tools, Techniques and Ethics**
This course covers the broad arena of international educational development practice by introducing students to a variety of tools used in international educational development work. It is a required course for IEDP Masters students and is offered in the Fall semester only. Coursework is built around the project cycle and will acquaint you with current approaches to development and accompanying tools employed by a variety of international development organizations. Specifically, you will gain skills to determine how to gather adequate information, interpret information and put this information into clear and helpful frameworks for formulating recommendations for action. To learn these skills, you will work in small groups on a technical proposal throughout the semester. Throughout the semester, we will seek a more nuanced understanding of the general context and the role of institutions in global development work, while being aware of local realities and ethical issues that make development as contested locally as it is at national and global levels. Development from this perspective is not primarily a technical enterprise, although it does require skill with ‘techniques’. Rather it involves a process of heralding the best available information to facilitate the mobilization of resources and people to engender development - a development process whose focus is broadening people's capacities, opportunities, choices, and access to social justice. Taught by: Ameena Ghaffar-Kucher Course usually offered in fall term Activity: Seminar
1.0 Course Unit

**EDUC 691 Core Methods in Educational Data Mining**
Students will learn how to execute core educational data mining methods in standard software packages, the limitations of existing implementations of these methods, and when and why to use these methods. The course will also cover how EDM differs from more traditional statistical and psychometric approaches. Prerequisite: Prior experience with either statistics or computer science recommended. Taught by: Baker Course usually offered in spring term Prerequisite: EDUC 721 Activity: Lecture
1.0 Course Unit

**EDUC 692 Education Policy Issues**
This course is an introduction to the process of conducting educational research. Its purpose is to help students learn to approach problems like researchers by examining and critiquing existing research and developing coherent 'researchable' questions. Students will carry out a substantial independent project where they will develop elements of a research proposal. Taught by: Maynard One-term course offered either term Activity: Lecture
1.0 Course Unit

**EDUC 693 Student Development in College Environments**
An overview of college student development theory is offered in this course. Specifically, three families of theory are explored: 1) Psychosocial and identity, 2) cognitive-structural, and 3) environmental. The theories are discussed in terms of their foundations, constructs, and applicability to work in various functional areas of higher education. One-term course offered either term Activity: Seminar
1.0 Course Unit

**EDUC 694 Organization and Administration of Intercollegiate Athletics**
Athletics play a critical role at colleges and universities. This course examines the role of intercollegiate athletics, how they are structured, what educational purposes they serve and how such programs influence the social and academic development of students. Taught by: Weaver/Staff One-term course offered either term Activity: Lecture
1.0 Course Unit
EDUC 696 In/formal Learning Experience Internship
The In/formal Learning Experiences Internship is a two-semester course that meets throughout the academic year to cover theory, research, and practice of informal learning. The internship is undertaken from October to March each academic year in one of our partnership institutions and includes about 120 hours field work. The course is designed to provide background readings, a discussion forum of central issues in informal learning, and a place to share and exchange internship experiences. This course will be required for all LST MEd and TLL MEd students as part of the required Internship Program. Two terms. Student must enter first term.

Activity: Lecture
1.0 Course Unit

EDUC 698 Politics of School Reform
In this seminar we will explore the political causes and consequences of school reform in the post-Brown era. Coverage will be eclectic so as to give participants a broad, interdisciplinary background in the field. We will draw primarily from the politics of education literature, but we will reach beyond and examine work from political science, sociology and history. Rather than the standard categories organizing this scholarship—by level (local, state, federal), decision-making body (school board, legislature, judiciary), or issue area (standards, decentralization, funding)—we will structure our exploration by considering fundamental conclusions about the politics of school reform: (1) School reform as contained politics, (2) School reform as transgressive politics, (3) School reform as collaborative politics, and (4) Institutions, ideas, & interests as constraints on the politics of school reform.

Taught by: Quinn
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 700 Craft of Ethnography
This course is designed to follow after Ethnographic Research Methods (EDUC 721). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project. Prerequisite: Must have completed EDUC 721 or equivalent introductory qualitative methods course.

Taught by: Hall
Course not offered every year
Also Offered As: ANTH 707
Activity: Lecture
1.0 Course Unit

EDUC 702 Conceptual Models of School Leadership & Organization
This graduate seminar has three components. One, we will explore contemporary theories of organization as frameworks for understanding how classrooms, schools, and districts function. Two, we will employ a case method approach on several real-world cases developed by Harvard Business School and the Public Education Leadership Project at Harvard University. Three, we will learn from and interact directly with local education leaders and their communities through a series of school leadership study tours.

Taught by: Quinn
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 703 Advanced Qualitative and Case Study Research
This course explores epistemological and methodological choices and stances in qualitative research as well as advanced research methods including qualitative research design and concept mapping, sampling/participant selection, interviewing, coding and data analysis, instrument development and triangulation techniques.

Taught by: Ravitch
Course usually offered in spring term
Prerequisite: EDUC 682
Activity: Lecture
1.0 Course Unit

EDUC 704 Economics of Higher Education
Covers selected topics in the economics of higher education, including investment and consumption theories, cost functions, university investment practices and principles, and academic labor markets.

Taught by: Presley
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 705 Proseminar in Research & Analysis
This course is designed to provide students with the skills, information, and resources that are necessary to develop a research proposal. This course will also examine strategies for completing proposals and dissertations. A variety of research designs and approaches to educational research will be explored. Through this course, students will become both informed consumers of research and effective designers of research. Prerequisite: Permission needed from department.

Taught by: Perna/Hartley
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 706 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.

Taught by: Hall
Course not offered every year
Also Offered As: ANTH 704, URBS 706
Prerequisite: EDUC 547
Activity: Lecture
1.0 Course Unit
EDUC 708 Schools as Organizations
Schools are places of learning - but they are also workplaces, teachers are employees and teaching is a job. This in-depth doctoral-level course focuses on theory and research concerned with the organizational and occupational side to schools and teaching. It draws from multiple fields and perspectives, including: organizational theory; the sociology of organizations, occupations and work; educational administration; and school leadership. The objective is to have students understand and evaluate a series of different perspectives from theory, research and policy concerned with the character of the teaching occupation and the organization of schools.
Taught by: Ingersoll
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 709 Peer Relationships in Childhood and Adolescence.
This course focuses on various aspects of children's peer relationships, especially with regard to their significance for human development. The roles of family, community, and socio-cultural contexts in the development of interpersonal competence and relationships are discussed. The course explores possible intervention strategies to help children with peer relationship difficulties.
Taught by: Chen
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 710 Methods of Discourse Analysis
This course introduces several methodological approaches that have been developed to do discourse analysis. The course intends primarily to provide students with various methodological tools for studying naturally-occurring speech. Assignments include both reading and weekly data analysis exercises. Prerequisite: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 682) and as such it is suggested that students have some background in qualitative methods before enrolling.
Taught by: Rymes
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 711 Education Policy Research Practicum
This course will partner students with educational leaders to conduct client-based, applied education research projects. Students will engage in original empirical analysis, learning how to use empirical evidence to support the work of policymakers and practitioners, and will complete written policy reports and present their findings to clients.
Course usually offered in spring term
Prerequisite: EDUC 591 AND (EDUC 667 OR EDUC 751)
Activity: Seminar
1.0 Course Unit

EDUC 713 Responding to Literature: An Interdisciplinary Perspective
This course deals with the ways in which readers respond to and transact with literary texts, and aims at helping students understand the nature of the variety of ways in which literature interfaces with our lives. Three different types of discourse are read: literary criticism; empirical research on response to literature; and literary texts themselves. Various types of literary criticism are considered, including (but certainly not limited to ) what is commonly called 'reader response criticism'; text-based criticism; and criticism that contextualizes literature socially and historically. The empirical research on response deals with ways in which readers of various ages interact with literature, mostly in school settings; some attention is given to instructional design and critique of methodology. The literary texts range from picturebooks to literature for young adults.
Taught by: Thomas
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 714 Law and Higher Education
An examination of the most important state and federal laws governing U.S. colleges and universities, with an emphasis on current legal problems.
Taught by: Roth
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 715 Case Studies in Higher Education Administration
This course is designed to enhance understanding of decision making in higher education administration. Based on case studies, students will analyze, propose policies, generate action plans and implementation procedures, and assess the potential consequences of their administrative decisions.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 716 Public Policy Issues in Higher Education
A study of the most influential federal and state policies, legislation and practices affecting colleges and universities.
Taught by: Finney
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 717 Professional Internship in Counseling I
The course will consist of experiential and small group learning, with a focus on practicing and refining skills related to advanced work in psychological services, including the application of various techniques of counseling, ethical considerations, and critiques of live and simulated counseling sessions through role-playing, audio and visual taping.
Prerequisite: Formal admission into Professional Counseling and Psychology M. Phil. Program.
Taught by: Watts
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 718 Professional Internship in Counseling II
Lab seminar group with a seminar group leader is the second component of the Professional Counseling Internship course. Lab will provide students with exposure to others' experiences in different types of internships, working with a variety of different client populations. Prerequisite: Students must be enrolled in the M. Phil. Ed. in Professional Counseling Program. A primary goal of this course is to help each student refine his/her evolving knowledge of self as a provider of psychological services to others. Students will also evaluate contexts of practice and the professional skills, ethics and practices inherent in effective provision of counseling and psychological services. This course consists of two components: CLASS MEETINGS, during which the full group will meet to address issues related to work in various internships, as well as discuss the development of advanced counseling skills and issues; and, LAB SEMINAR GROUP which consists of 7-8 masters students with a seminar group lab leader. Prerequisite: Students must be enrolled in the M. Phil. Ed. in Professional Counseling Program. Taught by: Watts Course usually offered in spring term Activity: Lecture 1.0 Course Unit

EDUC 719 Research on Teacher Education and Learning to Teach
This course focuses on issues of research, practice, and policy related to teacher education at the preservice, induction, and continuing education levels in the United States and internationally. The course is designed as a seminar to engage participants in the study of teacher education through interaction with researchers and policy-makers, through in-depth study of critical issues in the field, and through engagement with teacher education programs. It is anticipated that each course participant will develop a literature review focusing on one or more topics related to critical issues in teacher education. Taught by: Reisman/Staff Course usually offered in fall term Activity: Lecture 1.0 Course Unit

EDUC 720 Teachers and Teaching Policy
Explores research, policies, and practices that promote a high-quality teacher workforce, and effective instruction. Topics include recruitment, retention, mentoring, induction, professional development, certification, value-added, merit pay, etc. Appropriate for students from different programs, including education, social/public policy, psychology, political science, sociology, business, and current and future teachers and school leaders. One-term course offered either term Activity: Lecture 1.0 Course Unit

EDUC 721 Ethnographic Research Methods
A course in ethnographic participant observational research; its substantive orientation, literature, and methods. Emphasis is on the interpretive study of social organization and culture in educational settings, formal and informal. Methods of data collection and analysis, critical review of examples of ethnographic research reports, and research design and proposal preparation are among the topics and activities included in this course. Prerequisite: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 682) and as such it is suggested that students have some background in qualitative methods before enrolling. Taught by: Hall/Strong Course not offered every year Activity: Lecture 1.0 Course Unit

EDUC 722 Reforming Philadelphia Schools: A Research Practicum on Community Engagement
The course offers a unique opportunity for students to directly contribute to school improvement efforts in Philadelphia. Teams of students will consult with a local public school with the goal of conducting actionable research with broad policy relevance to the community engagement in education sector. Teams will submit a final report and present their findings at a public venue. The course is designed as a research practicum because understanding community engagement in education as it occurs in practice will provide insights that are unlikely to surface if we merely considered it in the abstract. The experience will provide students a set of skills appropriate to the design, interpretation, and presentation of research on community engagement in education. But we are much more ambitious in our aims. Our consultancies are also meant to help a local community solve an immediate problem of educational relevance. The course is suitable for graduate and undergraduate students with an interest in education, policy, and civil society. Taught by: Quinn One-term course offered either term Activity: Lecture 1.0 Course Unit

EDUC 723 Multicultural Issues in Education
This course examines critical issues, problems, and perspectives in multicultural education. Intended to focus on access to literacy and educational opportunity, the course will engage class members in discussions around a variety of topics in educational practice, research, and policy. Specifically, the course will (1) review theoretical frameworks in multicultural education, (2) analyze the issues of race, racism, and culture in historical and contemporary perspective, and (3) identify obstacles to participation in the educational process by diverse cultural and ethnic groups. Students will be required to complete field experiences and classroom activities that enable them to reflect on their own belief systems, practices, and educational experiences. Taught by: Gadsden Course usually offered in fall term Also Offered As: AFRC 723 Activity: Lecture 1.0 Course Unit
EDUC 724 Literacy: Social and Historical Perspectives
A review of the cross-cultural and historical literature on writing and reading with emphasis on the identification of norms and practices which affect the teaching and learning of reading and literacy today. Special attention to the social functions of literacy in work, home, and school settings and to myths regarding the consequences of literacy for cognition, socio-economic mobility, and predictability, and the predictability of citizen behaviors. Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 725 Advanced Professional Practice in Communities, Agencies and Organizations
The purpose of this course is to expand the student's awareness of the multifaceted responsibilities and roles of school counselors in primary and secondary school settings. Through readings, class discussions and guest lectures, it is intended that students will acquire additional competencies and a broader appreciation for professional issues confronted by school counselors and varied responsibilities they have in helping students focus on academic, personal, social and career development in an effort to achieve success in school and lead fulfilling lives. An important emphasis of this course will be on school counseling from an ecological and multicultural perspective. Prerequisite: Students must be enrolled in the M. Phil. ED. in Professional Counseling Program. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 726 Doctoral Foundations of Teaching and Learning
The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing and learning? A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international. Taught by: Kafai/Remillard/Yoon/Reisman/Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 727 Education, Culture and Society
This course surveys basic issues in the philosophical and social foundations of education, addressing basic questions about the purpose of education, mostly through reading primary texts. Intended for incoming doctoral students. Taught by: Ben-Porath
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 728 Advanced Public Policy Seminar in Higher Education
Students explore higher education in one state and collaboratively develop a case study to understand the relationship between state policies and higher education performance. Through readings, interviews and student presentations, students learn about the context, the performance, and the public policies influencing higher education performance.
Taught by: Finney, J
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 729 International Educational Development Doctoral Proseminar
The IEDP Doctoral Proseminar covers the broad arena of international educational development. Drawing on the research experiences of the faculty and of the enrolled doctoral students, the course allows for the analysis of intellectual and technical challenges of working in international education and development, especially around issues of social and public policy. Taught by: Ghaffar-Kucher,Ameena & Wagner,Dan
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 731 Risk, Resilience, and Prevention Science
Examines the definition and measurement of risk and resilience from the perspectives of developmental psychology and ecological theories of development; introduces students to the conceptual and practical integration of intervention and prevention sciences to address social, emotional, educational, and health problems across childhood. Taught by: Wolf
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 732 Doctoral Proseminar on Education Research
This seminar is designed to enable first-year doctoral students at Penn GSE to understand the broad and diverse field of educational research and the driving debates within the broader field and sub-fields. A primary goal of the course is to support students' developing identities as educational scholars and to help them develop the intellectual skills and stances they will draw upon in doctoral work. We will pay particular attention to the multidisciplinary nature of education research, how individual disciplines and theoretical traditions approach education problems in complementary or contrasting ways, and how educational research functions at the intersection of policy and practice. The seminar seeks to encourage an intellectual community among doctoral students across Penn GSE divisions and programs and to build familiarity with professional norms and expectations. This seminar is intended to build on and complement related courses and activities that are offered by individual Penn GSE divisions. Taught by: Varies
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
EDUC 733 Students’ Transitions from High School to College and to the Job Market
Scope and Audience: This course is appropriate for both masters level and doctoral level students in fields relevant to education, policy, or social science. Special emphasis will be given to develop research proposal that address gaps detected in the literature pertaining to issues and factors affecting students’ transitions from high school to college and to the job market. The ultimate goal of the coursework is to critically analyze and have informed opinions of the state of knowledge regarding factors affecting students’ college choice, access, and success, as well as how these choices impact their job market prospects. Course Description and Objectives: This course examines existing research on the analysis of college access and success, the transition from high school to college, community colleges, labor market opportunities, and the policies, interventions, and initiatives that have been developed to address inequities and inequities in students’ college plans, academic preparation, and financial access. Particular attention will be paid to issues of poverty, race, and ethnicity. The topics studied are informed by sociological, economic, and anthropological theories. Given that community colleges enroll close to 50% of total undergraduate students, and serve as the primary provider of college education for underrepresented, first-generation, low-income, and minoritized students, their role as a potential equalizing engine in the American higher education system will be studied. Specifically, we will study the diverse set of theoretical frameworks and methods that researchers have been using to understand these institutions and will assess the extensive evidence we have to date regarding their effects on education and labor market outcomes. Expectations: Students are expected to be engaged intellectual thinkers and active participants in the pursuit of knowledge, not just passive recipients of information. This course is reading intensive and the majority of class time will be spent in a seminar format discussing the assigned readings. There will be opportunities for students to take turns leading discussion sessions using a set of guiding questions generated by the students own creative and original thinking with the help of the instructor. These student-professor led discussion sessions will occupy about half of our class time while the other half will be lecture and presentation by the instructor along with presentation of work in progress of final papers to gain collective feedback.
Taught by: Manuel Gonzalez Canche
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 734 Masters Proseminar in International Educational Development
This course covers the broad professional arena of international educational development. It is designed to provide an analytical perspective on applied research and policy as undertaken by UN, donor and non-profit agencies, with a focus on developing countries. Such work will require analyzing intellectual and technical challenges of working in international education and human development, especially around issues of social and public policy as developed through writing policy briefs. Several specialists and speakers will be invited as guests throughout the semester.
Taught by: Alec Gershberg
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 735 Tutorial Work in Reading/Writing/Literacy
Tutorial in Reading Writing and Literacy, is designed for participants to gain knowledge and insight into the major challenges facing learners in their quest for proficiency in literacy. The course participants investigate and develop instructional plans for the literacy needs of learners in pre-K to 12th grade settings. Course participants will investigate the roles and responsibilities of the literacy specialist as related to identifying the needs of learners and planning appropriate instruction to meet those needs. Prerequisite: Permission needed from instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 736 Quasi-Experimental Design
Quasi-experimental design is the set of statistical procedures designed to reduce bias inherent to the analysis of observational data. This course covers the most pressing quasi-experimental techniques employed in the social sciences, with an especial emphasis on education issues. The class combines lecture and lab exercises complemented with real-life examples.
Taught by: Gonzalez Canche
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 737 Research in Teaching Writing
This doctoral seminar explores theories and research on writing, investigating current and traditional areas of inquiry in the field of writing studies. As class participants review and analyze theoretical and empirical literature on writing and teaching writing, the seminar will offer students opportunities to compose texts and reflect on their roles as writers in the academy through collaborative inquiry. Participants will think together about the purposes, functions, and consequences of writing in diverse communities and across school and out-of-school settings. The course will pay particular attention to how writing is shifting in a mobile, networked, global age, and how multimodality, interactivity, and hybridity characterize our composing lives.
Taught by: Stornaiuolo, A
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 738 Advanced Topics in Monitoring & Evaluation in International Education Development
This is a sequel to the Principles of M&E course offered in the fall. The course will review both theories as well as methods of program evaluation in a deeper way using papers and technical reports as case studies, with special emphasis on international education development.
Taught by: Thapa
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 739 Poverty and Child Development
The goal of this course is to help students develop a coherent understanding of the ways in which poverty affects families and children, the different needs of families and children across different developmental stages of childhood, and the intersection between poverty and education.
Taught by: Wolf
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
EDUC 744 Building Inclusive Communities in Higher Education
This course provides students an opportunity to apply their knowledge related to the practice of higher education administration. The goal of the course is to advance students' understanding of climate on today's campuses and to utilize diverse methods to create inclusive spaces on campus for all institutional stakeholders.
Taught by: Tiao
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 747 Social and Statistical Network Analysis
Network analysis aims to find structure among a variety of connections/settings. This course highlights the inferential/statistical aspect of network analysis which overcomes its main limitation of being depicted as a descriptive tool. Since applications of network analysis to education research are emerging, course participants will gain a competitive job-market advantage.
Taught by: Gonzalez Canche
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 751 Introduction to Applied Quantitative Methods for Education Research: Pre-K to 20
An introduction to the interpretation and use of data about education policy issues through the use of computer-assisted methods of statistical analysis. Emphasis is on the implications for educational policy and research design.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 764 Cognitive Processes
Basic concepts, theory, and research in cognitive science, problem-solving, psycholinguistics, memory, perception and social cognition. Special topics may include reading, bilingualism, computer modeling, and cognitive theory applied to education and non-education settings.
Taught by: Frye
Prerequisite: EDUC 568
Activity: Lecture
1.0 Course Unit

EDUC 765 Introduction to Causal Inference for Educational Research
Offers applied introduction to methods of causal inference for evaluation research; introduces students to statistical models for causal inference based on randomized controlled trials and observational studies; includes discussion of special topics such as replication and generalizability that touch upon issues related to implementation and implications of experimental/quasi-experimental research.
Taught by: Chan
Course usually offered in spring term
Prerequisite: EDUC 667
Activity: Seminar
1.0 Course Unit

EDUC 766 Advanced Professional Counseling Interventions
This course will focus on advanced issues in the clinical practice of professional psychology with children, adolescents and adults where students will practice clinical skills in role-played therapeutic situations. Students will be using this class as preparation for the formal clinical examination required by all Master of Philosophy in Education students prior to graduation from the Professional Psychology and Counseling program. Prerequisite: Admission into Professional Counseling M. Phil. Ed. Program
Taught by: Morris/Stevenson
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 767 Regression and Analysis of Variance
This course covers design of controlled randomized experiments, analysis of survey data and controlled field experiments, including statistical models, regression, hypothesis testing, relevant data analysis and reporting.
Taught by: Rovine/Victor
One-term course offered either term
Prerequisite: EDUC 667
Activity: Lecture
1.0 Course Unit

EDUC 768 Measurement Theory and Test Construction
Design of ability, achievement, and performance measures such as those applied for high-stakes decision making in large-scale assessment and for diagnosis and classification of individuals; advanced true-score and item response theory; item formatting, analysis, selection, calibration, linking, and scaling; analysis of reliability for continuous, ordinal, nominal, and composite scales; analysis of differential item functioning; unidimensionality, and local independence; model contrasting, test equating, and scaling for longitudinal assessment; standards and cut-point setting.
Taught by: McDermott
Course not offered every year
Prerequisite: EDUC 684
Activity: Lecture
1.0 Course Unit

EDUC 770 New Models for Postsecondary Education
Taught by: Pritchett
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 771 Factor Analysis and Scale Development
Advanced measurement theory; exploratory and confirmatory item factoring and clustering for self-report, observational, rating, performance, and personality instruments; factoring of dichotomous and ordered categorical data, full-information factoring; scaling procedures, hierarchical structure, full-information bifactor structure, invariance, generalizability, reliability, validity, interpretation, and scientific reporting.
Taught by: McDermott
Course usually offered in fall term
Prerequisite: EDUC 684
Activity: Lecture
1.0 Course Unit
EDUC 777 Structural Equations Modeling
Theory and application of means modeling and longitudinal analysis through structural equations, including observed variable regression with multiple equations simultaneously estimated, confirmatory factor analysis measurement models using multiple observed indicators to define sets of latent variables, and regression relationships among multiple latent variables; advanced applications for repeated measures and multilevel growth modeling in educational and social science research. Prerequisite: Introductory Statistics
Taught by: Rovine
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 782 Assessment for Counselors I
A critical analysis of tests and clinical methods in assessment as related to theories of intelligence, and includes: 1) factors influencing assessments; 2) assessment theory; 3) assessment practices; 4) interpretations of assessments. Prerequisite: Admission to Professional Counseling M. Phil. Ed. Program.
Activity: Lecture
1.0 Course Unit

EDUC 785 Selected Topics in Professional Psychology
Consideration of research and theory, on selected advanced topics. Prerequisite: Admission to Counseling & Mental Health Services or Professional Counseling M. Phil, Program
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 806 Narrating the Self
This seminar explores, in some linguistic detail, how narrators can partly construct their selves while telling autobiographical stories. The seminar addresses three questions: What is the structure of narrative discourse? How might we construct ourselves by telling stories about ourselves? If narrative is central to self-constructions, what is 'the self'? Taught by: Rymes
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 829 Policy Research
Study of the roles of scientific inquiry in development and assessment of contemporary educational and social policy. Analysis and application of foundational research, statistical and psychometric methods to inform a variety of policy topics and related issues and problems encountered in policy formation and evaluation.
Taught by: Rovine
Course usually offered in spring term
Prerequisite: EDUC 667
Activity: Lecture
1.0 Course Unit

EDUC 834 Theories of Reading
This course is designed as a collaborative inquiry toward constructing and elaborating theories of practice as teachers and/or researchers of reading. Using a seminar or working group format, participants explore the relationships among theory, reading, practice, pedagogy and research. The course's conceptualization is informed primarily by (1) frameworks from critical, feminist and culturally-centered literatures which foreground issues of equity, representation, and ethics; and (2) current conversations in the field of literacy where the definitions, purposes, and practices of reading have been made problematic. It also invites participants to engage the notion that knowledge for teaching and research comes from inquiry into the questions, issues, and contradictions that arise from everyday life. The course provides historical lenses for comparative analyses of theoretical frameworks and research paradigms as well as opportunities to investigate participants' individual histories as well as teaching and research interests.
Taught by: Campano
Course offered fall; even-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 836 Issues in Instructional Leadership in Reading and Writing
Participants will consider current critical issues in Reading, Writing, and Literacy, such as: improving accountability and assessment; approaches to professional development and curriculum development; and the use of scientifically 'valid' research to advance literacy learning.
Taught by: Waff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 838 Applied Research & Reporting
Hands-on experience conducting applied research. Students will be guided through a research project of relevance to education or social policy chosen by the student, with assistance from the instructor. The research entails analysis of one or more public or quasi-public use data sets, such as the National Longitudinal Survey of Youth; the National Longitudinal Survey of Youth Child Supplement; The Teenage Parent Demonstration Data Base; the National Profile of Child Care Settings Data Base; or the National Post Secondary Student Aid Survey. The students will prepare journal-length papers based on their research and respond to the reviews of classmates and the instructor. Prerequisite: Competence in basic statistics and computer literacy.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 845 Seminar in Microethnography
This course provides an introduction to theory and method in the unified analysis of verbal and nonverbal behavior as it is culturally patterned, socially organized, and socially organizing in face-to-face interaction, in an approach that integrates participant observation with the detailed analysis of audiovisual records. Students read relevant literature in linguistic anthropology, interactional sociolinguistics, conversation analysis, and embodiment in social interaction. Class requirements include in-class reading presentations, a small microethnographic research project, and several short data analysis reports drawing on differing levels of analysis and differing theoretical orientations. Students review and apply methods of audiovisual data collection, transcription, processing, archiving, and presentation.
Taught by: Rymes
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 860 ISHD Proseminar
This course gives students the opportunity to better understand their own psychological development and how this interacts with their scholarship and professional development. Required course for ISHD students.
Taught by: Stevenson
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 871 Randomized Trials and Experiments
This course will cover three alternatives to conventional modeling in the social sciences: (1) design and execution of field trials in education and other social sectors including criminology, (2) quasi-experiments especially contemporary research comparing results of randomized and non-randomized trials, and (3) analysis for descriptive and exploratory purposes. The course themes include causal inference, vulnerability of models applied to observational data, recent developments computer-intensive inductive approaches to data, and related matters. Although some methodological background papers will be discussed, the seminar is case study oriented with readings from contemporary research on the topics from peer reviewed journals and well-vetted reports issued by governmental and nongovernment agencies. Cases will include work supported by IES on effects of Odyssey Math, for example, and work in the crime and justice arena. We will study the work of scholars affiliated with Penn who are actively involved in randomized and non-randomized trials, for instance, and the work of colleagues at other universities (Berkeley, Northwestern, Wisconsin, Princeton, others) and colleagues in non-profit and for profit research organizations such as Analytica, AIR, Mathematica and others that contribute to learning in this arena. Colleagues who have contributed notably to contemporary trials and related topics, and whose work we study, will be invited to present guest lectures. Seminar participants are required to read relevant papers prior to the presentations. The course is open to graduate students who have had basic statistics courses at the graduate level, and have a strong interest in evidence based policy and in studies that transcend discipline boundaries.
Taught by: Boruch
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 880 Complex, Multilevel, and Longitudinal Research Models
Strategy, application, interpretation, and reporting for simple and complex factorial, repeated measures, time series, higher-order growth, unbalanced, and multiple constant and inconstant covariates designs; error covariance structure modeling, hierarchical linear modeling, multilevel cross-classification modeling, multilevel individual growth-curve modeling, multiple-group multilevel modeling, multilevel generalized linear modeling for discrete outcomes (multilevel multiple logistic regression); Receiver Operating Characteristic curve analysis; latent growth mixture modeling.
Taught by: McDermott
Course usually offered in fall term
Prerequisite: EDUC 767
Activity: Lecture
1.0 Course Unit

EDUC 881 Applied Multivariate Statistics
Multivariate strategies for hypothesis testing, prediction, and classification including multiple regression, multivariate multiple regression, canonical regression, multiple logistic regression, multiple discriminant functions, factor analysis of scaled variables, hierarchical cluster analysis, and multivariate classification analysis; computer processing, interpretation, and reporting. Prerequisite: Permission needed from instructor.
Taught by: McDermott
Course usually offered in spring term
Prerequisite: EDUC 767
Activity: Lecture
1.0 Course Unit

EDUC 900 Research Seminar in Applied Research Synthesis Methods
Issues in research design, development of a literature review, and dissertation proposal.
Taught by: Maynard
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 911 Issues in Second Language Acquisition
This course is designed for students to be able to analyze, synthesize and discuss second language acquisition theory and research on the basis of intensive reading of work that reflects perennial and current issues in the field. Comparisons and connections are drawn from theoretical and empirical literature on second language acquisition processes, constraints, and interventions. Relevant research methods are also addressed. Topics, issues, and readings are updated each time the course is offered. Prerequisite: Permission needed from instructor.
Taught by: Butler
Course not offered every year
Prerequisite: EDUC 670
Activity: Lecture
1.0 Course Unit
Entrepreneurship in Education
Entrepreneurship in Education provides an understanding of the nature of entrepreneurship related to public/private/not for profit and non-profit educational and social organizations. The course focuses on issues of management, strategies and financing of early stage entrepreneurial ventures, and on entrepreneurship in established educational organizations. Students will learn the fundamentals of business plan design and development. This course is only available to students in the Education Entrepreneurship program. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDEN 502 Foundations of Education
Foundations of Education surveys basic issues in the philosophical and social foundations of education. The course addresses basic questions about the purpose of education, the appropriate treatment for children from different cultural and economic groups and the relationship between rigor and relevance. Intended for advanced Masters and doctoral students. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDEN 503 Management in Education
Management in Education introduces the critical management skills involved in planning, structuring, controlling and leading an organization. The course provides a framework for understanding issues involved in both managing and being managed. The class develops a systems view of organizations, examining organizations as part of a context, including but not limited to environment, strategy, structure, culture, tasks, people and outputs. Students consider how managerial decisions made in any one of these domains affect decisions in each of the others. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDEN 504 Capstone (Part 1)
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. The Capstone Experience concludes with the presentation of a new Venture Pitch and the submission of a pro forma Business Plan suitable for presenting to prospective customers, end users, investors, funders, business partners, staff and other ecosystem stakeholders. The process equips an entrepreneur or an intrapreneur to tackle the next steps of launching their venture - whether that is building a minimally viable product, testing with customers, bringing on team members or seeking funding. Prerequisite: Enrollment Education Entrepreneurship program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
EDEN 505 Foundations of Teaching, Learning & Curriculum
Teaching, Learning & Curriculum explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing, and learning? A central goal of the course is to encourage students to consider these questions and their interconnections, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDEN 506 Economics of Education: Intro
This is a survey course at the introductory level designed to provide an overview of selected theoretical, conceptual and empirical perspectives on topics in the economics of education. We will apply economic principles to analyze a wide range of educational issues. This course assumes that students have no background in economics. Many of the readings will contain technical economic material, but the focus will be on the conceptual, theoretical and empirical findings of economic research within education. It is expected that you reflect on the findings we cover and how these findings may inform and relate to your educational and professional experiences, and how economic theory and empirical evidence might inform your business plan ideas. As we move through the course, you should gain a solid understanding of how economists think about and study education-related issues. Prerequisite: Enrollment Education Entrepreneurship program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDEN 507 Design of Learning Environments
Design of Learning Environments examines different theoretical frames and strategies related to the study and design of learning environments in school, community and online contexts. Physical, social and cognitive aspects of learning situations are considered as students evaluate current research and applications in a variety of existing educational learning environments. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDEN 508 Technology Strategy
Technology Strategy is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using technology to improve business processes and offerings. The class will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDEN 509 Marketing for Entrepreneurs
Marketing for Entrepreneurs addresses how to design and implement the best combination of marketing efforts to carry out a firm’s strategy in its target markets. Specifically, this course seeks to develop the student’s (1) understanding of how the enterprise can benefit by creating and delivering value to its customers and stakeholders, and (2) skills in applying the analytical concepts and tools of marketing to such decisions as segmentation and targeting, branding, pricing, distribution, and promotion. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDEN 510 Evaluation for Education Innovation
Evaluation for Education Innovation explores the use of exploratory, dynamic and adaptive frameworks for the evaluation of social sector programs, services and products. The course draws upon core principles and methodologies from business, design, entrepreneurship, engineering and the social sciences to help build, assess and scale education innovations. Students will learn how to assess effectiveness, quality, and value through real-world education cases, and how to use evaluation tools to drive the development of their education ventures. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDEN 511 Economics of Education: Entrepreneurial Finance
Entrepreneurial Finance provides a step-by-step introduction to core finance concepts in the context of new venture design and innovation implementation planning. Main areas of course focus are solution pricing, creation of a sustainable business model, and development of a robust financial model. In this course, students will learn to use financial analytical tools and frameworks to enable a venture/innovation launch. Students will build a financial model for the venture one that will assist in making critical choices and assessing the attractiveness of an enterprise to potential stakeholders. Closing the course, we will address issues of funding and fundraising strategy. The emphasis of the course is on assisting students to apply knowledge and concepts towards their personal professional and career aspirations. Prerequisite: Enrollment in Education Entrepreneurship program.
Activity: Lecture
0.5 Course Units

EDEN 513 Design of Learning Environments 2- Design Thinking
This course is structured for students to learn design thinking principles principles experientially. Design thinking is a critical tool and problem-solving methodology that is human-centered, values qualitative research merged with quantitative metrics; and applies prototyping to services, processes and experiences. Students will apply design thinking methods to conduct basic qualitative research and work to develop a new model for transformation on a real and relevant education challenge. This course is ideal for working professionals in the education, non-profit and social entrepreneurship sectors, wanting to apply a robust methodology that yields innovative insights and actionable results. This course is only available to students in the Education Entrepreneurship program.
Activity: Lecture
0.5 Course Units
EDEN 514 Foundations of Education - Ecosystem
Through this course, students will examine global trends impacting education and learning; analyze their own enterprise idea in the context of the global EdTech Market Landscape; evaluate one possible scenario for the future of education and generated critical questions about the implications of different scenarios; and assessed the role of different data for decision making at the education market level. Prerequisite: Enrollment in Education Entrepreneurship program.
Activity: Lecture
0.5 Course Units

EDEN 515 Capstone (Part 2)
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. The Capstone Experience concludes with the presentation of a new Venture Pitch and the submission of a pro forma Business Plan suitable for presenting to prospective customers, end users, investors, funders, business partners, staff and other ecosystem stakeholders. The process equips an entrepreneur or an intrapreneur to tackle the next steps of launching their venture whether that is building a minimally viable product, testing with customers, bringing on team members or seeking funding. Prerequisite: Enrollment in Education Entrepreneurship program.
Activity: Lecture
0.5 Course Units

EDEN 601 Schools as Organizations
Schools as Organizations focuses on the theory and research concerned with the organizational and occupational side to schools and teaching. The course draws from multiple fields and perspectives, including: organizational theory; the sociology of organizations, occupations and work; educational administration; and school leadership. The objective is to have students understand and evaluate a series of different perspectives from theory, research and policy concerned with the character of the teaching occupation and the organization of schools. Prerequisite: Enrollment in the Education Entrepreneurship program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDEN 602 Technology Strategy (Part 2)
Technology Strategy is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using technology to improve business processes and offerings. The class will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDEN 602 Technology Strategy (Part 2)
Technology Strategy is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using technology to improve business processes and offerings. Education - Higher Education Management (EDHE)
These courses are only for students enrolled in the Higher Education Management executive program.

EDHE 501 Introduction to Doctoral Studies
Introduction to Doctoral Studies provides an introduction and orientation to the Executive Doctorate in Higher Education Management. This course highlights resources, strategies, and expectations for earning the Doctor of Education degree at Penn through GSE’s Executive Doctorate program. Discussions center on students’ background and goals, program curriculum and milestones, library resources and academic writing. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDHE 502 Contemporary Issues
By introducing the key issues confronting (primarily American) higher education, this course will encourage students to develop the capacity to identify, summarize and critique arguments and perspectives on these issues. Students will think concretely about the key research questions that need to be asked and answered to move these issues forward, and will begin to develop an appreciation for the kinds of data that are available to describe and analyze these issues. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDHE 503 Why History Matters
How an institution remembers its history, what use it makes of its important historical moments, and how the interpretation of those events divide or coalesce an institutions stakeholders shape our understanding of the past and, often quite powerfully, shape the present. The task in Why History Matters is to use contemporary writing and original documents to sort through historical events as historians understand them and simultaneously to ask how those events shape our current views of higher education. The module argues that historical moments are rarely simply events that once happened. They matter because interpretations of the events - some of which occurred over long periods of time- are both controversial and become part of the institutional culture at an institution. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units
EDHE 504 Proseminar I
The purpose of Proseminar is to introduce students to the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDHE 505 Proseminar II
This module builds upon Proseminar I and continues to explore the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
0.67 Course Units

EDHE 506 Strategic Management Research I
Through exploring key issues related to strategic management, students will come to an understanding of the types of possible research questions that might be pursued to enhance decision-making. This module will cover a set of topics at the heart of strategic management including management, governance, leadership, and strategic planning while maintaining focus on how the changing context of higher education influences these topics. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDHE 507 Quantitative Methods I
This course provides an overview of basic quantitative methods applicable to applied research in higher education. Students will develop the ability to recognize good data and good evidence, including the distinctions between data and evidence within the context of institutional decision-making. The course includes attention to basic approaches to quantitative research, methods of collecting and analyzing data, and usefulness of data and analyses for decision-making, and will draw on the real problems students in the class are facing in their current jobs. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units

EDHE 508 Qualitative Methods I
Intended to provide a survey of the field of qualitative research, this course focuses on foundational philosophies of qualitative inquiry and develops tools needed to conduct qualitative research. The course is designed to support students in developing a critical understanding of the various stages of qualitative research including the development of researchable questions, theoretical and conceptual frameworks, methodological stances and approaches, data collection and analysis plans as well as instrument design and implementation. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.67 Course Units

EDHE 509 Public Policy
This module is designed to help students embrace a better understanding of the broad economic/political pressures facing colleges/universities today, the role of the state and federal governments and how these roles have changed over time, the public institutional tradeoffs related changing policy environments at the state/federal level, and the political context of higher education and emerging issues related to public accountability. Through coursework, students examining one or more states in-depth, in terms of demographic, economic, and policy contexts as it relates to higher education. Course meets in Boulder, CO. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDHE 510 Leadership and Change
The module on Leadership explores how executives and senior managers in higher education can think strategically and communicate persuasively, act decisively, and build leadership and teamwork in their organizations. Students apply theory and models to real world cases, both contemporary and historical, from multiple industries. Students focus on building leadership and teamwork to anticipate challenges ahead of serving long-term organizational interests, executing decisions and policies with integrity, and identifying an mentoring those whose leadership will be needed in the future. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
One-term course offered either term
Activity: Lecture
0.33 Course Units

EDHE 511 Leading Small Colleges
This module focuses on strategies for the sustainability and growth of small colleges, asking what is required to improve competitive standing, particularly among top colleges. Students analyze real data from an institution to develop an action plan to address this question, with the assumptions made and questions asked to arrive at this plan carefully scrutinized during class discussion. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
One-term course offered either term
Activity: Lecture
0.33 Course Units
EDHE 512 Proseminar III
This module builds upon Proseminar II and continues to explore the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Course usually offered in spring term Activity: Lecture 1.0 Course Unit

EDHE 513 Strategic Management Research II
The purpose of this module is to build on and explore additional topics presented in Strategic Management Research I. Through exploring key issues related to strategic management, students will come to an understanding of the types of possible research questions that might be pursued to enhance decision-making. This module will cover a set of topics at the heart of strategic management including management, governance, leadership, and strategic planning while maintaining focus on how the changing context of higher education influences these topics. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Course usually offered in spring term Activity: Lecture 1.0 Course Unit

EDHE 514 Quantitative Methods II
The purpose of this module is to build on and explore additional topics presented in Quantitative Methods I. This course provides an overview of basic quantitative methods applicable to applied research in higher education. Students will develop the ability to recognize good data and good evidence, including the distinctions between data and evidence within the context of institutional decision-making. The course includes attention to basic approaches to quantitative research, methods of collecting and analyzing data, and usefulness of data and analyses for decision-making, and will draw on the real problems students in the class are facing in their current jobs. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Course usually offered in spring term Activity: Lecture 0.67 Course Units

EDHE 515 Qualitative Methods II
The purpose of this module is to build on and explore additional topics presented in Qualitative Methods I. Intended to provide a survey of the field of qualitative research, this course focuses on foundational philosophies of qualitative inquiry and develops tools needed to conduct qualitative research. The course is designed to support students in developing a critical understanding of the various stages of qualitative research including the development of researchable questions, theoretical and conceptual frameworks, methodological stances and approaches, data collection and analysis plans as well as instrument design and implementation. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Course usually offered in spring term Activity: Lecture 0.33 Course Units

EDHE 516 Higher Education Finance
This module focuses on strategies for the sustainability and growth of small colleges, asking what is required to improve competitive standing, particularly among top colleges. Students analyze real data from an institution to develop an action plan to address this question, with the assumptions made and questions asked to arrive at this plan carefully scrutinized during class discussion. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Course usually offered in spring term Activity: Lecture 0.5 Course Units

EDHE 517 Equity and Diversity
The goal for this course is to provide students with a critical understanding of issues of diversity in American higher education. The module is designed around functions of higher education and its success is dependent on open and mature conversations about sometimes difficult and sensitive issues that ultimately inform students' research and practice. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Course usually offered in spring term Activity: Lecture 1.0 Course Unit

EDHE 518 Managing Intercollegiate Athletics
Students will review a number of issues that resonate in higher education such as athletic department right-sizing (dropping or adding sports), leading through a PR crisis involving athletics, and strategizing whether the investment a campus is making in athletics is appropriate. Students will also clarify their understanding of the philosophical arguments surrounding an institutions organizational and Divisional classification, the roles and responsibilities of the governing bodies, the expectations and challenges that confront todays student athletes, and the market forces that drive big time college sports. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Course usually offered in spring term Activity: Lecture 0.33 Course Units

EDHE 519 University and Its Community
This course will focus on the past, present, and likely future of university-community relationships. It will provide an overview of university-community conflict, cooperation and collaboration from the colonial college to the present. Particular emphasis will be placed on developments since the early 1990s and the birth of what might be termed the engaged, democratic, civic university responsibility movement. Various approaches to university-community partnerships in the US and abroad will be discussed. Through readings, discussion, and written assignments students will develop strategies for developing effective democratic partnerships that would positively impact the community and the university and powerfully contribute to student learning and development. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Course usually offered in spring term Activity: Lecture 0.33 Course Units
EDHE 520 Managing Human Resources
This module addresses the most important tasks in managing people, from hiring to supervising to development. Our focus is first on what research tells us about the factors that drive success in these areas and second on the practice of using those principles to enhance individual and organizational performance. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
One-term course offered either term
Activity: Lecture
0.33 Course Units

EDHE 521 Leadership, Governance, and Change
The purpose of this module is to explore key issues related to these topics and the types of possible research questions and methods that might be pursued to understand these topics more deeply. The content is intended to link practice and theory. The course has a strong tilt toward non-profit four-year colleges and universities in the U.S. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDHE 522 Higher Education Finance II
The purpose of this module is to build on and explore additional topics in higher education finance presented earlier. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
One-term course offered either term
Activity: Lecture
0.5 Course Units

EDHE 523 Globalization
Following a field research project outside the United States, students will reflect on the continuing globalization of higher education and institutional implications. By exploring current issues higher education faces outside the United States, students develop a more informed understanding of domestic challenges and how these challenges might be addressed. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 524 Innovation
Globally, higher education institutions are struggling with the effects of an increasingly digital world. This course provides an overview of how digitization impacts the economics, administration, teaching and learning, and research practices of universities and colleges. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 525 International Context
The Higher Education in International Context course provides students with exposure to issues facing international higher education and uses this exposure to reflect on higher education in the United States. The course will be centered on an experiential field research project. Students will travel to another country to meet and collaborate with higher education leaders there to learn firsthand about the challenges and opportunities associated with developing and transforming higher education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
2.0 Course Units

EDHE 601 International Context
The Higher Education in International Context course provides students with exposure to issues facing international higher education and uses this exposure to reflect on higher education in the United States. The course will be centered on an experiential field research project. Students will travel to another country to meet and collaborate with higher education leaders there to learn firsthand about the challenges and opportunities associated with developing and transforming higher education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
2.0 Course Units

EDHE 602 Student and Campus Services
A scan of most any American college or university will reveal a wide variety of services, functions and activities offered in support of student learning, student expectations and student life. Such functions include robust athletic and recreation programs, comprehensive health care and comprehensive arts, culture, diversity and community service programs. Many argue the essential nature of these functions; others decry the excessive hand-holding of students and the substantial expense of these services and functions. In this module, students will review the complex landscape of campus services intended predominantly for student support and engagement. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units

EDHE 603 Technology
In this module we will discuss a range of Information Technology goals (and challenges) shared by most colleges and universities, and they may be pursued through local IT infrastructure or services contracted with external entities. We will discuss IT challenges and opportunities especially relevant to the higher education sector, making the practice of IT at a college or university different from IT in most small and large corporations. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
One-term course offered either term
Activity: Lecture
0.33 Course Units

EDHE 604 Higher Education Law
This module explores topics such as contract law, employment law, Constitutional law (freedom of speech, due process, equal protection), tort law (liability for negligence), anti-discrimination laws, and administrative law. The premise of this module is that a successful higher education executive has an understanding of the legal environment in which colleges and universities must function today. The objective of the module is to provide this understanding. From a pragmatic perspective, this knowledge enables a higher education administrator to employ preventive legal strategies in institutional decision-making. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units

EDHE 605 Enrollment Management
Enrollment management is an organizational concept with a varying set of associated strategies for achieving institutional goals. Based on institutional type and mission, these goals can range from increasing and diversifying enrollment to optimizing tuition revenue. The impact of enrollment management over the last several decades has caused institutional leaders and the public to reexamine their values regarding higher education. This course will provide an overview of multiple enrollment management models.
Students will be asked to consider the evolution and maturation of these models, the related implications of these organizational structures and strategies, and the benefits and drawbacks of enrollment management on institutions and the marketplace. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units
EDHE 606 Dissertation Workshop I
Designed to support students through the dissertation process, this course will cover topics such as: submitting to the IRB; selecting an analytic strategy; data collection and management; coding and data analysis; and structuring dissertation chapters. Students will use a structured timeline in order to successfully defend their dissertations in the spring of their second year of the program. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDHE 607 Higher Ed Entrepreneurship
The purpose of this module is to focus on an emerging future in light of today's demands, particularly balancing entrepreneurial demands with public purpose objectives. This module asks, 1) what is the future going to hold? and 2) how must college and university leaders respond? Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units

EDHE 608 New Models for Post-Secondary Education
This course will create a foundation to understand the push for reform in higher education, examine in depth several new approaches to post-secondary education in the United States, and develop frameworks for assessing new models of post-secondary education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units

EDHE 609 Capstone Seminar
The Capstone module offers a culminating experience for students to share and discuss their intellectual and professional experiences in the program and how this has prepared them for the future. It is also an opportunity for students to provide feedback on the curriculum, pedagogy, and other program elements. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 610 Advancement
In this course, students will develop an in-depth understanding of institutional advancement and an ability to relate it to the broader management of colleges and universities. The course focuses primarily on how colleges and universities attract voluntary support, and will begin with an overview of advancement and external relations before moving on to fundraising specific issues. The history of fundraising, fundraising theory, fundraising ethics, fundraising tactics and other related topics will be discussed. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 611 Teaching and Learning
Through this course, students will be able to articulate the importance of student learning from a variety of perspectives; explain the role of organizational culture and how it interfaces with student learning; understand how issues of diversity and inclusive excellence support student learning; clarify what responsibilities administrators have as campus leaders to ensure student learning; identify existing barriers to student learning; and develop strategies to overcome those barriers. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 612 Negotiating & Bargaining
Through role-plays and exercises in class, the module addresses conflict management and negotiations through focusing on behavioral skills rather than substantive knowledge, putting relatively straightforward conceptual material to use in the context of real situations. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 613 Dissertation Workshop II
The purpose of this module is to build on and explore additional topics presented in Dissertation Workshop I. Designed to support students through the dissertation process, this course will cover topics such as: submitting to the IRB; selecting an analytic strategy; data collection and management; coding and data analysis; and structuring dissertation chapters. Students will use a structured timeline in order to successfully defend their dissertations in the spring of their second year of the program. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 614 Ethics and Leadership
This module introduces some models of organizational and leadership ethics and uses case discussions and personal experiences to explore and better understand the ethical dilemmas that face leaders in higher education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDHE 615 Leadership and Change for Higher Education’s Future
Most discussions of higher education’s future focus on key and familiar trends- demographics, technology, funding, new organizational models, etc. While each trend will affect higher education, the reality is that leaders will face a multitude of challenges simultaneously and those trends will interact with each other. How can higher education leaders explore those trends and issues sufficiently and begin to prepare for how, as a set, they may impact higher education? Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units
EDHE 616 Advanced Topics in Higher Education Management III: Faculty Roundtable
Seminar on special topics on higher education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 617 Community Colleges
This module examines the historical origins, evolving mission, programmatic similarities and differences, demographics, performance, finances, governance, and presidential leadership of U.S. community colleges. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 618 Virtual Distance Learning
In this course, you will experience Virtual Distance Analytics by participating in the Virtual Distance Index Assessment, receive your own Virtual Distance Management Report, detailing where Virtual Distance is most likely impacting you and your organization as well as content to master Virtual Distance in order to reduce and manage it over time for better educational outcomes. You will learn new leadership skills and core competencies to enhance your effectiveness in the Digital Age and help your students maximize their educational potential during this process of digital transformation. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Taught by: Larry Ward
One-term course offered either term
Activity: Lecture
0.33 Course Units

EDHE 619 Quality/Risk Management
This module will focus on what leaders can do to induce a culture of quality within an academic environment. This course is only for students enrolled in the Higher Education Management executive program. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDPR 501 Social Foundations of Independent Schools I
This course examines the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. The course focuses on the role of school mission and examines how different stakeholders in the school experience the mission. In this course the student perspective is examined. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDPR 502 Introduction to Teaching as Inquiry
This course explores foundations of learning theory and pedagogy, covering classic theories of learning through the latest research in brain science. These theories are put into action around building the teachers capacity to provide effective feedback, construct effective learning environments, plan instruction, and implement instructional strategies. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDPR 503 Learning Theory and Instructional Design I
Building off what was learned in EDPR 502, this course continues an exploration on curricular planning and instructional practice by focusing on Understanding by Design as a planning framework and builds the teachers capacity to observe classroom activity to analyze the effectiveness of learning in that classroom. The course continues to build the teacher’s capacity to improve instructional practice with a focus on the implementation of instructional activities. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 504 Field Seminar I
This course carries the credit for the weekly school-based course for the fall of the 1st year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 506 Reflective Practice in Schools I
This course carries the credit for online theory to practice sessions in the fall of the 1st year of instruction. During these sessions, students follow a protocol in which they engage in a process of instructional rounds that involve 1) readings about the focal topic 2) sharing video of classroom practice 3) observing video of other teachers in their cohort and 4) meeting with other fellows in the program to discuss their analysis of the videos shared with one another. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 507 Social Foundations of Independent Schools II
This course is a continuation of EDPR 501, examining the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. The course focuses on the role of school mission and examines how different stakeholders in the school experience the mission. In this course the faculty and administrator perspectives are examined. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
EDPR 508 Adolescent Development and Classroom Applications
This course builds the teacher's understanding of adolescent risk development dealing with topics such as identity development, risk taking, sexuality, relationships, and racial and ethnic identity development. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 509 Field Seminar II
This course carries credit for the weekly school-based course for the spring of the 1st year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 510 Methods I - Modern Language
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 511 Methods I - Math
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 512 Methods I - Social Studies
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 513 Methods I - Science
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 514 Methods I - English
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 515 Methods I - Independent Study
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 516 Reflective Practice in Schools II
Though this course is listed in the fall, the course carries the credit for online theory to practice sessions in the spring of the 1st year of instruction. During these sessions, students follow a protocol in which they engage in a process of instructional rounds that involve 1) readings about the focal topic 2) sharing video of classroom practice 3) observing video of other teachers in their cohort and 4) meeting with other fellows in the program to discuss their analysis of the videos shared with one another. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 517 Advanced Methods of Inquiry I
This course develops students' capacity to reflect on their practice and growth as practitioners over the course of the program, examining their own development through the use of rubrics and reflective analysis to build a portfolio that outlines this growth and identifies a plan for continued growth in the future. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units
EDPR 602 Advanced Methods of Inquiry II
This course develops student’s capacity to articulate and investigate an inquiry question about their own practice. The course builds the capacity of the teacher to use qualitative research strategies to systematically investigate and improve elements of their practice that are important to student learning. The course focuses on qualitative modes of inquiry, building researchable questions, and collecting data. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDPR 603 Social Foundations of Independent Schools: Advanced I
This course examines the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. The course focuses on the role of school mission and examines how different stakeholders in the school experience the mission. In this course, the parent perspective is examined. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 604 Advanced Learning Theory I
This course continues a focus on applying learning theory to educational practice, building on EDPR 505. The course supports students to build capacity to: understand the latest research on teaching and learning, provide effective feedback, lead instruction that supports active learning, develop effective classroom learning environments, and plan instruction using the Understanding by Design framework. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 605 Advanced Field Seminar I
This course carries credit for the weekly school-based course for the spring of the 2nd year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 606 Social Foundations of Independent Schools: Advanced II
This course examines the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. In this course, the outsider/societal perspective is examined; in particular, the course engages with the historical and contemporary context of public schooling in the United States. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 607 Advanced Learning Theory II
This course is a continuation of EDPR 604, with a focus on applying learning theory to educational practice. The course supports students to build capacity to: understand the latest research on teaching and learning, provide effective feedback, lead instruction that supports active learning, develop effective classroom learning environments, and plan instruction using the Understanding by Design framework. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 608 Advanced Field Seminar II
This course carries credit for the weekly school-based course for the spring of the 2nd year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 609 Masters Seminar
This course supports the students construction of their final portfolio, with a focus on supporting data collection and analysis around the students inquiry project and analysis of program competencies. These two components form a portfolio that serves as the final assessment for the program. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 610 Methods II- Modern Language
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 611 Methods II- Math
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in fall term
Activity: Lecture
0.5 Course Units
EDPR 612 Methods II- Social Studies
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 613 Methods II- Science
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 614 Methods II- English
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 615 Methods II- Independent Study
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

Education - Medical Education (EDME)

These courses are only available to students in the Medical Education program.

EDME 501 Applied Learning and Technology in Medical Education
This course is embedded in a block of three courses focusing on learning and technology in medical education. This course focuses on historical and current learning methods and practices, as well as learning technologies in medical education. Topics include the fundamentals of learning theories, effectively applying emerging technologies in medical education, adult learning and development, diversity, inclusion and medical education, and the challenges of teaching/learning in modern academic medicine and within the healthcare context. Prerequisite: Enrollment in Medical Education program.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDME 502 Learning & Instructional Design in Medical Education
This course is embedded in a block of three courses focusing on learning and technology in medical education. This course focuses on the design and delivery of medical education programs and interventions. Topics include current trends in medical education, pedagogy, curriculum and instructional design, assessment of learning and educational initiatives, and implementation of learning interventions in an uncertain environment. Prerequisite: Enrollment in Medical Education program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDME 503 Managing Technology in Curriculum in Medical Education
This course is embedded in a block of three courses focusing on learning and technology in medical education. This course focuses on selecting, embedding and managing technology in the medical education curriculum. Topics include the role of experiential learning in medical education, simulation, the virtual learning environment and emerging technologies, group dynamics, and the instructor-learner relationship. Prerequisite: Enrollment in Medical Education program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDME 504 Evidence Based Medical Education
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on research and research methods in medical education. Topics include quantitative, qualitative, and mixed methods research design in medical education. Specifically, students will explore the philosophical foundation of research, conducting the literature review, introduction to quantitative and qualitative data collection and analysis, the role of language in research, and developing research questions. Prerequisite: Enrollment in Medical Education program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDME 505 Assessing Medical Instruction
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on research and research methods to measure the effectiveness of medical education practices. Topics include assessment of learning outcomes, how to critically evaluate medical education research, evaluating the impact of learning interventions, and evidence-based decision making. Prerequisite: Enrollment in Medical Education program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDME 506 Evidence Based Medical Education II
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on advanced topics in research and research methods in medical education, as well as the development of medical educator skills. Specific topics include advanced quantitative, qualitative, and mixed methods research skills, and medical educator skills (e.g., story development, coaching, remediation and feedback, and presentation skills). Prerequisite: Enrollment in Medical Education program.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
EDME 545 Medical Education Experimental Course
This topic course explores multiple and different aspects of Medical Education. Specific course topics vary from year to year. Consult with the program for current course offerings.
Activity: Lecture
1.0 Course Unit

EDME 601 Leadership Skills in Education
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on leadership theories, models, and skills. Topics include a historical review of leadership theories and models, as well as an exploration of current research on leadership in organizations. Students will explore the competency-based approach to understanding effective leadership, emotional intelligence, employee engagement and happiness at work, and team dynamics as they relate to the medical education context.
Prerequisite: Enrollment in Medical Education program.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDME 602 Leadership Effectiveness in Medical Education
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on individual leadership development and will provide students with experiences, perspectives, and theories that will enable them to better understand themselves in the context of a diverse, changing world and a rapidly changing industry. Topics covered include adult development, adult learning, perception, bias, diversity and inclusion, emotional and social intelligence, and the role of values and ethics in leadership.
Prerequisite: Enrollment in Medical Education program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDME 603 Directing Education Programs
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on the competency-based approach to understanding effective leadership, emotional intelligence, employee engagement and happiness at work, and team dynamics as they relate to the medical education context.
Prerequisite: Enrollment in Medical Education program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDME 604 Capstone: Leadership in Medical Education I
This course focuses on academic and practical skills needed to prepare students for the final Capstone assignment, inclusive of all elements of the masters thesis portfolio. Specific topics include influencing across cultural boundaries in organizations, building teams to create sustainable change, and advanced medical educator skills (e.g., story development, coaching, remediation and feedback, and presentation skills).
Prerequisite: Enrollment in Medical Education program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDME 605 Capstone: Leadership in Medical Education II
These courses are only for students enrolled in the Mid-Career Doctoral Program in Educational & Organizational Leadership.

EDMC 601 Leading Teams and Fostering Learning Communities
This module is designed to help students learn what is known about teams and team leadership. It will be both research and case based. Drawing on the research literature, it will help students understand the nature of the different kinds of work teams are asked to do and how teams may be structured for effectiveness, depending on their objectives. Students will be asked to examine two cases that reflect different objectives and different designs. Through a field-based assignment, particular emphasis will be given to the various kinds of teams and groups principals, heads of schools, superintendents and others associated with the educational enterprise must work with and lead. As they work on their projects in this module, in other modules and in particular, in the Practitioner Research Module this fall, participants will also learn how to collect and make meaning of data on teams they choose to study.
Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDMC 602 Social Foundations of Education
This module provides the basis for more rigorously and thoroughly understanding the key, big picture, foundational issues of education, such as defining education, exploring common goals of education, and moral and political challenges in education. This module will introduce students to a handful of standard intellectual frameworks and provide guided challenging of prevalent assumptions about education. A handful of humanistic and scientific approaches will be used, but the principle disciplinary lens will be sociocultural anthropology, which investigates shared norms, values and activities within and across social groups.
Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDMC 604 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. Prerequisite: Enrollment in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDMC 605 Frameworks for Understanding Literacy, Teaching & Learning
Designed as a collaborative inquiry, this module will provide a range of contexts for exploring the nature and purposes of literacy education in the 21st century. Individually and collectively, we will unpack the conceptual frameworks -the images, practices, assumptions, and beliefs- that structure our understanding of what it means to teach and learn literacy in various settings. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
EDMC 606 Exploring Frameworks for Learners and Learning
This module will use a contextual approach to examine individual developmental issues across the life-course, specifically learner’s identities and pathways to learning. In addition to investigating how children learn at school, home, and in their communities, students in the course will become their own units of analyses. It is sometimes advantageous in fields of education and social science to regard oneself and life experiences as a point of departure in order to make sense of larger social forces. To that end, we will reflect on our own learning at different points throughout our lives and within a variety of social and educational contexts. This approach assumes that educational leaders might better understand and respond to developmental issues and identity formation of teachers and students by (re)examining our own biographies as learners and professionals and the interconnectedness of these roles and the expectations associated with them. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 607 Qualitative Research Methods I
This year-long course will introduce students to the foundations, theories, methods, and practices of qualitative inquiry broadly and practitioner research specifically. This course is intended to teach students, who are educational leaders, what research is, both historically and currently, and in terms of its promise for guiding informed, inquiry-based practices, including the practices of change and reform. Further, this course is designed to prepare students to conduct qualitative research in their own educational or community-based settings. Students will be guided through a systematic and self-reflective process of learning to become reflective, ethical, and critical researchers. Students will be supported as they develop a theoretically strong practice of qualitative research that is directly informed by their own professional experiences, questions, and contexts. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 608 Quantitative Methods I
This module focuses on the use of statistics for analyzing numerical data from educational contexts. The course materials and assignments are designed to help you gain the skills and knowledge required to plan and conduct high quality quantitative research. As such, the curriculum for this course focuses on the statistical methods most frequently used in education research and provides examples of the application of these methods using real data. This is an applied methods course, so the content will not be highly technical. While we will discuss some of the details of the mathematics behind statistics, we will place much more emphasis on understanding the concepts behind the statistics
What does each method do? How does it work? How do we interpret the results? This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Taught by: Leslie Nabors Olah
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 609 Leadership and Literature
Running a school is about understanding yourself and the perspectives of others to include your administration and staff, your students, their parents, alumni, and the larger school community. Good literature deepens your self-awareness and provides a wider appreciation of the experiences of others. Literature lets you experience what leaders are thinking and feeling and see how their decisions affect the lives of others. Reading literature opens insight into the most complex human issues, provides access to multiple human perspectives, and develops in school leaders empathy for the human condition and the complexity of the leadership challenges they face. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 611 Understanding Race and Politics
Using a culturally responsive philosophical world view and a racial socialization framework, this course will cover theoretical frames for shifting educational leaders’ assessment, engagement, and processing, and problem-solving of racial tension within educational contexts. The course will follow a self-development, emotions processing and interactive role- playing format where participants will offer experience from their own schooling and employment challenges where racial politics are at play. This course fits within the Understanding Context, Self, Others, Vision & Direction theme of the Mid-Career program. The objectives of this course include helping students to develop useful knowledge on racial literacy and practice of racial negotiation skills in the following areas: theorizing about managing racial politics in urban schooling, identifying the impact of racial microaggressions on psychological adjustment, applying problem-solving strategies to address racial tensions in relationships, policies, and curricula. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
EDMC 612 Introduction to Education Research
This course is designed to introduce students to the cycle of inquiry used in the on-going process of school reform and improvement. In this process, methods of gathering and analyzing various types of quantitative and qualitative data are central to central to posing questions, testing hypothesis, and evaluating new programs and initiatives—all of which are components of the inquiry cycle. This course will provide students with a hands-on opportunity to experience using the inquiry cycle to guide the exploration of the causes and effects student performance and possible means of improving poor performance through the analysis of internal data from a case study of a school district with twenty elementary schools. Analysis of both quantitative and qualitative data will be a particular focus of this guided inquiry, with the goal of helping students to begin developing fluency in these methods. Students will be asked to take on the responsibility of the superintendent of this school district and in this role, lead a team in the investigation of the problems underlying the schools’ performance on the statewide assessment of fourth grade writing skills. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 613 Quantitative Methods II
This module focuses on the use of statistics for analyzing numerical data from educational contexts. The course materials and assignments are designed to help you gain the skills and knowledge required to plan and conduct high quality quantitative research. As such, the curriculum for this course focuses on the statistical methods most frequently used in education research and provides examples of the application of these methods using real data. This is an applied methods course, so the content will not be highly technical. While we will discuss some of the details of the mathematics behind statistics, we will place much more emphasis on understanding the concepts behind the statistics. We will investigate what each method does, how it works, and how we interpret the results. Prerequisite: this course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Taught by: Leslie Nabors Olah
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 614 Qualitative Research Methods II
This year-long course will introduce students to the foundations, theories, methods, and practices of qualitative inquiry broadly and practitioner research specifically. This course is intended to teach students, who are educational leaders, what research is, both historically and currently, and in terms of its promise for guiding informed, inquiry-based practices, including the practices of change and reform. Further, this course is designed to prepare students to conduct qualitative research in their own educational or community-based settings. Students will be guided through a systematic and self-reflective process of learning to become reflective, ethical, and critical researchers. Students will be supported as they develop a theoretically strong practice of qualitative research that is directly informed by their own professional experiences, questions, and contexts. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 615 Public Leadership: History
This module will examine how Americans have used their public schools to make citizens, from the birth of the republic into the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of America itself? Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 616 Leadership Seminar: Theory & Cases
Central to enhancing the leadership practice is the deepening of competency to frame and reframe challenges. Through a series of guest instructors, this seminar will address intentionally distinctive perspectives on leadership practice, toward the development of increased reframing skills. Conceptual frames will include change management theories, entrepreneurship, recent leadership theory, and equity/social justice. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 617 Exploring/Enacting Leadership for STEM
Our approach to the STEM module embraces all three of these meanings of STEM. Our aims are to 1. introduce you to the critical competencies and practices that are at the heart of STEM learning and activity regardless, 2. ensure that you understand the key components of the four content domains brought together by STEM, and 3. provide opportunities for you to imagine and design STEM learning opportunities in your educational site. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 701 Proseminar I (Research Methods)
The goal of this course is to support you in your first steps toward forming your dissertation proposal. Beginning this process can be daunting for many doctoral students, but the clearer you are in articulating your research questions and the more knowledgeable you are about the research literature informing your questions, the more successful you will be in efficiently completing a strong proposal. To this end, we will focus on the relationship between reviewing the research literature, developing a conceptual framework, asking researchable questions, and choosing appropriate methods for addressing such questions. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units
EDMC 702 Leadership and Emotional Intelligence
The Leadership and Emotional Intelligence Module will focus on concepts and practices that will enable you to become a great leader. Through the study of social and emotional intelligence, you will become familiar with competencies that actually work in the real world of organizations and institutions. You will learn how these concepts have been identified, how they can be applied, and how to develop them in yourself and others. As part of the course, you will engage in reflective exercises that enable you to focus specifically on your own leadership - your strengths, your weaknesses, your vision for yourself as a person and as a professional, and how you plan to realize this vision and your goals. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDMC 703 Public Policy Workshop I
This workshop provides a survey of key policy debates and the various ways in which issues can be assessed and contested. The course explores democratic governance, education policymaking, and the way policy shapes education practice. Four topics will frame the class: the nature of public policy, the question and politics of accountability, the topics of teacher quality and school choice, and how science, research, and innovation interact with policy. Specific topics that the class will touch upon will include No Child Left Behind, Teach For America, charter schooling, scientifically based research, and parent trigger laws. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDMC 704 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDMC 705 Public Leadership: Social Contexts
This module will focus on conceptual, pedagogical, and practical issues typically studied under the headings, social context and social capital. It will examine families as a particular cultural and social context in which learning takes place and in which learners are engaged and engage others. Class meetings will be designed around three questions that will serve as themes for our reflections and discussions over the course of the module. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDMC 707 Educational Brand Management
This class experience is designed to provide experienced educational leaders with the requisite skills and knowledge necessary to design, implement and manage a brand identity for educational organizations, primarily schools or school districts. Successful branding is a comprehensive management issue. In schools, proactive and successful brand management builds financial and emotional value that enables success for the school or school district. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 708 Research Proposal & Instrument Design I
In the first module, students will receive structured assistance as they develop a solid research plan that includes refining their research questions' theoretical framework, identify and marshal literature in support of the planned study, devise a research design, identify and/or construct instruments to collect data, and produce a plan for analysis. Ideally, the first module will culminate in the completion of the dissertation proposal. The second module will focus on data collection and analysis as well as study implications. The two modules in this course are designed to provide structured support to students as they proceed with their dissertation work. While there will be didactic instruction on selected topics, significant time will be spent in small groups iteratively and collaboratively working through common challenges that students face in developing an empirical piece of research that emerges from their practice. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 709 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDMC 710 Organizational Diagnostics
Leaders in education are constantly presented with organizational challenges and opportunities for innovation. Each system has its own characteristic strengths and dynamics. Organizational Diagnosis is a process by which school leaders can learn to systematically see a system and decide what to do. This course will teach a sound framework for understanding and enhancing a system. The process focuses on identifying and defining an organizational issue, collecting and analyzing data on the system to create a narrative for what is and a roadmap for what ought to be, and determining the measure and method of feedback to both promote increased understanding of the situation and energize the school to take action. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered in fall term
Activity: Lecture
0.5 Course Units
EDMC 711 Engaging the Polis and Public of U.S. School Reform I
In recent decades, significant institutional changes to the education policy landscape have made local public engagement more difficult. Among these changes are increased centralization of policymaking in the federal government and in state governments, the rise of charter schools and portfolio management models, and mayoral and state takeovers of urban school districts. In this part of the module, we examine scholarship addressing the new landscape and the challenges it poses to community-based groups and to democratic decision-making. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 713 Research Proposal & Instrument Design II (Continued)
In the first module, students will receive structured assistance as they develop a solid research plan that includes refining their research questions’ theoretical framework, identify and marshal literature in support of the planned study, devise a research design, identify and/or construct instruments to collect data, and produce a plan for analysis. Ideally, the first module will culminate in the completion of the dissertation proposal. The second module will focus on data collection and analysis as well as study implications. The two modules in this course are designed to provide structured support to students as they proceed with their dissertation work. While there will be didactic instruction on selected topics, significant time will be spent in small groups iteratively and collaboratively working through common challenges that students face in developing an empirical piece of research that emerges from their practice. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 714 Creating Contexts for Teacher Learning and Leadership
This module will be a collaborative inquiry into the nature and relationships of teaching, teacher learning, and teacher leadership and their implications for leading learning in a school, district, or other educational organization. It will build on your work in other strands of the program, especially the Instructional Strand in which you have been taking up current perspectives on teaching and learning in various subjects and promising ways to provide leadership at the level of the department, school, and district, as well as in other educational organizations. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 715 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDMC 717 Organizational Theory
This module examines organizations as organizations and leadership within these organizations to address fundamental questions regarding how organizations come to be, persist, and/or change. Over the semester, we will grapple with questions regarding when and under what conditions do leaders effect meaningful organizational change. Students will be asked to reflect on their own leadership experiences inside organizations as well as potential changes to their approaches. In this way, students will gain knowledge and skills regarding the structures of educational organizations and the enabling and constraining conditions for leadership. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 718 Instructional Technology
This module involves exploration and analysis of historical and contemporary ideas about instructional technology, as well as the development of practical applications for such theories. Our focus will be on K-12 contexts; however, we will also consider how relevant experiences and practices with technologies outside of schools are related to what happens within. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 719 Leadership for Humanities
This course builds on previous learning in the Frameworks for Understanding Literacy Teaching and Learning module. After having encountered a range of perspectives about the nature of literacy (with an emphasis on literacy as critical social practice), we will examine the links between educational leadership and literacy teaching and learning. Seeing leadership as a shared enterprise, we will explore the core elements of a distributed perspective on literacy leadership at every level with a district/school community. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 801 Proseminar II: Data Analysis and Reporting
The goals of this module are twofold. First, it aims to provide students with a set of practical skills for making sense of qualitative and mixed data. Students will practice organizing and coding qualitative data, use various techniques to develop hypotheses and draw conclusions based on data, and apply these skills to their own dissertation research. Second, this module seeks to enable each student to make significant progress on his/her research over the course of the week. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDMC 803 Dissertation/Research
Dedicated dissertation research hours in year three of the program. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
2.5 Course Units
EDMC 805 Inquiry Seminar
The purpose of the Inquiry Community session is two-fold: to provide students with assistance with problems that occur in the process of doing qualitative or quantitative data analysis and to develop reflective processes for examining data that students can use in their settings of practice. The sessions should serve the practical purpose of providing students with support as they solve problems associated with issues of interpretation, and work toward the completion of their dissertations. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 806 Advanced Issues in Educational Leadership I
As a capstone integrative experience, this module features a series of day-long workshop-style sessions on Saturdays of the third program year. These Saturday Experiences will allow students to revisit core themes raised in various modules during the program and provide an opportunity to extend prior module work in new synthetic ways. Sessions will revisit each student’s leadership philosophy, engage constructs of decision-making and judgment, continue discussions around diversity and privilege, engage alumni leadership challenges, re-engage data analysis, take a further view into the global field of educational leadership, and reprise the three-year program experience. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 807 Dissertation/Research
Dedicated dissertation research hours in year three of the program. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
1.0 Course Units

EDMC 808 Leading Instructional and Curricular Change
This course is the Capstone Module for the Instructional Leadership strand of the Mid-Career Doctorate Program. A first emphasis of the module will be on several topics that have not yet been directly addressed during the program. The module is designed to provide opportunity to deal more intensively with topics and others that are identified through our initial discussions. A second focus of this course is on the process of collaborative problem-posing and problem-solving around issues in instructional leadership you are currently facing. To engage these topics and issues, we will draw on your experience as well as what has been addressed so far in the Instructional Leadership modules. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 809 Advanced Issues in Educational Leadership II (Continued)
As a capstone integrative experience, this module features a series of day-long workshop-style sessions on Saturdays of the third program year. These Saturday Experiences will allow students to revisit core themes raised in various modules during the program and provide an opportunity to extend prior module work in new synthetic ways. Sessions will revisit each student’s leadership philosophy, engage constructs of decision-making and judgment, continue discussions around diversity and privilege, engage alumni leadership challenges, re-engage data analysis, take a further view into the global field of educational leadership, and reprise the three-year program experience. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
2.0 Course Units

EDMC 810 Dissertation/Research
Dedicated dissertation research hours in year three of the program. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
2.0 Course Units

EDMC 811 EBL Capstone-Data Informed Inquiries
The goal of this module is to learn to apply the concept of data informed improvement into our daily practice. The field of educational improvement shares a set of goals, frameworks, and methods with other fields like organizational learning in sociology, continuous improvement in business and evidence-informed improvements in medicine. Each of these fields has its own set of frameworks and language to describe the improvement process, but they are all based on the notion of using data to inform continuous learning and improvement. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership
Taught by: Jon Supovitz
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 812 Engaging the Polis and Public of U.S. School Reform II
In recent decades, significant institutional changes to the education policy landscape have made local public engagement more difficult. Among these changes are increased centralization of policymaking in the federal government and in state governments, the rise of charter schools and portfolio management models, and mayoral and state takeovers of urban school districts. In this part of the module, we examine scholarship addressing the new landscape and the challenges it poses to community-based groups and to democratic decision-making. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

Education - Penn Chief Learning Officer (EDCL)
These courses are only available to students in the Penn Chief Learning Officer program.
EDCL 545 Penn Chief Learning Officer Program Experimental Course  
This topic course explores multiple and different aspects of Chief Learning Officer Program. Specific course topics vary from year to year. Consult with the program for current course offerings.  
Activity: Lecture  
1.0 Course Unit

EDCL 701 Learning Technology in the Workplace  
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on the role of technology in learning at work. This course focuses on the evolution of technology in organizations and a review of the most current technologies in use in organizational learning today. Topics include the history of and new directions in learning technologies, emerging learning technologies, security and privacy in a high-tech world, evaluating technological solutions for organizational learning needs, and evaluating learning technologies in light of organizational goals. This course is only available to students in the Penn Chief Learning Officer program.  
Activity: Lecture  
1.0 Course Unit

EDCL 702 Technology Strategies for Corporate Learners  
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on the role of technology in advancing learning in organizations. Topics include designing technology-enabled learning environments, using simulations, games, and apps, choosing and evaluating e-tools, educational entrepreneurship, evaluating technology-enabled learning interventions. Prerequisite: Enrollment in Penn Chief Learning Officer program.  
Activity: Lecture  
1.0 Course Unit

EDCL 703 Managing Technology in the Workplace  
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on managing learning technologies in the modern organization. Topics include identification and selection of learning technologies, managing change, communication skills to influence decisions about technology change/adoption/implementation, and implementation of learning technologies. Prerequisite: Enrollment in Penn Chief Learning Officer program.  
Activity: Lecture  
1.0 Course Unit

EDCL 704 Individual Effectiveness  
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on individual leadership development and will provide students with experiences, perspectives, and theories that will enable them to better understand themselves in the context of a diverse and changing world. Topics covered include adult development, adult learning, perception, bias, diversity and inclusion, emotional and social intelligence, and the role of values and ethics in leadership. Prerequisite: Enrollment in Penn Chief Learning Officer program.  
Activity: Lecture  
1.0 Course Unit

EDCL 705 Organizational Leadership  
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on leadership in the context of the modern organization. Students will review the history of management science as well as current research and practices in the areas of organizational culture, organizational change, organizational effectiveness, organizational diagnosis, engagement and happiness at work, and coping with stress in leadership roles. Prerequisite: Enrollment in Penn Chief Learning Officer program.  
Activity: Lecture  
1.0 Course Unit

EDCL 706 Functional Leadership  
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on managing teams within and across all functions of the organization, as well as functions in the organization that are responsible for talent management, leadership development, and human resources. Topics covered include team dynamics, organizational structure, talent management, and the impact of historical models and theories as well as globalization and demographic shifts that impact organizations. Prerequisite: Enrollment in Penn Chief Learning Officer program.  
Activity: Lecture  
1.0 Course Unit

EDCL 707 Learning Leader as Performance Consultant  
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on research and current practices in leadership development and organizational effectiveness. Topics covered include the models of individual change and development, the relationships among and between individual, team and organizational effectiveness, individual and large-scale leadership development, executive coaching, aligning and integrating learning and performance with organizational goals, and evaluation of learning interventions. Prerequisite: Enrollment in Penn Chief Learning Officer program.  
Activity: Lecture  
1.0 Course Unit

EDCL 708 Organizational Effectiveness  
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on the role of learning and development in organizational effectiveness. Topics covered include current learning practices in organizations, historical and current research on the efficacy of learning interventions in organizations, and designing learning interventions for individuals and groups in organizations. Prerequisite: Enrollment in Penn Chief Learning Officer program.  
Activity: Lecture  
1.0 Course Unit

EDCL 709 Organizational Learning  
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on theories and models of learning in organizations. Topics include learning theories, pedagogy and curriculum in adult learning, implications of the diverse global workforce for learning and development in organizations, organizational success and learning in an uncertain environment, and assessment of learning in organizations. Prerequisite: Enrollment in Penn Chief Learning Officer program.  
Activity: Lecture  
1.0 Course Unit
EDCL 710 Individual and Social Learning
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on the role of cognition in learning as well as the impact of the social context on individual learning and change. Topics covered include the cultural foundations of learning, action learning, informal learning, and the impact of organizational culture on individual learning and organizational change. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 711 Marketing for Executives
This course is embedded in block of three courses focusing on business acumen. This course focuses on strategic marketing. Topics covered include research and practices related to branding, managing innovation, customer contact and customer service, communication in business, crisis communication, the interaction of marketing and strategy, and the impact of marketing on organizational effectiveness. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 712 Finance for Executives
This course is embedded block of three courses focusing on business acumen. This course focuses on business and corporate finance. Topics include basic financial tools, and practices, global finance, micro- and macroeconomics in the context of business finance, strategy and decision making, the relationship between strategy and finance, strategy execution, mergers and acquisition, and governance. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 713 Management for Executives
This course is embedded block of three courses focusing on business acumen. This course focuses on topics impacting the modern business world, as well as topics impacting not-for-profit, government and non-governmental organizations. Specific topics include global trends and strategy, people analytics, talent management, employee engagement, entrepreneurship, and social entrepreneurship. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 714 Masters Thesis (CLO)
This online course guides students through a process of identifying a topic, reviewing historical and current literature, forming an argument for a research study, and writing the masters thesis. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Masters Thesis
1.0 Course Unit

EDCL 715 Qualitative Data Analysis
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on qualitative research in organizations. Topics include researcher positionality, theoretical and conceptual frameworks, the role of research questions in instrument development, common qualitative research data collection methods (e.g. interviews and focus groups), qualitative data analysis methods (e.g. coding, thematic analysis), and research ethics. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 716 Quantitative Data Analysis
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on quantitative research in organizations. Topics include hypothesis design and testing, variables, descriptive and analytic statistics, and critically evaluating quantitative and mixed methods research. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 717 Research Design & Delivery
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on qualitative, quantitative, and mixed methods research design. Topics include designing conceptual frameworks, designing research questions, conducting a literature review, designing qualitative and quantitative data collection and analysis methods (e.g. designing interview protocols and surveys), and research ethics. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 802 Practicum (CLO)
Practical application of academic program content. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Field Work
0.0 Course Units

EDCL 995 Advanced Dissertation Research Methods
This course provides students with further development of research and writing skills, guidance on the formation of a research question, literature review, and research design for the doctoral dissertation. The course also provides guidance on conducting doctoral research and writing the dissertation. Under guidance of the chair of the dissertation committee, students will write a dissertation to be evaluated by the committee chair and committee members. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Dissertation
1.0 Course Unit

Education - School & Mental Health Counseling (EDSC)
These courses are only available to students in the Executive Program in School and Mental Health Counseling.
EDSC 501 Ethics & Professional Principles in School & Mental Health Counseling
This course is designed to fulfill the Professional Orientation requirement of state licensure, as well as the Ethics and Professional Orientation requirement of the Planned Program of Study. It provides an opportunity for students to learn clinical skills and to refine skill application with clients. Students are also able to integrate theory and the other components of the program (Human Growth & Development, Social & Cultural Foundations, Helping Relationships) into practical application in this course. This course will assist students in the development of their knowledge and skills in ethical decision-making, ethical standards related to the field of school and mental counseling. In addition, a primary goal of this course is to help each student increase his/her knowledge of self as a provider of counseling services to others. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling. Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDSC 502 Counseling Interventions: Theory & Practice
This course will provide an overview of several of the primary theories of counseling, along with the key concepts and therapeutic processes related to those theories. Students will be guided to demonstrate a working knowledge of the theories presented, to be able to distinguish between different approaches, and develop a preliminary rationale for the use of a particular approach. The main objectives of the course are for the student to develop a working knowledge of the theories of counseling and the practical counseling interventions derived from those theoretical perspectives, and to begin practicing the applications of this knowledge. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling. Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDSC 503 School & Mental Health Counseling: Practicum I
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as through structured supervised learning opportunities in schools and clinical settings. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling. Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDSC 504 Assessment for Counselors in School & Mental Health Counseling
This course seeks to help students understand the assessment process including the theoretical and historical basis as well as legal and ethical concerns. Students will develop knowledge of concepts of measurement including descriptive statistics, central tendency, norms, reliability, validity, etc. This course will also review assessment as it relates to educational law, entitlement decisions, and high stakes accountability, in addition to teaching students how to implement assessment techniques through observation, interview and ecological and environmental methods. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling. Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDSC 505 Sociocultural Foundations in Counseling
Understanding sociocultural and individual differences is essential to the work of counselors. This course provides a contextual and applied understanding of working with clients who are culturally diverse. The purpose of this course is to expand one's understanding of the impact of sociocultural and contextual factors, the interaction of identities, and the application of this knowledge to working with underserved and under-addressed individuals in counseling. Both intervention and prevention strategies will be addressed. The student will be required to demonstrate a working knowledge of key concepts in sociocultural counseling and the topical areas addressed in the course. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling. Activity: Lecture
1.0 Course Unit

EDSC 506 School & Mental Health Counseling: Practicum I (Continued)
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as through structured, supervised learning opportunities in schools and clinical settings. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling. Activity: Lecture
0.0 Course Units
EDSC 507 Human Development
This course explores the characteristics of developmental change over time - from infancy through late adulthood - and the processes or mechanisms underlying these changes. Students will gain an understanding of the fundamental theories and research traditions of the field, how variations in context influence development, and how theory and research can be applied to real world issues. Using a cultural ecological framework, we will examine theoretical approaches to the study of human development emphasizing the importance of contextual factors (e.g., race, ethnicity, culture, gender, socioeconomic status, historical moment, etc.) and individual perceptions in understanding growth and change. Students will be encouraged to explore developmental change and growth as they occur across different developmental periods of life and within a wide variety of settings and cultural contexts in order to help them begin to crystallize their own world-views and conceptual frameworks of human development. Throughout the semester we will search for new ideas, challenge old ones, and wrestle with paradoxical issues. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Activity: Lecture
1.0 Course Unit

EDSC 508 Applied Quantitative Methods
This course is designed for counselors in training. To that end, this course will cover topics related to statistics and research methodology using instructional strategies intended to build the capacity of counselors-in-training to understand, interpret and use statistics and research methods to support their work with students, school staff, and school administrators. The majority of the course will involve a balance of lecture, discussion, and interactive practice activities, linking statistics and research methods to counseling and the real-world responsibilities of counselors-in-training. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSC 509 Career Counseling & Development
This course addresses career development throughout the life span. It includes the nature of work, career assessment measures, classification systems, and theory related to vocational planning. Student self-assessment, career guidance programs, and unique needs of special populations are covered. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSC 510 Group Counseling
This course is designed as an introduction to the use of groups in counseling practice. Its chief purpose is to provide students with an overview of basic elements of group process, with a focus on stages of group development; guidelines for multicultural practice; ethical and professional issues in group practice; and group leadership. The course is a combination of didactic and experiential elements, including demonstrations, short lectures, discussions of group process concerns, and questions and answers. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSC 511 School & Mental Health Counseling: Practicum II
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as, through structured supervised learning opportunities in schools and clinical settings. The Practicum is the initial opportunity for students to synthesize and integrate theoretical information from course work into their individual counseling and small group work. These objectives are met at the clinical site, through individual recorded client sessions, and in class. An additional aim of this course is to help students increase and explore their own self-knowledge as providers of counseling services to others. The course promotes an awareness and better understanding of oneself, how individual understanding may impact professional practice; appreciation of others, reinforcing the importance of empathic attention to the needs of others differing from ones own (cultural, educational, and socioeconomic background); and professional development, emphasizing skill building, ethics, and providing counseling services. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSC 512 School & Mental Health Counseling: Practicum III
This course is a continuation of Practicum II for students who need to complete their field placements. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Activity: Lecture
0.0 Course Units

EDSC 545 School and Mental Health Counseling Experimental Course
This topic course explores multiple and different aspects of School and Mental Health Counseling. Specific course topics vary from year to year. Consult with the program for current course offerings.
Activity: Lecture
1.0 Course Unit

EDSC 560 School and Mental Health Counseling: Internship I
This course provides the experience necessary to develop the skills to implement a comprehensive, developmental, and collaborative school counseling or mental health program. The course also translates knowledge, skills, attitudes to practice, and competencies that foster professionalism in school and community settings. Students will also complete supervised field experiences that provide actual on-the-job experience for a minimum of 420 clock hours of instructional experience for school counselor certification and/or 600 clock hours of supervised internship and a minimum of 240 hours of direct service to individuals and groups for Licensed Professional Counselor (LPC) eligibility. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
EDSC 602 Advanced Group & Family Systems Counseling
This course will focus on the basics of systems intervention with a specific focus on families and groups, and a second focus on diversity and racial stress and literacy in systems. The purpose is to develop more advanced knowledge of practical therapeutic problem-solving skills at the graduate student level using ecological, systemic, and cultural perspectives. Students will be exposed to basic group therapy strategies with children and youth, with family interventions across various school-based emotional health diagnostic populations, and how to intervene within groups and families in which cultural differences and styles are key themes. The student will be required to demonstrate a working knowledge of the key concepts in systems intervention, to make preliminary judgments about how to apply various strategies to specific problems in a variety of naturalized and formal therapeutic contexts including schools, homes, and community centers, and evaluated on the ability to react spontaneously to moment-by-moment shifts in group and family therapy processes. Students will also be challenged to develop a preliminary rationale for a systemic theory of behavior change. Given the diversity of clients that counselors see professionally, some demonstrated knowledge of how cultural differences will be addressed in the counseling session and in the relationships of larger societal institutions will be expected. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDSC 603 Advanced Professional Development: Utilizing & Building Resources within Community Agencies & Orgs
This course is structured to create an intellectual and practice-driven inquiry community in which you as students have the opportunity to deepen and expand your understanding of the multifaceted professional roles and responsibilities of school and mental health counselors, as well as the complex systems in which these roles are formed and enacted. The primary goal of the course is to support you in developing an inquiry stance on your practice (Cochran-Smith & Lytle, 2009) as a means of enhancing the quality and meaning of your work and professional identity. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Two terms. student must enter first term.
Activity: Lecture
0.5 Course Units

EDSC 604 Foundations in Education for Diverse Learners
This course is intended to engage you in thoughtful discussion about working with diverse learners while presenting factual information about specific areas of need. Our work will be situated within a socio-cultural framework that sees our students as resources that enrich our counseling work and their communities. In this class, we will address content related to both Special Education/Students with Disabilities and English Language Learners. As such, we use three major themes as central to school counseling work and professionalism: Supporting students with disabilities and English language learners; development of inclusive and empowering student practices and environments; and supporting positive school, community and life goals which affirm diversity and ensure equitable outcomes for all students. Over the course of the semester, you will have an opportunity to clarify and challenge your beliefs about working with students with diverse learning needs in your role as a school counselor, in urban and diverse environments. In particular, through course readings, discussion, and projects students will be challenged to think deeply and thoroughly about educating diverse students in schools, through the following core elements: a) taking an inquiry stance; b) urban contexts of schools, c) supporting social justice & equity, d) integrating theory with practice. In doing so, students will critically examine their own role in providing services to students which will support equitable, positive, student- and family-centered school and life outcomes. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDSC 605 School & Mental Health Counseling: Internship I (Continued)
This course provides the experience needed to develop the skills to implement a comprehensive, developmental and collaborative school counseling or mental health program. The course also translates knowledge, skills, attitudes to practice and competencies that foster professionalism in school and community settings. Students will also complete supervised field experiences that provide actual on-the-job experiences for a minimum of 420 clock hours of instructional experience for school counselor certification and/or 600 clock hours of supervised internship and a minimum of 240 hours of direct service to individuals and groups for Licensed Professional Counselor (LPC) eligibility. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in fall term
Activity: Lecture
0.0 Course Units
EDSC 606 Advanced Counseling Skills & Human Sexuality
This course will be a hybrid course combining advanced counseling skills and counseling related to human sexuality issues. The advanced counseling skills portion of the class will be understood as an elaboration of the basic understanding of theoretical interventions learned in the first year of the program by presenting students with information about case conceptualization and more advanced intervention from three major theoretical orientations (cognitive behavioral, psychoanalytic, and emotion-focused therapy). There will also be a brief consideration of what it means to integrate and combine different theoretical approaches, if they really are as different as we think. Topics in human sexuality that commonly present in school and mental health settings will be used as the context for applying advanced skills. This course aims to present students with factual information about advanced skills and human sexuality while also providing an atmosphere in which self-reflection and affective learning can facilitate counselor development in the areas of advanced skills and human sexuality. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling. Course usually offered summer term only.
Activity: Lecture
1.0 Course Unit

EDSC 607 Healthy Development & Psychopathology
This course will familiarize counseling students with the major mental disorders, as well as with conceptions of mental health, mental health promotion, resilience and recovery. It is important that counselors, regardless of concentration or specialization, be acquainted with the language, taxonomy, conceptualizations, and developments in the study of psychopathology, as well as a sense of the lived experience of people with mental disorders. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling. Course usually offered in fall term.
Activity: Lecture
1.0 Course Unit

EDSC 608 Research and Evaluation Seminar in Counseling and Education
This course focuses on the application of research concepts and use of data in comprehensive school counseling programs. The course materials, exercises and assignments are designed to help students gain and use practical skills required to make data-based decisions. Specifically, students will learn to use data to: identify needs within the school; identify possible interventions and programs to address the needs; implement interventions and programs; monitor and evaluate the interventions to demonstrate the results of the interventions; and use data to advocate for the profession, the work, and for students. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling. Two terms. Student must enter first term.
Activity: Lecture
0.5 Course Units

EDSC 610 School & Mental Health Counseling: Internship II
Internship II, a continuation of Internship I, continues to provide the experience needed to develop the skills to implement a comprehensive, developmental and collaborative school counseling or mental health program. Students will continue to work on translating their knowledge, skills and attitudes to practice. The course also uses knowledge of the following areas to provide students with an understanding of the hand-on experiences of a school counselor K-12 and a mental health counseling professional: individual and group counseling, classroom guidance activities and academic, personal/social and career interventions; consultation, coordination, and referral; school/agencies policies and procedures; community-based agencies and referrals; working with students with disabilities and English language learners; professional, ethical, and legal considerations; assessment and evaluation techniques; supervision and professional development through Seminar Group. Enrollment in the Executive Program in School and Mental Health Counseling. Course usually offered in spring term.
Activity: Lecture
1.0 Course Unit

EDSC 611 Wellness & Addiction Counseling
This course will provide an overview of the foundations of addictions from a theoretical, practical and applicable standpoint. The basics of understanding the process of screening, assessing and treating addictions will be discussed as well as a focus on the strengths and wellness perspective of persons with addictions. In addition, students will gain an understanding of the effects and treatment of co-occurring disorders (e.g., addiction and depression). Addiction lingo, positive psychology and the various types of addictions will be addressed along with etiological models and current approaches for treatment. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling. Course usually offered in spring term.
Activity: Lecture
1.0 Course Unit

EDSC 612 Trauma in School & Mental Health Counseling
Due to the overwhelming incidence of trauma, adversity, and toxic stress among consumers of mental health services and the potential profound and pervasive impact of trauma on development, it is essential that mental health professionals gain the necessary knowledge, competencies, and skills to foster resilience and healing. This course explores how trauma impacts not only cognitive and emotional processing, but also dysregulates neurophysiology, and discusses evidence based assessments and interventions that counselors can use to help alleviate the negative impact of trauma with their clients. This course is designed to provide foundational trauma education for mental health professionals working within schools and community settings to promote their ability to recognize trauma responses, to create trauma-sensitive educational and clinical environments to foster learning, growth and health and to develop trauma responsive counseling skills. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling. Course usually offered in spring term.
Activity: Lecture
1.0 Course Unit
EDSC 701 School and Mental Health Counseling: Advanced Internship in Professional Counseling
This course is a continuation of Internship II for students who need to complete their field placements. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Activity: Lecture
0.5 Course Units
EDSC 702 School and Mental Health Counseling: Advanced Internship in Professional Counseling
This course is a continuation of Internship II for students who need to complete their field placements. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Activity: Lecture
0.0 Course Units

Education - School Leadership (EDSL)
These courses are only available to students in the School Leadership Program.

EDSL 501 Sustainability in Schools
Addresses an issue of great relevance to schools in the 21st century. As the leadership program comes to a close, students in this course will look at the issue of sustainability across the financial, environmental, and programmatic dimensions of school life. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EDSL 502 Leadership in Public, Independent & Parochial Schools
Encourage students to consider the challenges of leadership in public, independent, and parochial schools as part of the broader discussion of educational leadership in elementary and secondary education. The course will seek to identify themes that have implications for independent, parochial, and public schools and will seek to establish interconnections. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EDSL 503 Developing Instructional Leadership in Practice
Emphasizes how to connect organizational systems with schools’ instructional missions. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EDSL 504 Field Internship Seminar: Inquiring Into Organizational and Legal Dimensions of Principal Leadership
Provides the systems-thinking lens through which students inquire into how an individual's organizational leadership can support continuous school improvement through attention to school climate, program coherence, and effectiveness of instruction. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EDSL 505 Aligning Fiscal, Human, and Community Resources in Support of the School's Instructional Mission
Emphasizes the connections between the school's mission and daily decision-making (including managing budgets and funding streams, use of space, use of time, and scheduling and assignments of staff and students). Prerequisite: Enrollment in School Leadership Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EDSL 506 Instructional Leadership to Promote Learning
The first course of the program, Instructional Leadership to Promote Learning begins with an exploration of values and beliefs underlying leadership in schools. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDSL 507 Practitioner Research
Addresses an important goal of the program: developing school leaders who are skilled practitioner researchers. As an outgrowth of this course, students will engage in a practitioner research project that is the culminating experience of the program. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDSL 508 Teaming and Collaborative Leadership in Schools
Presents two conceptual models for examining organizational practice in schools: working in groups and applying moral/ethical decision-making in schools. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDSL 509 Field Internship Seminar: Leadership for School Improvement
Supports each student in becoming a reflective practitioner. Students develop the inquiry, communication, and interpersonal skills needed to build purposeful learning communities for adults and students. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDSL 510 Critical Issues in Education
Engages the leadership cohort in analysis of three important issues of relevance to contemporary school leadership: technology, globalization, and equity and access. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

Education - Urban Teaching Residency Certificate (EDTC)
These courses are only available to students in the Urban Teaching Residency program.
EDTC 503 Methods: Elementary A
This course is designed to enhance literacy and mathematics instruction that engages all students as readers, thinkers, and sense makers. In this course, we will explore the interrelationship of language, literacy, numeracy, and culture, and will co-construct a knowledge base for understanding how children learn. We will also develop and practice new routines for teaching literacy and mathematics that build on students interests, curiosities, and informal knowledge. Throughout the course, you will be encouraged to critically reflect on continually develop your teaching practice. Course readings, discussions, and assignments will offer opportunities to think in both theoretical terms and practical terms about your teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 503
Activity: Lecture
1.0 Course Unit

EDTC 504 Methods: Middle Years A
This course focuses on you as both a learner and a teacher of mathematics and science. Its development is premised on the notion that in order for you to foster understanding and engagement for all your students, you have to develop and draw on different kinds of knowledge, skills, and dispositions. As a result, the course is designed to help you hone your practice as a teacher of mathematics and science and involves learning about learners (yourself included), the understandings and conceptions they hold, and the developmental processes through which they learn. It also involves developing skills in teaching practices that engage students in mathematical and scientific exploration, creating an environment that facilitates reasoning and promotes inquiry, and finding ways to analyze and learn from your own teaching. Good teaching is essentially a decision laden process, and the decisions you make are contextually based. Consequently, the aim of the course is not to provide you with a bag of tricks that are applicable or generalizable to all situations, but rather to help you develop necessary tools for thinking and working as a teacher. These tools include ways to explore scientific and mathematical content, assess your students understanding on an ongoing basis, and help all your students develop as learners of mathematics and science. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 504
Activity: Lecture
1.0 Course Unit

EDTC 505 Methods: 7-12 English A
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course is to provide a foundation in theory and then explores how that theory works within and against existing practices in schools. We will be reflecting on practice and designing and redesigning lessons and units based on theory and best practices for adolescent literacy. This course is an overview of the theory and pedagogy needed for effective English language arts instruction. Prerequisite: Enrollment in Urban Teaching Residency Program.
Taught by: n/a
Course usually offered in fall term
Also Offered As: EDTF 505
Activity: Lecture
1.0 Course Unit

EDTC 506 Methods: 7-12 General Science/Biology A
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 506
Activity: Lecture
1.0 Course Unit

EDTC 508 Methods: 7-12 World Languages A
The objectives of this course are for teachers to be able to: Align the four domains of professional practice with world languages pedagogy, recognize and demonstrate how pedagogical theories inform effective methodologies, incorporate a variety of standards-driven instructional practices using communicative techniques that engage students, research, identify and use resources that encourage student-centered learning practices, investigate and utilize a variety of assessments that effectively measure student performance and enhance proficiency, participate in local, state and national professional World Languages organizational activities including workshops and/or conferences. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 508
Activity: Lecture
1.0 Course Unit

EDTC 512 Methods: 7-12 Science (Chemistry)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Also Offered As: EDTF 512
Activity: Lecture
1.0 Course Unit

EDTC 513 Methods: 7-12 Science (Physics)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Also Offered As: EDTF 513
Activity: Lecture
1.0 Course Unit
EDTC 515 Child Development
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 515
Activity: Lecture
1.0 Course Unit

EDTC 520 Methods: 7-12 Mathematics A
The goal of this course is to enhance the teaching and learning of mathematics through a focus on the practical application of pedagogical theory. Each week we will engage in discussions and activities centered on different pedagogical approaches, using lessons covering specific mathematical concepts as demonstration tools. We will also use class time to reflect on experiences from our current teaching positions, and we will work together to develop solutions to problems that arise within our daily classroom experience. I aim to provide you with lesson and curricular development experience, multiple teaching techniques, and an engaging and supportive classroom environment to help us all develop as teachers and learners. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 520
Activity: Lecture
1.0 Course Unit

EDTC 521 Foundations of Special Education
This course strives to teach students who are working towards certification in general education problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible for Individualized Education Programming (IEPs) under the Individuals with Disabilities Act (IDEA). We will learn what constitutes disabilities in this population and issues surrounding providing this populations with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with implementing and IEP in the general education, or inclusive, environment. Students will discuss the appropriateness of various academic environments as children with disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. In addition, time will be spent in this course discussing the education of students who are English Language Learners from the standpoint of sheltered instruction and the use of WIDA lesson planning. A holistic approach to educating all students, with an emphasis on academic, social, emotional, behavioral, and transition skills area focus. Content will be presented through online lecture, hands on projects, and reading. It is expected that students will work within their current teaching placement and with actual students to complete some, if not all, of the 7 projects. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 521
Activity: Online Course
0.0 Course Units

EDTC 524 School & Society Seminar
This course is designed to provide students with an opportunity to investigate the philosophical underpinnings, social context, and current discourse of education and schooling in the United States. By historically linking the development of educational initiatives to notions of power, nation building, and citizenship, this class furthers an understanding of the assumptions about the purpose of education within this democratic nation, and its role(s) within our current social and political climate. Discussions of differential access to power and resources will be central to this class, thereby providing a forum for critically exploring educational policy, teaching practices, and the aims and purposes of education that are intimately connected to the social stratification and reproduction. We will draw on students experiential knowledge of schools and teaching to imagine how urban educators can transform the socially reproductive practices of schools. Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Also Offered As: EDTF 524
Activity: Lecture
1.0 Course Unit

EDTC 527 Social, Emotional, and Behavioral Interventions
This course is designed to provide students with a comprehensive understanding of students who present with social, emotional, and behavioral difficulties. The course will focus on the definitions, characteristics, prevalence, causes, and assessment of emotional and behavioral disorders. Effective teaching practices will be integrated in the course, including education service placements, functional behavior assessment, ABA, positive behavior supports and social skills instruction. Current issues in the field will also be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students’ teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 527
Activity: Online Course
1.0 Course Unit

EDTC 529 Language and Literacy Acquisition
This course addresses research-based instructional strategies for teaching literacy (including language development, reading, writing, and speaking) to learners in grade levels PreK-12 as well as practical and effective modifications for diverse learners (including struggling readers, English language learners, and students with learning disabilities in reading, as well as students with a wide range of disabilities requiring accommodations (cognitive, linguistic, physical, and social)). Formative and summative assessments of emergent and content literacy, including components of literacy (phonological awareness, word analysis, comprehension, vocabulary, fluency) will also be addressed. Also included are factors which influence literacy acquisition (including, but not limited to: English Language Learners), social and cultural implications for language and literacy development, as well as life-long literacy for children and adolescents who struggle in literacy. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 529
Activity: Online Course
1.0 Course Unit
EDTC 530 Contemporary Issues in Urban Education
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 530
Activity: Lecture
0.5 Course Units

EDTC 531 Methods: Elementary B
In this course we will be examining many aspects of the teaching of science and social studies in elementary schools today. The importance of the National Science and Social Studies Education Standards, the Next Generation of Science Standards, and the Pennsylvania State Standards in curriculum development and reform will be explored in depth. Among the topics covered will be planning science and social studies instruction to include inquiry and integrated concepts, developing authentic assessments involving a variety of tools, creating and maintaining a safe laboratory and learning environment that meets the needs of diverse learners, and the integration of technology into science and social studies education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 531
Activity: Lecture
1.0 Course Unit

EDTC 532 Methods: Middle Years B
Middle school teachers are involved in the constant process of increasing students’ active reading and writing about content area texts within the high-pressure environment of state accountability. Middle Years Methods offers practical strategies and applications that help establish a literate classroom environment in support of learning across all subject areas. Teachers learn approaches to help them establish literate classroom environments that are rich in problem-solving, critical thinking, logical reasoning concepts focused on state and national standards, and practical techniques that investigate and connect content in all subject areas to the real world. Middle Years Methods is structured to allow participants the opportunity to explore strategies and concepts for increasing student reading and writing proficiency. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 532
Activity: Lecture
1.0 Course Unit

EDTC 533 Methods: 7-12 English B
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course builds from Secondary ELA Methods I. We will begin the semester by exploring the self, culturally relevant pedagogy, and how these things impact our practice. Then we will explore a variety of practices for teaching reading, writing, listening, and speaking. The practices for teaching reading, writing, listening, and speaking align to Special Education Competencies IV. Pedagogy. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 533
Activity: Lecture
1.0 Course Unit

EDTC 534 Methods: 7-12 General Science/Biology B
This course is the second course in the three-course series that addresses teaching and learning in secondary science classrooms. The methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education: Assessing misconceptions, teaching through multiple intelligences, expanding instructional practices, teaching science in urban schools, culturally relevant pedagogies, gender, professional learning communities and workforce development, problem-based learning, current STEM fields of research, citizenship science, and ethical decision making. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 534
Activity: Lecture
1.0 Course Unit

EDTC 535 Methods: 7-12 World Languages B
This course includes theoretical and practical applications for the teaching of world languages based on the five ‘C’ goal areas: Communication, Cultures, Comparisons, Connections, and Communities of the World-Readiness Standards for Learning Languages. Approaches and techniques will be explored to equip world language teachers with the knowledge and tools necessary to create a student-centered, standards-driven classroom. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 535
Activity: Lecture
1.0 Course Unit
EDTC 536 Methods: 7-12 Mathematics B
Mathematics Methods B is enhancing student learning through knowing the content, planning around our knowledge and reflecting on our practice and our practice and our students thinking. Each week we will think about mathematics through talking about mathematics, doing mathematics, and presenting mathematics, as we will learn to expect our students to do. Each week we will spend time both learning concepts behind the mathematics taught and learned in middle and high school, with a couple of topics from elementary school that have bearing on middle and high school mathematics. We will learn about these concepts in ways that you will be able to use in the classroom, giving you experiences with different methods. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 536
Activity: Lecture
1.0 Course Unit

EDTC 601 Methods: Advanced Elementary
This course has been designed for first and second year teachers who are currently teaching in elementary classrooms. Our work together will build upon the course work you completed this year, your past experiences as a student and a teacher, and your current classroom practices. In this course, we explore the interrelationship of language, literacy, numeracy and culture in order to co-construct a knowledge base for understanding how children learn. We will interrogate our own teaching practices in an effort to make our classrooms more content-rich and child-centered. Our work will span content areas - math, literacy, social studies, and science - emphasizing both their interconnectedness and their particularity. The course will offer opportunity to think in both theoretical terms and practical terms about implications of our teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 601
Activity: Lecture
1.0 Course Unit

EDTC 604 Methods: 7-12 Advanced English
This course is designed to give working teachers intensive, hands-on practice with research-based pedagogy that they need to address the immediate challenges of teaching English in urban public schools. Students will develop plans for a full course, several conceptual units, and eight weeks of daily lesson plans. In addition, students will develop and present various instructional routines, which the class will critique. Finally, students will share resources with each other and engage in problem-solving of their real-world classroom issues. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 604
Activity: Lecture
1.0 Course Unit

EDTC 605 Methods: 7-12 Advanced Science
This course addresses teaching and learning in secondary science classrooms. The advanced methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education. Skills: topics investigated under this theme include: assessing misconceptions, teaching through multiple intelligences, expanding instructional practices. Teaching Science in Urban Schools: topics investigated under this theme include: culturally relevant pedagogies, gender, professional learning communities and workforce development. 21st Century Learning: topics investigated under this theme include: problem-based learning, information technologies, educational technologies, current STEM fields of research, citizenship science, and ethical decision making. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 605
Activity: Lecture
1.0 Course Unit

EDTC 606 Methods: 7-12 Advanced World Languages
As a sequel to your introductory world language teaching and learning course, this course assumes a level of familiarity with theoretical and practical approaches to world language teaching and learning such as: communicative language teaching, task-based instruction, student centered instruction, and national and state standards. Building on this background, we will examine and analyze the use of emerging key concepts in world language education as well as consider critical perspectives to more traditional pedagogical approaches. Our exploration of world language learning and teaching methods will be grounded in praxis; that is, we will consider how theoretical and research-based approaches inform classroom practices, experiences, and beliefs, and vice versa. Accordingly, the course will provide opportunities for you to bridge theory and practice through an ongoing cycle of discussion, in-class application, and learning experiences such as collaborative activities, peer feedback, self-reflection, brief presentations, and the design of instruction materials. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 606
Activity: Lecture
1.0 Course Unit

EDTC 618 Methods: 7-12 Advanced Mathematics
This course will focus on gaining a deeper understanding of the methods of mathematics teaching practice. This course will provide students the opportunity to put theory into practice through in class demonstrations of mathematical pedagogical practices. Through in class and online discussions, students will reflect on current teaching practices and the impact that these practices have on learning. It is my goal to support each student in further creating effective student-centered rational behind all teaching decisions. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 618
Activity: Lecture
1.0 Course Unit
EDTC 625 Culturally Responsive Pedagogy
What is culturally responsive (or relevant) pedagogy? What does it look like, what does it consist of, how is it done, who can do it, when and where can it enter? Is it effective, and for whom? What are the impediments and limitations? What are its roots? What can its future look like, and what can it mean for urban education, student success, and community empowerment? This course will explore these questions and more, providing a theoretical grounding to push this field further, and practical tools to incorporate into current and future teaching and learning activities. The course will also look closely at various intersections (critical race theory, critical pedagogy, gender studies, social justice, multiculturalism, diversity/equity), sociopolitical landscapes, and educational reform efforts, to understand how culturally responsive pedagogy fits within the broader narratives. The class is intentionally designed as a seminar/workshop. Class activities will include full group discussions, small group breakouts, video clips, informal presentations, and possible guest speakers. Students are expected to actively engage both with the readings and in class activities. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 625
Activity: Lecture
1.0 Course Unit

EDTC 701 Educating Students with Disabilities - Part II
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who have disabilities related to specific learning disabilities. We will learn what constitutes disabilities in this population and issues surrounding providing this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. Instructional techniques and assessments strategies will be a focus. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 701
Activity: Online Course
1.0 Course Unit

EDTC 702 Special Education Law & Processes
This course is designed to provide students with an understanding of special education processes, including the evaluation processes, exceptions and eligibility, the development and delivery of Individual Education Plans, as well as theories and best educational practices in the field and profession of special education. Students will become familiar with the Individuals with Disabilities in Education Act (IDEA), the cornerstone of special education law, Section 504 of the Americans with Disabilities Act, and Pennsylvania statutes and regulations governing special education law. Issues related to an understanding of the evaluation and determination of exceptionalities in a cultural context will be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 702
Activity: Online Course
1.0 Course Unit

EDTC 703 Educating Students with Disabilities - Part I
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible to take alternative state testing. We will learn what constitutes disabilities in this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. Students will discuss the appropriateness of various academic environments as children with more encompassing disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. A holistic approach to educating this population, with an emphasis on social, emotional, behavioral, transition and life skills are a focus. Students will receive a grade of a pass or fail at the conclusion of the fall term. 40 mandatory hours of fieldwork will take place in the spring semester. This will allow students to demonstrate learning acquired in the course work in a realistic setting. At the conclusion of the spring semester, a grade will be issued. Content will be presented through on line lecture, hands on projects, reading and fieldwork experience. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 703
Activity: Online Course
1.0 Course Unit

Education - Urban Teaching Residency Master's (EDTF)
These courses are only available to students in the Urban Teaching Residency program.

EDTF 503 Methods: Elementary A
This course is designed to enhance literacy and mathematics instruction that engages all students as readers, thinkers and sense makers. In this course, we will explore the interrelationship of language, literacy, numeracy, and culture, and will co-construct a knowledge base for understanding how children learn. We will also develop and practice new routines for teaching literacy and mathematics that build on students interests, curiosities, and informal knowledge. Throughout the course, you will be encouraged to critically reflect on continually develop your teaching practice. Course readings, discussions, and assignments will offer opportunities to think in both theoretical terms and practical terms about your teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 503
Activity: Lecture
1.0 Course Unit
EDTF 504 Methods: Middle Years A
This course focuses on you as both a learner and a teacher of mathematics and science. Its development is premised on the notion that in order for you to foster understanding and engagement for all your students, you have to develop and draw on different kinds of knowledge, skills, and dispositions. As a result, the course is designed to help you hone your practice as a teacher of mathematics and science and involves you learning about learners (yourself included), the understandings and conceptions they hold, and the developmental processes through which they learn. It also involves developing skills in teaching practices that engage students in mathematical and scientific exploration, creating an environment that facilitates reasoning and promotes inquiry, and finding ways to analyze and learn from your own teaching. Good teaching is essentially a decision-laden process, and the decisions you make are contextually based. Consequently, the aim of the course is not to provide you with a bag of tricks that are applicable or generalizable to all situations, but rather to help you develop necessary tools for thinking and working as a teacher. These tools include ways to explore scientific and mathematical content, assess your students understanding on an ongoing basis, and help all your students develop as learners of mathematics and science. Prerequisite: Enrollment in Urban Teaching Residency Program. Course usually offered in fall term Also Offered As: EDTC 504 Activity: Lecture 1.0 Course Unit

EDTF 505 Methods: 7-12 English A
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course is to provide a foundation in theory and then explore how that theory works within and against existing practices in schools. EDTF 532 Methods: Middle Years B
Middle school teachers are involved in the constant process of increasing students’ active reading and writing about content area texts within the high-pressure environment of state accountability. Middle Years Methods offers practical strategies and applications that help establish a literate classroom environment in support of learning across all subject areas. Teachers learn approaches to help them establish literate classroom environments that are rich in problem-solving, critical thinking, logical reasoning concepts focused on state and national standards, and practical techniques that investigate and connect content in all subject areas to the real world. Middle Years Methods is structured to allow participants the opportunity to explore strategies and concepts for increasing student reading and writing proficiency. Prerequisite: Enrollment in Urban Teaching Residency Program. Course usually offered in spring term Also Offered As: EDTC 532 Activity: Lecture 1.0 Course Unit

EDTF 533 Methods: 7-12 English B
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course builds from Secondary ELA Methods I. We will begin the semester by exploring the self, culturally relevant pedagogy, and how these things impact our practice. Then we will explore a variety of practices for teaching reading, writing, listening, and speaking. The practices for teaching reading, writing, listening, and speaking align to Special Education Competencies IV. Pedagogy. Prerequisite: Enrollment in Urban Teaching Residency Program. Course usually offered in spring term Also Offered As: EDTC 533 Activity: Lecture 1.0 Course Unit

EDTF 534 Methods: 7-12 General Science/Biology B
This course is the second course in the three-course series that addresses teaching and learning in secondary science classrooms. The methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education: Assessing misconceptions, teaching through multiple intelligences, expanding instructional practices, teaching science in urban schools, culturally relevant pedagogies, gender, professional learning communities and workforce development, problem-based learning, current STEM fields of research, citizenship science, and ethical decision making. Prerequisite: Enrollment in Urban Teaching Residency Program. Course usually offered in spring term Also Offered As: EDTC 534 Activity: Lecture 1.0 Course Unit

EDTF 535 Methods: 7-12 World Languages B
This course includes theoretical and practical applications for the teaching of world languages based on the five ‘C’ goal areas: Communication, Cultures, Comparisons, Connections, and Communities of the World-Readiness Standards for Learning Languages. Approaches and techniques will be explored to equip world language teachers with the knowledge and tools necessary to create a student- centered, standards-driven classroom. Prerequisite: Enrollment in Urban Teaching Residency Program. Course usually offered in spring term Also Offered As: EDTC 535 Activity: Lecture 1.0 Course Unit
EDTF 536 Methods: 7-12 Mathematics B
Mathematics Methods B is enhancing student learning through knowing the content, planning around our knowledge and reflecting on our practice and our practice and our students thinking. Each week we will think about mathematics through talking about mathematics, doing mathematics, and presenting mathematics, as we will learn to expect our students to do. Each week will spend time both learning concepts behind the mathematics taught and learned in middle and high school, with a couple of topics from elementary school that have bearing on middle and high school mathematics. We will learn about these concepts in ways that you will be able to use in the classroom, giving you experiences with different methods. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 536
Activity: Lecture
1.0 Course Unit

EDTF 601 Methods: Advanced Elementary
This course has been designed for first and second year teachers who are currently teaching in elementary classrooms. Our work together will build upon the course work you completed this year, your past experiences as a student and a teacher, and your current classroom practices. In this course, we explore the interrelationship of language, literacy, numeracy and culture in order to co-construct a knowledge base for understanding how children learn. We will interrogate our own teaching practices in an effort to make our classrooms more content-rich and child-centered. Our work will span content areas - math, literacy, social studies, and science - emphasizing both their interconnectedness and their particularity. The course will offer opportunity to think in both theoretical terms and practical terms about implications of our teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 601
Activity: Lecture
1.0 Course Unit

EDTF 604 Methods: 7-12 Advanced English
This course is designed to give working teachers intensive, hands-on practice with research-based pedagogy that they need to address the immediate challenges of teaching English in urban public schools. Students will develop plans for a full course, several conceptual units, and eight weeks of daily lesson plans. In addition, students will develop and present various instructional routines, which the class will critique. Finally, students will share resources with each other and engage in problem-solving of their real-world classroom issues. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 604
Activity: Lecture
1.0 Course Unit

EDTF 605 Methods: 7-12 Advanced Science
This course addresses teaching and learning in secondary science classrooms. The advanced methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education. Skills: topics investigated under this theme include: assessing misconceptions, teaching through multiple intelligences, expanding instructional practices. Teaching Science in Urban Schools: topics investigated under this theme include: culturally relevant pedagogies, gender, professional learning communities and workforce development. 21st Century Learning: topics investigated under this theme include: problem-based learning, information technologies, educational technologies, current STEM fields of research, citizenship science, and ethical decision making. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 605
Activity: Lecture
1.0 Course Unit

EDTF 606 Methods: 7-12 Advanced World Languages
As a sequel to your introductory world language teaching and learning course, this course assumes a level of familiarity with theoretical and practical approaches to world language teaching and learning such as: communicative language teaching, task-based instruction, student centered instruction, and national and state standards. Building on this background, we will examine and analyze the use of emerging key concepts in world language education as well as consider critical perspectives to more traditional pedagogical approaches. Our exploration of world language learning and teaching methods will be grounded in praxis; that is, we will consider how theoretical and research-based approaches inform classroom practices, experiences, and beliefs, and vice versa. Accordingly, the course will provide opportunities for you to bridge theory and practice through an ongoing cycle of discussion, in-class application, and learning experiences such as collaborative activities, peer feedback, self-reflection, brief presentations, and the design of instruction materials. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 606
Activity: Lecture
1.0 Course Unit

EDTF 613 Education Law
The practice of pushing students out of the education system and into the legal system has become known more concisely as the ‘school-to-prison pipeline.’ This course will examine the policies and procedures of school discipline grounded in the rhetoric of law and order and the criminalization of young people. We will address the historical, social, political, economic, and ethical dimensions of the relationship between education and the carceral state, with justice as our primary focus. We will engage with philosophical, theoretical, and empirical readings from a wide variety of disciplines toward the development of meaningful research questions and a proposal for the capstone. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDTF 616 Politics of School Reform
In this course we will explore the implications of US school reform in the post-Brown era. Interdisciplinary in nature, Politics of School Reform takes on the causes and consequences of reform by considering historical, sociological, and legal concepts related to major reform issues and initiatives. Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDTF 618 Methods: 7-12 Advanced Mathematics
This course will focus on gaining a deeper understanding of the methods of mathematics teaching practice. This course will provide students the opportunity to put theory into practice through in class demonstrations of mathematical pedagogical practices. Through in class and online discussions, students will reflect on current teaching practices and the impact that these practices have on learning. It is my goal to support each student in further creating effective student-centered rational behind all teaching decisions. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 618
Activity: Lecture
1.0 Course Unit

EDTF 619 Research Seminar
Research plays a critical role in education. Discipline-specific studies are used to evaluate new curricula and educational programming, and to better understand classroom and school environments. The ability to both use and to be a critical consumer of this literature is essential for educators. In this course, we examine multiple research and evaluation methodologies, their applicability to issues in education, and the use of research findings to develop educational policy. The course provides an overview of research design and qualitative and quantitative data collection and analysis. A key goal is to equip students with the knowledge they need to become critical consumers and strategic users of educational research. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDTF 625 Culturally Responsive Pedagogy
What is culturally responsive (or relevant) pedagogy? What does it look like, what does it consist of, how is it done, who can do it, when and where can it enter? Is it effective, and for whom? What are the impediments and limitations? What are its roots? What can its future look like, and what can it mean for urban education, student success, and community empowerment? This course will explore these questions more, providing a theoretical grounding to push this field further, and practical tools to incorporate into current and future teaching and learning activities. The course will also look closely at various intersections (critical race theory, critical pedagogy, gender studies, social justice, multiculturalism, diversity/equity), sociopolitical landscapes, and educational reform efforts, to understand how culturally responsive pedagogy fits within the broader narratives. The class is intentionally designed as a seminar/workshop. Class activities will include full group discussions, small group breakouts, video clips, informal presentations, and possible guest speakers. Students are expected to actively engage both with the readings and in class activities. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 625
Activity: Lecture
1.0 Course Unit

EDTF 627 Outside of the School Box
This course explores education broadly, focusing on the interconnections between individuals, families, and policy as each relates to urban public schools. Drawing from a critical sociocultural lens, Outside the School Box also engages with ongoing discussions of school quality and public policy. Major topics include the impact of housing selection on the makeup of urban public schools; teacher training, recruitment and retention; and causes and effects of market-driven educational systems. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDTF 628 Racial Literacy
This course will provide you with opportunities to explore the experiences, perspectives, and contributions of various cultures, groups, and individuals while exposing you to the knowledge, skills, and tools that are necessary to become a racially competent and highly effective educator. We will learn how racial literacy is defined, practiced, acquired, and used to demonstrate that understanding different viewpoints can improve ones ability to respond accordingly. Through storytelling, journaling, stress management practice, role-playing, and open exchange and dialogue you will see how racial literacy is established by reflecting on in-the-moment stress reactions. We will support you as you learn how to address diversity related topics in ways that create teaching and learning environments where mutual respect and trust form the basis of the relationships between you and the communities you serve. Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
EDTF 701 Educating Students with Disabilities - Part II
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who have disabilities related to specific learning disabilities. We will learn what constitutes disabilities in this population and issues surrounding providing this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. Instructional techniques and assessments strategies will be a focus. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 701
Activity: Online Course
1.0 Course Unit

EDTF 702 Special Education Law & Processes
This course is designed to provide students with an understanding of special education processes, including the evaluation processes, exceptions and eligibility, the development and delivery of Individual Education Plans, as well as theories and best educational practices in the field and profession of special education. Students will become familiar with the Individuals with Disabilities in Education Act (IDEA), the cornerstone of special education law, Section 504 of the Americans with Disabilities Act, and Pennsylvania statutes and regulations governing special education law. Issues related to an understanding of the evaluation and determination of exceptionality in a cultural context will be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 702
Activity: Online Course
1.0 Course Unit

EDTF 703 Educating Students with Disabilities - Part I
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible to take alternative state testing. We will learn what constitutes disabilities in this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. Students will discuss the appropriateness of various academic environments as children with more encompassing disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. A holistic approach to educating this population, with an emphasis on social, emotional, behavioral, transition and life skills are a focus. Students will receive a grade of a pass or fail at the conclusion of the fall term. 40 mandatory hours of fieldwork will take place in the spring semester. This will allow students to demonstrate learning acquired in the course work in a realistic setting. At the conclusion of the spring semester, a grade will be issued. Content will be presented through on line lecture, hands on projects, reading and fieldwork experience. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 703
Activity: Online Course
1.0 Course Unit

EDTF 704 Special Education Capstone - Part I
In this course, students who are working towards their Masters of Education in the Urban Teaching Residency Program will be involved in the process of designing and utilizing research in education. Students will learn the components of an educational research project including hypothesis development, literature review techniques, and various research methodologies including action research, data collection and analysis. Significant topics in education will be discussed. Students will be required to complete a preliminary literature review, Capstone Project Proposal and completed literature review in the fall term; followed by methodology, data analysis and discussion in the spring term. Both semesters will include whole group and individual instruction that will support the completion of a comprehensive Capstone Project that addresses a notable issue in education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.0 Course Units

EDTF 705 Urban Education Capstone Writing Seminar
This course is designed as a writing seminar in order to complete a thesis for a master’s degree. Students are required to develop a research question and methods for data collection, analyze existing literature related to the research question, collect data, analyze the data, and draw conclusions from the data. There will be four whole class sessions and at least three individual writing conferences. During the whole class sessions, students will learn how to plan, execute, and analyze research. Since this class is a writing seminar, be prepared to spend time in class drafting, conferencing, and/or researching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDTF 706 Special Education Capstone - Part II
In the second session of the Special Education Capstone students will continue the writing process with finalizing edited Literature Review sections from session I, and learning how to write and develop research based methodology appropriate for each student’s project. The course will then break apart the components of data analysis and discussion with students moving through the research process to compose each. The semester is comprised of face to face sessions in whole group and individual conferences. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.0 Course Units
ESE 099 Undergraduate Research and/or Independent Study
An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student’s academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term. One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: A maximum of 2 c.u. of ESE 099 may be applied toward the B.A.S. or B.S.E. degree requirements

ESE 111 Atoms, Bits, Circuits and Systems
Introduction to the principles underlying electrical and systems engineering. Concepts used in designing circuits, processing signals on analog and digital devices, implementing computation on embedded systems, analyzing communication networks, and understanding complex systems will be discussed in lectures and illustrated in the laboratory. This course provides an overview of the challenges and tools that Electrical Engineers and Systems Engineers address and some of the necessary foundations for students interested in more advanced courses in ESE. Prerequisite: FOR FRESHMAN ONLY
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Freshmen only

ESE 112 Engineering Electromagnetics
This course covers basic topics in engineering electromagnetics, namely, electric charge, electric field, electric energy, conductors, insulators, dielectric materials, capacitors, electric current, magnetic field, inductors, Faraday’s law of induction, alternating current (AC), impedance, Maxwell’s equations, electromagnetic and optical wave propagation, with emphasis on engineering issues. Relevant engineering topics are emphasized in our lectures in order to prepare students for other courses in ESE that rely on the contents on this course. Several laboratory experiments accompany the course to provide hands-on experience on some of the topics in the lecture and prepare students for the capstone project. Course usually offered in spring term
Activity: Lecture
1.5 Course Unit
Notes: Freshmen only

ESE 150 Digital Audio Basics
Primer on digital audio. Overview of signal processing, sampling, compression, human psychoacoustics, MP3, intellectual property, hardware and software platform components, and networking (i.e., the basic technical underpinnings of modern MP3 players and cell phones). Prerequisite: FOR FRESHMAN ONLY
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Freshmen only

ESE 190 Silicon Garage: Introduction to Open Source Hardware and Software Platforms
Project-centric learning course for non-ESE majors on microprocessor control of physical systems using open-source hardware and software platforms. Students will work in teams to develop software controlled systems based on the Arduino and Raspberry-Pi that interface with the real world (sensors, actuators, motors) and each other (networking). Prerequisite: High School Physics and Math
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

ESE 204 Decision Models
This first course in decision models will introduce students to quantitative models for decision making, using optimization and monte-carlo simulation. Examples will be drawn from manufacturing, finance, logistics and supply chain management. Students will use EXCEL and @Risk to build and analyze models. Course usually offered in fall term
Prerequisite: MATH 104
Activity: Lecture
1.0 Course Unit

ESE 210 Introduction to Dynamic Systems
This first course in systems modelling covers linear and nonlinear systems in both continuous and discrete time. Topics covered include linearization and stability analysis, elementary bifurcations, and an introduction to chaotic dynamics. Extensive applications to mechanical, electrical, biological, social, and economic/financial systems are included. The course will use both analytical and numerical/symbolic tools. Course usually offered in fall term
Corequisite: MATH 240
Activity: Lecture
1.0 Course Unit

ESE 215 Electrical Circuits and Systems
This course gives an introduction of modern electric and electronic circuits and systems. Designing, building and experimenting with electrical and electronic circuits are challenging and fun. It starts with basic electric circuit analysis techniques of linear circuits. Today mathematical analysis is used to gain insight that supports design; and more detailed and accurate representations of circuit performance are obtained using computer simulation. It continues with 1st order and 2nd order circuits in both the time and frequency domains. It discusses the frequency behavior of circuits and the use of transfer functions. It continues with introduction of non-linear elements such as diodes and MOSFET (MOS) transistors. Applications include analog and digital circuits, such as single stage amplifiers and simple logic gates. A weekly lab accompanies the course where concepts discussed in class will be illustrated by hands-on projects; students will be exposed to state-of-the-art test equipment and software tools (LabView, Spice). Course usually offered in fall term
Prerequisites: PHYS 150, 151
Corequisite: MATH 240
Activity: Lecture
1.5 Course Unit
ESE 218 Electronic, Photonic, and Electromechanical Devices
This first course in electronic, photonic and electromechanical devices introduces students to the design, physics and operation of physical devices found in today’s applications. The course describes semiconductor electronic and optoelectronic devices, including light-emitting diodes, photodetectors, photovoltaics, transistors and memory; optical and electromagnetic devices, such as waveguides, fibers, transmission lines, antennas, gratings, and imaging devices; and electromechanical actuators, sensors, transducers, machines and systems.
Course usually offered in fall term
Prerequisites: PHYS 150, 151
Corequisite: MATH 240
Activity: Lecture
1.5 Course Unit

ESE 224 Signal and Information Processing
Introduction to signal and information processing (SIP). In SIP we discern patterns in data and extract the patterns from noise. Foundations of deterministic SIP in the form of frequency domain analysis, sampling, and linear filtering. Random signals and the modifications of deterministic tools that are necessary to deal with them. Multidimensional SIP where the goal is to analyze signals that are indexed by more than one parameter. Includes a hands-on lab component that implements SIP as standalone applications on modern mobile platforms.
Course usually offered in spring term
Prerequisite: MATH 104
Corequisite: MATH 240
Activity: Lecture
1.5 Course Unit

ESE 290 Introduction to Electrical and Systems Engineering Research Methodology
Introduction to the nature and process of engineering research as represented by ongoing ESE faculty (and collaborating colleagues’ and industrial partners’) research projects. Joint class exercises in how to pursue effective background technical reading, pitch a proposal, and aim for the discovery of new human knowledge to complement the individually mentored topic specific project work.
Course usually offered in spring term
Prerequisites: MATH 240, 150, ESE 215 218 or ESE 204, 210 or ESE 215 and CIS 240
Corequisite: ESE 291
Activity: Lecture
0.5 Course Units

ESE 291 Introduction to Electrical and Systems Engineering Research and Design
Students contract with a faculty mentor to conduct scaffolded original research in a topic of mutual interest. Prepare project report on research findings.
Course usually offered in spring term
Corequisite: ESE 290
Activity: Laboratory
1.0 Course Unit

ESE 292 Introduction to Electromechanical Prototyping
This is a project-centric course for ESE majors to engage in circuit layout and prototype design skills. Students will work in teams to develop printed circuit boards using industry standard tools like Altium and learn mechanical prototyping skills using Solidworks. Emphasis will be on developing sound printed circuit board layout practices using circuitry knowledge that they acquire in ESE 215 and ESE 370. A module on using Cypress PSoC will introduce students to recent developments in analog/digital co-design.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

ESE 296 Study Abroad
Activity: Lecture
1.0 Course Unit

ESE 301 Engineering Probability
This course introduces students to the mathematical foundations of the theory of probability and its rich applications. The course begins with an exploration of combinatorial probabilities in the classical setting of games of chance, proceeds to the development of an axiomatic, fully mathematical theory of probability, and concludes with the discovery of the remarkable limit laws and the eminence grise of the classical theory, the central limit theorem. The topics covered include: discrete and continuous probability spaces, distributions, mass functions, densities; conditional probability; independence; the Bernoulli schema: the binomial, Poisson, and waiting time distributions; uniform, exponential, normal, and related densities; expectation, variance, moments; conditional expectation; generating functions, characteristic functions; inequalities, tail bounds, and limit laws. But a bald listing of topics does not do justice to the subject: the material is presented in its lush and glorious historical context, the mathematical theory buttressed and made vivid by rich and beautiful applications drawn from the world around us. The student will see surprises in election-day counting of ballots, a historical wager the sun will rise tomorrow, the folly of gambling, the sad news about lethal genes, the curiously persistent illusion of the hot hand in sports, the unreasonable efficacy of polls and its implications to medical testing, and a host of other beguiling settings.
Course usually offered in spring term
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit
ESE 303 Stochastic Systems Analysis and Simulation
Stochastic systems analysis and simulation (ESE 303) is a class that explores stochastic systems which we could loosely define as anything random that changes in time. Stochastic systems are at the core of a number of disciplines in engineering, for example communication systems and machine learning. They also find application elsewhere, including social systems, markets, molecular biology and epidemiology. The goal of the class is to learn how to model, analyze and simulate stochastic systems. With respect to analysis we distinguish between what we could call theoretical and experimental analysis. By theoretical analysis we refer to a set of tools which let us discover and understand properties of the system. These analysis can only take us so far and is usually complemented with numerical analysis of experimental outcomes. Although we use the word experiment more often than not we simulate the stochastic system in a computer and analyze the outcomes of these virtual experiments. Prerequisite: One computer language The class’s material is divided in four blocks respectively dealing with Markov chains, continuous time Markov chains, Gaussian processes and stationary processes. Emphasis is placed in the development of toolboxes to analyze these different classes of processes and on describing their applications to complex stochastic systems in different disciplines. Partial examples include: (i) the problem of ranking web pages by a search engine; (ii) the study of reputation and trust in social networks; (iii) modeling and analysis of communication networks; (iv) the use of queues in the modeling of transportation networks; (v) stochastic modeling and simulation of biochemical reactions and gene networks; (vi) arbitrages, pricing of stocks, and pricing of options through Black-Scholes formula; and (vii) linear filtering of stochastic processes to separate signals of interest from background noise. For more information visit the class’s web page at http://alliance.seas.upenn.edu/~ese303/wiki/.
Course usually offered in fall term
Prerequisite: ESE 301
Activity: Lecture
1.0 Course Unit

ESE 305 Foundations of Data Science
Introduction to a broad range of tools to analyze large volumes of data in order to transform them into actionable decisions. Using case studies and hands-on exercises, the student will have the opportunity to practice and increase their data analysis skills.
Course usually offered in fall term
Prerequisites: EAS 205 or MATH 312 and CIS 120 and ESE 301
Activity: Lecture
1.0 Course Unit

ESE 310 Electromagnetic and Electric Fields I
This course examines concepts of electromagnetism, vector analysis, electrostatic fields, Coulomb’s Law, Gauss’s Law, magnetostatic fields, Biot-Savart Law, Ampere’s Law, electromagnetic induction, Faraday’s Law, transformers, Maxwell equations and time-varying fields, wave equations, wave propagation, dipole antenna, polarization, energy flow, and applications.
Course not offered every year
Prerequisite: PHYS 151 AND MATH 114
Activity: Lecture
1.0 Course Unit

ESE 319 Fundamentals of Solid-State Circuits
Analysis and design of basic active circuits involving semiconductor devices including diodes and bipolar transistors. Single stage, differential, multi-stage, and operational amplifiers will be discussed including their high frequency response. Wave shaping circuits, filters, feedback, stability, and power amplifiers will also be covered. A weekly three-hour laboratory will illustrate concepts and circuits discussed in the class.
Course usually offered in spring term
Prerequisite: ESE 215
Activity: Lecture
1.5 Course Unit

ESE 321 Physics and Models of Semiconductor Devices
Semiconductor materials form the basis of modern electronic technology. This course develops the physics of semiconductor devices, the evolution of modern semiconductor technology, device engineering considerations, and introduces emerging technologies. The course stresses intuitive understanding of the physics through interactive exercises, instructional videos, in-class examples and a research project. Topics covered include an introduction to quantum mechanics and band theory of solids; physics governing charge carriers in semiconductors; fundamental operating mechanisms for p-n junctions, bipolar and field-effect transistors, and optoelectronic devices; and an introduction to nanoscale devices and the limits of transistor scaling.
Course not offered every year
Prerequisite: ESE 218
Activity: Lecture
1.0 Course Unit

ESE 325 Fourier Analysis and Applications in Engineering, Mathematics, and the Sciences
This course focuses on the mathematics behind Fourier theory and a wide variety of its applications in diverse problems in mathematics, engineering, and the sciences. The course is very mathematical in content and students signing up for it should have junior or senior standing. The topics covered are chosen from: functions and signals; systems of differential equations; superposition, memory, and non-linearity; resonance, eigenfunctions; the Fourier series and transform, spectra; convergence theorems; inner product spaces; mean-square approximation; interpolation and prediction, sampling; random processes, stationarity; wavelets, Brownian motion; stability and control; Laplace transforms. Prerequisite: Junior or Senior standing The applications of the mathematical theory that will be presented vary from year to year but a representative sample include: polynomial approximation, Weierstrass’s theorem; efficient computation via Monte Carlo; linear and non-linear oscillators, the isoperimetric problem; the heat equation, underwater communication; the wave equation, tides; testing for randomness, fraud; nowhere differentiable continuous functions; does Brownian motion exist?; error-correction; phase conjugate optics and four-wave mixing; cryptography and secure communications; how fast can we compute?; X-ray crystallography; cosmology; and what the diffusion equation has to say about mathematical finance and arbitrage opportunities.
Course usually offered in fall term
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit
ESE 330 Principles of Optics and Photonics
This course introduces the fundamental principles of optics, photonics, and antennas alongside a range of applications. Specific topics include: Maxwell’s equations and the wave equation; light propagation and interaction with materials; geometric/ray optics and polarization; wave optics; diffraction and gratings; waveguides and fiber optics; optical cavities; lasers and light sources; antennas and applications to wireless communication. Prerequisite: Permission of instructor
Prerequisites: ESE 215, 218
Activity: Lecture
1.0 Course Unit

ESE 336 Nanofabrication of Electrical Devices
This course is an intermediate undergraduate course in the understanding, fabrication, and characterization of electrical, optical, electromagnetic, and/or electromechanical nanodevices; i.e., micro- and nanoscale devices which have significant relevance to electrical engineering. Example devices of interest include transistors, microelectromechanical systems (MEMS), and optical and optoelectronic devices (including photovoltaic devices). Weekly laboratory sessions will enable the fabrication and characterization of a subset of electrical nanodevices. Students will learn basic physics and modeling of electrical nanodevices as well as acquire hands-on skill in their fabrication and characterization. Prerequisite: If course requirements not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: ESE 218
Activity: Lecture
1.5 Course Unit

ESE 350 Embedded Systems/Microcontroller Laboratory
An introduction to interfacing real-world sensors and actuators to embedded microprocessor systems. Concepts needed for building electronic systems for real-time operation and user interaction, such as digital input/outputs, interrupt service routines, serial communications, and analog-to-digital conversion will be covered. The course will conclude with a final project where student-designed projects are featured in presentations and demonstrations. Prerequisite: Knowledge of C programming or permission of the instructor
Course usually offered in spring term
Activity: Lecture
1.5 Course Unit

ESE 370 Circuit-Level Modeling, Design, and Optimization for Digital Systems
Circuit-level design and modeling of gates, storage, and interconnect. Emphasis on understanding physical aspects which drive energy, delay, area, and noise in digital circuits. Impact of physical effects on design and achievable performance.
Course usually offered in fall term
Prerequisites: ESE 150, 215
Activity: Lecture
1.0 Course Unit

ESE 400 Engineering Economics
This course investigates methods of economic analysis for decision making among alternative courses of action in engineering applications. Topics include: cost-driven design economics, break-even analysis, money-time relationships, rates of return, cost estimation, depreciation and taxes, foreign exchange rates, life cycle analysis, benefit-cost ratios, risk analysis, capital financing and allocation, and financial statement analysis. Case studies apply these topics to actual engineering problems. Prerequisite: Knowledge of Differential Calculus
Course usually offered in fall term
Also Offered As: ESE 542
Prerequisites: ESE 301 and CIS 110, 120
Activity: Lecture
1.0 Course Unit

ESE 402 Statistics for Data Science
The course covers the methodological foundations of data science, emphasizing basic concepts in statistics and learning theory, but also modern methodologies. Learning of distributions and their parameters. Testing of multiple hypotheses. Linear and nonlinear regression and prediction. Classification. Uncertainty quantification. Model validation. Clustering. Dimensionality reduction. Probably approximately correct (PAC) learning. Such theoretical concepts are further complemented by exemplar applications, case studies (datasets), and programming exercises (in Python) drawn from electrical engineering, computer science, the life sciences, finance, and social networks.
Course usually offered in fall term
Also Offered As: ESE 542
Prerequisites: ESE 301 and CIS 110, 120
Activity: Lecture
1.0 Course Unit

ESE 407 Introduction to Networks and Protocols
This is an introductory course on packet networks and associated protocols, with a particular emphasis on IP-based networks such as the Internet. The course introduces design and implementation choices that underlie the development of modern networks, and emphasizes basic analytical understanding of the concepts. Topics are covered in a mostly 'bottom-up' approach starting with a brief review of physical layer issues such as digital transmission, error correction and error recovery strategies. This is followed by a discussion of link layer aspects, including multiple access strategies, local area networks (Ethernet and 802.11 wireless LANs), and general store-and-forward packet switching. Network layer solutions, including IP addressing, naming, and routing are covered next, before exploring transport layer and congestion control protocols (UDP and TCP). Finally, basic approaches for quality-of-service and network security are examined. Specific applications and aspects of data compression and streaming may also be covered.
Course usually offered in fall term
Also Offered As: ESE 507
Prerequisite: ESE 301
Activity: Lecture
1.0 Course Unit
Notes: Course open to Seniors in SEAS and Wharton
ESE 419 Analog Integrated Circuits
Design of analog circuits and subsystems using primarily MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor and class AB output stages. The Cadence Design System will be used to capture schematics and run simulations using Spectre for some homework problems and for the course project. Topics of stability, noise, device matching through good layout practice will also be covered. Students who take ESE419 will not be able to take ESE572 later. More will be expected of ESE572 students in the design project. Prerequisite: If course requirement not met, permission of instructor required. Course usually offered in fall term
Also Offered As: ESE 572
Prerequisite: ESE 319
Activity: Lecture
1.0 Course Unit

ESE 420 Agent-Based Modeling and Simulation
Agents are a new technique for trying to model, simulate, and understand systems that are ill-structured and whose mathematics is initially unknown and possibly unknowable. This approach allows the analyst to assemble models of agents and components where micro-decision rules may be understood; to bring the agents and components together as a system where macro-behavior then emerges; and to use that to empirically probe and improve understanding of the whole, the interrelations of the components, and synergies. This approach helps one explore parametrics, causality, and what-if's about socio-technical systems (technologies that must support people, groups, crowds, organizations, and societies). It is applicable when trying to model and understand human behavior - consumers, investors, passengers, plant operators, patients, voters, political leaders, terrorists, and so on. This course will allow students to investigate and compare increasingly complex agent based paradigms along three lines - math foundations, heuristic algorithms/knowledge representations, and empirical science. The student will gain a toolbox and methodology for attempting to represent and study complex socio-technical systems. Course usually offered in fall term
Also Offered As: ESE 520
Activity: Lecture
1.0 Course Unit

ESE 421 Control For Autonomous Robots
This course introduces the hardware, software and control technology used in autonomous ground vehicles, commonly called 'self-driving cars.' The weekly laboratory sessions focus on development of a small-scale autonomous car, incrementally enhancing the sensors, software, and control algorithms to culminate in a demonstration in a realistic outdoor operating environment. Students will learn basic physics and modeling; controls design and analysis in Matlab and Simulink; software implementation in C and Python; sensor systems and filtering methods for IMUs, GPS, and computer vision systems; and path planning from fixed map data. Prerequisite: If course requirement not met, permission of instructor required. Course usually offered in fall term
Also Offered As: MEAM 421
Prerequisite: (CIS 110 OR CIS 120 OR ENGR 105) AND (ESE 210 OR ESE 215 OR MEAM 211)
Activity: Lecture
1.5 Course Unit

ESE 423 Quantum Engineering
Quantum engineering - the design, fabrication, and control of quantum coherent devices - has emerged as a multidisciplinary field spanning physics, electrical engineering, materials science, chemistry, and biology, with the potential for transformational advances in computation, secure communication, and nanoscale sensing. This course surveys the state of the art in quantum hardware, beginning with an overview of the physical implementation requirements for a quantum computer and proceeding to a synopsis of the leading contenders for quantum building blocks, including spins in semiconductors, superconducting circuits, photons, and atoms. The course combines background material on the fundamental physics and engineering principles required to build and control these devices with readings drawn from the current literature, including promising architectures for scaling physical qubits into larger devices and secure communication networks, and for nanoscale sensing applications impacting biology, chemistry, and materials Prerequisite: If course requirement not met, permission of instructor required. Course usually offered in spring term
Also Offered As: ESE 523
Prerequisite: PHYS 411
Activity: Lecture
1.0 Course Unit

ESE 444 Project Management
The course emphasizes a systems engineering approach to project management including the cycle costing and analysis, project scheduling, project organization and control, contract management, project monitoring and negotiations. In addition, the course will also examine management issues in large infrastructure projects like non-recourse or limited recourse project financing. Examples from the logistics planning process and global software project management will be used to highlight the course topics. Two terms. student may enter either term. Also Offered As: ESE 544
Prerequisite: ESE 304
Activity: Lecture
1.0 Course Unit

ESE 450 Senior Design Project I - EE and SSE
This is the first of a two-semester sequence in electrical and systems engineering senior design. Student work will focus on project/team definition, systems analysis, identification alternative design strategies and determination (experimental or by simulation) or specifications necessary for a detailed design. Project definition is focused on defining a product prototype that provides specific value to a least one identified user group. Students will receive guidance on preparing professional written and oral presentations. Each project team will submit a project proposal and two written project reports that include coherent technical presentations, block diagrams and other illustrations appropriate to the project. Each student will deliver two formal Powerpoint presentations to an audience comprised of peers, instructors and project advisors. During the semester there will be periodic individual-team project reviews. Prerequisite: Senior Standing or permission of the instructor Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
ESE 451 Senior Design Project II - EE and SSE
This is the second of a two term sequence in electrical and systems engineering senior design. Student work will focus on completing the product prototype design undertaken in ESE 450 and successfully implementing the said product prototype. Success will be verified using experimental and/or simulation methods appropriate to the project that test the degree to which the project objectives are achieved. Each project team will prepare a poster to support a final project presentation and demonstration to peers, faculty and external judges. The course will conclude with the submission of a final project written team report. During the semester there will be periodic project reviews with individual teams.
Course usually offered in spring term
Prerequisite: ESE 450
Activity: Lecture
1.0 Course Unit

ESE 460 The Principles and Practice of Microfabrication Technology
A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).
Course not offered every year
Also Offered As: ESE 574, MEAM 564
Prerequisites: ESE 218, MSE 321, MEAM 333, CBE 351, PHYS 250
Activity: Lecture
1.0 Course Unit

ESE 501 Networking - Theory and Fundamentals
Networks constitute an important component of modern technology and society. Networks have traditionally dominated communication technology in form of communication networks, distribution of energy in form of power grid networks, and have more recently emerged as a tool for social connectivity in form of social networks. In this course, we will study mathematical techniques that are key to the design and analysis of different kinds of networks. First, we will investigate techniques for modeling evolution of networks. Specifically, we will consider random graphs (all or none connectivity, size of components, diameters under random connectivity), small world problem, network formation and the role of topology in the evolution of networks. Next, we will investigate different kinds of stochastic processes that model the flow of information in networks. Specifically, we will develop the theory of markov processes, renewal processes, and basic queueing, diffusion models, epidemics and rumor spreading in networks.
Course usually offered in spring term
Prerequisite: ESE 530
Activity: Lecture
1.0 Course Unit

ESE 502 Introduction to Spatial Analysis
The course is designed to introduce students to modern statistical methods for analyzing spatial data. These methods include nearest-neighbor analyses of spatial point patterns, variogram and kriging analyses of continuous spatial data, and autoregression analyses of area data. The underlying statistical theory of each method is developed and illustrated in terms of selected GIS applications. Students are also given some experience with ARCMAP, JMPIN, and MATLAB software.
Course usually offered in fall term
Prerequisite: ESE 302
Activity: Lecture
1.0 Course Unit

ESE 503 Simulation Modeling and Analysis
This course provides a study of discrete-event systems simulation in the areas of queuing, inventory and reliability systems as well as Markov Chains, Random-Walks and Monte-Carlo systems. The course examines many probability distributions used in simulation studies as well as the Poisson process. Fundamental to most simulation studies is the ability to generate reliable random numbers and so the course investigates the basic properties of random numbers and techniques used for the generation and testing of pseudo-random numbers. Random numbers are then used to generate other random variable using the methods of inverse-transform, convolution, composition and acceptance/rejection. Finally, since most inputs to simulation are probabilistic instead of deterministic in nature, the course examines some techniques used for identifying the probabilistic nature of input data. These include identifying distributional families with sample data, using maximum-likelihood methods for parameter estimating within a given family and testing the final choice of distribution using chi-squared goodness-of-fit.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
ESE 504 Intro to Linear, Nonlinear and Integer Optimization
Introduction to mathematical optimization for graduate students who would like to be intelligent and sophisticated users of mathematical programming but do not necessarily plan to specialize in this area. Linear, integer and nonlinear programming are covered, including the fundamentals of each topic together with a sense of the state-of-the-art and expected directions of future progress. Homework and projects emphasize modeling and solution analysis, and introduce the students to a large variety of application areas.
Course usually offered in fall term
Also Offered As: OIDD 910
Activity: Lecture
1.0 Course Unit

ESE 506 Feedback Control Design and Analysis
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach.
Course usually offered in spring term
Also Offered As: MEAM 513
Prerequisite: MEAM 321 OR ESE 210
Activity: Lecture
1.0 Course Unit

ESE 507 Introduction to Networks and Protocols
This is an introductory course on packet networks and associated protocols, with a particular emphasis on IP-based networks such as the Internet. The course introduces design and implementation choices that underlie the development of modern networks, and emphasizes basic analytical understanding of the concepts. Topics are covered in a mostly 'bottom-up' approach starting with a brief review of physical layer issues such as digital transmission, error correction and error recovery strategies. This is followed by a discussion of link layer aspects, including multiple access strategies, local area networks (Ethernet and 802.11 wireless LANs), and general store-and-forward packet switching. Network layer solutions, including IP addressing, naming, and routing are covered next, before exploring transport layer and congestion control protocols (UDP and TCP). Finally, basic approaches for quality-of-service and network security are examined. Specific applications and aspects of data compression and streaming may also be covered.
Course usually offered in fall term
Also Offered As: ESE 407
Activity: Lecture
1.0 Course Unit
Notes: Course open to Graduate Students in SEAS and Wharton

ESE 510 Electromagnetic and Optics
This course reviews electrostatics, magnetostatics, electric and magnetic materials, induction, Maxwell’s equations, potentials and boundary-value problems. Topics selected from the areas of wave propagation, wave guidance, antennas, and diffraction will be explored with the goal of equipping students to read current research literature in electromagnetics, microwaves, and optics.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 512 Dynamical Systems for Engineering and Biological Applications
This midlevel course in nonlinear dynamics focuses on the analysis of low dimensional, continuous time models for describing and understanding complex behavior in physical, biological and engineered systems. We assume some background knowledge of ordinary differential equations, and develop at an engineering applications level the concepts and tools of qualitative dynamical systems theory with major focus on analysis and some on synthesis.
Course usually offered in fall term
Prerequisites: MATH 240, PHYS 150, ESE 210
Activity: Lecture
1.0 Course Unit

ESE 513 Prin of Quantum Tech
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 516 IoT Edge Computing
This course was developed to bring lessons learned from the product design industry into the classroom - specifically focusing on Internet of Things (IoT) device development and deployment. To achieve the highest level of knowledge transfer, the course will incorporate device design theory with discussions of real-world product failures and successes - as well as a heavy hands-on component to build a device from end to end. Students will learn to use industry standard tools, such as Altium, Atmel Studio, and IBM Watson - allowing them the same level of power and customization at the disposable of startups and Fortune 500 companies alike. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: ESE 519
Activity: Lecture
1.0 Course Unit
ESE 518 Battery and Super-Capacitor Systems
This is a senior / graduate course on scientific and technological fundamentals as they apply to electrochemical batteries and super-capacitors. The perspective utilized will be a combination of materials and systems science. The course will introduce the student to the different categories of electrochemical cells and batteries, and their related chemistry, kinds of super-capacitors, charging and discharging profiles, equivalent series resistance (ESR), power capacities, and lifetimes. For super-capacitors, the student will be introduced to double layer capacitance (DLC) and pseudo-capacitance types of energy storage, super-capacitor fundamentals through Faradaic and non-Faradaic processes, pseudo-capacitance of metal oxides and electro-active polymers (EAPs), non-ideal polarizable electrodes, energetics and kinetics of electrode processes, theories of dielectric polarization, inorganic and organic electro carbonaceous materials, effective surface area (ESA) and functionalizations, as well as the AC impedance behavior of batteries and super-capacitors including the self-discharge characteristics of both. The fundamental electrochemical relations will be discussed, as well as battery / super-caps system modeling, and batteries management systems.
Course not offered every year
Prerequisite: CHEM 101 AND MATH 104
Activity: Lecture
1.0 Course Unit

ESE 519 Real-Time Embedded Systems
The use of distributed wireless sensor networks has surged in popularity in recent years with applications ranging from environmental monitoring, to people- and object-tracking in both cooperative and hostile environments. This course is targeted at understanding and obtaining hands-on experience with the state-of-the-art in such wireless sensor networks which are often composed using relatively inexpensive sensor nodes that have low power consumption, low processing power and bandwidth. The course will span a variety of topics ranging from radio communications, network stack, systems infrastructure including QoS support and energy management, programming paradigms, distributed algorithms and example applications. Some guest lectures may be given.
Prerequisite: One course in computer networks and Senior or Graduate standing
Course usually offered in fall term
Also Offered As: IPD 519
Prerequisite: CIS 120 AND ESE 350
Activity: Lecture
1.0 Course Unit

ESE 520 Agent-Based Modeling and Simulation
Agents are a new technique for trying to model, simulate, and understand systems that are ill-structured and whose mathematics is initially unknown and possibly unknowable. This approach allows the analyst to assemble models of agents and components where micro-decision rules may be understood; to bring the agents and components together as a system where macro-behavior then emerges; and to use that to empirically probe and improve understanding of the whole, the interrelations of the components, and synergies. This approach helps one explore parametrics, causality, and what-ifs about socio-technical systems (technologies that must support people, groups, crowds, organizations, and societies). It is applicable when trying to model and understand human behavior - consumers, investors, passengers, plant operators, patients, voters, political leaders, terrorists, and so on. This course will allow students to investigate and compare increasingly complex agent based paradigms along three lines - math foundations, heuristic algorithms/knowledge representations, and empirical science. The student will gain a toolbox and methodology for attempting to represent and study complex socio-technical systems. Students taking this for graduate credit will also learn how to design agent-based tools.
Course usually offered in fall term
Also Offered As: ESE 420
Activity: Lecture
1.0 Course Unit

ESE 521 The Physics of Solid State Energy Devices
An advanced undergraduate course or graduate level course on the fundamental physical principles underlying the operation of traditional semiconducting electronic and optoelectronic devices and extends these concepts to novel nanoscale electronic and optoelectronic devices. The course assumes an undergraduate level understanding of semiconductors physics, as found in ESE 218 or PHYS 240. The course builds on the physics of solid state semiconductor devices to develop the operation and application of semiconductors and their devices in energy conversion devices such as solar photovoltaics, thermophotovoltaics, and thermoelectrics, to supply energy. The course also considers the importance of the design of modern semiconductor transistor technology to operate at low-power in CMOS. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: ESE 218 OR PHYS 240
Activity: Lecture
1.0 Course Unit
ESE 523 Quantum Engineering
Quantum engineering - the design, fabrication, and control of quantum coherent devices - has emerged as a multidisciplinary field spanning physics, electrical engineering, materials science, chemistry, and biology, with the potential for transformational advances in computation, secure communication, and nanoscale sensing. This course surveys the state of the art in quantum hardware, beginning with an overview of the physical implementation requirements for a quantum computer and proceeding to a synopsis of the leading contenders for quantum building blocks, including spins in semiconductors, superconducting circuits, photons, and atoms. The course combines background material on the fundamental physics and engineering principles required to build and control these devices with readings drawn from the current literature, including promising architectures for scaling physical qubits into larger devices and secure communication networks, and for nanoscale sensing applications impacting biology, chemistry, and materials science. Course usually offered in spring term
Also Offered As: ESE 423
Prerequisite: PHYS 411
Activity: Lecture
1.0 Course Unit

ESE 525 Nanoscale Science and Engineering
Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustension of current approaches, and for the development of revolutionary designs and applications. Prerequisite: If course requirement not met, permission of instructor required. Course usually offered in fall term
Also Offered As: MSE 525
Prerequisite: ESE 218 OR PHYS 240 OR MSE 220
Activity: Lecture
1.0 Course Unit

ESE 526 Photovoltaic Systems Engineering
This course will present the engineering basis for photovoltaic (PV) system design. The overall aim is for engineering students to understand the what, why, and how associated with the electrical, mechanical, economic, and aesthetic aspects of PV system. The course will introduce additional practical design considerations, added to the theoretical background, associated with pertinent electro-mechanical design. Permission of the instructor Course not offered every year
Activity: Lecture
1.0 Course Unit

ESE 527 Design of Smart Systems
Smart systems are materials, structures, devices and/or networks that seek to autonomously emulate human capabilities (sensing, nervous system, deliberating, acting) for adapting and continued functioning in potentially adverse conditions. Smart systems are a highly trans-disciplinary field that utilize microsystems technology with other disciplines like biology, information science, nanoscience, or cognitive science to control networks of components. Smart systems are causing a sea-change in hybrid cyber-physical-social systems leading to such breakthroughs as: the internet of Everything, smart cars, smart cities, the next industrial revolution, solutions to reduce global warming, and personalized e-healthcare, among many others. In this course students explore state-of-the-art smart system components, learn a design methodology to integrate the components, and apply the methodology to design and simulate a smart system prototype. The course will also cover life-long coping skills for human-centered design and for modeling the security, privacy and reliability hazards of the smart systems approach. Prerequisite: Junior or Senior standing, course or experience in a course with high level language Course not offered every year
Activity: Lecture
1.0 Course Unit

ESE 528 Estimation and Detection Theory
Statistical decision making constitutes the core of multiple engineering systems like communication, networking, signal processing, control, market dynamics, biological systems, data processing, etc. We strive to introduce mathematical theories that formulate statistical decision and obtain decision making algorithms with application to one or more of the above domains. This course will be offered every other year. One-term course offered either term
Prerequisite: ESE 530
Activity: Lecture
1.0 Course Unit

ESE 529 Introduction to Micro- and Nano-electromechanical Technologies
Introduction to MEMS and NEMS technologies: MEMS/NEMS applications and key commercial success stories (accelerometers, gyroscopes, digital light projectors, resonators). Review of micromachining techniques and MEMS/NEMS fabrication approaches. Actuation methods in MEMS and NEMS, MEMS/NEMS design and modeling. Examples of MEMS/NEMS components from industry and academia. Case studies: MEMS inertial sensors, microscale mirrors, micro and nano resonators, micro and nano switches, MEMS/NEMS chem/bio sensors, MEMS gyroscopes, MEMS microphones. Taught by: Troy Olsson Course usually offered in spring term
Also Offered As: MEAM 529
Activity: Lecture
1.0 Course Unit
ESE 530 Elements of Probability Theory
This rapidly moving course provides a rigorous development of fundamental ideas in probability theory and random processes. The course is suitable for students seeking a rigorous graduate level exposure to probabilistic ideas and principles with applications in diverse settings. The topics covered are drawn from: abstract probability spaces; combinatorial probabilities; conditional probability; Bayes’s rule and the theorem of total probability; independence; connections with the theory of numbers, Borel’s normal law; rare events, Poisson laws, and the Lovasz local lemma; arithmetic and lattice distributions arising from the Bernoulli scheme; limit laws and characterizations of the binomial and Poisson distributions; continuous distributions in one and more dimensions; the uniform, exponential, normal, and related distributions; random variables, distribution functions; orthogonal and stationary random processes; the Gaussian process, Brownian motion; random number generation and statistical tests of randomness; mathematical expectation and the Lebesgue theory; expectations of functions, moments, convolutions; operator methods and distributional convergence, the central limit theorem, selection principles; conditional expectation; tail inequalities, concentration convergence in probability and almost surely, the law of large numbers, the law of the iterated logarithm; Poisson approximation, Janson’s inequality, the Stein- Chen method; moment generating functions, renewal theory; characteristic functions. A solid foundation in undergraduate probability at the level of ESE 301 or STAT 430 at Penn. Students are expected to have a sound calculus background in the first two years of a typical undergraduate engineering curriculum. Undergraduates are warned that the course is very mathematical in nature with an emphasis on rigor; upperclassmen who wish to take the course will need to see the instructor for permission to register.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 531 Digital Signal Processing
This course covers the fundamentals of discrete-time signals and systems and digital filters. Specific topics covered include: review of discrete-time signal and linear system representations in the time and frequency domain, and convolution; discrete-time Fourier transform (DTFT); Z-transforms; frequency response of linear discrete-time systems; sampling of continuous-time signals, analog to digital conversion, sampling-rate conversion; basic discrete-time filter structures and types; finite impulse response (FIR) and infinite impulse response (IIR) filters; design of FIR and IIR filters; discrete Fourier transform (DFT), the fast Fourier transform (FFT) algorithm and its applications in filtering and spectrum estimation.
Course usually offered in fall term
Prerequisites: ESE 224, 325
Activity: Lecture
1.0 Course Unit

ESE 532 System-on-a-Chip Architecture
Motivation, design, programming, optimization, and use of modern System-on-a-Chip (SoC) architectures. Hands-on coverage of the breadth of computer engineering within the context of SoC platforms from gates to application software, including on-chip memories and communication networks, I/O interfacing, RTL design of accelerators, processors, concurrency, firmware and OS infrastructure software. Formulating parallel decompositions, hardware and software solutions, hardware/software tradeoffs, and hardware/software codesign. Attention to real-time requirements. Undergraduates: CIS 240, ESE 350; Graduate: Working knowledge of C.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 535 Electronic Design Automation
Formulation, automation, and analysis of design mapping problems with emphasis on VLSI and computational realizations. Major themes include: formulating and abstracting problems, figures of merit (e.g. Energy, Delay, Throughput, Area, Mapping Time), representation, traditional decomposition of flow (logic optimization, covering, scheduling, retiming, assignment, partitioning, placement, routing), and techniques for solving problems (e.g., greedy, dynamic programming, search, (integer) linear programming, graph algorithms, randomization, satisfiability). Digital logic, Programming (need to be Course not offered every year
Activity: Lecture
1.0 Course Unit

ESE 536 Nanofabrication and Nanocharacterization
This course is intended for first year graduate students interested in the experimental practice of nanotechnology. In the context of a hands-on laboratory experience, students will gain familiarity with both top-down and bottom-up fabrication and characterization technologies. This will be achieved through the realization of a variety of micro- and nanoscale structures and devices that can exhibit either classical or quantum effects at the small scale. Although concepts relevant to the laboratories will be emphasized in lecture, it is expected that students will already have been exposed to many of the underlying theoretical concepts of nanotechnology in previous courses. Prerequisite: If course requirement not met, permission instructor required.
Course usually offered in spring term
Prerequisite: ESE 525 OR MSE 525
Activity: Lecture
1.0 Course Unit

ESE 540 Engineering Economics
This course is cross-listed with an advanced-level undergraduate course (ESE 400). Topics include: money-time relationships, discrete and continuous compounding, equivalence of cash flows, internal and external rate of return, design and production economics, life cycle cost analysis, depreciation, after-tax cash flow analysis, cost of capital, capital financing and allocation, parametric cost estimating models, pricing, foreign exchange rates, stochastic risk analysis, replacement analysis, benefit-cost analysis, and analysis of financial statements. Case studies apply these topics to engineering systems. Students are not required to do additional work compared to ESE 400 students. The work-load is identical.
Course usually offered in fall term
Also Offered As: ESE 400
Activity: Lecture
1.0 Course Unit
ESE 542 Statistics for Data Science
The course covers the methodological foundations of data science, emphasizing basic concepts in statistics and learning theory, but also modern methodologies. Learning of distributions and their parameters. Testing of multiple hypotheses. Linear and nonlinear regression and prediction. Classification. Uncertainty quantification. Model validation. Clustering. Dimensionality reduction. Probably approximately correct (PAC) learning. Such theoretical concepts are further complemented by example applications, case studies (datasets), and programming exercises (in Python) drawn from electrical engineering, computer science, the life sciences, finance, and social networks.
Taught by: Victor Preciado
Course usually offered in fall term
Also Offered As: ESE 402
Prerequisites: ESE 301 or equivalent, CIS 110 or 120
Activity: Lecture
1.0 Course Unit

ESE 543 Human Systems Engineering
This course is an introduction to human systems engineering, examining the various human factors that influence the spectrum of human performance and human systems integration. We will examine both theoretical and practical applications, emphasizing fundamental human cognitive and performance issues. Specific topics include: human performance characteristics related to perception, attention, comprehension, memory, decision making, and the role of automation in human systems integration.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ESE 544 Project Management
The course emphasizes a systems engineering approach to project management including the cycle costing and analysis, project scheduling, project organization and control, contract management, project monitoring and negotiations. In addition, the course will also examine management issues in large infrastructure projects like non-recourse or limited recourse project financing. Examples from the logistics planning process and global software project management will be used to highlight the course topics.
Two terms. student may enter either term.
Also Offered As: ESE 444
Prerequisite: ESE 304
Activity: Lecture
1.0 Course Unit

ESE 545 Data Mining: Learning from Massive Datasets
Many scientific and commercial applications require us to obtain insights from massive, high-dimensional data sets. In this graduate-level course, students will learn to apply, analyze and evaluate principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course both covers theoretical foundations and practical applications.
Course usually offered in spring term
Prerequisites: ESE 530, ENM 503
Activity: Lecture
1.0 Course Unit

ESE 546 Principles of Deep Learning
Introductory class in machine learning and optimization. CIS 519, CIS 520, ESE 545, ESE 304, ESE 504, ESE 605 recommended or permission of the instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 547 Introduction to Legged Locomotion
This course reviews three decades' development of agile legged machines, treating past and recent advances as well as remaining formidable challenges in the materials selection, design, and programming of robots that can run, leap and climb through complicated, unstructured terrain. Emphasis is on developing understanding of and facility using key dynamical primitives whose composition allows more complicated behaviors to emerge from simpler constituents.
Several historical case studies will be used to illustrate how advances have rewarded interdisciplinary thinking about animals, materials, mathematics and mechatronics. Course credit will be based on problem sets and coding exercises.
Taught by: D. E. Koditschek
Activity: Lecture
1.0 Course Unit

ESE 548 Transportation Planning Methods
This course introduces students to the development and uses of the 4-step urban transportation model (trip generation-trip distribution-mode choice-traffic assignment) for community and metropolitan mobility planning. Using the VISUM transportation desktop planning package, students will learn how to build and test their own models, apply them to real projects, and critique the results. Prerequisite: CPLN 505 or other planning statistics course.
Taught by: Ryerson
Course usually offered in spring term
Also Offered As: CPLN 650
Prerequisite: CPLN 505
Activity: Lecture
1.0 Course Unit

ESE 550 Advance Transportation Seminar
Air transportation is a fascinating multi-disciplinary area of transportation bringing together business, planning, engineering, and policy. In this course, we explore the air transportation system from multiple perspectives through a series of lessons and case studies. Topics will include airport and intercity multimodal environmental planning, network design and reliability, air traffic management and recovery from irregular operations, airline operations, economics, and fuel, air transportation sustainability, and land use issues related to air transportation systems. This course will introduce concepts in economics and behavioral modeling, operations research, statistics, environmental planning, and human factors that are used in aviation and are applicable to other transportation systems. The course will emphasize learning through lessons, guest lecturers, case studies of airport development and an individual group and research project.
Taught by: Ryerson
Course usually offered in spring term
Also Offered As: CPLN 750
Prerequisite: CPLN 550
Activity: Seminar
1.0 Course Unit

ESE 549 Human Systems Engineering
This course is an introduction to human systems engineering, examining the various human factors that influence the spectrum of human performance and human systems integration. We will examine both theoretical and practical applications, emphasizing fundamental human cognitive and performance issues. Specific topics include: human performance characteristics related to perception, attention, comprehension, memory, decision making, and the role of automation in human systems integration.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
ESE 566 Networked Neuroscience
The human brain produces complex functions using a range of system components over varying temporal and spatial scales. These components are couples together by heterogeneous interactions, forming an intricate information-processing network. In this course, we will cover the use of network science in understanding such large-scale and neuronal-level brain circuitry. Prerequisite: Graduate standing or permission of the instructor. Experience with Linear Algebra and MATLAB.
Course usually offered in spring term
Also Offered As: BE 566
Activity: Lecture
1.0 Course Unit

ESE 567 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risk management, including both physical impact risk and transition risk, although the course will also discuss several other examples, including management of environmental risks, terrorism, and cyber-security, among other examples. The course will cover how people perceive risks and the impact this has on risk management. We will explore public policy surrounding risk management and how the public and private sector can successfully work together to build resilience, particularly to changing risks.
One-term course offered either term
Also Offered As: BEPP 261, BEPP 761, BEPP 961, OIDD 261, OIDD 761
Activity: Lecture
1.0 Course Unit

ESE 568 Mixed Signal Circuit Design and Modeling
This course will introduce design and analysis of mixed-signal integrated circuits. Topics include: Sampling and quantization, Sampling circuits, Switched capacitor circuits and filters, Comparators, Offset compensation, DACs/ADCs (Flash, delta-sigma, pipeline, SAR), Oversampling, INL/DNL, FOM. The course will end with a final design project using analysis and design techniques learned in the course. Students must provide a written report with explanations to their design choices either with equations or simulation analysis/insight along with performance results. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in fall term
Prerequisites: ESE 319, 419
Activity: Lecture
1.0 Course Unit

ESE 570 Digital Integrated Circuits and VLSI-Fundamentals
Explores the design aspects involved in the realization of an integrated circuit from device up to the register/subsystem level. It addresses major design methodologies with emphasis placed on the structured design. The course includes the study of MOS device characteristics, the critical interconnect and gate characteristics which determine the performance of VLSI circuits, and NMOS and CMOS logic design. Students will use state-of-the-art CAD tools to verify designs and develop efficient circuit layouts.
Course usually offered in spring term
Prerequisite: ESE 319
Activity: Lecture
1.0 Course Unit

ESE 572 Analog Integrated Circuits
Design of analog circuits and subsystems using bipolar and MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor arrays, and class AB output stages. The course will include a design project of an analog circuit. The course will use the Cadence Design System for schematic capture and simulation with Spectre circuit simulator. This course is similar to ESE 570, except that it will not require the use of the physical layout tools associated with VLSI design and implementation.
Course usually offered in fall term
Also Offered As: ESE 419
Prerequisite: ESE 319
Activity: Lecture
1.0 Course Unit

ESE 574 The Principles and Practice of Microfabrication Technology
A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).
Course not offered every year
Also Offered As: ESE 460, MEAM 564
Prerequisites: ESE 218, MSE 321, MEAM 333, CBE 351, PHYS 250
Activity: Lecture
1.0 Course Unit

ESE 578 RFIC (Radio Frequency Integrated Circuit) Design
Introduction to RF (Radio Frequency) and Microwave Theory, Components, and Systems. The course aims at providing knowledge in RF transceiver design at both microwave and millimeter-wave frequencies. Both system and circuit level perspective will be addressed, supported by modeling and simulation using professional tools (including Agilent ADS, Sonnet, and Cadence Design Systems). Topics include: Transmission Line Theory, S-parameters, Smith Chart for matching network design, stability, noise, and mixed signal design. RF devices covered will include: hybrid/Wilkinson/Lange 3dB couplers, Small Signal Amplifiers (SSA), Low Noise Amps (LNA), and Power Amps (PA). CMOS technology will be largely used to design the devices mentioned.
Course usually offered in spring term
Prerequisite: ESE 572
Activity: Lecture
1.0 Course Unit
ESE 590 Systems Methodology
This course covers the methodologies and techniques important to designing large complex, purposeful systems and to discovering policies that influence them throughout the stages of their lifecycle. The course focuses on hands-on synthetic thinking, where students assemble the big picture from modeling the individual actors, organizations, and artifacts in a socio-technical system of interest. This is the study of emergence of macro-behavior from the micro-decision making of the actors involved - to inquire into the design of a purposeful system, and to examine alternative futures that are ideal, yet affordable, sustainable, and workable. Specifically, the student learns systems theory, systems methodologies (design inquiry/learning systems, idealized design/interactive planning, and soft systems methodology/knowledge management), bottom up modeling (decision science, multi-attribute utility theory, affective reasoning, agent based modeling, simulated societies), and how to further research and apply the synthetic paradigm. Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 597 Master's Thesis
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

ESE 599 Independent Study for Master's credit
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ESE 605 Modern Convex Optimization
This course concentrates on recognizing and solving convex optimization problems that arise in engineering. Topics include: convex sets, functions, and optimization problems. Basis of convex analysis. Linear, quadratic, geometric, and semidefinite programming. Optimality conditions, duality theory, theorems of alternative, and applications. Interior-point methods, ellipsoid algorithm and barrier methods, self-concordance. Applications to signal processing, control, digital and analog circuit design, computation geometry, statistics, and mechanical engineering. Knowledge of linear algebra and willingness to do programming. Exposure to numerical computing, optimization, and application fields is helpful but not required. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ESE 610 Electromagnetic and Optical Theory II
This course covers exact, approximate and numerical methods of wave propagation, radiation, diffraction and scattering with an emphasis on bringing students to a point of contributing to the current research literature. Topics are chosen from a list including analytical and numerical techniques, waves in complex media and metamaterials, photonic bandgap structures, imaging, miniaturized antennas, high-impedance ground plans, and fractal electrodynamics. Course not offered every year
Activity: Lecture
1.0 Course Unit

ESE 611 Nanophotonics: Light at the Nanoscale
This course is intended for first and second year graduate students interested in nanoscale optics and photonics. Building on prior coursework in electromagnetism, this course provides a theoretical foundation and up-to-date survey of the key principles and phenomena relevant to the field of nanophotonics. Topics discussed include light-matter interaction through Maxwell's equations, photonic band theory and photonic crystals, plasmonic structures and devices, metamaterials and metasurfaces, PT-symmetric & topological photonic systems. Applications of nanophotonic devices and principles to a wide range of scenarios will also be explored in depth, including for renewable energy, information processing, imaging and sensing. Experimental techniques used in nanophotonics will be concurrently introduced and discussed. Prerequisite: Permission of instructor
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ESE 615 F1/10 Autonomous Racing Cars
This hands-on, lab-centered course is for senior undergraduates and graduate students interested in the fields of artificial perception, motion planning, control theory, and applied machine learning. It is also for students interested in the burgeoning field of autonomous driving. This course introduces the students to the hardware, software and algorithms involved in building and racing an autonomous race car. Every week, students take two lectures and complete an extensive hands-on lab. By Week 6, the students will have built, programmed and driven a 1/10th scale autonomous race car. By Week 10, the students will have learned fundamental principles in perception, planning and control and will race using map-based approaches. In the last 6 weeks, they develop and implement advanced racing strategies, computer vision and machine learning algorithms that will give their team the edge in the race that concludes the course. Prerequisites: C++ and Python programming, Matrix algebra, Differential equations, Signals and Systems Taught by: Rahul Mangharam
Activity: Lecture
1.0 Course Unit

ESE 617 Non-Linear Control Theory
The course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility, and observability, for nonlinear systems; Forbenius' theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations. Course not offered every year
Also Offered As: MEAM 613
Prerequisite: ESE 500
Activity: Lecture
1.0 Course Unit
ESE 619 Model Predictive Control
Increased system complexity and more demanding performance requirements have rendered traditional control laws inadequate regardless if simple PID loops are considered or robust feedback controllers designed according to some H2/infinity criterion. Applications ranging from the process industries to the automotive and the communications sector are making increased use of Model Predictive Control (MPC) where a fixed control law is replaced by on-line optimization performed over a receding horizon. The advantage is that MPC can deal with almost any time-varying process and specifications, limited only by the availability of real-time computer power. In the last few years we have seen tremendous progress in this interdisciplinary area where fundamentals of systems theory, computation and optimization interact. For example, methods have emerged to handle hybrid systems, i.e. systems comprising both continuous and discrete components. Also, it is now possible to perform most of the computations off-line thus reducing the control law to a simple look-up table.
Course usually offered in spring term
Prerequisites: ESE 500, 504 or 605
Activity: Lecture
1.0 Course Unit

ESE 621 Nanoelectronics
This is a graduate level course on fundamental operating principles and physics of semiconductor devices in reduced or highly scaled dimensions. The course will include topics and concepts covering basic quantum mechanics and solid state physics of nanostructures as well as device transport and characterization, materials and fabrication. A basic knowledge of semiconductor physics and devices is assumed. The course will build upon basic quantum mechanics and solid state physics concepts to understand the operation of nanoscale semiconductor devices and physics of electrons in confined dimensions. The course will also provide a historical perspective on micro and nanoelectronics, discuss the future of semiconductor computing technologies, cutting edge research in nanomaterials, device fabrication as well as provide a perspective on materials and technology challenges. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: ESE 521
Activity: Lecture
1.0 Course Unit

ESE 625 Nanorobotics
Nanorobotics is a field at the forefront of nano-science and engineering that seeks to create synthetic systems that sense and respond to their environment at dimensions comparable to biological microorganisms. This course explores the topic of small devices: What materials should we use to make these devices? How should they be powered or locomote? What capacities can they have for memory or information processing? How can they be made to interface safely with biological systems? This course covers the major frameworks for building small machines, including self-assembled systems (DNA nanotechnology, biohacking) and those fabricated by top-down lithography (self-folding systems, synthetic micro-swimmers, smart-dust). Particular emphasis is given to exploring physical principles that can be used to analyze the strengths and limitations of current robot designs at the micro and nanoscale.
Taught by: Marc Miskin
Activity: Lecture
1.0 Course Unit

ESE 635 Distributed Systems
This research seminar deals with tools, methods, and algorithms for analysis and design of distributed dynamical systems. These are large collections of dynamical systems that are spatially interconnected to form a collective task or achieve a global behavior using local interactions. Over the past decade such systems have been studied in disciplines as diverse as statistical physics, computer graphics, robotics, and control theory. The purpose of this course is to build a mathematical foundation for study of such systems by exploring the interplay of control theory, distributed optimization, dynamical systems, graph theory, and algebraic topology. Assignments will consist of reading and researching the recent literature in this area. Topics covered in distributed coordination and consensus algorithms over networks, coverage problems, effects of delay in large scale networks. Power law graphs, gossip and consensus algorithms, synchronization phenomena in natural and engineered systems, etc.
Course not offered every year
Prerequisites: Basic knowledge of linear systems (ESE 500), linear algebra (MATH 312 or equivalent), and optimization (ESE 504 or equivalent) and some familiarity with basics of nonlinear systems (ESE 617 or equivalent). Students without this background should consult with the instructor before registering.
Activity: Lecture
1.0 Course Unit

ESE 650 Learning in Robotics
This course will cover the mathematical fundamentals and applications of machine learning algorithms to mobile robotics. Possible topics that will be discussed include probabilistic generative models for sensory feature learning, Bayesian filtering for localization and mapping, dimensionality reduction techniques for motor control, and reinforcement learning of behaviors. Students are expected to have a solid mathematical background in machine learning and signal processing, and will be expected to implement algorithms on a mobile robot platform for their course projects. Grading will be based upon course project assignments as well as class participation. Students will need permission from the instructor. They will be expected to have a good mathematical background with knowledge of machine learning techniques at the level of CIS 520, signal processing techniques at the level of ESE 531, as well as have some robotics experience.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ESE 672 Integrated Communication Systems
This is an advanced radio frequency (RF) circuit design course that includes analysis and design of high-frequency and high-speed integrated communication circuits at both transistor and system levels. Students gradually design and simulate different blocks of an RF receiver and combine these blocks to form the receiver as their final project. We assume some background knowledge of device physics, electromagnetics, circuit theory, control theory, and stochastic processes. One-term course offered either term
Prerequisite: ESE 419 OR ESE 572
Activity: Lecture
1.0 Course Unit
ESE 673 Integrated Photonic Systems
Analysis and design of photonic integrated systems at both device and system levels including architectures, photonic integrated circuit technologies, passive components (nano-waveguides, resonators, couplers, and Y-junctions) and active components (lasers, modulators, and photodiodes) are studied. The emphasis is on silicon photonics. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: ESE 510
Activity: Lecture
1.0 Course Unit

ESE 674 Information Theory
Deterministic and probabilistic information. The pigeon-hole principle. Entropy, relative entropy, and mutual information. Random processes and entropy rate. The asymptotic equipartition property. Optimal codes and data compression. Channel capacity. Source channel coding. The ubiquitous nature of the theory will be illustrated with a selection of applications drawn from among: universal source coding, vector quantization, network communication, the stock market, hypothesis testing, algorithmic computation and kolmogorov complexity, and thermodynamics.
Course not offered every year
Prerequisite: ESE 530
Activity: Lecture
1.0 Course Unit

ESE 676 Coding Theory
Coding theory for telecommunications with emphasis on the algebraic theory of cyclic codes using finite field arithmetic, decoding of BCH and Reed-Solomon codes, finite field Fourier transform and algebraic geometry codes, convolutional codes and trellis decoding algorithms, graph based codes, Berrou codes and Gallager codes, turbo decoding, iterative decoding. And belief propagation.
Course not offered every year
Prerequisites: ESE 224, MATH 240, PHYS 150
Activity: Lecture
1.0 Course Unit

ESE 680 Special Topics in Electrical and Systems Engineering
Advanced and specialized topics in both theory and application areas. Students should check Graduate Group office for offerings during each registration period.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ESE 675 Teaching Practicum
Participation of graduate students in the teaching mission of the department will help to develop teaching, presentation, leadership, and interpersonal skills while assisting the department in discharging its teaching responsibilities. All doctoral students are required to participate under faculty guidance in the teaching mission of the department. This requirement will be satisfied by completing two 0.5 course units of teaching practicum (ESE 895). Each 0.5 course unit of teaching practicum will consist of the equivalent of 10 hours of effort per week for one semester. As a part of the preparation for and fulfillment of the teaching practicum requirement, the student will attend seminars emphasizing teaching and communication skills, lead recitations, lead tutorials, supervise laborato experiments, develop instructional laboratories, develop instructional materiaand grade homeworks, laboratory reports, and exams. A teacher training seminar will be conducted the day before the first day of classes of the Fall semester.
Attendance is mandatory for all second-year students. As much as possible, the grading aspect of the teaching practicum course will be such as not to exceed 50% of the usual teaching assistant commitment time. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty responsible for the course. At the completion of every 0.5 course unit of teach, the student will receive a Satisfactory/Unsatisfactory grade and a written evised by the faculty member responsible for the course. The evaluation will be comments of the students taking the course and the impressions of the faculty.
One-term course offered either term
Activity: Lecture
0.5 Course Units

ESE 689 Independent Study for PhD credit
For students who are studying a specific advanced subject area in electrical engineering. Students must submit a proposal outlining and detailing the study area, along with the faculty supervisor's consent, to the graduate group chair for approval. A maximum of 1 c.u. of ESE 689 may be applied toward the MSE degree requirements. A maximum of 2 c.u.s of ESE 689 may be applied toward the Ph.D. degree requirements.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ESE 995 Dissertation
Register for this after completing four years of full-time study including two course units each Summer Session (and usually equal to 40 course units).
One-term course offered either term
Activity: Dissertation
1.0 Course Unit

ESE 999 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Energy Management and Policy (ENMG)

ENMG 502 Introduction to Energy Policy
Energy, especially in the context of economic development and environmental sustainability, presents a career-defining challenge to many disciplines and professions. This course, therefore, is intended to provide an organizing foundation for courses across the University in Law, Wharton, Design, SAS, and SEAS. This course provides an advanced introduction to the design and delivery of energy policy at various levels of government in the U.S. and elsewhere. We will take a deep look at policies that regulate oil and gas industry, nuclear, green energy, and electricity markets. This will involve looking at past, present, and proposed policy mechanisms with a special consideration of how issues of climate change and sustainability affect those policies and policy proposals.

Taught by: Hughes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Special Information: Please note that this is a 1 cu graduate level course offered by the Department of City and Regional Planning in the School of Design, not by the undergraduate program in the College of Arts and Sciences. All undergraduates seeking a permit should contact Cornelia Colijn for permission: ccolijn@upenn.edu.

ENMG 503 Topics in Energy Policy
This seminar will explore a collection of ideas influencing energy policy development in the U.S. and around the world. Our platform for this exploration will be seven recent books to be discussed during the semester. These books each contribute important insights to seven ideas that influence energy policy: Narrative, Transition, Measurement, Systems, Subsidiarity, Disruption, Attachment. Books for 2018 will be chosen over the summer; the 2017 books are listed here as examples:

Engineering & Applied Science (EAS)

EAS 091 Chemistry Advanced Placement/International Baccalaureate Credit (Engineering Students Only)
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EAS 097 Embed Controlled Gardening
A service course intended to integrate concepts of basic physics, biology and electronics and systems engineering for the benefit of Penn engineering students, teachers and students from two minority centered community public schools. The course will engage the participants in the design and implementation of indoors cultivating systems using photo-voltaic (PV) technology to energize LED emulating the needed solar radiation for plant growth, a liquid nutrient distribution system, sensors / actuators capable of selecting the harvestable plants and keeping track of overall system parameters.

One-term course offered either term
Activity: Lecture
1.0 Course Unit

EAS 203 Engineering Ethics
In this course, students will study the social, political, environmental and economic context of engineering practice. Students will develop an analytical toolkit to identify and address ethical challenges and opportunities in the engineering profession, including studies of risk and safety, professional responsibility, and global perspectives. The course will begin with a foundation in the history of engineering practice and major Western ethical and philosophical theories. Students will then apply this material to both historical case studies, such as Bhopal, the NASA Shuttle Program, and Three Mile Island, as well as contemporary issues in big data, artificial intelligence, and diversity within the profession. Students will consider how engineers, as well as governments, the media, and other stakeholders, address such issues.

One-term course offered either term
Activity: Lecture
1.0 Course Unit

EAS 204 Technical Innovation & Civil Discourse in a Dynamic World
The promises of today’s emerging technologies include longer, healthier lives; safer, faster, and more efficient transportation; and immediate, far-reaching communication mechanisms. Recent advances in machine learning, autonomous systems, nanomaterials, and neurotechnologies offer the potential to dramatically change the way our global society lives, works and shares information. With such prolific power, these technologies also pose new challenges and risks such as reduced individual privacy, political repercussions, and inequitable access to the benefits of technology. Rapid technological innovation often outpaces and challenges established legal regulations, cultural norms, and societal frameworks of communications. A robust civil discourse anchored in technical expertise, cultural context, and inclusivity can foster the optimization of the benefits of emerging technologies. This course is aimed in preparing undergraduate students to engage in and lead such discourses. The students will consider a series of engineering innovations from technical, legal and social perspectives and will hone the analytical and communication skills necessary to identify and address opportunities for civil discourse. Undergraduates must have passed the WRIT requirement.

EAS 205 Applications of Scientific Computing.
This course will discuss a number of canonical problems and show how numerical methods are used to solve them. Lectures will introduce the underlying theory and the relevant numerical methods. Students will be expected to implement solutions to the problems using MATLAB. The course will use the visualization capabilities of MATLAB to provide students with a geometric interpretation of the key ideas underlying the numerical methods. Topics to be covered will include: the solution of systems of linear systems equations with application to problems such as force balance analysis and global illumination computation. Representing and computing coordinate transformations with applications to problems in graphics, vision and robotics. Transform Coding with applications to the analysis of audio signals and image compression. Analysis of variance and the search for low dimensional representations for high dimensional data sets egs. Google’s PageRank algorithm. Least Squares model fitting with applications to data analysis. Analysis of linear dynamical systems with applications to understanding the modes of vibration of mechanical systems. The analysis of stochastic systems governed by state transition matrices. Prerequisite: Prior expose to computing via courses such as EAS 105, CIS 110, or ESE 112, Math 114, Sophomore standing.

1.0 Course Unit

EAS 242 Energy Education in Philadelphia Schools
Students will learn about basic residential energy efficiency measures and practices from an established community based energy organization, the Energy Coordinating Agency of Philadelphia. Identify and understand fundamental core STEM energy concepts. Develop a short 'energy efficiency' curriculum appropriate for middle or high school students. Teach three (3) sessions in a science class in the School District of Philadelphia.
Taught by: Andrew E. Huemmler
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EAS 244 Curiosity: Ancient and Modern Thinking about Thinking
This course will examine two approaches to the skill unanswered question of what happens when we humans come up with new knowledge. How should we describe the impulse, or set of impulses, that leads us to seek it? What is happening when we achieve it? And how do we describe the new state in which we find ourselves after we have it? We will study the work of contemporary physicists and cognitive scientists on these questions along side the approaches developed by the two most powerful thinkers from antiquity on the topic, Plato and Aristotle.
Course not offered every year
Also Offered As: CLST 344, INTG 344
Activity: Seminar
1.0 Course Unit

EAS 261 Emerging Technologies and the Future of the World
Technological change is always occurring, but the rate of change seems to be accelerating. Advances in robotics, artificial intelligence, cyber, biotechnology, and other arenas generate promise as well as peril for humanity. Will these emerging technologies unleash the innovative capacity of the world, generating new opportunities that help people live meaningful lives? Alternatively, are automation and other technologies chipping away at the labor market in a way that could create severe generational dislocation at best, and national and international turmoil at worst? These questions are important, and have consequences for how we live our lives, how nations interact, and the future of the world writ large. Emerging technologies could shape public policy at the local, national, and international level, and raise questions of fairness, ethics, and transparency. This course takes a unique approach, combining insights from engineering, political science, and law in an interdisciplinary way that will expose students both to the key technologies that could shape the future and ways to think about their potential politics, and society.
Taught by: Horowitz
One-term course offered either term
Also Offered As: INTG 261, PSCI 261
Activity: Seminar
1.0 Course Unit
EAS 301 Climate Policy and Technology
The course will examine Pacala and Socolow's hypothesis that 'Humanity already possesses the fundamental scientific, technical and industrial know-how to solve the carbon and climate problem for the next half-century.' Fifteen 'climate stabilization wedges' i.e., strategies that each have the potential to reduce carbon emissions by 1 billion tons per year by 2054, will be examined in detail. Technology and economics will be reviewed. Socio-political barriers to mass-scale implementation will be discussed. Pacala and Socolow note 'Every element in this portfolio has passed beyond the laboratory bench and demonstration project; many are already implemented somewhere at full industrial scale'.
One-term course offered either term
Also Offered As: EAS 505
Activity: Lecture
1.0 Course Unit

EAS 306 Electricity and Systems Markets
The course discusses the existing electricity system from technical, economic, and policy perspectives. Basic power system engineering will be reviewed early in the course. Generation, transmission, distribution, and end-use technologies and economics will be discussed. Additional topics will include system operation, industry organization, government regulation, the evolution of power markets, environmental policy, and emerging technologies.
One-term course offered either term
Also Offered As: EAS 506
Activity: Lecture
1.0 Course Unit

EAS 320 Basic Chemical Process Safety
Process safety is an important but often overlooked aspect of a chemical engineer's education. When working in chemical engineering, it's simply not possible to learn by trial and error when the error can have catastrophic or dangerous implications. Students will learn the important technical fundamentals to allow them to contribute to a safer future. Chemical process safety is a scientific discipline as important as chemical production. What the students learn here could literally save their life. At the conclusion of the course, the expectation is that students should be able to identify hazards, safety risks and perform inherently safer design for chemical processes. By the end of the course, students will achieve Level I certification from SACHE (Safety and Chemical Engineering Education), a division of AIChE.
Taught by: Marylin Huff
Course not offered every year
Prerequisite: CBE 160
Activity: Lecture
1.0 Course Unit

EAS 401 Energy and Its Impacts: Technology, Environment, Economics, Sustainability
The objective is to introduce students to one of the most dominating and compelling areas of human existence and endeavor: energy, with its foundations in technology, from a quantitative sustainability viewpoint with its association to economics and impacts on environment and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field, with emphasis on explaining the technological foundation. The course spans from basic principles to applications. A review of energy consumption, use, and resources; environmental impacts, sustainability and design of sustainable energy systems; introductory aspects of energy economics and carbon trading; methods of energy analysis; forecasting; energy storage; electricity generation and distribution systems (steam and gas turbine based power plans, fuel cells), fossil fuel energy (gas, oil, coal) including unconventional types (shale gas and oil, oil sands, coalbed and tight-sand gas), nuclear energy wastes: brief introduction to renewable energy use: brief introduction to solar, wind, hydroelectric, geothermal, biomass; energy for buildings, energy for transportation (cars, aircraft, and ships); prospects for future energy systems: fusion power, power generation in space. Students interested in specializing in one or two energy topics can do so by choosing them as their course project assignments. Prerequisite: Any University student interested in energy and its impacts, who is a Junior or Senior. Students taking the course EAS 501 will be given assignments commensurate with graduate standing.
Course usually offered in fall term
Also Offered As: EAS 501
Activity: Lecture
1.0 Course Unit
Notes: Any University student interested in energy and its impacts, who is a Junior or Senior. Students taking the course as EAS 501 will be given assignments commensurate with graduate standing.

The objective is to introduce students to the major aspects of renewable energy, with its foundations in technology, association to economics, and impacts on ecology and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field. The course spans from basic principles to applications. A review of solar, wind, biomass, hydroelectric, geothermal energy, and prospects for future energy systems such as renewable power generation in space. Prerequisite: Junior standing
Course not offered every year
Also Offered As: EAS 502
Activity: Lecture
1.0 Course Unit

EAS 403 Energy Systems and Policy
This is a survey course that will examine the current U.S. energy industry, from production to consumption, and its impacts on local, regional, and the global environment. The course will seek to provide a fuller understanding of existing energy systems, ranging from technical overviews of each, a review of industry organization, and an exploration of the well-established policy framework each operates within. Near-term demands upon each energy supply system will be discussed, with particular focus on environmental constraints. Policy options facing each energy industry will be reviewed.
One-term course offered either term
Also Offered As: EAS 503
Activity: Lecture
1.0 Course Unit
EAS 408 Building Leadership
This course will build students’ personal leadership skills by helping them to kick-start a venture that they are passionate about. Ideas could range from a non-profit to help provide tutoring skills to local under-represented youth, to designing a product that could be launched on a crowdsourcing platform to creating a movement to drive more minority representation in books/media. Students must bring their own idea for their project and as we work to build it out, they will develop the leadership skills needed to bring it to life (e.g., networking, harnessing an ecosystem, building out a project plan). Lectures will be a mix lessons on real-world skill building (e.g., for networking - where to start, who to contact) with activities that will be specifically applied to the student’s venture. In addition, guest lecturers will be brought in so that students can learn from their leadership journeys. Students will also be paired with mentors to act as a sounding board and there will be weekly in-class discussions on their projects so that students can push each other as well - similar to how CEO roundtables work. At the end of this course, the goal will be to build enough momentum that students can take their project and continue to build it outside of class. Students will also be pushed to ‘think big’ so that their ideas from just a passion project to something that will have an impact. Prerequisite: Idea for the Passion Project that you want to build and Permission of the instructor.
Taught by: Vanessa Z Chan
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EAS 499 Senior Capstone Project
The Senior Capstone Project is required for all BAS degree students, in lieu of the senior design course. The Capstone Project provides an opportunity for the student to apply the theoretical ideas and tools learned from other courses. The project is usually applied, rather than theoretical, exercise, and should focus on a real world problem related to the career goals of the student. The one-semester project may be completed in either the fall or spring term of the senior year, and must be done under the supervision of a sponsoring faculty member. To register for this course, the student must submit a detailed proposal, signed by the supervising professor, and the student’s faculty advisor, to the Office of Academic Programs two weeks prior to the start of the term.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

EAS 507 Intellectual Property and Business Law for Engineers
Engineers are often on the front line of innovation. The goal of this course is to introduce engineering students to the basics of Intellectual property (IP) and business laws that they will encounter throughout their careers. Understanding these laws is critical for the protection of IP and for the creation and success of high-tech start-up ventures. Market advantage in large part springs from a company’s IP. Without legal protection and correct business formation, proprietary designs, processes, and inventions could be freely used by competitors, ruining market advantage. A basic understanding of IP laws, contractual transactions, employment agreements, business structures, and debt-equity financing will help engineering students to become effective employees or entrepreneurs, to acquire investors, and to achieve success. Though open to students of all disciplines, the course will use case studies particular relevance to students of engineering and applied science.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EAS 510 Technical Communication and Academic Writing for Non-native Speakers of English
Students will improve the grammar, word choice and organization of their professional writing by completing weekly writing assignments and a full-length research paper. Students will also give short oral presentations and receive feedback on pronunciation, wording, grammar and organization. Prerequisite: Graduate students who native language is English, but who would benefit from a course in Technical Communication, should take EAS 500.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EAS 512 Engineering Negotiation
The goal of this course is to teach students of engineering and applied science to be effective negotiators. It aims to improve the way these students communicate with virtually any human interaction. The course intends to improve the ability of engineers and other technology disciplines to gain more support more quickly for projects, research product and services development, and marketing. For those wanting to be entrepreneurs or intrapreneurs, the course is designed essentially to find the most value possible in starting up and running companies.
Based on Professor Diamond’s innovative and renowned model of negotiation, it is intended to assist those for whom technical expertise is not enough to persuade others, internally and externally, to provide resources, promotions and project approvals; or to resolve disputes, solve problems and gain more opportunities. Rejecting the 40-year-old notions of power, leverage and logic, the course focuses on persuasion by making better human connections, uncovering perceptions and emotions, and structuring agreements to be both collaborative and fair.
This course is entrepreneurial in nature and can provide many times more value than traditional persuasion. The Getting More book has sold more than 1 million copies around the world and is also used by universities, corporations (Google), and U.S. Special Operations (SEALs, Green Berets, Special Forces, Marines) to save lives and reduce conflict. From the first day, students will do interactive cases based their own engineering-related problems and based on current problems in the news. There will be diagnostics enabling every student to assess his/her skill and improvements.
One-term course offered either term
Activity: Lecture

EAS 545 Engineering Entrepreneurship I
Engineers and scientists create and lead great companies, hiring managers when and where needed to help execute their vision. Designed expressly for students having a keen interest in technological innovation, this course investigates the roles of inventors and founders in successful technology ventures. Through case studies and guest speakers, we introduce the knowledge and skills needed to recognize and seize a high-tech entrepreneurial opportunity - be it a product or service - and then successfully launch a startup or spin-off company. The course studies key areas of intellectual property, its protection and strategic value; opportunity analysis and concept testing; shaping technology driven inventions into customer-driven products; constructing defensible competitive strategies; acquiring resources in the form of capital, people and strategic partners; and the founder's leadership role in an emerging high-tech company. Throughout the course emphasis is placed on decisions faced by founders, and on the sequential risks and determinants of success in the early growth phase of a technology venture. The course is designed for, but not restricted to, students of engineering and applied science and assumes no prior business education. Prerequisite: Third or Fourth year or Graduate standing
One-term course offered either term
Also Offered As: IPD 545
Activity: Lecture
1.0 Course Unit
EAS 546 Engineering Entrepreneurship II
This course is the sequel to EAS 545 and focuses on the planning process for a new technology venture. Like its prerequisite, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Whereas EAS 545 investigates the sequential stages of engineering entrepreneurship from the initial idea through the early growth phase of a startup company, EAS 546 provides hands-on experience in developing a business plan for such a venture. Working in teams, students prepare and present a comprehensive business plan for a high-tech opportunity. The course expands on topics from EAS 545 with more in-depth attention to: industry and marketplace analysis; competitive strategies related to high-tech product/service positioning, marketing, development and operations; and preparation of sound financial plans. Effective written and verbal presentation skills are emphasized throughout the course. Ultimately, each team presents its plan to a distinguished panel of recognized entrepreneurs, investors and advisors from the high-tech industry.

EAS 549 Engineering Entrepreneurship Lab
Engineering Entrepreneurship Lab applies the principles of engineering and engineering entrepreneurship to a real-world problem of your specific field of study or professional interest. You will develop a venture based on a high-tech concept of your choosing (the one that you submitted as part of your application to the course). Like its prerequisite, EAS545 Engineering Entrepreneurship I, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Throughout the course you will formulate and test hypotheses using Lean Startup methodologies to develop key aspects of the venture including product development, customer and market development, team building and operations, and financial modeling and planning. The primary objective of the course is to develop a venture characterized by market-driven, high-tech product-service offering with a clear and validated product-market fit, an operational plan to bring your offering to market, and a plan to secure the resources required for execution of your plan. As discussed in EAS545, primary market research is essential to achieving product-market fit and validating all aspects of your business model. The success of your venture and your grade in the course will depend on the results of this research and testing process. Ideally, your work in this course results in pursuit of your high-tech venture outside of class and beyond the hallowed halls of Penn!

EAS 591 Leading Technology Teams
Engineers routinely work in teams collaborating with experts from multiple fields to address increasingly large complex problems/ opportunities. EAS 591, Leading Technology Teams, focuses on the dynamics of innovative, interdisciplinary, cross-functional teams. We examine ways to improve team performance by exploring technology leadership issues from multiple perspectives (i.e., the individual, the team, and the organization). Developing skills to be an effective technology team member, leader, and/or sponsor will provide you with a competitive advantage, not only for getting your first job but also for success throughout your career.

0.5 Course Units

EAS 592 Service Learning and Leadership
This course is designed to train the student leaders for service learning programs and expose students to relevant skills, including leadership, risk management, cultural competency, and organizational dynamics.
Activity: Lecture
1.0 Course Unit

EAS 595 Foundations of Leadership
The goal of EAS 595 is to increase your capacity to effectively lead throughout your career and wherever you find yourself in an organization. This involves understanding and learning about yourself and about working effectively with others. The course starts with an identification of values, strengths, preferences and passions. It then proceeds with the personal and interpersonal and moves through the strategic aspects of leadership by bringing together aspects of management science, social psychology, psychology of personality and behavioral economics. Topics include teamwork and team dynamics, identifying life's goals and dreams, decision making, valuing differences, understanding the dynamics of influence, using power with integrity, giving and receiving feedback, leading change, and discovering where we can make our contribution.

EAS 895 Professional Master's Academic Field Studies
This class allow master's students to pursue full-time internship opportunities in the Fall semester to apply what they have learned in practice. The student is required to work 20-40 hours a week, 12-15 week long full-time internships. International students under this academic field study track will be eligible for full-time CPT. As part of the application for field studies, students have to attach their coursework plan and receive approval from their program director to make sure they can meet all program requirements in 10 CU’s (11 CU’s for BIOT). Prerequisites: This class is restricted to SEAS Master's students only. Students can apply after their first two semesters of academic work at Penn. Students must complete at least 6 CU’s (course units) between their first two semesters during their first year. Academic field studies can only be done once for the duration of a master's student studies at Penn. For students pursuing a single Master’s degree, the field study period is usually the summer and continuing into the Fall semester of the second year. This option is not permitted in the final semester in which the student is graduating. As part of the application for field studies, students have to attach their coursework plan and receive approval from their program director to make sure they can meet all program requirements in 10 CU’s (11 CU’s for BIOT). Students on a single master's degree have to graduate within 2 years. Dual degree masters students have to graduate within 3 years. Student must be in good academic standing (minimum GPA 3.0) with their program and the University. Those that are not, are unable to apply for the track. It is the student’s responsibility to apply for CPT through ISSS. Students have to submit an academic field study proposal at least one month before the Spring term ends. Students that receive an offer to extend their Summer internship, must turn in their proposal no later than August 1st. Proposal requires details on internship work, explain relevance to student’s field of study, and requires a supervising faculty member. Students apply for field study has to have an internship offer from company. It is not the responsibility of Penn to help students find an internship.

EAS 905 Professional Master's Career Development
This class on professional career development broadly exposes students to organized workshops and seminar talks related to career development and research development. In career development, workshops will be held by career services staff related to identifying career interests, interview strategies, and career fair preparation. The research seminar talks are geared toward giving students exposure to research activities at Penn. The research seminar talks will be offered by individual departments and research programs, and include invited talks by external or internal faculty members. Students will receive a S/U grade and submit a final report at the end of the semester. Prerequisite: This class is restricted to SEAS Master's student only. Master's students can take the class at any time. However, the recommendation time to take this course is Fall semester of the second year.

ENG 101 Introduction to Engineering: Energy, Environment and Sustainability
This course is intended to introduce students to the field of engineering. It will expose students to the engineering disciplines through hands-on laboratory experiences. In addition, the course will provide tutorials on how to use important software packages as well as a 'Professional Preparation' module through studies of communication (writing and speaking skills), ethics, leadership and teamwork. This course is ideal for any freshman interested in exploring the possibility of studying engineering at Penn. The course counts as an engineering requirement in SEAS.
Taught by: Eric Stach
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENG 105 Introduction to Scientific Computing
This course will provide an introduction to computation and data analysis using MATLAB - an industry standard programming and visualization environment. The course will cover the fundamentals of computing including: variables, functions, decisions, iteration, and recursion. These concepts will be illustrated through examples and assignments which show how computing is applied to various scientific and engineering problems. Examples will be drawn from the simulation of physical and chemical systems, the analysis of experimental data, Monte Carlo numerical experiments, image processing, and the creation of graphical user interfaces. This course does not assume any prior programming experience but will make use of basic concepts from calculus and Newtonian physics.
Activity: Lecture
1.0 Course Unit

ENG 140 Penn Global Seminar: Robotics and Rehabilitation
This course focuses on understanding the design of intelligent technologies for rehabilitation diagnostics and intervention, which include using biomechanics, computer science, robotics and mechatronics design principles. This course explores the design process in which medical technology is developed for foreign economies, cultures, and healthcare systems. Student projects focus on understanding stake-holders needs and developing technology able to address a Jamaican client rehabilitation needs.

1.0 Course Unit
ENGR 212 Concepts in Micro- and Nanotechnology
Seminar/Lecture course on micro- and nanotechnology intended for nonspecialists. This course will discuss how very small structures and devices, as well as systems comprising these devices, are fabricated and characterized, with application examples from microelectronics, microelectromechanical systems, and quantum devices and systems. Current societal and ethical implications of micro- and nanotechnology, as well as creation and exploitation of commercial opportunities, will be discussed. Prerequisite: If course requirement not met, permission of instructor.
One-term course offered either term
Prerequisite: MATH 104 AND PHYS 093
Activity: Lecture
1.0 Course Unit

ENGR 250 Energy Systems, Resources and Technology
The course will present a comprehensive overview of the global demand for energy, and the resource availability and technology used in its current and future supply. Through a personal energy audit, students will be made aware of the extensive role that energy plays in modern life, both directly, through electricity and transportation fuel, and indirectly in the manufacturing of goods they use. The course will cover how that energy is supplied, the anticipated global growth in energy demand, the resource availability and the role of science and technology in meeting that demand in a world concerned about climate change. The roles of conservation, improved efficiency and renewable energy in meeting future demand in a sustainable, environmentally benign way will be covered. Prerequisite: Basic understanding of chemistry and physics
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENGR 450 Biotechnology, Immunology, Vaccines and COVID-19
This course will start with the fundamentals of biotechnology, and no prior knowledge of biotechnology is necessary. Some chemistry is needed to understand how biological systems work. We will cover basic concepts in biotechnology, including DNA, RNA, the Central Dogma, proteins, recombinant DNA technology, polymerase chain reaction, DNA sequencing, the functioning of the immune system, acquired vs. innate immunity, viruses (including HIV, influenza, adenovirus, and coronavirus), gene therapy, CRISPR-Cas9 editing, drug discovery, types of pharmaceuticals (including small molecule inhibitors and monoclonal antibodies), vaccines, clinical trials. Some quantitative principles will be used to quantifying the strength of binding, calculate the dynamics of enzymes, writing and solving simple epidemiological models, methods for making and purifying drugs and vaccines. The course will end with specific case study of coronavirus pandemic, types of drugs proposed and their mechanism of action, and vaccine development.
Taught by: Daniel Hammer
Course usually offered in fall term
Also Offered As: ENGR 550
Prerequisite: MATH 114 AND CHEM 102
Activity: Lecture

ENGR 503 Engineering in Oil, Gas and Coal, from Production to End Use
While conventional wisdom is that the world is running out of fossil fuels, technical advances such as deep water production, directional drilling, hydrofracturing, and the refining of non-conventional crude oil sources has increased the resource base significantly and there are well over 100 years of reserves of oil, natural gas and coal. The effect of technology advances has been most profound in the United States, where net energy imports are projected to fall to 12% of consumption by 2020. Excellent, highly technical careers are available in these industries, with opportunities to reduce their impact on the environment and in particular on climate change. The course will cover engineering technology in oil, natural gas and coal from production through end use. It will equip graduating students with the knowledge to contribute in these industries and to participate in informed debate about them.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENGR 504 Fundamental Concepts in Nanotechnology
This is a Master's level course that seeks to teach the physics needed to begin a study of engineering and science at the nanometer scale. Since the nanometer scale is so close to the quantum scale, much of the course deals with an introduction to quantum mechanics but the course also includes discussions in solid-state physics, electricity and magnetism and mechanics. The objective of the course is to teach the physics that an engineering student would need to have in order to do experimental work at the nanometer scale. In addition, this course will prepare the student to take more advanced courses in the Nanotechnology Program. Prerequisite: Some Differential Equations, Senior or Master's standing in Engineering or permission of the instructor
One-term course offered either term

ENGR 550 Biotechnology, Immunology, Vaccines and COVID-19
This course will start with the fundamentals of biotechnology, and no prior knowledge of biotechnology is necessary. Some chemistry is needed to understand how biological systems work. We will cover basic concepts in biotechnology, including DNA, RNA, the Central Dogma, proteins, recombinant DNA technology, polymerase chain reaction, DNA sequencing, the functioning of the immune system, acquired vs. innate immunity, viruses (including HIV, influenza, adenovirus, and coronavirus), gene therapy, CRISPR-Cas9 editing, drug discovery, types of pharmaceuticals (including small molecule inhibitors and monoclonal antibodies), vaccines, clinical trials. Some quantitative principles will be used to quantifying the strength of binding, calculate the dynamics of enzymes, writing and solving simple epidemiological models, methods for making and purifying drugs and vaccines. The course will end with specific case study of coronavirus pandemic, types of drugs proposed and their mechanism of action, and vaccine development.
Taught by: Daniel Hammer
Course usually offered in fall term
Also Offered As: ENGR 450
Activity: Lecture
1.0 Course Unit
Engineering Mathematics (ENM)

ENM 240 Differential Equations and Linear Algebra
This course discusses the theory and application of linear algebra and differential equations. Emphasis is placed on building intuition for the underlying concepts and their applications in engineering practice along with tools for solving problems. We will also use computer simulations in MATLAB to augment this intuition. One-term course offered either term
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit

ENM 251 Analytical Methods for Engineering
This course introduces students to physical models and mathematical methods that are widely encountered in various branches of engineering. Illustrative examples are used to motivate mathematical topics including ordinary and partial differential equations, Fourier analysis, eigenvalue problems, and stability analysis. Analytical techniques that yield exact solutions to problems are developed when possible, but in many cases, numerical calculations are employed using programs such as Matlab and Maple. Students will learn the importance of mathematics in engineering.
Prerequisite: Sophomore standing in SEAS or permission of instructor(s)
Course usually offered in spring term
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

ENM 321 Engineering Statistics
This is a first course in applied statistics and probability for students in engineering. The course covers basic concepts of probability, discrete and continuous random variables, probability distributions, data description techniques, random samples, estimations, hypothesis testing, regression, and statistical quality control.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENM 360 Introduction to Data-driven Modeling
From recognizing voice, text or images to designing more efficient airplane wings and discovering new drugs, machine learning is introducing a transformative set of tools in data analysis with increasing impact across engineering, sciences, and commercial applications. In this course, you will learn about principles and algorithms for extracting patterns from data and making effective automated predictions. We will cover concepts such as regression, classification, density estimation, feature extraction, sampling and probabilistic modeling, and provide a formal understanding of how, why, and when these methods work in the context of analyzing physical, biological, and engineering systems.
Course usually offered in fall term
Prerequisites: ENGR 105, MATH 240
Activity: Lecture
1.0 Course Unit

ENM 375 Biological Data Science I - Fundamentals of Biostatistics
The goal of this course is to equip bioengineering undergraduates with fundamental concepts in applied probability, exploratory data analysis and statistical inference. Students will learn statistical principles in the context of solving biomedical research problems.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENM 502 Numerical Methods and Modeling
This course provides an advanced introduction to various numerical methods for solving systems of algebraic equations (linear and nonlinear) and differential equations (ordinary and partial). Techniques covered include Newton's method, implicit and explicit time stepping, and the finite difference and finite element methods. The MATLAB software package will be used to implement the various methods and execute representative calculations.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENM 503 Introduction to Probability and Statistics
Course usually offered in fall term
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

ENM 510 Foundations of Engineering Mathematics - I
This is the first course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green's Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis. The fall course emphasizes the study of Hilbert spaces, ordinary and partial differential equations, the initial-value, boundary-value problem, and related topics.
Course usually offered in fall term
Prerequisites: MATH 240, 241
Activity: Lecture
1.0 Course Unit

ENM 521 Engineering Mathematics (ENM)
1.0 Course Unit
Prerequisites: MATH 240, 241
Activity: Lecture
Course usually offered in fall term
Prerequisite: Sophomore standing in SEAS or permission of instructor(s)
This course introduces students to physical models and mathematical methods that are widely encountered in various branches of engineering. Illustrative examples are used to motivate mathematical topics including ordinary and partial differential equations, Fourier analysis, eigenvalue problems, and stability analysis. Analytical techniques that yield exact solutions to problems are developed when possible, but in many cases, numerical calculations are employed using programs such as Matlab and Maple. Students will learn the importance of mathematics in engineering.
Prerequisite: Sophomore standing in SEAS or permission of instructor(s)
Course usually offered in spring term
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

ENM 531 Numerical Methods and Modeling
This course provides an advanced introduction to various numerical methods for solving systems of algebraic equations (linear and nonlinear) and differential equations (ordinary and partial). Techniques covered include Newton's method, implicit and explicit time stepping, and the finite difference and finite element methods. The MATLAB software package will be used to implement the various methods and execute representative calculations.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENM 551 Introduction to Probability and Statistics
Course usually offered in fall term
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

ENM 560 Foundations of Engineering Mathematics - II
This is the second course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green's Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis. The fall course emphasizes the study of Hilbert spaces, ordinary and partial differential equations, the initial-value, boundary-value problem, and related topics.
Course usually offered in fall term
Prerequisites: MATH 240, 241
Activity: Lecture
1.0 Course Unit

ENM 575 Biological Data Science II - Advanced Biostatistics
The goal of this course is to equip bioengineering undergraduates with fundamental concepts in applied probability, exploratory data analysis and statistical inference. Students will learn statistical principles in the context of solving biomedical research problems.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
ENM 511 Foundations of Engineering Mathematics - II
This is the second course of a two semester sequence, but each course is self-contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green's Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis.

Prerequisite: ENM 510
Activity: Lecture
1.0 Course Unit

ENM 512 Nonlinear Dynamics and Chaos
Activity: Lecture
1.0 Course Unit

ENM 520 Principles and Techniques of Applied Math I
This course is targeted to engineering PhD students in all areas. It will focus on the study of linear spaces (both finite and infinite dimensional) and of operators defined on such spaces. This course will also show students how powerful methods developed by the study of linear spaces can be used to systematically solve problems in engineering. The emphasis in this course will not be on abstract theory and proofs but on techniques that can be used to solve problems. Some examples of techniques that will be studied include: Functions of a Complex Variable, Partial Differential Equations, Asymptotic and Perturbation Methods, and Variational Methods.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENM 521 Principles and Techniques of Applied Math II
This course is a continuation of ENM 520 (or equivalent) and deals with classical methods in applied mathematics. The topics to be covered include: Functions of a Complex Variable, Partial Differential Equations, Asymptotic and Perturbation Methods, and Convex Analysis and Variational Methods.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENM 531 Data-driven Modeling and Probabilistic Scientific Computing
We will revisit classical scientific computing from a statistical learning viewpoint. In this new computing paradigm, differential equations, conservation laws, and data act as complementary agents in a predictive modeling pipeline. This course aims to explore the potential of modern machine learning as a unifying computational tool that enables learning models from experimental data, inferring solutions to differential equations, blending information from a hierarchy of models, quantifying uncertainty in computations, and efficiently optimizing complex engineering systems. Prerequisite: Programming in Python and MATLAB
Course not offered every year
Prerequisites: MATH 240, 513, 430 or ENM 240, 321, 503
Activity: Lecture
1.0 Course Unit

ENM 540 Topics In Computational Science and Engineering
This course is focused on techniques for numerical solutions of ordinary and partial differential equations. The content will include: algorithms and their analysis for ODEs; finite element analysis for elliptic, parabolic and hyperbolic PDEs; approximation theory and error estimates for FEM. Prerequisite: Background in ordinary and partial differential equations; proficiency in a programming language such as MATHLAB, C, Fortran Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 003 Introduction to Queer Theory
This course provides an introduction to the field of queer studies. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: GSWS 003
Activity: Lecture
1.0 Course Unit
ENGL 005 In Dark Times: The Dystopian Imagination in Literature and Film
This CWiC course will offer a guided introduction to the one of the most resilient genres of the human imagination: dystopian and apocalyptic fiction. Like a group of survivors huddled around a campfire, we will turn to literature and cinema to debate some of the big questions about the future of science, technology, religion, and capitalism. This course is designed as a Critical Speaking Seminar, and the majority of class assignments will be devoted to oral presentations: including a Parliamentary-style debate and a video essay. We will begin by reading some of the early, influential works in the dystopian genre by authors like Mary Shelley, H.G. Wells, and Aldous Huxley. Next, we will explore the paranoid, schizophrenic world of Cold-War-era dystopias by J.G Ballard, Philip K. Dick and Octavia Butler. We will conclude by reading contemporary climate fiction by the likes of Margaret Atwood and Kim Stanley Robinson. Alongside the literary material, we will also track the changing nature of dystopian cinema– from classics like Metropolis (1927) and La Jetee (1962) to the latest Zombie film. By the end of course, students will have a firm grasp of the history of the genre and will be able to draw on this knowledge to effectively debate issues related to privacy, big business, animal rights, climate change, migration etc.
Taught by: Dadawala
Also offered as: CIMS 005
Activity: Seminar
1.0 Course Unit

ENGL 009 Introduction to Digital Humanities
This course provides an introduction to foundational skills common in digital humanities (DH). It covers a range of new technologies and methods and will empower scholars in literary studies and across humanities disciplines to take advantage of established and emerging digital research tools. Students will learn basic coding techniques that will enable them to work with a range data including literary texts and utilize techniques such as text mining, network analysis, and other computational approaches.
Taught by: Trettien
One-term course offered either term
Also offered as: CIMS 009, COML 009, HIST 009
Activity: Lecture
1.0 Course Unit

ENGL 010 Introduction to Creative Writing
A course designed to introduce students to many of the elements of creative writing, including fiction, poetry, journalism, creative nonfiction, and memoir. Students can expect to read from a variety of assigned texts, respond to regular writing prompts, and workshop their own creative work in a collaborative setting. This course does not satisfy the writing requirement. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: This course does not satisfy the writing requirement.

ENGL 014 Dark Comedy in Theatre and Film
This course will examine the ‘troublesome genre’ of dark comedy by looking at the ways in which theatre and film use comic and tragic structures and traditions to explore concepts and stories seemingly at odds with those traditions. Although not always organized chronologically in time, we will examine the formal and structural characteristics of tragicomedy by tracing its development, from some of its earliest roots in Roman comedy, to its manifestation in contemporary films and plays. Aside from close readings of plays and analysis of films, we will read selected critical essays and theory to enhance our understanding of how dark comedies subvert categories and expectations. We will look at how dark comedies affect audiences and read sections of plays aloud in class. Issues to be considered include comparing the way the genre translates across theatre and film (adaptation) and examining the unique placement of the genre at the heart of contemporary American culture. Students will have the opportunity to experiment with creating tragicomic effect through performance in their presentations. The class is a seminar, with required participation in discussions. Other assignments include an 8-10 page paper and a presentation. We will read plays by authors as diverse as Plautus, Anton Chekhov, and Lynn Nottage, and filmmakers including Charlie Chaplin, Sofia Coppola, and Bong Joon-ho.
Taught by: Ferguson
Also offered as: CIMS 274, THAR 273
Activity: Seminar
1.0 Course Unit

ENGL 015 Topics in Literature
An introduction to Writing about Literature, with emphasis on a particular theme, genre, or period. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also offered as: CIMS 015, CLST 019, GSWS 017, LALS 016
Activity: Seminar
1.0 Course Unit
Notes: For additional information, please see our website at: <a href='https://www.english.upenn.edu'>https://www.english.upenn.edu</a>

ENGL 016 Topics in Literature
Freshman Seminars under the title 'Topics in Literature' will afford entering students who are considering literary study as their major the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Topics may range from the lyric poems of Shakespeare's period to the ethnic fiction of contemporary America. Small class-size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. One of them may be counted toward the English major and may be applied to a period, genre, or thematic requirement within the major.
See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also offered as: AFRC 017, COML 016
Activity: Seminar
1.0 Course Unit
Notes: Freshman Seminar
ENGL 017 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small sitting devoted to a significant intellectual endeavor. Specific topics be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings https://www.college.upenn.edu/node/403
One-term course offered either term
Also Offered As: ARTH 100, CIMS 016, URBS 106
Activity: Seminar
1.0 Course Unit
Notes: For Freshmen Only

ENGL 018 Old English
This course introduces students to the powerful and influential corpus of Old English literature. We will read a wide variety of texts: short poems such as The Wonderer, The Seafarer, The Wife’s Lament and the passionate religious poem The Dream of The Rood; chronicles such as The Battle Of Maldon Against The Vikings, The Old Testament, Exodus and Bede’s Conversion Of The English; and selections from the greatest of all English epics, Beowulf. Readings will be in Old English, and the first few weeks of the course will be devoted to mastering Old English prosody, vocabulary, and grammar (as well as a crash course on the early history of the English language). During the last few weeks we may read modern criticism of Old English poetry, or we will consider the modern poetic reception of Old English literature and explore theories and problems of translation, reading translations of Old English poems by Yeats, Auden, Tolkien, and Heaney. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 020 Literature Before 1660
This course will introduce students to key works of English literature written before 1660. It will explore the major literary genres of this period, as well as the social and cultural contexts in which they were produced. The course will examine how literature texts articulate changes in language and form, as well as in concepts of family, nation, and community during the medieval and early modern periods. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 021 Medieval Literature and Culture
This course introduces students to four hundred years of English literary culture, from approximately 1100 to 1500. This period was marked by major transformations, not only with respect to government, law, religious practice, intellectual life, England’s relation to the Continent (during the 100 Years War), the organization of society (especially after the Black Death), the circulation of literary texts, and the status of authors. Topics may include medieval women writers, manuscript production, literatures of revolt, courtly culture, Crusades, cross-Channel influences, and religious controversy. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 022 Romance
This course will focus on what is arguably the most extravagant, adventurous, and fantastical of the literary genres: the Romance. We will read a number of medieval and renaissance romance narratives, in verse and prose, beginning with the Arthurian romances (Malory’s Morte D’Arthur, Sir Gawain And The Green Knight) and continuing with as many (and as much) of the great renaissance romances as time will allow. Sir Philip Sidney’s Arcadia, Edmund Spenser’s The Faerie Queen, and Lady Mary Wroth’s Urania. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 024 Introduction to American and British Film and Media
This is a course on the history of Hollywood. It seeks to unravel Hollywood’s complex workings and explain how the business and politics of the film industry translate into the art of film. We will trace the American film industry from Edison to the internet, asking questions such as: What is the relationship between Hollywood and independent film? How has the global spread of Hollywood since the 1920s changed the film industry? How has Hollywood responded to crises in American politics (e.g., world wars, the cold war, terrorism)? And how have new technologies such as synchronized sound and color cinematography, television and the VCR, and new digital technologies changed film and the film industry? We will look closely at representative studios (Paramount, Disney, and others), representative filmmakers (Mary Pickford, Frank Capra, and George Lucas, among many others), and we will examine the impact of industrial changes on the screen. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 025 The Age of Chaucer
In this class we come to speak as people spoke in England some six centuries ago: in medieval or ‘Middle’ English. We do this by reading the poetry of Geoffrey Chaucer, a great poet who has influenced everyone from William Shakespeare to Sylvia Plath. Since Middle English takes some getting use to, class assignments are not heavy: usually about 800 lines per class. A typical class might begin by looking at a few of the easier passages in the Canterbury Tales, proceed to reading the greatest poem of love in the English language (Chaucer’s Troilus And Criseyde), before moving on to other contemporary writers in medieval culture. We will likely compare representations of medieval Christianity, Judaism, and Islam, as well as aspects of film adaptation by Italian filmmaker Pasolini (and perhaps by Chaucer scholar Terry Jones). We will consider what it might have been like to live secure in an age of faith; yet to live insecure, as a dizzying new profusion of trades and occupations sprang up in unprecedented ‘divisions of labor.’ We will imagine being a medieval woman, and may visit and handle medieval manuscripts. Above all, we will enjoy the poetry. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit
ENGL 026 Early Drama
Early drama in English had its roots as much in Christianity as in Classical antiquity. What grew into the theater of Shakespeare began as networks of strolling players and church authorities in market towns sponsoring cycles of ‘miracle’ and ‘mystery’ plays. This course will introduce students to major dramatic works of the medieval and early modern periods, including plays written for the public stage, closet dramas, masques, mayoral pageants and other kinds of performances. The course will also pay attention to the development of different dramatic genres during these periods, as well as the social and cultural contexts in which they were produced. Students thus will explore the history of drama in English through the renaissance to the closing of the theaters in 1641 and their eventual reopening in 1660. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year Activity: Lecture 1.0 Course Unit

ENGL 029 Classical Antiquity and English Literature
This course will examine the relationship between English literature and that of ancient Greece and Rome. At times we will discuss how classical theories of genre and aesthetics were appropriate and reinvented in medieval, renaissance, and seventeenth-century texts. What does it mean to call Hamlet and Oedipus The King tragedies, or The Frogs and The Way Of The World comedies? Should we consider the development of English drama and poetry as an extension of an imposing classical tradition or as a sustained and resistant response to it? See the English Department’s website at www.english.upenn.edu for a description of the current offerings. For BA Students: Arts and Letters Sector Course not offered every year Also Offered As: CLST 102 Activity: Lecture Notes: Formerly ENGL 096 1.0 Course Unit

ENGL 031 Introduction to Renaissance Literature and Culture
This course will survey the cultural history of sixteenth and seventeenth century England. Interdisciplinary in nature and drawing on the latest methodologies and insights of English studies, we will explore how aesthetics, politics, social traditions, impacted literature at this vital and turbulent time of English history. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Taught by: Loomba Course not offered every year Also Offered As: COML 031 Activity: Lecture 1.0 Course Unit

ENGL 033 The Bible As Literature
Successive generations have found the Bible to be a text which requires - even demands - extensive interpretation. This course explores the Bible as literature, considering such matters as the artistic arrangement and stylistic qualities of individual episodes as well as the larger thematic patterns of both the Old and New Testaments and the Apocrypha. A good part of the course is spent looking at the place of the Bible in cultural and literary history and the influence of such biblical figures as Adam and Eve, David, and Susanna on writers of poetry, drama, and fiction in the English and American literary traditions. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year Activity: Lecture 1.0 Course Unit

ENGL 034 Cultures of The Book
The impact of various technologies (from writing to various forms of manuscript to print to electronics) on the way the written word gives shape to a culture. The emphasis is on western cultures from Plato to the present, but participation by students with interest or expertise in non-western cultures will be of great value to the group as a whole. The course offers an ideal perspective from which students can consider meta-issues surrounding their own special interests in a wide variety of fields, as well as learn to think about the way in which traditional fields of study are linked by common inherited cultural practices and constructions. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. For BA Students: Humanities and Social Science S Course not offered every year Activity: Lecture 1.0 Course Unit Notes: Formerly ENGL 071

ENGL 038 The Age of Milton
The seventeenth century was a time of revolution and upheaval, of excesses both puritanical and cavalier. It saw the execution of one kind and the restoration of another, and survived the English Civil War and the Great Fire and Great Plague of London. This course explores the literature of this century through the works of John Milton’s major works (selected sonnets, Comus, Areopagitica, Paradise Lost, Paradise Regained, and Samson Agonistes), and his contemporaries. We will concentrate on a number of issues that governed writing in the period, particularly the tension between individual interiority and historical, social and political activity. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Course not offered every year Activity: Lecture 1.0 Course Unit

ENGL 040 British Poetry 1660 - 1914
This course provides students with a survey of British poetry and poetics from the Restoration to the Modern period, and usually will include writers ranging from Aphra Behn and Alexander Pope to Thomas Hardy. The course may be offered in various forms, some covering less, and some more historical back ground. Most will provide a sampling of eighteenth-century, Romantic, and Victorian poets. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. One-term course offered either term Activity: Seminar 1.0 Course Unit
ENGL 041 18th-Century British Literature
An introduction to British literary and cultural history in the eighteenth century. Typically, this course will contain materials from the later seventeenth to the early nineteenth centuries—from the Restoration and Glorious Revolution through the Enlightenment, the American and French Revolutions, and the Napoleonic Wars—though it need not cover the entire period. We will read plays, poetry and prose in order to understand the aesthetic, intellectual, social and political issues of literary production and achievement in this period. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 045 18th-Century Novel
This survey of the novel addresses key questions about the novel's 'rise' in the eighteenth century on both sides of the Atlantic, as well as attending to the cultural conditions that attended this new literary form. How did the concurrent 'rise' of the middle classes and the emergence of an increasingly female reading public affect the form and preoccupations of early novels? What role did institutions like literary reviews, libraries, and the church play in the novel's early reception? While reading will vary from course to course, students should expect to read such authors as Austen, Behn, Brockden Brown, Burney, Defoe, Fielding, Richardson, Rowlandson, Rowson, Scott, and Smollett. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 046 Drama from 1660 - 1840
This course surveys drama from the Restoration through the Romantic period, and in so doing explores arguably the most tumultuous period of British and American Theater history. These years saw the reopening of the theaters in London in 1660 after their having been closed through two decades of Civil War and Puritan rule. They witnessed the introduction of actresses to the stage, the development of scenery and the modern drop-apron stage, the establishment of theatrical monopolies in 1660 and stringent censorship in 1737, and the gradual introduction, acceptance, and eventual celebration of the stage in America. Perhaps most importantly, they oversaw some of the best comedies and farces in the English language, the introduction of pantomime and the two-show evening, sustained experimentation with music and spectacle on stage, and the transformation of tragedy into a star vehicle for actors and actresses like David Garrick, Sarah Siddons, John Philip Kemble, and Edmund Kean. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 050 The Romantic Period
This course offers an introduction to the literature of the Romantic period (ca. 1770-1830). Some versions of this course will incorporate European romantic writers, while others will focus exclusively on Anglo-American romanticism, and survey authors such as Austen, Blake, Brockden Brown, Byron, Coleridge, Emerson, Irving, Keats, Radcliffe, Scott, Shelley, and Wordsworth. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: GSWS 050
Activity: Lecture
1.0 Course Unit

ENGL 051 19th-Century British Literature
In 1815 in the wake of the battle of Waterloo, Great Britain controlled a staggering quarter of the world's landmass and half of its gross national product. This course will begin with the Napoleonic Wars and this Regency aftermath to survey a century of British literature— from Romanticism through the revolutions of 1848 and the Victorian and Edwardian periods to the beginning of the first World War. Most versions of this course will read both novels and poetry, often focusing on the relation between the two and their function within nineteenth century culture. Others may incorporate drama and non-fiction prose. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 053 19th-Century American Literature
A consideration of outstanding literary treatments of American culture from the early Federalist period to the beginnings of the First World War. We will traverse literary genres, reading autobiographies and travel accounts as well as fiction and poetry. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Formerly ENGL 083
ENGL 054 Sounding Poetry: Music and Literature
Never before has poetry been so inescapable. Hip hop, the soundtrack of our times, has made rhyme, meter, and word-play part of our daily lives. How did this happen? This course begins not on the page, but in the bardic traditions of Homer’s Iliad, which encoded many of the values of its time in oral formulas. Poetry was, however, no mere encyclopedia, but also a source of risk, as we will read in Plato’s warning against its hypnotic powers, and in the excesses of the Bacchae. We continue through 19th and 20th century attempts to recover these classic traditions (Wordsworth, Longfellow, Pound). Yet Europe was not the only center of poetic production. How does the Homeric tradition relate to living traditions of West African singing poets (griots) and Southern African praise songs? And what traces of these traditions can we hear in the blues? We will listen to early blues recordings and discuss the politics of collecting folklore, and the genius of African American modernists (Langston Hughes, Claude McKay, Georgia Douglas Johnson) who bought vernacular speech onto the page. We will read and listen to a number of 20th century poets inspired when page meets stage in jazz poetry, dub poetry, spoken word, and hip hop. Assignments will include 2 papers, 2 small-group performances, memorization exercises, and a creative adaptation of one poem. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
For BA Students: Arts and Letters Sector

Course usually offered in fall term
Also Offered As: AFRC 054, COML 054
Activity: Lecture
1.0 Course Unit

ENGL 055 19th-Century Novel
During the nineteenth century the novel became the dominant literary form of its day, supplanting poetry and drama on both sides of the Atlantic. In this introduction to the novelists of the period, we will read the writers who secured the novel’s cultural respectability and economic prominence. Likely authors will include Austen, the Brontes, Collins, Dickens, Eliot, Hardy, Hawthorne, Melville, Poe, Thackeray, Scott, and Stowe. The course will explore the themes, techniques, and styles of the nineteenth-century novel. It will focus not only on the large structural and thematic patterns and problems within each novel but also on the act of reading as a historically specific cultural ritual in itself. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 056 Modern Drama
This course will explore the major dramatic and theatrical movements that constitute the ‘modern,’ from the successive rises of melodrama and ‘realism’ in the nineteenth century, to those theatrical aesthetics that positioned themselves beyond or against realism at the turn of the twentieth century, to the present day. We’ll explore political theatre, the invention of the avant garde, the rise of the auteur-director, performance art, feminist and queer theatres, and the integration of non-western theatre into shared theatre practice in the colonial and post-colonial world. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 057 Literature of the Americas to 1900
This course examines U.S. literature and culture in the context of the global history of the Americas. Historical moments informing the course will range from the origins of the Caribbean slave-and-sugar trade at the beginning of the nineteenth century, to the Monroe Doctrine of 1823 and the U.S. Mexico and Spanish-American wars. Readings will include works by authors such as Frances Calderon de la Barca, Frederick Douglass, Helen Hunt Jackson, Henry Wadsworth Longfellow, Jose Marti, Herman Melville, John Rollin Ridge, Maria Amparo Ruiz de Burton, and Felix Varela. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Formerly ENGL 080

ENGL 058 Irish Literature
This course will provide an introduction to modern Irish literature, focusing on the tension between Ireland’s violent history and its heroic mythology. This tension leaves its mark not only on the ravaged landscape, but also on the English language, which displays its ‘foreignness’ most strongly in the hands of Irish writers. Readings will span the genres of poetry, drama, fiction, and history, and will include works by Sommerville and Ross, Yeats, George Moore, Joyce, Synge, O’Casey, Beckett, Edna O’Brien, and Brian Friel. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Formerly ENGL 063

ENGL 059 Modernisms and Modernities
This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts – including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1.0 Course Unit
ENGL 060 Rise of the Novel
This course explores the history of the British novel and the diverse strategies of style, structure, characterization, and narrative techniques it has deployed since the late seventeenth century. While works from the eighteenth and nineteenth centuries will form the core of the reading, some versions of this course will include twentieth-century works. All will provide students with the opportunity to test the advantages and limitations of a variety of critical approaches to the novel as a genre. Readings may include works by Behn, Swift, Defoe, Richardson, Fielding, Lennox, Smollett, Burney, Scott, Austen, the Brontës, Dickens, Eliot, Hardy, Conrad, Joyce, Lawrence, Woolf, Rhys, Greene, Naipaul, Carter, Rushdie, and Coetzee. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 061 20th-Century British Literature
This course introduces major works in twentieth-century British literature. We will read across a range of fiction, poetry, plays, and essays, and will consider aesthetic movements such as modernism as well as historical contexts including the two World Wars, the decline of empire, and racial and sexual conflict. Authors treated might include: Conrad, Yeats, Joyce, Eliot, Lawrence, Forster, Shaw, Woolf, Auden, Orwell, Beckett, Achebe, Rhys, Synge, Naipaul, Rushdie, Heaney, and Walcott. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

1.0 Course Unit

ENGL 062 20th-Century Poetry
From abstraction to beat, from socialism to negritude, from expressionism to ecopoetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetics, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 062

ENGL 063 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combinations and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.
Taught by: Silverman
Course usually offered in spring term
Also Offered As: ARTH 294, ARTH 694, GSWS 294, VLST 236
Activity: Lecture
1.0 Course Unit

ENGL 064 Modern America
This course is concerned with American literature and cultural life from the turn of the century until about 1950. The course emphasizes the period between the two World Wars and emphasizes as well the intellectual and cultural milieu in which the writers found themselves. Works by the following writers are usually included: James, Eliot, Frost, Fitzgerald, Faulkner, West, Stevens, DuBois, Williams, Wharton, Stein, West, Moore, and Hemingway. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year

ENGL 066 African American Drama: From the 1920's to the present
This course will introduce students to Pulitzer-prize winning plays such as Lynn Nottage's Sweat, groundbreaking plays such as Ntozake Shange's For Colored Girls, as well as less known plays that show the wide range of form and themes in 20th and 21st century African American drama. We will focus on performance as a mode of interpreting a script and performance as a way of understanding the intersections of race, class, and gender. In-class viewings of selected scenes in recorded productions of the plays will energize our analysis of the scripts. Short creative, performance-oriented writing assignments will produce the questions explored in the two critical essays. In addition to Sweat and For Colored Girls, our line-up may include Zora Neale Hurston's Color Struck, Anna Deavere Smith's Twilight: Los Angeles, 1992, Suzan-Lori Parks' 100 Plays for the First Hundred Days, August Wilson's Radio Golf, Lydia Diamond's Harriet Jacobs, Amiri Baraka's The Slave, and Claudia Rankine's The White Card.
Taught by: Crawford
One-term course offered either term

ENGL 067 American Theatre and Performance
This course examines the development of the modern American theatre from the turn of the century to the present day. Progressing decade by decade the course investigates the work of playwrights such as Eugene O'Neil, Arthur Miller, Tennessee Williams, Edward Albee, David Mamet, August Wilson and Tony Kushner, theatre companies such as the Provincetown Players and the Group Theatre, directors, actors, and designers. Some focus will also be given to major theatrical movements such as the Federal Theatre Project, Off-Broadway, regional theatre, experimental theatre of the Sixties, and feminist theatre.
Course not offered every year
Also Offered As: CIMS 273, THAR 272
Activity: Lecture
1.0 Course Unit

ENGL 069 Poetry and Poetics
What is poetry and what place does it have among literary forms? What is its relation to culture, history, and our sense of speakers and audiences? This course will focus on various problems in poetic practice and theory, ranging from ancient theories of poetry of Plato and Aristotle to contemporary problems in poetics. In some semesters a particular school of poets may be the focus; in others a historical issue of literary transmission, or a problem of poetic genres, such as lyric, narrative, and dramatic poetry, may be emphasized. The course will provide a basic knowledge of scansion in English with some sense of the historical development of metrics. This course is a good foundation for those who want to continue to study poetry in literary history and for creative writers concentrating on poetry. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 070 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs’ experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.

Activity: Lecture
1.0 Course Unit
Notes: Formerly ENGL 085
ENGL 078 Television and New Media
As a complex cultural product, television lends itself to a variety of critical approaches that build-on, parallel, or depart from film studies. This introductory course in television studies begins with an overview of the medium's history and explores how technical and industrial changes correspond to developing conventions of genre, programming, and aesthetics. Along the way, we analyze key concepts and theoretical debates that shaped the field. In particular, we will focus on approaches to textual analysis in combination with industry research, and critical engagements with the political, social and cultural dimensions of television as popular culture. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: ARTH 107, CIMS 103, COML 099
Activity: Lecture
1.0 Course Unit

ENGL 080 Literatures of Jazz
That modernism is steeped as much in the rituals of race as of innovation is most evident in the emergence of the music we have come to know as jazz, which results from collaborations and confrontations taking place both across and within the color line. In this course we will look at jazz and the literary representations it engendered in order to understand modern American culture. We will explore a dizzying variety of forms, including autobiography and album liner notes, biography, poetry, fiction, and cinema. We'll examine how race, gender, and class influenced the development of jazz music, and then will use jazz music to develop critical approaches to literary form. Students are not required to have a critical understanding of music. Class will involve visits from musicians and critics, as well as field trips to some of Philadelphias most vibrant jazz venues. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1.0 Course Unit

ENGL 083 Sicily on Page and Screen
What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore's Cinema paradiso and Coppola's The Godfather II, and read texts such as Lampedusa's The Leopard and Maraini's Bagheria. This course aims to increase students' understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others', cultural frameworks.

Notes: Course taught in English. Course Materials in English. There are no prerequisites for this course.
ENGL 085 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional ‘fog of war’ describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war’s traditional dependence on declaration is often warped by language games—‘police action,’ ‘military intervention,’ ‘nation-building,’ or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terrorist or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation—propaganda, nationalist messaging, memorialization, xenophobic depiction—affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war’s shaping influence? The class will concentrate on literary objects—short stories, and graphic novels—as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literary experience.

ENGL 087 Theatre, History and Culture I, Classical Athens to Elizabethan London
This course will explore the forms of public performance, most specifically theatre, as they emerge from and give dramatic shape to the dynamic life of communal, civic and social bodies, from their anthropological origins in ritual and religious ceremonies, to the rise of great urban centers, to the closing of the theaters in London in 1642. This course will focus on development of theatre practice in both Western and non-Western cultures intersects with the history of cities, the rise of market economies, and the emerging forces of national identity. In addition to examining the history of performance practices, theatre architecture, scenic conventions and acting methods, this course will investigate, where appropriate, social and political history, the arts, civic ceremonies and the dramaturgic structures of urban living. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1.0 Course Unit
ENGL 090 Gender, Sexuality, and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherrie Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg. ENGL 091 World Film History to 1945
This course is an introduction to the history of cinema from the 1890s to the present. In demonstrating how history energizes and complicates the movies, we will examine numerous film cultures and historical periods, including Hollywood silent cinema, Italian neo-realism, the French New Wave, recent films from Iran, and a variety of other film movements from different historical epochs and cultures. Screenings will feature movies such as Sergei Eisenstein’s THE BATTLESHIP POTEMKIN (1925), Jean Renoir’s THE GRAND ILLUSION (1937), Nicholas Ray’s REBEL WITHOUT A CAUSE (1955), Jean-Luc Godard’s CONTEMPT (1963), Spike Lee’s DO THE RIGHT THING (1989), Sally Potter’s ORLANDO (1992), and Pedro Almodovar’s TALK TO HER (2003). Our aim is to establish a broad historical and global foundation for the understanding of film as a complex exchange between art, technology, politics, and economics. Screenings will be mandatory. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1.0 Course Unit

ENGL 092 World Film History 1945-Present
This course is an introduction to the analysis of film as both a textual practice and a cultural practice. We will examine a variety of films—from Fritz Lang’s M (1931) to Julia Dash’s DAUGHTERS OF THE DUST (1991)—in order to demonstrate the tools and skills of 'close reading.' We will concentrate on those specifically filmic features of the movies, such as mise-en-scene, cinematography, editing and sound strategies, as well as those larger organizational forms, such as narrative and non-narrative structures and movie genres. Because our responses to the movies always extend beyond the film frame, we will additionally look closely at the complex business of film distribution, promotion, and exhibition to show how the less visible machinery of the movie business also shapes our understanding and enjoyment of particular films. Along the way, we will discuss some of the most influential and productive critical schools of thought informing film analysis today, including realism, auteurism, feminism, postmodernism, and others. Screenings are mandatory. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 094 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory, and provides an excellent foundation for the English major or minor. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning, appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the 'New' Criticism of the 1920's and 30's, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 096 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality – a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platos Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldua, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesy, Chandra Tadpole Mohanty, and Susan Stryker. ENGL 097 Theatre, History and Culture II
This course examines theatre and performance in the context of the border urban, artistic and political cultures housing them from the Renaissance to the mid-19th century. Encompassing multiple cultures and traditions, it will draw on a variety of readings and viewings designed to locate the play, playwright, trend or concept under discussion within a specific socio-historical context. The evolution of written and performed drama, theatre architecture, and scenography will be examined in tandem with the evolution of various nationalisms, population shifts, and other commercial and material forces on theatrical entertainment. Readings consequently will be drawn not only from plays and other contemporary documents, but also from selected works on the history, theory, design technology, art, politics or society of the period under discussion. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector

ENGL 100 Introduction to Literary Study
Literature does not exist for your protection. So dangerous is it, that Socrates argued poets ought to be banned from his ideal Republic. And Socrates himself—one of the most subversive of all poetic thinkers—was condemned to death for corrupting the young with his speeches. All great literature is unsettling and alarming. Along with its beauty and delicacy and rhetorical power and ethical force, it can be terrifyingly sublime and even downright ugly: full of contempt and horror and grandiosity and malice. From Socrates’ day to our own, countless writers have been jailed, exiled, and murdered, their works censored, banned, burned, for daring to say what others wish would remain unsaid—about religion and the State; sexuality, gender, and the body; art, science, and commerce; freedom and order; love and hate—and for saying it in ways that are aesthetically innovative, surprising, seductive, ravishingly unanticipated. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
For BA Students: Arts and Letters Sector

Notes: This course is intended to serve as a foundation for students interested in going on to become English majors.

ENGL 101 Study of an Author
This course introduces students to literary study through the works of a single author—often Shakespeare, but other versions will feature writers like Jane Austen, Geoffrey Chaucer, Herman Melville, and August Wilson. Readings an individual author across his or her entire career offers students the rare opportunity to examine works from several critical perspectives in a single course. What is the author’s relation to his or her time? How do our author’s works help us to understand literary history more generally? And how might be understand our author's legacy through performance, tributes, adaptations, or sequels? Exposing students to a range of approaches and assignments, this course is an ideal introduction to literary study for those students wishing to take an English course but not necessarily intending to major. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1.0 Course Unit

ENGL 103 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.
Taught by: Loomba
One-term course offered either term
Also Offered As: COML 125, NELC 180, SAST 124, THAR 105
Activity: Lecture
1.0 Course Unit

ENGL 104 Study of a Literary Period
This is an introduction to literary study through a survey of works from a specific historical period. Some versions will begin with traditional stories or poems, including a sampling of works in translation. Others will focus exclusively on modern and contemporary American short fiction or poetry. This course is designed or the General Requirement, and is ideal for students wishing to take an English course but not necessarily intending to major. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: CIMS 104, COML 104
Activity: Lecture
1.0 Course Unit

ENGL 105 Topics in Literature and Society
While the topic of this course varies from semester, its subject is always the relation between literature and socio-economic realities: political, economic, social, and of identity. Past versions of English 105 have included 'The World of Work,' ‘Disability Narratives,’ and ‘Conflict in Print.’ Each devotes a number of weeks to the economic and social theories underlying its given subject in order to provide students with adequate background. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Humanities and Social Science S

Activity: Lecture
1.0 Course Unit

ENGL 107 Literature and Medicine
This course offers a comprehensive study of significant changes and continuities in the history of medicine from 1650-1850, alongside works of literature that exemplify the shifting notions of the doctor and sickness in the Western medical tradition. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ENGL 111 Experimental Writing
A creative writing workshop committed to experimentation. The workshop will be structured around writing experiments, collaborations, intensive readings, and new and innovative approaches to composition and form. See English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 112 Workshop for Fiction Writers
This course emphasizes the study and practice of basic techniques of short fiction, with assignments divided between readings and discussion of student-written material. May be repeated for credit with a different instructor. See English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 113 Poetry Writing Workshop
This is a workshop for students who are interested in exploring a variety of approaches to poetry. Students will encounter a diverse series of readings, in-class writing activities, weekly writing assignments, and creative methods for heightening your abilities as a reader and writer. May be repeated for credit with different instructor. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: AFRC 114
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 114 Playwriting Workshop
The expressive possibilities and limitations of the stage medium through close reading of plays of various styles and period, study of the various resources of various types of theater, and original exercise in dramatic writing. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: THAR 114
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with different instructor.
ENGL 115 Workshop for Advanced Fiction Writers
An advanced workshop in the writing of fiction, with reading assignments and discussion of student works in progress. Topics may include the short story or the art of the novel. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. One-term course offered either term
Prerequisite: ENGL 112
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshmen. May be repeated for credit with a different instructor. Permission needed from instructor; writing sample required.

ENGL 116 Screenwriting Workshop
This course will look at the screenplay as both a literary text and a blue print for production. Several classic screenplay texts will be critically analyzed (REBEL WITHOUT A CAUSE, DOCTOR STRANGELOVE, PSYCHO, etc.) Students will then embark on writing their own scripts. We will intensively focus on: character enhancement, creating 'believable' cinematic dialogue, plot development and story structure, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext and visual story-telling. Class attendance is mandatory. Students will submit their works-in-progress to the workshop for discussion. See English Department’s website at www.english.upenn.edu for a description of the current offerings. One-term course offered either term
Also Offered As: CIMS 116
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 117 The Arts and Popular Culture
A creative writing workshop that concentrates on various aspects of writing about artistic endeavor, including criticism, reviews, profiles, interviews and essays. For the purposes of this class, the arts will be interpreted broadly, and students are able – and, in fact, encouraged – to write about both the fine arts and popular culture, including music, theater, film, fashion, photography and television. Students will write on a weekly basis, and many assignments will be tailored to each student's individual interests and are likely to include reporting and research. Writing subjects can range from a local band to a museum, from a theater group to a comedian. Course offerings may inclue Writing about Music, Writing about Popular Culture, or other topics and themes. Prerequisite: Students who have previously taken ENGL 117 should also be able to take this course in the spring term file. See the English Department's website at www.english.upenn.edu for a description of the current offerings. One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Students who have previously taken ENGL 117 should also be able to take this course in the spring term file.

ENGL 118 Advanced Poetry Writing Workshop
This workshop is especially valuable for creative writing concentrators in poetry within the English Major, for those who are working on longer works, or for those who wish to work on a series of poems connected by style and subject matter. Prerequisite: This workshop is designed for those students who have taken the introductory workshop ENGL 113 or its equivalent and desire advance study. May be repeated for credit with a different instructor. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: This workshop is designed for those students who have taken the introductory workshop ENGL 113 or its equivalent and desire advance study. May be repeated for credit with a different instructor.

ENGL 120 Working with Translations
In this class we will study and translate some of the major figures in 20th century poetry, including Rainer Maria Rilke, Claire Malroux, Pablo Neruda, Cesare Pavese, Anna Akhmatova, and Bei Dao. While the curriculum will be tailored to the interests and linguistic backgrounds of the students who enroll, all those curious about world poetry and the formidable, irresistible act of translation are welcome. Students should have at least an intermediate knowledge of a language other than English. We will study multiple translations of seminal poems, render our own versions in response, and have the additional opportunity to work directly from the original. Students may also work in pairs, or groups. A portion of the course will be set up as a creative writing workshop in which to examine the overall effect of each others’ translations so that first drafts can become successful revisions. While class discussions will explore the contexts and particularity of (among others) Urdu, Italian, French, and Polish poetry, they might ultimately reveal how notions of national literature have radically shifted in recent years to more polyglottic and globally textured forms. Through guest speakers, essays on translation theory, and our own ongoing experiments, this course will celebrate the ways in which great poetry underscores the fact that language itself is a translation. In addition to the creative work, assignments will include an oral presentation, informal response papers, and a short final essay. See the English Department’s website at www.english.upenn.edu for a description of current offerings. Course not offered every year
Also Offered As: COML 121
Activity: Seminar
1.0 Course Unit
Notes: This workshop is designed for those students who have taken the introductory workshop ENGL 113 or its equivalent and desire advance study. May be repeated for credit with a different instructor.

ENGL 121 Writing for Children
This is a course for students who have always thought it would be challenging, fun, curious, or rewarding to write a children's book. The class will be conducted as a seminar, using a wide variety of published children's books in all genres—picture books, chapter books, young fiction, older fiction as examples of successful books for young readers. See English Department website at www.english.upenn.edu for a description of current offerings. One-term course offered either term
Also Offered As: AFRC 121
Activity: Seminar
1.0 Course Unit
ENGL 122 Grotesque Forms
An introduction to letterpress printing and bookmaking and writing for the artist book, focusing on the history of the artist book, competence in letterpress technique, print composition and design skills, and alternative book binding. Course readings will focus on the work of Joanna Drucker and Jerome Rothenberg, and the examination of multi-media works. Field trips to local artist book collections will supplement course reading, projects, and the final project. The entire course will be taught, and practiced, through the lens of ‘the grotesque’ in art and literature. As a final project, each student will make their own limited-edition artist book that considers the course theme of ‘the grotesque’ through writing, image, printing and binding. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 124 Writing and Politics
This is a course for students who are looking for ways to use their writing to participate in the 2020 election. Student writers will use many forms–short essay, blogs, social media posts, mini video- or play scripts, podcasts–and consider lots of topics as they publish work, in real time, with #VoteThatJawn. This multi-media platform popped up in 2018 to support youth registration and voting in Philadelphia’s 2018 mid-term elections. Registration of 18-year-olds that year doubled: from 3,300 to nearly 7,000. This year university, high school, and media partners across the city aim to hit 10K. Imagine that. Imagine a Creative Writing class that answers our desire to live responsibly in the world and to have a say in the systems that govern and structure us. Plus learning to write with greater clarity, precision, and whatever special-sauce Jawn your voice brings. The course is designed as an editorial group sharing excellent, non-partisan, fun, cool, sometimes deadly earnest content for and about fresh voters. In addition, you will gain experience in activities that writers in all disciplines need to know: producing an arts-based event, a social media campaign, working with multi-media content, and collaborating with other artists. English 124 will sometimes work directly with diverse populations of youth from other colleges and high schools throughout the city. Because you will engage with a common reading program about the ground-breaking Voting Rights Act of 1965, the class is cross-listed with Africana Studies 124. In addition, the work of #VoteThatJawn performs a civic service; therefore it is listed as an an Academically Based Community Service (ABCS) course with the university. Don’t sit out this momentous electoral season because you have so much work. Use your work to bring other youth to the polls.
Taught by: Cary
Also Offered As: AFRC 124
Activity: Seminar
1.0 Course Unit

ENGL 129 Across Forms: Art and Writing
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn’t just like a dance, but was a dance or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but many not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing. Prerequisite: Permission to enroll is required; please submit a short description of your interest in the class to zolfr@writing.upenn.edu.
See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course usually offered in fall term
Also Offered As: FNAR 315, FNAR 615
Activity: Seminar
1.0 Course Unit

ENGL 130 Advanced Screenwriting
This is a workshop-style course for students who have completed a screenwriting class, or have a draft of a screenplay they wish to improve. Classes will consist of discussing student’s work, as well as discussing relevant themes of the movie business and examining classic films and why they work as well as they do. See English Department website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also Offered As: CIMS 130
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshmen.

ENGL 131 Inner Outer Space Travel Writing: A Creative Writing Workshop
Inner Outer Space Travel Writing is a creative writing workshop focused on writing work within the science fiction/speculative fiction/alternative futurities, science/land/travel writing, and creative-critical nonfiction traditions. Students will work within a variety of genres, with an emphasis on the essay, the short story, screen/tele-play, play, blog and performance. Students will read recommended texts from within their particular interests, and the course will culminate in both a public performance and dissemination/publication via another media platform (zine, website, podcast, etc). All levels of experience from none/first-time writer to published writers, are encouraged to register for the course.
Taught by: Bracho
Also Offered As: GSWS 510, LALS 510
Activity: Seminar
1.0 Course Unit
ENGL 133 Self-Scripting: Writing through Body and Space
In Self-Scripting, students will write through a variety of exercises and activities that put text into play with the body and space. Over the course of the semester, students will actively engage space and composition as they develop and explore scriptwriting for performance. We will explore exercises in an active laboratory setting. This course aims to expand on techniques for writing plays, poetry, and experimental biography.
Taught by: O’Karr
Course not offered every year
Also Offered As: THAR 115
Activity: Studio
1.0 Course Unit

ENGL 134 Passion Projects: Radical Experiments in Writing Plays, Screenplays, and Pilots
This creative writing workshop will focus on writing for screen, stage and internet and is open to undergraduate and graduate students at every level of writing experience. The course will be writing intensive and also include the reading and analysis of feminist, trans, queer, working class and racially liberatory plays, films, television and performance as models of inspiration. Meditation, drawing, theater games, improv exercises, screenings and outings to see work on and off campus will round out this holistic and experimental approach to making work that illuminates and entertains audiences from across the US and global audience spectrum.
Taught by: Bracho
Also Offered As: GSWS 512, LALS 512
Activity: Seminar
1.0 Course Unit

ENGL 135 Creative Non-Fiction Writing
A workshop course in the writing of creative nonfiction. Topics may include memoir, family history, travel writing, documentary, and other genres in which literary structures are brought to bear on the writing of nonfiction prose. May be repeated for credit with a different instructor. See the English Department’s website at www.english.upenn.edu for a description of the current offerings
One-term course offered either term
Also Offered As: AFRC 134, GSWS 135, URBS 135
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 136 Experimental Playwriting
In this course, students will write for theater and performance. Writers in the class will take cues from a myriad of experimental playwrights and performance artists who have challenged conventional ideas of what a script should look and sound like. Students will be asked to challenge how narrative is constructed, how characters are built and what a setting can be. This class will push beyond the formal structures of the well-made play script and address how writers explore and reinvent form and language as a means for radical change in the field of performance. Some playwrights we will read include Gertrude Stein, Suzan-Lori Parks, Maria Irene Fornes, Robert O’Hara, Young Jean Lee, John Jesurun, and Toshiki Okada. This class is ideal for playwrights, performers, screenwriters, and writers of experimental fiction. This course is cross-listed with Theatre Arts.
Taught by: O’Hara
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 138 Writing Center Theory & Practice
WRIT 138 401: This course is intended for capable writers who possess the maturity and temperament to work successfully as peer tutors at Penn. WRIT 138 402: ABCS course. Along with a study of theories, strategies, and methods for teaching and tutoring writing in diverse communities, this course will also interrogate our own social locations and the ways we engage with the realities of teaching and learning. To enable this, this course will provide opportunities for community engagement and reflection beyond the walls of our classroom by working with nearby high school students to prepare them for college-level writing. Please note that 8 of our weekly classes will be held at Robeson High School (4125 Ludlow School, Philadelphia, PA 19102). In addition to fieldwork, students will read and discuss key texts on community-engaged writing instruction, keep a weekly reflection and reading response journal, and engage in a scaffolded semester-long research project on community-engaged writing theory and practice.
Taught by: Varies
One-term course offered either term
Also Offered As: WRIT 138
Activity: Seminar
1.0 Course Unit

ENGL 142 Duchamp is My Lawyer
This course examines the impact of copyright law on artists and creative industries. Looking at publishing, music, film, and software, we will ask how the law drives the adoption of new media, and we will consider how regulation influences artistic decisions. A mix of the theoretical with the practical, we will be using UbuWeb (the largest and oldest site dedicated to the free distribution of the avant-garde) as our main case study. The course will cover both the history of copyright law and current debates, legislation, and cases. We will also follow major copyright stories in the news. Readings cover such diverse topics as the player piano, Disney films, YouTube, video game consuls, hip hop, the Grateful Dead, file sharing, The Catcher in the Rye, and many more. We will also examine the critical role of ‘shadow libraries,’ (free culture hubs) in regards how the cultural artifact is produced and distributed in the digital age, alongside today’s gatekeepers of algorithmic culture, such as Netflix, Amazon, and Spotify.
Taught by Decherney
Course usually offered in spring term
Also Offered As: CIMI 142
Activity: Seminar
1.0 Course Unit

ENGL 144 Speculative Fiction
A creative writing course devoted to speculative fiction. Topics may include science fiction, fantasy, horror, or other related genres. Students will study the literary origins of these genres and create their own original work. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Activity: Seminar
1.0 Course Unit
ENGL 145 Advanced Non-Fiction Writing
An advanced writing course devoted to creative nonfiction. Topics may include writing for literary magazines; writing for journals of opinion; memoir; family history; travel writing; documentary; or other topics and genres in which literary structures inform the writing of nonfiction prose. Offerings may address writing as a public act, questions of ethics and policy, methods of research and fact-checking, marketing, and how to understand and enter the world of publishing. May be repeated for credit with a different instructor. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: GSWS 145
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 155 Writing in the Documentary Tradition
This course will function as a workshop, with a select group of students. It’s a course that will honor the spirit and tradition of ‘documentary’ writing. The word ‘documentary’ has meant many things over time. Here, it means a kind of nose-close observation and reportage. It means a level of being with one’s subject matter in a way that other creative writing courses do not allow because of their format and structure. In English 155, a student writer at Penn will dare to ‘hang’ with a topic—a girl’s high-school basketball team; a medical intern in a HUP emergency room; a janitor doing the graveyard shift in a classroom building; a food-truck operator crowding the noontime avenues; a client-patient in the Ronald McDonald House near campus; a parish priest making a solitary and dreary and yet redemptive rounds of the sick and the dying in the hospital—for the entire term. At the term’s end, each writer in the course will have produced one extended prose work: a documentary piece of high creative caliber. This is our goal and inspiration. The piece will be 35 to 40 pages long, at minimum. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 156 Photographs and Stories
A creative writing course built entirely around the use of photographs, and the crafting of compelling nonfiction narratives from them. The essential concept will be to employ photographs as storytelling vehicles. So we will be using curling, drugstore printed Kodak shots from our own family albums. We will be using searing and famous images from history books. We will be taking things from yesterday’s newspaper. We will even be using pictures that were just made by the workshop participants outside the campus gates. In all of this, there will be one overriding aim to achieve memorable, full-bodied stories. To locate the strange, evocative, storytelling universes that are sealed inside the four rectangular walls of photograph. They are always there, if you know how to look. It’s about the quality of your noticing, the intensity of your seeing. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 157 Introduction to Journalistic Writing
This workshop is designed as an introduction to journalistic writing. Topics may include Writing about Food, Journalism and the Environment, Digital Newswriting, and other themes. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 158 Advanced Journalistic Writing
A workshop in creative writing devoted to original student work in journalism. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: STSC 118
Activity: Seminar
1.0 Course Unit

ENGL 159 Political Writing in the Digital Age
A primer on writing about U.S. politics, in an era of major technological upheaval and serious voter polarization. Today’s 24/7, wi-fi’d, blogging environment-along with the rise of new conservative media-are changing the ways that writers cover politics and deliver the information. May be repeated for credit with a different instructor. See English Department website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 160 Long-form Journalism
This course in long-form journalism is required of all journalistic writing minors. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
ENGL 161 The Art of the Profile
One of the toughest challenges for any journalist is to master the art of the profile-writing. In this course, students will read and critique some of the classic profile articles of the past 40 years and, most importantly, write profile articles of their own. Writing about people is often very rewarding, but rarely easy. In this course, students will debate the questions that have plagued and energized journalists for generations: How do you persuade someone that theirs is a worthy topic for a profile? How do you ask sensitive questions? If the person is a celebrity, how do you avoid being manipulated into writing a ‘puff piece’? Do you tape the interviews or just take notes? How do you structure a profile in order to keep the reader’s attention? Is it even possible to capture the essence of a person on the written page? Are you a friend to the profile subject—or a manipulator? A journalist at The New Yorker once said that a writer’s relationship with the profile subject is ‘a kind of love affair.’ On the other hand, a famous author once said that a profile writer is typically ‘gaining their trust and betraying without remorse.’ Which is closer to the truth? Students, in addition to writing their own profiles, will kick around these questions while reading some of the best contemporary profile writers, including Susan Orlean, Gay Talese, David Remnick, Mark Bowden, and Judy Bachrach. The instructor will also offer several of his own. See the English Department’s website at www.english.upenn.edu for a description of current offerings.

One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 162 Covering Political Elections
In this course, students with a passion for both writing and politics will have the unique opportunity to track the news as it unfolds week by week, to critique it in class, and, most importantly, to write about it in a variety of formats, ranging from ‘straight’ news to informed opinion. Students can expect spirited class debate about the elusive nature of ‘objectivity,’ the often thin line between truth and rumor, the challenges of fact-checking a candidate’s ‘spin,’ the challenges of writing responsibility in an era when even facts seem to be polarized, the challenges of analyzing election results and writing effectively, the growing pressure on journalists to reveal their political beliefs, and much more. Some of the writing will happen in class; students will view excerpts from election debates and broadcasts, and will file their reports ‘on deadline.’ And students will also have a chance, in class, to critique some of the nation’s best political writers—reporters, feature writers, columnists, and bloggers. Topics for this course may include reporting on Congressional midterms and reporting on the Presidential election. See English Department website at www.english.upenn.edu for a description of current offerings.

One-term course offered either term
Activity: Seminar
1.0 Course Unit

Notes: This course is not open to freshmen.

ENGL 165 Writing through Culture and Art
This is a year-long creative writing class, given as a collaboration between the Center for Programs in Contemporary Writing and the Philadelphia Museum of Art. Students will be encouraged to develop correspondent methods of responding to the PMA’s exhibitions. The class will involve regular trips to attend concerts, museums and lectures. The students will have access to the most cutting-edge artists today via class visits and studio visits. English 165 will culminate in a publication of student work. May be repeated for credit with a different instructor. Prerequisite: Permission of the instructor. Ideally, applicants will have already taken 117 with the instructor, but that is not firm prerequisite and other students should absolutely feel free to apply. See English Department website at www.english.upenn.edu for a description of current offerings.

One-term course offered either term
Activity: Seminar
1.0 Course Unit

Notes: May be repeated for credit with a different instructor.

ENGL 169 Advanced Writing Projects in Long-Form Nonfiction
An advanced course in long-form nonfiction journalistic writing for a select group of experienced and self-starting student writers. (Ideally, each accepted member will have already taken one or two nonfiction seminars within the creative writing program.) The goal will be to tailor a reporting and writing project to your interest, one you may have long wished to take up but never had the opportunity. It could be a project in the arts. It could be a profile of a person or place. It might be documentary in nature, which is to say an extremely close-up observation of your subject. (An example: think of a hospital chaplain at Penn, going on his dreary, redemptive, daily rounds, to visit the sick and anoint the dying. What if you were there, for most of the term, as unobtrusively as possible, at his black-clad elbow?) The group will meet at to-be-determined intervals. In between, the enrollees will be pairing off and in effect serving as each other’s editor and coach and fellow (sister) struggler. When we do assemble as a group, we will be reading to each other as well as discussing the works of some long-form heroes—Didion, Talese, Richard Ben Cramer, one or two others you may not have heard of. In essence, this is a kind of master course, limited in enrollment, and devoted to your piece of writing, to be handed in on the final day. It will be in the range of 25 to 30 pages, something above 8,000 words. The course presumes a lot of individual initiative and self-reliance. If you’re interested, please email phendric@english.upenn.edu and suggest your qualifications. Permission to enroll is required.

Activity: Seminar
1.0 Course Unit

ENGL 199 Independent Study in Writing
Supervised study in writing.

One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Notes: Interested students must receive permission by the professor and the English Department.
ENGL 200 Junior Research Seminar
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address debates within the field/period/topic of the course, research methods, and advanced writing and critical thinking issues. This course is required for most English Majors. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: This course is required of most English Majors.

ENGL 201 Virtual Reality Lab
In this collaboration between Penn and the Philadelphia Museum of Art (PMA), students will work with with curators to create virtual reality projects connected to the museum's collections. This course mixes virtual reality theory, history, and practice. We will read a wide range of scholarship, manifestoes, and memoirs that examine virtual reality and other immersive technologies, stretching from the 18th century to today. We will explore virtual reality projects, including narrative and documentary films, commercial applications, and games. We will work with many different virtual reality systems. And we will learn the basics of creating virtual reality, making fully immersive 3-D, 360-degree films with geospatial soundscapes. Finally, we will see what we have learned out of the classroom, working with the Philadelphia Museum of Art curators to create virtual reality experiences based around the museum's objects and exhibits. Students will gain an understanding of the unique approaches needed to appeal to museum visitors in a public setting, so we can make viable experiences for them. No previous knowledge of VR or experience is necessary. Interested students should email Prof. Peter Decherney to obtain a permit for the course.

ENGL 205 Spiegel-Wilks Seminar
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: Elijah Pierce's America: Barnes Foundation Curatorial Seminar This Spiegel-Wilks Curatorial Seminar is offered in collaboration with the Barnes Foundation. Students will be provided with an immersion in curatorial and museum studies and will have the opportunity to interact with curators, scholars, and staff at Penn and the museum, including Executive Director and President Thom Collins, who will co-teach the course. The course syllabus will engage the permanent collection at the museum, where the course will meet weekly. As part of the course, students will also conduct research and contribute to the temporary exhibition opening at the Barnes Foundation that semester, which will feature the work of Elijah Pierce (1892-1984), a self-taught woodcarver whose handcrafted works reacted to life in 20th-century America. One of the first generations of African Americans born into freedom, his remarkable narratives depict religious parables, autobiographical scenes, episodes from American politics, and figures from popular culture.

ENGL 209 Topics in Digital Humanities
This course focuses intensively on a particular issue in digital humanities (DH) and computational approaches to literary texts. See the English Departments website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 210 Critical-Creative Approaches to Literature
These courses enable students to think and write creatively as a means to the critical understanding of literary texts. The topic of the course will vary from semester to semester, but the course will always seek to advance students understanding of literature, its formal elements, and its relationship to culture and history through the use of creative projects instead of or alongside more traditional critical writing. See the English Department's website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors.

ENGL 211 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the 'snail' pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a 'spiral city', and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann's destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail's shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.
One-term course offered either term
Also Offered As: FNAR 318, FNAR 518
Activity: Seminar

ENGL 212 Walt Whitman and the People’s Press
Walt Whitman and the People’s Press: A Course to Design and Program a Mobile Printing Space as a Public Art Project. Inspired by Whitman at 200, a region-wide celebration of Walt Whitman, this hands-on and collaborative course will engage students with artists, writers, community leaders and the public to design and program a mobile poetry printing facility that recognizes the complicated legacy of Walt Whitman in the 21st Century. To do this students and instructors will consider Whitman’s poetry as well as his historical period and his place in Philadelphia and Camden. At the same time students will learn to use a press, design materials and create their own multimedia responses to Whitman. Students in this course should expect to read a great deal of poetry but also to be ready to work with their classmates to create responses to Whitman and to see and experience Philadelphia and Camden in new ways.

Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 229 Topics In Classicism and Literature
Ancient epic and mythology had a curious and rich afterlife in the Middle Ages. Virgil and Ovid were taught in medieval schools, read for their moral content, and revered as fiction that concealed great philosophical value. Their influence also gave rise to the great literary form of the Middle Ages, romance: narratives that place a premium on erotic love, individual quests, the unpredictability of adventure, and imaginary or exotic settings. Yet despite what may appear to be merely gratifying entertainment, medieval romance and medieval receptions of classical myth did tremendous cultural work, enabling profound explorations of history, political values, gender and sexual identity, and social power. We will spend some weeks reading Virgil’s Aeneid and Ovid’s Heroides and Metamorphoses. Then we will turn to medieval reimaginations of classical myth and metamorphosis, including poetry by Marie de France, Chretien de Troyes, and Chaucer, and anonymous works such as Sir Gawain and the Green Knight. The course requirements will be: one very short oral presentation on a research topic of your choice related to the reading, together with a short write-up of your research; one short critical paper; and one longer research paper (which can develop the subject of your oral presentation).

ENGL 242 Life Stories in America, 1730-1830
This course explores the social and cultural history of America by focusing on the lives of specific individuals, ranging from Jesuit priests in early Quebec to Philadelphia politicians to Saramaka slaves to Maine midwives. One of the people in Philadelphia who we will discuss is Benjamin Franklin, Penn's founding father. As we examine biography and autobiography as two of history's most powerful narrative frames, we will concentrate on the spaces and places in the social landscape that shaped individual understandings of work, sense of self, gender, beliefs, and political power.

ENGL 257 Topics of Americas Before 1900
The Essay Film is an important tradition within the various genres that constitute the field of Film and Video Art. Through the element of time it differentiates itself from its literary and photographic antecedents. It borrows selectively from both narrative fiction and documentary - highly subjective and occasionally poetic but without perhaps the burden of truth. The Essay Film is an attempt to dimensionalize our experience of the world and our place in it. It represents an argument, a meditation, a critical engagement with a place, a time or a subject. This is a combination seminar/studio course. Through readings, screenings and discussion students will gain an historical perspective on the genre. The core assignment is for each student to complete a short film (20 minutes max.) in the tradition of the Essay Film. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: FNAR 177, FNAR 677

ENGL 268 Apocalypse and the Anthropocene
In this class we will explore the narrative mode of the apocalypse in the context of the geologic designation of the Anthropocene. We will analyze a diversity of cultural forms to think about questions, reconceptions, and social issues relevant to that ephocal concept. Specifically, we will study the ways American apocalyptic novels, films, blogs, and video games attempt to understand the human and non-human relationships in the Anthropocene. We will look to the ways apocalypse narratives can represent and contest the exploitative, extractive, and unequal power relations that the 'era of the human' includes, paying special attention to American notions of nature and stewardship as they relate to geologic time and the legacies of genocide, slavery, and capitalism. Our class will investigate the ways works of art attempt to render these complex and perhaps overwhelming concepts comprehensible so that we may envision and enact just futures.

ENGL 273 The Chinese Body and Spatial Consumption in Chinatown
This course looks at representations of the Chinese (and Asian body) since the Limehouse district in East London and the advent of Chinese contract laborers to the Americas in the 19th century. The localization of the Chinese throughout the Americas within Chinatown precints were also subject to representational imaginings that were negotiated through the lens of civic planning, literature and later in cinema. Chinatowns are ultimately a product of racism. They were created as a political and social support system for newly arrived Chinese immigrants. While Chinese laborers arrived into the United States in 1840 and in significant numbers into Canada about 1860, Chinese contract workers were encouraged to immigrate to the Americas as an inexpensive source of labor, especially after the end of the American Civil War. Industrial leaders in America, Canada and elsewhere in the Americas (Mexico, Cuba, Peru, etc) saw the arrival of Chinese workers as a victory for commercial interests. However, the celebration was short-lived, as anti-Chinese sentiment quickly transformed into anti-Chinese hysteria. Rather than attacking the vested interests that exploit foreign labor as embodied by the Chinese worker, racist unions with the cooperation of civic leaders and the police deemed it safer to burn Chinatowns than capitalist property. Deeply under-studied to this day is the number of mass murders of Chinese workers in the 19th century by anti-Chinese thugs. This seminar will focus in on how the body of the Chinese (and Asian) was imagined and reimagined multiple times from the middle of the 19th century to today. Taught by: Lum/Yang
Also Offered As: ASAM 313, FNAR 313, FNAR 613
Activity: Seminar

1.0 Course Unit
Notes: Formerly ENGL 285, Spaces will be reserved for English majors

ENGL 275 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More's fictive island of 1517. The 'origins of environmentalism' lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others. Taught in English.

ENGL 276 Advanced Topics in Theatre History
The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event—acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.—relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

ENGL 279 Jewish Films and Literature
From the 1922 silent film 'Hungry Hearts' through the first 'talkie,' The JazzSinger, produced in 1927, and beyond 'Schindler's List,' Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's 'King Lear' to Sholom Aleichem's 'Teyve the Dairyman,' primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we 'read' literature and film, b) the various ways that the media of fiction, drama, and film 'translate' Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience. All readings and lectures in English.

ENGL 280 Arts and Research Studio: Queer Archives, Aesthetics, and Performance
This course focuses on questions of how to represent the queer past, which it approaches from several angles: through training in archival methods and in scholarly debates about historiographical ethics (or, in the words of David Halperin, 'how to do the history of homosexuality'); through engagement with the work of artists who make archives central to their practice; and through lab-based training that aims to represent encounters with queer history through embodied performance.
Expectations: This course meeting weekly for 3 hours. But as you will see listed below (these activities and dates are not confirmed for this draft syllabus) the course includes and require that you attend a series of off-campus trips both in Philadelphia and to NYC that occur outside of the class schedule. Below is a list of archives we will visit, performances we will attend, and artists' studios we will visit for in-depth conversation with artist about their practice. The course will address both practical and theoretical issues raised by research in LGBT archives. We will take advantage of local resources in Philadelphia, including the John J. Wilcox Archives at the William Way Center (http://www.waygay.org/archives/). But we will also visit the Lesbian Herstory Archives (http://www.lesbianherstoryarchives.org/) and The Downtown Collection at the Fales Library at NYU (https://guides.nyu.edu/downtown-collection) and the Franklin Furnace Performance Archives (http://www.franklinfurnace.org), all in New York City. We will also bring artists to campus to work directly with students, and will meet with artists in New York. We will take advantage of the staging of Killjoy Kastle in Philadelphia in Fall 2019. This site-specific art installation, the work of Toronto artists Allyson Mitchell and Dierdre Logue, is a haunted house that addresses the difficult history of lesbian feminism, as well as its potential for contemporary LGBT politics. Since the Haunted House will include materials related to the history of feminist and LGBT activism in Philadelphia, students in the course can actively contribute to the research for this project.

Course offered fall, odd-numbered years
Also Offered As: THAR 281
Activity: Studio
1.0 Course Unit

ENGL 281 Topics In African-American Literature
In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included 'African American Autobiography,' 'Backgrounds of African American Literature,' 'The Black Narrative' (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 281
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 282 Trap Music
This course examines the coming to pass of trap music from several perspectives: 1) that of its technological foundations and innovations (the Roland 808, Auto-tune, FL Studio (FruityLoops), etc.); 2) that of its masters/mastery (its transformation of stardom through the figures of the producer (Metro Boomin) and the rock star (Future)); 3) that of its interpretability and effects (what does the music say and do to us). We will thus engage with this music as a practice of art and form of technosociality that manifests uncanny and maximal attunement with the now. Taught by: White

Notes: Spaces will be reserved for English Majors
**ENGL 285 American Musical Theatre**

The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.

Notes: Spaces will be reserved for English Majors

**ENGL 287 Theatre and Politics**

This course will examine the relationship between theatre and politics in the twentieth and twenty-first centuries. How do theatre artists navigate their artistic and political aims? How do we distinguish between art and propaganda? Throughout the semester we will ask how the unique components of theatre–its poetic structure, engagement with spectators, aesthetics of representation, relationship to reality, and rehearsal process–contribute to its political capacity. Students will read a variety of plays drawn from late twentieth century and contemporary global theatre practice alongside political and aesthetic theory to interrogate the relationship between artistic production, power, and resistance. We will conclude with a consideration of the ways politics is itself a performance, considering how power is supported by theatrical means and how performance functions in resistance movements.

ENGL 299 Independent Study in Language and Literature
Supervised reading and research.
Taught by: Copeland
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Interested students must receive permission by the professor and the English Department

ENGL 303 Women in Theatre and Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignant—and always provocative. Our focus will be on English-language works from the late 20th century to the present (#metoo) moment. We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are 'women in comedy', trans performance, drag kings, feminist directing, etc.).
Taught by: Malague
Course not offered every year
Also Offered As: GSWS 279, THAR 279
Activity: Seminar
1.0 Course Unit

ENGL 304 Japanese Cinema
This course is a survey of Japanese cinema from the silent period to the present. Students will learn about different Japanese film genres and histories, including (but not limited to) the benshi tradition, jidaigeki (period films), yakuza films, Pink Film, experimental/arthouse, J-horror, and anime. Although the course will introduce several key Japanese auteurs (Mizoguchi, Ozu, Kurosawa, Oshima, Suzuki, etc), it will emphasize lesser known directors and movements in the history of Japanese film, especially in the experimental, arthouse, and documentary productions of the 1960s and 1970s. Finally, in addition to providing background knowledge in the history of Japanese cinema, one of the central goals of the course will be to interrogate the concept of 'national' cinema, and to place Japanese film history within an international context.
Taught by: Alekseyeva
One-term course offered either term

ENGL 318 Topics In Old English
This seminar explores an aspect of Anglo-Saxon culture intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar
ENGL 321 National Literatures
A course that traces how particular literary texts, very often medieval, are adopted to become foundational for national literatures. Key moments of emphasis will be the early nineteenth century, the 1930s, and (to some extent) the unfolding present. Research subtexting this offering has been conducted over the last years, both in my editing of Europe: A Literary History, 1348-1418 (2 vols and 82 chapters, Oxford UP, 2016) and in preparation for 'Medieval Studies in Troubled Times: the 1930s,' to be offered as Presidential plenary at the Medieval Academy of America convention at Penn on 9 March 2019. I have also travelled and lectured extensively for Penn Alumni Travel over the last decade, crossing national boundaries and also pondering how complex literary issues might be framed for a broad (but exceptionally intelligent) audience. Issues arising in traversing Mediterranean space are explored in an article published (in Italian) in Studi migranti. Some texts immediately suggest themselves for analysis. The Song of Roland, for example, has long been fought over between France and Germany; each new war inspires new editions on both sides. The French colonial education system, highly centralized, long made the Chanson de Roland a key text, with the theme of Islamic attack on the European mainland especially timely, it was thought, during the Algerian war of independence. Germany also sees the Niebelungenlied as a key text, aligning it with the Rhine as an impeccably Germanic: but the Danube, especially as envisioned by Stefan Zweig, offers an alternative, hybridized, highly hyphenated cultural vision in running its Germanic-Judaic-Slavic-Roman course to the Black Sea. The course will not be devoted exclusively to western Europe. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow’s great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin’s Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called ‘Hindu epics’ can also be a delicate matter. Some ‘uses of the medieval’ have been exercised for reactionary and revisionist causes in the USA, but such use is much more extraneous now east of Prague. And what, exactly, is the national epic of the USA? Preference given to Ben Franklin students.
Taught by: Wallace
One-term course offered either term
Also Offered As: COML 321
Activity: Seminar
1.0 Course Unit
Notes: Preference given to Ben Franklin students

ENGL 323 Topics In Medieval Poetry
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante’s autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil’s Aeneid and selections from Ovid’s Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in their original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required. When crosslisted with ENGL 323, this is a Benjamin Franklin Seminar.
Course not offered every year

Notes: ?Formerly ENGL 370?. Benjamin Franklin Seminar

ENGL 378 Global Media
This course explores a broad media landscape through new critical and conceptual approaches. It is designated as a Benjamin Franklin Seminar. This course maps the footprints of television at a global scale. Adopting comparative approaches, we will be studying TV’s formation of national and global discourses, and thereby recognizing not only television’s impact on processes of globalization, but also the ability of television to matter globally. Working through concepts of ‘broadcasting,’ ‘flow,’ ‘circulation,’ and ‘circumvention,’ the course examines the movement of (and blocks encountered by) television programs and signals across national borders and cultures. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services? Navigating from United States and Cuba to India and Egypt, the readings in the course illuminate how particular televisural genres, institutions, and reception practices emerged in various countries during specific historical periods. We shall be addressing a range of questions: what kind of global phenomenon is television? Can we study television in countries where we do not know the existing local languages? In what different ways (through what platforms, interfaces, and screens) do people in different continents access televisural content? What explains the growing transnational exports of Turkish and Korean TV dramas? What is the need to historically trace the infrastructural systems like satellites (and optical fiber cables) that made (and continue to make) transmission of television programming possible across the world? How do fans circumvent geo-blocking to watch live sporting events? Assignments include submitting weekly discussion questions and a final paper. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 380 Performance in the African Diaspora
The purpose of this course is to engage students in the rigorous process of mining experiences for material that can be transformed into a public performance piece. In-class writing, group discussions, and field work in the Philadelphia area. AUGUST WILSON AND BEYOND. The people need to know the story. See how they fit into it. See what part they play. - August Wilson, King Hedley II. In this seminar, students will read groundbreaking playwright August Wilson's 20th Century Cycle: ten plays that form an iconic picture of African American traumas, triumphs, and traditions through the decades, told through the lens of Pittsburgh's Hill District neighborhood. Other readings include supporting material on Wilson's work and African American theatre, the works of contemporary playwrights whom Wilson has influenced (such as Suzan-Lori Parks and Tarell Alvin McCraney), and context on Penn's relationship with West Philadelphia. See the English Department's website at www.english.upenn.edu for a description of current offerings.

Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 396 History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. The first half of the course will focus on early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (such as Philip Sidney and Giambattista Vico). In the second half of the course we will turn to modern concerns by looking at the literary (or 'art') theories of some major philosophers and theorists: Kant, Hegel, Marx, Nietzsche, Freud, and Walter Benjamin. We end the course in the mid-twentieth century. The purpose driving this course is to consider closely how this tradition generated questions that are still with us, such as: what is the act of interpretation; what is the 'aesthetic'; what is 'imitation' or mimesis; and how are we to know an author's intention. During the semester there will be four short writing assignments in the form of analytical essays (3 pages each). Students may use these small essays to build into a long piece of writing on a single text or group of texts at the end of the term. Most of our readings will come from a published anthology of literary criticism and theory; a few readings will be on Canvas.
Taught by: Copeland
Course not offered every year
Also Offered As: CLST 396, COML 396
Activity: Seminar
1.0 Course Unit

ENGL 399 Independent Study in Language and Literature
Supervised reading and research.
One-term course offered either term
Activity: Independent Study
2.0 Course Units
Notes: Interested students must receive permission of the professor and the English department. This course number is for two course units and created for LPS students.
ENGL 500 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar's exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture, and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

ENGL 505 Electronic Literary Studies Proseminar
This course is designed to introduce advanced undergraduate and graduate students to the range of new opportunities for literary research afforded by recent technological innovation. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: ARTH 506, CIMS 505, COML 504
Activity: Seminar
1.0 Course Unit

ENGL 512 Fiction Writing Workshop
In this fiction writing workshop, we will be making a conscious effort to transcend our personal reading and writing preferences in order to be apprenticed by divergent literature—aesthetic achievements centered around objective reality, subjective life, and ecstatic confession and play! Most of the works that tend to affect us deeply are the ones that might have wearied us, or even greatly disturbed us. But in time, upon further reflection, we find them rather informative—or even illuminating! We will do a lot of new weekly writing, which will result in a draft and a final version of an original story. You and another classmate will be 'hosting' at least one class in open discussion of a weekly reading, and critiquing each other's drafts—focusing on craft, rather than content. You will challenge your self-censorship in a safe and supportive environment, and will read weekly what you write to develop your observational and listening skills in determining the effects of the spoken word.
Taught by: Richardson
Also Offered As: GSWS 512
Activity: Seminar
1.0 Course Unit

ENGL 513 Writing through Music
'Not all that's heard is music...Remember the little / lovely notes' - Lorine Niedecker. This writing workshop will focus on the provocative interchanges between music and creative writing. We will consider music of all kinds, all genres (jazz, classical, hip-hop, ambient, folk, electronic, experimental, etc.), as a springboard for the imagination, as a counterpoint to forms of language, and as a tool for cultivating creative writing practices; we will also explore a range of poets and prose writers whose engagement with music reveals new ways of understanding the relationship between sound and the written word. Students will craft their own original pieces in this community-based classroom, where we will read and comment on each other's work as well as on outside readings and recordings; students will also be encouraged to explore the live music scenes where they live, and to create their own music if so inclined. Through regular weekly writing assignments in a range of genres, including poetry, essay, and fiction, we will push the boundaries of our ideas and discover and expand our own listening and reading practices. Course requirements include thoughtful and committed class participation, regular writing assignments, and a final portfolio as well as statement of creative practice.
Taught by: Johnson
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 518 King Arthur: Medieval to Modern
From the Middle Ages to the present, stories about King Arthur, the brave deeds of the nights of the Round Table, and Merlin's mysterious prophecies have mesmerized readers and audiences. In this course, we will study nearly 1000 years of literature about King Arthur, beginning with Geoffrey of Monmouth's twelfth-century History of the Kings of Britain and Sir Gawain and the Green Knight, and ending with Mark Twain, Alfred Lord Tennyson, and the fantasy fiction classic, T. H. White's Once and Future King. We will also be reading authors who repurposed Arthurian literature to think about gender relations (for example, Elizabeth Phelps' critique of domesticity), colonialism and nationalism (Wales and India), and religious cultures (for example, the medieval Hebrew version of King Arthur). Throughout the course, we will think about what Arthurian legends mean to the way we write history and the ways in which we view our collective pasts (and futures). Assignments will include response papers, an oral presentation, and a final paper.

ENGL 540 Topics in 18th Century British Literature  
This course covers topics in 18th Century British literature. Its emphasis varies with instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

ENGL 541 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019  
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the 'black interior,' how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be team taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia's jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.  
Taught by: Beavers

Also Offered As: AFRC 542, ARTH 519, MUSC 542, URBS 542  
Activity: Seminar  
1.0 Course Unit

ENGL 545 Eighteenth-Century Novel  
A survey of the major novelists of the period, often beginning with Defoe and a few of the writers of amatory fiction in the early decades of the century and then moving on to representative examples of the celebrated novels by Richardson, Fielding, and others of the mid-century and after. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

ENGL 548 English Literature and Culture, 1650-1725  
English 548, with its companion, English 549, studies the literature of this period in the context of the artistic and cultural milieu of the later seventeenth and early eighteenth centuries. Texts usually include works by Dryden, Rochester, Swift, Pope, and Defoe. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

ENGL 550 Topics in Romanticism  
This class explores the cultural context in which the so-called Romantic Movement prospered, paying special attention to the relationship between the most notorious popular genres of the period (gothic fiction and drama) and the poetic production of both canonical and emerging poets. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit
ENGL 553 British Women Writers
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 554, GSWS 553

ENGL 556 Topics in 19th-Century British Literature
This course covers topics in nineteenth-century British Literature, its specific emphasis varying with the instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 560 The Novel
This course will provide an intensive introduction to the study of the novel, approaching the genre from a range of theoretical, critical, and historical perspectives. It may examine conflicting versions of the novel's history (including debates about its relationship to the making of the individual, the nation-state, empire, capital, racial and class formations, secularism, the history of sexuality, democracy, print and other media, etc.), or it may focus on theories of the novel, narratology, or a particular problem in novel criticism. It may attend to a specific form or subgenre of fiction, or it may comprise a survey of genres and texts. See the English Department's website at: www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 563
Activity: Seminar
1.0 Course Unit

ENGL 563 Topics in 20th-Century British Literature
Topic for Spring 2016: Making and Marking Time. What is time? In the late 19th century, the questions of how to define time, how to slow down time, and, above all, how to accelerate movement have become focus of the work by many European philosophers who have tried to come to terms with what is now termed as the Industrial Revolution, and the idea of 'progress.' And can time be understood as something continuous, or is it fragmented, proceeding in fits and burst? Such contemplations on time have deeply influenced writers. Marcel Proust was a reader of Henri Bergson and translated his theories of time into a concept of memory. Thomas Mann has tried to navigate timeless in a novel set on a 'Magic Mountain.' Virginia Woolf and James Joyce have pictured an entire universe in a single day (Mrs. Dalloway, Ulysses) while early 20th century Italian Futurists made the contemplation of time part of their manifestos. With them, and with expressionist writers in Germany or writers from the DADA movement there elsewhere in Europe, a reckoning with time would also influence their choice of genre and form, writerly practice, and technique. Parallel to these literary experimentation, pictures were set into motion in scholarly studies by Eadweard Muybridge and finally in the new medium film; Impressionist painters insisted on picturing fleeting moments, and composers experimented with temporal sequences. We may be able to understand a reconsideration of time as driving force for the modern movement, or simply 'modernity.' In this seminar, we will study a selection of literary texts of the late 19th century and the modernist movement, consider the philosophical background and changes in historiography, and integrate a consideration of the visual arts and music.
Course not offered every year

Activity: Seminar
1.0 Course Unit

ENGL 573 Topics in Criticism & Theory
Topic for Spring 2021: Cultures of Reading in Imperial Russia
What did it mean to be a reader in imperial Russia? What did people read, and to what ends? How was literacy cultivated, and what were the social implications? In this course, students will read several canonical works of nineteenth-century Russian literature that thematize and foreground the act of reading: as a pursuit undertaken for the betterment of self, society, nation, and world; as a light pastime for the bored or underemployed; but also as an enterprise fraught with potential for moral or civic ruin. In addition to closely investigating allusions to the specific texts and authors read by literary characters, we will also examine the reading habits of our own authors as both consumers and producers of literary culture. We will consider these dynamics against a backdrop of constant fluctuations in educational policies, the book market, and the circulation of texts within and beyond Russia as we work together to develop an understanding of the imperial Russian reading public(s).

Activity: Seminar
1.0 Course Unit

ENGL 581 Learning from James Baldwin (1924-1987)
James Baldwin, one of the greatest writers of the twentieth century, spoke to the issues of his times as well as to our own. This class will examine the intellectual legacy that Baldwin left to present-day writers such as Toni Morrison, Charles Johnson, Ta-Nehisi Coates, Thulani Davis, Caryl Phillips and others. We will spend time reading and discussing Baldwin’s novels, short stories, plays and essays. In doing so, we will be considering the complex assumptions and negotiations that we make in our day-to-day lives around our identities and experiences built upon gender, sexual preference, the social-constructs called ‘race,’ and more. James Baldwin’s life and work will be the touchstone that grounds our discussions. We will read Go Tell It on the Mountain, Another Country, The Fire Next Time, and Giovanni’s Room and see films I Am Not Your Negro, The Price of the Ticket and The Murder of Emmett Till. Students will research subjects of their own choosing about Baldwin’s life and art. For example, they may focus on the shaping influences of Pentecostalism; segregation; racism; homophobia; exile in Paris; the Civil Rights Movement; Black Power, Baldwin’s faith, or his return to America.
Taught by: Watterson
Also Offered As: AFRC 581, GSWS 580
Activity: Seminar
1.0 Course Unit

ENGL 582 American Literature to 1810
In this course we shall examine the ways various voices—Puritan, Indian, Black, Female, Enlightened, Democratic—intersect with each other and with the landscape of America to produce the early literature(s) of America. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 584 Environmental Imaginaries
Drawing on theories of worldmaking and ethnographic works on culture and environment, this seminar will examine the production of Cartesian-based environmental imaginaries and their alternatives across a range of genres and practices. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.

ENGL 594 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as ‘foundational.’ Very often these texts have been epics or romances designated ‘medieval,’ that is, associated with the period in which specific vernaculars or ‘mother tongues’ first emerged. France and Germany, for example, have long fought over who ‘owns’ the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time these two countries go to war. In this course we will thus study both a range of ‘medieval’ texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow’s great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin’s Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called ‘Hindu epics’ can also be a delicate matter. Some ‘uses of the medieval’ have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark, is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory’s Morte Darthur was chosen to provide scenes for the queen’s new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Itinerary models, which do not observe national boundaries, might be explored, and also the cultural history of watercourses, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.
Taught by: Wallace
Course not offered every year
Also Offered As: COML 591, ITAL 594
Activity: Seminar
1.0 Course Unit

ENGL 595 Post-Colonial Literature
This course covers topics in Post-Colonial literature with emphasis determined by the instructor. The primary focus will be on novels that have been adapted to film. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 594, CIMS 595
Activity: Seminar
1.0 Course Unit
ENGL 596 Topics in Contemporary Art
Topics varies. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 596, CIMS 596, FNAR 605, GSWS 596
Activity: Seminar
1.0 Course Unit

ENGL 597 Modern Drama
This course will survey several basic approaches to analyzing dramatic literature and the theatre. The dramatic event will be broken into each of its Aristotelian components for separate attention and analysis: Action (plot), Character, Language, Thought, Music and Spectacle. Several approaches to analysing the dramatic text will be studied: phenomenological, social-psychological, semiotic, and others. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.

Course not offered every year
Also Offered As: CLST 636, COML 616, EALC 715, REES 616, ROML 616
Activity: Seminar
1.0 Course Unit

ENGL 705 Interdisciplinary Approaches to Literature
This course will explore one or more interdisciplinary approaches to literature. Literary relationships to science, art, or music may provide the focus. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 705
Activity: Seminar
1.0 Course Unit

ENGL 707 Orality and Literacy
Major lines of study of the subject of literacy are traceable in at least three disciplines: history of Western literature (especially classical and medieval studies), anthropology, and ethnography of education, including education development in the Third World and psychological and developmental education theory and practice. The linkages between oral and literary communicative modes in different cultures are studied, from a folklorist’s viewpoint. The overall task of the course is not to isolate topics of narrowly defined folkloric interest in the broad field of literacy, but to integrate and critique the diverse approaches to literacy as a communicative mode or modes, from the point of view of folklore as a discipline. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CLST 530, COML 530
Activity: Seminar
1.0 Course Unit

ENGL 715 Middle English Literature
This seminar will study a number of selected Middle English texts in depth. Attention will be paid to the textual transmission, sources, language, genre, and structure of the works. Larger issues, such as the influence of literary conventions (for example, ‘courtly love’), medieval rhetoric, or medieval allegory will be explored as the chosen texts may require.
Course not offered every year
Also Offered As: CLST 610, COML 714
Activity: Seminar
1.0 Course Unit

ENGL 721 Medieval Poetics
This course may include some of the following fields: studies of medieval stylistic practices, formal innovations, and theories of form; medieval ideas of genre and form; medieval thought about the social, moral, and epistemological roles of poetry; interpretive theory and practice; technologies of interpretation; theories of fiction (fabula) and allegory; sacred and secular hermeneutics; theories of language and the histories of the language arts; vernaular(s) and Latinity; material texts. See the English Department’s website at www.english.upenn.edu for a complete description of the current’s offerings.
Course not offered every year
Also Offered As: CLST 628, COML 618
Activity: Seminar
1.0 Course Unit

ENGL 730 Topics in 16th-Century History and Culture
This is an advanced course treating topics in 16th Century history and culture particular emphasis varying with instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 730
Activity: Seminar
1.0 Course Unit

ENGL 731 Renaissance Poetry
An advanced seminar in English poetry of the early modern period. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
ENGL 734 Renaissance Drama
This is an advanced course in Renaissance drama which will include plays by non-Shakespearean dramatists such as Marlowe, Jonson, and Middleton. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 734
Activity: Seminar
1.0 Course Unit

ENGL 736 Renaissance Studies
This is an advanced topics course treating some important issue in contemporary Renaissance studies. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 736
Activity: Seminar
1.0 Course Unit

ENGL 739 Milton
An examination of Milton's major poetry and prose with some emphasis on the social and political context of his work. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 745 Restoration and 18th-Century Fiction
This is an advanced course in the fiction of the Restoration and the 18th-Century, the period of 'The rise of the novel'. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 748 Studies in the Eighteenth Century
This course varies in its emphases, but in recent years has explored the theory of narrative both from the point of view of eighteenth-century novelists and thinkers as well as from the perspective of contemporary theory. Specific attention is paid to issues of class, gender, and ideology. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 753 Victorian British Literature
An advanced seminar treating some topics in Victorian British Literature, usually focusing on non-fiction or on poetry. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 753
Activity: Seminar
1.0 Course Unit

ENGL 761 British Modernism
This course treats one or more of the strains of British modernism in fiction, poetry, or the arts. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 768 Genres of Writing
Please check the department's website for the course description: https://www.english.upenn.edu. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 768
Activity: Seminar
1.0 Course Unit

ENGL 769 Feminist Theory
Specific topic varies. The seminar will bring together the study of early modern English literature and culture with histories and theories of gender, sexuality and race. Contact with 'the East' (Turkey, the Moluccas, North Africa and India) and the West (the Americas and the Caribbean) reshaped attitudes to identity and desire. How does this history allow us to understand, and often interrogate, modern theories of desire and difference? Conversely, how do postcolonial and other contemporary perspectives allow us to re-read this past? See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 770
Activity: Seminar
1.0 Course Unit

ENGL 770 Afro-American Literature
An advanced seminar in African-American literature and culture. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 770
Activity: Seminar
1.0 Course Unit

ENGL 771 Textual Production
This course is based on library work and is intended as a practical introduction to graduate research. It addresses questions of the history of the book, of print culture, and of such categories as 'work', 'character,' and 'author,' as well as of gender and sexuality, through a detailed study of the (re)production of Shakespearean texts from the seventeenth to the twentieth century. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 773 Modernism
An interdisciplinary and international examination of modernism, usually treating European as well as British and American modernists. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
ENGL 774 Postmodernism
An advanced seminar on postmodernist culture. Recently offered as a study of relationship between poetry and theory in contemporary culture, with readings in poststructuralist, feminist, marxist, and postcolonial theory and in poets of the Black Mountain and Language groups. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 622
Activity: Seminar
1.0 Course Unit

ENGL 775 African Literature
An advanced seminar in anglophone African literature, possibly including a few works in translation. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 775, COML 700
Activity: Seminar
1.0 Course Unit

ENGL 777 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programming part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films—features, shorts, documentaries, and television shows—paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of ‘African film and media,’ and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media?
To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu. Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport.
Taught by: Redrobe/Woubshet
Course not offered every year
Also Offered As: AFRC 791, ARTH 791, CIMS 791, COML 791
Activity: Seminar
1.0 Course Unit
ENGL 778 20th-Century Aesthetics
This course explores notions that have conditioned 20th century attitudes toward beauty among them ornament, form, fetish, the artifact 'women', the moves to 20th century fiction, art manifestos, theory, and such phenomena as beauty contests and art adjudications. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 797
Activity: Seminar
1.0 Course Unit

ENGL 783 Major American Author
A seminar treating any one of the major American Writers. Past versions have focused on Melville, Whitman, Twain, James, Pound, Eliot, and others. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 790 Recent Issues in Critical Theory
See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 790, GSWS 790
Activity: Seminar
1.0 Course Unit

ENGL 791 Collective Violence, Trauma, and Representation
This seminar is organized as a laboratory space for graduate students and faculty working in a number of adjacent fields and problems. Seminar discussions will be led not only by the primary instructors, but also by a number of guests drawn from the Penn faculty. For the first weeks of the course, we will focus on seminal works in the interlinked areas of history and memory studies, cultural representations of collective violence, trauma studies, and other related topics. Beginning with the 8th week of the course, we will turn to case studies in a variety of geographic, cultural and historical contexts. Additionally, some later sessions of the course will be devoted to a presentation and discussion of a work in progress of a Penn graduate student, faculty member or a guest lecturer.
Taught by: Platt

ENGL 799 Topics in Poetics
Topics in poetics will vary in its emphasis depending on the instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 799 Topics in American Literature
An advanced topics course in American literature, with the curriculum fixed by the instructor. Recently offered with a focus on American Literature of Social Action and Social Vision. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 799
Activity: Seminar
1.0 Course Unit

ENGL 800 Teaching of Literature and Composition
A course combining literary study with training in teaching. These courses will normally be taken by students in their first semester of teaching.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ENGL 850 Field List
Students work with an adviser to focus the area of their dissertation research. They take an examination on the field in the Spring and develop a dissertation proposal.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 851 Dissertation Proposal
A continuation of ENGL 850.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 998 Independent Study
Open to students who apply to the graduate chair with a written study proposal approved by the advisor. The minimum requirement is a long paper. Limited to 1 CU.
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit

ENGL 999 Independent Reading
Open only to candidates who have completed two semesters of graduate work.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Environmental Studies (ENVS)

ENVS 060 Global Environmental History from Paleolithic to the Present
This course explores the changing relationships between human beings and the natural world from early history to the present. We will consider the various ways humans across the globe have interacted with and modified the natural world by using fire, domesticating plants and animals, extracting minerals and energy, designing petrochemicals, splitting atoms and leaving behind wastes of all sorts. Together we consider the impacts, ranging from population expansion to species extinctions and climate change. We examine how human interactions with the natural world relate to broader cultural processes such as religion, colonialism and capitalism, and why it is important to understand the past, even the deep past, in order to rise to the challenges of the present.
Taught by: Norton, Berg
Also Offered As: HIST 060
Activity: Lecture
1.0 Course Unit

ENVS 091 Sustainable Development and Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development - environmental, economic, and social - through an examination of three products - peyote, coca, and coffee - that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts.
Taught by: Gimenez
Course offered fall; even-numbered years

ENVS 150 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we'll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: CIMS 150, COML 151, GRMN 150
Activity: Lecture
1.0 Course Unit

ENVS 151 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
Can the humanities help us think differently about the forest? What happens if we imagine forests as the agents of their stories? At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and the forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. The course places a wide range of literature and film in which forests are strongly featured in relation to environmental history and current environmental issues.

ENVS 165 Environment, Climate, and Culture in Japan
This course explores how Japanese literature, cinema, and popular culture have engaged with questions of environment, ecology, pollution, and climate change from the wake of the dropping of the atomic bomb on Hiroshima in 1945 to the ongoing Fukushima nuclear power plant disaster in the present. Environmental disasters and the slow violence of their aftermath have had an enormous impact on Japanese cultural production, and we examine how these cultural forms seek to negotiate and work through questions of representing the unrepresentable, victimhood and survival, trauma and national memory, uneven development and discrimination, the human and the nonhuman, and climate change’s impact on imagining the future. Special attention is given to the possibilities and limitations of different forms—the novel, poetry, film, manga, anime—that Japanese writers and artists have to think about humans’ relationship with the environment.

1.0 Course Unit

ENVS 181 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands. Summer abroad course.
Taught by: Simon Richter
Course usually offered summer term only

ENVS 211 Religion and Ecology
Also Offered As: ANTH 211, RELS 211
Activity: Lecture
1.0 Course Unit

ENVS 212 Animals & Religion
Religion is full of animals—lions and lambs, monkeys and elephants, buffalo and snakes, even mythical beasts. The identity of the human being is explained, in many traditions, by contrast with the identity of other species. We know who we are because we know who they are, or do we? This course interrogates—through an exploration of sacred texts, art, film, and museum artifacts—the tension present in many traditions between an anthropocentric prioritization of the human being and religious resources that encourage a valuing of other animal species. We’ll explore the way animals function both as religious objects and as religious subjects across diverse traditions, asking how human-animal relationships have shaped religion and how religion has shaped the way we think about and interact with other animals. We’ll ask how religion has engaged with animals over time and across global cultures, understanding them as symbols, messengers, and manifestations of the divine; as material for ritual and sacrifice; as kin and subordinates; as food and as filth; as helpmeets and as tempters. How have these perspectives shaped animal ethics, influencing the treatment, use, and consumption of animals and their bodies? Finally, we’ll ask what it means that we ourselves are evolved animals. How does our own animality factor into the practice of human religion? Is our religious capacity part of what sets us apart from other animals or is religiosity a trait we might expect to find in other species? To what extent is religion a function of the animal?
Taught by: Covey

Activity: Seminar
1.0 Course Unit

ENVS 239 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The ‘origins of environmentalism’ lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian texts from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others. Taught in English.

ENVS 245 Petrosylvania: Reckoning with Fossil Fuel
Fossil fuel powered the making—now the unmaking—of the modern world. As the first fossil fuel state, Pennsylvania led the United States toward an energy-intensive economy, a technological pathway with planetary consequences. The purpose of this seminar is to perform a historical accounting—and an ethical reckoning—of coal, oil, and natural gas. Specifically, students will investigate the histories and legacies of fossil fuel in connection to three entities: the Commonwealth of Pennsylvania, the City of Philadelphia, and the University of Pennsylvania. Under instructor guidance, students will do original research, some of it online, much the rest of it in archives, on and off campus, in and around Philadelphia. Philly-based research may also involve fieldwork. While based in historical sources and methods, this course intersects with business, finance, policy, environmental science, environmental engineering, urban and regional planning, public health, and social justice. Student projects may take multiple forms, individual and collaborative, from traditional papers to data visualizations prepared with assistance from the Price Lab for Digital Humanities. Through their research, students will contribute to a multi-year project that will ultimately be made available to the public.

1.0 Course Unit

ENVS 246 Spirituality in the Age of Global Warming: How Can Science & the Humanities Work Together?
We are living in the midst of one of the most severe crisis in the Earth's history. Science confirms the glaciers are melting, hurricanes are growing more intense, and the oceans are rising. But there is also a deeply spiritual dimension to global warming that does not factor into the scientific explanations. This part of the problem has been more powerfully expressed in film, literature, and art. We will be looking at films like Lee's 'When the Levees Broke,' about how the people of New Orleans turned to music and storytelling to rebuild their communities in the wake of Hurricane Katrina and Linda Hogan's novel, 'Solar Storm' which explores how Native American women draw upon spirituality to heal their community after a dam flooded their ancestral homeland. The class will also work on an ongoing research project in partnership with the Canadian government and Ojibwe First Nations who submitted a successful UNESCO World Heritage Site application to preserve the boreal forest and the Native people's traditional knowledge about their land. The class will be working on an interactive map to document how photographs, oral histories, and artwork helped convince UNESCO to preserve the land and the Traditional Ecological Knowledge (TEK) of the people who have lived on that land for thousands of years.

1.0 Course Unit

ENVS 247 Extreme Heat: White Nationalism in the Age of Climate Change
The Amazon is burning. The glaciers are melting. Heat waves, hurricanes, earthquakes, floods, wildfires, and droughts devastate ever larger swaths of the earth, producing crop failures, air pollution, soil erosion, famine and terrifying individual hardship. At the same time, the so-called Western World is literally walling itself off from the millions who are fleeing from disaster and war with what little they can carry. White militants chant 'blood and soil' and 'Jews will not replace us,' social media spreads memes and talking points about 'white genocide' and 'white replacement' and online ideologues fantasize about building white ethnostates. Are these developments connected? Is there a causal relationship? Or are these conditions purely coincidental? Increasingly, arguments about limits to growth, sustainability, development and climate change have come to stand in competitive tension with arguments for social and racial equality. Why is that case? What are the claims and underlying anxieties that polarize western societies? How do white nationalist movements relate to populist and fascist movements in the first half of the 20th century? What is new and different about them now? What is the relationship between environmentalism, rightwing populism and the climate crisis? And how have societies responded to the climate crisis, wealth inequality, finite resources and the threat posed by self-radicalizing white nationalist groups?

Taught by: Berg
Also Offered As: HIST 258
Activity: Seminar
1.0 Course Unit

ENVS 279 Nature's Nation: Americans and Their Environment
The United States is 'nature's nation.' Blessed with an enormous, resource-rich geographically diverse and sparsely settled territory, Americans have long seen 'nature' as central to their identity, prosperity, politics and power, and have transformed their natural environment accordingly. But what does it mean to be 'nature's nation? This course describes and explores how American 'nature' has changed over time. How and why has American nature changed over the last four centuries? What have Americans believed about the nation's nature, what have they known about the environment, how did they know it and how have they acted on beliefs and knowledge? What didn't or don't they know? How have political institutions, economic arrangements, social groups and cultural values shaped attitudes and policies? How have natural actors (such landscape features, weather events, plants, animals, microorganisms) played roles in national history? In addition to exploring the history of American nature, we will look for the nature in American history. Where is 'nature' in some of the key events of American history that may not, on the surface, appear to be 'environmental?'

1.0 Course Unit
**ENVS 295 Maritime Science and Technology: Woods Hole Sea Semester**
A rigorous semester-length academic and practical experience leading to an understanding of the oceans. The Sea Semester is composed of two intensive six-week components taken off-campus. The Shore Component is six weeks at Woods Hole, Massachusetts, with formal study in: Oceanography, Maritime Studies, and Nautical Science. This is followed by six weeks aboard a sailing research vessel, during which students conduct oceanographic research projects as part of the courses, Practical Oceanography I and II. Prerequisite: Laboratory course in physical or biological science or its equivalent; college algebra or its equivalent. This set of courses requires special application procedures. Contact Maria Andrews for information and an application. Only the 'SEA semester: Ocean Exploration' and 'SEA Semester: Oceans and Climates' can be taken for Penn credit without taking a leave, and all students must have permission from Maria Andrews before registering at SEA. Maritime Studies. A multidisciplinary study of the history, literature, and art of our maritime heritage, and the political and economic problems of contemporary maritime affairs. Nautical Science. The technologies of operation at sea. Concepts of navigation, naval architecture, ship construction, marine engineering systems, and ship management are taught from their bases in physics, mathematics, and astronomy. Practical Oceanography I. Taken aboard SSV Westward or SSV Corwith Cramer. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During two lectures daily and while standing watch, students learn the operation of basic oceanographic equipment, the methodologies involved in the collection, reduction, and analysis of oceanographic data, and the attendant operations of a sailing oceanographic research vessel. Practical Oceanography II. Taken aboard SSV Westward or SSV Corwith Cramer. Students assume increasing responsibility for conducting oceanographic research and the attendant operations of the vessel. The individual student is responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operation of the vessel. Each student completes an individual oceanographic research project designed during the shore component. Taught by: Andrews
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: This set of courses requires special application procedures. Contact Maria Andrews for information and an application. Only the 'SEA semester: Ocean Exploration' and 'SEA Semester: Oceans and Climates' can be taken for Penn credit without taking a leave, and all students must have permission from Maria Andrews before registering at SEA.

**ENVS 299 Independent Study**
Directed study for individuals or small groups under supervision of a faculty member. Permission of department required.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be repeated for credit

**ENVS 301 Environmental Case Studies**
A detailed, comprehensive investigation of selected environmental problems. Guest speakers from the government and industry will give their accounts of various environmental cases. Students will then present information on a case study of their choosing. Taught by: Dmochowski
Course usually offered in fall term
Prerequisite: ENVS 200
Activity: Lecture
1.0 Course Unit

**ENVS 302 Case Studies in Environmental Sustainability**
A detailed, comprehensive investigation of selected environmental sustainability problems specific to a selected region. This course aims to introduce students to myriad Earth and environmental issues (understanding how humans interact, affect and are influenced by our environment) through the analysis of several environmental case studies, as well as giving students an introduction to how complex cases are analyzed and what goes into decision-making at the individual, group, state, federal and global levels. The course includes an intensive field trip at the end of the semester - locations will vary by offering.
Taught by: Plante
Course offered spring; odd-numbered years
Prerequisite: ENVS 100 OR GEOL 100 OR GEOL 103 OR GEOL 125 OR GEOL 130
Activity: Seminar
1.0 Course Unit
Notes: Application required through Penn Global: <a href='https://global.upenn.edu/pennabroad/pgs'>https://global.upenn.edu/pennabroad/pgs</a>

**ENVS 312 Ocean-Atmosphere Dynamics and Implications for Future Climate Change**
This course covers the fundamentals of atmosphere and ocean dynamics, and aims to put these in the context of climate change in the 21st century. Large-scale atmospheric and oceanic circulation, the global energy balance, and the global energy balance, and the global hydrological cycle. We will introduce concepts of fluid dynamics and we will apply these to the vertical and horizontal motions in the atmosphere and ocean. Concepts covered include: hydrostatic law, buoyancy and convection, basic equations of fluid motions, Hadley and Ferrel cells in the atmosphere, thermohaline circulation, Sverdrup ocean flow, modes of climate variability (El-Nino, North Atlantic Oscillation, Southern Annular Mode). The course will incorporate student led discussions based on readings of the 2007 Intergovernmental Panel on Climate Change (IPCC) report and recent literature on climate change. Aimed at undergraduate or graduate students who have no prior knowledge of meteorology or oceanography or training in fluid mechanics. Previous background in calculus and/or introductory physics is helpful. This is a general course which spans many subdisciplines (fluid mechanics, atmospheric science, oceanography, hydrology).
Taught by: Marinov
Course usually offered in spring term
Also Offered As: ENVS 640, PHYS 314
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit
ENVS 325 Sustainable Goods
The study of sustainability—the long term viability of humans in harmony with the environment—has been identified as a critical issue for society and industry and is evolving to examine how society should conduct itself in order to survive. This issue impacts the consumer goods that we use in our lives, the processes that are designed to make these goods, and the raw materials that we obtain to create these goods. The questions that we will examine will be: can these goods be obtained, made, and consumed in a fashion that allows the current quality of life to be maintained (or enhanced) for future generations? Can these processes be sustainable? A review of consumer goods is necessary as the starting point in order to understand the needs of people in society and why people consume goods as they do. Subsequently, each student will choose a product to examine in detail and will research the product for its impact with respect to natural resource selection, production, use, and disposal/reuse.
Taught by: Hagan
Activity: Lecture
1.0 Course Unit

ENVS 326 GIS: Mapping Places & Analyzing Spaces
This course is a hands-on introduction to the concepts and capabilities of geographic information systems (GIS). Students will develop the skills necessary for carrying out basic GIS projects and for advanced GIS coursework. The class will focus on a broad range of functional and practical applications, ranging from environmental science and planning to land use history, social demography, and public health. By the end of the course, students will be able to find, organize, map, and analyze data using both vector (i.e., drawing-based) and raster (i.e., image-based) GIS tools, while developing an appreciation for basic cartographic principles relating to map presentation. This course fulfills the spatial analysis requirement for ENVS and EASC Majors. Previous experience in the use of GIS is not required.
Taught by: Heinlen
Activity: Lecture
1.0 Course Unit

ENVS 327 Principles of Sustainability
What is sustainability? Can any fundamental concepts, principles or framework be constructed that adequately describes the search for sustainability? Is there a meaningful methodology? Sustainability science is a trans-disciplinary approach in which the quantitative and qualitative, natural and social, and theory and practice are reconciled and creatively combined. The objective of this course is to provide an in-depth analysis of the foundational concepts, principles, processes and practices of sustainability science. The course will explore three foundational laws governing sustainability: the law of limits to growth, the second law of thermodynamics, and the law of self-organization. Students will examine how these laws operate in biological, ecological, and physical systems, and then apply them to social, economic and political systems.
Taught by: Alain Plante
Activity: Lecture

ENVS 399 Environmental Studies Seminar
Application of student and faculty expertise to a specific environmental problem, chosen expressly for the seminar. May be repeated for credit.
Taught by: Plante, Jerolmack, Kulik
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

ENVS 400 Environmental Studies Seminar
Application of student and faculty expertise to a specific environmental problem, chosen expressly for the seminar. May be repeated for credit.
Taught by: Pepino
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.
ENVS 406 Community Based Environmental Health
From the fall of the Roman Empire to Love Canal to the epidemics of asthma, childhood obesity and lead poisoning in West Philadelphia, the impact of the environment on health has been a continuous challenge to society. The environment can affect people’s health more strongly than biological factors, medical care and lifestyle. The water we drink, the food we eat, the air we breathe, and the neighborhood we live in are all components of the environment that impact our health. Some estimates, based on morbidity and mortality statistics, indicate that the impact of the environment on health is as high as 80%. These impacts are particularly significant in urban areas like West Philadelphia. Over the last 20 years, the field of environmental health has matured and expanded to become one of the most comprehensive and humanly relevant disciplines in science. This course will examine not only the toxicity of physical agents, but also the effects on human health of lifestyle, social and economic factors, and the built environment. Topics include cancer clusters, water borne diseases, radon and lung cancer, lead poisoning, environmental tobacco smoke, respiratory diseases and obesity. Students will research the health impacts of classic industrial pollution case studies in the US. Class discussions will also include risk communication, community outreach and education, access to health care and impact on vulnerable populations. Each student will have the opportunity to focus on Public Health, Environmental Protection, Public Policy, and Environmental Education issues as they discuss approaches to mitigating environmental health risks. This honors seminar will consist of lectures, guest speakers, readings, student presentations, discussions, research, and community service. The students will have two small research assignments including an Environmental and Health Policy Analysis and an Industrial Pollution Case Study Analysis. Both assignments will include class presentations. The major research assignment for the course will be a problem-oriented research paper and presentation on a topic related to community-based environmental health selected by the student. In this paper, the student must also devise practical recommendations for the problem based on their research. For BA Students: Natural Science and Math Sector
Taught by: Kulik
Course usually offered in fall term

1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.

ENVS 407 Urban Environments: Prevention of Tobacco Smoking in Adolescents
Cigarette smoking is a major public health problem. The Centers for Disease Control and Prevention Control reports that more than 80% of current adult tobacco users started smoking before age 18. The National Youth Tobacco Survey indicated that 12.8% of middle school students and 34.8% of high school students in their study used some form of tobacco products. In ENVS 407, Penn undergraduates learn about the short and long term physiological consequences of smoking, social influences and peer norms regarding tobacco use, the effectiveness of cessation programs, tobacco advocacy and the impact of the tobacco settlement. Penn students will collaborate with teachers in West Philadelphia to prepare and deliver lessons to middle school students. The undergraduates will survey and evaluate middle school and Penn student smoking. One of the course goals is to raise awareness of the middle school children to prevent addiction to tobacco smoke during adolescence. Collaboration with the middle schools gives Penn students the opportunity to apply their study of the prevention of tobacco smoking to real world situations.
Taught by: Pepino
Course usually offered in spring term

1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.

ENVS 408 Urban Environments: The Urban Asthma Epidemic
Asthma as a pediatric chronic disease is undergoing a dramatic and unexplained increase. It has become the number one cause of public school absenteeism and now accounts for a significant number of childhood deaths each year in the USA. The Surgeon General of the United States has characterized childhood asthma as an epidemic. In ENVS 408, Penn undergraduates learn about the epidemiology of urban asthma, the debate about the probable causes of the current asthma crisis, and the nature and distribution of environmental factors that modern medicine describes as potential triggers of asthma episodes. Penn students will co-teach asthma classes offered in public schools in West Philadelphia and survey asthma caregivers, providing them with the opportunity to apply theoretical knowledge to real-world situations, promote community education and awareness about asthma, and use problem-solving learning to enhance student education in environmental health.
Taught by: Kulik
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.
ENVS 410 The Role of Water in Urban Sustainability and Resiliency
This course will provide an overview of the cross-disciplinary fields of civil engineering, environmental sciences, urban hydrology, landscape architecture, green building, public outreach and politics. Students will be expected to conduct field investigations, review scientific data and create indicator reports, working with stakeholders and presenting the results at an annual symposium. We will gain an understanding of the dynamic, reciprocal relationship between practices in an watershed and its waterfront. Topics discussed include: drinking water quality and protection, green infrastructure, urban impacts of climate change, watershed monitoring, public education, creating strategies and more. Taught by: Neukrug
Course not offered every year
Prerequisite: ENVS 100 OR GEOL 100
Activity: Seminar
1.0 Course Unit
Notes: An academically-based curriculum service learning approach to using water, science and politics to create a sustainable Philadelphia.

ENVS 411 Air Pollution: Sources & Effects in Urban Environments
This is an ABCS course designed to provide the student with an understanding of air pollution at the local, regional and global levels. The nature, composition, and properties of air pollutants in the atmosphere will also be studied. The course will focus on Philadelphia’s air quality and how air pollutants have an adverse effect on the health of the residents. The recent designation by IARC of Air Pollution as a known carcinogen will be explored. How the community is exposed to air pollutants with consideration of vulnerable populations will be considered. Through a partnership with Philadelphia Air Management Service (AMS) agency the science of air monitoring and trends over time will be explored. Philadelphia’s current non-attainment status for PM2.5. and ozone will be studied. Philadelphia’s current initiatives to improve the air quality of the city will be discussed. Students will learn to measure PM2.5 in outdoor and indoor settings and develop community-based outreach tools to effectively inform the community of Philadelphia regarding air pollution. The outreach tools developed by students may be presentations, written materials, apps, websites or other strategies for enhancing environmental health literacy of the community. A project based approach will be used to include student monitoring of area schools, school bus routes, and the community at large. The data collected will be presented to students in the partner elementary school in West Philadelphia. Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with the sources, fate, and the environmental impacts and health effects of air pollutants.
For BA Students: Natural Science and Math Sector
Taught by: Andrews and Howarth
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ENVS 416 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted. Prerequisite: One semester of college chemistry.
Taught by: Arscott
Course usually offered in spring term
Also Offered As: BIOL 415
Prerequisite: BIOL 101 OR BIOL 121
Activity: Lecture
1.0 Course Unit

ENVS 417 The Anthropocene: Human-dominated Earth
How much have humans altered the planet they live on? Beyond climate change, humans have altered the Earth’s land, oceans and biosphere to such an extent that the concept of a new geologic epoch defined by the action of humans is seriously debated. This seminar will examine the origins of the Anthropocene, the ways in which humans have altered Earth systems, whether or not these alterations warrant a new geologic designation, and what the future potentially holds for both humans and the planet.
Taught by: Alain Plante
Activity: Seminar
1.0 Course Unit

ENVS 420 Regional Field Ecology
Over the course of six Sunday field trips, we will travel from the barrier islands along the Atlantic Ocean in southern New Jersey to the Pocono Mountains in northeastern Pennsylvania, visiting representative sites of the diverse landscapes in the region along the way. At each site we will study and consider interactions between geology, topography, hydrology, soils, vegetation, wildlife, and disturbance. Students will summarize field trip data in a weekly site report. Evening class meetings will provide the opportunity to review field trips and reports and preview upcoming trips. Six all-day Sunday field trips are required.
Taught by: Willig
Course usually offered summer term only
Also Offered As: ENVS 610
Activity: Lecture
1.0 Course Unit

ENVS 451 Sustainable Landscapes
Sustainable Landscapes
Taught by: Jerolmack
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENVS 455 Environmental Policy
Environmental policy
Taught by: Kulik
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENVS 460 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted. Prerequisite: One semester of college chemistry.
Taught by: Arscott
Course usually offered in spring term
Also Offered As: BIOL 415
Prerequisite: BIOL 101 OR BIOL 121
Activity: Lecture
1.0 Course Unit
ENVS 498 Senior Thesis
The culmination of the Environmental Studies major. Students, while working with an advisor in their concentration, conduct research and write a thesis. Prerequisite: ENVS 400-level course and declaration of the ECVS major. The environmental studies major, as of the fall of 2008, requires 1 semester of ENVS 399 and two semesters of ENVS 498. Taught by: Dmochowski
Two terms. student may enter either term.
Activity: Senior Thesis
0.5 Course Units
Notes: The Environmental Studies major, as of the fall of 2008, requires 1 semester of ENVS399 and two semesters of ENVS498.

ENVS 507 Wetlands
The course focuses on the natural history of different wetland types including climate, geology, and hydrology factors that influence wetland development. Associated soil, vegetation, and wildlife characteristics and key ecological processes will be covered as well. Lectures will be supplemented with weekend wetland types, ranging from tidal salt marshes to non-tidal marshes, swamps, and glacial bogs in order to provide field experience in wetland identification, characterization, and functional assessment. Outside speakers will discuss issues in wetland seed bank ecology, federal regulation, and mitigation. Students will present a short paper on the ecology of a wetland animal and a longer term paper on a selected wetland topic. Readings from the text, assorted journal papers, government technical documents, and book excerpts will provide a broad overview of the multifaceted field of wetland study. Taught by: Willig
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENVS 510 Regional Ecology: Restoration and Management to Build Resilience
Using the regional geology as a framework for comparison, this online course aims to 1) introduce the varied ecosystems of the region extending from the Atlantic Ocean to the Appalachian Mountains, 2) provide an approach to site analysis that examines connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic, and 3) investigate restoration and management efforts to build resilience in a changing climate. We will study natural and modified areas representative of regional physiographic provinces (areas of similar geology and topography) to better understand landscape patterns and processes as well as case studies of restoration and management projects. Students will complete weekly assignments and a research project involving a presentation and paper on a topic of interest. *This is an online course*+
Taught by: Sarah Willig, PhD
Activity: Online Course
1.0 Course Unit

ENVS 526 The History and Science of Climate Change
This course will provide an understanding of the Earth's climate system and how and why this has changed through time. The emphasis will be placed on spatial and temporal scales in the modern system while exploring the evidence for past change, possible mechanisms to explain these changes and the implications of these changes to past, present and future global climate. Students will learn to reconstruct the history and scales of climate change through the use of proxies; understand the mechanisms that act to drive climate change; show and understanding of the long-term natural climate variability on a global and regional scale; understand the importance of natural environmental change, against which to assess human impacts, recent climate change and issues of future environmental change.
Taught by: Yvette Bordeaux
Activity: Online Course
1.0 Course Unit

ENVS 541 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with both image and drawing based geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Its major objectives are to provide the training necessary to make productive use of at least two well-known software packages, and to establish the conceptual foundation on which to build further skills and knowledge in late practice.
Taught by: Tomlin
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENVS 544 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.
Taught by: Wiggin
Course not offered every year
Also Offered As: ANTH 543, COML 562, GRMN 544, URBS 544
Activity: Seminar
1.0 Course Unit

ENVS 601 Proseminar: Contemporary Issues in Environmental Studies
A detailed, comprehensive investigation of selected environmental problems. This is the first course taken by students entering the Master of Environmental Studies Program.
Taught by: Bordeaux/Colijn
One-term course offered either term
Activity: Seminar
1.0 Course Unit
ENVS 604 Conservation and Land Management
Understanding a region's natural resources and its threats are a key component in land preservation. This course will explore the different drivers and the techniques used to achieve success in small and large scale land protection. This field-based course will explore various strategies for open space conservation and protection, along with cultural perspectives on land preservation. Evaluation of management techniques used on preserved lands will also be investigated. Emphasis will be placed on developing skills in reading the landscape, the landowner, and the political motivators to determine conservation and restoration priorities.
Taught by: John Goodall
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
Notes: Some Saturday field trips will be required.

ENVS 605 Bioremediation
This course is an introduction to current and developing techniques for analyzing environmental contamination and for remediation of damaged environments. Knowledge of these options is important for students interested in public/law applications and environmental/landscape design and as a starting point for those pursuing a more science-oriented understanding. The first portion of this course will address bioindicators-the use of living systems to assess environmental contamination. These include systems ranging from biochemical assays to monitoring of whole organisms or ecosystems, as well as techniques ranging from laboratory to field and satellite surveys. The second portion of the course will introduce technologies for bioremediation-the use of living systems to restore contaminated environments. The technologies scale from single-species systems to complex ecosystems such as constructed wetlands; case studies will be examined. Students will be expected to participate in field trips, as well as prepare a final paper examining a particular technology in detail.
Taught by: Vann
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENVS 606 Avifaunal Ecology: Studying ornithological principles & behaviors to indicate ecosystem health
This class will explore the foundations of avifaunal biology and ecology using a combination of hands-on classroom and in-the-field experiences. Classroom content includes physiology, anatomy, and morphology of birds. The fall migration of birds in North America is an epic and often tragic event. Sampling birds in migration has resulted in foundational understandings about stopover habitats, species-specific energy budgets and has helped realize the complete life cycle of hundreds of species. We will enter the field and participate in actual ornithological research, explore avifaunal ecology through birdwatching, and meet with regional leaders in the ornithological field.
Taught by: McGraw
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ENVS 610 Regional Field Ecology
Over the course of six Sunday field trips, we will travel from the barrier islands along the Atlantic Ocean in southern New Jersey to the Pocono Mountains in northeastern Pennsylvania, visiting representative sites of the diverse landscapes in the region along the way. At each site we will study and consider interactions between geology, topography, hydrology, soils, vegetation, wildlife, and disturbance. Students will summarize field trip data in a weekly site report. Evening class meetings will provide the opportunity to review field trips and reports and preview upcoming trips. Six all-day Sunday field trips are required.
Taught by: Willig
Course usually offered summer term only
Also Offered As: ENVS 420
Activity: Lecture
1.0 Course Unit
Notes: Some Sunday field trips required.

ENVS 616 Risk Assessment: Science & Policy Challenges
How do government policy-makers make decisions about potential threats to human health and the environment in the face of scientific uncertainty? The course develops the concept of Risk Assessment from the publication of the 1983 National Research Council (NRC) report commonly known as the 'Red Book' which was used to rank the initial hazardous waste sites under the Superfund program. Using a variety of teaching tools, including lectures, panel discussions, and case studies, the course examines how public policy decisions regarding environmental risk are made and how effective those decisions are at reducing risks to affected populations. The course focuses on the complex interaction of science, economics, politics, laws, and regulations in dealing with environmental and public health risks. The course will begin with a review of the policy process and methods used in evaluating human health and environmental risks, including the traditional steps in the risk assessment process, including quantitative and qualitative aspects of hazard identification, dose-response assessment, exposure assessment, and risk characterization. The course will then focus on how scientific uncertainty, risk perceptions, socio-economic disparities, risk communication, and politics influence environmental risk-based decision-making. Issues such as special populations (e.g., children, elderly, immune-compromised, woman of pregnancy age, etc.) must be considered when developing risk reduction strategies. The use of the 'precautionary principle' will be discussed in the context of different types of environmental stressors (e.g., pesticides, chemicals, climate change, air pollution, water quality, and land use) and how this important controversial principle is applied differently in contrasting national and European risk management policies.
Taught by: Pepino
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
ENVS 617 Sustainable Estuaries: An Investigation of Resources & Recovery
This course will evaluate the multiple factors that must function to ensure the sustainability of estuaries of national significance. Since the beginning of the environmental movement in the 1960s, we have attempted to protect and improve our watersheds and estuaries through a series of environmental laws, but we learned over the last three decades that regulatory-based ‘command & control’ approaches may have achieved their limits of success, and we now need to think more holistically in order to achieve the Clean Water Act goal of ‘fishable and swimmable’ waters. In this course we will explore the new collaborative strategies and partnerships, which are available, and how social, economic and cultural factors are equally important as regulation to achieve estuary restoration. The National Estuary Program (NEP) was established in 1987 by amendments to the Clean Water Act (Section 320) to identify, restore and protect estuaries along the coasts of the U.S. Unlike traditional regulatory approaches to environmental protection, the NEP targets a broad range of issues and engages local communities in the process. The program focuses not just on improving water quality in an estuary, but on maintaining the integrity of the whole system - its chemical, physical, and biological properties, as well as its economic, recreational, and aesthetic. This course will examine the twenty estuaries of national significance, including the Chesapeake and the Delaware Bays, in an effort to define the condition of estuaries in the US and what strategies can be utilized to attain water quality and habitat goals while achieving important socioeconomic needs of the estuary’s diverse stakeholders. You will examine the history of estuary management, the factors that stress water quality and habitat, and what strategies are commonly used to reduce risks while safeguarding the environment and public health.
Taught by: Pepino
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

ENVS 620 Developing Environmental Policy
When we think of environmental policies in the USA, we may think of one or more laws geared to improve our nation’s air, water, ecosystems, and biodiversity. However, environmental policies and policy-making comprise more than just specific laws and regulations. Making and implementing environmental policy is a process influenced by multiple political, cultural, and economic factors in addition to scientific factors, all of which impact the ability of policies to be effective, that is, to actually improve the environment. In this course, we develop a framework to analyze the effectiveness of the social actors, process and outcomes of environmental policy-making. We ask questions such as: How do policy makers define environmental problems and solutions? Who are the social actors involved in the process? How are policies created and negotiated? What underlying assumptions and realities about the roles of government and society shape policy instruments and design? Are science and risk accurate or distorted? How are social and environmental justice intertwined? To answer these complex questions, we contextualize and critically analyze policies to determine how both government and society impact on regulatory approaches. We study the institutions involved and examine social and ecological outcomes of environmental policies. We also discuss contemporary issues and policy situations that arise throughout the course of the semester, and comment on them in a class blog. Finally, students will select an environmental issue and formulate a policy proposal to recommend to decisionmakers.
Taught by: Kulik
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ENVS 622 Environmental Enforcement
The goal of the course is to provide students with an introduction to the role of enforcement in federal, state and local environmental regulatory programs. Emphasis will be placed on federal enforcement actions initiated by the U.S. Environmental Protection Agency and U.S. Department of Justice. The course will provide students with an introduction to the American Legal System and legal concepts, like standing, jurisdiction, and burden of proof. A number of case studies and classroom exercises will be utilized as part of the discussion of civil and criminal enforcement actions. For example, a detailed case study will be presented concerning a successful prosecution by the federal government of a wastewater treatment plant operator (from the receipt of the initial tip through the sentencing of the defendant). A theme of all classes, presentations and assignments will be the role of the environmental professional in the enforcement context (e.g., the environmental professional who testifies as an expert in a judicial proceeding, or performs an audit that becomes the subject of a self-disclosure to EPA).
Taught by: Lisa
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
ENVS 629 The US Water Industry in the 21st Century
The course will explore all 4 sectors of the water business in the United States: The Drinking Water Industry, The Stormwater Utility, Water Resources (rivers, streams, reservoirs) Management and the Water Pollution Control Industry. The course will have 2 primary foci: 1. The influences on the industry from new technologies and infrastructure, acceptable levels of risk, public and private sector competition, climate change, the bottled water industry, resource recovery, rates and affordability and other influences will be investigated. 2. The management of a 21st century utility will be explored, including topics of organization and leadership, the role of environmentalism, infrastructure financing, water/wastewater treatment facility operations, public affairs and media, and designing a capital improvement program are examples of topic areas.
Taught by: Neukrug
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ENVS 634 Topics in Water Policy
This course will explore various themes such as the UN Millennium Development Goals, EPA regulatory practices, and global water policy and governance.
Taught by: Laskowski
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ENVS 635 Current Issues in the Delaware River Basin: An Insider's Perspective
This course will connect students with thought leaders and experts working to solve the critical water challenges of the 21st century.
Students will go behind the scenes of the 'water business' and meet with some of the nation's leading professionals and practitioners through 3 days of site visits to some of the world's greatest public water systems - Philadelphia, NYC and Washington, DC and to the headquarters of several of our nation's most innovative private water companies - Aqua American, American Water and Suez Water. These professionals and practitioners are invested in meeting today's water challenges which include delivering potable drinking water, managing rainwater/flooding, treating wastewater and protecting and enhancing our rivers and streams. Major challenges and issues to be investigated throughout the course include: climate impact on our water supplies and rivers; how we are adapting our natural and anthropogenic systems to make them more resilient and sustainable; emerging contaminants and technologies to monitor and treat these contaminants; the conflict between managing for drought and flood; public versus private business models; and equity, justice and the very value of water. Readings are required prior to the start of the course with a report and presentation as a wrap-up. Professor Neukrug, former Water Commissioner and CEO of Philadelphia Water will be available for pre-course discussions to ensure students are ready to jump into the water on day 1 of the class.
Taught by: Howard Neukrug
Course usually offered summer term only
Activity: Field Work
0.5 Course Units

ENVS 642 Global Water Conference in Stockholm, Sweden
The global water and sanitation crisis kills over 4,000 children each day and represents one of the biggest health problems in the world. At the University of Pennsylvania school year 2010-2011 was declared the 'Year of Water' in recognition of the many challenges that lie ahead as global increases in population and affluence and the influences of climate change will stress limited water resources. Each year the Stockholm International Water Institute convenes a Conference with experts from around the globe to exchange the latest water research findings and develop new networks. Students will attend the Conference, present research by presentations/posters, document a key issue, interview experts, and meet colleagues with common interests. They will also help other organizations at the Conference.
Taught by: Laskowski
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

ENVS 643 From Brownfield Remediation to Land Revitalization: US Strategies for Reducing Soil Contamination
This course is intended to give students an overview of the genesis of the so-called 'Brownfield' problem and of the various efforts our society is taking to solve or, at least, ameliorate it. The course will place the 'Brownfield' problem in the broader context of the growth and decline of the industrial base of cities like Philadelphia. Students will study the general constitutional and statutory framework within which we approach the problems of orphan, polluted sites and the disposal of contemporary solid wastes. They will also analyze the principal actions that have been taken by Federal and state government to address remediation and redevelopment of abandoned industrial sites. The course will also explore environmental equity issues. The students will collaborate with high school students at the West Philadelphia High School to identify sites in their neighborhoods and to learn how to determine the sites ownership and land use history. The students will study ways of remediation in light of community ideas about re-use. Students will be expected to participate actively in the seminar and the sessions with high school students. Students in the course are required to prepare and present a term paper on a topic in the general area of 'Brownfield' analysis and remediation.
Taught by: Keene
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENVS 644 Energy, Waste and the Environment
The aim of this course is to provide an incentive to use geochemical and mineralogical principles to address and solve major environmental problems. The students identify the problems that are associated with different types of waste. This course covers a wide range of problems associated with the waste arising from the generation of electricity. The main topics will be the uranium cycle, characterization of nuclear waste, and the containment and disposal of nuclear waste. Based on insights from the nuclear fuel cycle, solutions are presented that diminish the environmental impacts of coal and biomass combustion products, incineration of municipal solid waste, toxic waste due to refuse incineration, and landfills and landfill gases.
Taught by: Giere
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
ENVS 657 Introduction to Superfund Sites and Health Effects of Hazardous Waste
Superfund hazardous waste sites are prevalent in our nation and the exposures to toxicants from these sites raise immediate health concerns. The aims of this course are to educate students about such sites and provide a scientific basis for hazard identification, hazard characterization, risk communication and risk management. The course will describe the effect of these hazardous chemicals on the ecosystem and vice-versa, and remediation and mitigation approaches. These environmental science issues will open into the environmental health aspects of exposures including: biomonitoring (external and internal dose, biomarkers and the exposome), toxicological properties of contaminants and mode-of-action. The course will be complemented with visits to two Superfund sites in the region: Ambler (asbestos) and Palmerton (heavy metals). Prerequisite: 400 level course in Biology/Chemistry and Biochemistry
Taught by: Jane Willenbring, Richard Pepino, Trevor Penning
Also Offered As: PHRM 657
Activity: Lecture
1.0 Course Unit

ENVS 665 Industrial Ecology and the Circular Economy
Industrial Ecology is the multidisciplinary study of industrial systems and economic activities and their links to natural systems. The word “industrial” represents how humans use natural resources in the production of goods and services. ‘Ecology’ refers to the concept that our industrial systems need to operate within sustainable natural ecosystems. The application of industrial ecology requires a movement of industrial processes from open loop business processes, where resource and capital investments move through the system to create products and waste, to a closed loop system where wastes (aka by-products) become inputs for new processes. This approach will allow to move to a circular economy. The implementation of industrial ecology, which aligns business operations with the natural cycle, creates the opportunity for a circular economy and has the potential for significant benefit for industry as well as for the long term viability of the human population and the natural ecosystem. Prerequisite: Approval from the instructor if course prerequisites not met.
Taught by: James Hagan
Course usually offered summer term only
Prerequisite: ENVS 667
Activity: Seminar
1.0 Course Unit

ENVS 669 Corporate Sustainability Strategies
Before the year 2000, ‘environmental management’ for a business was typically driven by the need to respond to restrictions imposed by environmental regulation. But, at the dawn of the new millennium, leading businesses began to change their concept of environmental management to look beyond simply meeting governmental dictates. These organizations began to evolve and utilize ‘environmental strategy’ to create new ways of growing their businesses by bringing sustainability to the core of their business strategies. This seismic shift in view was accompanied by a bottom line emphasis that, in some cases, turned sustainability efforts into profit centers. Sustainability increasingly is not hidden within the silo of environmental, health, and safety departments but has become much more seamlessly integrated into the operations of corporate functional disciplines. Today, to effectively work in senior management, an executive needs to be knowledgeable not only about his or her specific business function but also how his or her business will be impacted by governmental regulations, policies, corporate sustainability initiatives, green marketing regulations, industry guidelines or ‘best practices’, new sustainable technologies, energy planning, environmental performance metrics, and required reporting on the environmental impact of their business unit.

ENVS 673 The Future of Water
From Wall Street to rural Sub-Saharan Africa, technology innovation to aging infrastructure-this course will explore the; impact of water and consider what future leaders need to know about the dynamics of the industry, investment and business opportunities, and water-related risk; Opportunities for water are booming around the world, in large part because of existing or looming shortages and decades of underinvestment, population growth, rapid industrialization and urbanization, pollution, and climate change. Water is the only irreplaceable natural resource on the planet. Its critical role in every aspect of the global economy, could, in fact, lead it to be the next gold or the next oil; This course will address the fundamentals of the water sector from an international perspective. The future of water will be critical to our global economic, social and political development and will likely become one of the most influential factors in business decisions for the future. Furthermore, it is essential for leaders across all sectors-from pharmaceuticals to financials, energy to agriculture-to understand how to sustainably manage and account for water resources, capitalize on new technologies, mitigate water-related risks and navigate through complex and dynamic policy and regulation. The course will engage students in high-level discussion and strategy formation, challenging them to develop creative and sustainable solutions to some of the greatest challenges facing environmental, business and water industry leaders today. Interactive sessions and projects will provide an introduction to appropriately managing, valuing and investing in water assets to create sustainable and compelling business opportunities.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
ENVS 674 Life Cycle Assessment
In order to make sensible decisions on products or projects, people need to understand the environmental impacts of these actions. Life cycle assessment (LCA) is a process to assess environmental impacts throughout the different stages of a product or project's life. This seminar is intended to be comprehensive and covers material extraction, processing, manufacture, distribution, use and end of life reuse, recovery or disposal. The objective of conducting an LCA is to compare the full range of environmental impacts that emanate from the provision of these products or services and then use that information to improve the situation to minimize or eliminate harm. The focus of this class will be to understand the phases of an LCA as well as conduct LCAs that compare the impacts of two related options. This course will enable the student to conduct LCAs and examine the use of software that could be used in this regard. The classic examples are cloth vs. disposable diapers, paper vs. ceramic cups, and so on. This course will enable the student to conduct LCAs and examine the use of software that could be used in this regard. Prerequisite: If course requirement not met, permission of instructor required.

ENVS 675 Charting a New Course for the Water Industry
We are entering an era of growing water infrastructure failures and remaining 'legacy' water pollution challenges. Fortunately, a network of global water CEOs from water utilities, industry and engineering consulting are leading the water sector towards innovative change. They are finding solutions at the intersection of science, engineering/technology and policy and paving the path forward for our water industry and our global water resources. This short course is led by the former CEO of Philadelphia Water and the Chair of the Leading Utilities of the World Network. Professor of Practice Howard Neukrug will lead a series of discussions on: (1) a brief history of water infrastructure systems in the US and the paradox of how our water resources have been used, valued, and priced over time; (2) a specific focus on the past 50 years of Philadelphia's efforts to meet the challenges of the Clean Water Act and Safe Drinking Water Act through leadership in the legislative, regulatory, management, and policy and research arenas of the water business; and (3) personal interviews with key water leaders on their greatest challenges past and future and how they are managing change and innovation towards more sustainable water systems in the 21st century.
Taught by: Howard Neukrug
Course not offered every year
Activity: Online Course
0.5 Course Units

ENVS 677 Sustainable Agriculture and Product Stewardship
This course will focus on how food is produced around the globe and inputs required to ensure food security. Topics explored include: Integrated Pest Management, Precision Agriculture, Product Stewardship, Biodiversity, Biologicals, Organics and Synthetic Products, GMOs, Sustainable Development Goals, Regulations, Stakeholders (Growers, NGOs, consumers, etc.), and Food waste.
Taught by: Linda Froelich
Activity: Seminar
1.0 Course Unit

ENVS 681 Modeling Geographical Space
This course explores the nature and use of raster-based geographic information systems (GIS) for the analysis and synthesis of spatial patterns and processes through 'cartographic modeling'. Cartographic modeling is a general but well defined methodology that can be used to address a wide variety of analytical mapping applications in a clear and consistent manner. It does so by decomposing both data and data-processing tasks into elemental components that can then be recomposed with relative ease and with great flexibility.
Taught by: Tomlin

Activity: Lecture
1.0 Course Unit

ENVS 686 Resiliency, Health & Built Environment
Overnight field trips required Aug 20-21, 2020 and Aug 24-25, 2020. Additional fees apply. Healthy resilient communities are successful outcomes of built places. This course is designed for MES students to build area expertise through lectures, on-site visits and real time simulations. Students will travel to New York City and Washington DC to learn about these topics and observe current practices first hand. Through the design and synthesis of place, including educational and health facilities, and the workplace, the class will investigate the impact of Social Determinants of Health and sustainability. They will also integrate resiliency planning to address impacts of sea level rise, severe heat and different climate and environmental conditions affecting the built environment. Course work covers design and planning theory that intersects with diseases, mental health, climate action and their interconnectivity. Case studies, seminars and tours of projects and health departments will bring to focus how the built environment can be a culprit and a solution.

Activity: Seminar
1.0 Course Unit
ENVS 688 Floodplain Management in a Changing Climate
According to a 2019 paper by Scott A. Kulp and Benjamin H. Strauss in the journal Nature Communications, 230 million people worldwide occupy land that is less than 1 meter above current high tide. These lands will be inundated by sea level rise by the end of this century, or earlier. Add to this the inherent flood risks in riverine and urban settings. How do we prepare and adapt? The class will explore the challenge of floodplain management in a changing climate through lectures, talks by guest experts, readings and multimedia, and exploration in the field. We will take a field trip to the New Jersey coast to witness home elevations, beach nourishment, and locales that are already experiencing chronic tidal flooding; we will meet with municipal officials challenged by increasingly persistent sea level rise. Our class will look at the National Flood Insurance Program, examine its goals, critique its 50 year history and debate reforms to the program at the same time the US Congress is considering reauthorization of the program. We will look at resiliency efforts that states and local governments are pursuing and the new city- and state-level position of Chief Resiliency Officer. In class we will cover hazard mitigation planning, land use, hard and natural infrastructure, regulations, the Community Rating System and other issues pertaining to flooding and climate change, including social justice and public health issues. Throughout the course, material will be introduced to prepare the student to take the Certified Floodplain Manager exam administered by the Association of State Floodplain Managers. This optional test, should the student pass, will provide credentialing that is well recognized in the United States.

Taught by: John Miller
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENVS 699 Masters of Environmental Studies Capstone Seminar
This course is designed to help students successfully complete their MES Capstone. A set of milestones will be set and regular meetings will be held in groups and individually to aid the student as they complete the research portion of their degree. We will be working together to complete a series of steps towards the final project. These steps fall into five major areas 1) Reviewing the literature; 2) Finding a model; 3) Framing your research; 4) Managing data; and 5) Writing your results. Throughout the semester, we will also discuss career goals and the job search. Prerequisite: Project proposal and Online Application required for course registration. See MES Office and ‘Guide to the Capatone’ for more information.

Taught by: Bordeaux
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: Project proposal and Online Application required for course registration. See MES Office and ‘Guide to the Capatone’ for more information.

ENVS 999 Independent Study
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Permission of instructor required

Epidemiology (EPID)

EPID 510 Introductory Epidemiology
This course provides an introduction to the fundamentals of research in clinical epidemiology. It covers definitions of epidemiology, measures of disease frequency; measures of effect and association; epidemiologic study designs, including randomized clinical trials, cohort and case-control studies, cross-sectional surveys, meta-analysis and decision analysis; and an overview of the conduct and analysis of epidemiologic studies. The course is composed of a series of lectures and discussion sessions designed to reinforce concepts introduced in the preceding lecture. Prerequisite: Permission of instructor
Taught by: Bewtra
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EPID 516 Mathematical Models for the Control of Infectious Diseases
As infectious diseases are transmitted from one host to another, the dynamics of transmission in the population of hosts follow certain basic rules. If one knows and understands these rules, one can plan rational strategies to prevent or control infections. One of the principal tools of those interested in public health interventions to control or ameliorate infectious diseases is the mathematical model. A model is just a means of representing and manipulating something that would not otherwise be accessible. This course provides students with the opportunity to construct models of the transmission of infectious diseases and to use these models to plan or compare disease control strategies. The course is predicated upon the notion that the act of building a mathematical model of disease transmission is often the very best way of understanding what is going on. This understanding will be further refined by the examination of more complicated and sophisticated model structures as they appear in the recent published literature. Prerequisite: Permission of instructor A disproportionate number of emerging infectious diseases and recent disease outbreaks in the United States and elsewhere have shared a common characteristic—they affect veterinary as well as human populations. Many are also vector-borne, passing between different species of hosts through insects and other invertebrates. In some cases humans are only ‘spillover hosts’ whose infection is incidental to the transmission cycle. Interdisciplinary approaches are especially important to control such diseases. As a particular focus of the course, students will learn the tools needed for successful collaborations to address the growing problem of zoonotic and vector-borne diseases.

Taught by: Levy, Smith
Course usually offered in fall term
Also Offered As: PUBH 610
Activity: Lecture
1.0 Course Unit

EPID 518 Geography & Public Health
This course will provide an introduction to GIS in public health research and practice. Through a series of lectures and labs students will explore theories linking health and the environment, spatial analysis and spatial epidemiology, and applications of GIS-related data collection and analysis.
Course usually offered in fall term
Also Offered As: PUBH 517
Activity: Lecture
1.0 Course Unit
EPID 526 Biostatistics for Epidemiologic Methods I
The first half of this will cover graphical methods, probability, discrete
and continuous distributions, estimation, confidence intervals, and one
sample hypothesis testing. Emphasis is placed on understanding the
proper application and interpretation of the methods. The second half
of this course will cover two sample hypothesis testing, nonparametric
techniques, sample size determination, correlation, regression, analysis
of variance, and analysis of covariance. Emphasis is placed on
understanding the proper application and underlying assumptions of
the methods presented. Laboratory sessions focus on the use of the
STATA statistical package and applications to clinical data. Prerequisite:
Permission of instructor. This course runs from mid summer to mid fall
term. There is a corresponding lab.
Taught by: Cucchiara, Yang
Activity: Lecture
1.0 Course Unit

EPID 527 Biostatistics for Epidemiologic Methods II
The first half of this covers concepts in biostatistics as applied to
epidemiology, primarily categorical data analysis, analysis of case-
control, cross-sectional, cohort studies, and clinical trials. Topics
include simple analysis of epidemiologic measures of effect; stratified
analysis; confounding; interaction, the use of matching, and sample
size determination. The second half of this course covers concepts in
biostatistics as applied to epidemiology, primarily multivariable models
in epidemiology for analyzing case-control, cross-sectional, cohort
studies, and clinical trials. Topics include logistic, conditional logistics,
and Poisson regression methods; simple survival analyses including
Cox regression. Emphasis is placed on understanding the proper
application and underlying assumptions of the methods presented.
Laboratory sessions focus on the use of the STATA statistical package
and applications to clinical data. Prerequisite: This course runs from mid
fall to mid spring term. There is a corresponding lab.
Taught by: Landis, Shaw
Prerequisite: EPID 526
Activity: Lecture
1.0 Course Unit

EPID 532 Database Management for Clinical Epidemiology
This course provides students with an introduction to the techniques
of database management as they apply to clinical research. Students
learn how to design and implement computerized databases, perform
basic query and reporting operations, migrate data between various file
formats, prepare databases for statistical analysis, and perform quality
assurance procedures. This course focuses on the practical issues of
database management and is intended to support each student's planned
research enterprise. Each class session will be preceded by a one-hour
online lecture and brief self-assessment quiz to be completed prior to
attending class. This lecture is intended to prepare students for the
class for the week, which will be dedicated to practical experience in a
laboratory setting. Prerequisite: Restricted to MSCE degree students.
Permission of Instructor.
Taught by: Harhay
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EPID 534 Qualitative Methods in the Study of Health, Disease and
Medical Systems
This course combines informal lecture and discussion with practical
eresearch to build specific skills for conducting qualitative research on
healthcare, broadly defined. Readings include books and papers about
research methodology and articles that provide exemplars and pitfalls of
qualitative research. Specific topics covered include: the role of theory
in qualitative research, method-research question fit, collecting different
types of qualitative data (observation, interview, focus group, text, video),
ethical issues in qualitative research, establishing rigor in qualitative
research, introduction to qualitative data analysis using software, mixing
methods, approaches for obtaining grant funding for qualitative research
and writing up qualitative research studies for publication. The objectives
of this course are: To introduce the student to the epistemological
underpinning of qualitative methodology; To review how to select the
best qualitative approach for different research questions; To introduce
the student to different qualitative data collection techniques; To review
standards of methodological rigor in qualitative research; To introduce
the basic principles of qualitative data analysis using NVivo software;
To provide practical advice about planning, getting funding for and
implementing a qualitative study. Prerequisite: Previous course work in
research methods or permission of course director.
Taught by: Szymbczak
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EPID 542 Measurement of Health in Epidemiology
This course addresses the measurement of epidemiological variables,
which broadly encompasses the tasks involved in obtaining data, without
which analyses cannot proceed. Course topics to be discussed include:
defining the concepts of exposure, disease, and health; approaches
to measuring exposures, which may be personal (i.e., psychological,
behavioral, biological, or genetic) or environmental (i.e., physical,
chemical, social, or organizational); approaches to measuring disease
and health status; assessing the validity and reliability of measurement
instruments; problems of misclassification of exposure status; missing
data; instrument (e.g., questionnaire) development; and qualitative
methods. Prerequisite: If course requirement not met, permission of
course director.
Taught by: Farrar
Course usually offered in fall term
Prerequisite: EPID 510 AND EPID 526
Activity: Lecture
0.5 Course Units

EPID 546 Clinical Database Research Methodology
This course will discuss appropriate selection of automated databases
for research questions of interest; assessment of drug exposures;
validation of health outcomes of interest; and addressing biases,
confounding, and missing data in databases. We will also review key
aspects of protocol development for database studies and discuss
research grant applications related to these studies. Prerequisite: If
course requirement not met, permission of course director required.
Taught by: Lo Re
Prerequisite: EPID 510 AND EPID 526
Activity: Lecture
0.5 Course Units
**EPID 550 Clinical Economics and Clinical Decision Making**
This course focuses on the application of decision analysis and economic analysis to clinical and policy research. The course begins with material about the selection, use, and analysis of diagnostic tests using two by two tables, likelihood ratios, and ROC curves. The course continues with the introduction of more general tools for decision analysis, including decision trees and other mathematical models. Special emphasis is placed on the assessment and use of utilities in these models. A major focus of the course is the application of economic principles to the evaluation of health outcomes. During seminars, students will carry out practical exercises that include problem solving, critically analyzing published articles, and learning to use computer software that facilitates decision and economic analyses. Prerequisite: Permission of instructor
Taught by: Glick, Williams
Course usually offered in spring term
Also Offered As: HPR 550
Activity: Lecture
1.0 Course Unit

**EPID 560 Issues in Research Protocol Development**
This course focuses on major issues in research protocol development, including methodological issues regarding different research designs, development of research questions, and plans for analysis. Each student will present his or her research proposal for open discussion during one of the sessions. Prerequisite: Restricted to MSCE degree students. Course usually offered in spring term
Activity: Seminar
0.25 Course Units

**EPID 570 Critical Appraisal of the Medical Literature**
This course focuses on techniques for critical appraisal of the medical literature. Each student will be responsible for at least one critical appraisal session covering different epidemiologic topics. Prerequisite: Restricted to MSCE degree students. Course usually offered in spring term
Activity: Lecture
0.25 Course Units

**EPID 575 Introduction to Genetic Epidemiology**
There is an increasing need for researchers to understand the genetic basis of incorporate the collection and analysis of genetic information into studies of The objectives of this course are to provide students with an understanding of used by molecular and genetic epidemiologists. This course consists of a series of discussions focused on the critical appraisal of genetic/molecular epidemiology. After completing this course, students will be able to read and interpret the epidemiology literature, and understand data collection and analysis approaches molecular and genetic epidemiological studies. Prerequisite: Permission of course director. Students enrolling in this class are expected to have a working knowledge of epidemiology, biostatistics, and human genetics. Students who do not meet these requirements may be allowed to enroll in the class, but may be required to undertake supplemental readings and/or tutorials to obtain the necessary background.
Taught by: Devoto, Saleheen
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**EPID 580 Outcomes Research**
This course is divided into two main parts. The first part addresses issues related to the measurement of quality in health care. Included is a review of the classical structure-process-outcome quality paradigm. The paradigm's strengths and limitations are addressed. This part especially focuses on outcome measure of quality and examines the validity of alternative measures. The second part deals with observational, or quasi-experimental, research studies. It addresses the advantages and limitations of alternative designs, and covers the role of clinical risk adjustment in observational studies of medical interventions. It focuses on the problem of selection bias, and reviews recent methods for dealing with this bias, such as instrumental variables. Prerequisite: Introductory course in statistics including regression methods. Permission of instructor if prerequisite is not met.
Taught by: Silber
Course usually offered in fall term
Also Offered As: HPR 580
Activity: Lecture
1.0 Course Unit

**EPID 582 Systematic Review and Meta-Analysis**
This course will provide an introduction to the fundamentals of systematic reviews and meta-analysis. It will cover introductory principles of meta-analysis; protocol development; search strategies; data abstraction methods; quality assessment; meta-analytic methods; and applications of meta-analysis.
Taught by: Umscheid, Chen
Course offered fall; odd-numbered years
Prerequisite: EPID 510 AND EPID 526
Activity: Lecture
1.0 Course Unit

**EPID 584 Health Disparities Research**
This course will provide an overview of research in health disparities. It will cover the historical aspects, concepts, policy, economic, genomic and social perspectives of health disparities. It will provide students with methodological tools for health disparities research and introduce students to ongoing health disparities research by current Penn and affiliated faculty members. The course is composed of a series of weekly small group lectures and discussion, including critical appraisal of published papers, guest faculty presentations, and student presentations. Students will be expected to attend weekly meetings and participate in class discussions, prepare and lead discussions of assigned papers, review assigned readings, and draft and present a scientific protocol of their choosing related to health disparities.
Taught by: Guevara, Takeshita
Course usually offered in spring term
Prerequisite: EPID 510 AND EPID 526
Activity: Lecture
1.0 Course Unit
EPID 600 Data Science for Biomedical Informatics
In this course, we will use R and other freely available software to learn fundamental data science applied to a range of biomedical informatics topics, including those making use of health and genomic data. After completing this course, students will be able to retrieve and clean data, perform exploratory analyses, build models to answer scientific questions, and present visually appealing results to accompany data analyses; be familiar with various biomedical data types and resources related to them; and know how to create reproducible and easily shareable results with R and github. Prerequisite: Familiarity with basic statistical (e.g., EPID 526, 527 or other first-year graduate level stats course) concepts is expected, as this course will not cover basic concepts in depth.
Taught by: Himes
Course usually offered in fall term
Also Offered As: BMIN 503
Activity: Lecture
1.0 Course Unit

EPID 602 Topics in Biom/Hlth Info
Also Offered As: BMIN 504
Activity: Lecture
1.0 Course Unit

EPID 610 Tutorial in Epidemiologic Research
This is a tutorial given by each student's advisor. Advisor and student meet weekly. Topics include: discussion and review of epidemiologic concepts and principles, guided readings in the epidemiology of a specific health area, and the development of the research protocol.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

EPID 621 Longitudinal and Clustered Data in Epidemiologic Research
An introduction to the principles of and methods for longitudinal and clustered data analysis with special emphasis on clinical, epidemiologic, and public health applications. Designed for advanced MS and PhD-level students in epidemiology and related fields. Marginal and conditional methods for continuous and binary outcomes. Mixed effects and hierarchical models. Simulations for power calculations. Software will include Stata and R. Prerequisite: Completion of EPID 526 and 527 or equivalent preparation in biostatistics, including generalized linear models. Completion of semester course in principles of epidemiology or equivalent. Good working knowledge of Stata and SAS and familiarity with principles of first-year calculus and matrix algebra. Permission of course director.
Taught by: Shults
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EPID 622 Applied Regression Models for Categorical Data
This course will provide in-depth treatment of several topics in categorical data analysis. After a brief review of methods for contingency tables, we will introduce the idea of generalized linear models, and focus on two special cases: multiple logistic regression and loglinear models. Each topic will be presented in detail by stating the model and covering parameter estimation and interpretation, inference, model building, regression diagnostics and assessment of model fit. Finally, we will cover extensions to both models, including models for multinomial data, analysis of matched-pair data, and random effects models. Topics will be illustrated in class with examples, and we will discuss the use of STATA to conduct the analyses.
Taught by: Xiao
Course usually offered in fall term
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
0.5 Course Units

EPID 623 Applied Survival Analysis
This course will focus on statistical methods for survival or time-to-event data. Topics covered will include: the concepts of survival data and censoring, estimation of survival functions, comparison of groups, regression analysis, sample size and power considerations, and methods for competing risks. All methods will be illustrated by in class examples and homework sets. Prerequisite: Students should be comfortable with basic calculus concepts (e.g., derivatives, integrals, etc). Offered second half of fall term.
Taught by: Li
Course usually offered in fall term
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
0.5 Course Units

EPID 624 Methods in PCOR
The goal of this course is to provide a broad overview of methods used in patient centered outcomes research (PCOR). Expert faculty will lecture on topics such as standards for research questions, patient centeredness, systematic reviews, causal inference, heterogeneity of treatment effect handling missing data, data networks, Bayesian designs, data registries, and diagnostic tests. Topics may also include advanced observational study design, statistical methods for observational studies, health status/quality of life as applied to PCOR and case studies of patient engagement. Prerequisite: Permission of instructor
Taught by: Gelfand
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EPID 600 Data Science for Biomedical Informatics
In this course, we will use R and other freely available software to learn fundamental data science applied to a range of biomedical informatics topics, including those making use of health and genomic data. After completing this course, students will be able to retrieve and clean data, perform exploratory analyses, build models to answer scientific questions, and present visually appealing results to accompany data analyses; be familiar with various biomedical data types and resources related to them; and know how to create reproducible and easily shareable results with R and github. Prerequisite: Familiarity with basic statistical (e.g., EPID 526, 527 or other first-year graduate level stats course) concepts is expected, as this course will not cover basic concepts in depth.

Activity: Lecture
1.0 Course Unit
EPID 625 Advanced Biostatistical Methods for Multivariable Prediction Models
This course is an introduction to statistical methods that can be used to evaluate biomarker prognostic studies and multivariate prediction models. It is designed for advanced MS and PhD-level students in epidemiology and related fields (nursing, health policy, social work, demography). Topics will include: biostatistical evaluation of biomarkers, predictive models based on various regression modeling strategies and classification trees, assessing the predictive ability of a model; internal and external validation of models; and updating prognostic models with new variables or for use in different populations. Students will learn about the statistical methods that are required by current reporting guidelines for biomarker prognostic studies or the reporting guidelines for multivariable prediction models. Prerequisite: Working knowledge of either Stata, SAS or R to fit regression, logistic regression and/or Cox regression models. Permission of course director for students outside of the School of Medicine graduate programs.
Taught by: Gimotty
Course usually offered in spring term
Prerequisite: EPID 526 AND EPID 527 AND (EPID 622 OR EPID 623)
Activity: Lecture
0.5 Course Units

EPID 630 Clinical Trials
This course is to serve as a general introduction to clinical trials, with emphasis on trial design issues. This is not a course on the biostatistics of clinical trials. It is expected that at the conclusion of the course, a student will be able to plan a clinical trial. Each class will consist of a two-hour lecture followed by a one hour discussion. Prerequisite: Permission of instructor.
Taught by: Farrar
Course usually offered in spring term
Also Offered As: REG 630
Prerequisite: EPID 510 AND EPID 526
Activity: Lecture
1.0 Course Unit

EPID 632 Introduction to Biomedical and Health Informatics
This course is designed to provide a survey of the major topic areas in medical informatics, especially as they apply to clinical research. Through a series of lectures and demonstrations, students will learn about topics such as databases, natural language, clinical information systems, networks, artificial intelligence and machine learning applications, decision support, imaging and graphics, and the use of computers in education.
Taught by: Holmes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EPID 634 Clinical Trial Outcomes: Measurement, Analysis and Interpretation
This course is intended to teach students the skills necessary to select and/or design appropriate outcomes for a clinical trial. Students will focus on recent changes in our understanding of clinical trial outcome measurements, analyses, and interpretation for both subjective and objective phenomenon, such as adherence, use of multiple outcomes, and clinical importance. While design issues for clinical trials are the main focus, other types of clinical studies will be considered as appropriate. Student will be expected to learn about the problems inherent in the design of outcome measures of health and how to apply different epidemiologic and biostatistical concepts toward a solution. It is expected that at the conclusion of the course, students will be able to plan a clinical trial with a valid, responsive, and interpretable outcome.
Prerequisite: Permission of instructor
Taught by: Farrar
Course usually offered in fall term
Prerequisite: EPID 510
Activity: Lecture
1.0 Course Unit

EPID 636 Epidemiological Methods in Acute Care
This is an advanced seminar that will cover nuanced methodological considerations and logistical challenges of research in acute care settings (e.g. prehospital, emergency department, hospital, and intensive care units). Topics to be covered with regards to primary data collection include: recruitment and consent, outcomes measurement, survey and qualitative research, clinical trials, quality improvement, decision making and cognitive biases, end-of-life issues, and acute care research networks. Topics to be covered with regards to secondary data analysis include: data sources, risk adjustment, missing data, causal inference, predictive modeling, decision rules, variability in care, organizational factors, and economic analysis. The course will finish with a discussion of the landscape for obtaining funding for acute care research. Weekly sessions will include expert guest lectures, review of landmark papers, and round-table discussion of the students’going research projects as they pertain to issues covered in the course. Prerequisite: Permission of instructor.
Taught by: Delgado,Holena
Course not offered every year
Prerequisite: EPID 510,EPID 526
Activity: Lecture
1.0 Course Unit

EPID 638 Topics in Clinical Trial Design and Analysis
This course is intended to follow, and be complementary to EPID 630: Clinical Trials. It will build on the basic principles of design, conduct, and analysis introduced in that course and will go into more detail on particular approaches. Topics covered will include noninferiority trials, phase 1 designs, multi-stage and other adaptive designs, graphical data presentations and current ethical controversies in clinical trials.
Taught by: Ellenberg
Course usually offered in fall term
Prerequisite: EPID 630
Activity: Lecture
1.0 Course Unit
EPID 640 Advanced Topics in Epidemiology
This course is designed to introduce students to advanced epidemiologic methods through a series of readings and discussions. The course aims to deepen the students' understanding of important concepts and controversies in contemporary epidemiology and to enhance their ability to think critically about empirical epidemiologic research. The course is intended for students who are already familiar with the fundamentals of epidemiology and biostatistics, and who wish to gain an understanding of the complex issues underlying epidemiologic study design and interpretation. Prerequisite: Permission of instructor.
Taught by: Naj
Course usually offered in spring term
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 644 Cardiopulmonary Epidemiology
This course is a seminar course that addresses epidemiological research issues as they apply to important clinical topics in cardiovascular and pulmonary medicine. Lectures and workshops are designed to acquaint students with the classic literature in the fields of cardiovascular and pulmonary epidemiology, to use a body of literature to demonstrate the strengths and weaknesses of epidemiological research designs as they have been applied to cardiovascular and pulmonary medicine to expose students to the range of topics studied to teach advanced epidemiological principles using a problem-based approach, and to stimulate students to develop independent research questions. Prerequisite: Permission of instructor.
Taught by: Kimmel
Course usually offered summer term only
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 645 Research Methods in Cancer Epidemiology
Research in cancer etiology, prevention, treatment, and control includes a wide range of subject matter science, from the initial molecular changes which precede the development of cancer to issues of primary guidelines for cancer survivors. The course reviews the possible study designs applied to cancer etiology, prevention, treatment, and control. These include randomized controlled trials and multiple types of observational studies (cohort, case-control, cross-sectional). Other topics will include causal inference, bias, and effect modification. Prerequisite: Permission of instructor.
Taught by: Aplenc, Getz
Course usually offered summer term only
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 646 Reproductive Epidemiology
This course provides an in-depth presentation of advanced epidemiologic research issues as they apply to important clinical topics in obstetrics and gynecology and related clinical disciplines. Lectures and workshops are designed to acquaint students with seminal issues in the field of reproductive epidemiology, to use a body of literature to demonstrate the strengths and weaknesses of epidemiological research designs as they have been applied to obstetrics and gynecology and related clinical disciplines, to expose students to the range of topics studied, to teach advanced epidemiologic principles using a problem-based approach, and to stimulate students interested in reproductive epidemiology to develop independent research questions.
Taught by: Barnhart
Course offered spring; even-numbered years
Activity: Lecture
1.0 Course Unit

EPID 652 Renal and Urologic Epidemiology
The objective of this course is to prepare students to function as effective, independent researchers in the fields of renal and urologic epidemiology by providing the students an understanding of how epidemiological research can and has advanced the knowledge of diseases in treatments of renal and urologic medicine. The structure of the course consists of a lecture series, workshops, and student presentations. Prerequisite: Permission of instructor.
Taught by: Feldman
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 656 Research Methods in Infectious Diseases Epidemiology
This course addresses epidemiological issues as they apply to important clinical topics in infectious diseases. Lectures and discussions will serve two primary goals: 1) to explore epidemiologic methods specific to infectious diseases (e.g. adherence to therapy) or which have important applications to infectious diseases (e.g. molecular epidemiology); and 2) to explore the epidemiology of particular infectious diseases in treatments of renal and urologic medicine. The structure of the course consists of a lecture series, workshops, and student presentations. Prerequisite: Permission from instructor is needed.
Taught by: Gross, Han
Course usually offered summer term only
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 658 Gastroenterology Epidemiology
This course provides an in-depth presentation of advanced epidemiologic research methods in conducting clinical epidemiologic research in the field of gastroenterology. Prerequisite: Permission of instructor.
Taught by: Yang
Course offered spring; odd-numbered years
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit
EPID 664 Methods in Neurologic Clinical Epidemiology
This course will introduce students to methods and study design principles that are specific or unique to clinical research and trials in neurology, child neurology, neuro-ophthalmology, neurosurgery, and related fields. Prerequisite: Permission of instructor
Taught by: Farrar, Waldman
Course offered spring; even-numbered years
Activity: Lecture
0.5 Course Units

EPID 666 Pharmacoepidemiology Research Methods
The purpose of this course is to explore and integrate concepts and considerations that are key to the conduct of pharmacoepidemiologic research. The format will be a mixture of seminar, instructor-led discussion, student-led discussion, and student presentations. Papers from the applied and methods literature will be used to illustrate concepts and as springboards for discussion. Topics covered include use of automated databases, pharmacogenomics, and approaches to addressing confounding.
Taught by: Hennessy
Course usually offered in spring term
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 672 Biostatistical Methods for Addressing Confounding
This course is designed to teach epidemiology students the statistical principles of analysis specific to pharmacoepidemiology study designs including the use of propensity scores, inverse probability weighting, time varying confounding analyses, disease risk scores, and instrumental variables. Each session includes both a lecture component and laboratory component. Students will learn the statistical principles and then apply them to example study datasets. Laboratory sessions will be conducted on the students laptops using STATA software. Prerequisite: Permission of the instructor(s).
Taught by: Ogdie-Beatty, Stephens-Sheilds
Course usually offered summer term only
Prerequisite: EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 674 Measuring the Microbiome: Methods and Tools
This is an advanced course addressing the methods and tools used to analyze microbiome data as well as their implications for clinical study design. The course will include: (1) lectures focused on how the microbiome is measured, approaches to the analysis of highly multivariate microbiome data, and the bioinformatic tools used to execute these analyses; (2) hands-on R and command-line coding to build familiarity with commonly used tools and analytic methods; and (3) short, practical assignments to reinforce the lectures and classwork.
The course will acquaint students with classic literature in the field of microbiome research and prepare students to integrate microbiome data collection and analysis with epidemiologic research methodologies.
Prerequisite: Permission of instructor if course prerequisites not met
Taught by: Brendan J. Kelly, MD, MSCE Assistant Professor of Medicine (Infectious Diseases) and Epidemiology 731 Blockley Hall
brendank@pennmedicine.upenn.edu
Course not offered every year
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 675 Advanced Methods for Analysis of Complex Genetic Traits
The advent of high-throughput genotyping has created unprecedented opportunities to characterize in detail information related to genome, epigenome and transcriptome. Such technological advancements have offered exciting opportunities for biological discovery as well as translation of biological data for targeted therapies. However, investigation of genetic polymorphisms, epigenetic signatures, gene transcription, biomarkers and their relationship with environmental factors and disease outcomes requires a thorough understanding of a wide range of experimental methods and statistical approaches.
Through critical review of the current literature, this course will provide understanding on various ‘-OMICS’ approaches for the study of complex disorders and traits. Students will also understand and present advanced statistical methods and how such concepts can be applied.
Prerequisite: Introduction to Genetic Epidemiology or equivalent; training in study design and statistical analysis related to statistical genetics and molecular epidemiology, and permission of course directors.
Taught by: Saleheen
Course not offered every year
Activity: Lecture
1.0 Course Unit

EPID 699 Lab Rotation
Activity: Laboratory
0.33 Course Units

EPID 701 Introduction to Epidemiologic Research
This course is intended to provide in-depth, exposure to the theory and methods of epidemiologic research. Topics to be covered include causal inference, measures of disease frequency and association, study design, bias and confounding, validity, and epidemiologic analysis. Prerequisite: Quantitative proficiency. Knowledge and/or experience in working in biomedical research. Permission of instructor.
Activity: Lecture
1.0 Course Unit
EPID 702 Advanced topics in Epidemiologic Research
The overarching goal of this course is to expose doctoral students in epidemiology to advanced epidemiologic and statistical research methods and theories that are limitedly or not otherwise covered in courses available in the curriculum. Topics that will be covered include reporting guidelines and best practices for reporting statistical methods and results, handling missing data, purposeful selection and application of propensity scores, selected topics in longitudinal and clustered data analysis, contemporary topics in statistical inference and use of p-values and other Frequentist statistical methods, Bayesian theory and inference, and topics selected in collaboration with students and the Graduate Group in Epidemiology and Biostatistics (GEB) each term. This course is intended for doctoral students in the PhD program in Epidemiology. However, students from other graduate groups are welcome, as long as they meet the pre-requisites; such students are welcome during any year of study. Three learning objectives have been developed for this course; (i) provide students with an understanding of modern and cutting-edge quantitative methods, advanced topics, and best practices in epidemiologic, statistical, and biomedical research; (ii) develop students competence and confidence in statistical programing to support accurate and reproducible epidemiologic and biostatistical analyses; (iii) improve the ability of students to make informed decisions regarding the selection of analytic methods in their individual and collaborative research projects. This course emphasizes the following core competencies: knowledge within program area (epidemiologic and biostatistical methods); research skills (study planning, critically appraising published research); quantitative and computational methodologies (data manipulation, data analysis, statistical coding and debugging, Bayesian inference, data visualization, purposeful statistical inference, and model selection). Through technical lectures, reading of carefully selected peer-reviewed tutorials, critical appraisal of published research studies, and in-class statistical coding laboratory sessions, this course will provide instruction on rigorous and informed statistical model selection, estimation, and interpretation.
Taught by: Michael Harhay, PhD, Assistant Professor of Epidemiology and Medicine
Course usually offered in spring term
Prerequisite: EPID 526 AND EPID 527 AND EPID 701
Activity: Lecture
1.0 Course Unit

EPID 714 Grant Writing/Review
This course will assist students in the design of an NIH grant (F-32, K, R21 orR01) for submission by enhancing their appreciation of the specifics of the grant writing process and in understanding the grant review process. This course is designed to provide background, training, and practice with the writing and submitting of NIH style grants. As a minimum all students who enroll will be expected to write and submit a reasonable draft of a full NIH style grant proposal by the end of the term. During the process, the portions of each proposal will be reviewed as a group by the other students in the course. In response to each review, students are expected to revise their grant sections. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Farrar/Seiber
Course usually offered summer term only
Also Offered As: HPR 714
Prerequisite: EPID 510 AND EPID 526 AND EPID 560 AND EPID 570
Activity: Seminar
0.5 Course Units

EPID 899 Pre-dissertation Research
Activity: Laboratory
0.5 Course Units

EPID 900 Master's Thesis
These are a series of tutorial sessions conducted by the student's advisor, which are to support the student's efforts in developing a research protocol, designing a designing a research project, and completing the study.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

EPID 995 Dissertation
Activity: Dissertation
0.5 Course Units

Filipino (FILP)

FILP 120 Beginning Filipino I & II
An introduction to the spoken and written Tagalog (Filipino) language. This will prepare and develop students' basic skills in speaking, listening, reading and writing Filipino at its beginning level. Prerequisite: For the second semester, completion of the first semester of ALAN 120 or permission of the instructor. Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Juliano
Two terms. student must enter first term.
Prerequisite: ALAN 120
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center.

FILP 121 Beginning Filipino II
A continuation of Beginning Filipino I, this class building on previous lessons on speaking, listening, reading and writing Filipino at its beginning level.
Activity Lecture
1.0 Course Unit

FILP 221 Intermediate Filipino II
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

FILP 320 Filipino Language and Culture
The Filipino Language and Culture is an advanced language and culture course offered to students who are in the upper immediate level of Filipino Language or those who had been certified to be proficient in Filipino language. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Juliano
Two terms. student must enter first term.
Prerequisite: ALAN 220
Activity: Lecture
1.0 Course Unit
Finance (FNCE)

FNCE 100 Corporate Finance
This course provides an introduction to the theory, the methods, and the concerns of corporate finance. The concepts developed in FNCE 100 form the foundation for all elective finance courses. The main topics include: 1) the time value of money and capital budgeting techniques; 2) uncertainty and the trade-off between risk and return; 3) security market efficiency; 4) optimal capital structure, and 5) dividend policy decisions. ACCT 101 + STAT 101 may be taken concurrently.
Taught by: Changes by semester
Also Offered As: FNCE 611
Prerequisite: (ECON 001 AND ECON 002) OR ECON 010 AND (MATH 104 OR MATH 110)
Activity: Lecture
1.0 Course Unit

FNCE 101 Monetary Economics and the Global Economy
This is an intermediate-level course in macroeconomics and the global economy, including topics in monetary and international economics. The goal is to provide a unified framework for understanding macroeconomic events and policy, which govern the global economic environment of business. The course analyzes the determinants and behavior of employment, production, demand and profits; inflation, interest rates, asset prices, and wages; exchange rates and international flows of goods and assets; including the interaction of the real economy with monetary policy and the financial system. The analysis is applied to current events, both in the US and abroad. Students cannot receive credit for taking both FNCE 101 and ECON 102. Wharton students are required to take FNCE 101.
Taught by: Varies by semester
One-term course offered either term
Also Offered As: FNCE 613
Prerequisite: (ECON 001 AND ECON 002) OR ECON 010 AND (MATH 104 OR MATH 110)
Activity: Lecture
1.0 Course Unit

FNCE 202 Consumer Financial Decision Making
Research shows that many individuals are profoundly underinformed about important financial facts and financial products, which frequently lead them to make mistakes and lose money. Moreover, consumer finance comprises an enormous sector of the economy, including products like credit cards, student loans, mortgages, retail banking, insurance, and a wide variety of retirement savings vehicles and investment alternatives. Additionally, recent breakthroughs in the FinTech arena are integrating innovative approaches to help consumers. Though virtually all people use these products, many find financial decisions to be confusing and complex, rendering them susceptible to fraud and deception. As a result, government regulation plays a major role in these markets. This course intended for Penn undergraduates considers economic models of household decisions and examines evidence on how consumers are managing (and mismanaging) their finances. Although academic research has historically placed more attention on corporate finance, household finance is receiving a brighter spotlight now-- partly due to its role in the recent financial crisis. Thus the course is geared toward those seeking to take charge of their own financial futures, anyone interested in policy debates over consumer financial decision making, and future FinTech entrepreneurs.
Taught by: Olivia Mitchell/Nicholas Roussanov
One-term course offered either term
Also Offered As: BEPP 202
Activity: Lecture
1.0 Course Unit

FNCE 203 Advanced Corporate Finance
The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as an extension of FNCE 100 (FNCE 611). Some are as of financial management not covered in FNCE 100 are covered in FNCE 203. These may include leasing, mergers and acquisitions, corporate reorganizations, financial planning and working capital management, and some other selected topics. Other areas that are covered in FNCE 100 are covered more in depth and more rigorously in FNCE 203. These include investment decision making under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and corporate liabilities, and dividend policy.
Taught by: Changes by semester
One-term course offered either term
Also Offered As: FNCE 726
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit
FNCE 205 Investment Management
This course studies the concepts and evidence relevant to the management of investment portfolios. Topics include diversification, asset allocation, portfolio optimization, factor models, the relation between risk and return, trading, passive (e.g., index-fund) and active (e.g., hedge-fund, long-short) strategies, mutual funds, performance evaluation, long-horizon investing and simulation. The course deals very little with individual security valuation and discretionary investing (i.e., 'equity research' or 'stock picking'). In addition to course prerequisites, STAT 102 may be taken concurrently.
Taught by: Changes by semester
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 101
Activity: Lecture
1.0 Course Unit

FNCE 206 Financial Derivatives
This course covers one of the most exciting yet fundamental areas in finance: derivative securities. In the modern financial architecture, financial derivatives can be the most challenging and exotic securities traded by institutional specialists, while at the same time, they can also be the basic securities commonly traded by retail investors such as S&P Index Options. Beyond trading, the basic ideas of financial derivatives serve as building blocks to understand a much broader class of financial problems, such as complex asset portfolios, strategic corporate decisions, and stages in venture capital investing. The global derivatives market is one of the most fast-growing markets, with over $600 trillion notional value in total. It is important as ever to understand both the strategic opportunities offered by these derivative instruments and risks they imply. The main objective of this course is to help students gain the intuition and skills on (1) pricing and hedging of derivative securities, and (2) using them for investment and risk management. In terms of methodologies, we apply the non-arbitrage principle and the law of one price to dynamic models through three different approaches: the binomial tree model, the Black-Scholes-Merton option pricing model, and the simulation-based risk neutral pricing approach. We discuss a wide range of applications, including the use of derivatives in asset management, the valuation of corporate securities such as stocks and corporate bonds with embedded options, interest rate derivatives, credit derivatives, as well as crude oil derivatives. In addition to theoretical discussions, we also emphasize practical considerations of implementing strategies using derivatives as tools, especially when no-arbitrage conditions do not hold. In addition to course prerequisites, STAT 102 may be taken concurrently.
Taught by: Varies by semester
One-term course offered either term
Also Offered As: FNCE 717
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 101
Activity: Lecture
1.0 Course Unit

FNCE 207 Valuation
The focus of this course is on the valuation of companies. The course covers current conceptual and theoretical valuation frameworks and translates those frameworks into practical approaches for valuing companies. The relevant accounting topics and the appropriate finance theory are integrated to show how to implement the valuation frameworks discussed on a step-by-step basis. The course teaches how to develop the required information for valuing companies from financial statements and other information sources in a real-world setting. Topics covered in depth include discounted cash flow techniques and price multiples. In addition, the course covers other valuation techniques such as leveraged buyout analysis. During the spring semester students cannot take Professor Glode's FNCE 207 class pass/fail. This section must be taken for a grade. Professor Glode requires attendance at first class.
Taught by: Professor Holthausen (Fall); Professor Glode (Spring)
One-term course offered either term
Prerequisite: FNCE 100 AND ACCT 101 AND STAT 101
Activity: Lecture
1.0 Course Unit

FNCE 209 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two midterms, (depending on instructor).
Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong
One-term course offered either term
Also Offered As: REAL 209
Prerequisite: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 219 International Financial Markets
FNCE 219 is a course on international financial markets. Major topics include foreign exchange rates, international money markets, currency and interest rate derivatives (forwards, options, and swaps), international stock and bond portfolios, and cryptocurrencies. Students learn about the features of financial instruments and the motivations of market participants. The class focuses on risk management, investing, and arbitrage relations in these markets. In addition to course prerequisites, FNCE 101 is recommended.
Taught by: Urban Jermann
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 101
Activity: Lecture
1.0 Course Unit
FNCE 230 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Taught by: Fernando Ferreira
Course usually offered in spring term
Also Offered As: BEPP 230, REAL 230
Activity: Lecture
1.0 Course Unit

FNCE 231 International Corporate Finance
(Formerly FNCE 208) Analyzes financial problems corporations face that result from operating in an international environment. Major topics include managing exchange risk through hedging and financing, measuring exchange rate exposure, calculating the cost of capital for foreign operations, assessment of sovereign risks, capital budgeting from a project and parent perspective, and international taxation.
Taught by: Karen Lewis
Also Offered As: FNCE 731
Prerequisite: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 232 International Banking
(Formerly FNCE 220) This course focuses on international financial institutions, especially the activities of global, systemically important banks. We will examine how current and historical events are reshaping the industry and highlight the basic analytics of managing a bank’s exposure to liquidity, credit, market and reputational risk. Most classes will begin with discussion of a current event related to course topics. Three team projects will be assigned that will give you deeper exposure to analytic techniques related to the course. Throughout the semester, we will discuss public policy issues facing the international financial system. In addition to course prerequisites, FNCE 101 is recommended.
Taught by: Professor Richard Herring
Course usually offered in spring term
Prerequisite: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 235 Fixed Income Securities
This course covers fixed income securities (including fixed income derivatives) and provides an introduction to the markets in which they are traded, as well as to the tools that are used to value these securities and to assess and manage their risk. Quantitative models play a key role in the valuation and risk management of these securities. As a result, although every effort will be made to introduce the various pricing models and techniques as intuitively as possible and the technical requirements are limited to basic calculus and statistics, the class is by its nature quantitative and will require a steady amount of work. In addition, some computer proficiency will be required for the assignments, although familiarity with a spreadsheet program (such as Microsoft Excel) will suffice. In addition to course prerequisites, FNCE 101 is recommended.
Taught by: Changes by Semester
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 101
Activity: Lecture
1.0 Course Unit

FNCE 237 Data Science for Finance
This course will introduce students to data science for financial applications using the Python programming language and its ecosystem of packages (e.g., Dask, Matplotlib, Numpy, Numba, Pandas, SciPy, Scikit-Learn, StatsModels). To do so, students will investigate a variety of empirical questions from different areas within finance including: FinTech, investment management, corporate finance, corporate governance, venture capital, private equity, and entrepreneurial finance. The course will highlight how big data and data analytics shape the way finance is practiced. Some programming experience is helpful though knowledge of Python is not assumed.
Taught by: Michael Roberts
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 102
Activity: Lecture
1.0 Course Unit

FNCE 238 Capital Markets
The objective of this course is to give you a broad understanding of the framework and evolution of U.S. capital markets, the instruments that are traded, the mechanisms that facilitate their trading and issuance, and the motivations of issuers and investors across different asset classes. The course will highlight the problems that capital market participants are seeking to solve, which you can use in your post-Wharton careers to evaluate future market innovations. We will consider design, issuance, and pricing of financial instruments, the arbitrage strategies which keep their prices in-line with one another, and the associated economic and financial stability issues. We will draw from events in the aftermath of the recent financial crisis, which illustrate financing innovations and associated risks, as well as policy responses that can change the nature of these markets. In addition to course prerequisites, FNCE 101 is recommended.
Taught by: Changes by semester
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit
FNCE 250 Venture Capital and the Finance of Innovation
This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the ‘venture capital method,’ comparables analysis, discounted cash flow analysis, contingent-claims analysis. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology.
Taught by: Luke Taylor
Course usually offered in fall term
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 251 The Finance of Buyouts and Acquisitions
The course focuses on financial tools, techniques, and best practices used in buyouts (financial buyers) and acquisitions (strategic buyers). While it will touch upon various strategic, organizational, and general management issues, the main lens for studying these transactions will be a financial one. It will explore how different buyers approach the process of finding, evaluating, and analyzing opportunities in the corporate-control market; how they structure deals and how deal structure affects both value creation and value division; how they add value after transaction completion; and how they realize their ultimate objectives (such as enhanced market position or a profitable exit). The course is divided into two broad modules. The first module covers mergers and acquisitions, and the second one studies buyouts by private equity partnerships.
During the spring semester this course cannot be taken pass/fail. FNCE 203 or FNCE 207 may be taken concurrently.
Taught by: Bilge Yilmaz
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 254 Impact Investing
This course explores Impact Investing, a discipline that seeks to generate social benefits as well as financial returns. From tiny beginnings, the Impact Investment space has expanded and now commands significant attention from policymakers, wealthy and public-spirited individuals, academia and, not least, the world’s largest asset managers and philanthropic foundations. Evangelists believe it may be the key to freeing the world from poverty. Skeptics think it will remain confined to the boutique. Regardless, Impact Investing is becoming a distinct career specialization for finance professionals despite the diverse skillset each must have and the uncertainty of the new field’s growth. FNCE 101, FNCE 205, and FNCE 238 are recommended but not required.
Taught by: Chris Geczy
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 256 Energy Finance
The objective of this course is to provide students with detailed knowledge of corporate structures, valuation methods, project finance, risk management practices, corporate governance issues, and geopolitical risks in the energy industry. In general, this course seeks to provide students with an overall context for understanding energy issues and risks, and how these might affect financing and investment decisions for both providers of energy and end-users of energy. FNCE 203 or FNCE 207 are recommended but not required.
Taught by: Professor Erik Gilje
Course usually offered in spring term
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 257 Foundations of Asset Pricing
This course will cover methods and topics that form the foundations of modern asset pricing. These include: investment decisions under uncertainty, mean-variance theory, capital market equilibrium, arbitrage pricing theory, state prices, dynamic programming, and risk-neutral valuation as applied to option prices and fixed-income securities. Upon completion of this course, students should acquire a clear understanding of the major principles concerning individuals’ portfolio decisions under uncertainty and the valuations of financial securities. In addition one of the following is recommended FNCE 205; BEPP 250; MATH 360; STAT 433
Taught by: Jessica Wachter
Course usually offered in spring term
Also Offered As: FNCE 757
Prerequisite: FNCE 100 AND FNCE 101 AND MATH 114 AND MATH 312 AND STAT 430
Activity: Lecture
1.0 Course Unit

FNCE 283 Strategic Equity Finance
This course combines lectures and cases, and will go through actual situations where companies need to make strategic decisions on raising equity capital. We will address different phases of a company’s life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues such as investor activism, governance and regulatory and valuation impact. FNCE 283 is a half semester course. FNCE 238 is recommended but not required.
Taught by: Professor David Musto and Professor David Erickson
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
0.5 Course Units
FNCE 291 Corporate Restructuring
This course will explore the highly active and sophisticated deal making environment that is the hallmark of modern distress corporate restructuring. The course is primarily comprised of two key components. The first is groundwork-laying lectures by three of the top practitioners in the restructuring field. In particular, the lectures will focus on fundamental rights and obligations of debtors, creditors, and other parties in interest in the various types of major chapter 11 cases, providing critical insight into understanding the motivations, strategies, and available tools for chapter 11 participants (which also serve as the foundation for out-of-court deals). The course also will provide a valuation framework for distressed assets. The second element of the course is a series of case study panels. The professors survey the market trends from the previous year bring together key participants from recent deals, including the CEO or chairman of the company, the judge, the lead banker and lead lawyer, and the lead investors to give their insight and perspectives to the class. These panels will provide students real-world insights into the most current issues in the field.

Other Information: Application: send a short 30 second to 1 minute video to Kyle.Ferrier@Kirkland.com stating why you want to take this course. The deadline to submit the video is June 21, 2020.
Taught by: Professor Bilge Yilmaz will co-teach with James Spayregen, Edward Sassower, Stephen Hessler from the Kirkland Law Firm.
Also Offered As: FNCE 791, LAW 908
Prerequisite: FNCE 101 AND FNCE 203 AND FNCE 207
Activity: Lecture
1.0 Course Unit

FNCE 311 Infrastructure Investing
The world economy runs on the infrastructure which has been built over the past 10,000 years. Each year, this infrastructure requires updating and new additions, from roads and bridges (the original infrastructure), to railroads, airports (the more recent infrastructure), to telecommunications and solar and wind power installations (modern infrastructure). There is a vast amount of public (i.e., taxpayer money directed by government officials) and private (i.e., individuals’ money typically managed on their behalf and directed by private equity or banks into infrastructure investments). In this course, we will cover Infrastructure Financing and investing from various angles. We will provide descriptions of types of infrastructure, examine the financing needs of infrastructure projects, consider the historic role of government and non-government funding, and assess the changing needs of consumers and role of technology and the increasing demands posed by a globalizing economy. As private equity firms continue to build infrastructure funds, the need for, and role for, private money continues to evolve, so we will also examine infrastructure investing as an alternative asset class from the investors’ perspective. FNCE 203 or FNCE 207 are recommended but not required.
Taught by: Professor Kevin Kaiser
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 341 Distressed Investing and Value Creation
This course familiarizes students with financial, strategic and legal issues associated with the restructuring of financially distressed firms and investment in distressed securities. The objective is to give students the concepts and tools necessary to assess the often-complex situation facing a firm facing financial distress. The course will cover the various options available for distressed firms, such as out-of-court workouts, exchange offers, prepackaged and pre-negotiated bankruptcies, distressed asset sales, 363 auctions, and Chapter 11 reorganization. We will consider distressed debt as an asset class and develop techniques for investing in distressed securities. We will assess investment opportunities using the concepts of value investing, in which we distinguish the value of asset from price. Students will sharpen their conceptual knowledge of finance and valuation in order to properly estimate the value of a distressed firm, and its securities. We will also address the importance of value creation and how to manage for value creation to resolve distress, or avoid it in the first place. FNCE 203 or FNCE 207 are recommended but not required.
Taught by: Kevin Kaiser
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 384 Advanced Topics in Private Equity
This course will address a variety of applied topics in private equity (PE), with a focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course), and a primarily U.S-centric view that should be largely applicable in other markets. In addition, the course will focus on the transaction stage of PE investing i.e., the art of the deal and mostly leave aside deal sourcing, portfolio management and investor relations. The goal of this course is to educate students about the substance, process and mechanics of PE investing, through the lens of the investment professionals, counterparties and advisors that drive transactions to completion. Course topics will address the entire deal process, and will include the following: Commercial Diligence (incl. financial modeling); Debt Financing; Accounting Diligence; Sales & Purchase Agreements; Comps Analysis; and Other Advisory Work. Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently apply those learnings to a real-time mock deal, and preparing dealmaterials that mirror a real private equity transaction. The in-class lectures will cover both conceptual frameworks and real-world examples.
Taught by: Bilge Yilmaz and Burcu Esmer
Prerequisite: FNCE 100 AND FNCE 101 AND (FNCE 203 OR FNCE 251)
Activity: Lecture
1.0 Course Unit
FNCE 385 ASP - Fin-Tech
The course exposes students to this fast-growing and exciting intersection between finance (Fin) and technology (Tech) while emphasizing the role data and analytics play. The course is structured around three main FinTech areas: (i) Lending/Banking services, (ii) Clearing (iii) Trading. It provides specific coverage and examples of developments from (1) market-place lending, (2) blockchain and distributed ledgers, (3) quantitative trading and its use of non-standard inputs. In each of these areas, we start by analyzing the marketplace, the incumbents, and then proceed to analyze the impact of the most relevant technologies have on the business. The course is built around data/code examples, cases, guest lectures, and group projects. Student are thus expected to work in teams and demonstrate a high level of independent learning and initiative.
Taught by: Shimon Kogan
Also Offered As: FNCE 885
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
0.5 Course Units

FNCE 386 ASP - Hedge Funds
This course will cover critical aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the U.S. and abroad that are most relevant for hedge funds. It will also present the major hedge fund strategies, describe operation, control, administration, due diligence and valuation issues. Performance evaluation and investing in hedge funds from the investor's perspective will be discussed as will be issues of potential changes in regulation, risk management, and the use of leverage. The format of the course will mix lectures with presentations from industry participants, hedge fund managers, those who invest in hedge funds, those who advise them and provide services to them, and those who regulate them. Those who want to launch a hedge fund, join an existing one, invest in one, or provide services to one will want to register for this course.
Taught by: Professor Scott Richard
Course usually offered in fall term
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
0.5 Course Units

FNCE 393 Central Banks, Macroeconomic Policy and Financial Markets
Understanding and predicting central banking decision making and behavior is crucial for all market participants from asset managers and traders to private consumers. This course aims to provide the methods and knowledge on how central banks and governments think and implement policies to reach the goals of price and financial stability as well as support of growth and employment. The core of the course connects between the legal and actual goals that central banks follow and the related economic analysis on which these goals and policies are set. We explain the economic rationale for the policy prescriptions to reach the goals and how these policies are actually implemented by the Federal Reserve Bank (Fed) in the US, the European Central Bank (ECB), Bank of Israel (BOI) and some remarks on other countries. We use data, current events of the 2007-2018 period as the basis for discussion and assignments. All of these are aimed understanding how and why the Fed, the ECB and the BOI set their policies. For each we shall simulate in class current decisions based on assignment related to past policies and the theory presented in class. In addition to course prerequisites, FNCE 100 is recommended.
Taught by: Zvi Eckstein and Joao Gomes
Also Offered As: FNCE 893
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 102
Activity: Lecture
1.0 Course Unit

FNCE 395 Private Equity
The course will be a survey of the private equity asset class. Its objective is to provide an understanding of the concepts, agents, and institutions involved in the late stage corporate private equity market in the U.S. and abroad. It will examine the buyout market and the activities of buyout funds from the differing perspectives of private equity investors, private equity fund sponsors, and managers of the portfolio companies. The course will be taught almost entirely with cases. Distinguished Wharton alumni in the private equity industry will be our guest speakers for many of the cases based on transactions they concluded. PLEASE NOTE: While this course is primarily intended for graduate students, admission may be granted to a limited number of interested undergraduate students. Be aware that this course may be recorded for live or subsequent distribution, display, broadcast, or commercialization in any media, including video, audio, or electronic media. For additional information, see the course syllabus or contact the department. This is a Pass/Fail course and will not count towards your concentration.
Also Offered As: FNCE 895
Prerequisite: FNCE 101 AND FNCE 203 OR FNCE 251
Activity: Lecture
0.5 Course Units

FNCE 399 Supervised Study in Finance
Integrates the work of the various courses and familiarizes the student with the tools and techniques of research.
Prerequisite: FNCE 100 AND FNCE 101
Activity: Independent Study
1.0 Course Unit
FNCE 401 Advanced Topics in PE
This course will cover a variety of applied topics in private equity (PE) with a focus on growth and later-stage buyout transactions. It will have a primarily U.S.-centric view that is largely applicable to other markets. Venture capital is not explicitly addressed in this course. Course topics will address the entirety of the deal process and value creation in the post-acquisition period, and will include the following: - LBO modeling - Commercial due diligence (principles and execution) - Debt financing - Sale & purchase agreements (SPA) - Accounting diligence - Deal structuring - Operations & Value creation Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently applying those learnings to former transactions (these must be old enough that sharing material is no longer sensitive). The in-class lectures will cover conceptual frameworks, practical considerations and real-world case studies and examples. There will be four assignments in this course. The first three assignments will apply these learnings to the art of the deal through a real world lens. In the last assignment, students will develop a value creation plan for designated public companies 'TargetCo1' and 'TargetCo2'. Students are expected to actively engage in classroom discussions, challenging one another and the instructors about how to think through these issues in an ever-evolving investment world. In addition, throughout the course, students are expected to work as a team on the assignments.
Taught by: Bilge Yilmaz, Burcu Esmer
One-term course offered either term
Prerequisite: FNCE 101 AND FNCE 251 AND WH 101 AND WH 201 AND (WH 301 OR MGMT 301)
Activity: Lecture
1.0 Course Unit

FNCE 402 Shareholder Activism
The aim of the course is to provide an introduction to shareholder activism. The course makes use of lectures and case studies. The lectures expose the students to the institutional and empirical facts as well as approaches followed by leading shareholder activists. The case studies are designed to provide students an experience on identifying potential opportunity for value creation through active engagement. Assignments require students to develop/practice skills on fundamental analysis.
Taught by: Bilge Yilmaz
Prerequisite: FNCE 100 AND FNCE 101 AND WH 101 AND WH 201 AND (WH 301 OR MGMT 301)
Activity: Lecture
1.0 Course Unit

FNCE 403 Behavioral Finance
This course combines insights from behavioral economics and psychology to shed light on anomalous decisions by investors and possibly behavior of asset prices. Its content is designed to both complement and challenge the 'rational' investment paradigms developed in the early finance classes. It introduces students to much modern theoretical and empirical research showing this paradigm to be insufficient to describe various features of actual financial markets. The course structure involves early lectures, several cases, and a final project involving 'real life' examples and some modern research methods. In the capstone project students research and explore a specific behavioral bias or a profitable investment opportunity. Students will work in groups to simulate the behavior of, say, a portfolio management team looking for a new trading strategy; a consulting firm advising corporations on issues of financial management; or an entrepreneurial start-up developing a retail financial product. The main deliverable is in a form of a 'pitch' to potential clients to be delivered both in the form of a group presentation in class and a formal write-up to be submitted by the due date. Completion of FNCE 203 and FNCE 205 is recommended.
Taught by: Nikolai Roussanov
Course usually offered in spring term
Prerequisite: FNCE 100 AND FNCE 101 AND WH 101 AND WH 201 AND (WH 301 OR MGMT 301)
Activity: Lecture
1.0 Course Unit

FNCE 404 Financial Engineering
This course expands the key insights from the prior quantitative finance courses such as Derivatives and Fixed Income by using more advanced tools in statistics and applied mathematics. Its focus is on devising new and innovative financial products, often employing financial derivatives and related dynamic strategies, to address portfolio and risk-management problems. The course structure involves an introductory lectures and case discussions in the first half, and a capstone 'real life' group project where students will seek to address specific problems in finance faced by sell-side banks, and buy-side corporate clients or investment funds. Each project will focus on practical economic needs and standard activities of a specific client and/or bank and the use of derivatives and dynamic strategies to solve them. Programming skills and an exposure to numerical methods are an important part of the project in this course.
Taught by: Krishna Ramaswamy
Course offered summer, fall and spring terms
Prerequisite: FNCE 101 AND (FNCE 207 OR FNCE 235) AND WH 101 AND WH 201 AND (WH 301 OR MGMT 301)
Activity: Lecture
0.5 Course Units
FNCE 611 Corporate Finance
This course serves as an introduction to business finance (corporate financial management and investments) for both non-majors and majors preparing for upper-level course work. The primary objective is to provide the framework, concepts, and tools for analyzing financial decisions based on fundamental principles of modern financial theory. The approach is rigorous and analytical. Topics covered include discounted cash flow techniques; corporate capital budgeting and valuation; investment decisions under uncertainty; capital asset pricing; options; and market efficiency. The course will also analyze corporate financial policy, including capital structure, cost of capital, dividend policy, and related issues. Additional topics will differ according to individual instructors. Also Offered As: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 613 Macroeconomics and the Global Economic Environment
This course is required for all students except those who, having prior training in macroeconomics, money and banking, and stabilization policy at an intermediate or advanced level, can obtain a waiver by passing an examination. The purpose of the course is to train students to think systematically about the current state of the economy and macroeconomic policy, and to be able to evaluate the economic environment within which business and financial decisions are made. The course emphasizes the use of economic theory to understand the workings of financial markets and the operation and impact of government policies. We will study the determinants of the level of national income, employment, investment, interest rates, the supply of money, inflation, exchange rates, and the formulation and operation of stabilization policies.
Taught by: Professors Abel, Landvoigt
Also Offered As: FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 621 Corporate Finance (Half CU)
(Formerly FNCE 614) This half-semester course serves as an introduction to corporate investments for non-majors. The primary objective is to provide a framework, concepts, and tools for analyzing financial decisions based on fundamental principles of modern financial theory. Topics covered include discounted cash flow techniques, corporate capital budgeting and valuation, investment decisions under uncertainty, and capital asset pricing. The approach is rigorous and analytical but the course will not cover several topics included in the full semester Corporate Finance course, including: market efficiency, corporate financial policy (including capital structure, cost of capital, dividend policy, and related issues), and options.
Taught by: Varies by semester
Prerequisite: (ACCT 611 OR ACCT 612 OR ACCT 613) AND (MGEC 611 AND MGEC 612) AND (STAT 613 OR STAT 621)
Activity: Lecture
0.5 Course Units

FNCE 623 Macroeconomics and The Global Economic Environment (Half CU)
(Formerly FNCE 615) This half-semester course in Macroeconomics is intended for non-finance majors. The goal of this course is to provide the foundation needed to recognize and understand broad economic and financial movements in the global economy. Key topics include national income accounting, production and economic growth, employment, business cycles, monetary and fiscal policy, and international finance. By the end of this course, students will be able to evaluate and discuss the global economic environment in which business and financial decisions are made.
Taught by: Varies by semester
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 717 Financial Derivatives
This course covers one of the most exciting yet fundamental areas in finance: derivative securities. Financial derivatives can be the most challenging and exotic securities traded by institutional specialists, while at the same time, they can also be the basic securities commonly traded by retail investors such as S&P Index Options. Beyond trading, the basic ideas of financial derivatives serve as building blocks to understand a much broader class of financial problems, such as complex asset portfolios, strategic corporate decisions, and stages in venture capital investing. The main objective of this course is to help students gain the intuition and skills on (1) pricing and hedging of derivative securities, and (2) using derivatives for investment and risk management. In terms of methodologies, we apply the non-arbitrage principle and the law of one price to dynamic models through three different approaches: the binomial tree model, the Black-Scholes-Merton option pricing model, and the simulation-based risk neutral pricing approach. We discuss a wide range of applications, including the use of derivatives in asset management, the valuation of corporate securities such as stocks and corporate bonds with embedded options, interest rate derivatives, credit derivatives, as well as crude oil derivatives. In addition to theoretical discussions, we also emphasize practical considerations of implementing strategies using derivatives as tools, especially when no-arbitrage conditions do not hold. In addition to prerequisites, STAT 613 may be taken concurrently.
Taught by: Krishna Ramaswamy
One-term course offered either term
Also Offered As: FNCE 206
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 719 International Financial Markets
This course covers topics on foreign exchange rates, international money markets, currency and interest rate derivatives (forwards, options, and swaps), international stock and bond portfolios, and cryptocurrencies. Students learn about the features of financial instruments and the motivations of market participants. The class focuses on risk management, investing, and arbitrage relations in these markets. In addition to prerequisites, FNCE 613 is recommended but not required.
Taught by: Urban Jermann
One-term course offered either term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit
Finance (FNCE)

FNCE 720 Investment Management
This course studies the concepts and evidence relevant to the management of investment portfolios. Topics include diversification, asset allocation, portfolio optimization, factor models, the relation between risk and return, trading, passive (e.g., index-fund) and active (e.g., hedge-fund, long-short) strategies, mutual funds, performance evaluation, long-horizon investing and simulation. The course deals very little with individual security valuation and discretionary investing (i.e., 'equity research' or 'stock picking').
Taught by: Professor Keim & Professor Stambaugh
One-term course offered either term
Prerequisite: FNCE 611 AND (STAT 613 OR STAT 621)
Activity: Lecture
1.0 Course Unit

FNCE 721 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. Lecture with discussion required.
Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong
One-term course offered either term
Also Offered As: REAL 721
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 725 Fixed Income Securities
This course covers fixed income securities (including fixed income derivatives) and provides an introduction to the markets in which they are traded, as well as to the tools that are used to value these securities and to assess and manage their risk. Quantitative models play a key role in the valuation and risk management of these securities. In addition to course prerequisites, FNCE 613 is recommended but not required.
Taught by: Professor Cuoco
Course usually offered in fall term
Prerequisite: FNCE 611 AND (STAT 613 OR STAT 621)
Activity: Lecture
1.0 Course Unit

FNCE 726 Advanced Corporate Finance
The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as an extension of FNCE 611. Some areas of financial management not covered in FNCE 611 are covered in FNCE 726. These may include leasing, mergers and acquisitions, corporate reorganizations, financial planning, and working capital management, and some other selected topics. Other areas that are covered in FNCE 611 are covered more in depth and more rigorously in FNCE 726. These include investment decision making under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and corporate liabilities, and dividend policy.
Taught by: Professor Gultekin
One-term course offered either term
Also Offered As: FNCE 203
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 728 Valuation
The focus of this course is on the valuation of companies. The course covers current conceptual and theoretical valuation frameworks and translates those frameworks into practical approaches for valuing companies. The relevant accounting topics and the appropriate finance theory are integrated to show how to implement the valuation frameworks discussed on a step-by-step basis. The course teaches how to develop the required information for valuing companies from financial statements and other information sources in a real-world setting. Topics covered in depth include discounted cash flow techniques and price multiples. In addition, the course covers other valuation techniques such as leveraged buyout analysis. In addition to prerequisites, ACCT 742 is recommended but not required.
Taught by: Professor Glode
One-term course offered either term
Prerequisite: FNCE 611 AND (ACCT 611 OR ACCT 613) AND (STAT 613 OR STAT 621)
Activity: Lecture
1.0 Course Unit

FNCE 730 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Taught by: Fernando Ferreira
Course usually offered in fall term
Also Offered As: BEPP 773, REAL 730
Activity: Lecture
1.0 Course Unit
FNCE 731 International Corporate Finance
This course analyzes financial problems corporations face that result from operating in an international environment. Major topics covered are corporate strategy and the decision to invest abroad, international portfolio diversification, managing exchange risk, taxation issues, cost of capital and financial structure in the multinational firm, and sources of financing.
Taught by: Professor Karen Lewis
Also Offered As: FNCE 208, FNCE 231
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 732 International Banking
This course focuses on international financial institutions, especially the activities of global, systemically important banks. We will examine how current and historical events are reshaping the industry and highlight the basic analytics of managing a bank's exposure to liquidity, credit, market and reputational risk. Most classes will begin with discussion of a current event related to course topics. Team projects will give deeper exposure to analytic techniques related to the course. Throughout the semester, we will discuss public policy issues facing the international financial system. In addition to prerequisites, FNCE 613 may be taken concurrently.
Taught by: Professor Richard Herring
Course usually offered in spring term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 737 Data Science for Finance
This course will introduce students to data science for financial applications using the Python programming language and its ecosystem of packages (e.g., Dask, Matplotlib, Numpy, Numba, Pandas, SciPy, Scikit-Learn, StatsModels). To do so, students will investigate a variety of empirical questions from different areas within finance by way of data labs, or case studies that rely on data and analytics. Some of the areas that may be covered in the course, subject to time constraints, include: FinTech, investment management, corporate finance, corporate governance, venture capital, private equity. The course will highlight how big data and data analytics shape the way finance is practiced. Some programming and experience is helpful though knowledge of Python is not assumed.
One-term course offered either term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 738 Capital Markets
The objective of this course is to give you a broad understanding of the instruments traded in modern financial markets, the mechanisms that facilitate their trading and issuance, as well as, the motivations of issuers and investors across different asset classes. The course will balance functional and institutional perspectives by highlighting the problems capital markets participants are seeking to solve, as well as, the existing assets and markets which have arisen to accomplish these goals. We will consider design, issuance, and pricing of financial instruments, the arbitrage strategies which keep their prices in-line with one another, and the associated economic and financial stability issues. The course is taught in lecture format, and illustrates key concepts by drawing on a collection of case studies and visits from industry experts. In addition to prerequisites, FNCE 613 may be taken concurrently.
Taught by: Professor David Musto and Professor Michael Schwert
One-term course offered either term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 750 Venture Capital and the Finance of Innovation
This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the 'venture capital method,' comparables analysis, discounted cash flow analysis, contingent-claims analysis. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology.
Taught by: Professor Taylor and Professor Catherine
Course usually offered in spring term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 751 The Finance of Buyouts and Acquisitions
The focus of this course is on buying (or acquiring controlling stakes in) firms. The main topics to be covered are mergers and friendly acquisitions, hostile takeovers and buyouts. Using case studies, the course surveys the drivers of success in the transactions. While issues regarding motive and strategy will be discussed, financial theory will be the main lens used to view these control acquiring transactions. This will allow students to (1) evaluate transactions through valuation approaches and (2) structure deals employing financial innovation as a response to legal framework and economic frictions. This course should be of interest to students interested in pursuing careers as private equity investors, advisors in investment banking and corporate managers that deal with these issues. This course assumes familiarity with valuation analysis. During the spring semester students are not permitted to take this course pass fail. In addition to prerequisites, FNCE 726 or 728 are recommended but not required.
Taught by: Professor Yilmaz
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit
FNCE 754 Impact Investing
This course explores Impact Investing, a discipline that seeks to generate social benefits as well as financial returns. From tiny beginnings, the Impact Investment space has expanded and now commands significant attention from policymakers, wealthy and public-spirited individuals, academia and, not least, the world's largest asset managers and philanthropic foundations. Evangelists believe it may be the key to freeing the world from poverty. Skeptics think it will remain confined to the boutique. Regardless, Impact Investing is becoming a distinct career specialization for finance professionals despite the diverse skillset each must have and the uncertainty of the new field's growth. In addition to prerequisites, FNCE 720 is recommended but not required.
Taught by: Christopher Geczy, Ph.D.
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 756 Energy Finance
The objective of this course is to provide students with detailed knowledge of corporate structures, valuation methods, project finance, risk management practices, corporate governance issues, and geopolitical risks in the energy industry. In general, this course seeks to provide students with an overall context for understanding energy issues and risks, and how these might affect financing and investment decisions for both providers of energy and end-users of energy. In addition to prerequisites, FNCE 726 and FNCE 728 are recommended but not required.
Taught by: Professor Erik Giljie
One-term course offered either term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 757 Foundations of Asset Pricing
This course will cover methods and topics that form the foundations of modern asset pricing. These include: investment decisions under uncertainty, mean-variance theory, capital market equilibrium, arbitrage pricing theory, state prices, dynamic programming, and risk-neutral valuation as applied to option prices and fixed-income securities. Upon completion of this course, students should acquire a clear understanding of the major principles concerning individuals' portfolio decisions under uncertainty and the valuations of financial securities. In addition one of the following is recommended FNCE 205; BEPP 250; MATH 360; STAT 433
Taught by: Jessica Wachter
Course usually offered in spring term
Also Offered As: FNCE 257
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 783 Strategic Equity Finance
This half-semester course combines lectures and cases, and will go through actual situation where companies need to make strategic decisions on raising equity capital. We will address different phases of a company's life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues such as investor activism, governance and regulatory and valuation impact.
Taught by: Professor David Musto and Professor David Erickson
Course usually offered in spring term
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 785 Business Strategy & Corp
This course explores strategic, business and legal decision making in a fluid real world corporate context. Classes will cover a series of timely financial and legal subjects as well as case studies that deal with topical problems in corporate governance, investment strategy, finance, private equity, executive compensation, and potential corporate and criminal behavior. Press, public market reaction, and governmental/political considerations will be integrated into the discussion. All students will be required to participate in one major and two minor team projects. An equal number of graduate law and business students will be enrolled in this class. The instructor, a 30 year veteran and partner at a major private equity firm, is also an attorney and CPA. No prerequisites.
Taught by: Perry Golkin
Also Offered As: LAW 542, LGST 785
Activity: Lecture
1.0 Course Unit

FNCE 791 Corporate Restructuring
This course will explore the highly active and sophisticated dealing environment that is the hallmark of modern distress corporate restructuring. The course is primarily comprised of two key components. The first is groundwork-laying lectures by three of the top practitioners in the restructuring field. In particular, the lectures will focus on fundamental rights and obligations of debtors, creditors, and other parties in interest in the various types of major chapter 11 cases, providing critical insight into understanding the motivations, strategies, and available tools for chapter 11 participants (which also serve as the foundation for out-of-court deals). The course also will provide a valuation framework for distressed assets. The second element of the course is a series of case study panels. The professors survey the market trends from the previous year bring together key participants from recent deals, including the CEO or chairman of the company, the judge, the lead banker and lead lawyer, and the lead investors to give their insight and perspectives to the class. These panels will provide students real-world insights into the most current issues in the field. By Video application only. send a short 30 second to 1 minute video why you want to take this course. The video must go to Kyle.Ferrier@Kirkland.com by 8-1-19
Also Offered As: FNCE 291, LAW 908
Activity: Lecture
1.0 Course Unit
FNCE 801 ASP - Advanced Topics in Private Equity
(Formerly FNCE 884) This course will address a variety of applied topics in private equity (PE), with a focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course), and a primarily U.S.-centric view that should be largely applicable in other markets. In addition, the course will focus on the transaction stage of PE investing i.e., the art of the deal and mostly leave aside deal sourcing, portfolio management and investor relations. The goal of this course is to educate students about the substance, process and mechanics of PE investing, through the lens of the investment professionals, counterparties and advisors that drive transactions to completion. Course topics will address the entire deal process, and will include the following: Commercial Diligence (incl. financial modeling); Debt Financing; Accounting Diligence; Sales & Purchase Agreements; Comps Analysis; and Other Advisory Work. Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently apply those learnings to a real-time mock deal, and preparing deal materials that mirror a real private equity transaction. The in-class lectures will cover both conceptual frameworks and real-world examples.
Taught by: Professor Bilge Yilmaz (yilmaz@wharton.upenn.edu) and Fellow David Bard
Prerequisite: FNCE 611 AND (FNCE 726 OR FNCE 751)
Activity: Lecture
1.0 Course Unit

FNCE 803 Behavioral Finance
(Formerly FNCE 739) There is an abundance of evidence suggesting that the standard economic paradigm - rational agents in an efficient market - does not adequately describe behavior in financial markets. In this course, we will survey the evidence and use psychology to guide alternative theories of financial markets. Along the way, we will address the standard argument that smart, profit-seeing agents can correct any distortions caused by irrational investors. Further, we will examine more closely the preferences and trading decisions of individual investors. We will argue that their systematic biases can aggregate into observed market inefficiencies. The second half of the course extends the analysis to corporate decision making. We then explore the evidence for the corporate world in the context of capital structure, investment, dividend, and merger decisions. In addition to prerequisites, FNCE 720 and FNCE 726 are recommended but not required.
Taught by: TBA
Course usually offered in spring term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 811 ASP - Infrastructure Investing
The world economy runs on the infrastructure which has been built over the past 10,000 years. Each year, this infrastructure requires updating and new additions, from roads and bridges (the original infrastructure), to railroads, airports (the more recent infrastructure), to telecommunications and solar and wind power installations (modern infrastructure). There is a vast amount of public (i.e., taxpayer money directed by government officials) and private (i.e., individuals' money typically managed on their behalf and directed by private equity or banks into infrastructure investments). In this course, we will cover Infrastructure Financing and investing from various angles. We will provide descriptions of types of infrastructure, examine the financing needs of infrastructure projects, consider the historic role of government and non-government funding, and assess the changing needs of consumers and role of technology and the increasing demands posed by a globalizing economy. As private equity firms continue to build infrastructure funds, the need for, and role for, private money continues to evolve, so we will also examine infrastructure investing as an alternative asset class from the investors’ perspective. FNCE 728 is recommended but not required.
Taught by: Professor Kevin Kaiser
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 812 The Finance, Economics and Law of Fiscal Crises
The focus will be on the causes of fiscal crises, a careful detailing of who wins and who loses, and then on how such crises might be resolved and, perhaps most importantly, how they might be prevented in the future. The course will draw upon the fiscal experiences of US local governments (New York, Philadelphia, Detroit, Orange County, Puerto Rico), utilities (WPPSS) and states (Illinois), and the international experience from such countries as Greece, Brazil, and Argentina. The costs of such crises for citizens, pensioners, and bond holders can be significant. We seek to understand the underlying economic, political, and legal/regulatory causes of such events so that they may be prevented in the future. The importance of private information and public regulation for disciplining the fiscal performance of democratically elected governments will be a central concern. We believe strongly that diagnosing and treating the ‘disease’ of fiscal mismanagement is an interdisciplinary endeavor drawing on finance, economics, political science, and the law. Students with backgrounds in any of these disciplines are welcome.
Taught by: Robert Inman & David Skeel
Also Offered As: LAW 609
Activity: Lecture
1.0 Course Unit
FNCE 841 ASP - Distressed Investing and Value Creation
