The Certificate in Nonprofit Administration offers current and aspiring nonprofit leaders a practical education to have an even greater impact on their organizations and communities. The certificate has an interdisciplinary curriculum covering the fundamental competencies of nonprofit management such as organizational leadership, governance, policy influence, program evaluation, financial management, marketing, and fundraising.

For more information: https://www.fels.upenn.edu/certificate/certificate-nonprofit-administration (https://www.fels.upenn.edu/certificate/certificate-nonprofit-administration/)

The Certificate in Nonprofit Administration requires 4 course units, including 2 course units of foundational courses and 2 course units of electives chosen from the list below.

Politics, Certificate

The Certificate in Politics is designed to provide students with the foundational knowledge and practical skills to effectively navigate complex and diverse political environments. Students who have completed this certificate have gone on to manage political campaigns, run for office, work at the intersection of the public and private sectors, and lead local, state, and federal government organizations.

Public Finance, Certificate

The Certificate in Public Finance allows students to learn how to promote economic growth at the community, organizational, and policy levels, while also gaining fundamental competencies of effective financial management needed to work in public finance. Elective coursework focuses on advancing equity and inclusion in development, and how to use data and analysis to make informed financial decisions.

Social, Cognitive, & Affective Neuroscience, Certificate

The Graduate Certificate in Social, Cognitive and Affective Neuroscience (SCAN) program enables graduate students and professionals preparing for a wide range of careers to work knowledgeably with neuroscience. Our program's aim is to supplement your education if you have expertise in areas other than neuroscience, enabling you to incorporate some of the concepts and methods of neuroscience into your work. The curriculum focuses on the aspects of neuroscience that have the most direct application to the understanding of human behavior, specifically social, cognitive and affective neuroscience.

For more information: https://neuroethics.upenn.edu(scan/)

Curriculum

Apply neuroscience to your field of interest

Penn's Graduate Certificate in Social, Cognitive and Affective Neuroscience (SCAN) is a four-course program that can be completed in one to two years. The required courses provide a strong grasp of neuroscience for non-neuroscientists, emphasizing those aspects of the field that are most relevant to understanding human behavior. The curriculum is composed of two foundational requirements and two electives.

Students meet individually with the program directors in September of their first year to discuss their goals and possible elective courses. To fulfill the requirements of the SCAN certificate, students are expected to earn a B or higher in every course.

</tr>
</tbody>
</table>

Elective Courses

The remaining two courses are intended to strengthen your mastery of specific areas of neuroscience and its relation to your fields of interest. Electives are organized into three categories, shown below. For these electives, students may take two Advanced Neuroscience courses or one course from any of these three categories: Advanced Neuroscience, Neuroscience & Society, Bridging. Approved electives for the upcoming semester can also be viewed below.

MKTG 854 Special Topics: Visual Marketing

Other program requirements and opportunities

Students meet individually with the program directors in September of their first year to discuss their goals and possible elective courses. To fulfill the requirements of the SCAN certificate, students are expected to earn a B or higher in every course. In addition to the four courses, it is a requirement to attend the annual half-day retreat (https://neuroethics.upenn.edu/scan/retreat/) while enrolled in the program.

The SCAN program makes study space available near the required course classrooms, with textbooks on reserve. Students may propose local neuroscientists as SCAN-sponsored lunch guests for informal conversation in this same area.

Prerequisites

There are no course prerequisites required to apply to the SCAN program. However, some of the elective courses that can be taken to fulfill the SCAN course sequence do have prerequisites. Some requirements are waived for SCAN students via a permit issued by the Department of Psychology. All permits for SCAN students are submitted at the end of the application period. At that time, you receive notification that you can register for the course.

Please e-mail us (penn-scan@sas.upenn.edu) if you have any questions about prerequisites and course registration.

School of Dental Medicine

The mission of the School of Dental Medicine is to educate predoctoral and graduate dental students in the highest quality clinical and research environment.

The school's core values are consistent with the Penn Compact 2020:

• Inclusion: We value diversity and respect for all
• Innovation: We expand knowledge through cutting edge research; We use the latest technology and evidence based practices in teaching and clinical care
• Impact: We provide high quality comprehensive dental care in all clinics; We make a difference in educational, research and clinical outreach initiatives locally and globally

The School of Dental Medicine advances oral health by educating clinical dentists and fostering leaders in research, education, clinical care and service both locally and globally. Faculty and students strive toward
eminence by increasing access to oral health care and professional education, integrating knowledge across disciplines, and engaging with our local, national, and global communities by continued innovation and research.

The School of Dental Medicine excels in discovering new knowledge in fundamental biology and dental medicine and disseminates this knowledge through discovery-oriented methodologies enhanced by the latest technologies. The School excels in instruction, research, and patient care in dental medicine and inspires, demands, and thrives on the need to continuously improve the quality of programs, produce future leaders, and be the best in all of its pursuits.

The School of Dental Medicine's activities in research, teaching, and clinical care promote lifelong learning relevant to a dynamic society and a rapidly expanding, multidisciplinary body of knowledge. The School of Dental Medicine is committed to share this knowledge through a comprehensive range of service activities with the local, national and global communities.

The School of Dental Medicine community values the diversity of its constituents and supports free expression, reasoned discourse, and diversity in ideas. The School of Dental Medicine fosters the growth of humane values and the highest ethical standards among students, faculty, and staff, and values its professional and community affiliations throughout the world.

For more information: https://www.dental.upenn.edu/about-us/mission-statement-vision/

History

The School of Dental Medicine is among the oldest university-affiliated dental institutions in the nation. Its historic ties trace back to the Philadelphia College of Dental Surgery, established in 1852. In 1856, the faculty of the Philadelphia College of Dental Surgery formed the Pennsylvania College of Dental Surgery when the former closed, and in 1878, the Pennsylvania College of Dental Surgery Dean, Dr. Charles J. Essig, was asked to join the University of Pennsylvania, founding the School of Dental Medicine as the Dental Department of the University of Pennsylvania. He would serve as the School's first Dean from 1878-1883. The Pennsylvania College of Dental Surgery would eventually merge with the University of Pennsylvania in 1909. The School's first facilities were housed in Medical Hall (now Claudia Cohen Hall). The following year it moved into its own building, Dental Hall, which was designed and constructed for its particular needs.

In 1897, Thomas W. Evans, a Philadelphia native, who became the dentist to the courts of Europe during France's Second Empire and confidant of Napoleon III, left his estate to create and maintain a dental school that would be "second to none." Evans' generosity made possible the construction of the Evans Building (officially called the Thomas W. Evans Museum and Dental Institute) which opened in 1915, the best-equipped dental building in the nation at that time. His boldness and spirit of leadership have continued to guide the School throughout its history of expansion and innovation both in curriculum and in clinical and scientific facilities.

Throughout its history, Penn Dental Medicine has grown in size and has consistently been at the forefront of dramatic changes that have characterized the profession of dentistry during that time. Nevertheless, Penn Dental Medicine has remained faithful to its original mission: "to prepare students for qualification for dental practice, to provide graduate training for qualified practitioners and to create the opportunity and facilities for scientific research in dentistry."

Since its founding, the dental education program has maintained its leadership role in dental education and research by preparing distinguished graduates capable of functioning in the many roles the profession demands: scientist, diagnostician, clinician, artist, engineer, teacher, and business manager. The School is committed to offering an education that advances both the art and science of dentistry, and prepares its students for leadership in the profession.

For more information: https://www.dental.upenn.edu/about-us/history/

Research

The School of Dental Medicine has a rich history as a research intensive institution and continues to be an international leader in the generation of new knowledge and treatment modalities to improve oral health.

As members of one of the world's leading biomedical research communities, faculty from Penn Dental Medicine actively pursue interdisciplinary collaborations to advance the practice of dentistry. The University of Pennsylvania has top-ranked Schools in each of the health professions—Dental Medicine, Medicine, Nursing and Veterinary Medicine—located on a single, contiguous campus, as well as renowned Departments in Materials Sciences and Bioengineering (School of Engineering) and the basic sciences (School of Arts & Sciences). Interdisciplinary scholarship and translational research are hallmarks of the University and significantly enhance Penn Dental Medicine's research enterprise.

Penn Dental Medicine places a high priority on research as it is a central component of excellence in instruction and patient care. With its own basic science faculty (unusual among dental schools nationwide), the School's research enterprise is broad and encompasses many areas of contemporary biomedical investigation with emphasis on both basic and clinical scientific research.

Research within the School focuses on the structures and functions of tissues and fluids and microbial flora in the oral cavity. Investigations range from oral microbiology and virology, inflammation and immunity, tooth development, mucosal disease, salivary gland disease, orofacial pain and the use of analgesics and sedatives, to the cellular biology of connective tissues and bone, the application of state-of-the-art dental materials, the causes and effects of periodontal disease, the oral delivery of protein drugs, and the relationship between mesenchymal stem cells and orofacial diseases at the molecule and cellular levels. Collectively, Penn Dental Medicine's research enterprise spans scientific disciplines to translate new knowledge into clinical therapies that expand our understanding of oral diseases and advance patient care.

For more information: https://www.dental.upenn.edu/research/research-overview/

Diversity & Inclusion

The School of Dental Medicine welcomes students and faculty from very diverse backgrounds and from all over the world. Diversity is one of our core values, and as such, it is our mission to ensure that our students learn in an environment that respects diverse traditions and experiences. Our goal is to provide a welcoming and supportive community that allows our faculty, students, and staff to achieve. Our commitment to diversity is reflected in the Penn Dental Medicine Statement on Diversity (https://www.dental.upenn.edu/student-life/diversity-and-

- The Office of Diversity and Inclusion (https://www.dental.upenn.edu/student-life/diversity-and-inclusion/office-of-diversity-and-inclusion/) oversees student support and mentorship programs and recruitment and retention initiatives that help to build diversity within Penn Dental Medicine’s academic community and foster a culture of inclusion, mutual trust, and respect.
- The Office of Faculty Advancement and Diversity (https://www.dental.upenn.edu/admissions-academics/office-of-faculty-advancement-and-diversity/) supports faculty development, recommends proactive strategies for increasing faculty diversity, and offers programs that enhance the climate and quality of academic life.
- Engaging in local and global communities is at the heart of the vibrant diversity that defines the Penn campus and is an integral part of the curriculum as well. Through the School’s Division of Community Oral Health (https://www.dental.upenn.edu/departments/division-of-community-oral-health/), students and faculty provide much-needed oral health services to the community, while connecting with diverse segments of the public and coming to understand the impact of social, cultural, and economic forces on oral health care. These academically based service-learning programs (https://www.dental.upenn.edu/admissions-academics/dmd-program/community-outreach-service-learning/) provide students and faculty with the framework to complete community-based activities as an essential, required component of the curriculum. And through international externships, students expand their perspective of dental education and oral health care delivery in different cultures throughout the world.
- The Penn Dental Medicine student body includes students from throughout the country and around world – see class profiles (https://www.dental.upenn.edu/student-life/profiles/) of recent DMD classes and the many countries of origin among the foreign-trained dentists in our Program for Advanced Standing Students (PASS).

For more information: https://www.dental.upenn.edu/student-life/diversity-and-inclusion/

Community Outreach

Being engaged in the surrounding community and striving to make it a better place is a key piece of Penn’s mission and educational goals. Through the School’s varied outreach and service-learning programs, Penn Dental Medicine students provide much-needed oral health services to the community, while broadening their understanding of public health issues. These academically based service-learning programs provide students and faculty with the framework to complete community-based activities as an essential, required component of academic course work. In total, students log approximately 16,000 service hours each year in both required and elective community experiences and the honors program.

This integral part of the curriculum takes students outside of the School’s clinics and campus to connect with diverse segments of the public and come to understand the impact of social, cultural, and economic forces on oral health care. The service learning programs are also an innovative and sustainable model for increasing access to care within the community and provides dental students and faculty with multiple opportunities to work with community partners in existing service programs where oral health education and services can be readily implemented. The required nature of students’ activities ensures that all students receive a consistent level of mentored community activities, and provides a consistent presence in oral health programs organized with agency partners in the community.

For more information: https://www.dental.upenn.edu/admissions-academics/dmd-program/community-outreach-service-learning/

Doctor of Dental Medicine, DMD

The four-year DMD program and curriculum at Penn Dental Medicine not only reflects a strong commitment to developing knowledge and skills in both oral science and oral health care, but also offers the flexibility for students to tailor their education to their interests. As one of 12 schools within the larger urban campus of the University of Pennsylvania, Penn Dental Medicine is uniquely positioned to provide a depth of opportunities for interdisciplinary study across other professional disciplines. Here, students find an education that builds excellence in dental medicine by encouraging individual interests and strengths to flourish and grow.

For more information: https://www.dental.upenn.edu/academic_programs_admissions/dmd_program.html

Curriculum

First Year

The first year of the curriculum introduces students to the concepts of human biology as they pertain to medicine in general and to dental medicine in particular. The curriculum reflects an emphasis on integration of scientific information by grouping courses into integrative course streams rather than discipline specific courses. This includes studies relating to the principles of oral disease prevention, patient management, and physical examination. A major segment of the curriculum focuses on the structure and function of oral tissues and contiguous structures. During this time, students will also begin an integrated preclinical course in restorative dentistry combining several disciplines (e.g., dental anatomy and occlusion, operative dentistry and dental materials), including extensive use of the School’s Virtual Reality Laboratory. Clinical
experiences begin upon entry into the DMD program and increase with each succeeding year. In the first year, students begin clinical rotations in oral medicine, periodontics, health promotion, radiology, and hospital dentistry. Additionally, students will assist upperclassmen on the clinic floor as part of the DRAUT first year course.

**Second Year**

The second-year curriculum is applied to understanding the pathology of the oral cavity and the principles of diagnosis and treatment. The curriculum includes fundamental courses in pathology (an integration of general and oral pathology), pharmacology, and principles of medicine. The preclinical restorative dentistry course is a continuation of the program offered in the first year and focuses on prosthetic therapy; it also includes additional rotations in the Virtual Reality Laboratory. Other didactic, laboratory, and clinical experiences are initiated in anesthesia and pain control, community health, endodontics, orthodontics, and periodontics. A course entitled "Introduction to Clinical Dentistry" is offered in the second year; the purpose is to facilitate the transition from the classroom to the clinic by allowing students to observe and practice the provision of services in various clinical departments. Beginning in October, afternoons are set aside for courses in the Selectives Program.

**Third Year**

Students begin to function as dental practitioners during their third year. Didactic courses provide a deeper and more sophisticated foundation of knowledge in the clinical disciplines. However, the bulk of the third year is spent providing general patient care in a variety of settings. This includes assignments to Primary Care Units in the general clinic and rotations in various specialty clinics. In addition, students provide patient screenings and education in community-based dental health programs at schools, health fairs, geriatric centers, and homes for disabled persons. Third-year students also participate in the Selectives Program.

Fourth Year

The fourth-year curriculum continues to expand the intellectual and clinical experiences of students, including a two-week hospital externship. Students continue to attend PCU clinical seminars in which they present clinical cases where the integration of knowledge, skills, and values is emphasized. Coursework is designed to augment the basic knowledge in the first three years. By graduation, students will have demonstrated the competence, confidence, and maturity to qualify as safe, beginning independent general dental practitioners.

Selectives

The Penn Dental Medicine's Selectives Program enhances the predoctoral curriculum by allowing students to individualize their education to reflect their own professional interests. Selectives are offered from October to June each year, and includes didactic, clinical, community dental health service, and research opportunities. Many Selectives occur in small group seminars or individualized settings that promote close student-faculty interactions.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Doctor of Science in Dentistry, DScD

The highly respected research environment at the School of Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to the School's graduate dental education programs to combine their specialty training with advanced research and academic opportunities through a Doctor of Science in Dentistry (DScD) degree. The DScD will prepare students to successfully enter the field of academic dentistry for careers as clinical or basic science researchers.

The program combines the research and clinical strengths of the School, drawing faculty mentors from throughout the clinical and basic science departments. With the goal of providing the opportunity to pursue research across disciplines, students also have the option to work with researchers from the School of Dental Medicine, School of Engineering and Applied Sciences, School of Medicine, and School of Nursing (https://www.nursing.upenn.edu/), and School of Veterinary Medicine (https://www.vet.upenn.edu/) of the University of Pennsylvania. Both rigorous clinical and research experiences are central to the DScD program and students devote from 40% to 80% of their time in each year of the program to research; clinical training also occurs in each year of the program to ensure maintenance of clinical skills throughout.

The DScD program is open to students with a DMD/DDS degree or equivalent who are pursuing advanced training in the School's Periodontics (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/periodontic-program/), Endodontics (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/endodontic-program/), Orthodontics (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/orthodontic-program/), Periodontics/Prosthesis (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/periodontal-prothesis-program/), or Oral Medicine (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/oral-medicine-program/) postgraduate programs. Candidates concurrently complete their clinical specialty training and DScD degree, engaging in an intensive research program that culminates in a thesis and oral defense. The program is also open to individuals who have completed their clinical specialty training, but are interested in obtaining a DScD degree; students in this track complete all of the didactic courses and research requirements but do not directly participate in clinical care. Those interested in applying to the DScD program should indicate so on their application to a clinical specialty program. If the applicant already has a certificate in a clinical specialty, he or she can apply directly to the DScD program.

For more information: https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/doctor-of-science-in-dentistry/

Curriculum

DScD with Postgraduate Certificate Program

The Doctor of Science in Dentistry (DScD) program is tailored to meet CODA requirements for each clinical specialty. For Endodontics (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/endodontic_residency_program/), Orthodontics (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/orthodontic_residency_program/), Oral Medicine (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/oral_medicine_residency_program/), and Pediatric Dentistry (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/pediatric_dentistry_residency_program/) postgraduate programs it is 5 years, for Periodontics (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/periodontic_residency_program/) 5.5 years and for Periodontic/Prosthesis (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/periodontal-prothesis-program/) 6 years. Clinical, didactic, and research aspects of the program are integrated so that in all years students experience both clinical and research training. In years one and two, there is greater focus on clinical training, while in later years there is greater focus on research training with clinical activities continuing in all years. All courses taken as part of clinical training are credited toward the DScD degree. In addition, three didactic courses from Penn's Biomedical Graduate Studies program
related to the research topic are required and typically taken in years two through four. Each student will write a K08 or K23 grant award; the application becomes the basis of a qualifying exam for the program. Only US citizens/green card holders will actually submit their K08 or K23 proposal to the NIH. This represents important training in grant writing as well as training in writing a scientific paper for publication, both of which are important aspects of academic success. NOTE: Acceptance into the specialty certificate program does not guarantee acceptance into the DScD program.

DScD without Postgraduate Certificate Program

Students who have completed clinical specialty training at an accredited institution are eligible to apply for the Doctor of Science in Dentistry (DScD) program without certificate. This program is 4 years in length. Students in this program are associated with a clinical specialty and will take all didactic courses in the specialty as well as a dissertation project but will not receive clinical training. In addition, the student will take three didactic courses from Penn’s Biomedical Graduate Studies program related to the research topic, typically taken in years 2-4. The didactic, research and dissertation components for this program are the same as those for the combined DScD/Certificate program.

General Requirements

All DScD students must complete the Core Graduate Dental Education courses, as well as three didactic courses from Biomedical Graduate Studies and a dissertation. Additional requirements depend on the track and clinical specialty.

Program for Advanced Standing Students, DMD

The Program for Advanced Standing Students (PASS) is designed for graduates of foreign dental schools who want to practice dentistry in the United States. Most states require a degree from a dental school accredited by the American Dental Association (ADA) before granting licensure. To prepare non-U.S. trained dentists, Penn Dental Medicine offers a two-and-a-half year program which leads to a DMD degree. Successful completion of the program allows foreign-trained dentists to take licensing exams in any state. PASS students are expected to successfully complete all competencies required in the 4-year program.

For more information: https://www.dental.upenn.edu/admissions-academics/program-for-advanced-standing-students/

Curriculum

Upon matriculation in January, PASS students will join the second year DMD class by participating in all ongoing preclinical and laboratory courses. PASS students will NOT be required to take any second year basic science courses but instead will participate in an additional, specially designed preclinical laboratory/seminar program.

Third- and Fourth-Year Dental Curriculum

Following the successful completion of the second year, students will be fully integrated into the class where they take part in all academic and clinical experiences in the third and fourth years of dental school. This includes participation in externships abroad or in the U.S. and the Selectives course offerings to customize a student’s educational experience. No special or separate teaching is conducted for the PASS program students. Please refer to the DMD curriculum for a complete description of the third- and fourth-year curriculum. Students participate in a modern health care delivery system which simulates general practice. In addition, they rotate through the specialty departments and work under the preceptorship of master clinicians.

Third Year

Students begin to function as dental practitioners during their third year. Didactic courses provide a deeper and more sophisticated foundation of knowledge in the clinical disciplines. However, the bulk of the third year is spent providing general patient care in a variety of settings. This includes assignments to Primary Care Units in the general clinic and rotations in various specialty clinics. In addition, students provide patient screenings and education in community-based dental health programs at schools, health fairs, geriatric centers, and homes for disabled persons. Third-year students also participate in the Selectives Program.

Endodontics, Certificate

The University of Pennsylvania School of Dental Medicine has the unique honor of being the birthplace of modern Endodontics with Dr. Louis Grossman, the father of modern Endodontics, having established the Penn Dental Medicine Endodontic program.

The Endodontic program is designed to provide postgraduate students with advanced training in Endodontics, and upon its successful completion, students are eligible for the specialty Board of Endodontics. The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to residency programs to combine their specialty training with advanced research and academic opportunities.

In addition to the core basic science courses required for all postgraduate students, the Endodontic Department arranges further basic science courses related to the specialty. Clinical seminars, planned reading seminars, and an extensive guest lecture series are also part of the educational experience.

Additional Program Options

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrent with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine's basic and clinical sciences and across the University.

Curriculum

Program Timelines

- Academic Track
  - MSOB and Certificate: 3 years
  - DScD and Certificate: 5 years
- Clinical Certificate Track
  - Certificate only: 2 years

Additional MSOB Course Requirements

For more information: https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/masters_of_science_in_oral_biology

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Master of Science in Oral Biology

The School of Dental Medicine also offers a Master of Science in Oral Biology (MSOB). Enrollment in the MSOB program is limited to individuals concurrently registered in one of the postgraduate specialty training (certificate) programs. Candidates receive the MSOB degree after completion of both their specialty training and the Master’s curriculum, which consists of didactic, seminar, and research practicum courses. The MSOB program is comprised of two tracks designed for outstanding students who are interested in either integrating research or structured evidence-based learning into their post-graduate education.

Depending on the track selected, research activities or a systematic literature review form the core of the MSOB program. Students are expected to participate in a clinical or basic science research project of sufficient scope and intensity or a formally structured and critically evaluated literature review focused on an important oral health-related research or clinical question. A thesis composed of an in-depth review of the relevant literature along with a manuscript reporting the results of the research or a systematic review is required for graduation for the research and evidence-based learning tracks respectively.

Oral and Maxillofacial Surgery, Certificate

The graduate program in Oral and Maxillofacial Surgery includes the awarding of a medical degree from the University of Pennsylvania School of Medicine, two years of general surgery, and 30 months of clinical rotations in oral and maxillofacial surgery. This dual-degree track is carefully designed to provide a comprehensive approach to both the medical school and residency components of the program. The program is accredited by the Commission on Dental Accreditation. Candidates who complete the program are eligible for examination by the American Board of Oral and Maxillofacial Surgeons.

The hallmark of Penn’s medical school is based on an innovative and highly acclaimed curriculum, which fuses basic and clinical sciences. This, coupled with core clinical clerkships, allows the oral and maxillofacial surgery resident to receive a medical education without compromise. The medical school rotations also meet mandatory residency requirements.

Candidates of the oral and maxillofacial surgery program are responsible for two and one-half years of medical school tuition. Rotations in Oral and Maxillofacial Surgery are scheduled at the following affiliated hospitals to provide an extremely broad and diverse clinical experience:

- The Hospital of the University of Pennsylvania
- Presbyterian Medical Center of Philadelphia
- Veterans Administration Hospital
- Children's Hospital of Philadelphia
- Pennsylvania Hospital
- University of Pennsylvania School of Dental Medicine

Program Timeline

Duration of program: 6 years

For more information: https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/oral_and_maxillofacial_surgery_residencymd_program
Curriculum

Program-Specific Curriculum: First Year
Oral and Maxillofacial Surgery (6 months)
Genetics, Epidemiology, Modules 2, 3, & 6 of Medical School Curriculum (6 months)

Program-Specific Curriculum: Second Year
Oral and Maxillofacial Surgery (2 months)
Modules 2, 3, 4, & 6 of Medical School Curriculum
Part I United States Medical Licensing Examination (USMLE)

Program-Specific Curriculum: Third Year
Oral and Maxillofacial Surgery (4 months)
Modules 4, 5, & 6 of Medical School Curriculum
Part II USMLE

Program-Specific Curriculum: Fourth Year
Oral and Maxillofacial Surgery (2 months)
General Surgery Internship – Hospital of the University of Pennsylvania (6 months)
Anesthesia (4 months)
Part III USMLE

Program-Specific Curriculum: Fifth Year
Oral and Maxillofacial Surgery (6 months)
General Surgery (6 months)

Program-Specific Curriculum: Sixth Year
Oral and Maxillofacial Surgery (12 months)

Seminars

• OMFS Lectures (weekly)
• Journal Club/Morbidity & Mortality Conference (monthly)
• Center for Human Appearance Conference (monthly)
• Oral Pathology (monthly)
• Multidisciplinary Trauma Conference
• Delaware Valley Society of Oral & Maxillofacial Surgery Seminar

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Oral Medicine, Certificate

The Oral Medicine Residency Program at Penn Dental Medicine began training qualified practitioners in the early 1960's, many of whom have gone on to become program directors at other institutions both in the United States and abroad, examiners on the Board of the American Academy of Oral Medicine, and internationally respected researchers and leaders in the field of Oral Medicine.

The objective of this program is to train a thoroughly qualified clinician and educator in the field of Oral Medicine. In addition to extensive clinical experience, there is a didactic curriculum that runs throughout the program. Opportunities for students to explore particular areas of interest in the field of Oral Medicine are encouraged.

Additional Program Options

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrent with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine's basic and clinical sciences and across the University.

GOMD 981	| Off-Service Clinical Rot	| 1.0

### Orthodontics and Periodontics, Certificate

The Orthodontics and Periodontics program features a Clinical Track and an Academic Track. Applicants to this joint program must be accepted by both the Periodontics and Orthodontic admissions committees.

#### Clinical Track

In this track, the first year provides a comprehensive background in periodontics through extensive literature reviews, seminars, and clinical practice. Selected periodontal cases are continued into the second year, which focuses on formal training in orthodontics, orthodontic preclinical laboratories, and the beginning of clinical training in several multi-band techniques. The third and fourth years consist primarily of orthodontic seminars, clinical practice of periodontics and orthodontics, and evaluation of post-treatment periodontal cases. Third- and fourth-year students also do limited teaching. Graduates in this program are fully certified and board eligible in both periodontics and orthodontics. The four-year track will develop skilled clinicians who will be able to practice and teach in a clinical setting.

**Duration of program: 48 months**

#### Academic Track

The five-year program is designed to prepare students for full-time academia as dental educators and highly trained clinicians in periodontics and orthodontics. This program is planned in cooperation with a research preceptor and leads to a Master of Science in Oral Biology. The five years are planned and balanced by the Departments of Periodontics and Orthodontics and the research preceptor, so students can undertake clinical research while also being trained as a clinician. The clinical portion of the program is similar to the four-year track. Students will also have courses in the Graduate School of Education and have teaching responsibilities the fourth and fifth years.

**Duration of program: 60 months**

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Orthodontics, Certificate

The postgraduate program in Orthodontics integrates basic science and clinical Orthodontics in a comprehensive curriculum, designed to develop clinically proficient specialists who possess a scholarly insight into Orthodontic theory as it relates to patient care. While the basic science courses build upon residents' predoctoral knowledge of oral biology and related areas, the major part of the program consists of clinical education and training.

Several popular corrective orthodontic regimens are taught, giving residents a thorough understanding of the respective merits of each treatment philosophy and the ability to apply them clinically. Since many corrective orthodontic problems involve adolescents, there is a strong emphasis on growth and development. Residents also gain experience in preventive and interceptive orthodontic care with preadolescents. The management of adult patients is also emphasized through courses such as TMJ therapy and orthognathic surgery. Other highlights of the program include:

- Experience in interdisciplinary care of patients requiring complex restorative dentistry or advanced periodontal therapy. A combined faculty from fixed prosthetics and orthodontics presents a one-year course in occlusion.
- Participation in monthly rotations at the Craniofacial Clinic at The Children's Hospital of Philadelphia (https://www.chop.edu/), exposing residents to craniofacial anomalies and treatment and the team approach involved in treating such conditions.
Additional Program Options

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrently with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine’s basic and clinical sciences and across the University.

Curriculum

Program Timeline

- Academic Track
  - MSOB and Certificate: 3 years
  - DScD and Certificate: 5 years
- Clinical Certificate Track
  - Certificate only: 26 months

Master of Science in Oral Biology

The School of Dental Medicine also offers a Master of Science in Oral Biology (MSOB). Enrollment in the MSOB program is limited to individuals concurrently registered in one of the postgraduate specialty training (certificate) programs. Candidates receive the MSOB degree after completion of both their specialty training and the Master’s curriculum, which consists of didactic, seminar, and research practicum courses. The MSOB program is comprised of two tracks designed for outstanding students who are interested in either integrating research or structured evidence-based learning into their post-graduate education.

Depending on the track selected, research activities or a systematic literature review form the core of the MSOB program. Students are expected to participate in a clinical or basic science research project of sufficient scope and intensity or a formally structured and critically evaluated literature review focused on an important oral health-related research or clinical question. A thesis composed of an in-depth review of the relevant literature along with a manuscript reporting the results of the research or a systematic review is required for graduation for the research and evidence-based learning tracks respectively.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Pedodontics, Certificate

The University of Pennsylvania School of Dental Medicine, in affiliation with The Children’s Hospital of Philadelphia, offers a two-year residency-
training program in Pediatric Dentistry. The goal of the program is to prepare Pediatric Dentists who are proficient in providing primary and comprehensive preventive and therapeutic care for infants and children through adolescence, including those with special needs.

Four students are accepted per year (candidates must be citizens of the United States or Canada). Students will receive extensive clinical and didactic training in Pediatric Dentistry including, but not limited to, comprehensive care of both healthy and special needs children and adolescents, restorative dentistry, pulp therapy, periodontal therapy, oral surgery, pharmacologic and non-pharmacologic behavior management techniques, space maintenance, orthodontic therapy, growth and development, treatment of patients under general anesthesia, treatment of patients in the operating room under general anesthesia, and management of traumatic injuries and emergency care.

Hospital rotations will include General Pediatrics, Anesthesiology, Oral and Maxillofacial Surgery, Craniofacial/Cleft Palate Clinic, Sedation, Oncology, Spina Bifida Clinic, General and Craniofacial Surgery, and Emergency Department. Hospital rotations will help students gain a deeper understanding of medical conditions and learn to work closely with medical colleagues and other members of the healthcare team. Students will have time designated for research and involvement in community activities. They will also teach at the University of Pennsylvania School of Dental Medicine Pediatric Dentistry Clinic.

Continuing education opportunities are encouraged. The program encourages development of critical thinking and inquiry in order to be able to participate in practice, education, and research in institutional, private, and public health settings; and to prepare students to grow into leadership roles in Pediatric Dentistry. The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to post-doctoral programs to combine their specialty training with advanced research and academic opportunities.

Additional Program Options
Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrently with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine's basic and clinical sciences and across the University.

A thesis composed of an in-depth review of the relevant literature along with a manuscript reporting the results of the research or a systematic review is required for graduation for the research and evidence-based learning tracks respectively.
Periodontics, Certificate

Approved by the American Dental Association, the Periodontics program is designed to provide postdoctoral students with advanced training in periodontics and implantology. Upon successful completion of the program, students are issued a certificate in periodontics and are qualified for examination by the American Board of Periodontology. In addition to the core basic science courses required for all graduate students, the department arranges further basic science courses related to periodontics.

Other features of the program include clinical seminars, planned reading seminars, interschool symposia, and an extensive guest lecture series. The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to post-doctoral programs to combine their specialty training with advanced research and academic opportunities.

Additional Program Options

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrent with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine’s basic and clinical sciences and across the University.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Perioprosthetic, Certificate**

This program is designed to provide postdoctoral students training in Fixed Prosthodontics, Esthetics, Advanced Implant Dentistry, and Periodontics. Upon successful completion of the program, the student will be issued certificates both in Periodontics and Periodontal Prosthesis. The focus is on the treatment of the advanced case to the highest esthetic and functional standards.

The basic science phase of the program is provided by the Division of Graduate Dental Education through a series of highly integrated core basic sciences. These courses are designed to expand the student’s knowledge of Oral Biology. Additional basic science courses specific to Restorative Dentistry are provided by the department. The emphasis of this program lies in developing specialists who have a scholarly approach to clinical problems. As the biologic foundation for all clinical dentistry, Periodontics comprises a substantial portion of the didactic program during the first two years. A major emphasis is placed on etiology, diagnosis, and treatment planning. In addition to completing all necessary requirements for certification in Periodontics, the student must complete a minimum of 10 advanced reconstructions.

Interdisciplinary training is the hallmark of this program with faculty representatives of the Departments of Endodontics, Periodontics, Maxillofacial Surgery and Restorative Dentistry, continually interacting both in the seminars and clinics. Literature seminars include Periodontics, Occlusion, Restorative, and Esthetic Dentistry. Each student is expected to write a paper on a clinical research activity and submit it for publication.

Courses specific to Prosthodontics are usually presented in seminar format. These include: material sciences, impression and 10 temporization techniques, biomechanics, CT scan technology and CAD/CAM based restorations, adjunctive orthodontics, occlusion, treatment planning, laboratory technology, practice management, articulators and facebows, porcelain laminates, resin-bonded restorations, and esthetics. A course in Implantology, including both the surgical and prosthetic phase, is presented to the students, as they are expected to perform both phases of treatment during their training program. There is ample interaction with laboratory technicians and students are required to perform various laboratory procedures during the completion of their cases. The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to post-doctoral programs to combine their specialty training with advanced research and academic opportunities.

**Additional Program Options**

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrently with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine’s basic and clinical sciences and across the University.

**Curriculum**

2020-21 Catalog | Generated 09/18/20
The School of Dental Medicine also offers a Master of Science in Oral Biology (MSOB). Enrollment in the MSOB program is limited to individuals concurrently registered in one of the postgraduate specialty training (certificate) programs. Candidates receive the MSOB degree after completion of both their specialty training and the Master's curriculum, which consists of didactic, seminar, and research practicum courses. The MSOB program is comprised of two tracks designed for outstanding students who are interested in either integrating research or structured evidence-based learning into their post-graduate education.

Depending on the track selected, research activities or a systematic literature review form the core of the MSOB program. Students are expected to participate in a clinical or basic science research project of sufficient scope and intensity or a formally structured and critically evaluated literature review focused on an important oral health-related research or clinical question. A thesis composed of an in-depth review of the relevant literature along with a manuscript reporting the results of the research or a systematic review is required for graduation for the research and evidence-based learning tracks respectively.

The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to residency programs to combine their specialty training with advanced research and academic opportunities. To that end, a Master of Science in Oral Biology degree will be earned concurrent with the specialty certificate, preparing students to successfully enter the field of academic dentistry, while also becoming skilled clinicians in specialty care. The curriculum is integrated so that both the certificate and the Master of Science degree will be awarded simultaneously upon the completion of requirements. Successful completion of the program will satisfy the formal training requirement for eligibility for the American Board of Prosthodontics certification examination.

### Program Timeline
- **Academic Track**
- **MSOB and Certificate: 3 years**

### Curriculum

#### Program Requirements for Certificate in Prosthodontics

The curriculum has been designed according to the accreditation standards which dictate that at least 60% of the educational experience must be devoted to patient contact and laboratory procedures and at least 30% to didactic instruction and research. Based on that, the program's curriculum consists of the follow components:

**Clinical**

Residents of the Advanced Specialty Education Program in Prosthodontics at the University of Pennsylvania School of Dental Medicine have the opportunity to see and treat patients with a variety of complex needs in state-of-the-art clinical faculties. The Program's clinical activities are held in three treatment centers/clinics:

- The Advanced Prosthodontics Clinical Center (APCC) inside Penn Dental Medicine on the third floor Robert Schattner Center – The APCC is the first prosthodontic clinic fully equipped with dental microscopes. Restorative and surgical procedures will be performed supervised by experienced prosthodontic faculty members.
- The Corporal Michael J. Crescenz Philadelphia VA Medical Center (http://www.philadelphia.va.gov/)
- The Hospital of the University of Pennsylvania (https://www.upennmedicine.org/penn-medicine-locations/hospital-of-the-university-of-pennsylvania/) (for the Maxillofacial rotation)

The goal of the off-site rotations is to maximize the learning clinical experience by exposing the residents to diverse clinical settings and patients’ pools.

Laboratory
The techniques will include fixed, removable, implant and digital prosthetics; occlusion; and CAD/CAM techniques. The Penn Dental Medicine CAD/CAM Center facilities and equipment will prepare the students/residents to experience the potentials of digital dentistry in prosthetics and become competent in digital laboratory workflow.

Teaching in predoctoral courses/clinic (as faculty or lecturer)
The goal of teaching in predoctoral courses is to give the student/resident experience in dental teaching at the undergraduate level. The objective of this experience is to provide exposure to the decision making process where the student/resident is the final authority rather than the student. An additional objective is to allow the student/resident to be exposed to standardized methods of teaching/learning and foster an interest in academics.

Research
The research component of the program is through the Master of Science in Oral Biology (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/masters_of_science_in_oral_biology/) program.

Didactic
The courses are presented by means of lecture, seminar, literature review, demonstration and laboratory. They are spread-out throughout the three-year long specialty program and they are part of the prosthetic certificate program, the master’s degree program, and the core curriculum for basic sciences.

Master of Science in Oral Biology
The School of Dental Medicine also offers a Master of Science in Oral Biology (MSOB). Enrollment in the MSOB program is limited to individuals concurrently registered in one of the postgraduate specialty training (certificate) programs. Candidates receive the MSOB degree after completion of both their specialty training and the Master’s curriculum, which consists of didactic, seminar, and research practicum courses. The MSOB program is comprised of two tracks designed for outstanding students who are interested in either integrating research or structured evidence-based learning into their post-graduate education.

Depending on the track selected, research activities or a systematic literature review form the core of the MSOB program. Students are expected to participate in a clinical or basic science research project of sufficient scope and intensity or a formally structured and critically evaluated literature review focused on an important oral health-related research or clinical question. A thesis composed of an in-depth review of the relevant literature along with a manuscript reporting the results of the research or a systematic review is required for graduation for the research and evidence-based learning tracks respectively.

Additional MSOB Course Requirements

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

School of Engineering and Applied Science
Penn’s School of Engineering is unlike any other. Traditionally untraditional. Pioneers in interdisciplinary education and research. Theory linked with real-world practice. The path for students who want to shape the future. With the pace of innovation and technological advancement accelerating ever faster, engineers hold the keys to the next generation’s routine wonders.

For more information, visit http://www.seas.upenn.edu/.
Mission and Philosophy

Penn Engineering seeks an optimal balance between the creation and integration of knowledge through scholarly research, entrepreneurship and innovation in translating the products of our research into practice, and the dissemination of knowledge to our students on the Penn campus and beyond. Accordingly, our mission has two facets:

- The creation, integration and dissemination of knowledge in both the fundamentals and their application in order to be an international center of engineering excellence and a catalyst for technological innovation; and
- The design and delivery of an engineering education known for its rigor, breadth and relevance to prepare students to become global leaders in technology-based fields.

The doctoral program is the hallmark of Penn Engineering's educational programs. Attracting, educating and mentoring outstanding doctoral students are priorities of the school. Penn Engineering doctoral graduates should be educated, trained and mentored for leadership positions, not only in academia, but also in industry and government. The education that we provide our doctoral candidates must embrace the challenges of the 21st century. The barriers to entry in the field of engineering is being lowered, and some technologies are becoming commoditized, even as new disruptive technologies are being developed. The gap between industry research and development and academic research is narrowing. It is important to strike the right balance between training in basic, curiosity-driven research while ensuring that our students are able to innovate and become leaders in today's quickly evolving disciplines.

Research

Our interdisciplinary research centers and institutes span across all departments in Penn Engineering and foster collaborations across different schools throughout the University. The physical connectivity of engineering buildings and the proximity to each of the other schools enables exciting collaborations with faculty, students and postdocs.

Research at Penn is constantly pushing back the frontiers of science and using innovative methods of thinking to approach problems and find solutions across many fields. If it hasn’t yet been solved, chances are someone at Penn Engineering is working to come up with the solution.

Programs

PhD Programs

- Bioengineering, PhD (p. 446)
- Chemical and Biomolecular Engineering, PhD (p. 447)
- Computer and Information Science, PhD (p. 448)
- Electrical and Systems Engineering, PhD (p. 449)
- Materials Science and Engineering, PhD (p. 449)
- Mechanical Engineering and Applied Mechanics, PhD (p. 450)
- Computer & Information Technology, MCIT (p. 455)
- Computer Graphics & Game Technology, MSE (p. 455)
- Data Science, MSE (p. 457)
- Electrical Engineering, MSE (p. 458)
- Embedded Systems, MSE (p. 459)
- Integrated Product Design, MIPD (p. 460)
- Integrated Product Design, MSE (p. 461)

- Scientific Computing, MSE (p. 467)
- Systems Engineering, MSE (p. 468)

Certificate Programs

- Integrated Product Design, Certificate (p. 469)

Bioengineering, PhD

The first doctorate degree in bioengineering in the nation was awarded at Penn in 1953, and since that time, Penn Bioengineering has been an integral academic program linking faculty from the engineering, medical, and arts and sciences schools on a single centrally-located campus. Penn Bioengineering provides students with a flexible curriculum and a world-class research environment. Students are given the opportunity to work in a collaborative culture that includes multiple generations of leaders in academia, government, and industry. The careful process of matching students with faculty based on their research interests begins with first-year lab rotations, which gives students an opportunity to begin their dissertation research in their first semester.

For more information: http://www.be.seas.upenn.edu/prospective-students/doctoral/index.php (http://www.be.seas.upenn.edu/prospective-students/doctoral/)

View the University’s Academic Requirements for PhD Degrees (p. 1939).

Required Courses

Students are required to take at least 9 graduate level courses and 2 seminars.

Biomedical Science

Select courses in cell biology and/or systems physiology. Courses chosen in consultation with advisor.

Bioengineering Fundamentals

Select three BE or Engineering courses devoted to analytical methods, modeling, experimental methods and data analysis which focus on the student concentration. Courses will be chosen in consultation with the advisor.

Research Discipline Electives

Select two courses chosen in consultation with advisor

Mathematics
Select two courses from the recommended list

Bioengineering Research Rotation

Bioengineering Seminar
Select a minimum of two BE 699 seminars, usually in the first year.

1 A list of courses that students have taken recently to fulfill this requirement (http://www.be.seas.upenn.edu/current-students/masters/documents/16BiologicalScienceCourses.pdf) can be found on the Bioengineering website.

2 Suggested courses include:
   • ENM 502 Numerical Methods and Modeling
   • ENM 510 Foundations of Engineering Mathematics - I
   • ENM 511 Foundations of Engineering Mathematics - II
   • BE 510 Biomechanics and Biotransport
   • Additional math course recommendations (http://www.be.seas.upenn.edu/current-students/masters/documents/16MathCourses.pdf) can be found on the Bioengineering website.

1 Selected in consultation with the research advisor.
2 Qualifications Evaluation will be completed during the Summer or Early Fall.
3 The Dissertation Proposal is required by the end of the Fall semester in the Third Year.

Chemical and Biomolecular Engineering, PhD

The Ph.D. in Chemical and Biomolecular Engineering is primarily a research-oriented degree for students showing exceptional promise for original contributions to the theory and practice of chemical and biomolecular engineering. The degree is a virtual requirement for those planning to teach chemical and biomolecular engineering, as well as for those planning on a research career. Doctoral candidates are expected to show superior capability for independent work and study.

For more information: http://www.cbe.seas.upenn.edu/prospective-students/doctoral/index.php (http://www.cbe.seas.upenn.edu/prospective-students/doctoral/)

View the University’s Academic Requirements for PhD Degrees (p. 1939).

Required Courses
Students are required to take a minimum of 10 graduate level courses, including the six required core courses.

### Core Courses

- Select four of the following:
  - CIS 500  Software Foundations
  - CIS 501  Computer Architecture
  - CIS 502  Analysis of Algorithms
  - CIS 505  Software Systems
  - CIS 511  Theory of Computation
  - CIS 520  Machine Learning

### Teaching Practicum

- CIS 895  Teaching Practicum
- CIS 895  Teaching Practicum

### Seminar Requirement

- Select four of the following: 1
  - CIS 610  Advanced Geometric Methods in Computer Science
  - CIS 620  Advanced Topics in Machine Learning
  - CIS 625  Theory of Machine Learning
  - CIS 630  Advanced Topics in Natural Language Processing
  - CIS 650  Advanced Topics in Databases
  - CIS 660  Advanced Topics in Computer Graphics and Animation
  - CIS 670  Advanced Topics in Programming Languages
  - CIS 673  Computer-Aided Verification
  - CIS 677  Advanced Topics in Algorithms and Complexity
  - CIS 680  Advanced Topics in Machine Perception
  - CIS 682  Friendly Logics
  - CIS 700  Special Topics
  - CIS 800  PhD Special Topics

### Independent Study

- Select 4 courses

### Research

- Select 2 required courses related to the Dissertation Research area plus 2 in an unrelated area

### Dissertation Status

- CIS 995  Dissertation

1 Two courses can be waived for students entering with a Master's degree. Advisor and Graduate Chair approval is required for non-CIS courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

---

Computer and Information Science, PhD

The Doctoral Program (Ph.D.) in Computer and Information Science (CIS) welcomes candidates with strong training in any of the disciplines related to modern information processing, with an emphasis on computer science and mathematics. Research and teaching form the essence of our doctoral program. Our curriculum is designed to develop the intellectual skills essential for the rapidly changing character of research and to meet the demands of academe and industry. Students develop their own advanced study focus, working with faculty mentors on topics ranging from the core computer science discipline to diverse scholarly interactions within the School of Engineering and the University.

For more information: [http://www.cis.upenn.edu/prospective-students/graduate/phd.php](http://www.cis.upenn.edu/prospective-students/graduate/phd.php)

View the University’s Academic Requirements for PhD Degrees (p. 1939).
Electrical and Systems Engineering, PhD

The ESE PhD program is designed to provide sufficient structure to help you build a strong foundation and to have sufficient flexibility to accommodate the direction of your creativity. You will collaborate closely with your faculty advisor on the direction of your research and develop skills needed to perform independent research and teaching in an exciting, intellectual environment. Current concentration areas are circuits and computer engineering, nanodevices and nanosystems, and information and decision systems. ESE research is focused on the development and application of systems theory to the design of physical, biological, and socio-technical artifacts that improve the human condition.

For more information: http://www.ese.upenn.edu/current-students/doctordegree/index.php

Course Requirements

ESE Doctoral students must complete a required series of 20 course units (CUs) of graduate-level courses and research units. A minimum of 10 CUs must be graduate level courses. The remaining 10 CUs are composed of Research Units (ESE 999 Thesis/Dissertation Research) and may include up to two Independent Study (ESE 899 Independent Study for PhD credit) units.

10 CUs of Coursework: these graduate level courses are organized by depth, breadth, critical thinking and elective categories.

The student must discuss with their advisor the courses that would best suit each of these categories for their specific PhD career at Penn. Course plans for ESE PhDs are very individualized and must be approved by their Faculty Advisor.

- Depth Requirement: At least five graduate-level courses in areas supporting the research of the Ph.D. student.
- Breadth Requirement: At least two graduate-level courses which are distinct from the major research area. The courses may be thematically linked in a 500-600 sequence or may represent two 500 level courses both distinct from the major research area. Independent Studies cannot be used in this category.
- Critical Thinking Requirement: At least two graduate-level courses satisfying formal analytical reasoning. Courses that satisfy this requirement include graduate courses in Mathematics, Engineering Mathematics, Statistics, or Discrete Mathematics and the following Physics courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS 516</td>
<td>Electromagnetic Phenomena</td>
<td>1</td>
</tr>
<tr>
<td>PHYS 518</td>
<td>Introduction to Condensed Matter Physics</td>
<td>1</td>
</tr>
<tr>
<td>PHYS 529</td>
<td>Modern Optics and Modern Optical Physics and Spectroscopy</td>
<td>2</td>
</tr>
<tr>
<td>PHYS 531</td>
<td>Quantum Mechanics I</td>
<td>1</td>
</tr>
<tr>
<td>PHYS 532</td>
<td>Quantum Mechanics II</td>
<td>1</td>
</tr>
</tbody>
</table>

Courses from other departments may be used provided they have a clear focus on mathematical reasoning and techniques and have been pre-approved. Independent studies cannot be used in this category.

- Electives: Any remaining courses approved by your faculty advisor may fulfill this category.
- 10 CUs of Research: Students may use up to two Independent Study units (ESE 899) to fulfill this requirement. Independent Study units are not required. Additional Research Units (999) may be taken in order to maintain a full-time status (see below). Students who have completed their course work will register for 3 CUs of Research Units per semester to maintain full time status.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Materials Science and Engineering, PhD

Materials science is a highly versatile discipline that enables innovations across a wide variety of technologies from cell phones to solar energy to bioimplants to airplanes. Applying insights from the basic sciences, this discipline designs new materials and fabrication methods to continually expand the scope and combination of mechanical, electrical, optical and transport properties available in materials. The newer fields of nanotechnology, biomaterials and quantum materials are providing materials scientists with an entirely new palette of molecular, organic, biological and inorganic building blocks to engineer materials with unique functionalities. The research and academic programs in the MSE Department and the broader MSE Graduate Group at Penn reflect these exciting new developments and our goal is to provide students enrolling in our program with a broad and multidisciplinary training so that they can be part of this materials revolution and contribute to solving the 21st century challenges.

For more information: http://www.mse.seas.upenn.edu/current-students/masters/doctoral-degree.php

View the University’s Academic Requirements for PhD Degrees (p. 1939).

Required Courses

Students are required to take at least 10 graduate level courses, including courses outside of their research area to gain a broader understanding of materials science and engineering. Doctoral students with a Master’s degree may transfer up to eight credits as course units to the Ph.D. program upon the approval of the Graduate Group Chair. However, a maximum of five transferred courses count toward the 10 courses required for the Ph.D. program.

1 At least one graduate course in MEAM beyond the core requirements is required to fulfill the Depth Requirement.

2 At least one graduate course outside MEAM that is related to the student’s research is required to fulfill the Breadth Requirement (not including ENM 520 Principles and Techniques of Applied Math I or ENM 521 Principles and Techniques of Applied Math II).

3 At least three additional graduate courses that are related to the student’s research are required to fulfill the Research Requirement.

In addition to the ten course units of graduate level work, students will complete:

- Responsible Conduct of Research in Engineering workshop in the first year (EAS 900 Responsible Conduct for Research in Engineering)
Bioengineering, MSE

The Bioengineering master's program provides an interdisciplinary education in scientific and engineering fundamentals, with an emphasis on new developments in the field of Bioengineering. The primary goal of the Penn Bioengineering master's program is to provide students with a customized curriculum designed to prepare them to function creatively and independently in industry, research and development, government or academia.

The master's degree program provides rigorous and advanced training in engineering with a focus on biological and medical sciences. The flexible curriculum allows students to select their own graduate coursework in math, biomedical sciences, bioengineering, and other science and engineering disciplines. The University of Pennsylvania has a 'one university' philosophy, and students may register for courses from any School in the University. Our students typically take courses in the Schools of Engineering, Arts and Sciences, and Medicine.

Bioengineering master's degree candidates select either the thesis or non-thesis degree track during their first year, in consultation with the Director of Master's Advising. Students typically complete their degree program in twelve to eighteen months.

The MSE in Bioengineering is a 'terminal degree;' meaning that students interested in pursuing a PhD must apply to the program through the PhD graduate admissions process.

For more information: [http://www.be.seas.upenn.edu/current-students/masters/degree-requirements.php](http://www.be.seas.upenn.edu/current-students/masters/degree-requirements.php)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Biotechnology, MBIOT

The Master of Biotechnology Program prepares students, both full- and part-time, for leadership in the critically important and dynamic industries of biotechnology and pharmaceuticals. Strongly interdisciplinary, this innovative professional master’s program draws its faculty and courses from the School of Arts and Sciences and the School of Engineering and Applied Science. Penn's world-class biomedical research centers, renowned science departments and position at the hub of the largest pharmaceutical/biotechnology corridor in the United States, place this program at the vanguard of biotechnology education. There are three parallel curriculum tracks: molecular biotechnology, pharmaceutical engineering biotechnology, and biomedical technologies. These tracks, in combination with core courses, insures that students get a uniquely broad exposure to the entire field of biotechnology and give students flexibility.
to tailor their degree to their background, interests, and current career or career goals.

For more information: http://biotech.seas.upenn.edu/

**Master’s Program Curriculum**

A minimum of 11.0 course units are required to obtain the Masters of Biotechnology degree.¹

The core courses represent 6 credit units and the track electives represent 5 credit units. Students must take at least 7 credit units—between the core and electives—within SEAS courses.

## Master's Degree Requirements

10 course units are required for the MSE in Chemical and Biomolecular Engineering.¹²
Focus areas include:

- Biotechnology and Pharma
- Catalysis, Energy, and Environment
- Computational Science and Simulation
- Process Control and Design
- Soft Matter

See Graduate Group Chair or Graduate Coordinator for suggested lists of elective courses in different focus areas.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Computer & Information Science, MSE

The CIS/ MSE program offers scholars the opportunity for advanced study in the scientific foundations of the rapidly growing field of computer science. Applicants to the MSE program should have strong undergraduate training in mathematics and computer science; prior coursework should include such areas as operating systems, programming languages, data structures, discrete mathematics, linear algebra, algorithms and theory; coursework should be similar to the courses taken by computer science undergraduates at the University of Pennsylvania.

Candidates who do not have an undergraduate major in computer science should consider applying to the Master of Computer and Information Technology program (MCIT). Dual degree/transfer information for current students can be accessed here. Submatriculation information for current students can be accessed here. CIS/MSE students can pursue many areas within their curriculum, including AI, databases, security, programming languages, etc. The CIS Graduate Program prepares our students to be tomorrow’s innovators, leaders, and visionaries. Our MSE graduates have obtained a wide range of positions in industry and continued in doctoral studies. Here’s a sample:

- Senior Programmer/Analyst, Computational Biology & Informatics Laboratory, University of Pennsylvania
- Software Development Engineer, Microsoft
- Researcher, Lincoln Laboratory, MIT
- Systems Engineer, Lockheed Martin
- Researcher, School of Medicine/Radiology, University of Pennsylvania
- Doctoral Student, Computer Information Science, University of Pennsylvania
- Doctoral Student, Computer Science, Brown University.
- Doctoral Student, Computer Science, University of Illinois, Urbana-Champaign

A more extensive list can be found here.

For more information: [http://www.cis.upenn.edu/prospective-students/graduate/mse.php](http://www.cis.upenn.edu/prospective-students/graduate/mse.php)
Curriculum

The MSE degree requires completion of ten course units that satisfies all of the following requirements:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CIS Courses</td>
<td>At least seven of the ten course units required for the degree must be CIS courses. These seven courses include four core courses and three CIS elective courses described below.</td>

<td>3</td>
</tr>
</tbody>
</table>

Advanced study in a specific area of computer science is encouraged. Besides coursework, students may pursue Independent Studies to increase their depth of knowledge in a specific area - a maximum of two independent study credits can be used as electives for the CIS/MSE degree. Students are also encouraged to submit a master's thesis (see below) which may count as two course units of Masters Student Thesis Research, CIS 597.

FORMS: Click here to access SEAS graduate forms, including the GraduatePetition for Action; click here to access CIS graduate forms.

Master's Thesis

A student wishing to complete a master's thesis may enroll in two course units of CIS 597/Masters Thesis Research, which count as electives towards the ten credits needed for the CIS/MSE degree. The student first chooses a thesis advisor, who must belong to the CIS Graduate Group, proposing a suitable thesis topic. The thesis advisor and student discuss and determine the topic, scope, etc. of the thesis. The advisor and student also determine one other faculty member to be a reader for the thesis. Once the advisor, reader, and topic have been chosen, the student should email Mike Felker (http://www.seas.upenn.edu/~mfelker/) who will provide a google doc master’s thesis approval form which can be shared with the thesis advisor, reader, and CIS/MSE Program Chair, Dr. Swapneel Sheth (swapneel@cis.upenn.edu). Information re: thesis formatting and submission of the thesis to the SEAS Research and Academic Services Office can be accessed here. (http://www.cis.upenn.edu/current-students/graduate/advising/graduation.php) A copy of the approved version of the thesis should be emailed to the CIS Master’s chair.

Cumulative GPA Requirement

A minimum GPA of 2.7 for master’s students must be maintained in order to be considered in good academic standing. If this minimum is not maintained, academic probation or dismissal from the program will be invoked. A 2.7 final GPA must be achieved to graduate in all situations. (Effective Fall 2007 class). Students are permitted to graduate with an F grade in a course; however, no grade lower than a C- will be counted towards the degree. In particular, a C- or better must be achieved in the core courses or they must be retaken.

Graduation Checklist for MSE Students

- Watch for email announcements regarding applying for graduation. Information on applying for a degree/graduation can be found here (http://www.cis.upenn.edu/current-students/graduate/advising/graduation.php).
- If needed, master’s thesis instructions should be obtained early on in the writing stage. You should make your advisor aware of the need for a timely reading and signature before graduation.
- Check that your academic record is cleared of Incompletes, No Grade Reported, and Unsatisfactory Progress. and that your GPA meets the requirements.
- Students who graduate in August or December may participate in the following May Commencement; a student graduating in August may participate in the May Commencement prior to graduation - contact Mike Felker (mfelker@cis.upenn.edu) for information.
- Make sure that your bursar’s bill is cleared before the end of the final semester.
- Students are allowed a maximum of seven years to complete the MSE degree program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Computer & Information Technology, MCIT

The Master of Computer and Information Technology (MCIT) program is a rigorous graduate-level program that gives talented students who have no prior experience in Computer Science an opportunity to embark on a highly successful career in computing and technology, often in coveted interdisciplinary roles or even in purely technical software development positions. The MCIT program stems from a belief that advanced computer science coursework for people with undergraduate degrees in other diverse fields leads to highly successful career paths. Our graduates and their careers today stand as strong proof to this philosophy. Within the realm of academia, pursuing further advanced study in computer science is also an option open to MCIT graduates. Due to the goals and nature of the MCIT program, it is strictly for applicants with limited or no past experience in computer science. Candidates with an undergraduate major in Computer Science or closely related fields, should consider applying to the Master of Science in Engineering (MSE) program instead.

For more information: http://www.cis.upenn.edu/prospective-students/graduate/mcit.php

For students interested in learning more about MCIT Online, click here (https://onlinelearning.seas.upenn.edu/mcit/).

Curriculum

A total of 10 course units are required for the MCIT degree.¹

</tr>
</tbody>
</table>

¹ It is expected that full-time MCIT students will take the six required courses during the first two semesters of enrollment and four electives during their second year.

² Offered in the Fall semester only. They are the prerequisites for CIT 594 Data Structures and Software Design, CIT 596 Algorithms and Computation, and CIT 595 Computer Systems Programming, respectively, which are offered in the Spring semester only.

³ Courses can be waived or replaced only with the permission of the instructor. As of Fall 2016, students must pass a proficiency exam in order to waive a course. All MCIT courses must be completed (or waivers obtained) during the first semester that the course is offered during the student’s time in the program. Students may not waive or replace more than two required MCIT courses. Courses that are waived need to be replaced with a suitable alternative.

⁴ Electives
- MCIT students must also complete four graduate-level (500 or higher) electives.
- At least three must be a CIS course; one may be an approved non-CIS course.
- The following courses are recommended for all MCIT students:
  - CIS 550 Database and Information Systems
  - CIS 555 Internet and Web Systems
  - CIS 573 Software Engineering
  - CIS 557 Programming for the Web
- Additional suitable electives include:
  - CIS 502 Analysis of Algorithms
  - CIS 505 Software Systems
  - CIS 519 Introduction to Machine Learning
  - CIS 551 Computer and Network Security
  - CIS 552 Advanced Programming
  - CIS 553 Networked Systems
  - CIS 554 Programming Paradigms
  - CIS 559 Programming and Problem Solving
- Click here (http://www.cis.upenn.edu/about-academics/courses.php#500) for all CIS graduate course options.
- One course from the list of pre-approved non CIS graduate courses, found here (http://www.cis.upenn.edu/current-students/graduate/advising/electives-non-cis.php), may be used as an elective. Graduate courses offered in other departments may count as an elective with the prior approval of the MCIT program director; in general, such courses must have a strong technical component in order to be approved.

Continuing in the Master of Science in Computer & Information Science (CIS/MSE) Program

MCIT students may apply to continue in the Master of Science in Engineering in Computer & Information (CIS/MSE) program. Students pursuing this dual degree route need to satisfy a minimum GPA requirement, have earned a high grade in at least one CIS elective, and have completed the majority of the MCIT requirements at the time of applying. In addition to the ten courses required for the MCIT program, students continuing in the CIS/MSE program need to take six additional CIS graduate courses for a total of sixteen credits; satisfactory completion results in the awarding of the MCIT and CIS/ MSE degrees. Click here (http://www.cis.upenn.edu/current-students/graduate/mse/) to access the CIS/MSE degree requirements. Click here (http://www.seas.upenn.edu/graduate/advising/documents/g-apply-for-dual-masters.pdf) to access the MCIT-CIS/MSE dual degree application.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Computer Graphics & Game Technology, MSE

Interactive entertainment and computer-animated visual effects are now part of our mainstream culture. Creating such computer-generated imagery, however, is no trivial task. It requires a delicate blending of art
with science by teams of highly skilled professionals, including artists, animators, writers, designers, engineers and software developers working long hours with cutting-edge technology and tools. Currently there are very few interdisciplinary academic programs at four-year research universities adequately preparing students for such positions. The Master of Science in Engineering in Computer Graphics and Game Technology (CGGT) was created specifically to address this need.

For more information: http://www.cis.upenn.edu/prospective-students/graduate/cggt.php

Curriculum

A total of 10 course units are required for the MSE in Computer Graphics and Game Technology (CGGT).¹,²

- Candidates with non CS backgrounds (http://www.cis.upenn.edu/current-students/graduate/cggt/non-cs.php)
- Submatriculants interested in CGGT (http://www.cis.upenn.edu/current-students/graduate/cggt/submatriculation.php)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Data Science, MSE

Penn’s Master of Science in Engineering (MSE) in Data Science prepares students for a wide range of data-centric careers, whether in technology and engineering, consulting, science, policy-making, or understanding patterns in literature, art or communications.

The Data Science Program can typically be completed in one-and-a-half to two years. It blends leading-edge courses in core topics such as machine learning, big data analytics, and statistics, with a variety of electives and an opportunity to apply these techniques in a domain specialization – a depth area – of choice.

The depth area offers both preparatory coursework and a thesis or practicum in a data science application area. Potential areas of specialization include network science (the Warren Center for Network and Data Science), digital humanities (the Price Lab for Digital Humanities), biomedicine (the Institute for Biomedical Informatics), and public policy (the Penn Wharton Budget Model and the Annenberg Center for Public Policy) – as well as more traditional opportunities in Computer and Information Science and Electrical and Systems Engineering. For students interested in applying data analysis and modeling to other areas within engineering and the physical sciences, Penn offers a specialized and synergistic program in Scientific Computing.

For more information: https://dats.seas.upenn.edu/program/

Curriculum

10 course units are required for the Data Science degree. The ten course units for the Data Science degree are divided into three categories: Foundations, Core Requirements and Technical & Depth Area electives. (As long as the prerequisites for the courses are met, students can complete these courses in any sequence)

CIS 505 Software Systems
CIS 573 Software Engineering

2 In lieu of these courses, students may take Technical Electives and are encouraged (but not required) to take a course from Bucket C in lieu of Probability, and a course from Bucket B in lieu of PL.

3 Students must choose courses from 3 different buckets, one bucket of which can be a 2 semester sequence of thesis/practicum. Two of the courses must represent a depth sequence, which could be the thesis/practicum or (for bucket options B-J) two courses, one of which builds on the other (e.g. is a prerequisite).
Electrical Engineering, MSE

The MSE Program in Electrical Engineering gives students the theoretical and technological foundation needed to deal with the new ideas and new applications that are the hallmarks of modern electrical engineering. A major advantage of our MSE program is that it allows students to focus their education according to their interests and goals, from nanotechnology and circuits, to embedded systems or robotics. The MSE Program in Electrical Engineering gives students the theoretical foundation and the interdisciplinary skills needed to deal with the new ideas and new applications that are the hallmarks of modern electroscience. A major advantage of our MSE Program allows you to tailor your education to your own interests and goals, from Electromagnetics and Photonics, sensors and MEMS to VLSI and Nanotechnology.

For more information: http://www.ese.upenn.edu/current-students/masters/index.php (http://www.ese.upenn.edu/current-students/masters/)

¹ Students must choose courses from 3 different buckets, one bucket of which can be a 2 semester sequence of thesis/practicum. Two of the courses must represent a depth sequence, which could be the thesis/practicum or (for bucket options B-J) two courses, one of which builds on the other (e.g. is a prerequisite).

² Suggestions for projects will be provided to students. Students may choose from these suggested projects or may also come up with their own project/advisor ideas. Students will be mentored jointly by the Program Director and by an advisor in the area of the project, and must receive approval by Faculty Director.

³ Generally, any course in which the primary focus is a physical/chemical/biological/mechanical application area that may be studied computationally is allowed.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Students must complete ten (10) course units at the graduate level (500+).  
- A maximum of two (2) graduate-level course units may be transferred from another school to apply towards the degree. These cannot have been used to fulfill requirements of an undergraduate degree.  
- Students must be registered with the 500-level course number to be eligible as a graduate level course. Any cross-listed section at the 400-level taken must address different topics to be eligible.  
- A maximum of 1 ESE 599 course unit can be used toward the degree.  
- If a thesis is completed, it will count for 2 course units of ESE 597 Master’s Thesis.

Only the following EAS courses are allowed:
- EAS 507 Intellectual Property and Business Law for Engineers  
- EAS 510 Technical Communication and Academic Writing for Non-native Speakers of English  
- EAS 512 Engineering Negotiation  
- EAS 545 Engineering Entrepreneurship I  
- EAS 546 Engineering Entrepreneurship II  
- EAS 595 Foundations of Leadership  
- ESE 680 Special Topics in Electrical and Systems Engineering can be taken several times and counted more than once towards the degree. Each ESE 680 Special Topics in Electrical and Systems Engineering course taken must address different topics to be eligible.

A maximum of 1 ESE 599 course unit can be used toward the degree.

If a thesis is completed, it will count for 2 course units of ESE 597 Master’s Thesis.

Select from graduate courses at Penn in SEAS, SAS, Medicine, Law, Wharton MBA, Social Policy, and Education. These must have technical/scientific content and relevance to the student’s program. Approval must be obtained from the ESE department prior to enrollment in the course.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Embedded Systems, MSE

The Embedded Systems (EMBS) Graduate program is designed for students who wish to pursue industrial jobs in automotive, aerospace, defense, and consumer electronics, as well as for practicing engineers in the embedded systems industry who want to gain knowledge in state-of-the-art tools and theories. The core topics span embedded control, real-time operating systems, model-based design and verification, as well as implementation of embedded/autonomous systems. Applicants are expected to have a strong academic background in both computer science and electrical engineering. All EMBS candidates must be confident working at both the hardware and software levels of the stack. EMBS is a multi-disciplinary field, but we understand that not all incoming students may have the background required in certain areas. While we do not have prerequisites for admission, it is highly recommended that your undergraduate coursework covered the basics of both C/C++ and Java programming, computer architecture, operating systems, and algorithms. Work experience and practical project experience in the domain of Cyber-Physical Systems a plus.

For more information: [http://www.cis.upenn.edu/prospective-students/graduate/embs.php](http://www.cis.upenn.edu/prospective-students/graduate/embs.php)

## Integrated Product Design, MIPD

The MIPD provides students from engineering, design or business backgrounds with expertise in a human-centered design process that leverages their existing skills and enables them to develop new ones.

Designed to ground students in the disciplines of product design while allowing them to tailor their learning experience to meet their individual goals. M:IPD students take both integrated courses designed specifically for the degree and single discipline courses that provide more in-depth training in business, design arts or engineering.

Integrated Product Design, MSE

The MSE:IPD teaches students design processes to generate creative ideas, rapid prototyping techniques and how to creatively resolve tensions between design, engineering and business criteria.

The courses provide students with the opportunity to build greater skills in engineering disciplines related to product design while helping them contextualize those skills as a part of the product design process. MSE:IPD students master methods for prototyping, fabrication, manufacturing, and computer-aided design. They complement their strength in engineering with new skills in business and design arts.

1 The curriculum is comprised of 6 core courses and 4 additional courses; one in design, one in business and two in engineering.

- Since the program is cross-disciplinary, students who do not have the requisite background in the three areas, engineering, design arts, and business, may be required to enroll in additional foundational courses in these areas.
- The core curriculum is comprised of 6 foundational courses that are required of all students regardless of their undergraduate degree.

2 Select 4 additional courses; one in design, one in business and two in engineering from the preapproved list in the handbook. For more information about design, engineering and business courses see the Course Directory (https://ipd.me.upenn.edu/courses/).

For guidance on the policies and procedures that govern the program see the IPD Guidelines (https://ipd.me.upenn.edu/ipd-guidelines/).

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Materials Science and Engineering, MSE

The master's program in Materials Science and Engineering prepares students to be leaders, innovators, and visionaries in the materials revolution that is being driven by discoveries that cross the boundaries of physics, chemistry, engineering and biology, such as in the growing fields of nanobiology, nanophotonics and optoelectronics.

Penn is one of the first universities to establish a center for materials research. By remaining at the forefront of technology innovations, this center, the Laboratory for Research on the Structure of Matter (LRSM), has grown to be one of the largest in the nation. We are opening up new fields in materials science, preparing tomorrow's leaders, and putting our knowledge to practical use in today's high-tech society. Our multidisciplinary program allows you to tailor your education to your own professional and career goals, from ceramics, polymers, and metals to non-structured and soft materials. Our graduates can be found in positions in industries that range from electronics, manufacturing, and communications to transportation and energy, or pursuing doctoral degrees at Penn and other top-ranked research universities.

Total Course Units: 10

Non-thesis or Thesis option:

• Non-thesis course-based option: Students successfully complete 10 course units at the 500 or higher level. All must carry a letter grade (A, B, C or D).
  • Students must secure written approval for all course selections from the Masters Program Advisor. Furthermore, all changes to these course selections must be approved in writing by the Masters Program Advisor. Students wishing to take courses not listed on the provided list are required to receive written approval from the Masters Program Advisor. All non-elective courses should have technical/scientific content relevant to the student’s M.S.E. degree program.
  • 5 MSE courses (500 level or higher) requiring a letter grade are compulsory. Up to 7 MSE courses are highly recommended for obtaining a solid background in materials science. 3 MSE courses are compulsory in the first semester of study.

• Non-thesis option with independent study: Students take 8 courses credits at the 500 or higher level earning letter grades and complete 2 Masters Independent Study (MSE 599) credits. Students receive a letter grade (A, B, C, D or F) in MSE 599. Independent Study requires a faculty advisor; see detail below about selecting an advisor.
  • Students interested in pursuing the non-thesis option with independent study or the thesis option are encouraged to attend Faculty Research Presentations in the late August and September. Students can also meet with individual faculty and the Master’s Program Advisor to discuss their research interests.

• Thesis option: Students take 7 course units at the 500 or higher level earning letter grades and complete 3 course units of research with a faculty member by registering for 2wo research credits (MSE 597 Masters Thesis Research) and 1 Independent Study (MSE 599). Students receive a letter grade (A, B, C, D or F) in both MSE 597 and MSE 599. Students must have their thesis approved by their thesis advisor and the Graduate Group Chair, as well as submit their thesis to the Graduate Group Coordinator. The thesis option requires a faculty advisor; see details below about selecting an advisor.

1 A maximum of two free electives (500 level or higher) are permitted. Free electives can be selected from across the university, including SEAS, SAS and Wharton. Also, free electives are not permitted for students pursuing a dual degree at Penn.
During the first semester, Masters degree students are not permitted to take Independent Study and are required to enroll in only MSE courses.

All Masters degree students must maintain a GPA of 2.7 or higher to be in good standing and for graduation. Students are required to attend weekly MSE seminars organized by the department as part of their education and exposure to latest scientific advances.

Transfer of credits:
- A maximum of two graduate-level course units may be transferred from another school to apply toward the M.S.E. degree if approved by the Masters Program Advisor. These two courses cannot have been used in the fulfillment of an undergraduate degree.
- Sub-matriculants may count up to three 500 or higher level courses for both degrees.

A maximum of two SEAS courses relevant to materials science are permitted. Note that only one Engineering Entrepreneurship course will count as a MSE related SEAS-course. A second entrepreneurship course will be counted as a free elective in addition.

### Master’s Scholars Program

A selected number of awards designated “Master’s Scholars” will be made each year to deserving students to promote and enhance their research experience at Penn. The awards will enable highly motivated students (with a GPA of 3.25 or higher) to pursue a well-designed research project with a faculty member for one or two semesters and obtain valuable training in experimental and computational research. The award carries no financial benefit to the students; award funds are used solely to defray the costs of facility user fees, chemicals, computer resources, etc. Research proposals submitted by students will be evaluated and awards will be made on a competitive basis. A call for proposals occurs near the start of the fall and spring semesters.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Mechanical Engineering & Applied Mechanics, MSE

The master’s in Mechanical Engineering and Applied Mechanics (MEAM) is innovative, unique, and nationally recognized for its excellence. We are at the forefront in preparing students for leadership careers by providing opportunities to work in emerging and interdisciplinary areas that are fueling exciting advances in technology. The program can be tailored and customized to meet individual needs under the guidance and approval of an academic advisor. Students can choose to concentrate in *Mechatronic and Robotic Systems, *Micro/Nano Systems, *Heat Transfer, Fluid Mechanics, and Energy, *Mechanics of Materials and *Design and Manufacturing.

### Nanotechnology, MSE

Nanotechnology, the application of the science of the very small, is an exciting field that is enabling solutions in alternative energy, electronic devices, medical diagnostics and therapeutics. Penn's Nanotechnology Master's degree can prepare students for leadership roles, both technical and managerial, in emerging high tech industries as well as in traditional industries that exploit nanoscale phenomena.

Select 3 pre-approved Science or Technology-Relevant electives \(^3\)

Total Course Units: 10

1. Students must complete 10 course units at the graduate level (500+).
2. Students must attend and submit reports on four technical seminars (two seminars per year for full-time students). Students are expected to present on seminars they attended during their first year to the new cohort of Nano students the following year.

3. Science or Technology-Relevant Electives:
   - These courses may be chosen from: any SEAS course (including engineering entrepreneurship, technology policy, NANO 597 Master’s Thesis Research, special topics, and/or NANO 599 Master’s Independent Study, as well as technology-relevant courses from other Penn departments (typically physics, chemistry, math, biology, etc.).
   - The courses must have significant technical and scientific content and relevance to the student’s program.
   - Approval must be obtained from the NANO program prior to enrollment in the course.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Robotics, MSE

The master’s degree in Robotics (ROBO) is a multi-disciplinary program jointly sponsored by the Departments of Computer and Information Science, Electrical and Systems Engineering, and Mechanical Engineering and Applied Mechanics.

Housed and administered by the GRASP Lab, one of the top robotics research centers in the world, Penn’s ROBO master’s program educates students in the science and technology of robotics, vision, perception, control, automation, and machine learning. Our students hail from a variety of engineering, scientific, and mathematical backgrounds, united by a passion for robots and a desire to advance robotic technologies to benefit humanity. Our program provides an ideal foundation for jobs in a variety of industries including robotics, aerospace, automotive, industrial automation and defense; it also provides a solid basis for further graduate studies.

Select 3 Foundational courses \(^1\)

#### Technical Electives

Select 5 Technical electives \(^2\)

#### General Elective

Select 2 General electives \(^3\)

Total Course Units: 10
1 course from 3 out of the 4 areas (Artificial Intelligence; Robot Design & Analysis; Control; Perception); 3 courses total required.

5 courses are required from the approved Technical Elective list.

2 graduate level courses are required; choose from:
- MATH, CIS, ESE, MCIT, or MEAM courses
- Foundational Course areas
- Technical Elective List
- Certain courses will only be considered general electives (such as EAS 545 Engineering Entrepreneurship I, EAS 546 Engineering Entrepreneurship II). A full list may be found here (https://www.grasp.upenn.edu/academics/masters/current/).
- Courses from other disciplines with pre-approval of the Program Director.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Scientific Computing, MSE

The MSE in Scientific Computing (SCMP) program at Penn provides multifaceted education in the fundamentals and applications of computational science. This education program provides a rigorous computational foundation for applications to a broad range of scientific disciplines. An education in SCMP combines a comprehensive set of core courses centered on numerical methods, algorithm development for high performance computational platforms, and the analysis of large data, and offers flexibility to specialize in different computational science application areas. Students may elect to pursue a thesis in computationally-oriented research within the School of Engineering and Applied Science.

We welcome applications from candidates who have a strong background in physical or theoretical sciences, engineering, math, or computer science. Some experience with computer programming is also strongly recommended.

### Systems Engineering, MSE

The MSE Program in Systems Engineering (SE) is best positioned to give students a broad foundation across data science, systems modeling, and optimization and decision-making with applications in societal systems (energy, transportation, health operations).

The MSE Program in Systems Engineering (SE), grounded in the intersection of electrical and systems engineering, is best positioned to give students the in-depth theoretical foundation and interdisciplinary skills required by the growing complexity of technological systems. Our flexible curriculum allows you to tailor your studies to your personal interests and goals, from signal processing, optimization, simulation, control and cybernetics to complex adaptive systems, stochastic processes and decision sciences.

\(^1\) Or a free elective (subject to approval)

\(^2\) Select 2 course units of SCMP 597 Thesis Research or SCMP 599 Independent Study.

\(^3\) Generally, any course in which the primary focus is a physical/chemical/biological/mechanical application area that may be studied computationally is allowed.
ESE 505  Feedback Control Design and Analysis
ESE 543  Human Systems Engineering
ESE 605  Modern Convex Optimization
ESE 619  Model Predictive Control

Leadership Electives
Select 1 Leadership Elective: 1
- ESE 540  Engineering Economics
- ESE 544  Project Management
- ESE 680  Special Topics in Electrical and Systems Engineering
- EAS 545  Engineering Entrepreneurship I
- EAS 546  Engineering Entrepreneurship II
- EAS 507  Intellectual Property and Business Law for Engineers
- EAS 512  Engineering Negotiation

Technical Elective
Select 1 Technical Elective: 1
- EAS 510  Technical Communication and Academic Writing for Non-native Speakers of English
- EAS 512  Engineering Negotiation
- EAS 545  Engineering Entrepreneurship I
- EAS 546  Engineering Entrepreneurship II
- EAS 595  Foundations of Leadership
- Any 500 or 600 level course in ENM, ESE, CIS, CIT or MEAM
- **ESE 599 can only be used in this category

Application Area
Choose ESE 597 or any two graduate level courses from one approved Application Area 2

Total Course Units 10

1 Curriculum
   - Students must complete ten (10) course units at the graduate level (500+)
   - Students must be registered in the 500-level section in a cross-listed course. Any cross-listed section at the 400-level or below is ineligible towards the degree.

2 Application Area Electives:
   - Select 2 course units of approved electives from graduate courses offered at Penn in SEAS, SAS, Medicine, Law, Wharton MBA, Social Policy, and Education.
   - These must have technical/scientific content and relevance to the student's program.
   - Approval must be obtained from the ESE department prior to enrollment in the course.

For more information: https://ipd.me.upenn.edu/ipd-programs/ipd-certificate/

Curriculum
A total of 5 course units are required for the Certificate.

1 A complete list of electives are available in the IPD program office (229A Towne Building).

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

School of Nursing
Penn Nursing offers a number of resources and experiences not found at most other schools, including a state-of-the-art simulation lab with mannequins that respond as patients would, classrooms with the latest hospital-based electronic medical records (EMR) technology, and clinical experiences in The Children's Hospital of Philadelphia and the Hospital of the University of Pennsylvania, two of the nation's best hospitals. Penn Nursing is a premier academic and research institution renowned for advancing the frontiers of nursing science and patient care. Our students learn from the thought leaders in nursing research, education, and practice who ensure Penn Nursing remain one of the top schools of nursing in the world. At Penn Nursing, students become part of the next generation of healthcare leaders, prepared to care for patients, to conduct landmark research, and to make new strides in healthcare management and health policy.

Learn more about our history: http://www.nursing.upenn.edu/about/history/
Learn more about our school leadership: http://www.nursing.upenn.edu/about/our-leadership/

Mission
The mission of the University of Pennsylvania School of Nursing is to make a significant impact on health by advancing science, promoting equity, demonstrating practice excellence, and preparing leaders in the discipline of nursing.

Philosophy
The mission of the School of Nursing is aimed at meeting the health needs of society in a global and multicultural world. To this end, scholarship, research, education, and practice are integrated to create a culture of inquiry that values intellectual curiosity and diversity, and where faculty, clinicians, staff, and students thrive and learn from one another.

Scholarship and Research
We believe that integrating the arts and sciences is the basis for nursing knowledge and the framework for nursing practice and scholarship. Nursing knowledge encompasses empirical, philosophical, historical, ethical, and personal ways of knowing and is fundamental to the advancement of professional practice. Scholarship encompasses more than research, but also the integration of research into practice and health policy formation and the advancement and dissemination of nursing knowledge. Research is integral in every educational program and strengthened by participating in and contributing to the rich scholarly environment of the University and across national and international health policy organizations.

Nursing is scientifically based and carried out autonomously, as well as interdependently. The focus is development, dissemination, and utilization of knowledge about nursing actions that promote positive changes in patients, systems of care, and the larger society. Nurses collaborate with individuals, families, groups, communities, and other professions to achieve health and well-being for all people.

The School of Nursing is responsive to numerous influences that shape health care, including evolving models of care, consumer advocacy, demographic changes, and advances in science and technology. The faculty are committed to a scholarly agenda that pushes the boundaries of nursing science, in turn influencing education and shaping policy and practice.

Education
Education at the University of Pennsylvania facilitates the intellectual, personal and social development of students as they identify and attain academic and professional goals. Our educational environment fosters independence, ethical behavior, creative and critical thinking, increased breadth of knowledge, and sensitive interactions concerning cultures and viewpoints.

Programs, from baccalaureate to post-doctoral and lifelong learning, are enriched by the varied needs and perspectives of a culturally diverse population, as well as pressing needs for nursing leaders in a rapidly changing world. These leaders will be the clinical experts, health policy shapers, and nursing scholars of the future.

The baccalaureate program, including traditional and second degree students, focuses on professional nursing practice across the continuum of health care, with particular emphasis on vulnerable populations. The curriculum is dynamic and includes leadership skills, interdisciplinary collaboration, and content and clinical experiences that emphasize evidence-based practice. The curriculum also reflects changes in science and technology.

The Master's programs focus on advanced practice nursing and administration, with an emphasis on specialty and subspecialty practice in concert with changing societal needs. Graduate nurses are prepared for advanced practice that creatively combines knowledge and skills in critical thinking and expert interventions across the lifespan. Special attention is given to clinical decision-making and management skills, as well as methods of evaluation of quality and cost of care.

Pre- and post-doctoral education is dedicated to advancing the discipline of nursing through research. The goal is to equip students with a foundation in nursing and a field of concentration to make substantive contributions to scholarship. Strong faculty mentorship is integral to the development of a critical cadre of future researchers, academicians, and leaders, nationally and internationally.

Practice
The primary goal of nursing practice is to optimize care and outcomes for patients and their family members. The practice of nursing is the foundation for informing educational pedagogies and for the generation of discipline-specific research. Practice is defined as the diverse and varied construction, application, and evaluation of knowledge and the action within the discipline of nursing, particularly for the recipients of nursing care. We believe it is the responsibility of academic nursing to serve as the fulcrum of modeling the intentional integration of education, research, and clinical care to improve the delivery of quality health services.

Nursing is an evidence-based, caring profession that improves the health and quality of life for individuals, families, and communities throughout the world. Nursing possesses a unique body of knowledge that guides its practice in both autonomous and collaborative health care settings. Penn Nursing serves as the model for nurses who care for society's needs in a global and multicultural context. Thus at Penn, we seek to promote health and alleviate suffering in every part of the world by preparing nurses to be responsive to the health-related issues and preferences, values, and needs of all societies. Our goals are to improve and maintain optimal health, prevent disease, enhance the quality of recovery from illness, and support patients and families to cope with acute and chronic health problems. Penn Nursing serves as a model to direct the advancement of the translation of evidence-based knowledge toward culturally competent models of care.

Revised Mission and Philosophy approved by the School of Nursing Faculty Senate 2/3/03.

Revised Mission and Philosophy approved by the School of Nursing Faculty Senate 5/7/12.

Revised Practice statement approved by the School of Nursing Faculty Senate 4/8/13.

Revised Mission approved by the School of Nursing Faculty Senate 10/5/15.

The Office of Nursing Research (http://nursing.livewhale.net/research/oni/), along with our four research centers (http://nursing.livewhale.net/research/research-centers/) and partnerships across Penn, provide students with resources and support that are virtually unparalleled in our field. Students, from undergraduates to doctoral students, have
narrow opportunities to engage in research and work alongside some of the most recognized researchers in their fields.

For more information, visit: https://www.nursing.upenn.edu/research/.

Accreditation is a hallmark of educational quality, and we are proud to share our credentials on our website: http://www.nursing.upenn.edu/about/accreditation/.

Penn Nursing students benefit from a dual advising structure. All students are assigned a faculty advisor and have access to the professional staff advisors in the Office of Student Affairs.

For more information, visit: http://www.nursing.upenn.edu/student-services/advising/accelerated/.

Nursing, PhD

The mission of the doctoral program of the University of Pennsylvania School of Nursing is to develop scholars of the discipline of Nursing capable of building a program of research that advances nursing knowledge and contributes to the health of individuals, families, and communities.

Graduates of this program will serve as leaders at the forefront of nursing research and its translation into practice locally, nationally, and globally. These nurse scientists will create new knowledge and be informed by a nursing perspective to enhance health and to develop and test innovations to improve outcomes of healthcare, with a priority on populations at greatest need.

The foundation of program success is the substantive match between the student and the faculty advisor. The educational experience focuses on the processes of exploring and examining substantive bodies of knowledge. The researcher's development is fostered through exposure to an array of philosophic and methodological aspects of nursing and related basic and applied disciplines.

Our full-time PhD students are fully funded for the first three years, which includes a living stipend and covers tuition, fees, and health insurance.

For more information: https://www.nursing.upenn.edu/academics/doctor-of-philosophy-in-nursing-phd/

View the University's Academic Requirements for PhD Degrees (p. 1939).

Curriculum

To earn the PhD, students must complete the 14 course units (CUs) in addition to satisfying several non-credit milestones.

The below requirements apply only to PhD students entering Fall 2018 and later. Students who entered in Fall 2017 and earlier should refer to the PhD Student Handbook (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/phd-handbook/degree-requirements/) for a complete listing of degree requirements.

Most students complete their coursework within three years and then will be on dissertation status until the final dissertation defense.

Adult Gerontology Acute Care Nurse Practitioner, MSN

We prepare acute care nurse practitioners for the management of patients with specialized health care needs. You'll develop expertise in physical assessment, complex clinical decision making, diagnostic and interventional procedures, prescriptive knowledge, and patient care management across the continuum of acute care services, from critical care to discharge to the patient's transition back into their community.

You'll have the opportunity to focus in general surgery, internal medicine, cardiology, neurosurgery, oncology, trauma, and many other specialty areas as well as concentrate your work on populations of special interest, such as the underserved or minority health.

And our large network of highly skilled clinicians train you using various technologies—like immersive simulation—to give you the chance to practice newly acquired skills. The program follows a curriculum that includes theoretical content and mentored clinical experience that emphasizes research and holistic patient care within a collaborative team approach. For your practicum, we do the legwork and match you with a preceptor, including acute care nurse practitioners, physicians, or collaborative teams.

You'll be able to choose from a variety of clinical concentrations, such as cardiology, trauma, general surgery, transplant, nephrology, and internal medicine, and select a minor from a number of relevant areas, such as oncology, palliative care, forensics, global health, and more.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Our program is designed for Primary-Care-prepared Nurse Practitioners who work with acutely-ill patients.

We know that many Nurse Practitioners who are primary care prepared and working with acutely-ill patients are interested in becoming certified in acute care. In response to this, and in compliance with the APRN Consensus Model, Penn Nursing created a streamlined post-master’s Adult Gerontology Acute Care NP program. Nurse Practitioners who work with the acutely ill every day for a minimum of one year as a Nurse Practitioner are eligible to apply (https://www.applyweb.com/upenn/).

Please visit our Post-Graduate APRN Certificate page for application requirements specific to this program.

The APRN Consensus Model, published in 2008 by the American Association of Colleges of Nursing calls for improved congruence between licensure, accreditation, certification and educational requirements between agencies and State Boards of Nursing. This means that if an NP graduated from a primary care NP program, that they should work with patients who have primary care issues. Likewise, if an NP is educated and certified as an acute care nurse practitioner, then this NP should work with acutely ill, critically ill, or chronically complex patients. This does not mean that all NPs working in inpatient settings have to be acute care prepared. It means that each NP has to evaluate the care they provide every day to their patients and decide if the majority of problems managed are primary care or acute care focused.

*Please be aware that we will need an affiliation agreement with your site of employment where you will be doing your clinical hours. Before applying, we recommend that you confirm with your contracts office/nursing education department/practice manager that they will be willing to sign an affiliation agreement/contract with University of Pennsylvania School of Nursing.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Adult Gerontology Primary Care Nurse Practitioner, MSN**

We’ll train you to deliver care that meets patients’ needs, regardless of setting. You’ll be comfortable working in community health clinics, private medical practices, specialty clinics, Veteran’s Administration facilities, home care, assisted living facilities, long-term care settings, rehabilitation centers, and urgent care.

In many cases, Adult-Gerontology Primary Care Nurse Practitioners follow their patients across care settings, acting as a guardian to protect care quality and patient safety during transitions. These nurses are the backbone of our profession, caring for patients in sickness and in health, and they are in demand today more than ever. We base the program around five core courses, and supplement with three theory and four clinical courses. The clinical courses include classroom case studies and clinical preceptorships that focus on physical assessment and pathophysiology, health maintenance, and the management of common acute and chronic health problems.

consult with their academic program regarding final certifications and requirements for graduation.

**Family Nurse Practitioner, MSN**

We emphasize hands-on, real life care in all aspects of the program. All of our faculty members are currently in practice, an important cornerstone of our program, giving you indispensable exposure to the kind of work you'll step into after graduation. You'll also have opportunities to do clinical work here and abroad, interacting with patients speaking languages other than English and gaining experience with culturally diverse populations. Your coursework will include four core courses (graduate research and sciences), one elective, and nine theory/clinical courses. The clinical courses include classroom work, lab sessions, and clinical preceptorships focused on physical assessment and pathophysiology, health maintenance, and the management of common acute and chronic health problems.

**Health Leadership, MSN**

Our Health Leadership Master’s program prepares professional nurses for leadership roles in many healthcare fields such as global and public health, nursing education, consulting, health policy and risk management, and quality improvement.

You’ll have unparalleled freedom to design the focus of your studies to best match your interests and career goals. We emphasize research and systems thinking and provide you with the chance to develop leadership skills. Five core leadership courses are requisite and the remainder of your course of study is designed with program faculty to inform your career interests (three are nursing leadership electives and four courses may be taken anywhere within the University).

For more information: [https://www.nursing.upenn.edu/health-leadership/](https://www.nursing.upenn.edu/health-leadership/)

### Curriculum

A total of 12 course units are required.

Due to the number of electives in the program, students can earn multiple minors or can pursue dual degrees. Dual degrees are offered with the Public Health Program (MSN/MPH), with the Bioethics Department (MSN/MBE), and with the Law School (MSN/ML). Minors are offered in Quality Improvement and Safety Processes in Healthcare, Organizational Dynamics, and in Transformative Nursing Education.

**Neonatal Nurse Practitioner, MSN**

We prepare you to care for newborn infants who arrive with a variety of medical needs such as prematurity, birth defects, substance abuse problems, infections, and a variety of chronic conditions. While technically the neonatal period describes the first month after birth, often times these babies will be sick for much longer, requiring lengthy stretches of care to address the challenges laid upon them at delivery. You’ll learn to care for infants until discharge and beyond, working with family and support groups to ensure the best quality of life for your patients and families.

We also collaborate with faculty and students in other pediatric graduate programs, increasing the breadth of your exposure to the field and providing you experiences available nowhere else.

For more information: [https://www.nursing.upenn.edu/neonatal/](https://www.nursing.upenn.edu/neonatal/)

**Curriculum**

**Post-Masters Certification**

Penn’s MSN programs include a Post-Master’s Certificate option. These programs can be pursued at any time post-degree. Current Master’s students are also welcome to add complementary minors to their studies: [https://catalog.upenn.edu/graduate/nursing/programs/](https://catalog.upenn.edu/graduate/nursing/programs/)

The Post-Master’s Certificate curriculum is determined after a gap analysis is made by the Program Director. Prospective students should reach out to the Admissions Office for more information about post-masters and certificate options and to request a review of the student’s previous MSN transcript. The length of each program depends on the course units required and course offerings per semester. For more information: [https://www.nursing.upenn.edu/admissions/msn-and-post-masters/post-masters/](https://www.nursing.upenn.edu/admissions/msn-and-post-masters/post-masters/).

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Nurse-Midwifery, MSN**

We prepare you for a midwifery practice focused on providing family-centered, comprehensive care to essentially healthy women and their families. We believe that the autonomous practice of nurse practitioners/midwives is based on the health promotion model and interdependent practice—a system that emphasizes the unique aspects each health professional brings to the care of a client. To develop well-rounded midwives, we offer courses ranging from advanced physiology and pathophysiology to the use of ultrasonography during pregnancy. We also cover public policy, complementary therapies, and fetal evaluation. You’ll become a highly competent clinician, and an effective and a culturally sensitive patient advocate while learning to manage a team within the varied systems of healthcare delivery.

Your clinical work can be completed in hospitals, birthing centers, and in home birth experiences, as well as abroad through international study opportunities.

Our graduates go on to become home-birth practitioners, birth center practice directors, directors of midwifery educational programs, and directors of CNM services in large teaching and small community hospitals.

For more information: [https://www.nursing.upenn.edu/nurse-midwifery/](https://www.nursing.upenn.edu/nurse-midwifery/)

We also provide a plan of study for full time (https://www.nursing.upenn.edu/nursing-and-health-care-administration/plans-of-study/full-time-fall-start/) students; part-time study is also possible and plans of study can be developed with faculty advisors.

Nursing & Health Care Administration, MSN

Drawing on the combined strengths of the School of Nursing, The Wharton School, and the Organizational Dynamics Program, this program gives you unparalleled opportunities to learn from the very best in the field.

We know our students have wide ranging interests regarding the kind of administrative or leadership fields they’d like to pursue, so we tailor your educational plan to best suit your career goals. Generally, you’ll focus in these areas: operations management, healthcare consulting, quality improvement, or project management. In addition to coursework in leadership development, research, and systems thinking, we also cover financial management, strategic planning, quality improvement and patient safety processes, negotiations, informatics, and human resources management, all with an emphasis on administration in diverse healthcare settings.

Plans of study are available for both full-time (https://www.nursing.upenn.edu/nurse-midwifery/plans-of-study/full-time/) and part-time (https://www.nursing.upenn.edu/nurse-midwifery/plans-of-study/part-time/) students.

The midwifery program at the University of Pennsylvania is fully accredited by the Accreditation Commission for Midwifery Education (ACME), 8403 Colesville Road, Suite 1550, Silver Spring, MD 20910-6374; for information about accreditation please contact ACME directly. Tel: 240-485-1802, acme@acm.org, www.midwife.org/acme (http://www.midwife.org/acme/).

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

1 Information about recommended electives can be found at: https://www.nursing.upenn.edu/nursing-and-health-care-administration/plans-of-study/.
Pediatric Acute Care Nurse Practitioner: Acute/Chronic, MSN

Graduates of this program are prepared to provide collaborative, comprehensive care to children and adolescents with a variety of complex critical, acute and chronic conditions, and emerge as clinical and professional leaders who are expert in physical assessment and clinical decision making, managing multifaceted disorders, culturally sensitive family focused care, community engagement, transitional care and integrating health care policy. Our approach, across all health care settings, is based on a thorough assessment and integration of the social determinants of health.

We uniquely offer three concentrations of study all housed within the Pediatric Acute Care Program. This allows for students to approach their Graduate level education with a specific clinical focus while still receiving a broad based education in Pediatric Acute Care. Our graduates from all concentrations are able to pursue career options in any area of Pediatric Acute Care. Our Acute and Chronic Care concentration is focused on the care of children with acute and chronic conditions. It is distinctive as it offers an emphasis and commitment to following children and families throughout chronic childhood illness. We structure the program and clinical experiences to foster an understanding and management of families in the continuum of illness. Clinical experiences are located in diverse settings such as pediatric acute care inpatient units, step-down units, emergency departments, community sites and ambulatory, rehabilitative, and specialty-based clinics.

Pediatric Acute Care Nurse Practitioner: Critical Care, MSN

Graduates of this program are prepared to provide collaborative, comprehensive care to children and adolescents with a variety of complex critical, acute and chronic conditions, and emerge as clinical and professional leaders who are expert in physical assessment and clinical decision making, managing multifaceted disorders, culturally sensitive family focused care, community engagement, transitional care and integrating health care policy. Our approach, across all health care settings, is based on a thorough assessment and integration of the social determinants of health.

We uniquely offer three concentrations of study all housed within the Pediatric Acute Care Program. This allows for students to approach their Graduate level education with a specific clinical focus while still receiving a broad based education in Pediatric Acute Care. Our graduates from all
concentrations are able to pursue career options in any area of Pediatric Acute Care.

Our Critical Care concentration will prepare you for advanced practice with critically ill children in pediatric critical care units and cardiac intensive care units. It is the first of its kind. We are currently the only program in the country which is specifically preparing students in pediatric critical care. We structure the program and clinical experiences to develop an in depth understanding of critical care physiology and management including invasive procedures. We focus on the spectrum of chronic and acute critical illness as it relates to children and their families. Clinical experiences are located in Pediatric Intensive Care and Cardiac Intensive Care Units.

Post-Masters Certification
Penn’s MSN programs include a Post-Master’s Certificate option. These programs can be pursued at any time post-degree. Current Master’s

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Pediatric Acute Care Nurse Practitioner: Oncology, MSN

Graduates of this program are prepared to provide collaborative, comprehensive care to children and adolescents with a variety of complex critical, acute and chronic conditions, and emerge as clinical and professional leaders who are expert in physical assessment and clinical decision making, managing multifaceted disorders, culturally sensitive family focused care, community engagement, transitional care and integrating health care policy. Our approach, across all health care settings, is based on a thorough assessment and integration of the social determinants of health.

We uniquely offer three concentrations of study all housed within the Pediatric Acute Care Program. This allows for students to approach their Graduate level education with a specific clinical focus while still receiving a broad based education in Pediatric Acute Care. Our graduates from all concentrations are able to pursue career options in any area of Pediatric Acute Care. Our Oncology concentration offers students a strong foundation in pediatric acute care with a focus on pediatric oncology. It is the first of its kind. We are currently the only program in the country which is specifically preparing students in pediatric oncology. You will be prepared to deliver comprehensive care to children with cancer and their families. Specifically, we structure the program and clinical experiences to help you develop physical assessment skills, clinical decision making, continuity of care, family interventions, health care policy collaboration, and transition care related to children with cancer. Clinical experiences are located in both inpatient and ambulatory centers for pediatric oncology.

Clinical experiences are all arranged and coordinated by the university. A clinical site coordinator will work specifically with you and the Pediatric Acute Care Program.

For more information: https://www.nursing.upenn.edu/pediatric/pediatric-acute-care-nurse-practitioner/

Curriculum
A total of 12 course units are required.
## Pediatric Primary Care Nurse Practitioner, MSN

Penn is a nationally recognized leader in training excellent nurse practitioners for primary care practice. As you study with us, you’ll learn all of the pediatric nurse practitioners' responsibilities, including well-child care, sick exams, health counseling, telephone management, behavioral issues, conducting research, providing education, and impacting public policy. The goal will be for you to be able to practice these roles in an autonomous fashion, in collaboration with a physician or as a leader of an interdisciplinary team. Coursework for the NP program includes core graduate courses, electives, and a group of six clinical courses that must be taken together.

## Post-Masters Certification

Penn's MSN programs include a Post-Master's Certificate option. These programs can be pursued at any time post-degree. Current Master's students are also welcome to add complementary minors to their studies: [https://catalog.upenn.edu/graduate/nursing/programs/](https://catalog.upenn.edu/graduate/nursing/programs/)

The Post-Master's Certificate curriculum is determined after a gap analysis is made by the Program Director. Prospective students should reach out to the Admissions Office for more information about post-masters and certificate options and to request a review of the student's previous MSN transcript. The length of each program depends on the course units required and course offerings per semester. For more information: [https://www.nursing.upenn.edu/admissions/msn-and-post-masters/post-masters/](https://www.nursing.upenn.edu/admissions/msn-and-post-masters/post-masters/).

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Psychiatric Mental Health Nurse Practitioner, MSN**

Significant advancements have been made in recent years in our understanding of neuroscience and human behavior and the effective treatment and prevention of mental illness. Yet, despite this progress, mental health issues are often minimized, mishandled, and insufficiently treated, shrouded in fear and shame. There is disparity in treatment across many populations, and a critical shortage of skilled mental health professionals that limits the ability of patients to get the care they so deeply need. Confounding this is a lack of diversity among health care providers who may not adequately understand cultural barriers to seeking care. This is something we are striving to change.

In our program, you’ll benefit from a holistic approach that blends neuroscience with psychotherapy and psychopharmacology. You’ll work alongside faculty and mentors to advocate treatment of the whole person, blending mind and body in the context of the patient’s psychosocial environment. You’ll learn biopsychosocial assessment and diagnosis as well as medication management, all while deepening your skills in psychotherapy, including therapeutic approaches like cognitive behavioral therapy, group/family therapy, and more.

We use a three-semester clinical practicum, with the program placing students in settings that allow for exposure to a variety of psychiatric populations. Onsite preceptors will supervise your work, and you’ll share experiences with other students through weekly small group seminars on campus.

For more information: https://www.nursing.upenn.edu/psychiatric-mental-health/

**Curriculum**

A total of 14 course units are required. We also provide plans of study for full time (https://www.nursing.upenn.edu/psychiatric-mental-health/plans-of-study/full-time/) students and part time (https://www.nursing.upenn.edu/psychiatric-mental-health/plans-of-study/part-time/) students.

**Women's Health/Gender Related Nurse Practitioner, MSN**

The Women’s Health/Gender-Related Nurse Practitioner program focuses on the primary health care needs of women from adolescence through the advanced years, concentrating on promoting and maintaining wellness. We put a premium on research that examines the influences that affect women’s lives, such as public policy, advances in technology, and environmental and socio-cultural factors.

We prepare you for interdependent practice, a care model that emphasizes the unique aspects each health professional brings to the patient. For you, as a nurse practitioner, this involves providing family-centered and comprehensive care to women and their families. We train you to provide care that is shaped by a deep respect for human dignity, an understanding of the nuance of culture, and the woman’s right to self-determination. Through collaborative classroom settings, specially-designed courses, and top-notch clinical experiences, you’ll study a range of women’s health issues including normal pregnancy, prenatal management, alternative medicine, clinical management of family planning, well-woman health care and menopause, and primary care that’s associated with women’s health.

**Curriculum**

A total of 13 course units are required. We also provide plans of study for full time (https://www.nursing.upenn.edu/womens-health-gender-related/plans-of-study/full-time/) students, and part time students. Part
Executive Leadership, DNP

Doctor of Nursing Practice in Executive Leadership (DNP-EL)

Our online post-master's DNP-EL program develops nurses for various senior leadership roles aimed at transforming healthcare delivery and improving outcomes at the systems level.

Our Program

Executive leadership in an everchanging and complex healthcare industry requires the knowledge and skills to revolutionize care delivery models and improve patient and organizational outcomes. Focused on systems leadership and innovative change, the DNP-EL prepares graduates for a variety of leadership roles including but not limited to Chief Nursing Officers, Clinical and Project Directors, Healthcare Consultants, and Practice Leaders.

Our Curriculum

Offered online with only a few on-campus intensives, the DNP-EL can be completed while working full-time from any location. An unparalleled advantage, this interdisciplinary curriculum incorporates content from Wharton Executive Education (https://executiveeducation.wharton.upenn.edu/), Wharton Online (https://executiveeducation.wharton.upenn.edu/), and the Perelman School of Medicine Health Care Innovation Graduate Program (https://improvinghealthcare.mehp.upenn.edu/master-of-health-care-innovation/). Situated within a resource-intensive university, students avail of online library services, and take courses taught by faculty with vast healthcare leadership experience. In-person intensives provide students with networking opportunities, individualized faculty mentorship and access to executives from our world-class academic health system.

The DNP-EL includes coursework in strategic planning, innovation and design thinking, organizational change, and policy advocacy. A mutual benefit for students and their employers, the program culminates with the design of a systems-level evidence-based project implemented within their own organization.

The DNP-EL is a two-year program consisting of 11 course units.

who practice across a range of settings and are vested in helping you
develop your educational and professional career. Mentored by expert
nurse anesthetists and anesthesiologists, you'll acquire the critical
thinking skills for independent as well as collaborative clinical decision-
making.

You'll hone your skills in our state-of-the-art simulation center, performing
procedures like placing regional anesthetics, using fiber optic intubating
equipment, inserting central venous catheters, pulmonary artery
catheters and chest tubes, using ultrasound guidance, performing needle
cricothyroidotomies, and placing double lumen endotracheal tubes. And
you'll be exposed to experiences that range from common complications
to rare occurrences. Our curriculum is divided into four conceptual
areas: core courses, area courses, translating research into practice, and
leadership and management.

Our robust clinical rotation allows you the opportunity to work with
patients of all acuity levels including concentrations in pediatric, cardiac,
and non-cardiac thoracic specialties. Our clinical coordinators work
to provide you with a supervised introduction to clinical experiences,
relying heavily on our excellent faculty to mentor students as they gain
independence, critical thinking, and autonomy. The DNP-NA program is a
full-time program which can be completed in 36 months.

**Nursing, DNP**

Penn Nursing has been a leader in the science and practice of nursing since 1886, and continues to be at the forefront of advancing science, delivering solutions, and shaping health policy and practice to engender a healthier future.

The Post-Master’s DNP focuses on developing skills in translating research in practice, evaluating evidence, applying research in decision-making, and implementing viable clinical innovations to change practice and improve care delivery. Our hybrid online and in-person curriculum is designed to prepare professionals to become leaders in practice innovation by providing education in the translation of evidenced-based practice, project management, and leadership development.

In addition to our world-renowned faculty and state-of-the-art facilities, more than half of the required course curriculum will be offered online by fall 2019, with the goal of offering 100% of the course offerings online by 2020. This flexibility will allow nursing leaders the convenience of earning their PM-DNP while balancing their full-time career.

For more information: [https://www.nursing.upenn.edu/dnp/](https://www.nursing.upenn.edu/dnp/)

**Curriculum**

The Post-Master’s DNP requires 10 course units which can be completed in two years.

**Adult Oncology Specialist, Minor**

Our Adult Oncology Specialty Minor is designed for graduate nursing students who desire advanced training in oncology nursing from the top researchers and clinicians in the country.

Our faculty have extensive experience in oncology nursing. You’ll interact with nationally recognized scientists and clinicians in the field of cancer care from the School of Nursing and the University of Pennsylvania Health System’s Abramson Cancer Center. You are required to complete three courses, the last of which includes clinical hours. Clinically-focused students will need to complete 240 clinical hours. These hours can be applied to meet the clinical hour requirements for certification.

Courses are online with synchronous and asynchronous components. In addition, students will meet on campus twice per semester (2 days in the fall and 2 days in the spring) for seminars, high-fidelity simulations, and networking with experts in the field of oncology and nursing.

**Curriculum**

A total of 3 course units are required. We also provide a sample plan of study ([https://www.nursing.upenn.edu/adult-oncology-minor-post-masters/plans-of-study/typical-sequence/) for students.

**Integrated Nursing Care of Autism Spectrum Disorder, Minor**

Designed for registered nurses, school nurses, or advanced practice nurses who focus on pediatrics, mental health, or the family, this three-semester program will prepare you to design and deliver comprehensive care to this unique and special needs population.

You will develop the skills to screen for ASD, to provide comprehensive care for the co-occurring behavioral, medical, and psychiatric conditions,
and to integrate innovative nursing care into the lives of your ASD patients and their families.

We offer the opportunity to work with nationally recognized faculty, clinicians, epidemiologists, and scientists in this field through lectures, seminars, interactive discussions, case-based learning, independent guided studies, and clinical fieldwork. This Post-Master's Certificate or Minor includes three graduate level courses and one clinical experience. The clinical is six hours one day per week for one semester. Schedules will be flexible to meet individual student needs.

For more information: http://www.nursing.upenn.edu/autism-spectrum-disorder-minor-post-masters/

A total of 3 course units are required. We also provide a sample plan of study (https://www.nursing.upenn.edu/autism-spectrum-disorder-minor-post-masters/plans-of-study/typical-sequence/) for students.

**Global Health, Minor**

Available exclusively to Penn Nursing students at both the undergraduate and graduate level, our Global Health minor is an opportunity to increase your knowledge of the world and the factors that contribute to the health of populations. We take a cross-disciplinary approach to help you integrate your knowledge of nursing, culture, and diversity to more effectively engage with patients locally, nationally, and around the world. Open to students in full- or part-time Master's or Post-Master's study, this three-course concentration builds on three core dimensions of global health: sociocultural influences of health; methods for assessing population health; and coursework in a geographic area of interest to you.

For more information: http://www.nursing.upenn.edu/global-health-minor/

**Health Informatics, Minor**

The emerging field of health informatics is growing in relevance and influence as technologies continue to improve. Our program focuses on concepts and issues surrounding technology and information management in today's ever-changing healthcare environment. This minor is a perfect complement to advanced practice, administrative, and leadership Master's programs.

Nutrition, Minor

The focus of the Graduate level Nutrition Minor is to give students an option for more advanced nutrition courses in a manner that permits them to have documentation of this knowledge. This training will be useful for nurses who intend to practice in a nutrition-related field, for MPH students who choose to focus on nutrition-related issues such as obesity or global health, and for Penn students who intend to submatriculate for graduate level work at Penn and desire such coursework.

Quality Improvement & Safety Processes Healthcare, Minor

In this minor you’ll focus on systems thinking, the science of patient safety, patient-centered care, team-based collaboration, and quality improvement. Our faculty will mentor you in how to implement process improvement tools, and we’ll give you the opportunity to do a quality improvement project within a healthcare organization. This three-course minor can be done simultaneously with any graduate clinical program, and prepares advanced practice nurses to implement quality improvement processes and measure resultant outcomes.

For more information: http://www.nursing.upenn.edu/quality-improvement-safety-processes-in-healthcare-minor/

Curriculum

A total of 3 course units are required. We also provide a sample plan of study (https://www.nursing.upenn.edu/quality-improvement-safety-processes-in-healthcare-minor/plan-of-study/plan-of-study/) for students.

Women's Health Studies, Minor

In the Women's Health Studies minor you’ll focus on the societal factors that influence women's health, as well as how their health needs are met by healthcare systems and practitioners alike. You’ll address issues such as research gaps in women's health, the need for public policy evaluation and advocacy, and how technology can improve the medical lives of women around the world.

This minor is based on advanced practice nursing and midwifery theory, but is open to all Penn graduate students with a strong interest in women's health.

Transformative Nursing Education Program, Minor

Graduate courses in education coupled with experiential learning is integral for preparing future nursing leaders in education. The aim of this program is to produce educators who enrich learning experiences for nursing students in an academic environment, or for those nurses working in healthcare system.

Designed for nurses interested in teaching in an academic setting or in the care delivery environment as a professional development specialist, this program combines adult learning theory with a toolkit of teaching strategies and hands-on teaching opportunities. Offered in a blended online/in-class learning environment, graduate nursing students complete three courses for this program. Alternatively, students who are mainly interested in academic teaching can pursue just two courses (NURS 600 and NURS 601) aimed at preparing exemplary teachers in the classroom and clinical settings. Students exclusively interested in teaching in the service environment (e.g., hospitals) can complete two courses (NURS 600 and NURS 602) in this focus area.

Certification

Those who complete our Transformative Nursing Education program meet the educational requirements to take the NLN Nurse Educator certification exam (http://www.nln.org/), and the ANCC Nursing Professional Development Certification exam (http://www.nursecredentialing.org/NPD-Eligibility.aspx).

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Select 2 graduate level NURS electives

Total Course Units

Certification

Completing this minor does not result in eligibility to sit for a WHNP or CNM certification examination, nor does it result in eligibility for licensure.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Adult Oncology Specialist, Certificate

Our Adult Oncology Specialty Certificate is designed for practicing Master’s-prepared nurses who desire advanced training in oncology nursing from the top researchers and clinicians in the country.

Our faculty have extensive experience in oncology nursing. Students interact with nationally recognized scientists and clinicians in the field of cancer care from the School of Nursing and the University of Pennsylvania Health System’s Abramson Cancer Center. The program consists of three courses, the last of which includes clinical hours. Certificate students who have been working with oncology patients should submit a portfolio to determine if additional clinical experiences are required. Clinically-focused students will need to complete 240 clinical hours. These hours can be applied to meet the clinical hour requirements for certification.

Courses are online with synchronous and asynchronous components. Students are required to come to Penn’s campus twice over the course of their studies (2 days in the fall and 2 days in the spring) for seminars, high-fidelity simulations, and networking with experts in the field of oncology and nursing.

2020-21 Catalog | Generated 09/18/20
School of Social Policy & Practice

The University of Pennsylvania School of Social Policy & Practice, formerly Penn Social Work, is noted for its commitment to social justice and to educating students that will take an active role in the struggle against oppression. The School has articulated a social philosophy that shapes the educational programs it offers, the research it undertakes, and the leadership it provides to the profession. This statement of social philosophy – Penn Approach (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/the-penn-approach/) – is first and foremost an evolving philosophy. It reflects the faculty’s commitment to introduce students to a variety of perspectives related to social work practice, nonprofit leadership, social policy, research, racism, and oppression, and the nature of human behavior in the social environment.

The Penn Approach to the education of future social workers includes at least two major perspectives:

- a clear understanding and respect for the past and a realistic interpretation of current professional issues;
- a vision of the future that reflects a commitment to social change based on the values and philosophy of the School.

The School offers a curriculum that integrates the development of practice skills with research, the study of specific social problems and social policies, theories and methods of social change, knowledge about human relationships, and individual and societal responses to institutional racism and other “isms.”

The University of Pennsylvania School of Social Policy & Practice is educating tomorrow’s leaders to confront societal problems in a time of diminishing resources, to provide leadership to non-profit organizations, to design and facilitate real-world solutions while fostering meaningful societal change. Students can also learn about the integration of innovative technology to enhance the delivery of social services, research on welfare to work initiatives, faith-based services, and other ground-breaking faculty research.

Learn more about SP2’s history: https://www.sp2.upenn.edu/about/sp2-history/

Vision

The passionate pursuit of social innovation, impact, and justice.

Mission

The School of Social Policy & Practice contributes to the advancement of more effective, efficient, and humane human services through education, research, and civic engagement. In pursuit of this mission, our theory-based masters and doctoral programs in social work, social welfare, nonprofit leadership, and social policy encourage students to think and work across disciplinary lines and cultures as well as across national and international boundaries. The pursuit of social justice is at the heart of the School’s knowledge-building activities. Our innovative educational and research programs reinforce our vision of active student engagement in their own learning as well as that of social agencies and larger social collectivities organized at the local, national, and international levels.

Diversity & Inclusion

Throughout its history, the School of Social Policy & Practice (SP2) at the University of Pennsylvania has been committed to understanding and embracing diversity in its countless forms. With our Master of Social Work (MSW) program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/), the first program of its kind to organize its curriculum around the construct of institutional racism, two other expanding and ambitious masters programs (in Social Policy (http://www.sp2.upenn.edu/degree-programs/ms-in-social-policy/) and Nonprofit Leadership (http://www.sp2.upenn.edu/degree-programs/ms-in-nonprofit-leadership/)) that organically complement and extend our MSW offering, and two exciting doctoral programs (a clinical Doctorate in Social Work (http://www.sp2.upenn.edu/degree-programs/doctorate-in-social-work/) and a PhD in Social Welfare (http://www.sp2.upenn.edu/degree-programs/phd-in-social-welfare/)) that produce some of the most sought-after thought leaders in our fields, SP2’s mission is to think critically, thoroughly, and holistically about the many factors that impact people’s everyday lives and life chances.

As SP2 has evolved, so too has the understanding of diversity that grounds and enlivens its work. Our historic commitment to racial and economic justice has in recent years intersected in vital ways with emerging commitments individuals and communities marginalized along other axes of oppression. Individuals and organizations across SP2 have mobilized to create curricular, interpersonal, and structural space for the consideration of LGBTQ+ needs and experiences and the elevation of LGBTQ+ voices both within and beyond the School. This understanding and this commitment is about striving to consciously honor the complex and multifaceted experiences of self and community that shape our lives together.

SP2 strives to be a space of principled inclusivity, valuing differences of opinion and attempting to foster an institutional environment where we all think openly, honestly, reflectively, and deeply about the questions and concerns that both unite and divide us. For our faculty, students, and staff, diversity is a multifaceted and intersectional concept that includes careful treatment of questions about how differences linked to race, sexuality, gender identity, religion, ideology, mental illness, ethnicity, class, age, and so much more systematically privilege some and marginalize others. The issues that we grapple with—from homelessness and racism to prisoner re-entry and poverty, from responsible philanthropy and economic mobility to aging and child welfare—are some of the biggest in the academy and in society, and many seem intractable. But we also recognize that we have the best chance of doing justice to these social issues by embodying a truly diverse and inclusive space from which we can attempt to re-imagine our social world.

Promoting social justice and working against forces of oppression have been central to SP2’s efforts since the founding of the MSW program over a century ago; they ground our work to this day, challenging us all—faculty and students, alumni, staff, and community—to grow together into new knowledge and to grapple with ever-evolving examples of injustice and inequity. Understanding, respecting, and celebrating diversity is essential to SP2’s educational mission and values, and we are committed to helping students learn how to have difficult conversations, listening without pre-judgement, and addressing social problems from diverse perspectives. It is a commitment that we take seriously and one that we hope to nurture in our students as they become empowered to work for a more just, equitable, and compassionate world.

Learn more about SP2’s history: https://www.sp2.upenn.edu/about/sp2-history/
Faculty & Research
The SP2 faculty upholds Penn’s commitment to engage locally and globally. Internationally regarded for producing cutting-edge research, our distinguished scholars, practitioners, and policy advisors bring a broad range of real-world expertise and interdisciplinary focus to the classroom setting. The research of the SP2 faculty is transforming policy and shaping best-practices on international, federal, and local levels. The faculty’s important research and activism stretch across the social sciences and the humanities in ways that link nuanced methodological inquiries and important research questions to attempts at real-world problem-solving.

SP2 faculty members are readily available to students. They are inspirational instructors and supportive mentors and advisors, helping students to approach problems in innovative and creative ways.

Course Units 3.50

Total Course Units 20.00

1 A minimum of four course units of pre-program credits will be granted to applicants with an appropriate master’s degree in social work or a related profession or allied discipline.

2 At least four of the elective courses in the advanced curriculum must be taken in departments and units of the University other than the School of Social Policy & Practice. Students are encouraged to use electives to develop content and methodological expertise in their area of research. These courses must relate to the substantive content that students select for their individualized program of study, and must be listed by the University as at or above the 500 level. In some cases, students are allowed to take graduate-level courses at other universities. The student’s advisor will guide the student in the selection of elective courses.

Nonprofit/NGO Leadership, MSNPL

The Nonprofit/NGO Leadership (NPL) Program at the School of Social Policy and Practice welcomes individuals who are bright, passionate, and energized to be transformative thought leaders, social entrepreneurs, and innovators for social impact. The world needs innovative approaches to address the world’s complex social challenges. Our students are the next generation of leaders and entrepreneurs who will help transform nonprofits, social enterprises, international NGOs, educational systems, social service agencies, art and cultural institutions, foundations, and advocacy and volunteer organizations. Our program allows students to build a foundation for their professional and civic journeys as collaborative agents of innovation and impact.

Social Policy, MSSP

The Master of Science in Social Policy Program (MSSP) program is an eleven-month, ten-course program that prepares professionals with knowledge and skills to use policy to increase equality, promote equity, and forge social change. MSSP graduates are prepared for policy leadership positions in government, philanthropic foundations, research institutes, nonprofit and non-governmental organizations, and other related settings, through:

- Understanding the world views, assumptions, and philosophies underlying all policy solutions;
- Understanding how decisions about social policy issues are made, shaped and influenced at local, state, national and global levels;
- Formulating a social reform agenda that is evidence-based and aims at improving the equity, effectiveness, and efficiency of policy creation and implementation; and
- Generating and considering a wide array of policy options to address social problems.

¹ Under certain approved circumstances, the Policy Internship may be completed in the spring semester along with MSSP 632.

Social Policy/Data Analytics, MSSP & Certificate

The Master of Science in Social Policy + Data Analytics for Social Policy Certificate (MSSP+DA) is a 12-course, three-to-four-semester offering. MSSP + DA is a STEM-designated degree.

Despite the unquestionable relevance and powerful utility of the social analysis of digital data, there are currently not enough professionals trained in the substantive knowledge and skills of social policy analysis and data analytics. Data analytics developed as the multidisciplinary
convergence of computer science, statistics, and cognitive sciences. Adding the discipline of social policy to this convergence, SP2’s Master of Science in Social Policy program plus the Data Analytics for Social Policy Certificate (MSSP+DA) is the first to train students explicitly in the use of data analytics for social policy analysis, research and evaluation. The MSSP+DA provides cutting edge training for the growing and highly needed professionals of data analytics for social policy.

For more information: https://www.sp2.upenn.edu/academics/ms-in-social-policy/

Curriculum
A total of 12 course units plus an internship are required for graduation.

Social Policy Internships
The MSSP+DA provides students with competitive and cutting-edge opportunities for policy internships in data analytics that emphasize competency development in both policy analysis and data analytics. These parallel competencies position graduates to work in the fast growing and developing world of data analytics for social policy. Credit for the internship is incorporated into the MSSP+DA Capstone Seminar. The Data Analytics policy internship must consist of a minimum commitment of 150 hours.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Sample Plan of Study
The MSSP+DA program may be pursued on a full or part-time basis. While students may customize their schedules due to participation in a dual degree or certificate program, enrollment in an international course or study abroad experience, or successfully passing a waiver exam, the grid below outlines the standard schedule and course of study for full-time students.

Social Work, DSW

The Doctorate in Clinical Social Work is a fully online program that offers all the advantages of a world class learning community in a highly interactive, relational, accessible and convenient format. Balancing the rigor of doctoral education with the practical considerations of busy working professionals, students complete the coursework and dissertation simultaneously, earning the degree in 3 years without career disruption. The program uses a combination of campus immersion experiences and online course delivery (videoconferencing) that works for working professionals, wherever they live. Students enjoy an unparalleled educational experience, coming together to interact and learn on an Ivy League campus during the campus immersion experiences. Technology is used to connect, not to distance. The program recognizes the importance of relational learning and all of the online course delivery and educational strategies are chosen with an eye toward building knowledge in community. Renowned faculty from all over the world teach cutting-edge courses on the latest in clinical practice, research, and teaching. Graduates’ successes prove that the DSW is a gateway to fulfilling careers as social work practice leaders and educators.

For more information: https://www.sp2.upenn.edu/academics/doctorate-in-clinical-social-work/

Curriculum

Students begin the program with a five day immersion experience on Penn’s Philadelphia campus at the start of the fall semester (late August/early September). During this residency period, students attend their first classes and participate in a variety of activities that immerse them in the Penn experience and prepare them for the DSW program. Students come to campus for one more five-day residency period in the summer following the first year. Students who are able to travel to campus more often are invited to do so to use the library, meet with faculty, and take advantage of other campus resources and activities.

Classes meet online two evenings each week for two hours. Students and faculty log in on their personal computers or devices from wherever they are. The real-time online video conferencing format allows everyone to be seen and heard at all times, closely approximating a physical classroom experience. Students are in class for the first two years of the program; in the third year, students participate in a Dissertation Seminar Series that provides support and structure as they complete the last stages of the dissertation.

The curriculum is designed to bridge theory, practice, and research, and prepare students for teaching. Students are actively engaged in learning about and critiquing the latest developments, discoveries, and best practices in evidence-based social work practice and teaching. Classes are taught by Penn faculty and renowned visiting faculty and clinician experts from across the country. The dissertation provides an opportunity to gain deep knowledge and become a content expert in a particular area, as well as contribute to the social work knowledge base.

1. During the second year, the student cohort selects two electives and takes them together as a group.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Sample Plan of Study

First-year Curriculum

The program begins with a two-semester foundation that spans clinical theory and research and ends with a core course on trauma-informed individual and organizational interventions. Concurrent with their coursework, students engage in a dissertation workshop that helps guide them through the first stages of the dissertation project. Near the end of the first year, students are matched with a dissertation chair who shepherds them through the remainder of the dissertation process.

Second Year Courses

The Master of Social Work (MSW) Program at the University of Pennsylvania’s School of Social Policy & Practice is one of the oldest and most well-respected social work programs in the country. The program (ranked 5th in the nation by Princeton Review’s Gourman Report and 12th by U.S. News and World Report) is designed to prepare social workers for leadership roles in developing and providing services to individuals, families, groups, communities and organizations in the local, national, and global arenas. With a recently redesigned curriculum, Penn’s MSW degree melds cutting-edge innovation with a rich educational tradition rooted in social justice and social change.

For more information: https://www.sp2.upenn.edu/academics/master-of-social-work/

Curriculum

A minimum of 16 course units are required for graduation.

Third-year Curriculum

During the third and final year of the program, students complete, defend and deposit the dissertation. There is no formal coursework, but students participate in a dissertation seminar that provides structure and support and keeps them moving steadily toward the defense.

Social Work, MSW

The Master of Social Work (MSW) Program at the University of Pennsylvania’s School of Social Policy & Practice is one of the oldest and most well-respected social work programs in the country. The program (ranked 5th in the nation by Princeton Review’s Gourman Report and 12th by U.S. News and World Report) is designed to prepare social workers for leadership roles in developing and providing services to individuals, families, groups, communities and organizations in the local, national, and global arenas. With a recently redesigned curriculum, Penn’s MSW degree melds cutting-edge innovation with a rich educational tradition rooted in social justice and social change.

For more information: https://www.sp2.upenn.edu/academics/master-of-social-work/

Sample Plan of Study

Penn offers four different MSW program options, enabling students to choose the course of study that best fits with their personal circumstances and career goals: the two-year Full-Time program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/full-time-two-year/), the three-year Part-Time program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/part-time-three-year/), the Advanced Standing program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/advanced-standing/), and the Employed Practitioners program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/employed-practitioners/). Additionally, the Penn MSW program accepts students from Pennsylvania’s CWEL program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/cwel/).

While students may customize their schedules due to participation in a dual degree or certificate program, enrollment in an international course or study abroad experience, the needs of their field placement agency, or successfully passing a waiver exam, the grid below outlines the standard schedule and course of study for full-time students.

For more information: https://www.sp2.upenn.edu/academics/master-of-social-work/program-options/

Sample Plan of Study

Below is the standard schedule and course of study for full-time students.

Joint Lectures

Sequences in the MSW program may schedule sequence-wide lectures for all sections at various points in the semester. These lectures feature experts in the field and are a mandatory component of the course(s).

Founded in 1884, Penn Vet is the only veterinary school developed in association with a medical school, and is one of only four private veterinary schools in the nation. Penn Vet’s two campuses, urban and rural, offer students learning opportunities and experiences in virtually every aspect of veterinary medicine. As part of the University of Pennsylvania, Penn Vet is a key partner in one of the world’s great biomedical research and teaching centers. Our students can learn firsthand how veterinary medicine and research impacts human lives, as well as those of animals.

The relationship between animal health and human health is the core of our teaching tradition. Our distinguished faculty members bring a diverse range of academic backgrounds and unique perspectives to the classroom and clinic that will broaden our students’ views of veterinary medicine.

At the center of Penn Vet’s efforts is compassion for both animals and people, as well as the preservation of a healthy environment. People look to veterinarians as professionals who not only deliver healthcare throughout the lifespan of animals, but also improve our quality of life within that context. We value relationships with our clients and further their interests along with those of the local community. Moreover, as a profession and an institution, veterinarians are well positioned to contribute solutions to some of the world’s most pressing challenges, including food security, biosecurity, biodiversity, antimicrobial stewardship, and climate change.

On the campus where modern veterinary medicine was born, we have an obligation to train a diverse student body on emerging career pathways. Adapting the curriculum to a new vision of the veterinary profession will be critical to our success. Penn Vet will further strengthen our profession by enabling broader opportunities through novel certificate and dual degree programs that break down traditional boundaries between the veterinary and other professional disciplines: public health, human healthcare, social policy, business, and law. As a result, graduating VMDs will be better prepared to fashion their own career goals, and ultimately contribute more creatively and effectively towards building a better world.

For more information: https://www.vet.upenn.edu/

Mission

Penn Vet’s mission is to lead the advancement of health and science for the betterment of animals, humans, and their environment.

For more information: https://www.vet.upenn.edu/education/

Research

At Penn Vet, our challenge is to advance the field of veterinary medicine, and by extension, all science. Penn Vet faculty conduct groundbreaking research projects ranging in focus from osteosarcoma, molecular genetics, retinal blindness, the therapeutic potential of stem cells, the impact of stress on pregnant females, to the impact of nutrition and crating on swine health and reproduction. From large to small, from molecular to systemic, research at Penn Vet continues to push the limits of what we know about animals and humans.

The work we do here is diverse—from dinosaurs to dogs, from cytokine biology to cell engineering, from mitochondria to mapping avian flu outbreaks, our researchers are in constant motion, advancing the scientific knowledge base.

Penn Vet’s research centers are recognized throughout the nation and the world for groundbreaking advances in:

---

**School of Veterinary Medicine**

Established in 1884, Penn Vet is the only veterinary school developed in association with a medical school, and is one of only four private
We chose these thematic areas because they cover the major areas of biomedical science and we have outstanding scientists and clinicians working in each of these fields. Just a few of our achievements include our advances in stem cell biology, our strong parasite immunology group, our successes in treating inherited diseases in dogs and cats using gene therapy, our remarkable programs in clinical and basic neuroscience, and our basic and emerging translational work in comparative oncology. In research that impacts humans and non-humans alike, Penn Vet is leading the way toward eminence in veterinary scientific investigation.

For more information: https://www.vet.upenn.edu/research/}

Diversity

The School of Veterinary Medicine welcomes and accepts diversity in the broadest context so as to recognize, value and learn from all people of varying cultural backgrounds regardless of their race, color, sex, sexual orientation, gender identity, religion, creed, national or ethnic origin, citizenship status, age, disability, veteran status, or any other legally protected class status.

One of the missions of the Office for Faculty Affairs and Diversity is to foster a respectful, creative, and collaborative environment that will support the faculty, staff and student body, to maximize their contributions to the educational, research, clinical, and service missions of Penn Vet.

Our goal is to make Penn Vet a more welcoming and diverse institution by devising strategies for attracting exceptional scholars and students, and nurturing their development. Penn Vet's diversity among its faculty and student body is of paramount importance, because brilliant scholars and students are absolutely essential in keeping the institution become productive, creative, competitive, and successful in its mission to train the next generation of leaders in all fields of Veterinary Medicine.

Penn's stature as an eminent and innovative University rests on our conviction, combined with compelling evidence that excellence and diversity go hand in hand. The School of Veterinary Medicine is eager to move decisively forward in building an ever more diverse and eminent faculty, and in fostering an inclusive and equitable community.

Multiple resources are available at UPenn to support and promote our diverse faculty and student body.

Faculty and Staff Resources for Diversity

- University Council Committee on Diversity and Equity
- Woman of Color at Penn
- Affirmative Action and Equal Opportunity Programs
- UPenn LGBT Center
- Lesbian, Gay, Bisexual, Transgender, Questioning and Ally employees at Penn (LEAP)

Student Resources for Diversity

- School-Affiliated Organizations
- Minorities and Cultural Diversity
- Religious Diversity
- UPenn LGBT Center
- Lesbian, Gay, Bisexual, Transgender, Questioning and Ally employees at Penn (LEAP)

History

Founded in 1884, the School of Veterinary Medicine at the University of Pennsylvania – Penn Vet – is one of the world’s premier veterinary schools. Penn Vet is the only veterinary school in the United States that was a direct outgrowth of the University's School of Medicine. A pioneer since its inception, Penn Vet has led the way in such areas as infectious disease research, germ cell biology, animal transgenesis, comparative oncology, and comparative medical genetics.

Penn Vet has also successfully integrated scholarship and research with all aspects of veterinary medical education. The School’s strength in basic sciences, immunology, and mathematical modeling are valuable assets for developing strategies to rapidly detect and control the spread of new infections, and improving and developing vaccines that effectively protect animals.

Animal Welfare and Behavior, Certificate

This four-course, for-credit Certificate Program in Animal Welfare Science and Animal Behavior is designed for individuals working with animals in research, industry, and the nonprofit sector, as well as for those who are interested in developing careers in animal health and welfare. Taught by nationally and internationally renowned Penn Vet faculty, it prepares students to understand how animal welfare and behavior are understood and assessed. The course follows Penn’s semester schedule and includes both asynchronous and weekly synchronous components, allowing students direct contact with multiple faculty members who have unique expertise in large and small animal health, welfare, and behavior.

For more information: http://www.vet.upenn.edu/AWB (http://www.vet.upenn.edu/AWB/)
Curriculum

This certificate requires the completion of four courses.

Animal Welfare and Behavior, MSAWB

This online Master of Science in Animal Welfare and Behavior provides in depth training in the science of animal welfare to working professionals engaged in animal protection, animal agriculture and food production, animal research, animal oversight or animal health as well as students interested in developing a career in these areas. The degree includes eight or nine online courses that can be completed in two-four years.

## Stuart Weitzman School of Design

As a diverse community of scholars and practitioners, the School is committed to advancing the public good—both locally, nationally, and globally—through art, design, planning and preservation. With 3 research degrees, 7 professional degrees and 15 certificates offered, the Weitzman School of Design’s graduate programs are consistently ranked among the top 10 in the nation, and serve as a platform for groundbreaking research as well as community engagement.

Learn more about our school leadership and the Weitzman School of Design student experience: https://www.design.upenn.edu/about (https://www.design.upenn.edu/about/).

## Mission

The Weitzman School of Design prepares students to address complex sociocultural and environmental issues through thoughtful inquiry, creative expression, and innovation. As a diverse community of scholars and practitioners, we are committed to advancing the public good—both locally and globally—through art, design, planning, and preservation.

## History

Although the Weitzman School of Design dates its founding from 1890, architecture courses were first offered in 1868, making Penn’s architecture program the second oldest in the United States. In 1921, the Department of Architecture joined with the Department of Music.

2020-21 Catalog | Generated 09/18/20
and Fine Arts to create an independent undergraduate School of Fine Arts modeled on the French École des Beaux Arts. In 1958, the School was renamed the Graduate School of Fine Arts, reflecting the shift to graduate degree offerings in architecture, city and regional planning, landscape architecture and fine arts. In the 1980s, a program in historic preservation was added. To more accurately capture the School’s sphere of influence, it was renamed the School of Design in 2003, and, in early 2019, the University named the School for award-winning designer Stuart Weitzman in recognition of his lifetime commitment and support. Today, the School is made up of a standing faculty of 43, approximately 160 lecturers and associated faculty, and more than 700 students.

Architecture, MS

The Master of Science degree, first offered in 1984, is intended for individuals with an undergraduate professional degree in architecture who wish to pursue a self-directed program of study at the advanced level. It enables students to gain a greater understanding of the relationship between the discipline and the profession. A total of ten approved courses are required, including one course in Architectural Theory and an individually directed selection of electives from the Master of Architecture program, and a qualifying exam. This degree is normally completed in one calendar year. Applicants must hold a bachelor’s degree in architecture.

Architecture, PhD

The Ph.D. Program in Architecture, created in 1964, is the oldest in the country and is widely regarded as preeminent in the fields of theory, technology and representation. Its goal is to produce a body of graduates...
who will act as a reflective leaven to the architectural profession, providing an historical and/or theoretical context for current practice.

The Doctor of Philosophy in Architecture is for the person who wishes to make a significant scholarly contribution to the discipline of architecture. Requirements for the degree include twenty approved courses, the passing of two language exams, a qualifying examination, a preliminary examination, teaching experience, a dissertation and a final defense. Course work from previous Master's degrees is taken into consideration when deciding the number of courses required for the Ph.D. degree. Students with a Master's degree from Penn may be granted up to 12 course units transfer credit, those with a Master's degree from another institution may be granted up to 8 towards their Ph.D. requirement.

For more information: https://www.design.upenn.edu/architecture/graduate/info

City Planning, PhD

The University of Pennsylvania is an intellectually stimulating environment in which to study the serious problems that face our metropolitan areas today and the broad spectrum of responses to meet those challenges. Students enrolled in the City and Regional Planning Ph.D. program have easy access to a broad, multi-disciplinary faculty and all the resources of a first-rate urban research university.

The Ph.D. program in City and Regional Planning (CPLN), governed by the Graduate Group in City and Regional Planning, is one of the oldest in the country, dating back to the 1950s. Penn's faculty has guided more than 300 students though their graduate studies to the completion of the degree and aided them in assuming positions of leadership in both academia and the profession throughout the United States and across the world.

Penn’s Ph.D. program in city and regional planning has a straightforward objective: to train thought-leaders and exceptional scholars. To this end, the Graduate Group aims to ensure acquisition of strong research and communication skills. It is also committed to cultivating enduring faculty/student mentoring relationships and collegial networking among a students’ peers, including other Ph.D. students in urban-focused disciplines.

For more information: https://www.design.upenn.edu/city-regional-planning/phd/about

View the University’s Academic Requirements for PhD Degrees (p. 1939).

Curriculum

Coursework

A total of 20 course units are required.

The Graduate Group in City and Regional Planning does not designate a formal list of required courses other than the Doctoral Seminar and research methods, but allows students to work with the Graduate Group Chair and their principal advisor to develop a study plan consistent with their research and future teaching interests.

Additional Requirements
Additional elements of the program include:

• Preparatory Requirements (Writing and Presentation and Scholarly Preparation)
• Qualifying/Candidacy Examinations
• Dissertation

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Architecture, MArch
The Master of Architecture Professional Degree is a comprehensive and rigorous program, preparing graduates for the full range of activities in the profession. An intensive sequence in Design Studios constitutes the focus of the program. Thorough training is also provided in history, theory, technology, ecology, society, and professional practice. Studios and courses are supported by a rigorous program in visual studies that develops skills in digital and new media. At the upper levels of the program students establish individual trajectories by selecting from a range of elective studios and courses with leading figures in design, technology and theory. The final year culminates in advanced design studios that include research directed by leading designers as well as the option of an independent thesis. Summer programs abroad and studios based in other countries provide opportunities for international studies. The program aims to develop critical, creative and independent thinking that realizes potentials within an ever-changing world. The Master of Architecture degree is a professional degree accredited by the National Architectural Accrediting Board (NAAB) and is a STEM designated program.

Students who hold a five-year professional Bachelor of Architecture degree or its equivalent are not eligible to apply to the Master of Architecture program. They are encouraged to look into one of the post-professional Master of Science in Design degree programs.

The Master of Architecture Program may be combined with certificate programs offered in the Weitzman School of Design.

Course Waivers
In some instances, students with a specialized background in a subject will be given permission to waive a required course. A course waiver waives the course requirement NOT the total course units to complete the degree.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Architecture: Advanced Architectural Design, MSD

This three-semester Master of Science in Design with a concentration in Advanced Architectural Design [MSD-AAD] is for architecture students with five-year professional bachelor degrees from the US and around the world. This course of study does not lead to a professional degree in architecture. The MSD-AAD program builds on its success as a program focused on innovation in architecture design.

The purpose of the MSD Advanced Architectural Design program is four-fold. First, to prepare students for high level design research in the profession or academy in contemporary issues that affect the architecture discipline. Second, to develop skills in emerging design and cross-disciplinary tools. Third, to critically engage the theoretical dimensions of the contemporary architectural discourse around these tools; and fourth, to integrate advanced digital modeling techniques into a design methodology that has direct bearing on the development of material, production, fabrication and construction processes and their aesthetics.

The advanced architectural design-based program starts with a mandatory ten-day workshop in design technique. A coordinated semester of advanced architectural design and courses follow after which the students join the Master of Architecture program for one year. During this year students pursue an individually directed course of study by choosing from a wide range of options in advanced architectural design studios, and elective courses offered within the Master of Architecture program.

Architecture: Environmental Building Design, MSD

The Master of Science in Design with a concentration in Environmental Building Design (MSD-EBD) is an advanced, three-semester, post-professional degree designed for architects seeking new skills and competitive advantage in the growing field of sustainable design. With the renewed urgency of environmental issues—from global climate change to ‘net-zero’ design—architects are faced with demands for new kinds of services that require a new kind of professional. LEED accreditation is a start, helping designers utilize existing technologies, but a wider range of skills is required to achieve real innovation and to meet the needs of clients in this rapidly changing field. New building design, renovation of existing buildings, and environmental analysis at many scales are critical aspects of comprehensive environmental design. The challenge to architects is to operate at scales greater and smaller than that of the building, requiring the understanding of the chemistry of materials as well as consideration of the impact of whole populations of buildings on their local, regional, and global ecosystems.

Architecture: Historic Preservation, MSD

The one-year Master of Science in Design with a concentration in Historic Preservation (MSD-HP) complements Weitzman School's long-standing two-year MSHP degree. The MSD-HP directly addresses the needs of practicing design professionals seeking post-professional training, specialization, or change in career path. The MSD-HP curriculum requires 12 CUs and spans one calendar year – two full-time semesters, plus one summer studio course. Half of the required courses are elective; personalized curricula can accommodate advanced thesis research or additional studios. Applicants must possess a professional degree in design or planning fields (architecture, landscape architecture, interior architecture, urban planning, urban design, engineering) from an accredited university, and at least three years of professional experience.

Architecture: Robotics and Autonomous Systems, MSD

The Master of Science in Design: Robotics and Automated Systems (MSD-RAS) explores avenues for re-situating the role of architectural design within present day autonomous technologies. The program critically develops novel approaches to manufacturing, construction, occupation, demolition and re-use, through creative engagement with robotics, material systems, and design-computation. Students develop skills in advanced forms of robotic manufacturing, artificial intelligence, sensor and vision technologies in order to develop methods for design that harness production or live adaption as a creative opportunity. Operating predominantly through material prototyping and robotic fabrication, participants critically assess the socio-political, ethical and philosophical dimensions of a recent societal shift towards algorithmic and autonomous technological dependence, and provoke alternative forms of dialogue with industry and culture that address our individual and collective engagement with the built environment. The work of the program is both highly speculative and physically manufactured. Students collaboratively develop robotically manufactured architectural prototypes (part or whole) that is presented and exhibited at the completion of the program.

2020-21 Catalog | Generated 09/18/20
City & Regional Planning: Housing, Community and Economic Development, MCP

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

The Housing, Community and Economic Development concentration focuses on how planners and policy leaders influence the social and economic factors shaping metropolitan economies and urban neighborhoods, particularly low-wealth communities and communities of color. It prepares graduates for positions in housing, community and economic development finance, neighborhood revitalization, workforce development, center city re-development, and public sector management of urban and regional economic development. Housing, Community and Economic Development is a four-credit concentration.

For more information: https://www.design.upenn.edu/city-regional-planning/graduate/program

Curriculum

A total of 18 course units are required for graduation. 15 course units must be in City Planning (CPLN) courses.

Internship Requirement

Because a planning education extends beyond the classroom, all MCP students are required to complete a planning internship, usually between their first and second years. Internships may be paid or unpaid, for at least six weeks. Internships can be completed at any government agency or commission, private consulting firm, or non-profit or advocacy organization involved in planning practice, or research.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
City & Regional Planning: Land Use & Environmental Planning, MCP

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

Land use and environmental planning are at the core of city planning. With the U.S. forecast to add more than 80 million new residents over the next forty years (and the world forecast to add 3 billion), land use and environmental planners will have to figure out new ways to accommodate population and economic growth while strengthening existing cities and towns; preserving precious and irreplaceable farm and resource lands; promoting new urban forms such as transit-oriented and mixed-use development; taking advantage of new water, land, telecom, and transportation infrastructure systems; promoting clean air and water, and robust ecologies; and reducing the carbon footprint of cities and suburbs alike. Students who complete the Land Use and Environmental Planning concentration work for local and municipal governments, for land use and environmental planning consultants, for and regional growth management agencies, and for smart growth, land conservation, and sustainable development policy and advocacy organizations.

1 Students choosing to take Site Planning for this requirement may NOT count it towards their Core Breadth Methods requirement.

Internship Requirement

Because a planning education extends beyond the classroom, all MCP students are required to complete a planning internship, usually between their first and second years. Internships may be paid or unpaid, for at least six weeks. Internships can be completed at any government agency or commission, private consulting firm, or non-profit or advocacy organization involved in planning practice, or research.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

City & Regional Planning: Public & Private Development, MCP

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

Students in the Public & Private Development concentration will learn the planning, design, entrepreneurial, and financing principles of developing for-profit and community-oriented housing and commercial development
projects; how to put together development proposals and plans that meet the needs of tenants, the marketplace, and the community; how to develop projects that are economically, socially, and environmentally sustainable; and how private developers can work in partnership with cities and towns, redevelopment agencies, non-profits, and community groups to create affordable housing and public-private development partnerships. These same skills and abilities will be widely valued outside the United States, especially in growing areas of Asia and South America.

1 Students who take CPLN 504 Site Planning to meet this elective may NOT use it to meet the Core Breadth Methods requirement.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

City & Regional Planning: Smart Cities, MCP

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

Today's combination of portable-yet-powerful computing and communication devices and Internet-accessible 'big data' are democratizing all aspects of urban planning and decision-making. In the process, these factors are transforming planners from central information gatekeepers into bottom-up enablers who are helping city dwellers take better advantage of the opportunities and richness of urban life. By giving constituents quick access to usable information, these new technologies are connecting planners, residents, businesses, and nonprofits to make them smarter and more productive. The purpose of this concentration is to give MCP students the skills and abilities they will need to develop planning applications that seamlessly combine user-friendly data retrieval and modeling procedures with individual and collaborative urban planning and design tools.

City & Regional Planning: Sustainable Transportation & Infrastructure, MCP

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

This concentration explores the roles of transportation and other capital infrastructure systems in shaping urban and metropolitan development patterns in the U.S. and around the world. It focuses foremost on urban highway, public transit, and non-motorized transportation systems and their connections to sustainable, livable and economically-productive development forms; and secondly on water, energy, and communications infrastructure. It covers initial planning and development topics (such as right-of-way and system planning issues), linkages to urban and economic development issues (such as those surrounding high-speed rail), and ongoing finance and management topics such as pricing, equity of access, and value creation. Students who complete the Sustainable Transportation & Infrastructure Planning concentration work for local and municipal governments, for state highway departments and metropolitan transit operators, for transportation and infrastructure planning consultants, for system developers and utilities, and for policy and planning organizations advocating more sustainable transportation and development choices.

Internships may be paid or unpaid, for at least six weeks. Internships can be completed at any government agency or commission, private consulting firm, or non-profit or advocacy organization involved in planning practice, or research.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

---

**City & Regional Planning: Urban Design, MCP**

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

The Urban Design concentration focuses on understanding the links between the physical form and structure of cities and regions and the economic, social and political forces that shape them. It provides knowledge about alternative theories and methods for the physical improvement of urban places and includes courses in graphic communication, the history and theory of design, and the context and operation of development incentives and controls. Graduates from the Urban Design concentration typically work in local government or for private design firms developing urban design plans, neighborhood and district plans, public space and street plans, and, increasingly, plans for new communities.

For more information: [https://www.design.upenn.edu/city-regional-planning/graduate/program](https://www.design.upenn.edu/city-regional-planning/graduate/program/)

**Curriculum**

A total of 18 course units are required for graduation. 15 course units must be in City Planning (CPLN) courses.

Students in the Urban Design concentration may not take CPLN 504 to meet their Core Breadth Methods requirement.

**Internship Requirement**

Because a planning education extends beyond the classroom, all MCP students are required to complete a planning internship, usually between their first and second years. Internships may be paid or unpaid, for at least six weeks. Internships can be completed at any government agency or commission, private consulting firm, or non-profit or advocacy organization involved in planning practice, or research.

![Image of internship requirement](https://www.design.upenn.edu/fine-arts/graduate/)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Fine Arts, MFA**

The two-year Master of Fine Arts program at Penn is focused on the professional development of studio artists. Through studio work, seminar courses, international residency opportunities, and interactions with vital working artists, the program provides an open intellectual framework to foster critical awareness and independent methods of artistic research. Students extend their conceptual strategies while inventing and then refining their own hybridized forms of art-making methods. The program encourages exploration, extending studies into other disciplines within the Weitzman School of Design and the University at large through a rich selection of outside electives and optional certificate and dual-degree programs.

For more information: [https://www.design.upenn.edu/fine-arts/graduate/program/](https://www.design.upenn.edu/fine-arts/graduate/program/)

**Curriculum**

A total of 19 course units are required for graduation.

With permission of the Department Chair, a student may substitute up to 3 FNAR elective requirements with general (outside) electives.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Historic Preservation, MSHP**

The Master of Science in Historic Preservation degree requires two academic years of full-time study, including core subjects and specialized study in one of four focus areas: architectural conservation, preservation design, preservation planning, and public history of the built environment.

For more information: [https://www.design.upenn.edu/historic-preservation/about/](https://www.design.upenn.edu/historic-preservation/about/)

**Curriculum**

A total of 19 course units are required.

All courses must be pre-approved by the student’s advisor prior to registration each semester. In addition, students are expected to complete a summer institute (HSPV 790) before their first year, and a summer internship between their first and second years of study.

### Landscape Architecture & Regional Planning, MLA

The Department of Landscape Architecture and Regional Planning offers two primary courses of study leading to a professionally accredited Master of Landscape Architecture (MLA) degree. The first professional degree program is three years in length and is designed for students with an undergraduate degree in a field other than landscape architecture or architecture. The second professional degree is two years in length and is designed for those who already hold an accredited bachelor's degree in either landscape architecture or architecture. Students may be admitted with advanced standing into either of these programs depending upon their respective backgrounds. Dual degree programs with Architecture (MLA/MARCH), City Planning (MLA/MCP), Historic Preservation (MLA/MSHP), Urban Spatial Analytics (MLA/MUSA), or Fine Arts (MLA/MFA) are also available. The Master of Landscape Architecture degree may be combined with Weitzman School of Design certificate programs, such as the Urban Design Certificate. The Department also offers a Certificate in Landscape Studies, designed for students who may wish to augment or focus their prior work through research into landscape topics.

For more information: [https://www.design.upenn.edu/landscape-architecture/work](https://www.design.upenn.edu/landscape-architecture/work/)

### Urban Spatial Analytics, MUSA

The for-profit sector has embraced data and analytics as a means to increase efficiency and grow the bottom line. The government and non-profit sectors are next in line. The Master of Urban Spatial Analytics is a one year graduate program that teaches students how to use spatial analysis and data science to address the most pressing public policy and city planning conundrums of our day. We are teaching the next generation of civic technologists. The one-year MUSA program combines coursework on GIS, spatial analysis, data science, statistics, R and python programming, data visualization and web-based mapping with world-class urban content coursework from across the University of Pennsylvania. The program is administered jointly by the Weitzman School of Design and the Penn Institute for Urban Research.

Students enrolling in the MUSA program are expected to have a basic familiarity with GIS (including ESRI's ArcGIS or ArcView programs) and descriptive/inferential statistics. For those who lack such background, MUSA and the Weitzman School of Design offer introductory GIS courses during the summer, two weeks prior to the start of the fall term.

For more information: [https://www.design.upenn.edu/musa/about/](https://www.design.upenn.edu/musa/about/)

Course Sequence

Full-Time: 2 terms / 9 months

- Fall Year 1 - 5 course units
- Spring Year 1 - 5 course units

Part-time: 4 terms / 18 months

- Fall Year 1 - 3 course units
- Spring Year 1 - 3 course units
- Fall Year 2 - 2 course units
- Spring Year 2 - 1 course unit / capstone

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Ecological Architecture, Certificate

The goal of the Certificate in Ecological Architecture is to enable students to critically engage in performance-based design, using innovative techniques and exploring new possibilities. It introduces students to the range of approaches in the required courses of the Certificate, and then allows them to pursue different emphases through a selection of elective courses. The use of design to achieve environmental health and well-being involves the acquisition of basic analytical skills and tools, a broad understanding of the dynamic interaction among the natural, technological, and cultural environments, and the study of techniques of immediate use to designers.

For more information: https://www.design.upenn.edu/all-degrees-certificates/ecological-architecture-certificate

ARCH 734 Ecological Architecture - Contemporary Practices  
ARCH 751 Ecology, Technology, and Design

Elective Courses

Select 3 course units from the following:

- ARCH 712 Topics in 20th Century Architecture
- ARCH 732 Technology Designated Elective
- ARCH 753 Building Performance Simulation
- ARCH 754 Performance Design Workshop
- CPLN 531 Introduction to Environmental Planning & Policy
- CPLN 641 Progressive Development
- CPLN 687 Topics in Historic Preservation
- CPLN 730 Sustainable Cities
- EAS 503 Energy Systems and Policy
- EAS 505 Climate Policy and Technology
- EAS 506 Electricity and Systems Markets
- ENVS 674 Life Cycle Assessment
- LARP 760 Topics in Ecological Design
- LGST 815 Environmental Management: Law and Policy

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Ecological Planning, Certificate

Interest in ecological planning has been increasing in recent years along with the growing awareness of the impacts of climate change on the world's ecosystems, wildlife, and human settlements. The availability of water and the management of storm water and wastewater have become critical issues in planning for the future of human settlements. Of paramount importance is for students to understand the role of natural cycles (hydrologic, carbon, nitrogen, etc.) and the varying carrying capacity of different landscapes to support human settlements. Jobs in sustainability are becoming popular both in the public sector (e.g., Philadelphia's Office of Sustainability) and in the private sector (e.g., environmental compliance officers and consulting firms). The Certificate in Ecological Planning draws on courses within the Weitzman School of...
Design, the Environmental Studies Program, and other Schools to offer students an interdisciplinary approach to Ecological Planning.

For more information: https://www.design.upenn.edu/all-degrees-certificates/certificate-ecological-planning

Curriculum

A total of 5 course units are required to complete the Certificate program.

Students in the MCP program with a Land Use and Environmental Planning concentration must, in addition to the four courses taken to meet the LUEP Concentration requirements, take a Science Course Elective and two additional courses from the Other Elective Courses list. The Science Course and Other Elective Courses may not double-count for the LUEP concentration and Ecological Planning Certificate.

1 Substitutions to required courses must be approved in writing by the director of the certificate program and submitted to the Weitzman School of Design Office of Student Services.

2 MLA students could take the CPLN 702 Ecological Systems studio or propose to have one of the available LARP 700-level studios substitute for the CPLN studio, with approval of program directors.

3 Alternative elective courses must be approved in writing by the director of the certificate program and submitted to the Weitzman School of Design Office of Student Services.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Emerging Design and Research, Certificate

Today’s design problems require crossing disciplines. They continuously challenge us to apply new skills, methods, tools, and techniques to situations that cannot be addressed with the expertise of a single domain. As designers develop new intuitions to respond to emerging problems, they often need to extend their vocabulary to work in a wide variety of media—ranging from print and screen-based interfaces, mobile applications, responsive materials, and urban-scale installations to programming the behavior of organic matter. In addition to such broad literacy, it also becomes increasingly necessary to understand how design interacts with society at large and resonates with the cultural, political, economic, and environmental realities of 21st Century.

The Emerging Design and Research Certificate credentials an area of concentration that addresses the need for such a design culture. It teaches the theories, techniques, and technologies required for a new breed of artists, designers, and researchers to be equally versed in visual communication, physical prototyping, software, hardware, and interaction design. For today’s cultural producers, the program fosters a pedagogy in which individuals can design their creative expressions, resistances, responsibilities, and critical attitudes as a response to the society they are living in. In addition to taking classes, students are expected to propose and realize a research project under the guidance of the Certificate director and to follow a study plan that includes the courses necessary to realize their project. In the Certificate program, students are able to study visual communication and take graphic design classes, but can also expand their studies by taking other types of design classes offered across the Weitzman School of Design.

Energy Management & Policy, Certificate

The Certificate in Energy Management and Policy is offered through the Kleinman Center for Energy Policy at PennDesign. This certificate draws on the interdisciplinary nature of energy policy education at Penn, and draws from a comprehensive set of courses across several schools at Penn, with a foundational offering in the Weitzman School of Design. The certificate is intended for professional graduate students currently enrolled at the University interested in adding an understanding of energy policy to their list of educational qualifications.

For more information: https://kleinmanenergy.upenn.edu/certificate-energy-management-and-policy

Curriculum

A total of 5 course units are required to complete the Certificate program.

Total Course Units 5

1 Substitutions must be approved in writing by the Director and submitted to the Weitzman School of Design Office of Student Services. Students enrolled in the Master of Fine Arts program at the Weitzman School of Design may double count these courses towards their graduate degree.

Students enrolled in other programs at the Weitzman School of Design or at Penn must receive permission from their graduate degree program director to apply these courses to their primary degree.

Environmental Building Design, Certificate

The Certificate in Environmental Building Design is only open to students enrolled in the Master of Architecture degree program. Students in the Master of Architecture degree program are eligible to apply for the Certificate as part of the regular spring admission cycle, allowing them to join the program in their 700 year with the incoming cohort of MSD-EBD students in the ARCH 752 and ARCH 708 sequence. The other required courses can be taken by MArch students independently and prior to their acceptance into the Certificate program. The students will take 4 course units of required courses and 2 course units of ARCH 708, which is taken in lieu of ARCH 704.

For more information: https://www.design.upenn.edu/all-degrees-certificates/certificate-environmental-building-design

Curriculum

A total of 6 course units are required to complete the Certificate program. The Certificate is open to students enrolled in the Master of Architecture program only.

1 Substitutions must be approved in writing by the Director and submitted to the Weitzman School of Design Office of Student Services.

2 Students who have previously taken an introductory GIS course in another department (e.g. URBS 530, SWRK 730, or HSPV 741) may use it to meet this requirement subject to the permission of the Certificate director.

3 Students who have completed CPLN 503 may take CPLN 632/LARP 741 as an advanced course.

Historic Preservation, Certificate

The Certificate in Historic Preservation provides an opportunity for students enrolled in other graduate degree programs (including Architecture, Landscape Architecture, and City Planning) to gain expertise in historic preservation while completing requirements for their professional degree.

For more information: https://www.design.upenn.edu/all-degrees-certificates/historic-preservation-certificates

Land Preservation, Certificate

This Certificate is aimed at two types of students: working practitioners needing basic training in land preservation or updating current practices, and graduate students in Penn's schools interested in adding knowledge about land preservation practices to their professional qualifications. These include students in the Weitzman School of Design, the School of Arts and Sciences (especially in Environmental Studies), Fels, the Law School, and The Wharton School.

For more information: https://www.design.upenn.edu/all-degrees-certificates/land-preservation-certificate
**Curriculum**

A total of 5 course units are required to complete the Certificate program.

Weitzman School of Design students may complete this Certificate within the time-span of their chosen degrees in the same manner as other School-wide certificates. All others complete the five course unit program.

Substitutions must be approved in writing by the Director and submitted to the Weitzman School of Design Office of Student Services.

For more information: [https://www.design.upenn.edu/all-degrees-certificates/landscape-studies-certificate](https://www.design.upenn.edu/all-degrees-certificates/landscape-studies-certificate/)

**Landscape Studies, Certificate**

In response to the increased and broad interest in landscape topics, the Department of Landscape Architecture offers a Certificate in Landscape Studies. This is targeted toward students enrolled in other programs in both the Weitzman School of Design and the University more broadly, as well as to mid-career professionals and scholars who wish to enhance their education. Potential candidates must apply for admission in accordance with school procedures. Accepted students must complete 5 course units from the Department of Landscape Architecture. Typically, these course units will be elective courses, although courses required for the MLA curriculum such as those from the Theory, Media, and Workshop sequences may be taken with permission from the instructor.

For more information: [https://www.design.upenn.edu/all-degrees-certificates/landscape-studies-certificate](https://www.design.upenn.edu/all-degrees-certificates/landscape-studies-certificate/)
At least one course must be in each of Architecture, City Planning, and the Wharton School. Substitutions must be approved in writing by the Director and submitted to the Weitzman School of Design Office of Student Services.

CPLN 540 or REAL 821 is a prerequisite for CPLN 641.
FNCE 611 is a prerequisite for REAL 721.
REAL 721 is a prerequisite for REAL 821.

Real Estate Design and Development Certificate for MCP-PPD Students

In addition to the four courses taken to meet the PPD concentration requirements in the Master of City Planning program, students must take 3 additional courses from the above list to also receive the REDD certificate. Courses may not double count for the PPD concentration and the REDD certificate.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Time-Based and Interactive Media, Certificate

The Time-Based and Interactive Media Certificate program is suited for graduate students and professionals who wish to develop skills with the moving image, digital technology, and interactivity. The curriculum will enable applicants to engage in new technologies and skills that could be incorporated into their practice, or extend their knowledge to improve their career opportunities.

The selection and sequence of the elective courses must be approved by the Director and must be completed within six semesters.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Urban Design, Certificate

The Certificate in Urban Design is open to students already enrolled at the Weitzman School of Design in Architecture, City Planning, Historic Preservation, Fine Arts, or Landscape Architecture. The pedagogy of Urban Design education at the Weitzman School of Design is interdisciplinary and based on an appreciation of the city as an irreducibly complex socio-political and ecological system. This manifests in the diversity of faculty teaching in the Certificate and in the course content. The curriculum for the Certificate in Urban Design includes courses in the fundamental principles of urban design, how urban design is produced and implemented, the history and theory of urban design, and an interdisciplinary studio emphasizing design as research. The studio investigates important current urban issues either in the U.S. or in an international setting and approaches urbanism through a range of contemporary theoretical and methodological lenses. The studio is considered a capstone educational experience for students coming from the different disciplines in the Weitzman School of Design and students are expected to work collaboratively in the exploratory pursuit of innovation.

Students interested in the Certificate in Urban Design should contact the certificate director for the most up to date information.

For more information: https://www.design.upenn.edu/all-degrees-certificates/urban-design-certificate (https://www.design.upenn.edu/all-degrees-certificates/urban-design-certificate/)

### Urban Resilience, Certificate

The Urban Resilience Certificate draws on resilience expertise within the different departments of the School and builds upon a rich legacy at Penn. Rooted in Ian McHarg's layered-analysis methods of thinking holistically across systems and scales, the certificate offers a foundational program for 'resilience by design.' It includes a flexible set of courses offered at the Weitzman School of Design as well as at Wharton and the School of Engineering and Applied Science. The certificate is intended for professional graduate students enrolled at the Weitzman School of Design who are interested in adding an understanding of urban resilience, and how to design within a risky and uncertain world, to their list of educational qualifications.

The term resilience has different meanings in different domains. Often it is defined simply as the ability to deal with specific shocks or stresses. Resilience, for example, is easily equated with flood risk management. In the engineering world the term is generally used to mean the ability to withstand or bounce back from shocks or stresses. Such simple definitions not only run the risk of overlooking the distinctions between damage mitigation, resilience, and adaptation, but they also misrepresent the transformative potential of the concept. A broader definition of (urban) resilience, as the ‘capacity of individuals, communities, institutions, business, and systems within a city to survive, adapt, and grow no matter what kinds of chronic stresses and acute shocks they experience’ ([100 Resilient Cities](https://www.design.upenn.edu/all-degrees-certificates/urban-resilience)), challenges us to think of urban systems as complex and adaptive. Designing in such systems forces designers to work across disciplines, at different (time-) scales simultaneously, and in both the social and physical domains. Designers must accept and embrace emergence and uncertainty. While the certificate program offers students an understanding of such challenges as climate change and inequality, and introduces concrete tools for analyzing, communicating, managing, and strategizing about these challenges ‘by design,’ it also urges students to re-think the position of the design disciplines in the face of fundamental uncertainty and lack of control. The program shows students how designers can have agency by participating in cities understood as complex adaptive systems.

---

**The Wharton School**

In 1881, American entrepreneur and industrialist Joseph Wharton established the world’s first collegiate school of business at the University of Pennsylvania.

Wharton’s pioneering vision was to produce graduates who would become “pillars of the state, whether in private or in public life.” The Wharton School maintains a long tradition of educating visionary business leaders in academia, business, government, and not-for-profit organizations.

Today, Wharton has expanded the scope of this vision to become the most comprehensive source of business knowledge in the world — with over 225 faculty members, 95,000 alumni, 5,000 students across 10 academic departments, 20 research centers, and more than 9,000 executive education participants annually.

Learn more about our history: https://www.wharton.upenn.edu/about-wharton/

Learn more about our school leadership: https://www.wharton.upenn.edu/senior-leadership/

---

**Mission and Philosophy**

Founded in 1881 as the first collegiate business school, the Wharton School (https://www.wharton.upenn.edu/) of the University of Pennsylvania is recognized globally for intellectual leadership and ongoing innovation across every major discipline of business education. With a broad global community and one of the most published business school faculties, Wharton creates economic and social value around the world. The School has 5,000 undergraduate (https://undergrad.wharton.upenn.edu/), MBA (https://mba.wharton.upenn.edu/), executive MBA (https://executivemba.wharton.upenn.edu/), and doctoral (https://doctoral.wharton.upenn.edu/) students; more than 9,000 participants in executive education (http://executiveeducation.wharton.upenn.edu/) programs annually and a powerful alumni network (https://alumni.wharton.upenn.edu/) of 95,000 graduates.

Wharton Doctoral Programs train students to become academic thought leaders. As leading research scholars, students will develop the ideas that advance academic knowledge and generate innovations in business theory and practice. Students will work closely with Wharton faculty to learn the practice of rigorous research and use the unparalleled resources of the School and University to define their impact as a scholar.

---

**Research Environment**

Wharton is part of the University of Pennsylvania, an R1 research institution with deep commitment and broad resources to support student and faculty research.

**Research That Matters**

Our faculty will tell you that producing high-quality research is critical to your success. It’s the core of the doctoral experience and academic life. The best way to understand what our students do is to browse their research on each program of study site (https://doctoral.wharton.upenn.edu/programs-of-study/), learn about the awards and honors (https://doctoral.wharton.upenn.edu/student-awards/) they receive, and read about their career placements (https://doctoral.wharton.upenn.edu/career-placement/) at top universities and institutions.

**Centers for Knowledge**

Through Wharton’s 10 departments (https://www.wharton.upenn.edu/departments/) and 20 research centers and initiatives (https://www.wharton.upenn.edu/research-centers/), students have access to faculty within a deep and broad environment that fosters their intellectual growth. As students’ ideas take shape and even change, they can build on their foundational knowledge base with areas such as entrepreneurship and leadership to health care economics and business ethics.

Explore Wharton Faculty (https://doctoral.wharton.upenn.edu/faculty/)

**Cross-Disciplinary Research**

The faculty’s diverse research agendas encourage students to follow new ideas that go across boundaries — not just at Wharton but also at Penn’s other globally renowned graduate and professional schools. At Penn, students find unparalleled opportunities to work with leading faculty in such disciplines as law, engineering, medicine, economics, sociology, psychology, and mathematics.
Diversity and Inclusion

The Wharton Doctoral Programs is committed to the belief that a diverse range of perspectives is essential to fostering breadth of thought and knowledge. The environment is meant to provide equal opportunity and equal treatment for all students, regardless of age, gender, race, ethnicity, national origin, religion, sexual orientation, disability, and marital or parental status. We take seriously our responsibility to promote responsible conduct by all students and to make institutional arrangements that create an environment of tolerance and that supports participation and advancement by individuals from diverse backgrounds.

Accounting, PhD

The Accounting PhD program trains students to do rigorous research in accounting, a specialized area of financial economics. The program is highly analytical and quantitative. We look for strong undergraduate preparation in microeconomics and mathematics, while some prior accounting or finance training at the undergraduate or graduate level is an advantage. Institutional understanding of how accounting information is used by capital market participants and/or within firms is useful and best obtained through relevant work experience, but is not required of applicants.

Close working relationships with faculty members provide an excellent learning experience while at Wharton and can continue throughout the student’s career. Our program provides students with opportunities to interact with faculty and get started on relevant research early in the program. Required research elements include the first-year research assistantship and the first and second year summer research papers.

For more information: https://doctoral.wharton.upenn.edu/programs-of-study/accounting/

View the University’s Academic Requirements for PhD Degrees (p. 1939).

Required Courses

The course of study for the Ph.D. in Accounting requires the completion of 16 graduate course units.¹

Required Courses

The course of study for the Ph.D. in Applied Economics requires the completion of 15 graduate course units. The common core consists of 3 theory courses and 3 statistics/econometrics courses. Students are also expected to master two field areas by passing two courses in each (total of 4 courses units). The remaining course units necessary to achieve 15 are split between the mandatory graduate student research seminars and other electives.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Ethics and Legal Studies, PhD**

The Ethics & Legal Studies Doctoral Program at Wharton focuses on the study of ethics and law in business. It is designed to prepare graduates for careers in university teaching and research at leading business schools, law schools, and other programs. Faculty and student interests range over topics including international business ethics and human rights, corporate governance, social impact, environmental law and policy, securities, normative political theory, negotiations, and corporate criminal law.

**Finance, PhD**

The department prepares students for careers in research and teaching at the world’s leading academic institutions, focusing on Asset Pricing and Portfolio Management, Corporate Finance, International Finance, Financial Institutions and Macroeconomics.

Wharton’s Finance faculty, widely recognized as the finest in the world, have been at the forefront of several areas of research. For example, members of the faculty have led modern innovations in theories of portfolio choice and savings behavior, which have significantly impacted the asset pricing techniques used by researchers, practitioners, and policymakers. Another example is the contribution by faculty members to the analysis of financial institutions and markets, which is fundamental to our understanding of the trade-offs between economic systems and their implications for financial fragility and crises.
Faculty research, both empirical and theoretical, includes such areas as:

- Structure of financial markets
- Formation and behavior of financial asset prices
- Banking and monetary systems
- Corporate control and capital structure
- Saving and capital formation
- International financial markets

**Additional Coursework**

Select six additional courses ^1^ 6

Total Course Units 18

^1 Students can satisfy these additional course credits in the following ways.
1. Transfer Credits
2. Electives from Other Departments: Economics, Statistics, Accounting, Mathematics, etc.
3. Seminar Courses: Students should limit seminar courses (FNCE 950s) to a maximum of three (3). These credits require students to attend weekly seminars and write referee reports. A permit is required. The PhD Program Coordinator must approve before a permit is issued.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

^1 Usually given in June after the student’s first year in the program. If the student fails, he/she can take the following June. If the students fails the exam twice, the student will not normally be allowed to stay in the program.

**Health Care Management & Economics, PhD**

The program combines intensive training in health care management and economics coupled with advanced training in a traditional business discipline.

Our program provides thought leadership and policy development in the following areas of distinction:

- Value of technology and innovation
- Health insurance design and reform
• Design and impact of incentives in numerous health industry contexts
• Competition and collaboration across the value chain
• The broad interprofessional/multidisciplinary work of the Leonard Davis Institute of Health Economics

Wharton's doctoral program is unique among similar programs because it provides a strong background in microeconomic theory, an advanced teaching of econometric and statistical techniques, a comprehensive analysis of both health economics and health care services research, and grounding in management/strategy theory and research. The doctoral program complements the course work with numerous opportunities to collaborate with faculty members in research projects exploring a wide variety of topics in the health economics and management fields.

Management, PhD

Wharton's Management program prepares students to apply rigorous social science disciplinary theory and research methods to the demands of current management and leadership challenges in the public and private sectors. Our faculty has a broad range of interests ranging from the behavior of individuals, teams and groups to organizational strategy of multinational firms. Major areas of faculty research currently include:

• new venture formation, growth, and corporate entrepreneurship;
• human resources and competitiveness;
• emotions, identity, creativity and motivation;
• political and social influence strategies;
• technology and practice adoption, diffusion, and transfer within and across organizations;
• organizational learning and adaptation;
• and the strategic management of complementary resources and capabilities within an organization, alliance, network or ecosystems.

Each student draws on the faculty’s diverse expertise and varied interests to develop a program uniquely suited to his or her interests frequently spanning the formal specializations noted above. The program encourages students to gain research experience by working closely with multiple faculty on a variety of projects beginning with a research assistantship assignment in the first year with the hope of entering the
job market in year 4 or 5 with multiple research papers in the publication pipeline.

For more information: https://doctoral.wharton.upenn.edu/management/

**Marketing, PhD**

The Wharton doctoral program offers students an unmatched interdisciplinary environment within which to generate creative ideas and hypotheses and to develop the analytic skills to evaluate them.

Faculty members are active in diverse research areas that connect to initiatives and centers both within Wharton more broadly, and other departments within the university.

For more information: https://marketing.wharton.upenn.edu/program-requirements/

For more information about the Joint Doctoral Degree in Marketing and Psychology: https://marketing.wharton.upenn.edu/joint-doctoral-degree-in-marketing-and-psychology/

View the University’s Academic Requirements for PhD Degrees (p. 1939).
### Required Courses

The Ph.D. program in Marketing is based on the completion of the dissertation as well as a minimum of 17 graduate level course units.

## Operations, Information and Decisions, PhD

Wharton’s program in Operations, Information and Decisions emphasizes research on real management problems and maintains a balance between theory and implementation. The faculty trains scholars in decision making, information and operations/operations research.

Our faculty leads in the development and application of an innovative blend of analytical and empirical approaches to important problems facing the private and public sectors, including:

- supply chain management;
- service delivery systems;
- product development and innovation processes;
- decision support systems;
- information-based strategy;
- systems development and implementation;
- risk and environmental management; and
- behavioral approaches to individual and managerial decision making.
Our PhD program provides a unique mix of behavioral, economic, statistical and analytical training to its students, and its strength is reflected in our students’ record of placement and achievement.

3 Areas of Specialization

Decision Making (DM)
What factors influence human judgment and decision-making? Why and when are people prone to judgement errors and biases? What kinds of interventions will help people make better decisions, or improve human welfare? Our interdisciplinary Decision-Making PhD program focuses on training students to conduct and publish academic research that helps to answer these important questions. Along the way, students receive rigorous quantitative/statistical training, and acquire a deep understanding of the literature on judgment and decision-making, significant exposure to the fields of psychology, economics, organizational behavior, and marketing.

Information Systems (IS)
The IS track covers a broad range of research interests. Students interested in information and decision technology (IDT) focuses on the analytical and information technology-based methods for managing complex organizations. Those interested in information strategy and economics (ISE) focus on understanding the strategic aspects of information and information management.

Operations Management / Operations Research (OM / OR)
OM/OR focuses on the processes that define an organization’s outputs, as well as the methods commonly used to analyze these processes. Students specializing in OM are interested in a wide range of functions and organizational types, including operations strategy, product design, process design, technology management, capacity planning, inventory control, supply chain management and service system planning. Students interested in OR focus more on the application of mathematical models to these areas.

For more information: https://doctoral.wharton.upenn.edu/operations-information-decisions/

View the University’s Academic Requirements for PhD Degrees (p. 1939).

Total Course Units 14-21

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Statistics, PhD

Wharton’s PhD program in Statistics provides the foundational education that allows students to engage both cutting-edge theory and applied problems. These include problems from a wide variety of fields within Wharton, such as finance, marketing, and public policy, as well as fields across the rest of the University such as biostatistics within the Medical School and computer science within the Engineering School.

Major areas of departmental research include:

- analysis of observational studies;
- Bayesian inference, bioinformatics;
- decision theory;
- game theory;
- high dimensional inference;
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Accounting, MBA

The Accounting major helps students acquire the skills to measure and communicate an organization’s economic activities. Accounting is the formal system of collecting, organizing, and reporting the financial data used to make economic decisions. The data shed light on current financial status and liquidity, as well as past profitability and funds-generating capability. Its users include corporate shareholders, lenders, management, employees, research organizations, and taxing and regulatory agencies.

Many different types of economic decisions require accounting data. One major use of accounting data is to inform outsiders (interested people who do not have direct access to corporate records) of the firm’s economic status and progress. By contrast, the firm’s management requires data that will aid in controlling operations and evaluating performance. Outside agencies often collect accounting data for tax collection and other social and economic policy purposes.

The accounting major at the Wharton School focuses on the user of accounting data. Most courses in the department stress concepts, procedures and applications with a view to the student understanding how accounting information is generated and its reliability in analysis. Most accounting majors are preparing for careers in which accounting data are used extensively. The department’s flexible curriculum also allows interested students to take the required courses toward certification as a CPA (certified public accountant) or CMA (chartered management accountant). As the specific course requirements for these certificates vary from state to state and usually exceed the minimum requirements for a Wharton MBA major, students who seek professional certification should seek the advice of the Accounting Department adviser as early as possible to plan their programs.

For more information: [https://accounting.wharton.upenn.edu/programs/mba/](https://accounting.wharton.upenn.edu/programs/mba/)
Curriculum

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Accounting major.

Actuarial Science, MBA

The Wharton actuarial science curriculum prepares students for professional certification as an actuary. The curriculum includes general business courses important for developing a strong, general understanding of the business environment, as well as quantitative courses in economics, accounting, computer science, and finance. The location of the actuarial science program within an internationally renowned business school provides students with an exceptional opportunity to blend studies in economic theory, financial strategies, general business principles, insurance company management, corporate risk management, and public policy. Students enrolling are expected to have undergraduate training in calculus and at least one course in statistics and probability theory. Students are encouraged, but not required, to take actuarial examinations organized by the Society of Actuaries or the Casualty Actuarial Society during their studies.

The Society of Actuaries and the Casualty Actuarial Society adopted a new examination system in 2007. Three topics (Applied Statistical
Methods, Corporate Finance, and Economics) require Validation by Educational Experience (VEE). The Society of Actuaries has approved a large number of Wharton and Penn courses that satisfy the VEE requirements. A list of these approved courses can be found on the Society website.

For more information: https://statistics.wharton.upenn.edu/programs/mba/course-requirements-major-actuarial-science/

^1 Students cannot enroll in both FNCE 621 and FNCE 623.
^2 Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
^3 STAT 621 is by placement only.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Business Analytics, MBA

The Business Analytics MBA major is designed to build deep competency in the skills needed to implement and oversee data-driven business decisions, including

- collecting, managing and describing datasets,
- forming inferences and predictions from data and
- making optimal and robust decisions.

Business analytics makes extensive use of statistical analysis and the applications of business analytics span all functional areas.

Business analytics has emerged in recent years as a powerful and required capability for firms in competitive markets. The quantity, quality and diversity of available data have never been greater, which has created new and significant opportunities for organizations to use data to improve their decisions with respect to both internal resources as well as external interactions with suppliers and customers.

Students choosing the Business Analytics MBA major are ideally suited for the growing set of careers broadly defined under the header of "data science" with responsibilities for managing and analyzing data. In addition, the major provides an excellent complement to students who choose to focus on one of the functional areas of business (e.g., accounting, finance, marketing, operations).

For more information: https://mba-inside.wharton.upenn.edu/buan-major/

Curriculum

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Business Analytics major. Up to one (1) CU from a list of pre-approved non-Wharton courses may be counted towards the major.

**Business Economics & Public Policy, MBA**

The Business Economics and Public Policy major equips future business leaders with the tools to analyze incentives and policies of firms, governments, and consumers. Whether a firm is engaged in real estate development, bringing new products to market, developing new technologies, exporting products, addressing environmental issues, or providing infrastructure services, it will need to be familiar with the incentives of competitors and the role of government so that it can understand which actions it can take, and how other actors will respond.

The major enables students to formulate policy with the best techniques offered by both private and public sector research. The tools will be useful across a range of careers, particularly those that involve developing economies or regulated industries. It helps future private managers to understand, react to, and help form the environment in which they will operate.

The department’s courses focus on understanding the implications for the business world of increased globalization; technological change, such as the internet and e-commerce; the increasing role of intellectual property rights; and the public demand for greater government efficiency. These new developments have resulted in privatization, deregulation, and changes in health, antitrust, and environmental policy — all of which critically affect business interests.

Business, Energy, Environment and Sustainability, MBA

The MBA Major in Business, Energy, Environment and Sustainability ("BEES") is designed to provide in-depth foundations for those interested in the complex relationships between business and the natural environment, management of environmental risks, and the business and economics of energy. As global energy markets grow and change rapidly and environmental challenges rise, there is a strong need for a new generation of expert business leaders who understand the rapidly evolving trends in business models, technology, regulation, and financing. Students choosing the BEES MBA Major are therefore ideally suited for the ever-expanding set of careers in energy companies, clean-tech investing, energy banking, consulting, the non-profit world, and the government. Students will gain insight into these challenges through an inter-disciplinary approach. Relevant courses are offered by departments including Business Economics and Public Policy, Finance, Legal Studies and Business Ethics, Management, Marketing, and Operations Information and Decisions. Additional courses on business, energy, and the environment can be credited toward the Wharton BEES MBA Major from the School of Arts and Sciences, the School of Engineering and
Applied Science, and the School of Design, among other programs, as specified below.

The BEES MBA Major requires four course units. At least three course units must be from the list of Wharton courses. Up to one course unit may be from the list of pre-approved non-Wharton courses. If a student believes that a course is missing from this list, they may petition the Director of the BEES Major to add the course to the list prior to the start of the semester in which the course will be taken, or at the latest, within the first two weeks of the semester. Requests after a course has been completed will not be granted. The request should include a copy of the syllabus for the course and a brief statement as to why the course should be added. Courses that are likely to be approved are non-Wharton courses in which the primary focus is on topics relating to energy, environment, and sustainability, such as those listed here: [https://kleinmanenergy.upenn.edu/energy-courses/](https://kleinmanenergy.upenn.edu/energy-courses/).
Curriculum
A minimum of 19 course units is required for graduation.

Only one (1) CU of pass/fail coursework can be counted toward the Entrepreneurship & Innovation major.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Entrepreneurship and Innovation, MBA
The Entrepreneurship & Innovation major provides MBA students with skills, analytical tools, perspectives, and experiences that prepare them for careers as autonomous entrepreneurs, family-business entrepreneurs, or entrepreneurs in corporate settings. Whether a student wants to start a business while in school, join an emerging business, or set the groundwork to launch a new firm later in his or her career, the program aims to provide preparation for all of these exciting options. Entrepreneurial skills and thinking are actively sought by more competitive and profitable growing businesses. The special strength of this program is that it combines theory with practice, providing students the opportunity to test the theories, models, and strategies learned in the classroom by creating real business plans, working on other field projects, and gaining access and insight from leaders in the entrepreneurial business community.

Endowed in 1997 by Robert B. Goergen WG’62, The Goergen Entrepreneurial Management Program is based on the leading research conducted by Wharton faculty. The program is distinguished by its ability to combine theory with practice, allowing students to gain access and insight from the entrepreneurial business community. His generous gift endows the teaching programs in entrepreneurship at Wharton, including a Robert B. Goergen Professorship, funds for course development, and fellowships for new faculty.

1. Students cannot enroll in both FNCE 621 and FNCE 623.
2. Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
3. STAT 621 is by placement only.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Finance, MBA**

The Finance major provides students with the analytic and theoretical tools required to master practical issues in Finance, with applications to financial management in business firms, financial institutions, government, and not-for-profit entities. While some attention is given to the descriptive, institutional, and historical aspects of the field, primary emphasis is placed on the analytical foundations of the discipline, emphasizing theory and methods of analysis and making extensive use of relevant techniques of economic analysis, mathematics, and statistics. Graduates have begun their professional careers with positions in financial divisions of non-financial firms, investment banks, broker-dealers, asset management firms, and management consulting firms, as well as various departments of commercial banks and other financial intermediaries, not-for-profit entities, central banks, and international financial organizations.

For more information: [https://fnce.wharton.upenn.edu/programs/mba/](https://fnce.wharton.upenn.edu/programs/mba/)

**Curriculum**

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Finance major.

1. Students cannot enroll in both FNCE 621 and FNCE 623.
2. Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
3. STAT 621 is by placement only.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Health Care Management, MBA

The Health Care Management major builds on the established strength of the core curriculum to provide expertise in the complex and distinctive features of the dynamic and rapidly changing health care industry. Wharton Health Care majors are unusually well-qualified for careers in management, consulting, and investing in diverse areas within health care space, including health care delivery, services, managed care, biotechnology and pharmaceuticals, information technology, and entrepreneurship.

Health Care majors draw on a rich variety of electives within the Health Care Management Department, other Wharton Departments, and courses across the university. They also benefit from an interdisciplinary faculty based in Wharton, the Perelman School of Medicine, and other Penn schools and departments, along with adjunct faculty with extensive practical experience.

The Health Care Management major differs from others at Wharton in that:

1. Students must choose the major at the time of application to Wharton, and
2. The major integrates academic and professional development, helping students to obtain summer and permanent positions.

The Health Care Management Department also sponsors an alumni mentor program and benefits from strong links to the Wharton Health Care Alumni Association. Students in health care-related dual degree programs, including the MD/MBA, generally complete the Health Care Management major.

For more information: [https://hcmg.wharton.upenn.edu/programs/mba/hcmg-major-requirements/](https://hcmg.wharton.upenn.edu/programs/mba/hcmg-major-requirements/)

### Curriculum

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Health Care Management major.

### Individualized Major, MBA

You may find that your course choices do not fit within the standard majors at Wharton. In this case you may plan an individualized major as an alternative to the existing majors. Wharton offers this option for students who have specific, carefully determined interdisciplinary interests and wish to acquire depth in an area not adequately covered by any of the existing majors. To pursue an individualized major,
you must propose a theme, course plan, and title for the major and describe how the proposed courses address the theme. You should submit this proposal on an Individualized Major Request (https://mba-inside.wharton.upenn.edu/wp-content/uploads/2014/12/INDM Approval 2012.pdf) form to a faculty member for approval. Completed forms should be submitted to the MBA Program Office in 300 Jon M. Huntsman Hall for final approval. When possible, this form should be submitted toward the end of the third semester in the MBA Program.

The following rules apply to individualized majors:

1. An individualized major must be a sole major; it may not be pursued in conjunction with an existing major.
2. The title of the individualized major must not sound like "general management" or like an existing major or combination of existing majors.
3. Your proposal for the individualized major must be approved by a faculty member in the relevant field and an administrator in the MBA Program Office.

For more information: https://mba-inside.wharton.upenn.edu/individualized-major/

Curriculum

A minimum of 19 course units is required for graduation. Only one (1) CU of pass/fail coursework can be counted toward the major.

**Insurance and Risk Management, MBA**

By majoring in insurance and risk management, an MBA student may fuse general management education with specialized expertise. This major enables the student to gain a thorough understanding of risk management and insurance theory and practice. Students are exposed
to the legal, actuarial, financial, and economic principles underlying corporate and public sector risk management, with specific applications to individual, business, and social problems. Risk Management and Insurance theory, functions, and strategies are investigated against a background of accelerating change in the legal, regulatory, and economic environment. Career opportunities for MBA graduates with a major in insurance and risk management include positions in many types of consulting, risk management, employee benefits management, insurance company management, and personal financial planning. Risk management involves financial and statistical analysis of risk and insurance-related problems that confront businesses and public sector managers. Positions are available in risk management departments of large corporations, risk management consulting firms, insurance brokerage firms, and special risk divisions of insurance companies, that deal with large corporate risks as well as government and non-profit organizations around the world. The increasing importance of employee benefits in overall compensation management requires individuals with education in group insurance, pension plans, and deferred compensation arrangements. Positions are available in corporate benefit departments, employee benefit consulting firms, and bank trust departments as well as social insurance agencies in the public sector. Insurance company management positions are available in general management, marketing, financial management, and research and planning; jobs in the regulatory sector are also available to our graduates. The growth in the number of firms providing personal financial planning has increased the demand for persons with education in the use of life insurance and related mechanisms in capital accumulation and estate conservation. Additional opportunities for an MBA combining finance and insurance include positions in insurance company investment, pension fund management, and social insurance program design and oversight. Management consulting firms also seek candidates with expertise in insurance for positions involving insurance industry analysis, including insurance company formations and acquisitions. This demand can be expected to accelerate in view of the ongoing erosion of traditional regulatory barriers between commercial banking, insurance, and the securities industry. The Department also participates in a crossfunctional major in Environmental and Risk Management.

---

1 Students may seek approval to have one of the four course units be from other departments of The Wharton School or in other schools of the University.
Management, MBA

The Management major develops students’ knowledge and expertise to manage complex, established enterprises or guide start-up enterprises in their formative years. The department encompasses strategic and entrepreneurial management, as well as the management of people and organizations across national and cultural borders. It offers a general major in Management, as well as focused majors in Entrepreneurial Management, Organizational Effectiveness, Multinational Management, and Strategic Management. Majors in Entrepreneurial Management, Strategic Management, and Multinational Management can count some courses outside the department toward their major requirements. The general Management major provides the flexibility of choosing courses across different areas of interest within the department.

For more information: https://mgmt.wharton.upenn.edu/programs/mba/management/

Curriculum

A minimum of 19 course units is required for graduation.

Only one (1) CU of pass/fail coursework can be counted toward the Management major.

Management Major Requirements

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Marketing & Operations Management, MBA**

Marketing and Operations are two closely interrelated functional areas in all manufacturing and service firms. This cross-functional major is designed to satisfy the strong need in industry for MBAs with in-depth training in both areas. Graduates from this major are better prepared to accept future career challenges at the intersection of these two disciplines. Examples of their first job assignment include brand managers who have to coordinate marketing and manufacturing for a particular product, members of new product development teams, leaders of quality management programs, or managers in the service sector with responsibility for creating and marketing new services.

For more information: https://marketing.wharton.upenn.edu/mba-program/marketing-operations-management-major/

**Curriculum**

A minimum of 19 course units is required for graduation.

Marketing (MKTG) electives taken on a pass/fail basis cannot be counted toward the Marketing & Operations major. One (1) CU of Operations (OIDD) elective coursework may be taken on a pass/fail basis.

</table>

1. Students cannot enroll in both FNCE 621 and FNCE 623.
2. Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
3. STAT 621 is by placement only.

No more than one course unit may be earned from the following: MKTG 890, MKTG 893, MKTG 895, MKTG 897, or MKTG 899.

Instructor permission needed.

A minimum of 1 course unit must be in MKTG and a minimum of 2 course units must be in OIDD. The remaining 1 course unit can be from either MKTG or OIDD. Students may take MKTG 770 or MKTG 727, but not both. If MKTG 712, MKTG 771, MKTG 776, or MKTG 809 is selected to satisfy the MKTG Research course requirement, any of the remaining MKTG Research courses listed in this note may be taken to satisfy the two MKTG course units. MKTG 712, MKTG 771, MKTG 776, and MKTG 809 cannot apply to both.

Selective coursework may be taken from the following: MKTG 890, MKTG 893, MKTG 895, MKTG 897, or MKTG 899.

This curriculum is subject to change and should be verified with the academic program.
Marketing, MBA

The marketing major is designed to build deep competency in the art and science of choosing which customers to serve, and getting, keeping and growing them through delivering superior customer value.

Marketing majors will gain a proficiency in the latest methods and concepts for understanding customer behavior and for devising effective marketing strategies. This is a valuable preparation for careers in consulting and general management and essential for entrepreneurs.

Students begin by taking Marketing Management (MKTG 611 and MKTG 612 or MKTG 613), an overview of the role of marketing in the development of business strategies. Using a combination of lectures, readings, case studies, and computer simulations, these core courses review fundamental approaches in product/market selection, product line management, communications management, pricing, distribution, and marketing research. Students can choose among many electives to structure a program of study to match their interests and career objectives.

For more information: https://marketing.wharton.upenn.edu/mba-program/marketing-management-major/

Curriculum

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Marketing major.

Total Course Units 9.5

1 Students cannot enroll in both FNCE 621 and FNCE 623.
2 Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
3 STAT 621 is by placement only.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Students may take MKTG 770 or MKTG 727, but not both. If MKTG 712, MKTG 771, MKTG 776, or MKTG 809 is selected to satisfy the MKTG Research course requirement, any of the remaining MKTG Research courses listed in this note may be taken toward satisfying these 3 course units. MKTG 712, MKTG 771, MKTG 776, and MKTG 809 cannot apply to both.

No more than one course unit may be earned from the following Independent or Advanced Study courses: MKTG 890, MKTG 893, MKTG 895, MKTG 897, or MKTG 899.

### Multinational Management, MBA

The purpose of the multinational management major is to prepare MBAs for managerial, financial and consulting positions in which a sophisticated understanding of the multinational firm, the international competitive environment, and the cross-national political and social aspects of business is required. The major consists of courses on multinational management complemented by functional electives in the areas of finance, marketing, accounting, legal studies, public policy, real estate or healthcare management.

For more information: [https://mgmt.wharton.upenn.edu/programs/mba/multinational-management/](https://mgmt.wharton.upenn.edu/programs/mba/multinational-management/)

### Curriculum

A minimum of 19 course units is required for graduation.

Only one (1) CU of pass/fail coursework can be counted toward the Multinational Management major.

**Operations, Information, & Decisions, MBA**

The Operations, Information, and Decisions major is designed to improve the quality and productivity of enterprises by educating highly capable professionals, and discovering, developing, and validating new principles, theory, and methods.

Members of the department share common interests in process management, decision-making, and information. Our common approach to education and research is to blend rigor and relevance. We believe in science-based management and our work is built around models. We seek to reconcile theory and data, and to influence practice. We are a group of individuals with diverse interests and training; indeed, our diversity is central to the intellectual vitality of our community. Nevertheless, several themes characterize the questions of primary concern to most members of the department.

- How can the speed and quality of decision-making by individuals, groups, and organizations be improved?
- How can useful inferences be made from large datasets?
- How can supply chains be managed to provide the right products at the right time and place for least cost?
- How can organizations create high-quality and efficient service delivery operations?
- How can the process of developing goods and services be transformed to deliver better products more efficiently?
- How do changes in the quality, speed, and frequency of information exchange impact an enterprise's functions, productivity, and organization?

Organizational Effectiveness, MBA

The Organizational Effectiveness major is designed to educate students in the leading edge of theory and practice associated with the management of employees and the design of organizations. It spans topics from understanding the behavior of individuals and groups to designing management systems and structures to support business strategy. It serves students with a range of career objectives:

1. those who seek leadership positions focusing on employees in organizations;
2. those interested in consulting in the area of organizational effectiveness or management consulting more generally; and
3. those interested in balancing a more technical academic and business backgrounds with greater depth in understanding behavioral and management expertise.

Total Course Units 9.5

1 Students cannot enroll in both FNCE 621 and FNCE 623.
2 Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
3 STAT 621 is by placement only.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Quantitative Finance, MBA

This major focuses on the application of advanced quantitative and computational tools in the finance industry. It prepares students for a professional career in the quantitative modeling of financial markets. Students majoring in Quantitative Finance are ideally suited for careers in asset management firms or in financial modeling in a broad range of firms.

Curriculum

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Quantitative Finance major.

This major cannot be taken in conjunction with the general Finance (FNCE) major.

## Real Estate, MBA

The Wharton School has offered a real estate concentration for MBA students and undergraduates since 1985. The concentration has grown and developed, both in size and scope. The concentration consists of two required credit units and three electives. While the required courses focus on real estate development and finance, the electives allow students to explore a variety of issues related to real estate. These include real estate economics, urban fiscal policy, real estate law, housing markets, the relationship between government policy and private development, international real estate markets.

The real estate concentration prepares students to be leaders in the real estate industry and provides the quantitative and qualitative tools necessary for their roles in shaping the future of the industry. To keep students informed of current issues in Real Estate, the Real Estate Department and Samuel Zell and Robert Lurie Real Estate Center sponsors conferences, seminars, and special programs on vital public policy issues relevant to the field.

For more information: https://real-estate.wharton.upenn.edu/programs/mba-major/

### Curriculum

2020-21 Catalog | Generated 09/18/20
The Statistics major develops the skills and insights required to draw inferences and conclusions from many types of data. A key challenge facing managers is the interpretation of the vast amount of data generated in the world of business today. Modern computing systems now produce large volumes of information whereas previously one could often only rely upon intuition and guesses. Yet this information does not directly answer important business questions. What combination of features is most desirable for consumers? What will sales be next month? How did we do last month? Data analysis and statistics offer a systematic approach that can help provide answers to these questions.

Courses offered by the Statistics Department develop the skills and insights required to make effective use of statistical methods. The courses provide the knowledge needed to select and apply techniques and to communicate statistical results. Interpretation in realistic applications offers guiding examples, and theory is used to motivate and compare alternative schemes.

Regardless of topic, all of these courses provide useful skills that augment the substantive managerial abilities of students. Courses also provide exposure to computer software that implements key techniques.

Strategic Management, MBA

This major provides students with a deep grounding in the basic logic of competitive advantage, premised on a careful analytical treatment of the distinct qualities and positions of individual firms and an understanding of broader competitive dynamics. This background would position students well for guiding strategy at both established and emerging enterprises, as well as prepare them for positions with consulting firms that work with firms in setting their strategies.

For more information: https://mgmt.wharton.upenn.edu/programs/mba/strategic-management/

Curriculum

A minimum of 19 course units is required for graduation. Only one (1) CU of pass/fail coursework can be counted toward the Strategic Management major.

Select up to 1 course unit from the following:

- LGST 785 Business Strategy & Corp
- LGST 815 Environmental Management: Law and Policy
- MGMT 715 Political Environment of the Multinational Firm
- MGMT 720 Corporate Diplomacy

Total Course Units: 9.5

1 Students cannot enroll in both FNCE 621 and FNCE 623.
2 Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
3 STAT 621 is by placement only.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Executive MBA

Executive MBA

Wharton delivers our undiluted MBA curriculum to working professionals through our executive MBA program in Philadelphia and San Francisco. Wharton emphasizes an intensive core in general management and an unmatched selection of electives in a residential every-other-weekend format tailored for working professionals. Wharton’s EMBA curriculum offers rigorous learning in a collaborative environment. The intensive, cross-functional core curriculum provides business fundamentals and the leadership, communication and analytical skills that are critical to your success. Through electives in the second year, you may then develop one or more areas of expertise or continue to develop a breadth of knowledge. Options to study globally help students become global citizens.

For more information: https://executivemba.wharton.upenn.edu/

Curriculum

A minimum of 19 course units is required for graduation.

Students are required to complete the core EMBA curriculum and may complete the rest of the required course units with electives. Majors are not required in the executive MBA program but add another option for study.

### Academic Resources

Penn offers a wide variety of resources, offices, and programs for graduate students to support them in all aspects of their Penn experience. The following list highlights some of the most commonly used resources and areas of interest relating to academics and educational opportunities.

- Academic Calendar (p. 555)
- Advising & Mentoring PhD Students (p. 558)
- Career Services (p. 565)
- Doctoral Dissertation Manual (p. 565)
- Ethics and Original Research Handbook (p. 565)
- Exchange Scholar Program (p. 565)
- Fontaine Society (p. 566)
- Graduate Group Review Student Feedback Form (p. 566)
- Graduate Student Center (p. 566)
- Graduation (p. 566)
- Guide To Thriving at Penn (p. 568)
- Information for International Students (p. 568)
- Information for Students with Children (p. 568)
- Learning Resources (p. 569)
- Libraries (p. 569)
- Master’s Thesis Style Guide (p. 569)
- Registrar’s Office (p. 570)
- Wellness (p. 571)

### Academic Calendar

**Notes:**

For the most up-to-date information about Fall 2020, visit [https://fall-2020-planning.upenn.edu](https://fall-2020-planning.upenn.edu).

Graduate and professional programs may follow their own calendars; check the website for each School or program.

Rosh Hashanah, Yom Kippur, the first two days of Passover and Good Friday are religious holidays that affect large numbers of University community members and that fall during the academic year. View the University’s policy regarding these and other holidays (p. 2012).

The University’s Three-Year Academic Calendar is subject to change. In the event that changes are made, the latest, most up-to-date version will be posted to the Almanac’s website ([https://almanac.upenn.edu/penn-academic-calendar/](https://almanac.upenn.edu/penn-academic-calendar/)).

Advising & Mentoring PhD Students

Guidelines for Students, Faculty and Administrators at the University of Pennsylvania
### Choosing a Dissertation Advisor

**Introduction**

While some graduate groups may assign an advisor to a student upon admission to the program, in many graduate groups the responsibility for finding a dissertation advisor rests with the student. The choice of a faculty member who will supervise the dissertation work required to fulfill degree requirements is one of the most critical decisions a graduate student will make. A student will spend several years working with the faculty member of choice, and that choice will significantly affect the direction of the student's career. Choosing a dissertation advisor, therefore, is an extremely important decision for doctoral students, although it is not immutable, as will be discussed later.

A student undertaking dissertation work needs an advisor who will be not only academically competent in a particular area but also willing to act as the student's advocate when necessary. It is important that the student be able to work and communicate effectively with the advisor and not feel overwhelmed or intimidated in the relationship. Dissertation work can be lonely and isolating. Each student requires the guidance of someone who will stimulate thought, who has sufficient interest in the student's topic to produce new insights jointly, and who will challenge the student to think in a novel manner about the research.

**Obtaining Information on Potential Advisors**

Students who are responsible for finding their own advisor should be familiar with the University rules (p. 1939) about who can advise dissertation research and serve on the dissertation committee. Several resources and strategies can help students identify an appropriate faculty advisor, as follows.

The graduate group website or handbook is a valuable source of information on potential advisors. Many graduate groups have developed websites that profile affiliated faculty members, including their areas of research, recent publications, and other academic activities. Literature searches can provide further information on the publications and preferred journals of particular faculty members. The graduate group chair can also provide valuable advice on potential advisors and can help students to become familiar with any specific graduate group policies on supervision.

Students can get to know potential advisors by taking a course, doing a lab rotation, acting as a teaching assistant, and/or attending seminars and other presentations by the faculty member.

Graduate students working with the potential advisor are an invaluable source of information. Students who are currently working or have worked with a particular advisor can be asked about their experience with that advisor and about the advisor's expectations and working methods. Getting to know these students is also useful because with anyone choosing to work with a faculty advisor would likely have close, future interactions with their students. Talking to multiple students is always encouraged given the possibly strong and differing opinions one might hear.

Students should make an appointment to see potential advisors. Meeting a potential advisor is an essential step in determining whether a faculty member would be a good fit in terms of mentoring and interpersonal style
and research interested. The following is a list of issues that might be covered in such a meeting:

- How many graduate students do you advise? (Students may not want to pick a faculty member who has too many students already.)
- Typically, how often do you meet with your students?
- Typically, how much time do you expect students to take to complete their dissertation?
- How will we agree upon my research topic?
- Are there sufficient funds available for the research project?
- What will be the sources of my stipend/funding? What are ways you can provide assistance for finding additional funding if/when my stipend expires?
- What level of independence is expected of your graduate students?
- Is there any specific knowledge I need to have before starting to work with you?
- Will I have the opportunity to attend conferences? Publish papers? Present work at colloquia? Are there funds available for me to do so?
- Are you planning a sabbatical leave soon? If so, what arrangements for continued supervision will be made during your absence?
- What opportunities would I have in this area of research when I graduate?
- How do you typically assist students on the job market?
- Will guidelines be drawn up for working together?
- How will I receive feedback on my progress?

These questions are designed to help the student and the potential advisor determine whether a good match exists. Where appropriate, the student may also want to ask about the order of authorship on publications and intellectual property issues.

The choice of a dissertation advisor is a decision to be made with a great deal of care and consideration. Discussion of the topics listed above will also give faculty members a sense of what students expect in terms of meetings, feedback, turn-around time on submitted work, etc. Taking time to explore these issues should result in a productive relationship for both student and advisor that culminates in a piece of original research, completed within a reasonable time period.

**Changing Advisors**

There may be situations in which a student must change advisors. Some situations are beyond the student’s control; for example, when an advisor leaves the university or otherwise becomes unavailable. In other situations, the student may want to choose a different advisor; for example if the focus of the research project changes to something outside of the current advisor’s expertise, or if works styles do not mesh well.

In these latter situations, students should understand that while there can be risks in changing advisors, it usually can be negotiated in a positive manner. Students deciding to pursue this option should be sure to consult the graduate group for any specific policies and procedures that apply to changing advisors, and be sure to ascertain if funding may change under a new advisor. Students should always be professional and respectful in interactions with the current advisor and potential new advisor, and be certain that another member of the faculty is willing to add them as a new advisee before discussing a change with the current advisor. Students should focus discussions on interests and goals and not on negative incidents or difficulties. The potential new advisor, as well as leaders or other members of the graduate group, may have advice regarding how to broach this change with the current advisor.

**Expectations, Provision of Structure, and Timelines**

The provision of structure by dissertation advisors is crucial at all stages of a graduate student’s work, but is particularly important during the initial phase of dissertation work. It is essential that advisors and students have a shared set of expectations. Each needs to understand the constraints that operate on the other and the effects that these may have on the mentoring relationship. Good advisors make their expectations clear to students on issues such as the need for regular meetings, mastery of methodological skills, conference publications and conference presentations, timelines for degree completion, etc. Once these expectations are clearly outlined, it is much easier to develop a positive, productive relationship.

The following are suggested topics to cover in initial discussions between student and advisor:

- Frequency of contact.
- Preferred communication method (e.g., e-mail, phone calls, Skype, in person).
- Timelines for each stage of the research, including publications and conference presentations.
- Type and frequency of feedback expected.
- Whether students work in the graduate group or at home/library. Hours of work.
- Nature of any directed reading program.
- Monitoring, evaluation, and reporting of progress.
- Additional training, fieldwork requirements.
- Any authorship/collaboration or intellectual property issues.
- The establishment and membership of the dissertation committee.

**The Dissertation Committee**

The academic experience is greatly enhanced if faculty members other than the direct advisor are readily and formally available for consultation and discussion with the graduate student. To provide this element of supervision, a dissertation committee should be put in place for the Ph.D. student early in the dissertation stage. The graduate group is responsible for monitoring the progress of the student through the dissertation committee, as follows:

- A dissertation committee should consist of at least three faculty members (including at least two members of the graduate group). While some graduate groups require all members of the dissertation committee be members of the graduate group or affiliated department, others encourage/require appointment of a faculty member from another department, to encourage an interdisciplinary perspective. Be sure to review the policy about the composition of dissertation committee (p. 1939) as you are building your committee.
- It is required that the dissertation committee meet with the student, as a committee, at least once per year to assess the student’s progress in the program and to provide advice on future work.
- The committee submits a written report to the graduate group chair, at least once per year, detailing its observations of the student’s progress and its recommendations.
The student must be given the opportunity to respond to the committee's report/recommendation and to append a response to the committee's report.

Copies of the report shall be given to the student and filed with the graduate group office.

The Graduate Group is responsible for recording the membership of the dissertation committee in the Student Information System (SRS). The graduate division office at the home school will monitor compliance with this requirement through SRS reports and an annual audit of the official student file.

Open Access Publication of Dissertations

The culmination of the research project will be a dissertation. All Penn PhD dissertations are published by ProQuest and a hard copy is placed in the Penn Library once the student graduates. Penn also requires open access publication of dissertations in the institutional repository, Scholarly Commons (http://repository.upenn.edu/etd.html). Open access publication provides a much wider audience, can help to market ideas to potential employers, and can help make plagiarism or theft much easier to detect. The open access dissertation will be available via the internet, including full text searching through search engines like Google. The same legal and copyright protections pertain to open access publication as to traditional hardcopy publication.

In cases where papers are in press, patents are pending, or where there are other intellectual property concerns, it may be beneficial to delay publication (commonly referred to as an 'embargo'). Students should discuss with the advisor whether a delay in publication is necessary or advisable. If the student and advisor agree that it will be advantageous to embargo the dissertation, embargo preferences can be entered when submitting the dissertation using ETD Administrator. Note that different embargo options are available for traditional publishing (in ProQuest: 6 months, 1 year, 2 years) and open access (in Scholarly Commons: 3 years initially). A request for a three-year delay in open access publication through Penn's Scholarly Commons will be granted automatically when requested. Requests for additional delays – which must be made in advance of the embargo expiring – require approval by the Graduate Group Chair and in some cases the school’s Graduate Dean or Associate Dean for Graduate Studies.

Expectations & Responsibilities of the Student, Advisor and Graduate Group

Responsibilities of the Student

Good mentoring practice entails responsibilities not only of the advisor but also of the student. When a student enters a doctoral program, that student commits time and energy necessary for research leading to a dissertation that makes a substantial and original contribution to knowledge. It is the responsibility of the student to conform to University and program requirements and procedures. Although it is the duty of the advisor to be reasonably available for consultation, the primary responsibility for keeping in touch rests with the student. The student's responsibilities include the following:

- Becoming familiar with, and adhering to, the rules, policies, and procedures in place in the graduate group, home school, and the University as outlined in available resources such as graduate group student handbooks/web sites and the University's policies (p. 1939). Of particular importance are rules around Academic Integrity.
- Knowing and following the rules and policies of the graduate group and the University. Adhering to all deadlines and policies regarding registration, leaves of absence, limitations on time and recertification, dissertation submission and graduation (p. 1939).
- Selecting and planning an original research topic that can be successfully completed within the expected time frame for the degree program; in some cases, this will be done in consultation with the thesis advisor.
- Preparing a research plan and timetable in consultation with the advisor as a basis for the program of study, including any proposed fieldwork.
- Learning and adhering to responsible conduct of research standards for your field. Acquiring the necessary health and safety skills for undertaking the proposed research.
- Meeting with the advisor when requested and reporting regularly on progress and results.
- Establishing a dissertation committee, with the assistance of the advisor, early in the dissertation stage, as required by the graduate group.
- Keeping advisors informed on how they can be contacted and informing them of any significant changes that may affect the progress of the research.
- Maintaining good records of each stage of the research.
- Be a good citizen of the research group, laboratory, department, or other entity that requires cooperation from its members (e.g., lab chores).
- When necessary, planning to seek additional funding as needed well in advance.
- Thinking critically about career trajectory and mindfully pursuing opportunities to support career goals, for example, through teaching, publishing, presenting, externships, etc. (See Appendix A: Skill Building for more information.)

Responsibilities of the Faculty Advisor

Within the context of their role as advisors, a faculty member’s primary task is to guide and inspire his or her students to reach their scholarly potential. At the same time, each advisor must try to ensure that each student is in compliance with the rules and regulations of the University. The advisor should promote conditions conducive to a student’s research and intellectual growth and provide appropriate guidance on the progress of the research and the standards expected.

Good mentoring practice includes the following:

- Guiding the student in the selection and planning of an original research topic that can be successfully completed within the expected time frame for the degree program.
- Establishing with the student a realistic timetable for completion of various phases of the program.
- Being accessible to give advice and provide feedback, while also establishing for the student a realistic timeline for receiving feedback. Feedback should be professional and constructive and provide concrete guidance for improvement.
- Ensuring that students have an understanding of the relevant theories and the methodological and technical skills necessary for the research, including provision of information through an ethical
review process where applicable. Ensuring that students adhere to responsible conduct of research standards for your field.

- Establishing with the student a dissertation committee early-on in the dissertation stage (e.g., after the qualifying exam) and ensuring that the committee meets with the student at least once a year, as a committee, and provides an annual written report of the student's progress.
- Making arrangements to ensure continuity of supervision during leaves or an extended period of absence.
- Encouraging participation in graduate group seminars and colloquia.
- Encouraging and assisting students to attend and present work at local, national, or international conferences and to publish their work in appropriate journals.
- Advising on matters of career options, job market, preparation of the CV, and strategies for launching a career in research.
- Contributing to the student’s professional development through letters of reference and general advice.
- Advising the student on seeking additional funding, as needed.
- Ensuring that the research environment is safe, equitable, and free from harassment and discrimination.
- Avoiding personal or business relationships that may constitute a conflict of interest.
- Being sensitive to academic needs and concerns that may arise for international students, students from underrepresented groups, students with disabilities, and/or students with family responsibilities.
- Communicating in a timely manner if the student’s academic performance is not meeting expectations, providing an outline for what actions need to be taken in order to return to academic good standing, and a timeline for doing so. While dealing with inadequate academic performance can be difficult, it is in no one's best interests to prolong a program of study if success is unlikely.
- Serving as an advocate for the student.

Students sometimes experience personal difficulties. These can include family difficulties, problems in personal relationships, cultural adjustments, financial pressures, medical issues, and problems associated with employment. The importance of these various problems should not be under-emphasized. Advisors should not act in a counseling capacity with their students, nor should they intrude into the personal lives of their students with unwanted advice. However, advisors should try to ensure that their relationships with students are such that students will be comfortable telling advisors that they are having significant personal difficulties. Sometimes a timetable can be rearranged or a referral made to appropriate campus resources (http://www.gsc.upenn.edu/resources/).

Responsibilities of the Graduate Group

The graduate group chair, the graduate group coordinator, and other support staff play key roles in the lives of graduate students. The graduate group must endeavor to create an environment within which scholarly work by graduate students can flourish, and problems can be resolved in an effective manner. Students should take the time to get to know the graduate group administrators. In this way, students can stay current with regulations and graduate group activities and events.

Responsibilities of the graduate group include the following:

- Producing a handbook/brochure/web site that outlines program requirements, regulations and procedures, financial support and information on faculty members and their area of research/expertise. If requirements change, past versions of the information should be maintained for students admitted under the previous requirements.
- Having procedures in place to facilitate the search for an advisor and to allow a change in advisor in the unlikely event that this becomes necessary.
- Establishing an effective communication system with graduate students (i.e., mailboxes and/or e-mail lists) and workspace, where possible.
- Providing orientation sessions for both new and continuing students. Information conveyed in these sessions should include: overview of program policies and requirements, areas of faculty expertise for research supervision, expected performance and timelines for completion of degree requirements, intellectual property policies, publication and authorship issues, scholarship/funding information, information on policies regarding the proper conduct of research, sexual harassment, safety and workplace regulations, and procedures for complaints and appeals.
- Providing responsible conduct of research training as appropriate for your field.
- Ensuring that the student's dissertation committee meets University guidelines (p. 1939) and that the membership is documented in the student's official file.
- Ensuring that the committee meets once a year and that an annual written progress report is filed in the official student file at the graduate group office.
- Providing a mechanism for resolving problems, which may arise between graduate students, advisors and/or members of the dissertation committee.
- Establishing a graduate group appeals process to review formal complaints from students.
- Ensuring a safe, equitable and fair working environment for students and informing them of all relevant safety and work regulations.
- Being sensitive to academic needs and concerns that may arise for international students, students from underrepresented groups, students with disabilities, and/or students with family responsibilities.
- Disbursing financial support in a fair and equitable manner that is consistent with the graduate group's funding policy.
- Being knowledgeable about University resources (http://www.gsc.upenn.edu/resources/) in place to support students, and making referrals when appropriate.

Conflict Resolution

Students experiencing a conflict with an advisor or other faculty member are encouraged to discuss their situation with the Director of the Graduate Student Center (https://gsc.upenn.edu) for advice and support before moving forward. If a dispute or concern arises between a graduate student and advisor with respect to the mentoring relationship, the student and advisor should try first to resolve any difficulties amicably between themselves. If informal discussion does not resolve the problem, there are several avenues to pursue within the graduate group: in most cases, the graduate group chair should be consulted first. If the graduate group chair is unable to find a satisfactory solution, advice may be sought from the relevant associate dean of the student's school or from the University Ombuds (http://www.upenn.edu/ombudsman/), which is a confidential, off-the-record resource that can help the student or the advisor explore options, identify resources, manage expectations, and express frustrations. Additionally, the University Ombuds (http://
If all else fails, and if the nature of the issue is academic, a student may pursue a formal academic appeal by contacting the Office of the Vice Provost for Education (https://provost.upenn.edu/education/).

Here are some further considerations related to conflict resolution:

- All conflict is not necessarily to be avoided. Conflict can result in creative solutions and when the conflict involves ideas, it can advance knowledge.
- There is a significant power differential in the student/advisor relationship, but the very nature of the relationship and the academic enterprise requires that ideas and assumptions may be challenged.
- Expectations should be clear and commonly understood on both sides; put them in writing, if necessary.
- Conflict should be handled early. It is easier to handle smaller issues as they arise, and sometimes options for resolution may diminish over time.
- The Office of Student Conduct’s conflict resolution program (https://www.osc.upenn.edu/mediation-conflict-resolution-mediation/) provides conflict coaching, mediation, and workshops on communication and conflict resolution skills.
- Not all conflict can be resolved informally. If you have tried your best but have not resolved the issue, follow the recommended route to a more formal resolution.

### Seeking Support & Reporting Concerns

#### Academic Concerns

Students who believe that their Graduate Group is not following recommended academic guidelines or University requirements (for example, annual dissertation committee meetings) should discuss their concerns first with the Graduate Group Chair. If the Graduate Group Chair is involved in the issue, or is unable to resolve the issue, students should next discuss the concern with the Graduate Dean in their school. Students who do not find resolution here should bring the concern to the University’s Vice Provost for Education at provost-edg@upenn.edu. Students uncomfortable with this process at any stage are encouraged to bring their concerns to the Director of the Graduate Student Center (http://www.gsc.upenn.edu/) for advice and support.

Students who want to provide general feedback about their experiences in their Graduate Group, either anonymously or not, can fill out the Graduate Group Review Student Feedback Form (https://vpe.wufoo.com/forms/w1dk1nrj0k6ihvi/). PhD Graduate Groups are periodically reviewed by the Graduate Council of the Faculties (GCF), and feedback from current graduate students will be used in that review process. Confidentiality will be maintained for students who do provide their name.

#### Concerns Regarding Unfair Treatment, Bias, Harassment, or any Form of Violence

##### Sorting Through Options

Recognizing that issues of bias, harassment and/or violence can be particularly sensitive, Penn provides several Confidential Campus Resources that can help students sort through options and decide whether and how to make a formal report. These include:

- African-American Resource Center (http://www.upenn.edu/aarc/)
- Counseling and Psychological Services (http://www.vpul.upenn.edu/caps/)
- Lesbian Gay Bisexual Transgender Center (http://www.vpul.upenn.edu/lgbtc/)
- Office of the Chaplain (https://chaplain.upenn.edu/)
- The Office of the Ombuds (http://www.upenn.edu/ombuds/)
- Office of Penn Violence Prevention and Education (https://www.vpul.upenn.edu/pvp/)
- Penn Women’s Center (http://www.vpul.upenn.edu/pwc/)
- Special Services Department, Division of Public Safety (https://www.publicsafety.upenn.edu/about/special-services/)
- Student Health Service (http://www.vpul.upenn.edu/shs/)

### Reporting

Students wishing to initiate a complaint against a member of the Penn community for sexual misconduct – which includes sexual harassment, sexual violence, relationship violence, and stalking – the complaint should be brought to the Associate Vice President for Equity and Title IX Officer (AVP). See the Sexual Misconduct Policy, Resource Offices and Complaint Procedures (https://catalog.upenn.edu/pennbook/ssexual-misconduct-resource-offices-complaint-procedures/) for more information. Penn Violence Prevention (https://www.vpul.upenn.edu/pvp/sexualviolence/) provides support and information about options for reporting sexual misconduct.

Students wishing to lodge an official complaint of discrimination and/or retaliation can pursue either formal mediation or a formal complaint of discrimination and/or retaliation through the Office of Affirmative Action and Equal Opportunity Programs (http://www.upenn.edu/affirm-action/). Affirmative Action maintains a Complaint of Discrimination and/or Retaliation Form. Individuals also may report having been treated in a biased or discriminatory manner by completing a Bias Incident Reporting Form (https://diversity.upenn.edu/diversity-at-penn/bias-motivated-incident-report/). This form may be used to report incidents of bias involving Penn students, faculty, or staff. You are not required to provide your name or contact information. Confidentiality will be maintained to the extent possible.

215-P-COMPLY (https://secure.ethicspoint.com/domain/media/en/gui/22868/) is Penn’s confidential reporting and help line. As a member of the Penn community, you are encouraged to raise questions and concerns, particularly if you suspect violations of policies or legal requirements. To report a student engaged in misconduct, contact the Office of Student Conduct (https://www.osc.upenn.edu/), which is responsible for matters of student discipline. Penn Violence Prevention (https://www.vpul.upenn.edu/pvp/gethelp/) provides support and information about options for reporting sexual violence, relationship violence, or stalking.

### Appendix A - Skill Building and Career Development

PhD students will find that their academic research experience – as well as their strength on the job market – can be enhanced if they focus on developing important skills such as writing, teaching and management throughout their doctoral studies. Students may also want to explore
Develop Writing Skills

The Office of Learning Resources (http://www.vpul.upenn.edu/lrc/lr/) provides help in skills such as academic reading, writing, study strategies, and time management. This academic support is provided through a varied menu of services and programs, some specifically for graduate students and for international students.

The Marks Family Writing Center (http://writing.upenn.edu/critical/writing_center/) provides graduate students with feedback on seminar papers, proposals, manuscripts, and other texts, working on anything from conceptualizing to polishing a final draft, including how to plan and stage writing work.

Develop Teaching Skills

The Center for Teaching & Learning (https://wwwctl.upenn.edu/programs-and-services-graduate-students/) prepares graduate students to serve as TAs and/or to teach their own classes at Penn. In addition, CTL has a number of programs and services to help graduate students as they go on the job market and imagine themselves as future faculty.

The CTL Teaching Certificate (https://wwwctl.upenn.edu/ctl-teaching-certificate/) provides doctoral students with support for improving their teaching as well as recognition for their commitment to developing as teachers. The CTL Teaching Certificate also offers a structure through which interested graduate students can prepare themselves to become faculty in the future. The certificate is noted on the student’s transcript, as a statement from the University of Pennsylvania that a graduate student has pursued advanced training in teaching.

Develop Leadership and Management Skills

There are many opportunities on campus to develop leadership and management skills. PhD students can benefit from holding leadership roles in their school governments or GAPSA (http://www.gapsa.upenn.edu/) or other graduate student organizations (http://www.gsc.upenn.edu/resources/gradgroups.php). PhD students can also volunteer to serve on University committees (http://www.gapsa.upenn.edu/university-committee-seats/).

There are also paid positions on campus (http://www.gsc.upenn.edu/resources/#resource8content) which can provide management and leadership experiences. Examples include fellow positions at the Graduate Student Center (http://gsc.upenn.edu/), graduate associate positions in College Houses & Academic Services (http://www.collegehouses.upenn.edu/join/ga/), and advising positions at the Weingarten Learning Resource Center (http://www.vpul.upenn.edu/lrc/lr/).

A session with an advisor in Career Services (http://www.vpul.upenn.edu/careerservices/gradstud/phdpostdoc.php) can help students identify other important skills and opportunities to develop them.

For Students Considering Careers Beyond Academia

The reality is that your faculty advisor is probably not well-equipped to help you explore careers outside of the professoriate. However, there are many other helpful resources at Penn to assist. Set up an appointment with a graduate student/postdoc career advisor at Career Services (http://www.vpul.upenn.edu/careerservices/gradstud/phdpostdoc.php) where you can get guidance and resources specifically for PhD students exploring their many career options. In addition, you can tap into the vast network of PhD alumni who work in a variety of fields through QuakerNet (https://quakernet-ldap.upenn.edu/discovery/7entityID=https%3A%2F%2Fquakernet-ldap.upenn.edu%2Fsp&return=https%3A%2F%2Fquakernet-ldap.upenn.edu%2FShibboleth.sso%2FLogin%3FSAMLDS%3D1%26target%3Dss%2F53A&mem%3A21cf92f0073f5163ec21b1b). There are also many ways to research career paths taken by Penn alumni using LinkedIn (https://www.linkedin.com/school/university-of-pennsylvania/alumni/). If you are looking for the best ways to take full advantage of these online tools, then call 215-898-7530 to set up a time to speak with career advisors who are specialized in working with PhD students at any stage of the career exploration and career development process. PhD students can begin the process of exploring relevant career paths by reading the Carpe Careers blog (https://www.insidehighered.com/career-advice/carpe-careers/) on the Inside Higher Ed website, written by PhD/postdoc career advisors from a wide range of academic institutions, and setting up free accounts with the following online tools:

- The Versatile PhD (https://www.vpul.upenn.edu/secuareservices/pennkey/esub.php) (for all academic disciplines)
- myIDP (http://myidp.sciencecareers.org/) (for PhD students in STEM fields)
- Imagine PhD (https://www.imaginephd.com/) (for PhD students in humanities and Social Sciences)
- BGS Career Development (https://bgscareerdevelopment.com/) (for PhD students in biomedical fields)

Appendix B - Policies, Rules & Resources

Academic Policies

- Academic Rules for PhD Programs (p. 1939)
- Code of Academic Integrity (p. 1965)
- Fairness of Authorship Credit in Collaborative Faculty-Student Publications for PhD, AM, and MS Students (p. 1973)
- Patent and Tangible Research Property (p. 1993) See section 2.1.4 Student Inventions
- Ethics & Original Research (p. 565)
- Dissertation Manual (p. 565)
- PhD Student Leave of Absence Policy (http://catalog.upenn.edu/pennbook/phdstudentleaveofabsence/)
Conduct Policies
- Code of Student Conduct (p. 1965)
- Alcohol and Other Drug Policy (p. 1945)
- Student Grievance Procedures (p. 2047)

Resources for student success
Penn provides many resources to help students thrive in graduate school. And we recognize that student overall wellness can fall within several dimensions including academic, emotional, physical, spiritual, and financial. The University offers a wide range of resources (https://gsc.upenn.edu/resources/) designed to support these many dimensions of wellness.

Career Services
Career Services provides support and resources for PhD and master's degree students. Career Advisors are happy to work with students on all aspects of their career exploration and planning at any time during their academic programs, and there are many career-relevant steps that students can take in their first years. With access to the student/employer engagement platform called "Handshake (https://www.vpul.upenn.edu/careerservices/handshake/)", students can search for jobs and internships across industries, search and register for upcoming career workshops/programs, career fairs, and employer information sessions, and schedule 1-on-1 or group appointments with advisors at Career Services. Graduate students are encouraged to set up a time to meet with a career advisor to get any of their career questions answered, or to discuss the types of questions they should be asking in order to maximize their career readiness by the time of their graduation. All career appointments and walk-ins are entirely confidential.

For more information, visit https://www.vpul.upenn.edu/careerservices/gradstud/index.php (https://www.vpul.upenn.edu/careerservices/gradstud/).

Doctoral Dissertation Manual
Writing and submitting your dissertation are among the final steps leading to the award of the PhD degree. At the University of Pennsylvania, a student presents and defends the dissertation publicly, and then, with the approval of the dissertation committee and graduate group chair, submits the final manuscript for publication. Finally, the PhD degree is awarded to the candidate upon the recommendation of the Graduate Council of the Faculties.

A bound copy of the dissertation is shelved in the University Library, where it is available through Interlibrary Loan. A digital copy is included in the ProQuest/UMI database, accessible online to subscribers and libraries.

Beginning December 2015, Penn will require open access publication of dissertations (p. 561). Open access publication provides a much wider audience for you, can help to market your ideas to potential employers, and can help make plagiarism or theft much easier to detect. The open access dissertation, published in the University’s institutional repository, ScholarlyCommons, (http://repository.upenn.edu/) will be available via the internet, including full text searching through search engines like Google. The same legal and copyright protections pertain to open access publication as to traditional hardcopy publication. The University permits delay of traditional and open access publication as necessary. See Delay of Publication, below.

Dissertations must be submitted in digital format through ProQuest's ETD Administrator module. Follow the instructions in Submitting Your Dissertation, and should further questions arise, consult the Graduation Coordinators at the Graduate Division of Arts and Sciences, Suite 322A, 3401 Walnut Street/6228; phone 215-898-7444, email: gas-degree@sas.upenn.edu. The Graduate Division of Arts and Sciences serves as the administrative clearinghouse for final deposit of all Penn PhD dissertations.

Ethics and Original Research Handbook
To ensure that all Penn students understand the high academic standards of the University, the Ethics & Original Research Handbook is available to guide you as you approach the research and writing tasks that your courses and dissertation will demand of you. This handbook outlines important information you will need to know about correctly acknowledging your sources when you write a report, research paper, critical essay, or position paper. It also provides guidelines for collaboration on assignments.

View the handbook: https://provost.upenn.edu/uploads/media_items/ethics-handbook.original.pdf

Exchange Scholar Program
The Exchange Scholar Program allows Penn Ph.D. students to apply to study for a semester or an academic year at one of twelve other participating institutions.

Please check with your graduate group about graduate group policies regarding the Exchange Scholar program.

Consortium for Exchange Scholar Program for Ph.D. Students:
- University of California at Berkeley
- Brown University
- University of Chicago
- Columbia University
- Cornell University
- Harvard University
- Massachusetts Institute of Technology
- University of Pennsylvania
- Princeton University
- Rutgers University
- Stanford University
- Yale University

First year doctoral students and master’s students may not participate in the program.
Fontaine Society

Fontaine Fellowships support the education of the most underrepresented groups in PhD education.

In 1970 an endowment was established posthumously in honor of Dr. William Fontaine, first African-American appointed to the Standing Faculty at the University of Pennsylvania. From its inception, the endowment, known as the “Fontaine Fellowship” has been used to advance the University’s goals related to diversity. Originally restricted to students from groups “traditionally and historically underrepresented” in higher education specifically U.S. African American, Native American, and Hispanic students—diversity is now more broadly defined, and may include, for example, first-generation college students who are from low income families, or students whose backgrounds are most underrepresented in a specific discipline or field.

Fontaine funding, in combination with other resources, is used by the schools to recruit a diverse class of PhD students. Fontaine Fellows receive graduate financial aid that is identical to all other funded students in their respective doctoral programs. In addition, the Fontaine Society provides members with opportunities to come together throughout the year to support another’s academic progress and enhance the University campus as a whole, through their contributions to the scholarly community.

For more information, visit https://gsc.upenn.edu/fontaine/about (https://gsc.upenn.edu/fontaine/about/).

Graduate Group Review Student Feedback Form

PhD Graduate Groups are periodically reviewed by the Graduate Council of the Faculties (GCF) in order to identify strengths and weaknesses within each program, and to recommend any changes that may help to improve the Graduate Group. Feedback from current graduate students is an essential element in that review process. You can provide feedback by attending the meeting with the Graduate Group Review Liaison from the GCF and/or using the feedback form (https://vpe.wufoo.com/forms/w1dk1nrj0k8ihvl/). Even if your Graduate Group is not being reviewed, you are welcome to fill out the form (https://vpe.wufoo.com/forms/w1dk1nrj0k8ihvl/) if you would like to provide feedback on your experiences in your Graduate Group.

Feedback form responses are viewed by the Vice Provost for Education, and by the Graduate Group Review Liaison if the Graduate Group is being reviewed. You are not required to provide your name or contact information. Confidentiality will be maintained for students who do provide their name. However, the feedback you provide may become part of the Graduate Council of the Faculties review report. Your demographic information is requested but will not be included in the review report.

This feedback form is intended to solicit general information and impressions about your graduate school experiences. If there is a specific incident you would like to report, please use the University’s Bias Incident Reporting Form (https://diversity.upenn.edu/diversity-at-penn/forms/).

If you have questions about the Graduate Group review process, please contact the Office of the Vice Provost for Education at provost-ed@upenn.edu or 215-898-7225.

View the Graduate Group Review Student Feedback Form: https://vpe.wufoo.com/forms/w1dk1nrj0k8ihvl/

Graduate Student Center

The Graduate Student Center (https://gsc.upenn.edu) was established in 2001 to meet the unique needs of graduate and professional students at Penn. The Grad Center empowers graduate and professional students to participate in a graduate community at Penn, and creates academic, social, intercultural and professional development programs.

The Center provides graduate and professional students with a centrally-located home that includes a lounge, free coffee and tea, a cafe, and meeting/study space. We encourage you to learn more about our activities, facilities, and resources; from New Student Orientation to graduation, the Graduate Center is a supportive, fun space that brings together the wide range of graduate and professional students at Penn.

Grants to help defray the cost of insurance for PhD Students

The University created two grant programs for PhD students to help offset the cost of health insurance and dental insurance. These grants are funded by the Office of the Provost and administered by the Graduate Student Center and the Office of Student Registration and Financial Services.

For more information, visit https://gsc.upenn.edu/resources/graduate-funding-and-finances/insurance-subsidies-and-grants (https://gsc.upenn.edu/resources/graduate-funding-and-finances/insurance-subsidies-and-grants/)

Graduation

Applying for Graduation

The Graduate Division of the School of Arts and Sciences (https://www.sas.upenn.edu/graduate/) oversees the review of all non-professional doctoral dissertations and Master’s theses for the University. Consequently, degree candidates not just in the Graduate School of Arts and Sciences, but for all academic graduate degrees in all nine of the university’s graduate schools must apply (https://fission.sas.upenn.edu/sso/gas/degree/app-start.php) to this office when planning to graduate in any given term.

For more information: https://www.sas.upenn.edu/graduate-division/resources/graduation-and-beyond (https://www.sas.upenn.edu/graduate-division/resources/graduation-and-beyond/)

Graduation Calendar

Revised May 20, 2020

For PhD, AM, MS, and professional degrees in SAS and SEAS

August 2020

GAS begins accepting dissertations Thursday, June 4.

<table>
<thead>
<tr>
<th>Action</th>
<th>Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sign up</td>
<td>April 28 through July 6</td>
</tr>
<tr>
<td>Late Sign#up¹</td>

**Guide To Thriving at Penn**

Penn provides many resources to help you thrive in graduate school, and we recognize that your overall wellness can fall within several dimensions including emotional, physical, social, spiritual, and financial. The University offers a wide range of resources designed to support these many dimensions of your wellness. Learn more about them at: https://gsc.upenn.edu/resources/.

In addition, the University’s HELP Line 215-898-HELP (4357) is a 24-hour-a-day phone number for members of the Penn community who are seeking time sensitive help in navigating Penn’s resources for health and wellness.

**Information for International Students**

Penn’s International Student and Scholar Services (ISSS) (https://global.upenn.edu/issss/) provides immigration benefits assistance and integration initiatives for the international community at Penn. ISSS works with international students through all stages of their journey at Penn, providing guidance every step of the way.

ISSS provides support to students in many different areas. Some examples include:

- Preparing students for arrival to the U.S.
- Helping get adjusted to life in Philadelphia
- Advising on maintaining status, travel, and immigration guidelines
- Providing integration opportunities such as social events, cultural trips and leadership roles
- Assisting with employment authorization before internships or jobs

Find out more information for:

- New Students (https://global.upenn.edu/issss/new/)
- Current Students (https://global.upenn.edu/issss/students/)
- Beyond Immigration (https://global.upenn.edu/issss/beyond-immigration/)

**English Language Programs (https://www.elp.upenn.edu/)**

The English Language Programs (ELP) was established in the 1960s. For over half a century, we have offered courses in English as a Second Language as well as dynamic cultural experiences.

The ELP is a top English language program with a CEA-accredited Intensive Program. We offer open-enrollment programs in Academic, Business, and General English as well as provide programs to matriculated Penn students in areas such as business, dentistry, and law. We offer teacher training, cross-cultural training, and testing. Custom programs and consulting services are available for foundations, multinational corporations, universities, and government agencies.

**Information for Students with Children**

**Family Resource Center**

Penn’s Family Resource Center is a hub for information, resources, childcare benefits, activities and advocacy for students and post-docs with children. The Family Center provides a forum for student parents to connect and develop supportive networks, and offers a welcoming and family-friendly environment for Penn students, post-docs, caregivers, and children.

The Family Center facility includes a large common room and a family reading room complete with toys, games, books, stuffed animals, and two private lactation rooms equipped with Symphony breast pumps. Children visiting the Family Center must be supervised by parents or caregivers at all times. Students and post-docs who wish to use the Family Center should first review the Family Center Guidelines and must complete our Parental Release & Consent Form (https://familycenter.upenn.edu/become-member/).

Visit the Family Center website for more information about activities, benefits, and resources for students with children: https://familycenter.upenn.edu

**Resources**

- Campus Lactation Rooms
- PhD Grant Program
- PhD Family Leave Policies
Learning Resources

Weingarten Learning Resources Center (http://www.vpul.upenn.edu/lrc/Irc/)
The Weingarten Center provides academic support services and programs for undergraduate, graduate, and professional students at the University of Pennsylvania through its two offices. The services and programs of both offices are free and confidential.

Office of Learning Resources (http://www.vpul.upenn.edu/lrc/Ir/)
The Office of Learning Resources (http://www.vpul.upenn.edu/lrc/Ir/) staff provide a wide range of programming and professional consultation services in university-relevant skills such as reading, writing, study strategies, and time management.

Student Disabilities Services (http://www.vpul.upenn.edu/lrc/sds/)
Student Disabilities Services (http://www.vpul.upenn.edu/lrc/sds/) staff work closely with students who self-identify with disabilities in order to ensure equal access to all University programs, activities and services.

Weigle Information Commons (WIC) (http://commons.library.upenn.edu/)
WIC in Van Pelt Library supports students at the individual and course level. Students can receive assistance with writing, speaking, and study skills (http://commons.library.upenn.edu/student-support/student-assistance-services/) at WIC, in addition to learning software and hardware (http://commons.library.upenn.edu/software/) through workshops and online tutorials. High-tech study spaces, equipment, and specialized printers are available as well.

Libraries

Penn has a large and service-oriented library system. The combined 15 libraries on campus contain over 4,500,000 volumes, subscribe to more than 33,000 serials, and offer a rapidly growing set of electronic services which can be accessed from home or office, as well as in the libraries.

- Locations and hours (http://www.library.upenn.edu/locations/)

Research

- For Research Guides by subject, visit: https://guides.library.upenn.edu/hometabs (https://guides.library.upenn.edu/hometabs/).
- To get help with research, students can submit questions online (http://faq.library.upenn.edu/ask/) or make an appointment for in-person assistance (http://faq.library.upenn.edu/widget_standalone.php?widget_id=3266).

Canvas

Canvas is the online learning management system used at Penn. A valid PennKey is required to login to the system.

- To login to Canvas, visit: https://canvas.upenn.edu (https://canvas.upenn.edu/).

- For help with Canvas, visit: http://guides.library.upenn.edu/canvas_students (http://guides.library.upenn.edu/canvas_students/).

Weigle Information Commons (WIC) (http://commons.library.upenn.edu/)
WIC in Van Pelt Library supports students at the individual and course level. Students can receive assistance with writing, speaking, and study skills (http://commons.library.upenn.edu/student-support/student-assistance-services/) at WIC, in addition to learning software and hardware (http://commons.library.upenn.edu/software/) through workshops and online tutorials. High-tech study spaces, equipment, and specialized printers are available as well.

Master’s Thesis Style Guide

University Style Guide for Masters Theses

Paper Requirements

Two hard copies of the approved thesis must be submitted in separate, appropriate sized boxes or sealable envelopes to the

Graduation Coordinator
Graduate Division of Arts and Sciences
3401 Walnut Street

Engineering students must submit the approved thesis to the

Office of Academic Programs
School of Engineering
111 Towne Building

The thesis must be printed single-sided on acid-free white paper, 20 lb. (or heavier stock), 8 1/2 x 11 inches in size. Copier paper is fine.

Font, Spacing, and Margin Requirements

Any non-italic font 10-12 points in size should be used. Headings may be larger. For enhanced screen readability, use Arial (10pt), Courier New (10pt), Georgia (11pt), Times New Roman (12 pt), or Verdana (10pt) font. For footnotes, figures, citations, charts and graphs, a font of 8 point or larger should be used. Italic type may be used for quotations, words in a foreign language, occasional emphasis, or book titles.

For the sake of readability, it is recommended that the text of the dissertation be double-spaced (except for footnotes, long quoted passages, and lists of tables and figures, which are single-spaced). If desired, authors may choose to single-space the abstract and/or thesis manuscript.

Allow one and one-half inches for the left margin and one inch for all other margins. All text, including page numbers, must fit within these margins.

Organization of the Manuscript

Pages must appear in the following order:

- Title Page
- Dedication (optional)
- Acknowledgment (optional)
- Abstract (optional)
- Table of Contents (mandatory for theses 50 pages or longer)
- List of Tables (optional)
PRACTICAL ADVICE: THE IMPACT OF ‘POOR RICHARD’S ALMANAC’ ON DOMESTIC HABITS IN THE AMERICAN COLONIES

Author’s Name

A THESIS

in

American Civilization

Presented to the Faculties of the University of Pennsylvania in Partial Fulfillment of the Requirements for the Degree of Master of (Arts/Science)

2012

Graduate Group Chair

Registrar’s Office

The Office of the University Registrar (https://srfs.upenn.edu/registrar/) supports teaching and learning at the University of Pennsylvania by maintaining the integrity of academic policies and the student information system. We are the stewards of Penn’s student records from application to degree conferral in perpetuity.

We provide the following services to Students, Faculty, Alumni, Parents, Staff and many other constituents across our campus:

• Support Students and Departments during Registration
• Reserve Classrooms for Courses and Academic Events
• Schedule Final Exams
• Record and Report Enrollment and Final Grades
• Certify Attendance
• Manage Veterans Affairs Educational Benefits
• Issue Transcripts
• Verify Graduation and Degrees

A transcript is a representation of a student’s academic record while at the University of Pennsylvania.

Official transcripts are ordered through the Office of the University Registrar website (https://srfs.upenn.edu/student-records/transcripts/). Unofficial transcripts are available at anytime, online for students and alumni class of 1988 or later via the Penn in Touch portal (https://pennintouch.apps.upenn.edu/pennInTouch/jsp/fast2.do?1=2&access=student&bchp=1).

The University Registrar’s office provides verification of dates a student attended Penn and degrees awarded by the Schools of the University. Details concerning Academic Certification may be found on the University Registrar web page (https://srfs.upenn.edu/student-records/enrollment-degree-verification/+).

In accordance with Title 38 US Code 3679 subsection (e), the University of Pennsylvania adopts the following additional provisions for any students using U.S. Department of Veteran Affairs (VA) Post 9/11 G.I. Bill® (Ch. 33) or Vocational Rehabilitation and Employment (Ch. 31) benefits, while payment to the institution is pending from the VA. The University will not:

• Prevent the student’s enrollment;
• Assess a late penalty fee to the student;
• Require student secure alternative or additional funding;
• Deny their access to any resources (access to classes, libraries, or other institutional facilities) available to other students who have satisfied their tuition and fee bills to the institution.

However, to qualify for this provision, such students may be required to:

• Provide Chapter 33 Certificate of Eligibility (or its equivalent) or for Chapter 31, VA VR&E’s contract with the school on VA Form 28-1905 by the first day of class.
• Chapter 33 students can register at the VA Regional Office to use E-Benefits to get the equivalent of a Chapter 33 Certificate of Eligibility. Chapter 31 student cannot get a completed VA Form 28-1905 (or any equivalent) before the VA VR&E case-manager issues it to the school.
• Provide written request to be certified;
Provide additional information needed to properly certify the enrollment as described in other institutional policies.

‘GI Bill®’ is a registered trademark of the U.S. Department of Veterans Affairs (VA). More information about education benefits offered by VA is available at the official U.S. government website at www.benefits.va.gov/gibill (https://gcc01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.benefits.va.gov%2Fgibill%2Fgibilldata%3D02%7C701%7Cramckinney%40pa.gov%7C6f396242142c49d489d608d8234c4af5%7C418e284101284dd59b6c47fcs59i7%7C0%7C0%7C637298157877210440&data=IvWEW1sejv6Ym3kGW%2FZocYrBwiTvxbSO3K07nuVFM%3D&reserved=0).

Wellness

There are a wide variety of resources available to support students at Penn. Some of the most commonly used resources are listed below.

Wellness at Penn (https://www.wellnessatpenn.com/)

The Wellness at Penn initiative provides support, resources, and practical tools for wellness across the Penn community. It affirms wellness as a core priority and necessary driver of life on campus; and it offers a wide range of opportunities to reflect and engage on issues of wellness, stress, mental health, resilience, happiness, personal and academic goals, and the meaning of success.

Counseling and Psychological Services (CAPS) (http://www.vpul.upenn.edu/caps/)

215-898-7021 (Nights and weekends, ask for CAPS counselor on call.)

Counseling and Psychological Services (CAPS) provides professional psychological and psychiatric services to undergraduate, graduate, and professional students who need support in fulfilling their academic, social, and personal objectives. Along with health and wellness partners throughout the Penn community, CAPS directly supports student mental health through counseling, crisis management, consultation, education and outreach, and training.

Division of Public Safety (https://www.publicsafety.upenn.edu/)

A central source for information about police, fire, and emergency services, security services, including walking escorts, and special victim services. Public safety also manages the University’s extensive electronic security infrastructure.

Student Disabilities Services (http://www.vpul.upenn.edu/ldr/sds/)

(215) 573-9235, TDD: (215) 746-6320

The Office of Student Disabilities Services (SDS), part of the Weingarten Learning Resources Center (http://www.vpul.upenn.edu/ldr/), provides comprehensive, professional services and programs for students who self-identify with disabilities to ensure equal academic opportunities and participation in University-sponsored programs. Professional staff evaluate current documentation, determine individual students’ eligibility according to program guidelines, and determine reasonable accommodations for all qualified students with documented disabilities on a case-by-case basis, including academic adjustments, e-text, accessible campus housing, and transportation and parking. SDS also coordinates auxiliary aids and services such as sign language interpreters and Computer Aided Realtime Translation (CART) reporters, as well as the loan of equipment and assistive technologies.

Student Health Service (http://www.vpul.upenn.edu/shs/)

215-746-3535

Student Health Service is a state-of-the-art primary care center dedicated to the health and well-being of Penn students. Student Health provides accessible, cost-effective, culturally-sensitive, and student-focused healthcare, including care for acute and chronic health problems, preventive health services, and health and wellness education. The Health Service works in close collaboration with our partners in the University Life Division, and with our colleagues in the University of Pennsylvania Health System (http://www.pennmedicine.org/) to help ensure the health and wellness of the campus community.

Student Intervention Services (http://www.vpul.upenn.edu/intervention.php)

215-898-6081

Penn Student Intervention Services (SIS) assists the University community in handling emergencies or critical incidents involving the welfare and safety of students.

Office of the Chaplain (https://chaplain.upenn.edu/)

215-898-8456

The staff of the Office of the Chaplain (https://chaplain.upenn.edu/about-us/staff/) is available to students, faculty and staff for pastoral support, guidance, or informal advising and counseling. The Chaplain, an ordained clergy person, participates in campus ceremonies such as Convocation, Baccalaureate and Commencement and also officiates at weddings (https://chaplain.upenn.edu/about-us/weddings-blessings/) and campus memorial services. The office serves and supports a wide range of student organizations (https://chaplain.upenn.edu/student-organizations/), fellowships and religious communities on our campus. They also develop programming designed to improve interfaith understanding and build meaningful, collaborative relationships across religious difference.

Campus Health (http://www.vpul.upenn.edu/shs/campushealth/)

Part of Student Health Service, Campus Health (http://www.vpul.upenn.edu/shs/campushealth/) seeks to empower the Penn community to Live Well through advocacy, education, and action. Campus Health staff focus on a wide variety of healthy living topics including sleep, hygiene, stress reduction, nutrition, exercise, tobacco-free lifestyles and bike safety. Key initiatives include annual flu immunization clinics, which vaccinate more than 2,000 people, and yearlong sexual wellness education through events such as ‘Sex Camp’ and ‘Sex Jeopardy.’
Alcohol and Other Drug Program Initiatives (http://www.vpul.upenn.edu/alcohol/)
The Office of Alcohol and Other Drug Program Initiatives oversees critical areas of health and wellness that can challenge the academic success of Penn students. The office comprises alcohol policy initiatives, violence prevention, data collection, strategic project management, and (in a collaboration with Student Intervention Services (http://www.vpul.upenn.edu/intervention.php)) proactive crisis management.

Policies and Procedures
The following policies and procedures relate to graduate academics at Penn, and are organized by topic.

Most academic polices and procedures at Penn are school-based. University policies (p. 1933) are also often administered through the schools. Students should consult with their school or graduate group with questions or for help in understanding academic policies and procedures.

Academic Rules
• Academic Rules for PhD Programs (p. 1939)
• Academic Rules for Research Master’s Programs (p. 1944)

Course and Exam Related Policies
• Academic Good Standing and Academic Withdrawal (p. 572)
• Course Numbering & Academic Credit (p. 290)
• Rules Governing Final Examinations (p. 2026)
• Policy on Secular and Religious Holidays (p. 2012)

Leaves of Absence and Withdrawals
• Academic Good Standing and Academic Withdrawal (p. 572)
• Leaves of Absence (p. 572)

Teaching
• Evaluation and Certification of the English Fluency of Undergraduate Instructional Personnel (p. 1971)
• Guide to Graduate Student Appointments (https://www.finance.upenn.edu/sites/default/files/Tax-Withholding-on-Graduate-Stipends.pdf)

Research
• Fairness of Authorship Credit in Collaborative Faculty-Student Publications for PhD, AM, and MS Students (p. 1973)
• Guidelines for Research in the Community (p. 1984)
• Guidelines for Student Protection in Sponsored Research Projects (p. 1984)
• Policy Regarding Human Subject Research in the Sociobehavioral Sciences (p. 2015)
• Procedures Regarding Misconduct in Research for Nonfaculty members of the Research Community (p. 2019)

Academic Good Standing and Academic Withdrawal
The minimum standard for satisfactory work for the Graduate Faculties is a B average in each academic year, but the graduate group may set additional requirements that determine advancement; these requirements may require a student to withdraw despite a satisfactory grade average, if the quality of the student’s work is not at a level that predicts successful degree completion.

Students whose grades are not meeting minimum requirements or who are not satisfactorily meeting other graduate group requirements will receive a communication at the end of the academic term or year regarding their academic probation, along with an outline for what actions need to be taken in order to return to academic good standing, and a timeline for doing so. Students receiving such a communication are responsible for working with their advisor and/or graduate group chair to improve academic performance. Students who do not return to academic good standing within the time frame outlined may be withdrawn by the graduate group.

School specific policies:
• Annenberg School for Communication (https://www.asc.upenn.edu/academics/graduate-program/annenberg-school-policies/normal-progress-phd-program/)
• School of Arts and Sciences
• Graduate School of Education (http://www.gse.upenn.edu/pdf/students/Student_Handbook_16-17.pdf)
• School of Engineering and Applied Science (http://www.seas.upenn.edu/graduate/handbook/g-academic-requirements.php)
• Perelman School of Medicine (Biomedical Graduate Studies) (https://webdev.med.upenn.edu/contribute/bgs/documents/ExpectationsofStudents2017forAugustMatrics.pdf)
• School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/phd-handbook/academic-regulations/)
• School of Social Policy & Practice (https://www.sp2.upenn.edu/resources/phd-student-handbook/academics/#GradesandAcademicSta)
• The Wharton School

Leaves of Absence
Leaves of absence for PhD students are governed by University policy (http://catalog.upenn.edu/pennbook/phdstudentleavofabsence/). PhD students are also eligible for Family Leave and New Parent Accommodation per University policy (p. 1975).

Leave of absence policies for professional students vary by school. Professional students should consult the policies in their schools and programs.
The following is a list of all programs offered for academic credit at the University of Pennsylvania and is accurate as of May 2020. Students interested in non-credit and continuing education may visit this webpage (http://www.upenn.edu/programs/lifelong/).
COURSES A-Z

Courses are organized by subject and include courses at the undergraduate and graduate levels.

Search courses by keyword using the Advanced Course Search (p. 1932).

For more information, see the guide to Course Numbering and Academic Credit (p. 290) at the University of Pennsylvania.

A

• Accounting (ACCT) (p. 576)
• Africana Studies (AFRC) (p. 579)
• American Sign Language (ASLD) (p. 608)
• Amharic (AMHR) (p. 609)
• Anatomy (ANAT) (p. 610)
• Ancient History (ANCH) (p. 612)
• Ancient Near East Languages (ANEL) (p. 619)
• Anthropology (ANTH) (p. 620)
• Applied Math & Computational Science (AMCS) (p. 661)
• Applied Positive Psychology (APOP) (p. 663)
• Arabic (ARAB) (p. 664)
• Architecture (ARCH) (p. 668)
• Art & Archaeology of Mediterranean World (AAMW) (p. 687)
• Art History (ARTH) (p. 696)
• Asian American Studies (ASAM) (p. 726)
• Asian Languages (ALAN) (p. 729)
• Astronomy (ASTR) (p. 730)

B

• Behavioral & Decision Sciences (BDS) (p. 731)
• Bengali (BENG) (p. 732)
• Biochemistry & Molecular Biophysics (BMB) (p. 733)
• Biochemistry (BCHE) (p. 737)
• Bioengineering (BE) (p. 737)
• Bioethics (BIOE) (p. 747)
• Biological Basis of Behavior (BIBB) (p. 752)
• Biology (BIOL) (p. 758)
• Biomedical Graduate Studies (BIOM) (p. 771)
• Biomedical Informatics (BMIN) (p. 772)
• Biostatistics (BSTA) (p. 773)
• Biotechnology (BIOT) (p. 776)
• Bosnian-Croatian-Serbo (BCS) (p. 776)
• Business Economics & Public Policy (BEPP) (p. 777)

C

• Cell and Molecular Biology (CAMB) (p. 787)
• Chemical & Biomolecular Engineering (CBE) (p. 798)
• Chemistry (CHEM) (p. 805)
• Chichewa (CHIC) (p. 812)

### Accounting (ACCT)

**ACCT 101 Accounting and Financial Reporting**

This course is an introduction to the basic concepts and standards underlying financial accounting systems. Several important concepts will be studied in detail, including: revenue recognition, inventory, long-lived assets, present value, and long term liabilities. The course emphasizes the construction of the basic financial accounting statements - the income statement, balance sheet, and cash flow statement - as well as their interpretation.

One-term course offered either term

Activity: Lecture

1.0 Course Unit
ACCT 102 Strategic Cost Analysis
Strategic Cost Analysis is the process of analyzing and managing costs in order to improve the strategic position of the business. This goal can be accomplished by having a thorough understanding of which activities and costs support an organization’s strategic position and which activities and costs either weaken it or have no impact. Subsequent cost management efforts can then focus on reducing or limiting expenditures on activities that add little or no strategic value, while increasing expenditures on activities that support the strategic position of the organization. Performance can then be evaluated to ensure that the chosen actions are taken, and that these actions are yielding improved strategic performance. Throughout the course, a strategic cost analysis and management framework will be applied across functions and organizations to highlight the cost analysis and performance evaluation methods available to forecast financial performance and improve strategic position.

Taught by: Chris Ittner
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

ACCT 212 Financial Measurement and Disclosure(X)
This course builds on the knowledge you obtained in your introductory financial accounting course. This is an intermediate level course on financial reporting which covers more complicated transactions than those found in ACCT 101. We will cover major valuation and financial reporting topics on all three major sections of the balance sheet-assets, liabilities, and equity-along with their consequences for net income and cash flows. Case studies and illustrative examples from the financial press will be used to increase your familiarity with actual firms’ financial statements and to emphasize the effect of financial accounting rules on the information presented in financial statements. After completing this course, you will have obtained many of the tools necessary to both prepare and analyze financial statements and accounting information provided by firms. You will acquire an understanding of both the ‘how’ of accounting procedures and the underlying reasons ‘why’ these practices are adopted. These skills are essential for pursuing a broad range of professions in accounting and finance.

Course usually offered in fall term
Prerequisite: ACCT 101
Activity: Lecture
1.0 Course Unit

ACCT 242 Accounting and Business Analysis
In the course, students learn how to analyze firms’ financial statements and disclosures to determine how a firm’s particular accounting choices reflect the underlying economics of the firm. As a result, the course strengthens students’ ability to use financial statements as part of an overall assessment of the firm’s strategy and valuation. The course is especially useful for anyone interested in working on the buy or sell side. The course provides both a framework for and the tools necessary to analyze financial statements. At the conceptual level, it emphasizes that preparers and users of financial statements have different objectives and incentives. At the same time, the course is applied and stresses the use of actual financial statements. For example, students learn how to detect when firms are managing earnings and/or balance sheets. It draws heavily on real business problems and uses cases to illustrate the application of the techniques and tools.

One-term course offered either term
Also Offered As: ACCT 742
Prerequisite: ACCT 101
Activity: Lecture
1.0 Course Unit

ACCT 243 Accounting for Mergers, Acquisitions, and Complex Financial Structures
The objective of this course is to discuss and understand the accounting that underlies merger, acquisition, and investment activities among firms that result in complex financial structures. Key topics include the purchase accounting method for acquisitions, the equity method for investments, the preparation and interpretation of consolidated financial statements, tax implications of mergers and acquisitions, earnings-per-share considerations, the accounting implications of intercompany transactions and non-domestic investments, etc.

Course usually offered in fall term
Also Offered As: ACCT 743
Prerequisite: ACCT 212 AND (ACCT 242 OR ACCT 243)
Activity: Lecture
1.0 Course Unit

ACCT 270 Forensic Analytics
Recent trends in Big Data and predictive analytics are revolutionizing the way stakeholders analyze financial data. This course teaches students the hands-on skills necessary to manipulate large-scale financial databases and build predictive models useful for strategic and investment decisions. The course will cover three applications of predictive analytics: (i) forecasting future earnings, (ii) predicting accounting fraud, and (iii) detecting insider trading. The course will draw on cutting-edge academic research in each area; introduce students to the basic SQL coding skills necessary to manipulate Big Data and conduct meaningful analyses; and leverage the datasets and computing power of Wharton Research Data Services. The course is organized as a hybrid of a traditional seminar course and a computer science course. The first few classes of each unit will cover the conceptual material and source material related to each topic. The later classes in each unit will cover the technical material and programming skills needed to manipulate the respective datasets, estimate prediction models, and backtest algorithms.

Taught by: Dan Taylor
Course usually offered in spring term
Prerequisite: ACCT 101 AND STAT 102
Activity: Lecture
1.0 Course Unit

ACCT 297 Taxes and Business Strategy
The objective of this course is to develop a framework for understanding how taxes affect business decisions. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, organizational form, and mergers and acquisitions. The ultimate goal is to provide a new approach to thinking about taxes that will be valuable even as laws and governments change.

One-term course offered either term
Also Offered As: ACCT 897
Prerequisite: ACCT 101 AND FNCE 101
Activity: Lecture
1.0 Course Unit

ACCT 399 Supervised Study
Intensive reading and study with some research under the direction of a faculty member. Approval from one of the departmental advisers must be obtained before registration. Senior standing and 3.4 average in major related subjects required.

One-term course offered either term
Activity: Independent Study
1.0 Course Unit
ACCT 611 Fundamentals of Financial Accounting
The objective of this course is to provide an understanding of financial accounting fundamentals for prospective consumers of corporate financial information, such as managers, stockholders, financial analysts, and creditors. The course focuses on understanding how economic events like corporate investments, financing transactions and operating activities are recorded in the three main financial statements (i.e., the income statement, balance sheet, and statement of cash flows). Along the way, students will develop the technical skills needed to analyze corporate financial statements and disclosures for use in financial analysis, and to interpret how accounting standards and managerial incentives affect the financial reporting process. This course is recommended for students who want a more in-depth overview of the financial accounting required for understanding firm performance and potential future risks through analysis of reported financial information, such as students intending to go into security analysis and investment banking.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ACCT 613 Fundamentals of Financial and Managerial Accounting
This course provides an introduction to both financial and managerial accounting, and emphasizes the analysis and evaluation of accounting information as part of the managerial processes of planning, decision-making, and control. A large aspect of the course covers the fundamentals of financial accounting. The objective is to provide a basic overview of financial accounting, including basic accounting concepts and principles, as well as the structure of the income statement, balance sheet, and statement of cash flows. The course also introduces elements of managerial accounting and emphasizes the development and use of accounting information for internal decisions. Topics include cost behavior and analysis, product and service costing, and relevant costs for internal decision-making. This course is recommended for students who will be using accounting information for managing manufacturing and service operations, controlling costs, and making strategic decisions, as well as those going into general consulting or thinking of starting their own businesses.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ACCT 706 Cost Management
This course covers managerial accounting and cost management practices that can be strategically applied across the various functions of a business organization to improve organizational performance. The course emphasizes the methods available to measure and evaluate costs for decision-making and performance evaluation purposes. It reviews a number of cost management issues relating to the design and implementation of strategic, marketing, value analysis, and other management models in modern firms; and identifies major contemporary issues in managerial accounting and financial decision-making. A variety of case studies in different industries and decision contexts are used to examine the application of these concepts.
One-term course offered either term
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
0.5 Course Units

ACCT 742 Financial Reporting and Business Analysis
This intensive one-semester course focuses on how to extract and interpret information in financial statements. The course adopts a user perspective of accounting by illustrating several specific accounting issues in a decision context.
One-term course offered either term
Also Offered As: ACCT 242
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
1.0 Course Unit

ACCT 743 Accounting for Mergers, Acquisitions and Complex Financial Structures
This class studies how complex financial structures account for their activities. Primary emphasis is on the application of purchase accounting for mergers and acquisitions, the equity method for investments, and preparing and interpreting consolidated financial statements. Other topics covered include translations and remeasurements for nondomestic investments, and earnings per share calculations for complex financial structures. Tax considerations and acquisition strategies are of only peripheral interest in this class, and students who are concerned primarily with those topics are advised to seek a different elective.
Course usually offered in fall term
Also Offered As: ACCT 243
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
1.0 Course Unit

ACCT 747 Financial Disclosure Analytics
This course focuses on the analysis of financial communications between corporate managers and outsiders, including the required financial statements, voluntary disclosures, and interactions with investors, analysts, and the media. The course draws on the findings of recent academic research to discuss a number of techniques that outsiders can use to detect potential bias or aggressiveness in financial reporting. FORMAT: Case discussions and lectures. Comprehensive final exam, group project, case write-ups, and class participation.
One-term course offered either term
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
1.0 Course Unit

ACCT 897 Taxes and Business Strategy
The objective of this course is to develop a framework for understanding how taxes affect business decisions. Traditional finance and strategy courses do not consider the role of taxes. Similarly, traditional tax courses often ignore the richness of the decision context in which tax factors operate. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, organizational form, regulated industries, financial instruments, tax-sheltered investments, mergers and acquisitions, multinational, and multistate. The ultimate goal is to provide a new approach to thinking about taxes (and all forms of government intervention) that will be valuable even as laws and governments change.
One-term course offered either term
Also Offered As: ACCT 297
Prerequisite: (ACCT 611 OR ACCT 613) AND FNCE 611
Activity: Lecture
1.0 Course Unit
ACCT 910 Accounting Theory Research
This is a theory course covering topics in agency theory, disclosure theory, and incentive design. Course usually offered in fall term. Activity: Seminar 1.0 Course Unit

ACCT 921 Empirical Research in Accounting I
This is an empirical literature survey course covering topics that include corporate disclosure, cost of capital, incentives, compensation, governance, financial intermediation, financial reporting, tax, agency theory, cost accounting, capital structure, international financial reporting, analysts, and market efficiency. Course usually offered in spring term. Activity: Seminar 1.0 Course Unit

ACCT 922 Empirical Research in Accounting II
This is an empirical literature survey course covering topics that include corporate disclosure, cost of capital, incentives, compensation, governance, financial intermediation, financial reporting, tax, agency theory, cost accounting, capital structure, international financial reporting, analysts, and market efficiency. Course usually offered in spring term. Activity: Seminar 1.0 Course Unit

ACCT 930 Empirical Design in Accounting Research
This is an empirical research design course covering topics related to empirical methodology, causal inference, econometric analysis, and panel data approaches. At least one graduate level course in econometrics is recommended. Activity: Seminar 1.0 Course Unit

ACCT 981 Workshop Colloquium I
Students attend workshops in departments outside of accounting to provide student exposure to theory, research designs and methods that are being explored outside of accounting to provide breadth of exposure to foster innovative research ideas. Students are required to attend 15 non-accounting workshops over one academic year and write up a referee report for 8 of those workshop papers. They are also required to write up at least one research proposal that stems from theories or research methods gleaned from one or more of the workshops attended. Activity: Seminar 1.0 Course Unit

ACCT 982 Workshop Colloquium II
Students attend workshops in departments outside of accounting to provide student exposure to theory, research designs and methods that are being explored outside of accounting to provide breadth of exposure to foster innovative research ideas. Students are required to attend 15 non-accounting workshops over one academic year and write up a referee report for 8 of those workshop papers. They are also required to write up at least one research proposal that stems from theories or research methods gleaned from one or more of the workshops attended. Activity: Seminar 1.0 Course Unit

Africana Studies (AFRC)

AFRC 001 Introduction to Africana Studies
The term Africana emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of the field, however, are much older, easily reaching back to oral histories and writings during the early days of the Trans-Atlantic African slave trade. The underpinnings of the field continued to grow in the works of enslaved Africans, abolitionists and social critics of the nineteenth century, and evolved in the twentieth century by black writers, journalists, activists, and educators as they sought to document African descended people's lives. Collectively, their work established African Studies as a discipline, epistemological standpoint and political practice dedicated to understanding the multiple trajectories and experiences of black people in the world throughout history. As an ever-transforming field of study, this course will examine the genealogy, major discourses, and future trajectory of Africana Studies. Using primary sources such as maps and letters, as well as literature and performance, our study of Africana will begin with continental Africa, move across the Atlantic during the middle passage and travel from the coasts of Bahia in the 18th century to the streets of Baltimore in the 21st century. The course is constructed around major themes in Black intellectual thought including: retentions and transferal, diaspora, black power, meanings of blackness, uplift and nationalism. While attending to narratives and theories that concern African descended people in the United States, the course is uniquely designed with a focus on gender and provides context for the African diasporic experience in the Caribbean and Latin America. For BA Students: Humanities and Social Science S Taught by: Beavers, Butler, Charles, Johnson, Hanchard One-term course offered either term Activity: Lecture 1.0 Course Unit

AFRC 002 Introduction to Sociology
Sociology provides a unique way to look at human behavior and social interaction. Sociology is the systematic study of the groups and societies in which people live. In this introductory course, we analyze how social structures and cultures are created, maintained, and changed, and how they affect the lives of individuals. We will consider what theory and research can tell us about our social world. For BA Students: Society Sector Taught by: Imoagene, Zuberi One-term course offered either term Also Offered As: SOCI 001 Activity: Lecture 1.0 Course Unit

AFRC 006 Race and Ethnic Relations
The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, and Asian Americans and Multiracials. Taught by: Charles, Kao, Zuberi One-term course offered either term Also Offered As: ASAM 006, SOCI 006, URBS 160 Activity: Lecture 1.0 Course Unit
AFRC 008 Sociology of the Black Community
This course explores a broad set of issues defining important aspects of the Black/African American experience. In addition to the 'usual suspects' (e.g., race, socioeconomic status, poverty, gender, and group culture), we also think about matters of well-being, the family, education, and identity in Black/African American communities. Our goal is to gain a deeper sociological understanding and appreciation of the diverse and ever-changing life experiences of Blacks/African Americans.
Taught by: Charles
One-term course offered either term
Also Offered As: SOCI 028
Activity: Seminar
1.0 Course Unit
Notes: Freshman Seminar

AFRC 010 Freshman Seminar: The World After 1800
This course is cross-listed with PSCI 010 (Freshmen Seminar) when the subject matter is related to African American or other African Diaspora issues. Topics vary. A recent topic is 'Race, Crime, and Punishment.' See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.
Taught by: Gottschalk
One-term course offered either term
Also Offered As: HIST 106
Activity: Seminar
1.0 Course Unit

AFRC 011 Urban Sociology
This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories urbanism, as well as more specific areas of inquiry, including American urbanism, segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization and the process of urbanization in less developed counties.
Taught by: Flippen
Course not offered every year
Also Offered As: SOCI 011, URBS 112
Activity: Seminar
1.0 Course Unit

AFRC 012 Freshman Seminar
Also Offered As: LALS 107, PSCI 010
Activity: Seminar
1.0 Course Unit

AFRC 015 Freshman Seminar in 20TH Century History
In this First Year Seminar we will use coming-of-age autobiographies to explore some of the most significant historical developments of the 20th century. By coming of age I mean autobiographies in which the author focuses primarily on the periods of childhood and adolescence into young adulthood. We will read books by people who lived during segregation in the South, the Great Depression, Japanese Internment during World War II, and the Civil Rights Movement of the 1960s. We will consider many issues, including: race, racism, immigration, religion, social class, and gender. We will contemplate questions about identity, family, honesty, and memory. As we read each book we will examine an individual life in a particular place and time, and we will move out beyond the confines of a person, family, or town to explore the broader historical moment in which the individual lived. To make this deeper contextualization possible, the course is divided into segments that will allow us to study the historical context of the autobiography as well as engage in focused discussion of the texts themselves.
Taught by: Williams
One-term course offered either term
Activity: Seminar
1.0 Course Unit

AFRC 017 Topics in Literature
SPRING 2018: This seminar will introduce students to the power of public art. Outdoor murals, painted poetry, poetry performed outdoors, anti-museum sculpture, and outdoor theater will be the focus of this seminar. How does public art make the very idea of art gain new dimensions such as art as an event (not an object) and art as a community intervention? Our starting point will be outdoor murals in Philadelphia and other very recent art reconsidering the meaning of public monuments. In addition to our focus on contemporary public art in Philadelphia, we will focus on the role of public art in the 1960s and 1970s Black Arts Movement. The seminar will unveil the power of outdoor space to create art that has urgency and the openness of radical experimentation. See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.
Taught by: Beavers, Tillet, Crawford
One-term course offered either term
Also Offered As: COML 016, ENGL 016
Activity: Seminar
1.0 Course Unit

AFRC 019 AFAM Freshman Seminar
This course will introduce students to a more hemispheric understanding of the American experience, through the writings of many authors from the New World, including the United States, on what it means to be an American. Students will read texts from many genres including but not limited to poetry, film, prose, political speeches and autobiography, to come to terms with histories of native Americans, African-Americans, Latinos, and whites in the United States, as well as peoples of South America and the Caribbean. In the process students will become familiar with scholarship across the social sciences and humanities that consider issues of race, culture, nation, freedom and inequality in the Americas, and how racial slavery and the Afro-American hemispheric experience has informed multiple American visions.
Taught by: Hanchard
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
AFRC 041 Homelessness & Urban Inequality
This freshman seminar examines the homelessness problem from a variety of scientific and policy perspectives. Contemporary homelessness differs significantly from related conditions of destitute poverty during other eras of our nation's history. Advocates, researchers and policymakers have all played key roles in defining the current problem, measuring its prevalence, and designing interventions to reduce it. The first section of this course examines the definitional and measurement issues, and how they affect our understanding of the scale and composition of the problem. Explanations for homelessness have also been varied, and the second part of the course focuses on examining the merits of some of those explanations, and in particular, the role of the affordable housing crisis. The third section of the course focuses on the dynamics of homelessness, combining evidence from ethnographic studies of how people become homeless and experience homelessness, with quantitative research on the patterns of entry and exit from the condition. The final section of the course turns to the approaches taken by policymakers and advocates to address the problem, and considers the efficacy and quandaries associated with various policy strategies. The course concludes by contemplating the future of homelessness research and public policy.
Taught by: Culhane
Course usually offered in fall term
Also Offered As: SOCI 013, URBS 010
Activity: Seminar
1.0 Course Unit

AFRC 047 That's My Song!: Musical Genre as Social Contract
Music in American history has been fundamental to identity formation because, as one scholar notes, it comprises 'the deepest feelings and qualities that make a group unique. Through moving and sounding together in synchrony, people can experience a feeling of oneness with others.' This course examines how various musical genres have served as 'social contracts' among audiences throughout the process of this country's nation building process. Within America's melting pot ideal, communities of listeners have asserted their powerful convictions about social identity through musical praxis and its 'rules of engagement.' The discourses surrounding the notion of 'genre' have often made these meanings legible, audible and powerful for many. From Protestant church performance practices, to minstrelsy, to Tin Pan Alley to rock and hip-hop, the social agreements of musical genres help us understand the dynamism of American identities.
Taught by: Ramsey
Course not offered every year
Also Offered As: MUSC 047
Activity: Lecture
1.0 Course Unit

AFRC 050 World Musics and Cultures
This course examines how we as consumers in the 'Western' world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways—particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of 'World Music' by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.
For BA Students: Arts and Letters Sector
Taught by: Muller, Rommen
One-term course offered either term
Also Offered As: ANTH 022, FOLK 022, MUSC 050
Activity: Lecture
1.0 Course Unit

AFRC 053 Music of Africa
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwaito to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African Fuji, and North African rai and hophop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post colonial era. (Formerly Music 053).

Activity: Lecture
1.0 Course Unit
AFRC 054 Sounding Poetry: Music and Literature
Never before has poetry been so inescapable. Hip hop, the soundtrack of our times, has made rhyme, meter, and word-play part of our daily lives. How did this happen? This course begins not on the page, but in the bardic traditions of Homer’s Iliad, which encoded many of the values of its time in oral formulas. Poetry was, however, no mere encyclopedia, but also a source of risk, as we will read in Plato’s warning against its hypnotic powers, and in the excesses of the Bacchae. We continue through 19th and 20th century attempts to recover these classic traditions (Wordsworth, Longfellow, Pound). Yet Europe was not the only center of poetic production. How does the Homeric tradition relate to living traditions of West African singing poets (griots) and Southern African praise songs? And what traces of these traditions can we hear in the blues? We will listen to early blues recordings and discuss the politics of collecting folklore, and the genius of African American modernists (Langston Hughes, Claude McKay, Georgia Douglas Johnson) who bought vernacular speech onto the page. We will read and listen to a number of 20th century poets inspired when page meets stage in jazz poetry, dub poetry, spoken word, and hip hop. Assignments will include 2 papers, 2 small-group performances, memorization exercises, and a creative adaptation of one poem. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
For BA Students: Arts and Letters Sector
Taught by: Muller
Course not offered every year

AFRC 056 Seeing/Hearing Globally: Knowing People, Culture, and Places through Travel
Students are provided a general introduction to a country’s history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the 12 day intensive travel to that country (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites for journaling and are expected to produce a written/creative project at the end of the travel. The itinerary and specific course content will vary according to the travel site and focus of each class.

AFRC 062 Land of the Pharaohs
This course provides an introduction to the society, culture and history of ancient Egypt. The objective of the course is to provide an understanding of the characteristics of the civilization of ancient Egypt and how that ancient society succeeded as one of the most successful and long-lived civilizations in world history.
For BA Students: History and Tradition Sector
Also Offered As: NELC 062
Activity: Lecture
1.0 Course Unit

AFRC 066 African American Drama: From the 1920’s to the present
This course will introduce students to Pulitzer-prize winning plays such as Lynn Nottage’s Sweat, groundbreaking plays such as Ntozake Shange’s For Colored Girls, as well as less known plays that show the wide range of form and themes in 20th and 21st century African American drama. We will focus on performance as a mode of interpreting a script and performance as a way of understanding the intersections of race, class, and gender. In-class viewings of selected scenes in recorded productions of the plays will energize our analysis of the scripts. Short creative, performance-oriented writing assignments will produce the questions explored in the two critical essays. In addition to Sweat and For Colored Girls, our line-up may include Zora Neale Hurston's Color Struck, Anna Deavere Smith's Twilight: Los Angeles, 1992, Suzan-Lori Parks' 100 Plays for the First Hundred Days, August Wilson's Radio Golf, Lydia Diamond’s Harriet Jacobs, Amiri Baraka’s The Slave, and Claudia Rankine's The White Card.
Taught by: Crawford

Also Offered As: ENGL 066, THAR 066
Activity: Lecture
1.0 Course Unit

AFRC 070 Colonial Latin America
The year 1492 was pivotal in the history of the world. It precipitated huge population movements within the Americas and across the Atlantic - a majority of them involuntary as in the case of indigenous and African people who were kidnapped and enslaved. It led to cataclysmic cultural upheavals, including the formation of new cultures in spaces inhabited by people of African, European and indigenous descent. This course explores the processes of destruction and creation in the region known today as Latin America in the period 1400 - 1800. Class readings are primary sources and provide opportunities to learn methods of source analysis in contexts marked by radically asymmetrical power relationships.
For BA Students: History and Tradition Sector
Taught by: Norton
Course usually offered in fall term
Also Offered As: HIST 070, LALS 070

1.0 Course Unit
Notes: Fulfills History & Tradition Distribution Requirement

AFRC 073 The African Diaspora: Global Dimensions
This class examines the cultural and social ramifications of the African diaspora on a global level. It is divided into two major sections. The first section provides the historical background to the African diaspora by focusing on the forced migration of Africans to Spanish and Portuguese colonies in the Americas. We will then delve into the black experience in French and British colonial spaces. In this section, we will also endeavor to move beyond the Atlantic-centric paradigm in studies of the African diaspora by examining free and unfree migrations of African people across the Indian Ocean to places as far away as India and the Philippines. The second half of the class devotes significant attention to the historical legacy of slavery and colonialism in places like Brazil, Cuba and the United States. In this section, we will discuss such issues as race relations, the struggle for civil rights for African-descent people as well as the emergence and the implementation of affirmative action policies in places like Brazil and the US.
Taught by: Ferreira
Course usually offered in spring term
Also Offered As: HIST 078, LALS 078
Activity: Lecture
1.0 Course Unit
AFRC 075 Africa Before 1800
Survey of major themes and issues in African history before 1800. Topics include: early civilizations, African kingdoms and empires, population movements, the spread of Islam, and the slave trade. Also, emphasis on how historians use archaeology, linguistics, and oral traditions to reconstruct Africa's early history.
For BA Students: History and Tradition Sector
Taught by: Babou
Course usually offered in spring term
Also Offered As: HIST 075
Activity: Recitation
1.0 Course Unit

AFRC 076 Africa Since 1800
Survey of major themes, events, and personalities in African history from the early nineteenth century through the 1960s. Topics include abolition of the slave trade, European imperialism, impact of colonial rule, African resistance, religious and cultural movements, rise of naturalism and pan-Africanism, issues of ethnicity and tribalism in modern Africa.
For BA Students: History and Tradition Sector
Taught by: Cassanelli
Course usually offered in fall term
Also Offered As: HIST 076
Activity: Recitation
1.0 Course Unit

AFRC 077 Jazz Style and History
This course is an exploration of the family of musical idioms called jazz. Attention will be given to issues of style development, selective musicians, and to the social and cultural conditions and the scholarly discourses that have informed the creation, dissemination and reception of this dynamic set of styles from the beginning of the 20th century to the present. Fulfills Cultural Diversity in the U.S.
Taught by: Ramsey
Course not offered every year
Also Offered As: MUSC 035
Activity: Lecture
1.0 Course Unit

AFRC 078 Faculty-Student Collaborative Action Seminar in Urban University-Community Rltn
This seminar helps students develop their capacity to solve strategic, real-world problems by working collaboratively in the classroom, on campus, and in the West Philadelphia community. Students develop proposals that demonstrate how a Penn undergraduate education might better empower students to produce, not simply 'consume,' societally-useful knowledge, as well as to function as caring, contributing citizens of a democratic society. Their proposals help contribute to the improvement of education on campus and in the community, as well as to the improvement of university-community relations. Additionally, students provide college access support at Paul Robeson High School for one hour each week.
Taught by: Harkavy
One-term course offered either term
Also Offered As: HIST 173, URBS 178
Activity: Seminar
1.0 Course Unit

AFRC 081 African-American Literature
An introduction to African-American literature, typically ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some versions of the course will concentrate only on the modern period. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ENGL 081, GSWS 081
Activity: Lecture
1.0 Course Unit

AFRC 085 Contemporary American Literature
The readings for this course expose the student to a wide range of American fiction and poetry since World War II, giving considerable attention to recent work. Works may include All The King's Men by Robert Penn Warren, Herzog by Saul Bellow, On The Road by Jack Kerouac, V by Thomas Pynchon, Of Love and Dust by Ernest J. Gaines, A Flag For Sunrise by Robert Stone, The Killing Ground by Mary Lee Settle, and selected poem by Ginsberg, Plath, and Walcott. Readings vary from term to term.
Course not offered every year
Also Offered As: CIMS 074, ENGL 074
Activity: Lecture
1.0 Course Unit
Notes: This course is cross-listed with ENGL 074 (Contemporary American Literature) when the course content is related to Afro-American issues. Topic vary. Consult the Africana Department website for a current course description.

AFRC 101 Study of an Author
This course introduces students to literary study through the works of a single author—often Shakespeare, but other versions will feature writers like Jane Austen, Geoffrey Chaucer, Herman Melville, and August Wilson. Readings an individual author across his or her entire career offer students the rare opportunity to examine works from several critical perspectives in a single course. What is the author's relation to his or her time? How do our author's works help us to understand literary history more generally? And how might we understand our author's legacy through performance, tributes, adaptations, or sequels? Exposing students to a range of approaches and assignments, this course is an ideal introduction to literary study for those students wishing to take an English course but not necessarily intending to major. See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
Taught by: Beavers
One-term course offered either term
Also Offered As: ENGL 101, GSWS 101
Activity: Lecture
1.0 Course Unit

AFRC 109 American Jesus
Course not offered every year
Also Offered As: RELS 110
Activity: Seminar
1.0 Course Unit
AFRC 112 Discrimination: Sexual and Racial Conflict
This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages, and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual governmental policies and alternative policies are evaluated in light of the empirical evidence on group differences and the alternative theories of discrimination. This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing.
For BA Students: Society Sector
Taught by: Madden
Course usually offered in spring term
Also Offered As: GSWS 114, SOCI 112
Activity: Lecture
1.0 Course Unit

AFRC 114 Poetry Writing Workshop
This is a workshop for students who are interested in exploring a variety of approaches to poetry. Students will encounter a diverse series of readings, in-class writing activities, weekly writing assignments, and creative methods for heightening your abilities as a reader and writer. Maybe repeated for credit with different instructor.
Taught by: Beavers
One-term course offered either term
Also Offered As: ENGL 113
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshmen. Students wishing to take this course must submit a writing sample as part of the selection process.

AFRC 115 Religious Ethics and Modern Society
Religious beliefs of Malcolm X and MLK formed their social action during the Civil Rights for African Americans. This seminar will explore the religious biographies of each leader, how religion shaped their public and private personas, and the transformative and transgressive role that religion played in the history of the Civil Rights movement in the United States and abroad. Students in this course will leave with a clearer understanding of religious beliefs of Christianity, The Nation of Islam, and Islam, as well as religiously based social activism. Other course emphases include the public and private roles of religion within the context of the shaping of ideas of freedom, democracy, and equality in the United States, the role of the 'Black church' in depicting messages of democracy and freedom, and religious oratory as exemplified through MLK and Malcolm X.
Taught by: Butler
One-term course offered either term
Also Offered As: RELS 112
Activity: Lecture
1.0 Course Unit

AFRC 116 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region's long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantation of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.
Taught by: Thomas
Course not offered every year
Also Offered As: ANTH 116, LALS 116
Activity: Lecture
1.0 Course Unit

AFRC 120 Social Statistics
This course offers a basic introduction to the application/interpretation of statistical analysis in sociology. Upon completion, you should be familiar with a variety of basic statistical techniques that allow examination of interesting social questions. We begin by learning to describe the characteristics of groups, followed by a discussion of how to examine and generalize about relationships between the characteristics of groups. Emphasis is placed on the understanding/interpretation of statistics used to describe and make generalizations about group characteristics. In addition to hand calculations, you will also become familiar with using PCs to run statistical tests.
Taught by: Charles
One-term course offered either term
Also Offered As: SOCI 120
Activity: Recitation
0.0 Course Units

AFRC 121 Writing for Children
We will read our favorite kids' books, determine the kinds of books we love to read and write, and then write them, aiming at a clear voice appropriate to the story, and as much order or misrule as each writer's kid-muse demands. For inspiration, we'll visit the Maurice Sendak Collection at the Rosenbach Museum and Library and have a nostalgia wallow in the kids' section at the library. Then students write, fast-fast, drafts of stories to workshop, mull and revise. Yes, fun is required.
For sure we'll critique, but first we'll try to outrun our interior grown-up! Workshopping happens first with student writer colleagues, and then with the real kids in schools, through our partner West Philadelphia Alliance for Children. Reading to children will give studentwriters a chance to hear where children laugh, see where they look scared, or notice when they begin to fidget. Returning with revisions will be a promise fulfilled, and an important marker in the literary life of everyone involved. Our class will act as a team of editors, then, to submit stories-and-illustrations by authors and/or kids-on the upcoming website, SafeKidsStories.org.
Taught by: Cary
One-term course offered either term
Also Offered As: ENGL 121
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshmen. Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor.
AFRC 122 Popular Culture and Youth in Africa
All across the continent, Africa is alive with the energies of young people, expressed in music, art, fashion, drama, video, poetry, protest, and urban legends. In this course, we take a close look at the wide variety of popular forms produced and consumed by young people in a diversity of contexts, urban and rural, elite and marginal, mainstream and transgressive. We will examine how popular culture draws from African tradition to craft innovative versions of modernity and futurity. We will explore themes of democracy, inequality, and social justice threaded through popular genres as well as experiences of joy, anger, fear, and hilarity. We will see how popular culture provides escape and entertainment for young people while also working to transform African societies.
Taught by: Cary
Course usually offered in spring term
Also Offered As: ANTH 120
Activity: Seminar
1.0 Course Unit

AFRC 124 Writing and Politics
This is a course for students who are looking for ways to use their writing to participate in the 2020 election. Student writers will use many forms—short essay, blogs, social media posts, mini video- or play scripts, podcasts—and consider lots of topics as they publish work, in real time, with #VoteThatJawn. This multi-media platform popped up in 2018 to support youth registration and voting in Philadelphia's 2018 mid-term elections. Registration of 18-year-olds that year doubled: from 3,300 to nearly 7,000. This year university, high school, and media partners across the city aim to hit 10K. Imagine that. Imagine a Creative Writing class that answers our desire to live responsibly in the world and to have a say in the systems that govern and structure us. Plus learning to write with greater clarity, precision, and whatever special-sauce Jawn your voice brings. The course is designed as an editorial group sharing excellent, non-partisan, fun, cool, sometimes deadly earnest content for and about fresh voters. In addition, you will gain experience in activities that writers in all disciplines need to know: producing an arts-based event, a social media campaign, working with multi-media content, and collaborating with other artists. English 124 will sometimes work directly with diverse populations of youth from other colleges and high schools throughout the city. Because you will engage with a common reading program about the ground-breaking Voting Rights Act of 1965, the class is cross-listed with Africana Studies 124. In addition, the work of #VoteThatJawn performs a civic service; therefore it is listed as an Academically Based Community Service (ABCS) course with the university. Don't sit out this momentous electoral season because you have so much work. Use your work to bring other youth to the polls.
Taught by: Cary
Also Offered As: ENGL 124
Activity: Seminar
1.0 Course Unit

AFRC 134 Creative Non-Fiction Writing
A workshop course in the writing of creative nonfiction. Topics may include memoir, family history, travel writing, documentary, and other genres in which literary structures are brought to bear on the writing of nonfiction prose. May be repeated for credit with a different instructor.
Taught by: Cary, Watterson
One-term course offered either term
Also Offered As: ENGL 135, GSWS 135, URBS 135
Activity: Seminar
1.0 Course Unit

AFRC 135 Law and Society
After introducing students to the major theoretical concepts concerning law and society, significant controversial societal issues that deal with law and the legal systems both domestically and internationally will be examined. Class discussions will focus on issues involving civil liberties, the organization of courts, legislatures, the legal profession and administrative agencies. Although the focus will be on law in the United States, law and society in other countries of Africa, Asia, Europe and Latin America will be covered in a comparative context. Readings include research, reports, statutes and cases.

One-term course offered either term
Also Offered As: SOCI 135
Activity: Lecture
1.0 Course Unit

AFRC 141 Histories of Race and Science in Philadelphia
The history of race and science has its American epicenter in Philadelphia. Throughout this Academically-Based Community Service (ABCS) course, we will interrogate the past and legacy of racial science in the United States; the broad themes we broach will be met concretely in direct engagement with Penn and the Philadelphia community. As an extended case study, students will undertake independent research projects using primary source documents from local archives, tracing the global history of hundreds of human skulls in the 19th century Samuel G. Morton cranial collection at the Penn Museum, a foundational and controversial anthropological collection in the scientific study of race. These projects will be formed through an ongoing partnership with a Philadelphia high school in which Penn students will collaborate with high school students on the research and design of a public-facing website on the Morton collection and the legacy of race and science in America. In our seminar, we will read foundational texts on the study of racial difference and discuss anti-racist responses and resistance to racial science from the 19th century to the present. Throughout, we will work directly with both primary and secondary sources, critically interrogating how both science and histories of science and its impacts on society are constructed. Throughout this course, we will explore interrelated questions about Penn and Philadelphia's outszie role in the history of racial science, about decolonization and ethics in scholarly and scientific practice, about the politics of knowledge and public-facing scholarship, and about enduring legacies of racial science and racial ideologies. All students are welcome and there are no prerequisites, save for intellectual curiosity and commitment to the course. This course will be of particular interest to those interested in race, American history and the history of science, anthropology, museum studies, education, and social justice.
Taught by: Mitchell
Also Offered As: ANTH 140, HIST 154, STSC 140
Activity: Seminar
1.0 Course Unit
AFRC 147 Studies in African American Music
This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways that black music produces 'meaning' and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments. The course will also engage other expressive art forms from visual and literary sources in order to better position music making into the larger framework of African American aesthetics.
Taught by: Ramsey
Course not offered every year
Also Offered As: MUSC 235
Activity: Lecture
1.0 Course Unit

AFRC 168 History of American Law to 1877
The course surveys the development of law in the U.S. to 1877, including such subjects as: the evolution of the legal profession, the transformation of English law during the American Revolution, the making and implementation of the Constitution, and issues concerning business and economic development, the law of slavery, the status of women, and civil rights.
Taught by: Berry
Course usually offered in fall term

AFRC 175 Society and Culture of Brazil
With its booming economy, the recent inauguration of its first female president, and its selection as host to the 2012 World Cup and Olympic games, Brazil is growing in global prestige. But amid all these exciting developments are devastating socioeconomic inequalities. Access to safe living conditions, livable wages, higher education, and overall social mobility remain painfully out of reach to many Brazilians, the majority of whom are the descendants of slaves. Why do these problems persist in a country that has had such an enduring and widespread reputation as a ‘racial democracy'? What are the possibilities of closing the equality gap in Brazil?
Course not offered every year
Also Offered As: HIST 175, LALS 175
Activity: Lecture
1.0 Course Unit

AFRC 176 Afro-American History 1550-1876
This course examines the experiences of Africans and African Americans in colonial America and in the United States to 1865. We will explore a variety of themes through the use of primary and secondary sources. Topics include: the development of racial slavery, labor, identity, gender, religion, education, law, protest, resistance, and abolition.

AFRC 185 Africa and the Transatlantic Slave Trade
This course focuses on the history of selected African societies from the sixteenth through the mid-nineteenth centuries. The primary goal is to study the political, economic, social, and cultural history of a number of peoples who participated in the Atlantic slave trade or were touched by it during the era of their involvement. The course is designed to serve as an introduction to the history and culture of African peoples who entered the diaspora during the era of the slave trade. Its audience is students interested in the history of Africa, the African diaspora, and the Atlantic world, as well as those who want to learn about the history of the slave trade. Case studies will include the Yoruba, Akan, and Fon, as well as Senegambian and West-central African peoples.
Taught by: Ferreira
One-term course offered either term
Also Offered As: HIST 187, LALS 187
Activity: Lecture
1.0 Course Unit
AFRC 187 Topics in Africana Studies
Topics Vary. See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.
SPRING 2017: The history of the women and men of African Descent who have studied, taught, researched, and worked at the University of Pennsylvania provides a powerful window into the complex history of Blacks not only in America but throughout the Diaspora. This class will unpack, uncover, and present this history through close studies of texts and archived records on and at the university, as well as through first hand accounts by alumni and past and present faculty and staff members. These stories of the trials and triumphs of individuals on and around this campus demonstrate the amazing and absurd experience that Blacks have endured both at Penn and globally. Emphasis will be placed on the research process with the intent of creating a democratic classroom where all are students and all are instructors. Students will become familiar with archival historical research (and historical criticism) as well as with ethnographic research. Far more than just a survey of historical moments on campus and in the community, students will meet face to face with those who have lived and are presently living history and they will be faced with the challenge of discerning the most effective ways of documenting, protecting, and representing that history for future generations of Penn students.
Taught by: Howard, Peterson
One-term course offered either term
Activity: Seminar
1.0 Course Unit

AFRC 190 Introduction to Africa
This course provides an introduction to the study of Africa in all its diversity and complexity. Our focus is cultural, geographical, and historical: we will seek to understand Africa's current place in the world political and economic order and learn about the various social and physical factors that have influenced the historical trajectory of the continent. We study the cultural formations and empires that emerged in Africa before European colonial invasion and then how colonialism reshaped those sociocultural forms. We'll learn about the unique kinds of kinship and religion in precolonial Africa and the changes brought about by the spread of Islam and Christianity. Finally, we'll take a close look at contemporary issues such as ethnic violence, migration, popular culture and poverty, and we'll debate the various approaches to understanding those issues.
For BA Students: Society Sector
Taught by: Hasty
Course usually offered in fall term
Also Offered As: ANTH 190
Activity: Lecture
1.0 Course Unit

AFRC 201 Divinities, Diviners and Divinations: Religions of the African Diaspora
This undergraduate course is designed to provide students with a broad introduction to major themes within African Diasporic Religions. This is an interdisciplinary course. We will be drawing upon various theoretical methods, i.e. historical, ethnographical, and autobiographical. Additionally, we will be examining visual media to understand the presence and value of African Diasporic Religions in the 20th/21st century. Special attention will be given to Vodou, Santeria, and Candomble in the Americas. Thematically, we will work through concepts of the diaspora; memory, myth and authenticity; ritual and material practices; borders, migration, gender and sexuality, religious Commodities and exchange. As we traverse through these various religious traditions, it is through the readings, lectures, invited speakers, films and class discussions that we will develop a complex understanding of integrative religious worldviews that impacts every aspect of life: family structure, gender relations, education, healing, economics, politics, arts, and so on. It is with the hopes that we can apprehend how these traditions are indeed an American Religion.
Taught by: Nwokocha
One-term course offered either term
Also Offered As: GSWS 201
Activity: Lecture
1.0 Course Unit

AFRC 202 Spirit possession in Caribbean Religions
This course is designed to provide students with a broad introduction to possession experiences in Caribbean Religions. Through historical, ethnographic, autobiographical, literary and visual texts this course examines complex, gendered practices within the possession process, the vibrant spiritual energy that sustains communal connections during religious ceremonies, and the transnational imaginations that animate Caribbean religious practices in the Americas. Special attention will be given to Santeria, Candomble, Vodou, Myal, Palo Monte, and Revival Zion in the Americas. Possession is a process through which gender and sexuality can be performed, contesting national and regional discourses of sexuality, gender, and race in the Caribbean. Thematically, we will work through concepts of memory, community, adornment, ritual, borders, and the senses. We will investigate religious ritual practices to understand various religious worldviews that shape communities' religious and social lives.
Taught by: Nwokocha
Course not offered every year

Also Offered As: LGST 218
Activity: Lecture
1.0 Course Unit

AFRC 222 African Women’s Lives: Past and Present
Restoring women to African history is a worthy goal, but easier said than done. This course examines scholarship over the past forty years that brings to light previously overlooked contributions African women have made to political struggle, religious change, culture preservation, and economic development from pre-colonial times to present. The course addresses basic questions about changing women’s roles and human rights controversies associated with African women within the wider cultural and historical contexts in which their lives are lived. It also raises fundamental questions about sources, methodology, and representation, including the value of African women’s oral and written narrative and cinema production as avenues to insider perspectives on African women’s lives.
Taught by: Blakley
Course not offered every year
Also Offered As: GSWS 222
Activity: Lecture
1.0 Course Unit

AFRC 225 African Languages and Culture
The aim of the course is to provide an overall perspective on African languages and linguistics. No background in linguistics is necessary. Students will be introduced to theoretical linguistics—its concepts, theories, ways of argumentation, data collection, data analysis, and data interpretation. The focus will be on the languages and linguistics of Africa to provide you with the knowledge and skills required to handle the language and language-related issues typical of African conditions. We will cover topics related to formal linguistics (phonology/phonetics, morphology, syntax, and semantics), aspects of pragmatics as well as the general socio-linguistic character of African countries. We will also cover language in context, language and culture, borrowing, multilingualism, and cross-cultural communication in Africa.

Also Offered As: ASAM 203, HIST 231
Activity: Seminar
1.0 Course Unit

AFRC 232 Race and Ethnic Politics
This course examines the role of race and ethnicity in the political discourse through a comparative survey of recent literature on the historical and contemporary political experiences of the four major minority groups (Blacks or African Americans, American Indians, Latinos or Hispanic Americans, and Asian Americans). A few of the key topics will include assimilation and acculturation seen in the Asian American community, understanding the political direction of Black America in a pre and post Civil Rights era, and assessing the emergence of Hispanics as the largest minority group and the political impact of this demographic change. Throughout the semester, the course will introduce students to significant minority legislation, political behavior, social movements, litigation/court rulings, media, and various forms of public opinion that have shaped the history of racial and ethnic minority relations in this country. Readings are drawn from books and articles written by contemporary political scientists.
Taught by: Gillon
Course not offered every year
Also Offered As: LALS 232, PSCI 231
Activity: Recitation
1.0 Course Unit

AFRC 233 World History: Africa or the Middle East
SPRING 2018: African cities in the past contributed to dynamic and prosperous civilizations. What happened? This course examines Africans’ aspirations of modernity through the lens of African urban history using fiction, film and current scholarship in several disciplines. Each class will explore two temporali-ties—the precolonial history of African cities, and the colonial and postcolonial histories of economic, social and political progress which goes by the name of development. Grounded in the case studies of both ancient and modern cities, this course explores the emergence and decline of trading centers, the rise of colonial cities, and the dilemmas of postcolonial economies and politics.
Taught by: Babou, Powell
Course usually offered in fall term
Also Offered As: GSWS 232, HIST 232, NELC 282

Activity: Seminar
1.0 Course Unit
AFRC 235 Law and Social Change
Beginning with discussion of various perspectives on social change and law, this course then examines in detail the interdependent relationship between changes in legal and societal institutions. Emphasis will be placed on (1) how and when law can be an instrument for social change, and (2) how and when social change can cause legal change. In the assessment of this relationship, emphasis will be on the laws of the United States. However, laws of other countries and international law relevant to civil liberties, economic, social and political progress will be studied. Throughout the course, discussions will include legal controversies relevant to social change such as issues of race, gender and the law. Other issues relevant to State-Building and development will be discussed. A comparative framework will be used in the analysis of this interdependent relationship between law and social change.

AFRC 238 Modalities of Black Freedom and Escape: Ships
The course circulates around ships and boats. The course combines methods from environmental humanities, visual arts and history to consider multi-modal practices of black freedom and escape. From free black sailors in the eighteenth century Caribbean Sea, to twentieth and twenty-first century West African fishing boats, notions of Haiti's 'boat people,' Parliament Funkadelic's mothership, and sinking boats with Somali and Ethiopian migrants off Yemen's coast, ships have been and remain technologies of containment and freedom for communities of African descent. In the face of environmental vulnerabilities and the reality of water ways as systems of sustenance and imminent death, this course asks: how do black people use the ship and the process and practice of shipping as vessels for freedom, escape, and as a site to experiment with futures? Using the city of Philadelphia and the Schuylkill and Delaware rivers as our primary site of interrogation, the course attends to the threats that black people experience following natural disaster (New Orleans, Haiti, Puerto Rico) and everyday engagement with the local and global state structures regarding water (Flint, MI). In this context, we also look to shipping as a site to theorize and account for black innovation, meanings of (non-)sovereignty, and alternative futures.

AFRC 245 Dancing the African Diaspora
This seminar/studio course introduces students to theories, debates, and critical frameworks in African Diaspora Dance Studies. It asks: What role does dance play throughout the African diaspora? What makes a dance 'black'? How do conceptualizations of gender and sexuality inform our reading of dancing bodies? Using African diaspora, critical dance, performance, and black feminist frameworks, we will examine the history, politics, and aesthetics of 'black dance'. Through a keywords format, we'll construct both a vocabulary: a body of words used to describe a phenomena, and a grammar: a body of rules that lay bare the operations between terms. This course recognizes the fluidity of meaning between words depending on the context, geography, and circumstance of their evocation. Our key terms will allow us to examine a number of dancers, choreographers, companies, and movement practices. Moving across an African diasporic map, this course explores the politics of black choreography, and the political significance of black bodies in motion.

1.0 Course Unit

AFRC 248 The Haitian Revolution
In August 1791, enslaved Africans on the northern plain of Saint Domingue (colonial Haiti) rose up in a coordinated attack against their French colonial masters and plantation overseers, launching the initial revolt in what would come to be known as the Haitian Revolution. In the years that followed, their actions forced the legal abolition of racial discrimination, and then the abolition of slavery, throughout the French Empire. Ultimately, when Napoleon Bonaparte threatened to return slavery to Saint Domingue, they waged a war for independence. After defeating the Napoleonic army, these former slaves then declared the world's first 'Black Republic,' the independent state of Haiti, in 1804.
This seminar will examine some of the major themes and debates surrounding Haiti's colonial and revolutionary history. We will begin by considering the colonial paradox: France's leading role in the intellectual movement called the 'Enlightenment' coincided with its ascent as a slaveholding colonial power. The seminar will also explore parallels and points of connection between the revolutionary movements in France and Saint Domingue. When the Haitian Revolution began in 1791, the French Revolution was already two years old: how did the increasingly radical ideas and widespread violence in France shape events in the Caribbean? Likewise, how did west African traditions and political ideologies influence insurgents? And how, in turn, did the revolution in Saint Domingue impact the revolution in France? From a diplomatic perspective, we will also consider relations between the Haitian Revolutionary leadership and French officials, examining their respective goals, which overlapped and diverged at different moments. Finally, we will ask how the revolution in Saint Domingue-and the birth of Haiti—impacted ideas about liberty, sovereignty and freedom throughout the Atlantic world. We will read a combination of primary and secondary materials each week. Students are encouraged to read primary documents in the original French if they are able. A final research paper will be required of all students, drawing on the Kislak Center's rich collection of revolutionary-era documents.

AFRC 258 Latin American Music
This course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts—concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertories of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production. (Formerly Music 158).

AFRC 268 Contemporary Issues in African Society
This course will deal with law and society in Africa. After surveying the various legal systems in Africa, the focus will be on how and to what extent the countries of Africa ‘re-Africanized’ their legal systems by reconciling their indigenous law with western law and other legal traditions to create unified legal systems that are used as instruments of social change and development. Toward this end, the experiences of various African countries covering the various legal traditions will be included. Specific focus will be on laws covering both economic and social relations. This emphasis includes laws of contracts and civil wrongs, land law, law of succession, marriage and divorce and Africa’s laws of International Relations, among other laws. Throughout this course a comparative analysis with non-African countries will be stressed.

AFRC 274 Faces of Jihad in African Islam
This course is designed to provide the students with a broad understanding of the history of Islam in Africa. The focus will be mostly on West Africa, but we will also look at developments in other regions of the continent. We will explore Islam not only as religious practice but also as ideology and an instrument of social change. We will examine the process of islamization in Africa and the different uses of Jihad. Topics include prophetic jihad, jihad of the pen and the different varieties of jihad of the sword throughout the history in Islam in sub-Saharan Africa.

AFRC 269 Constitutional Law: Public Power & Civil Rights to 1912
This course explores the creation and transformations of the American constitutional system’s structures and goals from the nation’s founding through the period of Progressive reforms, the rise of the Jim Crow system, and the Spanish American War. Issues include the division of powers between state and national governments, and the branches of the federal government; economic powers of private actors and government regulators; the authority of governments to enforce or transform racial and gender hierarchies; and the extent of religious and expressive freedoms and rights of persons accused of crimes. We will pay special attention to the changing role of the Supreme Court and its decisions in interpreting and shaping American constitutionalism, and we will also read legislative and executive constitutional arguments, party platforms, and other influential statements of American constitutional thought.

AFRC 277 Penn Slavery Project Research Seminar
This research seminar provides students with instruction in basic historical methods and an opportunity to conduct collaborative primary source research into the University of Pennsylvania’s historic connections to slavery. After an initial orientation to archival research, students will plunge into doing actual research at the Kislak Center, the University Archives, the Historical Society of Pennsylvania, the American Philosophical Society, the Library Company, and various online sources. During the final month of the semester, students will begin drafting research reports and preparing for a public presentation of the work. During the semester, there will be opportunities to collaborate with a certified genealogist, a data management and website expert, a consultant on public programming, and a Penn graduate whose research has been integral to the Penn Slavery Project.
Taught by: Brown

AFRC 281 Topics in African American Literature
In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included 'African American Autobiography,' 'Backgrounds of African American Literature,' 'The Black Narrative' (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music. See Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.

Notes: Spaces will be reserved for English Majors.

AFRC 283 Modern Art
The history of modern art is closely tied to and largely unfolds from the history of Western Imperialism. While the technologies made possible by colonial resource extraction produced new ways of looking, modern conceptions of the self and how to represent it developed in dialogue with racialized notions of the other. This course focuses on encounters between the cultures of Africa and Europe, from 1880 to 1960, and on the visual practices that emerged on both continents as a result. Topics of special interest will include racial difference and the birth of photography, colonial masquerade, impressionism, symbols of power in royal arts, cubism, mass marketing and colonial self-fashioning, West African studio photography, world’s fairs and the Musee de l’Homme, Dada and surrealism, Negritude and interwar Paris, anti-aesthetics, colonial arts education, National art schools in the age of African independence, humanism and South African photography under Apartheid.

Activity: Lecture
1.0 Course Unit

AFRC 286 Topics in Race and Ethnicity - No Bench by the Road: Monuments, Memory, and the Afterlife of Slavery
SPRING 2018: In 1989, as she reflected on her magnum opus, Beloved, Toni Morrison declared "There is no place you or I can go, to think about or not think about, to summon the presences of, or recollect the absences of slaves. She went on, There is no suitable memorial, or plaque, or wreath, or wall, or park, or skyscraper lobby. There's no 300-foot tower, there's no bench by the road.' And because such a place doesn't exist...the book had to.' Today, there are significantly more markers of slavery in the public sphere as well as new novels, films, and television shows that directly take up the history and remnants of slavery in our lives. Looking at Colson Whitehead's novel, The Underground Railroad and WGN's tv series 'The Underground,' the remaking of the Whitney Plantation in Louisiana as well as considering the debates about confederate flags and monuments in places like New Orleans, Virginia, and South Carolina, this course will examine the meaning and movements behind these contemporary engagements with American slavery today. See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

1.0 Course Unit

AFRC 287 Religion and Society in Africa
In recent decades, many African countries have perennially ranked very high among the most religious. This course serves as an introduction to major forms of religiosity in sub-Saharan Africa. Emphasis will be devoted to the indigenous religious traditions, Christianity and Islam, as they are practiced on the continent. We will examine how these religious traditions intersect with various aspects of life on the continent. The aim of this class is to help students to better understand various aspects of African cultures by dismantling stereotypes and assumptions that have long characterized the study of religions in Africa. The readings and lectures will be drawn from historical and a few anthropological, and literary sources.

1.0 Course Unit

AFRC 294 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

Activity: Lecture
1.0 Course Unit

AFRC 302 Sustainable Entrepreneurship
This course is designed to introduce students to the multiple methods of engaging Africana entrepreneurship, public service and philanthropy. Alongside a thorough review of both popular and independent activist media, students will be trained to use accessible technology to participate in international communications networks. ‘Big ideas,’ will be translated into succinct artistic statements. We will look intimately at the architecture of David Adjaye, Adjaye Associates; the initiatives of Majora Carter for Sustainable South Bronx and Majora Carter Group; the philanthropic equity of Vista Equity Partners and C.E.O. Robert Smith, and the political work of Mayor Ras Baraka, City of Newark among other examples from the public and private sector throughout the African Diaspora. Prior to the development of our own app ideas, we will focus on the urban market advertising strategies of majority companies that are lauded for their sustainable initiatives including Nike, Hewlett-Packard and Apple. We will also use as secondary resources macro approaches to sustainability from the United Nations Foundation. This course makes an argument for inclusion of race, class and gender equity in the evolving definition of sustainability. Our argument, consistent with the growth of so many of these professionals inside of and clearly influenced by hip-hop culture, is that they are best prepared, culturally, to ‘make something out of nothing.’
Taught by: Gilliam
Course not offered every year
Activity: Seminar
1.0 Course Unit

AFRC 305 Housing, Race, and Community in the United States
One’s home is the first site of self-identity, socialization, and notions of citizenship. In the United States, neighborhoods are the basic units of political organization, educational options, and familial wealth. This course explores the intersections between race and housing in the United States with a specific focus on the experiences of African-Americans in urban centers. The intersectional housing experiences of Asian, Latinx, first-generation immigrants, Arab, and indigenous communities will also be analyzed. This course represents both a timely and nuanced opportunity to address housing as a focal point of existing racial tensions and deepening socio-economic inequalities in the U.S. Increasingly, housing has become a contested subject, with heated debates concerning its status as a human, and potentially constitutional, right. Students will explore urban governance values, the commodification of urban landscapes, and the institutional dimensions of race in the United States. Students will develop a critical understanding of the underlying structural causation for the issues faced by minority populations seeking adequate, affordable, and safe housing in the U.S. Prior knowledge of urban planning, housing, or social policy is not necessary for this course. Students will finish the course equipped with a broad knowledge base of associated development topics including globalization, commodification, and social justice.
Taught by: Redden
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

AFRC 307 Race, Science and Justice
This course draws on an interdisciplinary body of biological and social scientific literature to explore critically the connections between race, science, and justice in the United States, including scientific theories of racial inequality, from the eighteenth century to the genomic age. After investigating varying concepts of race, as well as their uses in eugenics, criminology, anthropology, sociology, neuroscience, and medicine, we will focus on the recent expansion of genomic research and technologies that treat race as a biological category that can be identified at the molecular level, including race-specific pharmaceuticals, commercial ancestry testing, and racial profiling with DNA forensics. We will discuss the significance of scientific investigations of racial difference for advancing racial justice in the United States.
Taught by: Roberts

Activity: Seminar
1.0 Course Unit
AFRC 316 Africa and Roman Literature
In this course, we will explore race and ethnicity in the Roman world by focusing on the life and works of Roman Africans and the ways in which non-African Romans engaged with and presented the peoples of Africa. The course covers Roman literature in translation from the comedies of Plautus produced in the late 3rd-2nd centuries BCE, to African Christian writing of the 5th century CE. It also covers a wide range of genres: we will examine how Roman writers articulate questions of race in comedy and satire, epic, history, biography, and elegy among others. We will read African writers (Apuleius, Augustine) and ask how their Africanness influences their works. We will read Roman accounts of journeys to Africa, wars with Africa, and encounters with Africans to ask how the Romans saw themselves as different from or similar to Africans. The course will also explore in more general terms how Romans talk about race: did racism exist? What aspects of different cultures and peoples did Romans choose to emphasize when they talked of non-Romans?
Taught by: Lewis

AFRC 321 Understanding African Conflict
The end of colonial rule was the springboard for the start of cold wars in various regions of Africa. Where peace could not be maintained violence erupted. Even where secession has been attained, as in the new country of South Sudan, the threat of civil war lingers. While domestic politics have led to the rise of armed conflicts and civil wars in many African countries, the external factors should also not be ignored. Important in all current conflicts is the concern to international peace and security. Overall this course will: (1) investigate the general nature of armed conflicts in Africa (2) provide in-depth analysis of the underlying factors (3) and discuss the regional and the international responses to these conflicts and their implications. Special emphasis will be placed upon African conflicts and civil wars in: great Lakes area, Mali, Nigeria, Senegal, Sudan, Somalia, South Sudan, and Uganda.

One-term course offered either term
Activity: Seminar
1.0 Course Unit

AFRC 322 American Slavery and the Law
In this course, we will work both chronologically and thematically to examine laws, constitutional provisions, and local and federal court decisions that established, regulated, and perpetuated slavery in the American colonies and states. We will concern ourselves both with change over time in the construction and application of the law, and the persistence of the desire to control and sublimate enslaved people. Our work will include engagement with secondary sources as well as immersion in the actual legal documents. Students will spend some time working with murder cases from the 19th century South. They will decipher and transcribe handwritten trial transcripts, and will historicize and analyze the cases with attention to procedural due process as well as what the testimony can tell us about the social history of the counties in which the murders occurred. Students will have the opportunity to choose a topic and conduct original research using both primary and secondary sources, resulting in a 20-page research paper. We will spend a good deal of time throughout the semester learning how to research, write, and re-write a paper of this length. At the end of the semester students will present the highlights of their research to the class.
Taught by: Williams
Course usually offered in spring term
Also Offered As: HIST 322
Activity: Seminar
1.0 Course Unit

AFRC 324 Dress and Fashion in Africa
Throughout Africa, social and cultural identities of ethnicity, gender, generation, rank and status were conveyed in a range of personal ornamentation that reflects the variation of African cultures. The meaning of one particular item of clothing can transform completely when moved across time and space. As one of many forms of expressive culture, dress shape and give forms to social bodies. In the study of dress and fashion, we could note two distinct broad approaches, the historical and the anthropological. While the former focuses on fashion as a western system that shifted across time and space, and linked with capitalism and western modernity; the latter approach defines dress as an assemblage of modification the body. The Africanist proponents of this anthropological approach insisted that fashion is not a dress system specific to the west and not tied with the rise of capitalism. This course will focus on studying the history of African dress by discussing the forces that have impacted and influenced it overtime, such as socio-economic, colonialism, religion, aesthetics, politics, globalization, and popular culture. The course will also discuss the significance of the different contexts that impacted the choices of what constitute an appropriate attire for distinct situations. African dress in this context is not a fixed relic from the past, but a live cultural item that is influenced by the surrounding forces.

Activity: Lecture
1.0 Course Unit
AFRC 325 Performance in the African Diaspora
The purpose of this course is to engage students in the rigorous process of mining experiences for material that can be transformed into a public performance piece. In-class writing, group discussions, and field work in the Philadelphia area. AUGUST WILSON AND BEYOND. The people need to know the story. See how they fit into it. See what part they play. - August Wilson, King Hedley II. In this seminar, students will read groundbreaking playwright August Wilson’s 20th Century Cycle: ten plays that form an iconic picture of African American traumas, triumphs, and traditions through the decades, told through the lens of Pittsburgh’s Hill District neighborhood. Other readings include supporting material on Wilson’s work and African American theatre, the works of contemporary playwrights whom Wilson has influenced (such as Suzan-Lori Parks and Tarell Alvin McCraney), and context on Penn’s relationship with West Philadelphia. As an Academically Based Community Service (ABCS) course, this seminar gives students the opportunity to enhance their understanding of the plays, and history and culture that shaped them, by forming meaningful relationships with West Philadelphia residents. Wilson’s plays provide the bridge between the two groups. The course culminates with students writing an original theatre piece inspired by the readings and relationships, which they will share at an end-of-semester performance.

AFRC 327 Fashioning the Black Body
The fundamental query underlying this course is what is the relationship between dress, adornment, and corporeal figuring and race, specifically blackness? This course will draw upon a number of disciplines and fields including history, performance theory, cultural studies, gender studies, and queer studies to examine how blackness is fashioned, and refashioned within the United States and globally. Throughout the course we will investigate how not only race—but attendant issues of gender, sexuality and citizenship have all been constructed and contested through dress. Finally, we will explore what new and more nuanced insights might fashion, dress, adornment, and corporeal figuring offer us for understanding black subjectivities more broadly.
Taught by: Bush

1.0 Course Unit

AFRC 336 Africa and the Indian Ocean World
The Indian Ocean region represents an area with interwoven centuries of interactions, politically, historically, geographically and culturally. This area has witnessed continuous migrations of peoples, the circulation of goods and ideas, and the interaction with foreign forces. The Indian Ocean world has served as an epicenter of global economy in pre-modern world and as such, it gave rise to trading networks and political empires. As part of the Indian Ocean World, the eastern and southern shores of Africa are both the recipients and the transmitters of cultural and political icons. The existence of many islands that separate Africa from Asia stand as hybrid cultures that are influenced by forces from different continents. Political and cultural relations between African regions and the rest of the Indian Ocean world are evident with the presence of African-descent populations in these places, as well as the prevalent of cultural practices of African origin. Signs of interaction between the Indian Ocean world and the African shores are apparent in several archaeological sites, as well as in the cultural practices of religion, language, architecture and modes of dress. The European colonial expansion, has allowed the populations in the Indian Ocean world to share strategies during their independence movements to thwart western political hegemony. With the current advanced forms of globalization, this region is moving more towards economic and political cooperation and in addressing the transnational natural and man-made threats.

AFRC 338 Exhibiting Black Bodies
This course concerns the exhibiting of Black Bodies in Museums and gallery spaces. We will trace the evolution of public history from the ‘Cabinets of Curiosity’ in 18th and 19th Century Europe, through to the current institutional confirmation of the validations traditions represented by Museu Afro Brasil (Sao Paulo, Brazil), National Museum of African American History and Culture (Washington,D.C.), and the Museum of Black Civilization (Dakar, Senegal). We will give particular attention to ‘why these representations at these times in these places?’ In the process of addressing these questions we will give voice to the figures who conceived the curatorial content from those with the colonial mentality, to those with the abolitionist and nationalist and Pan-African visions.
Taught by: Zuberi
Also Offered As: AFRC 620, SOCI 338, SOCI 660

AFRC 345 Sinners, Sex and Slaves: Race and Sex in Early America
This course explores the lost worlds of sinners, witches, sexual offenders, rebellious slaves, and Native American prophets from the seventeenth to nineteenth centuries. Using the life stories of unusual individuals from the past, we try to make sense of their contentious relationships with their societies. By following the careers of the trouble-makers, the criminals, and the rebels, we also learn about the foundations of social order and the impulse to reform that rocked American society during the nineteenth century.
Taught by: Brown
Course usually offered in fall term
Also Offered As: GSWS 345, HIST 345
Activity: Lecture
0.0 Course Units

AFRC 346 Bodies, Race and Rights: Sex and Citizenship in Modern American History
What did it mean to be a man or woman in the post-Civil War United States? Was being a man the same as being a citizen? If African-American men were to be fully embraced as both men and citizens in the aftermath of slavery, where did that leave women, white and black? Why did a nation built on immigration become so hostile to certain groups of immigrants during this period? In this course, we consider how the meanings and experiences of womanhood, manhood, citizenship, and equality before the law changed from the period immediately after the Civil War until the present day. We look at political battles over the meaning of citizenship, the use of terror to subdue African Americans from the past, we try to make sense of their contentious relationships with their societies. By following the careers of the trouble-makers, the criminals, and the rebels, we also learn about the foundations of social order and the impulse to reform that rocked American society during the nineteenth century.
Taught by: Brown
Course usually offered in spring term

AFRC 347 Art, Medicine, & Magic: Bodily Remedies
In this activity-centric course, you will explore art, medicine, and magic as entangled approaches for healing human bodies across time, space, and societies. At first glance, artists, doctors, and religious leaders may seem to address questions about bodies and healing in very different ways. Yet, in practice, art, magic, and medicine have been in deep conversation with one another for millennia. 4,000 years ago in Mesopotamia, medical doctors were professionals who had offices, hospital beds, and pharmacological and surgical equipment expertise, but they often worked hand in hand with diviners and exorcists. In rural Haiti today, Haitian Vodou priestesses collect herbs, craft sculptures, and sing as they clean wounds and dispense antibiotics within the course of a single ‘remed’ (remedy). In the United States, megachurches send thousands of doctors on evangelical medical missions each year, while in Colombia, contemporary artists are called on to assuage profound social trauma related to decades of military conflict. Examples like these show that art, magic, and medical practice have long been entangled technologies; sometimes working together, sometimes at odds with one another, these practices have always been in the course of what healing’ is and how it can be achieved. Attending to these entanglements this course asks ‘what does healing look like and feel like - in what ways do humans transform affliction?’ Together, we will investigate how everyday bodily experiences of ‘wellbeing’ and ‘illness’ are configured through art, magic, and medical practices across human communities, shaping how people understand and manage disorders from COVID-19 to schizophrenia, from ancestral trauma to breast cancer. Throughout the course, you will use ethnographic case studies & in-class activities to work through three aspects of the core class question: 1) how do art, magic, and medicine work in communities? 2) how are they experienced in communities (who has access to what kind of healing and who doesn't have access; who can be a healer and who can't be; what should and does healing/sickness feel like?) 3) how do they approach inequalities? (e.g. how and why are illnesses unequally distributed; what illnesses matter more (and less) than others; which communities should be saved (and which sacrificed). Taught by: Jordan
Course not offered every year
Also Offered As: ANTH 354
Activity: Seminar

AFRC 354 Undergraduate Topics In African Studies
SPRING 2017 - UNDERSTANDING AFRICA: This course will explore the economic, social, and political realities facing sub-Saharan Africa today by placing them in historical and global contexts. Key themes will include colonial and precolonial history, nationalist movements and cold war politics, economic development and foreign aid, ethnic and political conflicts, media representation and popular culture. The course will focus on local and global dynamics that have a role in shaping the present day Africa.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
AFRC 368 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).
Taught by: Wilson

Activity: Seminar
1.0 Course Unit

AFRC 372 Africa and the Mid-East
This seminar will explore the historical relationship between these two regions from the early modern age to the present. We will examine the history of trade, particularly the slave trade, and its cultural and political legacy. We will compare the experiences of European imperialism—how the scramble for Africa dovetailed with the last decades of the Ottoman Empire—with an eye to how this shaped nationalist movements in both regions. The course will also explore the decades of independence with a special eye towards pan-Africanism and pan-Arabism. We will also study the ramifications of the Arab-Israeli conflict on the relationship between African and Middle-Eastern countries, from Uganda to Ethiopia, from OPEC to Darfur. This course will pay close attention to migrations through the regions, whether forced or economic or religious. Whenever possible we will explore, through film and literature, how people in Africa and the Middle East see their connections, and their differences.
Taught by: Eve Troutt Powell, Young
One-term course offered either term
Also Offered As: HIST 371, NELC 334
Activity: Seminar
1.0 Course Unit

AFRC 373 The History of Foreign Aid and Intervention in Africa
This course examines the history, politics, and significance of foreign aid to Africa since the late 19th century. While we do not typically think about the European colonial period in Africa in terms of ‘foreign aid,’ that era introduced ideas and institutions which formed the foundations for modern aid policies and practices. So we start there and move forward into more contemporary times. In addition to examining the objectives behind foreign assistance and the intentions of donors and recipients, we will look at some of the consequences (intended or unintended) of various forms of foreign aid to Africa over the past century. While not designed to be a comprehensive history of development theory, of African economics, or of international aid organizations, the course will touch on all of these topics. Previous course work on Africa is strongly advised.
Taught by: Cassanelli

Also Offered As: HIST 372
Activity: Lecture
1.0 Course Unit

AFRC 377 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar's exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

AFRC 387 Topics in Africana Studies
Topics vary: Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women's lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected. Using materials such as slave narratives, social criticism, and archival sources, this course will explore the theoretical and practical applications of black feminist thought in nineteenth and twentieth century North American culture and politics. In particular, we will consider the symbols and practices (storytelling, myth-making, art, archival research) that black women use to document lives. We will ask: how do these methods of documentation inform our understanding of the past and the production of historical knowledge? How can we understand black feminism as both theory and practice? And what are the implications of black feminist approaches for current research and scholarship? We will give particular attention to concepts such as gender, race, memory, the archive, and embodied knowledge to complicate our understanding of historical documentation, epistemology, and authenticity. The course material will include scholarship by Harriet Jacobs, Audre Lorde, Saidiya Hartman, Hazel Carby, Hershini Young, Evelyn Brooks Higginbotham, Toni Morrison, and others. (Image: From In Praise of Shadows, Kara Walker (2009). See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings. AFRC 392 Queering North African Subjectivities
This seminar will explore the ways in which literary and visual representations of sexual difference and gender roles disrupt the cultural imagination of everyday life in North Africa and its Diasporas. Special attention will be given to representations of Arab women and queer subjectivities as sites of resistance against dominant masculinity. We will analyze the ways in which representations of gender have allowed for a redeployment of power, a reconfiguration of politics of resistance, and the reworking of long-standing images of Islam in France. Finally, we will question how creations that straddle competing cultural traditions, memories and material conditions can queer citizenship. Course taught in English.

Also Offered As: COML 393, FREN 392, GSWS 392
Activity: Seminar
1.0 Course Unit

AFRC 393 Cinema and Civil Rights
Topic Varies Spring 2017: This course will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and strategies of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative. Taught by: Redrobe

AFRC 400 Seminar in Africana Studies
This course is an examination and analysis of the changing images and achievements of African Americans in motion pictures and television. The first half of the course focuses on African-American film images from the early years of D.W. Griffith's 'renegade bucks' in The Birth of a Nation (1915); to the comic servants played by Steppin Fetchit, Hattie McDaniel, and others during the Depression era; to the post-World War II New Negro heroes and heroines of Pinky (1949) and The Defiant Ones (1958); to the rise of the new movement of African American directors such as Spike Lee (Do the Right Thing), Julie Dash (Daughters of the Dust), Charles Burnett, (To Sleep With Anger) and John Singleton (Boyz N the Hood). The second half explores television images from the early sitcoms 'Amos 'n Andy' and 'Beulah' to the 'Cosby Show,' 'Fresh Prince of Bel Air,' and 'Martin.' Foremost this course will examine Black stereotypes in American films and television—and the manner in which those stereotypes have reflected national attitudes and outlooks during various historical periods. The in-class screenings and discussions will include such films as Show Boat (1936), the independently produced 'race movies' of the 1930s and 1940s, Cabin in the Sky (1943), The Defiant Ones (1958), Imitation of Life (the 1959 remake) & Super Fly (1972).

Also Offered As: CIMS 370
Activity: Seminar
1.0 Course Unit

AFRC 404 Black Geographies and the Meaning of Land Rights
This course will interweave issues of land dispossession and land rights, both in Africa and in the Americas, with endogenous concepts and practices of space and place. Specifically, this course will trace the concept of property, as developed among Europeans and European descendants, and explore how this concept interacted with the formation of the concept of race in order to established forms of social control and domination. The first part of this course will focus on Africa generally using Kenya as a case study. The material will cover the impact of colonialism and its legacy on land rights after independence. This first part will also explore contemporary forms of land dispossession happening through international land investments, often termed land grabs. The second part of the course will turn to the experiences of African descendants in the Americas. Using a few case studies, this section will examine different countries, histories, and rural and urban areas to unravel how different types of control over land interact with social relationships and specifically with the formation of race and racism. In both sections, we will also look at forms of resistance and resilience as local populations demand not only access to and control over land, but also impose their own ideologies of what it means to occupy space. By the end of this course, students should be able to more fully articulate the significance of control over land as it impacts and effects social relationships and specifically how it relates to the formation and continuation of inequalities along racial lines. Students will apply the concepts learned throughout the course to their own independent research done on an area in Philadelphia or Pennsylvania.

1.0 Course Unit

AFRC 405 Religion, Social Justice & Urban Development
Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha’i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.

AFRC 406 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom, self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.

1.0 Course Unit

AFRC 420 Advanced Topics in Africana Studies
Topics vary. See the Africana Studies Department's course list at https://africana.sas.upenn.edu for a description of the current offering. After an examination of the philosophical, legal, and political perspectives on Human Rights, this course will focus on US policies and practices relevant to Human Rights. Toward that end, emphasis will be placed on both the domestic and the international aspects of Human Rights as reflected in US policies and practices. Domestically, the course will discuss (1) the process of incorporating the International Bill of Human Rights into the American legal system and (2) the US position on and practices regarding the political, civil, economic, social, and cultural rights of minorities and various other groups within the US. Internationally, the course will examine US Human Rights policies toward Africa. Specific cases of Rwanda, Kenya, South Africa and Egypt, as well as other cases from the continent, will be presented in the assessment of US successes and failures in the pursuit of its Human Rights strategy in Africa. Readings will include research papers, reports, statutes, treaties, and cases.

Activity: Lecture
1.0 Course Unit
AFRC 431 Mobilizing Decolonial Arts and Practice in the Black Atlantic and Beyond
This course will define CHOICE by looking at the transnational linkages connecting artistic, curatorial, personal, and political choices. An overarching question of the course will be "how do artists, activist, curators, and communities, question, select, translate, and disseminate the information needed to incite large-scale movements and global change and how can we, as a class, do the same through our own choices?" Students will examine the significance of theories arising from museum studies, curatorial studies, global social justice movements, as well as dance and diaspora studies. As a way of emphasizing the perspectives, artistic practices, the political engagement of marginalized groups, and the work of activists in the global south, this class will explore rituals, performances, and visual and expressive cultures. Looking closely at altar-making practices, ritual performances, religious coalitions, and resistant narratives, we will learn how artists, activists, and communities seek economic gain, resist oppression, express political opinions, and create tenable lives in difficult situations. The class is divided into sections including: Geographies, Bodies, Spaces, Words, Futures so that students can begin to deconstruct the colonial frameworks that structure their thinking in these areas. The assignments of the class will also afford students opportunities to learn from the work of local curators, activists, artists, exhibitions, and initiatives, including those at the Penn Museum, The Philadelphia Museum of Art, and Philadelphia Assembled.

1.0 Course Unit

AFRC 436 Africana Studies Undergraduate Seminar
On the stage of modern world history, Haiti plays the unique role as both the exceptionally victorious and tragic character. This course interrogates archival documents, oral histories, historical texts, and prose created within the nation and her diaspora in order to establish a nuanced image of the projection of Haiti's modern history. Using two classic Haitian texts, Marie Vieux-Chauvet's Love, Anger, Madness (1968) and Michel-Rolph Trouillot's Silencing the Past: Power and the Production of History (1995), this course examines how, why, and to what end Haiti's history and popular narratives about the country have served to construct and dismantle global movements, popular culture, and meanings of race, gender, and citizenship in the Americas. In our historical examination, we will question some of the iconic representations of Haiti through literature that deepen the affective historical profile of Haiti with interrogations of culture, sexuality, political, and media performance. Students will become familiar with the post-colonial history of Haiti and the region, meanings of race, and the production of history. The course is a research and historical methods seminar. Students will conduct archival research and write narratives from primary source material. This course qualifies as a 'methods' course for Africana Studies undergraduate majors and minors.
Taught by: Johnson

1.0 Course Unit

AFRC 437 Race & Criminal Justice
Why are African Americans and some other minority groups disproportionately incarcerated and subjected to penal sanctions? What are the political, social, and economic consequences for individuals, communities, and the wider society of mass incarceration in the United States? What types of reforms of the criminal justice system are desirable and possible? This advanced seminar analyzes the connection between race, crime, punishment, and politics in the United States. The primary focus is on the role of race in explaining why the country’s prison population increased six-fold since the early 1970s and why the United States today has the highest incarceration rate in the world. The class will likely take field trips to a maximum-security jail in Philadelphia and to a state prison in the Philadelphia suburbs.
Taught by: Gottschalk

AFRC 440 African Art, 600-1400
This course examines the flourishing civilizations of the African continent between the Fall of the Roman Empire and the dawn of the 'Age of Discovery.' Although material remains of the complex cultures that created exceptional works of art are rare, current archaeology is bringing much new information to the fore, allowing for the first time a preliminary survey of the burgeoning artistic production of the African continent while Europe was building its cathedrals. Bronze casting, gold work, terracotta and wood sculpture, and monumental architecture - the course takes a multi-media approach to understanding the rich foundations of African cultures and their deep interconnectedness with the rest of the world before the disruptive interventions of colonialism.

AFRC 480 Liberation and Ownership
Who is going to own what we all have a part of creating? The history of the Americas, and of all peoples everywhere, is an evolving answer to the question of ownership. Ownership is about: the ties that bind and those that separate; production, participation, and control; the creation of community and the imposition of hierarchies—racial, sexual, and others; dreams of possessing and the burdens of debt and ecological despoliation; dependency and the slave yearning to breathe free. Of all the issues relevant to democracy, oppression, injustice, and inequality, ownership is arguably the most important and least understood. Utilizing a variety of disciplinary perspectives—with a particular emphasis on radical and critical theories of liberation, and by focusing on particular global sites and processes of capitalism, students will assess and refine their views regarding ownership and liberation in light of their own social, political, religious, aesthetic, and ethical commitments.

AFRC 514 Africa and the Indian Ocean
The Indian Ocean region represents an area with interwoven centuries of interactions, politically, historically, geographically and culturally. This area has witnessed continuous migrations of peoples, the circulation of goods and ideas, and the interaction with foreign forces. The Indian Ocean world has served as an epicenter of global economy in pre-modern world and as such, it gave rise to trading networks and political empires. As part of the Indian Ocean World, the eastern and southern shores of Africa are both the recipients and the transmitters of cultural and political icons. The existence of many islands that separate Africa from Asia stand as hybrid cultures that are influenced by forces from different continents. Political and cultural relations between African regions and the rest of the Indian Ocean world are evident with the prevalence of cultural practices of African origin. Signs of interaction between the Indian Ocean world and the African shores are apparent in several archeological sites, as well as in the cultural practices of religion, language, architecture and modes of dress. The European colonial expansion, has allowed the populations in the Indian Ocean world to share strategies during their independence movements to thwart western political hegemony. With the current advanced forms of globalization, this region is moving more towards economic and political cooperation and in addressing the transnational natural and man-made threats.

AFRC 530 Black Performance Theory
In his 1995 documentary Black Is, Black Ain't Marlon Riggs traces a black cultural tradition while simultaneously destabilizing the very notion of blackness itself. He testifies that: Black is black, and black is blue. Black is bright. Black is you. Black can do you in. In Riggs configuration, black is a color, black is a feeling, black is a sound, black is materiality, and black is a life sentence. In an effort to raise critical questions around blackness, performance, race, and feeling, this course follows in the tradition of Riggs work. In other words, this graduate level course examines the notion of blackness through theorizations of performance. It pursues the following questions: What is blackness? How is blackness embodied, felt, heard, represented, and seen through performance? How is black performance political? Discussions and written work will interrogate the slipperiness of, desire for, and policing of blackness in order to trouble conceptions of race as a biological essence. Organized by keywords in the field of Black Performance Theory - and exploring varying performance forms (the play, the dance, the film, the photograph, the performance of everyday life, the television program, the exhibit, and even the tweet) - This course foregrounds the micro-politics through which black racialized subjects are shaped in the realm of culture. Performances will be consulted each meeting which we will use to interpret and complicate the day's readings. In examining blackness through a number of performance mediums, we will consider the politics of black creative labor and the processes of racialization produced through black bodies.

AFRC 531 Mobilizing Decolonial Arts and Practice in the Black Atlantic and Beyond
This course will define CHOICE by looking at the transnational linkages connecting artistic, curatorial, personal, and political choices. An overarching question of the course will be how do artists, activist, curators, and communities, question, select, translate, and disseminate the information needed to incite large-scale movements and global change and how can we, as a class, do the same through our own choices? Students will examine the significance of theories arising from museum studies, curatorial studies, global social justice movements, as well as dance and diaspora studies. As a way of emphasizing the perspectives, artistic practices, the political engagement of marginalized groups, and the work of activists in the global south, this class will explore rituals, performances, and visual and expressive cultures. Looking closely at altar-making practices, ritual performances, religious coalitions, and resistant narratives, we will learn how artists, activists, and communities seek economic gain, resist oppression, express political opinions, and create tenable lives in difficult situations. The class is divided into sections including: Geographies, Bodies, Spaces, Words, Futures so that students can begin to deconstruct the colonial frameworks that structure their thinking in these areas. The assignments of the class will also afford students opportunities to learn from the work of local curators, activists, artists, exhibitions, and initiatives, including those at the Penn Museum, The Philadelphia Museum of Art, and Philadelphia Assembled.

AFRC 535 Sociology of Race and Ethnicity
Race and ethnicity are, above all, both converge as system of ideas by which men and women imagine the human body and their relationships within society. In this course we will question the concept of race and ethnicity and their place in modern society (1500 - 2020). While the course reviews the pre-1500 literature our focus will be on the last 500 years. This course reviews the research that has contributed to the ideas about ethnicity and race in human society. The review covers the discourse on race in political propaganda, religious doctrine, philosophy, history, biology and other human sciences.
Taught by: Zuberi
Also Offered As: SOCI 533
Activity: Seminar
1.0 Course Unit

AFRC 538 Topics in Medieval Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be Migrating Materiality: Ivory Carving Around the Mediterranean. The craft of ivory carving around the Mediterranean is contingent upon the availability of imported elephant tusks, from either South East Asia or, more frequently, from the African continent. The shifting winds of trade routes offer an interpretive paradigm with which to analyze ivory objects from a variety of different cultural groups: the lack or abundance of ivory and the resulting desire for or surfeit of the material shapes its meaning and use around the Mediterranean basin. The study of ivory objects as they migrate around the Mediterranean allows us to investigate the rich intercultural interactions between Eastern and Western Christians, and both of these with the Islamic world. This course focuses on an object-oriented knowledge of ivory artifacts, with a strong emphasis on the collections at the Penn Museum, the Philadelphia Museum of Art, and other area collections.

Also Offered As: AAMW 540, ARTH 540
Activity: Seminar
1.0 Course Unit

AFRC 542 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the ‘black interior,’ how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be team taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia’s jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.

AFRC 550 Critical Ethnography
‘This graduate course introduces students to theories, practices, and critiques of critical ethnography. Ethnography – an approach to the study of culture which anthropologist James Clifford described as a process that “translates experiences into text” - will have our full attention. This process of translation, although seemingly straightforward, requires layers of interpretation, selection, and the imposition of a viewpoint or politics. While ethnography is often narrowly conceived of as a methodology, this course considers ethnography as a mode of inquiry, as a philosophy, as an ongoing question and performance. We wrestle with notions of ‘the self’ and ‘the other’ at the intersection of imbricated cultural and performance worlds. Together we’ll ask: How is ethnography both critical and performative? What is the relationship between theory and method? How can we evaluate ethnographic work? And finally, what kinds of ethnographers do we want to be? This course considers a range of ethnographic examples in order to analyze both the craft and the stakes of ‘translating experiences into text.’

1.0 Course Unit
AFRC 552 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom, self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.

AFRC 563 Old Egyptian
This course is an introduction to the language of the Egyptian Old Kingdom. The grammar of the period will be introduced during the early part of the semester, using Ededl’s ALTAGYPTISCHE GRAMMATIK as the basic reference. Other grammatical studies to be utilized will include works by Allen, Baer, Polotsky, Satzinger, Gilula, Dorot, and Silverman. The majority of time in the course will be devoted to reading varied textual material: the unpublished inscriptions in the tomb of the Old Kingdom official Kapure—on view in the collection of the University Museum; several autobiographical inscriptions as recorded by Sethe in URKUNDEN I; and a letter in hieratic (Baer, ZAS 93, 1966, 1-9).
One-term course offered either term
Also Offered As: ANEL 563
Prerequisite: ANEL 460
Activity: Lecture
1.0 Course Unit

AFRC 569 Topics in 20th-Century American Literature
This course covers topics in 20th-century literature, its emphasis varying with instructor.
Taught by: Beavers
Course not offered every year
Also Offered As: ENGL 569
Activity: Seminar
1.0 Course Unit
Notes: This is an English topics course in 20th Century American Literature. The course is cross-listed with English 569 when the course content includes significant African American or other African Diaspora literatures. Content varies with the instructor. A frequent topic is ‘A Love Supreme: Literatures of Jazz’

AFRC 570 African-American Literature
Spring 2018: The aim of this seminar can be described as trying to figure out how poetry and poetics figure into the effort to theorize the African American subject in the 21st Century. At a time when the sheer number of African American poets publishing today (to say nothing of the major prizes they are winning) has exploded exponentially, why does poetry continue to be so marginal in African American literary and cultural studies? As we make our way through recently published anthologies of African American poetry, then turn to works of individual poets, we will consider issues of influence, intertextual periodization, stylization, and tradition as they impact approaches to form, structure, and craft. Ultimately, however, we will focus on the question of why are these poets writing these poems at this particular time? Technologies like PennSound and You Tube will provide time? Technologies like PennSound and You Tube will provide important critical tools in our endeavors and at various points during the term, guest lecturers will join our discussions.

Course not offered every year
Also Offered As: ENGL 570, GSWS 570
Activity: Seminar
1.0 Course Unit

AFRC 571 Visualizing W.E.B. Du Bois
This seminar will focus on a project that views history as a result of our contemporary society in which biographical truths are constantly shifting. So the historical biographers write about the way they remembered and visualize the past, and not about the way that it happened. We will take Du Bois’s biography in his own words and interrogate his narrative with the visual narratives of his life and influence produced by others. ‘Visualizing W.E.B Du Bois’ focuses on photographic, film, and video representations intended to present some aspect of Du Bois’s reality, primarily for the purposes of instruction or maintaining a historical record. Such projects include photos, materials originally shot on film stock, and digital images that can be either displayed in a book or magazine, and moving images made into a film or video for a TV show or released for screening in cinemas, or other broadcast mediums like YouTube and Vimeo.
Taught by: ZUBERI
Course not offered every year
Activity: Seminar
1.0 Course Unit

AFRC 572 Topics in African Literature
This course is based on a selection of representative texts written in English, as well as a few texts in English translation. It involves, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions of established writers in their use of old forms and experiments with new. See the Department’s website at www.africana.upenn.edu for a complete description of the current offerings.

Activity: Seminar
1.0 Course Unit
AFRC 575 Topics of Psychology in Education: Qualitative Studies of Developmental Interventions
This course is designed to introduce students to innovative approaches to the psychology of education, especially with regard to populations from at-risk contexts, sociocultural dimensions of education, and social-emotional learning.
Course not offered every year
Also Offered As: EDUC 575
Activity: Seminar
1.0 Course Unit

AFRC 581 Learning from James Baldwin (1924-1987)
James Baldwin, one of the greatest writers of the twentieth century, spoke to the issues of his times as well as to our own. This class will examine the intellectual legacy that Baldwin left to present-day writers such as Toni Morrison, Charles Johnson, Ta-Nehisi Coates, Thulani Davis, Caryl Phillips and others. We will spend time reading and discussing Baldwin’s novels, short stories, plays and essays. In doing so, we will be considering the complex assumptions and negotiations that we make in our day-to-day lives around our identities and experiences built upon gender, sexual preference, the social-constructs called ‘race,’ and more. James Baldwin's life and work will be the touchstone that grounds our discussions. We will read Go Tell It on the Mountain, Another Country, The Fire Next Time, and Giovannii's Room and see films I Am Not Your Negro, The Price of the Ticket and The Murder of Emmett Till. Students will research subjects of their own choosing about Baldwin's life and art. For example, they may focus on the shaping influences of Pentecostalism; segregation; racism; homophobia; exile in Paris; the Civil Rights Movement; Black Power, Baldwin’s faith, or his return to America. Taught by: Watterson
Also Offered As: ENGL 581, GSWS 580
Activity: Seminar
1.0 Course Unit

AFRC 587 Race, Nation, Empire
This graduate seminar examines the dynamic relationships among empires, nations and states; colonial and post-colonial policies; and anti-colonial strategies within a changing global context. Using the rubrics of anthropology, history, cultural studies, and social theory, we will explore the intimacies of subject formation within imperial contexts- past and present- especially in relation to ideas about race and belonging. We will focus on how belonging and participation have been defined in particular locales, as well as how these notions have been socialized through a variety of institutional contexts. Finally, we will consider the relationships between popular culture and state formation, examining these as dialectical struggles for hegemony. Taught by: Thomas
Course usually offered in spring term
Also Offered As: ANTH 587, GSWS 587, LALS 588
Activity: Seminar
1.0 Course Unit

AFRC 591 Introduction to Francophone Studies
An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec. Taught by: Ramsey

Notes: An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.

AFRC 594 Post-Colonialism Literature
This course covers topics in Post-Colonial literature with emphasis determined by the instructor. The primary focus will be on novels that have been adapted to film. See the Department’s website at www.africana.upenn.edu for a complete description of the current offerings
Course not offered every year
Also Offered As: CIMS 595, ENGL 595
Activity: Seminar
1.0 Course Unit

AFRC 602 Stereotype Threat, Impostor Phenomenon, and African Americans
This course critically examines stereotype threat and impostor phenomenon as they relate to African Americans. Both stereotype threat and impostor phenomenon negatively affect African Americans. The apprehension experienced by African Americans that they might behave in a manner that confirms an existing negative cultural stereotype is stereotype threat, which usually results in reduced effectiveness in African Americans' performance. Stereotype threat is linked with impostor phenomenon. Impostor phenomenon is an internal experience of intellectual phoniness in authentically talented individuals, in which they doubt their accomplishments and fear being exposed as a fraud. While stereotype threat relies on broad generalization, the impostor phenomenon describes feelings of personal inadequacy, especially in high-achieving African Americans. This course will explore the evolving meanings connected to both stereotype threat and impostor phenomenon in relation to African Americans. Taught by: Abiola
Course usually offered in fall term
Also Offered As: EDUC 538
Activity: Seminar

AFRC 606 The Interpretation of Oral Traditions
Topics may draw on methodologies derived from jazz studies, chant studies, and ethnomusicology. See department website for course information. Taught by: Abiola
Course not offered every year
Also Offered As: MUSC 606
Activity: Seminar
1.0 Course Unit
AFRC 620 Exhibiting Black Bodies
This course concerns the exhibiting of Black Bodies in Museums and gallery spaces. We will trace the evolution of public history from the ‘Cabinets of Curiosity’ in 18th and 19th Century Europe, through to the current institutional confirmation of the vindications traditions represented by Museu Afro Brasil (Sao Paulo, Brazil), National Museum of African American History and Culture (Washington, D.C.), and the Museum of Black Civilization (Dakar, Senegal). We will give particular attention to ‘why these representations at these times in these places?’ In the process of addressing these questions we will engage with the figures who conceived the curatorial content from those with the colonial mentality, to those with the abolitionist and nationalist and Pan-African visions.
Taught by: Zuberi
One-term course offered either term
Also Offered As: AFRC 338, SOCI 338, SOCI 660
Activity: Seminar
1.0 Course Unit
Notes: See the Africana Studies Department’s course list at <a href='https://africana.sas.upenn.edu'>https://africana.sas.upenn.edu</a> for a description of the current offering.

AFRC 624 Race, Poverty, & Place
In recent years, long-disinvested cities have become the site of renewed investment, population growth, and economic development in a phenomenon often described as gentrification. Nonetheless, socioeconomic inequality between races, ethnicities, genders, and places within the larger metropolitan area continue to persist, suggesting that a rising tide does not raise all boats. Planners must grapple with these issues of inequality and inequity, particularly the implementation of plans and policies that may in theory provide benefits to all, but in practice continue to accumulate benefits for a select few. This course examines the construction of race, the making of a place, and the persistence of poverty in racialized places in the city. This course will engage in a critical discussion of the aforementioned themes, such that the normative notions of race, capitalism, urbanism, gender, power, and space are upended to privilege more marginalized perspectives of these processes.
Taught by: Drake-Rodriguez
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

AFRC 632 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.
Course not offered every year
Also Offered As: AFRC 332, HIST 370, NELC 332, NELC 632
Activity: Seminar
1.0 Course Unit

AFRC 638 Race & Criminal Justice

AFRC 645 Graduate Research Seminar
SPRING 2019: This seminar is suitable for graduate students in any discipline in which historical research may be relevant. We will work with both secondary and primary sources, and students will have the opportunity to visit and undertake research in an archive.
Taught by: Williams
One-term course offered either term
Also Offered As: HIST 645
Activity: Seminar
1.0 Course Unit

AFRC 655 Topics in Black Political Thought: Difference And Community
This course is designed to familiarize graduate students with some of the key texts and debates in Africana Studies concerning the relationship between racial slavery, modernity and politics. Beginning with the Haitian Revolution, much of black political thought (thinking and doing politics) has advocated group solidarity and cohesion in the face of often overwhelming conditions of servitude, enslavement and coercion within the political economy of slavery and the moral economy of white supremacy. Ideas and practices of freedom however, articulated by political actors and intellectuals alike, have been as varied as the routes to freedom itself. Thus, ideas and practices of liberty, citizenship and political community within many African and Afro-descendant communities have revealed multiple, often competing forms of political imagination. The multiple and varied forms of political imagination, represented in the writings of thinkers like Eric Williams, Richard Wright, Carole Boyce Davies and others, complicates any understanding of black political thought as having a single origin, genealogy or objective.
Students will engage these and other authors in an effort to track black political thought’s consonance and dissonance with Western feminisms, Marxism, nationalism and related phenomena and ideologies of the 20th and now 21st century.
Taught by: Hanchard
Also Offered As: GSWS 655, LALS 656, PSCI 612
Activity: Seminar
1.0 Course Unit
AFRC 677 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar’s exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.
Taught by: Knight
Course not offered every year
Also Offered As: AFRC 377, ANTH 377, ANTH 677, ENGL 500, FNAR 377
Activity: Seminar
1.0 Course Unit

AFRC 701 African Studies Seminar
Interdisciplinary seminar for discussion of issues of special interest to graduate students and faculty in Africana Studies. Topics vary according to the interests and expertise of instructors. SPRING 2017 - Readings in African American Religion: Traditional narratives of African American Religion go from slavery to civil rights to ‘freedom’ without taking into account the complex religious lives and intellectual production of people of African descent in the Americas. This course will focus on African American Religion and the historical and theoretical frameworks that have shaped the study of this field. Readings will cover religious studies, anthropology history, and African American studies in order to provide an understanding of the varieties of religion and religious experiences with this particular segment of the African Diaspora.
Taught by: Butler
Course not offered every year
Also Offered As: RELS 701
Activity: Seminar
1.0 Course Unit

AFRC 706 Introduction to Africa and African Diaspora Thought
This course examines the processes by which African peoples have established epistemological, cosmological, and religious systems both prior to and after the institution of Western slavery.
Taught by: Amponsah
One-term course offered either term
Also Offered As: HIST 706
Activity: Seminar
1.0 Course Unit

AFRC 708 Cultural and Literary Theory of Africa and the African Diaspora
This course introduces students to the theoretical strategies underlying the construction of coherent communities and systems of representation and how those strategies influence the uses of expressive culture over time. Topics vary. See the Africana Studies Department’s website at https://africana Studies.sas.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

AFRC 710 Political Economy and Social History of Africa and the African Diaspora
This course provides the opportunity for students to investigate the relationship between the emergence of African peoples as historical subjects and their location within specific geopolitical and economic circumstances. Topics vary.
Taught by: Hanchard, Zuberi
Two terms. student must enter first term.
Also Offered As: COML 710, LALS 710, PSCI 711
Activity: Seminar
1.0 Course Unit

AFRC 720 Graduate Prospectus and Grant-Writing Seminar
Prerequisite: Graduate student must be ‘All But Dissertation’ (ABD). This course is intended to help students to write a strong dissertation proposal/prospectus. A proposal is a detailed plan for a long journey of conceptualization, research, and writing that will lead to the first major, independent scholarly contribution. Students will work closely with advisors, peers, and the professor in the course, to develop the questions, methodological approaches, and theoretical perspectives that will guide their research and writing. At the end of the semester, each student will have completed a proposal, and will be ready to defend it.
Taught by: Williams
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Graduate student must be ‘All But Dissertation’ (ABD).

AFRC 723 Multicultural Issues in Education
This course examines critical issues, problems, and perspectives in multicultural education. Intended to focus on access to literacy and educational opportunity, the course will engage class members in discussions around a variety of topics in educational practice, research, and policy. Specifically, the course will (1) review theoretical frameworks in multicultural education, (2) analyze the issues of race, racism, and culture in historical and contemporary perspective, and (3) identify obstacles to participation in the educational process by diverse cultural and ethnic groups. Students will be required to complete field experiences and classroom activities that enable them to reflect on their own belief systems, practices, and educational experiences.
Taught by: Gadsden
Course usually offered in fall term
Also Offered As: EDUC 723
Activity: Lecture
1.0 Course Unit
AFRC 770 Afro-American American Literature
How does Elizabeth Alexander's poem Praise Song for the Day, written for the inauguration of Barack Obama, relate to Amiri Baraka's 9/11 poem Somebody Blew America? This seminar will explore the unnaming and experimentation that shape African American literature and theory in the early years of the 21st century. Frameworks of the seminar will include the post-9/11 novel, the poetics of the black, black abstraction, twenty-first century practices of the black diaspora Age of Obama turn to the satirical. Critical texts such as How to See a Work Total Darkness and Abstractionist Aesthetics will be as central as cutting edges such as The Psychic Hold of Slavery and signature essays such as On Failing to the Past Present. This course will focus on the new literary voices that have the 21st century and, also, writers whose 21st century art is the late stage of literary trajectory. Special attention will be given to Toni Morrison, Colson Whitehead, Octavia Butler, Claudia Rankine, Mat Johnson, and Paul Beatty.

AFRC 791 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programming part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films—features, shorts, documentaries, and television shows—paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of 'African film and media,' and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media? To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu.
Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport.

American Sign Language (ASLD)

ASLD 071 American Sign Language I
Introduction to American Sign Language (ASL). Introduces ASL in a contextualized and conversational manner. Course includes receptive and expressive readiness activities, sign vocabulary and grammar, and an introduction to important topics and people within Deaf communities and Deaf culture. Offered through the Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 072 American Sign Language II
Increased communication skill in American Sign Language (ASL). Expressive and receptive abilities are expanded upon via a contextualized and conversational manner Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion. Offered through the Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Prerequisite: ASLD 071
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 073 American Sign Language III
American Sign Language (ASL) at the Intermediate I level. Expressive and receptive abilities are expanded upon via a contextualized and conversational manner, including, but not limited to, narrative production. Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion. Offered through the Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Prerequisite: ASLD 072
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 074 American Sign Language IV
American Sign Language (ASL) at the Intermediate II level. Expressive and receptive abilities are expanded upon via a contextualized and conversational manner, including, but not limited to, narrative production. Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion. Offered through Penn Language Center.
For BA Students: Last Language Course
One-term course offered either term
Prerequisite: ASLD 073
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 075 American Sign Language V
This is an advanced ASL course in which students expand their conversational and narrative range. While receptive readiness activities continue to be an important part of the class, the emphasis moves toward honing expressive sign skills through narrative presentation and ASL-only class discussions. Various aspects of Deaf culture and cultural behavior rules will be incorporated into the course. A large component of the course is a unit on Deaf history in which students read and discuss major events and famous deaf people via readings, film, class lectures and discussions, and other outside resources. Offered through Penn Language Center.

Notes: Offered through the Penn Language Center

ASLD 076 Deaf Literature, Performance, Art, and Film
This course is an advanced/conversational ASL course that explores several key topics related to Deaf culture and the Deaf experience's influence on literature (both written and signed), theatre, fine and visual arts, and film—both Deaf and hearing directed and acted. Using only ASL in class, students learn about various perspectives and approaches to each of the themes and topics of the course. Some questions to explore and answer in this course will be: What is Deaf Literature? The Deaf Lens: What is it? How is it different from a hearing perspective on film? How is Deafness expressed differently in each of the arts discussed in this course? Analysis and discussion will come from readings as well as viewings of various types of Deaf arts.

ASLD 077 ASL/Deaf Studies - ABCS
For this course, students will attend Pennsylvania School for the Deaf on a weekly basis where they will participate in and contribute to the school community via tutoring or other mutually agreeable activities. Students will also have formal class on a weekly basis with discussions and activities centered on reflection of community experiences through linguistic as well as cultural lenses. Additionally, drawing from the required Linguistics and other ASL/Deaf Studies coursework, students will develop an inquiry question and conduct preliminary community-based research to analyze sociolinguistic variations of ASL and Deaf cultural attitudes, behaviors, and norms. Ongoing reflections and discussions-formal and informal-on Deaf cultural/theoretical topics drawing from readings as well as community experiences will be integral to the course experience. LING 078, Topics in Deaf Culture and permission from the instructor, are required for this course. Anyone considering taking this course should contact the ASL Program Coordinator early in the semester prior to enrollment (Spring) to ensure adequate time to obtain clearances and appropriate placement. Prerequisite: If course requirement not met, permission of instructor required. Participation in this class requires students to have in place the mandatory clearances for working in schools before the semester starts. Students should also be in contact with the department during the advanced registration period in order to secure a placement in the community. Prerequisite: Anyone considering taking this course should contact the ASL Program Coordinator early in the semester prior to enrollment (Spring) to ensure adequate time to obtain clearances and appropriate placement. ASLD 079 Disability Rights and Oppression: Experiences within Global Deaf Communities
This course explores the linguistic and social statuses of global Deaf communities with respect to language rights and efforts toward parity with spoken language communities. We will begin by providing some background and context for understanding Deaf communities and people as both linguistic and cultural minorities as well as members of a disability group. We then explore various examples of oppression born by Deaf people throughout history and today, with an emphasis on the Milan Conference of 1880, from which several decrees mandated that sign languages be banned in all instruction of Deaf students worldwide. The impacts of said decrees were catastrophic for the linguistic and social rights of Deaf people; effects of these experiences are pernicious and long lasting. Since then, global Deaf communities have fought to gain the legal rights and social recognition that are typically afforded hearing members of their respective communities. There are some Deaf communities that have attained said rights, where others are still left far behind. We explore the lasting effects of the Milan Congress in global terms, using the United States and North American Deaf communities as a standard for comparative measurement. Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs Do note that this course will include a module on Italian Sign Language (LIS) and will give opportunities to learn and use LIS in and amongst Italian Deaf community members while in Italy. Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs
Taught by: Fisher
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ASLD 091 American Sign Language III/IV
Expanded instruction of American Sign Language (ASL) on the Intermediate I and II levels. Includes receptive and expressive readiness activities, sign vocabulary and grammar growth, fingerspelling practice and narrative skills. Topics on Deaf cultural are also included in the course readings and discussions. Increases the emphasis on more abstract and challenging conversational and narrative range.
For BA Students: Last Language Course
Course not offered every year
Prerequisite: ASLD 072
Activity: Lecture

Notes: Offered by Penn Language Center; permit from Penn Language Center required for admission.

Amharic (AMHR)

AMHR 240 Elementary Amharic I
The Elementary Amharic I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on Ethiopia/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extralinguistic skills in Amharic. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content. Offered through Penn Language Center.
For BA Students: Language Course
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center
AMHR 241 Elementary Amharic II
Continuation of Elementary Amharic I. Amharic belongs to the southern branch of Hemeto-Semitic languages, which is also referred to as 'Afrasian.' Amharic is the official language of Ethiopia and is spoken by 14 million native Amharas and by approximately 18 million of the other groups in Ethiopia. This course continues to introduce basic grammar, vocabulary, and the reading and writing of Amharic to new speakers. Prerequisite: If course requirement not met, permission of instructor required. Offered through Penn Language Center.
For BA Students: Language Course

ANAT 512 Human Anatomy: Cardiovascular, Respiratory, Digestive, and Musculoskeletal Systems
This human anatomy course will cover anatomy, embryology, histology, and imaging of the: cardiovascular system; respiratory system; digestive system; and musculoskeletal system, including the limbs, vertebral column, and back. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battilo@upenn.edu) if you have question. Cardiovascular and Respiratory Systems. The objectives are to: 1) define and discuss the structures that participate in the process of respiration; 2) compare and contrast structures situated in the chest (thorax and mediastinum); 3) describe anatomic differences of the right versus the left lung, structures in each lung, and how each lung functions; 4) summarize the anatomic differences in the atria and ventricles of the heart and how these chambers contract, resulting in the opening and closing of the atrioventricular and semilunar valves; 5) compare and contrast the histology of the heart, bronchi, bronchioles, and lung alveoli; 6) analyze and identify anatomic structures in plain films and/or other imaging modalities; and 7) discuss the embryology of the heart and lungs, including fetal and postnatal circulation and common congenital heart malformations. Digestive System. The objectives are to: 1) define the embryological basis for the formation of the gastrointestinal tract; 2) define and discuss the anatomic structures that make up the digestive system, including the mouth, larynx, esophagus, stomach, small intestine, large intestine, liver, and biliary tract; 3) compare and contrast the arterial blood supply and the functional and histologic differences in various parts of the gastrointestinal tract; and 4) analyze and identify anatomic structures in plain films and/or other imaging modalities. Musculoskeletal System. The objectives are to: 1) discuss the anatomic structures that make up the major parts of the musculoskeletal system, which are the vertebral column and back, upper limbs, and lower limbs; 2) identify the blood supply, innervation, and musculature of the upper limbs, including the shoulder, elbow, wrist, and hand; 3) identify the blood supply, innervation, and musculature of the lower limbs, including the hip, knee, ankle, and foot; 4) define the components of the nervous system that affect the musculoskeletal system, limbs, vertebral column, and back and discuss nerve lesions; 5) discuss how herniated disks, fractures of the upper and lower limbs, and impingement of nerve roots can result in musculoskeletal abnormalities, and 6) analyze and identify anatomic structures in plain films and/or other imaging modalities.

ANAT 516 Human Anatomy: Endocrine and Reproductive Systems
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the endocrine and reproductive systems. The objectives are to: 1) define mechanisms of hormonal signaling; 2) describe the anatomic relationships and gross structure of major endocrine and reproductive organs, including the hypothalamus, pituitary glands, thyroid gland, parathyroid glands, pancreas, adrenal glands, gonads, breasts, and male and female reproductive systems; 3) characterize the microscopic anatomy of major endocrine and reproductive organs; 5) assess the regulation of major hormonal axes and intuit pathophysiologic effects of hormonal dysregulation; 6) explain the effects of significant hormones on their respective target tissues; 7) trace the embryologic origins of the endocrine and reproductive organs, including the pharyngeal apparatus. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battilo@upenn.edu) if you have questions.
Activity: Online Course
0.5 Course Units

ANAT 517 Anatomy of the Head and Neck: Cranial Nerves and Their Distribution
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the head and neck with emphasis on the cranial nerves and their distribution. The objectives are to: 1) identify major bone and cartilage components of the neck and skull and how they develop; 2) describe sources of innervation to face, CN V and VII; 3) name cranial nerve innervations of extraocular muscles of the eyes; 4) name major elements that make up naso-, oro-, and laryngeal pharynx; 5) name the cranial nerves involved in swallowing; 6) identify the signs and symptoms of lesions of each of the cranial nerves; and 7) identify structures on CT and plain film imaging of head and neck. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battilo@upenn.edu) if you have questions. This course is open to LPS Post-Baccalaureate students only. ANAT 518 Brain and Spinal Cord: Longitudinal Neural Pathways
This course, covering the anatomy, development, and cytology of the central nervous system, including a detailed examination of the functional and clinical neuroanatomy of the spinal cord, prepares students to: - Compare and contrast the differences in how the neural tube and neural crest develop, and list their postnatal derivatives. - Compare the malformations that result in open versus closed neural tube defects, including the ability to distinguish the different forms of spina bifida. - List the major excitatory and inhibitory neurotransmitters used by neurons in the central and peripheral nervous system. - Compare the functions of Schwann cells and Oligodendrocytes in forming myelin and the differences in autoimmune diseases (MS and Guillain Barre) associated with each. - Recall the basic anatomy of the spinal cord including the vertebral level where the cord end and meninges end, what makes up the conus medullaris and cauda equina, and which cord segments innervate the upper and lower limbs. - Contrast the two divisions of the ANS in terms of locations of pre and post ganglionic neuron cell bodies, neurotransmitters utilized and receptors that they bind to. - Describe the names and locations of the two neurons that generate voluntary versus reflex contractions of skeletal muscle, and be able to draw and label a cord section with these neurons. - Recall the differences between the myotatic and inverse myotatic reflexes. - Describe how these two sensory systems utilize three neurons to process sensory information. - Draw out the three neurons that are components of the DC/ML System and label the modalities of their dorsal roots, their course and sites of termination. - Draw out the three neurons that are components of the Anterolateral System and label the modalities of their dorsal roots, their course and sites of termination. - Summarize the major signs and symptoms of the 7 common spinal cord diseases and clinical conditions including Polio, Tabes dorsalis, ALS, Subacute Combined Degeneration, Syringomyelia, Anterior cord syndrome, Brown Sequard Syndrome
Taught by: James S. White, PhD
Activity: Online Course
1.0 Course Unit

ANAT 519 Brain and Spinal Cord: Motor and Sensory Functional Systems
This course, covering the anatomy of the central nervous system, including a detailed examination of the functional and clinical neuroanatomy of the brainstem, cerebellum, diencephalon, visual system, auditory system and cerebral cortex, prepares students to: - Describe the cerebellar connectional anatomy that permits the right side of the cerebellum to promote fine-tuning of skeletal muscles on the right side of the body. - Recall how cerebellar lesions cause tremor with movement and how hemisphere lesions of the cerebellum differ from vermis lesions. - Identify which lesions result in dysmetria, disdiadochokinesis, and gait ataxia. - Describe the major components of the Direct and Indirect Basal Ganglia Pathways, the neurotransmitters that they use and their roles in initiating movement or suppressing unwanted movement. - Contrast the signs and symptoms of those with a direct (Parkinson's) and indirect (Huntington's) basal ganglia disease and how each causes different forms of resting tremors. - Name the 4 major tracts that traverse the brainstem and the signs and symptoms if each is lesioned. - Discuss how motor and sensory nuclei of brainstem cranial nerves are organized into functional longitudinal columns in the brainstem and note how this organization correlates with the entry and exit points of cranial nerves. - Distinguish the gaze malfunctions that result from lesions to the Frontal Eye Field, PPRF, and MLF. - Trace the path of a visual stimulus from the nasal and temporal parts of the retina to the cuneus and temporal gyrus of visual cortex. - Draw out the different visual field deficits and the causes evident in lesions to the optic nerve, optic chiasm, optic tract, optic radiations and visual cortex. - Describe the three components of the ear and how the organ of Corti transduces mechanical energy into generator potentials. - Distinguish between the lesion sites and causes of a sensorineural versus a conductive hearing loss and how one uses the Weber and Rinne tests to determine the nature of the hearing loss. - Differentiate the major nuclei of the thalamus and their functions. - Describe the different embryonic origins of the pituitary and the nuclei in the hypothalamus that control or contribute to the functional activity of each pituitary component. - Name the lobes that make up the cortex and distinguish the vascular territories of the anterior, middle and posterior cerebral arteries. - Describe how the dominant hemisphere differs functionally from the non dominant hemisphere. - List four different lesion sites in the dominant hemisphere that result in an aphasia and list the signs and symptoms of that aphasia. - Name the major components of the Papez circuit and how they contribute to memory consolidation. - List the signs and symptoms of lesions to each of the cranial nerves. - Distinguish the signs and symptoms of various lateral versus medial brainstem vascular lesions, the vessels involved and the cranial nerves affected.

Course usually offered in fall term
Also Offered As: HIST 024, NELC 101
Activity: Lecture
1.0 Course Unit
ANCH 026 Ancient Greece
The Greeks enjoy a special place in the construction of western culture and identity, and yet many of us have only the vaguest notion of what their culture was like. A few Greek myths at bedtime when we are kids, maybe a Greek tragedy like Sophokles’ Oidipous when we are at school: these are often the only contact we have with the world of the ancient Mediterranean. The story of the Greeks, however, deserves a wider audience, because so much of what we esteem in our own culture derives from them: democracy, epic poetry, lyric poetry, tragedy, history writing, philosophy, aesthetic taste, all of these and many other features of cultural life enter the West from Greece. The oracle of Apollo at Delphi had inscribed over the temple, ‘Know Thyself.’ For us, that also means knowing the Greeks. We will cover the period from the Late Bronze Age, c. 1500 BC, down to the time of Alexander the Great, concentrating on the two hundred year interval from 600-400 BC.

ANCH 027 Ancient Rome
At its furthest extent during the second century CE, the Roman Empire was truly a ‘world empire’, stretching from northern Britain to North Africa and Egypt, encompassing the whole of Asia Minor, and bordering the Danube in its route from the Black Forest region of Germany to the Black Sea. But in its earliest history it comprised a few small hamlets on a collection of hills adjacent to the Tiber river in central Italy. Over a period of nearly 1500 years, the Roman state transformed from a mythical Kingdom to a Republic dominated by a heterogeneous, competitive aristocracy to an Empire ruled, at least notionally, by one man. It developed complex legal and administrative structures, supported a sophisticated and highly successful military machine, and sustained elaborate systems of economic production and exchange. It was, above all, a society characterized both by a willingness to include newly conquered peoples in the project of empire, and by fundamental, deep-seated practices of social exclusion and domination. This course focuses in particular upon the history of the Roman state between the fifth century BCE and the third century CE, exploring its religious and cultural practices, political, social and economic structures. It also scrutinizes the fundamental tensions and enduring conflicts that characterized this society throughout this 800-year period.

ANCH 046 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hurrians, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.

Activity: Lecture
1.0 Course Unit

ANCH 104 Race and Ethnicity in the Ancient World
Modern political and artistic movements often appeal to an ancient past in order to construct their own social and racial identities. But how did ancient peoples understand themselves and others? How should we understand race and ethnicity in the ancient past? And how are perceptions of the past used today to construct or dismantle structures of power? This course explores both ancient and modern representations of race and ethnicity in antiquity. We will investigate both how ancient peoples around or near the Mediterranean (e.g. Greeks, Romans, Egyptians, Persians, and Nubians) understood difference and also how modern eras have appropriated ancient identities. Our dialogues will include ancient ethnographies, literature, and visual arts as well as modern theories and media, with an emphasis on active learning and collaboration. Students will be encouraged to produce both analytical and creative responses to our materials.

ANCH 133 The History of God
This course introduces the history of God as understood by modern scholars of religion. Why do people believe in gods in the first place? How did so many people come to believe that there was only one god, and how is that god different from earlier gods? How is the God of Judaism different from that venerated by Christians and Muslims. And what is the future of God in a world shaped by secularism, capitalism, and climate-change? This course will address these and other questions in light of anthropology, psychology, intellectual history, and other approaches that scholars uses to illumine religion.

ANCH 136 The Ancient Economy
This class presents an introduction to economies before economics, a study of economic activity in the Greco-Roman world. Ancient Greece and Rome have been called some of the first ‘global’ economies - they engaged in long-distance trade, introduced the first coinage systems, and built and manufactured at large scales. At the same time, they remained agrarian societies, with majority peasant populations, high levels of inequality and social systems that often placed social capital ahead of profit. Using textual sources, archaeology and techniques from the natural and social sciences, this class will not only look at basic elements of economic activity in the ancient world - demographics, trade, monetization, industry - but also ask critical questions about how - or if - modern economic methods can be applied to the distant past. No previous knowledge of the ancient world or economics is necessary.

ANCH 146 Ancient Mediterranean Empires
What constituted an empire in antiquity and how was imperialism legitimized? Which measures were used to maintain and organize imperial power? How did foreign rule affect the daily life of people all over the Mediterranean? In this course we will discuss and compare ancient empires from Achaemenid Persia to Alexander the Great and the Hellenistic kingdoms of his successors to the emergence of Rome as one of the most successful and influential empires in world history. Topics that will be discussed include ancient ideas and concepts of imperial rule, patterns of political, economic and cultural power and their interrelations as well as imperial crises and local resistance. All texts will be discussed in translation. There are no prerequisites.

ANCH 202 Cleopatra
Cleopatra VII (70/69 30 BCE) is one of the most famous women in world history. She has been remembered, admired, and reproached as a power-hungry Hellenistic queen, as the last pharaoh of Egypt, as a self-confident female ruler, and as the vicious seductress of Julius Caesar and Mark Antony. Her supposedly extravagant lifestyle, her political schemes, but also her integrity in choosing suicide over submission have inspired poets, artists, and historians from her own time to the modern world. In this seminar, we will take a closer look at some of the common perceptions and stereotypes that have shaped the image of Cleopatra for more than 2000 years. The main focus, however, will be on the historical queen, her biography, and the political and cultural contexts of her life. We will use ancient literary texts, papyri, inscriptions, coins, and archaeological evidence to analyze Cleopatra’s rise to power, how she presented herself to her subjects, and how she was perceived by others, as well as her role in the tumultuous events that led to the end of the Hellenistic period and the rise of imperial Rome under the rule of Augustus. No prerequisites, but some background in Hellenistic and/or Roman history will be helpful.

ANCH 257 Religion and the Polis
This class is designed to introduce students to the study of Greek religion with particular attention to the notion of polis religion, a recent model used to understand the function and structure of Greek religion. In this class we will look at the major institutions of Greek religion, notably sacrifice, festivals, and processions, but will also examine the importance of sanctuaries and temples in the heart of the city, on the edges of its territory and in the countryside. We will also examine religion as a system of belief and action, and will consider the intersection of local, state and international religious institutions.

ANCH 261 Ancient Iranian Empires
Iran - as a landmass and a political entity - was central to the ancient world in a variety of ways. Ancient Iranian Empires were of central importance to - and centrally located in - the ancient world. It was the successor kingdom to the Assyrians and Babylonians; the power against which Greece and Rome defined themselves; and the crucible in which various communities and models of rule developed. This course offers a survey of the history of the ancient Persianate world, focusing in particular on the political and imperial entities that rose to power, the cultural, political, mercantile, and other contacts they shared with their neighbors to the East and West, and the communities and religious groups that arose and flourished within their lands. Ancient Iranian empires rivaled the Greek and Roman Empires to their West, and the central and eastern Asian Empires to their east, and the ongoing history of diplomacy, cultural contact, and war between these regions was formative to each and to the ancient world as a whole. Iran was home to and similarly formative for a variety of religions, including Zoroastrianism, Judaism, Christianity, Manichaeanism, and Islam, and a central question Ancient Iranian political powers sought to address was how to negotiate and address the variety of populations under their control. The course will conclude by studying how, rather than a simplistic story of decline, the strategies, policies, institutions, and memory of the Iranian Empires continued to shape early Islam, medieval imagination, and modern political regimes.

ANCH 301 Lies My Ancient History Teacher Told Me
The neat, comforting narratives that we construct of the histories of ancient Greece and Rome cover up a collection of controversies and debates that continue to rage in contemporary scholarship. Can we use the Homeric epics as sources of early Greek history? Who was responsible for the Peloponnesian War? How can we best explain Rome's acquisition of empire? How new was the political revolution of Augustus? What were the main reasons for the rise of Christianity? In this course, we explore these and other controversies, focusing on both modern scholarship and the ancient sources. All texts will be discussed in translation. No prior knowledge of Ancient History is required, although it would be useful to have taken ANCH 026 and/or ANCH 027.

ANCH 303 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine ancient Greece and Rome as the cradles of democracy and republicanism, early Judea as a pious theocracy, but monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). In this class, we will take a special look at kinship among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences. In all these cultures, the king was a polarizing figure in reality and in conception. On the one hand, some revered the monarch as ideal leader, and monarchy provided the language with which to describe and even imagine the very gods. On the other, monarchs were widely reviled in both theory and practice, from the Greek tyrants to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal and the worst form of government. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, human frailty, and utopianism.

ANCH 305 Jewish Diaspora in the Roman Empire
Under the Roman Empire, Jewish communities developed and flourished especially in the cities of the Eastern Mediterranean, in Egypt, Syria, Asia Minor, Greece, Northern Africa, and Italy proper. In many of these cities, the Jews formed a considerable part of the population; they influenced the cultural, social, and political communal life and developed an identity that was distinctively different from that in Judea. In this seminar, we will trace Jewish life in the Diaspora under Roman rule. How did Jews and non-Jews interact? What was the legal status of Jewish communities under the Roman Empire? What caused conflicts and how were they solved? What can the history of Jewish Diaspora communities tell us about minorities in the Roman Empire in general? We will use literary texts, inscriptions, papyri, and archaeological material to answer these questions and many more.

Also Offered As: JWST 305
Activity: Seminar
1.0 Course Unit
ANCH 311 Disasters in the Ancient World
Natural disasters occupy a powerful place in our imagination. Stories of floods, plagues, earthquakes and storms excite and horrify us, and communities mobilize their resources quickly in response to these events. The ancient Mediterranean world, natural disasters could take on potent meaning, indicating the anger or disfavor of the gods, acting as warnings against certain courses of action, or confirmations of individuals’ fears or suspicions about the world in which they lived. In this course, we explore the evidence for some disasters in the ancient Mediterranean world, the ways in which contemporaries reacted to those disasters and interpreted their causes. This project is of necessity, multidisciplinary, involving textual, archaeological, geological, and comparative materials and drawing on methodologies from history, political and archaeological science, and the emerging field of disaster studies. In the process, we will gain an appreciation of the social structures of communities in the period, the thought-world in which they operated, and the challenges and opportunities that attend a project of this sort. No prior knowledge of Ancient History is required, although it would be useful to have taken an introductory survey course. Texts will be discussed in translation.

Activity: Seminar
1.0 Course Unit

ANCH 315 Kinship and Connectivity in the Roman World
An individual’s life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieu.

Activity: Seminar
1.0 Course Unit

ANCH 316 Africa and Roman Literature
In this course, we will explore race and ethnicity in the Roman world by focusing on the life and works of Roman Africans and the ways in which non-African Romans engaged with and presented the peoples of Africa. The course covers Roman literature in translation from the comedies of Plautus produced in the late 3rd to 2nd centuries BCE, to African Christian writing of the 5th century CE. It also covers a wide range of genres: we will examine how Roman writers articulate questions of race in comedy and satire, epic, history, biography, and elegy among others. We will read African writers (Apuleius, Augustine) and ask how their Africanness influences their works. We will read Roman accounts of journeys to Africa, wars with Africa, and encounters with Africans to ask how the Romans saw themselves as different from or similar to Africans. The course will also explore in more general terms how Romans talk about race: did racism exist? What aspects of different cultures and peoples did Romans choose to emphasize when they talked of non-Romans?

Also Offered As: AFRC 316, CLST 316
Activity: Seminar
1.0 Course Unit

ANCH 323 Greek World After Alexander the Great
This class is designed as a detailed investigation of the world created by Alexander the Great. We will cover the three hundred year period known as the Hellenistic Age from the career of Alexander the Great (354-323 BC) until the defeat of Antony and Cleopatra at the Battle of Actium (31 BC). This was a period during which the world of the Greeks underwent extraordinary and far-reaching changes, as Greek culture was established as far afield as northwestern India, central Asia and Egypt. In the same period kingdoms controlled by Alexander’s Successors used Greek culture to define their rule, establishing a Greek culture of the elite in regions which previously had been dominated by the Persians. As Greek and non-Greek worlds collided, a new interpretation of Greek culture emerged, giving rise, among other things, to universities and professional schools, state subsidized health care, triumphalist architecture, the heroization of the noble savage, coinage with royal portraits, the deification of men and a multitude of other social, artistic and political forms familiar to us. It was an age of radical change, dislocation, as Greek populations colonized regions previously unknown to them.

Course not offered every year
Activity: Lecture
1.0 Course Unit
ANCH 330 The Rise and Decline of Macedonia
In this course, we will study the rise and development of Macedonia from a tiny kingdom on the northern fringes of the Greek world to one of the major powers of the region and beyond. Regarded by the Greeks as an at least semi-barbarian culture on the periphery, Macedonia became the dominant power in the Greek world during the fourth century BC and its king Alexander the Great set out to conquer the world. After his death, Macedonia was one of the Hellenistic kingdoms competing for power and influence in the Mediterranean until it finally came under Roman control. Topics that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general. Special emphasis will therefore be laid on critical reading and interpretation of ancient literary texts, documentary evidence and archaeological material. That will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general.

Activity: Seminar
1.0 Course Unit

ANCH 363 Foreigners in Rome
According to the stories the Romans told about the origins of their city, Rome began as a community of immigrants. As a growing metropolis and, eventually, the center of an empire, the city remained a magnet for people from other parts of the Empire and beyond. Foreigners came to the city as merchants and travelers, they settled here seeking a different and better life, pursuing a career, or escaping hardships in their home communities. Others were brought to Rome against their will, as prisoners or slaves. In this seminar, we will explore the different communities of foreigners and immigrants that shaped Rome. How and why did they move to the city? How did they experience their new home? How did they adapt to life in Rome and how, in turn, did they influence what we define as ‘Roman’ today? Finally, what can the legal, social, political, and social status of immigrants tell us about Roman society in general? To answer these questions (and more), we will look at a wide array of primary sources, including literary texts, inscriptions, and material culture.
Taught by: Wilker
Also Offered As: CLST 364
Activity: Seminar
1.0 Course Unit

ANCH 384 The Hellenistic and Roman Near East
In this course we will study the history of the Hellenistic and Roman period from a Near Eastern perspective. From the conquests of Alexander the Great to the end of Roman rule in late antiquity, this region was the scene of conflicts, but also of peaceful and fruitful interactions between Greeks, Romans, Egyptians, Jews, Syrians, Arabs and many other societies. What was the impact of Greek and Roman rule and how did the peoples of the region react to these fundamental changes? On the other hand, how did they influence the culture and worldview of their conquerors? We will use historical texts, documents and archaeological evidence to discuss these political, cultural and religious encounters that made the Near East to a key region of Greco-Roman history. All texts will be discussed in translation. No prerequisites, although it would be useful to have some background in Hellenistic and/or Roman history.

Activity: Independent Study
1.0 Course Unit

ANCH 506 MLA Proseminar: Ancient Economies
This class presents an introduction to economies before economics, a study of economic activity in the Greco-Roman world. Ancient Greece and Rome have been called some of the first ‘global’ economies - they engaged in long-distance trade, introduced the first coinage systems, and built and manufactured at large scales. At the same time, they remained agrarian societies, with majority peasant populations, high levels of inequality and social systems that often placed social capital ahead of profit. Using textual sources, archaeology and techniques from the natural and social sciences, this class will not only look at basic elements of economic activity in the ancient world - demographics, trade, monetization, industry - but also ask critical questions about how - or if - modern economic methods can be applied to the distant past. No previous knowledge of the ancient world or economics is necessary.
Taught by: Bowes
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
ANCH 535 Problems in Greek: Archaic and Classical
This seminar is designed to introduce students to the major issues and problems in the early history of Ancient Greece, from approximately 776 BC until the reign of Alexander the Great nearly four hundred and fifty years later. A number of these issues have been the subject of academic investigation for decades: the historicity of Homeric society, the origins of democracy, the reforms of Kleisthenes, the population of Athens, for example. The investigation of many of these problems, however, has received fresh impetus from newer approaches: demographic studies of the Aegean islands, the dating of 5th century inscriptions, the study of Solons poetry have all yielded new insights and transformed our understanding of Greek culture and history. In this seminar we will explore many older questions from newer perspectives, with attention to such recent topics as gender, ethnicity and subaltern studies. The result is a view of Greece that is both more familiar and yet equally more alien. Taught by: McInerney
One-term course offered either term

Notes: Graduates Only

ANCH 604 Provincial Perspectives
Most of the primary sources available to us are commonly taken to reflect the ideology, concepts, and realities of Roman imperial rule through the lenses of the central power. However, a number of sources provide insights into how provincials and imperial subjects perceived the empire and their own status within its political, cultural, and social frameworks. In this seminar, we will focus on how ethnic, religious, cultural, and regional identities were developed, maintained, adapted, and interpreted within and in reaction to the empire in concept and reality. Historiographical and auto-ethnographic works, orations, philosophical, and religious texts reflect different attitudes towards the imperial center, ranging from open hostility and frustrated acceptance to praise and identification. Texts to be discussed include canonical works (Polybius, Dionysius of Halicarnassus, Second Sophistic) as well as lesser-known texts and authors. Special emphasis will be laid on scholarly approaches, including concepts of identity, hybridization and cultural change, the dynamics of imperial integration, and the (de-)construction of modern narratives of Romanization. Taught by: Wilker

Activity: Seminar
1.0 Course Unit

ANCH 612 The Flavian Era
The time of the Flavians (69-96 BCE) holds a special place in Roman history and culture as it marks the transition from the Julio-Claudian period to the High Empire. Historically, the rule of Rome’s second dynasty saw a stabilization of the imperial power system, the consolidation of social and political hierarchies, and an increasing integration of the empire. Major construction projects reshaped the city of Rome, topographically and ideologically. The literary production in various genres reached a new peak, developed new forms, and explored new topics. The unusually high number of Greek and Latin texts and documents preserved allow us to analyze such changes closely; our focus will be on the interrelation and conjunction of these developments. Final projects will take the form of papers suitable for presentation at the SCS Annual Meeting. Taught by: Wilker, Damon
Also Offered As: CLST 612
Activity: Seminar
1.0 Course Unit

ANCH 616 Ancient Economies
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his The Ancient Economy have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy. Activity: Lecture
1.0 Course Unit

ANEL 546 Intermediate Sumerian
Reading literary texts in the Sumerian Language from ancient Mesopotamia.
Taught by: Tinney
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

ANEL 560 Late Egyptian
Introduction to the grammar of Late Egyptian.
One-term course offered either term
Prerequisite: ANEL 460
Activity: Lecture
1.0 Course Unit

ANEL 563 Old Egyptian
This course is an introduction to the language of the Egyptian Old Kingdom. The grammar of the period will be introduced during the early part of the semester, using Ededl's ALTAGYPTISCHE GRAMMATIK as the basic reference. Other grammatical studies to be utilized will include works by Allen, Baer, Polotsky, Satzinger, Gilula, Doret, and Silverman. The majority of time in the course will be devoted to reading varied textual material: the unpublished inscriptions in the tomb of the Old Kingdom official Kapure--on view in the collection of the University Museum; several autobiographical inscriptions as recorded by Sethe in URKUNDEN I; and a letter in hieratic (Baer, ZAS 93, 1966, 1-9).
Taught by: Silverman
One-term course offered either term
Also Offered As: AFRC 563
Prerequisite: ANEL 460
Activity: Lecture
1.0 Course Unit

ANEL 640 First Year Akkadian I
Introduction to the grammar of the Akkadian language with emphasis on developing skills in the cuneiform writing system and reading of selected texts.
Course usually offered in fall term
Also Offered As: ANEL 440
Activity: Lecture
1.0 Course Unit

ANEL 641 First Year Akkadian II
A continuation of 1st Year Akkadian I, this class builds on the lessons of that class on the grammar of the Akkadian language with emphasis on developing skills in the cuneiform writing system and reading of selected texts. To take this class without first having taken 1st Year Akkadian I requires permission of the instructor.
Course not offered every year
Also Offered As: ANEL 441
Prerequisite: ANEL 640
Activity: Lecture
1.0 Course Unit
ANEL 644 Readings in Akkadian Texts I
Readings in Akkadian texts on selected topics.
Taught by: Frame
Course not offered every year
Prerequisite: ANEL 641
Activity: Seminar
1.0 Course Unit

ANEL 646 The Land of Sumer: Writing, Language, and Culture
This self-contained course sets the Sumerian language, writing system and use of writing in their social and historical context. The aim is to provide students of ancient history and culture from diverse disciplines with a good grounding in Sumerian culture, familiarity with the Sumerian language and cuneiform writing system and the requisite knowledge for critical assessment of published translations and of the secondary literature. The course is organized as two threads, culture on the one hand and language on the other. The two threads are united by taking examples in the language exercises, vocabulary assignments, etc., as far as possible from the domain of the week’s cultural topics. The net effect is to examine the culture both through contemporary secondary literature and through direct contact with elementary primary texts of relevance to the various topics of discussion. The language component of the course will be carried out in a combination of transliteration and cuneiform, with an expectation that all students will gain familiarity with at least the core 80 syllabic signs, and about 100 additional logographic signs.
Taught by: Tinney
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANEL 647 Sumerian Daily Texts
Reading administrative and economic texts in the Sumerian Language from ancient Mesopotamia.
Taught by: Tinney
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANEL 664 Coptic
The course will be an introduction to the writing, grammar, and literature of Coptic.
Taught by: Silverman
Course not offered every year
Also Offered As: RELS 616
Activity: Lecture
1.0 Course Unit

ANEL 665 Demotic
The course will be an introduction to the writing, grammar, and literature of Demotic, the phase of the language in use during the latter periods of Egyptian history.
Taught by: Houser Wegner
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANEL 740 Akkadian Religious and Scientific Texts
Readings in Akkadian of religious and scientific texts from ancient Mesopotamia.
Taught by: Frame
One-term course offered either term
Prerequisite: ANEL 641
Activity: Lecture
1.0 Course Unit

ANEL 741 Akkadian Legal Texts
Readings in Akkadian legal texts and law corpora from ancient Mesopotamia.
Taught by: Frame
One-term course offered either term
Prerequisite: ANEL 641
Activity: Lecture
1.0 Course Unit

ANEL 742 Akkadian Economic Texts
Readings in Akkadian economic texts from ancient Mesopotamia.

Course not offered every year
Prerequisite: ANEL 641
Activity: Seminar
1.0 Course Unit

ANEL 743 Peripheral Akkadian
Readings in selected texts in Akkadian from the periphery of Mesopotamia, including Alalah, Ugarit, Nuzi, Suza and El-Amarna.
One-term course offered either term
Prerequisite: ANEL 641
Activity: Lecture
1.0 Course Unit

ANEL 746 Readings in Sumerian Texts
Selected readings in Sumerian texts.
Taught by: Tinney
One-term course offered either term
Prerequisite: ANEL 646
Activity: Lecture
1.0 Course Unit

Anthropology (ANTH)

ANTH 001 Archaeology: Window to the Human Past
This course will introduce students to the methods and theory of archaeology by exploring how we turn archaeological data into statements about cultural behavior. We will discuss the place of archaeology in the broader field of anthropology and debate issues facing the discipline today. The course will rely on case studies from around the world and from many different time periods to introduce students to the research process, field and lab methods, and essential questions of archaeological anthropology. Students will have the opportunity to work hands-on with archaeological materials through visiting the galleries and working with Penn Museum collections.
For BA Students: History and Tradition Sector
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit
ANTH 002 Anthropology, Race, and the Making of the Modern World
Anthropology as a field is the study of human beings - past, present, and future. It asks questions about what it means to be human, and whether there are universal aspects to human existence. What do we share and how do we differ? What is ‘natural’ and what is ‘cultural’? What is the relationship between the past and the present? This course is designed to investigate the ways anthropology, as a discipline, emerged in conjunction with European (and later, American) imperialism, the trans-Atlantic slave trade, and the will to know and categorize difference across the world. We will probe the relationships between anthropology and modern race-making by investigating how anthropologists have studied key institutions and systems that structure human life: family and kinship, inequality and hierarchy, race and ethnicity, ritual and symbolic systems, gender and sexuality, reciprocity and exchange, and globalization and social change. The course fundamentally probes how the material and ideological constellations of any given moment shape the questions we ask and the knowledge we produce about human existence.
For BA Students: Society Sector
Taught by: Thomas
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit

ANTH 003 Introduction to Human Evolution
How did humans evolve? When did humans start to walk on two legs? How are humans related to non-human primates? This course focuses on the scientific study of human evolution describing the emergence, development, and diversification of our species, Homo sapiens. First we cover the fundamental principles of evolutionary theory and some of the basics of genetics and heredity as they relate to human morphological, physiological, and genetic variation. We then examine what studies of nonhuman primates (monkeys and apes) can reveal about our own evolutionary past, reviewing the behavioral and ecological diversity seen among living primates. We conclude the course examining the ‘hard’ evidence of human evolution - the fossil and material culture record of human history from our earliest primate ancestors to the emergence of modern Homo sapiens. You will also have the opportunity, during recitations, to conduct hands-on exercises collecting and analyzing behavioral, morphological, and genetic data on both humans and nonhuman primates and working with the Department of Anthropology’s extensive collection of fossil casts.
For BA Students: Living World Sector
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit

ANTH 004 The Modern World and Its Cultural Background
An introduction to the diversity of cultures in the world. This course is divided into two parts. The first briefly examines different models of understanding human diversity: ethnicities, religions, languages, political forms, economic structures, cultures, and ‘civilizations’. Students will learn to think about the world as an interconnected whole, and know the significance of culture on a global scale. The second part is an introduction to area studies, in which we undertake a survey of the different regions of the world. We conduct the survey paying attention to the different aspects of human diversities, which we examine in the first part of this course. Students will acquire a greater appreciation and understanding of cultural differences in the more comprehensive social context.
For BA Students: Humanities and Social Science Sector
Course usually offered in spring term
Activity: Recitation
1.0 Course Unit

ANTH 005 Great Transformations
This course explores the history and archaeology of the last 20,000 years from the development of agriculture to the industrial revolution. Why did people across the world abandon foraging for farming? How and why did cities and states develop? Why did societies succeed or fail? How have humans transformed themselves and the natural world, including the landscape and the climate? We will explore the methods that archaeologists use to consider these questions and analyze evidence for social and economic change from the Middle East, the Americas, Asia, Africa, Australia and Europe. In addition, students will have a chance to conduct hands-on exercises with artifacts from the Penn Museum during practicums.
For BA Students: History and Tradition Sector
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ANTH 012 Globalization And Its Historical Significance
This course describes and analyses the current state of globalization and sets it in historical perspective. It applies the concepts and methods of anthropology, history, political economy and sociology to the analysis and interpretation of what is actually happening in the course of the semester that relates to the progress of globalization. We focus on a series of questions not only about what is happening but about the growing awareness of it and the consequences of the increasing awareness. In answering these questions we distinguish between active campaigns to cover the world (e.g. Christian and Muslim proselytism, free-trade agreements, democratization) and the unplanned diffusion of new ways of organizing trade, capital flows, tourism and remote interaction via the Internet. The body of the course deals with particular dimensions of globalization, reviewing both the early and recent history of each. The overall approach is historical and comparative, setting globalization on the larger stage of the economic, political and cultural development of various parts of the modern world. The course is taught collaboratively by an anthropologist, an historian, and a sociologist, offering the opportunity to compare and contrast distinct disciplinary approaches. It seeks to develop a general social-science-based theoretical understanding of the various historical dimensions of globalization: economic, political, social and cultural.
For BA Students: Humanities and Social Science Sector
Taught by: Spooner
Course usually offered in fall term
Also Offered As: HIST 012, SOCI 012
Activity: Lecture
1.0 Course Unit
ANTH 022 World Musics and Cultures
This course examines how we as consumers in the 'Western' world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways—particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of 'World Music' by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process. Fulfills College Cross Cultural Foundational Requirement.

For BA Students: Arts and Letters Sector
Taught by: Muller, Rommen, Sykes
One-term course offered either term

1.0 Course Unit
Notes: Open to all students

ANTH 026 Behind the Iron Curtain
This first-year seminar provides an introduction to the histories, cultures, and societies of Central and Eastern Europe, including Poland, the Czech Republic, Slovakia, Hungary, Romania, Bulgaria, Albania, and the successor states of Yugoslavia. Through a selection of articles and essays written by anthropologists and sociologists and based on their extended fieldwork in the region, students will explore both the ethnographic method and the experience of everyday life during and after the communist era. Topics will include: popular music under socialism, food and wine, environmental concerns, the status of Muslim minorities, socialist aesthetics, public memory and cultures of commemoration, privatization, advertising, women’s rights, gender and sexuality, emergent nationalisms, and the rise of income inequality and homelessness. All readings and assignments in English.

ANTH 031 The 'Rights of Nature' in Times of Conflict and Transition
In less than half a decade, the idea that 'nature' possesses inalienable rights akin to human rights has gone from a strictly theoretical concept to the basis of policy changes in several countries and U.S. municipalities. This first-year seminar will introduce students to current legal, political, ethical, and practical debates about the implementation and impacts of granting 'rights to nature' in these different contexts. We will begin by examining how the Community Environmental Legal Defense Fund (CELDF) supported citizens of Tamaqua, Pennsylvania to write the world's first local 'rights of nature' ordinance. We will then go on to compare the politics of 'rights of nature' cases in Ecuador, New Zealand, India, and Colombia. We will pay particular attention to the way biocentric constitutional moves may transform concepts and understandings of environmental justice and socio-environmental conflicts. In particular, how the recognition of 'nature' as a victim of war may transform understandings of violence, and hence, approaches to constructing peace and engaging and reparative and restorative practices within the larger framework of planetary and community efforts to mitigate climate change. Lastly, we will explore the possibilities and tensions between community decision-making, the 'rights of nature,' and national level policies regarding the intensification of extractive activities and questions of territorial ordinance.

ANTH 045 How Our Environment Has Shaped Us
From our earliest ancestors to the recent warming of our planet, the history and future of humans is fundamentally influenced by our relationship with the world around us. This intimate connection makes it a necessity for us to understand how humans have used, adapted to, altered and are in turn affected by our environment. How has climate change affected the development of human society? How have people adapted to their environments in the past and how have they shaped these environments in turn? What does it mean to develop 'sustainable' approaches to our environments over the short and long term? Environmental archaeology is the study of these questions. By the end of this course you will have the tools to interpret human-environment interactions in the past and the present, and suggest ways we can change our thinking and actions in the future.

ANTH 053 Music in Troubled Places
In this class, we go beyond the headlines to discuss the history and cultures of peoples who have had to endure terrible suffering, particularly through ethnic conflict and civil war. We will focus on a curious phenomenon: populations typically defined as separate from one another (e.g., Israelis and Palestinians) often have a history of shared or related cultural practices, of which music is a prime example. We will survey a number of current and recent conflict zones and use music as a way to deepen our understanding of the identities and relationships between the peoples involved including through a consideration of my own fieldwork in Sri Lanka. Querying the very definitions of music, trouble, and place, the course then broadens out to consider how musicians have been affected by and/or responded to important global problems like slavery, sexual violence, climate change and other ecological disasters, like Hurricane Katrina. Regions to be considered in our lectures and/or readings include: Afghanistan, Iraq, Syria (including Kurdish musics), Israel-Palestine, Sri Lanka, the Maldives, Myanmar/Burma, Uganda, Sierra Leone, North and South Korea, the Marshall Islands, Cambodia, Mexico, and the United States.

ANTH 056 Seeing/Hearing Globally: Knowing People, Culture, and Places through Travel
Students are provided a general introduction to a country’s history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the 12 day intensive travel to that country (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites for journaling and are expected to produce a written/creative project at the end of the travel. The itinerary and specific course content will vary according to the travel site and focus of each class.

ANTH 058 Freshman Seminar
This interdisciplinary course introduces students to qualitative research methods and frameworks in the social sciences and humanities. The goals of the semester will be for each student to develop their own research proposal for a specific project that they could imagine pursuing over the summer or later in their undergraduate career; and to develop a web-based exhibit of one Penn-based research collection of interest. Students will be introduced to a range of textual, archival and media collections and databases available at Penn, with particular attention to South Asia and other specific regions of interest to course participants. The class will visit the Penn Museum object collections and archives, the Art library, the Kislak Center for Rare Books and Manuscripts, Film Archives, and other special collections on campus, and meet with a representative from the Center for Undergraduate Research Funding (CURF). Students will learn how to frame an effective research question, situate it in relation to existing research, select the most appropriate methods for addressing the question, and develop an effective research plan. Each week students will be introduced to a new set of frameworks for analysis, see specific examples of their application drawn from anthropological, historical, and related scholarship and have opportunities to practice applying and evaluating the strengths and weaknesses of specific methodological tools. Students will also have the opportunity to identify sources of funding for summer research projects and prepare applications for these opportunities as part of the course. The course is ideal as an introduction to both the excellent libraries and research collections housed at Penn, and to a wide range of intellectual frameworks for engaging with these collections - a great way to kick off your undergraduate experience at Penn! Prerequisite: Topic varies by semester, see subtitle and Professor.

ANTH 086 Desire and Demand: Culture and Consumption in the Global Marketplace
Does consumption shape culture or does culture shape consumption? As even the most mundane purchase becomes socially symbolic and culturally meaningful we can persuasively argue that the concept of ‘need’ has been transformed. Analyzing a variety of physical and virtual consumer venues, the goal of this seminar is to understand and to analyze historical and contemporary issues related to a culture of consumption. We investigate social and political-economic factors that impact when and how people purchase goods and argue that behavior attached to consumption includes a nexus of influences that may change periodically in response to external factors. Readings and research assignments are interdisciplinary and require a critical analysis of global/local linkages. The city of Philadelphia becomes the seminar’s laboratory as we ask: how have issues of culture, consumption, and global capitalism become intertwined around the world?

ANTH 091 Sustainable Development and Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development - environmental, economic, and social - through an examination of three products - peyote, coca, and coffee - that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts.

Also Offered As: ANTH 654, NELC 281, NELC 681, SAST 161
Activity: Lecture
1.0 Course Unit

ANTH 104 Sex and Human Nature
This course is an introduction to the scientific study of sex in humans. Within an evolutionary framework, the course examines genetic, physiological, ecological, social and behavioral aspects of sex in humans. After providing the basic principles of evolutionary biology, the course delves into the development of sexual anatomy and physiology. Among the subjects to be explored are sex determination, the nature of orgasms, and the sexual development of females and males from birth to adulthood. The role of ecology and social life in shaping human mating patterns is also evaluated using ethnographic and cross-cultural materials from a variety of human cultures. In particular, the course examines why humans marry or pair bond, whether there is a biological basis of love, which biological and psychological factors produce jealousy. Finally, the course explores topics relevant to human sexuality today, such as the ‘hook-up culture’, contraception and abortion, sex work, sexual transmitted diseases, and the ethical and legal dimensions of human sexuality.

Course not offered every year
Also Offered As: GSWS 103
Activity: Lecture
1.0 Course Unit

ANTH 105 Human Adaptation
This course concerns evolutionary processes using humans (Homo sapiens) as a case study. Through a study of the anatomical, genetic, and behavioral adaptations in our species, we will explain and explore our biology through mammalian, primate, and hominid evolutionary histories. Through evolutionary theory, we explore why humans are imperfectly adapted and not an end product of evolutionary change, and how we create and modify, not just respond to, evolutionary pressures. Through this approach, we gain insights into how and why our biology functions (and sometimes malfunctions) in the way that it does. Then, we will explore topics including human birth, growth, locomotion, reproduction, and diet as part of human biocultural adaptation. This course will involve the analysis of hominin fossil casts and human skeletal material from the Penn Museum Physical Anthropology section.
Taught by: Mitchell
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 109 Anthropology of the Senses
Smelling, seeing, hearing, tasting, and touching are the foundation of our empirical knowledge of the world, providing the most basic information we have. These senses are biological yet our sense perception how we see, smell, taste, hear, and touch is both shaped by and shapes our different cultures. As a result, they provide a useful framework to investigate a classic problem in anthropology, the intersection between biology and culture. This class investigates the senses as cultural and historical phenomena, drawing on readings from a range of disciplines, including anthropology, history, psychology, musicology, and cultural studies.

ANTH 110 Water in the Middle East Throughout History
Water scarcity is one of most important problems facing much of the Middle East and North Africa today. These are arid regions, but human and natural systems have interacted to determine relative water scarcity and abundance at different times and places. This course examines the distribution of water resources throughout the Middle East and the archaeology and anthropology of water exploitation and management over the last 9000 years, looking at continuities and changes through time. Students will learn to make basic digital maps representing Middle Eastern hydro-geography and arguments about modern and historic water resources in the region. The class will cooperatively play an 'irrigation management game' designed to familiarize personnel involved in the operation of irrigation schemes with the logistical and social issues involved in water management. We will engage with a variety of media, including academic readings, popular journalism, films, satellite imagery, and digital maps, in our quest to explore whether or not the past can inform present efforts to better manage modern water resources. The course is structured in units focused on each of the major hydro-environmental zones of the Middle East: the river valleys of Mesopotamia, Egypt, and the Levant, the internal basins of western Central Asia and the Levant, the deserts of Arabia and North Africa, highland zones in Yemen and Iran, and coastal marsh areas along the Persian Gulf. We will examine irrigation systems, water supply systems, and ways of life surrounding water sources known from ethnographic studies, history, and archaeological excavations. These data will allow us to engage with debates in Middle Eastern anthropology, including those concerning the relationship between water and political power, the environment in which the world's earliest cities arose, and the relevance of 'lessons of the past' for present and potential future water crises and 'water wars.' In our final weeks, we will discuss archaeology and historical anthropology's contribution to conceptions of water 'sustainability' and examine attempts to revive traditional/ancient technologies and attitudes about water.

ANTH 111 Introduction to Mediterranean Archaeology
The cultures of Greece and Rome, what we call classical antiquity, span over a thousand years of multicultural achievement in the Mediterranean. This course tells the story of what it was like to live in the complex societies of ancient Greece and Rome. This story is told principally using the art, architecture, pottery and coins produced by these societies. We will examine both the bold and sexy, and the small and humble, from the Parthenon to wooden huts, from the Aphrodite of Knidos to the bones of a fisherman named Peter.

ANTH 112 Sacred Stuff: Religious Bodies, Places, and Objects
Does religion start with what's in our heads? Or are religious commitments made, shaped and strengthened by the people, places, and things around us? This course will explore how religion happens in the material world. We'll start with classical and contemporary theories on the relationship of religion to stuff. We'll then consider examples of how religion is animated not just by texts, but through interactions with objects, spaces, bodies, monuments, color, design, architecture, and film. We'll ask how these material expressions of religion move beyond private faith and connect religion to politics and identity.

One-term course offered either term
Also Offered As: ARTH 339, RELS 102
Activity: Seminar
1.0 Course Unit

ANTH 114 Migration and Borders
We live in an interconnected world of ever-intensifying flows of people, goods, and ideas. Rather than giving rise to a 'borderless world,' however, these flows have instead led to the proliferation and elaboration of borders on a planetary scale. This introductory course explores this paradox, evaluating the links between migration and borders in different contexts across the globe. We ask a number of related questions: What is migration? What is a border? What is the relationship between migration and borders? How might anthropology - the study of what it means to be human - shed light on this relationship? In so doing, we explore a number of case studies from archaeological, biological, cultural, and linguistic perspectives to better understand migration and borders as conjoined anthropological phenomena.
Taught by: Carruthers
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 116 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region's long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantsations of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.
Taught by: Thomas
Course not offered every year

ANTH 118 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, exorcism, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft— including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion. For BA Students: Humanities and Social Science S Taught by: St. George

ANTH 120 Popular Culture and Youth in Africa
All across the continent, Africa is alive with the energies of young people, expressed in music, art, fashion, drama, video, poetry, protest, and urban legends. In this course, we take a close look at the wide variety of popular forms produced and consumed by young people in a diversity of contexts, urban and rural, elite and marginal, mainstream and transgressive. We will examine how popular culture draws from African tradition to craft innovative versions of modernity and futurity. We will explore themes of democracy, inequality, and social justice threaded through popular genres as well as experiences of joy, anger, fear, and hilarity. We will see how popular culture provides escape and entertainment for young people while also working to transform African societies.

Activity: Lecture
1.0 Course Unit

ANTH 121 Origin and Culture of Cities
The UN estimates that 2.9 of the world’s 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the ‘origin’ of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.
For BA Students: History and Tradition Sector Taught by: Zettler
Course usually offered in fall term

Activity: Lecture
1.0 Course Unit

ANTH 122 Becoming Human
Human evolutionary studies is a composite product of the fieldwork of both Paleolithic archaeology and human paleontology (or what we refer to as ‘stones and bones’). This marriage of two subdisciplines of anthropology produces a unique set of data that is intellectually managed and driven by theories within anthropology as a whole and even beyond – to fields such as biology, psychology, and primate ethology, as we try to understand the origins of language, culture, and our unique physical characteristics. In this course, we will jointly discuss and debate the actual evidence of human evolution, describing what the actual evidence is and exploring how far can we take these interpretations.
For BA Students: Natural Science and Math Sector One-term course offered either term
Activity: Lecture
1.0 Course Unit

ANTH 123 Communication & Culture
The course looks at varieties of human expression – such as art, film, language and song – as communicative practices that connect persons together to form a common culture. Discussion is centered around particular case studies and ethnographic examples. Examination of communicative practices in terms of the types of expressive signs they employ, their capacity to formulate and transmit cultural beliefs and ideals (such as conceptions of politics, nature, and self), and to define the size and characteristics of groups and communities sharing such ideals. Discussion of the role of media, social institutions, and technologies of communication (print, electronic). Emphasis on contemporary communicative practices and the forms of culture that emerge in the modern world.
For BA Students: Society Sector Taught by: Agha
One-term course offered either term
Activity: Recitation
1.0 Course Unit

ANTH 124 Archaeology & The Bible
Archaeology and the Bible is a chronological survey of the long span of human occupation in the Land of the Bible, known by the names of the modern nation-states and political entities that occupy the area, as well as various short hands such as Levant and Syria-Palestine, from ca. 10,000 BCE; when humans first began to farm and herd animals through the time of the Divided Monarchy of Israel and Judah. While archaeology has moved beyond a primary concern with illuminating the Bible, NELC 155 will investigate the broader import of archaeological discoveries for our understanding of ancient Israel and its neighbors.

Course not offered every year
Also Offered As: NELC 155
Activity: Lecture
1.0 Course Unit
ANTH 127 The Material Past in a Digital World
The material remains of the human past - objects and spaces - provide tangible evidence of past people's lives. Today's information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today's world and for discussing the human consequences of these new technologies and data. We will discuss information technology's impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology's role in the preservation of the past in today's turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.
Also Offered As: ARTH 127, CLST 127, HIST 127, NELC 187
Activity: Lecture
1.0 Course Unit

ANTH 131 Small Business Anthropology
With a focus on minority-owned small businesses in the City of Philadelphia, this class will introduce students to the work of anthropologists who have made their careers in the business world using the tools they acquired through training in anthropology. By bringing anthropological perspectives into the workplace, business anthropologists seek to promote well-being for employees and owners, as well as consumers and the communities in which businesses operate. The class will also introduce students to Philadelphia from the point of view of minority owned small businesses. One of the two class days each week will focus on business anthropology as a profession and include readings on organizational culture, design anthropology, and the role of anthropologists in marketing and advertising, as well as in globalization processes and entrepreneurship. The second of the two days each week will focus on the city of Philadelphia and the role of small businesses within it. We will study the spatial layout of the city, the kinds of small businesses that are operative within the city and where they are located, the relationship of business to ethnicity, gentrification and its impact on small business, and the role of government and community groups in relationship to small businesses and their owners and employees. As part of the class, students will engage in guided research on specific small businesses, with the aim of developing an ethnographic understanding of the experiences of owners and employees, the opportunities they have seized upon and the problems they have confronted. We hope in the course of the semester to provide an ethnographic profile of a sampling of small businesses from different industries, which can in turn contribute to understanding larger social and cultural patterns within Philadelphia. Through a class blog or other means, we hope as well to contribute to the ability of minority small business owners to voice their experiences, as well as their fears and hopes for the future, to members of the University community and beyond.
Taught by: Urban
Also Offered As: URBS 131
Activity: Seminar
1.0 Course Unit

ANTH 134 Making the Natural World: An Introduction to Political Ecology
What are the limits of nature? When do natural systems become human or socio-natural systems? In this course, we examine the human construction of nature both conceptually, through ideas about environment, ecosystem, organism, and ecology, and materially, through trajectories of direct action in and on the landscape. Beginning with a consideration of foundational concepts in human ecology, we will discuss current problems and approaches, centering on political ecology. Readings and case studies are drawn from human-environmental contexts in Oceania, South Asia, Southeast Asia, Sub-Saharan Africa, Latin America, Europe, and North America. We will also consider topics including a) the relationship between indigenous and technocratic knowledge and resource governance, b) environmental movements themselves as objects of ethnographic study; c) justice and sustainability as environmental goals; d) inequality, displacement and violence as environmental problems; and e) fair trade and food security or sovereignty.
Taught by: Lycett
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ANTH 139 Ancient Civilizations of the World
This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist of a guided tour of a relevant gallery, as well as a hands-on object-based lab with archaeological materials selected by the instructor. This course meets the General Education Curriculums Cross Cultural Analysis foundation approach, whose aim is to help students understand and interpret the cultures of peoples (even long-dead peoples) with histories different from their own; it also fulfills the History and Tradition Sector breadth requirement.

ANTH 140 Histories of Race and Science in Philadelphia
The history of race and science has its American epicenter in Philadelphia. Throughout this Academically-Based Community Service (ABCS) course, we will interrogate the past and legacy of racial science in the United States; the broad themes we broach will be met concretely in direct engagement with Penn and the Philadelphia community. As an extended case study, students will undertake independent research projects using primary source documents from local archives, tracing the global history of hundreds of human skulls in the 19th century Samuel G. Morton cranial collection at the Penn Museum, a foundational and controversial anthropological collection in the scientific study of race. These projects will be formed through an ongoing partnership with a Philadelphia high school in which Penn students will collaborate with high school students on the research and design of a public-facing website on the Morton collection and the legacy of race and science in America. In our seminar, we will read foundational texts on the study of racial difference and discuss anti-racist responses and resistance to racial science from the 19th century to the present. Throughout, we will work directly with both primary and secondary sources, critically interrogating how both science and histories of science and its impacts on society are constructed. Throughout this course, we will explore interconnected questions about Penn and Philadelphia’s outsized role in the history of racial science, about decolonization and ethics in scholarly and scientific practice, about the politics of knowledge and public-facing scholarship, and about enduring legacies of racial science and racial ideologies. All students are welcome and there are no prerequisites, save for intellectual curiosity and commitment to the course. This course will be of particular interest to those interested in race, American history and the history of science, anthropology, museum studies, education, and social justice.
Taught by: Mitchell
Also Offered As: AFRC 141, HIST 154, STSC 140

ANTH 143 Explorations in Human Biology
This course is an exploration of human biology from a biocultural and evolutionary perspective. The class will provide you with a better understanding of what it means to be human, how humans came to exhibit such a wide range variation, and what biological anthropology can contribute to your understanding of the world. In this class students will learn to integrate the theory and methods used in human biology research through lectures, assignments, and lab sessions. This course will explore topics including human genetics, growth and development, nutrition, disease, and reproduction. We will also use the course as an opportunity to introduce you to the important contributions of biological anthropologists to the study of race, inequality, sex and gender, and health among others.

ANTH 148 Food and Fire: Archaeology in the Laboratory
This course will let students explore the essential heritage of human technology through archaeology. People have been transforming their environment from the first use of fire for cooking. Since then, humans have adapted to the world they created using the resources around them. We use artifacts to understand how the archaeological record can be used to trace breakthroughs such as breaking stone and bone, baking bread, weaving cloth and firing pottery and metals. The seminar will meet in the Penn Museum’s Center for the Analysis of Archaeological Materials. Students will become familiar with the Museum’s collections and the scientific methods used to study different materials. Class sessions will include discussions, guest presentations, museum field trips, and hands-on experience in the laboratory.

**ANTH 149 Introduction to Native American and Indigenous Studies**

This course offers a broad introduction to evolving scholarship in the combined fields of Native American Studies and Indigenous Studies worldwide. Students will examine the various ways that Indigenous peoples and academic researchers are currently engaging with Indigenous knowledges, while also exploring the lingering impacts of settler colonialism and the influence of decolonizing methodologies. Students will gain foundational understandings of the cross-disciplinary nature of Native American and Indigenous Studies (NAIS), by studying theoretical interpretations of Indigenous peoples in academic and historical contexts, and by examining practical approaches to Indigenous research in diverse worldwide settings. Students will approach topics from a variety of disciplinary traditions, utilizing historical texts, ethnological studies, oral literature, material culture, and modern media, including websites and databases produced by and for Indigenous communities. Readings will include the work of researchers who bridge the disciplines of anthropology, history, folklore, art, law, science, etc. Students will watch a selection of films by Indigenous filmmakers, and attend lectures by a selection of Indigenous guest speakers. NAIS faculty advisors from various schools at Penn (e.g., School of Arts and Sciences, Education, Law, Nursing) will also present several guest lectures to highlight their unique experiences and research projects with Indigenous communities. Special case studies will focus on: new directions in collaborative research; issues in museum representation and repatriation; heritage site protection and Indigenous archaeology; legal interventions and protections for Indigenous rights; and innovative projects in language restoration and cultural recovery.

**ANTH 150 Sport and Society: The Anthropology of Sports**

Sport and Society introduces students to the broad field of anthropology in order to understand the interrelatedness of sport and society. We first review the evolutionary foundations of sport in play and ritual, and the biological underpinnings for athletics. We then discuss the broad range of sports across global history, and highlight how archaeologists have studied sports in the past. The final section of the class will explore the ways in which contemporary major sports entangled with broader social and cultural phenomena. Drawing on examples from the U.S. and around the world, we focus on questions of gender, race, and nationality.

**ANTH 151 Archaeology of American History: The Colonial Period**

Anthropology 151/752 is a lecture-seminar that is open to all students. This course will explore American history through a different range of information. Over the last seventy-five years the new field of Historical Archaeology (academically first developed at Penn) has excavated numerous sites dating from the 16th, the 17th, and the 18th centuries in what is now the United States. Recovered archaeological remains combined with archival sources are giving us a different view of the rise of America as a distinctive society. This class is focused on the Colonial Period from the earliest explorations by Europeans to the eve of the American Revolution. Discoveries of early European intrusions into the continent, especially the Spanish and English, will be reviewed along with the reaction of Native Peoples to such contact. Successful settlements on the East Coast in La Florida and at Jamestown as well as in the Rio Grande Valley in the Southwest will be explored along with later colonization of the Middle Atlantic and New England regions. Mature 18th century colonial society as seen in Philadelphia and Annapolis along with the distinctive subject of African American sites will also be covered. **ANTH 154 Liquid Histories and Floating Archives**

Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth’s systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students take them into the archives at the Independence Seaport Museum and at Bartram’s Garden. Field trips by boat on the Schuylkill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region’s vast tidal marshlands wetlands. Excursions also help document how extreme rain events, storms, and rising waters are re-making the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?

**ANTH 155 Globalization: Causes & Effects**

Class sessions will be devoted to discussion of the dynamics of globalization with the objective of illuminating the world-historical context of the changes that are happening around us unevenly in different parts of the world today, and developing critical approaches to the available research methodologies and explanatory theories. Weekly readings will be selected from the major researchers in the field, and students will test their ideas in short research projects of their own on questions arising from the discussions. The overall approach will be historical and comparative. Apart from weekly assigned readings and participation in class discussions, requirements for the course include three short research papers.

**ANTH 159 Population and Public Health in Eastern Europe**

Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism dismantled welfare states at the exact moment when health services were most needed, leaving charities and nongovernmental organization to try to fill in the gaps. Through a combination of readings from the fields of epidemiology, demography, and medical anthropology, this course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.

Taught by: GHODSEE
Also Offered As: REES 159, SOCI 159
Activity: Lecture
1.0 Course Unit

**ANTH 160 Sex and Socialism**

This seminar examines classic and current scholarship and literature on gender and sexuality in contemporary Eastern Europe, and examines the dialogue and interchange of ideas between East and West. Although the scholarly and creative works will primarily investigate the changing status of women during the last three decades, the course will also look at changing constructions of masculinity and LGBT movements and communities in the former communist bloc. Topics will include: the woman question before 1989; gender and emerging nationalisms; visual representations in television and film; social movements; work; romance and intimacy; spirituality; and investigations into the constructed concepts of ‘freedom’ and ‘human rights.’

Activity: Seminar
1.0 Course Unit

**ANTH 169 Merchants, Saints, Slaves and Sojourners: the Worlds of the Indian Ocean**

Do oceans serve to divide and demarcate distinct cultures and regions? Or do they facilitate exchange, connection and cosmopolitanism? This course will explore the manner in which the Indian Ocean has played both roles throughout history, and how the nature of those divisions and connections has changed over time from the ancient to the modern world. We will reconstruct the intertwined mercantile, religious and kinship networks that spanned the Indian Ocean world, across the Middle East, East Africa, South Asia, Southeast Asia and China, illuminating the histories of Hinduism, Buddhism and Islam, while also considering the role of successive imperial political formations, from Rome to Britain. Throughout the semester we will seek to understand the Indian Ocean through the people who lived and worked in its milieu - from consuls and military commanders, to traders, brokers, sailors, prisoners and slaves. Course materials will draw on a variety of disciplines (anthropology, archaeology, material culture, religious studies) to construct the cultural, economic, and environmental history of the Indian Ocean.

**ANTH 177 Colonial Pasts and Indigenous Futures: A History of Belize and Central America**

The small country of Belize (formerly British Honduras) represents the past history and ongoing story of Central America and the region. Belize has a colonial past and present with strong ties to the UK and emerging connections to the US. At the same time, there is a growing post-colonial debate within the country about the role of indigenous Maya people in the past, present and future of the country. This course will be the first of two courses which will lead to active work in Belize during the summer of 2021 with the development and creation of a Community Museum within the Maya village of Indian Creek in southern Belize. This course will be taught by Richard M. Leventhal who has worked in Belize for the past 20 years. Leventhal will be joined by 3 Maya activists from Belize who will co-teach the class for 5-6 weeks out of the semester.

1.0 Course Unit
ANTH 180 From Ayahuasca to Zoloft: Anthropological Approaches to Drugs and Drug Use
In this course we will consider the cultural, social, political, medical, and biological aspects of drugs (legal, illegal, pharmaceutical, botanical, and otherwise) through space and time. We will take a broad approach, thinking critically about what, who, and under what circumstances a given substance becomes a 'drug.' In doing so, we will be able to interrogate the linguistic dimensions of drugs, considering the way in which language creates social worlds and social meanings. We will explore different kinds of drugs, their origins, biochemical properties, and the biological pathways through which they affect us. We will also think about how drugs and drug use has changed over time, taking a cross-cultural and materialist perspective to investigate drug use past and present. Topics we will address include debates over the commercialization, criminalization, and decriminalization of hallucinogenic plants such as marijuana, the recent use of drugs ranging from LSD to magic mushrooms to treat depression and other mental illnesses, the legacies of colonialism and botanical migrations, the ethics of the pharmaceutical industry, and comparative explorations of the language about and approaches to addressing both the 'crack epidemic' of the early 80s and 90s and the current opioid crisis. We will read both classic anthropological texts including ethnographies as well as works from other disciplines including science studies, biology, history, ethnomedicine, history, and sociology.
Taught by: Hoke
Course offered fall; even-numbered years
Also Offered As: LALS 180
Activity: Lecture
1.0 Course Unit

ANTH 190 Introduction to Africa
This course provides an introduction to the study of Africa in all its diversity and complexity. Our focus is cultural, geographical, and historical: we will seek to understand Africa's current place in the world political and economic order and learn about the various social and physical factors that have influenced the historical trajectory of the continent. We study the cultural formations and empires that emerged in Africa before European colonial invasion and then how colonialism reshaped those sociocultural forms. We'll learn about the unique kinds of kinship and religion in precolonial Africa and the changes brought about by the spread of Islam and Christianity. Finally, we'll take a close look at contemporary issues such as ethnic violence, migration, popular culture and poverty, and we'll debate the various approaches to understanding those issues.
For BA Students: Society Sector
Taught by: Hasty
Course usually offered in fall term
Also Offered As: AFRC 190
Activity: Lecture
1.0 Course Unit

ANTH 199 Independent Study in Anthropology
A study under faculty supervision of a problem area or topic not included in the formal curriculum. Junior or senior standing and written permission of instructor and undergraduate chair required to enroll.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ANTH 202 Language, Migration, Diaspora
Centering on the relation between language, migration, and diaspora, this course uses linguistic anthropological approaches to understand how the 'very big' is reflected in the 'very small.' We will approach language use as a process that unfolds in the microclimate of everyday interaction, but whose effects extend to and shape large-scale social processes. We will ask a number of interrelated questions: How does language use shape global phenomena like transnationalism and diasporic populations? How do globalizing forces impact and shape language structure and use? How are mobility and (im)migration enabled or constrained through everyday communicative interaction? We begin by exploring the ideologies inherent in everyday speech, evaluating how language is linked to social identities like class, race, gender, and sexuality, and to social personae like 'the migrant,' 'the refugee,' 'the foreigner,' or to the 'diasporic subject' more generally. We then explore the cultural politics of languages in and across nation-states, attending to their uses and values in unprecedented global flows of information, goods, and people.
Taught by: Carruthers
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 205 American Folklore
This course will examine American expressive culture, including everyday speech, narrative, music, foodways, religion, public celebrations, and material culture through an exploration of the multiple and changing avenues of diversity in the United States. Folklore can be considered the unofficial culture that exists beneath and between the institutions of power that we read about in our history books, and that is what we will be studying—the 99% of American life that goes unseen and unnoticed in other college courses. Some of the topics we will examine are: campus folklore; body art and adornment; contemporary (urban) legends and beliefs; public celebrations and rituals; and the adaptation and commodification of folk culture in popular media.
One-term course offered either term
Also Offered As: FOLK 201
Activity: Recitation
1.0 Course Unit
ANTH 209 Indigenous Communities and Community Museums: Directions for the Future
Community museums are becoming more commonplace within indigenous communities throughout the Americas. These museums are created internally, by and for communities, as a way of framing self-identity and representation. The development of these museums is focused upon the need to define and highlight identity and differences between indigenous communities and the surrounding world. These community museums contrast dramatically with other cultural museums where the stories and histories of groups tend to be controlled by the nation-state and professional curators. This course will focus on the nature of indigenous communities, cultural representation, and identity with a focus upon the modern Maya communities of southern Belize. In addition, museums and community museums, world-wide, will be examined and analyzed. What are the different models of community museums and what is the process for the development of such museums? Is the only de-colonized museum one created and framed within and by the community? Seminar format with weekly discussions, readings, and a final research paper. There are no pre-requisites for this course and a background in anthropology is not required. This course will be connected to a community museum project in Indian Creek, Belize where travel and work will be initiated over the summer of 2021. This course is recommended but not required for participation in summer research program in Belize
Taught by: Leventhal
Course not offered every year
Also Offered As: LALS 210
Activity: Seminar
1.0 Course Unit

ANTH 210 Death: Anthropological Perspectives
This course will cover the topic of DEATH from a bio/cultural perspective including the evolution of life history (aging and demography - mortality) as well as from an archaeological perspective (prehistory) and early history of mortuary practices. Nothing in the lifespan of humans is so revealing on the interface of culture and biology as is death and the experience of death. This course is not concerned specifically with how an individual experiences death, but in the ways that culture and biology have come to define and deal with physical death and the death experience.
Taught by: Monge
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 211 Religion and Ecology
This class will introduce the overlaps between religion and ecology. Rather than assuming that there is a necessary positive or negative relationship between religion and ecology, we will look at how these relationships have materialized in complicated ways at different moments in history. We'll consider perspectives and case studies from a range of different moments in history. We'll consider perspectives and case studies from a range of different traditions, with a special attention paid to the genesis of the field of Religion and Ecology in critiques of Christian attitudes toward the environment in the 1960s and 1970s.
Taught by: Covey
Course not offered every year
Also Offered As: ENVS 211, RELS 211
Activity: Lecture
1.0 Course Unit

ANTH 212 Animals & Religion
Religion is full of animals–lions and lambs, monkeys and elephants, buffalo and snakes, even mythical beasts. The identity of the human being is explained, in many traditions, by contrast with the identity of other species. We know who we are because we know who they are, or do we? This course interrogates–through an exploration of sacred texts, art, film, and museum artifacts–the tension present in many traditions between an anthropocentric prioritization of the human being and religious resources that encourage a valuing of other animal species. We'll explore the way animals function both as religious objects and as religious subjects across diverse traditions, asking how human-animal relationships have shaped religion and how religion has shaped the way we think about and interact with other animals. We'll ask how religion has engaged with animals over time and across global cultures, understanding them as symbols, messengers, and manifestations of the divine; as material for ritual and sacrifice; as kin and subordinates; as food and as filth; as helpmeets and as tempters. How have these perspectives shaped animal ethics, influencing the treatment, use, and consumption of animals and their bodies? Finally, we'll ask what it means that we ourselves are evolved animals. How does our own animality factor into the practice of human religion? Is our religious capacity part of what sets us apart from other animals or is religiosity a trait we might expect to find in other species? To what extent is religion a function of the animal?

ANTH 215 The Ancient Maya: Integrating Material, Text, and Image

Ancient Maya studies is one of the most dynamic and innovative fields in world archaeology today. Emerging as a true historical archaeology only in the past three decades, the decipherment of Maya script now provides a powerful complement and counterpoint to both traditional excavation data and new remote sensing technologies. Equally, the reading of images, and their interaction with texts and artifacts, forms a vital part of our interest in the broader humanistic concerns of worldview and the transcendent—where our primary interest lies in gaining access to past mentalities. This course will provide a comprehensive introduction into current knowledge of the Ancient Maya, with a recurring methodological focus on how different types of evidence are integrated to assemble a persuasive ‘portrait of the past.’ This scope of this process is unique in the ancient Americas, since only the Maya offer us the opportunity to read their own descriptions of the world two millennia or more in the past. Geographically, we will be looking at the greater Yucatan Peninsula, which today covers parts of southeastern Mexico, the whole of Guatemala and Belize, and the western extremities of Honduras and El Salvador. Since archaic times (before 1200 BCE) this has been occupied by speakers of the Mayan language group, and millions of people identified as Maya by that means continue to do so today (despite popular notions to the contrary, they have never ‘disappeared’). No prior knowledge of archaeology or art history is necessary. The course structure is one 3-hour session per week, consisting of a lecture followed by group discussion in seminar-style. Additionally, in Week 6 there will be a virtual tour of the new Mexico and Central American Gallery at Penn Museum. This will introduce the class to the issues of disseminating scholarship and building narratives that are accessible to the wider public.

ANTH 219 Archaeology Field Project

First-hand participation in research project in historical archaeology in Southern New Jersey. Transportation provided by the university. Students will assist in excavations and archival research on local archaeological sites. Class is open to all undergraduates; no previous archaeological experience is required. Attendance will involve Fridays or Saturdays, all day from 8:00 to 5:00 including travel time to the excavations and back to the University Museum. Students enroll for only one day (F or S). Enrollment is limited so specific permission of the instructor is required (Robert L. Schuyler: schuyler@sas.upenn.edu; (215)898-6965; U Museum 412). A follow up laboratory course (Anth 220 in the spring semester) will also be available during which the artifacts and documentary sources collected in the fall will be analyzed at the University Museum. Course may be repeated for credit.

1.0 Course Unit

ANTH 221 Material World in Archaeological Science

By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. ANTH 221/521 will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.

ANTH 231 Modalities of Black Freedom and Escape: Ships
The course circulates around ships and boats. The course combines methods from environmental humanities, visual arts and history to consider multi-modal practices of black freedom and escape. From free black sailors in the eighteenth century Caribbean Sea, to twentieth and twenty-first century West African fishing boats, notions of Haitian 'boat people,' Parliament Funkadelic's mothership, and sinking boats with Somali and Ethiopian migrants off Yemen's coast, ships have been and remain technologies of containment and freedom for communities of African descent. In the face of environmental vulnerabilities and the reality of water ways as systems of sustenance and imminent death, this course asks: how do black people use the ship and the process and practice of shipping as vessels for freedom, escape, and as a site to experiment with futures? Using the city of Philadelphia and the Schuylkill and Delaware rivers as our primary site of interrogation, the course attends to the threats that black people experience following natural disaster (New Orleans, Haiti, Puerto Rico) and everyday engagement with the local and global state structures regarding water (Flint, MI). In this context, we also look to shipping as a site to theorize and account for black innovation, meanings of (non-)sovereignty, and alternative futures. Taught by: Johnson
Course not offered every year

Activity: Seminar
1.0 Course Unit

ANTH 234 Pharmaceuticals and Global Health
In some parts of the world, spending on pharmaceuticals is astronomical. In others, people do not have access to basic or life-saving drugs. Individuals struggle to afford medications; whole populations are neglected, considered too poor to constitute profitable markets for the development and distribution of necessary drugs. This seminar analyzes the dynamics of the burgeoning international pharmaceutical trade and the global inequalities that emerge from and are reinforced by market-driven medicine. Questions about who will be treated and who will not filter through every phase of pharmaceutical production—from preclinical research to human testing, marketing, distribution, prescription, and consumption. Whether considering how the pharmaceutical industry shapes popular understandings of mental illness in North America and Great Britain, how Brazil has created a model of HIV/AIDS prevention and treatment program, or how the urban poor in Delhi understand and access healthcare, the seminar draws on anthropological case studies to illuminate the roles of corporations, governments, non-governmental organizations, and individuals in relation to global pharmaceuticals. As we analyze each case and gain familiarity with ethnographic methods, we will ask how individual and group health is shaped by new medical technologies and their evolving regulatory regimes and markets. The course familiarizes students with critical debates on globalization and with local responses to globalizing processes; and it contributes to ethical and political debates on the development and access to new medical technologies.
Taught by: Michael Joiner

Activity: Seminar
1.0 Course Unit

ANTH 236 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NE 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.
Taught by: Zettler

Course usually offered in fall term
Also Offered As: HSOC 238
Activity: Lecture
1.0 Course Unit

ANTH 241 Performing History
This seminar concentrates on the ways that various peoples in the world make their history by means other than relying on written texts alone. Over the course of the semester, we therefore may be examining such different public events and civic rituals as parades, political and religious processions, local historical pageants, carnivals, historic preservation, museums, military reenactments, and history theme parks. The emphasis in each of these forms, places, and semiotic processes will be on their identity and function as key performances that transform consciousness, shift individuals alternately into both actors and spectators, reframe the everyday as the metaphysical, and intensify the status of cultural values in the histories they present to view. Course requirements: a seminar paper, the topic of which you will discuss with me no later than week five of the course; and a working annotated bibliography and statement of your paper’s main thesis. I will say more about these assignments as they approach.
Course not offered every year
Also Offered As: ARTH 395, HIST 241
Activity: Seminar

ANTH 242 Music, Religion, Ritual in South and Southeast Asia.

What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today's public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.

Taught by: Sykes
Course not offered every year
Also Offered As: MUSC 252, SAST 252
Activity: Lecture
1.0 Course Unit

ANTH 244 Disease and Human Evolution

This course will explore the role played by disease in human evolution, from the emergence of the human lineage to the present day. We will evaluate both infectious and non-infectious diseases and examine the way in which populations and disease organisms have co-evolved. Related issues to be explored include the nature of the virulence and pathogenicity of infectious agents, and the impact of vaccination on pathogen evolution. In addition, we will discuss the epidemiological transition and the rise of complex diseases of modernization (e.g., diabetes, cancer) that has occurred in the past several centuries. Overall, the course will provide a broader understanding of the influence of disease processes on the evolution of the human species.

Taught by: Schurr
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 245 Environment in India: Nature, Culture, & Conservation in the Western Ghats

India, one of the world's most populous countries, also ranks as one of the most important centers of biodiversity, conservation, and environmental movements. Despite pervasive scholarly and popular narratives of inevitable ecological damage associated with population growth, human land use has, at times, enhanced biodiversity, preserved existing environments, and created new ones. In this course, students will examine long-term human and natural histories from a number of perspectives to develop more accurate, historically-informed understandings of how India's natural spaces have developed and how the spaces can be best sustained. During the travel component, students will visit India and work with local partners who are actively engaged in protecting human livelihoods, reducing human-wildlife conflict, and conserving biodiversity in the Western Ghat Mountains, a biodiversity hotspot.

Taught by: Morrison
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 246 Molecular Anthropology

In this course, we will explore the molecular revolution in biological anthropology. In particular, we will examine how molecular data can be used to illuminate anthropological question concerning human origins, evolution and biological variation. Some of the specific topics to be covered in this course are the phylogenetic relationships among primates, kinship in apes and monkeys, the hominoid trichotomy, modern human origins and migrations, Neanderthal and Denisovan admixture with modern humans, biogenetics of skin color, and physiological, phenotypic and disease adaptations.

Taught by: Schurr
Course not offered every year
Also Offered As: ANTH 649
Activity: Seminar
1.0 Course Unit

ANTH 248 Food and Feasting: Archaeology of the Table

Food satisfies human needs on many levels. ANTH 248 explores the importance of food in human experience, starting with the nutritional and ecological aspects of food choice and going on to focus on the social and ritual significance of foods and feasts. Particular attention will be paid to the way that archaeologists and biological anthropologists find out about food use in the past. Contemporary observations about the central significance of eating as a social activity will be linked to the development of cuisines, economies, and civilizations in ancient times. The course will use lectures, discussions, films, food tastings, and fieldwork to explore the course themes.

Taught by: Moore
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 249 Evolutionary Medicine

Evolutionary medicine is the application of modern evolutionary theory to studies of health and disease in humans. In taking this approach, the course will explore the role that disease played in human evolution. We will examine both infectious and non-infectious diseases, and assess the way in which populations and disease organisms have co-evolved. Related issues to be examined are the nature of the virulence and pathogenicity of infectious agents, and their efforts to subvert the immune system's responses to infection. We will also explore the evolved responses that enable individuals to protect, heal and recuperate themselves from infections and injuries, such as fever and sickness behavior, and the fitness enhancing aspects of these processes. Finally, we will study how past adaptations of early humans to their environments now affects modern humans, who have very different diets, life expectancy, activity patterns, and hygiene than their ancestors.

ANTH 255 Modern Southeast Asia
This freshman-friendly course provides a broad introductory overview of modern Southeast Asia, surveying the region's extraordinary diversity and ongoing social, economic, and political transformations. Centering on the nation-states that have emerged following the second World War, we will assess elements of Southeast Asian geography, history, language and literature, cosmologies, kinship systems, music, art and architecture, agriculture, industrialization and urbanization, politics, and economic change. We will remain particularly attentive to the ways Southeast Asians negotiate and contend with ongoing challenges with modernization, development, and globalization.
Taught by: Carruthers
Also Offered As: SAST 266
Activity: Lecture
1.0 Course Unit

ANTH 256 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertories of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North-American contexts of music consumption and production. (Formerly Music 258).

1.0 Course Unit

ANTH 258 Visualizing the Past
Most people's information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of 'ancient, mysterious, and lost' civilizations, and tours often lead by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote and interpret the past? How can modern technologies be applied to do a better job at presenting what is difficult to experience firsthand? This class will focus on case studies, c and methods of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art. Each year, the studio-seminar focuses on a project. In addition to exploring general concepts of archaeology and the media, students will work in teams to produce an interactive, digital media exhibit using the latest modeling visualization programs for presenting the sacred landscape of the Inca capital of Cuzco, Peru. Cuzco is one of the most important UNESCO World Heritage sites and visited by nearly a million tourists a year. Potential class projectinclude fly-throughs of architectural and landscape renderings, simulations of astronomy and cosmology, modeling of human behavior within architectural and landscape settings, and study artifacts in the Penn Museum.
One-term course offered either term
Also Offered As: CIS 106
Activity: Lecture
1.0 Course Unit
ANTH 260 Cultures of Science and Technology
Science and technology figure centrally in the economic, political, and socio-cultural changes that impact our worlds. Happenings in the life sciences, including the discovery of new genes, pathways, and processes, are redrawing the concepts of the human body and the relationship between science and social relations. The seminar starts from the premise that scientific facts are made, not things existing a priori in the world, and that are merely picked up by researchers and consumed by lay audiences. Likewise, technologies are created through a process of intense negotiation between producers and their sophisticated users. Focusing on the biosciences, we explore the production of science and technology and how they 1) affect individuals, self-identities, subjectivity, kinship, and social relationships; 2) have interacted with or reinforced political programs, racial classifications, unequal access to knowledge, and patterns of social injustice; 3) inform contemporary institutional structures, strategies of governance, and practices of citizenship. We will combine methods and perspectives from social and cultural anthropology, and the social studies of science and technology, and will draw from historical case studies, contemporary ethnographies of science, scientific and medical journals, documentary films, and media reports.

Taught by: Petryna
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 263 Music and Performance of Africa
This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required.

Taught by: Muller
Course not offered every year
Also Offered As: AFRC 253, MUSC 256
Activity: Lecture
1.0 Course Unit

ANTH 267 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the Center for the Analysis of Archaeological Materials (CAAM) and is taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.

1.0 Course Unit

ANTH 268 Anthropology of Museums
This course examines museums as sites where issues of Indigenous identity, memory, place and power intersect. Museums have long engaged in the selective preservation, representation, and contextualization of Indigenous objects, cultures, and histories. We will examine the processes of building collections in an attempt to create and sustain a narrative of Indigenous peoples. We will consider the ways in which the social, political, and technological factors have shaped the museum’s role in the field of anthropology.

Taught by: Bruchac
Activity: Seminar
1.0 Course Unit

ANTH 271 Ancient Mexico and Central America
This course will provide an overview of the diverse cultures of ancient Mesoamerica. Across the landscape that is now Mexico and Central America, the societies that inhabited highlands and tropical lowlands developed agricultural lands, built towering pyramids and cities, and forged great civilizations all before the arrival of Europeans to the New World. In this class, students will learn about these diverse civilizations and the many similarities and continuities among them. They will then learn about the legacy left by these cultures on today’s modern peoples of Central Mexico and Central America.

1.0 Course Unit

ANTH 273 Global Health: Anthropological Perspectives
In some parts of the world spending on pharmaceuticals is astronomical. In others, people struggle for survival amid new and reemerging epidemics and have little or no access to basic or life-saving therapies. Treatments for infectious diseases that disproportionately affect the world’s poor remain under-researched and global health disparities are increasing. This interdisciplinary seminar integrates perspectives from the social sciences and the biomedical sciences to explore 1) the development and global flows of medical technologies; 2) how the health of individuals and groups is affected by medical technologies, public policy, and the forces of globalization as each of these impacts local worlds. The seminar is structured to allow us to examine specific case material from around the world (Haiti, South Africa, Brazil, Russia, China, India, for example), and to address the ways in which social, political-economic, and technological factors -- which are increasingly global in nature -- influence basic biological mechanisms and disease outcomes and distribution. As we analyze each case and gain familiarity with ethnographic methods, we will ask how more effective interventions can be formulated. The course draws from historical and ethnographic accounts, medical journals, ethical analyses, and films, and familiarizes students with critical debates on globalizing and with local responses to globalizing processes.

ANTH 276 Ethnographic Approaches to Urban Athletics and Human Movement
Rooted in the rubric of public interest social science, the course focuses on bridging theory and practice motivated by a commitment to social justice through original ethnographic research. In particular, this course will focus on kinesiology and the anthropological study of sports and well-being through intense analysis of the Young Quakers Community Athletics (YQCA) program, a collaboration between the Netter Center for Community Partnerships and Penn Athletics. The course will also serve as a volunteer organization, and suggest ways that the anthropological approach might support the efforts of the organization.

ANTH 294 Global Cities: Urbanization in the Global South
This course examines the futures of urbanization in most of the world. With cities in 'developing' countries set to absorb 95% of urban population growth in the next generation, the course explores the plans, spaces and social experiences of this dramatic urban century. How do proliferating urban populations sustain themselves in the cities of Latin America, Africa and Asia? What kinds of social and political claims do these populations make more just and sustainable cities? The course investigates the ongoing experiences in urban planning, infrastructure development and environmental governance in cities of the Global South. In so doing, it imagines new forms of citizenship, development and sustainability that are currently unfolding in these cities of the future.

ANTH 300 Research Seminar in Anthropology
ANTH 300 is a Research Seminar for anthropology majors. It defines the Penn anthropology major by bringing together and inter-relating major threads from the different subfields of the Penn anthropology curriculum. Each session includes contributions from members of the standing faculty and seminar discussions of a research theme in which anthropological knowledge is currently progressing. The course is also organized around the involvement in the Young Quakers Community Athletics (YQCA) program, a collaboration between the Netter Center for Community Partnerships and Penn Athletics. In guest lecturers from multiple disciplines will help to round out the course. The core learning objective is to bring a broad range of specialized expertise to foster a holistic examination of a complex institutional partnership intended to promote positive social transformation and improved human health and well-being.

ANTH 303 Research Methods in Cultural Anthropology
This undergraduate seminar is about how ethnographers do research. It introduces fundamental concepts and techniques - research design, participant observation, interviews, questionnaires, field notes, archives, data collection and analysis. It also addresses ethical and legal issues - cultural protocols, intellectual property rights, collaborative anthropology, and institutional review boards. Students will conduct original ethnographic research in partnership with the Netter Center.

Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 305 Anthropology and Policy: History, Theory, Practice
From the inception of the discipline, anthropologists have applied their ethnographic and theoretical knowledge to policy issues concerning the alleviation of practical human problems. This approach has not only benefited peoples in need but it has also enriched the discipline, providing anthropologists with the opportunity to develop new theories and methodologies from a problem-centered approach. The class will examine the connection between anthropology and policy, theory and practice (or ‘praxis’), research and application. We will study these connections by reading about historical and current projects. As an ABCS course, students will also volunteer in a volunteer organization of their choice in the Philadelphia area, conduct anthropological research on the organization, and suggest ways that the anthropological approach might support the efforts of the organization.

Course not offered every year

ANTH 307 Contemporary Native Americans
This course examines the social and political lives of contemporary Native American Indians in the United States and Canada. Topics include: Indigenous identity; homelands and natural resources; popular culture and media; Indigenous arts and cultural expression; museum representations; athletics; gender relations; tribal recognition and sovereignty; and resistance movements. We will consider the origins of federal programs and legislation that have become essential to the protection of Native American freedoms. Students can expect to gain an appreciation of the complexity and cultural diversity of Native communities and tribal nations and insights into their interactions with other cultures over time.

1.0 Course Unit
ANTH 308 Ethnohistory of the Native Northeast
Ethnohistory is a multi-disciplinary form of ethnographic study and documentary research that employs both anthropological and historical approaches. This course examines the foundations of the ethnohistorical method as a means to interpret cross-cultural colonial interactions and conflicts, and to better understand the complex histories of Native American Indian peoples from Pennsylvania and northward and eastward. Students will develop skills and strategies for interpreting and contextualizing primary and secondary source materials, oral traditions, colonial records, historical maps, and material culture. Hands-on study will include visits to local archives and historical sites to view relevant documents and landscapes.
Taught by: Bruchac
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 309 Psychoanalysis and Anthropology
This course will introduce students to the rich literature that has grown up around the encounter between psychoanalysis and anthropology, from totem and taboo, to studies of the Oedipus complex, child-rearing practices, ritual symbolism, mythology, and dreams. The class will also look to the future, endeavoring to examine as well such issues as the role of computers (are they self objects?) and the internet (including such online games as 'Second Life'), dreams in space alien abduction narratives, sexuality in advertising, political psychology, and other contemporary issues. This course counts towards the Psychoanalytic Studies (PSYS) Minor.

ANTH 310 Transdisciplinary Environmental Humanities
Emergent transdisciplinary fields, such as the environmental humanities, reflect a growing awareness that responses to contemporary environmental dilemmas require the collaborative work of not only diverse scientists, medical practitioners, and engineers, but also more expansive publics, including artists, urban and rural communities, social scientists, and legal fields. This course is inspired by the need to attend to environmental challenges, and their health, justice, and knowledge production implications, as inherently social concerns. The class is co-taught by faculty from the School of Arts and Sciences and the School of Medicine, and will address the challenges and possibilities of working across disciplinary boundaries, building collaborative affinities, and negotiating frictions between diverse methodological and epistemological approaches. Dr. Kristina Lyons from the Department of Anthropology brings years of experience collaborating with soil scientists, small farmers, indigenous communities, lawyers, and judges in Colombia on watershed restoration projects, soil degradation, toxicity, and the implementation of socio-ecological justice. Dr. Marilyn Howarth is a medical doctor from the Center of Excellence in Environmental Toxicology of the School of Medicine and has experience engaging the public, legislators and regulators around environmental health issues affecting the quality of air, water, soil and consumer products. Through their different lenses, they will foster interdisciplinary environmental collaboration and scholarship by engaging students in discussions and research that bring together the arts and sciences regarding issues of urban air pollution, soil remediation, deforestation, and water contamination, among other environmental health problems. This inaugural course seeks to explore environmental humanities on the global scale. Using Dr. Lyons' deep insight and valuable connections to communities in Colombia, we will explore the experience of environmental degradation, opportunities and challenges for mitigation, and socio-environmental health implications there while placing these issues in conversation with U.S. public health, regulatory and political frameworks and community experiences on similar issues. A comparative exploration of environmental justice in both Colombia and the U.S. will be infused into much of the discussion. This class offers a unique opportunity for students from engineering, natural and social sciences, humanities and the arts to learn to converse and collaborate around pressing socio-environmental and public health issues.

ANTH 315 Kinship and Connectivity in the Roman World
An individual’s life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.

ANTH 317 The Politics of Matter and the Matter of Politics
What is nature? What is culture? What kinds of practices and actors constitute what we call science? Who and what constitute the sphere we refer to as politics? A number of theoretical developments in cultural anthropology, political theory, critical geography, and feminist science studies have problematized the modernist ontological divide between Nature and Culture and a whole series of binary oppositions (such as objects/subjects, matter/form, bio/geo) that follow from it. Taking inspiration from this literature and placing it in conversation with Native and Indigenous scholarship and a series of contemporary socio-environmental struggles occurring in Latin America and beyond, this course will discuss the conceptual-methodological tools that a concern with politics of matter has generated. The epistemic and political implications of these tools go beyond their analytical usefulness as innovative devices to explore novel phenomena. They complicate well-established fields of inquiry, such as political ecology and economy, environmental studies, ethics, social justice, and modern politics; and, indeed, the singular ontology that these fields may inadvertently and explicitly sustain. We will explore how it is that things, stuff, matter, ‘nature’ came to fall outside modern politics as such, and the kinds of ethico-political repercussions that problematizing this division may produce.

Taught by: Kristina Lyons
One-term course offered either term
Also Offered As: LALS 317
Activity: Seminar
1.0 Course Unit

ANTH 322 Bodies of Water: Conflicts and Collaborations around Wetlands and Watersheds
In less than half a decade, the idea that ‘nature’ possesses inalienable rights akin to human rights has gone from a strictly theoretical concept to the basis of policy changes in several countries and U.S. municipalities. This seminar will introduce students to current legal, political, ethical, and practical debates about the implementation and impacts of granting ‘rights to nature’ in these different contexts with a particular focus on the rights associated with bodies of water. We will begin by examining how the Community Environmental Legal Defense Fund (CELDF) supported citizens of Tamaqua, Pennsylvania to write the world’s first local ‘rights of nature’ ordinance. We will then go on to compare the politics of ‘rights of nature’ cases in Ecuador, New Zealand, India, and Colombia paying special attention to the cases of rivers. We will focus on the ways biocentric constitutional moves may transform concepts and understandings of environmental justice and socio-environmental conflicts. In particular, how the recognition of ‘nature’ as a victim of war may transform understandings of violence, and hence, approaches to constructing peace and engaging and reparative and restorative practices within the larger framework of planetary and community efforts to mitigate climate change, deforestation, and the degradation of watersheds and wetlands. Lastly, we will explore the possibilities and tensions between community decision-making, the ‘rights of nature,’ and national level policies regarding the intensification of extractive activities and questions of territorial ordinance as they relate to multiple bodies of water.

Taught by: Lyons
Course not offered every year

ANTH 323 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.

ANTH 325 Who Owns the Past? Archaeology and Politics in the Middle East
This course explores the role of cultural heritage and archaeological discoveries in the politics of the Middle East from the nineteenth century to the recent aftermath of the Arab Spring. We will explore how modern Middle East populations relate to their pasts and how archaeology and cultural heritage have been employed to support particular political and social agendas, including colonialism, nationalism, imperialism, and the construction of ethnic-religious identities. Although it was first introduced to the Middle East as a colonial enterprise by European powers, archaeology became a pivotal tool for local populations of the Middle East to construct new histories and identities during the post-World War I period of intensive nation-building after the dissolution of the Ottoman Empire. To understand this process, we will first look at the nineteenth-century establishment of archaeology by institutions like the Penn Museum. Then we will move on to individual case studies in Turkey, Iraq, Egypt, Israel/Palestine, Iran, and the republics of former Soviet Transcaucasia to look at the role of archaeology and cultural heritage in the formation of these countries as modern nation-states with a shared identity among citizens. We will conclude with an examination of the recent impact of the Islamic State on material heritage in Syria and Iraq, the changing attitudes of Middle Eastern countries toward foreign museums, and the role of UNESCO in defining Middle Eastern sites of world heritage. The course will also include field trips to the Penn Museum.

ANTH 328 Performing Culture, Native American Arts
This course analyzes cultural performances as sites for the formation, expression, and transmission of social identity. Students will read ethnographies, critiques, and reports of performance genres including ritual, theater, music, dance, art, and spoken word, with a particular focus on Native American and Indigenous arts and expressions. Topics include: expressive culture as survivance; debates around authenticity and invented traditions; public identity and sexuality; political resistance; the effects of globalization; transnationalism and hybridity; cultural appropriation; and the transformation of folk performances in the wake of modern media.

Taught by: Bruchac
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ANTH 329 Psychoanalytic and Anthropological Perspectives on Childhood
How do people become who they are, both similar to others and uniquely individual? How might these similarities and differences be shaped by childhood experiences in family, community, and societies around the world? How do children develop emotionally? Morally? What features of human development, expression of emotions, and relational patterns are universal for our species? What features are not universal? And what is and is not known about these questions? In this course, we will consider these and many other questions. We will read about and discuss complex and dynamic interactions between culture and individual psychology, and between nature and nurture from birth to adulthood.

We will carefully examine various phases of human development as described by psychoanalysts and anthropologists. The course includes anthropologic and psychoanalytic readings and videotapes, as well as literature, fairy tales, and mythologies from cultures around the world. The instructors are both psychoanalysts, one a psychiatrist and one a pediatrician. The course counts towards the Psychoanalytic Studies (PSYS) Minor.

Taught by: Blum/Shapiro
Course not offered every year
Also Offered As: ANTH 529

1.0 Course Unit

ANTH 332 Medicine and the Language of Pain
Pain can be a particularly complex and morally charged object of biomedicine. The interiority of pain— the deeply private nature of pain experience— complicates its communication. Pain, particularly its chronic form, defies purely biological explanation, troubling fundamental biomedical distinctions between mind and body, subject and object. And decisions about analgesia are fraught, as doctors and patients pursue relief from pain amidst a widespread epidemic of opiate abuse that infuses their interaction with concerns about addiction, drug seeking, culpability, and responsibility. This seminar seeks to shed light on these issues by using concepts from linguistic and medical anthropology to explore how we experience, think about, and talk about pain.

As an interdisciplinary endeavor, the course is of relevance not only to anthropology but also to medical sociology, medical ethics, public health, health policy, and science and technology studies.

Activity: Seminar
1.0 Course Unit
ANTH 334 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to ‘write women’s worlds’, but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline’s epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world. Prerequisite: Should have some functional knowledge of Cultural Anthropology.

ANTH 336 The Peopling of the Americas
The peopling of the Americas is a question that has intrigued scholars and laymen for over 500 years. The origin of Native Americans was also a seminal issue during the emergence of American Anthropology as a discipline at the turn of the 20th century, with research on this topic animating current studies of ethnohistory, indigenous archaeology, post-colonialism and repatriation. The proposed course will review the scholarship dedicated to describing this long history from an interdisciplinary perspective. It will explore their roots in the expansion of modern humans into Eurasia, evaluate the new archeological and genetic research that has fundamentally altered our understanding of the migration history and diversity of indigenous peoples in the American continents, and examine issues of identity, ethnicity and cultural heritage in contemporary Native populations that extend from this knowledge. The course will further draw on the instructor’s fieldwork experience working with indigenous communities in Alaska, Canada, the Lower 48, Mexico and the Caribbean, as well as native Siberians in Russia, where the cultural and biological roots of ancestral Native American populations lie.
Taught by: Schurr

ANTH 337 Applying Anthropology Methods in Policy and Practice
This course will introduce students to applied anthropology methods for doing research that can change policy and practices. Examples of policy and practice change include clinical practices in health care settings, social welfare policy, and legal advocacy. Students will be trained in multiple anthropology research methods, including brief participant-observation, presentation of self in the field, entering the field in diverse cultural environments, qualitative interviewing, life story interviewing, and ethnographic content analysis of textual material. Students will also learn how to use NVivo software for analyzing qualitative and some quantitative data from their field notes, interviews, and analysis of popular articles/websites. Finally, students will practice writing products for non-academic audiences, such as policymakers, the media, and the general public. The course will emphasize using anthropology research methods to address real-world problems in policy and practice in diverse cultural contexts. This course is a service learning class affiliated with the Netter Center and a Benjamin Franklin Scholars course.
Taught by: Sahota
Activity: Seminar
1.0 Course Unit

ANTH 342 Dress and Fashion in Africa
Throughout Africa, social and cultural identities of ethnicity, gender, generation, rank and status were conveyed in a range of personal ornamentation that reflects the variation of African cultures. The meaning of one particular item of clothing can transform completely when moved across time and space. As one of many forms of expressive culture, dress shape and give forms to social bodies. In the study of dress and fashion, we could note two distinct broad approaches, the historical and the anthropological. While the former focuses on fashion as a western system that shifted across time and space, and linked with capitalism and western modernity; the latter approach defines dress as an assemblage of modification the body. The Africanist proponents of this anthropological approach insisted that fashion is not a dress system specific to the west and not tied with the rise of capitalism. This course will focus on studying the history of African dress by discussing the forces that have impacted and influenced it overtime, such as socio-economic, colonialism, religion, aesthetics, politics, globalization, and popular culture. The course will also discuss the significance of the different contexts that impacted the choices of what constitute an appropriate attire for distinct situations. African dress in this context is not a fixed relic from the past, but a live cultural item that is influenced by the surrounding forces.
Taught by: Ali-Dinar

Activity: Lecture
1.0 Course Unit
ANTH 344 Documentary Experiments in Urban Research
What can video art, experimental documentary, and sensory ethnography teach us about the practice of urban research? How can we build on the traditions of first person and essay cinema to produce compelling documents of our own questions and findings? This course surveys a range of film and video works on themes such as the production of space, urban nature, infrastructure, and collective memory. Taken as a genre, these time-based works provide a powerful model for training scholars' observational skills, conceptualizing scales of analysis, and engaging broader publics in urban research. In this course, we will explore this audiovisual genre in dialogue with selected theoretical, ethnographic, and case study readings in urban studies. As an advanced theory-practice course, it combines seminar readings and discussion with regular screenings and a series of workshops on photo, video, audio, and postproduction skills. The course will provide a general fluency in contemporary urban research, with particular emphasis on urban political ecology. In dialogue with this scholarship, students will develop and situate their own experimental documentary research projects.

Taught by: Mendelsohn

ANTH 346 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI's ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.

ANTH 347 Anthropology of Corporations
Modern business corporations can be characterized as having their own internal cultures, more or less distinct from one another. They also exist within encompassing cultures and cultural flows. At the same time, corporations are producers and disseminators, and thus have effects on their surrounding environments, effects that extend from the local to the global. This course examines modern corporations from these three perspectives through theoretical and ethnographic readings, guest speakers from the corporate world, and independent research conducted by the students. Course requirements include student presentations of their research and readings; one or more take-home exams; and a final research paper.

1.0 Course Unit

ANTH 350 Archaeology of Civilizations in South America
This course provides a basic survey of the archaeology of civilizations of South America (the Andean region of the central highland and coastal areas that today are Peru and Bolivia and parts of Ecuador, Chile, and Argentina). Topics include the history of South American archaeology, peopling of the continent, origins and evolution of agriculture, early village life, ceremonial and domestic architecture, prehistoric art and symbolism, Andean cosmology and astronomy, indigenous technology, the historical ecology of landscapes, outside contacts and relationships, economics and trade, social and political structure, state formation and urbanism, and early contacts with Europeans. The lectures and readings are based on recent archaeological investigations and interpretations combined with appropriate analogy from ethnohistory and ethnography. The prehistory of the Amazonian lowlands and northern South America will be covered in other courses.

ANTH 351 Women Making History: The Penn Museum and the Centennial
2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote ‘shall not be denied or abridged by the United States or by any State on account of sex’. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women’s and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women’s History; or Museum Studies recommended.
Taught by: Sharkey

Also Offered As: ANTH 531, GSWS 331, GSWS 533, NELC 331, NELC 531
Activity: Seminar
1.0 Course Unit

ANTH 354 Art, Medicine, & Magic: Bodily Remedies
In this activity-centric course, you will explore art, medicine, and magic as entangled approaches for healing human bodies across time, space, and societies. At first glance, artists, doctors, and religious leaders may seem to address questions about bodies and healing in very different ways. Yet, in practice, art, magic, and medicine have been in deep conversation with one another for millennia. 4,000 years ago in Mesopotamia, medical doctors were professionals who had offices, hospital beds, and pharmacological and surgical equipment expertise, but they often worked hand in hand with diviners and exorcists. In rural Haiti today, Haitian Vodou priestesses collect herbs, craft sculptures, and sing as they clean wounds and dispense antibiotics within the course of a single ‘remed’ (remedy). In the United States, megachurches send thousands of doctors on evangelical medical missions each year, while in Colombia, contemporary artists are called on to assuage profound social trauma related to decades of military conflict. Examples like these show that art, magic, and medical practice have long been entangled technologies; sometimes working together, sometimes at odds with one another, these practices have always been in dialog about what ‘healing’ is and how it can be achieved. Attending to these entanglements this course asks ‘what does healing look like and feel like - in what ways do humans transform affliction?’ Together, we will investigate how everyday bodily experiences of ‘wellbeing’ and ‘illness’ are configured through art, magic, and medical practices across human communities, shaping how people understand and manage disorders from COVID-19 to schizophrenia, from ancestral trauma to breast cancer. Throughout the course, you will use ethnographic case studies & in-class activities to work through three aspects of the core class question: 1) how do art, magic, and medicine work in communities? 2) how are they experienced in communities (who has access to what kind of healing and who doesn’t have access; who can be a healer and who can’t be; what should and does healing/sickness feel like?) 3) how do they approach inequalities? (e.g. how and why are illnesses unequally distributed; what illnesses matter more (and less) than others; which communities should be saved (and which sacrificed).

Activity: Seminar
1.0 Course Unit
ANTH 359 Nutritional Anthropology
The course is an introduction to nutritional anthropology, an area of anthropology concerned with human nutrition and food systems in social, cultural and historical contexts. On the one hand, nutritional anthropologists study the significance of the food quest in terms of survival and health. On the other hand, they also know that people eat food for a variety of reasons that may have little, if anything, to do with nutrition, health, or survival. While the availability of food is dependent upon the physical environment, food production systems, and economic resources, food choice and the strategies human groups employ to gain access to and distribute food are deeply embedded in specific cultural patterns, social relationships, and political and economic systems. Thus, nutritional anthropology represents the interface between anthropology and the nutritional sciences, and as such, can provide powerful insights into the interactions of social and biological factors in the context of the nutritional health of individuals and populations. Because food and nutrition are quintessential biocultural issues, the course takes a biocultural approach drawing on perspectives from biological, socio-cultural and political-economic anthropology. Course content will include: a discussion of approaches to nutritional anthropology; basics of human nutrition; food systems, food behaviors and ideas; methods of dietary and nutritional assessment; and a series of case studies addressing causes and consequences to nutritional problems across the world.
Taught by: Hoke
Course not offered every year
Also Offered As: LALS 359, URBS 359
Activity: Lecture
1.0 Course Unit

ANTH 361 Global Food Security
This is an interdisciplinary course on the problems of food demand and consumption, production and supply in our increasingly globalized and urbanizing world. Special attention will be given to the intersections of current technologies of food production, current nutritional problems, environmental change and resource degradation, and the changing quality of human social life under globalization. Where and how will sufficient nutritious food be produced sustainably and how can the politics and economics of equitable distribution in such large urban populations be achieved? (Previously ANTH 561)

Course usually offered in spring term
Also Offered As: ANTH 661, VCSN 657
Activity: Lecture
1.0 Course Unit

ANTH 362 Intro to Digital Archaeology
Digital methodologies are now an integral part of archaeological practice and archaeologists are now expected to possess basic computing skills and be familiar with a range of data collection, analysis and visualization techniques. This course will use case studies and applied learning opportunities centered on a course project to explore a broad array of digital approaches in archaeology. The technological underpinnings, professional procedures, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include aerial and satellite image analysis, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.
Taught by: Herrmann

Activity: Lecture
1.0 Course Unit

ANTH 368 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).
Taught by: Wilson
Also Offered As: AFRC 368, ANTH 668, COMM 368, FNAR 368
Activity: Seminar
1.0 Course Unit
ANTH 377 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar’s exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

Activity: Seminar
1.0 Course Unit

ANTH 386 Desire and Demand II: Culture, Production, and Consumption in the Global Marketplace
The goal of this course is to understand and to investigate both historical and contemporary issues related to a culture of consumption. Reading topics cover both contemporary and scholarly issues in cultural anthropology, popular culture, consumer behavior, off-shore production, social networking, media and communications, financial and real estate markets and marketing. Class distinctions are equally interdisciplinary as we focus on investigating and identifying critical global/local linkages. We analyze the various ways in which Philadelphia and other ‘global cities’ are competing for consumer revenues. We ask what factors have led contemporary society reaching its current stage of mass consumption and how have certain goods and services been reconfigured, packaged or re-packaged to attract new consumers. In order to better understand the link between consumption and production factors we explore the relationship between outsourcing and/or offshore production and modern consumption. Approximately sixty percent of the seminar takes place in the classroom and will include lecture, class discussion, and films. The remaining portion of the class meetings will involve local and regional travel. Research assignments emphasize the use of anthropological participant-observation techniques to investigate the relationships between culture and contemporary mass consumption within the contexts of re-gentrification, urbanization, and globalization.
Taught by: Diggs-Thompson
Also Offered As: ANTH 586
Activity: Seminar
1.0 Course Unit

ANTH 391 Multi-Modal Ethnography: Anthropology Beyond Text
What does the digital age mean for humanistic, social scientific, and professional inquiry and practice? How do non-text based formats - such as film, dance and other kinds of performance, creative writing, and soundscapes - transform both the processes and products of research? How do they inform and transform our disciplines, and what might this mean for the communities with which we work? This advanced undergraduate seminar will address these (and other related) questions. Taught by the invited Fellows from the Center for Experimental Ethnography, this course will take shape differently each semester according to the Fellow’s area of expertise and practice. Students will be encouraged to explore alternative formats of representation that move beyond text while still being grounded in ethnographic research, and they will develop skills in relevant media. https://www.sas.upenn.edu/anthropology/courses/topics-courses

1.0 Course Unit

ANTH 402 Applied Research Skills in Global Community Health
While political borders remain, social and human borders fall with the increasing movement of people, ideas, and resources across geographies. What is global becomes local. While biomedical and counting sciences advance, the human experience and influence remain core to understanding behavior, beliefs, and awareness. What is human remains paramount. The Maya Western Highlands of Guatemala are undergoing health changes (trauma, maternal-infant health, diabetes, mental health) through economic development and continued human migration to and from the US. The Cobbs Creek neighborhood in West Philadelphia is also facing epidemics of non-communicable diseases. In this context, Applied Skills in Global Community Health will provide academic and professional skills development in comparing the role of culture, history and politics in the health of a population in transition (demographic, nutritional, epidemiologic, economic) in both settings. Classroom work will occur in the spring of each year combined with a short (1 wk) field experience in the Western Highlands of Guatemala. In addition students will examine health and community research in the Cobbs Creek neighborhood of West Philadelphia. Students may substitute 10 week field work as part of the companion course ANTH 403 for the 1 week experience.
Taught by: Barg/Bream
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ANTH 403 Field Experience in Global Community Health
The Maya Western Highlands of Guatemala are undergoing health changes (trauma, maternal-infant health, diabetes, mental health) through economic development and continued human migration to and from the US. The communities of Santiago Atitlan, Solola, San Jaun Sacatepequez, and Coatepeque have community based infrastructures (public health clinics, private NGOs, and research projects) that work to address these health changes. In this context, the Field Experience in Global Community Health will provide applied academic and professional skills development in data collection, analysis, and reporting. Field work will occur in the summer of each year combined with a campus based skills development experience.
Taught by: Barg/Bream
Course usually offered in fall term
Activity: Independent Study
0.5 Course Units
ANTH 404 Introduction to the Human Skeleton

An introduction to the anatomy and biology of the human skeleton. Laboratory work will be supplemented by lectures and demonstrations on the development structure, function, and evolution of the human skeleton.

Taught by: Monge
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 407 Human Evolution

An examination of fossils and other evidence documenting human evolution. Lectures and readings are supplemented with slide and fossil reproduction materials.

Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 415 Archaeology of Animals

This course introduces the study of animal bones from archaeological sites. Faunal analysis is an interdisciplinary science which draws methods from archaeology, biology, and paleontology. Bones, shells, and other remains yield evidence for the use of animals by humans, and evidence for the biology of animals and for past environments. The course will focus on research approaches to important transitions in human-animal relationships: the development of human hunting and fishing, animal domestication, early pastoralism, and the emergence of market economies in animal products. Class presentations will include lectures and discussion concerning research design and archaeological case material, with additional videos, sidework with field and laboratory equipment, and supervised work identifying and describing archaeological materials from the University Museum’s collections. This class is taught in the Zooarchaeology Laboratory of the Center for the Analysis of Archaeological Materials.

Taught by: Moore
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 419 Mining Archaeology

In ancient times, materials such as stone and metals were used to produce artifacts including pigments, jewelry, tools, and weapons. This course is designed to introduce students to research on the early exploitation of mineral resources. Which techniques were used to access and process raw materials in antiquity? Which archaeological methods can be used to investigate these features and artifacts? The course will provide worldwide examples through time, ranging from Stone Age flint mining, Iron Age rock salt mining to Medieval silver mining. Ethnographic studies and hands-on activities will contribute to our understanding of mining in archaeology, and artifacts from the Museum’s collections will undergo scientific analysis in the Center for the Analysis of Archaeological Materials. Prerequisite: Desired but not mandatory.

ANTH 221/521 Material World in Archaeological Science

Taught by: Jansen
Course usually offered in spring term
Also Offered As: CLST 419, NELC 419
Activity: Seminar
1.0 Course Unit

ANTH 421 Anthropology In and Of Environmental Health

Anthropology provides a critical lens through which we can understand the multiple ways that environmental toxins affect human health and well-being. In this course, we will explore ways that politics, economics, social dynamics and communication strategies affect the uneven distribution of risk from environmental hazards. We will examine issues related to community engagement, environmental justice, risk perception, citizen science and environmental stigma. Students will have an opportunity to visit a local Superfund site.

Taught by: Barg
Course offered fall; odd-numbered years
Activity: Seminar
1.0 Course Unit

ANTH 424 Political Ecologies of the City

Cities have been centres of aspiration for much of human history. They have provided a limited yet critical focus for social mobility, both in political and economic terms. As large agglomerations of political and economic power, urban residents have also consumed growing proportions of the earth’s mineral, food and water resources from the national (and international) body. The contradictory aspects of urban aspiration frame this course. Drawing on the frameworks of political ecology, in this course we think through the cities of the global south to understand how cities are made. To do this, we will first focus on the construction on the liberal city and how it has been occupied, both formally and informally, by urban subjects in most of the world. Next, we will learn about projects through which natural resources have been directed to and through the city. Finally we will conclude with a particular attention to how urban resources are claimed by marginalized migrants, and the particular sorts of governance institutions these practices engender.

Taught by: Anand
Course not offered every year
Also Offered As: URBS 424
Activity: Seminar
1.0 Course Unit

ANTH 429 Anthropology of the Environment

This seminar draws from social scientific and scientific literatures to explore current themes in the anthropology of the environment. We will investigate the links between climate change science and social science, and the ways in which anthropologists can contribute via in-depth fieldwork methodology and long engagement in issues of society-environment interactions. We will also explore how potential environmental, social, and biological impacts of global warming on the future are being assessed through conceptual paradigms linked to risk, probability, scenario forecasting, tipping points, planetary boundaries, and extinction.

Taught by: Petryna
Activity: Seminar
1.0 Course Unit

ANTH 433 Andean Archaeology

Consideration of the culture history of the native peoples of the Andean area, with emphasis on the pre-conquest archaeology of the Central-Andean region.

Taught by: Erickson
Course not offered every year
Also Offered As: LALS 433
Activity: Lecture
1.0 Course Unit
ANTH 440 Plants and Society
Interactions between humans and the living landscape around us have played - and continue to play - a fundamental role in shaping our worldview. This course is designed to introduce students to the diverse ways in which humans interact with plants. We will focus on the integration of ethnographic information and archaeological case studies in order to understand the range of interactions between humans and plants, as well as how plants and people have profoundly changed one another. Topics will include the origins of agriculture; cooking and plant processing; human health and the world of ethnomedicine; and poisonous and psychoactive plants. We will examine ancient plant material firsthand at the Center for the Analysis of Archaeological Materials (CAAM) and will handle botanical ecofacts from the Penn Museum's collections. Students will also carry out a substantial research project focused on an archaeological culture and plant species of their own interest.
Taught by: WHITE
Course not offered every year
Also Offered As: CLST 441
Activity: Seminar
1.0 Course Unit

ANTH 444 Human Growth and Development
In this course we will examine key issues and the processes involved in human growth and development. By their very nature, growth and development are biocultural processes that require an integrated analysis of social construction and biological phenomena. As such, we will incorporate insight from evolutionary theory, ecology, developmental biology, psychology, human biology, and cultural anthropology in our study of growth and development. Such an integrated perspective will help students to see that development is not just a biological unfolding from birth through adolescence and adulthood. Rather, development is best understood as process that is deeply intertwined with the environment within which the organism develops. Additionally, we will apply these biocultural and socio-ecological insights to emerging health challenges associated with various developmental stages. The study of human growth and development is useful to all students in biological, health-related, and social sciences. Course enrollment is restricted to juniors, seniors, and graduate students only.
Taught by: Hoke
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 451 Historical Archaeology
Archaeology of the Modern World from the Columbian voyage (1492) to the 20th century. Topics such as the rise of early modern Europe, European exploration and colonization, African American Archaeology, Asian American Archaeology, the rise of colonial society, contact with native peoples, the Industrial Revolution, and the archaeology of the 20th century will be covered.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 751
Activity: Seminar
1.0 Course Unit

ANTH 454 Quantitative Analysis of Anthropological Data
This course is designed to provide students with a basic understanding of how to work with and present quantitative data. Topics include graphical display of numerical data, probability, sampling, descriptive and inferential statistics (parametric and non-parametric two-and three group tests, regression and correlation). Using examples drawn from the social sciences and anthropology, the focus is on teaching the logic behind quantitative arguments and statistical tests, rather than on the mathematical formulas, making the course especially relevant for students who do not have a strong background in mathematics. This course fulfills the Colleges Quantitative Data Analysis requirement.
Activity: Lecture
One-term course offered either term
1.0 Course Unit

ANTH 508 Conservation of Archaeological Sites and Landscapes
This seminar will address the history, theories, principles, and practices of the preservation and interpretation of archaeological sites and landscapes. The course will draw from a wide range of published material and experiences representing both national and international contexts. Topics will include site and landscape documentation and recording; site formation and degradation; intervention strategies including interpretation and display, legislation, policy, and contemporary issues of descendental community ownership and global heritage. Depending on the site, students will study specific issues leading toward the critique or development of a conservation and management program in accordance with guidelines established by ICOMOS/ ICAHM and other official agencies.
One-term course offered either term
Also Offered As: HSPV 747
Activity: Seminar
1.0 Course Unit

ANTH 511 Ethics, Archaeology, and Cultural Heritage
This seminar will explore some of the most important issues that are now a central part of archaeological, anthropological and historical research throughout the world. The identification and control of cultural heritage is a central part of the framework for research within other communities. Issues for this course will also include cultural identity, human rights, repatriation, colonialism, working with communities and many other topics. Field research today must be based upon a new series of ethical standards that will be discussed and examined within this class. Major topics include: cultural heritage - definitions and constructs, cosmopolitanism and collecting, archaeology and looting, cultural heritage preservation, museums - universal and national, museum acquisition policies, cultural identity, international conventions (including underwater issues), national laws of ownership, community based development, cultural tourism, development models, and human rights.
Taught by: Leventhal
Course not offered every year
Also Offered As: LALS 511
Activity: Seminar
1.0 Course Unit
ANTH 514 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.
Taught by: Boileau
Course not offered every year
Also Offered As: AAMW 512, CLST 512
Activity: Seminar
1.0 Course Unit

ANTH 519 Psychoanalysis and Anthropology
This course will introduce students to the rich literature that has grown up around the encounter between psychoanalysis and anthropology, from totem and taboo, to studies of the Oedipus complex, child-rearing practices, ritual symbolism, mythology, and dreams. The class will also look to the future, endeavoring to examine as well such issues as the role of computers (are they self objects?) and the internet (including such online games as ‘Second Life’), dreams in space alien abduction narratives, sexuality in advertising, political psychology, and other contemporary issues. This course counts towards the Psychoanalytic Studies (PSYS) Minor.
Taught by: Urban/Blum
Course not offered every year
Also Offered As: ANTH 309
Activity: Seminar
1.0 Course Unit

ANTH 521 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. ANTH 221/521 will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be team taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.
Taught by: Boileau/Dibble/Jansen
Course not offered every year
Also Offered As: ANTH 221, ARTH 230, CLST 244, NELC 284, NELC 584
Activity: Lecture
1.0 Course Unit

ANTH 527 Cultural Heritage and Conflict
Intentional destruction of cultural heritage is designed to erase the presence of a people in history and has become an all too familiar feature of the devastation wrought by contemporary violence and ‘ethnic cleansing.’ Recent cases appear frequently in news headlines and include such well-known examples as the 2001 demolition of the Bamiyan Buddhas in Afghanistan, the 2012 destruction of Sufi shrines in Timbuktu, Mali, and the recent obliteration of historic sites across Syria and Iraq. This course explores this phenomenon by examining such questions as: Why is cultural heritage targeted in conflict? Under what circumstances? By whom? In so doing, we will engage with readings that discuss the historical development of the international laws and norms that aim to protect cultural heritage during conflict and examples successful and unsuccessful humanitarian interventions.
Taught by: Brian Daniels
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 529 Psychoanalytic and Anthropological Perspectives on Childhood
How do people become who they are, both similar to others and uniquely individual? How might these similarities and differences be shaped by childhood experiences in family, community, and societies around the world? How do children develop emotionally? Morally? What features of human development, expression of emotions, and relational patterns are universal for our species? What features are not universal? And what is and is not known about these questions? In this course, we will consider these and many other questions. We will read about and discuss complex and dynamic interactions between culture and individual psychology, and between nature and nurture from birth to adulthood. We will carefully examine various phases of human development as described by psychoanalysts and anthropologists. The course includes anthropologic and psychoanalytic readings and videotapes, as well as literature, fairy tales, and mythologies from cultures around the world. The instructors are both psychoanalysts, one a psychiatrist and one a pediatrician. The course counts towards the Psychoanalytic Studies (PSYS) Minor.

ANTH 531 Women Making History: The Penn Museum and the Centennial
2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote ‘shall not be denied or abridged by the United States or by any State on account of sex’. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women’s and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women’s History; or Museum Studies recommended.

Also Offered As: ANTH 351, GSWS 331, GSWS 533, NELC 331, NELC 531
Activity: Seminar
1.0 Course Unit

ANTH 533 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.

Taught by: Chantel White
Course not offered every year

Activity: Seminar
1.0 Course Unit

ANTH 536 The Peopling of the Americas
The peopling of the Americas is a question that has intrigued scholars and laymen for over 500 years. The origin of Native Americans was also a seminal issue during the emergence of American Anthropology as a discipline at the turn of the 20th century, with research on this topic animating current studies of ethnohistory, indigenous archaeology, post-colonialism and repatriation. The proposed course will review the scholarship dedicated to describing this long history from an interdisciplinary perspective. It will explore their roots in the expansion of modern humans into Eurasia, evaluate the new archeological and genetic research that has fundamentally altered our understanding of the migration history and diversity of indigenous peoples in the American continents, and examine issues of identity, ethnicity and cultural heritage in contemporary Native populations that extend from this knowledge.

The course will further draw on the instructor’s fieldwork experience working with indigenous communities in Alaska, Canada, the Lower 48, Mexico and the Caribbean, as well as native Siberians in Russia, where the cultural and biological roots of ancestral Native American populations lie.

1.0 Course Unit

ANTH 543 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.

Activity: Seminar
1.0 Course Unit

ANTH 546 Global Citizenship
This course examines the possibilities and limitations of conceiving of and realizing citizenship on a global scale. Readings, guest lecturers, and discussions will focus on dilemmas associated with addressing issues that transcend national boundaries. In particular, the course compares global/local dynamics that emerge across different types of improvement efforts focusing on distinctive institutions and social domains, including: educational development; human rights; humanitarian aid; free trade; micro-finance initiatives; and the global environmental movement. The course has two objectives: to explore research and theoretical work related to global citizenship, social engagement, and international development; and to discuss ethical and practical issues that emerge in the local contexts where development initiatives are implemented.

Taught by: Hall
Course usually offered in spring term
Also Offered As: EDUC 503, URBS 546
Activity: Seminar
1.0 Course Unit
ANTH 547 Anthropology and Education
An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.
Taught by: Hall or Posecznick
Course offered summer, fall and spring terms
Also Offered As: EDUC 547, URBS 547
Activity: Lecture
1.0 Course Unit

ANTH 548 Colonialism and its Legacies
In this course we explore the history and long-term consequences of European colonial expansion, with a primary focus on Eurasia and on the British Empire, though we will range further afield as needed. Rather than attempting a comprehensive historical overview, we will use a series of case studies to illustrate changing understandings of colonialism and associated processes, including anti-colonial movements, decolonization, postcoloniality, and the enduring effects of colonialism in the present. This is a seminar-style course.

ANTH 551 Experimental Ethnography at the Interfaces of the Arts & Sciences
This course takes inspiration from conversations and practices occurring at the interfaces of cultural anthropology, the environmental humanities, and feminist science studies. Anthropologist Stuart McLean (2017) has asked: 'What might become of anthropology if it were to suspend its sometime claims to be a social science? What if it were to turn instead to exploring its affinities with art and literature as a mode of engaged creative practice carried forward in a world heterogeneously composed of humans and other than humans?' At the same time, the emergence of the environmental humanities as an academic discipline in the twenty-first century reflects the growing conviction on the part of diverse sectors that 'environmental' problems cannot be solved by science and technology alone. Instead, cultivation of experimental methods and alliance building between the arts and social and natural sciences has become ever more important strategy in terms of fomenting public engaged scholarship. In this course, we will not necessarily suspend the social scientific claims of anthropology, and ethnography more specifically, but we will push our methodological premises and conceptual work to experiment with our objects of study, matters of concern, and the diverse materialities that emerge from and participate in our ethnographic work.
Taught by: Lyons
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ANTH 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Erickson
Course not offered every year
Also Offered As: AAMW 557, LALS 557
Activity: Seminar
1.0 Course Unit

ANTH 559 Audio Ethnography
This is an intensive, graduate-level, practice-based course in which students will record, edit, and produce anthropologically informed audio works that record and interpret culture and lived experience. Projects in this class will look beyond conventional linguistic or musical codes to sounds whose semiotic or affective value may be less immediately evident. Through the process of making location recordings, analyzing those recordings, composing them into autonomous works, and critiquing every step of the way, this course will engage with questions of ethnographic representation through the medium of sound. In parallel with contextualizing readings and sound projections, throughout the semester students will work intensively on audio projects, receiving training on recording techniques, audio editing, and basic post-production techniques. The course is an opportunity to open up the question of what might constitute 'audio documentary' or 'ethnographic audio'. Presentation strategies for final projects will be discussed and decided on individual bases. Projects will be situated in relationship to cognate fields, including the anthropology of the senses, interdisciplinary sound studies, ethnomusicology, ethnographic cinema, sound art, sound mapping, soundscape composition, and experimental nonfiction media practices which involve location recording. Through weekly sound projections and home listening, students will also gain a familiarity with existing genres and uses of nonfiction audio in anthropology and related fields.

ANTH 560 Critical Ethnography
This graduate course introduces students to theories, practices, and critiques of critical ethnography. Ethnography – an approach to the study of culture which anthropologist James Clifford described as a process that ‘translates experiences into text’ - will have our full attention. This process of translation, although seemingly straightforward, requires layers of interpretation, selection, and the imposition of a viewpoint or politics. While ethnography is often narrowly conceived of as a methodology, this course considers ethnography as a mode of inquiry, as a philosophy, as an ongoing question and performance. We wrestle with notions of ‘the self’ and ‘the other’ at the intersection of imbriicated cultural and performance worlds. Together we’ll ask: How is ethnography both critical and performative? What is the relationship between theory and method? How can we evaluate ethnographic work? And finally, what kinds of ethnographers do we want to be? This course considers a range of ethnographic examples in order to analyze both the craft and the stakes of ‘translating experiences into text.’

ANTH 562 Intro to Digital Archaeology
Digital methodologies are an integral part of contemporary archaeological practice, and demand that archaeologists to hold a new set of skills and knowledge fundamentals. This course will expose students to a broad range of digital approaches through a review of relevant literature and through applied learning opportunities centered on a course project. The technological underpinnings, best practices, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include: aerial and satellite remote sensing, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D modeling and visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological coursework and/or experience preferred.

Activity: Lecture
1.0 Course Unit

ANTH 564 Colonial Ecologies
This seminar explores the historical ecology of European colonial expansion in a comparative framework, concentrating on the production of ‘periphery’ and the transformation of incorporated societies and environments. We begin with a discussion of the theoretical frameworks, sources of evidence, and analytical strategies employed by researchers to address the conjunction of environmental and human history in colonial contexts, including underdevelopment and global systems of circulation; political ecology; and ecological imperialism. We then discuss the circulation of persons, crops, invasives, and microbes as fundamental conditions of emerging global systems. Drawing on these elements, we discuss landscapes as sites of misrecognition, rationalization, and cultural production. This discussion sets the stage for an examination of novel forms of economic and ecological production, including the emergence of the ‘drug foods’, the transformation of forest products, and the rise of the plantation. We then consider the political ecology of crisis in colonial settings, including agrarian collapse, famine, and ‘ecological poverty’.
Taught by: Lycett
Course not offered every year

ANTH 567 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.

Activity: Lecture
1.0 Course Unit

ANTH 572 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Taught by: Herrmann

Activity: Laboratory
1.0 Course Unit
ANTH 576 Anthromedialities: Experimental Theory and Practice
In recent years much has been made of the 'beyond text' turn in anthropology, specifically the need to re-evaluate the singular authority of 'writing culture.' Several new approaches advocate for non-textual medialities, with representations originating in both sonovisual media and performance. Less, however, has been theorized and advocated about intermediality and the multicompositional practices of transmediality and plurimediality, specifically their more transgressive multisensory epistemology. This course will examine these radical approaches to interacting textual, visual, sonic and performative mediations, theorizing their epistemic and ethical implications, collaborative potentials, affordances in narrative and non-narrative representation, and political and aesthetic investments. Students will both critically engage histories of transmedial anthropology, and produce projects that are multicompositional.

1.0 Course Unit

ANTH 577 Everyday States: The Anthropology of Power and Politics
While anthropologists have long been interested in political systems, they have in recent years made the modern state a critical site of ethnographic analysis. By focusing on everyday practice of officials in the Global North and South, anthropologists have drawn attention to the creative ways in which state actors and subjects of rule make and maintain its powerful institutions. Even as bureaucracies are formalized and instituted as sites of rational order and even-handed administration, scholars of everyday state formation have drawn attention to the ways that state authority depends on and reproduces racialized, gendered and geopolitical inequality. Indeed, like many other social institutions, racialized states are constituted through differentiated relations between government workers and the governed, through everyday rituals of violence and sovereignty, discipline and improvement. The class begins with a review of some influential theorizations of the modern state. Next, we focus on how political authority and social difference are produced by the everyday work of states. We attend to the colonial, racialized and gendered workings of states—particularly through their efforts to discipline black and brown bodies through sovereign violence and differentiated plans and programs of development. Finally, we will conclude the class by attending to the political work of subordinated groups as they demand distributive justice, equity and full citizenship in 'most of the world.'

Taught by: Anand
Course offered spring; odd-numbered years
Activity: Seminar
1.0 Course Unit

ANTH 580 Domestication
Domestication: one of the most frequently cited 'major transitions' in our global past. The story of domestication is not consigned to deep time though— it is interwoven with current movements. Rewilding, feralization, paleodiet, and GMO, all have intersections with the concept of domestication, and are politicised through the lens of the archaeology and anthropology of the 'domesticated'. Traditionally, study of the domestication process has been the exclusive domain of archaeologists and agricultural scientists; today it is an increasingly a multidisciplinary enterprise involving specialists across the sciences and humanities and, importantly, multiple voices that are changing the way we think about this as a single 'process'. In this seminar series we are going to unpick this term: what is ‘domestication’, how did (or does) it unfold, when did it start and has it ended? And perhaps most importantly, should we even be using this term at all? We will look back to the origins of the ideas, explore the influence of Darwinian thinking, 19th century philosophy, and explore alternative ideas such as familiarisation and multi-species thinking to question the dominance of 'domestication' in the archaeological and anthropological literature. The course is appropriate for graduate students interested in exploring this topic in a dynamic conversation. Students will be expected to lead discussions of specific works, as well as explore beyond the reading list or present aspects of their own present or proposed future research.

Taught by: Bates
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 583 Ethnographic Filmmaking
This ethnographic methodology course considers filmmaking/videography as a tool in conducting ethnographic research as well as a medium for presenting academic research to scholarly and non-scholarly audiences. The course engages the methodological and theoretical implications of capturing data and crafting social scientific accounts/narratives in images and sounds. Students are required to put theory into practice by conducting ethnographic research and producing an ethnographic film as their final project. In service to that goal, students will read about ethnography (as a social scientific method and representational genre), learn and utilize ethnographic methods in fieldwork, watch non-fiction films (to be analyzed for formal properties and implicit assumptions about culture/sociality), and acquire rigorous training in the skills and craft of digital video production. This is an ABCS course, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. Due to the time needed for ethnographic film production, this is a year-long course, which will meet periodically in both the fall and spring semesters.

Two terms. student must enter first term.
Also Offered As: EDUC 586
Activity: Seminar
1.0 Course Unit
ANTH 586 Desire and Demand II: Culture, Production, and Consumption in the Global Marketplace
The goal of this course is to understand and to investigate both historical and contemporary issues related to a culture of consumption. Reading topics cover both contemporary and scholarly issues in cultural anthropology, popular culture, consumer behavior, off-shore production, social networking, media and communications, financial and real estate markets and marketing. Class distinctions are equally interdisciplinary as we focus on investigating and identifying critical global/local linkages. We analyze the various ways in which Philadelphia and other ‘global cities’ are competing for consumer revenues. We ask what factors have led contemporary society reaching its current stage of mass consumption and how have certain goods and services been reconfigured, packaged or re-packaged to attract new consumers. In order to better understand the link between consumption and production factors we explore the relationship between outsourcing and/or offshore production and modern consumption. Approximately sixty percent of the seminar takes place in the classroom and will include lecture, class discussion, and films. The remaining portion of the class meetings will involve local and regional travel. Research assignments emphasize the use of anthropological participant-observation techniques to investigate the relationships between culture and contemporary mass consumption within the contexts of re-gentrification, urbanization, and globalization.

ANTH 589 It was the Law at the Time: Museums, Colonialism, and the Question of Property
Current discussions about who owns cultural property, especially in relation to objects acquired under and during Europe’s colonial project, form their arguments, limits and possibilities around international legal instruments such as UNESCO’s conventions on cultural property. Like broader claims for reparations by formally colonized peoples, legal demands for reparations or restitution with regard to cases of colonial injustice often run up against responses such as ‘it was the law at the time’ or ‘it was a long, long time ago and therefore there are no legal venues for claimants today’. The CARICOM-claim regarding reparations for slavery submitted by a number of Caribbean states, as well as demands regarding cultural treasures looted in the late 19th century in different parts of Africa and elsewhere, are clear examples of this phenomenon. Proposed solution for these conflicts almost always circumvent questions of ownership (at the time) or other legal possibilities. They are sought in extra-legal ways. Increased attention for these and similar cases have fueled new research into the histories of slavery and colonialism, and into the provenance of colonial cultural objects in Western museums. Similarly there is an increasing number of research projects that explore, for example, the fate of colonial objects in Europe, in relation to the fate of Nazi-looted art. While the legal limits of current claims form part of the investigation of many of these studies, they often fail to pay serious attention to the relationship between the law and the colonial project itself. Importantly, they also fail to explore the relationship between the law, questions of property and the ‘creation’ of the colonized subject. This seminar will focus on this nexus and will interrogate the role of law within the colonial era, especially with regard to the legal fashioning of hierarchies of colonial subjects and colonial objects. In what ways is the law implicated the colonial project itself, and what role did it place in the fashioning of colonial subjects and colonial objects? Moreover, what role should an attentiveness at the law play in today’s debates around reparation or restitution/ These are some of the key questions that the course will explore. Bringing together readings from legal and political philosophy, material culture and critical heritage studies, this course explores some of the key debates and texts surrounding questions of law, philosophy, colonialism and questions around reparations or restitution of cultural objects. Students will be introduced to the works of some of the key thinkers on which contemporary notions of ownership, the legal subject and (cultural) property are based, probing their genealogy in relation to the racial hierarchies established under the colonial project. We will explore both the history and application of legal frameworks that governed colonial subjects and (cultural) objects alike and their basis in legal philosophy. Is there reason to rethink the role of law within debates around reparations and restitution? And, last but not least: are there reasons to rethink the idea of property itself? What other genealogies of the law can we trace to think differently about ownership of (cultural) property?

ANTH 591 Multi-Modal Ethnography: Anthropology Beyond Text
What does the digital age mean for humanistic, social scientific, and professional inquiry and practice? How do non-text based formats - such as film, dance and other kinds of performance, creative writing, and soundscapes - transform both the processes and products of research? How do they inform and transform our disciplines, and what might this mean for the communities with which we work? This advanced undergraduate seminar will address these (and other related) questions. Taught by the invited Fellows from the Center for Experimental Ethnography, this course will take shape differently each semester according to the Fellow's area of expertise and practice. Students will be encouraged to explore alternative formats of representation that move beyond text while still being grounded in ethnographic research, and they will develop skills in relevant media. ANTH 593 Natural and Cultural Heritage in Global Perspective
This seminar will explore the ideas surrounding the theories, discourses, and practices surrounding natural and cultural heritage. Heritage has become inscribed in the planning of urban and rural landscapes, designed as tourist destinations, and considered a universal good in global cosmopolitan society. But it would be well to ask: what kind of 'nature' and 'culture' has been labeled as heritage? What kind of organizations, economics, and politics are necessary to sustain it? How are these put in place? By whom? For whom? Over the course of the semester, students will engage with readings that discuss how cultural and natural heritage is communicated to the public and the relationship between academic critique and pragmatic social engagement. This seminar is further grounded by a partnership between the Penn Cultural Heritage Center and the U.S. Mission to UNESCO focused on the assessment of World Heritage Sites, and students will have the opportunity to learn from and participate in specific case studies.
Taught by: Daniels
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 598 The Economics of Heritage
Governmental resources for archaeological and heritage sites are declining worldwide while commercial and economic development initiatives are threatening the fabric of heritage and the larger landscape environment to ever greater degrees. As a consequence, the competition for resources to protect and preserve heritage is intensifying, as is the challenge to articulate the value of heritage resources vs. competing commercial or public projects. This is the context for understanding the issues surrounding the definition of the value of cultural heritage assets and the tools available for their measurement and management. This course explores in some depth issues relating to the economic analysis of heritage and culture. It is designed to provide students with a foundational understanding of the economics of heritage-related projects, the tools and techniques available for their analysis and the ethical and practical issues of public policy and private actions that determine the future of heritage resources. Readings and case studies will explore technical, practical and ethical issues that arise in cultural heritage economics. Relevant analytical techniques will be introduced and particular emphasis will be placed on commercial, government and community issues unique to heritage-related activities. Special emphasis will be placed upon developing pertinent strategies for the tourist industry. Students will produce one case-study project intended to integrate the technical and practical aspects of the course.
Taught by: Peter Gould
Activity: Seminar

ANTH 600 Contemporary Archaeology in Theory
This graduate seminar addresses contemporary anthropological archaeology and considers the varied ways inferences are made about past and present human behavior from the archaeological record. It reviews such fundamental topics as the use of analogy, Middle Range theory, symbolism and meaning, social and cultural evolution, ideology and power, feminism and gender, and indigenous (non-Western) perspectives. It also foregrounds basic issues regarding heritage, looting, and ethics.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: First-year anthropology graduate students.

ANTH 602 Evolutionary Anthropology
This course will explore various subfields of biological anthropology to better understand what it means to be human. Special attention will be paid to current issues and problems in these subfields, and the different ways in which researchers are attempting to understand and uncover the details of human evolution. Among the areas that are explored in this course are paleoanthropology, primatology, human biology, molecular anthropology, evolutionary medicine, epigenetics, and human life history. Specific issues to be explored include the primate roots of human behavior, brain and language evolution, new fossil hominins, the origins of anatomically modern humans, and modern human migration history.
Taught by: Schurr
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: First-year anthropology graduate students.
ANTH 603 Language in Culture and Society
First-year anthropology graduate students or Instructor Permission. Examination of properties of human language which enable social persons to interpret the cultural world and to act within it. Topics include: principles of lexical and grammatical organization; the role of language structure (grammar) and linguistic context (indexicality) in discursive activity; referential uses of language; social interaction; markers of social role, identity, and group-belonging; criteria by which models of linguistic form and function are formulated; the empirical limits within which different models have explanatory value.
Taught by: Agha
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: First-year anthropology graduate students.

ANTH 607 Contemporary Native Americans
This course examines the social and political lives of contemporary Native American Indians in the United States and Canada. Topics include: Indigenous identity; homelands and natural resources; popular culture and media; Indigenous arts and cultural expression; museum representations; athletics; gender relations; tribal recognition and sovereignty; and resistance movements. We will consider the origins of federal programs and legislation that have become essential to the protection of Native American freedoms. Students can expect to gain an appreciation of the complexity and cultural diversity of Native communities and tribal nations and insights into their interactions with other cultures over time.

Course not offered every year
Also Offered As: ANTH 307
Activity: Lecture
1.0 Course Unit

ANTH 615 Afghanistan, Iran and Pakistan: Islamism, Terrorism and Globalization
Why are Islam and the Middle East continually in the news in the Western world, and why are Afghanistan, Iran and Pakistan the countries that are most frequently named? Fifty years ago, before the terms 'Islamism' and 'terrorism' were coined, and before we began talking about globalization, things were very different. All three countries had close relations with Europe and America. In this course we will track the various currents of social change that produced the current situation, using the methods and theoretical concepts of anthropology. We will follow the news in the course of the semester and track the way things are continuing to change, so that at the end of the semester we can understand the region and its problems in the context of world history and globalization. Instead of an exam at the end of the semester, you will be asked to write a short essay (1000 words) on a question at the end of January relating to issues we have discussed in class, and again at the end of February and March, and to formulate a research question on a problem that interests you in the history of the area and try to answer it a a final paper by the end of the examination period.
Taught by: Spooner
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 617 Contemporary Approaches to the Study of Culture and Society
A critical examination of recent history and theory in cultural and social anthropology. Topics include structural-functionalism; symbolic anthropology; post-modern theory. Emphasis is on major schools and trends in America, Britain, and France.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: First-year anthropology graduate students.

ANTH 620 Directed Reading and Research
To be arranged only by consultation with academic adviser and faculty member(s) to be involved; a proposed syllabus must be presented for approval, and written papers will be required without exception. On approval of these papers one copy must be presented to the Department of Anthropology office for filing. May be repeated for credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be repeated for credit

ANTH 626 Intensity
This course examines the manner in which humans encounter the continuous and gradable features of phenomena in social life - sensory qualities of objects, people's aspirations and affect, pitch movement during voiced talk, monsoons and sea breezes, biological growth and environmental degradation, migratory flows in transnational settings - and attempt to evaluate or convert them into discrete dimensions of social life. We examine how intensities and gradients are managed in everyday life as well as in institutional settings - through government policies, scientific protocols, surveillance regimes, infrastructural agendas - and we survey the ways in which everyday and institutional practices reflect and shape each other in societies across the world. In particular, we explore the question of what an anthropology of intensity might look like, and how it may reconfigure approaches to the ethnographic study of human affairs.
Taught by: Carruthers
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

ANTH 628 Language in Culture and Society: Special Topics
The course is devoted to a single research topic of contemporary interest in linguistic anthropology. Topics vary from year to year. Readings locate current debates in relation to longstanding assumptions in the literature and new directions in contemporary research.
Taught by: Agha
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 630 Intensive Language Training in Anthropology
This course is designed to allow graduate students to obtain in-depth training in a scholarly language that will be utilized for dissertation fieldwork and satisfying the language exam for the Department of Anthropology Graduate Program. Through this intensive training in the oral and written forms of a language, students will accelerate their competency in it, while also potentially preparing themselves for advanced language training through tutorials or summer immersion programs.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ANTH 633 Forensic Anthropology
This course will investigate and discuss the various techniques of analysis that biological anthropologists can apply to forensic cases. Topics include human osteology, the recovery of bodies, the analysis of life history, the reconstruction of causes of death, and various case studies where anthropologists have contributed significantly to solving forensic cases. Discussions will include the limitations of forensic anthropology and the application of DNA recovery to skeletal/mummified materials.
Taught by: Monge
Course not offered every year
Also Offered As: ANTH 230, CRIM 230
Activity: Lecture
1.0 Course Unit

ANTH 634 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to ‘write women’s worlds’, but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline’s epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world. Prerequisite: Should have some functional knowledge of Cultural Anthropology.
Taught by: Thomas
Course not offered every year
Also Offered As: AFRC 334, AFRC 634, ANTH 334, GSWS 334, GSWS 634
Activity: Seminar

ANTH 636 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.
Taught by: Zettler
Course offered in spring term
Also Offered As: ANTH 236, NELC 241, NELC 641, URBS 236
Activity: Lecture
1.0 Course Unit

ANTH 642 Ethnographies in Linguistic Anthropology
This course provides graduate students in linguistic anthropology and allied fields an opportunity for sustained, critical engagement with ethnographic monographs in linguistic and semiotic anthropology. Readings vary yearly, but run the gamut from the classical or ‘canonical’ to the contemporary or ‘experimental’. Recurring concerns include: the nature of the ethnographic monograph as text-artifact; the presentation and exposition of ethnographic and linguistic particulars; questions of ‘authorial voice’; and the registers, genres, and styles of ethnographic representation obtaining in the linguistic anthropological tradition.
Taught by: Carruthers
Course usually offered in spring term
Prerequisite: ANTH 603
Activity: Seminar
1.0 Course Unit

ANTH 643 Globalization And Its Historical Significance
Globalization is one of the most comprehensive topics of our time, and also one of the most controversial. This course assesses the current state of globalization, considering it in terms of economic, political, and cultural change, and follows its progress through the semester. The class will be led through the main topics and debates, introduced to conceptual and empirical tools for framing academic discussion and research about its dynamics, how and when it began, and (most particularly) how it differs from earlier episodes of historical change.
Taught by: Spooner
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 649 Molecular Anthropology
In this course, we will explore the molecular revolution in biological anthropology. In particular, we will examine how molecular data can be used to illuminate anthropological question concerning human origins, evolution and biological variation. Some of the specific topics to be covered in this course are the phylogenetic relationships among primates, kinship in apes and monkeys, the hominoid trichotomy, modern human origins and migrations, Neanderthal and Denisovan admixture with modern humans, biogenetics of skin color, and physiological, phenotypic and disease adaptations.
Taught by: Schurr
Course not offered every year
Also Offered As: ANTH 592
Activity: Seminar
1.0 Course Unit

ANTH 654 Topics In Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.
Taught by: Spooner
Course usually offered in fall term
Also Offered As: ANTH 100, NELC 281, NELC 681, SAST 161
Activity: Lecture
1.0 Course Unit

ANTH 655 Methods and Grantwriting for Anthropological Research
This course is designed for third- and fourth-year graduate students in anthropology who are working on their dissertation research proposals and submitting grants. Graduate students from other departments who will be submitting grant proposals that include an ethnographic component are also welcome. Students will develop their proposals throughout the course of the semester, and will meet important fall submission deadlines. They will begin by working with various databases to search funding sources relevant to the research they plan to conduct. In class sessions, they will also work with the professor and their peers to refine their research questions, their methods, the relationship of any previous research to their dissertation fieldwork, and the broader theoretical and ‘real-world’ significance of their proposed projects. Finally, students will also have the opportunity to have live ‘chats’ with representatives from funding agencies, thereby gaining a better sense of what particular foundations are looking for in a proposal.
Taught by: Thomas
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ANTH 658 Discourse-Centered Research Seminar
This seminar explores the interface between discourse, culture, and social processes. It is designed for graduate students in anthropology and related disciplines who (1) wish to study the current literature in linguistic anthropology concerned with discourse-centered approaches to culture; and (2) themselves have or will acquire during the semester discourse materials (texts, recordings, ethnographic data, etc.) that they wish to analyze from an anthropological point view. The instructor will spend time discussing his own past and current research. Class sessions will also include discussion of the writings of contemporary anthropologists investigating culture through discourse. The seminar is designed for maximum flexibility in accommodating students’ research interests and needs.
Taught by: Urban
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ANTH 663 Independent Study in South Asian Archaeology
This course provides a broad overview of the archaeology and early history of South Asia, a region that includes present-day India, Pakistan, Bangladesh, Sri Lanka, Nepal, Myanmar, Bhutan, and the Maldives. Beginning with a brief overview of the Paleolithic, we will discuss the multiple origins of early agriculture, the development of early states in the Indus river basin and beyond, the second urbanization, the expansion of institutionalized forms of religion, long-distance trade, social differentiation, and the rise of states as empires. No background in archaeology is required. The class will produce a collaborate spatial database of archaeological sites for selected time periods and will produce a document describing some of the major historical changes in South Asia as illustrated by the archaeological database.
Taught by: Morrison
Course not offered every year
Activity: Independent Study
1.0 Course Unit

ANTH 668 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).
Taught by: Wilson
Also Offered As: AFRC 368, ANTH 368, COMM 368, FNAR 368
Activity: Seminar

ANTH 670 Research Design
This is a practical course on the challenges of designing research projects in anthropology with a special focus on the dissertation project. We will discuss how to select and refine a topic that is, ideally, important without being impossible. Interesting research can often be described or understood in multiple ways, and we will practice recasting project proposals for different kinds of audiences and formats. We will also consider issues of methodology, or the logic of method. Specific kinds of questions tend to lead to specific field and lab methods, and it is important to match your questions to your ways of answering them.
This is not, however, a methods course. If you need to learn ethnography, ceramic analysis, textual analysis or some other set of methods, you should look for specific instruction in that field. Instead, we will consider how to assemble a research project that is well-structured, significant, and feasible using one or more analytical strategies. Research design is critical not only for planning research appropriate to your questions but also serves as the basis for successful proposals. Proposal-writing is a specific genre you will need to master; the final product for this course is therefore a research proposal. We will discuss the format of the proposal in detail. Not all proposals need to follow the same template, but there is a family resemblance to successful proposals; thus, although we will follow advice for writing scientific proposals, more humanistically-oriented students should not find this to be a problem.

ANTH 677 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar’s exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

Activity: Seminar
1.0 Course Unit

ANTH 684 Religion and Society in World History
Anthropologists have never found a society that did not have ideas, rituals and practice that falls easily into our category of ‘religion’ (a term coined in Roman times to cover everything relating to assumptions about supernatural forces in any cultural context). So how can we define religion now, over two thousand years since the end of the ‘Axial Age’ (800-200 BCE) that produced all the major religious ideas, that would allow us to include all the forms we know not only of Judaism, Buddhism, Christianity and Islam, but also Confucianism, Hinduism, Jainism, Shinto, Sikhism, Taoism, and Zoroastrianism, and the religions of the small isolated communities we found during the colonial period in Africa and Australia? And why has religious practice been declining in the Western world since the middle of the 20th century? Is the anthropology of religion a different subject now than what it was a hundred years ago? The religions that we know historically, because they are based on texts, especially Christianity and Islam, have obviously changed in many ways since their early days, and it is easy to see a relationship between the way they changed and what was going on in the societies that carried them: Christianity spread through the Roman Empire; Islam spread from Mesopotamia along trade routes, west to Egypt and North Africa, and east into central Asia and north China. It will be interesting to study the various constituents of religion (e.g. Faith, Law, Authority, Ritual, Sacraments, morality, spirituality) comparatively between each of the religions for which we have sufficient data, religious wars, and see the historical significance of (for example) the French Revolution, the Pope, and Ayatollah Ruhollah Khomeini.
Taught by: Spooner
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 704 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Taught by: Hall
Course not offered every year

Prerequisite: EDUC 547
Activity: Lecture
1.0 Course Unit

ANTH 706 State, Society, and Culture in South Asia
This interdisciplinary course introduces graduate students to both classic and more recent theoretical frameworks used in understanding and analyzing society, culture, and the state, with particular reference to South Asia. Topics include bureaucracy and the state; power and performance; hierarchy and individualism; caste, community, and domination; money and markets; credit and debt; globalization and consumption; economic liberalization and political transformations; local and trans-local contexts of meaning; the environment, politics, and urban and rural ecologies; and culture and the changing shape of politics. Particular emphasis will be placed on the ways in which recent ethnographic and historical monographs have positioned their interventions in relation to broader debates and scholarship, both within scholarship on South Asia and more generally.
Taught by: Mitchell
Course not offered every year
Also Offered As: SAST 704
Activity: Seminar
1.0 Course Unit

ANTH 707 Craft of Ethnography
This course is designed to follow after Ethnographic Research Methods (EDUC 721). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project. Prerequisite: Must have completed EDUC 721 or equivalent introductory qualitative methods course.
Taught by: Hall
Course not offered every year
Also Offered As: EDUC 700
Activity: Lecture
1.0 Course Unit

ANTH 719 Archaeology Field Project
This is a parallel course to ANTH 219, but on the graduate level. It will only be open to select graduate students (i.e. historical archaeology students and some CGS MA students). Specific permission of the instructor is required in each case.
Taught by: Schuyler
Course usually offered in fall term
Also Offered As: ANTH 219
Activity: Seminar
1.0 Course Unit
Notes: Permission of instructor required.

ANTH 720 Historical Archaeology Laboratory
Parallel graduate course to ANTH 220. Lab class will meet in three hour sessions on Fridays and Saturdays and will involve the analysis of artifacts, documentary records, oral historic sources and period illustrations collected on Southern New Jersey historic sites and Silver Reef, a ghost town in Southwestern Utah. No Previous archaeological or lab experience is required. Course may be repeated for credit.
Taught by: Schuyler
Course usually offered in spring term
Also Offered As: ANTH 220
Activity: Laboratory
1.0 Course Unit

ANTH 730 Readings & Research In Linguistic Anthropology
The course is designed for students and faculty interested in discussing current research and/or research topics in any area of linguistic or semiotic anthropology. The primary intent of the course is to familiarize students with the literature on selected research topics and to develop their own research agendas in the light of the literature. Students may enroll on an S/U basis for 0.5 CU per semester. The course may be repeated for credit up to 4 times.
Taught by: Agha
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

ANTH 733 Colloquium Seminar
This graduate seminar is a full year course open to second year anthropology graduate students. Other interested students should contact the instructors for permission before enrolling. Topic changes each year, corresponding to the Penn Anthropology Department Colloquium series.
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

ANTH 741 Anthropology of Affect
This course draws upon three anthropological literatures pertaining to affect. One, growing out of Darwin’s observations in The Expression of Emotions in Man and Animals, looks at the evolutionary and neurobiological bases of affect. A second developed in connection with psychoanalysis, and centers upon insights gained through empathic and introspective processes. A third arose with cultural studies and reactions within anthropology to structuralism, including research on cross-cultural variation in the conceptualization of emotions. The course is appropriate for graduate students interested in exploring the linkages among these literatures, and who envision or are already actively undertaking research for which knowledge of them is pertinent. Students will be expected to lead discussions of specific works, as well as present aspects of their own present or proposed future research. Students outside of the Anthropology Department should contact the instructor to request a permit.
Taught by: Urban
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 751 Historical Archaeology
Archaeology of the Modern World from the Columbian voyage (1492) to the 20th century. Topics such as the rise of early modern Europe, European exploration and colonization, African American Archaeology, Asian American Archaeology, the rise of colonial society, contact with native peoples, the Industrial Revolution, and the archaeology of the 20th century will be covered.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 451
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

ANTH 752 Archaeology of American History: The Colonial Period
Over the last fifty years archaeologists have been exploring historic sites in the United States dating from both the Colonial Period and the 19th/20th centuries. What can archaeology now tell us about the origins of American society, the invasion of North America by various European peoples (Spanish, English, Dutch), the impact on native peoples, the rise of African American and Asian American cultures, major crisis (e.g. the revolution, Civil War, and the Great Depression), the settlement of the Far American West, and the final emergence of a truly national culture in the 20th century? A basic question will be how an American history based on both archaeology and archival sources is different and more complete than an image of the past drawn only from written sources.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 151
Activity: Seminar
1.0 Course Unit

ANTH 753 Arch Amer Hist 1790-2000
Also Offered As: ANTH 152
Activity: Seminar
1.0 Course Unit

Applied Math & Computational Science (AMCS)

AMCS 510 Complex Analysis
Complex numbers, DeMoivre’s theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy’s integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.
Taught by: Staff.
One-term course offered either term
Also Offered As: MATH 410
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 514 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Also Offered As: MATH 314, MATH 514
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 520 Ordinary Differential Equations
After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.
One-term course offered either term
Also Offered As: MATH 420
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 525 Partial Dif Equations
Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.
Course usually offered in fall term
Also Offered As: MATH 425
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 567 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB. Prerequisite: Graduate standing or permission of the instructor.
One-term course offered either term
Also Offered As: BE 567, GCB 567
Activity: Lecture
1.0 Course Unit
AMCS 584 The Mathematics of Medical Imaging and Measurement
The last several decades have seen major revolutions in both medical and non-medical and imaging technologies. Underlying all of these advances are sophisticated mathematical tools to model the measurement process and reconstruct images. This course begins with an introduction of the mathematical models and then proceeds to discuss the integral transforms that underlie these models: the Fourier transform, the Radon transform and the Laplace transform. We discuss how each of these transforms is inverted, both in theory and in practice. Along the way we study interpolation, sampling, approximation theory, filtering and noise analysis. This course assumes a thorough knowledge of linear algebra and a knowledge of analysis at the undergraduate level (Math 314 and Math 360 and Math 361, or Math 508 and Math 509).

Taught by: Staff.
Course not offered every year
Also Offered As: BE 584, MATH 584
Prerequisite: MATH 114 AND MATH 360 OR MATH 508 AND MATH 361 OR MATH 509
Activity: Lecture
1.0 Course Unit

AMCS 599 Independent Study
Activity: Independent Study
1.0 Course Unit

AMCS 602 Algebraic Techniques for Applied Mathematics and Computational Science, I.
We turn to linear algebra and the structural properties of linear systems of equations relevant to their numerical solution. In this context we introduce eigenvalues and the spectral theory of matrices. Methods appropriate to the numerical solution of very large systems are discussed. We discuss modern techniques using randomized algorithms for fast matrix-vector multiplication, and fast direct solvers. Topics covered include the classical Fast Multipole Method, the interpolative decomposition, structured matrix algebra, randomized methods for low-rank approximation, and fast direct solvers for sparse matrices. These techniques are of central importance in applications of linear algebra to the numerical solution of PDE, and in Machine Learning. The theoretical content of this course is illustrated and supplemented throughout the year with substantial computational examples and assignments.
Course not offered every year
Activity: Lecture
1.0 Course Unit

AMCS 603 Algebraic Techniques for Applied Mathematics and Computational Science, II.
We begin with an introduction to group theory. The emphasis is on groups as symmetries and transformations of space. After an introduction to abstract groups, we turn our attention to compact Lie groups, in particular SO(3), and their representations. We explore the connections between orthogonal polynomials, classical transcendental functions and group representations. This unit is completed with a discussion of finite groups and their applications in coding theory.
Course not offered every year
Activity: Lecture
1.0 Course Unit

AMCS 608 Analysis
One-term course offered either term
Also Offered As: MATH 608
Prerequisite: MATH 508 AND MATH 509
Activity: Lecture
1.0 Course Unit

AMCS 609 Analysis
One-term course offered either term
Also Offered As: MATH 609
Prerequisite: MATH 608

1.0 Course Unit

AMCS 610 Functional Analysis
Also Offered As: MATH 610
Prerequisite: MATH 608 OR MATH 609
Activity: Lecture
1.0 Course Unit

AMCS 999 Independent Study & Research
Study under the direction of a faculty member.
Activity: Independent Study
1.0 Course Unit
Applied Positive Psychology (APOP)

APOP 100 Introduction to Positive Psychology
In the 20th century, the field of psychology made enormous and important strides in addressing mental health challenges. Today research in the field has expanded, inspired, in part, by Martin E.P. Seligman's 1998 APA presidential address, to include the scientific study of optimal functioning and what helps people live full lives. This course focuses on the science of thriving—what does it mean to be 'happy,' and how can one cultivate well-being at the individual and community level? Students explore the foundations of this science, understand a conceptual framework for well-being, and actively engage in activities that help to cultivate well-being. Drawing upon theory, empirical research, ancient and collective wisdom, we examine these topics critically and experientially and together build an engaged learning community. For those pursuing a Certificate in Applied Positive Psychology, this course is strongly recommended as a prerequisite for the other three courses.

Taught by: na
Also Offered As: LEAD 340
Activity: Online Course
1.0 Course Unit

APOP 120 Human Flourishing: Strengths and Resilience
What does it mean to flourish? What are we like when we are at our best? What helps us bounce back from challenges and adversity? Continuing the exploration of the science of positive psychology, students delve deeply into the study of character strengths as a framework for building positive character and well-being, and explore the concept of resilience, or the ability to overcome challenging situations. In this course, we explore how we can leverage our strengths to more effectively contribute to the greater world and enhance our own well-being. We also study the physical and psychological protective factors that constitute resilience, and how they are cultivated. Students learn about these topics from a scientific and experiential perspective, both as individuals and within our learning community. This course will have required synchronous sessions and the instructor will offer a choice of times. Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.

Taught by: Robertson-Kraft
Activity: Online Course
1.0 Course Unit

APOP 200 Positive Psychology at Work
If flourishing is related to our lived daily experience, and approximately 50% of our waking hours are spent working, how do our workplaces contribute to, and diminish, our ability to thrive? Students are exposed to an array of research-informed strategies that have been applied in a variety of disciplines and workplaces, including business, education, health care, and nonprofit organizations. Exploration of case studies and salient research topics such as relationships at work, positive leadership, prosocial behavior, and our sense of meaning and purpose, guide our learning. Students gain an understanding of the variables that contribute to our ability to flourish at work and understand how we both experience and shape our work environments through our individual contributions. This course will have required synchronous sessions and the instructor will offer a choice of times.

Taught by: Meredith Myers
Also Offered As: LEAD 360
Activity: Online Course
1.0 Course Unit

APOP 220 Flourishing with Others: Building Thriving Relationships
Interpersonal relationships are key for happiness and well-being. Christopher Peterson, one of the pioneers of positive psychology used to say that the field could be summarized in three words: 'Other people matter.' In this course, we will take a deep dive into the research on relationships that work well and foster well-being. We will study positive relationships at different levels, from the closest ones, like families and romantic partnerships, to friendships, relationships between colleagues and in teams at work, to broader communities, and our relationship with nature and our planet. For each of these domains, we will learn practical ways to nurture and improve relationships and to help people flourish through them. This class will combine academic rigor with experiential learning, and it will provide many opportunities for self-reflection, conversation in small teams and applied 'experiments' in students' lives.

Taught by: Margarita Tarragona
Activity: Online Course
1.0 Course Unit

APOP 300 The Scientific Method in Positive Psychology
How do we both understand and measure well-being, and the psychological characteristics that contribute to it? Understanding the scientific basis of these important questions requires an understanding of the scientific methods that inform them. You will learn the basics of the scientific method, and foundational descriptive statistics used in positive psychology and social sciences. You will explore how concepts related to positive psychology are operationalized and measured, and learn the basics of developing hypotheses, research design, and practicing open science. This is not a statistics course—the goal is to equip you to be critical and informed consumers of research in positive psychology and beyond. This course also involves weekly synchronous recitation sessions (scheduling varies). This course substitutes as a Scientific Process requirement for the BAAS degree. Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.

Taught by: Robertson-Kraft
Activity: Online Course
1.0 Course Unit

APOP 320 Morality and the Good Life
Morality pervades everyday life. Far from being confined to the ivory tower, we make moral decisions and engage in moral behavior every day, ranging from the ordinary (e.g., whether to volunteer or return a lost wallet) to the extreme (e.g., whether to donate one's kidney to a stranger or fight and die for a cause). Morality is central to our evaluations of ourselves and others, and to the wellbeing of ourselves and the societies in which we live. In this course, you will learn about psychological research on morality. We will cover topics such as (1) How people make moral judgments, (2) How and why people have differing judgments of everything from tax rates to dietary preferences, (3) Psychological factors contributing to moral (e.g., altruistic) behavior, and (4) Intersections between moral psychology and our ideals, aspirations and well-being at the individual and societal level. This course aims to introduce you to the psychology of morality, to enable you to be more aware of and effective in navigating moral challenges in daily life.

Taught by: Damien Crone
Activity: Online Course
1.0 Course Unit
Arabic (ARAB)

ARAB 031 Elementary Arabic I
This is the beginners course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from ‘incipient survival’ to ‘full’ survival in the native-speaking environment.
For BA Students: Language Course
Course usually offered in fall term
Also Offered As: ARAB 631
Activity: Lecture
1.0 Course Unit

ARAB 032 Elementary Arabic II
This course is a continuation of first semester Elementary Arabic, and builds on the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale.
For BA Students: Language Course
Course usually offered in spring term
Also Offered As: ARAB 632
Prerequisite: ARAB 031
Activity: Lecture
1.0 Course Unit

ARAB 033 Intermediate Arabic III
This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.
For BA Students: Language Course
Course usually offered in fall term
Also Offered As: ARAB 633
Prerequisite: ARAB 032
Activity: Lecture
1.0 Course Unit

ARAB 034 Intermediate Arabic IV
This is the continuation of the first semester Intermediate Arabic. This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that students will achieve Intermediate High according to the ACTFL scale.
For BA Students: Last Language Course
Course usually offered in spring term
Also Offered As: ARAB 634
Prerequisite: ARAB 033
Activity: Lecture
1.0 Course Unit

ARAB 035 Advanced Intermediate Arabic I
This is a proficiency-based course which builds on the lessons from Intermediate Arabic. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.
For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: ARAB 635
Prerequisite: ARAB 034
Activity: Lecture
1.0 Course Unit

ARAB 036 Advanced Intermediate Arabic II
This course is a continuation of first semester Advanced Intermediate Arabic. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.
For BA Students: Advanced Language Course
Course usually offered in spring term
Also Offered As: ARAB 636
Prerequisite: ARAB 035
Activity: Lecture
1.0 Course Unit

ARAB 037 Advanced Arabic and Syntax I
Advanced syntax through the reading of Arab grammarians. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them. Readings are by medieval and modern writers.
For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: ARAB 637
Prerequisite: ARAB 036
Activity: Lecture
1.0 Course Unit
**ARAB 039 Colloquial Arabic**
A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor. One-term course offered either term
Also Offered As: ARAB 639
Prerequisite: ARAB 032
Activity: Lecture
1.0 Course Unit

**ARAB 041 Beginning Arabic I**
This is a beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading, and writing skills in the standard means of communication in the Arab world. The course is proficiency-based, implying that all activities are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 041) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government's Foreign Service Institute), from 'incipient survival' to 'full survival' in the native-speaking environment. Prerequisite: See the LPS Course Guide. **This course does not fulfill the College/Wharton language requirement.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: See the LPS Course Guide. **This course does not fulfill the College/Wharton language requirement.

**ARAB 042 Beginning Arabic II**
Prerequisite: If course requirements not met, permission of instructor required. **This course does not fulfill the College language requirement.
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: ARAB 041
Activity: Lecture
1.0 Course Unit

**ARAB 043 Continuing Arabic III**
This is the continuation of ARAB041 and ARAB 042, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 041-042, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Liberal and Professional Studies language requirement in Arabic but not for the School of Arts and Sciences. However, it should be emphasized that you will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale. Prerequisite: See the CLPS Course Guide. **This course does not fulfill the College language requirement.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: See the CLPS Course Guide. **This course does not fulfill the College language requirement.

**ARAB 044 Continuing Arabic IV**
Prerequisite: If course requirements not met, permission of instructor required. See the LPS Course Guide. **This course does not fulfill the College language requirement.
Course usually offered in spring term
Prerequisite: ARAB 043
Activity: Lecture
1.0 Course Unit
Notes: See the LPS Course Guide. **This course does not fulfill the College language requirement.

**ARAB 131 Intensive Elementary Arabic I&II**
This is a six-week intensive beginners' course in Modern Standard Arabic (MSA). It will introduce the student to speaking, listening, reading, and writing skills in the standard means of communication in the Arabic world. The course is proficiency-based, implying that all activities are aimed at placing the student in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 041) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other terms of the government's Foreign Service Institute) survival to 'full survival' in the native-speaking environment. Prerequisite: Offered through the College of Liberal and Professional Studies Summer Session I.
For BA Students: Language Course
Course usually offered summer term only
Activity: Lecture
2.0 Course Units
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.

**ARAB 133 Intensive Intermediate Arabic I&II**
This is a six-week intensive course offered in the summer through LPS; see the Penn Summer Course Guide. This is the continuation of ARAB031-32 or ARAB 131, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing the student in the context of the native-speaking environment from the very beginning. As in ARAB 031-032 or ARAB 131, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Arts and Sciences language requirement in Arabic. However, it should be emphasized that the student will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale. Prerequisite: Offered through the College of Liberal and Professional Studies Summer Session I.
For BA Students: Last Language Course
Course usually offered summer term only
Activity: Lecture
2.0 Course Units
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.
ARAB 135 Intensive Advanced Intermediate Arabic I&II
This is a six-week intensive course offered in the summer through LPS; see Penn Summer Course Guide. It continues from the first intermediate course, ARAB 033/034 or ARAB 133. Emphasis continues to be on all four language skills: speaking, listening, reading, and writing. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both achievement-based and proficiency-based. There is no Oral Proficiency Interview at the end of this session, but we anticipate that by the end of this, third year students will range in proficiency from Intermediate High to Advanced Mid on the ACTFL scale. Prerequisite: Offered through the College of Liberal and Professional Studies Summer Session I.
For BA Students: Advanced Language Course
Course usually offered summer term only
Activity: Lecture
2.0 Course Units
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.

ARAB 235 The Adab Tradition
Taught by: Fakhreddine, H.
Course not offered every year
Also Offered As: ARAB 735
Activity: Seminar
1.0 Course Unit

ARAB 331 Advanced Spoken Standard Arabic
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview. Taught in MSA with writing assignments in MSA.
For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: ARAB 531
Prerequisite: ARAB 036
Activity: Lecture
1.0 Course Unit

ARAB 333 Readings in the Qur’an and Tafsir
This course has two goals: to introduce undergraduate students to reading the Qur’an in Arabic, and to enhance the speaking, listening, and writing skills in MSA. Through the reading and study of selected major Qur’anic narratives and commentary (tafsir), students will become familiar with Qur’anic vocabulary, style, recitation practices, and other intricacies of the Qur’anic text. All students will also memorize a short sura of their choice and practice reciting it in an aesthetically appropriate manner (typically suras 1, 112, 113, or 114). Taught in MSA with writing assignments in MSA.
Taught by: Lowry
Course offered spring; even-numbered years
Prerequisite: ARAB 035
Activity: Seminar
1.0 Course Unit

ARAB 432 Arabic Readings in Belles-Lettres
This course aims to improve reading skills and vocabulary by introducing students to extensive passages taken from a variety of Arabic literary genres from all periods. Taught in MSA with writing assignments in MSA.
Course usually offered in fall term
Also Offered As: COML 432
Prerequisite: ARAB 036 OR ARAB 636
Activity: Seminar
1.0 Course Unit

ARAB 433 Arabic Readings in the Social Sciences and the Media
This course trains students to be proficient with written materials and media in MSA. This class will explore the Middle East through timely analysis of Arabic media as well as original analysis of the ideological, intellectual, social, cultural, and religious background to current events, including the Arab Spring and its aftermath. It is intended that, upon completion of this course, students will be able to work independently with a variety of media texts at different levels. Taught in MSA with writing assignments in MSA.
Course offered spring; odd-numbered years
Prerequisite: ARAB 036 OR ARAB 636
Activity: Lecture
1.0 Course Unit

ARAB 434 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 436 Introduction to Pre-Modern Arabic Texts
This course aims to provide incoming graduate students and advanced undergraduate students with an introduction to issues in Arabic grammar and syntax that commonly arise in pre-modern Arabic texts. Students will also be introduced to, and expected to consult, the standard reference works used as aids in reading such texts. Students will be expected to prepare a text or set of texts assigned by the instructor for each session. It is intended that, upon completion of this course, students will be able to work independently with a wide variety of pre-modern Arabic texts. Although the texts in this course are pre-modern, the course reinforces MSA reading skills. May be taken twice for credit with instructors permission.
Taught by: Lowry
Course offered fall; even-numbered years
Prerequisite: ARAB 036 OR ARAB 636
Activity: Seminar
1.0 Course Unit
Notes: May be taken twice for credit with instructors permission.

ARAB 437 History & Fiction in Arabic
This course trains students to be proficient with written materials and media in MSA. This class will explore the Middle East through timely analysis of Arabic media as well as original analysis of the ideological, intellectual, social, cultural, and religious background to current events, including the Arab Spring and its aftermath. It is intended that, upon completion of this course, students will be able to work independently with a variety of media texts at different levels. Taught in MSA with writing assignments in MSA.
Course offered spring; odd-numbered years
Prerequisite: ARAB 036 OR ARAB 636
Activity: Lecture
1.0 Course Unit

ARAB 438 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 439 Arabic Readings in the Social Sciences and the Media
This course trains students to be proficient with written materials and media in MSA. This class will explore the Middle East through timely analysis of Arabic media as well as original analysis of the ideological, intellectual, social, cultural, and religious background to current events, including the Arab Spring and its aftermath. It is intended that, upon completion of this course, students will be able to work independently with a variety of media texts at different levels. Taught in MSA with writing assignments in MSA.
Course offered spring; odd-numbered years
Prerequisite: ARAB 036 OR ARAB 636
Activity: Lecture
1.0 Course Unit

ARAB 440 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 441 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 442 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 443 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 444 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 445 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 446 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 447 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit
ARAB 531 Advanced Spoken Standard Arabic
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview. Taught in MSA with writing assignments in MSA. For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: ARAB 331
Prerequisite: ARAB 036 OR ARAB 636
Activity: Lecture
1.0 Course Unit

ARAB 533 Readings in Islamic Law
This advanced readings course provides students with the opportunity to study Arabic-language Islamic legal texts from all periods, including the Qur’an, Hadith, premodern and Ottoman-period texts, and modern positive legislation and constitutions to the extent that they are related to or invoke Islamic law.
Taught by: Lowry
Course not offered every year
Prerequisite: ARAB 036 OR ARAB 636
Activity: Seminar
1.0 Course Unit

ARAB 534 Arabic: Reading Historical Manuscripts
Arabic language is used by many societies not only in communication but also in correspondence and in documenting the affairs of their daily lives. Arabic script is adopted by many groups who native languages are not Arabic, in writing their language before some moved to the Roman alphabet. In many historical documents specific style of writing and handwriting are dominant. This specificity is influenced by the dialectical variations, the historical development of each region and the level of Arabic literacy and use.
Taught by: Dinar
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 631 Elementary Arabic I
This is the beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that students range from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from ‘incipient survival’ to ‘full’ survival’ in the native-speaking environment.
For BA Students: Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 031
Activity: Lecture
1.0 Course Unit

ARAB 632 Elementary Arabic II
This course is a continuation of ARAB 031/631. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 032
Prerequisite: ARAB 631
Activity: Lecture
1.0 Course Unit

ARAB 633 Intermediate Arabic III
This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. This is the continuation of ARAB031 and ARAB 032, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 031-032, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 033
Prerequisite: ARAB 632
Activity: Lecture
1.0 Course Unit

ARAB 634 Intermediate Arabic IV
This course is a continuation of ARAB 033/633. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Last Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 034
Prerequisite: ARAB 633
Activity: Lecture
1.0 Course Unit

ARAB 635 Advanced Intermediate Arabic I
This is a proficiency-based course which continues from the first intermediate course, ARAB 033/034. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency- based. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Advanced Language Course
Also Offered As: ARAB 035
Prerequisite: ARAB 634
Activity: Lecture
1.0 Course Unit
ARAB 636 Advanced Intermediate Arabic II
This course is a continuation of ARAB 035/635. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Advanced Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 036
Prerequisite: ARAB 635
Activity: Lecture
1.0 Course Unit

ARAB 637 Advanced Arabic and Syntax I
Advanced syntax through the reading of Arab grammarians. Development of reading in bulk. Emphasis on classical Arabic read in works by medieval and modern writers. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them.
For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: ARAB 037
Prerequisite: ARAB 636
Activity: Lecture
1.0 Course Unit

ARAB 639 Colloquial Arabic
A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor.
Course not offered every year
Also Offered As: ARAB 039
Prerequisite: ARAB 032
Activity: Lecture
1.0 Course Unit

ARAB 731 Topics in Islamic Studies
Topics vary from year to year in accordance with the interests and needs of students. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.
Taught by: Lowry
One-term course offered either term
Prerequisite: ARAB 436
Activity: Seminar
1.0 Course Unit
Notes: ARAB 436 or equivalent

ARAB 733 Arabic Texts in Islamic History
This is a graduate seminar course in which different genres of premodern Arabic texts are covered at the advanced graduate level. Students in this course are expected to be able to read and prepare (vowel, parse, and translate) passages from Arabic texts on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent and potential topics include: Geographers and travel accounts; biographical dictionaries; chronicles; heresiography; poetry; memoir and sira. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.
Taught by: Cobb
Course not offered every year
Prerequisite: ARAB 036
Activity: Seminar
1.0 Course Unit

ARAB 734 Selected Topics in Arabic Literature
This is a survey of Arabic poetry from the Pre-Islamic era until today. Readings will be selected to trace major thematic and formal developments in Arabic poetry. Readings also include excerpts from modern critical scholarship on the topic in Arabic. The class aims to introduce students to the basics of academic research and writing in Arabic. The class is taught in MSA with oral presentations and writing assignments in MSA.
Taught by: Fakhreddine
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 735 The Adab Tradition
This is a survey of pre-modern Arabic prose. Selections will be made from major books of Adab, compilations of akhbār, the Qurān, the sūrah, and critical treatise. Readings will be accompanied by excerpts from modern critical scholarship on the topic in Arabic. The class is taught in MSA with oral presentations and writing assignments in MSA.
Taught by: Fakhreddine, H.
Course not offered every year
Also Offered As: ARAB 235
Activity: Seminar
1.0 Course Unit

Architecture (ARCH)

ARCH 102 Introduction to Design
An exploration of the design process utilizing drawing and model-making techniques. Skills of representation and fabrication are introduced in the context of the development of each student’s capacity to observe, interpret, and translate design concepts into physical form. The course includes a weekly lecture and a biweekly studio component.
Taught by: Faculty
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 111 Architecture in the Anthropocene
This course will use architecture as a lens to investigate the emerging field of the environmental humanities. Our goal is to analyze and understand these new intellectual frameworks in order to consider the relationship between global environmental challenges and the process of constructing a just and equitable world. As such, we move between social and political theory, environmental history, architectural history and theory, and explorations of urban change. Issues of importance will include: theories of risk, the role of nature in political conflicts; environmental communication; the culture and technology of energy transition; and the relationship between speculative design and other narratives of the future. These conceptual frameworks will be read alongside creative projects in art, literature, and architecture, and will be amplified through presentations and discussions with numerous visitors to the course.
Taught by: Daniel Barber
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
ARCH 201 Design Fundamentals I
This studio course develops drawing and model-making skills with emphasis on digital representation and digital fabrication. The capacity of nature-inspired design is explored as a foundation for the creative production of new forms of expression.

Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 102
Activity: Studio
1.5 Course Unit

ARCH 202 Design Fundamentals II
A studio course exploring the relationship between two-dimensional images and three-dimensional digital and physical models. This studio course develops advanced techniques in digital representation and fabrication through an investigation of the theme of inhabitation in architecture.

Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 201
Activity: Studio
1.5 Course Unit

ARCH 301 Design I
An introduction to the design of architecture in the city. Students explore the relationships between two-dimensional patterns and their corresponding three-dimensional interpretations through the orthographic drawings of plan, section, and elevation and three-dimensional digital and physical models.

Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 202
Activity: Studio
2.0 Course Units

ARCH 302 Design II
An introduction to the design of architecture in the landscape. Issues of mapping, placement, scale, and construction are explored through studio design projects, site visits, and discussions. Course work focuses on the preparation and presentation of design projects emphasizing analytical skills along with the development of imaginative invention and judgment.

Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 301
Activity: Studio
2.0 Course Units

ARCH 303 Design Fundamentals
The creation of a successful product requires the integration of design, engineering, and marketing. The purpose of this intensive studio course is to introduce basic concepts in the design of three-dimensional products. For purposes of the course, design is understood as a creative act of synthesis expressed through various modes of 2-dimensional and 3-dimensional representation. The course develops basic design skills ranging from hand sketching to the use of digital modeling software and rapid prototyping. Fulfills the requirement for a design background course in the interdisciplinary graduate program in Integrated Product Design (IPD).

Taught by: Wesley
Course usually offered summer term only
Also Offered As: IPD 503
Activity: Studio
1.0 Course Unit

ARCH 318 Topographical Stories: Architecture, Literature, and Cities
This course will argue a simple thesis: that the spaces of our lives record the stories of our lives. Architecture and literature will be studied, through built works and texts, the latter from both author-architects and fiction writers (novelists, short story writers, and poets). Urban settings throughout the world will occupy our attention, in Berlin, New York, Paris, Milan, London, Venice, Vienna, Chicago, and Shanghai. In much the same way that literacy is both cultivated and preserved in books, cultural memory obtains legible shape in buildings, persisting as long as they do. In a time when so much in life seems in flux social norms, family structures, political allegiances, and so on the power of architecture to give practical affairs orientation and stability is especially important. This course will study how architectural settings provide palpable structure for the events of our lives, particularly those events that occur in cities and their institutions, for cities have always been and remain culture’s most efficient and eloquent articulation. Unlike literature, film, or advertising, architecture performs its signifying role rather quietly and unobtrusively, but this fact does not diminish its capacity to allow us to feel ‘at home’ in many and varied settings. This will be clear to non-architects as soon as they reflect on the role played by domestic arrangements, for even the most prosaic events cannot unfold unless the settings in which they are to occur are ‘in order’. Less clear perhaps, but no less important is the role that architecture plays in our understanding and experience of community, civility, and the common good. The course will be structured in two parts. The first part, much shorter than the second, will be thematic and a-historical. In the opening lectures the basic topics of the course will be introduced, as will be the questions to be asked of the writings, images, buildings, and cities taken up in part two. The second group of studies will look at a number of cities in Europe, the USA, and China. To make the volume of study materials manageable, we will concentrate on developments in the last hundred to hundred and fifty years. The writings of author architects will provide us with some insight into the ways architecture has served a ‘narrative’ function in these cities, but we will also read stories, poems, and parts of novels that augment and enrich those architectural accounts. The idea is that stories about spaces will clarify the ways that spaces are stories.

Taught by: Leatherbarrow
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 401 Advanced Design
Content and technique are explored in this studio course through the vehicle of a design project focused on the development of a critical understanding of geometries and mathematics in the representation and fabrication of contemporary architecture.

Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 302
Corequisite: ARCH 411
Activity: Studio
2.0 Course Units
ARCH 411 Theory I: Geometry in Architecture
Following a brief historical overview of Euclidean, stereotomic, projective and descriptive geometry in pre-modern architecture, the course examines the writings and works of early 20th-century modern architects who used regulating lines and numerical harmonic scales to generate and regulate architectural form in accordance with the golden section ratio and the dynamic symmetry of root rectangles. Also examined are works of mid 20th-century architecture based on traditional geometric constructions—conic sections (circles, ellipse, hyperbola and parabola) and ruled surfaces (cylinders, cones, hyperboloids, and hyperbolic paraboloids), as well as those derived from polyhedral and geodesic structures. Following an introduction to the geometry of free-form curves characteristic of the digital turn in late 20th-century architecture— including Bezier, B-spline, NURBS (non-uniform rational B-spline), and developable surfaces—the course concludes with an overview of recent efforts to utilize curvature in contemporary architecture within a set of more definitive geometrical and disciplinary boundaries.
Taught by: Faculty
Course usually offered in fall term
Corequisite: ARCH 401
Activity: Lecture
1.0 Course Unit

ARCH 412 Theory II: Architecture as Cultural Ecology
This course will study and argue a single thesis: that the architects of the early 20th century did not neglect the environmental and cultural context of their buildings because they were narrowly focused on the production of free-standing and radically new objects of design, but developed designs that combined attention to environmental issues with both imaginative approaches to social and cultural purposes and a new understanding of aesthetic content. A review of contemporary ecological mandates will begin the course. That will then be contrasted with historical and ancient conceptions. In depth studies of specific buildings will follow, viewed as cultural ecologies. The course will then turn to the materials and elements of architecture that have been used to construct cultural ecologies. With a more nuanced view of our inheritance we will ask what is not only possible but necessary for architecture in our time, in both its landscape and urban contexts.
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 411
Activity: Lecture
1.0 Course Unit

ARCH 431 Construction I
Course explores basic principles and concepts of architectural technology and describes the interrelated nature of structure, construction and environmental systems. Open to Intensive Majors only.
Taught by: Faculty
Course usually offered in fall term
Also Offered As: ARCH 531
Activity: Lecture
0.5 Course Units

ARCH 432 Construction II
A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building. Open to Intensive Majors only.
Taught by: Faculty
Course usually offered in spring term
Also Offered As: ARCH 532
Activity: Lecture
1.0 Course Unit

ARCH 433 Building Systems Integration
What makes buildings livable and buildable. After the initial concept design and massing studies are complete the next step is detailing. This seminar will examine the detail, how they can inform and enhance a building's design. The primary goals of a building is that it stands up to external forces, protects inhabitants from the elements and provides a healthy environment. This course will look at the individual components of structure, skin and systems. More importantly though, it will examine the connections between them. The class will begin with lectures examining the different systems and then progress into applying these ideas as a whole to individual studio projects. The final results of this course will be a 3D wall section with accompanying details. These details will be developed in a variety of software as chosen by the student. Recommended options are Revit, Rhino, AutoCAD.
Taught by: Faculty
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

ARCH 435 Structures I
Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored. Open to Intensive Majors only.
Taught by: Faculty
Course usually offered in fall term
Also Offered As: ARCH 535
Activity: Lecture
0.5 Course Units

ARCH 436 Structures II
A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored. Open to Intensive Design majors only.
Taught by: Faculty
Course usually offered in spring term
Also Offered As: ARCH 536
Activity: Lecture
0.5 Course Units

ARCH 498 Senior Honors Thesis
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 401
Activity: Independent Study
1.0 Course Unit
Notes: Permission of the Undergraduate Chair
ARCH 500 Summer Preparatory Design Studio
The Summer Preparatory Studio offers an intensive drawing and design experience to candidates for admission to the Graduate Program in Architecture who have not completed the necessary design studio prerequisites or who are required to have additional design experience to qualify for matriculation into the Master of Architecture Professional Degree Program in September. Enrollment in this program does not count towards the Master of Architecture degree. The intent of the drawing component of the course is to familiarize the student with primarily black and white mediums (pencil, charcoal, ink, etc). Exercises are designed to sharpen the student’s ability to see selectively and to transform image to paper through both line and tonal renditions in freehand sketch form. Exercises will also familiarize the student with basic drafting skills necessary for architectural communication and provide an introduction to computer-aided design through applications of the intensive Rhino and Illustrator tutorials given in the Digital Navigation course. The design part of the course presents a rhythm of basic three-dimensional design studies and simple architectural studio investigations. These are intended to build fundamental skills and acquaint the student with the architectural issues of form/space, conceptualization, transformation of scale, simple functional and constructional problems and a sensitivity to context. Course enrollment is by permit only. 
Course usually offered summer term only
Activity: Studio
2.0 Course Units

ARCH 501 Design Studio I
An introductory architectural design studio through which students develop critical, analytical and speculative design abilities in architecture. Students develop representational techniques for the analysis of social and cultural constructs, and formulate propositions for situating built form in the arena of the urban and suburban environment. The studio initiates innovation through a sequence of projects, spatial models and rule sets that introduce each student to rule-based design processes in which a reversal of expectations leads to the creation of novel spaces and structures. It introduces computation, geometric techniques, and digital fabrication. Projects explore the formation of space in relation to the body, and the developments of small scale public programs.
Course usually offered in fall term
Corequisite: ARCH 521
Activity: Studio
2.0 Course Units

ARCH 502 Design Studio II
This studio explores urban architecture as an embodiment of cultural values. Siting, enclosure of space and tectonic definition are stressed in order to challenge students to project relevant and inventive architectural situations.
Course usually offered in spring term
Corequisite: ARCH 522
Activity: Studio
2.0 Course Units

ARCH 511 History and Theory I
The first of three required courses in the history and theory of architecture, this is a lecture course with discussion groups that meet weekly with teaching assistants. The course explores fundamental ideas and models of architecture that have emerged over the past three hundred years.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ARCH 512 History and Theory II
How do architecture, urbanism, and the environment reflect the dominant social, economic, and political changes of the twentieth and twenty-first centuries and how did its vast geopolitical shifts such as Imperialism, Fascism, the Cold War, Neoliberalism, the ‘War on Terror,’ and Nationalism reshape architecture culture? How might architecture culture respond and help construct its resistant variants, anti-fascism, anti-imperialism, decolonization, and making ‘quieter places’ in Donna Haraway’s sense? How do critical frameworks to rethink positivism, efficiency, standardization, and even utopian thinking become revised through the lenses of queer, postcolonial, critical race, and eco-feminist theory in postwar architectural production? And how do these frameworks allow us to conceive of more equitable ways of being in the world while thinking with a varied pasts? This course provides twelve discursive and theoretical frameworks to rethink architectural history in the twentieth and twenty-first century. Through twelve lectures the course traces critical questions confronting architectural modernity from the violence of settler colonialism to the possibilities of making kin. While we will trace instances of architecture, city planning, landscape and infrastructural developments that corresponded to dominant ways of conceiving modernity and its analog progress narratives, the course is mainly interested in considering resistant paradigms that elide attempts to speak of a unified or homogenous notion of modernity. The course will be active and interactive and will include building a collaborative dictionary of architectural terms.
Taught by: Sophie Hochhausl
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 521 Visual Studies I
The study of analysis and projection through drawing and computer visualization
Course usually offered in fall term
Corequisite: ARCH 501
Activity: Laboratory
0.5 Course Units

ARCH 522 Visual Studies II
A continuation of the study of analysis and projection through drawing and computer visualization.
Course usually offered in spring term
Corequisite: ARCH 502
Activity: Laboratory
0.5 Course Units

ARCH 531 Construction I
Lecture course exploring the basic principles of architectural technology and building construction. The course is focused on building material, methods of on-site and off-site preparation, material assemblies, and the performance of materials. Topics discussed include load bearing masonry structures of small to medium size (typical row house construction), heavy and light wood frame construction, sustainable construction practices, emerging + engineered materials, and integrated building practices. The course also introduces students to Building Information Modeling (BIM) via the production of construction documents.
Course usually offered in fall term
Also Offered As: ARCH 431
Activity: Lecture
0.5 Course Units
ARCH 532 Construction II
A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building.
Course usually offered in spring term
Also Offered As: ARCH 432
Activity: Lecture
1.0 Course Unit

ARCH 536 Structures II
A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Course usually offered in fall term
Also Offered As: ARCH 436
Activity: Lecture
0.5 Course Units

ARCH 601 Design Studio III
In this studio, students engage architecture in its role as a cultural agent and examine the way buildings establish and organize dynamic relationships between site, program and material. The design of a complex building of approximately 50,000 SF provides the pedagogical focus for this research. Students extend skills in geometrical organization, site analysis and building massing/orientation to relate to program organization, circulation and egress, building systems and materials. The conceptual focus centered on the program of dwelling and how this program can be employed to develop and promote dynamic relationships and conditions through time, both within the building and between the building and the context. Through research and experimentation students integrate ecological processes into their design methodology to support design innovations in the building’s structure, its construction assemblies, environmental systems, and materials. Students work towards a high level of design resolution and visual representation, including the articulation of the building structure and its material assembly/enclosure.
Course usually offered in fall term
Corequisite: ARCH 621
Activity: Studio
2.0 Course Units

ARCH 602 Design Studio IV
This studio enables students to develop and resolve the design of a building in terms of program, organization, construction and the integration of structures, enclosure and environmental systems as well as life safety issues. Students select from a range of individually-directed studios within this overall framework. Each instructor develops a different approach and project for their section of this studio. Studios incorporate the expertise of external consultants in advanced areas of technology, engineering and manufacturing.
Course usually offered in spring term
Activity: Studio
2.0 Course Units

ARCH 611 History and Theory III
This is the third and final required course in the history and theory of architecture. It is a lecture course that examines selected topics, figures, projects, and theories from the history of architecture and related design fields during the 20th century. The course also draws on related and parallel historical material from other disciplines and arts, placing architecture into a broader socio-cultural-political-technological context. Seminars with teaching assistants complement the lectures.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: This is the third and final required course in the history and theory of architecture. It is a lecture course that examines selected topics, figures, projects, and theories from the history of architecture and related design fields during the 20th century. The course also draws on related and parallel historical material from other disciplines and arts, placing architecture into a broader socio-cultural-political-technological context. Seminars with teaching assistants complement the lectures.

ARCH 621 Visual Studies III
The final of the Visual Studies half-credit courses. Drawings are explored as visual repositories of data from which information can be gleaned, geometries tested, designs refined and transmitted. Salient strengths of various digital media programs are identified and developed through assignments that address the specific intentions and challenges of the design studio project.
Course usually offered in fall term
Corequisite: ARCH 601
Activity: Laboratory
0.5 Course Units

ARCH 631 Technology Case Studies I
A study of the active integration of various building systems in exemplary architectural projects. To deepen students’ understanding of the process of building, the course compares the process of design and construction in buildings of similar type. The course brings forward the nature of the relationship between architectural design and engineering systems, and highlights the crucial communication skills required by both the architect and the engineer.
Taught by: Franca Trubiano
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
ARCH 633 Environmental Systems I
An introduction to the influence of thermal and luminous phenomenon in the history and practice of architecture. Issues of climate, health and environmental sustainability are explored as they relate to architecture in its natural context. The classes include lectures, site visits and field exploration.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

ARCH 634 Environmental Systems II
Considers the environmental systems of larger, more complex buildings. Contemporary buildings are characterized by the use of systems such as ventilation, heating, cooling, dehumidification, lighting, communications, and controls that not only have their own demands, but interact dynamically with one another. Their relationship to the classic architectural questions about building size and shape are even more complex. With the introduction of sophisticated feedback and control systems, architects are faced with conditions that are virtually animate and coextensive at many scales with the natural and man-made environments in which they are placed.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

ARCH 636 Material Formations
Material Formations introduces robotic production and material dynamics as active agents in design rationalization and expression. The course investigates opportunities for designers to synthesize multiple performance criteria within architecture. Theory, Case-Studies and practical tutorials will focus on the incorporation of analytical, simulation, generative computation and robot fabrication concerns within design. While production is traditionally viewed as an explicit and final act of execution, the course explores the potential for all aspects of building production and use to participate within the creative design process, potentially producing performance and affect. Students will develop skills and experience in computer programming, physics-based simulation, and robot motion planning. A design research project will be undertaken through a number of discrete assignments that require the synthetization or structural performance along with material and robotic production constraints. The course will explore design as the outcome of materially formative processed of computation and production. Structure: the course will commence with weekly lectures and computer-based tutorials, and culminate in a series of intensive incremental learning, and prepare groups to work on a final assignment which involves the robotic fabrication of a small design prototype.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 671 Professional Practice I
The course consists of a series of workshops that introduce students to a diverse range of practices. The course goal is to gain an understanding of the profession by using the project process as a framework. The course comprises a survey of the architectural profession - its licensing and legal requirements; its evolving types of practice, fees and compensation; its adherence to the constraints of codes and regulatory agencies, client desires and budgets; and its place among competing and allied professions and financial interests. The workshops are a critical forum for discussion to understand the forces which at times both impede and encourage innovation and leadership. Students learn how architects develop the skills necessary to effectively communicate to clients, colleagues, and user groups. Trends such as globalization, ethics, entrepreneurship, sustainability issues and technology shifts are analyzed in their capacity to affect the practice of an architect.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

ARCH 685 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Taught by: Dean Steiner
Course usually offered in fall term
Also Offered As: CPLN 685, LARP 685
Activity: Seminar
1.0 Course Unit

ARCH 698 Architectural Association (AA), London
An advanced Architectural Design Studio taught by Homa Farjadi in London at the Architectural Association's School of Architecture. Topics engage aspects of urban life and urban form in London, and vary from year to year. During the fifth term of the Master of Architecture program, up to fifteen students a year may enroll for the semester abroad program in London, England. This is coordinated by Prof. Homa Farjadi and is housed at the Architectural Association (AA), located on Bedford Square in the heart of Bloomsbury. Students enroll in a special design studio, ARCH 702, taught by Prof. Farjadi, and in two elective courses offered by the faculty at the AA.
Course usually offered in fall term
Activity: Lecture
2.0 Course Units

ARCH 702, taught by Prof. Farjadi, and in two elective courses offered by the faculty at the AA.
ARCH 701 Studio V
These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouverneur, Marcinkoski, Mathur, McCloskey, Neises, Olin, Pevzner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia. More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedito (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).

ARCH 703 Advanced Architectural Design Studio
An Advanced Architectural Design Studio specifically tailored to post-professional students. Through this studio, students engage in the challenges and opportunities presented by changes in society, technology, and urban experience. Through design projects, they explore alternative modes and markets for practice, along with new directions and new tools for design.
Course usually offered in fall term
Activity: Studio
2.0 Course Units

ARCH 704 Advanced Design: Research Studio
In the final semester of the program, students select from three options: 1) an elective design studio, selected from among the advanced architectural design studios offered by the Department of Architecture; 2) a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or 3) an independent thesis, the exploration of a topic or theme under the supervision of a thesis advisor.
Course usually offered in spring term
Activity: Studio
2.0 Course Units

ARCH 705 MSD-AAD Design Research Studio
Students learn from industry leaders by electing their Design research Studio. The second semester design research studio focuses on large scale detail leading to a building design.
Taught by: Ali Rahim
Activity: Studio
2.0 Course Units

ARCH 706 Independent Thesis
In the final semester of the program, students select from three options: 1) An elective design studio; selected from among the advanced architectural design studios offered by the Department of Architecture; 2) a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or 3) an independent thesis, the exploration of a topic or theme under the supervision of a thesis advisor.
Course usually offered in spring term
Activity: Independent Study
2.0 Course Units

ARCH 707 AAD Fabrication Studio
The final studio course in the MSD-AAD sequence. Through this studio, students engage in the challenges and opportunities presented by changes in society, technology, and urban experience. Through design projects, they explore alternative modes and markets for practice, along with new directions and new tools for design.
Course usually offered summer term only
Activity: Studio
2.0 Course Units

ARCH 708 Bioclimatic Design Studio
An advanced design studio for the MSD-EBD program that synthesizes the concepts and techniques of environmental building design. Topics and materials for the studio are developed in Arch 752: EBD Research Seminar, and summarized in a research report at the end of studio.
Taught by: Dorit Aviv
Course usually offered summer term only
Prerequisite: ARCH 751 AND ARCH 752 AND ARCH 753
Activity: Studio
2.0 Course Units

ARCH 709 Environmental Building Design Research Studio
Architecture is a process of discovery, of deciding what to work on, before it ever becomes a matter of design (disegno, drawing). For environmental building design, the process of discovery is even more profound, involving issues of resource consumption, modes of living and working, and of ecological interconnection that have to be explored before questions of performance can even be addressed. This design studio uses research at multiple scales to identify the topic of the studio, then student teams develop design for buildings of maximum (ecological) power.
Course usually offered in fall term
Prerequisite: ARCH 708 AND ARCH 751 AND ARCH 752 AND ARCH 753
Activity: Studio
2.0 Course Units
ARCH 710 Contemporary Theory 1989-Present
A chronological overview of the approaches and attitudes adopted by architects, theorists and inter-disciplinary writers from 1993--today that have helped shape the current discourse of architecture. This course will introduce and contextualize key projects, and polemics over the last 25 years. Central themes in this course include the impact of digital technologies and methods of design, production and materiality. These are explored through texts, movements, projects and buildings that help form an overview that has shaped the contemporary condition that we live in. There have been a myriad of different approaches and through a select set of readings and lectures students will be exposed to crucial texts, projects and buildings making students versatile and knowledgeable in the important concepts that shape our current discourse. A focus will be the organization, configuration and articulation of buildings and the conceptual and cultural arguments they are associated. Formal, organizational and material characteristics of this period will be explored. This class will develop students' knowledge and provide a platform from which they can continue the discussions surrounding architectural thought and practice. The students will learn to communicate their ideas verbally and in writing. Contemporary topics in architecture theory and projects are introduced in a weekly lecture format critical to the shaping of our discipline today. A weekly recitation session allows students to engage with the readings critically in the subject matter. A mid-term and final paper are required to pass this class. (Topics to be covered: Seminal projects and buildings in the last 25 years, situating the architects work within a culture of debate and discourse identifying the important readings surrounding each building/project.) This course is a requirement of the MSD-AAD curriculum. Course usually offered in spring term
Activity: Lecture

1.0 Course Unit

ARCH 712 Topics in Architecture Theory II
A seminar on advanced topics in architectural design and theory. Topics and instructors will vary.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 713 Ecological Thinking in Art and Architecture
This seminar will address the diverse narratives of ecological thinking in the history of art, architecture, and urban planning during the 20th century. The course will contextualize and interrogate contemporary disciplinary discourses as well as historical assumptions related to ecological thinking in art and architectural history and environmentally-conscious practices. By mapping received trajectories of Eco Art, Ecocritical Art History, and Ecological Histories of Architecture and Urban Planning, the course will work from a subtly hidden foundation of eco-historical knowledge that connects these fields of inquiry, while also critiquing these trajectories and seeking to provide more focused and robust alternatives for knowledge production in the present. It aims to attract students from the School of Arts and Sciences and the Weitzman School of Design in a discussion on the interconnected histories of art and architecture during the 20th century.
Taught by: Zarmakoupi
Also Offered As: ARTH 577
Activity: Seminar
1.0 Course Unit

ARCH 714 Museum as Site: Critique, Intervention and Production
In this course, we will take the museum as a site for critique, invention, and production. As architecture, cultural institution, and site of performance, the museum offers many relevant opportunities. Students will visit, analyze, and discuss a number of local exhibitions and produce their own intervention in individual or group projects. Exhibition design, design of museum, the process of curating, producing artworks ranging from paintings to installation and performance, as well as attention to conservation, installation, museum education, and the logistics and economics of exhibitions will be discussed on site and in seminar. These topics and others will be open for students to engage as part of their own creative work produced for the class and an online exhibition.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 715 Contemporary Aesthetic Theory
This course offers a framework for a provocative history of ideas about beauty as they relate to contemporary thinking and their production of form in architecture. In a world increasingly defined by visuality, the concepts of beauty and visual sensation are not mere intellectual exercises but standards that define the very nature of design practice across disciplines, and that are essential to the worlds of objects, automobiles, furniture and architecture in the twenty-first century. Aesthetic theory is about beauty and about form and how it affects us every day. As architecture practice changes, the tools that are used to create form change due to new technologies, new materials and new tools for fabrication and aesthetics gives us an important way in to understanding the relationship between the object created and the user. This occurs in contemporary cultural landscapes in which we exist, and aesthetics is the organizing element. Through lectures and discussions of aesthetics readings in recitations focused on the object, students will work on a term paper that brings a clear understanding of aesthetics and its role in participating in culture through the objects of the automobile, furniture and architecture industries.
Activity: Seminar
1.0 Course Unit

University of Pennsylvania Catalog
ARCH 178 History and Theory of Architecture and Climate
This seminar will explore the history of buildings as mechanisms of climate management, and the theoretical and conceptual frameworks that pertain. In particular, we will examine how visual and mediatic interventions became a crucial aspect of architectural engagement with climate systems, and how, simultaneously, architectural image-making techniques became an important interdisciplinary site for understanding the cultural effects of scientific knowledge.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 179 Archigram and Its Legacy: London, A Technotopia
Acknowledging the ubiquitous proliferation of 'Hi-Tech' architecture in contemporary London, this research seminar examines the scope of technology as it emerges and re-emerges in the work of various architects currently dominating the city. This scope includes the last strains of post-war urbanism which spawned a legacy of radical architecture directly contributing to the Hi-Tech; a particular focus of the course will be the contributing and contrasting influence provided by the counter-cultural groups of the 60's - Archigram, Superstudio, the Metabolists and others. Using the premise of Archigram's idea of infrastructure, both literal and of event, the course will attempt to discover relational networks between works of the present day (Rogers, Foster, Grimshaw, etc.). As this work practices upon and within public space, an understanding of the contribution of technology to urban theatricality will evolve which is relevant to contemporary spheres of technological design practices. Students will be required to produce and present a term research paper.
Taught by: Faculty
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ARCH 720 Visual Literacy and its Culture
The digital turn in the creative fields resulted in profound transformations of techniques, aesthetics and underlying concepts in the development of contemporary visual culture. The dissemination and consumption of information through images through all types of media platforms influence and re-define (for better or worse) all aspects of our culture and reality. It is vital to develop a deep knowledge of the current visual concepts and techniques in arts, photography, cinema, product design and architecture to claim a critical stance through which we can positively contribute to the evolution of contemporary culture. The discipline of architecture has been deeply influenced by the digital shift in modes of design and visualization which yielded a wide array of directions within the architectural discourse, especially with questions and problems regarding representation. One clear outcome of this transformational period is the diversity of new representational strategies to seek alternative modes of visualization. It is clear that no one representational medium can be defined as the locus of architectural thought and architecture, as a cultural practice, can no longer be defined through the output of a single medium. The reality of our discipline is that we work through collective mediums and conventions of drawings, models, images, simulations, texts, prototypes and buildings to visualize architectural concepts. These mediums all require degrees of expertise in techniques that are necessary for their execution: they all involve conceptual depth that define their disciplinary positions; they all require translations across each other to enable subjective work-flows; they all require aesthetic attitudes to influence the development of visual culture in architecture. This course will introduce the AAD majors to contemporary topics of visualization in arts, photography, cinema and architecture. They will explore multiple mediums of representation to help them gain the vital visual literacy to excel in the program. Students will be introduced to discursive background and contemporary concepts of line drawing, fabricated object and constructed image as they work through 3 distinct projects during the semester. Each exercise will be initiated by a topical lecture and be followed by weekly pin ups to advance student projects. (Topics to be covered: Discourse of Contemporary Line Drawing, Multi-part 3D Printing, Vacuform/CNC Milling, Digital/Analog Surface Articulation, Rendering, Abstraction and Realism, Montage/Collage/Photorealism)
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
ARCH 721 Designing Smart Objects for Play and Learning
Today's children enjoy a wide array of play experiences, with stories, learning, characters and games that exist as physical stand-alone objects or toys enhanced with electronics or software. In this course, students will explore the domain of play and learning in order to develop original proposals for new product experiences that are at once tangible, immersive and dynamic. They will conduct research into education and psychology while also gaining hands-on exposure to new product manifestations in a variety of forms, both physical and digital. Students will be challenged to work in teams to explore concepts, share research and build prototypes of their experiences in the form of static objects that may have accompanying electronic devices or software. Final design proposals will consider future distribution models for product experiences such as 3D printing, virtual reality and software-hardware integration. Instruction will be part seminar and part workshop, providing research guidance and encouraging connections will subject matter experts throughout the Penn campus.
Course usually offered in fall term
Also Offered As: IPD 521
Activity: Seminar
1.0 Course Unit

ARCH 724 Technology in Design
The aim of this course is to understand the new medium of architecture within the format of a research seminar. The subject matter of new media is to be examined and placed in a disciplinary trajectory of building design and construction technology that adapts to material and digital discoveries. We will also build prototype with the new media, and establish a disciplinary knowledge for ourselves. The seminar is interested in testing the architecture-machine relationship, moving away from architecture that looks like machines into architecture that behaves like machines: An intelligence (based on the conceptual premise of a project and in the design of a system), as part of a process (related to the generative realm of architecture) and as the object itself and its embedded intelligence.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 725 Design Thinking
Creating new product concepts was once a specialized pursuit exclusively performed by design professionals in isolation from the rest of an organization. Today's products are developed in a holistic process involving a collaboration among many disciplines. Design thinking - incorporating processes, approaches, and working methods from traditional designers' toolkits - has become a way of generating innovative ideas to challenging problems and refining those ideas. Rapid prototyping techniques, affordable and accessible prototyping platforms, and an iterative mindset have enabled people to more reliably translate those ideas into implementable solutions. In this course, students will be exposed to these techniques and learn how to engage in a human-centered design process.
Course usually offered in fall term
Also Offered As: IPD 572
Activity: Seminar
1.0 Course Unit

ARCH 726 Furniture Design Strategic Process
Like architecture, furniture exists at the intersection of idea and physical form. Due to the specific scale that furniture occupies, however, this physical form relates not only to the environment in which the furniture is set, but also intimately to the physical bodies that interact with and around it. Additionally, as a manufactured product, often specified in large quantities, furniture must also address not only poetic considerations, but practical and economic ones as well. Instead of being seen as one-off objects, the furniture created in this seminar focuses on furniture development as a strategic design process where the designer's role is to understand the various responsibilities to each stakeholder (client/manufacturer, market/customer, environment) and the additional considerations (materials, processes, manufacturability, etc.), and ultimately translate these points into a potentially successful product. In order to approach furniture in this manner, the course will be structured around specific design briefs and clustered into three distinct but continuous stages. First, through focused research into stakeholder needs and potential market opportunities, students will craft tailored design proposals and development concepts accordingly. Next, students will work toward visualizing a concept, complete with sketches, small mock-ups, scale-model prototypes, technical drawings, connections and other pertinent details in order to refine their proposals and secure a real world understanding of the manufacturing processes and the potential obstacles created by their decisions. From insights gained and feedback from these steps, students will ultimately develop a final design proposal for a piece, collection, or system of furniture that successfully leverages their understanding of a thoughtful and deliberate design strategy.
Taught by: Mike Avery and Brad Ascalon
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 727 Industrial Design I
This course provides an introduction to the ideas and techniques of Industrial Design, which operates between Engineering and Marketing as the design component of Integrated Product Development. The course is intended for students from engineering, design, or business with an interest in multi-disciplinary, needs-based product design methods. It will follow a workshop model, combining weekly lectures on design manufacturing, with a progressive set of design exercises.
Course usually offered in spring term
Also Offered As: IPD 527
Activity: Lecture
1.0 Course Unit
ARCH 728 Design of Contemporary Products: Mass Customization
Personalization is quickly becoming the norm for mass production in a variety of consumer-centric industries. From retail to food, the idea of designing and making custom-made products tailored to fit one’s lifestyle will be our exploration. Utilizing digital design innovations, we are able to incubate ideas, prototype, test and be entrepreneurial in design to create these individualized products. Cues from these industries will be used to shift both cultural and experiential product design from a regional discovery to a global focus. This course will embrace digital design and utilize its engagement with manufacturing solutions for a physical output. Through research and a series of design exercises, the approach will be built upon several strategies including adaptability, materiality, fabrication, modularity, and human-centric design. The final project will interpret the research and result in the creation of a design strategy for a mass customized product or system. This course will explore product design solutions through a combination of physical and digital design methods. Beginning with an examination of case studies, students will gain a sense of the breadth of product and interaction design practice as it applies to smart objects. Through a series of lectures and hands-on studio exercises, students will explore all aspects of smart object design including expressive behaviors (light, sound and movement), interaction systems, ergonomics, data networks and contexts of use. The course will culminate in a final project that considers all aspects of smart object design within the context of a larger theme.
Course usually offered in spring term
Also Offered As: IPD 528
Activity: Seminar
1.0 Course Unit

ARCH 730 Techniques, Morphology, and Detailing
The course will focus on design, morphology detailing, and the construction of a pavilion on a chosen site. The course will develop through hands-on workshops and will focus on acquiring knowledge through making, (Technne), understanding the morphological transformation of a given geometric packing, and building using readily available materials. The process consists of building and testing physical models that simulate the actual pavilion in order to ultimately realize the desired design. The second half of the semester will focus on using lightweight construction materials to fabricate the pavilion’s actual components, including structural elements, molded components, and joints, which are required for the pavilion’s final assembly. Additionally, students will learn to organize design and fabrication teams, control design and production schedules, and work with a set budget, which requires keeping track of construction costs and forecasting required procurements, including material quantities takeoff, ordering materials and scheduling deliveries.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 731 Experiments in Structures
This course studies the relationships between geometric space and those structural systems that amplify tension. Experiments using the hand (touch and force) in coordination with the eye (sight and geometry) will be done during the construction and observation of physical models. Verbal, mathematical and computer models are secondary to the reality of the physical model. However these models will be used to give dimension and document the experiments. Team reports will serve as interim and final examinations. In typology, masonry structures in compression (e.g., vault and dome) correlate with 'Classical' space, and steel or reinforced concrete structures in flexure (e.g., frame, slab and column) with 'Modernist' space. We seek the spatial correlates to tensile systems of both textiles (woven or braided fabrics where both warp and weft are tensile), and baskets (where the warp is tensile and the weft is compressive). In addition to the experiments, we will examine Le Ricolais’ structural models held by the Architectural Archives.

ARCH 733 New Materials and Methods
The primary goal of this course is to help students formulate a robust research proposal for their culminating design studio in digital large-scale fabrication and robotics manufacturing using new materials such as carbon fiber and other composites. The course provides a forum for critical discussion of contemporary design practices that is exploratory and speculative in nature. In addition to collaborative thinking and debate students will develop their own research interests to formulate contemporary positions in the making of architecture through the research of materials and their fabrication methods.
Course usually offered in fall term
Corequisite: ARCH 720

ARCH 734 Ecological Architecture - Contemporary Practices
Architecture is an inherently exploitive act - we take resources from the earth and produce waste and pollution when we construct and operate buildings. As global citizens, we have an ethical responsibility to minimize these negative impacts. As creative professionals, however, we have a unique ability to go farther than simply being 'less bad.' We are learning to design in ways that can help heal the damage and regenerate our environment. This course explores these evolving approaches to design - from neo-indigenous to eco-tech to LEED to biomimicry to living buildings. Taught by a practicing architect with many years of experience designing green buildings, the course also features guest lecturers from complementary fields - landscape architects, hydrologists, recycling contractors and materials specialists. Coursework includes in-class discussion, short essays and longer research projects.

ARCH 737 Semi-Fictitious Realms
The pursuit of immersive digital experiences has long been a goal of the computing industry. Early wearable displays designed in the 1960s depicted simple three dimensional graphics in ways that had never been seen before. Through trial and error, digital pioneers reframed the relationship between user and machine, and over the last five decades, have made strides that advanced both the input and output mechanisms we are so comfortable with today. As a field, architecture has been reliant on these advancements to design and document buildings, but these tools still leave the architect removed from the physicality of the design, with their work depicted as 2D lines or 3D planes alone. This course will study the evolutionary advancements made that now allow us to fully inhabit digital worlds through Virtual Reality. Using the HTC Vive and Unreal Engine, students will generate immersive, photorealistic models of unbuilt architectural works and explore digital/physical interactivity. From the terraces of Paul Rudolph's Lower Manhattan Expressway to Boullee's Cenotaph for Newton, the goal of this course is to breathe new life into places and spaces that have, until this time, never been built or occupied.

ARCH 738 The Modern House: Technology Then and Now
In the current age of new fabrication methodologies, methods are emerging for the conception and design of the contemporary house which have radical potential for enclosure, habitation and practices of daily life. This course begins by examining the canonical houses of the original avant-garde - Adolf Loos, Frank Lloyd Wright, Le Corbusier, Mies van der Rohe and Alvar Aalto - on the premise that their houses were working manifestos for rethinking space, form and indeed ideas of life itself - all of which were prompted by new concepts of construction. From this spectrum of issues, contemporary houses and contemporary methods and materials will be studied extensively to develop equally new ideas between matter and quotidian life. As the primary task of the course, students will work in teams to develop highly detailed constructional proposals for a portion of a speculative home.

1.0 Course Unit

ARCH 739 New Approaches to an Architecture of Health
Health care is taking on a new role in our society - with a refocusing from episodic care for those who are ill or symptomatic to providing life-long care geared towards maintaining wellness. These changes are evident across numerous areas of design, from wearable technologies that track and analyze, to large scale building initiatives that aim to create healthier environments and improve lives through strategic planning initiatives. A concrete, physical representation of this paradigm shift can be found within the hospital building itself and in the new manner in which hospitals are looking to serve their patients and care for their clinicians. Simultaneously both public and private spaces, hospitals are complex systems in which sickness, health, hospitality, technology, emergency, and community share space and compete for resource. In order to frame our present day understanding of the role of architecture (and design) in fostering health for individuals and within communities, this seminar will begin with an exploration of the historical and contemporary perspectives on the role of the architect and built environment on health. (Parallels between design and our ever-changing understanding of the biological, social, and environmental causes of sickness and disease will also be explored.) During this conversation, students will read articles and study recently constructed projects in order to examine the ways in which the architects approached these topics through built form. Following from this foundation, students will craft arguments for a new approach to the individual, the community, health, and architecture through a written response and architecturally designed scenario that argues for their perspective on how architecture can and should shape the health of those who inhabit it. Throughout the course, students will engage in weekly readings (and discussions) of critical texts exploring ideas around the role and impact of architecture on health. Various content experts will be included in the course to provide additional insights into key areas of theory and practice in order to lend additional perspectives and ground the conversation.

ARCH 741 Architecture Design Innovation
The mastery of techniques, whether in design, production or both, does not necessarily yield great architecture. As we all know, the most advanced techniques can still yield average designs. Architects are becoming increasingly adept at producing complexity & integrating digital design and fabrication techniques into their design process - yet there are few truly elegant projects. Only certain projects that are sophisticated at the level of technique achieve elegance. This seminar explores some of the instances in which designers are able to move beyond technique, by commanding them to such a degree as to achieve elegant aesthetics within the formal development of projects.

1.0 Course Unit
ARCH 742 Function of Fashion in Architecture
The Function of Fashion in Architecture will survey the history of fashion and the architectural parallels starting from Ancient Civilization to Present. The focus will be on the relevance of garment design, methods and techniques and their potential to redefine current architecture elements such as envelope, structure, seams, tectonics and details. The functional, tectonic and structural properties of garment design will be explored as generative platforms to conceptualize very specific architectural elements. One of the challenges in the course is the re-invention of a means of assessment, the development of notations and techniques that will document the forces and the production of difference in the spatial manifestations of the generative systems.

Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 743 Form and Algorithm
The critical parameter will be to develop the potential beyond finite forms of explicit and parametric modeling towards non-linear algorithmic processes. We will seek novel patterns of organization, structure, and articulation as architectural expressions within the emergent properties of feedback loops and rule-based systems. This seminar will accommodate both introductory and advanced levels. No previous scripting experience is necessary. It will consist of a series of introductory sessions, obligatory intensive workshops, lectures followed by suggested readings, and will gradually focus on individual projects. Students will be encouraged to investigate the limits of algorithmic design both theoretically and in practice through a scripting environment.

Activity: Seminar
1.0 Course Unit

ARCH 744 Postdigital Craft
As we have entered a postdigital era, the dominance of a purely technological approach as a vehicle for design innovation has waned. Questions of substance and disciplinary autonomy have found their way back into the contemporary cultural discourse, enriching the way we examine and deploy advanced technologies towards novel expressions in architecture. This seminar will investigate, through the production of estranged objects, opportunities for design that are being generated at the intersection of machinic and human minds, and speculate on possible futures in which concepts of nature and technology have been inseparably intertwined.

1.0 Course Unit

ARCH 746 Cinema and Architecture in Translation
Cinema and Architecture in Translation is a seminar that will survey key cinematic moments and techniques within the history of film and find new intersections between architecture and narratives. The focus will be on the relevance of mise-en-scene, the background and building figures of architecture and future speculations of the city, yet in relation to narrative dynamics. One of the challenges is to consider techniques that will affect both conceptualization and the production of spatial manifestations using potent visual platforms. Current pre and post-production techniques in film making methods are converging with architectural digital representation. This is an opportunity that provides fertile ground for architects to re-examine the ‘digital’ in a variety of scales in relation to impactful narratives and visualizations. These tools, specifically the technique of ‘matte-painting’ will be explored in this course. There is a rich history in constructing images, speculative worlds and scenes for the film industry. We will explore the parallels between the tools and strategies of cinematic visualization as it relates to advanced architectural image making. Students will have the opportunity to analyze filmic scene making, learn advanced representation and techniques in matte painting and zbrush. Above all this course will engage students in the conceptual as well as practical complementarities of architecture and cinema, while watching some of the best films ever made and the most provocative and insightful books to help process them. An important aspect of this course will be to explore the differences between ‘real’ architecture and the cinematic architecture. The expansive Space and Time in which cinematic architecture is located, creates an incubator where true innovated speculation can occur. This is an advanced representation course that produces 2D images and narrative texts.

1.0 Course Unit

ARCH 747 Robotic Fabrication
Automation and robotics have helped manufacturing increase productivity by 1,500% since 1945 (McKinsey 2017). In contrast, however, construction productivity has remained relatively stagnant during the same time. The construction industry is facing pressure to change. For the robotics industry, construction presents potential use cases and unique applications that can utilize a variety of evolving technologies from drones, ground robotics, teleoperation, machine vision, additive manufacturing, and assistive robotics. These technologies take advantage of the digital revolution and utilize ideas in automobile and aerospace engineering. Our interest in these technologies is that they open new opportunities for design. Robotic fabrication will explore the theory and design of a project that will form a component of the culminating design studio for the MSD AAD program. Theory will be explored through a series of lectures and the design component will focus on a one to one scale fabrication of a project determined by the design studio curriculum.
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
ARCH 748 Architecture and the New Elegance
This design seminar will define and elaborate on the following topics for the digital discourse - the contemporary diagram, technique, structural thinking, systemic thinking and aesthetic projections. Technological innovations establish new status quos and updated platforms from which to operate and launch further innovations. Design research practices continually reinvent themselves and the techniques they use to stay ahead of such developments. Reinvention can come through techniques that have already been set in motion. Mastery of techniques remains important and underpins the use of digital technologies in the design and manufacturing of elegant buildings. But, ultimately, a highly sophisticated formal language propels aesthetics. The repositioning of design intent and the complex order generated by the behavioral techniques of multi-agent systems has implications for the affects which are generated as well as the nature of hierarchy within architecture. The distributed non-linear operation of swarm systems intrinsically resists the discrete articulation of hierarchies within Modern architecture and contemporary parametric component logic. The bottom-up nature of swarm systems refocuses tectonic concerns on the assemblage at the micro scale rather than the sequential subdivision of program or form. The seminar will explore strategies for high population agent models through the use of lightweight algorithmic environments, in particular the Java-based platform Processing.

ARCH 749 Indeterminate Delineations
Architecture has always been closely entangled with modes of vision. Devices ranging from Durer’s perspective machine to the photographic eye have strongly shaped the way we think and design the built environment of our cities. A strange loop is in place here: our world-views provide the development of specific modes of representation, of engagement with the world, and in turn they begin to have an impact in that same world, becoming an active element in the way we understand it. Put more simply, it is the technologies through which we see and experience the built environment that define the way we construct it. In this class, we will focus on visual and physical points as anchors to tie modes of vision with modes of construction. Points play an important role in the history of visuality: if during Impressionism and Pointillism they were devised to delineate the contrast and alignments between what we see and how we see it in an attempt to investigate the mechanics of vision, it was during the post war period that Max Wertheimer’s work at the Berlin School of Gesalt Psychology leveraged them as graphic elements to understand part to whole relationships central to Bauhaus’ design pedagogy. Today, imaging technologies are once again placing points as central elements in the construction of our contemporary visual language, transforming ever-growing datasets of partial images in three dimensional machine readable survey models: it is with points and aggregated clouds that we are constructing the figure of our cities. As such, they become a necessary site of design investigation to move beyond monolithic views of the world. This class leverages the bi-product of scanning technologies - point clouds and image making - to explore inclusive modes of delineations: a visual sensibility to engage with the multifaceted nature of the built environment.

ARCH 750 Parafictional Objects
This representation/design seminar explores the aesthetics of estrangement in realism through various mediums. The reality of the discipline is that architecture is a post-medium effort. Drawings, Renderings, Models, Prototypes, Computations, Simulations, Texts, and Buildings are all put forward by architects as speculative proposal for the reality of the future. Students will explore the reconfiguration of a ‘found object’ in multiple mediums and represent parafictional scenarios in various techniques of realism. At a time when rendering engines enable the production of hyper-realistic images within the discipline without any critical representational agenda, it has become ever more imperative to rigorously speculate on realism.

ARCH 751 Ecology, Technology, and Design
This course will examine the ecological nature of design at a range of scales, from the most intimate aspects of product design to the largest infrastructures, from the use of water in bathroom to the flow of traffic on the highway. It is a first principle of ecological design that everything is connected, and that activities at one scale can have quite different effects at other scales, so the immediate goal of the course will be to identify useful and characteristic modes of analyzing the systematic, ecological nature of design work, from the concept of the ecological footprint to market share. The course will also draw on the history of and philosophy of technology to understand the particular intensity of contemporary society, which is now characterized by the powerful concept of the complex, self-regulating system. The system has become both the dominant mode of explanation and the first principle of design and organization. The course will also draw on the history of and philosophy of technology to understand the particular intensity of contemporary society which is now characterized by the powerful concept of the complex, self-regulating system. The system has become both the dominant mode of explanation and the first principle of design and organization.

ARCH 754 Performance Design Workshop
The workshop applies simulation and diagramming techniques to a series of discrete design projects at different scales. The emphasis is on refinement and optimization of performance based building design. Performance analysis techniques can provide enormous amounts of information to support the design process, acting as feedback mechanisms for improved performance, but careful interpretation and implementation are required to achieve better buildings. Energy, lighting, and air flow are the three main domains covered in the workshop. Students will learn how to utilize domain tools at an advanced level, and utilize them as applications to examine the environmental performance of existing buildings. Using the results of analytical techniques, the students will develop high-performance design strategies in all three domains. Lectures will be given on specific topics each week. A series of analytical class exercises will be assigned to provide students with hands-on experience in using the computer models. A case-study building will be provided at the beginning of the course and students will model different components each week throughout the semester. Every week students present the progress of their work, which will be used to correct methodological and technical issues. ARCH 762 Design and Development
This newly reconstituted course will introduce designers and planners to practical methods of design and development for major real estate product types. Topics will include product archetypes, site selection and obtaining entitlements, basic site planning, programming, and conceptual and basic design principles. Project types will include, among others; infill and suburban office parks, all retail forms, campus and institutional projects. Two-person teams of developers and architects will present and discuss actual development projects. Course usually offered in spring term
Also Offered As: CPLN 643
Activity: Lecture
1.0 Course Unit

ARCH 765 Project Management
This course is an introduction to techniques and tools of managing the design and construction of large, and small, construction projects. Topics include project delivery systems, management tools, cost-control and budgeting systems, professional roles. Case studies serve to illustrate applications. Cost and schedule control systems are described. Case studies illustrate the application of techniques in the field. Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 768 Real Estate Development
This course evaluates 'ground-up' development as well as re-hab, re-development, and acquisition investments. We examine raw and developed land and the similarities and differences of traditional real estate product types including office, R & D, retail, warehouses, single family and multi-family residential, mixed use, and land as well as 'specialty' uses like golf courses, assisted living, and fractional share ownership. Emphasis is on concise analysis and decision making. We discuss the development process with topics including market analysis, site acquisition, due diligence, zoning, entitlements, approvals, site planning, building design, construction, financing, leasing, and ongoing management and disposition. Special topics like workouts and running a development company are also discussed. Course lessons apply to all markets but the class discusses U.S. markets only. Throughout the course, we focus on risk management and leadership issues. Numerous guest lecturers who are leaders in the real estate industry participate in the learning process. Format: predominately case analysis and discussion, some lectures, project visits.
Taught by: Alan Feldman
One-term course offered either term
Also Offered As: REAL 321, REAL 821
Prerequisite: REAL 721 OR FNCE 721
Activity: Lecture
1.0 Course Unit
Notes: Notes: Predominately case analysis, discussion, some lectures, and project visits.

ARCH 771 Professional Practice II
A continuation of ARCH 671. Further study of the organizational structures of architectural practices today, specifically those beyond the architect’s office. The course is designed as a series of lectures, workshops and discussions that allows students and future practitioners the opportunity to consider and develop the analytical skills required to create buildings in the world of practice.

ARCH 791 ARCH Summer Institute: Digiblast
This is a non-credit course for entering Master of Architecture students. The course will cover digital modeling and workflow and will prepare students for techniques used in PennDesign's 500 and 600 level design studios. Course fee: $750.00. Note: course fees apply only to students who are NOT enrolled in ARCH-500. Course enrollment is by permit only. Course usually offered summer term only
Activity: Studio
0.0 Course Units
ARCH 792 ARCH Summer Institute: Advanced Architectural Design Digital Workshop
This is a non-credit course for entering Master of Science in Design: Advanced Architectural Design students. The Digital Methods workshop provides a comprehensive introduction to four elements critical to the workflow of the graduate studios at PennDesign: 3D modeling, scripting, visualization and fabrication. Short daily lectures situating digital technologies in contemporary design practice are followed by hands-on tutorials in Maya and Rhinoceros. The first half of the workshop provides an operative knowledge of the many geometry types, modeling techniques, scripting languages and simulation tools available for studio work. Visualization techniques are also introduced, and students will learn to efficiently produce presentation-quality renderings, animations and technical line drawings from digital models. Students also learn protocols for transferring data between various design software packages and how to create data compatible with PennDesign's digital fabrication equipment. Course fee: $750.00. Course enrollment is by permit only.
Course usually offered summer term only
Activity: Studio
0.0 Course Units

ARCH 793 ARCH Summer Institute: History of Architecture
This is a non-credit course for entering Master of Architecture students. The course will cover western architecture from ancient Egypt to the modern age and will satisfy the history pre-requisite condition for matriculation in the fall. Course fee: $750.00. Course enrollment is by permit only.
Course usually offered summer term only
Activity: Lecture
0.0 Course Units

ARCH 794 ARCH Summer Institute: Physics for Architects
This is a non-credit course for entering Master of Architecture students. The course will cover the following: mechanics, heat, light, sound and electricity. The course will satisfy the physics pre-requisite condition for matriculation in the fall. Course fee: $750.00. Course enrollment is by permit only.
Course usually offered summer term only
Activity: Lecture
0.0 Course Units

ARCH 799 Environmental Building Design Summer Preparatory Workshop
This is a required, non-credit course for entering Master of Science in Design: Environmental Building Design students. The workshop provides an introduction to digital modeling and scripting techniques for environmental performance analysis. Students also learn protocols for transferring data between various design software packages and how to create data compatible with the School of Design's plotting and digital fabrication equipment. Course fee: $750.00. Course enrollment is by permit only.

0.0 Course Units

ARCH 800 Introduction to 3D Programming
ARCH 800 is a two week required introductory course for matriculating RAS students. This course introduces computer programming (Python, Grasshopper, etc.) within a 3D modelling/simulation environment, and introduces students to Penn's ARI Robotics Lab.
Taught by: Ezio Blasetti
Activity: Laboratory
0.0 Course Units

ARCH 801 Material Agencies: Robotics & Design Lab I
The Fall Material Agencies course consists of two half-semester long sections and is supported by two aligned Core Technical Seminars of half-semester length each. Students will typically work in pairs. Section 1: Programmed Matter. Introduces students to a generative approach to digital design and robotic manufacturing with the goal of unifying design and production within one creative process. The studio will commence with students gaining first-hand experience programming and operating Penn's industrial robots. 3d design models will be developed in parallel to fabrication experiments and digital simulations. The design brief will focus on a small scale design prototype that is explored at a micro-scale of resolution relative to normative architectural practice. Material placement and material affect will be considered intrinsic to design expression and integral to considerations of space, form, structure and production concerns. The brief will focus on a small scale object or architectural part design with ornamental features. The course introduces material dynamics, robot programming, 3d modelling and computer programming within design. Section 2: Manipulative Matter explores both robotic fabrication and the use of sensors and actuators within responsive fabricated objects or architectural elements. Design Prototyping involving manipulation-based Manufacture. Eg. Sheet metal folding. This will complement the first studio by requiring more pre-determined design intent, fabrication rationalization and robot sensor and electrical integration. A final design prototype will demonstrate embodied material intelligence - through an integrative approach to material organization, electronic circuitry, production and design. Electronic wiring and parts will be integrated within larger material prototypes through fabrication methods such as: inlays, additive manufacturing, casting, soldering, painting, laser-cutting, or milling.
Activity: Studio
2.0 Course Units
ARCH 802 Material Agencies: Robotics & Design Lab II
This course will leverage knowledge gained by students in the Fall and set an ambitious aim for the experimentation, development and demonstration of a robotically manufactured design prototype that is intrinsically related to a bespoke production process. The end product will involve a 1:1 part or whole, physically fabricated work that will be accompanied by either a live demonstration or video production. During the first half of the semester students will engage in the development of bespoke robotic tooling, sensor and programming capabilities in order to create novel manufacturing processes that explore ideas of intelligent or autonomous manufacturing with an emphasis on responsive or manipulation based processes. Industry processes will be leveraged yet re-cast through creative engagement with manufacturing materials, tools and production operations. Participants will follow a brief that specifies a line of inquiry or scenario, whilst allowing some degree of self-direction. Projects will engage in a speculative and critical approach to architectural design, production and use while leveraging robotics platforms, methods for machine vision, sensing and learning, in addition to an engagement with material dynamics and computer programming within design research. A successful project is expected to: demonstrate a rigorously crafted design artifact; explore novel approaches to design, material fabrication and user engagement, questioning the role and nature of architecture’s physical and cultural contribution; and explore novel forms of robotic production and representation. Some proposals will involve live or filmed demonstrator performances. All projects will require a computer simulation or animation that demonstrates a temporal consideration for design, manufacture or use. The course introduces robot tooling, sensor-feedback procedures, 1:1 material prototyping, and building design with tectonic considerations. Examples of potentially relevant industry processes include: sheet-metal bending, incremental metal forming, additive and subtractive manufacturing.
Activity: Studio
2.0 Course Units

ARCH 803 General Overview of Algorithmic Design and Robotic Fabrication
Directly supports ARCH 801 Material Agencies I: Section 2. This seminar will teach students computer and robot programming skills that will be utilized to deliver a complimentary and integral aspect of design-prototyping and fabrication work. Topics will vary in application to suit the studio brief. Participants will be introduced to the Robotics Lab, and will learn to set up ABB Industrial Robot tasks. Design algorithms will be developed that establish a conceptual relationship to the manufacturing process and attempt to leverage it for creative forms of design expression whilst addressing material and production performance constraints. Examples include computer programming that simulates a material placement and robotic manufacturing process such as additive manufacturing, filament winding or weaving, and utilizes these tasks in a generative design methodology, where design character, variation in material organization is evaluated relative to performance criteria such as material quantities, production time, etc. Submissions will be technical in nature and will also be implemented within ARCH 801 prototypes. The course provides a foundation for more specialist technical development in Semester 2.
Activity: Seminar
0.5 Course Units

ARCH 804 Advanced RAS Programming
This course will support ARCH 802 Material Agencies II with a greater level of technical competency and detail. More ambitious functionality will be developed that will enable student’s greater degrees of freedom and creativity in their engagement with design and production processes. While students will not engage in science/engineering development, research and software developed in such disciplines will be applied within design, fabrication and user occupation orientated scenarios. Topics will vary in application to suit studio briefs and shifting capabilities within industry and academia. Examples include mechanical and electrical design for bespoke robot tooling, use of Computer Vision for real-time sensing and live behavior-based adaptation, machine learning in design or fabrication applications, or deeper engagement in robot communication and control (E.g. Linux ROS Robot programming framework).
Activity: Seminar
1.0 Course Unit

ARCH 805 Introduction to Micro-controllers, Sensor and Actuator Systems
Directly supports ARCH 801 Material Agencies I: Section 2. This seminar will teach participants to design and assemble electronic circuits using sensors/actuators and micro-processors, and to program digital and analogue means of data exchange. Students will develop a closed or open loop reactive system that consists of embedded sensor systems that will operate within the Design Studio project prototype, and utilizes feedback from sensors to drive designed affects (E.g. kinetic, lighting, variations in porosity). The course will consider degrees of control, feedback, energy and force in relation to interactions of matter, space and active bodies (human and non-human). Participants will learn how to design electric circuits, solder and weld these and to integrate circuits with micro-processors, sensors and actuators. Exact equipment and methods will vary over time as these technologies evolve rapidly. At present possible micro-controllers utilized include Arduino, Raspberry Pi, Odroid, Intel Nuc, Atom and others. Sensors such as flex, pressure and proximity sensors will be utilized. Possible forms of actuation include servo and stepper motors, linear actuators, NITinol muscle wire, pneumatic actuators. A Programming Language will be utilized to for the writing of simple control algorithms that clarify how input and output data is processed and acted upon, with a particular focus on leveraging physical world actions within a designed control loop where possible.
Activity: Seminar
0.5 Course Units

ARCH 806 Experimental Matter
This course aims to extend knowledge into state of the art materials, material applications and fabrication methods and contribute research and experimental results towards ARCH 802 Material Agencies II course prototypical projects. Operating predominantly through research and controlled physical experiments, students will develop a material strategy for their ARCH 802 Material Agencies II work, investigating scientific research papers, industry publications and precedent projects in order to develop know-how in materials and material applications. A material application method will be proposed and experimented with to evaluate and develop use within a robotic fabrication process. Submissions will incorporate experimental test results, methods and precedent research documentation.
Activity: Seminar
1.0 Course Unit
ARCH 807 RAS Theory
This seminar provides a theoretical context to the program, relating autonomous robotics and fabrication research to architectural discourse, philosophy, science and technology. The course commences with a historical overview of scientific topics including cybernetics, complexity theory, emergence/self-organization, evolution/developmental biology, behaviour-based robotics. The course also critically assesses present and future societal trajectories in relation to technology, exploring socio-political, ethical and philosophical arguments that concern a broader technological shift that has occurred during the last decade which has given rise to our unquestioned reliance on algorithms within our everyday lives (social media, shopping, navigation), and similar impact from Urban OS’s, Industry 4 and driverless car technologies. Readings cover philosophy, computer science, cybernetics, robotics, sociology, psychology, and will be discussed in relation to their consideration within the domain of architectural design and building technology. Examples include: Blaise Aguera y Arcas, Maurice Conti, Norbert Weiner, Kevin Kelly, Ray Kurzweil, Ed Finn, Donna Haraway, Andre Gorz, Bruce Sterling, Daniel Kahneman, Timothy Morton, Levi Bryant. A theoretical written statement related to ARCH 801 Material Agencies I Section 1 or 2 will be produced by participants within this core seminar.
Activity: Seminar
1.0 Course Unit

ARCH 808 Scientific Research and Writing
Following a framing of architectural design-research and theory in Semester 1, this course aims to provide students with knowledge of state of the art robotics and design taking place in the research community and to introduce methods to evaluate and demonstrate academic research that encompasses both creative and technical work. Submissions will include a technical written statement related ARCH 802 Material Agencies II work, which will be produced by participants under direction within this core seminar. This will train students for additional technical career opportunities and raise the level of discourse and prospects for further research from the program and its participants to a level suitable for continuation within PhD studies.
Activity: Seminar
1.0 Course Unit

ARCH 811 Theories of Architecture
The purpose of this course is to provide to students who are embarking on careers in teaching and scholarship in architecture a re-introduction to some of the principal issues and writings of the architectural theory, as they developed historically from antiquity to the present. In addition to introducing recurring themes and primary texts, this course aims to help students develop the practices that are typical of scholarship, the forms and habits of scholarly inquiry. It is a required course for all incoming Ph.D. and M.S. students.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ARCH 812 Methods In Architectural Research
Methods in Architectural Research is a seminar aimed at first year, second semester PhD and MS students in Architecture who aim to develop their field definition (biblio + statement) and/or research proposal in pursuit of their advanced research degree. The course is also of interest to MArch students interested in advanced forms of academic research. The course will cover the full context of research methods in both the humanities and sciences attendant to architecture. Students will be tasked with identifying and naming a field of study, an initial research question to investigate, a methodology they will employ, and a value proposition for their work.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 813 Qualifying Research
This is an independent study course for first year Ph.D. and M.S. students, supervised by a member of the Graduate Group in Architecture. A course of readings and advisor sessions throughout the semester will result in an independent study paper, which will also be used as the student's qualifying paper for the Qualifying Examination. This research paper will be prepared as if for scholarly publication.
Course usually offered in spring term
Activity: Independent Study
1.0 Course Unit

ARCH 814 The Concept of an Avant-Garde
No historian of architecture has written as intensely about the contradictions of architecture in late-modern society or reflected as deeply on the resulting problems and tasks of architectural historiography as Manfredo Tafuri (1935-1994). For many, the Italian historian's dismissal of 'hopes in design' under conditions of advanced capitalism produced a disciplinary impasse. This in turn led to call tooubler Tafuri · to move beyong his pessimistic and lacerating stance. The seminar will undertake a close reading of one of Tafuri's most complexly conceived and richly elaborated books, The Sphere and the Labyrinth: Avant-Gardes and Architecture form Piranesi to the 1970s. Initially published in Italian in 1980 and translated into English in 1987, the book represents the first effort to define and historicize the concept of an avant-garde specifically in architecture. Its content centers on the radical formal and urban experiments of the first three decades of the twentieth century. Yet Tafuri surprisingly begins his account with the eighteenth-century inventions of Piranesi, and he concludes with an examination of the 'neo-avant-garde' of his own day. In addition to traversing The Sphere and the Labyrinth chapter by chapter - starting with the extraordinary methodological introduction, 'The Historical "Project"'- we shall also read a number of primary and secondary sources on the historical contexts under discussion and consider a number of important intertexts that shed light on Tafuri's position. The objectives of the course are at once historical and historiographic: we shall be concerned both with actual events and with how they have been written into history. Finally, we shall reassess the role of an avant-garde in architecture and compare Tafuri's conception to that advanced in other disciplines. Is the concept of an avant-garde still viable today? Or should it be consigned to the dustbin of twentieth-century ideas? Assignment for first class: read the introduction to The Sphere and the Labyrinth, pp. 1-21, 'The Historical 'Project.' A copy of the book is on reserve at the library. Note: the book is out of print. For future classes please make every effort to purchase a used copy or obtain one via interlibrary loan. Copies of individual chapters will also be made available on our class website.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
**ARCH 815 Research Report**
The candidate for the M.S. in Architecture degree shall prepare a research report in his or her subject of study. The topic of this report must be approved by an advisor. This report will be developed in the independent study courses, undertaken after the eight units of course work has been completed, normally in the summer semester. The purpose of these courses is to give the student an opportunity to synthesize their previous coursework at Penn. Course enrollment is by permit only. Please contact Sarah Lam (ARCH Dept.) at sarahlam@design.upenn.edu.

Course usually offered in fall term
Activity: Independent Study
2.0 Course Units

**ARCH 816 Advanced Topics in Architecture Culture from World War II through 2001**
This seminar will be taught as an advanced section of ARCH 512. It is primarily for students who are in their first year of the PhD program in Architecture but it is open to other upper-level students with instructor permission. In addition to the weekly discussion-format seminar on Tuesday afternoons (1.5 hours), students are also expected to attend the lectures associated with ARCH 512 on Tuesday mornings (10:30-12). Assigned readings will go beyond those on the 512 syllabus to include more complex and sophisticated source material. The subject of both ARCH 512 and 812 is the evolution of the culture of architecture from World War II to the turn of the twenty-first century. Starting with the period of wartime planning and postwar reconstruction in the 1940s, we will move decade by decade up to the present century, considering the transformations of modernist culture under the impact of social, political, technological, and urban changes. We will address the challenges posed to architecture from inside as well as outside the discipline and from around the world, attending to material and ideological developments and to relations between individual protagonists and larger historical and institutional forces. Among the wide range of issues at stake are the impact of research and technology coming out of the world war; the intensifying critique of interwar functionalism and debates over monumentalhumanism, regionalism, history, aesthetics; the effects of suburbanization, expanded mobility, changing demographics, and environmental factors; the phenomena of consumer culture and mass media; the impact of the Cold War and decolonization; the emergence of a ‘global village’ and its intensifying cultural exchanges; the rise of a new architectural avant-garde in the 1960s and the advent of postmodernism; plus more recent ramifications. At the level of theory and methodology, the seminar will be especially concerned with issues of periodization and documentation. We will discuss and debate the question of how ‘architecture culture’ is produced and reproduced at particular moments in history. Seminar discussions will be focused around specific case studies, some to be determined by the instructor, the rest based on in-depth individual research products to be carried out by the members of the class. Each student will work on his or her case-study project over the course of the semester, leading to an in-class presentation and a term paper of 25 pages.
Course usually offered in spring term
Activity: Seminar

**ARCH 851 Field Bibliography**
This course is essentially an independent study, undertaken by doctoral students in preparation for the Candidacy Examination. This course should be taken in conjunction with ARCH 852 after all other courses have been completed. Normally a member of the student’s Dissertation Committee supervises this course.
Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

**ARCH 852 Dissertation Proposal**
This course is essentially an independent study, undertaken by doctoral students in order to write the Proposal for the Dissertation. The Proposal is prepared before and defended during the Candidacy Examination. This course should be taken in conjunction with ARCH 851 after all other courses have been completed. Normally a member of the student’s Dissertation Committee supervises this course.
Two terms. student may enter either term.
Activity: Independent Study

**ARCH 995 Dissertation**
Two terms. student may enter either term.
Activity: Dissertation
1.0 Course Unit

**ARCH 998 Independent Thesis Study**
Activity: Independent Study
1.0 Course Unit

**ARCH 999 Independent Study**
This course enables students to undertake self-directed study on a topic in Architecture, under the supervision of a faculty member. Students are required to make a proposal for the study to the Department Chair, outlining the subject and method of investigation, and confirming the course supervisor at least two weeks prior to the beginning of the semester.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Art & Archaeology of Mediterranean World (AAMW)

AAMW 425 Late Antique Arts
What is ‘Late Antiquity’? In 312 when Roman emperor Constantine inaugurated a Christian empire, ‘Roman’ culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of economic and political upheaval destruction was frequent but partial: Rome long survived, Constantine's 'new Rome,' Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition, in forms and styles: we critique art-historical models for Late Antique 'decline', analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies, and new peoples invading an already polyethnic Empire, interacted with Greco-Roman Late Antiquity: we visit arts of Sasanian and Islamic empires east and south, and 'barbarian' domains in Africa, Europe, Britain. Media discussed, for sacred, courtly, domestic, funerary, political and civic spaces and structures include not just 'monumental' painting, mosaic, sculpture, but also objects of silver, ceramic, ivory, figural textile, glass; painted books; jewelry; mass-media artifacts like coins and pilgrimage tokens. We also study Late Antique texts on art, objects, space and viewership.
Taught by: Ann Kuttner
Course not offered every year
Also Offered As: ARTH 425, CLST 425
Activity: Lecture
1.0 Course Unit

AAMW 427 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts (gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.
Taught by: Kuttner, Rose
Course not offered every year
Also Offered As: ARTH 427, CLST 427
Activity: Lecture
1.0 Course Unit

AAMW 428 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from the 4th century BCE and the rise of Alexander the Great's Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt's defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt, (Etrusco) Anatolia, the Mideast and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites. It is desirable for undergraduates to have experience of research. Of interest to students in AAMW, ARTH, ANCH, CLST, VLST, NELC, RELS and ANTH.
Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 428
Activity: Lecture
1.0 Course Unit

AAMW 430 Medieval Islamic Art & Architecture
An introduction to the major architectural monuments and trends, as well as to the best-known objects of the medieval (seventh-to fourteenth-century) Islamic world. Attention is paid to such themes as the continuity of late antique themes, architecture as symbol of community and power, the importance of textiles and primacy of writing. Suitable for students of literature, history, anthropology as well as art history.
Taught by: Holod
Course not offered every year
Also Offered As: ARTH 435, NELC 489
Activity: Lecture
1.0 Course Unit

AAMW 509 Curatorial Seminar
Curatorial seminars expose students to the complexity of studying and working with objects in the context of public display. With the guidance of faculty and museum professionals, students learn what it means to curate an exhibition, create catalogues and gallery text, and/or develop programming for exhibitions of art and visual/material culture. Students in this curatorial seminar will participate in planning the exhibition of Japanese illustrated books from the Tress collection to be held in the Kislak Center in spring 2021. Japanese illustrated books are celebrated for their high technical and aesthetic achievements and the collection spans all genres and formats over more than three hundred years. In this course, students will be thinking through how we can tell the story of the illustrated book in Japan in the space of the exhibition. We will think through how these materials related to their broad and largely literate audiences, and we'll pay close attention to artists, genres, technologies, and subjects. Students will conduct research, prepare didactic labels, write entries for the catalogue, and develop the website and symposium as part of their curatorial practice. There will be extensive hands-on engagement with examples from the Kislak collections as well as practical training in papermaking, materials, and binding. By permission only.
Course not offered every year
Also Offered As: ARTH 501, NELC 501
Activity: Seminar
1.0 Course Unit
AAMW 512 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.
Course not offered every year
Also Offered As: ANTH 514, CLST 512
Activity: Seminar
1.0 Course Unit

AAMW 514 Kinship and Connectivity in the Roman World
An individual's life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.
Taught by: Brent
Also Offered As: ANCH 315, ANTH 315, CLST 315, CLST 515
Activity: Seminar
1.0 Course Unit

AAMW 519 Ancient Greek Colonies
This seminar examines the archaeology of Greek colonization from the Late Bronze Age to ca. 600 B.C. These colonies were highly diverse in their motivations, physical settings, and political and social structures, as well as their relationships with mother cities and the new worlds they inhabited. Emphasis is placed on the colonial experience as a cross-cultural and negotiated process. In addition to archaeological and epigraphic evidence, literary and historical traditions are examined. Colonies from the southern Balkan peninsula, Black Sea, Ionia, northern Africa, and Magna Graecia will be the focus of reading, reports, and discussion.
Taught by: Tartaron
Course not offered every year
Also Offered As: CLST 532
Activity: Seminar
1.0 Course Unit

AAMW 520 Topics in Aegean Bronze Age
Topic varies from semester to semester. This Fall 2019 seminar will discuss The Architecture of Akrotiri, Thera. Around 3,500 years ago a culture thrived on the small island of Thera in the Cycladic islands of Greece. Excavations have revealed a portion of a sophisticated town with multi-storied buildings decorated with elaborate fresco programs and equipped with all the necessities to support a cosmopolitan community with trade contacts reaching throughout the Mediterranean, Egypt, and the Ancient Near East. Due to the Bronze Age eruption of the volcano at the center of the island, Akrotiri is known as the best-preserved Late Cycladic site in the Aegean. In this class, we will examine the architecture and frescoes, or wall paintings, of Akrotiri and explore what they reveal to us about this unique group of people. Students will write and present two research papers to the class.
Course not offered every year
Also Offered As: ARTH 520
Activity: Seminar
1.0 Course Unit

AAMW 522 Topics in Ancient Iranian Art
Topic varies. Spring 2018: This seminar will focus on the environmental, archaeological and textual record for settlement in the Persian/Arabian Gulf region from the Neolithic to the pre-Islamic Late Antique. Emphasis will be on the settlement history and material culture. Special attention will be paid to the close interaction of the local communities on the Arabian side of the Gulf with those on the Iranian/Indus valley side. The patterns of sea faring trade and interaction from Mesopotamia, Iran, Indus Valley and beyond will be considered. It is possible that this class will take a site trip to the UAE during the spring break, if the logistics can be arranged. Instructors: Professors Holly Pittman (Penn), Peter Magee (Bryn Mawr College).
Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 522
Activity: Seminar
1.0 Course Unit

AAMW 523 Narrative in Ancient Art
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of ‘Western’ art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask ‘who is the story for, and why?’ for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors’ expertise in Mesopotamian visual culture, and in the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.
Taught by: Kuttner/Pittman
Also Offered As: ARTH 523, CLST 523, NELC 523
Activity: Seminar
1.0 Course Unit
AAMW 524 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty.
Taught by: Rose
Also Offered As: CLST 524
Activity: Seminar
1.0 Course Unit

AAMW 525 Topics in Greek and Roman Art
Topics vary from semester to semester. For the Spring 2020 semester, the topic will be Violence and Ancient Mediterranean Art. The Greek and Roman world was fascinated by representing humans and beasts enduring physical and psychological pain, and images of violence inflicted by mortal and supernatural beings alike. These images occur in art of all kinds, consumed both privately and publicly, emerging in the domestic, religious, military and political sphere. They had a range of aims, from affording emotional catharsis, building political cohesion or enforcing social norms, to generating religious awe or confidence in empire -- and giving entertainment. As we explore this corpus, we can ask: what might be the roots of such preoccupation with the art of violence and pain in the 'Classical tradition' and its post-antique legacy? Many modern cultures exhibit similar fascination: how far can modern reactions to and theories about such images be guides to reconstructing ancient viewership? How can ancient texts and histories help us in this interdisciplinary project?
Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 525, CLST 521
Activity: Seminar
1.0 Course Unit

AAMW 526 Material & Methods in Mediterranean Archaeology
This course is intended to familiarize new graduate students with the collections of the University of Pennsylvania Museum of Archaeology and Anthropology and the wide range of scholarly interests and approaches used by faculty at Penn and neighboring institutions, as well as to provide an introduction to archaeological methods and theory in a Mediterranean context. Each week, invited lecturers will address the class on different aspects of archaeological methodology in their own research, emphasizing specific themes that will be highlighted in readings and subsequent discussion. The course is divided into five sections: Introduction to the Mediterranean Section; Collections; Method and Theory in Mediterranean Archaeology; Museum Work; and Ethics. The course is designed for new AAMW graduate students, though other graduate students or advanced undergraduate students may participate with the permission of the instructor.
Taught by: Tartaron
Course usually offered in fall term
Also Offered As: CLST 526
Activity: Seminar

AAMW 529 Topics in Roman Architecture
Topic varies. Spring 2018: This seminar offers a critical assessment of digital Roman architecture studies. What has been accomplished and learned over the last generation since the Digital Turn, and where is the field of Roman architecture being taken? Points of focus include several landmark case studies, such as digital reconstructions of the city of ancient Rome, and threatened cultural heritage sites in Syria. The course will involve readings of significant texts, in class discussions and presentations lead by the seminar’s participants, and testing and critiquing of a limited set of digital tools.
Taught by: Stinson
Course not offered every year
Also Offered As: ARTH 529
Activity: Seminar
1.0 Course Unit

AAMW 530 Topics in Byzantine Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: The Icon. This seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasm and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity.
Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 532
Activity: Seminar
1.0 Course Unit

AAMW 533 Topography and Monuments of Ancient Rome
An intensive exploration of Rome’s urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required.
Taught by: Rose
Course not offered every year
Also Offered As: CLST 328, CLST 533
Activity: Seminar
1.0 Course Unit
AAMW 534 Problems in Greek and Roman History: Archaic and Classical
This seminar is designed to introduce students to the major issues and problems in the early history of Ancient Greece, from approximately 776 BC until the reign of Alexander the Great nearly four hundred and fifty years later. A number of these issues have been the subject of academic investigation for decades: the historicity of Homeric society, the origins of democracy, the reforms of Kleisthenes, the population of Athens, for example. The investigation of many of these problems, however, has received fresh impetus from newer approaches: demographic studies of the Aegean islands, the dating of 5th century inscriptions, the study of Solons poetry have all yielded new insights and transformed our understanding of Greek culture and history. In this seminar we will explore many older questions from newer perspectives, with attention to such recent topics as gender, ethnicity and subaltern studies. The result is a view of Greece that is both more familiar and yet equally more alien.
Taught by: McInerney
Course not offered every year
Also Offered As: ANCH 535
Activity: Seminar
1.0 Course Unit

AAMW 536 Archaeology of Anatolia
This class is devoted to the archaeology and history of Anatolia (ancient Turkey) from the beginning of the Bronze Age (3000 BC) to the end of the Byzantine period (1453 AD). Emphasis will be placed on the great empires in Anatolia (Hittite, Phrygian, Lydian, Urartian, Persian, Roman, and Byzantine), and on the great cities (Troy, Sardis, Ephesus, Constantinople). The course is intended to complement the major exhibit on Gordion, the Phrygians, and Anatolian archaeology that will open at the Penn Museum in February of 2016 and run for 10 months.
Taught by: Brian Rose
Course not offered every year
Also Offered As: ARTH 421, CLST 336, NELC 121, NELC 521
Activity: Lecture
1.0 Course Unit

AAMW 539 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.
Taught by: Chantel White
Course not offered every year
Also Offered As: ANTH 533, CLST 543, NELC 585
Activity: Seminar
1.0 Course Unit

AAMW 540 Topics in Medieval Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be Migrating Materiality: Ivory Carving Around the Mediterranean. The craft of ivory carving around the Mediterranean is contingent upon the availability of imported elephant tusks, from either South East Asia or, more frequently, from the African continent. The shifting winds of trade routes offer an interpretive paradigm with which to analyze ivory objects from a variety of different cultural groups: the lack or abundance of ivory and the resulting desire for or surfeit of the material shapes its meaning and use around the Mediterranean basin. The study of ivory objects as they migrate around the Mediterranean allows us to investigate the rich intercultural interactions between Eastern and Western Christians, and both of these with the Islamic world. This course focuses on an object-oriented knowledge of ivory artifacts, with a strong emphasis on the collections at the Penn Museum, the Philadelphia Museum of Art, and other area collections.
Taught by: Guerin
Course not offered every year
Also Offered As: AFRC 538, ARTH 540
Activity: Seminar
1.0 Course Unit

AAMW 542 Ancient Seafaring
This course explores ships, seafaring, and seafarers of the ancient Greek World from the Bronze Age (Minoans and Mycenaeans) to the Age of Alexander (Hellenistic period). Sources include shipwrecks and related artifacts, artistic representations, and ancient documents and literature. The emphasis is not so much on the technical aspects of shipbuilding and navigation as on the ways that seafaring shaped Greek history and connected the Greeks to a wider world through trade, warfare, colonization, and adventure.

AAMW 546 Museum Internship
The Museum Internship in the spring consists of a research project with Penn Museum collections based on a proposal designed and approved during the fall AAMW Proseminar (AAMW 526). It is offered to, and is a requirement for, first-year AAMW graduate students only.
Course usually offered in spring term
Prerequisite: AAMW 526
Activity: Independent Study
1.0 Course Unit
AAMW 550 Archaeologies of Subalternity
This course addresses the various areas and approaches to 'otherness' in ancient Mediterranean archaeology, and the power dynamics of oppression. We'll not only examine disempowerment around cultural identity, class, gender and sexuality, and race/ethnicity, but we'll spend equal time pondering how those subjects have been studied - or ignored - by classical archaeologists. The power relationships both inherent in the subjugation of various kinds of people in the ancient world, and in the academic discourses around them, are the themes of the course. While this course will be focused on the Bronze Age through late antique Mediterranean, those with other period/interests are most welcome. Students will be asked to bring their own interests to the course, which help shape the course. Upper-level courses in archaeology, anthropology, or ancient history are recommended prior to enrollment.
Taught by: Bowes
Course not offered every year
Also Offered As: CLST 305, CLST 605
Activity: Seminar
1.0 Course Unit

AAMW 552 Archaeometallurgy Seminar
This course is designed to provide an in-depth analysis of archaeological metals. Topics to be discussed include: exploitation of ore and its transformation to metal in ancient times, distribution of metal as a raw material, provenance studies, development and organization of early metallurgy, and interdisciplinary investigations of metals and related artifacts like slag and crucibles. Students will become familiar with the full spectrum of analytical procedures, ranging from microscopy for materials characterization to mass spectrometry for geochemical fingerprinting, and will work on individual research projects analyzing archaeological objects following the analytical methodology of archaeometallurgy.
Taught by: Moritz Jansen
Also Offered As: ANTH 552, CLST 552, NELC 587
Activity: Seminar
1.0 Course Unit

AAMW 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends.
Taught by: Erickson
Course not offered every year
Also Offered As: ANTH 557, LALS 557
Prerequisite: ANTH 241 OR ANTH 600
Activity: Seminar
1.0 Course Unit

AAMW 559 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as 'myth' entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.
Taught by: Kuttner, Brisman
Also Offered As: ARTH 559, CLST 559, COML 559, GRMN 559
Activity: Seminar
1.0 Course Unit

AAMW 562 Intro to Digital Archaeology
Digital methodologies are an integral part of contemporary archaeological practice, and demand that archaeologists hold a new set of skills and knowledge fundamentals. This course will expose students to a broad range of digital approaches through a review of relevant literature and through applied learning opportunities centered on a course project. The technological underpinnings, best practices, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include: aerial and satellite remote sensing, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D modeling and visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.
Taught by: Herrmann
Also Offered As: ANTH 362, ANTH 562, CLST 362, CLST 562, NELC 362
Activity: Lecture
1.0 Course Unit
AAMW 572 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Taught by: Herrmann
Course offered spring; even-numbered years
Also Offered As: ANTH 572, CLST 572, NELC 572
Activity: Laboratory
1.0 Course Unit

AAMW 604 Troy and Homer
An interdisciplinary seminar focusing on the city of Troy both as an archaeological site and as the setting of the legendary Trojan War. We will consider Homer's Iliad (with selected sections read in Greek) together with the topography and archaeology of the site of Troy in order to address a series of interrelated questions: What are the points of continuity and discontinuity between the stories told by the literary tradition and the material record? How do both types of evidence contribute to our understanding of political relations and cultural interactions between Greece and Anatolia in the Bronze Age? How do Hittite sources bear on our reconstruction of the events behind the Troy legend? How have the site and the poem contributed to each other's interpretation in the context of scholarly discovery and debate? We will give some attention to modern receptions of the Troy legend that deliberately combine material and textual elements, such as Cy Twombly's 'Fifty Days at Iliam' and Alice Oswald's 'Memorial: An Excavation of Homer's Iliad.' The seminar will include a visit to the site of Troy during the Spring Break.
Taught by: Murnaghan
Also Offered As: CLST 604, GREK 604
Activity: Seminar
1.0 Course Unit

AAMW 606 Pastoral Nomadism in the Past and Present
Pastoral nomadism is a 'third way' of human subsistence separate from farming and foraging. It is a sustainable human adaptation to grassland and arid environments practiced through particular technologies and domesticated animals. This course begins by examining the human ecology and social organization that emerge from mobile ways of life, drawing on modern, ethnographic, and archaeological examples of pastoral nomadic groups in the Middle East and Central Asia. Academic readings and ethnographic films will form the basis of discussions about several larger themes, including: the origins of pastoral nomadism and horse riding; the development of dairy-based foods and human adaptations allowing the digestion of lactose; the historical relationship between mobile groups of pastoralists and territorial states; popular perceptions of nomads in various forms of historical and modern media; and the influence of ideas about nomads on modern senses of heritage and nationalism in the Middle East and Central Asia.
Taught by: Hammer
Also Offered As: ANTH 108, NELC 106, NELC 606
Activity: Seminar
1.0 Course Unit

AAMW 611 Greek Epigraphy
An introduction to the principles and practices of Greek Epigraphy. Study of selected Greek inscriptions.
Taught by: McInerney
Course not offered every year
Also Offered As: ANCH 611, CLST 611, GREK 611
Activity: Seminar
1.0 Course Unit

AAMW 613 Landscapes and Seascapes of the Ancient Mediterranean
The Mediterranean environment is both diverse and unique, and nurtured numerous complex societies along its shores in antiquity. This seminar offers a primer on theoretical and methodological approaches to studying landscapes and seascapes of the Mediterranean from the Bronze Age to the early modern era, at scales from local to international and on land and underwater. Concepts from processual, post-processual, and current archaeologies will be considered, and field techniques including excavation and surface survey, remote sensing and geophysics, GIS modeling, and ethnography/ethnoarchaeology are examined. Course content and discussion focus on case studies that illustrate how these tools are used to reconstruct the appearance and resources of the natural environment; overland and maritime routes; settlement location, size, function, and demography; social and economic networks; and agricultural, pastoral, and nomadic lifeways. Seminar participants will develop case studies of their own geographical and chronological interest.
Taught by: Tartaron
Course not offered every year
Also Offered As: CLST 313, CLST 613
Activity: Seminar
1.0 Course Unit

AAMW 618 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
Taught by: Silverman
Also Offered As: ANCH 068, ARTH 218, ARTH 618, NELC 068, NELC 668
Activity: Lecture
1.0 Course Unit
AAMW 622 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age. Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 222, ARTH 622, NELC 222, NELC 622
Activity: Lecture
1.0 Course Unit

AAMW 624 Art of Mesopotamia
The class presents a survey of the art and archaeology of Mesopotamia beginning with the appearance of the first cities and ending with the fall of the Assyrian Empire in the seventh century BCE. It presents the major artistic monuments of Mesopotamian culture, embedding them in their historical context. Focus is placed in particular on the interactions with surrounding cultures of Iran, Central Asia, the Caucasus, the Persian Gulf and Anatolia in order to decenter the discourse from a strictly Mesopotamian perspective. The format is lecture; assignments involve reading response papers; there are in-class midterm and final exams. Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 224, ARTH 624, NELC 224, NELC 624
Activity: Lecture
1.0 Course Unit

AAMW 625 Greek Art and Artifact
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers' emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society. Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 225, ARTH 625, CLST 220
Activity: Lecture
1.0 Course Unit

AAMW 626 Hellenistic and Roman Art and Artifacts
This course surveys the political, religious and domestic arts, patronage and display in Rome's Mediterranean, from the 2nd c. BCE to Constantine's 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire. Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 226, ARTH 626, CLST 221
Activity: Lecture
1.0 Course Unit

AAMW 628 Greek Art and Architecture
Introduction to the art of building and city planning in the ancient Greek world, 7th-1st c. BC. Emphasis on concepts of organizing space, on issues of structure, materials, decoration, proportion, and the Mycenean and eastern heritage as well as on theory and practice of urbanism as reflected in ancient cities (Athens, Pergamon, Alexandria) and writings (Plato, Aristototle, and others). Excursions to the Penn Museum and Philadelphia. No prerequisites. Taught by: Zarmakoupi
Course not offered every year
Also Offered As: ARTH 228, ARTH 628, CLST 245
Activity: Lecture
1.0 Course Unit

AAMW 630 Etruscan Art & Archaeology in the Penn Museum
The Etruscans, who spoke a language unlike any others known, were cast by their Greek and Roman rivals as outsiders and enemies: pirates, lovers of luxury, loose women. Today we must rely on the archaeological evidence of painted tombs, decorated Tuscan temples and massive engineering works to correct the picture. The course will survey a millennium (1st millennium BCE) of Etruscan culture through archaeological sites, works of art and everyday material culture, especially illustrated with objects in the collection of the Penn Museum. An additional insight into Italic culture comes from tomb groups excavated for the Museum at the Faliscan settlement of Narce. Students will gain familiarity with the societies of pre-Roman Italy through close study of their vases, jewels, arms, armor, textiles and tools, and even their very bones, and discover a surprising amount of Etruscan heritage surviving today. Taught by: Turfa
Course not offered every year
Also Offered As: CLST 335, CLST 635
Activity: Lecture
1.0 Course Unit

AAMW 632 Byzantine Art and Architecture
This course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium—a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts: political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the pagan Greco-Roman past; and the changing nature of Byzantium's interactions with neighboring cultures. Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 232, ARTH 632
Activity: Lecture
1.0 Course Unit
AAMW 633 Eastern Medieval Architecture
This lecture course examines major architectural developments in the eastern Mediterranean between the 4th and 14th centuries CE. The focus is on the Byzantine Empire, with its capital at Constantinople. Lectures also devoted to related developments in the Caucasus (Armenia and Georgia), early Russia, the Balkans (Bulgaria and Serbia), Sicily and under the Normans, the Crusader states. Parallel developments in early Islamic architecture are used for comparative purposes. The course examines evidence for religious and secular buildings, as well as urbanism and settlement patterns.
Taught by: Ousterhout
Course not offered every year
Also Offered As: ARTH 233, ARTH 633
Activity: Lecture
1.0 Course Unit

AAMW 635 Introduction to Visual Culture of the Islamic World
A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.
Course not offered every year
Also Offered As: ARTH 235, ARTH 635, NELC 285, NELC 685, VLST 235
Activity: Lecture
1.0 Course Unit

AAMW 640 Medieval Art
An introductory survey, this course investigates painting, sculpture, and the ‘minor arts’ of the Middle Ages. Students will become familiar with selected major monuments of the Late Antique, Byzantine, Carolingian, Romanesque, and Gothic periods, as well as primary textual sources. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects. Discussions focus especially on several key themes: the aesthetic status of art and the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.
Course not offered every year
Also Offered As: ARTH 240, ARTH 640
Activity: Lecture
1.0 Course Unit

AAMW 646 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI's ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.
Taught by: Hammer
Course usually offered in fall term
Also Offered As: ANTH 346, NELC 346, NELC 646
Activity: Lecture
1.0 Course Unit

AAMW 647 Archaeological Fieldwork in Southern Iraq
After several decades of closure to foreign researchers, the heartland of the world's earliest cities (southern Iraq) has reopened for archaeological expeditions. This course is a seminar for graduate students who will conduct fieldwork in Spring 2019 at two major Mesopotamian cities, Ur (Tell al-Muqayyar) and Lagash (Tell al-Hiba), as part of Penn-led expeditions. This course is a seminar for graduate students who will conduct fieldwork in Spring 2019 at two major Mesopotamian cities, Ur (Tell al-Muqayyar) and Lagash (Tell al-Hiba), as part of Penn-led expeditions. This course is a seminar for graduate students who will conduct fieldwork in Spring 2019 at two major Mesopotamian cities, Ur (Tell al-Muqayyar) and Lagash (Tell al-Hiba), as part of Penn-led expeditions. Activity: Lecture
1.0 Course Unit

AAMW 698 Prospectus Workshop
Designed to prepare graduates in any aspect of study in the ancient world to prepare for the dissertation prospectus. Course will be centered around individual presentations and group critique of prospectus’ in process, as well the fundamentals of large-project research design and presentation.
Taught by: Wilker
Course usually offered in spring term
Also Offered As: CLST 698
Activity: Seminar
1.0 Course Unit
Notes: Graduate students in Classical Studies, Ancient History, and AAMW
AAMW 700 Geoarchaeology
In this course, students will learn the basic concepts of earth systems and explore the ways that archaeologists use various environmental sciences (e.g., geomorphology, limnology, palynology, and dendroclimatology) and paleoecological modeling in their research. The course will include lectures and laboratory activities on the basics of geology, including surficial geology, rock and mineral identification, geomorphology and soils, sedimentation and stratigraphy, as well as a systematic review of depositional environments and their archaeological potential. A series of archaeological case studies will illustrate the application of these concepts in real-world field archaeology.
Taught by: Tartaron and Magee
Also Offered As: CLST 700
Activity: Seminar
1.0 Course Unit

AAMW 701 Proseminar In Methods in the History of Art
The meanings we ascribe to art works of any culture or time period are a direct result of our own preoccupations and methods. This colloquium will give both a broad overview of contemporary debates in the history of art—including such issues as technologies of vision, feminism, gender and sexuality studies, globalization, the pictorial turn or material/visual culture—and locate these methods within art history’s own intellectual history, as well as the history of aesthetics. The course will consist of wide-ranging weekly readings and discussion, and also clarify such key terms as iconography, formalism, connoisseurship, and the Frankfurt and Vienna Schools.
Course not offered every year
Also Offered As: ARTH 701
Activity: Seminar
1.0 Course Unit

AAMW 702 Greek Sanctuaries
Sanctuaries remain an important focal point for the study of Greek religion. Both as sites for worship, dedication, oracular activity and other cult activity and as sites for the mediation of elite and state competition sanctuaries are, along with the polis, the most essential structuring institutions of Greek life. This seminar takes a selection of larger and smaller extra-urban sanctuaries and examines their growth, articulation and function.
Taught by: McInerney
Course not offered every year
Also Offered As: ANCH 702, CLST 702
Activity: Seminar
1.0 Course Unit

AAMW 705 Ethnoarchaeology: Greece
Ethnoarchaeology involves distinctive theoretical and methodological approaches to the study of living societies for the explicit purpose of shedding light on archaeological questions. In this seminar, we will review the intellectual history of ethnoarchaeology in North America and Europe, and explore case studies from Greece, the wider Mediterranean, and beyond. Among the topics will be analogy, cross-cultural comparison, experimental archaeology, oral history research, and archaeologically oriented ethnographic fieldwork. Students will create a proposal for ethnoarchaeological fieldwork in their area of interest in NSF or Wenner-Gren format, to be critiqued by the instructor and their peers.
Course not offered every year
Also Offered As: CLST 705
Activity: Seminar
1.0 Course Unit

AAMW 706 Archaeology of the Hellenistic Period in Italy, Greece, and Asia Minor
A survey of the archaeology of the Hellenistic period (331-31 BCE) across the Mediterranean, with a focus on Rome, Magna Graecia, Greece, and western Asia Minor. The course will stress the interactions among cities and kingdoms during the Roman Republic and Greek Hellenistic periods, especially the second century B.C. Students will work with relevant objects in the Pea Museum’s Mediterranean Section.
Taught by: Rose

Also Offered As: ARTH 706, CLST 706
Activity: Seminar
1.0 Course Unit

AAMW 715 Archaeology of Troy
An introduction to the archaeology of Troy, in northwestern Turkey. The course will focus on the results of excavations at the site in 1988, although the earlier excavations of Schliemann, Dorpfeld, and Blegen will also be considered. The course will cover a broad chronological span—from the early Bronze age through the late Roman period, and will include Greek, Roman, and Medieval attitudes toward Troy and the Trojan legend.
Taught by: Rose
Course not offered every year
Also Offered As: CLST 715
Activity: Seminar
1.0 Course Unit

AAMW 720 Topics in Aegean Art
Topic varies. Fall 2019: During the short period of the Neo Sumerian Empire at the end of the third millennium BCE, Mesopotamian concepts of kingship were crystallized through images, buildings, and textual creations. This seminar will examine this central institution from many points of view that invite cross historical and cross-cultural consideration.
Taught by: Pittman

1.0 Course Unit
AAMW 726 The Archaeology of Greece and Asia Minor in the Archaic and Classical Periods

An examination of new discoveries and conflicting interpretations in the archaeology of Greece and Asia Minor between the seventh and fourth centuries B.C.E. Both sides of the Aegean will receive equal attention, and emphasis will be placed on sanctuaries, settlements, and cemeteries.

Taught by: Rose
Course not offered every year
Also Offered As: ARTH 726, CLST 711
Activity: Seminar
1.0 Course Unit

AAMW 732 Topics in Byzantine Art and Architecture

Topic varies. Spring 2018: The recent ‘return’ to the object across the humanities and social sciences has brought to the fore concerns with the nature of material things, their operation in the world, and their entanglement with humans. This seminar will introduce you to some of the key theoretical writings on the object and material culture and will ask you to interrogate their relevance for the discipline of art history. Our focus will be on the Middle Ages, but depending on the specific interests of the seminar’s participants, we may venture into other historical periods and cultural domains. Topics to be addressed include the social life of things; agency; materiality; the relic; the gift; the miniature; and the question of the human/nonhuman divide.

Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 732
Activity: Seminar
1.0 Course Unit

AAMW 737 Islamic Architecture

This seminar will address the problems of studying architecture in the Islamic world. Considered will be issues of architectural design, regional and trans-regional constructional traditions, structural know-how and innovation, patronage and use. The examples discussed will be mainly religious and social service complexes. Attention will be paid to the manner of transmission of architectural design knowledge and constructional skill.

Taught by: Holod
Also Offered As: ARTH 737
Activity: Seminar
1.0 Course Unit

AAMW 738 Topics in Islamic Archaeology

Topic varies. Spring 2017: This seminar will trace the development of the field from one that was centered largely on the recovery of major monuments to one in which issues of daily life, demography, chronology and the study of settlement patterns have come to play a major role. The seminar will review work in the major zones of the Islamic world: Central Asia, Iran, Iraq, Anatolia, Syria, Palestine, Egypt, North Africa I (Libya-Tunisia), North Africa II (Algeria-Morocco), Spain. Of special interest this semester will be the study of landscape archaeology and settlement patterns. The seminar will discuss changes in patterns of settlement, trade and material culture 650 - 1300 CE in different areas of the Islamic world, concentrating on sites in Iran, Syria and North Africa.

Taught by: Holod
Course not offered every year
Also Offered As: ARTH 738, NELC 731
Activity: Seminar
1.0 Course Unit

AAMW 740 Topics in Medieval Art

Topic varies. Spring 2015: Among the functional genres shaping religious imagery in the Middle Ages and Renaissance, the altarpiece is arguably the most important, and many of the most famous panel paintings that hang today in museums originated as components of altarpieces. The altarpiece in the Latin church bridged the divide between clergy and laypeople, between cult and devotion, between public acclaim and private interests. Such altarpieces developed into extraordinarily dynamic vehicles for staging the religious image, akin to mural painting (in its potential for narrative elaboration), and manuscript illumination (in its potential for interchanging and juxtaposing imagery). As an umbrella for diverse research projects in both medieval and Renaissance art, this seminar affords an overview of the origins, development and articulation of the altarpiece as a functional and pictorial genre in European art, on both sides of the Alps. It also seeks to provide students with the materials and practical training—technical, scholarly, interpretative—required to study altarpieces as visual, narrative, and material totalities.

Art History (ARTH)

ARTH 070 Latina/o Literature and Culture

This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs’ experience in the U.S.

Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer Latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.

ARTh 100 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small sitting devoted to a significant intellectual endeavor. Specific topics be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings https://www.college.upenn.edu/node/403.
One-term course offered either term
Also Offered As: CIMS 016, ENGL 017, URBS 106
Activity: Seminar
1.0 Course Unit
Notes: For Freshmen Only

ARTh 101 World Art and Civilization Before 1400
This course serves as a double introduction to the History of Art. First it is a survey of the ancient world that lays the foundation for the History of Art across the whole Eastern Hemisphere. Across this enormous timespan and geographical spread, an emphasis will be placed on moments of interaction, as well as analogies. Secondly, through this overview of the Ancient world up to around 1400, the basic skills that serve the student in the study of the History of Art will also be developed: close looking, understanding plans, the basics of iconography, questions of stylistic development, among others. This course fulfills Sector III: Arts and Letters and counts towards the History of Art major and minor requirements.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ARTh 102 World Art: 1400 to Now
This course is an introduction to the visual arts in a global context over the period from the early 1400s to the present. The content of the class varies according to the expertise of the instructors but will introduce students to selected and significant moments in artistic production in both the Western and Eastern hemispheres. Offering a broad historical overview of key techniques, movements, and artists, this course will cover aspects of art production around the world during an era of increasing economic exchange, colonization, and industrialization. Looking at painting, sculpture, architecture, and prints, as well as new media such as photography and film, the course will respond to the following questions: How does artistic practice change in this period? Who owns art? What is the role of the artist in society, and where is art made, exhibited, and consumed? Other topics to be covered are art’s crucial role in the period’s political debates and social transformations, including modernization and technological advances, as well as art criticism’s import in forming public opinion. An introduction to art history, this course offers a wholly new perspective on the arts and cultures in this era of artistic innovation. This course fulfills Sector III: Arts and Letters and counts towards the History of Art major and minor requirements.
For BA Students: Arts and Letters Sector
Taught by: Dombrowski, Kim, Shaw, Davis

Also Offered As: VLST 232
Activity: Lecture
1.0 Course Unit

ARTh 103 Art and Civilization in East Asia
Introduction to major artistic traditions of China and Japan and to the methodological practices of art history. Attention given to key cultural concepts and ways of looking, in such topics as: concepts of the afterlife and its representation; Buddhist arts and iconography; painting styles and subjects; and more broadly at the transmission of styles and cultural practices across East Asia. Serves as an introduction to upper level lecture courses in East Asian art history cultures. If size of class permits, certain sessions will be held in the Penn Museum or the Philadelphia Museum of Art.
For BA Students: Arts and Letters Sector
Taught by: Davis, Steinhardt
Course not offered every year
Also Offered As: EALC 013, VLST 233
Activity: Lecture
1.0 Course Unit

ARTh 104 Introduction to Art in South Asia
This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as ‘traditional’ or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe and diverse. This course introduces the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: SAST 200, SAST 500, VLST 234
Activity: Lecture
1.0 Course Unit

ARTh 106 Architect and History
The built environment shapes our lives and this course tackles its underpinning design principles and qualities as well as social and cultural contexts. It is an interpretative look at the built environment or, more precisely, at the ways in which monuments and cities are designed, represented, perceived and construed over time. It introduces students to the interrelated fields of architecture, art history, and urbanism and explores great architectural monuments and cities from the modern to the ancient period, from the US across Europe and from the Mediterranean to Asia. We will assess the built environment as culturally meaningful form and examine a body of historical and cultural material relevant to its interpretation. In doing so, the course seeks to foster a critical understanding of the cultural and artistic processes that have influenced architectural and urban design. The focus will be on understanding these works as results of skilled workmanship as well as social and cultural products. We will tackle ancient and modern perceptions of these monuments and cities by analyzing form, design, structure and by addressing their perceptual qualities through 3D reconstructions and virtual environments, as well as sketchbook assignments. This course fulfills Sector IV, Humanities and Social Sciences. It cannot be taken pass/fail and must be taken for a regular grade. All assignments (6 sketchbook assignments and 2 papers) have to be completed and both exams attended, in order to pass the course.
For BA Students: Humanities and Social Science S
Taught by: Zarmakoupi
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
ARTH 127 The Material Past in a Digital World
The material remains of the human past—objects and spaces—provide tangible evidence of past people's lives. Today's information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today's world and for discussing the human consequences of these new technologies and data. We will discuss information technology's impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology's role in the preservation of the past in today's turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

Also Offered As: ANTH 127, CLST 127, HIST 127, NELC 187
Activity: Lecture
1.0 Course Unit

ARTH 212 Cities and Temples in Ancient India
The wooden architecture of ancient India's cities is represented in relief carvings from Buddhist religious monuments of the early centuries A.D. and replicated in remarkable excavated cave cathedrals. This course will trace that architectural tradition, its transformation into a symbolic vocabulary for a new structure, the Hindu temple, and the development of the temple in India from ca. 500-1500 A.D.

Taught by: Meister
Course not offered every year
Also Offered As: ARTH 612, SAST 201, SAST 501
Activity: Lecture
1.0 Course Unit

ARTH 213 Arts of Japan
This course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age.

Taught by: Davis
Course not offered every year
Also Offered As: ARTH 613, EALC 157, EALC 557
Activity: Lecture
1.0 Course Unit

ARTH 214 Arts of China
A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China's Bronze Age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting. Prerequisite: Graduate students may take this course as EALC 527 and should see the instructor to discuss additional requirements for graduate credit.

Taught by: Steinhardt, Davis
One-term course offered either term
Also Offered As: ARTH 614, EALC 127, EALC 527
Activity: Lecture
1.0 Course Unit

ARTH 217 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting style forms the basis of analysis, and themes such as landscape and narrative are considered with regard to larger social and cultural issues. The class pays particular attention to the construction of the concepts of the 'artist' and 'art criticism' and their impact on the field into the present. Visits to look at paintings at the University of Pennsylvania Museum, PMA and/or local collections.

Taught by: Steinhardt
Course not offered every year
Also Offered As: ARTH 617, EALC 227, EALC 627
Activity: Lecture
1.0 Course Unit
Notes: Also fulfills General Requirement in History & Tradition for Class of 2009 and prior.

ARTH 218 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.

1.0 Course Unit
ARTH 220 The Ancient Maya: Integrating Material, Text, and Image

Ancient Maya studies is one of the most dynamic and innovative fields in world archaeology today. Emerging as a true historical archaeology only in the past three decades, the decipherment of Maya script now provides a powerful complement and counterpoint to both traditional excavation data and new remote sensing technologies. Equally, the reading of images, and their interaction with texts and artifacts, forms a vital part of our interest in the broader humanistic concerns of worldview and the transcendent—where our primary interest lies in gaining access to past mentalities. This course will provide a comprehensive introduction into current knowledge of the Ancient Maya, with a recurring methodological focus on how different types of evidence are integrated to assemble a persuasive ‘portrait of the past.’ This scope of this process is unique in the ancient Americas, since only the Maya offer us the opportunity to read their own descriptions of the world two millennia or more in the past. Geographically, we will be looking at the greater Yucatan Peninsula, which today covers parts of southeastern Mexico, the whole of Guatemala and Belize, and the western extremities of Honduras and El Salvador. Since archaic times (before 1200 BCE) this has been occupied by speakers of the Mayan language group, and millions of people identified as Maya by that means continue to do so today (despite popular notions to the contrary, they have never ‘disappeared’). No prior knowledge of archaeology or art history is necessary. The course structure is one 3-hour session per week, consisting of a lecture followed by group discussion in seminar-style. Additionally, in Week 6 there will be a virtual tour of the new Mexico and Central American Gallery at Penn Museum. This will introduce the class to the issues of disseminating scholarship and building narratives that are accessible to the wider public.

ARTH 222 Art of Ancient Iran

This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age.

Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 622, ARTH 622, NELC 222, NELC 622
Activity: Lecture
1.0 Course Unit

ARTH 224 Art of Mesopotamia

The class presents a survey of the art and archaeology of Mesopotamia beginning with the appearance of the first cities and ending with the fall of the Assyrian Empire in the seventh century BCE. It presents the major artistic monuments of Mesopotamian culture, embedding them in their historical context. Focus is placed in particular on the interactions with surrounding cultures of Iran, Central Asia, the Caucasus, the Persian Gulf and Anatolia in order to decentr the discourse from a strictly Mesopotamian perspective. The format is lecture; assignments involve reading response papers; there are in class midterm and final exams.

Taught by: Pittman
Course not offered every year

Activity: Lecture
1.0 Course Unit

ARTH 225 Greek Art and Artifact

This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers’ emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.

Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 625, ARTH 625, CLST 220
Activity: Lecture
1.0 Course Unit

ARTH 226 Hellenistic and Roman Art and Artifacts

This course surveys the political, religious and domestic arts, patronage and display in Rome’s Mediterranean, from the 2nd c. BCE to Constantine’s 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.

Course not offered every year
Also Offered As: AAMW 626, ARTH 626, CLST 221
Activity: Lecture
1.0 Course Unit

ARTH 232 Byzantine Art and Architecture

This course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium—a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West. Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts: political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the pagan Greco-Roman past; and the changing nature of Byzantium’s interactions with neighboring cultures.

Taught by: Drpic

Activity: Lecture
1.0 Course Unit
ARTH 233 Eastern Medieval Architecture
This lecture course examines major architectural developments in the eastern Mediterranean between the 4th and 14th centuries CE. The focus is on the Byzantine Empire, with its capital at Constantinople. Lectures also devoted to related developments in the Caucasus (Armenia and Georgia), early Russia, the Balkans (Bulgaria and Serbia), Sicily and under the Normans, the Crusader states. Parallel developments in early Islamic architecture are used for comparative purposes. The course examines evidence for religious and secular buildings, as well as urbanism and settlement patterns.

ARTH 237 Berlin: History, Politics, Culture
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany.
The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin. All readings and lectures in English.

1.0 Course Unit

ARTH 240 Medieval Art
An introductory survey, this course investigates architecture, painting, sculpture, and the 'minor arts' of the Middle Ages. Students become familiar with selected major monuments of the Romanesque and Gothic periods, primarily in Western Europe as well as relevant sites around the Mediterranean. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects and monuments. Discussions focus especially on several key themes: the role of luxury in the medieval west; the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.
Taught by: Guerin
Course not offered every year
Also Offered As: AAMW 640, ARTH 640
Activity: Lecture
1.0 Course Unit

ARTH 245 Gothic Architecture: Gold and Stone
Key monuments of the Middle Ages, the Gothic cathedrals of Western Europe present a synthesis of the theological, economic, and social developments of the twelfth through fourteenth centuries. A harmonious marriage between technology and aesthetics, of political power and imagination, these immense and ingenious structures are as famous for their sculptural programs as they are for the liturgies that animated their spaces. Students will also be introduced to local uses of Gothic in Philadelphia architecture to better understand the lived experiences of these built manifestations of transcendence.
Taught by: Guerin
Course not offered every year
Also Offered As: AAMW 645, ARTH 645
Activity: Lecture
1.0 Course Unit

ARTH 250 Michelangelo and the Art of the Italian Renaissance
An introduction to the work of the Renaissance artist Michelangelo (1475-1564)-his sculptures, paintings, architecture, poetry, and artistic theory-in relation to his patrons, predecessors, and contemporaries, above all Leonardo and Raphael. Topics include artistic creativity and license, religious devotion, the revival of antiquity, observation of nature, art as problem-solving, the public reception and function of artworks, debates about style, artistic rivalry, and traveling artists. Rather than taking the form of a survey, this course selects works as paradigmatic case studies, and will analyze contemporary attitudes toward art of this period through study of primary sources.
Taught by: Guerin
Course not offered every year
Also Offered As: ARTH 650
Activity: Lecture
1.0 Course Unit
ARTH 254 Global Renaissance and Baroque
An introduction to transcultural encounters within and beyond early modern Europe, 1450-1600. Topics include: the theory and historiography of global art; artistic relations between Venice, the Byzantine and Ottoman Empires, and islands in the Eastern Mediterranean; Portugal's overseas mercantile network in Africa and Asia; and the Baroque in Latin America, with emphasis upon Brazil. Our discussions focus on these paradigmatic case studies so as to question the language and terms we use to characterize confrontations between native and foreign, the self and the other.

Course not offered every year
Also Offered As: ARTH 654
Activity: Lecture
1.0 Course Unit

ARTH 258 Early Modern Japanese Art and the City of Edo
Study of the major art forms and architecture of Tokugawa (or Edo) period (1603-1868). In this course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the reinvention of classical styles, and patronage will be raised. May include some visits to PMA, Penn Museum, or other local collections.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 658, EALC 150, EALC 550
Activity: Lecture
1.0 Course Unit

ARTH 261 Northern Renaissance Art
This course critically examines concepts traditionally associated with the Renaissance by focusing on the exchange of artistic ideas throughout the Holy Roman Empire and across different media, such as the altarpieces of Jan van Eyck, the expressive drawings of Albrecht Durer and Hans Baldung Grien, the peasant studies of Pieter Bruegel and the prints of satirists who wished to remain anonymous. The material is organized thematically around four topics: religious art as piety and politics; antiquity as a source of tradition and imagination; the formulation of a public discourse that exposed social threats; and the distinctiveness of artistic claims of individual achievement. A motif throughout the course is the question of how the survival of fragments may be presented in museum contexts as parts standing in for an absent whole. We will also consider how historians approach designs for works of art now lost or never completed. Encouraging encounters with art and artifacts around the city, assignments focus on objects in Philadelphia collections.
Taught by: Brisman
Course not offered every year
Also Offered As: ARTH 661
Activity: Lecture
1.0 Course Unit

ARTH 262 Netherlandish Art
Dutch and Flemish painting in the 15th and 16th centuries with special emphasis on the contributions of Robert Campin, Jan van Eyck and Roger van der Weyden, Bosch, and Bruegel. Also included are topics on the development of prints as well as the dialogue with Italian art.
Course not offered every year
Also Offered As: ARTH 662, DTCH 261
Activity: Lecture
1.0 Course Unit

ARTH 267 Latin American Art
The numerous traditions of Latin American art have been formed from the historical confluence of Indigenous, European, African, and Asian cultural traditions, each one impacting the others. This course serves as an introduction to these hybrid New World art forms and movements by both providing a large chronological sweep (1492-present) and focusing on several specific countries, including Brazil, Mexico, Cuba, Peru, and Argentina.
Taught by: Shaw, Kim
Course not offered every year
Also Offered As: ARTH 667, LALS 267, LALS 667
Activity: Lecture

ARTH 270 The Modern City
A study of the European and American city in the eighteenth, nineteenth, and twentieth centuries. Emphasis is placed on the history of architecture and urban design; political, sociological, and economic factors also receive attention. The class considers the development of London, St. Petersburg, Washington, Boston, Paris, Vienna and Philadelphia.
Taught by: Brownlee, D.
Course not offered every year
Also Offered As: ARTH 670, URBS 276
Activity: Lecture
1.0 Course Unit

ARTH 271 Modern Architecture, 1700-1900
The history of western architecture, ca. 1700-1900, when architecture was transformed to serve a world that had been reshaped by political and industrial revolutions. Topics to be considered include the Rococo, the English Garden, Palladianism, Romanticism, neo-classicism, the picturesque, the Greek and Gothic Revivals, and the search for a new style.
Taught by: Brownlee, D.
One-term course offered either term
Also Offered As: ARTH 671
Activity: Lecture
1.0 Course Unit

ARTH 273 History of Photography
A history of photography and theories of photography from 1839 to the present. Photography's origins are rooted both in artistic desire and technological ingenuity. Some of photography's inventors identified more as artists than engineers. At many points in the history of the medium, the question remains open whether new forms of artistic expression are driven by new technologies, or whether new technologies emerge to fulfill the desires of artistic imagination. This class will address photography's relationship with painting, print, and drawing. It will examine the effect of photography on portraiture, landscape, depictions of motion, and abstraction. We will also investigate the changing cultural perception of photography as an artistic medium from the 19th to the 21st century.
Taught by: Vershbow
Course not offered every year
Also Offered As: ARTH 673, VLST 273
Activity: Lecture
1.0 Course Unit
ARTh 274 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

Taught by: Shaw, Staff
Course not offered every year
Also Offered As: ARTH 276, ARTH 676
Activity: Lecture
1.0 Course Unit

ARTh 276 Impressionism
Impressionism opened the pictorial field to light, perception, science, modernity, bourgeois leisure and famously the material qualities of paint itself. This course will survey the movement’s major contexts and proponents—Manet, Monet, Morisot, Cezanne, Gauguin, Van Gogh, Rodin—from its origins in the 1860’s to its demise in the 1890’s, as well as its subsequent adaptions throughout the world until World War I. Particular attention is paid to the artists’ critical reception and the historical conditions which allowed one nation, France, to claim the emergence of early Modernism so firmly for itself. The course also analyzes the effects of the rapidly changing social and cultural fabric of Paris, and its affects on artistic developments. We also look outside of France’s borders to Germany and Britain.

Taught by: Dombrowski
One-term course offered either term
Also Offered As: ARTH 676
Activity: Lecture
1.0 Course Unit

ARTh 277 The Rise of Modernity: Arts of the 19th Century
The nineteenth century is often considered as fast-paced, politically volatile and new-media obsessed as our own age. This course explores the nineteenth century’s claim to have produced the first truly modern culture, focusing on the visual arts and metropolitan spaces of Europe and North America in their intellectual and social contexts. Stretching from the American and French Revolutions to the eve of World War I, topics to be covered include: the rise of capitalist and industrialist culture, art and revolutionary upheaval, global travel and empire, the origins of modernist art and architecture, and new media such as stereoscopes, iron and glass construction, and photography. Major artistic personalities of the age, from Jacques-Louis David and Gustave Courbet to Claude Monet and Vincent Van Gogh, and from Friedrich Schinkel and, Baron Haussmann to Frank Furness and Frank Lloyd Wright, are discussed. Each lecture will be followed by a brief period of discussion, and regular field trips take students to examine art and architecture first hand, in the museums and on the streets of Philadelphia.

Taught by: Brownlee, Dombrowski
Course not offered every year
Also Offered As: ARTH 677
Activity: Lecture
1.0 Course Unit

ARTh 278 American Art
This course surveys the most important and interesting art produced in the United States (or by American artists living abroad) up through the 1950s. This period encompasses the history of both early and modern art in the U.S., from its first appearances to its rise to prominence and institutionalization. While tracking this history, the course examines art’s relation to historical processes of modernization (industrialization, the development of transportation and communications, the spread of corporate organization in business, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and the cultural changes these developments entailed. In these circumstances, art is drawn simultaneously toward truth and fraud, realism and artifice, science and spirituality, commodification and ephemerality, nationalism and cosmopolitanism, individualism and collectivity, the past and the future, professionalization and popularity, celebrating modern life and criticizing it.

Taught by: Leja, Shaw
One-term course offered either term
Also Offered As: ARTH 678
Activity: Lecture
1.0 Course Unit
Notes: Satisfies Cultural Diversity in the U.S. requirement.

ARTh 281 Modern Architecture, 1900-Present
The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time is also devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that are traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.

Taught by: Brownlee

Notes: Fulfills Cross-Cultural Analysis Requirement
**ARTH 285 Modern Art**
The history of modern art is closely tied to and largely unfolds from the history of Western Imperialism. While the technologies made possible by colonial resource extraction produced new ways of looking, modern conceptions of the self and how to represent it developed in dialogue with racialized notions of the other. This course focuses on encounters between the cultures of Africa and Europe, from 1880 to 1960, and on the visual practices that emerged on both continents as a result. Topics of special interest will include racial difference and the birth of photography, colonial masquerade, impressionism, symbols of power in royal arts, cubism, mass marketing and colonial self-fashioning, West African studio photography, world’s fairs and the Musee de l’Homme, Dada and surrealism, Negritude and interwar Paris, anti-aesthetics, colonial art education, National art schools in the age of African independence, humanism and South African photography under Apartheid.

Taught by: Roach

Also Offered As: AFRC 283, ARTH 685
Activity: Lecture
1.0 Course Unit

**ARTH 286 Modern Art: Picasso to Pollock**
Early twentieth-century art in Europe is marked by a number of exciting transformations. This period witnessed the rise of abstraction in painting and sculpture, as well as the inventions of collage, photomontage, constructed sculpture, the ready made and found object, and performance art. Encounters with the arts of Africa, Oceania and other traditions unfamiliar in the West spurred innovations in media, technique, and subject matter. Artists began to respond to the challenge of photography, to organize themselves into movements, and in some cases, to challenge the norms of art through ‘anti-art.’ A new gallery system replaced traditional forms of exhibiting and selling art, and artists took on new roles as publicists, manifesto writers, and exhibition organizers. This course examines these developments, with attention to formal innovations as well as cultural and political contexts.

One-term course offered either term
Also Offered As: ARTH 686
Activity: Lecture
1.0 Course Unit

**ARTH 289 Topics in Film Studies**
This course is an exploration of multiple forces that explain the growth, global spread and institutionalization of international film festivals. The global boom in film industry has resulted in an incredible proliferation of film festivals taking place all around the world, and festivals have become one of the biggest growth industries. A dizzying convergence site of cinephilia, media spectacle, business agendas and geopolitical purposes, film festivals offer a fruitful ground on which to investigate the contemporary global cinema network. Film festivals will be approached as a site where numerous lines of the world cinema map come together, from culture and commerce, experimentation and entertainment, political interests and global business patterns. To analyze the network of film festivals, we will address a wide range of issues, including historical and geopolitical forces that shape the development of festivals, festivals as an alternative marketplace, festivals as a media event, programming/agenda setting, prizes, cinephilia, and city marketing. Individual case studies of international film festivals-Cannes, Berlin, Venice, Rotterdam, Karlovy Vary, Toronto, Sundance among others-will enable us to address all these diverse issues but also to establish a theoretical framework with which to approach the study of film festivals. For students planning to attend the Penn-in-Cannes program, this course provides an excellent foundation that will prepare you for the on-site experience of the King of all festivals.

**ARTH 290 Post War Japanese Cinema**
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how ‘art’ and ‘history’ are being defined in the cinematic context. How other directors also took up these issues, and referred to the ‘big three’ is also be discussed.

Activity: Lecture
1.0 Course Unit
**ARTH 291 East Asian Cinema**

This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g. modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required.

Taught by: Zhou
Also Offered As: CIMS 291, EALC 106, EALC 506
Activity: Lecture
1.0 Course Unit

**ARTH 292 Topics in Digital/New Media**

Topic varies. Spring 2015: Documents are written texts, evidence, inscriptions, and much more. Documentary films have been used to tell stories, share experiences, spread propaganda, resist exploitation, invoke memories, and much more. How can we think of information and meaning in relation to the shared histories of document and documentary? Database management systems based on digital technologies have technically transformed ways of classifying, storing, and aggregating data, but have they really changed our experiences of mediating with our past, present, and future? Issues of agency, memory, representation, performativity, interactivity, and posthumanism are entangled in discussions of databases and archives and our engagement with them. In this course we will relate and juxtapose readings connecting documents, documentaries, and archives. We will read media and cultural theorists such as Lisa Gitelman, Akira Lippit, and Wendy Chun alongside novelists like Franz Kafka and Ismail Kadare. Assignments include one assigned/selected report from field visits to libraries and museums, one reading presentation and blogging assignment, and a final paper or practice-based art project.

**ARTH 294 Art Now**

One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.

Taught by: Silverman
Course usually offered in spring term
Also Offered As: ARTH 694, ENGL 063, GSWS 294, VLST 236
Activity: Lecture

**ARTH 295 Cinema and Media**

This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as ‘cinema,’ to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be a weekly film screening for this course. No knowledge of film theory is presumed.

Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class mid-term; 1 final project.

Taught by: Redrobe
Course not offered every year
Also Offered As: ARTH 695, CIMS 305, COML 299, ENGL 305, GSWS 295
Activity: Lecture

**ARTH 296 Contemporary Art**

Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the ‘canon’ of what counts as important is still in flux, especially for the last twenty years. And the stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists of the post-war period, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.

Course not offered every year
Also Offered As: ARTH 696
Activity: Lecture
1.0 Course Unit
ARTh 300 Undergraduate Methods Seminar
Topic varies. This course, required for history of art majors, acquaints students with a wide variety of historical and contemporary approaches to studying art, architecture, material culture, and visual culture.
Activity: Seminar
1.0 Course Unit

ARTh 302 Methods of Object Study
This seminar introduces students to methods of analyzing the material, physical, and visual aspects of objects in a museum, gallery, or library context. Students will receive training in curatorial practices, as well as close observation and precise descriptive terminology for materials and techniques, and examine essential tools of conservation and technical analysis. For the Spring 2020 semester, this immersive course will stress the importance of developing the visual literacy essential for connoisseurs of works of art on paper. Students will learn to use close observational skills to understand an artist’s choice, the subtle inherent characteristics of the material and physical aspects of works on paper, their context, and significance. The focus will be on examination and discussion of works in the Philadelphia Museum of Art collection and the study of the materials and techniques used by artists from the fifteenth through twenty-first centuries. We will begin by considering what questions to ask about a work of art on paper and approaches and tools for looking and informing our answers. Throughout the semester, students will engage in directed examination, study, and discussion about the physical characteristics of papers, dry drawing materials, watercolors, inks, and print processes, and their implications for the completed artwork. Condition and other conservation considerations will be addressed. Most sessions will take place in the paper conservation laboratory at the Philadelphia Museum of Art. Brief readings for each session will be chosen to educate about the physical aspects of the materials and to stimulate discussion, which will be an important part of the course. Several trips to off-site workshops may be included. Each student will carry out technical examination of two works for written and class presentation. The instructors will be available before or after class or by appointment to continue the discussion and to discuss student projects.

ARTh 305 Spiegel-Wilks Seminar
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: Elijah Pierce’s America: Barnes Foundation Curatorial Seminar This Spiegel-Wilks Curatorial Seminar is offered in collaboration with the Barnes Foundation. Students will be provided with an immersion in curatorial and museum studies and will have the opportunity to interact with curators, scholars, and staff at the Barnes Foundation and Penn, including Executive Director and President Thom Collins, who will co-teach the course. The course syllabus will engage the permanent collection at the museum, where the course will meet weekly. As part of the course, students will also conduct research and contribute to the temporary exhibition opening at the Barnes Foundation that semester, which will feature the work of Elijah Pierce (1892-1984), a self-taught woodcarver whose handcrafted works reacted to life in 20th-century America. One of the first generations of African Americans born into freedom, his remarkable narratives depicted religious parables, autobiographical scenes, episodes from American politics, and figures from popular culture.

ARTh 313 Topics in East Asian Art
Topic varies from semester to semester. This seminar focuses on issues confronting artists from East Asia working in today’s contemporary art world. We will begin by considering the terms that constitute the definition of the ‘modern’ and the ‘contemporary,’ asking how, by whom, and for whom these terms have been configured. By gaining a familiarity with the major styles, media, institutions, artists, and concepts over the twentieth century in East Asia, we will develop tools to analyze how contemporary artists are crossing boundaries, challenging the limits of nationalism, and dealing with shifting political and social grounds. We will take our analysis on site at the Venice Biennale, looking closely at how East Asian artists are participating in, as well as contesting, this influential international exposition. Students will make close studies of national pavilions as well as the international exhibition, generating analyses of these display spaces, and will produce a group website in response to the Biennale as an alternative virtual exhibition. By permission only

**ARTH 315 Topics in Japanese Art**

Topics vary from semester to semester. For the Fall 2020 semester, the topic will be: From Edo to Tokyo. How did a fishing village with a ramshackle castle become an early modern megalopolis over the course of a century? How did that city modernize rapidly, rebuild, and rebuild again to become one of the most technologically advanced urban environments in the world? In this course we will study the development of the city of Edo and its transformation into Tokyo through its urban planning, architecture, and visual arts. Starting with the formation of the shogun’s city, Edo, we’ll look at castles, mausolea, paintings, and other works to track the uses of architecture and art in the service of political power. At the same time, the long-time imperial capital of Kyoto (Miyako) and other regions actively expanded artistic modes, making this one of the most dynamic eras in Japanese art history, and a new urban population supported other forms of architecture and visual arts, including gardens, paintings, ceramics, and prints. In the final weeks of the course, we will consider how Edo became Tokyo, and how the city was rebuilt through modernization and land reclamation as well as after the 1923 earthquake and the Allied firebombing of WWII. And how did the postwar boom once more transform Tokyo, while also retaining traces and spaces of this earlier part of the city? Finally, we’ll think about the ways in which the Olympics in 1964 and 2020 put the city on display.

**ARTH 318 Topics in African Art**

Topic varies. Spring 2017: The dynamic, multi-media character of African art makes it particularly compelling as part of new art historical methodologies. Digital media—photographs, music, video, global mapping systems and 3-D printing–is reshaping understandings of African art history. This seminar critically explores how African art history has been taking shape through digital means, particularly online among professional arts institutions and as employed by contemporary African and African diasporic artists. As we consider how the digital world is shaping African art history we will encounter important issues in regards to ethics, cultural studies, performance theory, race, gender and global definitions of modernity. We will cover a very broad geography and time scale in this course in order to consider different movements of African art through the lens of the digital humanities. Students should bring a laptop to class as we work with WordPress to create web-based galleries, timelines and related critical writing.

**ARTH 320 Aegean Bronze Age Art**

Topics vary from semester to semester. For the Fall 2020 semester, the topic will be ‘Luxury Items.’ Artifacts from the Aegean Bronze Age (3,000-1,100 BCE) such as gold jewelry and vessels, carved stone vases and seals of exotic materials as well as fine pottery and carved ivory are just some of the luxury items recovered from archaeological sites in Greece that clearly demonstrate the cosmopolitan nature of this society. In this class we will examine these luxury items and discuss how these masterpieces were made, the craftspeople who made them, what they may have meant in the context of Aegean society, and what they tell us about trade in this early period with Egypt and the Ancient Near East. From the Shaft Grave items recovered by Heinrich Schliemann at Mycenae to the artifacts from Akrotiri on the island of Thera, the so-called ‘Pompeii of the Aegean,’ it is obvious that luxury was a concept familiar to the prehistoric Greek people.

**ARTH 323 Origins of Art / Origins of Writing**

Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.

ARTh 329 Topics in Roman Art and Architecture
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be "The Last Days of Pompeii." Pompeii is one of the most famous archaeological sites in the world. Not fully excavated and only partially understood, it seems to offer a tantalizing cross-section of Roman architecture, art and society, preserved as it was when the volcano Mount Vesuvious erupted on 24 August 79 CE. At the same time, the rediscovery of Pompeii since the eighteenth century has had a profound impact on western culture. This course will look at the discovery, reception and reinvention as well as 'original' character of Pompeii and other settlements around Vesuvious destroyed at the same time as Pompeii, such as Herculaneum and Stabiae. We will examine the evidence that these Campanian sites provide for Roman architecture, art and society, and the difficulties we face in trying to use it. The course will include a range of material, from the architecture of houses and public areas of the city, tackling the notions of public and private in Roman society, the wall painting in Pompeian houses, examining the forms and functions of Roman frescoes as well as the ways in which they have been viewed in antiquity and modern times, to the shops, workshops and taverns that populated the ancient city and provide evidence for its economy. The approach is thematic, addressing the urban planning and development of the city, the domestic spaces and activities, the public spaces and buildings, and economy of the city, concentrating on case studies, such as the Forum, the House of the Vettii, the textile industry and the Villa of the Papyri. No special prior knowledge of antiquity is assumed.

ARTh 332 Topics in Byzantine Art
Topic varies. Fall 2017: This undergraduate seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasam and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity.

ARTh 339 Sacred Stuff: Religious Bodies, Places, and Objects
Does religion start with what's in our heads? Or are religious commitments made, shaped and strengthened by the people, places, and things around us? This course will explore how religion happens in the material world. We'll start with classical and contemporary theories on the relationship of religion to stuff. We'll then consider examples of how religion is animated not just by texts, but through interactions with objects, spaces, bodies, monuments, color, design, architecture, and film. We'll ask how these material expressions of religion move beyond private faith and connect religion to politics and identity.

1.0 Course Unit

ARTh 340 Topics in Medieval Art
Topics vary from semester to semester. For the Spring 2021 semester, the topic will be: Art in the Time of Dante. 2021 marks the 700th anniversary of the death of Dante Alighieri (1265-1321). While his Divine Comedy is the pinnacle of medieval literary arts, Dante was himself interested in the masterpieces of visual arts of his own time – in Italy and abroad. Prominent artists like Cimabue and Giotto are mentioned in his texts, as well as such notorious figures linked to artistic production as the usurer Reginaldo degli Scrovegni or the mercenary Castruccio Castracani. Dante witnessed some of the most dramatic events of the Middle Ages, from the transfer of the papacy to Avignon to the salacious affair of the Tour de Nesle in France – together we will examine the visual culture of this tumultuous time.
Taught by: Guerin
Activity: Seminar
1.0 Course Unit

ARTh 343 Topics in Medieval Renaissance Art
Topics vary from semester to semester. In Fall 2019, this course will examine the commission, production, and display of art at the Valois courts from the start of the Hundred Years War with England 1330s to the death of Francis I in 1547. During these two centuries, conflict and conquest shaped the making of artwork in profound and sometimes unexpected ways: precarious dynastic claims could be substantiated through carefully crafted images, while foreign artists (including Rosso Fiorentino, Francesco Primaticcio, and Leonardo da Vinci) could be called upon to boost the monarch's prestige. Investigating the role played by objects in cultural diplomacy and propaganda, this course will examine works in a wide variety of techniques including easel painting, manuscript illumination, tapestry, armor, and metalwork, without neglecting less tangible art forms such as feasting, chivalric tournaments, and royal processions. Topics will include the art of the gift, female patronage, the interaction between text and image, and the role of artists in shaping a royal visual identity. The course will include visits to the Philadelphia Museum of Art and an illuminated manuscript handling session at the Free Library of Philadelphia.
Taught by: Herman
Activity: Seminar
1.0 Course Unit
ARTH 350 Topics in Southern Renaissance Art
Topic varies from semester to semester. For the Spring 2021 semester, the topic will be: Chiaroscuro. In this seminar we will explore the artistic technique known as 'chiaroscuro,' the contrast between light and shadow so as to produce effects of volume and relief. While we will grapple with chiaroscuro as deployed in architecture, drawings, and prints, our focus will be all the tenebrist paintings of Caravaggio. If the lit bodies in Caravaggio's paintings project out boldly in relief, does anything remain and speak in the surrounding darkness?
Taught by: Kim
Activity: Seminar
1.0 Course Unit

ARTH 351 Topics in Early Modern Art Theory
Topic varies. Spring 2016: What does it mean to write about art? What are the historical origins of this undertaking? How does language mediate the intellectual, somatic, and cultural rapport between the viewing self and the physical object? As an initial response to these questions we will examine the writings of the Tuscan artist and critic Giorgio Vasari (1511-1574), the biographer of such renowned artists as Leonardo, Raphael, Donatello, and Michelangelo. In addition to considering works of art described in Vasari's accounts, we will pay close attention to his language and its relationship with other types of writing: saints lives, chronicles, legends, guidebooks, anecdotes, jokes, gossip, and sermons. Issues to be explored include: the process of craft and handwork, notions of genius and inspiration, and the relationship between the visual arts and natural environment.
Taught by: Kim
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARTH 362 Topics in Northern Baroque
Topic varies. Spring 2016: Undergraduate seminar focusing on all aspects of the life and works of Rembrandt van Rijn (1606-1669). Students will produce a research paper on any aspect of the artist's life and times, and course sessions will explore self-portraits, artistic development, specific painting types (figure studies, landscapes, portraits), case study individual works (the Paris Bathsheba and the Philadelphia Museum Head of Christ), mythologies, religious works, and the etchings of Rembrandt. Weekly discussions--one short analysis paper in addition to the term research paper.

1.0 Course Unit

ARTH 373 Topics in American Art
Topic varies from semester to semester. For the Spring 2021 semester, the topic will be: Jackson Pollock and Abstract Expressionism. Jackson Pollock is widely considered one of the most important artists of the 20th century. This seminar will examine reasons why his paintings are held in such high regard. We will look closely at his work, study important primary documents - letters, statements, interviews, etc. - and discuss influential interpretations that emerged during his lifetime and since. We will also examine the larger artistic phenomenon that emerged in New York during the 1940s - Abstract Expressionism - in which Pollock's art was central. The paintings of other artists associated with this classification, including Mark Rothko, Barnett Newman, Willem de Kooning, Lee Krasner, and others, will be studied.

ARTH 374 Material History of Photography
Photography is a young medium and yet its history can be traced through differing narratives. Was the medium born in a French patent office, when the sun burned a handprint in silver salt, or when human eyes saw an inverted image projected into a dark space? Does photography reflect the perspective and biases of its inventors and users, or does it re-invent how we see the world? This seminar will take theoretical and material approaches to understanding the histories of photography. In addition to lectures and readings, students will handle original materials and make photographs using historic chemical-processes and styles.

Course offered fall; even-numbered years
Also Offered As: VLST 237
Activity: Seminar
1.0 Course Unit
AR TH 379 Global Media
This course explores a broad media landscape through new critical and conceptual approaches. It is designated as a Benjamin Franklin Seminar. This course maps the footprints of television at a global scale. Adopting comparative approaches, we will be studying TV’s formation of national and global discourses, and thereby recognizing not only television’s impact on processes of globalization, but also the ability of television to matter globally. Working through concepts of ‘broadcasting,’ ‘flow,’ ‘circulation,’ and ‘circumvention,’ the course examines the movement of (and blocks encountered by) television programs and signals across national borders and cultures. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services? Navigating from United States and Cuba to India and Egypt, the readings in the course illuminate how particular televisural genres, institutions, and reception practices emerged in various countries during specific historical periods. We shall be addressing a range of questions: what kind of global phenomenon is television? Can we study television in countries where we do not know the existing local languages? In what different ways (through what platforms, interfaces, and screens) do people in different continents access televisual content? What explains the growing transnational exports of Turkish and Korean TV dramas? What is the need to historically trace the infrastructural systems like satellites (and optical fiber cables) that made (and continue to make) transmission of television programming possible across the world? How do fans circumvent geo-blocking to watch live sporting events? Assignments include submitting weekly discussion questions and a final paper. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Also Offered As: CIMS 378, ENGL 378
Activity: Seminar
1.0 Course Unit

AR TH 383 Queer Modernisms
This course tracks the development of Modernism in America, Western Europe, and specific other locations around the globe, with particular emphasis as to how and why dissident sexualities so often found expression in and as aesthetic dissent. Creating new expressive forms and theories that often seem far removed from any traditional definition of sexuality, queer modernist artists often replaced dangerous forms of social dissent with more prudent forms of formal dissidence. In pursuing these questions, we will place art in its broader social context, seeking to answer such significant problems as how and why forms of artistic representation that were once transparent, eminently legible to all strata of society, increasingly became, under the avant garde, designed to speak only to an elect, to a select few in our culture. We will ask what happens when art deliberately narrows its audience, and how that narrowing is related to questions of sexual difference. What is the relationship between queerness and cultural elitism, a connection generally presumed in popular culture, but rarely examined academically? And finally we will ask about the utility of forms of queer political dissent if those forms remain illegible as queer to a wider audience. Throughout, new methods informed by queer, gender, and critical race theory will be utilized.
Taught by: Katz
Also Offered As: GSWS 315

Activity: Seminar
1.0 Course Unit

AR TH 386 Topics in 20th Century Art
Topic Varies. Spring 2018: In 1913, Marcel Duchamp posed a nebulous question central to much of the art of the twentieth century. As a young painter in Paris, he wrote in a private note: ‘Is it possible to make works that are not of art?’ What are the possibilities of making in a modern world that has alienated labor from its products and commodified the work of art? What is the artist’s role amidst forces of rapid industrialization, mechanization, and automation? Duchamp would continuously explore these questions in a career that stretched into the 1960s, pushing painting, sculpture, and film in new directions through the use of objects not traditionally associated with art a porcelain urinal, a collection of settled dust, a tuft of human hair. This course examines issues of materiality and media in Duchamp’s art and in modernism more broadly. Meetings will include visits to the Duchamp collection at the Philadelphia Museum of Art. Readings will draw from art history, literature, and social and political theory.

1.0 Course Unit
ARTh 393 Topics in Film Studies
Topic varies. Spring 2017: This course will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and strategies of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative. ARTh 425 Late Antique Arts
What is ‘Late Antiquity’? In 312 when Roman emperor Constantine inaugurated a Christian empire, ‘Roman’ culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of economic and political upheaval destruction was frequent but partial: Rome long survived, Constantine’s ‘new Rome’, Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition, in forms and styles: we critique art-historical models for Late Antique ‘decline’, analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies, and new peoples invading an already polyethnic Empire, interacted with Greco-Roman Late Antiquity; we visit arts of Sasanian and Islamic empires east and south, and ‘barbarian’ domains in Africa, Europe, Britain. Media discussed, for sacred, courtly, domestic, funerary, political and civic spaces and structures include not just ‘monumental’ painting, mosaic, sculpture, but also objects of silver, ceramic, ivory, figural textile, glass; painted books; jewelry; mass-media artifacts like coins and pilgrimage tokens. We also study Late Antique texts on art, objects, space and viewership. Taught by: Ann Kuttner
Course not offered every year
Also Offered As: AAMW 425, CLST 425

1.0 Course Unit

ARTh 427 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts (gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society. Taught by: Kuttner, Rose
Course not offered every year
Also Offered As: AAMW 427, CLST 427
Activity: Lecture
1.0 Course Unit

ARTh 428 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from the 4th century BCE and the rise of Alexander the Great’s Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt’s defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt, Anatolia, the Mideast and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites. Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 428

ARTh 435 Medieval Islamic Art & Architecture
An introduction to the major architectural monuments and trends, as well as to the best-known objects of the medieval (seventh-to fourteenth-century) Islamic world. Attention is paid to such themes as the continuity of late antique themes, architecture as symbol of community and power, the importance of textiles and primacy of writing. Suitable for students of literature, history, anthropology as well as art history. Taught by: Holod
Course not offered every year
Also Offered As: AAMW 435, NELC 489
Activity: Lecture
1.0 Course Unit
**ARTH 440 African Art, 600-1400**
This course examines the flourishing civilizations of the African continent between the Fall of the Roman Empire and the dawn of the 'Age of Discovery.' Although material remains of the complex cultures that created exceptional works of art are rare, current archaeology is bringing much new information to the fore, allowing for the first time a preliminary survey of the burgeoning artistic production of the African continent while Europe was building its cathedrals. Bronze casting, gold work, terracotta and wood sculpture, and monumental architecture - the course takes a multi-media approach to understanding the rich foundations of African cultures and their deep interconnection with the rest of the world before the disruptive interventions of colonialism.

Taught by: Guerin
Also Offered As: AFRC 440
Activity: Lecture
1.0 Course Unit

**ARTH 501 Curatorial Seminar**
Curatorial seminars expose students to the complexity of studying and working with objects in the context of public display. With the guidance of faculty and museum professionals, students learn what it means to curate an exhibition, create catalogues and gallery text, and/or develop programming for exhibitions of art and visual/material culture. Students in this curatorial seminar will participate in planning the exhibition of Japanese illustrated books from the Tress collection to be held in the Kislak Center in spring 2021. Japanese illustrated books are celebrated for their high technical and aesthetic achievements and the collection spans all genres and formats over more than three hundred years. In this course, students will be thinking through how we can tell the story of the illustrated book in Japan in the space of the exhibition. We will think through how these materials related to their broad and largely literate audiences, and we’ll pay close attention to artists, genres, technologies, and subjects. Students will conduct research, prepare didactic labels, write entries for the catalogue, and develop the website and symposium as part of their curatorial practice. There will be extensive hands-on engagement with examples from the Kislak collections as well as practical training in papermaking, materials, and binding. By permission only.

**ARTH 507 MLA Proseminar**
This MLA Proseminar course in the history of art explores an aspect of Art History and Theory; specific course topics vary. Proseminars are taught by Penn Standing Faculty and fulfill a core MLA Program requirement. Please see the College of Liberal and Professional Studies Course Guide for a description of current offerings.

Activity: Seminar
1.0 Course Unit

**ARTH 511 Topics in Indian Art**
Topic varies. Fall 2016: Important as texts have been to South Asia’s history, perceptions of the physical world dominate experience within South Asian cultures. Seeing and being seen, vocalizing and hearing, contribute to the construction of meaning. This pro-seminar will approach South Asia’s perceptual world as expressed and tested by art, and methods to frame art as a source of knowledge.

**ARTH 513 Ukiyo-e: Beyond the Great Wave**
In this seminar we will take a closer look at the prints, paintings, and illustrated books produced in the genre known as ‘ukiyo-e,’ the ‘pictures of the floating world.’ We’ll begin by asking how the ‘Great Wave’ became a global icon and we’ll bust the myth of prints being used as wrapping paper. As we learn the history of the genre, from 1600 to ca. 1850, we’ll also make critical interventions into that narrative, asking how ‘ukiyo-e’ became a genre within a larger artistic sphere; how publishers collaborated with designers to construct artistic personae; how illustrated books contributed to knowledge formations; and how concepts of authenticity and authorship remain critical to its understanding. Taught online, this course will also consider how internet resources affect our understanding of the work of art. Students need not have any Japanese language skills, but should have taken related courses in art history or East Asian Studies. Advanced undergraduates and graduate students preferred.

**ARTH 514 Topics in East Asian Art**
Topic varies. Spring 2017: In this seminar, led by Hiromi Kinoshita, The Hannah L. and J. Welles Henderson Associate Curator of Chinese Art, Philadelphia Museum of Art, students will learn about the considerations of a gallery reinstallation relating to the presentation of the Chinese collections at the Philadelphia Museum of Art. With more than 7,000 objects spanning from the Neolithic to the present, the reinstallation aims to display highlights and strengths of the collection that include early ceramics, porcelains, sculpture, furniture and architectural interiors with paintings and textiles. Students will study original objects of different media from the collection and learn about curatorial practices that include examination and analysis, connoisseurship, exhibition layout and label writing. Previous knowledge of Chinese art history and culture would be advantageous.

Taught by: Davis, Steinhardt
One-term course offered either term

ARTh 515 Topics in Japanese Art
Topic varies. Fall 2018: This course will consider Japanese woodblock prints, illustrated books, and paintings from the seventeenth through the twentieth century. Topics include: the formation of 'Ukiyo-e' or 'the pictures of the floating world' as a genre; the development of the publishing system and its audience; specific artists and their works; the reception of Japanese prints in Europe and America; the modern reinvention of the woodblock print; and others. We will also make extensive use of the collections held in the Kislak Center, the Philadelphia Museum of Art, and in other local collections. Assignments may include: close study of a single work; web page development; research paper; regular participation in discussions.

1.0 Course Unit

ARTh 517 History of the Book in East Asia
Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we'll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.

ARTh 519 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the 'black interior,' how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be team taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia's jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.

ARTh 520 Topics in Aegean Bronze Age
Topic varies from semester to semester. This Fall 2019 seminar will discuss The Architecture of Akrotiri, Thera. Around 3,500 years ago a culture thrived on the small island of Thera in the Cycladic islands of Greece. Excavations have revealed a portion of a sophisticated town with multi-storied buildings decorated with elaborate fresco programs and equipped with all the necessities to support a cosmopolitan community with trade contacts reaching throughout the Mediterranean, Egypt, and the Ancient Near East. Due to the Bronze Age eruption of the volcano at the center of the island, Akrotiri is known as the best-preserved Late Cycladic site in the Aegean. In this class, we will examine the architecture and frescoes, or wall paintings, of Akrotiri and explore what they reveal to us about this unique group of people. Students will write and present two research papers to the class.
Course not offered every year
Also Offered As: AAMW 520

ARTh 522 Topics in Ancient Iranian Art
Topic varies. Spring 2018: This seminar will focus on the environmental, archaeological and textual record for settlement in the Persian/Arabian Gulf region from the Neolithic to the pre-Islamic Late Antique. Emphasis will be on the settlement history and material culture. Special attention will be paid to the close interaction of the local communities on the Arabian side of the Gulf with those on the Iranian/Indus valley side. The patterns of sea faring trade and interaction from Mesopotamia, Iran, Indus Valley and beyond will be considered. It is possible that this class will take a site trip to the UAE during the spring break, if the logistics can be arranged. Instructors: Professors Holly Pittman (Penn), Peter Magee (Bryn Mawr College).

1.0 Course Unit
ARTh 523 Narrative in Ancient Art
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of ‘Western’ art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask ‘who is the story for, and why?’ for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors’ expertise in Mesopotamian visual culture, and in the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.

Also Offered As: AAMW 523, CLST 523, NELC 523
Activity: Seminar
1.0 Course Unit

ARTh 525 Topics in Greek and Roman Art
Topics vary from semester to semester. For the Spring 2020 semester, the topic will be Violence and Ancient Mediterranean Art. The Greek and Roman world was fascinated by representing humans and beasts enduring physical and psychological pain, and images of violence inflicted by mortal and supernatural beings alike. These images occur in art of all kinds, consumed both privately and publicly, emerging in the domestic, religious, military and political sphere. They had a range of aims, from affording emotional catharsis, building political cohesion or enforcing social norms, to generating religious awe or confidence in empire -- and giving entertainment. As we explore this corpus, we can ask: what might be the roots of such preoccupation with the art of violence and pain in the ‘Classical tradition’ and its post-antique legacy? Many modern cultures exhibit similar fascination: how far can modern reactions to and theories about such images be guides to reconstructing ancient viewership? How can ancient texts and histories help us in this interdisciplinary project?

ARTh 529 Topics in Roman Architecture
Topic varies. Spring 2018: This seminar offers a critical assessment of digital Roman architecture studies. What has been accomplished and learned over the last generation since the Digital Turn, and where is the field of Roman architecture being taken? Points of focus include several landmark case studies, such as digital reconstructions of the city of ancient Rome, and threatened cultural heritage sites in Syria. The course will involve readings of significant texts, in class discussions and presentations lead by the seminar’s participants, and testing and critiquing of a limited set of digital tools.

ARTh 532 Topics in Byzantine Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: The Icon. This seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasm and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity.
Taught by: Drpic
Course not offered every year
Also Offered As: AAMW 530
Activity: Seminar

ARTh 540 Topics in Medieval Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be Migrating Materiality: Ivory Carving Around the Mediterranean. The craft of ivory carving around the Mediterranean is contingent upon the availability of imported elephant tusks, from either South East Asia or, more frequently, from the African continent. The shifting winds of trade routes offer an interpretive paradigm with which to analyze ivory objects from a variety of different cultural groups: the lack or abundance of ivory and the resulting desire for or surfeit of the material shapes its meaning and use around the Mediterranean basin. The study of ivory objects as they migrate around the Mediterranean allows us to investigate the rich intercultural interactions between Eastern and Western Christians, and both of these with the Islamic world. This course focuses on an object-oriented knowledge of ivory artifacts, with a strong emphasis on the collections at the Penn Museum, the Philadelphia Museum of Art, and other area collections.

ARTh 550 Topics in Southern Renaissance Art
Topic Varies. Spring 2019: This course explores the art of composition in two respects: first, composition as the arrangement of words and sentences into prose; second, composition as the organization of visual elements into a painting. Through the writings of key Renaissance writers, we will explore such issues as the mythical origins of the portrait, the role of precious materials in art, the relationship between figure and ground, and the mechanics of describing a painting into words. Some knowledge of a Romance language (Italian, French, Spanish, or Portuguese) helpful though by no means required.
Taught by: Kim, Staff
Course not offered every year
Activity: Seminar
1.0 Course Unit
**ARTH 552 High Renaissance**

One Italian poet called his garden 'the blending of art and nature.' In a garden, he claimed, 'one cannot discern whether a thing is the work of one or the other; whether it is a piece of natural artifice or artificial nature.' Around the same time, the Italian humanist Jacopo Bonfadio invented the term, terza natura, for gardens seemed to be a 'third nature' somehow in between wild first nature and the second built or man-impounded world of human endeavor. The history of landscape architecture is a history of man's sometimes misguided efforts to 'improve' his surroundings in the search for a beauty that harnessed natural forms through the application of human reason. This seminar will address changing tastes in garden design in Early Modern Europe but will also extend our study further into the past, beyond Europe and forward to the present day. The seminar will introduce themes in garden design and examples from garden history and, in the process, the course will ask the participants to consider different cultural visions of the 'beautiful' or 'appropriate' landscape and ultimately better understand the history of the gardener's art.

**ARTH 559 Myth Through Time and In Time**

The textual and physical remains of Greek and Roman culture and belief as 'myth' entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the myths and the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.

**ARTH 560 Topics in Aesthetics**

Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.

**ARTH 561 Topics in Northern Renaissance**

Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: Privacy and Society. Dutch Painting in the Seventeenth Century. How do paintings offer personal reflection, and how do they construct social bonds? This course will promote new critical approaches to interrogate three areas of Dutch ‘Golden Age’ painting: the development of landscape tradition; the pictorialization of interior domestic spaces; the concept of group portraiture. The burgeoning art market of the seventeenth offered both new forms of intimacy—inviting the beholder into domestic interiors to observe the events of everyday life—and public statements about leadership, social structures, and national identity. Freed from the patronage of churches and courts, Dutch artists produced pictures that could be purchased for the home—landscapes, moralizing genre scenes, still lifes, and portraits. They also made paintings for public spaces such as guild halls and charitable organizations, which map the relationships between members of civic organizations. The aim of this course is to develop a set of critical skills for analyzing the different ways in which seventeenth-century Dutch paintings drew upon shared social values, national identity and economic pride, how they appealed to individual buyer tastes, and how they established ideologies of land rights and concepts of gendered space that may today be critiqued as exclusionary. We will use our current circumstance of ‘social distancing’ as a way to look anew at the question of how paintings of this period used art to construct social bonds. Online in format, this course will address these matters by pairing recent interventions in art history with foundational texts. Part of our ongoing collective work will be the construction of a checklist of paintings, drawings, and prints in the Philadelphia area and its environs in the hopes that we may eventually view these works together or have a shared plan of which works to observe in person as time and access permits. In writing assignments, we will attend to the representation of space, considering domestic interiors, urban settings, church architecture, imperial arenas, and the politicization of landscapes both real and imagined.

Activity: Seminar
1.0 Course Unit
ARTh 573 Topics in Criticism & Theory
Topic for Spring 2021: Cultures of Reading in Imperial Russia
What did it mean to be a reader in imperial Russia? What did people read, and to what ends? How was literacy cultivated, and what were the social implications? In this course, students will read several canonical works of nineteenth-century Russian literature that thematize and foreground the act of reading: as a pursuit undertaken for the betterment of self, society, nation, and world; as a light pastime for the bored or underemployed; but also as an enterprise fraught with potential for moral or civic ruin. In addition to closely investigating allusions to the specific texts and authors read by literary characters, we will also examine the reading habits of our own authors as both consumers and producers of literary culture. We will consider these dynamics against a backdrop of constant fluctuations in educational policies, the book market, and the circulation of texts within and beyond Russia as we work together to develop an understanding of the imperial Russian reading public(s).

ARTh 577 Ecological Thinking in Art and Architecture
This seminar will address the diverse narratives of ecological thinking in the history of art, architecture, and urban planning during the 20th century. The course will contextualize and interrogate contemporary disciplinary discourses as well as historical assumptions related to ecological thinking in art and architectural history and environmentally-conscious practices. By mapping received trajectories of Eco Art, Ecocritical Art History, and Ecological Histories of Architecture and Urban Planning, the course will work from a subtly hidden foundation of eco-historical knowledge that connects these fields of inquiry, while also critiquing these trajectories and seeking to provide more focused and robust alternatives for knowledge production in the present. It aims to attract students from the School of Arts and Sciences and the Weitzman School of Design in a discussion on the interconnected histories of art and architecture during the 20th century.
Taught by: Zarkakoupi
Also Offered As: ARCH 713
Activity: Seminar
1.0 Course Unit

ARTh 579 Topics in American Art
Topic varies from semester to semester. For the Spring 2021 semester, the topic will be: Arts & Crafts Decorative Arts, 1875-1900. This seminar will offer an overview of American decorative arts of the Arts & Crafts Movement, broadly conceived. It would explore the role of British antecedents, the Centennial Exposition as a catalyst for design reform, the growth of different regional centers (New England, the Midwest, the South, California), the movement’s relationship to modernism in the first decades of the 20th century, and its relationship to the Studio Craft movement of the post-World War II era. Issues to be addressed include the challenge of defining Arts & Crafts ‘style(s);’ disconnects between theory and practice, relationships between handicraft and factory production, roles of women and amateurs, and tensions between artistic elites and advocates for social and political reform. Major firms and figures to be highlighted include Rookwood Pottery, Louis Comfort Tiffany, Gustav Stickley, and Frank Lloyd Wright. Special attention will be paid to Arts & Crafts artists in the Philadelphia area: William L. Price and Rose Valley, Henry Chapman Mercer and the Moravian Tile Works, the New Hope School, and Wharton Esherick.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARTh 580 The Sexuality of Postmodern Art
This course is fundamentally concerned with why so many of the defining artists of the postwar generation were queer, indeed such that one could plausibly claim that postmodernism in American art was a queer innovation. Centrally, most of these artists raise the problem, as the above quotes underscore, of authoriality and its discontents. Deploying a combination of social-historical and theoretical texts, we will approach the problem of the disclaiming of authoriality in post-war American art, focusing on the works of John Cage, Robert Rauschenberg, Jasper Johns, Cy Twombly, Robert Indiana, Louise Nevelson, Ellsworth Kelly, Agnes Martin, Leon Polk Smith and not least Andy Warhol. Central to this course will be the continuing salience of the ‘death of the author’ discourse, pioneered in literature by Barthes and Foucault, and in art by every one of the artists we will be examining. What, in short, is the relationship between the rise of an anti-biographical, anti-authorial theoretical framework, and the lived histories of so many queer authors? In asking this question, we are of course self-consciously violating the very premise of one key strand of postmodernist critique—and in so doing attempting to historicize a theoretical frame that is strikingly resistant to historical analysis. (Undergraduates interested in the course should contact Professor Katz.)

ARTh 582 Modern and Contemporary Design
This seminar will provide a brief overview of the history of modern and contemporary design, from the beginning of the Industrial Revolution to today, and engage students in the hands-on analysis of objects through the collections of the Philadelphia Museum of Art, the consideration of the presentation of objects in museums, and the discussion of several important contemporary topics in the study of material culture.
Taught by: Brownlee
Course not offered every year
Activity: Seminar
1.0 Course Unit
ARTH 583 Art, Sex and the Sixties
With a distinct emphasis on post World War II performance, film, sculpture and painting, this course explores the conjunction of the period's systematic revamping of our social/sexual schema with the equally revolutionary ascendency of an artistic postmodernity. And it seeks to explore this dynamic not only within the familiar confines of North America and Europe but towards Latin America and Asia, too, in what was a nearly simultaneous emergence of the erotic as a political force in the 60s. Reading a range of key voices from Brazilian theorist and poet Oswald de Andrade to Frankfurt School philosopher Herbert Marcuse, performance artists Carolee Schneemann, and Yoko Ono, Neo-Freudian theorist Norman O. Brown and lesbian feminist author Monique Wittig, we will examine how and why sex became a privileged form of politics at this historical juncture in a range of different contexts across the globe. Students interested in feminism, gender or queer theory, social revolution, performance studies, post war art and Frankfurt School thought should find the course particularly appealing, but it assumes no background in any of these fields.

1.0 Course Unit

ARTH 584 Topics in Cultural History
Topic for Spring 2016: Making and Marking Time. What is time? In the late 19th century, the questions of how to define time, how to slow down time, and, above all, how to accelerate movement have become focus of the work by many European philosophers who have tried to come to terms with what is now termed as the Industrial Revolution, and the idea of 'progress.' Can time be understood as something continuous, or is it fragmented, proceeding in fits and bursts? Such contemplations on time have deeply influenced writers. Marcel Proust was a reader of Henri Bergson and translated his theories of time into a concept of memory. Thomas Mann has tried to navigate timelessness in a novel set on a 'Magical Mountain.' Virginia Woolf and James Joyce have pictured an entire universe in a single day (Mrs. Dalloway, Ulysses) while early 20th century Italian Futurists made the contemplation of time part of their manifestos. With them, and with expressionist writers in Germany or writers from the DADA movement there elsewhere in Europe, a reckoning with time would also influence their choice of genre and form, writerly practice, and technique. Parallel to these literary experimentation, pictures were set into motion in scholarly studies by Edweard Muybridge and finally in the new medium film; Impressionist painters insisted on picturing fleeting moments, and composers experimented with temporal sequences. We may be able to understand a reconsideration of time as driving force for the modern movement, or simply 'modernity.' In this seminar, we will study a selection of literary texts of the late 19th century and the modernist movement, consider the philosophical background and changes in historiography, and integrate a consideration of the visual arts and music.

ARTH 593 Topics in Cinema and Media
Spring 2016: Taking its title from a recent special issue in the journal Framework, this seminar will engage the where of film and media theory. At a moment when this discourse, often presumed to have roots in Anglo and Western European traditions, is purportedly undergoing a global turn, we will consider how some of film and media theory's key terms and preoccupations including realism, documentary, genre, identity, sound, spectatorship, nation, auteur, and screens are being inflected by expanded geographic, linguistic, aesthetic and cultural frames. We will grapple with some of the logistical challenges, motivations, resistances, and questions that scholars encounter as they attempt to shift film and media theory's borders; compare contemporary efforts to broaden the discourse's geographic horizon with earlier efforts to do the same; and consider what happens to the viewer's sense of space and place in different media environments. Course requirements: full participation in readings, screenings, discussion, and class presentations; 20-25 page research paper + annotated bibliography. Permission of instructor required for advanced undergraduates.
Taught by: Redrobe
Course not offered every year
Also Offered As: CIMS 590, COML 599, ENGL 593

1.0 Course Unit
ARTh 612 Cities and Temples in Ancient India
The wooden architecture of ancient India's cities is represented in relief carvings from Buddhist religious monuments of the early centuries A.D. and replicated in remarkable excavated cave cathedrals. This course will trace that architectural tradition, its transformation into a symbolic vocabulary for a new structure, the Hindu temple, and the development of the temple in India from ca. 500-1500 A.D.
Taught by: Meister
Course not offered every year
Also Offered As: ARTH 212, SAST 201, SAST 501
Activity: Lecture
1.0 Course Unit

ARTh 613 Arts of Japan
This course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 213, EALC 157, EALC 557
Activity: Lecture
1.0 Course Unit

ARTh 614 Arts of China
The goals of this course are to introduce the major artistic traditions of China, from the Neolithic period to the present and to teach the fundamental methods of the discipline of art history. Our approaches will be chronological, considering how the arts developed in and through history, and thematic, discussing how art and architecture were used for philosophical, religious and material ends. Topics of study will include: Shang bronzes: Han concepts of the afterlife; the impact of Buddhism; patronage and painting; the landscape tradition; the concept of the literatus: architecture and garden design; the 'modern' and 20th-century artistic practices; among others.
Taught by: Steinhardt, Davis
Course not offered every year
Also Offered As: ARTH 214, EALC 127, EALC 527
Activity: Lecture
1.0 Course Unit

ARTh 617 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting style forms the basis of analysis, and themes such as landscape and narrative are considered with regard to larger social and cultural issues. The class pays particular attention to the construction of the concepts of the 'artist' and 'art criticism' and their impact on the field into the present. Visits to look at paintings at the University of Pennsylvania Museum, PMA and/or local collections.
Taught by: Steinhardt
Course not offered every year
Also Offered As: ARTH 217, EALC 227, EALC 627
Activity: Lecture
1.0 Course Unit

ARTh 618 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
Taught by: Silverman
Also Offered As: AAMW 618, ANCH 068, ARTH 218, NELC 068, NELC 668
Activity: Lecture
1.0 Course Unit

ARTh 622 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age.
Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 622, ARTH 222, NELC 222, NELC 622
Activity: Lecture
1.0 Course Unit

ARTh 624 Art of Mesopotamia
The class presents a survey of the art and archaeology of Mesopotamia beginning with the appearance of the first cities and ending with the fall of the Assyrian Empire in the seventh century BCE. It presents the major artistic monuments of Mesopotamian culture, embedding them in their historical context. Focus is placed in particular on the interactions with surrounding cultures of Iran, Central Asia, the Caucasus, the Persian Gulf and Anatolia in order to decenter the discourse from a strictly Mesopotamian perspective. The format is lecture; assignments involve reading response papers; there are in class midterm and final exams.
Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 624, ARTH 224, NELC 224, NELC 624
Activity: Lecture
1.0 Course Unit

ARTh 625 Greek Art and Artifact
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers' emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.
Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 625, ARTH 225, CLST 220
Activity: Lecture
1.0 Course Unit
ARTH 626 Hellenistic and Roman Art and Artifacts
This course surveys the political, religious and domestic arts, patronage and display in Rome's Mediterranean, from the 2nd c. BCE to Constantine's 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and the Etruscan and Republican Italy; next we will map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.
Taught by: Ousterhout
Course not offered every year
Also Offered As: AAMW 626, ARTH 226, CLST 221
Activity: Lecture
1.0 Course Unit

ARTH 632 Byzantine Art and Architecture
This course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium—a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts: political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the pagan Greco-Roman past; and the changing nature of Byzantium's interactions with neighboring cultures.
Taught by: Drpic
One-term course offered either term
Also Offered As: AAMW 632, ARTH 232
Activity: Lecture
1.0 Course Unit

ARTH 633 Eastern Medieval Architecture
This lecture course examines major architectural developments in the eastern Mediterranean between the 4th and 14th centuries CE. The focus is on the Byzantine Empire, with its capital at Constantinople. Lectures also devoted to related developments in the Caucasus (Armenia and Georgia), early Russia, the Balkans (Bulgaria and Serbia), Sicily and under the Normans, the Crusader states. Parallel developments in early Islamic architecture are used for comparative purposes. The course examines evidence for religious and secular buildings, as well as urbanism and settlement patterns.
Taught by: Ousterhout
Course not offered every year
Also Offered As: AAMW 633, ARTH 233
Activity: Lecture
1.0 Course Unit

ARTH 635 Introduction to Visual Culture of the Islamic World
A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.
Course not offered every year
Also Offered As: AAMW 635, ARTH 235, NELC 285, NELC 685, VLST 235
Activity: Lecture
1.0 Course Unit

ARTH 640 Medieval Art
An introductory survey, this course investigates painting, sculpture, and the 'minor arts' of the Middle Ages. Students become familiar with selected major monuments of the Late Antique, Byzantine, Carolingian, Romanesque, and Gothic periods, as well as primary textual sources. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects. Discussions focus especially on several key themes: the aesthetic status of art and the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.
Taught by: Guerin
Course not offered every year
Also Offered As: AAMW 640, ARTH 240
Activity: Lecture
1.0 Course Unit

ARTH 650 Michelangelo and the Art of the Italian Renaissance
An introduction to the work of the Renaissance artist Michelangelo (1475-1564)-his sculptures, paintings, architecture, poetry, and artistic theory-in relation to his patrons, predecessors, and contemporaries, above all Leonardo and Raphael. Topics include artistic creativity and license, religious devotion, the revival of antiquity, observation of nature, art as problem-solving, the public reception and function of artworks, debates about style, artistic rivalry, and traveling artists. Rather than taking the form of a survey, this course selects works as paradigmatic case studies, and will analyze contemporary attitudes toward art of this period through study of primary sources.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 250
Activity: Lecture
1.0 Course Unit

ARTH 654 Global Renaissance and Baroque
An introduction to transcultural encounters within and beyond early modern Europe, 1450-1600. Topics include: the theory and historiography of global art; artistic relations between Venice, the Byzantine and Ottoman Empires, and islands in the Eastern Mediterranean; Portugal's overseas mercantile network in Africa and Asia; and the Baroque in Latin America, with emphasis upon Brazil. Our discussions focus on these paradigmatic case studies so as to question the language and terms we use to characterize confrontations between native and foreign, the self and the other.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 254
Activity: Lecture
1.0 Course Unit
ARTH 658 Early Modern Japanese Art and the City of Edo
Study of the major art forms and architecture of Tokugawa (or Edo) period (1603-1868). In this course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the reinvention of classical styles, and patronage will be raised. May include some visits to PMA, Penn Museum, or other local collections.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 258, EALC 150, EALC 550
Activity: Lecture
1.0 Course Unit

ARTH 661 Northern Renaissance Art
Survey of the principal developments in Northern Europe during the ‘early modern’ period, i.e. the transition from medieval to modern art-making during the fifteenth and sixteenth centuries. Principal attention to painting and graphics with additional consideration of developments in sculpture, particularly in the regions of the Netherlands and German-speaking Europe. Attention focused on the works of the following artists: Van Eyck, Bosch, Durer, Holbein, Bruegel, and on topics such as the rise of pictorial genres, urban art markets, Reformation art and art for the dynastic courts of emerging nation-states.
Course not offered every year
Also Offered As: ARTH 261
Activity: Lecture
1.0 Course Unit

ARTH 662 Netherlandish Art
Dutch and Flemish painting in the 15th and 16th centuries with special emphasis on the contributions of Robert Campin, Jan van Eyck and Roger van der Weyden, Bosch, and Bruegel.
Course not offered every year
Also Offered As: ARTH 262, DTCH 261
Activity: Lecture
1.0 Course Unit

ARTH 667 Latin American Art
The numerous traditions of Latin American art have been formed from the historical confluence of Indigenous, European, African, and Asian cultural traditions, each one impacting the others. This course serves as an introduction to these hybrid New World art forms and movements by both providing a large chronological sweep (1492-present) and focusing on several specific countries, including Brazil, Mexico, Cuba, Peru, and Argentina.
Taught by: Shaw, Kim
Course not offered every year
Also Offered As: ARTH 267, LALS 267, LALS 667
Activity: Lecture
1.0 Course Unit

ARTH 670 The Modern City
A study of the European and American city in the eighteenth, nineteenth, and twentieth centuries. Emphasis is placed on the history of architecture and urban design; political, sociological, and economic factors also receive attention. The class considers the development of London, St. Petersburg, Washington, Boston, Paris, Vienna and Philadelphia.
Taught by: Brownlee
Course not offered every year
Also Offered As: ARTH 270, URBS 276
Activity: Lecture
1.0 Course Unit

ARTH 671 Modern Architecture, 1700-1900
The history of western architecture, ca. 1700-1900, when architecture was transformed to serve a world that had been reshaped by political and industrial revolutions. Topics to be considered include the Rococo, the English Garden, Palladianism, Romanticism, neo-classicism, the picturesque, the Greek and Gothic Revivals, and the search for a new style.
Taught by: Brownlee
One-term course offered either term
Also Offered As: ARTH 271
Activity: Lecture
1.0 Course Unit

ARTH 673 History of Photography
A history of photography and theories of photography from 1839 to the present. Photography’s origins are rooted both in artistic desire and technological ingenuity. Some of photography’s inventors identified more as artists than engineers. At many points in the history of the medium, the question remains open whether new forms of artistic expression are driven by new technologies, or whether new technologies emerge to fulfill the desires of artistic imagination. This class will address photography’s relationship with painting, print, and drawing. It will examine the effect of photography on portraiture, landscape, depictions of motion, and abstraction. We will also investigate the changing cultural perception of photography as an artistic medium from the 19th to the 21st century.
Taught by: Vershbow
Course not offered every year
Also Offered As: ARTH 273, VLST 273
Activity: Lecture
1.0 Course Unit

ARTH 674 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
Taught by: Shaw, Staff
Course not offered every year
Also Offered As: AFRC 294, ARTH 274, ASAM 294, CIMS 293, LALS 274
Activity: Lecture
1.0 Course Unit
ARTH 676 Impressionism
Impressionism opened the pictorial field to light, perception, science, modernity, bourgeois leisure and famously the material qualities of paint itself. This course will survey the movement’s major contexts and proponents—Manet, Monet, Morisot, Cezanne, Gauguin, Van Gogh, Rodin—from its origins in the 1860’s to its demise in the 1890’s, as well as its subsequent adaptions throughout the world until World War I. Particular attention is paid to the artists’ critical reception and the historical conditions which allowed one nation, France, to claim the emergence of early Modernism so firmly for itself. The course also analyzes the effects of the rapidly changing social and cultural fabric of Paris, and its affects on artistic developments. We also look outside of France’s borders to Germany and Britain.
Taught by: Dombrowski
One-term course offered either term
Also Offered As: ARTH 276
Activity: Lecture
1.0 Course Unit

ARTH 677 The Rise of Modernity: Arts of the 19th Century
The nineteenth century is often considered as fast-paced, politically volatile and new-media obsessed as our own age. This course explores the nineteenth century’s claim to have produced the first truly modern culture, focusing on the visual arts and metropolitan spaces of Europe and North America in their intellectual and social contexts. Stretching from the American and French Revolutions to the eve of World War I, topics to be covered include: the rise of capitalist and industrialist culture, art and revolutionary upheaval, global travel and empire, the origins of modernist art and architecture, and new media such as stereoscopes, iron and glass construction, and photography. Major artistic personalities of the age, from Jacques-Louis David and Gustave Courbet to Claude Monet and Vincent Van Gogh, and from Friedrich Schinkel and, Baron Haussmann to Frank Furness and Frank Lloyd Wright, are discussed. Each lecture will be followed by a brief period of discussion, and regular field trips take students to examine art and architecture first hand, in the museums and on the streets of Philadelphia.
Taught by: Brownlee, Dombrowski
Course not offered every year
Also Offered As: ARTH 277
Activity: Lecture
1.0 Course Unit

ARTH 678 American Art
This course surveys the most important and interesting art produced in the United States (or by American artists living abroad) up through the 1950s. This period encompasses the history of both early and modern art in the U.S., from its first appearances to its rise to prominence and institutionalization. While tracking this history, the course examines art’s relation to historical processes of modernization (industrialization, the development of transportation and communications, the spread of corporate organization in business, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and the cultural changes these developments entailed. In these circumstances, art is drawn simultaneously toward truth and fraud, realism and artifice, science and spirituality, commodification and ephemerality, nationalism and cosmopolitanism, individualism and collectivity, the past and the future, professionalization and popularity, celebrating modern life and criticizing it.
Taught by: Leja, Shaw
One-term course offered either term
Also Offered As: ARTH 278
Activity: Lecture
1.0 Course Unit

ARTH 681 Modern Architecture, 1900-Present
The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time is also devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that are traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.
Taught by: Brownlee
One-term course offered either term
Also Offered As: ARTH 281
Activity: Lecture
1.0 Course Unit

ARTH 685 Modern Art
The history of modern art is closely tied to and largely unfolds from the history of Western Imperialism. While the technologies made possible by colonial resource extraction produced new ways of looking, modern conceptions of the self and how to represent it developed in dialogue with racialized notions of the other. This course focuses on encounters between the cultures of Africa and Europe, from 1880 to 1960, and on the visual practices that emerged on both continents as a result. Topics of special interest will include racial difference and the birth of photography, colonial masquerade, impressionism, symbols of power in royal arts, cubism, mass marketing and colonial self-fashioning, West African studio photography, world’s fairs and the Musee de l’Homme, Dada and surrealism, Negritude and interwar Paris, anti-aesthetics, colonial arts education, National art schools in the age of African independence, humanism and South African photography under Apartheid.
Taught by: Roach

Also Offered As: AFRC 283, ARTH 285
Activity: Lecture
1.0 Course Unit
ARTH 686 Modern Art: Picasso to Pollock  
Early twentieth-century art in Europe is marked by a number of exciting transformations. This period witnessed the rise of abstraction in painting and sculpture, as well as the inventions of collage, photomontage, constructed sculpture, the ready made and found object, and performance art. Encounters with the arts of Africa, Oceania and other traditions unfamiliar in the West spurred innovations in media, technique, and subject matter. Artists began to respond to the challenge of photography, to organize themselves into movements, and in some cases, to challenge the norms of art through 'anti-art.' A new gallery system replaced traditional forms of exhibiting and selling art, and artists took on new roles as publicists, manifesto writers, and exhibition organizers. This course examines these developments, with attention to formal innovations as well as cultural and political contexts. This course requires permission from the instructor.  
One-term course offered either term  
Also Offered As: ARTH 286  
Activity: Lecture

ARTH 690 Post War Japanese Cinema  
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how 'art' and 'history' are being defined in the cinematic context. How other directors also took up these issues, and referred to the 'big three' is also be discussed.  
Taught by: Davis

Activity: Lecture  
1.0 Course Unit

ARTH 694 Art Now  
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.  
Taught by: Silverman  
Course usually offered in spring term  
Also Offered As: ARTH 294, ENGL 063, GSW 294, VLST 236  
Activity: Lecture  
1.0 Course Unit

ARTH 695 Cinema and Media  
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as 'cinema,' to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be no screenings for this course. No knowledge of film theory is presumed. Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class midterm; 1 take-home final.

Activity: Lecture  
1.0 Course Unit

ARTH 696 Contemporary Art  
Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the 'canon' of what counts as important is still in flux, especially for the last twenty years. And the stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists of the post-war period, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.  
Course not offered every year  
Also Offered As: ARTH 296  
Activity: Lecture  
1.0 Course Unit
ARTH 701 Proseminar in Methods in the History of Art
Spring 2019: This course introduces theories and methods of the history of art and architecture, as well as classical archaeology, that have played a major role in the formation of these disciplines from the later eighteenth century to the present day. Classical archaeology is usually said to begin as art history with J.J. Winckelmann (1717-68) and the course will map the intellectual geographies of these disciplines. Our aim will be to shed light on the epistemological underpinning of Winckelmann’s History of Art of Antiquity, the shakiness of subsequent understandings of historical processes but foremost to consider other approaches. The seminar will give a broad overview of theories and methods in relation to relevant developments in other disciplines, such as philosophy, aesthetics, history, and anthropology. Topics include antiquarianism, idealism, formalism, iconography and iconology, semiotics, technologies of vision and the period eye, theories of space and place, gender and sexuality studies, the social history of art, and neuroaesthetics among others. Readings include key texts by major art and architecture theorists and historians and tackle approaches that range from early connoisseurship and the Frankfurt and Vienna Schools to recent questions of 'affect' and discourses of eco-aesthetics.

Activity: Seminar
1.0 Course Unit

ARTH 714 Topics in East Asian Art
Curatorial Seminar Spring 2015: This course will be offered in association with the exhibition, Representing Place: Landscape and Imagination in Modern Japanese Prints, to be held at the Arthur Ross Gallery in spring 2015. The seminar proposes to expand our discussion of landscape as a larger theme in the visual arts, with examples drawn from Europe, America, East Asia, and other locations. We will further consider how some sites became known as famous places, and how that act is tied up to issues of local, regional and national identity and often implicated in the promotion of specific places. This course will feature the opportunity to study works in the PMA collection, travel to ‘famous sites’ around Philadelphia, and participate in the final preparations and installation of the exhibition.
Taught by: Davis

1.0 Course Unit

ARTH 720 Topics in Aegean Art
Topic varies. Fall 2018: The choices made by groups of people with regard to the treatment of their dead can be reflective of a society's beliefs and social structure. In this course, we will examine the burial traditions of the people of the Prehistoric Aegean from the Neolithic through the end of the Bronze Age, circa 7,000-1,100 BCE. We will focus on burial architecture, grave goods, burial rituals, mortuary variability, and the symbolic meaning of death and burial in Prehistoric Greece. Particular attention will be paid to recent discoveries on Crete, the Mainland, and the Cycladic islands. Students will write two papers, and these papers will be presented to the class. The first paper will be circa 15 pages long with footnotes, bibliography, and images (presented via powerpoint) and the second will be a 20-25 page paper with footnotes, bibliography, and images presented via powerpoint.

Activity: Seminar
1.0 Course Unit

ARTH 732 Topics in Byzantine Art and Architecture
Topic varies. Spring 2018: The recent ‘return’ to the object across the humanities and social sciences has brought to the fore concerns with the nature of material things, their operation in the world, and their entanglement with humans. This seminar will introduce you to some of the key theoretical writings on the object and material culture and will ask you to interrogate their relevance for the discipline of art history. Our focus will be on the Middle Ages, but depending on the specific interests of the seminar’s participants, we may venture into other historical periods and cultural domains. Topics to be addressed include the social life of things; agency; materiality; the relic; the gift; the miniature; and the question of the human/nonhuman divide.

ARTH 737 Islamic Architecture
This seminar will address the problems of studying architecture in the Islamic world. Considered will be issues of architectural design, regional and trans-regional constructional traditions, structural know-how and innovation, patronage and use. The examples discussed will be mainly religious and social service complexes. Attention will be paid to the manner of transmission of architectural design knowledge and constructional skill.
Taught by: Holod
Course not offered every year
Also Offered As: AAMW 737

1.0 Course Unit

ARTH 740 Topics in Medieval Art
Topic varies. Fall 2018: This seminar will examine the intersection between technique, medium and desire in the Middle Ages. The questions of what spurs or instigates technical change, what means an artist/artisan deploys to achieve the longed-for result, and what happens in the face of failure will organize our discussions. In order to interrogate these topics, we will read rather broadly across the history of art and the history of science, touching on periods adjacent to the Middle Ages. The course will incorporate selective hands-on learning experiences to enrich our inquiry.
Taught by: Guerin

Activity: Seminar
1.0 Course Unit

ARTH 750 Topics in Southern Renaissance Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be ‘Figure and Ground.’ We owe the Renaissance picture more than the idealized human figure. For figure, depends on ground, here defined in at least three senses: 1) the ground as the material preparation of the support; 2) the plane where figures anchor their place in the pictorial world; and 3) the field in and against which figuration occurs, namely the background. In this graduate seminar, we will attempt to discuss, debate, and formulate ideas and methods to interpret the Renaissance picture according to these three semantic areas of ground. We will begin with gold grounds in the fourteenth century and conclude with the darkened grounds of tenebrist painters such as Caravaggio. In addition to reading current art historical scholarship grappling with several ‘turns’ (material, global, ecocritical) as well as Anne Cheng’s notion of ‘ornamentalism’ that draws from critical race and gender theory, we will also focus our attention on those Renaissance writers who described and prescribed the look of the picture in ways not usually accommodated by standard art historical approaches. Rather than recuperating the ground as an integral category, we will instead consider the acute dilemma of the ground’s theoretical exception.

Activity: Seminar
1.0 Course Unit

ARTH 761 Topics in Northern Renaissance Art
Topic varies from semester to semester. Fall 2019: One of the primary concerns of those who study works of art is who made it. In the early modern period, artists were also concerned with this question, and found innovative ways to assert authorship by stamping their works with monograms and signatures, securing rights to intellectual property, and launching lawsuits against each other. While the death of the author has long been asserted in literary theory and has consequentially urged art historical approaches to think beyond concepts of artistic genius and authorial voice, questions of authorship and workshop practice are still necessary to the establishment of the basic biographies of objects. This seminar explores how these various approaches may work together by combining close readings of primary-source documents, theoretical approaches to concepts of authorship, and object-based studies in different media represented in the Philadelphia Museum of Art: paintings, prints, drawings, textiles, architecture, decorative arts, and armor.

ARTH 762 Topics in Baroque Art
Topic varies.
Course not offered every year
Activity: Seminar
1.0 Course Unit
ARTH 765 Topics in Northern Baroque Art
Topic varies. This seminar will consider major themes in Northern art of the 16th and 17th centuries, essentially from Bruegel to Vermeer. The premise is that the Reformation altered certainties in knowledge and even in perception, especially in the wake of wars, newly discovered lands, changing science and collecting of Wonders. Among new imagery topics would include: melancholy, vanitas, witchcraft, travel images, and the status of the emblem as well as allegory. Students will select a topic for semester-long investigation and co-present a class with the instructor. No prerequisites; graduate students only.
Course not offered every year
Also Offered As: DTCH 665
Activity: Seminar
1.0 Course Unit

ARTH 771 Topics in 19th Century Architecture
Topic varies. Fall 2017: This seminar will explore the exhilarating architectural environment of the period ca. 1750-1900, when a ferocious appetite for artistic invention was let loose in kitchen filled with new knowledge about the entire history of human architecture. Focusing on French, German, and English architecture, the seminar will examine major texts and study important monuments, all considered in their cultural and political contexts.
Taught by: Brownlee
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARTH 775 Topics in 19th Century European Art
Topic varies from semester to semester. For Spring 2020, this course will cover 'Cezanne, Alienation, and Modern Portraiture.' In the process of advancing modern art, Cezanne is often said to have subjugated the modern individual to the painting. Lost in conspicuous brushwork and vibrant coloration, the sitter had a difficult time making their presence felt in his work (not least his wife, Hortense Fiquet, who he portrayed most frequently). With the help of new scholarship on the artist and the period, this course will reassess this old saw of modernist art history, and instead place Cezanne's innovations carefully within the contemporary emergence of psychology and modern urban consciousness. We will discuss the various ways in which the birth of modernist representation coincided with the birth of the modern subject, and develop new means to analyze modernist portraiture more broadly. Along the way, this seminar will look carefully at Cezanne's entire career and oeuvre (and that of several of his colleagues as well), and we will study in particular the ways in which writers, philosophers and art historians--from Zola, Rilke, Heidegger and Merleau-Ponty to Jonathan Crary, Tamar Garb and T. J. Clark more recently--have used the artist to write their histories of modernism and modernity since the turn of the last century.

1.0 Course Unit

ARTH 777 The Long Nineteenth Century: Literature, Philosophy, Culture
The present course will discuss German literature and thought from the period of the French Revolution to the turn of the twentieth century, and put it into a European context. In regard to German literature, this is the period that leads from the Storm and Stress and Romanticism to the political period of the Vormarz, Realism, and finally Expressionism; in philosophy, it moves from German Idealism to the philosophy of Schopenhauer, Nietzsche, and neo-Kantian thought. It is also the period that saw the rise of the novel, and new forms of dramatic works. Painting moved out of the studio into plein air; the invention of photography made an imprint on all arts, and the rise of the newspaper led to new literary genres such as the feuilleton. Economically, Germany experienced the industrial revolution; politically, it was striving for a unification that was finally achieved in 1871. The nineteenth century saw the establishment of the bourgeoisie, the emergence of the German working class, and the idea of the nation state; it also saw Jewish emancipation, and the call for women's rights. Readings will focus on a variety of literary, political, and philosophical texts; and consider a selection of art works.

ARTH 791 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programing part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films—features, shorts, documentaries, and television shows—paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of ‘African film and media,’ and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media?
To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu. Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport.

1.0 Course Unit

ARTH 792 Reading Against Racism
This course takes as its starting point Audre Lorde's 1981 Keynote presentation at the National Women's Studies Association Conference, 'The Uses of Anger: Women Responding to Racism.' Lorde, critiquing white feminisms, states, "I cannot hide my anger to spare you guilt, nor hurt feelings, nor answering anger; for to do so insults and trivializes all our efforts. Guilt is not a response to anger; it is a response to one's own actions or lack of action. If it leads to change then it can be useful, since it is then no longer guilt but the beginning of knowledge. Yet all too often, guilt is just another name for impotence, for defensiveness destructive of communication; it becomes a device to protect ignorance and the continuation of things the way they are, the ultimate protection for changelessness.' Eschewing defensiveness, ignorance, and innocence, and opening to meaningful change by engaging the writings of anti-racist and anti-imperialist thinkers, including those focused on the transformation of higher education, this course examines the responsibilities scholars take on when we affirm that 'Black Lives Matter,' and acknowledges that higher education, including the humanities, is actively implicated in the structures and operations of white privilege and anti-black racism as well as in other intersectional modes of exclusion, including all forms of discrimination based on race, ethnicity, national original, ability, class, sexuality, gender, and beliefs. The course aims to approach these urgent but longstanding issues in ways that help us to understand some of the complexities, practicalities, and temporalities of the work of change; to grapple with what Rosalyn Deutsche in Hiroshima After Iraq (2011) describes as "the inseparability of the social and the psychic," and to seek out effective alternatives to the tendency of politicized academic writing in time of conflict to regress to what Deutsche calls 'heroic masculinism.' Reading Against Racism' is imagined as a way of catalyzing active, collective, and long-term anti-racist, anti-imperialist intellectual work. It seeks to participate in the development of more just and inclusive academic modes and spaces by fostering time and structure for thought and self-reflection, by generating ideas for implementation, and by learning from our readings as well as from each other. All students, white and BIPOC, are welcome to participate, but we will begin this course by working together to establish a community agreement that takes account of the different ways in which such a course is likely to be experienced by white and BIPOC people. For example, recognizing that discussions about race and racism require immense emotional labor from BIPOC people in particular, BIPOC students should not be asked to use their personal experiences to frame questions under discussion or to represent any group. We will establish together other guidelines to create as safe and supportive a space (or spaces) for reading, thinking, and acting against racism as we can muster, including deciding how we would like to include in our process tools like trigger warnings, opt-out mechanisms, smaller subgroups, etc.
Requirements: Weekly reading; weekly journal for self-reflection (required, but not for submission); participation in discussion; design a syllabus for an introductory course in your field. Thanks to all the students who have generously participated in developing this course and to the scholars who have written the materials we will read.
Taught by: Redrobe
Also Offered As: CIMS 792
Activity: Seminar

Asian American Studies (ASAM)

ASAM 001 Asian Americans in Contemporary Society
This class will introduce you to sociological research of Asian Americans and engage in the ‘model minority’ stereotype. We begin by a brief introduction to U.S. immigration history and sociological theories about assimilation and racial stratification. The class will also cover research on racial and ethnic identity, educational stratification, mass media images, interracial marriage, multiracials, transracial adoption, and the viability of an Asian American panethnic identity. We will also examine the similarities and differences of Asian Americans relative to other minority groups.
For BA Students: Society Sector
One-term course offered either term
Also Offered As: SOCI 103
Activity: Lecture
1.0 Course Unit

ASAM 002 Asian American Literature
An overview of Asian American literature from its beginnings at the turn of the twentieth century to the present. This course covers a wide range of Asian American novels, plays, and poems, situating them in the contexts of Asian American history and minority communities and considering the variety of formal strategies these different texts take.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: ENGL 072
Activity: Lecture
1.0 Course Unit

ASAM 003 Introduction to Asian American History
This course provides an introduction to the history of Asian/Pacific Americans, focusing on the wide diversity of migrant experiences, as well as the continuing legacies of Orientalism on American-born APA’s. Issues of race, class, gender, and sexuality will also be examined.
For BA Students: History and Tradition Sector
Taught by: Azuma
One-term course offered either term
Also Offered As: HIST 155
Activity: Lecture
1.0 Course Unit

ASAM 005 Race and Ethnic Relations
This course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, Asian Americans, and multiracials.
One-term course offered either term
Also Offered As: AFRC 006, SOCI 006, URBS 160
Activity: Lecture
1.0 Course Unit

ASAM 100 Introduction to Asian American Studies
According to the U.S. Census, there are approximately 21 million Asian residents in the U.S. that comprise almost 6 percent of the total population. This relatively small number disguises the critical experiences Asian American communities face in both the local and transnational context. Yet, Asian Americans constitute one of the most heterogeneous racial groups within the U.S. Over the course of this semester we will read about and actively discuss the history of Asian immigration to the U.S., the social construction and experience of race in the U.S., and the political, economic, and cultural contributions of Asian Americans. We will also examine how Asian Americans negotiate/deploy their culture and ethnicity to achieve recognition in multicultural America and how the construction of Asian American identity intersects with class, gender, and sexuality.
Taught by: Pillai
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ASAM 104 Asian American Communities
Who is Asian American and how and where do we recognize Asian America? This interdisciplinary course explores the multiple factors that define Asian American identity and community. In order to provide a sketch of the multifaceted experience of this growing minority group, we will discuss a wide variety of texts from scholarly, artistic, and popular (film, cinematic) sources that mark key moments in the cultural history of Asia America. The course will address major themes of community life including migration history, Asian American as model minority, race, class, and transnational scope of Asian America. In combination with the readings, this class will foster and promote independent research based on site visits to various Asian American communities in Philadelphia and will host community leaders as guest lecturers.
Taught by: Khan
One-term course offered either term
Also Offered As: SAST 113, URBS 207

ASAM 120 Asian American Popular Culture
This course will examine the ways in which Asian Americans have constituted and positioned their identities through various mediums of popular culture, community building and activism. First, students will become familiar with major concepts relating to Popular Culture, Cultural Studies, and Asian American Cultural Studies. Second, students will have a deeper understanding of the Asian American Movement. Third, students will make connections between representations and dominant images of Asian Americans within various mediums.
Taught by: Van Do
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ASAM 160 South Asians in the United States
This course investigates the everyday practices and customs of South Asians in America. Every immigrant group has its own history, customs, beliefs and values, making each unique while simultaneously a part of the 'melting pot' or salad bowl' of American society. Yet how do people define themselves and their ethnicities living in a diasporic context? By taking into account the burgeoning South Asian American population as our model, this course will explore the basic themes surrounding the lives that immigrants are living in America, and more specifically the identity which the second generation, born and/or raised in American, is developing. South Asians in the U.S. will be divided thematically covering the topics of ethnicity, marriage, gender, religion, and pop culture. Reading and assignments will discuss a variety of issues and viewpoints that are a part of the fabric of South Asia, but will focus on the interpretation of such expressive culture in the United States.
Taught by: Khan
Course usually offered in fall term
Also Offered As: SAST 290
Activity: Seminar
1.0 Course Unit

ASAM 165 The Asian Caribbean
This course complicates prevailing understandings of the Caribbean and extends the boundaries of Asian America by exploring the histories, experiences, and contributions of Asians in the Caribbean. In particular, we will focus on the migrations of Chinese and Indian individuals to Cuba, Trinidad, and Guyana as well as how their descendants are immigrating to the United States. We will examine the legal and social debates surrounding their labor in the 19th century, how they participated in the decolonization of the region, and how their migration to the United States complicates our understandings of ethnicity and race. Ultimately, through our comparative race approach, we will appreciate that the Caribbean is more than the Black Caribbean, it is also the Asian Caribbean.
Taught by: Pillai
Course usually offered in spring term
Also Offered As: GSWS 165, SAST 166
Activity: Lecture
1.0 Course Unit

ASAM 170 Psych of Asian Americans
Using a cultural perspective, this course is intended to provide knowledge of Asian American personality, identity, and its relationship to mental well being; analyze psycho-social research pertinent to Asian Americans; and develop critical thinking skills on Asian American issues through experiential learning/discussions.
Course usually offered in spring term
Also Offered As: SAST 170
Activity: Seminar
1.0 Course Unit

ASAM 175 Asian American Race Relations: Comparative Case Studies and Theories
This course provides an introduction to comparative racial frameworks and case studies in Asian American Studies. In line with an emergent body of work that considers the relational nature of racializations, we will examine how Asian American racial constructions are not only formed in relation to whiteness but also to other groups of color. Starting from the premise that the US is dynamically multiracial, we will consider how Asian Americans have been both 'lumped together' with and 'counterpointed' to other racially marginalized communities across historical time. Moreover, we will explore how Asian Americans themselves have articulated racial positions both in solidarity with and opposition to other people of color. Lastly, we will survey the different comparative racial frameworks Asian American Studies scholars have developed to understand the shifting terrain of race relations. The course places a particular emphasis on Asian-Black relations and Afro Asian political theory, given the unique juxtaposition of these groups in US racial discourse, the significance of 'Blackness' to Asian American political and cultural identities, and the seminal place of these discussions in Comparative Ethnic Studies. Course materials include primary and scholarly readings, media, and material collaboratively gathered by members of the class. We will focus on developing diverse research methods for understanding the relational nature of Asian American racialization and community formation, culminating in individual research projects on case studies chosen by students in consultation with the instructor.
Taught by: Daniel Woo
Course usually offered in spring term
Activity: Seminar

ASAM 180 Asian American Food
You are what you eat. Asian American Food explores the history, politics, and ethnic identity of food through a cultural lens. Growing food, eating, and sharing meals serve as intimate expressions of self and community. By examining the production and consumption of food, the course investigates the ways that Asian Americans navigate traditions, gender norms, religious dietary laws, food habits, and employment as they create lives in the United States. The course overviews the history of Asian American foodways, but has a particular focus on Philadelphia’s Asian American communities.

ASAM 208 Asian American Cinema Movement: Fighting For Representation
Providing a broad introduction to the history of persons of Asian descent living in the United States, this course will specifically examine the Asian American & Pacific Islander American experience as told through the cinematic lens. Equal parts socio-political history and media studies, this course will comprehensively assess factors contributing to the historical under representation of AAPIs in mainstream American media. By contrast, the media texts that we study will reveal a cinematic history that runs parallel to the mainstream, consisting of independently produced films created by and/or starring AAPIs that feature authentic portrayals of the community they represent. Topics will include economics of film production, broadcast television ratings, film festivals as a mechanism of distribution, negative stereotyping, Hollywood whitewashing, cultural appropriation, and media activism. The course will take place once a week and will consist of a brief discussion of the previous week's readings, followed by a lecture, and ending with a full or partial film screening relating to the current week's topic. Additional out of class assignments will be given that involve attending the Philadelphia Asian American Film Festival, tentatively scheduled November 8-18, 2018. Students will have the opportunity to engage with and learn from AAPI filmmakers in attendance at the festival, with additional volunteer opportunities available for extra credit.
Taught by: Buscher
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ASAM 210 Asian Am Religions
This course examines the changing religious landscape of the United States through a focus on the religious life of Asian Americans. Through interdisciplinary texts and ethnographic field assignments, students will consider how religion and race intersect to inform notions of cultural and political citizenship, community, and culture. Topics to be explored include the impact of 9/11, religious political activism, and the appropriation and commodification of 'Asian' religious practices.
Taught by: Rupa Pillai
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ASAM 215 Asian American Gender and Sexualities
This course explores the intersection of gender, sexuality, and race in Asian America. Through interdisciplinary and cultural texts, students will consider how Asian American genders and sexualities are constructed in relation to racism while learning theories on and methods to study gender, sex, and race. We will discuss masculinities, femininities, race-conscious feminisms, LGBTQ+ identities, interracial and intraracial relationships, and kinship structures.
Taught by: Rupa Pillai
Course usually offered in spring term
Also Offered As: GSWS 215, SAST 215
Activity: Seminar
1.0 Course Unit

ASAM 220 Asian American Women: Nation, Self and Identity
This course examines the literary constructions of Asian American Womens’ identity in relation to the U.S. nation state. How have the figures of the tiger mother, the Asian nerd, the rice queen, the trafficked woman, the geisha, the war bride, emerged to represent Asian American women, and how have Asian American feminists responded to these problematic racial stereotypes? How does the scholarship on such racialized representations illuminate historical and contemporary configurations of gender, sexuality, race, class, nation, citizenship, migration, empire, war, neoliberalism and globalization as they relate to the lives of Asian American women? In exploring these questions, this course examines Asian American histories, bodies, identities, diasporic communities, representations, and politics through multi- and interdisciplinary approaches, including social science research, literature, popular representations, film, poetry and art.
Taught by: Roy
Course usually offered in spring term
Also Offered As: GSWS 220, SAST 221
Activity: Seminar
1.0 Course Unit

ASAM 294 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
Taught by: Shaw, Staff
Course not offered every year
Also Offered As: AFRC 294, ARTH 274, ARTH 674, CIMS 293, LALS 274
Activity: Lecture
1.0 Course Unit
ASAM 313 The Chinese Body and Spatial Consumption in Chinatown
This course looks at representations of the Chinese (and Asian body) since the Limehouse district in East London and the advent of Chinese contract laborers to the Americas in the 19th century. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning, literature and later in cinema. Chinatowns are ultimately a product of racism. They were created as a political and social support system for newly arrived Chinese immigrants. While Chinese laborers arrived into the United States in 1840 and in significant numbers into Canada about 1860, Chinese contract workers were encouraged to immigrate to the Americas as an inexpensive source of labor, especially after the end of the American Civil War. Industrial leaders in America, Canada and elsewhere in the Americas (Mexico, Cuba, Peru, etc) saw the arrival of Chinese workers as a victory for commercial interests. However, the celebration was short-lived, as anti-Chinese sentiment quickly transformed into anti-Chinese hysteria. Rather than attacking the vested interests that exploit foreign labor as embodied by the Chinese worker, racist unions with the cooperation of civic leaders and the police deemed it safer to burn Chinatowns than capitalist property.Deeply under-studied to this day is the number of mass murders of Chinese workers in the 19th century by anti-Chinese thugs. This seminar will focus in on how the body of the Chinese (and Asian) was imagined and reimagined multiple times from the middle of the 19th century to today. Taught by: Lum/Yang
Also Offered As: ENGL 273, FNAR 313, FNAR 613
Activity: Seminar
1.0 Course Unit

ASAM 354 American Expansion in the Pacific
This class will focus on America’s expansion into the Pacific around the turn of the century with the acquisition of Hawaii and the Phillipines. It can deal with various issues, including the meaning of ‘frontier,’ colonialism, development of capitalist economies in the region, diplomacy, racism, migration, an American brand of Orientalism in encountering the ‘natives’ and ‘heathens,’and histories of the West and the Pacific Islands in general. Taught by: Azuma
One-term course offered either term
Also Offered As: HIST 354
Activity: Lecture
1.0 Course Unit

Asian Languages (ALAN)

ALAN 240 Intermediate Mongolian I
Mongolian is the national language of the independent State of Mongolia and the language of the nomadic warriors Genghis Khan (known to the Mongolians themselves as Chinggis Khan). It is also spoken in China and Siberia. Today Mongolian musical styles like throat singing (khoomii), products like cashmere (nooluur), and tourism to visit Mongolia's nomadic herders (malchid) are making a mark on the world stage. In this class the students will continue with the basics of modern Mongolian language, as spoken in Ulaanbaatar 'Red Hero,' the country's capital. They will learn in the phonetic Cyrillic script, which was adapted to Mongolian language from Russian in 1945, with a few additional letters. Intermediate and more advanced grammar will be taught through communicative methodology. Students will also have opportunity to experience Mongolian arts, culture, and cooking in and out of class. This is the first semester of Intermediate Mongolian. By the end of two semesters intermediate Mongolian, students will have learned all the noun forms, and all the major verb forms and will be able to form complex, multi-clause sentences, telling stories, expressing their feelings, and making arguments and explanations. They should be able to interact in all basic ‘survival’ situations in Mongolia. Taught by: Tseveendulam
Course usually offered in fall term
Prerequisite: ALAN 141
Activity: Lecture
1.0 Course Unit

ALAN 241 Intermediate Mongolian II
This course is a continuation of Intermediate Mongolian I. Mongolian is the national language of the independent State of Mongolia and the language of the nomadic warriors Genghis Khan (known to the Mongolians themselves as Chinggis Khan). It is also spoken in China and Siberia. Today Mongolian musical styles like throat singing (khoomii), products like cashmere (nooluur), and tourism to visit Mongolia’s nomadic herders (malchid) are making a mark on the world stage. In this class the students will continue with the basics of modern Mongolian language, as spoken in Ulaanbaatar ‘Red Hero,’ the country’s capital. They will learn in the phonetic Cyrillic script, which was adapted to Mongolian language from Russian in 1945, with a few additional letters. Intermediate and more advanced grammar will be taught through communicative methodology. Students will also have opportunity to experience Mongolian arts, culture, and cooking in and out of class. This is the first semester of Intermediate Mongolian. By the end of two semesters intermediate Mongolian, students will have learned all the noun forms, and all the major verb forms and will be able to form complex, multi-clause sentences, telling stories, expressing their feelings, and making arguments and explanations. They should be able to interact in all basic ‘survival’ situations in Mongolia. Taught by: Tseveendulam
Activity: Lecture
1.0 Course Unit
Astronomy (ASTR)

ASTR 001 A Survey of the Universe
A general survey, designed for the non-major, of the facts and theories of the astronomical universe, from solar system, to stars, to galaxies and cosmology. Topics include planets, satellites, small objects in the solar system, and extraterrestrial life; stars, their evolution, and their final state as white dwarfs, neutron stars, or black holes; galaxies, quasars, large structures, background radiation, and big bang cosmology. Elementary algebra and geometry will be used. This course is not recommended for physical-science majors or engineering students. Engineering students receive no credit for this course.
For BA Students: Physical World Sector
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit
Notes: Only one ASTR course below ASTR 211 may be taken for credit. Engineering students receive no credit for this course.

ASTR 006 The Solar System, Exoplanets, and Life
A survey course on planets and life covering our own Solar System and exoplanets orbiting other stars. Topics include the latest results and theories about: the origin and evolution of planetary systems around our Sun and other stars; the detection of exoplanets; the implications of planetary atmospheres for life; and the search for life on other planets in our Solar System. This course is designed for the non-major and elementary algebra and geometry will be used. Physical science majors and engineering students should prefer ASTR 211 to this course.
For BA Students: Natural Science and Math Sector
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Also fulfills General Requirement in Physical World for Class of 2009 and prior. Only one ASTR course below ASTR 211 may be taken for credit. Fulfills quantitative data analysis requirement.

ASTR 007 The Big Bang and Beyond
An introductory course for students who do not intend to major in a physical science or engineering, covering theories of the Universe ranging from the ancient perspective to the contemporary hot big bang model, including some notions of Einstein’s special and general theories of relativity. Topics will include the solar system, stars, black holes, galaxies, and the structure, origin and future of the Universe itself. Elementary algebra is used. Fulfills quantitative data analysis requirement.
For BA Students: Natural Science and Math Sector
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Also fulfills General Requirement in Physical World for Class of 2009 and prior. Only one ASTR course below ASTR 211 may be taken for credit.

ASTR 211 Introduction to Astrophysics I
A basic course for majors in physical sciences and engineering; required for the astrophysics concentration. The course provides fundamental knowledge of Newtonian gravity and the properties of light and matter as they are relevant for understanding astrophysical objects. Application is made to the observed features of planetary motion, the atmospheres and stars and planets, and the structure and evolution of stars.
For BA Students: Physical World Sector
Course usually offered in fall term
Prerequisite: MATH 104 OR PHYS 150
Activity: Lecture
1.0 Course Unit

ASTR 212 Introduction to Astrophysics II
A basic course for majors in physical sciences and engineering; require for the astrophysics concentration. The course covers fundamental knowledge of Einstein’s gravity, the contents of the universe, and the structure and distribution of galaxies. Emphasis is on the key elements of modern cosmology: the mathematical model of the expanding universe, the cosmic microwave background, the early universe and the emergence of large-scale structure in the present universe.
For BA Students: Physical World Sector
Course usually offered in spring term
Prerequisite: MATH 114 OR PHYS 151
Activity: Lecture
1.0 Course Unit

ASTR 250 Astronomical Techniques
A laboratory course in astronomical observations and data reduction. This course satisfies one of the requirements for the astrophysics concentration. Topics vary, but include spherical astronomy, timekeeping and coordinate systems, astro-statistics, telescopes, CCD’s, signal processing, imaging, spectroscopy, radio astronomy and data reduction techniques using custom software. Attendance at observatory sessions outside of the scheduled class time is required, but times are uncertain due to weather conditions. The course requires small-group work in-class, and substantial out-of-class time. Notes: Course not offered every year.
The observatories at DRL are used for experimental and observational practice.
Course offered spring; even-numbered years
Prerequisite: (ASTR 001 AND MATH 240 AND MATH 241) OR (ASTR 007 AND MATH 240 AND MATH 241) OR ASTR 211 OR ASTR 212
Activity: Lecture
1.0 Course Unit
Notes: The observatories at DRL are used for experimental and observational practice.

ASTR 392 Life and Death of Stars
This is an advanced undergraduate course on the life and death of stars. The course will cover the structure of stellar interiors, nuclear reactions and the formation of elements, stellar evolution, supernovae, and the physics of white dwarfs, neutron stars, and black holes. We will approach these topics from both theoretical and observational perspectives.
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit
ASTR 503 Astronomical Methods and Instrumentation
Techniques of modern astronomical observations, including: detection of light from the radio through gamma rays; sources of noise in astronomical measurements; image analysis and reduction techniques; telescope optics and adaptive optics; spectroscopic measurements; radio interferometry and spectroscopy.
Course offered spring; even-numbered years
Activity: Lecture
1.0 Course Unit

ASTR 533 Galaxies: Structure, Dynamics and Formation
Galactic structure and dynamics. Observed scaling relations. Models and observations of galaxy formation and evolution. Enrollment restricted to graduate students.
Course offered fall; odd-numbered years
Activity: Lecture
1.0 Course Unit

Behavioral & Decision Sciences (BDS)

BDS 501 Behavioral Science: Theory and Application of Experimental Methods
Permits offered to non-MBDS students if space is available. Request a permit here: www.sas.upenn.edu/lps/graduate/mbds/permit-request. Our understanding of different mechanisms and (economic) relationships is hampered by a lack of data and - more often than not - either the observation or the data is not reliable. In recent decades, through the work of pioneers in the behavioral and experimental economics fields, such as Daniel Kahneman and Vernon Smith, economics experiments have become a vital part of the scientific discourse, facilitating our understanding of the world we live in (much like in biology, chemistry, physics, etc.). In this course, we will explore economic behavior by developing a research idea, designing an experiment, then carrying out the experiment under controlled conditions. Essentially, you will learn how to think about ideas, generate ideas, and use economic experiments to test them.
Taught by: Dimant
Activity: Lecture
1.0 Course Unit

BDS 502 Norms and Nudges
Social norms are the rules we live by, and we encounter them in any area of our life. Social norms often guarantee the smooth functioning of a group or organization. Sometimes, however, these norms are inefficient or do not benefit society at large. What can we do to change these harmful collective behaviors? Social psychology, philosophy, sociology, rational-choice, legal theory, and even economics, are investigating and theorizing pro-social behavior, justice motivation, and moral and social norms. In this course, we will examine the latest and best in this emerging multidisciplinary field. Students will be encouraged to apply its findings and methods to their area of interest.
Taught by: Bicchieri
Also Offered As: PHIL 428
Activity: Lecture
1.0 Course Unit

BDS 503 Behavioral Public Policy
A core MBDS program course requirement, this course addresses methodological issues that apply to each of the policies currently provided by governmental and non-governmental institutions worldwide. We will discuss the conditions that must be satisfied to make policies effective and the behavioral incentives that policy actors face. The course relies on the main theoretical and empirical findings of modern policy analysis and upon an extensive set of case studies. Students are required to master the conceptual material and to confront and solve practical cases in public policy.
Activity: Lecture
1.0 Course Unit

BDS 505 Research Methods for Behavioral Science
The course is a survey of methods of research in behavioral and decision sciences. We will cover principles of scientific thinking, operationalizing research questions into testable ideas, and the ethics of behavioral research. A significant portion of the class will be devoted to study designs. We will cover basics of experimental design, quasi-experiments, and observational surveys. The class will also provide an introduction to qualitative research methods, including focus groups, unstructured and semi-structured interviews, and ethnographies. We will conclude the semester with the methods of communicating our findings to different types of audiences. We will analyze research processes and results from the perspective of the information consumer. The class will be useful for those interested in learning how to read and write behavioral science publications and how to design one's own studies. For practical skills in using software to analyze data, see BDS522 and BDSS16.
Taught by: Alex Shpenev
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BDS 511 Negotiation Behavior
We negotiate every day-with merchants, service providers, employers, coworkers, friends, and family-determining the price we will pay, the amount of our compensation, where to go to dinner, who will clean the kitchen, etc. Although negotiations are a ubiquitous part of our everyday lives, many of us know little about the strategy and psychology of effective negotiations. Why do we sometimes get our way, while other times we walk away feeling frustrated by our inability to achieve the agreement we desire? Over the past few decades, research in social psychology and decision science has sought the answer to this question and created a rich body of knowledge on bargaining behavior, leading to a well-validated prescription on how to negotiate. In this course, you will learn both the how and the why of negotiation behavior. Through role-playing exercises, you will be able to evaluate your own negotiation behavior as well as that of your classmates and receive advice on how to optimize it to achieve your desired outcomes. Importantly, you will also read and discuss research articles that have led to such practical advice. Non-MBDS students may request a permit to register at www.sas.upenn.edu/lps/graduate/mbds/permit-request.
Activity: Lecture
1.0 Course Unit
BDS 512 Power, Persuasion and Influence
For permits please see: https://www.sas.upenn.edu/lps/graduate/mbds/permit-request
Power and influence are fundamental for taking action in personal relationships, professional contexts and in society in general. To be able to use them effectively, however, we need to understand the nature, sources, uses and development of power and influence in these various contexts. To accomplish this goal, this course will survey theories of power, persuasion and influence from multiple disciplines and discuss their application to everyday actions.
Activity: Lecture
1.0 Course Unit

BDS 516 Data Science and Quantitative Modeling
(This course fulfills the MBDS program’s quantitative course requirement.) Increasingly, decision-makers and systems rely on intelligent technology to analyze data systematically to improve decision-making. Data science is opening new pathways to improve decision-making in private and public organizations. Through lectures and real-world examples, this course will present a practical understanding of the fundamental methods used by data scientists including data management techniques, quantitative modeling, and data visualization. The primary emphasis is on understanding the fundamental concepts and applications of data science in the context of behavioral and decision sciences. We will cover several algorithms though this is not an algorithms course. We will examine real-world examples and cases to place data science techniques in context, to develop data-analytic thinking, and to illustrate that proper application is as much an art as it is a science. Non-MBDS students may request a permit to register at https://www.sas.upenn.edu/lps/graduate/mbds/permit-request.
Activity: Lecture
1.0 Course Unit

BDS 521 Judgments & Decisions
This course addresses the ideal standards of judging and deciding, and the ways in which people fall short of these standards, with emphasis on the latter. We will discuss heuristics and other intuitive strategies that people may use in day-to-day thinking, and the biases that result from this use. We will apply this approach to shed light on faulty analyses in medicine, law, and everyday thinking. Understanding the ideals of good thinking and causes of our failure to conform to these ideals may ultimately help improve the decisions we make in private and professional lives. A limited number of seats in this class are reserved for upper level LPS undergraduate students who may be allowed to register with special permission from the instructor. Non-MBDS students should request a permit to register at https://www.sas.upenn.edu/lps/graduate/mbds/permit-request.
Activity: Lecture
1.0 Course Unit

BDS 522 Statistical Reasoning for Behavioral Science
For permits please see: https://www.sas.upenn.edu/lps/graduate/mbds/permit-request
The complexity of human behavior exceeds that of most phenomena studied in the natural sciences. Any inference about human behavior and decision-making has to rely on statistical methods rather than on deterministic modeling. In this class, students will learn the methods of descriptive and inferential statistics used in behavioral science from the basics to those more commonly used. In this sense, this is a class on theoretical statistics, but we will go beyond theory to apply these methods to answer our own research questions. As such, this is also a class on applied statistics. We will rely heavily on statistical programming languages (namely, R) and version control systems (Git) to create statistical reports. Finally, we will work with new research in the field and learn to critically assess the statistical methods used therein. After completing this class, students will be competent in reading cutting-edge scientific literature, producing their own results using the more commonly used methods, and able to critically assess the limitations of their own and other people’s research. Non-MBDS students must complete a permit request.
Activity: Lecture
1.0 Course Unit

BDS 585 Consulting in Behavioral Science
In this course, students will gain a better understanding of applied behavioral science. The course will emphasize oral and written communications and the development of client deliverables, client relations, team work, client presentation, and peer review. There will be a mix of in-person and online course meetings. This course is for MBDS students and by permission only. MBDS students: To apply to take this course, please complete this course application: https://upenn.co1.qualtrics.com/jfe/form/SV_beGKCGR6puftiVT)
Taught by: Zarak Khan
Activity: Lecture
1.0 Course Unit

BDS 990 Master’s Continuation
Activity: Masters Thesis
1.0 Course Unit

Bengali (BENG)

BENG 403 Beginning Bengali Part I
This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.
For BA Students: Language Course
Taught by: Banerjee, H
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
BENG 404 Beginning Bengali Part II
This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.
For BA Students: Language Course
Taught by: Banerjee, H
Course usually offered in spring term
Prerequisite: BENG 403
Activity: Seminar
1.0 Course Unit

BENG 423 Intermediate Bengali Part I
This course develops the student's prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version.
For BA Students: Language Course
Taught by: Banerjee, H
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

BENG 424 Intermediate Bengali Part II
This course develops the student’s prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version.
For BA Students: Last Language Course
Taught by: Banerjee, H
Course usually offered in spring term
Prerequisite: BENG 423
Activity: Seminar
1.0 Course Unit

BENG 433 Advanced Bengali
The objective of this course is to develop the proficiency level of the students in all the four skills by using different genres of Bengali literature (West Bengal and Bangladesh) as its course content. Reading comprehension will be enhanced as students learn to understand authentic texts at the linguistic and cultural level while discussion (description, narration, supporting opinion) on issues related to these texts aim to hone the oral and written skills. Students will be allowed to work on individual texts & topics (with the instructors permission) for their final project. This is a one semester course. Spring: Bengali Popular Culture- This course aims to use as its content, different aspects of popular Bengali culture as they are represented in media (film, television, magazines, newspapers) and arts (fashion, local and regional art, music). Students will be expected to develop their linguistic skills (description, narration, supporting opinion) and socio-cultural awareness while interacting with these varied types of texts. Students will be allowed to work on individual texts & topics (with the instructors permission) for their final project. This is a one semester course.
For BA Students: Advanced Language Course
Taught by: Banerjee, H
Course not offered every year
Activity: Lecture
1.0 Course Unit

Biochemistry & Molecular Biophysics (BMB)

BMB 508 Macromolecular Biophysics: Principles and Methods
This course introduces students to the physical and chemical properties of biological macromolecules, including proteins and nucleic acids. It surveys the biophysical techniques used to study the structure and thermodynamics of macromolecules. It is intended to be a first course for graduate students with an undergraduate background in either physics, chemistry or biology, and no necessary background in biochemistry. Prerequisite: Senior undergraduate or graduate level biochemistry of biophysics.
Taught by: Sharp
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BMB 509 Structural and Mechanistic Biochemistry
The course will focus on the key biochemical task areas of living cells. The course progresses from primarily molecular level events, such as storage and translation of genetic information, creation, control and removal of proteins, to higher organization levels such as metabolic pathways, signaling pathways, regulation and homeostasis. Each section will cover structure details of the relevant molecules, appropriate binding/catalysis events, regulatory aspects, and how they fit into the relevant pathway(s) and cell function. Material will be covered with a combination of formal lectures and student presentations. Prerequisites: If course requirements not met, permission of course director required.
Taught by: Van Duyne
Course usually offered in spring term
Prerequisite: BMB 508 AND BIOM 600
Activity: Lecture
1.0 Course Unit
BMB 510 Data Analysis and Scientific Inference
An introductory course in the analysis of data and scientific inference for graduate students in Biochemistry, Molecular Biophysics, and related quantitative biomedical research areas. The course will stress fundamental principles of data analysis, best practice in presenting data, and how to draw sound scientific inferences from the data. The overall goal is to provide students the tools to carry out rigorous and reproducible scientific research.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BMB 518 Protein Conformation Diseases
Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer’s disease, Parkinson’s disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidoses. This course will include lectures, directed readings, and student presentations to cover seminal and current papers on the cell biology of protein conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation. Target audience is primarily 1st-year CAMB, other BGS graduate students, or students interested in acquiring a cell biological perspective on the topic. MD/PhDs and Postdoc are welcome. MS and undergraduate students must obtain permission from course directors. Class size is limited to 14 students.
Taught by: Yair Argon
Course usually offered in fall term
Also Offered As: CAMB 615, NMG 615
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

BMB 554 Macromolecular Crystallography: Methods and Applications
This is an introductory course on methods and applications of macromolecular structure determination using X-ray crystallography. The course will be broken up into three parts: 1) Principles of X-ray crystallography involving didactic lectures on the technique with weekly problem sets; 2) Workshops on macromolecular structure determination involving hands-on experience with the technology; 3) Student ‘journal club’ presentations on current high-impact publications involving X-ray crystal structure determination. Prerequisite: Undergraduate calculus and trigonometry.
Taught by: Marmorstein and Skordalakes
Course usually offered in fall term
Also Offered As: CHEM 555
Activity: Lecture
1.0 Course Unit

BMB 558 Bioinorganic Chemistry
This course covers selected topics in bioinorganic chemistry. Special emphasis is placed on dioxygen chemistry and electron transfer processes. Course topics include: 1) oxygen uptake and utilization; 2) oxygen transport; 3) oxygen and O atom incorporation into substrates; 4) metalloenzyme-catalyzed C-C bond formation; 5) the metallobiochemistry of DNA; 6) metal-sulfide proteins; 7) manganese containing metalloproteins; 8) photosystem II, light-driven electron transfer and the biological water-splitting reaction; 9) biological electron transfer; 10) electron transfer theory; 11) mechanisms of energy storage and release; and 12) long-distance electron transfer reactions.
Taught by: Dmochowski
One-term course offered either term
Also Offered As: CHEM 567
Activity: Lecture
1.0 Course Unit

BMB 581 Techniques of Magnetic Resonance Imaging
Detailed introduction to the physics and engineering of magnetic resonance imaging as applied to medical diagnosis. Covered are magnetism spatial encoding principles, Fourier analysis, spin relaxation, imaging pulse sequences and pulse design, contrast mechanisms, chemical shift, flow encoding, diffusion and perfusion, and a discussion of the most relevant clinical applications.
Taught by: Song and Wehrli
Course offered spring, odd-numbered years
Also Offered As: BE 581
Activity: Lecture
1.0 Course Unit

BMB 585 Wistar Institute Cancer Biology Course: Signaling Pathways in Cancer
This course is intended to provide foundational information about the molecular basis of cancer. When necessary the significance of this information for clinical aspects of cancer is also discussed. The main theme centers around cell cycle checkpoints with specific emphasis on the biochemistry and genetics of DNA damage signaling pathways, DNA damage checkpoints, mitotic checkpoints and their relevance to human cancer. The course is taught by the organizers and guest lecturers from universities and research institutions in the Northeast. Following every lecture, students present a research paper related to the topic of that lecture. The course is intended for first and second year graduate students but all graduate students are welcome to attend. Prerequisite: Undergraduates and Master’s degree candidates require permission from the course directors.
Taught by: Skordalakes and Murphy
Course usually offered in fall term
Also Offered As: GCB 585
Activity: Lecture
1.0 Course Unit
BMB 598 Tutorial
The tutorial course is designed for in-depth study of a specific topic through one-on-one meetings and discussions between the student and a selected BMB faculty member. The intent of the course is to broaden the students' knowledge, thus the tutorial may not be taken with the student's current rotation advisor or thesis advisor. Choice of faculty member and topic is by prior mutual agreement between the student and faculty member, subject to approval by the course director. Student and faculty member will typically meet for an hour or so 2 - 3 times per week. The course may take the form of literature study, or where appropriate, a mini-project (typically computer-based). A tutorial can be used by students to become more deeply acquainted with the literature related to their thesis project or to help prepare students for their Candidacy Exam. Upon completion of the tutorial, students must prepare a written description of the area studied (5-10 typewritten pages)
Taught by: Kim Sharp and staff
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit

BMB 601 Fundamentals of Magnetic Resonance
This course introduces basic theoretical and experimental concepts of magnetic resonance and its applications in biochemistry, biology and medicine. Topics covered include description of the phenomenon of magnetic resonance, and classical and quantum strategies to compute nuclear spin responses in liquids, solids and biological tissues, polarization transfer and multiple quantum effects and their applications in biomedicine. Nuclear spin relaxation in solid-state materials and in biological systems will be discussed. Concepts of magnetic resonance imaging, imaging strategies, image contrast, and diagnostic applications are discussed. The course includes several practicals dealing with the demonstration of NMR hardware and experiments to compute basic NMR parameters on high resolution and clinical MRI scanners. For further details of this course, visit www.mmrcc.upenn.edu
Taught by: Reddy
Course offered fall; odd-numbered years
Activity: Lecture
0.5 Course Units

BMB 605 Drug Discovery and Development
This course will expose graduate-level students to the process of drug discovery and development. The course will be structured to cover topics from the identification of a disease-relevant target through to Phase III Clinical Trials. The course will be lecture based and there will also be student-led journal club presentations as part of the course. There will also be a writing project consisting of a 3 page proposal of how to advance one of the areas of Drug Discovery & Development covered in the course.
Taught by: Dr. Ben E. Black, UPenn and Dr. Craig A. Leach, GlaxoSmithKline
Course usually offered in spring term
Also Offered As: CAMB 710, PHRM 605
Activity: Lecture
1.0 Course Unit
Notes: 2 X 1.5 hr sessions per week.

BMB 618 Applications of High Resolution NMR Spectroscopy to Problems in Structural Biology
A lecture-based course designed to introduce graduate students to applications of modern high-resolution nuclear and multidimensional NMR spectroscopy to problems in structural biology. The course will first introduce classical definitions and descriptions of nuclear magnetic resonance and a convenient formalism for the analysis of advanced NMR experiments. Concepts and applications of multidimensional homonuclear 1H NMR and multidimensional heteronuclear spectroscopy of proteins and nucleic acids will be described. Resonance assignment strategies including analysis of triple resonance spectroscopy will be covered. The origin, measurement and extraction of structural restraints and their use in structure determination will be surveyed and illustrated with recent examples. Undergraduate biochemistry and physical chemistry background required.
Taught by: Wond
Course offered fall; odd-numbered years
Prerequisite: BMB 601
Activity: Lecture
0.5 Course Units

BMB 622 Physical Principles of Mechano-Enzymes
This course will provide an introduction to the biochemical, structural, and mechanical properties of energy-transducing enzymes. We will emphasize the relationships of mechanical, thermal, and chemical forces in mechano-enzyme function.
Taught by: Dominguez, Goldman, Grishchuk and Ostap
Course offered spring; even-numbered years
Activity: Lecture
0.5 Course Units

BMB 624 Molecular and Physical Basis of Ion Channels
This course is a journal club format, targeted to graduate and MD/PhD students interested in ion channels from graduate programs in Physiology, Pathology, Neuroscience, Pharmacology, Biochemistry & Molecular Biophysics. It meets for two hours on alternate weeks and is coupled to the Ion Channel Journal Club, which also meets for one hour on the same alternate weeks. A faculty member meets with students to discuss and review the contents of each selected article earlier in the week in preparation for the subsequent Journal Club presentation.
The day following the Journal Club the person who discussed the paper meets with the students to answer questions and to discuss the research that goes on in his lab. This elective course is meant to introduce students to the latest advances in ion channel research and includes topics extending from biophysics, structure, and physiology to cell biology and medical applications.
Taught by: Kallen
Course offered spring; odd-numbered years
Activity: Lecture
0.5 Course Units

BMB 618 Applications of High Resolution NMR Spectroscopy to Problems in Structural Biology
A lecture-based course designed to introduce graduate students to applications of modern high-resolution multinuclear and multidimensional NMR spectroscopy to problems in structural biology. The course will first introduce classical definitions and descriptions of nuclear magnetic resonance and a convenient formalism for the analysis of advanced NMR experiments. Concepts and applications of multidimensional homonuclear 1H NMR and multidimensional heteronuclear spectroscopy of proteins and nucleic acids will be described. Resonance assignment strategies including analysis of triple resonance spectroscopy will be covered. The origin, measurement and extraction of structural restraints and their use in structure determination will be surveyed and illustrated with recent examples. Undergraduate biochemistry and physical chemistry background required.
Taught by: Wond
Course offered fall; odd-numbered years
Prerequisite: BMB 601
Activity: Lecture
0.5 Course Units

BMB 622 Physical Principles of Mechano-Enzymes
This course will provide an introduction to the biochemical, structural, and mechanical properties of energy-transducing enzymes. We will emphasize the relationships of mechanical, thermal, and chemical forces in mechano-enzyme function.
Taught by: Dominguez, Goldman, Grishchuk and Ostap
Course offered spring; even-numbered years
Activity: Lecture
0.5 Course Units

BMB 624 Molecular and Physical Basis of Ion Channels
This course is a journal club format, targeted to graduate and MD/PhD students interested in ion channels from graduate programs in Physiology, Pathology, Neuroscience, Pharmacology, Biochemistry & Molecular Biophysics. It meets for two hours on alternate weeks and is coupled to the Ion Channel Journal Club, which also meets for one hour on the same alternate weeks. A faculty member meets with students to discuss and review the contents of each selected article earlier in the week in preparation for the subsequent Journal Club presentation.
The day following the Journal Club the person who discussed the paper meets with the students to answer questions and to discuss the research that goes on in his lab. This elective course is meant to introduce students to the latest advances in ion channel research and includes topics extending from biophysics, structure, and physiology to cell biology and medical applications.
Taught by: Kallen
Course offered spring; odd-numbered years
Activity: Lecture
0.5 Course Units
BMB 626 Mass Spectrometry and Proteomics
This course will provide a detailed introduction to proteomics and mass spectrometry. The role of mass spectrometry in both characterizing proteins for traditional protein structure-function studies and identification of proteins in proteome studies will be emphasized. Targeted and global proteomes, quantitative protein profiling and compositional proteomics, and applications of proteome studies will be discussed. Intended for first and second year graduate students and others with an interest in proteomics and mass spectrometry.
Taught by: Speicher and Garcia
Course offered spring; even-numbered years
Activity: Lecture
0.5 Course Units

BMB 627 Computer Programming for Biochemists and Biophysicists
An introductory course on programming and algorithms for scientists with an emphasis on applications to biophysics. Students will learn to write, debug, and execute basic programs through lectures, in-class workshops, and programming projects outside of class. Prerequisite: Permission of instructor for non-BMB students.
Taught by: Sharp and Van Duyne
Activity: Lecture
0.5 Course Units

BMB 632 Probing Structure and Function of Complex RNA-Protein Machines
RNA-Protein complexes or RNPs can range from simple assemblies to megadalton enzymatic machines. The latter include two of the most abundant and essential enzymatic complexes for converting genes to functional protein -the ribosome and the spliceosome. Understanding the molecular interactions that hold these RNPs together and how these complexes function has required the development of new techniques and pushed the boundaries of quantitative biochemistry. In this course we will take an in-depth look at general concepts common to many RNA binding proteins, the methods used to study protein-RNA and RNA-RNA interactions, and how the complex nature of large RNPs uniquely allow them to achieve their precise functions. The course will be a combination of both lectures and student-lead discussion of recent literature. Students will be evaluated based on their presentations of primary literature and their participation in class discussion.
Taught by: Lynch
Course offered fall, even-numbered years
Activity: Lecture
1.0 Course Unit

BMB 634 Cryo-Em
This is an introductory course on methods and applications of cryo-EM single-particle analysis and tomography. The course will be broken up into three parts: 1) Principles of single-particle reconstruction including hands-on experience with the technology; 2) Principles of cryo-EM tomography including data analysis; 3) Student presentations of their 3D reconstructions and research article
Taught by: Co-Directors Kenji Murakami, Ph.D., Yi-Wei Chang, Ph.D., Sudheer Kumar Molugu, Ph.D
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BMB 635 Computational Structural
Activity: Lecture
1.0 Course Unit

BMB 650 Current Biochemical Topics
Participation in the ‘Dr. George W. Raiziss Biochemical Rounds’, a weekly seminar program sponsored by the Department of Biochemistry and Biophysics. Program deals with a wide range of modern biochemical and biophysical topics presented by established investigators selected from our faculty, and by leading scientists from other institutions. Prerequisite: Permission needed from Department
Taught by: Black and Shorter
Course offered summer, fall and spring terms
Also Offered As: CAMB 702, PHRM 650
Activity: Seminar
1.0 Course Unit

BMB 699 Laboratory Rotation
Supervised ‘mini-projects’ for graduate students in Biochemistry and Molecular Biophysics. End of the semester requirements are 1) poster presentations; 2) written rotation summaries; or 3) talks. Course is offered fall, winter, spring, and summer semesters.
Taught by: Kohli
Course offered summer, fall and spring terms
Activity: Laboratory
1.0 Course Unit

BMB 704 Structural Biology Tg
Activity: Lecture
1.0 Course Unit

BMB 705 Candidacy Exam Preparation Course
This course is designed for second year BMB students to prepare them for the Candidacy Examination, which must be completed in the spring semester of the second year.
Taught by: Marmorstein, Lynch and Nelson
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

BMB 751 Chemical Biology
This course focuses on current topics in Chemical Biology, particularly experiments in which 1) chemical synthesis enables one to probe or control biological systems, or 2) manipulation of biological systems facilitates novel chemical syntheses. The course is broadly divided into two sections, one dealing with the study of individual proteins and nucleic acids, and one dealing with complex cellular systems. As the goal of the course is to familiarize students with innovative recent experimental approaches and to stimulate them to conceive of their own new methodology, students will be responsible for delivering presentations on topics selected from the literature, designing experiments to address currently unsolved problems in Chemical Biology (in take-home examinations), and generating several novel research proposal ideas, one of which will be elaborated into a full proposal.
Taught by: EJ Petersson
One-term course offered either term
Also Offered As: CHEM 751
Activity: Lecture
1.0 Course Unit

BMB 799 Independent Study (Yrs 1 - 2)
Activity: Independent Study
1.0 Course Unit

BMB 899 Pre-Dissertation Research
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Biochemistry (BCHE)

BCHE 280 Physical Models of Biological Systems
Classic case studies of successful reductionistic models of complex phenomena, emphasizing the key steps of making estimates, using them to figure out which physical variables and phenomena will be most relevant to a given system, finding analogies to purely physical systems whose behavior is already known, and embodying those in a mathematical model, which is often implemented in computer code. Topics may include bacterial genetics, genetic switches and oscillators; systems that sense or utilize light; superresolution and other new microscopy methods; and vision and other modes of sensory transduction.
Course usually offered in fall term
Also Offered As: PHYS 280
Prerequisite: (PHYS 101 OR MATH 104) AND (MATH 114 OR MATH 104) AND (MATH 115 OR MATH 116)
Activity: Lecture
1.0 Course Unit

BCHE 299 Undergraduate Research Projects
Independent Research.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: 10-20 h., 1-2 c.u., admission by permission of the biochemistry undergraduate chairman.

BCHE 300 Senior Research Projects
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: 10-20 h., 1-2 c.u., admission by permission of the biochemistry undergraduate chairman.

BCHE 404 Biochemistry Laboratory
Participation in research projects in the laboratories of individual faculty members. A list of possible research supervisors is available in the Biochemistry office (351 Chemistry). In addition to their laboratory projects, students will attend a weekly seminar in which their own and related work will be discussed. Year long course--initial registration must occur in Fall term, 0 c.u. for first term and 2 c.u. for second term, 15h.
Prerequisite: If course requirement not met, permission of instructor required.
Two terms. student must enter first term.
Prerequisite: CHEM 451
Activity: Seminar
1.0 Course Unit
Notes: Year long course --initial registration must occur in Fall term, 0 c.u. for first term and 2 c.u. for second term, 15h. CHEM 451 or permission of instructor required.

Bioengineering (BE)

BE 100 Introduction to Bioengineering
Survey course introducing students to the breadth of bioengineering. Course consists of introductory lectures, guest speakers/panelists, and a series of small assignments that allow students to explore different facets of bioengineering and the Penn Bioengineering program.
Course usually offered in fall term
Corequisite: MATH 104 AND PHYS 140
Activity: Lecture
0.5 Course Units
Notes: Freshmen only

BE 200 Introduction to Biomechanics
This course investigates the application of statics and strength of materials to soft and hard biologic tissues. The course will cover simple force analyses of the musculoskeletal system and introduces the fundamentals of the mechanics of materials including axial loading, torsion and bending and their application to biomechanics. The lecture and recitation will be complemented with hands-on examples emphasizing connections between theoretical principles and practical applications.
Course usually offered in fall term
Prerequisite: MATH 114 OR PHYS 140 OR PHYS 150
Corequisite: MATH 240
Activity: Lecture
0.5 Course Units

BE 220 Biomaterials
This course investigates the application of materials science and engineering to biomedical applications, with a focus on polymers, ceramics, and metals. The course will cover concepts related to basic material fabrication and synthesis, structure and property characterization, as well as applications of biomaterials. The lecture and recitation will be complemented with laboratory examples of material assessment and characterization.
Course usually offered in spring term
Prerequisites: BE 200, CHEM 102
Activity: Lecture
1.0 Course Unit

BE 225 Technology and Engineering in Medicine
The course is appropriate for engineering and natural science majors including premeds. The prerequisites will not be waived. This course will provide an examination of technology with emphasis on engineering design and its impact on medicine and health. Planned topics change from year to year and include, for example, cochlear implants and visual sensory rehabilitative devices. The course includes homework and reading assignments. Every student presents a paper on a relevant biomedical technology and the underlying science and engineering design.
One-term course offered either term
Prerequisites: MATH 114, PHYS 140 and 141 or PHYS 150 and 151 or PHYS 170 and 171
Activity: Seminar
1.0 Course Unit
BE 270 Bioengineering Laboratory Principles
This course will cover a variety of bioengineering laboratory principles and techniques including data collection, analysis and reporting. Students will explore tools related to mechanics, materials and electronics with applications in the bioengineering field.
Taught by: Dourete/Burdick
Course usually offered in spring term
Activity: Laboratory
1.0 Course Unit

BE 301 Bioengineering Signals and Systems
Properties of signals and systems; Examples of biological and biomedical signal and systems; Signal operations, continuous and discrete signals; Linear, time invariant systems; Time domain analysis; Systems characterized by linear constant-coefficient differential equations; Fourier analysis with applications to biomedical signals and systems; Introduction to filtering; Sampling and the sampling theorem. Examples vary from year to year, but usually include signals such as the ECG and blood pressure wave, principles of signal coding in the auditory system. One-term course offered either term
Prerequisites: MATH 241, PHYS 141 OR 151, ENGR 105
Activity: Lecture
1.0 Course Unit

BE 305 Engineering Principles of Human Physiology
This course presents a quantitative, biophysical approach to physiology, focusing on the nervous, cardiovascular, and pulmonary systems. We will also emphasize computational modeling and analysis of physiological systems.
Course usually offered in spring term
Prerequisite: MATH 240 AND ENGR 105
Activity: Lecture
1.0 Course Unit

BE 306 Cellular Engineering
The biological cell is a complex machine and its function is at the root of all physiology and many pathologies. Recent advances in molecular and cell biology enable the redesign of cell function. This course aims to develop a quantitative understanding of cell function, and how we might go about changing cell function through intelligent redesign. The course covers topics ranging from receptor binding and endocytosis, cell adhesion and motility, cell function in the immune system, systems and synthetic biology, genetic knockdown and manipulation using CRISPR and gene therapy, and strategies for immunotherapy including chimeric antigen receptor therapy (carT).
Taught by: Hammer
Course usually offered in fall term
Prerequisites: CHEM 102, MATH 241, PHYS 140, 141, BIOL 121
Activity: Lecture
1.0 Course Unit

BE 309 Bioengineering Modeling, Analysis and Design Laboratory I
BE 309 is a one course-unit laboratory course with a focus on combining experimental and mathematical approaches to understand biological systems and solve bioengineering problems. The course content integrates concepts from mathematics, physics, signal analysis, control engineering, mass transport, and heat transfer with applications in physiology and pharmacology. Areas of emphasis are model development and validation, statistical analysis, experimental design, error analysis and uncertainty, and scientific writing.
Course usually offered in fall term
Prerequisites: ENGR 105, PHYS 141, 151, MATH 240, BE 200, 220, ENM 375
Activity: Lecture
1.0 Course Unit

BE 310 Bioengineering Modeling, Analysis and Design Laboratory II
BE 310 is a one course-unit laboratory course on the design of technology to measure and control biological systems. The course is divided into four modules: (i) microfluidics for point of care diagnostics, (ii) synthetic biology for predicting cellular behavior, (iii) electronics and signal analysis of bioelectrical signals, and (iv) bioanalytical spectroscopy for low-cost diagnostics. Each module will have two components: (i) a series of structured learning exercises to teach key concepts and methods of the topic that we are studying, and (ii) a design challenge, in which the understanding gained in the first component is used to design a solution to an open ended bioengineering challenge.
Course usually offered in spring term
Prerequisites: ENGR 105, PHYS 141, 151, BE 220, BIOL 121, 123, MATH 240, ENM 375
Corequisite: MATH 241 AND BE 301
Activity: Laboratory
1.0 Course Unit

BE 330 Self-Assembly of Soft Materials
Soft matter is found in diverse applications including sports (helmets & cloths); food (chocolate, egg); consumer products (e.g., lotions and shampoo); and devices (displays, electronics). Whereas solids and liquids are typically hard and crystalline or soft and fluid, respectively, soft matter can exhibit both solid and liquid like behavior. In this class, we investigate the thermodynamic and dynamic principles common to soft matter as well as soft (weak) forces, self-assembly and phase behavior. Classes of matter include colloidal particles, polymers, liquid crystalline molecules, amphiphilic molecules, biomacromolecules/membranes, and food. Active learning activities will be included.
Course usually offered in fall term
Also Offered As: MSE 330
Prerequisite: CHEM 102 OR MSE 220 OR BE 220
Activity: Lecture
1.0 Course Unit

BE 350 Introduction to Biotransport Processes
Introduction to basic principles of fluid mechanics and of energy and mass transport with emphasis on applications to living systems and biomedical devices.
Course usually offered in spring term
Prerequisites: MATH 240, PHYS 140 or 150, BE 200
Activity: Lecture
1.0 Course Unit
1.0 Course Unit
Activity: Lecture
Course usually offered in spring term
Notes: Junior and Senior BE majors only

**BE 400 Preceptorship in Clinical Bioengineering**
Introduction to the integration of biomedical engineering in clinical medicine through lectures and a preceptorship with clinical faculty. This course is for BE majors ONLY, with preference given to BSE students.

**BE 470 Medical Devices**
Lab-based course where students learn the fundamentals of medical device design through hands-on projects using microcontrollers. Students first learn basic design building blocks regularly employed in microcontroller-based medical devices, and then carry out a small design project using those building blocks. Projects are informed by reverse-engineering of competing products, FDA regulations, and marketplace considerations. Prerequisite: Junior or Senior BE Majors only. Students who have taken ESE 350 or a similar course may not enroll. Permission of instructor required if course prerequisites not met.

**BE 472 Medical Device Development**
Students will learn the process of developing medical devices that fulfill unmet patient needs. Students will be equipped with an understanding of what is required to lead a startup venture in medical devices including regulatory, legal, fundraising, team building and leadership. In lab, students will develop a proof-of-concept prototype device. Students will pitch their ideas to real med tech investors. The successful student will leave the class with the knowledge, skills and confidence to lead a startup venture in medical devices. If desired by the student, the proof-of-concept device can be used as the basis for their senior design project. Junior standing in Bioengineering or permission of the instructor if course prerequisite is not met.

**BE 483 Molecular Imaging**
This course will provide a comprehensive survey of modern medical imaging modalities and the emerging field of molecular imaging. The basic principles of X-ray, ultrasound, nuclear imaging, and magnetic resonance imaging will be reviewed. The course will also cover concepts related to contrast media and targeted molecular imaging. Topics to be covered include the chemistry and mechanisms of various contrast agents, approaches to identifying molecular markers of disease, ligand screening strategies, and the basic principles of toxicology and pharmacology relevant to imaging agents.

**BE 495 Senior Design Project**
Group design projects in various areas of bioengineering. Project ideas are proposed by the students in the Spring semester of the Junior year and refined during the Fall semester. The course guides the students through choosing and understanding an impactful biomedical problem, defining characteristics of a successful design solution to eliminate or mitigate a problem or fulfill a need, identifying and prioritizing constraints, creatively developing potential design solutions, iteratively refining design options, defining and implementing an optimal solution, and evaluating how well the solution fulfills the need. Final oral and written reports are required. Also emphasized are teamwork, project management, time management, regulations/standards, and effective communication.

**BE 496 Senior Design Project**
Second semester of a two semester design project. Seniors in BE or Department Permission. Course usually offered in spring term

**BE 490 Independent Project in Bioengineering**
An intensive independent study experience on an engineering or biological science problem related to bioengineering. Requires preparation of a proposal, literature evaluation, and preparation of a paper and presentation. Regular progress reports and meetings with faculty advisor are required. Sophomore, Junior and Senior BE majors only.

**BE 492 Independent Project in Bioengineering**
Second semester of an independent project. Sophomore, Junior and Senior BE majors only.

**BE 494 Independent Project in Bioengineering**
One-term course offered either term

**BE 496 Independent Project in Bioengineering**
Second semester of a two semester design project. Seniors in BE or Department Permission.

**BE 497 Independent Project in Bioengineering**
One-term course offered either term

**BE 498 Independent Project in Bioengineering**
One-term course offered either term

**BE 480 Introduction to Biomedical Imaging**
Introduction to the mathematical, physical and engineering design principles underlying modern medical imaging systems including x-ray computed tomography, ultrasonic imaging, and magnetic resonance imaging. Mathematical tools including Fourier analysis and the sampling theorem. The Radon transform and related transforms. Filtered backprojection and other reconstruction algorithms. Bloch equations, free induction decay, spin echoes and gradient echoes. Applications include one-dimensional Fourier magnetic resonance imaging, three-dimensional magnetic resonance imaging and slice excitation.

**BE 499 Independent Project in Bioengineering**
Sophomore, Junior and Senior BE majors only.

**BE 493 Independent Project in Bioengineering**
Sophomore, Junior and Senior BE majors only.

**BE 495 Independent Project in Bioengineering**
One-term course offered either term

**BE 496 Independent Project in Bioengineering**
One-term course offered either term

**BE 497 Independent Project in Bioengineering**
One-term course offered either term

**BE 498 Independent Project in Bioengineering**
One-term course offered either term

**BE 499 Independent Project in Bioengineering**
One-term course offered either term

**BE 490 Independent Project in Bioengineering**
An intensive independent study experience on an engineering or biological science problem related to bioengineering. Requires preparation of a proposal, literature evaluation, and preparation of a paper and presentation. Regular progress reports and meetings with faculty advisor are required. Sophomore, Junior and Senior BE majors only.

**BE 492 Independent Project in Bioengineering**
Second semester of an independent project. Sophomore, Junior and Senior BE majors only.

**BE 494 Independent Project in Bioengineering**
One-term course offered either term

**BE 496 Senior Design Project**
Second semester of a two semester design project. Seniors in BE or Department Permission.

**BE 497 Independent Project in Bioengineering**
One-term course offered either term

**BE 498 Independent Project in Bioengineering**
One-term course offered either term

**BE 499 Independent Project in Bioengineering**
One-term course offered either term

**BE 480 Introduction to Biomedical Imaging**
Introduction to the mathematical, physical and engineering design principles underlying modern medical imaging systems including x-ray computed tomography, ultrasonic imaging, and magnetic resonance imaging. Mathematical tools including Fourier analysis and the sampling theorem. The Radon transform and related transforms. Filtered backprojection and other reconstruction algorithms. Bloch equations, free induction decay, spin echoes and gradient echoes. Applications include one-dimensional Fourier magnetic resonance imaging, three-dimensional magnetic resonance imaging and slice excitation.

**BE 495 Senior Design Project**
Group design projects in various areas of bioengineering. Project ideas are proposed by the students in the Spring semester of the Junior year and refined during the Fall semester. The course guides the students through choosing and understanding an impactful biomedical problem, defining characteristics of a successful design solution to eliminate or mitigate a problem or fulfill a need, identifying and prioritizing constraints, creatively developing potential design solutions, iteratively refining design options, defining and implementing an optimal solution, and evaluating how well the solution fulfills the need. Final oral and written reports are required. Also emphasized are teamwork, project management, time management, regulations/standards, and effective communication.

Seniors in BE or Department Permission.

**BE 496 Senior Design Project**
Second semester of a two semester design project. Seniors in BE or Department Permission.

**BE 497 Independent Project in Bioengineering**
One-term course offered either term

**BE 498 Independent Project in Bioengineering**
One-term course offered either term

**BE 499 Independent Project in Bioengineering**
One-term course offered either term
BE 497 Senior Thesis in Biomedical Science
An intensive independent project experience incorporating both technical and non-technical aspects of the student’s chosen career path. Chosen topic should incorporate elements from the student’s career path electives, and may involve advisors for both technical and non-technical elements. Topics may range from biomedical research to societal, technological and business aspects of Bioengineering. A proposal, regular progress reports and meetings with a faculty advisor, a written thesis, and a presentation are required. Seniors in BAS or Department Permission.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BE 498 Senior Thesis in Biomedical Science
Second semester of a year-long project. Seniors in BAS or Department Permission.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 502 From Biomedical Science to the Marketplace
This course explores, through own work (this is, own discovery) the transition from fundamental knowledge to its ultimate application in a clinical device or drug. Emphasis is placed upon factors that influence this transition and upon the integrative requirements across many fields necessary to achieve commercial success. Special emphasis is placed upon entrepreneurial strategies, intellectual property, and the FDA process of proving safety and efficacy. Graduate students or permission of the instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BE 504 Biological Data Science II: Data Mining Principles for Epigenomics
This course will teach upper level undergraduates and graduate students how to answer biological questions by harnessing the wealth of genomic and epigenomic data sets generated by high-throughput sequencing technologies. Graduate students or permission of the instructor
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 510 Biomechanics and Biotransport
The course is intended as an introduction to continuum mechanics in both solid and fluid media, with special emphasis on the application to biomedical engineering. Once basic principles are established, the course will cover more advanced concepts in biosolid mechanics that include computational mechanics and bio-constitutive theory. Applications of these advanced concepts to current research problems will be emphasized.
Course usually offered in spring term
Prerequisites: MATH 241, BE 200, 350
Activity: Lecture
1.0 Course Unit

BE 512 Bioengineering III: Biomaterials
This course provides a comprehensive background in biomaterials. It covers surface properties, mechanical behavior and tissue response of ceramics, polymers and metals used in the body. It also builds on this knowledge to address aspects of tissue engineering, particularly the substrate component of engineering tissue and organs. General Chemistry, basic biomechanics.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BE 514 Rehab Engineering and Design
Students will learn about problems faced by disabled persons and medical rehabilitation specialists, and how engineering design can be used to solve and ameliorate those problems. The course combines lectures, multiple design projects and exercises, and field trips to clinical rehabilitation facilities. Students will have substantial interaction with clinical faculty, as well as with patients. Prerequisite: Graduate students or permission of the instructor.
Course usually offered in fall term
Also Offered As: IPD 504
Activity: Lecture
1.0 Course Unit

BE 515 Bioengineering Case Studies
This course has the unofficial title 'What Makes Medical Technology Work?' We will examine biomedical devices and technologies with significant engineering components for use in breast cancer detection, for minimally invasive treatment of cancer and other disease, and applied neuroscience technologies for rehabilitation. Various factors that determine the success of particular medical systems will be discussed, including the 'fit' of the technology with a medical need, testing for safety and efficacy, FDA premarket approval requirements, clinical studies used to assess the technology for evidence-based medicine. The class will examine successful and unsuccessful examples of these technologies. The course will require extensive reading of papers from the professional literature, group presentations and papers. BE seniors and graduate students are encouraged to enroll. Graduate students or permission of the instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
BE 516 Introduction to High-Performance Scientific Computing
Research problems in the domain of physical, biological and biomedical sciences and engineering often span multiple time and length-scales from the molecular to the organ/organism, owing to the complexity of information transfer underlying biological mechanisms. Multiscale modeling (MSM) and high-performance scientific computing (HPC) have emerged as indispensable tools for tackling such complex problems. However, a paradigm shift in training is now necessary to leverage the rapid advances, and emerging paradigms in HPC — GPU, cloud, exascale supercomputing, quantum computing — that will define the 21st century. This course is a collaboration between Penn, UC Berkeley, and the Extreme Science and Engineering Discovery Environment (XSEDE) which administers several of the federally funded research purpose supercomputing centers in the US. It will be taught as a regular 1 CU course at Penn by adopting a flip-classroom/active learning format. The course is designed to teach students how to program parallel architectures to efficiently solve challenging problems in science and engineering, where very fast computers are required either to perform complex simulations or to analyze enormous datasets. The course is intended to be useful for students from many departments and with different backgrounds, e.g., scholar of Penn Institute for Computational Science, although we will assume reasonable programming skills in a conventional (non-parallel) language, as well as enough mathematical skills to understand the problems and algorithmic solutions presented.
Taught by: Ravi Radhakrishnan
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BE 518 Optical Microscopy
Course usually offered in fall term
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

BE 521 Brain-Computer Interfaces
The course is geared to advanced undergraduate and graduate students interested in understanding the basics of implantable neuro-devices, their design, practical implementation, approval, and use. Reading will cover the basics of neural signals, recording, analysis, classification, modulation, and fundamental principles of Brain-Machine Interfaces. The course will be based upon twice weekly lectures and 'hands-on' weekly assignments that teach basic signal recording, feature extraction, classification and practical implementation in clinical systems. Assignments will build incrementally toward constructing a complete, functional BMI system. Fundamental concepts in neurosignals, hardware and software will be reinforced by practical examples and in-depth study. Guest lecturers and demonstrations will supplement regular lectures. BE 301 (Signals and Systems) or equivalent, computer programming experience, preferably MATLAB (e.g., as used the BE labs, BE 310). Some basic neuroscience background (e.g. BIOL 215, BE 305, INSC core course), or independent study in neuroscience, is required. This requirement may be waived based upon practical experience on a case by case basis by the instructor.
Course usually offered in spring term
Also Offered As: NGG 521
Activity: Lecture
1.0 Course Unit

BE 530 Theoretical Neuroscience.
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. Knowledge of multivariable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.
Taught by: Vijay Balasubramanian
Course usually offered in spring term
Also Offered As: BIBB 585, NGG 594, PHYS 585, PSYC 539
Activity: Lecture
1.0 Course Unit

BE 537 Biomedical Image Analysis
This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomaterials imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods. Prerequisite: Mathematics through multivariate calculus (MATH 241), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics.
One-term course offered either term
Also Offered As: CIS 537
Activity: Lecture
1.0 Course Unit
BE 540 Biomolecular and Cellular Engineering
This course will introduce concepts and methods for the quantitative understanding of molecular and cellular phenomena. Topics include molecular recognition, receptor-ligand binding, viral infection, signal transduction, cell adhesion, motility, and cytoskeletal dynamics. The course requires mathematics at the level of differential equations, and some knowledge of Matlab programming. A basic knowledge of cell biology is suggested, although not required.
One-term course offered either term
Also Offered As: CBE 540
Activity: Lecture
1.0 Course Unit

BE 541 Engineering and Biological Principles in Cancer
This course provides an integrative framework and provides a quantitative foundation for understanding molecular and cellular mechanisms in cancer. The topics are divided into three classes: (1) the biological basis of cancer; (2) cancer systems biology; and (3) multiscale cancer modeling. Emphasis is placed on quantitative models and paradigms and on integrating bioengineering principles with cancer biology. Prerequisite: Seniors in BE or permission of the instructor.
Course usually offered in spring term
Also Offered As: CBE 541
Activity: Lecture
1.0 Course Unit

BE 546 Fundamental Techniques of Imaging I
This course covers the fundamentals of modern techniques in biological and in vivo biomedical imaging. This practical course consists of a series of hands-on lab exercises, covering major imaging modalities, but also extends to non-radiology modalities of interest in biological, pathological or animal imaging (e.g., optical imaging). Topics include x-ray, mammography, CT, proton therapy, radiation safety and brachytherapy. The emphasis will be on hands-on aspects of all areas of imaging and imaging analysis. Small groups of students will be led by a faculty member with technical assistance as appropriate. Graduate students or permission of the instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 547 Fundamental Techniques of Imaging 2 (BE 483/583 or MMP 507 preferred).
This laboratory course covers the fundamentals of modern medical imaging techniques. Students will participate in a series of hands-on exercises, covering the principals of X-ray imaging, CT imaging, photoacoustic imaging, diffusion tensor imaging, localized magnetic resonance (MR) spectroscopy, MR contrast agents, diffuse optical spectroscopy, and bioluminescence imaging. Each lab is designed to reinforce and expand upon material taught in BE483/583 Molecular Imaging and MMP507 Physics of Medical Imaging Graduate students or permission of the instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 550 Continuum Tissue Mechanics
This course introduces tensor calculus and continuum mechanics, with a focus on finite-deformation behavior of biological tissues including skin, tendon/ligament, cartilage, bone, blood vessels, nerves. Senior/Graduate Student in Bioengineering or permission of the instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 551 Biomicrofluidics
The focus of this course is on microfluidics for biomedical applications. Topics to be covered in the first half of this course include microscale phenomena, small-scale fabrication techniques, and sensing technologies that are often leveraged in the development of microfluidic systems for the study of biomolecules, cells, tissues, and organs in living biological systems. In the second half of this course, strong emphasis will be placed on the application of microfluidics in cell biology, bioanalytical chemistry, molecular biology, tissue engineering, and drug discovery. Prerequisite: Experience with an undergraduate level fluid mechanics course is preferred. Examples of relevant SEAS courses include BE 350 (Biotransport), CBE 350 (Fluid Mechanics), and MEAM 302 Fluid Mechanics).
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BE 553 Principles, Methods, and Applications of Tissue Engineering
Tissue engineering demonstrates enormous potential for improving human health. This course explores principles of tissue engineering, drawing upon diverse fields such as developmental biology, cell biology, physiology, transport phenomena, material science, and polymer chemistry. Current and developing methods of tissue engineering, as well as specific applications will be discussed in the context of these principles. A significant component of the course will involve review of current literature within this developing field. Graduate Standing or instructor's permission.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 554 Engineering Biotechnology
Advanced study of re DNA techniques; bioreactor design for bacteria, mammalian and insect culture; separation methods; chromatography; drug and cell delivery systems; gene therapy; and diagnostics.
Course usually offered in spring term
Also Offered As: CBE 554
Activity: Lecture
1.0 Course Unit
BE 555 Nanoscale Systems Biology
Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano- thru micro- scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (eg. fluorescence down to nano-scale, AFM), physical methods (eg. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology.
Prerequisite: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor. Taught by: Discher
Course usually offered in fall term
Also Offered As: CBE 555, MEAM 555
Activity: Lecture
1.0 Course Unit

BE 558 Principles of Biological Fabrication
BE 558 introduces methodological approaches that are currently used for the de novo construction of biological molecules - primarily, nucleic acids and proteins - and how to use these molecules to engineer the properties of cells and intact tissue. By the end of the semester, students should (i) possess a molecular-scale understanding of key biological synthesis (ii) and assembly processes, (ii) gain an intuition for how to create novel (iii) methodologies based on these existing processes, and (iii) appreciate (iv) the drivers of technology adoption (e.g. cost, time, ease, and (v) reproducibility). Throughout the course, we will place the material in context of applications in bioengineering and human health, including: protein engineering, drug discovery, synthetic biology & optogenetics, bio-inspired materials, and bio-electronic devices. Graduate standing or permission of the instructor. Undergraduate level biology, physics and chemistry.
Course offered fall; odd-numbered years
Activity: Lecture
1.0 Course Unit

BE 559 Multiscale Modeling of Chemical Systems
This course provides theoretical, conceptual, and hands-on modeling experience on three different length and time scales - (1) electronic structure (Å, ps); (2) molecular mechanics (100A, ns); and (3) deterministic and stochastic approaches for microscale systems (um, sec). Students will gain hands-on experience, i.e., running codes on real applications together with the following theoretical formalisms: molecular dynamics, Monte Carlo, free energy methods, deterministic and stochastic modeling. Prerequisite: Undergraduate courses in numeral analysis and statistical mechanics.
Course not offered every year
Also Offered As: CBE 559, SCMP 559
Activity: Lecture
1.0 Course Unit

BE 561 Musculoskeletal Biology and Bioengineering
The goal of this course is to educate students in core principles and expose them to cutting-edge research in musculoskeletal biology and bioengineering through (1) lectures covering the basic engineering principles, biological fundamentals, and clinical practices involved in the function, repair, and regeneration of the musculoskeletal tissues; (2) critical review and presentation by student groups of recent and seminal publications in the field related to the basic science, translation, and clinical practice of musculoskeletal biology and bioengineering, with discussion input by faculty members with relevant expertise. This course will place an emphasis on delivering multidisciplinary knowledge of cell and molecular biology, mechanics, material science, imaging, and clinical medicine as it relates to the field of musculoskeletal bioengineering and science. Graduate student standing in Engineering and/or CAMB. Undergraduate students with permission of the instructor.
Course offered fall; odd-numbered years
Activity: Lecture
1.0 Course Unit

BE 562 Drug Discovery and Development
Intro to Drug Discovery; Overview of Pharmaceutical Industry and Drug Development Costs, Timelines; High Throughput Screening (HTS); Assay Design and Sensitivity Solid Phase Synthesis and Combinatorial Chemistry; Enzyme Kinetics; Fluorescence, Linearity, Inner-filter effect, quenching; Time dynamics of a Michaelis-Menten Reaction; Competitive Inhibitor; FLINT, FRET, TRF, FF; SPA, alpha-screen; Enzyme HTS (protease); Cell based screening; Fura-2 ratio, loading signaling; Gfpcalmodulin-gfp integrated calcium response; Estrogen/ERE-Luc HTS; Problems with cell based screening (toxicity, permeability, nonspecificity); Instrumentation, Robotics/Automation; Z-factor; SAR, Positioning Scanning; Microarray HTS; IC50, % Conversion in HTS and IC50, Assay Optimization.
Course usually offered in fall term
Also Offered As: CBE 562
Activity: Lecture
1.0 Course Unit

BE 565 Developmental Engineering of Tissues
This course discusses systems biology approaches to understanding tissue development, homeostasis, and organogenesis. Emphasis is placed on modern technologies, models, and approaches to understanding collective cell behaviors that sculpt tissue form and function, placing developmental principles within an engineering framework. We will consider morphogenetic, mechanobiology, and microengineering/sensing analyses. Senior Standing in Bioengineering or permission of the instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
BE 566 Networked Neuroscience
The human brain produces complex functions using a range of system components over varying temporal and spatial scales. These components are couples together by heterogeneous interactions, forming an intricate information-processing network. In this course, we will cover the use of network science in understanding such large-scale and neuronal-level brain circuitry. Prerequisite: Graduate standing or permission of the instructor. Experience with Linear Algebra and MATLAB.
Course usually offered in spring term
Also Offered As: ESE 566
Activity: Lecture
1.0 Course Unit

BE 567 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB. Prerequisite: Graduate standing or permission of the instructor.
One-term course offered either term
Also Offered As: AMCS 567, GCB 567
Activity: Lecture
1.0 Course Unit

BE 568 Causality for Medicine and Biology
The goal of this course is to introduce students to the analysis of data which aims at understanding causal relations. Within biomedical research there are randomized experiments that effortlessly get at certain kinds of causality but generally only allow low-dimensional probing. There are also observational studies that generally do not meaningfully get at causality. The field of econometrics has worked out a great deal of approaches that meaningfully allow the estimation of causality without randomized experiments. This set of techniques is largely unknown in much of biology and medicine. We will thus review the econometric approaches with an eye towards applications to biology and medical problems. We will also review ways of infusing these techniques with machine learning approaches to obtain more meaningful estimates.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BE 569 Systems Biology of Cell Signaling Behavior
This course discusses the principles of cell signaling and cell decisions. We start from a molecular description of cell signaling components. The course builds towards understanding how their interactions govern cell and tissue behavior and how these processes can breakdown in disease. We conclude with a survey of modern approaches to analyze and manipulate signaling networks to study and control biological systems. Graduate, Junior or Senior standing in Bioengineering or permission of the instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 570 Biomechatronics
Mechatronics is the combination of mechanical, electrical and computer engineering principles in the design of electromechanical systems. Biomechatronics is the application of these principles to human biology and includes orthopaedic, hearing, respiratory, vision and cardiovascular applications. In this hands-on, project-based course, these biomechatronic systems will be explored. Students will learn the basic mechanical and electrical elements needed to complete a biomechatronic design challenge including basic circuits, design considerations, material fabrication, microcontrollers and mechanisms (e.g. converting rotational motion into linear motion). Students will carry out a final design project utilizing these building blocks. A first course in programming (Matlab and/or C++ preferred), Senior standing in BE or permission of the instructor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BE 571 The Goals of Scientific Inquiry
A key skill needed for a successful career in engineering and applied science is the ability to capitalize on current advances in technology (e.g., big data, data science, machine learning) to solve important problems. To gain this ability a student must go beyond an understanding of the technology itself, and instead must achieve the more challenging capacity to identify tractable problems, to formulate good questions, to initiate big ideas, to guide the advancement of science. In this course, we provide a broad and rich perspective on science as a field, laying the critical groundwork for just such achievements. Prerequisites: The course is open to all graduate students. Undergraduates must have passed Math 241, ENM 375 or equivalent, CIS 120 or higher, and PHYS 141. PHIL 025 or similar is beneficial but not required.
Taught by: Bassett, D
Course offered spring; even-numbered years
Activity: Lecture
1.0 Course Unit

BE 573 Special Topics in Bioengineering - 1
This special topics course will focus on emerging topics in Bioengineering at the molecular and cellular level covering genomics, epigenetics, molecular and cellular systems with focus on immunology, cancer, neuroengineering, biomechanics, and other facets of bioengineering
Taught by: BE Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 574 Special Topics in Bioengineering - 2
This special topics course will focus on emerging topics in Bioengineering at the macroscale from organ to population level covering genomics, epigenetics, molecular and cellular systems with focus on immunology, cancer, neuroengineering, biomechanics, and other facets of bioengineering
Taught by: BE Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
BE 576 The Cell as a Machine
The course is a general survey of cell mechanics, emphasizing problem-based and hypothesis-testing approaches. It is based on the concept that the cell is a complex machine, and that the cell can therefore be understood by first understanding principles of complex functions in robust machines, and then understanding the design and operation of complex functions specifically in cells. The course has been offered internationally for many years using a reverse-classroom format. Lectures, which are given primarily by Michael Sheetz, former director of the Mechanobiology Institute at the National University of Singapore, are pre-recorded and viewed independently by students, who also do outside reading and prepare questions in advance of a live, remote, 2 hour question/discussion session with Dr. Sheetz. The Penn course directors are present at all question/discussion sections, and lead tutorials on site. Homework and exams are graded, and Penn course directors will review them for consistency. Other sites that will be involved in the course in the coming year include Columbia, MIT, and Berkeley. Graduate Standing or permission of the instructor. Course usually offered in fall term Activity: Lecture 1.0 Course Unit Notes: Auditors not permitted

BE 578 Principles of Controlled Release Systems
This course provides a basic understanding of the engineering of controlled release systems specifically geared towards the development of formulations for drug delivery, which stands as a 114 billion dollar industry. The course focuses on topics at the interface between engineering and medicine, such as biomaterials, pharmacokinetics, polymer chemistry, reaction kinetics, and transport phenomena. Design of controlled release systems for transdermal, aerosol, oral, gene, and targeted cellular delivery are discussed with emphasis placed on fabrication, US FDA regulatory considerations, and the relevant physiological milieu. The course comprises (1) foundational lectures that provide the basic tools for the student to elaborate a controlled delivery system, (2) an overview of key current research on biomedical controlled release systems for different pathologies and body compartments, (3) an elevator pitch competition for original ideas that use controlled release systems, and (4) a project; plan and presentation to implement the pitched controlled release; system idea to practice design and problem-solving skills and practice basic elements of business proposal. Graduate students and senior standing in Bioengineering, Chemical and Biomolecular Engineering, or permission of the instructor. Course usually offered in fall term Activity: Lecture 1.0 Course Unit

BE 581 Techniques of Magnetic Resonance Imaging
Detailed introduction to the physics and engineering of magnetic resonance imaging as applied to medical diagnosis. Covered are magnetism spatial encoding principles, Fourier analysis, spin relaxation, imaging pulse sequences and pulse design, contrast mechanisms, chemical shift, flow encoding, diffusion and perfusion, and a discussion of the most relevant clinical applications. Taught by: Song and Wehrli Course offered spring; odd-numbered years Also Offered As: BMB 581 Activity: Lecture 1.0 Course Unit

BE 583 Physics of Medical / Molecular Imaging
Physical principles of diagnostic radiology, fluoroscopy, computed tomography; principles of ultrasound and magnetic resonance imaging; radioisotope production, gamma cameras, SPECT systems, PET systems; diagnostic and nuclear medicine facilities and regulations. The course includes a component emphasizing the emerging field of molecular imaging. Course usually offered in fall term Also Offered As: BE 483, MPH 602 Prerequisite: MATH 241 AND BIOL 215 AND BE 305 Activity: Lecture 1.0 Course Unit

BE 584 Mathematics of Medical Imaging and Measurements
In the last 25 years there has been a revolution in image reconstruction techniques in fields from astrophysics to electron microscopy and most notably in medical imaging. In each of these fields one would like to have a precise picture of a 2 or 3 dimensional object which cannot be obtained directly. The data which is accessible is typically some collection of averages. The problem of image reconstruction is to build an object out of the averaged data and then estimate how close the reconstruction is to the actual object. In this course we introduce the mathematical techniques used to model measurements and reconstruct images. As a simple representative case we study transmission X-ray tomography (CT). In this context we cover the basic principles of mathematical analysis, the Fourier transform, interpolation and approximation of functions, sampling theory, digital filtering and noise analysis. Course not offered every year Also Offered As: AMCS 584, MATH 584 Prerequisite: MATH 114 AND MATH 360 OR MATH 508 AND MATH 361 OR MATH 509 Activity: Lecture 1.0 Course Unit

BE 597 Master's Thesis Research
For students working on an advanced research program leading to the completion of master's thesis. One-term course offered either term Activity: Masters Thesis 1.0 Course Unit

BE 599 Master's Independent Study
The purpose of BE 599 is to allow a student to create a customized curriculum to study material beyond or outside the scope of our standard BE course offerings. Independent study is NOT a research or design project, it is a one-on-one or small-group course with a professor. The course should require an effort comparable to that of a regular course, about 10-12 hours per week. A paper or presentation is required One-term course offered either term Activity: Independent Study 1.0 Course Unit
**BE 608 Commercializing Translational Therapeutics**
To provide an in-depth view of the process by which scientific discoveries are commercialized. This course covers discovery in the laboratory, technology transfer, regulatory, financial, and managerial issues involved in moving a technology from the lab into the market place. The course contents fall into three broad categories: (1) examples of scientific discoveries that are candidates for commercialization, (2) fundamental elements of technology transfer, such as intellectual property protection and licensing, and (3) aspects of commercialization, such as regulatory approval, financing, and startup formation. In using this structure, the course provides parallel coverage of both the science and the commercialization process, in such a way that the elements of one contribute to the student’s experience in learning the other. Prerequisite: Undergraduates and graduate students in other departments are welcome. Please contact mmaxwell@upenn.edu to request permission to request permission to register. Taught by: Nalaka Gooneratne, MD Also Offered As: MTR 620 Activity: Lecture 1.0 Course Unit

**BE 640 The Extracellular Matrix**
This course is geared towards first and second year graduate students in BGS/CAMB and SEAS/BE with an interest in the interface of extracellular matrix (ECM) cell biology and biomechanics. Students will learn about the ECM and adhesion receptors and their impact on the cytoskeleton and signaling, as well as fundamental concepts in biomechanics and engineered materials. We will discuss how these topics can inform the study of cell biology, physiology and disease. An additional objective of the course is to give students experience in leading critical discussions and writing manuscript reviews. Invited outside speakers will complement the strengths of the Penn faculty. Taught by: R. Mauck, R. Wells. Course offered spring; even-numbered years Also Offered As: CAMB 703 Prerequisite: BIOM 600 Activity: Lecture 1.0 Course Unit

**BE 650 Advanced Biomedical Imaging Applications**
The course will cover a broad range of biomedical imaging technologies including X-ray, MRI, US, molecular and optical imaging. The curriculum will focus on the design of biomedical imaging based research studies spanning from basic technology development through clinical trials. This discussion oriented course is expected prepare students for integrating imaging technology and biomedical concepts to answer biological and medical questions. Course usually offered in fall term Activity: Lecture 1.0 Course Unit

**BE 662 Advanced Molecular Thermodynamics**
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory. Course usually offered in fall term Also Offered As: CBE 618, MEAM 662 Activity: Lecture 1.0 Course Unit

**BE 699 Bioengineering Seminar**
This is a required course for BE PhD candidates and involves attendance at seminars related to bioengineering topics, which can be either within the departmental seminar series or through other relevant seminar series on campus. The goal is to expose students to a breadth of bioengineering topics beyond their specific dissertation work. Students are required to submit summaries of the attended seminars to receive course credit. One-term course offered either term Activity: Seminar 0.5 Course Units

**BE 711 Integrative plant and animal mechanobiology**
This course aims to provide students with an understanding of biomechanics that spans the plant and animal kingdoms, with the goal of emphasizing principles common to both. Major concepts include 1) Plant and Animal Cell Biology; 2) Solid, Fluid, and Transport Mechanics; and 3) Integrating Biology and Mechanics - Big Questions. In addition to lectures, there will be two journal article discussion sections. Most lectures will be given by Penn faculty, although selected topics (particularly in plant biology and mechanics) will be covered by faculty at other sites through lectures broadcast remotely. The Penn director will be present at all sessions of the class. Undergraduates require special permission from the director. Taught by: Rebecca Wells Course usually offered in fall term Also Offered As: CAMB 711 Activity: Lecture 1.0 Course Unit

**BE 899 PhD Independent Study**
The purpose of BE 899 is to allow a student to create a customized curriculum to study material beyond or outside the scope of our standard BE course offerings. Rather than a research or design project, BE 899 is a one-on-one or small-group course with a professor. Students must submit a proposal outlining the study area along with the professor’s approval. A paper or presentation is required. One-term course offered either term Activity: Independent Study 1.0 Course Unit Notes: Graduate Students Only

**BE 990 Masters Thesis**
For Master’s students who have completed the course requirements for the Master's degree and are strictly working to complete the Master’s Thesis leading to the completion of a Master’s degree. Permission Required.
One-term course offered either term Activity: Masters Thesis 1.0 Course Unit

**BE 995 Doctoral Dissertation Status**
Ph.D. Students register for Doctoral Dissertation Status after they have advanced to Ph.D. candidacy by completing the Candidacy Exam which consists of the Dissertation Proposal Defense.. Permission required. For Ph.D candidates only.
One-term course offered either term Prerequisites: For Ph.D. Candidates only Activity: Dissertation 1.0 Course Unit
BE 999 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Bioethics (BIOE)

BIOE 282 Lying, Cheating, Stealing, and Killing: How to Think About Professional Ethic
Professionals - in business, medicine, law, and politics - face myriad ethical dilemmas in their daily work life that challenge, and sometimes conflict with, the moral commitments that guide their everyday life. This course systematically examines the ethical dimensions of these four professional roles, asking questions such as: Are there limits to what we should sell? How far should competitors go to ‘win’? Who should get ventilators in a flu pandemic? Is it morally permissible for physicians to assist in suicide? Should lawyers represent terrorists or child killers? How far does attorney-client privilege go? Is it morally justifiable to torture enemy combatants? Should politicians lie?
Taught by: Allen/Emanuel/Hirschmann/Strudler
Also Offered As: PSCI 282
Activity: Lecture
1.0 Course Unit

BIOE 401 Introduction to Bioethics
Course usually offered in fall term
Also Offered As: BIOE 601
Activity: Lecture
1.0 Course Unit

BIOE 402 Foundations of Bioethics
This course examines the various theoretical approaches to bioethics and critically assesses their underpinnings. Topics to be covered include an examination of various versions of deontological theories, utilitarianism, virtue ethics, principlism, casuistry, feminist ethics, narrative theory, and pragmatism.
Also Offered As: BIOE 602
Activity: Lecture
1.0 Course Unit

BIOE 505 Sex and Bioethics
While the topics of sex and sexuality have a long and storied history in medical culture, they have been especially complex and problematic in the past century. With the creation of distinct sexually-minded medical fields since the late 19th-century including sexology, psychiatry, and hormonal studies, medicine has also occasioned the very categories and labels of the homosexual, the hermaphrodite, the invert, and the nymphomaniac, to name a few. While medical historians and queer theorists have paid almost obsessive attention to these subjects, bioethicists have intervened to a lesser degree and on only a handful of relevant subjects. In this course, we will address the range of historical and theoretical matters that speak to this intersection of bioethics and sex, paying special attention to the health concerns of lesbian, gay, bisexual, trans, queer, and intersex (LGBTQI) persons. Who has sex with whom? What does it mean to pathologize or diagnose such desires? How do we raise the stakes when considering persons who question their sex or who are in sexual transition? And how do such questions reveal the dilemmas of bioethicists at large, not just those related to matters of sex and sexuality? Accordingly, this course will consider a range of historical and contemporary topics which speak to the bioethical dilemmas of the intersection of medicine, sex, and sexuality, including: the gay adolescent, the intersex person, gay-conversion therapies, the prospect of gay gene studies, sex addiction, and blood/organ donation policies in wake of the HIV/AIDS pandemic. Specifically, we will focus on literary sources (poetry, memoirs, diaries, and films) as well as on non-literary accounts (medical texts, bioethical scholarship, legal cases, and historical records) that explore the emotional and somatic aspects of matters related to sex and bioethics.
Activity: Lecture
1.0 Course Unit

BIOE 540 Challenging Clinical Ethics: Managing patient/caregiver conflicts through mediation.
The contemporary healthcare system in which patients, families, institutions and a multiplicity of caregivers interact over matters of life and death with legal, ethical, emotional and scientific complexities inherently gives rise to a variety of disputes. Such disputes are frequently highly charged and are often emergent in nature. In recent years, mediation has grown exponentially as a dispute resolution mechanism of choice. Not surprisingly, the success of mediation and a wider understanding of the process, has led to its application in the realm of healthcare disputes with encouraging results. This course will initially provide an overview of classical mediation theory and practice. Students will be introduced to negotiation fundamentals critical to the practice of mediation. Similarities and differences between mediation in the healthcare field, as distinct from other contexts, will be examined. All class members will participate in mediation role-plays designed to simulate disputes of the kind prevalent in healthcare landscape.
Taught by: Bergman
Course not offered every year
Activity: Lecture
1.0 Course Unit
BIOE 545 Mediation Intensive I
Students will be placed in a variety of clinical situations in which they will play the roles of disputants and mediators, with ongoing discussions and critiques of mediator performance. Each student will be videotaped during their mediation to elicit feedback from the group and to catalyze self-criticism. As distinct from the course, BIOE 540: Challenging Clinical Ethics, in which negotiation and mediation theory are taught as a prelude to clinical simulations, this course references the literature solely in relation to problems encountered in the hands-on mediation of specific cases. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Activity: Seminar
1.0 Course Unit

BIOE 546 Mediation Intensive II
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to Mediation Intensive I, but the Mediation Intensive II will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; and receive constructive feedback in a supportive environment. Students will also be required to complete a written research paper. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Activity: Seminar
1.0 Course Unit

BIOE 547 Mediation Intensive III
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to Mediation Intensive I and II, but med. intensive III will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; and receive constructive feedback in a supportive environment. Students will also be required to complete a written research paper. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Activity: Seminar
1.0 Course Unit

BIOE 548 Mediation Intensive IV
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to earlier mediation intensives but the mediation intensive IV will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; use video-tapes of simulations to improve mediation techniques and strengthen interpersonal skills; receive constructive feedback in a supportive environment. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Activity: Seminar
1.0 Course Unit

BIOE 550 Bioethics and Society
This set of courses will deal with bioethical issues in popular culture addressed from a social science perspective. Courses to be offered include: ‘Sociology of Bioethics,’ and ‘Media and the Doctor-Patient Relationship.’ This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

Taught by: MERZ,JON
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 551 Sociological Topics in Bioethics
This set of courses will deal with bioethical issues in popular culture addressed from a social science perspective. Courses to be offered include: ‘Sociology of Bioethics,’ and ‘Media and the Doctor-Patient Relationship.’ This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 552 Anthropological Topics in Bioethics
This set of courses provides an introduction to the use of anthropological methods and perspective to address bioethical topics and issues. Past courses have included the ‘Sociology of Medicine,’ Medical Errors,’ and ‘Sociology of Jewish Bioethics.’ This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 553 Historical Topics in Bioethics
This set of courses provides a historical perspective on the field of bioethics and/or key issues or areas within the field. Courses that might be offered include the history of medicine and the history of science. This is a topics course - for information on the topics currently being offered, please go to the course listing on the Bioethics website: https://www.med.upenn.edu/ mbe.

Course not offered every year
Activity: Seminar
1.0 Course Unit
BIOE 554 Religious Topics in Bioethics
This set of courses examine the role of spirituality in the field of bioethics. Courses might be taught from a single religious perspective or provide an overview of many different perspectives. Past courses have included ‘Spirituality and Bioethics.’ This is a topics course - for information on the topics currently being offered, please go to the course on the Bioethics website: http://www.med.upenn.edu/mbc. Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 555 Bioethics and Technology
Activity: Lecture
1.0 Course Unit

BIOE 556 Evidence in Bioethics and Health Policy
The ability to critically appraise scholarly work is a necessary skill to effectively contribute to bioethics and health policy debates, and for development and implementation of health interventions. The object of this course is to provide students with the skills needed to become fluent in reading and assessment of empirical bioethics and health service research. The course will review and evaluate a wide range of qualitative and quantitative methods utilized in bioethics, health policy, and medical research. Specifically, students will learn the conceptual rational for standard qualitative and quantitative methods, their strengths and weakness. At course completion, students should be able to critically evaluate empirical research published in top bioethics, health policy, and medical journals.
Taught by: Maclean
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BIOE 557 Disability Bioethics
Activity: Lecture
1.0 Course Unit

BIOE 558 Reproductive Health
Whether dealing with personal decisions or public policy, reproductive health matters are almost always controversial and often intractable. It is almost 50 years since the Supreme Court decision Griswold v Connecticut ’settled’ the right to contraceptives yet the last several years have been marked by increasing legislative action and judicial review of this right. This course will explore the ethical dimensions of reproductive health controversies including: 1) the moral and legal status of the human embryo and fetus in the context of assisted reproduction, embryonic stem cell research and abortion; 2) contraception, including over-the-counter provision of emergency contraception and contraceptives and legislation challenges to contraceptive insurance coverage in the Affordable Care Act; 3) attempts to restrict access to abortion by restricting later term abortion, mandating informed consent and waiting periods, and regulating abortion clinics; 4) maternal-fetal relationship including prenatal testing and the regulation of women’s behavior while pregnant, 5) assisted reproduction and 6) global concerns such as sex selective abortion, forced abortion and sterilization and reproductive rights in relation to population dynamics and environmental concerns.
Activity: Lecture
1.0 Course Unit

BIOE 559 Speaking For Patients: Ethical Issues in Patient Advocacy
This course examines the role that activism and advocacy play in shaping health care in the United States and abroad. The course combines in-depth exploration of particular case studies–AIDS activism in the 1980s, the billion-dollar breast cancer movement, the anti-vaccine movement–with an analysis of cross-cutting questions and themes. We consider how health advocates contribute to forming personal identities around certain illnesses and conditions, how they mobilize constituents and recruit allies, and how they influence decisions about health policy, research, and practice. We also consider the implications of an increasingly professionalized health advocacy industry and ask how corporate sponsorship has changed the landscape of health activism. In addition, we examine the ethical issues involved in speaking on behalf of others, particularly those (e.g., young children, persons with intellectual disabilities) who cannot speak for themselves.
Taught by: Matthew McCoy
Activity: Lecture
1.0 Course Unit

BIOE 560 Clinical Approaches to Bioethics
This set of courses examines issues in bioethics from the perspective of the practicing clinician, physician, nurse, or other health care professional. These courses will often use case studies or clinical experience to analyze or understand contemporary problems in bioethics. An example of such a course is ‘Clinical Dilemmas Through the Life Cycle.’ This is a topics course - for information on the topics currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbc. Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 561 Ethics of Science
This Bioethics course will examine ethics as it relates to science.
Taught by: Steve Joffe
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 562 Propaganda
A Bioethics examination of truth and persuasion in health and pandemics.
Taught by: Jon Merz
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 564 Social Media, Healthcare, and Medical Ethics
In this course, students will examine the conceptual and ethical challenges posed by the use of artificial intelligence, social media, and the ‘internet of things’ in healthcare contexts. The course will combine both didactics and discussion to engage students on these issues.
Taught by: Dominic Sisti
Course not offered every year
Activity: Lecture
1.0 Course Unit
BIOE 565 Rationing
You have one liver but three patients awaiting a liver transplant. Who should get the liver? What criteria should be used to select the recipient? Is it fair to give it to an alcoholic? These are some of the questions that arise in the context of rationing and allocating scarce health care resources among particular individuals, what is called micro-allocation decisions. There are also macro-allocation decisions that focus on how health care systems distributes resources across populations. Using the cases of organs for transplantation, the rationing for vaccines in a flu pandemic, and oncology drug shortages, the course will critically examine alternative theories for allocating scarce resources among individuals. Using both the need to establish priorities for global health aid and to define an essential benefit package for health insurance, the course will critically examine diverse theories for macro-allocation from cost-effectiveness analysis to age-based rationing to accountability for reasonableness.

Taught by: Ezekiel Emanuel, Harald Schmidt
Activity: Lecture
1.0 Course Unit

BIOE 566 Personal Responsibility
Activity: Lecture
1.0 Course Unit

BIOE 570 Bioethics and Policy
This set of courses will look at bioethical topics from either a legal or public policy perspective. Past courses have included: Ethics of Managed Care, Law, Medicine and Policy, and Legal Aspects of Healthcare in America. This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbc.
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 571 Global Health Policy
This course considers various theoretical approaches to global justice and global governance and analyzes their implications for global health. The course includes two parts. The first part examines accounts of cosmopolitanism, nationalism and other theories of global justice, critically assessing duties ascribed by each that may be owed universally to all persons or confined within associative boundaries of communities or nations. The second part explores applications to global health governance encompassing consideration of human rights and the operation and accountability of global institutions such as the United Nations, the International Monetary Fund, the World Bank, and the World Health Organization. The course scrutinizes the relevance of global justice for governing the global health realm, evaluating the current global health system and proposals for reforming it.
Activity: Lecture
1.0 Course Unit

BIOE 572 Global Bioethics
According to the WHO, around 30 million people with HIV/AIDS should receive anti-retroviral treatment. But only 10 million do. Drugs containing tenofovir—the standard of care in developed countries are expensive. Stavudine-based treatments are much cheaper but have worse side-effects. Is it ethical to use stavudine-based rather than tenofovir-based treatments in sub-Saharan Africa? Smoking rates have decreased drastically in most developed countries. But they are increasing in many developing countries. Established public health measures are not implemented, and the tobacco industry pursues a range of marketing activities that would be unacceptable in developed countries. As a consequence, global deaths from smoking are expected to increase to 1bn by the end of the 21st century, with 80% of deaths in developing countries. Is industry s behavior immoral or normal in a global market?
ARDS is a disease of premature newborns. Is it ethical to test a new ARDS drug in Bolivia if the drug—if proven to be effective—will be very expensive and accessible only to the richest people in Bolivia and other developing countries? An overarching question that these different cases raise is whether there are universal ethical standards that should apply to all people, or whether regional variations should be acceptable. Universalists typically argue that there must be no double standards, and that people should be treated the same regardless of where they live. Pragmatists raise concerns about moral imperialism, neo-colonialism, or insufficient respect for cultural or other differences. Increasing globalization fuels debates about which of competing sets of moral standards is the right one. Looking at a range of diverse cases including healthcare research, health policy, flu pandemics, family planning, smoking and obesity policy, and genetically modified crops, this course explores controversies in the cross winds of market forces, politics and ethics, and examines the roles and responsibilities of key actors and international policy guidance.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BIOE 575 Health Care Reform and the Future of the American Health Care System
Under stress from COVID-19, this course provides students with a rigorous understanding of the current American health care system and how it is likely to evolve over the next decade. The course will focus on six topics: 1) the development of the current health care system; 2) challenges of health care costs, quality, and access; 3) lessons of previous attempts to reform the system including the Affordable Care Act (ACA); 4) analysis of current policies regarding provider payment, technology, and electronic health records and how various sectors (e.g. public health and hospitals) are evolving in the current system; 5) impact of COVID-19 on health care delivery and finance, and 6) future megatrends in American health care system. Throughout the course, lessons will integrate basic health economics, history, health policy, and politics to elucidate key principles for understanding the health care system. The course will also examine at least one other country’s health system for comparison. The course will end with a consideration of the long-term outlook for the structure of the US health system and potential reforms.
Taught by: Emanuel,Schwartz
Course usually offered in fall term
Also Offered As: HCMG 250, HCMG 850
Activity: Lecture
1.0 Course Unit

BIOE 578 Bioethics and Human Rights
Activity: Lecture
1.0 Course Unit
BIOE 580 Research Ethics
This class is intended to give students a broad overview of research ethics and regulation. The students will come out of the class with an understanding of the moral bases of scientific ethics and the historical evolution of biomedical research ethics. Students will be fully conversant with the development, implementation, and limitation of US human subjects regulation. The course will include reading assignments and lectures addressing the following topics: ethics and morality in science, science in society; scientific integrity; misconduct: from FFP to MIM; conflicts of interest; collegiality, publication, and authorship; ethics codes and regulation; research with human subjects; historical review of human experimentation; human subjects regulation (HHS, FDA), Institutional Review Boards; informed consent, waivers, vulnerable populations, privacy and the confidentiality of records; and research on animals.
Taught by: Merz
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 590 Philosophical Topics in Bioethics
This set of courses provides a philosophical perspective on bioethical topics and issues. This can include courses that integrate ethical theory with concern for particular applications of theory or conceptual issues in medicine, health care, and the life sciences. Past courses have included Philosophy of Death and Dying, Genetics and Ethics, Philosophy of Medicine, Pragmatic Bioethics, and Feminism and Bioethics. This is a topics course - for information on the topics currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbi.
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 601 Introduction to Clinical Bioethics
This course is intended to serve as a broad introduction to the field of bioethics. The course will focus on three of the most important areas in bioethics: Genetics & Reproduction, Human Experimentation, and End-of-Life. Each module of the course will cover essential bioethics concepts, relevant legal cases, and classical readings of that theme. Each module will include one guest lecture from our distinguished bioethics faculty.
Taught by: Fiester
Course usually offered in fall term
Also Offered As: BIOE 401
Activity: Lecture
1.0 Course Unit

BIOE 602 Conceptual Foundations in Bioethics
This course examines the various theoretical approaches to bioethics and critically assesses their underpinnings. Topics to be covered include an examination of various versions of deontological theories, utilitarianism, virtue ethics, principlism, casuistry, feminist ethics, narrative theory, and pragmatism.
Course usually offered in spring term
Also Offered As: BIOE 402
Activity: Lecture
1.0 Course Unit

BIOE 603 Clinical Ethics
This course will familiarize participants with the basic modes and styles of ethics in clinical medical settings. Participants will read the major philosophical and sociological discussions on the scope and meaning of clinical ethics. Issues of particular concern will include, but are not limited to, the meaning of professional moral expertise and its professional roots, the range of possible kinds of moral intervention in clinical settings, the meaning of responsibility for the clinical ethicist, the arguments against formalized or certified clinical consultation, and significant concepts in clinical ethics, including end-of-life issues. Students will be required to complete an introductory clinical experience, rounding in units of HUP or CHOP. This seminar is open to graduate students in the Master of Bioethics program and in the health care professions. Please contact the Department of Medical Ethics for permission to register.
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 605 Mentored Research I
Activity: Masters Thesis
1.0 Course Unit

BIOE 606 Mentored Research II
Activity: Masters Thesis
1.0 Course Unit

BIOE 607 Mentored Research III
Activity: Masters Thesis
1.0 Course Unit

BIOE 608 Mentored Research IV
Activity: Masters Thesis
1.0 Course Unit

BIOE 996 Master of Bioethics Capstone
This course serves the final MBE project. This course requires students to work with faculty to produce original research that is of publishable quality. Past students have published in Nature, Science, and other prominent journals. This course is only open to students in the Master of Bioethics program.
Taught by: Lance Wahlert
Course offered summer, fall and spring terms
Activity: Masters Thesis
1.0 Course Unit

BIOE 999 Independent Study
This course is only open to students in the Master of Bioethics program.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Biological Basis of Behavior (BIBB)

BIBB 030 Neurobiology of Brain Disorders
The human brain is clearly the most complicated and magical organ in the body. We don't completely understand how it works, but we do know, unfortunately, fora variety of reasons, the human brain is prone to failure, either by acute injury, chronic degeneration, genetic flaws in its composition, or unknown disturbances in its behavior. Diseases of the brain can take many forms but are all uniformly devastating for individuals, families, and our society, and are also very costly. This course will explore the ways in which various brain disorders (both neurological and psychiatric) manifest themselves and discuss their underlying neurobiological mechanisms. In addition, the social and economic impact of these diseases in society will be considered, as well as some well publicized political issues surrounding many of these brain disorders.
Taught by: Dichter
Activity: Seminar
1.0 Course Unit

BIBB 050 Forensic Neuroscience
Progress in behavioral neuroscience and brain imaging techniques, such as functional and structural Magnetic Resonance Imaging (MRI) and Positron Emission Tomography (PET) has forced the courts to reconsider the role of behavioral sciences in courtroom decision-making. The goal of this course is to enable students to understand and interpret the use of behavioral neuro evidence in the justice system. The course will introduce the students to the relevant behavioral neuroscience constructs, principles of brain imaging and rules of scientific evidence. Students will be asked to use this introductory knowledge to critically evaluate the use of brain imaging and other behavioral neuroscience techniques as evidence in representative legal cases. For each case, students will serve as neuroscience experts for the defense or prosecution and prepare, present and defend their testimony against the opposing team. Through this course, students will develop the ability to critically evaluate brain imaging and other neuroscience data in forensic and legal settings.
Taught by: Langleben
Activity: Seminar
1.0 Course Unit

BIBB 060 Music and the Brain
Every human culture that has ever been described makes some form of music. The musics of different cultures cover a wide range of styles, but also display fascinating similarities, and a number of features are shared by even the most disparate musical traditions. Within our own culture, music is inescapable—there are very few individuals who do not listen to some form of music every day and far more who listen to music virtually all day long. Appreciation of music comes very early: newborns prefer music to normal speech and mothers all over the world sing to their babies in a fundamentally similar way. And yet, despite this seeming ubiquity, the real origin and purpose of music remains unknown. Music is obviously related to language, but how? Why do so many cultures make music in such fundamentally similar ways? What goes into the formation of music ‘taste’ and preferences? Does music have survival value, or is it merely ‘auditory cheesecake’, a superfluous byproduct of evolution as some critics have maintained? What is the nature of musical ability and how do musicians differ from non-musicians? In this course, we will look for answers by looking at the brain. Almost 200 years of scientific research into brain mechanisms underlying the production and appreciation of music is beginning to shed light on these and other questions. Although the sciences and the arts are often seen as entirely separate or even in opposition, studying the brain is actually telling us a lot about music, and studying music is telling us just as much about the brain.
Taught by: Kaplan
Activity: Seminar
1.0 Course Unit

BIBB 090 Your Brain on Food
What motivates us to eat? Why do many of us eat even in the absence of hunger? How do our food preferences and habits form? And how can eating transition from regulated to dysregulated? This seminar class investigates these questions and many others, with a focus on how our brains regulate food intake. We will explore the neuroscience behind eating, as well as the genetic, psychological, social, cultural, and societal influences that shape our behavior. Through readings, assignments, and class discussions, we will navigate the biological forces behind normal eating, as well as how eating becomes disordered in diseases like obesity and eating disorders. Through this course, students will learn about behavioral neuroscience research from human and animal studies and will develop critical thinking, reading, and writing skills. There are no prerequisites except for a love of food.
Taught by: Alhadeff
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

BIBB 109 Introduction to Brain and Behavior
Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological bases of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders.
For BA Students: Living World Sector
Taught by: Kane and McLean
One-term course offered either term
Also Offered As: BIOL 109, PSYC 109
Activity: Lecture
1.0 Course Unit
**BIBB 159 Memory**
This course presents an integrative treatment of the cognitive and neural processes involved in learning and memory, primarily in humans. We will survey the major findings and theories on how the brain gives rise to different kinds of memory, considering evidence from behavioral experiments, neuroscientific experiments, and computational models.
Taught by: Schapiro  
Also Offered As: PSYC 159  
Activity: Lecture  
1.0 Course Unit

**BIBB 160 ABCs of Everyday Neuroscience**
This course is an opportunity for undergraduates to share their interest and enthusiasm for neuroscience with students in grades 9-12 attending urban public schools in West Philadelphia. The course will allow Penn students to develop their science communication and teaching skills. Students will prepare neuroscience demonstrations, hands-on activities, and assessment tools. In parallel, the course aims to engage local high school students, increasing their interest and knowledge in science, and ultimately promoting lifelong science literacy.
Taught by: Lori Flanagan-Cato  
Prerequisite: BIBB 109  
Activity: Lecture  
1.0 Course Unit  
Notes: Enrollment by application only - apply via the link in 'Additional Course Information' above.

**BIBB 217 Visual Neuroscience**
An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.
Taught by: Stocker  
Course usually offered in spring term  
Also Offered As: PSYC 217, VLST 217  
Prerequisite: PSYC 109  
Activity: Lecture  
1.0 Course Unit

**BIBB 227 Physiology of Motivated Behaviors**
This course focuses on evaluating the experiments that have sought to establish links between brain structure (the activity of specific brain circuits) and behavioral function (the control of particular motivated and emotional behaviors). Students are exposed to concepts from regulatory physiology, systems neuroscience, pharmacology, and endocrinology and read textbooks as well as original source materials. The course focuses on the following behaviors: feeding, sex, fear, anxiety, the appetite for salt, and food aversion. The course also considers the neurochemical control of responses with an eye towards evaluating the development of drug treatments for: obesity, anorexia/cachexia, vomiting, sexual dysfunction, anxiety disorders, and depression.
Taught by: Grill  
One-term course offered either term  
Also Offered As: PSYC 127  
Prerequisite: PSYC 001  
Activity: Lecture  
1.0 Course Unit

**BIBB 231 Evolution of Behavior: Animal Behavior**
The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territoriality and communication.
Taught by: Seyfarth/Cheney  
Course not offered every year  
Also Offered As: BIOL 231, PSYC 231  
Prerequisite: BIOL 102 OR BIOL 121 OR PSYC 001  
Activity: Lecture  
1.0 Course Unit

**BIBB 233 Neuroethology**
In course, students will learn how neurobiologists study the relationship between neural circuitry and behavior. Behaviors such as bat echolocation, birdsong, insect olfaction, spatial navigation, eye movement and others will be used to explore fundamental principles of brain function that include brain oscillations, population codes, efference copy, sensorimotor maps and sleep replay. The course will also discuss the various methodologies that are used to address these questions. The reading material will be derived mostly from the primary literature.
Taught by: McLean  
Course usually offered in spring term  
Also Offered As: PSYC 233  
Prerequisite: BIBB 109  
Activity: Lecture  
1.0 Course Unit

**BIBB 240 Chronobiology and Sleep**
Topics to be covered include basic principles of chronobiology; neuroscience mechanisms of circadian rhythms and sleep; phylogeny and ontogony of sleep; human sleep and sleep disorders; circadian dysfunction; circadian and sleep homeostatic influences in human health and safety. Students may not receive credit for both BIBB 240 and BIBB 040.
Taught by: Dinges  
Course usually offered in spring term  
Prerequisite: BIBB 109  
Activity: Lecture  
1.0 Course Unit  
Notes: Students may not receive credit for both BIBB240 and BIBB040

**BIBB 249 Cognitive Neuroscience**
The study of the neuronal systems that underlie human perception, memory and language; and of the pathological syndromes that result from damage to these systems.
Taught by: Epstein or Mackey  
One-term course offered either term  
Also Offered As: PSYC 149  
Prerequisite: PSYC 001 OR COGS 001  
Activity: Lecture  
1.0 Course Unit
BIBB 251 Molecular and Cellular Neurobiology
Cellular physiology of neurons and excitable cells; molecular neurobiology and development. Topics include: action potential generation; synaptic transmission; molecular and physiological studies of ion channels; second messengers; simple neural circuits; synaptic plasticity; learning and memory; and neural development. Prerequisite: PHYS 105 or 151 strongly recommended
Taught by: Schmidt
Course usually offered in fall term
Also Offered As: BIOL 251
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit
Notes: (3hrs. lec., 3hrs. lab, 1.5 c.u.)

BIBB 260 Neuroendocrinology
This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.
Taught by: Flanagan-Cato
One-term course offered either term
Also Offered As: PSYC 239
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit

BIBB 269 Autonomic Physiology
This course will introduce the student to the functioning of the autonomic nervous system (ANS), which is critically involved in the maintenance of body homeostasis through regulation of behavior and physiology. The course will begin with a review of the basic anatomy and physiology of the ANS including the sympathetic, parasympathetic and enteric divisions. The mechanisms by which the ANS regulates peripheral tissues will be discussed, including reflex and regulatory functions, as will the effect of drugs which modulate ANS activity. The role of the ANS in regulating behavior will be addressed in the context of thirst, salt appetite and food intake.
Taught by: Heerding
Course usually offered in spring term
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit

BIBB 270 Drugs, Brain and Mind
The course will begin with a review of basic concepts in pharmacology including: routes of drug administration, drug metabolism, the dose response curve, tolerance and sensitization. Following a brief overview of cellular foundations of neuropharmacology (neuronal biology, synaptic and receptor function), the course will focus on several neurotransmitter systems and the molecular and behavioral mechanisms mediating the mind-altering, addictive and neuropsychiatric disorders, including depression, schizophrenia and anxiety with an emphasis on their underlying neurobiological causes, as well as the pharmacological approaches for treatment.
Taught by: Kane
Course usually offered in fall term
Also Offered As: PSYC 225
Prerequisite: BIBB 109 OR PSYC 109
Activity: Lecture
1.0 Course Unit

BIBB 273 Neuroeconomics
This course will introduce students to neuroeconomics, a field of research that combines economic, psychological, and neuroscientific approaches to study decision-making. The course will focus on our current understanding of how our brains give rise to decisions, and how this knowledge might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include how individuals make decisions under conditions of uncertainty, how groups of individuals decide to cooperate or compete, and how decisions are shaped by social context, memories, and past experience.
Taught by: Kable
Course not offered every year
Also Offered As: PSYC 273
Activity: Lecture
1.0 Course Unit

BIBB 310 Functional Neuroanatomy Laboratory
A laboratory course designed to familiarize the student with the fundamental gross and histological organization of the brain. The mammalian brain will be dissected and its microscopic anatomy examined using standard slide sets. Comparative brain material will be introduced, where appropriate, to demonstrate basic structural-functional correlations.
Taught by: McLean
One-term course offered either term
Also Offered As: PSYC 210
Prerequisite: BIBB 109
Activity: Laboratory
1.0 Course Unit
**BIBB 334 Computational Neuroscience Lab**
This course will focus on computational neuroscience from the combined perspective of data collection, data analysis, and computational modeling. These issues will be explored through lectures as well as Matlab-based tutorials and exercises. The course requires no prior knowledge of computer programming and a limited math background, but familiarity with some basic statistical concepts will be assumed. The course is an ideal preparation for students interested in participating in a more independent research experience in one of the labs on campus. For the Spring 2019 semester, the course will focus on the topic of visual memory.

Taught by: Nicole Rust  
Course usually offered in spring term  
Also Offered As: PSYC 434  
Prerequisite: BIBB 109  
Activity: Laboratory  
1.0 Course Unit

**BIBB 350 Developmental Neurobiology**
This course will focus on cellular and molecular mechanisms of the organogenesis of the central nervous system. A goal of the course will be to understand the form, function and pathology of the adult nervous system in terms of antecedent developmental processes.

Taught by: Julie McGurk  
One-term course offered either term  
Prerequisite: BIBB 109 AND BIOL 101  
Activity: Lecture  
1.0 Course Unit

**BIBB 375 Laboratory in Animal Behavior**
This course will allow students to understand the variety, function, and evolution of complex behaviors in simple animals and how the genes governing these behaviors can be used to provide insight into human behavior and brain disease. The course is structured to allow students to experience what it is like to work in a neuroscience research laboratory. We will use the fruit fly (Drosophila melanogaster) as our model organism (with one class dedicated to song birds). Over the course of the semester, we will examine the underlying neurobiology, physiology, and genetics of a variety of fly behaviors to understand aggression, taste, learning and memory, courtship, neurodegenerative diseases, and circadian rhythms. We will review both current and historical research advances in detail by focusing on primary literature. Students will be expected to design, analyze and interpret the behavioral experiments that are employed. Students will learn how to conduct animal behavior research, enhance their ability to critically read scientific literature, and improve their written and oral communication skills through paper presentations and written reports.

Taught by: Kane  
Course usually offered in spring term  
Prerequisite: BIBB 109 AND (BIOL 101 OR BIOL 102) OR (BIOL 123 OR BIOL 124)  
Activity: Laboratory  
1.0 Course Unit

**BIBB 399 Independent Research**
Individual research of an experimental nature with a member of the standing faculty leading to a written paper. The grade is based primarily on a serious term paper describing original research carried out by the student. Students must submit a proposal prior to registering. During the semester, students must attend two seminars to discuss planning and independent research project, ethical concerns in research and writing a scientific paper. Attendance at the meetings is mandatory. Students doing more than one credit of independent study will be required to present a poster at the annual BBB Symposium.

Taught by: Standing Faculty  
One-term course offered either term  
Prerequisite: BIBB 109  
Activity: Independent Study  
1.0 Course Unit

**BIBB 420 Smell and Taste**
All organisms respond to chemicals in their environment. This chemosensation guides diverse behaviors such as a feeding, avoiding predators, sex, and social interactions. This course will provide a broad survey of our current understanding of taste and smell, focusing on insect and rodent model systems as well as studies in humans. The course will begin with a review of chemical signal transduction mechanisms, and build to an exploration of the cortical integration of chemical signals and chemical guided behaviors. Class time will emphasize primary literature, discussion, and student presentations. The goal is to reach an integrated understanding of the physiology and psychology of chemical sensory systems. In the process, students will learn to read and critically evaluate data from primary research articles.

Taught by: Lewandowski  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

**BIBB 421 Functional Imaging of the Human Brain**
The course will provide a detailed overview of functional brain imaging and its potential uses. Issues regarding advantages and disadvantages of different modalities, study design image analysis & interpretation and how these relate to various neurological & psycholigical phenomena will be discussed. Class will cover the following specific topics in this general time frame: Introduction to functional brain function, basics of nuclear medicine imaging (including instrumentation, image acquisition, and radiopharmaceuticals for positron emission tomography and single photon emission computed tomography), imaging of neurological disorders, imaging of psychological disorders, introduction to activation studies, image analysis and statistical problems, study design, literature review, journal article presentation, tour of Penn imaging facilities, interpretation of imaging studies, implications for clinical and research, and implications for understanding the human mind and consciousness.

Taught by: Newberg  
Course usually offered in spring term  
Prerequisite: BIBB 109  
Activity: Seminar  
1.0 Course Unit
BIBB 429 Big Data, Memory, and the Human Brain
Advances in brain recording methods over the last decade have generated vastly more brain data than had been collected by neuroscientists during the previous century. To understand the human brain, scientists must now use computational methods to exploit the power of these huge data sets. This course will introduce you to the use of big data analytics in the study of human memory and its neural basis. Through hands-on programming projects, we will analyze multi-terabyte data sets both to replicate existing phenomena and to make new discoveries. Although the course has no formal neuroscience or psychology prerequisites, it does require CIS 121 and Python experience. Because of the heavy computing resources required to perform the assignment enrollment is limited to 15 students and there is a required course application. https://frms.gle/CfoegYqm5mwUBk3x7
Taught by: Kahana
Also Offered As: PSYC 429
Prerequisite: CIS 121
Activity: Seminar
1.0 Course Unit
Notes: Course taught in English. Course Materials in English. There are no prerequisites for this course.

BIBB 430 Neurobiological Basis of Autism
This course examines the neurobiological processes underlying autism spectrum disorders. In this seminar course, we will first examine the brain phenotypes associated with Autism Spectrum Disorders (ASD), in addition to investigating the genetic and environmental contributions to the etiology and pathophysiology of ASD. After an initial examination of the clinical literature and research, we will focus on animal models of ASD, including those of syndromic causes of autism (Rett Syndrome, Tuberous Sclerosis, Fragile X) and investigate changes in neurotransmitter systems and synaptic dysfunctions in the brain of these models.
Taught by: Herrington
One-term course offered either term
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit

BIBB 440 The Neuroscience behind the Addiction to Chocolate, Wine, Coffee and Tobacco
Both clinical observations and popular culture support the idea that food might have addictive properties. Similar to the narrative for addictive drugs, individuals and the media use terms like ‘food addict’ and ‘chocoholic’, and refer to cravings, symptoms of withdrawal, and escalating patterns of eating that might be viewed as evidence of tolerance. The class will discuss chocolate and coffee as examples of so-called ‘addictive’ food and compare their effects and mechanisms with those of alcohol and nicotine, two substances with well-characterized addictive properties. Furthermore, we will discuss why some forms of overeating are thought to reflect an addictive behavior. Considering the social dimension of alcohol, coffee, and tobacco consumption and the fact that large numbers of the population consume them together, we will also discuss the possible interactive effects of combinations of these psychoactive substances on mood and disease state. At the end of the course the student will become familiar with the diagnostic criteria for substance dependence, the anatomy and physiology of the brain circuits involved in reward processing and drug dependence, and the neurotransmitter systems involved.
Taught by: Mariella De Biasi, PhD
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BIBB 442 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.
Taught by: Abel
Course usually offered in fall term
Also Offered As: BIOL 442, NGG 575, PSYC 421
Prerequisite: BIBB 251 OR BIOL 251
Activity: Seminar
1.0 Course Unit

BIBB 460 Neuroendocrinology Seminar
This course is an upper-level seminar, designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health. The format will be a mixture of lectures and journal club discussions based on recent primary literature in the field of neuroendocrinology. Students will also write several short papers based on the clinical neuroendocrinology.
Taught by: Flangan-Cato
One-term course offered either term
Also Offered As: PSYC 439
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

BIBB 466 Molecular Genetics of Neurological Disease
This course will focus on the molecular basis of neurological diseases, exploring in detail key papers that cover topics including defining the disease genes, development of animal models that provide mechanistic insight, and seminal findings that reveal molecular understanding. Diseases covered will include neurological diseases of great focus today such as Alzheimer’s, Fragile-X and autism, dementia, motor neuron degeneration, and microsatellite repeat expansion disorders. The course will provide a perspective from initial molecular determination through current status. Students will gain an understanding of how the molecular basis of a disease is discovered (from classical genetics to modern genomics) and how such diseases can be modeled in simple genetic systems for mechanistic insight. The course will be comprised of lectures with detailed analysis of primary literature and in-class activities. Grading will be based on class participation, exams, and written papers.
Prerequisite: BIOL 251 and BIOL 41 are recommended.
Taught by: Bonini
Course usually offered in fall term
Also Offered As: BIOL 466
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit
**BIBB 469 Stress Neuroscience**
Stress can be caused by a variety of conditions, ranging from low-level noise in the workplace to life-threatening situations and these stressors can cause changes in the physiology and behavior of individuals. This course will examine the neural mechanisms underlying physiological and emotional responses to stress in a journal club format. Topics to be covered include anxiety disorders, depression and other mood disorders, the differential effects of stress on males and females, the physiological effects of stress on the immune system and feeding behavior, the effects of maternal stress on offspring as well as strategies to mitigate the effects of stress.
Taught by: Heerding
One-term course offered either term
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

**BIBB 470 Animal Models of Neuropsychiatric Disorders**
This seminar will focus on the significant role of animal models in the investigation of the pathophysiology of a variety of human neuropsychiatric disorders as well as in the development of treatments for these disorders. The course will focus on the use of genetically modified mice in the investigation of Autistic Spectrum Disorders (ASD), anxiety and affective disorders, schizophrenia and obsessive-compulsive disorder (OCD), with an emphasis on the limitations of such models. Class time will consist of short lectures and open discussions via student-led presentations. Emphasis will be placed on the critical analysis of primary literature.
Taught by: Kane
Course not offered every year
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

**BIBB 473 Neuroeconomics**
This course will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. A particular focus will be on how evidence about the neural processes associated with choices might be used to constrain economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, reinforcement learning, strategic interactions and games, and social preferences.
Taught by: Joseph Kable
One-term course offered either term
Also Offered As: NGG 706, PSYC 473
Prerequisite: PSYC 149 OR PSYC 253 OR PSYC 265
Activity: Seminar
1.0 Course Unit

**BIBB 475 Neurodegenerative Diseases**
This course will familiarize students with advances in our understanding of the clinical features and pathogenesis of a wide range of neurodegenerative diseases, including Alzheimer’s disease and other dementias, prion diseases, Parkinson’s disease and atypical parkinsonisms, neurodegenerative ataxias, motoneuron diseases, degenerative diseases with chorea, iron and copper disorders, and mitochondrial diseases. Students will analyze original research reports on a range of proposed pathological cellular processes that may represent steps in cell death pathways leading to neuron loss seen in these diseases. Significant emphasis will be placed on the fast-expanding field exploring genetic contributions to neurodegenerative disease, as identification of genetic mutations pathogenic for familial neurodegenerative diseases has been a major driving force in neurodegenerative research and pointed researchers towards essential molecular process that may underlie these disorders. Strategies for therapeutic intervention in the management, prevention, and cure of neurodegenerative disease will be addressed.
Taught by: Lexow
One-term course offered either term
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

**BIBB 479 Neural Systems and Behavior**
This course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.
Taught by: Schmidt, M./Medina
Course usually offered in spring term
Also Offered As: BIOL 451, PSYC 479
Prerequisite: BIOL 251 OR BIBB 251
Activity: Lecture
1.0 Course Unit

**BIBB 480 Biological Basis of Psychiatric Disorders**
The contributions of basic sciences (neuroanatomy, neurophysiology, neurochemistry, and neuropharmacology) to an understanding of behavior and behavioral disorders will be covered and important psychiatric disorders will be discussed, primarily from the viewpoint of their biological aspects. Emphasis will be placed on critical evaluation of research strategies and hypotheses.
Taught by: Lexow
One-term course offered either term
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

**BIBB 481 Behavioral Pharmacology**
This seminar course reviews the behavioral effects of drugs in animals, the general biological and psychological principles of drug action, and the relationship between drugs that affect brain monoamine and opiate systems and their behavioral effects. Introductory lectures on general topics will be followed by advanced discussion of specific topics in a journal club format through student presentations.
Taught by: Heerding
Course not offered every year
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit
BIBB 482 Clinical Psychopharmacology
This course examines the history, rationale and putative mechanism of action of drugs used in the treatment of psychiatric disorders. Emphasis is placed on neurobiological processes underlying psychopathology and pharmacological intervention. Drugs currently in use as well as new drugs in development will be covered. Strategies, techniques, issues and challenges of clinical psychopharmacological research will be addressed and new approaches to drug discovery, including the use of pharmacogenomics and proteomics to understand variability in drug response and identify new molecular drug targets, will be covered in depth. Specific drug classes to be considered include antidepressants, anxiolytics, typical and atypical antipsychotics, narcotic analgesics, sedative hypnotics, and antiepileptic medications. A contrasting theme throughout the course will be the use of drugs as probes to identify neural substrates of behavior.

Taught by: Lexow
Course not offered every year
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

BIBB 485 Nerve and Muscle in Health and Disease
In this seminar course, we will deepen our understanding about excitability in the nervous system and in skeletal and cardiac muscle. A particular focus of the course will be the roles which calcium ions play as second messengers in nerve, muscle and synapse. We will study disease processes involving excitability and calcium handling, such as Long QT syndrome and hyperkalemic periodic paralysis. The later part of the course will have a journal club format, based on the reading and presentation of original papers, including papers about non-opioid analgesia and malignant hyperthermia. We will learn about the techniques used to study intracellular calcium and about how calcium is handled in nerve and muscle. Classical, physiological experiments will be interpreted in terms of modern molecular knowledge.

Taught by: Hollingworth
Course usually offered in spring term
Prerequisite: BIBB 251
Activity: Seminar
1.0 Course Unit

BIBB 492 Experimental Methods in Synaptic Physiology
In this lab course, a small number of students meet once per week to discuss topics in synaptic physiology and to become proficient at sharp electrode techniques for intracellular recording, using isolated ganglia from the snail Heliosoma. The first part of each class will consist of discussion of weekly reading from the primary literature, with the remainder of the class devoted to hands-on experiments. After learning to record from and characterize single neurons, students will study synaptic transmission by stimulating incoming nerve trunks or by recording from pairs of interconnected neurons. As a midterm assignment, students will prepare and present a short research proposal using this model system, to be evaluated by the class. For the last half of the course, the class will work together on one or two of these proposals, meeting at the end of each class to pool our data, analyze the results and discuss their significance. Lab Fee: $100.

Taught by: Kaplan
One-term course offered either term
Prerequisite: BIBB 251
Activity: Laboratory
1.0 Course Unit

BIBB 499 Advanced Independent Research
Continuation of BIBB 399 research. Students will be required to give an oral presentation of their research at the annual BBB symposium Honors Seminar and attend weekly seminars.

Taught by: McLean
One-term course offered either term
Prerequisite: BIBB 399
Activity: Independent Study
1.0 Course Unit

BIBB 585 Theoretical and Computational Neuroscience
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.

Taught by: Vijay Balasubramanian
Course usually offered in spring term
Also Offered As: BE 530, NGG 594, PHYS 585, PSYC 539
Activity: Lecture
1.0 Course Unit

Biology (BIOL)

BIOL 005 The Genomic Revolution: A First Year Seminar
The goal of this course is to convey a basic understanding of human genome science and in so doing, to learn of its impact on treatment of human disease and discernment of aspects of human identity. Our current understanding of the structure and function of genes will allow a personalized treatment for many diseases, but just how such advances are applied will involve ethical as well as scientific considerations. We will discuss how the field of genetics has been changed dramatically by the ability to clone and sequence genes, and then to be further transformed by massive sequencing of whole genomes. A major part of the course will be devoted to how these advances have led to understanding and treatment of genetic disease and cancer. We will also discuss the tremendous potential (and dangers) of gene editing advances. Finally, we will explore how genomics has allowed an understanding of deep human history, as well as the ability to decipher one’s more immediate ancestry. Readings will be from a number of books written for an informed general audience rather than from a textbook. The seminar should be of interest to those who would like to fulfill their Living World General Education requirement, and particularly also to those who eventually might be interested in taking courses in the Life Sciences but initially would like an introductory seminar-type approach within a focused area.

Taught by: Weinberg
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
BIOL 006 Evaluating Medical Treatment: How Do We (and the FDA) Know What Works?
The development of new medical treatments typically culminates in one or more clinical trials - experiments in which the effects of the new treatment are compared with the effects of another treatment or no treatment. A great many considerations go into the design of these medical experiments. In this seminar, we will discuss the basic structure of the clinical trial, the varying types of designs that may be used, the scientific and ethical issues that arise, and the regulatory process that ultimately determines whether medical products are effective and safe and whether they can be made available to the public. May not be counted toward the Biology major or minor.
Taught by: Ellenberg
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor.

BIOL 010 Ecological Consequences of Climate Change
Students will read and discuss seminal papers on a number of major topics in the ecology of climate change and the long-term consequences of the effects of climate change on ecological systems. Some of the topics include: effects of climate change on species distributions, disruption of plant pollinator systems and the consequences for ecosystem composition and stability, changes in the distribution and epidemiology of insect-borne infectious diseases, and the consequences of sea level rise and the increased intensity and frequency of severe weather events. Other topics may be covered. Grading will be based on participation in discussions, a paper on an approved topic, a presentation on the topic of the student's paper and 1 exam.
Taught by: Dunham
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor.

BIOL 011 Humans in a Microbial World
Microbes are a fundamental part of life on this planet. This course will explore the causes and consequences of the distribution and abundance of microbes (microbial ecology) as well as microbial evolution on human health and disease risk. We will address the interplay between human society and microbial ecology and evolution in shaping disease risk and directing scientific study. This course will apply concepts from basic biology, ecology, and evolution to study infectious microbes as living creatures. May not be toward the Biology major or minor.
For BA Students: Living World Sector
Taught by: Brisson
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor.

BIOL 014 Descent with Modification: An introduction to the science of evolution
Evolution provides the unifying framework for the biological sciences and has been confirmed by a huge and diverse body of evidence. Public opinion polls show, however, that evolution continues to be socially and politically controversial in the United States. In this freshman seminar, we will explore the scientific basis for evolution by reading and discussing historical sources, a current nonspecialist text on evolution, and selected papers and articles from the scientific and popular literature. With our knowledge of evolutionary fact and theory as background, we will also discuss social and political opposition to the teaching of evolution. Grading will be based on participation in class discussions and on performance in several brief writing assignments. There is no course prerequisite, but high school introductory biology would be helpful. May not be counted toward the Biology major and minor. Prerequisite: General biology background preferred but not required.
For BA Students: Living World Sector
Taught by: Sniegowski
Course offered fall; even-numbered years
Activity: Seminar
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor. General biology background preferred but not required.

BIOL 017 The Biology of Food
This course will examine the ways in which humans manipulate - and have been manipulated by - the organisms we depend on for food, with particular emphasis on the biological factors that influence this interaction. The first part of the course will cover the biology, genetics, evolution, and breeding of cultivated plants and animals; the second part will concern the ecological, economic, and political factors that influence food production. May not be counted toward the Biology major or minor.
For BA Students: Living World Sector
Taught by: Poethig
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor.

BIOL 019 Biological Science and Public Policy
This course will examine the scientific basis of public policy decision making in areas of human health, the environment, energy, and agriculture. A general understanding of the science involved in these areas - predominantly genetics, cell biology, physiology, and ecology - will be applied to topics such as drug and herbicide resistance, endangered species, regulation of biotechnology, microbial sources of energy, control of toxic substances, and the war against cancer. No formal background in biology or policy is required. The course should be particularly useful for non-science students who would like to gain insight into areas of biology of importance to public decision making and to students of public policy who would like a better background on biological issues. May not be counted toward the Biology major or minor. Only offered through the College of Liberal and Professional Studies. Prerequisite: High school biology recommended
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor. Only offered through the College of Liberal and Professional Studies.
BIOL 101 Introduction to Biology A
General principles of biology focusing on the basic chemistry of life, cell biology, molecular biology, and genetics in all types of living organisms. Particular emphasis will be given to links between the fundamental processes covered and current challenges of humankind in the areas of energy, food, and health. (3 hrs. lec., 3 hrs. lab, 1.5 c.u.) Biology majors and pre-medical students should take either BIOL 101 or 121. BIOL 101 is the companion course to BIOL 102 and should be taken before BIOL 102. For BA Students: Living World Sector
One-term course offered either term
Activity: Lecture
1.5 Course Unit
Notes: (3 hrs. lec., 3 hrs. lab, 1.5 c.u.) Biology majors and pre-medical students should take either BIOL 101 or 121. BIOL 101 is the companion course to BIOL 102 and should be taken before BIOL 102.

BIOL 102 Introduction to Biology B
General principles of biology focusing on evolution, physiology, development, and ecology in all types of living organisms. (3 hrs. lec., 3 hrs. lab, 1.5 c.u.) BIOL 102 is the companion course to BIOL 101 and should be taken after BIOL 101.
For BA Students: Living World Sector
One-term course offered either term
Prerequisite: BIOL 101
Activity: Lecture
1.5 Course Unit
Notes: (3 hrs. lec., 3 hrs. lab, 1.5 c.u.) BIOL 102 is the companion course to BIOL 101 and should be taken after BIOL 101.

BIOL 109 Introduction to Brain and Behavior
Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological basis of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders.
For BA Students: Living World Sector
Taught by: Kane and McLean
One-term course offered either term
Also Offered As: BIBB 109, PSYC 109
Activity: Lecture
1.0 Course Unit

BIOL 121 Introduction to Biology - The Molecular Biology of Life
An intensive introductory lecture course covering the cell, molecular biology, biochemistry, and the genetics of animals, bacteria, and viruses. This course is comparable to Biology 101, but places greater emphasis on molecular mechanisms and experimental approaches. Particular attention is given to the ways in which modern cell biological and molecular genetic methods contribute to our understanding of evolutionary processes, the mechanistic basis of human disease, and recent biotechnological innovations. Students are encouraged to take BIOL 121 and 123 concurrently. Biology majors and pre-medical students should take either BIOL 101 or 121. BIOL 121 is the companion course to BIOL 124 and may be taken before or after BIOL 124. Solid high school biology and strong high school chemistry or CHEM 101
For BA Students: Living World Sector
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Biology majors and pre-medical students should take either BIOL 101 or 121. BIOL 121 is the companion course BIOL 124 and may be taken before or after BIOL 124. Solid high school biology and strong high school chemistry.

BIOL 123 Introductory Molecular Biology Laboratory
An intensive introductory laboratory course emphasizing how molecular biology has revolutionized our understanding of cell and organism functions. BIOL 121 and 123 should be taken concurrently. Taught by: Hogan
Course usually offered in fall term
Prerequisite: BIOL 121
Activity: Lecture
0.5 Course Units
Notes: (1 hr. lec., 3 hrs. lab, 0.5 c.u.) Students may not take both BIOL 101 and 123 for credit. Prerequisite: Solid high school biology or credit by exam for BIOL 102.

BIOL 124 Introductory Organismal Biology Lab
An intensive introductory laboratory course in organismal biology. Solid high school biology or credit by exam for BIOL 102. (1 hr. lec., 3 hrs. lab, 0.5 c.u.) BIOL 124 is the companion course to BIOL 121 and may be taken before or after BIOL 121. Students may not take both BIOL 102 and 214 for credit.
Taught by: Robinson/Hogan
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: (1 hr. lec., 3 hrs. lab, 0.5 c.u.) BIOL 124 is the companion course to BIOL 121 and may be taken before or after BIOL 121. Students may not take both BIOL 102 and 124 for credit.
BIOL 138 Energy Transformations and Living Off-the-Grid
The course will examine major sources of energy on earth: sunlight, mechanical, chemical and biological, and how this energy is transformed into useful energy for humans - typically electrical energy or food. Considerable emphasis will be on forms of regenerative energy that can be used when living off-the-grid. As a case study, we will examine some approaches taken by the US military to provide energy capability for dismounted Marines operating on foot in austere environments. Faculty lectures will be supplemented by guest lectures from leaders in government and industry. Prerequisite: High school biology and math. No scientific knowledge is assumed beyond high school biology, chemistry and physics. Energy is necessarily a quantitative subject so students should be comfortable with quantitative approaches. A major goal of this course is for students to develop an awareness for the amounts of energy they use in their daily lives, and how they might reduce them. As an exercise, students will measure how much energy their smart phones and laptops use in a day and try to generate a comparable amount of energy through physical effort.
Taught by: Rome
Course offered fall; odd-numbered years
Activity: Seminar
1.0 Course Unit

BIOL 140 Humans and the Environment
Intensive exposure to current issues and solutions in contemporary human interactions with the environment. Global in scope, but focused on case histories. Emphasis on providing biological and sociological background for a given major environment-human interaction, and state-of-the-art suggested solutions. Biology background recommended. Sophomore standing or greater.
For BA Students: Natural Science and Math Sector
Taught by: Janzen
Course usually offered in fall term
Also Offered As: BIOL 440
Activity: Lecture
1.0 Course Unit

BIOL 156 Field Studies in Tropical Biodiversity and Conservation
We will use the Area de Conservacion Guanacaste (ACG) in Costa Rica as a living laboratory and case study in how to effectively foster community based environmental stewardship of natural ecosystems. This is an immersion course that broadly covers four major themes including: 1, biodiversity; 2, conservation philosophies and practices; 3, primary ecosystems within the Costa Rican ACG and their major species composition; and 4, fundamentals of field ecology (terrestrial and marine) including the practice and implementation of the scientific method. Students will learn how to develop and conduct research experiments via field-based activities, and will gain familiarity with a diversity of terrestrial and marine organisms including insects, endemic and invasive species of terrestrial flora and megafauna, corals, algae, invertebrates, fish, sea turtles and marine mammals. Additional topics covered will include fundamentals of oceanography, ecological and evolutionary principles as applied to ecosystem structure, function, and biodiversity, and environmental and management challenges of the Costa Rican ACG and tropical ecosystems globally. Application required through Penn Global: https://global.upenn.edu/pennabroad/PGS
Taught by: Sherwood
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Application required through Penn Global: <a href='https://global.upenn.edu/pennabroad/PGS'>https://global.upenn.edu/pennabroad/PGS</a>

BIOL 199 Clinical & Translational Research
Independent study for students doing research based on data that is generated in a clinical setting. Projects must be sponsored by standing faculty of the University of Pennsylvania and co-sponsored by a faculty member in the Department of Biology. The project must be of biological interest and must use appropriate quantitative or statistical methods. A final paper is required. Apply at the Academic Office, 102 Leidy Labs.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

BIOL 201 Essentials of Cell Biology
An intermediate level course covering principles of modern biochemistry. Topics include protein structure, protein purification and characterization, proteomics, enzyme kinetics and mechanisms, membrane structure and function, metabolism, and cellular energy transduction. Emphasis will be on biochemical problem solving, experimental design, and application of quantitative methods in a biological and clinical context. This course is open to students in the College of Liberal and Professional Studies only. Prerequisite: BIOL 101 and BIOL 102 or BIOL 217 and CHEM 241, the latter of which may be taken concurrently. CHEM 242 is recommended and may also be taken concurrently.
One-term course offered either term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 203 Essentials of Biochemistry
Intermediate level course covering principles of modern biochemistry. Topics include protein structure, protein purification and characterization, proteomics, enzyme kinetics and mechanisms, membrane structure and function, metabolism, and cellular energy transduction. Emphasis will be on biochemical problem solving, experimental design, and application of quantitative methods in a biological and clinical context. This course is open to students in the College of Liberal and Professional Studies only. Prerequisite: BIOL 101 and BIOL 102 or BIOL 217 and CHEM 241, the latter of which may be taken concurrently. CHEM 242 is recommended and may also be taken concurrently.
One-term course offered either term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121 AND CHEM 241
Activity: Lecture
1.0 Course Unit

BIOL 204 Biochemistry
BIOL 204 examines the basic principles of protein structure, protein purification and characterization, proteomics, enzyme kinetics and mechanism, membrane structure and function, metabolism, and cellular energy transduction. The primary objective is to provide life scientists with an appreciation of basic principles of modern biochemistry, and of how the current conceptual and technical framework arose. Emphasis is placed on the experimental approaches and reasoning behind the dissection and reconstitution of these processes in a biological and, in some cases, clinical context. Discussions directed at biochemical problem solving, experimental design and the application of quantitative methods are integral to the course. Prerequisite: BIOL 101 and BIOL 102 or BIOL 217 and CHEM 241 the latter of which may be taken concurrently. CHEM 242 is recommended and may also be taken concurrently.
Taught by: Rea
Course usually offered in spring term
Prerequisite: ((BIOL 101 AND BIOL 102) OR BIOL 121) AND CHEM 241
Activity: Lecture
1.0 Course Unit
BIOL 205 Cell Biology
A conceptual view of cell structure and function including membrane structure, intracellular organelles, membrane trafficking, surface receptors and signal transduction, the cytoskeleton, cell motility and communication, and the cell cycle. Cell biology is a dynamic field and recent research discoveries will be included in the lectures.
Taught by: Guo and Svitkina
Course usually offered in fall term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 211 Essentials of Molecular Biology and Genetics
This course will survey the discipline of molecular genetics. Mendelian and molecular genetics will be discussed as well as the use of genetic analysis to address questions in all areas of biology. The processes of DNA replication, transcription, and translation will be discussed at the molecular level. Other topics include the regulation of gene expression and genomics. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 213 Essentials of Vertebrate Physiology
A comparative and quantitative approach to the physiological function of vertebrates. Topics include muscles, nervous system, cardiovascular system, respiration, and renal function. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisite: (BIOL 101 AND BIOL 102) OR (BIOL 121 AND BIOL 124)
Activity: Lecture
1.0 Course Unit

BIOL 215 Vertebrate Physiology
The course will focus on integrative aspects of physiological function of vertebrates. Comparative, environmental and quantitative approaches will be used. Major topics include muscle, the cardiovascular system, respiration, renal function and the nervous system.
Taught by: Woodward
One-term course offered either term
Prerequisite: BIOL 102 OR BIOL 121 OR BIOL 124
Activity: Lecture
1.0 Course Unit

BIOL 211 Molecular Biology and Genetics
This course will survey the discipline of molecular genetics. Two broad areas will be considered 1) Molecular Biology: DNA replication, transcription, translation, regulation of gene expression in both prokaryotic and eukaryotic systems, and genomics and 2) Genetics: basic Mendelian & molecular genetics.
Taught by: Bonini/Gallagher/Guild/Levine
One-term course offered either term
Also Offered As: BIOL 527
Prerequisite: BIOL 101 OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 230 Evolutionary Biology
Theories and mechanisms of evolution, with emphasis on the genetic basis of evolutionary change.
Taught by: Schmidt, P
Course usually offered in spring term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 231 Evolution of Behavior: Animal Behavior
The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territoriality and communication.
Course not offered every year
Also Offered As: BIBB 231, PSYC 231
Prerequisite: BIOL 102 OR BIOL 121 OR PSYC 001
Activity: Lecture
1.0 Course Unit

BIOL 240 Ecology: From individuals to ecosystems
The study of living organisms in their natural environment, spanning the ecological physiology of individuals, the structure of populations, and interactions among species, including the organization of communities and ecosystem function.
Taught by: Helliker/Akcay
Course usually offered in fall term
Prerequisite: BIOL 102 OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 251 Molecular and Cellular Neurobiology
Cellular physiology of neurons and excitable cells; molecular neurobiology and development. Topics include: action potential generation; synaptic transmission; molecular and physiological studies of ion channels; second messengers; simple neural circuits; synaptic plasticity; learning and memory; and neural development. Prerequisite: PHYS 105 or 151 strongly recommended
Taught by: Schmidt
Course usually offered in fall term
Also Offered As: BIBB 251
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit
Notes: (3hrs. lec., 3hrs. lab, 1.5 c.u.)

BIOL 275 Elements of Microbiology
Microbiology plays a central role in diverse areas of human life such as infectious disease, ecology, and biotechnology. This course will cover aspects of modern microbiology with an emphasis on prokaryotic organisms. The topics will include basic aspects of microbial diversity, genetics, and pathogenesis as well as examples of applied microbiology. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisite: (BIOL 101 OR BIOL 121) AND (BIOL 211 OR BIOL 221)
Activity: Lecture
1.0 Course Unit
Notes: Combined lecture and lab course.
BIOL 304 Infectious Disease Biology
This course focuses on selected topics concerning infectious agents, the diseases they cause in humans, and the social and scientific challenges they pose. The first section addresses the principles of epidemiology and microbial pathogenesis, as well as pathophysiology of infectious diseases. In the second section, tools and techniques of diagnosis, tracking, and control of infectious diseases will be discussed. To develop a broad understanding of the many different aspects of infectious processes, selected viral, fungal, protozoan, and helminthic pathogens and related infectious diseases will be presented. This course is open to students in the College of Liberal and Professional Studies only. Course usually offered in spring term
Prerequisite: (BIOL 211 OR BIOL 221) AND BIOL 275 AND BIOL 404
Activity: Lecture
1.0 Course Unit

BIOL 306 Histology
This course is designed to introduce the undergraduate student to the structure of tissues at the cellular level and to the way in which those tissues are assembled into organs. This knowledge of structure will be the basis for discussion of tissue and organ function. This course is open to students in the College of Liberal and Professional Studies only. One-term course offered either term
Prerequisite: ((BIOL 101 AND BIOL 102) OR BIOL 121) AND (BIOL 201 OR BIOL 205)
Activity: Lecture
1.0 Course Unit

BIOL 325 Marine Biology
An introduction to marine biology and oceanography. Topics will include chemical and physical oceanography, a survey of forms, function and phylogeny of algae, invertebrates and vertebrates, and an examination of ecological and evolutionary principles as applied to marine organisms and ecosystems.
Taught by: Barott
Course usually offered in fall term
Prerequisite: BIOL 102 OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 330 Comparative Vertebrate Anatomy and Evolution
This course will survey the phylogeny and anatomy of vertebrate organisms from a comparative evolutionary perspective. The lecture will concentrate on the history, diversity, structure and function of vertebrates. A companion lab course, BIOL 336, is available for those students interested in a more complete understanding of vertebrate anatomy.
Taught by: Dunham
Course usually offered in spring term
Prerequisite: BIOL 102 OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 336 Comparative Vertebrate Anatomy Lab
Laboratory portion of BIOL 330 Comparative Vertebrate Anatomy and Evolution. Students will learn comparative anatomy through dissection of representative vertebrates. Students taking the lab must have credit or register for the lecture course, BIOL 330.
Taught by: Dunham
Course usually offered in spring term
Prerequisite: BIOL 330
Activity: Laboratory
0.5 Course Units
Notes: (3 hrs lab., 0.5 c.u.)

BIOL 354 Developmental Biology
A view of how an animal embryo is specified to develop and differentiate into a wide spectrum of cell types, and how the spatial patterns and axes of embryos are determined. The course will focus on genetic and molecular approaches, but will also cover the comparative anatomy of developing embryos to the extent necessary to understand the conserved aspects of embryonic patterning. Special emphasis will be placed on organisms with particular advantages for the study of embryonic development: e.g., mouse, frog, zebrafish, and Drosophila. The first half of the course will cover cell fate restrictions, cloning animals using nuclear transfer, stem cell biology, formation of the embryonic axes in vertebrates and Drosophila, and patterning of the neural tube and mesodermal tissues. The second half of the course will focus on emerging ideas and findings in the field, with emphasis on analysis of original literature.
Taught by: Wagner J
Course usually offered in spring term
Prerequisite: BIOL 205 OR BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 375 Microbial Diversity and Pathogenesis
Microbiology plays a central role in diverse areas of human life such as infectious disease, ecology, and biotechnology. This course will cover aspects of modern microbiology with an emphasis on prokaryotic organisms. The topics will include basic aspects of microbial diversity, genetics, virology, and pathogenesis as well as examples of applied microbiology.
Taught by: Pohlschroder
Course usually offered in spring term
Also Offered As: BIOL 575
Prerequisite: ((BIOL 101 AND BIOL 102) OR BIOL 121) AND BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 376 Microbial Diversity and Pathogenesis Lab
The importance of microbiology in complex issues, such as the impact of the microbiome in human health or as alternative energy sources, is being appreciated more and more each day. This upper level laboratory course provides students with a robust technical skill set while also giving them an opportunity to participate in an authentic research project that may lead to novel discoveries. Students will generate research questions, formulate hypotheses, design experiments, analyze data, and present their research findings to the class. In each project, students will use the cutting edge approach of metagenomics to evaluate the microbial diversity of their environment via Next Generation Sequencing. Students will also examine the function of microbial species within their communities. Potential projects include the isolation of novel antibiotic producers and the antibiotic they produce, designing and optimizing microbial fuel cells that can be used to generate electricity, or isolating antibiotic resistant bacteria and attempting novel approaches to inhibit or prevent their growth. Prerequisite: BIOL 375 previously or concurrently is recommended but not required.
Taught by: Pohlschroder and Hogan
Course usually offered in spring term
Also Offered As: BIOL 576
Prerequisite: BIOL 375
Activity: Laboratory
1.0 Course Unit
Notes: (3 hrs lab., 0.5 c.u. or 6 hrs lab., 1.0 c.u. in some years)
**BIOL 399 Independent Study**
Laboratory research with a faculty member in the Department of Biology. Research may also be conducted elsewhere on campus but co-sponsored by a faculty member in Biology. A final paper is required. Apply at the Biology Academic Office, 102 Leidy Labs.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**BIOL 400 Field Botany**
This course focuses on teaching students the Pennsylvania flora, both native and naturalized. Through weekly field trips, students will gain an appreciation for the diversity of plant species and plant communities in PA, and observe and discuss ecological and historical forces that influence plant species occurrences and plant communities. The ability to quickly and accurately identify plants in the field, through both sight identification and the use of a dichotomous key, is the major thrust of this course. Students will also learn how to appropriately collect plant materials for further study/identification in the laboratory and for archiving in an herbarium collection.
Taught by: Block and Skema
Course usually offered in fall term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 124
Activity: Laboratory
1.0 Course Unit

**BIOL 401 Prokaryotic Microbiology: A Pragmatic View**
This interactive course is intended for a small group of students aspiring to pursue research in microbiology, preferably using prokaryotes. Students will study selected papers and will attend the Prokaryotic Microbiology Seminars on Fridays. Specific problems of importance to a given field at a particular time will be critically analyzed and discussed: How were cutting edge techniques of the time used to address these problems? How would the same problems be approached using current techniques? The emphasis of the course will be on learning to become a thoughtful experimentalist rather than acquiring the hottest emerging knowledge. Prerequisite: BIOL 375 is recommended but not required.
Taught by: Daldal
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

**BIOL 404 Immunobiology**
Early development of microbiology, pathology, and immunobiology; molecular and cellular bases of immune phenomena including: immunity to pathogens, immune diseases, autoimmunity, and hypersensitivity. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisite: (BIOL 201 OR BIOL 205) AND (BIOL 211 OR BIOL 221)
Activity: Lecture
1.0 Course Unit

**BIOL 405 First Line of Defense: The Role of Innate Immunity in Disease**
All organisms, from bacteria to humans, rely on innate, non-specific defense systems to protect against infection and mediate damage. Even in organisms that can generate highly specific and efficient adaptive responses, such as humans, defects in innate immune system components can be fatal. In this course, we will examine the cellular and molecular mechanisms of the components of the innate immune system through discussion of primary literature. We will explore how the innate immune system influences the course of infections and cancer, as well as autoinflammatory disorders that lead to host tissue damage. Though our focus will be on mammalian immunity, we will also explore the evolutionary development of innate immunity through comparison of systems in different organisms.
Taught by: Elliott
Course usually offered in fall term
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

**BIOL 406 Molecular Mechanisms of Infectious Disease Biology**
This course is designed for advanced undergraduates and beginning graduate students with a particular interest in infectious disease biology. Note that this course is not a comprehensive survey of the field and is not appropriate for students seeking a lecture course on disease. The primary objective of this course is to teach students considering a career in the biomedical sciences how to read, discuss, and question research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of pathogen interactions with host cells and organisms, and implications for basic research and therapeutic development. Prerequisite: BIOL 221 recommended.
Taught by: Roos
Course usually offered in spring term
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

**BIOL 407 Cancer Cell Biology**
This course will focus on the molecular mechanisms by which fundamental cellular processes are disrupted in the development of cancer.
Taught by: Keith
Course usually offered in fall term
Prerequisite: BIOL 205 AND 221
Activity: Seminar
1.0 Course Unit

**BIOL 410 Advanced Evolution**
Mechanisms of evolution at the genetic and populational levels. Empirical and theoretical approaches to natural selection, population structure, gene flow, and quantitative genetics will be emphasized.
Taught by: Sniegowski/Plotkin
Course offered fall; odd-numbered years
Prerequisite: BIOL 230
Activity: Lecture
1.0 Course Unit
BIOL 411 Evolutionary Ecology
This course will focus on topics at the intersection of evolutionary biology and ecology, including the evolution of cooperation and conflict from genes to societies to ecological communities, life history evolution, and the evolution of interspecific interactions and ecological communities. The course will use a combination of lectures and discussion of readings from the primary literature.
Taught by: Linksvayer
Course usually offered in spring term
Prerequisite: BIOL 221 OR BIOL 231 OR BIOL 240
Activity: Seminar
1.0 Course Unit

BIOL 412 Animal Physiological and Population Ecology
This course explores the interactions of environmental variables, such as temperature, with the physiology of vertebrate animals and the mechanistic links of those interactions with population dynamics.
Taught by: Dunham
Course offered spring; even-numbered years
Prerequisite: BIOL 240
Activity: Seminar
1.0 Course Unit

BIOL 415 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted. Prerequisite: One semester of college chemistry.
Taught by: Arscott
Course usually offered in spring term
Also Offered As: ENVS 416
Prerequisite: BIOL 101 OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 417 Theoretical Population Biology
Introduction to basic theoretical tools to study the evolutionary and ecological dynamics of populations. Topics to be discussed include: basic population dynamics and population genetics theory, evolutionary game theory/adaptive dynamics, social evolution (kin selection/multilevel selection), life-history evolution, and stochastic models. Other topics may be added based on the specific interests of students in the class.
Taught by: Akcay
Course usually offered in spring term
Prerequisite: BIOL 230 AND MATH 104
Activity: Seminar
1.0 Course Unit

BIOL 421 Molecular Genetics
A detailed analysis of gene structure and expression in both prokaryotic and eukaryotic organisms. Rapid advances in DNA technology and genomics will be emphasized. The application of these advances to the molecular genetic analysis of development, cell function and disease will be discussed.
Taught by: Weinberg
Course usually offered in fall term
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 423 Plant Ecology
The course will be a focused study of genomes, genomic techniques, and how these approaches are and will be used in diagnosing and treating human disease. Topics will include genome sequencing, analysis of sequences and microarrays, and new techniques including high-throughput sequencing and reverse genetic analysis with a focus on genome-wide mutant collections. Prerequisite: BIOL 421 strongly recommended.
Taught by: Gregory
Course usually offered in spring term
Also Offered As: CAMB 431
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 425 Biochemistry and Molecular Genetics Superlab
Intensive laboratory class where open-ended, interesting biological problems are explored using modern lab techniques. Topics may include protein structure/function studies; genetic screens, genomics and gene expression studies; proteomics and protein purification techniques; and molecular cloning and DNA manipulation. The course emphasizes developing scientific communication and independent research skills.
Course topics reflect the interests of individual Biology faculty members. This course is recommended for students considering independent research.
Taught by: Casper
One-term course offered either term
Prerequisite: BIOL 204 OR BIOL 205 OR BIOL 221
Activity: Laboratory
1.0 Course Unit

BIOL 430 Evolution and Ecology of Infectious Diseases
This course will focus on fundamental topics related to the ecological and evolutionary processes driving the transmission of pathogenic microbes among hosts including life-history strategies; evolution of pathogenic traits; the impacts of temporal, spatial and host-trait heterogeneity; and factors causing the emergence of an infectious pathogen. Examples will be drawn from human, wildlife, and plant pathogens to illustrate these ecological and evolutionary topics. Students will learn to develop and apply current ecological and evolutionary theory to infectious microbe research and gain practical experience accessing, interpreting and synthesizing the peer-reviewed scientific literature through a combination of popular and scientific readings, discussion, and lecture.
Taught by: Brisson
Course not offered every year
Prerequisite: BIOL 230 OR BIOL 240
Activity: Seminar
1.0 Course Unit

BIOL 431 Genome Science and Genomic Medicine
This course will be a focused study of genomes, genomic techniques, and how these approaches are and will be used in diagnosing and treating human disease. Topics will include genome sequencing, analysis of sequences and microarrays, and new techniques including high-throughput sequencing and reverse genetic analysis with a focus on genome-wide mutant collections. Prerequisite: BIOL 421 strongly recommended.
Taught by: Gregory
Course usually offered in spring term
Also Offered As: CAMB 431
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit
BIOL 433 The Genetics of Adaptation: How sex, conflict, and pathogens shape modern genomes
In this course we explore the genetic basis of adaptation. We will investigate the forces that drive adaptation (e.g., environmental stress, pathogens, conflict, sex), the genetic mechanisms of adaptation (protein sequence changes, expression divergence, gene duplication, etc.), and the consequences of adaptation for contemporary cellular functions, developmental processes, and ecological interactions. The class meetings will be structured around both lectures and student-led discussions of the primary literature.
Taught by: Levine
Course usually offered in spring term
Prerequisite: BIOL 221 OR BIOL 230
Activity: Seminar
1.0 Course Unit

BIOL 436 Molecular Physiology
This course is designed for advanced undergraduate and graduate students who are interested in molecular physiology of sensory signal transduction. The major topics to cover will be signal transduction mechanisms used by membrane ion channels and receptors that detect the sensory stimuli (light, sound, temperature and taste, for example) and transmit the signals to the nervous system. Modern molecular/structural techniques (patch clamp, protein crystallization, molecular genetics, expression cloning and protein purification) will be introduced along with each topic. References will be primary research articles. Students will critically evaluate research discoveries by reading and presenting one to two original research papers. Each student is required to write a 10-page research proposal and to critique proposals written by fellow students.
Taught by: Ren
Course usually offered in fall term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Seminar
1.0 Course Unit

BIOL 437 Introduction to Computational Biology & Biological Modeling
The goal of this course is to develop a deeper understanding of techniques and concepts used in Computational Biology. The course will strive to focus on a small set of approaches to gain both theoretical and practical understanding of the methods. We will aim to cover practical issues such as programming and the use of programs, as well as theoretical issues such as algorithm design, statistical data analysis, theory of algorithms and statistics. This course WILL NOT provide a broad survey of the field nor teach specific tools but focus on a deep understanding of a small set of topics. We will discuss string algorithms, hidden markov models, dimension reduction, and machine learning (or phylogeny estimation) for biomedical problems. Prerequisite: Probability theory and linear algebra are highly recommended.
Taught by: Kim
Course usually offered in fall term
Also Offered As: CIS 436
Prerequisite: BIOL 446 AND MATH 104
Activity: Lecture
1.0 Course Unit

BIOL 438 Systems Biology: Integrative physiology and biomechanics of the muscular system
The course will focus on muscle function from the level of molecules to whole animal locomotion. At each level of organization, muscle function will be explored from mechanical and energetic viewpoints. The course will include lectures, demonstrations, and several guest expert lectures. Students will also be introduced to realistic musculo-skeletal modelling and forward dynamic simulations to explore integrated function.
Taught by: Rome
Course usually offered in spring term
Prerequisite: BIOL 215 OR BIOL 251
Activity: Lecture
1.0 Course Unit

BIOL 440 Advanced Analysis of Humans and the Environment
Advanced version of BIOL 140: Humans and the Environment. Additional readings and course work as directed. Permission of instructor required to enroll.
For BA Students: Natural Science and Math Sector
Taught by: Janzen
Course usually offered in fall term
Also Offered As: BIOL 140
Activity: Lecture
1.0 Course Unit

BIOL 442 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.
Course usually offered in fall term
Also Offered As: BIBB 442, NGG 575, PSYC 421
Prerequisite: BIBB 251 OR BIOL 251
Activity: Seminar
1.0 Course Unit

BIOL 444 Molecular Evolution of Physiological Functions
This course is designed for students who are interested in understanding how physiological functions are achieved. Taking advantage of the recent explosion in genetic data and high-resolution protein structure analysis across organisms, the course focuses on the evolution of physiological functions at the genetic, structural, circuit and organismal levels. Examples include the co-evolution of toxins and toxin resistance between hunter and prey, the evolution of substance transport across cell membranes, intracellular signaling cascades, intercellular communication, distributed and centralized nervous systems, neural circuits controlling physiological functions such as feeding, locomotion and visual information processing. Students are expected to learn 1) basic physiological processes, their origin and adaptation, 2) modern genetic, structural and physiological techniques, 3) to critically evaluate research findings, 4) to present scientific papers, and 5) to write a research report.
Taught by: Ren
Course usually offered in fall term
Prerequisite: BIOL 109 OR BIOL 215 OR BIOL 221 OR BIOL 251
Activity: Seminar
1.0 Course Unit
BIOL 446 Statistics for Biologists
Introductory probability theory. Principles of statistical methods. Problems of estimation and hypothesis testing in biology and related areas.
Taught by: Plotkin
Course usually offered in fall term
Prerequisite: MATH 104
Activity: Lecture
1.0 Course Unit

BIOL 448 Principles of Drug Action
Principles of Drug Action covers the concepts of pharmacological sciences as they relate to biochemistry, cell biology, and drug therapy. The intent of the course is to provide a solid grounding in targets of drug action, dose-response relationships, pharmacodynamics, and pharmacokinetics. The grounding is achieved by a discussion of these concepts explicitly and, through selected examples, implicitly. The first part of the course covers each of the concepts. Emphasis is placed on the integration with principles of cell biology and biochemistry. The second part of the course covers selected therapeutic applications. The applications chosen fall within four areas: cardiovascular, brain and behavior, antipyretic and anti-inflammatory, and antimicrobial. They are used to recapitulate important concepts and provide insight into the interplay between pharmacology and human physiology. The applications and the areas they represent are by no means comprehensive, but students will be able to pursue additional interests through papers.
Prerequisite: BIOL 204 is recommended.
Taught by: Manning
Course usually offered in fall term
Prerequisite: BIOL 205
Activity: Lecture
1.0 Course Unit

BIOL 451 Neural Systems and Behavior
This course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.
Taught by: Schmidt, M.
Course usually offered in spring term
Also Offered As: BIIB 479, PSYC 479
Prerequisite: BIOL 251 OR BIIB 251
Activity: Lecture
1.0 Course Unit

BIOL 456 Neural Circuits for Survival
A fundamental goal of neuroscience is to understand how neural circuits in the brain function to influence behavior. The aim of this course is to highlight the neural basis of behavior and discuss modern approaches and novel methods to study the neuronal control of classically studied aspects of behavior. Through a combination of discussions, student presentations, and interactive lectures, we will explore the neural systems that regulate the interactions an animal has with the external world. We will explore sensory systems (such as vision, taste, and olfaction), motor systems, and survival behaviors (such as feeding, drinking, mating, and aggression). The course evaluation will be based largely on written work, participation, and presentations.
Taught by: Betley
Course usually offered in spring term
Prerequisite: BIOL 251
Activity: Seminar
1.0 Course Unit

BIOL 464 Field Studies in Aquatic Microbial Ecology
This is a field and laboratory-based course that involves students in hands-on research methods in aquatic microbial ecology. Students will gain familiarity with experimental design, field measurements of environmental parameters (physical, chemical, and biological), sample collection techniques, and laboratory analyses required to assess the activity, health, and community composition of aquatic microbial ecosystems in an urban environment. We will compare and contrast various watersheds in and around the greater Philadelphia area, and students will design and conduct original independent research as a final course project. Enrollment preference given to students who have completed BIOL 240.
Taught by: Sherwood
Course usually offered in spring term
Prerequisite: BIOL 101 OR BIOL 121
Activity: Laboratory
1.0 Course Unit

BIOL 466 Molecular Genetics of Neurological Disease
This course will focus on the molecular basis of neurological diseases, exploring in detail key papers that cover topics including defining the disease genes, development of animal models that provide mechanistic insight, and seminal findings that reveal molecular understanding. Diseases covered will include neurological diseases of great focus today such as Alzheimer’s, Fragile-X and autism, dementia, motor neuron degeneration, and microsatellite repeat expansion disorders. The course will provide a perspective from initial molecular determination through current status. Students will gain an understanding of how the molecular basis of a disease is discovered (from classical genetics to modern genomics) and how such diseases can be modeled in simple genetic systems for mechanistic insight. The course will be comprised of lectures with detailed analysis of primary literature and in-class activities. Grading will be based on class participation, exams, and written papers.
Prerequisite: BIOL 251 and BIOL 421 are recommended.
Taught by: Bonini
Course usually offered in fall term
Also Offered As: BIBB 466
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit
BIOL 469 Plant Physiology Through Space and Time
This course is a lab/lecture/seminar hybrid that will meet once per week for three hours. Each session will consist of mini-lecture/lab, paper discussions/lab, or solely lab efforts. All reading assignments will be available on Canvas (no textbook fees). We will examine various aspects of photosynthesis, water relations and nutrient acquisition in the context of the evolutionary progression of higher plants. With each subject, we will consider, measure, and in some cases model whole-plant physiology while examining sub-cellular-level controls and ecosystem-to-global-level consequences. This course is designed to give molecular biologists through earth-system scientists the tools to measure and understand whole-plant physiological responses to molecular manipulation and environmental variability. All students will learn to appreciate the context of their work on both micro and macro scales.
Taught by: Helliker
Course usually offered in spring term
Prerequisite: BIOL 240
Activity: Seminar
1.0 Course Unit

BIOL 475 Topics in Prokaryotic Biology: From Molecules to Microbiomes
This course will cover research articles from both the classic and contemporary literature on the genetics, cell biology, and physiology of prokaryotes. The material will focus on a small number of subjects in depth, with an emphasis on how the field has arrived at its current state of knowledge and on exciting new research directions. Possible topics include: stress responses, cell signaling, subcellular organization, bacteriophages, microbial communities, and host-microbe interactions.
Taught by: Goulian
Course offered spring; even-numbered years
Prerequisite: BIOL 221 OR BIOL 375
Activity: Seminar
1.0 Course Unit

BIOL 477 The Science and Art of Biotechnology
Biotechnology transforms basic biological research into pharmaceutical therapies. This course will examine some explanations for American biotechnology vitality by studying case histories in which fundamental, biological observations were subsequently developed, successfully and unsuccessfully, for therapeutic applications. Along the way, we will also seek to understand the interactions among academic research institutions, biotechnology companies, large pharmaceutical companies, the Food and Drug Administration, financial institutions, venture groups, and the Patent and Trademark Office. Classes will be highly interactive. Students will present case histories in a critical fashion. Ultimately, students will conduct mock negotiations focused on university technology transfers, clinical trial design, financing, and intellectual property.
Taught by: Roth
Course usually offered in fall term
Prerequisite: BIOL 204 OR BIOL 205 OR BIOL 221
Activity: Seminar
1.0 Course Unit

BIOL 480 Advanced Cell Biology
This course is designed for beginning graduate students and advanced undergraduates with a particular enthusiasm for cell biology. Biology 480 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course which provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question original research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies. There is no assigned text; students learn to critically evaluate current literature by reading original papers on selected topics in modern cell biology. Accordingly, class participation/discussion is essential and the grade will be determined significantly by that. In addition, there will be two exams including answering short questions and an essay critiquing an original paper that is selected on a topic in Cell Biology.
Taught by: Guo
Course usually offered in fall term
Also Offered As: CAMB 480
Prerequisite: BIOL 201 AND BIOL 205
Activity: Lecture
1.0 Course Unit

BIOL 482 Cell Signaling
The evolution of multicellularity required that cells be able to both send and receive signals from their neighbors. The development of organs and differentiation of cells and tissues requires reliable and continuous communication between cells. Consequences of inappropriate or anomalous signaling include development abnormalities and cancer. This class will examine mechanisms of cell-to-cell signaling between cells in plants and animals with an emphasis on the cell biology of development.
Taught by: Gallagher
Course usually offered in fall term
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

BIOL 483 Epigenetics
This course investigates epigenetic phenomena: heritable alternate states of gene activity that do not result from an alteration in nucleotide composition (mutations). Epigenetic mechanisms regulate genome accessibility and cell differentiation. They play a key role in normal development and in oncogenesis. For example both mammalian X-chromosome inactivation and nuclear transfer (cloning) are subject to epigenetic regulation. Amongst the epigenetic mechanisms we will discuss in this course are chromatin organization, histone modification, DNA methylation and non-coding RNAs. The course is geared toward advanced undergraduate and beginning graduate students and is a combination of lectures, student presentations and research presentations by guest speakers. Students will work with the current scientific literature.
Taught by: Wagner D
Course usually offered in fall term
Also Offered As: CAMB 483
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit
BIOL 484 Cell Motility and the Cytoskeleton
Cytoskeleton and cell motility plays a crucial role in many aspects of normal and pathological physiology of individual cells, tissues, and whole organisms, including morphogenesis, immune response, wound healing, oncogenesis, and infection. This course will cover current topics in cell biology with emphasis on cytoskeleton and cell motility and their roles in these processes. Lectures, student presentations, and discussions in the class will be based on primary scientific literature.
Taught by: Svitkina
Course usually offered in fall term
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

BIOL 485 The RNA World: A functional and computational analysis
A focused study of genomic, biochemical, cellular, and molecular aspects of RNA. Topics of study will include RNA structure, RNA processing and turnover, splicing, ribozymes and riboswitches, RNA editing and modification, RNA interference, endogenous eukaryotic RNA silencing pathways, small RNA biology, computational methodologies for studying RNA biology, and RNA viruses. Lectures, students presentations, and discussions will be based on readings from the primary literature.
Prerequisite: BIOL 421 strongly recommended
Taught by: Gregory
Course offered spring; even-numbered years
Also Offered As: CAMB 485
Prerequisite: BIOL 221
Activity: Seminar
1.0 Course Unit

BIOL 486 Chromosomes and the Cell Cycle
Life depends on the propagation of genetic material from one generation to the next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanisms that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding.
Taught by: Lampson
Course offered spring; even-numbered years
Also Offered As: CAMB 486
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

BIOL 483 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from an historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Prerequisite: BIOL 483 recommended
Taught by: Berger
Course offered spring; odd-numbered years
Also Offered As: CAMB 493, GCB 493
Prerequisite: BIOL 221
Activity: Seminar
1.0 Course Unit

BIOL 499 Advanced Independent Study
A second semester of independent study, in most cases extending the research undertaken for the BIOL 399. Apply at the Biology Academic Office, 102 Leidy Labs.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

BIOL 522 Human Evolutionary Genomics
Advanced seminar on current topics in human genomics and human evolution. Topics include the methods used for mapping and sequencing genomes; phylogenetic and population genetic analysis; and detecting variation in the human genome. This course is designed for graduate students but advanced undergraduates with a strong background in genetics are also welcome.
Taught by: Tishkoff
Course offered spring; even-numbered years
Also Offered As: CAMB 522
Activity: Seminar
1.0 Course Unit

BIOL 527 Genetics for Computational Biology
This course will survey the discipline of molecular genetics. Two broad areas will be considered: 1) Molecular biology. DNA replication, transcription, translation, and the regulation of gene expression in both prokaryotic and eukaryotic systems and genomics and 2) Genetics: basic Mendelian & molecular genetics.
Taught by: Bonini/Gallagher/Guild/Keith
One-term course offered either term
Also Offered As: BIOL 221
Prerequisite: BIOL 101 OR 121
Activity: Lecture
1.0 Course Unit
BIOL 536 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the ‘pencil and paper’ level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis. Prerequisite: College level introductory biology required; undergraduate or graduate level statistics taken previously or concurrently required; molecular biology and/or genetics encouraged; programming experience encouraged. Taught by: Kim
Course usually offered in fall term
Also Offered As: CIS 536, GCB 536
Prerequisite: ((BIOL 101 AND BIOL 102) OR BIOL 121) AND STAT 111 AND STAT 112
Activity: Lecture
1.0 Course Unit

BIOL 540 Genetic Analysis
The logic and methodology of genetic analysis in plants and animals. This lecture course will focus on the use of mutations to study gene function and higher order biological processes, methods for reporting and manipulating gene expression, and analysis of the genetic basis of natural variation.
Taught by: Poethig
Course not offered every year
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 571 Topics in Computational Biology
Course for graduate students planning research in computational biology and genomics. Assigned readings will cover algorithms and data analysis techniques in computational biology. The course will include presentations and discussion of research problems involving computational analysis and there. Active group participation is required. Topics could include string algorithms, probability theory, multivariate statistics, molecular evolution, Markov Models, phylogenetic trees, and machine learning.
Taught by: Kim
Course not offered every year
Activity: Seminar
1.0 Course Unit

BIOL 575 Microbial Diversity and Pathogenesis
Advanced version of BIOL 375: Microbial Diversity and Pathogenesis for graduate students only. Additional readings and course work as directed. Taught by: Pohlschroder
Course usually offered in spring term
Also Offered As: BIOL 375
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 576 Microbial Diversity and Pathogenesis Lab
Advanced version of BIOL 376: Microbial Diversity and Pathogenesis Lab for graduate students only. Additional readings and course work as directed. Permission of instructor. BIOL 575 previously or concurrently is recommended but not required.
Taught by: Pohlschroder and Hogan
Course usually offered in spring term
Also Offered As: BIOL 376
Activity: Laboratory
1.0 Course Unit

BIOL 586 Topics in Mathematical Biology
This course will cover various mathematical models and tools that are used to study modern biological problems. The specific emphasis will vary from year to year, but typically will include an introduction to stochastic processes and computational methods that arise in evolutionary biology and population genetics. No prior knowledge of biology is needed to take this course, but a strong background in probability and familiarity with algorithms and combinatorics will be assumed. Prerequisite: MATH 241 and 340 are recommended
Course not offered every year
Also Offered As: MATH 586
Prerequisite: MATH 430
Activity: Lecture
1.0 Course Unit

BIOL 599 Master’s Independent Study
Laboratory research for the Master’s of Science in Biology submatriculation program. Apply at the Academic Office, 102 Leidy Labs.
One-term course offered either term
Activity: Independent Study
1.5 Course Unit

BIOL 608 Communication for Biologists
Basic science writing and presentation skills for PhD students in Biology. Designed for second year graduate students preparing for qualifying exams. In the first half of the course, students will produce weekly writing assignments and critique writing submitted by others. In the second half, students will learn techniques for effective research presentations in both seminar style environments and chalk-talk settings.
Taught by: Schmidt/Plotkin
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

BIOL 700 Advanced Topics in Current Biological Research
Integrative seminar on current biological research for first-year PhD students.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Course open to PhD students in Biology only.

BIOL 999 Independent Study and Research
Advanced laboratory research with a member of the Biology Graduate Group. May be taken for multiple course unit credit
One-term course offered either term
Activity: Independent Study
0.5 Course Units
Notes: May be taken for multiple course unit credit
Biomedical Graduate Studies (BIOM)

BIOM 502 Molecular Basis of Disease
BIOM 502 introduces students to basic mechanisms of disease and examines a different disease each week. The focus of the course will be on understanding the pathophysiology of the diseases and how research has enhanced not only our knowledge of disease mechanisms but has also led to improved therapy for patients with these diseases. This course is reserved for BGS students only. Prerequisite: Permission of course director.
Taught by: Dr. Jonathan Katz and Dr. Jennifer Punt
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BIOM 510 Case Studies in Translational Research (CSTR) (Open to MD/PhD and VMD/PhD students only)
This course is open to MD/PhD, VMD/PhD and Biomedical Graduate Studies PhD students. All second year combined degree students are expected to take this course unless excused by Dr. Brass. Enrollment is limited to 24 students but interested VMD/PhD and BGS students are welcome as space permits. Prerequisite: Must be in the MD/PhD or VMD/PhD program and have completes the first year of training. CSTR is a seminar style course where groups of students work with selected Penn faculty to prepare a discussion and literature review on disease topics. Topics will include gene therapy for hemophilia, retinal disease and wound healing, cytokine therapies for immune disorders, genetic sleep disturbances and vaccine development. Most of the course will focus on the analysis of successful translational research projects that are taking place here at Penn.
Taught by: Drs. Mitch Weiss, Emma Meagher and Skip Brass
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

BIOM 555 Regulation of the Genome
Regulation of gene expression including chromatin structure, transcription, DNA modification, RNA processing, translation, control of gene expression via microRNAs and post-translational processing. Prerequisite: Permission of instructors.
Taught by: Drs. Zhaolan Zhou and Ben Black
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BIOM 600 Cell Biology
BIOM 600 is a beginning-to-intermediate-level graduate school course designed to introduce students to the molecular components and physiological mechanisms that underlie the structure and function of eukaryotic cells. The course emphasizes core cell biology concepts by describing both landmark experiments and methods as well as current scientific research questions and technical approaches. Lectures till focus on discoveries involving: (i) molecular mechanisms of cellular communication; (ii) intracellular compartmentalization, protein-vesicle targeting, and organelle biogenesis; (iii) mechanisms of membrane transport and excitability; (iv) cytoskeletal architecture, cell adhesion, and cell motility; and (v) cell fate. The main goal of the course is to provide a strong foundational basis for the biomedical student's graduate education especially in the practice of solving research problems in the context of cell biology. The format and content of the course conveys to students not only how scientists what they know but also the tremendous excitement that has paralleled rapid advances in understanding cell structure, organization, and function in recent years. Permission of instructor required to enroll.
Taught by: Dr. Kurt Engleka, Course Director
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BIOM 611 Statistics in Experimental Design and Analysis
BIOM 611 is an introductory course providing an overview of fundamental concepts in biostatistics as they relate to experimental design and analysis. It introduces the student as well to the related concepts of premise and reproducibility. The first unit introduces the scientific method as a series of six steps. In the first unit we explore the strength of evidence supporting a particular research hypothesis, consider the generalizability of our conclusion and estimate the magnitude of the effect. The second unit specifically introduces methods for comparing means and proportions between groups and the analysis of paired data. We conclude by considering differences in means and proportions between multiple groups and associations between quantitative variables. Analysis of variance (ANOVA), correlation and linear regression are explored. Statistical methods will be implemented using the software package R (in Rstudio). Students will have an opportunity to code directly in R or to use the graphical user interface, Rcmdr to facilitate work with R. This course is NOT recommended for students with a strong quantitative background. Those of you with a strong background should take a statistics course with more rigorous mathematical underpinnings and or with exposure to more advanced statistical methods. Discuss with advisor or see the following page for detailed instructions. www.med.upenn.edu/bgs/documents/BGSStatisticsRequirements10-6-16.pdf
Taught by: J. Richard Landis, PhD
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Biomedical Informatics (BMIN)

BMIN 501 Introduction to Biomedical and Health Informatics
This course is designed to provide a survey of the major topic areas in medical informatics, especially as they apply to clinical research. Through a series of lectures and demonstrations, students will learn about topics such as databases, natural language, clinical information systems, networks, artificial intelligence and machine learning applications, decision support, imaging and graphics, and the use of computers in education.
Taught by: Holmes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BMIN 502 Databases in Biomedical Research
This course is intended to provide in-depth, practical exposure to the design, implementation, and use of databases in biomedical research, and to provide students with the skills needed to design and conduct a research project using primary and secondary data. Topics to be covered include: database architectures, data normalization, database implementation, client-server databases, concurrency, validation, Structured-Query Language (SQL) programming, reporting, maintenance, and security. All examples will use problems or data from biomedical domains. MySQL will be used as the database platform for the course, although the principles apply generally to biomedical research and other relational databases.
Taught by: Holmes
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BMIN 503 Data Science for Biomedical Informatics
In this course, we will use R and other freely available software to learn fundamental data science applied to a range of biomedical informatics topics, including those making use of health and genomic data. After completing this course, students will be able to retrieve and clean data, perform explanatory analyses, build models to answer scientific questions, and present visually appealing results to accompany data analyses; be familiar with various biomedical data types and resources related to them; and know how to create reproducible and easily shareable results with R and github. Prerequisite: Familiarity with basic statistical (e.g., EPID 526, 527 or other first-year graduate level stats course) concepts is expected, as this course will not cover basic concepts in depth.
Taught by: Himes
Course usually offered in fall term
Also Offered As: EPID 600
Activity: Lecture
1.0 Course Unit

BMIN 504 Topics in Biom/Hlth Info
Also Offered As: EPID 602
Activity: Lecture
1.0 Course Unit

BMIN 505 Precision Medicine and Health Policy
Through a series of lectures, readings and response papers, students will learn about topics such as medical ethics, unintended consequences of medicine/research, genetics, genetic interpretation, hospital performance, and informatic methods to assess these factors. The informatics topics covered in this course include: decision support, genetic database, clinical interpretation of genetics, detection of bias in EMRs, detection of bias in guidelines, methods to ameliorate bias, mapping clinical guidelines to computable standards, performance assessment, machine learning, and artificial intelligence applications in this space.
Taught by: Boland
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BMIN 506 Standards and Clinical Terminologies
This survey course is designed to provide an overview of health information standards and clinical terminologies. Through a series of lectures, demonstrations, and hands-on exercises, students will learn about topics such as standards, interoperability, data modeling, vocabularies, and health information exchange.
Taught by: Michael Padula
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

BMIN 507 Human Factors
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

BMIN 509 Telehealth and mHealth Systems and Applications
This course is designed to develop intelligent consumers, managers, and researchers of telehealth and mHealth systems through guided exploration into the components of such systems. The course is designed to introduce many of the challenges facing designers and managers of telehealth/ mHealth and remote health care delivery networks. The spectrum of activity ranging from research into implications of system design for applications that bridge geographic distance to the development of practical applications is considered in both historical context and in case studies. The current status and future trends of this emerging domain are reviewed.
Taught by: Demiris, George
Also Offered As: NURS 529
Activity: Lecture
1.0 Course Unit

BMIN 520 AI I: Intro To AI
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
**Biostatistics (BSTA)**

**BSTA 550 Applied Regression and Analysis of Variance**

An applied graduate level course in multiple regression and analysis of variance for students who have completed an undergraduate course in basic statistical methods. Emphasis is on practical methods of data analysis and their interpretation. Covers model building, general linear hypothesis, residual analysis, leverage and influence, one-way anova, two-way anova, factorial anova. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.

Taught by: Rosenbaum
Course usually offered in fall term
Also Offered As: PSYC 611, STAT 500
Activity: Lecture
1.0 Course Unit

**BSTA 620 Probability I**

This course covers Elements of (non-measure theoretic) probability necessary for the further study of statistics and biostatistics. Topics include set theory, axioms of probability, counting arguments, conditional probability, random variables and distributions, expectations, generating functions, families of distributions, joint and marginal distributions, hierarchical models, covariance and correlation, random sampling, sampling properties of statistics, modes of convergence, and random number generation. Two semesters of calculus (through multivariate calculus), linear algebra, or permission of the instructor to enroll.

Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**BSTA 621 Statistical Inference I**

This class will cover the fundamental concepts of statistical inference. Topics include sufficiency, consistency, finding and evaluating point estimators, finding and evaluating interval estimators, hypothesis testing, and asymptotic evaluations for point and interval estimation. Prerequisite: If course requirements not met, permission of instructor.

Course usually offered in spring term
Prerequisite: BSTA 620
Activity: Lecture
1.0 Course Unit

**BSTA 511 Biostatistics in Practice**

Biostatistics in Practice offers Biostatistics students an opportunity to acquire and demonstrate proficiency in statistical collaboration, data analysis and scientific writing. The project is defined by several elements: A scientific question or hypothesis arising in medical research; the statistical methodology needed to address the question; the development of a study design and/or analysis of a relevant data set; and a summary of the results of these analyses. In most cases, a collaborating medical scientist provides the research question and the data. The student, under the supervision of a biostatistics faculty member, identifies the appropriate statistical methods and conducts the analysis. The analysis should be sufficiently extensive and detailed to support a manuscript publishable in the medical literature. Enrollment open to Biostatistics student only.

Taught by: Nandita Mitra
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**BSTA 550 Applied Regression and Analysis of Variance**

An applied graduate level course in multiple regression and analysis of variance for students who have completed an undergraduate course in basic statistical methods. Emphasis is on practical methods of data analysis and their interpretation. Covers model building, general linear hypothesis, residual analysis, leverage and influence, one-way anova, two-way anova, factorial anova. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.

Taught by: Rosenbaum
Course usually offered in fall term
Also Offered As: PSYC 611, STAT 500
Activity: Lecture
1.0 Course Unit

**BSTA 620 Probability I**

This course covers Elements of (non-measure theoretic) probability necessary for the further study of statistics and biostatistics. Topics include set theory, axioms of probability, counting arguments, conditional probability, random variables and distributions, expectations, generating functions, families of distributions, joint and marginal distributions, hierarchical models, covariance and correlation, random sampling, sampling properties of statistics, modes of convergence, and random number generation. Two semesters of calculus (through multivariate calculus), linear algebra, or permission of the instructor to enroll.

Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**BSTA 621 Statistical Inference I**

This class will cover the fundamental concepts of statistical inference. Topics include sufficiency, consistency, finding and evaluating point estimators, finding and evaluating interval estimators, hypothesis testing, and asymptotic evaluations for point and interval estimation. Prerequisite: If course requirements not met, permission of instructor.

Course usually offered in spring term
Prerequisite: BSTA 620
Activity: Lecture
1.0 Course Unit
**Biostatistics (BSTA)**

**BSTA 622 Statistical Inference II**
This class will cover the fundamental concepts of statistical inference. Topics include sufficiency, consistency, finding and evaluating point estimators, finding and evaluating interval estimators, hypothesis testing, and asymptotic evaluations for point and interval estimation. Course usually offered in fall term
Prerequisite: BSTA 621
Activity: Lecture
1.0 Course Unit

**BSTA 630 Statistical Methods and Data Analysis I**
This first course in statistical methods for data analysis is aimed at first-year Biostatistics students. It focuses on the analysis of continuous data. Topics include descriptive statistics (measures of central tendency and dispersion, shapes of distributions, graphical representations of distributions, transformations, and testing for goodness of fit); populations and sampling (hypotheses of differences and equivalence, statistical errors); one- and two-sample t tests; analysis of variance; correlation; nonparametric tests on means and correlations; estimation (confidence intervals and robust methods); categorical data analysis (proportions; statistics and test for comparing proportions; test for matched samples; study design); and regression modeling (simple linear regression, multiple regression, model fitting and testing, partial correlation, residuals, multicollinearity). Examples of medical and biologic data will be used throughout the course, and use of computer software demonstrated. Multivariable calculus and linear algebra and permission of instructor required to enroll.
Course usually offered in fall term
Prerequisite: BSTA 620
Activity: Lecture
1.0 Course Unit

**BSTA 632 Statistical Methods for Categorical and Survival Data**
This is the second half of the methods sequence, where the focus shifts to methods for categorical and survival data. Topics in categorical include defining rates; incidence and prevalence; the chi-squared test; Fisher’s exact test and its extension; relative risk and odds-ratio; sensitivity; specificity; predictive values; logistic regression with goodness of fit tests; ROC curves; the Mantel-Haenszel test; McNemar’s test; the Poisson model; and the Kappa statistic. Survival analysis will include defining the survival curve, censoring, and the hazard function; the Kaplan-Meier estimate, Greenwood’s formula and confidence bands; the log rank test; and Cox’s proportional hazards regression model. Examples of medical and biologic data will be used throughout the course, and use of computer software demonstrated.
Course usually offered in spring term
Prerequisite: BSTA 620 AND BSTA 621 AND BSTA 630
Activity: Lecture
1.0 Course Unit

**BSTA 651 Introduction to Linear Models and Generalized Linear Models**
This course extends the content on linear models in BSTA 630 and BSTA 632 to more advanced concepts and applications of linear models. Topics include the matrix approach to linear models including regression and analysis of variance, general linear hypothesis, estimability, polynomial, piecewise, ridge, and weighted regression, regression and collinearity diagnostics, multiple comparisons, fitting strategies, simple experimental designs (block designs, split plot), random effects models, Best Linear Unbiased Prediction. In addition, generalized linear models will be introduced with emphasis on the binomial, logit and Poisson log-linear models. Applications of methods to example data sets will be emphasized.
Course usually offered in spring term
Prerequisite: BSTA 620 AND BSTA 630 AND BSTA 621 AND BSTA 632
Activity: Lecture
1.0 Course Unit

**BSTA 656 Longitudinal Data Analysis**
This course covers both the applied aspects and methods developments in longitudinal data analysis. In the first part, we review the properties of the multivariate normal distribution and cover basic methods in longitudinal data analysis, such as exploratory data analysis, two-stage analysis and mixed-effects models. Focus is on the linear mixed-effects models, where we cover restricted maximum likelihood estimation, estimation and inference for fixed and random effects and models for serial correlations. We will also cover Bayesian inference for linear mixed-effects models. The second part covers advanced topics, including nonlinear mixed-effects models, GEE, generalized linear mixed-effects models, nonparametric longitudinal models, functional mixed-effects models, and joint modeling of longitudinal data and the dropout mechanism. If course requirements are not met, permission of instructor required.
Taught by: Wensheng Gu
Prerequisite: BSTA 621 AND (BSTA 631 OR BSTA 632) AND BSTA 651 AND (BSTA 653 OR BSTA 754)
Activity: Lecture
0.5 Course Units

**BSTA 660 Design of Observational Studies**
This course will cover statistical methods for the design and analysis of observational studies. Topics for the course will include epidemiologic study designs, issues of confounding and hidden bias, matching methods, propensity score methods, sensitivity analysis, and instrumental variables. Case studies in biomedical research will be presented as illustrations. Prerequisite: If course requirements not met, permission of instructor required.
Taught by: Rebecca Hubbard
Activity: Lecture
0.5 Course Units

**BSTA 661 Design of Interventional Studies**
This course is designed for graduate students in statistics or biostatistics interested in the statistical methodology underlying the design, conduct, and analysis of clinical trials and related interventional studies. General topics include designs for various types of clinical trials (Phase I, II, III), endpoints and control groups, sample size determination, and sequential methods and adaptive design. Regulatory and ethical issues will also be covered. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Alisa Stephens Shields
Activity: Lecture
0.5 Course Units
**BSTA 670 Statistical Computing**
This course concentrates on computational tools, which are useful for statistical research and for computationally intensive statistics. Through this course you will develop a knowledge base and skill set of a wide range of computational tools needed for statistical research. Topics include computer storage, architecture and arithmetic; random number generation; numerical optimization methods; spline smoothing and penalized likelihood; numerical integration; simulation design; Gibbs sampling; bootstrap methods; and the EM algorithm. Prerequisite: If course requirements not met, permission of instructor required.
Taught by: Kristin Linn
Prerequisite: BSTA 651 AND BSTA 620 AND BSTA 621
Activity: Lecture
1.0 Course Unit

**BSTA 699 Lab Rotation**
Activity: Laboratory
0.33 Course Units

**BSTA 750 Statistical Methods for Risk Prediction and Precision Medicine**
This is an advanced elective course for graduate students in Biostatistics, Statistics, Epidemiology, and other BGS disciplines. It will cover various topics for evaluating the performance of biomarkers to predict risk of clinical or disease outcomes, specifically including relative, absolute and competing risks for binary and time-to-disease outcomes; statistical inference for quantifying predictive accuracy with binary and time-to-event outcomes; statistical methods and inference for case-control study designs; Efficient study design issues for biomarker evaluation. This course is designed to help students 1) understand various concepts of risk in the medical literature; 2) understand various statistical methods for evaluating prediction performance of biomarkers and diagnostic tests and for designing efficient biomarker studies; 3) improve the ability to read critically papers published in statistical and medical journals on related topics; and 4) develop research ideas for risk prediction. Upon successfully completing this course, students will be able to: 1) Conduct statistical analysis for evaluating prediction performance of biomarkers and diagnostic tests; 2) Have a better ability to read and understand papers published in statistical and medical journals on related topics; and 3) Be well prepared to work on related topics for dissertation.
Taught by: Jinbo Chen
Course usually offered in fall term
Prerequisite: BSTA 630 AND BSTA 632
Activity: Lecture
0.5 Course Units

**BSTA 751 Statistical Methods for Neuroimaging**
This course is intended for students interested in both statistical methodology, and the process of developing this methodology, for the field of neuroimaging. This will include quantitative techniques that allow for inference and prediction from ultra-high dimensional and complex images. In this course, basics of imaging neuroscience and preprocessing will be covered to provide students with requisite knowledge to develop the next generation of statistical approaches for imaging studies. High-performance computational neuroscience tools and approaches for voxel- and region-level analyses will be studied. The multiple testing problem will be discussed, and the state-of-the-art in the area will be examined. Finally, the course will end with a detailed study of multivariate pattern analysis, which aims to harness patterns in images to identify disease effects and provide sensitive and specific biomarkers. The student will be evaluated based on 3 homework assignments and a final in-class presentation. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Doug Schaubel
Course usually offered in fall term
Prerequisite: BSTA 622
Activity: Lecture
0.5 Course Units

**BSTA 754 Advanced Survival Analysis**
This advanced survival analysis course will cover statistical theory in counting processes, large sample theory using martingales, and other state of the art theoretical concepts useful in modern survival analysis research. Examples in deriving rank-based tests and Cox regression models as well as their asymptotic properties will be demonstrated using these theoretical concepts. Additional potential topics may include competing risk, recurrent event analysis, multivariate failure time analysis, joint modeling of survival and longitudinal data, sample size calculations, multi-state models, and complex sampling schemes involving failure time data. In addition to satisfying course prerequisites, permission of instructor is required.
Taught by: Doug Schaubel
Course usually offered in fall term
Prerequisite: BSTA 622
Activity: Lecture
1.0 Course Unit

**BSTA 777 Statistical Methods for Meta-Analyses**
This graduate-level Biostatistics course will introduce the fundamentals of statistical methods for meta-analyses. It will cover key principles of meta-analysis and the statistical rationales behind the analytic models, including univariate meta-analysis, multivariate meta-analysis, meta-analysis of diagnostic test accuracy, network meta-analysis, and multivariate network meta-analysis. Beyond these commonly used models, the course will cover statistical methods and software that investigate and correct for biases in systematic reviews such as publication bias, outcome reporting bias. Advanced statistical inferential tools such as publication bias, outcome reporting bias. Advanced statistical inferential tools such as composite likelihood, pseudolikelihood, integrated likelihood methods, EM algorithms will be introduced. In addition, the course will also cover some practical steps in systematic review including search strategies, data abstraction methods; quality assessment; and writing a meta-analysis report. The course is composed of a series of weekly lectures and small group discussions. Students will be expected to attend weekly lectures, participate in class discussions, review assigned readings, complete homework assignments, and conduct a real-world meta-analysis with a clinically meaningful problem. Fundamentals of Biostatistics background or permission of instructor required to enroll.
Activity: Lecture
1.0 Course Unit
Biotechnology (BIOT)

BSTA 782 Stat Meth/Incomplete Data
Taught by: Qi Long
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BSTA 787 Methods for Statistical Genetics and Genomics in Complex Human Disease
This is an advanced elective course for graduate students in Biostatistics, Statistics, Epidemiology, Bioinformatics, Computational Biology, and other BGS disciplines. This course will cover statistical methods for the analysis of genetics and genomics data. Topics covered will include genetic linkage and association analysis, analysis of next-generation sequencing data, including those generated from DNA sequencing and RNA sequencing experiments. Students will be exposed to the latest statistical methodology and computer tools on genetic and genomic data analysis. They will also read and evaluate current statistical genetics and genomics literature. Prerequisite: If course requirements not met, permission of instructor required.
Taught by: Mingyao Li
Prerequisite: (BSTA 630 AND BSTA 632) OR (EPID 520 AND EPID 521)
Activity: Lecture
1.0 Course Unit

BSTA 789 Big Data
Selected topics from public health and biomedical research where 'Big data' are being collected and methods are being developed and applied, together with some core statistical methods in high dimensional data analysis. Topics include dimension reduction, detection of novel association in large datasets, regularization and high dimensional regression, ensemble learning and prediction, kernel methods, deep learning and network analysis. R programs will be used throughout the course, other standalone programs will also be used. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Hongzhe Lee
Prerequisite: BSTA 621 AND BSTA 622
Activity: Lecture
1.0 Course Unit

BSTA 790 Causal Inference in Biomedical Research
This course considers approaches to defining and estimating causal effects in various settings. The potential-outcomes approach provides the framework for the concepts of causality developed here, although we will briefly consider alternatives. Topics considered include: the definition of effects of scalar or point treatments; nonparametric bounds on effects; identifying assumptions and estimation in simple randomized trials and observational studies; alternative methods of inference and controlling confounding; propensity scores; sensitivity analysis for unmeasured confounding; graphical models; instrumental variables estimation; joint effects of multiple treatments; direct and indirect effects; intermediate variables and effect modification; randomized trials with simple noncompliance; principal stratification; effects of time-varying treatments; time-varying confounding in observational studies and randomized trials; nonparametric inference for joint effects of treatments; marginal structural models; and structural nested models. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Nandita Mitra
Course not offered every year
Prerequisite: BSTA 620 AND BSTA 621 AND BSTA 622 AND BSTA 630 AND BSTA 631
Activity: Lecture
1.0 Course Unit

Bosnian-Croatian-Serbo

BCS 390 Elementary Bosnian/Croatian/Serbian I
The course level is basic, starting with the alphabet (both versions of it, the Latin and the Cyrillic), moving on to the grammar basics, then some communication and other forms of interaction.
For BA Students: Language Course
Taught by: Scepanovic-Ulia
Course not offered every year
Activity: Lecture
1.0 Course Unit

BCS 391 Elementary Bosnian/Croatian/Serbian II
For BA Students: Language Course
Course not offered every year
Prerequisite: BCS 390

Prerequisite: BCS 394
Activity: Lecture
1.0 Course Unit
Business Economics & Public Policy (BEPP)

BEPP 201 Public Finance and Policy.
This course explores the economics and politics of public policy to provide an analytic framework for considering why, how, and with what success/failure government intervenes in a variety of policy areas. Particular attention will be paid to important policy issues relating to taxation, social security, low-income assistance, health insurance, education (both K-12 and higher ed), the environment, and government deficits. The costs and benefits of alternative policies will be explored along with the distribution of responsibilities between the federal, state and local governments. While the course will focus primarily on U.S. policies, the topics covered (e.g. tax reform, deficits versus austerity, etc.) are currently at the center of the policy debate in many other industrialized countries as well. Taught by: Deniz Selman
One-term course offered either term
Also Offered As: BEPP 770
Activity: Lecture
1.0 Course Unit

BEPP 202 Consumer Financial Decision Making
Research shows that many individuals are profoundly underinformed about important financial facts and financial products, which frequently lead them to make mistakes and lose money. Moreover, consumer finance comprises an enormous sector of the economy, including products like credit cards, student loans, mortgages, retail banking, insurance, and a wide variety of retirement savings vehicles and investment alternatives. Additionally, recent breakthroughs in the FinTech arena are integrating innovative approaches to help consumers. Though virtually all people use these products, many find financial decisions to be confusing and complex, rendering them susceptible to fraud and deception. As a result, government regulation plays a major role in these markets. This course intended for Penn undergraduates considers economic models of household decisions and examines evidence on how consumers are managing (and mismanaging) their finances. Although academic research has historically placed more attention on corporate finance, household finance is receiving a brighter spotlight now—partly due to its role in the recent financial crisis. Thus the course is geared toward those seeking to take charge of their own financial futures, anyone interested in policy debates over consumer financial decision making, and future FinTech entrepreneurs. Taught by: Olivia Mitchell/Nicholas Roussanov
One-term course offered either term
Also Offered As: FNCE 202
Activity: Lecture
1.0 Course Unit

BEPP 203 Business in the Global Political Environment.
This course examines the non-market components of business and the broader political, regulatory, and civil context in which companies function. This course addresses how businesses interact with political and regulatory institutions, as well as the general public, with a focus on the global economy. The first portion examines the realities associated with political economy and the actual making of laws and regulations by imperfect politicians and regulators. The second portion analyzes the economic rationale for legislation and regulation in the presence of market failures. The course covers specific market failures and potential solutions including government regulation. Taught by: Santosh Anagol/Shing-yi Wang
One-term course offered either term
Prerequisite: BEPP 250 OR ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit

BEPP 207 Economics for the Next Hundred Years
Taught by: Eduardo Azevedo
Activity: Lecture
0.5 Course Units

BEPP 208 Housing Markets
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 250 (undergrads) or MGEC 611 and 612 for MBA’s. Non-Wharton students should have taken the equivalent course in the College. Lecture with discussion required. Taught by: Gyourko
Course usually offered in spring term
Also Offered As: BEPP 708, REAL 208, REAL 708
Prerequisite: BEPP 708, REAL 208, REAL 708
Activity: Lecture
1.0 Course Unit
Notes: Lecture with discussion required.
BEPP 210 Firms, Markets and Public Policy.
Many dimensions of firms’ strategies, including agreements with suppliers and competitors, mergers and acquisitions, pricing, and technology standards development, among others, are subject to the oversight of regulatory bodies and governmental agencies. This course studies how public policy impacts firms’ strategic choices in a host of economic environments. We will analyze pricing strategies including versioning and bundling; product standardization decisions; the management of complementarities between products; the role of network effects and platform competition; and how firms can take advantage of the regulatory environment they operate in when making such decisions. We will study, for example, why Sony won the Blu-Ray format war against the widely supported HD-DVD format; how the FCC plans to incentivize television broadcasters to return spectrum holdings for auction to wireless broadband providers; and how contracts with content providers affect firms’ strategic interactions in the e-reader market. To understand how firm strategy and public policy interact, the course will rely on a mix of simple but rigorous analytical models and case studies.
Taught by: Katja Seim.
One-term course offered either term
Also Offered As: BEPP 710
Prerequisite: BEPP 250
Activity: Lecture
1.0 Course Unit

BEPP 212 Economic Analysis of Law
This course provides an introduction to the economic analysis of law and legal institutions. Our goal is develop intuitions about the ways law simultaneously shapes and responds to private behavioral incentives. In the first half of the course, we will survey the application of key economic concepts to basic features of the Anglo-American common law of property, contract, and tort. In the second half of the course, we will use the tools developed in our survey to focus in depth on the law of intellectual property.
Taught by: Buccola

Also Offered As: LGST 212
Activity: Lecture
1.0 Course Unit

BEPP 214 Nonprofit Sector: Economic Challenges and Strategic Responses.
The nonprofit sector plays a key role in the provision of many goods and services which are fundamental in our society and which may be difficult to provide using market mechanisms alone. Education, health care, charitable services, and the arts are some primary examples of these. Nonprofit organizations operate in service of specific social missions rather than profit maximization, but in order to serve those missions effectively while ensuring their own survival, they must also make many of the decisions typically associated with private firms. That is, they must compete for funding, human resources, and consumers of their services, they must manage and invest their resources efficiently, and they must innovate new products and services over time. Importantly, the latter requirements may at times come in conflict with the organizations’ social values. As a result, nonprofit organizations as economic decision-makers confront a number of unique challenges to their success and growth. The goal of this course is to give students a broad overview of the economic, organizational, and strategic concerns facing the non-profit sector. Our objective is to characterize the unique economic environment, identify effective strategic governance, and management approaches, and explore how appropriate measurement techniques can can inform the policy treatment of nonprofits. This course is organized around a number of lectures, readings and outside speakers, a midterm exam and a required project.
Taught by: Ashley Swanson.
Activity: Lecture
1.0 Course Unit

BEPP 220 Behavioral Economics, Markets, and Public Policy
Behavioral economics has revealed a variety of systematic ways in which people deviate from being perfectly selfish, rational, optimizing agents. These findings have important implications for government policy and firm behavior. This course will explore these implications by answering two main questions: (1) what does behavioral economics imply for when and how the government should intervene in markets? (2) What does behavioral economics imply for firms’ pricing and production decisions? The course will present the standard economic approaches to answering these questions and then explore how answers change when we consider that people act in behavioral ways. Towards the end of the course, we will investigate specific policy questions, allowing us to debate solutions while hearing from policy makers operating in a world of behavioral agents.
Taught by: Judd Kessler.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BEPP 230 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Taught by: Fernando Ferreira
Course usually offered in spring term
Also Offered As: FNCE 230, REAL 230
Activity: Lecture
1.0 Course Unit
BEPP 233 Consumers, Firms and Markets in Developing Countries

Nearly four-fifths of the world’s population lives in low income or developing countries. Though currently far behind the U.S., the 15 fastest growing economies/markets in the world are all developing countries. And developing countries already account for 6 of the world’s 15 largest economies. This course will examine economic life, including consumers, firms and markets, in low income countries. We will apply both economic theory and empirical analysis for analyzing the roles of both business and government in consumption, production and market equilibria.

Taught by: Robert Jensen

One-term course offered either term
Activity: Lecture
1.0 Course Unit

BEPP 236 International Housing Comparisons

This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.

Taught by: Wachter

Course usually offered in spring term
Also Offered As: BEPP 836, REAL 236, REAL 836
Activity: Lecture
1.0 Course Unit

BEPP 250 Managerial Economics

This course will introduce you to ‘managerial economics’ which is the application of microeconomic theory to managerial decision-making. Microeconomic theory is a remarkably useful body of ideas for understanding and analyzing the behavior of individuals and firms in a variety of economic settings. The goal of the course is for you to understand this body of theory well enough so that you can effectively analyze managerial (and other) problems in an economic framework. While this is a ‘tools’ course, we will cover many real-world applications, particularly business applications, so that you can witness the usefulness of these tools and acquire the skills to use them yourself. We will depart from the usual microeconomic theory course by giving more emphasis to prescription: What should a manager do in order to achieve some objective? That course deliverable is to compare with description: Why do firms and customers act the way they do? The latter will still be quite prominent in this course because only by understanding how other firms and customers behave can a manager determine what is beswt for him or her to do. Strategic interaction is explored both in product markets and auctions. Finally, the challenges created by asymmetric information - both in the market and within the firm - are investigated.

One-term course offered either term
Also Offered As: BEPP 950
Prerequisite: ECON 001 AND MATH 103
Activity: Lecture
1.0 Course Unit

BEPP 261 Risk Analysis and Environmental Management

This course is designed to introduce students to the role of risk assessment, risk perception and risk management in dealing with uncertain health, safety and environmental risks including the threat of terrorism. It explores the role of decision analysis as well as the use of scenarios for dealing with these problems. The course will evaluate the role of policy tools such as risk communication, economic incentives, insurance, regulation and private-public partnerships in developing strategies for managing these risks. A project will enable students to apply the concepts discussed in the course to a concrete problem.

Taught by: Kunreuther

One-term course offered either term
Also Offered As: BEPP 761, BEPP 961, ESE 567, OIDD 261, OIDD 761
Activity: Lecture
1.0 Course Unit

BEPP 263 Environmental & Energy Economics and Policy

This course examines environmental and energy issues from an economist’s perspective. Over the last several decades, energy markets have become some of the most dynamic markets of the world economy, as they experienced a shift from heavy regulation to market-driven incentives. First, we look at scarcity pricing and market power in electricity and gasoline markets. We then study oil and gas markets, with an emphasis on optimal extraction and pricing, and geopolitical risks that investors in hydrocarbon resources face. We then shift gears to the sources of environmental problems, and how policy makers can intervene to solve some of these problems. We talk about the economic rationale for a broad range of possible policies: environmental taxes, subsidies, performance standards and cap-and-trade. In doing so, we discuss fundamental concepts in environmental economics, such as externalities, valuation of the environment and the challenge of designing international agreements. At the end of the course, there will be special attention for the economics and finance of renewable energy and policies to foster its growth. Finally, we discuss the transportation sector, and analyze heavily debated policies such as fuel-economy standards and subsidies for green vehicles. Prerequisites: An introductory microeconomics course (ECON1, or another course approved by the instructor) will be sufficient in most cases; BEPP 250 or an equivalent intermediate microeconomics course is recommended.

Taught by: Arthur van Benthem

Also Offered As: OIDD 263
Activity: Lecture
1.0 Course Unit
BEPP 280 Applied Data Analysis
This course will examine how and when data can be used specifically to infer whether there is a causal relationship between two variables. We will emphasize (a) the critical role of an underlying economic theory of behavior in interpreting data and guiding analysis, as well as (b) a range of advanced techniques for inferring causality from data, such as randomized controlled trials, regression discontinuity, difference-in-difference, audit study (mystery shopping) approaches and stock-market event studies. The issue of causality, and the relevance of thinking about models and methods for inferring causality, is just as central and important for 'Big Data' as it is when working with traditional data sets in business and public policy. The emphasis will not be on proofs and derivations but rather on understanding the underlying concepts, the practical use, implications and limitations of techniques. Students will work intensively with data, drawing from examples in business and public policy, to develop the skills to use data analysis to make better decisions. All analysis will be conducted using R. The goals of the course are for students to become expert consumers able to interpret and evaluate empirical studies as well as expert producers of convincing empirical analysis themselves.
Taught by: Santosh Anagol.
One-term course offered either term
Also Offered As: BEPP 780
Prerequisite: STAT 102 OR STAT 112 OR STAT 431 OR ECON 104
Activity: Lecture
1.0 Course Unit

BEPP 284 Game Theory for Business and Life
The objective of this course is to make you more skilled in the art and science of strategic reasoning. Strategic situations permeate our lives and we will examine many such situations through the lens of game theory. The course is composed of game-theoretic concepts, applications, and experiential learning. The bulk of the applications are to business situations including investment and entry, bargaining, managerial incentive contracts, network effects, product location, and two-sided markets. However, given the ubiquitous presence of strategic situations in human societies, applications will extend to politics, war, sports, history, crime, theology, and every day life, and cover the existence of God, steroid use in sports, racial discrimination, land conflict, trench warfare in World War I, and the Medieval Law Merchant. Students will regularly participate in experiments involving strategic reasoning, and form teams to compete in a simulated industry environment.
Taught by: Joseph Harrington
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BEPP 289 Nations, Politics, and Market
This course is intended to deepen understanding of the major contemporary issues in the world economy. The focus is on the 'big picture' of global economic developments and the evolution of economic thought over the last one hundred years. The topics include: financial market booms and busts; business cycles; monetary and fiscal policies; inequality; the social welfare state; technological change and economic growth; and international trade and financial arrangements. The time period covers: the Roaring Twenties; the Great Depression, the post war Golden Age (1945-1973); the stagflation of the 1970s; the Washington Consensus era of the market liberalization (1980-2007); and the 2008 financial crisis and Great Recession of 2007-2010 and its aftermath. The course also explores different schools of thought. The course will chronicle and compare economic policy and performance of the United States, Europe, Japan and emerging markets (Asia, Latin America, Africa).

BEPP 305 Risk Management
The last financial crisis and subsequent recession provide ample evidence that failure to properly manage risk can result in disaster. Individuals and firms confront risk in nearly all decisions they make. People face uncertainty in their choice of careers, spending and saving decisions, family choices and many other facets of life. Similarly, the value that firms create by designing and marketing good products is at risk from a variety of sources. The bankruptcy of a key supplier, sharp rise in cost of financing, destruction of an important asset, impact of risk from a variety of sources. The bankruptcy of a key supplier, sharp rise in cost of financing, destruction of an important asset, impact of global warming, or a liability suit can quickly squander the value created by firms. In extreme cases, risky outcomes can bankrupt a firm, as has happened recently to manufacturers of automobile parts and a variety of financial service firms. The events since the Global Financial Crisis also offer stark reminders that risk can impose significant6 costs on individuals, firms, governments, and society as a whole. This course explores how individuals and firms assess and evaluate risk, examines the tolls available to successfully manage risk and discusses real-world phenomena that limit the desired amount of risk-sharing. Our focus is primarily on explaining the products and institutions that will serve you better when making decisions in your future careers and lives.

BEPP 322 Business Insurance and Estate Planning.
This course presents an analysis of overall private wealth management. This includes planning for disposition of closely-held business interests; the impact of income taxes and other transfer costs on business interests and other assets; integration of life insurance, disability insurance, medical benefits, and long-term care insurance in the financial plan; planning for concentrated asset (e.g. common stock) positions, diversification techniques, and asset allocation strategies; distribution of retirement assets; lifetime giving and estate planning; and analysis of current developments in the creation, conservation, and distribution of estates. Attention also is given to various executive compensation techniques (including restricted stock and stock options) and planning for various employee benefits. The course also covers sophisticated charitable giving techniques and methods for financing education expenses. Reading consist of textbooks, case studies, and bulk pack articles.
Taught by: Victor Hallman.
One-term course offered either term
Also Offered As: BEPP 823
Activity: Lecture
1.0 Course Unit
BEPP 401 Public Policy Analysis
BEPP 401 fulfills the Wharton capstone requirement with a hands-on approach to addressing a key public policy question. We will partner with the City of Philadelphia, state government, federal agency or other key influencer group to address an important and topical public policy question each year. At the city level, potential questions include the economic and distributional impact of raising the minimum wage, implementing a soda tax, providing universal pre-K, mandating paid sick leave, and other issues related to urban policy and planning. At the state level, potential policies include changes in occupational licensing requirements, business regulations, and Medicaid cost share restructuring. At the national level, potential questions include the implementation of a national electric grid for automobile charging, reforms to disaster preparedness systems, and immigration reform. Students will be provided with a ‘core’ data set appropriate for addressing the defining question to the capstone course.
Taught by: Robert Inman
Course not offered every year
Prerequisite: BEPP 250
Activity: Lecture
0.5 Course Units
BEPP 451 Fundamentals of Actuarial Science I
This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 851, STAT 451, STAT 851
Prerequisite: MATH 104 AND STAT 430
Activity: Lecture
1.0 Course Unit
BEPP 452 Fundamentals of Actuarial Science II
This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Lemaire
Course usually offered in spring term
Also Offered As: BEPP 852, STAT 452, STAT 852
Prerequisite: STAT 451 OR BEPP 451
Activity: Lecture
1.0 Course Unit
BEPP 453 Actuarial Statistics
This course covers models for insurer’s losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 853, STAT 453, STAT 853

BEPP 710 Firms, Markets and Public Policy.
Many dimensions of firms’ strategies including agreements with suppliers and competitors, mergers and acquisitions, pricing and technology standards development, among others, are subject to the oversight of regulatory bodies and governmental agencies. This course studies how public policy impacts firms’ strategic choices in a host of economic environments. We will analyze pricing strategies including versioning and bundling; product standardization decisions; the management of complementarities between products; the role of network effects and platform competition; and how firms can take advantage of the regulatory environment they operate in when making such decisions. We will study, for example, why Sony won the Blu-Ray format war against the widely supported HD-DVD format; how the FCC plans to incentivize television broadcasters to return spectrum holdings for auction to wireless broadband providers; and how contracts with content providers affect firms’ strategic interactions in the e-reader market. To understand how firm strategy and public policy interact, the course will rely on a mix of simple but rigorous analytical models and case studies.
Taught by: Katja Seim.
Also Offered As: BEPP 210
Prerequisite: MGEC 611 AND MGEC 612
Activity: Lecture
1.0 Course Unit

BEPP 761 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risk management, including both physical impact risk and transition risk, although the course will also discuss several other examples, including management of environmental risks, terrorism, and cyber-security, among other examples. The course will cover how people perceive risks and the impact this has on risk management. We will explore public policy surrounding risk management and how the public and private sector can successfully work together to build resilience, particularly to changing risks.

Activity: Lecture
1.0 Course Unit
BEPP 763 Energy Markets & Policy
Over the last several decades, energy markets have become some of the most dynamic markets of the world economy. Traditional fossil fuel and electricity markets have been seen a partial shift from heavy regulation to market-driven incentives, while rising environmental concerns have led to a wide array of new regulations and ‘environmental markets’. The growth of renewable energy could be another source of rapid change, but brings with it a whole new set of technological and policy challenges. This changing energy landscape requires quick adaptation from energy companies, but also offers opportunities to turn regulations into new business. The objective of this course is to provide students with the economist’s perspective on a broad range of topics that professionals in the energy industry will encounter. Topics include the effect of competition, market power and scarcity on energy prices, the impact of deregulation on electricity and fossil fuel markets, extraction and pricing of oil and gas, geopolitical uncertainty and risk in hydrocarbon investments, the environmental impact and policies related to the energy sector, environmental cap-and-trade markets, energy efficiency, the economics and finance of renewable energy, and recent developments in the transportation sector.
Taught by: Arthur Van Benthem
Also Offered As: OIDD 763
Activity: Lecture
1.0 Course Unit

BEPP 770 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.

BEPP 811 Risk and Crisis Management.
The growing connectivity of global economies and financial markets has produced widespread risk contagion, resulting in increased volatility and an ever-increasing demand for risk capital. This course focuses on understanding the drivers of risk contagion and ways to restore confidence in worldwide markets for pure and financial risk. The class begins with an evaluation of recent financial and pure risk events: for example, the sovereign debt crisis, Japanese earthquake, and BP Deepwater Horizon. We explore how these events are being financed in innovative ways via the capital and insurance markets. Next we emphasize the role of risk management in the preservation and creation of value, helping firms identify, measure, monitor and manage/finance risk. Doing so results in risk-adjusted returns (or return on risk-adjusted capital) that exceed the cost of capital. We devote substantial focus on the practical implementation of effective risk management/financing, given evolving regulatory and governance standards. In addition, we explore opportunities for corporate growth as well as public/private partnerships. The course will conclude with a discussion of emerging markets and the role of risk management in developing a middle class needing new forms of risk transfer/financing.
One-term course offered either term
Activity: Lecture
0.5 Course Units

BEPP 812 Markets for Pure Risk
The increased frequency and severity of pure risk events hinders corporations’ abilities to execute strategy and deliver sustainable financial results to stakeholders. Prominent recent examples include disruptions from Hurricane Katrina, Japan’s earthquake/nuclear disaster/supply chain breakdowns, Thai floods, U.S. wildfires, and global terrorist attacks. At the same time, both industrialized and emerging economies understand that the management and financing of pure risk is critical to the success of their economies. Consequently, the rising demand for risk capital has ushered in several capital market innovations and public/private partnerships necessary for managing and financing pure risk. This course investigates these issues, beginning with an introduction to pure risks, their centers of gravity and global consequences for corporations, consumers, and the macroeconomies. Next we move on to traditional sources of risk capital provided to corporations and governments via insurance and reinsurance mechanisms. The course concludes with a discussion of new sources of risk capital provided by capital markets including catastrophic risk bonds, securitization of mortality and liability risk, and other forms of insurance-linked securities. Our focus is on the supply of risk capital to corporations and economies, recognizing the unique position of emerging economies in this nexus. Throughout, the class emphasizes current real-world cases to illustrate the competitive differences in strategies taken by hedge funds, private equity pools, and insurers, as they address the increasing need for risk capital around the world. This course complements BEPP 811, Risk and Crisis Management, which focuses on how firms can use various types of hedging instruments to manage pure risks (that is BEPP811’s emphasis is primarily on the demand side of markets for pure risks whereas BEPP 812 examines the supply side of these markets). However, BEPP 811 is not required as a prerequisite. Format: Lecture and discussion, midterm and final.

BEPP 823 Business Insurance and Estate Planning.
This course presents an analysis of overall private wealth management. This includes planning for disposition of closely-held business interests; the impact of income taxes and other transfer costs on business interests and other assets; integration of life insurance, disability insurance, medical benefits, and long-term care insurance in the financial plan; planning for concentrated asset (e.g., common stock) positions, diversification techniques, and asset allocation strategies; distribution of retirement assets; lifetime giving and estate planning; and analysis of current developments in the creation, conservation, and distribution of estates. Attention also is given to various executive compensation techniques (including restricted stock and stock options) and planning for various employee benefits. The course also covers sophisticated charitable giving techniques and methods for financing education expenses. Readings consist of textbook, case studies, and bulk pack articles. This course should be attractive to most students to help them plan for their own or their families’ financial affairs. It also should be particularly attractive to students specializing in entrepreneurship, wealth management finance, and law.
Taught by: Victor Hallman.
One-term course offered either term
Also Offered As: BEPP 322
Activity: Lecture
1.0 Course Unit
BEPP 836 International Housing Comparisons
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Taught by: Susan Wachter
Course usually offered in spring term
Also Offered As: BEPP 236, REAL 236, REAL 836
Prerequisite: FNCE 613
Activity: Lecture
1.0 Course Unit

BEPP 851 Fundamentals of Actuarial Science I
This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums. Prerequisite: One semester of calculus.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 451, STAT 451, STAT 851
Activity: Lecture
1.0 Course Unit

BEPP 852 Fundamentals of Actuarial Science II
This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans.
Taught by: Lemaire
Course usually offered in spring term
Also Offered As: BEPP 452, STAT 452, STAT 852
Prerequisite: STAT 851 OR BEPP 851
Activity: Lecture
1.0 Course Unit

BEPP 853 Actuarial Statistics
This course covers models for insurer's losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains. Prerequisite: Two semesters of statistics.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 453, STAT 453, STAT 853
Activity: Lecture
1.0 Course Unit

BEPP 893 Advanced Study Projects
The ASP is intended to generate an interchange of ideas and perspectives and to provide the student with an opportunity to pursue a narrow topic in depth. ASP topics will be chosen by the student with advice from the instructor. The seminar instructor will act as coordinator for the projects. Other members of the department will serve as unofficial advisers to students according to expertise and interests.
Taught by: Bailey
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

BEPP 900 Research Seminar
Of the many ways that doctoral students typically learn how to do research, two that are important are watching others give seminar presentations (as in Applied Economics Seminars) and presenting one's own research. The BEPP 900 course provides a venue for the latter. Wharton doctoral students enrolled in this course present applied economics research. Presentations both of papers assigned for other classes and of research leading toward a dissertation are appropriate in BEPP 900. This course aims to help students further develop a hands-on understanding of the research process. All doctoral students with applied microeconomic interests are encouraged to attend and present. Second and third year Applied Economic Ph.D. students are required to enroll in BEPP 900 and receive one-semester credit per year of participation.
Taught by: Shing-yi Wang and Corinne Low
Two terms. student may enter either term.
Activity: Seminar
0.5 Course Units
Notes: Permission of instructor required.
BEPP 904 Experimental Economics
This course will help prepare you to run your own economics laboratory and field experiments. Experimental methods have been widely adopted by economists to develop new insights, and some economic theories and hypotheses are uniquely well-suited for testing with experimental tools and data. Achieving high internal and external validity requires careful experimental design. Substantive areas of application in the course will include market equilibrium, asset bubbles, learning in games, public good provision, and labor market relationships. Additional topics may include biases in individual decision-making, field experiments in development economics; and happiness, neuroeconomics, and behavioral/experimental welfare economics. Economists’ typical interests in strategic and market-based interactions raise particular methodological challenges and opportunities.
Course not offered every year
Also Offered As: OIDD 904
Activity: Lecture
1.0 Course Unit

BEPP 911 Empirical Public Policy
This course examines econometric research on a variety of topics related to public policy, with the goal of preparing students to undertake academic-caliber research. The course is not an econometrics or statistics course per se; rather, it focuses on research designs with observational data and how econometric techniques are applied in practice. The course aims to train students to do applied economic research that involves measuring effects of theoretical or practical interest. It proceeds in two major parts. The first part examines endogeneity and inference about causal relationships, instrumental variables methods and critiques, and panel data methods. The second part of the course addresses ‘structural’ econometric modeling. Topics covered in this part include sorting and selection, entry models, and counterfactual analyses of policy changes. The course proceeds by analyzing, in detail, approximately 24 well-known empirical research papers in applied economics or related fields. These include public economics and tax policy, labor economics, law and economics, health care policy, industrial organization and competition, transportation demand and policy, and others.
Taught by: Ulrich Doraszelski
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BEPP 915 Behavioral Economics and Policy Analysis
In this course we will be surveying the ways in which behavioral economics ideas are influencing economic analysis in different ‘applied micro’ fields. A guiding focus of the course will be studying the role of behavioral economics when conducting welfare or policy analysis. The course will begin with a high-level overview of the common themes seen across all the fields we will discuss, and then we will proceed through a series of modules in which we examine the specifics in different applications. Over the course of the semester, we will dive into public finance, health economics, market design, labor economics, and industrial organization.
Taught by: Alex Rees-Jones
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BEPP 931 Numerical Methods in Economics
The objective of this course is to introduce graduate students to computational approaches for solving economic models. We will formulate economic problems in computationally tractable form and use techniques from numerical analysis to solve them. Examples of computational techniques in the current economics literature as well as discuss areas where these techniques may be useful in future research will be disclosed. We will pay particular attention to methods for solving dynamic optimization problems and computing equilibria of games. The substantive applications will cover a wide range of problems including industrial organization, game theory, macroeconomics, finance, and econometrics.
Taught by: Ulrich Doraszelski
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BEPP 932 Contract Theory and Applications
The course provides an advanced introduction to the theory of contracts and its mixture of foundational theories and applications to fields such as labor, regulatory and industrial organization.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BEPP 933 Public Economics: Social Insurance and Government Expenditures
The first part of this course will examine the rationale for and economic impact (e.g. on saving, labor supply, etc.) of social insurance programs such as social security, unemployment insurance and disability insurance. The next major part of the course will explore these same issues for government interventions in health insurance markets. The course will then cover research on public goods, externalities, fiscal federalism, and economic stimulus (including the government’s recent response to the ‘Great Recession’) before proceeding to an exploration of the government’s role in K-12 and high education. Both theoretical and empirical evidence will be covered along with a mix of classic studies and more cutting-edge research. Throughout the course we will discuss the tradeoffs - for example between the protection and distortion of social insurance programs - that influence government’s optional role. While the focus will be on evidence from the U.S., some research from other industrialized and developing countries will also be covered.
Activity: Lecture
0.5 Course Units

BEPP 941 Development Economics
This course will cover current microeconomic issues of developing countries including poverty, risk, savings, human capital, and institutions. We will also explore the causes and consequences of market failures that are common in many developing countries with a focus on credit, land, and labor markets. The course is designed to introduce recent research with focus on empirical methods and testing theories with data.
Taught by: Shing-yi Wang/Robert Jensen
One-term course offered either term
Activity: Lecture
1.0 Course Unit
BEPP 950 Managerial Economics
Public goods, externalities, uncertainty, and income redistribution as sources of market failures; private market and collective choice models as possible correcting mechanisms. Microeconomic theories of taxation and public sector expenditures. The administration and organization of the public sector.
Taught by: Postlewaite
One-term course offered either term
Also Offered As: BEPP 250
Prerequisite: MGEC 611 AND MGEC 612 OR (ECON 701 AND ECON 703)
Activity: Lecture
1.0 Course Unit

BEPP 952 Economics and Law
Activity: Lecture
1.0 Course Unit

BEPP 956 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risk management, including both physical impact risk and transition risk, although the course will also discuss several other examples, including management of environmental risks, terrorism, and cyber-security, among other examples. The course will cover how people perceive risks and the impact this has on risk management. We will explore public policy surrounding risk management and how the public and private sector can successfully work together to build resilience, particularly to changing risks.
One-term course offered either term
Also Offered As: BEPP 261, BEPP 761, OIDD 261, OIDD 761
Activity: Lecture
1.0 Course Unit

BEPP 960 Applied Economics Seminar
The goal of this course is to help doctoral students develop critical thinking skills through both seminar participation and writing of referee reports. To this end students will attend the Wharton Applied Economics each Wednesday at noon seminar when it meets; prepare two written referee reports on WAE papers per semester, due before the seminar is presented. After attending the seminar and the ensuing discussion of the paper, students will prepare follow-up evaluations of their referee report reports, due one week after the seminar.
Taught by: Gilles Duranton
Two terms. student may enter either term.
Also Offered As: REAL 962
Activity: Seminar
0.5 Course Units

BEPP 970 Market Design
The course covers Market Design, the analysis and engineering of market rules and institutions. In the last 60 years practitioners and academics have deliberately engineered the rules of an increasing number of markets, with classic examples including medical resident matching (e.g., NRMP), spectrum auctions (e.g., FCC auctions), and organ donation exchanges. In the last few years, very large markets have been created from scratch, such as eBay, Adwords, and smaller markets like odesk.com and sittercity.com. These designs use a broad set of tools, including economic theory, empirical analysis and experiments (and a fair dose of trial-and-error). With this experience, useful principles have emerged, on what market failures typically have to be addressed, and on which rules work and which do not.
Taught by: Eduardo Azevedo
Activity: Lecture
1.0 Course Unit

BEPP 980 Industrial Organization and Competition Policy
This course focuses on empirical methods and applications of research topics in Industrial Organization. Although not exclusively, the course will focus mostly on the application of econometric techniques used to study specific markets and antitrust policies. The topics that will be covered include the evaluation of market power and mergers, product differentiation, investment and innovation, price discrimination, vertical relations, entry and product positioning, and the dynamics of industries. The course will also discuss research methodologies related to microeconomic theory, computational methods, and econometric analysis. The applicability of the techniques goes beyond the field of Industrial Organization, and include the Labor, Health, Trade and Public economics.
One-term course offered either term
Prerequisite: (ECON 701 AND ECON 703) OR (ECON 681 AND ECON 682)
Activity: Lecture
1.0 Course Unit
CAMB 480 Advanced Cell Biology
This course is designed for beginning graduate students and advanced undergraduates with a particular enthusiasm for cell biology. Biology 480 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course which provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question original research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies. There is no assigned text; students learn to critically evaluate current literature by reading original papers on selected topics in modern cell biology. Accordingly, class participation/discussion is essential and the grade will be determined significantly by that. In addition, there will be two exams including answering short questions and an essay critiquing an original paper that is selected on a topic in Cell Biology.
Taught by: Guo
Course usually offered in fall term
Also Offered As: BIOL 480
Prerequisite: BIOL 201 AND BIOL 205
Activity: Lecture
1.0 Course Unit

CAMB 483 Epigenetics
This course investigates epigenetic phenomena: heritable alternate states of gene activity that do not result from alteration in nucleotide composition (mutations). Epigenetic mechanisms regulate genome accessibility and cell differentiation. They play a key role in normal development and in oncogenesis. For example both mammalian X-chromosome inactivation and nuclear transfer (cloning) are subject to epigenetic regulation. Amongst the epigenetic mechanisms we will discuss in this course are chromatin organization, histone modification, DNA methylation and non-coding RNAs. The course is geared toward advanced undergraduate and beginning graduate students and is a combination of lectures, student presentations and research presentations by guest speakers. Students will work with the current scientific literature.
Taught by: Wagner
Course usually offered in fall term
Also Offered As: BIOL 483
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit

CAMB 485 The RNA World: A Functional and Computational Analysis
A focused study of genomic, biochemical, cellular, and molecular aspects of RNA. Topics of study will include RNA structure, RNA processing and turnover, splicing, ribozymes and riboswitches, RNA editing and modification, RNA interference, endogenous eukaryotic RNA silencing pathways, small RNA biology, computational methodologies for studying RNA biology, and RNA viruses. Lectures, student presentations, and discussions will be based on readings from the primary literature.
Prerequisite: BIOL 421 strongly recommended
Taught by: B. Gregory
Course offered spring; even-numbered years
Also Offered As: BIOL 485
Prerequisite: BIOL 221
Activity: Seminar
1.0 Course Unit

CAMB 486 Chromosomes and the Cell Cycle
Life depends on the propagation of genetic material from one generation to next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanisms that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding. There is no textbook for the course. Readings from the primary literature will be assigned for each meeting and provided as pdf files. Presentations of these papers and class participation, including questions and critical evaluation, are an essential part of the course.
Grading will be based on a final paper in the form of a research proposal (50%) and on class participation (50%).
Taught by: Lampson, M.
Course offered spring; even-numbered years
Also Offered As: BIOL 486
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

CAMB 493 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from an historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease.
The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Prerequisite: BIOL 483 recommended
Taught by: Berger
Course offered spring; odd-numbered years
Also Offered As: BIOL 493, GCB 493
Prerequisite: BIOL 221
Activity: Seminar
1.0 Course Unit

1.0 Course Unit

CAMB 508 Topics in Quantitative Training
Topics in Quantitative Training. This course will be better defined later. Right now using this as a placeholder since we need to get this info in the system by February 20
Taught by: TBD
Activity: Lecture
1.0 Course Unit

CAMB 510 Immunology for CAMB
The purpose of this course is to provide a thorough grounding in immunology to Cell and Molecular Biology graduate students, with an emphasis on the role of the immune system in combating infectious diseases. This is a required course for CAMB students in the Microbiology, Virology and Parasitology program and the Vaccine and Gene Therapy program, replacing IMMU 506 (Immune Mechanisms). It may also be used as an elective by CAMB students in other programs such as those from the Cancer Biology program and Cell Biology, Physiology and Metabolism program. Prerequisite: If course requirements not met, permission of instructor required. The course is divided into two parts. The first deals with innate immune response with a focus on pattern recognition and subsequent signaling in infection by bacteria, viruses, and parasites. The second half will focus on adaptive immune mechanisms, the structure, function, and molecular biology of antigen receptors and major histocompatibility complex molecules, and the development, activation, and differentiation of lymphocytes and other hematopoietic cells involved in immunity. The course is comprised of two 1.5-hour lectures per week, with Friday journal club on selected weeks.
EXAMS: There will be two exams. The first will be taken after part I, and the second after part II of the course. Both will be open book, in-class exams. The exam will consist of essay or brief answer questions based on experimental design and/or data. Each exam is weighed equally in determining the final letter grades of students. The grades are based solely on the exams.
Taught by: G. Scott Worthen
Course usually offered in spring term
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

CAMB 511 Principles of Development
This graduate course, which will include lectures and readings from the literature, is designed to provide a foundation in the principles of developmental biology. Topics covered will include: the germ line and piRNA, signaling pathways in development, pattern formation and cell specification, gastrulation, tissue differentiation, morphogenesis, cell polarity, epigenetics in development, organogenesis, stem cell biology, regeneration, and developmental evolution. The use of molecular biology, biochemistry, genomics and genetics, cell biology, and embryological manipulations will be discussed in the context of the analysis of developmental mechanisms. Undergraduate background in cell biology and molecular biology required. Non-BGS students require permission from course director to enroll.
Taught by: M. Mullins & P. Seale
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
CAMB 512 Cancer Biology and Genetics
The course objective is to introduce the students to important and current concepts in Cancer Biology and Cancer Genetics. The lectures are organized into 4 broad thematic groups: A) Intro to Cancer Biology and Signal Transduction (e.g., tumor suppressor and oncogene function, DNA repair pathways, senescence, apoptosis); B) Intrinsic and Extrinsic Drivers (e.g., tumor microenvironment, hypoxia, angiogenesis); C) Genome regulation and in Primary and Metastatic Tumors and D) Evading Cell Death. The organizers, along with faculty from the School of Medicine, the Wistar Institute and CHOR with expertise in the corresponding areas provide lectures for the course. The students are expected to present, and participate in discussions of one or more key recent papers. This is a year - long course. Non-CAMB students must contact the course director prior to registration. Students must have taken the fall CAMB 512 course to participate in the spring semester.
Taught by: Karin Eisinger, Todd Ridky, Kathrin Bernt & Kathryn Hamilton
Two terms. student may enter either term.
Activity: Lecture
0.5 Course Units

CAMB 518 Current Topics in Ion Channels
The course is a seminar format, specifically a journal club format, targeted to graduate students and MD/PhD students interested in ion channels. It meets for one hour, once a week for graduate students and once every other week for the entire group with formal presentation. On alternate weeks a faculty member meets with students to discuss and review the contents of each selected article for the subsequent week's presentation. This is an elective course meant to excite and intellectually enlighten students regarding the latest advances in ion channel research. It includes a wide range of ion channel topics from basic biophysics, structure, and physiology to cell biology and clinical applications. It is attended by faculty, students, and postdocs from the departments of Physiology, Pathology, Neuroscience, Pharmacology, Biochemistry & Biophysics, Psychiatry. We require a written critique of each paper presented by other participants during the semester, submitted prior to the formal presentation of the paper. This critique will be graded by a faculty member, as will the student's participation in both the preparatory sessions and formal presentation sessions. A final grade would be based on both of these components.
Taught by: Deutsch, C.
One-term course offered either term
Prerequisite: BIOM 600
Activity: Seminar
1.0 Course Unit

CAMB 522 Human Evolutionary Genomics
Advanced seminar on current topics in human genomics and human evolution. Topics include the methods used for mapping and sequencing genomes; phylogenetic and population genetic analysis; and detecting variation in the human genome. This course is designed for graduate students but advanced undergraduates with a strong background in genetics are also welcome. Permission of director required to enroll.
Taught by: S. Tishkoff
Course offered spring: even-numbered years
Also Offered As: BIOL 522
Activity: Seminar
1.0 Course Unit

CAMB 530 The Cell Cycle, Genome Integrity and Cancer
This seminar course focuses on molecular and biochemical events that regulate cell cycle progression and genome maintenance, and explores how these processes influence cancer etiology and treatment. Specific topics will familiarize students with the key principles and recent developments within these areas. These topics include CDK-Cyclins and their inhibitors, regulation of G1-S and G2-M phase cell cycle transitions, DNA damage checkpoints and repair, the impact of chromatin regulation on DNA repair, and how each of these processes affects cancer etiology and treatment. In depth reading and evaluation of research literature will be primarily used to accomplish these aims, as well as provide instruction on rigorous experimental design and data interpretation. If course requirements not met, permission of instructor required. Preferential registration of Cancer Biology and CAMB students up to the maximum of 12 students applies. Permission to register is required upon exceeding the 12 student limit.
Taught by: Asangani, Irfan and Greenberg, Roger
Course usually offered in fall term
Prerequisite: BIOM 555 AND BIOM 600
Activity: Seminar
1.0 Course Unit

CAMB 532 Human Physiology
This course will present a survey of the physiology of most of the major organ systems. It will integrate knowledge of cellular and molecular mechanisms into an understanding of function at the tissue, organ, and organism levels. It will begin with a brief review of membrane physiology, followed by electrophysiology and signaling in nerve. Then, after a brief outline of neural control systems and their role in homeostasis, it will present motility and muscle, the cardiovascular system, respiration, the renal and gastrointestinal systems, and selected topics from the endocrine system, the reproductive systems, environmental and exercise physiology. As well as providing a basis of integrative physiology for students in fields such as physiology, bioengineering and pharmacology, it should be of interest to students of cellular and molecular biology and genetic engineering who will need to appreciate the roles of specific systems and molecules at higher levels of organization. Prerequisite: Although not a formal prerequisite, a good foundation in cell bio level of BIOM/CAMB 600 (or an equivalent upper level undergraduat strongly recommended. A general understanding of the chemistry a biochemistry of macromolecules, and of basic molecular biology wi assumed. This course is primarily designed for 2nd year BGS stud year students in BGS or other programs will require the permission of instructor. This course is not open to undergraduates.
Taught by: Tejvir Khurana, Ben Prosser, and Paul Titchenell
Course usually offered in fall term
Also Offered As: PHRM 532
Activity: Lecture
1.0 Course Unit
CAMB 534 Seminar on current genetic research: Human Disease Modeling in Experimental Sys
An advanced seminar course emphasizing genetic research in model organisms and how it informs modern medicine. Each week a student will present background on a specific human disease. This is followed by an intense discussion by the entire class of 2 recent papers in which model organisms have been used to address the disease mechanism and/or treatment. As a final assignment, students will have the opportunity to write, edit, and publish a 'News & Views' style article in the journal 'Disease Models and Mechanisms'. Offered spring semester. Prerequisite: If course requirements not met, permission of instructor required. Taught by: T. Jongens
Course usually offered in spring term
Also Offered As: NGG 534
Prerequisite: CAMB 542 OR CAMB 605
Activity: Seminar
1.0 Course Unit

CAMB 542 Topics in Molecular Medicine
TiMM is planned as a once-weekly seminar course whose goal is to introduce students to the ways in which biomedical research can provide new insights into clinical medicine and, conversely, how knowledge of clinical disease impacts scientific discovery. There are two sections for the course -- 401 and 402. Section 401 is for first year MD/PhD students only and section 402 is for VMD/PhD and PhD students. Taught by: Section 401: Johnson, Kohli Section 402: Atchison, Mason Course usually offered in fall term
Also Offered As: PHRM 542
Activity: Seminar
1.0 Course Unit

CAMB 550 Genetic Principles
This is a required course of the Genetics and Epigenetics Program and is designed to provide students with a comprehensive overview of genetic concepts and methodology. The course is organized into three parts: I Fundamental genetic concepts and tools; II Genetics of model organisms (with focus on worms, flies, zebrafish and mice); III Human genetics and disease. Each week there will be two lectures and one associated discussion/problem-solving session. Discussions emphasize practical aspects of generating and interpreting genetic data. Offered spring semester. Taught by: Grant,S. & Joyce, E. Course usually offered in spring term Activity: Lecture
1.0 Course Unit

CAMB 577 Advanced Epigenetics Technology
Second year students in GCB, CAMB (G&E), or IGG programs using genomics methods to measure transcriptomics and epigenomics changes in their experimental systems. The goal is to familiarize students with the latest cutting-edge genomics tools and cover solutions to major experimental and computational challenges in the investigation of genome-wide epigenetic data sets. Students will develop competence in (i) variations of experimental techniques improving resolution and throughout, (ii) issues related to the computational analyses closely related to the various genome-wide assays used to probe epigenetic processes and signals, (iii) computational approaches useful to overcome pitfalls associated to the analysis of a given epigenetic data modality, (iv) methods, techniques and studies on the integration of multi-layer epigenetic data sets. Taught by: Golnaz Vahedi
Course usually offered in spring term
Also Offered As: GCB 577, IMUN 577
Prerequisite: (BIOL 483 OR BIOL 493) AND GCB 534 AND (GCB 535 OR GCB 536)
Activity: Lecture
1.0 Course Unit

CAMB 597 Neural Development, Regeneration and Repair
General Description: The goals of this course are to examine the principles underlying the nervous system development and to learn how understanding developmental mechanisms can inform strategies to promote regeneration and repair. This is not a survey course. Rather, the course will focus on selected topics, for which we will discuss the genetic, molecular and cellular strategies employed to study these problems in different model organisms. Emphasis is on how to interpret and critically evaluate experimental data. Students who are not in one of the BGS graduate programs need instructor permission to enroll. Taught by: Wenqin Luo, Jonathan Raper
Course usually offered in fall term
Also Offered As: NGG 597
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

CAMB 601 Advanced Virology Seminar
This seminar course covers current topics and important concepts in virology. Students will read selected papers on various topics in virology. Each subject will be illustrated by ground-breaking classic papers and innovative recent articles. Students will present a seminar under the guidance of a faculty member. Grades will be based on the guidance of a faculty member. Grades will be based on the quality of the seminar(s) and participation in discussion. Prerequisite: Non-CAMB students must obtain instructor approval. Taught by: S. Weiss, P. Bates
Course usually offered in spring term
Prerequisite: CAMB 706
Activity: Seminar
1.0 Course Unit
CAMB 605 CAMB First Year Seminar
Topics are selected by course instructors and student participants. Course instructors vary yearly. The goal of this course is to provide students with an opportunity to analyze, present, and discuss significant research papers in the field of cell and molecular biology in small group settings. The sections are taught by faculty from the different programs within the Graduate Group. This is a required course for CAMB PhD students. Other BGS students are eligible, space permitting.
Taught by: John Seykora
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CAMB 608 Regulation of Eukaryotic Gene Transcription
An advanced seminar course emphasizing current topics in gene regulatory mechanisms in eukaryotes. Based on the current literature, presentations and in depth discussions will familiarize the student with recent innovations and developing principles of genome regulation. Students are expected to bring their laptops to class. Non-CAMB students need approval from course directors. MD/PhD students do not need to take BIOM 555 as prerequisite.
Taught by: D. Epstein
Course usually offered in fall term
Prerequisite: BIOM 555
Activity: Seminar
1.0 Course Unit

CAMB 609 Vaccines and Immune Therapeutics
Vaccination is perhaps the most successful medical technological intervention. The goal of this course is to expand on students’ general understanding of the immune system and to focus this understanding towards the application of modern vaccines and immune therapies in the 21st century. The course will provide the student with a sense of how these principles are applied to a vaccine and immune therapeutic development. The course covers basic vaccine science and describes how this science is translated through clinical, regulatory, ethical, and political issues to result in a final vaccine product. The courses’ goal is to leave the student with an understanding of the implications of modern vaccines/immunotherapies and their impact on world health. Initial lectures review immune mechanisms believed to be responsible for vaccine-induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism, as well as vaccines and immunotherapies for cancer. An appreciation for the application of laboratory science to the clinical development and clinical trials of vaccines are provided. An important focus on the regulatory, safety, and ethical implications of vaccines in different world situations based on true world examples are presented. The financial implications of specific vaccines with these implications for global health is a focus of the course. The course is presented in a lecture-style consisting of multiple distinguished guest lecturers who are experts in their particular area of vaccine development. There are required readings to provide the student context and background for the diverse lectures. Students are graded on course participation and a final project/exam which students present. The project is to design a vaccine strategy for a current disease or pathogen of importance that does not as yet have an effective vaccine or immune therapy and present this to the class. Strategies used should build on the material presented in the class lectures. The course is intended for graduate students or medical students in various MS, Ph.D., or MD/Ph.D. programs on the campus, as well as local scientists and professionals in the community. As a prerequisite, students should have taken biology, biochemistry, or immunology courses at the advanced college level. This course is offered in the fall semester. Prerequisite: Biology, Biochemistry at the advanced college level, college-level immunology is recommended. Not limited to CAMB students, however first options are to CAMB students, the permission of the instructors via email.
Taught by: David Weiner, Paul Offit, Stanley Plotkin
Course usually offered in fall term
Also Offered As: IMUN 609
Activity: Lecture
1.0 Course Unit
CAMB 610 Molecular Basis of Gene Therapy and Genome Editing

This is a team-taught, survey course that focuses on the basic science relevant to achieving efficient and effective gene transfer and genome editing in animal models and humans for the treatment of disease. The course includes units devoted to a variety of vectors useful for gene transfer, the fundamentals of genome editing, and current therapeutic approaches using specific diseases as models. Prior background in biochemistry, cell biology, and molecular biology is essential. Aspects of organ system anatomy and physiology, virology, and immunology that are relevant to the course material are included in the course. Because of rapid movement in this field, specific topics vary somewhat from year to year. Offered every fall. Prerequisites: Background in biochemistry, cell biology and molecular biology. Students not enrolled in a BGS graduate program who wish to take this course must get permission in advance from Dr. Musunuru. Students should send their undergraduate and graduate transcripts (including spring semester) along with their request to Dr. Musunuru via email: kiranmusunuru@gmail.com. This class is not accepting non-BGS masters students.

Taught by: Kiran Musunuru
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CAMB 615 Protein Conformation Diseases

Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidosis. This course will include lectures, directed readings and student presentations to cover seminal and current papers on the cell biology of protein conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation. Target audience is primarily 1st year CAMB, other BGS graduate students, or students interested in acquiring a cell biological perspective on the topic. MD/PhDs and Postdoc are welcome. MS and undergraduate students must obtain permission from course directors. Class size is limited to 14 students.

Taught by: Yair Argon
Course usually offered in fall term
Also Offered As: BMB 518, NGG 615
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

CAMB 617 Emerging Infectious Diseases

A physician from just 25 years ago would not recognize two of today's most pressing public health problems, AIDS and Hepatitis C, nor be familiar with many other infectious diseases or agents including MERS, Ebola virus, Hantaanvirus, HTLV-1, HHV-8 and Borrelia burgdorferi. Such a physician might also be dismayed to learn that old enemies such as tuberculosis, malaria, diphtheria, West Nile virus, meningococcal meningitis, Yellow fever, and Dengue have become more (or rather less) prevalent due to antibiotic resistance and other factors. In addition, bioterrorism, long a theoretical possibility, is now part of today's reality and could result in the deliberate introduction of anthrax or other biological agents into the civilian population or the food supply. Thus, with the beginning of the new millennium, the medical profession, the veterinary profession, and the biomedical research establishment are faced with the triple-threat of emerging infectious diseases, reemerging infectious diseases, and bioterrorism. These topics are covered in this course, with an emphasis on student's participation in the discussion. Course open to graduate students only. Other students may petition the course director for permission to enroll. Emerging Infectious Diseases will cover emerging viral, bacterial and parasitic organisms, with lectures being given by faculty from the Schools of Medicine, Veterinary Medicine, Dental Medicine, and Arts and Sciences, and outside lecturers. Epidemiology, immune responses to infection, vaccine and antimicrobial agents, and pathogenesis all will be discussed. The course format will include short lectures by various faculty members to provide background information on each topic, followed by extensive discussion by students. Classes will run from 10am to 11:30AM on Mondays and Wednesdays in Johnson 207. Evaluation will be based on presentations of a research manuscript from the literature and participation in discussion sessions.

Taught by: S. Hensley, P. Bates
Prerequisite: BIOM 600 AND CAMB 706
Activity: Lecture
1.0 Course Unit
CAMB 632 Cell Control by Signal Transduction Pathways
This course, 'Targeting the cancer cell: from mechanism to precision medicine', will examine how various signal transduction mechanisms influence cell functions including replication, growth, transcription, translation and intracellular trafficking. We will also consider how non-cell autonomous mechanisms, such as the tumor microenvironment and the immune system influence cancer cell signaling. We will consider how important signaling pathways, such as Ras, Raf, Notch, Wnt, TGF beta, and various kinases/phosphatases become dysregulated in cancer, as well as delve into how the DNA damage response, immune system, and tumor microenvironment exert important influences on oncogenic signaling. In the first half of the course, invited faculty members will pick 2 relatively recent papers from their field that highlight important areas. Each paper will be assigned to a student, who will meet with the faculty mentor prior to the class to discuss the paper and their presentation. During the class, students will present each paper for approximately 45 minutes with time for discussion. Students will present the important background, break down the paper, look for strengths and weakness and come up with a plan of what the next set of experiments could or should be. In the second half of the course, students will independently pick a relevant paper for in class presentation and will also write a short ‘News and Views’ style article based on the paper they have chosen. The goal of the course is to provide students with a view of the cancer cell that integrates both cell autonomous and non-cell autonomous signals and to use this information to consider how to successfully treat cancer.

Taught by: X. Hua, J. Field, A. Resnick, and W. Pear
Course usually offered in spring term
Also Offered As: PHRM 632
Prerequisite: BIOM 600
Activity: Seminar
1.0 Course Unit

CAMB 633 Advanced Seminar in Gene Therapy
Class: Each class will involve a review of a manuscript in the field of gene therapy selected by course faculty (Drs. Kurre, Pardi, Melenhorst or Rivella). Two weeks prior to their lecture, faculty will assign one primary research paper plus review articles that provides relevant background. Before the session, each paper will be assigned to a student presenter, who will prepare slides and meet with the faculty lecturers ahead of time. Two faculty will be present for each class. The student leader will introduce the paper and ask the group to each cover a portion of the result section in order to promote discussion, interaction and participation. Each session will last 1 hour, including presentation of the manuscript and Q&A. Each session will cover one paper on a weekly base, alternating these classes with lectures (see below). Each presentation will utilize 45% of the grade. Lectures: during each lecture, a faculty or external speakers will lecture for 40 minutes followed by a 15 minutes breakout discussion. The student will attend and ask questions during or at the end of the lecture. These lectures will happen independently from the paper discussion. Dr. Rivella, or a substitute, will also be present at each lecture. Prerequisites: Second year students, who already have notions of cell manipulation, immunotherapy and vector biology.

Taught by: Stefano Rivella, Professor of Pediatrics
Course offered spring; even-numbered years
Activity: Seminar
1.0 Course Unit

CAMB 637 Gene Therapy: Vectors, Immunology, and Disease
This seminar course is designed to provide students with a cohesive understanding of virology and immunology of gene therapy. Three major themes will be covered: vectors, vector immunology and gene therapy of genetic and acquired diseases. The topics to be covered are viewed as an extension of topics covered in CAMB 610 (Molecular Basis of Gene Therapy), although CAMB 610 is not an absolute prerequisite for this seminar. Each class will consist of a brief introduction by an instructor, reviewing background information related to the theme discussion. The topics are explored through discussions, led by assigned students, of seminal research articles. Students are expected to have thoroughly reviewed the assigned articles and be able to present and discuss various aspects of the papers. Regular attendance and active participation in the discussions, which focus on critical evaluation of experimental design, data presentation and interpretation, is essential. Student evaluation will be based on attendance, in-class presentation (for 50% of the letter grade), and a take-home exam (for another 50% of the grade).

Prerequisite: BGS Students only
Taught by: J. Riley
Course offered spring; even-numbered years
Activity: Seminar
1.0 Course Unit

CAMB 691 Advanced Topics in Cell Biology & Physiology
This course, together with its companion CAMB 692, offers an advanced, in depth analysis of selected topics in cell biology and physiology. CAMB 691 and 692 are complementary courses that focus on different aspects of cell biology; these courses are offered on an alternating basis in the spring semester. The courses can be taken in either order, but require BIOM 600 or an equivalent background in basic cell biology. CAMB 691 will focus on key issues at the forefront of research in the areas of (1) Channels and transporters, (2) Vesicular and viral trafficking, (3) Tissue mechanics, (4) Heart and muscle physiology, (5) Cytoskeletal dynamics and cell division. The course format pairs faculty presentations with student-led discussion sessions highlighting important papers from the primary literature. Students will be evaluated on their presentations, their participation in class discussions, and weekly problem sets. Offered alternately in the spring semester with CAMB 692. Permission needed for all non-CAMB students. Advanced undergrads must contact instructor to confirm qualifications.

Taught by: M. Marks, C. Deutsch
Course offered spring; even-numbered years
Prerequisite: BIOM 600
Activity: Seminar
1.0 Course Unit
CAMB 692 Advanced Topics in Cell Biology and Physiology II: Cell Signaling and Metabolism

Cells in complex organisms are required to adapt rapidly in a changing environment. Maintaining homeostasis while performing specialized functions requires that cells respond to extracellular signals as well as fluctuations in a host of intracellular metabolites. This course will cover selected topics and general principles related to signal transduction and the control of metabolic flux in living cells. The course format will include student-led discussion sessions both providing an overview of a topic as well as focusing on important papers from the primary literature. Students will be evaluated on their presentations and participation, as well as problem sets. Offered alternately in the spring semester with CAMB 691.

Taught by: J. Bauer & R. Lee
Course offered spring; odd-numbered years
Prerequisite: BIOM 600
Activity: Seminar
1.0 Course Unit

CAMB 695 Scientific Writing

This 7-week course is designed to introduce students to basic scientific writing skills and is based upon the premise that clear writing, giving feedback, and receiving feedback are all essential tools for professional development. While this is not strictly a prelim preparatory course, applying the principles of this course will help improve your prelim writing and your scientific writing in general. Structure: An initial introductory lecture for the entire class is followed by 6 weekly small group sessions. These sessions are conducted as workshops designed to enhance student and faculty engagement to improve scientific writing. During the course, participants review the principles of clear, persuasive writing, and apply these principles to writing for a scientific audience. Particular emphasis is placed on conveying the significance of your research, outlining your aims, and discussing your results. Classes are highly interactive, and the majority of class time will be spent discussing student scientific writing. In order to focus on the techniques of scientific writing, in-class discussion and critiques will not address scientific methodology or interpretations of results. Evaluations: One of the goals of the course is to encourage active and open interaction among students, and grading will be predominantly based on class attendance, participation, and timely submission of assignments, not on the quality of the writing itself. Offered spring semester.

Taught by: J. Katz, J. Lok
Course usually offered in spring term
Prerequisite: (BIOM 555 AND BIOM 600) AND CAMB 605
Activity: Lecture
0.5 Course Units

CAMB 697 Biology of Stem Cells

The goal of this course is to introduce graduate students to the field of stem cell biology through lectures and reviews of important contributions from the literature. Topics include embryonic stem cells, epigenetics and reprogramming, tissue specific stem cells such as hematopoietic, neuronal and epithelial stem cells, tissue regeneration, and tissue engineering. The future potential and challenges in stem cell and regeneration biology will be discussed. Important aspects of stem cell identification and characterization utilizing multiple model systems will also be a focus. Offered Fall Semester.

Taught by: P. Gadue, P. Rompolas
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CAMB 698 Elective Tutorials in Cell and Molecular Biology

Interested students must contact Dr. Lee (rjl@penmedicine.upenn.edu) in the fall semester or Dr. Stanger (bstanger@upenn.edu) in the spring semester before enrolling in the course. Students will meet weekly with a faculty mentor to focus in-depth on a biomedical topic of their choice. Prior to each semester in which the course is offered, students are encouraged to make arrangements with faculty on their own and contact mentors directly to set up an individualized plan. Student should submit proposed mentors/topics to the course director before enrolling. The course director must approve the plan prior to beginning the independent study. This tutorial course is designed to provide students with an in-depth knowledge of a specific topic in Cell and Molecular Biology. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their field of interest or to expand on a topic that the student found interesting in one of their basic courses. Final student grades will be based on mentor evaluations as well as a written review-style paper and brief (15 min) presentation to all students enrolled in the course.

Taught by: Lee, Robert (Fall semester) and Ben Stanger (Spring Semester)
One-term course offered either term
Prerequisite: CELL 600
Activity: Seminar
1.0 Course Unit

CAMB 699 Lab Rotation

Two terms. student may enter either term.
Activity: Laboratory
0.5 Course Units

CAMB 700 Topics in Microbiology

This course is designed for second year students in the MVP program, and focuses on pathogen-host interactions. Students make a presentation designed for 30 minutes on a topic of their choice. The topic can be something that they are working on, or simply something that they are interested in. They are requested to provide sufficient background, discuss what is known and what is not known about the topic, and then frame two to three Specific Aims. The success of the course rests entirely upon the quality of the faculty and students involved. In past years, the class have been very interactive, with each class lasting about 1.5 hours. The discussions are deliberately wide-ranging, and review recent literature, techniques, and how to construct a grant. Generally, two faculty will be in attendance. Permission of instructor required to enroll. Students must have taken Immunology and two MVP pathogen classes.

Taught by: M. Betts, J. Riley
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
CAMB 701 Tumor Microenvironment
This course is designed for second year (and up) graduate students interested in learning about the tumor microenvironment. The course will cover the main players of the tumor microenvironment field (stroma, vasculature and immune cells) and emphasize the connections between the basic biology of the tumor microenvironment to potential therapeutic intervention. The goals of this course are to enrich scientific culture, train for clear and concise oral presentations, improve grant-writing skills, and develop critical thinking, professional composure, and discussion skills. The course will be divided into 4 broad topic areas. The course will begin with didactic lectures presented with overviews of Immunology, Stromal cells and extracellular matrix, and Angiogenesis/Endothelial cells. After that each session will be student run and consist of one hour of presentation of a didactic background lecture regarding the salient points of that week's topic, followed in the second hour by a discussion of a primary research paper(s) to be read in advance of the session by all class participants. Discussions will include specific technical background needed for the paper, presentation of the KEY data in the paper, leading discussion on the data and conclusions drawn from the paper and putting them in the context of the state of the field. Specific requirements for students include: - One to two presentations throughout the course. Students will be guided in choosing the appropriate depth of background nd topic area and ingiving formal presentations and constructive criticism of scientific data. - Submission of a discussion point each week that a student is not presenting, due the night before class. - A Specific Aims Page for a grant using one of his or her two presentations as 'preliminary data' or their own research project provided it is related to the tumor microenvironment and is approved by one of the course directors. Evaluation: Students will be evaluated on their participation in class (30%), their presentations (30%), their discussion points (15%) and their Specific Aims Page (25%). Students will be given feedback immediately after their presentations. Prerequisite: First year CAMB core courses must be completed. Course is for 2nd year graduate students and beyond. CB students get first priority followed by other CAMB students.
Taught by: Sandra Ryeom and Ellen Pure
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CAMB 702 Current Biochemical Topics
Participation in the 'Dr. George W. Raiziss Biochemical Rounds', a weekly seminar program sponsored by the Department of Biochemistry and Biophysics. Program deals with a wide range of modern biochemical and biophysical topics presented by established investigators selected from our faculty, and by leading scientists from other institutions. Prerequisite: Permission needed from Department
Taught by: Black and Shorter
Course offered summer, fall and spring terms
Also Offered As: BMB 650, PHRM 650
Activity: Seminar
1.0 Course Unit

CAMB 703 The ECM, adhesion receptor signaling, and translational biomechanics
This course is geared towards first and second year graduate students in BGS/CAMB and SEAS/BE with an interest in the interface of extracellular matrix (ECM) cell biology and biomechanics. Students will learn about the ECM and adhesion receptors and their impact on the cytoskeleton and signaling, as well as fundamental concepts in biomechanics and engineered materials. We will discuss how these topics can inform the study of cell biology, physiology and disease. An additional objective of the course is to give students experience in leading critical discussions and writing manuscript reviews. Invited outside speakers will complement the strengths of the Penn faculty.
Taught by: R. Mauck, R. Wells.
Course offered spring; even-numbered years
Also Offered As: BE 640
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

CAMB 704 Stress Responses in Metabolism and Cancer
The course meets once a week for student presentations and lectures. The first 2-3 weeks encompasses lectures on state-of-the-art metabolic labeling, metabolomics, and other related methodologies. Subsequently, both ‘historical’ and more recent papers in the field of cancer metabolism are reviewed with individual faculty experts in each chosen area. The overall goal of the course is to give students a better understanding of the abrogation of normal cellular metabolism and stress during cancer, and how these interplay with each other to create/retain a malignant state. Grades are dependent on 2 presentations per semester, class participation, and weekly answers to 2-3 questions on the assigned papers. Must have completed first-year CAMB courses to enroll.
Taught by: C. Simon, Z. Arany, and K. Wellen
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CAMB 705 Advanced Topics in Bacterial-Host Interactions
This course will delve into specific topics in general area of bacterial pathogenesis and bacteria-host interactions. We will be exploring key historical and current papers on topics related to bacterial invasion of and replication within host cells, bacterial interference with host cell signaling pathways, bacterial interactions with host mucosal tissues, and the role of bacterial colonization in shaping and instructing host immune responses. Each week, a student will lead the class in the discussion of published papers on a specific topic. The format of each class will be a 10-15 minute introduction of the key background and underlying questions to be presented by the student, followed by an in-depth analysis by all members of the class of one to two articles. Students will be graded based on their introductory presentation and active participation in the paper discussions. Recommended strong background in cell biology, immunology and/or bacteriology fulfilled by 1st year CAMB (previous BGS) courses. Course is limited to 2nd - 3rd year graduate students or advanced undergraduates with course directors permission.
Taught by: Igor Brodsky and Sunny Shin
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
CAMB 706 MVP Core
This is a year-long course for the incoming CAMB-MVP students and others wishing to gain a broad overview of pathogens and their interactions with hosts. The course will provide students with key fundamental knowledge of Microbiology, Virology and Parasitology. The course starts with introductory lectures on Concepts of Host-Pathogen interactions. The rest of the course is divided into sections on Bacteriology, Virology and Parasitology. Each week there are three 1 hour class slots that are either lectures on a specific topic or discussions of a relevant paper presented by students. Classes are led by faculty from across the campus and are highly interactive. Evaluation is based on mid and final take home essay topics for each of the three sections. Regular attendance and active participation in the discussions is also part of the evaluation.
Taught by: M. Weitzman and S. Shin
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

CAMB 707 Cell and Gene Therapy
This course will provide students with a general overview of translational research in the area of gene and cell therapy. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area. Prerequisite: At least one course in immunology.
Taught by: Michael C. Milone, MD, PhD, Elizabeth Hexner, MD, MSTR
Course usually offered in spring term
Also Offered As: MTR 621, REG 621
Activity: Lecture
1.0 Course Unit

CAMB 708 HIV Virology/Pathogenesis/Cure Seminar/Journal Club
This will be a year-long class, held every other week, that is paper-based utilizing the current literature in HIV virology, pathogenesis and cure research. The class will have a journal club format with attendance and participation open to the full Penn student & postdoc community (teach-your-peers). Enrolled students will be responsible for approximately 4-5 presentations over the duration of the course, as well as for bi-weekly paper selection in conjunction with the instructors and coordinating the presentations by other participants. Prerequisites: Strong background in cell biology, immunology or virology fulfilled by 1st yr CAMB Courses. Course is limited to graduate students. Instructor permission required for non-CAMB graduate students.
Taught by: Ronald Collman and Katharine Bar
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

CAMB 709 Quantitative Imaging and Analysis for Biologists (QIAB)
This course will provide an introduction to the fundamentals of modern light microscopy and image analysis using the free software package, Fiji, as a guide. Topics include fundamentals of basic and advanced light microscopy, image data optimization, and commonly-used processing and analysis tools such as filters, segmentation, tracking, and simple macro programming. The goal is to provide students with the background and confidence required to pursue more advanced quantitative imaging methods as the need arises in their research. Students will be graded based on their active participation in class, completion of hands-on Fiji exercises, and a final presentation describing an application of at least one of the analysis methods covered in class to their own image data. CAMB 709 is limited to 2nd - 4th-year graduate students who have previous/current experience with light microscopy. Permission to enroll from course directors is required for all students.
Taught by: M. Lakadamyali and A. Stout
Activity: Lecture
0.5 Course Units

CAMB 710 Drug Discovery and Development
This course will expose graduate-level students to the process of drug discovery and development. The course will be structured to cover topics from the identification of a disease-relevant target through to Phase III Clinical Trials. The course will be lecture based and there will also be student-led journal club presentations as part of the course. There will also be a writing project consisting of a 3 page proposal of how to advance one of the areas of Drug Discovery & Development covered in the course.
Taught by: Dr.Ben E.Black, UPenn and Dr.Craig A.Leach, GlaxoSmithKline
Course usually offered in spring term
Also Offered As: BMB 605, PHRM 605
Activity: Lecture
1.0 Course Unit

CAMB 711 Integrative plant and animal mechanobiology
This course aims to provide students with an understanding of biomechanics that spans the plant and animal kingdoms, with the goal of emphasizing principles common to both. Major concepts include 1) Plant and Animal Cell Biology; 2) Solid, Fluid, and Transport Mechanics; and 3) Integrating Biology and Mechanics - Big Questions. In addition to lectures, there will be two journal article discussion sections. Most lectures will be given by Penn faculty, although selected topics (particularly in plant biology and mechanics) will be covered by faculty at other sites through lectures broadcast remotely. The Penn director will be present at all sessions of the class. Undergraduates require special permission from the director.
Taught by: Rebecca Wells
Course usually offered in fall term
Also Offered As: BE 711
Activity: Lecture
1.0 Course Unit
CAMB 712 Topics in Cancer Biology
This course is an elective course for 2nd year Cancer Biology Students on a range of cancer-related topics. The course is designed to expose students to a range of topics in cancer biology, improve writing skills, train students to give clear and concise oral presentations, develop active listening and critical thinking skills as well as discussion skills. The course will also teach students about rigor and reproducibility in experimental design. The course will interface with Cancer Biology WIP talks (which are only given by 3rd year and up students) and complement journal club and prelim preparation. Completion of first-year CAMB courses required to enroll. Course is designed for second-year CAMB students. Taught by: Sandra Ryeom Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

CAMB 713 Neuroepigenetics
This is a course intended to bring students up to date concerning our understanding of Neural Epigenetics. It is based on assigned topics and readings covering a variety of experimental systems and concepts in the field of Neuroepigenetics, formal presentations by individual students, critical evaluation of primary data, and in-depth discussion of potential issues and future directions, with goals to: 1) Review basic concepts of epigenetics in the context of neuroscience, 2) Learn to critically evaluate a topic (not a single paper) and set the premise, 3) Improve experimental design and enhance rigor and reproducibility, 4) Catch up with the most recent development in neuroepigenetics, 5) Develop professional presentation skills - be a story teller. Each week will focus on a specific topic of Neuroepigenetics via a 'seminar' style presentation by a class member. Prerequisite: If course requirement not met, permission of instructor is required. Taught by: Zhaolan Zhou, Elizabeth Heller, and Hao Wu Course usually offered in fall term Also Offered As: NGG 713 Prerequisite: BIOM 555 Activity: Lecture
1.0 Course Unit

CAMB 714 DIY Transcriptomics
As access to high-throughput sequencing technology increases, the bottleneck in biomedical research has shifted from generating data, to analyzing and integrating diverse data types. Addressing these needs requires that students and postdocs equip themselves with a toolkit for data mining and interrogation. This course focuses specifically on studying global gene expression (transcriptomics) through the use of the R programming environment and the Bioconductor suite of software packages - a versatile and robust collection of tools for bioinformatics, statistics, and plotting. During this semester-long course students participate in a mix of lectures and guided code review, all while working with real datasets directly on their laptop. Students will learn to analyze RNAseq data using a lightweight and reusable set of modular scripts that leverage open-source software. In addition, students will learn best practices in data science for working in R/Bioconductor, including creating interactive data visualizations, making their analyses transparent and reproducible, and identifying experimental bias in large datasets. Students are encouraged, but not required, to bring their own RNAseq data to the course. Taught by: Dan Beiting One-term course offered either term Activity: Lecture
1.0 Course Unit

CAMB 752 Genomics
Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete genomic sequence and set of cellular instructions encoded in the DNA of specific organisms, including homo sapiens, dozens of bacterial species, the yeast Saccharomyces cerevisiae, the nematode C. elegans, and the fruit fly Drosophila melanogaster. The goals of the course include the following: 1. introduce the basic principles involved in sequencing genomes, 2. familiarize the students with new instrumentation, informative tools, and laboratory automation technologies related to genomics, 3. teach the students how to access the information and biological materials that are being developed in genomics and 4. examine how these new tools and resources are being applied to basic and translational research. This will be accomplished through in depth discussion of classic and recent papers. Prerequisite: Permission of Instructor. Taught by: S Diskin Course usually offered in spring term Also Offered As: GCB 752 Prerequisite: GCB 534 Activity: Seminar
1.0 Course Unit

CAMB 899 Pre-dissertation Research
Activity: Laboratory
1.0 Course Unit

CAMB 995 Dissertation
Activity: Dissertation
1.0 Course Unit

Chemical & Biomolecular Engineering (CBE)

CBE 099 Undergraduate Research and Independent Study
An opportunity for the student to work closely with a professor in a project to develop skills and technique in research and development. To register for this course, the student writes a one-page proposal that is approved by the professor supervising the research and submitted to the undergraduate curriculum chairman during the first week of the term. One-term course offered either term Activity: Independent Study
1.0 Course Unit
Notes: A maximum of 2 c.u. of CBE 099 may be applied toward the B.S.E degree requirements

CBE 150 Introduction to Biotechnology
The goal of this course is to teach you the fundamentals of biotechnology and introduce you to concepts in Chemical Engineering along the way. Concepts in Biotechnology that will be covered include, DNA, RNA, the Central Dogma, proteins, recombinant technology, RNA silencing, electrophoresis, chromatography, synthetic biology, pull down assays, PCR, hybridization, array technology, DNA machines, DNA sequencing, and forensics. Concepts in Chemical Engineering that will be covered include the mass balance, scaling laws and the Buckingham-Pi theorem, kinetics of enzyme reactions, thermodynamics of molecular binding, the Langmuir isotherm, separations via chromatography. Reserved for Freshmen only. Course usually offered in fall term Activity: Lecture
1.0 Course Unit
CBE 160 Introduction to Chemical Engineering
Students will learn to read and understand a process flow sheet. There is a focus on drawing a process flow sheet, and formulating and solving the material balances for the chemical processes involving chemical reactions (some with recycle streams, some with purge streams, and some with bypass streams). Additionally, students will understand the limits of the ideal gas law, and have a working knowledge of the cubic equations of state and the concept of a compressibility factor. The class will study the basic concepts of gas-liquid phase equilibrium and apply Raoult’s Law to solve phase equilibrium problems. A final objective is to design flow sheets and solve material balances for simple chemical processes using ASPEN (chemical engineering simulation program). Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CBE 230 Material and Energy Balances of Chemical Processes
This course introduces the principles of material and energy balances and their applications to the analysis of single- and multiple-phase processes used in the chemical, pharmaceutical, and environmental industries. The course focuses on the conceptual understanding of properties of pure fluids, equations of state, and heat effects accompanying phase changes and chemical reactions, and problem-solving skills needed to solve a wide range of realistic, process-related problems.
Course usually offered in fall term
Prerequisite: CBE 160
Activity: Lecture
1.0 Course Unit

CBE 231 Thermodynamics of Fluids
Students will understand, evaluate, and apply different equations of state relating pressure, temperature, and volume for both ideal and non-ideal systems. The course will focus on calculating and applying residual properties and departure functions for thermodynamic analysis of non-ideal gases. Students will apply and describe simple models of vapor-liquid equilibrium in multi-component systems (e.g. Raoult’s Law, modified Raoult’s Law, Henry’s Law). Additionally, the class will analyze and describe properties of non-ideal mixtures and their component species. We will also model and predict reaction equilibria (including non-ideal fluid systems), as well as solve problems related to complex phase equilibria of multi-component systems (find equilibrium compositions for non-ideal phases).
Taught by: Amish Patel
Course usually offered in spring term
Prerequisite: CBE 230
Activity: Lecture
1.0 Course Unit

CBE 297 Study Abroad
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CBE 305 Fluid Mechanics
This course is designed for students to understand the fundamental characteristics of fluids. We will develop, starting from first principles, the basic equations for fluid statics, and use them to determine pressure variations in fluids with rigid body rotation. Students will understand in detail the basic types of fluid flow line patterns (e.g. streamlines and streamtubes) and the different types of interchangeable energy forms (e.g. kinetic, potential, and pressure). It is also important to develop, starting from first principles, the formulations for inviscid and viscous flow problems. These include the discussion of a control system and system boundaries, the detailed construction of conservations equations of mass, energy, and momentum for Newtonian fluids, the derivation of the Navier-Stokes equations, and the determination of appropriate initial and boundary conditions. A final objective of the course is to solve various fluid mechanics problems using control systems, dimensional analysis, and developed equations. Such problems include, but are not limited to, the terminal velocity of a falling sphere, Stokes flow, the relation between the friction factor and the Reynolds number, and flow profiles in numerous geometries.
Taught by: John Crocker
Course usually offered in fall term
Prerequisite: CBE 350
Activity: Lecture
1.0 Course Unit

CBE 325 Renewable Energy
This course covers engineering concepts for renewable energy processes. Fundamental engineering calculations for solar, wind, biofuel, geothermal, and hydroelectric energy production in comparison to oil and gas will be covered. Electric vehicles and energy storage will be discussed. Students will consider the specific needs of public health, safety and welfare in addition to global, cultural, social, environmental and economic factors will be in a particular country for a group project.
Taught by: Miriam Wattenbarger
Course usually offered in spring term
Prerequisite: CHEM 101 AND PHYS 141
Activity: Lecture
1.0 Course Unit

CBE 350 Fluid Mechanics
This course is designed for students to understand the fundamental characteristics of fluids. We will develop, starting from first principles, the basic equations for fluid statics, and use them to determine pressure variations in fluids with rigid body rotation. Students will understand in detail the basic types of fluid flow line patterns (e.g. streamlines and streamtubes) and the different types of interchangeable energy forms (e.g. kinetic, potential, and pressure). It is also important to develop, starting from first principles, the formulations for inviscid and viscous flow problems. These include the discussion of a control system and system boundaries, the detailed construction of conservations equations of mass, energy, and momentum for Newtonian fluids, the derivation of the Navier-Stokes equations, and the determination of appropriate initial and boundary conditions. A final objective of the course is to solve various fluid mechanics problems using control systems, dimensional analysis, and developed equations. Such problems include, but are not limited to, the terminal velocity of a falling sphere, Stokes flow, the relation between the friction factor and the Reynolds number, and flow profiles in numerous geometries.
Taught by: John Crocker
Course usually offered in fall term
Prerequisite: CBE 350
Activity: Lecture
1.0 Course Unit

CBE 351 Heat and Mass Transport
Prerequisite: CBE 350
Activity: Lecture
1.0 Course Unit

CBE 353 Molecular Thermodynamics and Chemical Kinetics
Taught by: Aleksandra Vojvodic
Course usually offered in fall term
Prerequisite: CBE 231
Activity: Lecture
1.0 Course Unit
CBE 360 Chemical Process Control
Taught by: Robert Riggleman
Course usually offered in spring term
Prerequisite: CBE 230
Activity: Lecture
1.0 Course Unit

CBE 371 Separation Processes
The design of industrial methods for separating mixtures. Distillation; liquid-liquid extraction; membranes; absorption. Computer simulations of the processes.
Course usually offered in spring term
Prerequisite: CBE 231
Activity: Lecture
1.0 Course Unit

CBE 375 Engineering and the Environment
The course will introduce emerging environmental issues, relevant engineering solutions, and problem-solving techniques to students. The case study approach will be used to assist students to develop and apply the fundamental engineering skills and scientific insights needed to recognize a variety of environmental problems that have profound impacts on all aspects of modern society. Sophomore standing required to enroll.
Course usually offered in spring term
Prerequisite: Sophomore Standing
Activity: Lecture
1.0 Course Unit

CBE 400 Introduction to Product and Process Design
Introduction to product design, process synthesis, steady-state and batch process simulation, synthesis of separation trains, second-law analysis, heat integration, heat-exchanger design, equipment sizing, and capital cost estimation.
Course usually offered in fall term
Prerequisites: CBE 351, 371
Corequisite: CBE 451
Activity: Lecture
1.0 Course Unit

CBE 410 Chemical Engineering Laboratory
Experimental studies in heat and mass transfer, separations and chemical reactors to verify theoretical concepts and learn laboratory techniques. Methods for analyzing and presenting data. Report preparation and the presentation of an oral technical report.
Course usually offered in fall term
Prerequisites: CBE 351, 371
Activity: Laboratory
1.0 Course Unit

CBE 430 Introduction to Polymers
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in fall term
Also Offered As: CBE 510, MSE 430, MSE 580
Prerequisites: MSE 260 or CBE 231, CHEM 221, MEAM 203
Activity: Lecture
1.0 Course Unit

CBE 451 Chemical Reactor Design
Course usually offered in fall term
Prerequisite: CBE 231 AND 351
Activity: Lecture
1.0 Course Unit

CBE 459 Product and Process Design Projects
Design of chemical, biochemical, and materials products and processes based on recent advances in chemical and bioengineering technology. Design group weekly meetings with faculty advisor and industrial consultants. Comprehensive design report and formal oral presentation. Heat exchanger design and profitability analysis.
Course usually offered in spring term
Prerequisite: CBE 400
Activity: Lecture
1.0 Course Unit

CBE 460 Chemical Process Control
Course usually offered in spring term
Prerequisite: CBE 230
Activity: Lecture
1.0 Course Unit

2020-21 Catalog | Generated 09/18/20
CBE 479 Biotechnology and Biochemical Engineering
An overview of biotechnology from a chemical engineering perspective: DNA, enzymes, proteins, molecular genetics, genetic engineering, cell growth kinetics, bioreactors, transport processes, protein recovery and protein separations. Group projects include a MATLAB kinetics project and a biotechnology company profile. Applications to current practices in biopharmaceuticals, biofuels, and bioremediation are discussed. Junior/Senior Standing in Engineering and CBE 150 or Permission of the Instructor. Course usually offered in fall term Activity: Lecture 1.0 Course Unit

CBE 480 Laboratory in Biotechnology and Genetic Engineering
The laboratory methods covered include molecular cloning techniques, cell transformation, DNA gel electrophoresis, ImageJ, PCR, DNA sequencing, SDS-PAGE, mammalian cell culture and enzyme assays. Culture techniques for bacteria, yeast and mammalian cells are taught and practiced. The students write several individual lab reports and keep a weekly lab notebook during the semester. A group presentation and report on a proposal for a new lab experiment is the final assignment for the lab. Course usually offered in spring term Prerequisite: CBE 479 Activity: Laboratory 1.0 Course Unit

CBE 508 Probability and Statistics for Biotechnology
The course covers topics in probability theories and statistical techniques, with emphasis placed on the practical problems relevant to the subject areas of biotechnology. The course provides a rigorous introduction to such topics as elements of probability, random variables and probability functions, random samples, parameter estimations, hypothesis testing, regression, analysis of variance, lifetime testing, and nonparametric tests. Course usually offered summer term only Activity: Lecture 1.0 Course Unit

CBE 511 Physical Chemistry of Polymers and Amphiphiles
This course deals with static and dynamic properties of two important classes of soft materials: polymers and amphiphiles. Examples of these materials include DNA, proteins, diblock copolymers, surfactants and phospholipids. The fundamental theories of these materials are critical of understanding polymer processing, nanotechnology, biomembranes and biophysics. Special emphasis will be placed on understanding the chain conformation of polymer chains, thermodynamics of polymer chains, thermodynamics of polymer solutions and melts, dynamics of polymer and statistical thermodynamic principles of self-assembly. Course usually offered in fall term Activity: Lecture 1.0 Course Unit

CBE 515 Chemical Product Design
Introduction to product design, molecular and mixture design, functional and formulated product design, design of device products, pharmaceutical product and process design, optimal batch process design strategies, batch process simulation, six-sigma design Taught by: Warren D. Seider Activity: Lecture 1.0 Course Unit

CBE 517 Principles of Genome Engineering
This course covers up-to-date techniques in genome engineering and its application in basic research and translational medicine. Genetic engineering techniques including site-directed DNA recombination (Cre-Lox, Phi31 integrase), genome editing (TALEN, CRISPR/Cas-9), next generation sequencing, and molecular imaging will be covered. Key concepts in genomics, epigenetics, gene regulation will be introduced, and application of genetic engineering techniques in the field of developmental biology, stem cell biology, and synthetic biology will be discussed. Course usually offered in spring term Activity: Lecture 1.0 Course Unit

CBE 522 Polymer Rheology and Processing
This course focuses on applications of rheology to polymer process technologies. It includes a general review of rheological concepts, including viscoelasticity and the influence of shear rate, temperature and pressure on polymer flow properties. The course covers the elementary processing steps common in various types of polymer manufacturing operations including handling of particulate solids, melting, pressurizing and pumping, mixing and devolatilization. Specific polymer processing operations including extrusion, injection molding, compression molding, fiber spinning and wire coating are covered. Emerging polymer processing applications in microelectronics, biomedical devices and recycling are also discussed. One-term course offered either term Prerequisites: MEAM 302 and 333 or CBE 350 and 351 Activity: Lecture 1.0 Course Unit
CBE 525 Molecular Modeling and Simulations
Students will explore current topics in thermodynamics through molecular simulations and molecular modeling. The requisite statistical mechanics will be conveyed as well as the essential simulation techniques (molecular dynamics, Monte Carlo, etc.). Various approaches for calculating experimentally measurable properties will be presented and used in student projects.
Course usually offered in fall term
Prerequisite: CBE 231 OR CBE 618
Activity: Lecture
1.0 Course Unit

CBE 535 Interfacial Phenomena
This course provides an overview of fundamental concepts in colloid and interface science. Topics include the thermodynamics of interfaces, interfacial interactions (e.g. van der Waals interactions, electrostatics, steric interactions), adsorption, the hydrodynamics and stability of interfacial systems, self assembly, etc. Connections to self-assembly and directed assembly of nanomaterials and emerging topics are explored.
Prerequisites: undergraduate thermodynamics, some familiarity with concepts of transport phenomena (including fluid flow and mass transfer) and differential equations
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CBE 540 Biomolecular and Cellular Engineering
This course will introduce concepts and methods for the quantitative understanding of molecular and cellular phenomena. Topics include molecular recognition, receptor-ligand binding, viral infection, signal transduction, cell adhesion, motility, and cytoskeletal dynamics. The course requires mathematics at the level of differential equations, and some knowledge of Matlab programming. A basic knowledge of cell biology is suggested, although not required.
Activity: Lecture
1.0 Course Unit

CBE 544 Computational Science of Energy and Chemical Transformations
Our theoretical and computational capabilities have reached a point where we can do predictions of materials on the computer. This course will introduce students to fundamental concepts and techniques of atomic scale computational modeling. The material will cover electronic structure theory and chemical kinetics. Several well-chosen applications in energy and chemical transformations including study and prediction of properties of chemical systems (heterogeneous, molecular, and biological catalysts) and physical properties of materials will be considered.
Prerequisites: CBE 231, MEAM 203
Activity: Lecture
1.0 Course Unit

CBE 545 Electrochemical Energy Conversion and Storage
Fuel cells, electrolysis cells, and batteries are all electrochemical devices for the interconversion between chemical and electrical energy. These devices have inherently high efficiencies and are playing increasingly important roles in both large and small scale electrical power generation, transportation (e.g. hybrid and electric vehicles), and energy storage (e.g. production of H2 via electrolysis). This course will cover the basic electrochemistry and materials science that is needed in order to understand the operation of these devices, their principles of operation, and how they are used in modern applications. Prerequisite: Introductory chemistry and an undergraduate course in thermodynamics (e.g. CBE 231, MEAM 203)
Activity: Lecture
1.0 Course Unit

CBE 546 Fundamentals of Industrial Catalytic Processes
A survey of heterogeneous catalysis as applied to some of the most important industrial processes. The tools used to synthesize and characterize practical catalysts will be discussed, along with the industrial processes that use them.
Activity: Lecture
1.0 Course Unit

CBE 554 Engineering Biotechnology
Advanced study of re DNA techniques; bioreactor design for bacteria, mammalian and insect culture; separation methods; chromatography; drug and cell delivery systems; gene therapy; and diagnostics.
Activity: Lecture
1.0 Course Unit
CBE 555 Nanoscale Systems Biology
Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano- thru micro- scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (eg. fluorescence down to nano-scale, AFM), physical methods (eg. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology. Prerequisite: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor. Taught by: Discher
Course usually offered in fall term
Also Offered As: BE 555, MEAM 555
Activity: Lecture
1.0 Course Unit

CBE 556 The Biochemical Engineering of Wine
This course surveys the biochemistry and biochemical unit operations involved in the commercial production of modern wines. Topics will include grape growing, pressing, fermentation, filtration, and packaging/aging. Emphasis will also be placed on yeast microbiology and wine biochemistry. Lectures will be supported by wine tasting sessions to highlight the important characteristics of different wine types. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: This course can only be used as a Technical Elective in SEAS

CBE 557 Stem Cells, Proteomics and Drug Delivery - Soft Matter Fundamentals
Lectures on modern topics and methods in cell and molecular biology and biomedicine from the perspective of soft matter science and engineering. Discussions and homeworks will cover soft matter related tools and concepts used to 1) isolate, grow, and physically characterize stem cells, 2) quantify biomolecular profiles, 3) deliver drugs to these cells and other sites (such as tumors with cancer stem cells) will be discussed. Skills in analytical and professiona presentations, papers and laboratory work will be developed. Background in Biology, Physics, Chemistry or Engineering. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CBE 559 Multiscale Modeling of Chemical Systems
This course provides theoretical, conceptual, and hands-on modeling experience on three different length and time scales - (1) electronic structure (A, ps); (2) molecular mechanics (100A, ns); and (3) deterministic and stochastic approaches for microscale systems (um, sec). Students will gain hands-on experience, i.e., running codes on real applications together with the following theoretical formalisms: molecular dynamics, Monte Carlo, free energy methods, deterministic and stochastic modeling. Prerequisite: Undergraduate courses in numeral analysis and statistical mechanics. Course not offered every year
Also Offered As: BE 559, SCMP 559
Activity: Lecture
1.0 Course Unit

CBE 562 Drug Discovery and Development
Intro to Drug Discovery; Overview of Pharmaceutical Industry and Drug Development Costs, Timelines; High Throughput Screening (HTS); Assay Design and Sensitivity Solid Phase Synthesis and Combinatorial Chemistry; Enzyme Kinetics; Fluorescence, Linearity, Inner-filter effect, quenching; Time dynamics of a Michaelis-Menton Reaction; Competitive Inhibitor; FLINT, FRET, TRF, FP, SPA, alpha-screen; Enzyme HTS (protease); Cell based screening; Fura-2 ratio, loading signaling; Gfpcalmodulin-gfp integrated calcium response; Estrogen/ERE-Luc HTS; Problems with cell based screening (toxicity, permeability, nonspecificity); Instrumentation, Robotics Automation; Z-factor; SAR, Positioning Scanning; Microarray HTS; IC50, % Conversion in HTS and IC50, Assay Optimization. Course usually offered in fall term
Also Offered As: BE 562
Activity: Lecture
1.0 Course Unit

CBE 564 Drug Delivery
The topics include drug transport, distribution and interactions in the body, specific challenges for biotherapeutics, pharmacokinetics, drug delivery systems and nanocarriers, gene delivery systems, targeted drug delivery, and translational aspects of new drug delivery systems. Faculty from engineering and medicine will give lectures related to their research interests. The students read current journal articles on drug delivery systems. The major group assignment for the course is a written and oral group proposal on a new drug delivery system. One-term course offered either term
Also Offered As: PHRM 564
Activity: Lecture
1.0 Course Unit
CBE 570 Experimental Methods for Polymer Science and Soft Matter - Theory and Practice

This course covers the relevant theory and practical application of experimental methods used to study the structure, dynamics and physico-chemical properties of soft matter and macromolecular materials. Systems of interest include self-assembled polymers and (macro)molecular materials, liquid crystals, colloidal suspensions, biological materials, gels, and other complex fluids. Particular emphasis is placed on the development of kinematic theory for X-ray scattering, methods of structure determination by (x-ray/electron) diffraction, microscopy (optical; atomic force; electron), dynamic scattering (light/ optical; x-ray; neutron) and rheology (bulk and microrheology). Thermomechanical, electronic and optical property characterization are also addressed. Lectures are complemented by lab exercises and projects. The subject matter is particularly relevant for students conducting experimental research on macromolecular materials, soft matter and complex fluids. Senior standing or permission of the instructor.

Course usually offered in spring term

Activity: Lecture
1.0 Course Unit

CBE 580 Masters Biotech Lab.

The laboratory methods covered include molecular cloning techniques, cell transformation, DNA gel electrophoresis, ImageJ, PCR, DNA sequencing, SDS-PAGE, mammalian cell culture, and enzyme assays. Culture techniques for bacteria, yeast and animal cells are taught and practiced. The students write several individual lab reports and keep a lab notebook during the semester. A group presentation and report on a proposal for a new lab experiment is the final assignment for the lab.

One-term course offered either term

Activity: Lecture
1.0 Course Unit

Notes: Reserved for students in the Master of Biotechnology Program. Not open to SEAS undergraduates.

CBE 597 Master's Thesis Research

One-term course offered either term

Activity: Masters Thesis
1.0 Course Unit

CBE 599 Master's Indep Study

One-term course offered either term

Activity: Independent Study
1.0 Course Unit

CBE 602 Statistical Mechanics of Liquids

The course will focus on advanced concepts and methods in statistical mechanics with a particular emphasis on the liquid state, e.g. aqueous solutions, capillarity, polymers, colloids, glasses, amphiphilic self-assembly, etc. Principles of both equilibrium and nonequilibrium statistical mechanics will be discussed and connections to experimentally measurable quantities will be made wherever possible.

One-term course offered either term

Prerequisites: CBE 618, MSE 575, BE 619, BMB 604, PHYS 581, CHEM 521 and PHYS 611 and CHEM 522

Activity: Lecture
1.0 Course Unit

CBE 618 Advanced Molecular Thermodynamics

This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory.

Course usually offered in fall term

Also Offered As: BE 662, MEAM 662

Activity: Lecture
1.0 Course Unit

CBE 621 Advanced Chemical Kinetics and Reactor Design

Course usually offered in fall term

Activity: Lecture
1.0 Course Unit

CBE 640 Transport Processes I

This course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows. Examples from mechanical, chemical, and biological systems will be used to illustrate fundamental concepts and mathematical methods.

Course usually offered in fall term

Activity: Lecture
1.0 Course Unit

CBE 641 Transport Processes II (Nanoscale Transport)

A continuation of CBE 640, with additional emphasis on heat and mass transport. This course aims to teach transport concepts and methods useful in many current CBE laboratory settings. The emphasis will be on microscopic dynamics and transport in both hard and soft systems (e.g. colloids and polymers), of relevance to a variety of biological and biomolecular systems. Wherever possible, will make connections between classical, macroscopic transport, and what is happening microscopically. Will make use of a comination of analytic and algorithmic/numerical methods to facilitate understanding of the material. Physical topics will include stochastic, ‘single-molecule’, non-ideal, hard sphere and frustrated systems, phase transitions, nonequilibrium statistical mechanics and optics. Concepts will include properties of stochastic functions (Gaussian statistics, correlation functions and power spectra), Fourier methods, Convolution, the Central Limit theorem, anomalous diffusion, percolation, and the Fluctuation/Dissipation theorem. Computational methods will concentrate on Monte Carlo simulations of ‘toy’ models.

Course usually offered in spring term

Activity: Lecture
1.0 Course Unit
CBE 895 Teaching Practicum
This course provides training in the practical aspects of teaching. The students will work with a faculty member to learn and develop teaching and communication skills. As part of the course, students will participate in a range of activities that may include: giving lectures, leading recitations, supervising laboratory experiments, developing instructional laboratories, developing instructional material, preparing and grading homework assignments and solution sets, and preparing examinations. Feedback on the recitations will be provided to the student by the faculty responsible for the course. The course is graded on a Satisfactory/Unsatisfactory basis. The evaluation will be based on comments of the students taking the course and the impressions of the faculty.
Taught by: John Crocker
One-term course offered either term
Activity: Teacher Education
0.0 Course Units

CBE 899 Independent Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CBE 990 Masters Thesis
For Master’s students who have completed the course requirements for the Master’s degree and are strictly working to complete the Master’s Thesis leading to the completion of a Master’s degree. Permission Required.
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

CBE 995 Dissertation
One-term course offered either term
Activity: Dissertation
1.0 Course Unit

CBE 999 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master’s thesis or Ph.D. dissertation requirements. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Chemistry (CHEM)

CHEM 010 Academic Based Community Service-Chemistry Outreach
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CHEM 012 Environmental Chemistry
The course aims to teach chemical content and principles in the context of significant environmental issues. Topics to be covered include: composition of the atmosphere; protecting the ozone layer; chemistry of global warming; traditional hydrocarbon fuels and energy utilization; water supply, its contaminants, and waste water treatment; acid rain; nuclear energy; and new energy sources. Students will develop critical thinking ability, competence to better assess risks and benefits, and skills that will lead them to be able to make informed decisions about technology-based matters. Prerequisite: The course requires math literacy at the high school algebra level (2 years) and a willingness to learn Excel. Student must also have taken one year of high school chemistry.
For BA Students: Physical World Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: The course requires math literacy at the high school algebra level (2 years) and a willingness to learn Excel. Students also must have taken one year of high school chemistry.

CHEM 022 Structural Biology
This course will explain in non-mathematical terms how essentially all biological properties are determined by the microscopic chemical properties of proteins. It will also explain how research results, especially those of structural biology, are presented to its various audiences.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Seminar
0.5 Course Units
Notes: Freshman Seminar

CHEM 025 Freshman Seminar: From Alchemy to Nanoscience
The imperative to transform matter, find its roots in alchemy and the search for the Philosopher’s Stone, which was thought to contain the secret of turning base metals into gold and also the secret of immortality. We will examine the evolution of the way in which people have thought about matter and its transformations; from the manufacturing of explosives to dyestuffs to pharmaceuticals and perfumes. We will do some simple experiments that demonstrate some of these principles. We will follow the development of the chemical sciences from the works of early alchemists to Renaissance (Newton and Boyle) scientists and modern thinkers (Priestly, Lavoisier, Dalton, Mendeleev and others). This class, which is designed for non-science as well as potential science majors, will involve discussions on readings, as well as field trips to some Philadelphia locations that are notable in the history of chemistry.
Taught by: Jeffrey Winkler
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CHEM 053 General Chemistry Laboratory I
A general laboratory course covering aspects of qualitative and quantitative analysis, determination of chemical and physical properties, and chemical synthesis. Lab fee $150.
One-term course offered either term
Activity: Laboratory
0.5 Course Units

CHEM 054 General Chemistry Laboratory II
Continuation of CHEM 053. Lab fee $150
One-term course offered either term
Activity: Laboratory
0.5 Course Units
CHEM 100 Introduction to General Chemistry
This course is equivalent to Chemistry 101 but is intended for students with less preparation in high school chemistry and mathematics, and moves more methodically through the introductory chapters. The course covers most of the same topics as Chem101 and is designed to provide students with the skills needed to succeed in Chem102. In Chem100 there is a strong emphasis on problem-solving that is fundamental to all physical science. Topics will include: introduction to fundamental chemical ideas and their application to chemical reactions, stoichiometry and ideal gases. Also provided is an overview of the periodic table and classical ideas of chemical bonding using Lewis structures. Quantum theory will be introduced - focusing on its role in understanding atomic structure, the periodic table, and chemical bonding. Topics from mathematics and physics that are necessary to chemical problem-solving will be included as needed. Prerequisite: Students with credit for CHEM 101 may not enroll in CHEM 100. Credit will not be awarded for both CHEM 100 and 101.
For BA Students: Physical World Sector
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Students with credit for CHEM 101 may not enroll in CHEM 100. Credit will not be awarded for both CHEM 100 and 101.

CHEM 101 General Chemistry I
Basic concepts and principles of chemistry and their applications in chemistry and closely-related fields. The first term emphasizes the understanding of chemical reactions through atomic and molecular structure. This is a university level course, treating the material in sufficient depth so that students can solve chemical problems and can understand the principles involved in their solution. It includes an introduction to condensed matter. This course is suitable for majors or non-majors and is recommended to satisfy either major or pre-professional requirements for general chemistry. This course is presented for students with high school chemistry and calculus. Students with a lesser background than this should take CHEM 100. Prerequisite: Students with credit for CHEM 100 may not enroll in CHEM 101. Credit is not awarded for both CHEM 101 and 100.
For BA Students: Physical World Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Students with credit for CHEM 101 may not enroll in CHEM 100. Credit is not awarded for both CHEM 101 and 100.

CHEM 102 General Chemistry II
Continuation of Chemistry 101. The second term stresses the thermodynamic approach to chemical reactions, electrochemical processes, and reaction rates and mechanisms. It includes special topics in chemistry.
For BA Students: Physical World Sector
One-term course offered either term
Prerequisite: CHEM 101 AND MATH 104
Activity: Lecture
1.0 Course Unit

CHEM 115 Honors Chemistry I
This course will focus on introducing students to the following topics: the nature of the chemical bond (forces, potentials, and quantum mechanics), covalent and non-covalent interactions, properties of gasses, liquids, and solids. Students in section 001 will be introduced to modern computational chemistry methods and section 002 introduces students to modern experimental techniques. Prerequisite: AP Chemistry exam score of 5.
For BA Students: Physical World Sector
Course usually offered in fall term
Corequisite: MATH 114
Activity: Lecture
1.0 Course Unit
Notes: Freshman only.

CHEM 116 Honors Chemistry II
An advanced course for students who have had very strong background in Chemistry in High School (AP, IB, or equivalent). Advanced material from the general chemistry curriculum will be covered in the context of topics selected from current research areas. A continuation of Honors Chemistry I, Honors Chemistry II will focus on topics in biochemistry and biophysical chemistry relating to thermodynamics, equilibrium, kinetics, and electrochemistry. Prerequisite: Advanced High School Chemistry (AP or equivalent).
For BA Students: Physical World Sector
Taught by: Subotnik
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CHEM 221 Physical Chemistry I
Introductory quantum mechanics, atomic and molecular structure, chemical bonding, and microscopic understanding of physical and chemical properties of molecules.
Course usually offered in fall term
Prerequisite: CHEM 102 AND MATH 114 AND PHYS 150
Activity: Lecture
1.0 Course Unit

CHEM 222 Physical Chemistry II
Continuation of Physical Chemistry I. Principles and applications of thermodynamics, and a molecular-based understanding of macroscopic properties.
Taught by: Gai
Course usually offered in spring term
Prerequisite: CHEM 221 AND PHYS 151
Activity: Lecture
1.0 Course Unit

CHEM 223 Experimental Physical Chemistry I
Important methods, skills, and apparatus used for the acquisition and interpretation of quantitative information about chemical systems will be discussed in principle and used in the laboratory. Lab fee $300.
Course usually offered in spring term
Prerequisite: CHEM 221
Activity: Laboratory
1.0 Course Unit

CHEM 241 Principles of Organic Chemistry
Fundamental course in organic chemistry based upon the modern concepts of structure and mechanism of reactions.
One-term course offered either term
Prerequisite: CHEM 102
Activity: Lecture
1.0 Course Unit
CHEM 242 Principles of Organic Chemistry II
Continuation of CHEM 241.
One-term course offered either term
Prerequisite: CHEM 241
Activity: Lecture
1.0 Course Unit

This course is functionally equivalent to Organic Chemistry II as the second term of introductory Organic Chemistry, placing the content in the context of biology and medicine. Topics include: 1) alkyl compounds, ethers, epoxides and sulfides in lipids; 2) carboxylic acids and amines in amino acids; 3) aromatic compounds and heterocycles in nucleic acids; and 4) ketones and aldehydes in carbohydrates. The synthesis and mechanism of action of pharmaceuticals that feature these functional groups will also be discussed. Additionally, this course makes use of 3D structure tutorials, recitation sections and visits from biomedical scientists who make use of chemistry in their work.
Taught by: Chenoweth, Petersson
Course usually offered in spring term
Prerequisite: CHEM 241
Activity: Lecture
1.0 Course Unit

CHEM 244 Experimental Organic Chemistry Lab I
A basic laboratory course where modern chromatographic, instrumental, and spectroscopic techniques are applied to experimental organic chemistry. Course must be taken concurrently with Organic Chemistry I.
Taught by: Rutherford
Corequisite: CHEM 241
Activity: Laboratory
0.5 Course Units

CHEM 245 Experimental Organic Chemistry
A basic laboratory course in which both the theoretical and practical aspects of a variety of organic reactions and multistep syntheses are emphasized. Modern chromatographic, instrumental, and spectroscopic techniques are applied to experimental organic chemistry. Course should be taken concurrently with Organic Chemistry II or in the semester immediately following. PLEASE NOTE THE FOLLOWING: For the Summer and LPS offering of Organic Chemistry Lab., it is a 2-semester course. Part 1 is taken in the first term for 0.5 CU and then Part 2 is taken in the second term immediately following the first for 0.5 CU.
Taught by: Hall
One-term course offered either term
Prerequisite: CHEM 241
Corequisite: CHEM 243
Activity: Laboratory
1.0 Course Unit

CHEM 246 Advanced Synthesis and Spectroscopy Laboratory
Advanced laboratory work on the synthesis, structure, and properties of organic and inorganic compounds. Infrared, ultraviolet, and nuclear magnetic resonance spectroscopy. Lectures cover the theoretical basis and applications of modern spectroscopic methods. Lab fee $300.
Course usually offered in fall term
Prerequisite: (CHEM 242 OR CHEM 243) AND CHEM 245
Corequisite: CHEM 261
Activity: Laboratory
1.0 Course Unit

CHEM 249 Experimental Organic Chemistry Laboratory II
A continuation of CHEM 244, where the techniques introduced and practiced in Experimental Organic Chemistry I are applied to a variety of organic reactions and multistep syntheses. Course must be taken concurrently with Organic Chemistry II lecture.
Taught by: Rutherford
Corequisite: CHEM 242 OR CHEM 243
Activity: Laboratory
0.5 Course Units

CHEM 251 Principles of Biological Chemistry
Fundamentals of biological chemistry, including the structure of biological macromolecules and their mechanism of action, intermediary metabolism, and the chemical basis of information transfer. Course can be taken concurrently with CHEM 242 or CHEM 243.
One-term course offered either term
Prerequisite: CHEM 102 AND CHEM 241
Corequisite: CHEM 242 OR CHEM 243
Activity: Lecture
1.0 Course Unit

CHEM 256 Inorganic Chemistry I
An introductory survey of the bonding, structure, and reactions of important metal and nonmetal compounds.
Course usually offered in fall term
Prerequisite: CHEM 242 OR CHEM 243
Activity: Lecture
1.0 Course Unit

CHEM 299 Directed Study and Seminar
Independent project under the direction of a faculty member conducting chemistry research. Prerequisite: Permission of undergraduate chairman.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CHEM 399 Independent Research
Independent project under the direction of a faculty member conducting chemistry research. Prerequisite: Permission of undergraduate chairman; a B average in Chemistry, Mathematics, and Physics.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CHEM 441 Organic Reaction Mechanisms
Study of important types of reactions and functional groups, with emphasis on synthetic usefulness, mechanisms, and stereoelectronic principles.
Course usually offered in fall term
Prerequisite: CHEM 242
Activity: Lecture
1.0 Course Unit

CHEM 443 Modern Organic Synthesis
Introduction to advanced organic synthesis. Study of important synthetic reactions including: oxidations, reductions, and methods for the formation of carbon-carbon bonds, with an emphasis in chemoselectivity, stereoselectivity and asymmetric synthesis. Survey of modern methods for the synthesis of small, medium and large ring systems. Analysis of modern synthetic strategies, with illustrative examples from total synthesis of natural and unnatural products.
Course usually offered in fall term
Prerequisite: CHEM 441
Activity: Lecture
1.0 Course Unit
CHEM 451 Biological Chemistry I
Structure, dynamics, and function of biological macromolecules. Properties of macromolecular assemblies, membranes and their compartments. (Formerly, CHEM 450-I).
Course usually offered in fall term
Prerequisite: (CHEM 242 OR CHEM 243) AND CHEM 221 AND CHEM 251
Activity: Lecture
1.0 Course Unit

CHEM 452 Biological Chemistry II
Physical and chemical description of macromolecular information transfer. Gene organization, replication, recombination, regulation and expression. (Formerly, CHEM 450-II)
Course usually offered in spring term
Prerequisite: (CHEM 242 OR CHEM 243) AND CHEM 222 AND CHEM 251
Activity: Lecture
1.0 Course Unit

CHEM 462 Inorganic Chemistry II
A detailed treatment of the theory and application of modern physical methods for the elucidation of structure and mechanism in inorganic and organometallic chemistry. An introduction to symmetry and group theory is followed by the application of these concepts to vibrational and electronic spectroscopy of inorganic complexes. Magnetic resonance is discussed in detail, including topics such as EPR, Fourier transform methods, dynamic systems, and 2-dimensional NMR.
One-term course offered either term
Prerequisite: CHEM 261
Activity: Lecture
1.0 Course Unit

CHEM 495 High Throughput Discovery: A Multidisciplinary Approach to Cancer.
The newly developed massively parallel technologies have enabled the simultaneous analysis of many pathways. There are several large scale international efforts to probe the genetics and drug sensitivity of cancer cell lines. However, there are some rare cancers that have not been analyzed in depth. One of these rare cancers is malignant peripheral nerve sheet tumors (MPNST). MPNST, although a rare cancer, are common in patients with neurofibromatosis type. In the course, students will take part in a high throughput discovery effort in two phases. Phase 1 is a training phase, which will consist of quantitative profiling the sensitivity of MPNST cell lines to a library of >120 common and experimental cancer drugs. These will be conducted in the UPenn High Throughput Screening Core. While we call this a training phase, the data from this will be subject to rigorous quality control for eventual publication and development of a public database for rare tumors. Phase 2 is an independent research project. Examples of projects include, but are not limited to: Combinatorial screens (synthetic lethal); siRNA screens; novel compound screens; determining mechanisms of cell death; developing tools for data analysis and database development. During phase 2, students will also modify compounds of interest using the Penn Chemistry Upenn/Merck High Throughput Experimentation Laboratory. We will sponsor phase 2 projects relevant to neurofibromatosis. However, in phase two students can also research other areas if they develop sponsorships from professors. We expect the course to be a hypothesis engine that generates ideas for further research. Prerequisites include a strong foundation in biology and chemistry. Students will prepare an abstract proposal by week four on their phase 2 projects, and a report in scientific paper style, due on the last day of the semester. In addition to attending the class lecture, an estimated 10 hours a week Independent Laboratory Research is expected.
Taught by: Dr.'s Jeffrey Field, David Schultz, and Simon Berritt
Course usually offered in spring term
Also Offered As: PHRM 495
Activity: Laboratory
1.0 Course Unit

CHEM 521 Statistical Mechanics I
Principles of statistical mechanics with applications to systems of chemical interest.
Course usually offered in fall term
Prerequisite: CHEM 222
Activity: Lecture
1.0 Course Unit

CHEM 522 Statistical Mechanics II
A continuation of CHEM 521. The course will emphasize the statistical mechanical description of systems in condensed phases.
Course usually offered in spring term
Prerequisite: CHEM 521
Activity: Lecture
1.0 Course Unit

CHEM 523 Quantum Chemistry I
The principles of quantum theory and applications to atomic systems.
